  - 4.2. **FILE NUMBER:** PL17-002 17 - 38  
**LOCATION OF PROPERTY:** 1017 N. Crane Avenue  
**PROJECT DESCRIPTION:** Temple Accessory Shed Design Review Exemption

**CEQA Determination:** The project is exempt from the requirements of CEQA pursuant to Section 15303

**Prepared By:** Lilly Bianco, Contract Planner

**Recommendation:** Staff recommends that the Planning Commission adopt a resolution finding that:

1. The project is exempt from the requirements of CEQA pursuant to CEQA Section 15303 as the construction of an accessory structure.
2. Accepts the required findings and approves the design review exemption for the Temple Shed at 1017 N. Crane Avenue.

- 4.3. **FILE NUMBER:** PL16-096  
**LOCATION OF PROPERTY:** 800 Crane Avenue, St.Helena, CA 94574  
**PROJECT DESCRIPTION:** Design Review Exemption for Harold Smith & Sons Concrete Reclaimer Replacement

39 - 68

**CEQA Determination:** The project is categorically exempt in accordance with CEQA Section 15302

**Prepared By:** Noah Housh, Planning Director

**Recommendation:** The Planning and Community Improvement Department recommends that the Planning Commission:

1. Determine that the project is categorically exempt from the requirements of CEQA pursuant to CEQA Section 15302 "Replacement or Reconstruction" as the replacement of a commercial structure with a new structure of substantially the same size, purpose, and capacity.
2. Accept the required findings enumerated in Municipal Code Section 17.164.030 and adopt a resolution approving a Design Review Exemption for the proposed Harold Smith and Sons Concrete Reclaimer Replacement project.

## 5. PUBLIC HEARINGS

- 5.1. **FILE NUMBER:** PL17-005  
**LOCATION OF PROPERTY:** 1380 Main Street, Suite #103  
**PROJECT DESCRIPTION:** Request by Shannon Coombs for a use permit in order to establish a clothing and fashion accessories boutique in a new tenant space located in the Menegon Building at 1380 Main Street in the CB: Central Business district.

69 - 81

**CEQA Determination:** Staff finds that the project is exempt from the requirements of CEQA pursuant to Section 15301, Class 1

**Prepared By:** Aaron Hecock, Senior Planner

**Recommendation:** Staff recommends that the Planning Commission:

1. Determine that the project is exempt from the requirements of CEQA pursuant to Section 15301, Class 1, which exempts the operation, leasing, or minor alteration of existing facilities; and
2. Accept the required findings and approve a Use Permit for a new clothing store at 1380 Main Street Suite #103.

5.2.

- ***This item was continued from the February 21, 2017 Planning Commission Meeting***

83 - 1793

**FILE NUMBER:** PL16-042/PL16-043

**LOCATION OF PROPERTY:** 830 Pratt; 2555 Main Street

**PROJECT DESCRIPTION:** Applicant is proposing a campus master plan to restructure and expand the educational facilities at the Greystone Campus (2555 Main Street) and expand student enrollment from 200 to 300 students. Also proposed is a 4,468 sf underground storage cave and the installation of three modular storage units at the rear of the building. Concurrently, student housing facilities (dormitories) at the Vineyard Lodge Housing Site (830 Pratt Avenue) will be expanded by 123 net new dorm rooms to accommodate a total of 224 residents. The applicant is requesting the following entitlements: Design Review, Use Permit(s), Demolition Permit, and Variance(s).

**CEQA Determination:** In accordance with the California Environmental Quality Act (CEQA) Guidelines, an Initial Study and Mitigated Negative Declaration (IS/MND) has been prepared for the proposed project.

**Prepared By:** Lilly Bianco, Contract Planner

**Recommendation:** The Planning and Community Improvement Department recommends that

1. Adopt the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the project; and
2. Accept the required findings enumerated in Municipal Code Section 17.164.030 and adopt a resolution approving Design Review and a Use Permit for the CIA at Greystone project at 2555 Main Street.
3. Adopt a resolution approving a Demolition Permit, Design Review, a Use Permit, and Variance(s) for the Vineyard Lodge Housing component of the Campus Master Plan at 830 Pratt Avenue.

6. SCHEDULED MATTERS

6.1. None

7. DEPARTMENT REPORTS

This is an opportunity for staff to report on or update the Commission on any relevant matters.

- 7.1. Administrative Determination that discretionary Design Review approval to re-develop the property at 2600 Sulphur Springs Road will not require dedication of 30-feet of right-of-way to the City of St Helena for future public street improvements. 1795 - 1796  
[2600 Sulphur Springs - Admin Determination](#)

8. AGENDA FORCAST

Attached is a summary document of pending projects and up coming and items of priority and interest that will be placed on future agendas. This is also an opportunity for the Commission as a whole to request items be placed on

future agendas for discussion. These items should be consistent with, and work to implement adopted Council Goals.

9. ADJOURNMENT

The next Regular Planning Commission meeting is scheduled for March 21, 2017, at 6:00 p.m. in the Vintage Hall Board Room located at 465 Main Street.

This agenda was posted at City Hall, 1480 Main Street, and at Vintage Hall, 465 Main Street, St. Helena, California on March 2, 2017.

A handwritten signature in black ink, appearing to read "Noah Housh".

Noah Housh, Planning Director

**Appeal.** A person who is dissatisfied with a decision of the Planning Commission may appeal that decision to the City Council pursuant to Municipal Code Section 17.08.180, Appeal procedure. Actions of the Planning Commission will be listed on the City Council agenda the following Tuesday to give the City Council opportunity to review the Planning Commission's decision. Absent of an appeal by the City Council or by a citizen, the appeal period will terminate two weeks after the Planning Commission hearing.

**Special Assistance for the Disabled.** In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please call the City Clerk's Office (707) 967-2792. Notification 48 hours prior to the meeting will enable City to make reasonable arrangements to ensure accessibility to this meeting (28 CFR35.102-35.104 ADA Title II). However, City staff will attempt to assist at any time with accessibility. The City Clerk has equipment to assist those with a hearing impairment.

#### PUBLIC TESTIMONY PROCEDURES

Pursuant to the Government Code Section 54954.3, the public may address the Commission on each agenda item during the Commission's consideration of that item. Each speaker has the option to state his or her name for the record before testifying. Depending on the number of speakers or the interest of the item, the Planning Commission Chairman may also restrict, at his/her discretion, the speaker's time to three minutes. The

Chairman may also restrict public comments if they become irrelevant to the agenda item or repetitious of prior comments. All persons interested may appear and be heard or submit written statements prior to the Planning Commission meeting. Please note that if you challenge the City's decision on any of these matters in court, you may be limited to raising only those issues you or someone else raised at the meeting or in written correspondence delivered to the City at, or prior to, the meeting.

#### CHALLENGING DECISIONS OF CITY ENTITIES

The time limit within which to commence any lawsuit or legal challenge to any quasi-adjudicative decision made by the City of St. Helena is governed by Section 1094.6 of the Code of Civil Procedure, unless a shorter limitation

period is specified by any other provision, including without limitation Government Code section 65009 applicable to many land use and zoning decisions, Government Code section 66499.37 applicable to the Subdivision Map Act, and Public Resources Code section 21167 applicable to the California Environmental Quality Act (CEQA). Under Section 1094.6, any lawsuit or legal challenge to any quasi-adjudicative decision made by the City must be filed no later than the 90th day following the date on which such decision becomes final. Any lawsuit or legal challenge, which is not filed within that 90-day period, will be barred. Government Code section 65009 and 66499.37, and Public Resources Code section 21167, impose shorter limitations periods and requirements, including timely service in addition to filing.

If a person wishes to challenge the above actions in court, they may be limited to raising only those issues they or someone else raised at the meeting described in this notice, or in written correspondence delivered to the City of St. Helena, at or prior to the meeting. In addition, judicial challenge may be limited or barred where the interested party has not sought and exhausted all available administrative remedies.

#### SUPPLEMENTAL MATERIAL RECEIVED AFTER THE POSTING OF THE AGENDA

Any supplemental writings or documents distributed to a majority of the Planning Commission regarding any item on this Agenda, after the posting of the Agenda, will be available for public review in the Planning Department's Office located at 1480 Main Street, St. Helena, California, during normal business hours. In addition, such writings or documents will be made available on the City's web site at <http://cityofstheleena.org> and will be available for public review at the respective meeting.

# Action Minutes City of St. Helena Planning Commission

## Regular Meeting

Tuesday, February 7, 2017 @ 6:00 PM  
Vintage Hall Board Room - Second Floor  
465 Main Street, St. Helena

**PLEASE NOTE:** Any person who wishes to speak regarding an item on the agenda or make a comment under the "Oral Communication" portion of the agenda may do so, but please observe the time limit of three minutes.

Page

1. PLEDGE OF ALLEGIANCE

2. CALL TO ORDER AND ROLL CALL

Chairperson: Grace Kistner

Vice Chair: Vacant

Commissioners: Sarah Parker, Bobbi Monnette, Tracy Sweeney

Staff Present: Noah Housh, Planning and Community Improvement Director, Aaron Hecock, Senior Planner, Lilly Bianco, Contract Planner, Thomas B. Brown, City Attorney, Erica Smithies, Assistant Public Works Director, Xinia Gamero, Administrative Assistant.

3. PUBLIC FORUM:

This is an opportunity for the public to address the Commission on items of interest to the public that are NOT listed on the agenda. Because of restrictions imposed by the Brown Act, the Commission may not engage in discussion nor take action on matters not described on the agenda. **Please observe the time limit of three minutes.**

No Public Comment received.

4. CONSENT ITEMS

Members of the Commission or the public may ask that any items be considered individually for purposes of considering alternative action, for extended discussion, or for public comment. Unless that is done, one motion may be used to adopt all recommended actions. (Roll Call Vote)

4.1. Approval of Minutes November 15, 2016 and December 20, 2016.

# - #

[COMMISSION MINUTES 11-15-16](#)

[COMMISSION MINUTES 12-20-16](#)

4.2. **File Number:** PL16-070

# - #

**Location of Property:** 1330 Madrona Avenue

**Project Description:** Applicant, Ivan Lukrich, on behalf of property owners, Joyce Hoshall, is requesting Design Review approval to perform minor exterior modifications and construct a new master suite at the existing residence at 1330 Madrona Avenue.

**CEQA Determination:** The project is exempt from the requirements of

CEQA pursuant to Section 15301, which exempts minor alterations and additions to existing private structures

**Prepared By:** Lilly Bianco, Contract Planner

**Recommendation:** Staff recommends that the Planning Commission adopt a resolution finding that:

1. The project is exempt from the requirements of CEQA pursuant to CEQA Section 15301 as a minor alteration and addition to an existing structure.
2. Accepts the required findings and approves the design review exemption for the modifications to 1330 Madrona Avenue.

4.3. **File Number:** PL16-084

# - #

**Location of Property:** 1425 Oak Avenue

**Project Description:** Request from the United Methodist Church for approval of a Design Review Exemption to allow the construction of a 400-square foot, free standing shade structure to serve the Sun and Stars Montessori School at 1425 Oak Avenue.

**CEQA Determination:** Staff finds that the project qualifies for a Class 3 Categorical Exemption under Section 15303 of the California Environmental Quality Act.

**Prepared By:** Noah Housh, Planning Director

**Recommendation:** It is recommended by the Planning and Community Improvement Department that the Planning Commission:

1. Determine that the project is exempt from the requirements of CEQA as a Class 3 Categorical Exemption under Section 15303 of CEQA.
2. Accept the required findings and approve the Design Review Exemption for the proposed installation of a 12-foot tall, 400-square foot cloth shade structure to cover the play area at the rear of the building at 1425 Oak Avenue.

4.4. **File Number:** PL16-099

# - #

**Location of Property:** 1475 Main Street

**Project Description:** Request by Julie Spencer on behalf of the Rianda House for sign permit approval in order to place a new informational monument sign on the Rianda House property located at 1475 Main Street in the Business and Professional Office (BPO) district.

**CEQA Determination:** This project is exempt from the requirements of CEQA pursuant to Section 15311 of the CEQA Guidelines, which exempts on-premise business signs.

**Prepared By:** Aaron Hecock, Senior Planner

**Recommendation:** Staff feels the sign is well designed and well placed and is in support of the application. Therefore, staff recommends that

the Planning Commission:

1. Determine that the signs are exempt from the requirements of CEQA pursuant to Section 15311, Class 11(a) of the CEQA Guidelines which exempts on-premise business signs; and
2. Approve the request for a Sign Permit in order to place a new, illuminated, monument sign on the property located at 1475 Main Street.

Noah Housh addressed the Commission.

Commissioner Monnette pulled Item 4.2 and the Minutes from the November 15, 2016 meeting.

**MOTION:** Commissioner Parker moved to approve Items 4.3 and 4.4 on the Consent Calendar. The motion was seconded by Commissioner Monnette and roll call carried by the following vote:

AYES: Commissioner Parker, Monnette, Sweeney and Kistner  
 NOES: None  
 ABSENT: None  
 ABSTAIN: None

**MOTION:** Commissioner Parker moved to approve Item 4.2 on the Consent Calendar. The motion was seconded by Commissioner Sweeney and roll call carried by the following vote:

AYES: Commissioner Parker, Sweeney and Kistner  
 NOES: None  
 ABSENT: None  
 ABSTAIN: Commissioner Monnette

## 5. PUBLIC HEARINGS

### 5.1. **File Number:** PL16-080

# - #

**Location of Property:** 1405 Adams Street

**Project Description:** Applicant, Lauren Gaffney of Wade Design Architects, is requesting Design Review Approval on behalf of property owners, George Duran and Joseph Pon, to construct a new single family residence with attached accessory dwelling, swimming pool, landscaping, and other appurtenant improvements at 1405 Adams Street.

**CEQA Determination:** The project is exempt from the requirements of CEQA pursuant to Section 15303, which exempts the construction single-family residences, amongst other things.

**Prepared By:** Lilly Bianco, Contract Planner

**Recommendation:** Staff finds that the proposed configuration of the site, the overall design elements and proposed materials/finishes are in character with the neighborhood and the community in general.

Because of this staff concludes that design review findings can be made and recommends that the Planning Commission:

1. Determine that the project is exempt from the requirements of CEQA, pursuant to Section 15303, which exempts the construction single-family residences.
2. Accept the required findings and grant design review approval for the Adams Street Residence at 1405 Adams Street.

Lilly Bianco reported on Item.

Luke Wade and Paul Rosinski addressed the Commission.

Chair Kistner opened Public Comment.

No Public Comment received.

Chair Kistner closed Public Comment.

**MOTION:** Commissioner Sweeney moved that the Planning Commission determine that the project is exempt from the requirements of CEQA, pursuant to Section 15303, which exempts the construction single-family residences; and accept the required findings and grant design review approval for the Adams Street Residence at 1405 Adams Street. The motion was seconded by Commissioner Parker and roll call carried by the following vote:

AYES: Commissioner Sweeney, Parker and Kistner

NOES: Commissioner Monnette

ABSENT: None

ABSTAIN: None

5.2. **File Number:** PL16-019

# - #

**Location of Property:** 1367 Main Street

**Project Description:** Request by John Anderson for a Use Permit in order to establish a catering operation in addition to the existing chocolate shop at an existing tenant space located at 1367 Main Street in the CB: Central Business district.

**CEQA Determination:** Staff finds that the project is exempt from the requirements of CEQA pursuant to Section 15301, Class 1, which exempts the operation, leasing, or minor alteration of existing facilities.

**Prepared By:** Aaron Hecock, Senior Planner

**Recommendation:** Staff feels the addition of a catering business to the existing chocolate shop will have minimal impact to surrounding businesses as it won't be an everyday use, will largely occur overnight, won't require the hiring of any additional staff, and will use the existing commercial kitchen. Therefore, staff recommends that the Planning Commission:

1. Determine that the project is exempt from the requirements of CEQA pursuant to Section 15301, Class 1, which exempts the operation, leasing, or minor alteration of existing facilities.

2. Accept the required findings and approve the Use Permit for 1367 Main Street.

Aaron Hecock reported on Item.

Commissioner Sweeney and Chair Kistner disclosed meeting with the applicant prior to the Public Hearing of the Item.

John Anderson, applicant, addressed the Commission.

Chair Kistner opened Public Comment.

No Public Comment received.

Chair Kistner closed Public Comment.

**MOTION:** Commissioner Parker moved that the Planning Commission determine that the project is exempt from the requirements of CEQA pursuant to Section 15301, Class 1, which exempts the operation, leasing, or minor alteration of existing facilities; and accept the required findings and approve the Use Permit for 1367 Main Street. The motion was seconded by Commissioner Monnette and roll call carried by the following vote:

AYES: Commissioner Parker, Monnette, Sweeney and Kistner

NOES: None

ABSENT: None

ABSTAIN: None

4.1. None

5. PUBLIC HEARINGS

5.1. FILE NUMBER: PL16-058

LOCATION OF PROPERTY: 1111 Main Street

PROJECT DESCRIPTION: The applicant is requesting Master Use Permit approval in order to accommodate a variety of tenants in the existing building adjacent Sunshine Market and Wells Fargo Bank at 1111 Main Street in the Central Business (CB) district consistent with Municipal Code Section 17.48.

CEQA Determination: Staff finds that the project is exempt from the requirements of CEQA pursuant to Section 15301, Class 1, which exempts the operation, leasing, or minor alteration of existing facilities.

Prepared By: Aaron Hecock, Senior Planner

Recommendation: Staff is in general support of this application and recommends that the Planning Commission:

1. Determine that the project is exempt from the requirements of CEQA pursuant to Section 15301, Class 1, which exempts the operation, leasing, or minor alteration of existing facilities.
2. Accept the required findings and approve the Master Use Permit for 1111 Main Street allowing for the uses described in this report.

Planning Director Noah Housh reported on this item.

Applicant representative Caity Hoertkorn Beita addressed the Commission.

Chamber President Pam Simpson addressed the Commission.

MOTION: Commissioner Parker moved to adopt staff's recommendation. The motion was seconded by Chair Kistner and roll call carried by the following vote:

AYES: Commissioner Parker, Kistner and Knudsen

NOES: Commissioner Monnette

ABSENT: None

ABSTAIN: None

Chair Kistner called for a brief recess for staff to address technical difficulties.

Chair Kistner reconvened the meeting.

## 5.2. FILE NUMBER: PL16-042/PL16-043

LOCATION OF PROPERTY: 2555 Main Street/830 Pratt Avenue

PROJECT DESCRIPTION: Applicant is proposing a campus master plan to restructure and expand the educational facilities at the Greystone Campus (2555 Main Street) and expand student enrollment from 200 to 300 students. Also proposed is a 4,468 sf underground storage cave and the installation of three modular storage units at the rear of the building. Concurrently, student housing facilities (dormitories) at the Vineyard Lodge Housing Site (830 Pratt Avenue) will be expanded by 123 net new dorm rooms to accommodate a total of 224 residents. The applicant is requesting the following entitlements: Design Review, Use Permit(s), Demolition Permit, and Variance(s).

CEQA Determination: In accordance with the California Environmental Quality Act (CEQA) Guidelines, an Initial Study and Mitigated Negative Declaration (IS/MND) has been prepared for the proposed project.

Prepared By: Lilly Bianco, Contract Planner

Recommendation: The Planning and Community Improvement Department recommends that

1. Adopt the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the project; and
2. Accept the required findings enumerated in Municipal Code Section 17.164.030 and adopt a resolution approving Design Review and a Use Permit for the CIA at Greystone project at 2555 Main Street.
3. Adopt a resolution approving a Demolition Permit, Design Review, a Use Permit, and Variance(s) for the Vineyard Lodge Housing component of the Campus Master Plan at 830 Pratt Avenue.

Contract Planner Lilly Bianco reported on this item.

Applicant Culinary Institute of America (CIA) Managing Director Tom Bensel and CIA consultants Charles Chace, David Bueller and Carolyn Cole addressed the Commission.

Clay Gregory, Mike Quaglia, Philip Norfleet, Anthony McKelly, Donna Hinds, Rusty Hinds, Pat Dell, Amy Thomason, Pam Simpson, Adam Busby, Brian Russell addressed the Commission.

Chair Kistner called for a recess.

Chair Kistner reconvened the meeting.

Nicole Perry, Shannon Lannon, Mike Griffen, Nancy Wallace, citizen, citizen, Jason Roberts and applicant representative Naomi Miroglio addressed the Commission.

Commission Monnette provided a statement of disclosure that she is neutral and did not discuss these matters with her tenant that addressed the Commission during public comment.

A motion was made by Commissioner Parker to continue this item to the March 7, 2017 Planning Commission meeting. The motion was seconded by Commission Monnette and roll call carried by the following vote:

AYES: Commissioner Parker, Monnette, Kistner and Knudsen

NOES: None

ABSENT: None

ABSTAIN: None

Chair Kistner called for a recess.

Chair Kistner reconvened the meeting.

6. SCHEDULED MATTERS

6.1. None

7. DEPARTMENT REPORTS

This is an opportunity for staff to report on or update the Commission on any relevant matters.

Planning Director Housh announced that Sophia Johnson started as the new Permit Technician today.

8. AGENDA FORECAST

Attached is a summary document of pending projects and upcoming and items of priority and interest that will be placed on future agendas. This is also an opportunity for the Commission as a whole to request items be placed on future agendas for discussion. These items should be consistent with, and work to implement adopted Council Goals.

Planning Director Noah Housh encouraged the Commissioners to review the tentative agenda and communicate any questions they might have to him.

Chair Kistner requested an update on the General Plan be added to the list.

9. ADJOURNMENT: Chair Kistner adjourned the meeting at 9:47 p.m.

**CITY OF ST. HELENA  
PLANNING DEPARTMENT 1480 MAIN STREET- ST. HELENA, CA 94574  
PLANNING COMMISSION**

**March 7, 2017**

**AGENDA SECTION:** Consent

**FILE NUMBER:** PL17-002

**SUBJECT:** Temple Accessory Shed Design Review Exemption

**PREPARED BY:** Lilly Bianco, Contract Planner

**REVIEWED BY:** Noah Housh, Planning Director

**APPLICATION FILED:** 01/16/17

**ACCEPTED AS COMPLETE:** 02/22/17

**LOCATION OF PROPERTY:** 1017 N. Crane Avenue

**APN:** 009-322-003

**GENERAL PLAN/ZONING:** Medium Density Residential (MR)

**APPLICANT:** David Hanawalt, AIA, Lail Design Group

**PHONE:** (707) 564-8000

**PROJECT DESCRIPTION**

Applicant, David Hanawalt, on behalf of property owner, Charlotte Temple, is requesting Design Review approval to construct a 15' x 27' accessory structure with a height of 12'8" to serve as a fireproof photography storage shed and limited landscape improvements including introduction of a concrete pathway and small plantings. The accessory structure would be supported by a concrete slab-on-grade foundation and constructed of concrete block walls with gabled roof that exhibits a pitch consistent with the primary residence. The structure will feature board and batten siding and galvanized metal roof to match the materials and finishes of the primary residence. Pursuant to St. Helena Zoning Code, Section Sec. 17.164.060, staff recommends the Planning Commission approve an exemption from Design Review given that the project poses no substantial design problems and meets the criteria for an exemption pursuant to Municipal Code Section 17.164.030 and as described in more detail below.

**ANALYSIS**

**GENERAL PLAN**

The subject property exhibits a General Plan Land Use designation of Medium Density Residential. This land use designation allows single family detached and attached homes, secondary residential units, and other compatible uses including accessory

*Temple Accessory Shed  
1017 N. Crane Avenue  
Design Review Exemption  
March 7, 2017*

structures. The Medium density residential land use designation serves as the predominant residential land use designation and is intended to perpetuate the existing development patterns exhibited by St. Helena's established neighborhoods.

### **ZONING**

Consistent with the GP land use designation, 1017 N Crane Avenue exhibits a zoning designation of MR: Medium Density Residential. The MR Zoning District allows for accessory structures insofar as they conform to the development standards prescribed by Municipal Code Section 17.40.060 and Section 17.116.010.

Review of the project indicates that it meets all applicable development standards; the proposed project would introduce a new accessory structure of 405 square feet to be located at the property rear, limited in scale relative to the primary residence and accessory dwelling and not readily visible from the public right of way. As proposed the project would not exceed thresholds established for maximum coverage of a required setback. Calculations indicate that 50 percent of the rear setback area would amount to 589 sf; taken together, the portion of square footage of the existing *and* proposed accessory structures that are within the rear setback area would amount to 472 square feet, which equates to less than 50 percent coverage. Similarly, with the addition of the proposed accessory structure, the subject property would exhibit an FAR of 0.195 which is within the allowable FAR of 0.30 (3,300 sf). The proposed structure would exhibit side setbacks of 11'2" and rear setback of 7'6" and therefore exceed the minimum required setbacks of 3 feet.

### **NET FLOOR AREA:**

|                            |         |
|----------------------------|---------|
| EXISTING RESIDENCE         | 1312 SF |
| EXISTING ADU               | 435 SF  |
| EXISTING ACCESS. STRUCTURE | 122 SF  |
| PROPOSED ACCESS. STRUCTURE | 405 SF  |

---

|              |                 |
|--------------|-----------------|
| <b>TOTAL</b> | <b>2,274 SF</b> |
|--------------|-----------------|

**FLOOR AREA RATIO: 2274 /11,641 SF = 0.195**

### **DESIGN REVIEW**

The purpose of design review is to, among other things, promote the qualities that bring value to the community and foster attractiveness and functional utility of the community as a place to live and work. Consistent with Zoning Code Section 17.164.060, the Commission may approve a design review exemption insofar as the project raises no substantial design problems of the sort enumerated in sections 17.164.010 to 17.164.030. The project therefore must be obviously consistent with the design criteria prescribed by Section 17.164.030 (detailed below) and exhibit a quality of design that is compatible with adjacent development, features a siting, scale, massing and architectural style that is generally consistent with the predominant development patterns, and that does not otherwise detract or negatively affect the established

*Temple Accessory Shed  
1017 N. Crane Avenue  
Design Review Exemption  
March 7, 2017*

character of the surrounding neighborhood. Consistency findings related to the Design Review Criteria and enumerated, below.

Design Review Criteria.

1. Consistency and compatibility with applicable elements of the general plan. *As an accessory structure of an appropriate size, scale, and siting and on a medium density residential property, the project would not conflict with or otherwise prevent the attainment of any GP policies, goals, or objectives.*
2. Compatibility of design with the immediate environment of the site;  
*The shed will be compatible in that it will be of a scale clearly subordinate to the primary residence and features materials, finishes, and roof pitch that match the primary residence.*
3. Relationship of the design to the site;  
*The shed will be located at the rear of the property and subordinate to the primary residence.*
4. Determination that the design is compatible in areas considered by the board as having a unified design or historical character;  
*The proposed shed will be located at the rear of the property and exhibit a max height of 12'8" such that it would not be readily visible from street frontage and would not affect the character of the greater neighborhood.*
5. Whether the design promotes harmonious transition in scale and character in areas between different designated land uses;  
*The proposed shed would not be visible from street frontage and therefore would not be expected to affect the visual transitions exhibited by different land use areas.*
6. Compatibility with future construction both on and off the site;  
*The shed will match the primary residence in terms of materials, finishes, and roof pitch and therefore is and would continue to be compatible with construction on site.*
7. Whether the architectural design of structures and their materials and colors are appropriate to the function of the project;  
*The proposed shed will be of a simple design and able to adequately function as a photography shed.*
8. Whether the planning and siting of the various functions and buildings on the site create an internal sense of order and provide a desirable environment for occupants, visitors and the general community;  
*The site includes an existing residence, accessory dwelling, and accessory structure. The existing accessory structure (122 sf) and accessory dwelling (435 sf) and proposed accessory photography shed (405 sf) would be situated at the rear of the property with adequate separation and property setbacks. Further, the uses are scaled such that there is clear hierarchy in terms of the primary residence, accessory dwelling, and accessory sheds. They would be generally located around the periphery of the backyard with connectivity between the uses provided by a small pathway. Given that all of the structures exhibit adequate separation and placement around the yard periphery, the project would promote an internal sense of order and provide a desirable environment.*
9. Whether the amount and arrangement of open space and landscaping are appropriate to the design and the function of the structures;

Temple Accessory Shed  
1017 N. Crane Avenue  
Design Review Exemption  
March 7, 2017

*As an accessory photography shed serving a single family residence additional open space or landscaping is not necessary for the design or functionality of the structure.*

10. Whether sufficient ancillary functions are provided to support the main functions of the project and whether they are compatible with the project's design concept;  
*No additional ancillary functions are proposed.*
11. Whether access to the property and circulation systems are safe and convenient for pedestrians, cyclists and vehicles;  
*The project does not propose any changes to circulation systems or site access.*
12. Whether natural features are appropriately preserved and integrated with the project;  
*The limited size of the shed would not affect significant natural features. The project would necessitate the removal of two 2' caliper olive trees which are not considered significant natural features. A limited amount (<500sf) of landscaping will be introduced to enhance the backyard landscaping.*
13. Whether the materials, textures, colors and details of construction are an appropriate expression of its design concept and function and whether they are compatible with the adjacent and neighboring structure and functions;  
*The accessory structure would be supported by a concrete slab-on-grade foundation and constructed of concrete block walls with gabled roof that exhibits a pitch consistent with the primary residence. The structure will feature board and batten siding and galvanized metal roof to match the materials and finishes of the primary residence. As such, the project would be compatible with neighboring structures.*
14. In areas considered by the board as having a unified design character or historical character, whether the design is compatible with such character;  
*As an ancillary shed at the rear of the subject property, the project would not affect the character of the greater neighborhood.*
15. Whether the landscape design concept for the site, as shown by the relationship of plant masses, open space, scale, plant forms and foliage textures and colors create a desirable and functional environment and whether the landscape concept depicts an appropriate unity with the various buildings on the site;  
*The project would include the introduction of 6' to 10' shrubs in the backyard and along the fence line which appear appropriate for the design and function of the project.*
16. Whether plant material is suitable and adaptable to the site, capable of being properly maintained on the site, and is of a variety which is suitable to the climate of St. Helena;  
*The minimal amount of landscaping proposed and which included a limited amount of shrubs would be suitable for the subject site.*
17. Whether sustainability and climate protection are promoted through the use of green building practices such as appropriate site/architectural design, use of green building materials, energy efficient systems and water efficient landscape materials.  
*The proposed structure has no water supply or wastewater. Further, as detailed in the applicant's written statement, the mechanical system proposed to maintain a steady indoor temperature and humidity for photography archive*

Temple Accessory Shed  
1017 N. Crane Avenue  
Design Review Exemption  
March 7, 2017

*is the most efficient unit rated in the category by Energystar. As such, the project adequately promotes and furthers sustainability goals.*

#### **Staff Findings**

The proposed project is limited to the construction of an accessory structure and minimal landscape improvements (concrete path and shrubs) at the rear of the property which is incidental and clearly subordinate to the primary structure and substantially matches the primary building in terms of materials and finishes. Staff finds that the proposed modifications are of a scale, massing, and quality of design that is appropriate for the subject property. Given its location at the rear of the property it is not expected to diminish or otherwise detract from the character of the neighborhood or that of adjacent properties. Accordingly, the proposed project appears to be consistent with all applicable design review criteria.

#### **CEQA**

The project is exempt from the requirements of CEQA pursuant to Section 15303, which exempts Accessory (appurtenant) structures including garages, carports, patios, swimming pools, and fences. The proposed project is not subject to any of the exceptions to the use of a categorical exemption as outlined in CEQA Section 15300.2. The project site is not located on or near an environmentally sensitive area, is not visible from a scenic highway, is not included on a hazardous waste site, and will not impact historic resources or otherwise generate or contribute to any potentially significant impacts.

#### **STAFF RECOMMENDATION**

Staff recommends that the Planning Commission adopt a resolution finding that:

1. The project is exempt from the requirements of CEQA pursuant to CEQA Section 15303 as the construction of an accessory structure.
2. Accepts the required findings and approves the design review exemption for the Temple Shed at 1017 N. Crane Avenue.

**CITY OF ST. HELENA PLANNING COMMISSION**

**RESOLUTION NO.**

**RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ST. HELENA  
GRANTING APPROVAL OF A DESIGN REVIEW EXEMPTION  
FOR THE TEMPLE ACCESSORY SHED LOCATED AT 1017 N. CRANE AVENUE**

**PROPERTY OWNER:** Mr. David Hanawalt

**APN:** 009-322-003

**Recitals**

**A. Whereas**, Mr. David Hanawalt submitted an application for a Design Review Exemption to construct a new accessory structure at 1017 Crane Avenue in the MR: Medium Density Residential District, and

**D. Whereas**, A staff report dated March 7, 2017 and incorporated herein by reference analyzed the projects consistency with the Design Criteria enumerated in Section 17.164.030 of the Municipal Code, and

**D. Whereas**, the Planning Commission of the City of St. Helena, State of California, considered the project, staff report, and all testimony, written and spoken, at a duly noticed public hearing on March 7, 2017, and

**E. Now, therefore** let it be found that, the Planning Commission approves the Design Review Exemption and authorizes the modifications contained in said plans based on the findings below and subject to the conditions of approval enumerated herein.

**Resolution**

1. The project is exempt from the requirements of CEQA pursuant to Section 15303, which exempts Accessory (appurtenant) structures including garages, carports, patios, swimming pools, and fences. The proposed project is not subject to any of the exceptions to the use of a categorical exemption as outlined in CEQA Section 15300.2. The project site is not located on or near an environmentally sensitive area, is not visible from a scenic highway, is not included on a hazardous waste site, and will not impact historic resources or otherwise generate or contribute to any potentially significant impacts.

2. DESIGN REVIEW:

The purpose of design review is to, among other things, promote the qualities that bring value to the community and foster attractiveness and functional utility of the community as a place to live and work. Consistent with Zoning Code Section 17.164.060, the Commission may approve a design review exemption insofar as the project raises no substantial design problems of the sort enumerated in sections 17.164.010 to 17.164.030. The project therefore must be obviously consistent with the design criteria prescribed by Section 17.164.030 (detailed below) and exhibit a quality of design that is compatible with adjacent development,

features a siting, scale, massing and architectural style that is generally consistent with the predominant development patterns, and that does not otherwise detract or negatively affect the established character of the surrounding neighborhood.

Design Review Criteria:

1. Consistency and compatibility with applicable elements of the general plan. *As an accessory structure of an appropriate size, scale, and siting and on a medium density residential property, the project would not conflict with or otherwise prevent the attainment of any GP policies, goals, or objectives.*
2. Compatibility of design with the immediate environment of the site;  
*The shed will be compatible in that it will be of a scale clearly subordinate to the primary residence and features materials, finishes, and roof pitch that match the primary residence.*
3. Relationship of the design to the site;  
*The shed will be located at the rear of the property and subordinate to the primary residence.*
4. Determination that the design is compatible in areas considered by the board as having a unified design or historical character;  
*The proposed shed will be located at the rear of the property and exhibit a max height of 12'8" such that it would not be readily visible from street frontage and would not affect the character of the greater neighborhood.*
5. Whether the design promotes harmonious transition in scale and character in areas between different designated land uses;  
*The proposed shed would not be visible from street frontage and therefore would not be expected to affect the visual transitions exhibited by different land use areas.*
6. Compatibility with future construction both on and off the site;  
*The shed will match the primary residence in terms of materials, finishes, and roof pitch and therefore is and would continue to be compatible with construction on site.*
7. Whether the architectural design of structures and their materials and colors are appropriate to the function of the project;  
*The proposed shed will be of a simple design and able to adequately function as a photography shed.*
8. Whether the planning and siting of the various functions and buildings on the site create an internal sense of order and provide a desirable environment for occupants, visitors and the general community;  
*The site includes an existing residence, accessory dwelling, and accessory structure. The existing accessory structure (122 sf) and accessory dwelling (435 sf) and proposed accessory photography shed (405 sf) would be situated at the rear of the property with adequate separation and property setbacks. Further, the uses are scaled such that there is clear hierarchy in terms of the primary residence, accessory dwelling, and accessory sheds. They would be generally located around the periphery of the backyard with connectivity between the uses provided by a small pathway. Given that all of the structures exhibit adequate separation and placement around the yard periphery, the project would promote an internal sense of order and provide a desirable environment.*
9. Whether the amount and arrangement of open space and landscaping are appropriate to the design and the function of the structures;

*As an accessory photography shed serving a single family residence additional open space or landscaping is not necessary for the design or functionality of the structure.*

10. Whether sufficient ancillary functions are provided to support the main functions of the project and whether they are compatible with the project's design concept;  
*No additional ancillary functions are proposed.*
11. Whether access to the property and circulation systems are safe and convenient for pedestrians, cyclists and vehicles;  
*The project does not propose any changes to circulation systems or site access.*
12. Whether natural features are appropriately preserved and integrated with the project;  
*The limited size of the shed would not affect significant natural features. The project would necessitate the removal of two 2' caliper olive trees which are not considered significant natural features. A limited amount (<500sf) of landscaping will be introduced to enhance the backyard landscaping.*
13. Whether the materials, textures, colors and details of construction are an appropriate expression of its design concept and function and whether they are compatible with the adjacent and neighboring structure and functions;  
*The accessory structure would be supported by a concrete slab-on-grade foundation and constructed of concrete block walls with gabled roof that exhibits a pitch consistent with the primary residence. The structure will feature board and batten siding and galvanized metal roof to match the materials and finishes of the primary residence. As such, the project would be compatible with neighboring structures.*
14. In areas considered by the board as having a unified design character or historical character, whether the design is compatible with such character;  
*As an ancillary shed at the rear of the subject property, the project would not affect the character of the greater neighborhood.*
15. Whether the landscape design concept for the site, as shown by the relationship of plant masses, open space, scale, plant forms and foliage textures and colors create a desirable and functional environment and whether the landscape concept depicts an appropriate unity with the various buildings on the site;  
*The project would include the introduction of 6' to 10' shrubs in the backyard and along the fence line which appear appropriate for the design and function of the project.*
16. Whether plant material is suitable and adaptable to the site, capable of being properly maintained on the site, and is of a variety which is suitable to the climate of St. Helena;  
*The minimal amount of landscaping proposed and which included a limited amount of shrubs would be suitable for the subject site.*
17. Whether sustainability and climate protection are promoted through the use of green building practices such as appropriate site/architectural design, use of green building materials, energy efficient systems and water efficient landscape materials.  
*The proposed structure has no water supply or wastewater. Further, as detailed in the applicant's written statement, the mechanical system proposed to maintain a steady indoor temperature and humidity for photography archive is the most efficient unit rated in the category by Energy star. As such, the project adequately promotes and furthers sustainability goals.*

The proposed project is limited in scope and limited to the construction of an accessory structure and limited landscape improvements (concrete path and shrubs) at the rear of the property which is incidental and clearly subordinate to the primary structure and substantially matches the primary building in terms of materials and finishes. Staff finds that the proposed modifications are of a scale, massing, and quality of design that is appropriate for the subject property. Given its location at the rear of the property it is not expected to diminish or otherwise detract from the character of the neighborhood or that of adjacent properties. Accordingly, the proposed project appears to be consistent with all applicable design review criteria.

**F. Now therefore be it further resolved** that, the Design Review for the above described project is granted subject to compliance with all applicable provisions of the Zoning Code subject to each of the following conditions. Permit shall be in conformance with all City ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.

#### **Conditions of Approval**

1. The Permit shall be in conformance with all City ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.
2. The plans submitted for building permit review shall be in substantial conformance with the plans on file in the Planning Division, date stamped December 5, 2016, except as modified by the following conditions.
3. The Design Review Exemption shall be vested within one (1) year from the date of approval. A building permit for the use allowed under this approval shall have been obtained within one (1) year from the effective date of the Use Permit and Design Review decision or these approvals shall expire; provided however that the approved Use Permit and Design Review may be extended for up to two (2) one-year periods pursuant to the St. Helena Municipal Code, Section 17.08.030, Extension of Permits and Approvals.
4. The Design Review Exemption shall become effective fourteen (14) calendar days after approval, provided that the action is not appealed by the City Council or any other interested party within that 14 day period.
5. Any request for an extension of the Design Review Exemption must be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.
6. All required fees, including planning fees, development impact fees, building fees, retrofit fees, and St. Helena Unified School District fees shall be paid prior to issuance of building permit.

7. Prior to issuance of construction permits, compliance with conditions of approval shall be clearly identified on all plans. A copy of approved plans with the conditions listed *on* said plans shall be maintained on-site during construction activities.
8. Conditions shall be achieved at such a time as determined by the City and shall be achieved at the requisite stage and before issuance of certificate of occupancy or initiation of use unless another time is set by law or by this approval. Occupancy or final inspection of a project may be withheld if all conditions, including payment of fees for services rendered by the City, are not met.
9. The applicant shall defend and indemnify and hold the City, its agents, officers, and employees harmless of any claim, action or proceedings to attack, set aside, void or annul an approval so long as the City promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.
10. This Design Review approval shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.
11. The primary purpose of this review is for compliance with the General Plan and Zoning Ordinance. The owner/applicant is responsible for meeting with the Building Official / Fire Inspector to review compliance with Building and Fire Codes, including fire protection systems and the accessibility standards of Title 24.
12. No structure shall be permitted over any existing property lines. Documentation of the location of the property lines shall be submitted with plans for building permit issuance.
13. A building permit is required for any onsite demolition, construction or change of occupancy.
14. Fire sprinklers could be required depending on the extent of the modifications to the ceiling envelop. This will be determined as a component of the building permit review.

#### **Public Works Department Conditions of Approval**

15. Approval of this project shall be subject to the requirements of, and all improvements shall be designed and constructed in accordance with, the most current version at the time of improvement plan submittal, Caltrans Standards and Specifications, the City of St. Helena Municipal Code, the St. Helena Water and Sewer Standards, the St. Helena Street, Storm Drain and Sidewalk Standards, and all current federal, state and county codes governing such improvements.
16. For any improvements outside the existing building envelope, a grading and drainage plan showing topographic data, all easements, infrastructure onsite and

directly adjoining, and an erosion control plan shall be submitted for review and approval by the City Engineer prior to the issuance of a building permit. If the project entails more than 50 cubic yards of soil disturbance, 10,000 square feet of disturbance area, a cut or fill of 3 feet or more, or alteration of any drainage pattern, a grading permit shall be required.

17. Drainage needs to be routed to prevent inundation of neighboring properties. Grading and/or site improvement plans shall show how 2-year and 10-year storm flows shall be infiltrated on site and/or diverted at the property lines to prevent inundation of neighboring properties.
18. If the project includes 500 square feet or more of new landscaping and/or 2,500 square feet or more of rehabilitated landscape, the proposed landscaping shall comply with the State's Model Water Efficient Landscape Ordinance (MWELo).
19. Erosion and sediment control plans shall conform to the latest State and City codes at a minimum.
20. Provide details of any and all proposed fencing and/or walls on all plans submitted for building permit review.

**I HEREBY CERTIFY** that the foregoing Design Review Exemption was duly and regularly approved by the Planning Commission of the City of St. Helena at a regular meeting of said Planning Commission held on March 7, 2017 by the following roll call vote:

7. WRITTEN DIMENSIONS TAKE PRECEDENCE OVER DIMENSIONS SHOWN ON DRAWINGS. WHERE DISCREPANCIES OCCUR, NOTIFY LAL DESIGN GROUP FOR CLARIFICATION.
8. ACCEPT NO PAY OR PUNCH CORRECTIONS TO THESE DRAWINGS WITHOUT THE DESIGNER'S INITIALS AND SIGNATURE. ALL CHANGES NOT IN CONFORMANCE WITH THIS PROVISION.
9. ALL USERS OF THESE DRAWINGS AGREE BY USING THEM TO BE RESPONSIBLE FOR ANY AND ALL WORK THAT DOES NOT COMPLY WITH THE APPLICABLE BUILDING CODES, LOCAL ORDINANCES, AND ACCEPTABLE STANDARDS.
10. THESE DRAWINGS ARE THE PROPERTY OF LAL DESIGN GROUP. THEY ARE TO BE USED ONLY FOR THE PROJECT SHOWN ON THESE PLANS.
11. LAL DESIGN GROUP SHALL HAVE NO CONTROL OR LIABILITY FOR CONSTRUCTION MEANS, METHODS, TECHNIQUES, PRELIMINATIONS AND PROGRAMS IN CONNECTION WITH THE WORK.
12. LAL DESIGN GROUP ASSUMES NO RESPONSIBILITY FOR PERFORMANCE OF PRODUCTS OR MATERIALS SPECIFIED.
13. PERMITS REQUIRED BY TITLE 24, THEREBY CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE CALIFORNIA BUILDING COMMISSION (CBC), EQUIPMENT RECORDING IS TO BE APPROVED WITH COMPLETE PRINTED MAINTENANCE INSTRUCTIONS.
14. REFER TO THE PROJECT MANUAL FOR DETAILED INTERFERENCE REQUIREMENTS AND INPUT/OUTPUT LISTS AND REQUIREMENTS.
15. THE CONTRACTOR SHALL FINISH ALL SYSTEMS INSTALLATION IN ACCORDANCE WITH EXISTING AND ACCEPTABLE TRADE PRACTICE.
16. THESE VARIATIONS ARE REQUIRED FOR THIS PROJECT AND ARE NOT TO BE USED FOR ANY OTHER PROJECT PRIOR TO FINAL INSPECTION.

#### GREEN BLDG. CODE NOTES

- A. MINIMUM SPACES AROUND PRESS. ELECTRIC CABLES, CONDUITS OR OTHER OPENINGS IN PLATES AT EXTERIOR WALL SHALL BE PROVIDED AGAINST THE PASSAGE OF ROBOTS BY ACCEPTABLE METHOD. (CBC Section 4.09.4.2)
- B. A MINIMUM OF 50 PERCENT OF CONSTRUCTION WASTE GENERATED AT THE SITE SHALL BE DIVERTED TO RECYCLE OR SALVAGE. (CBC Section 4.09.4.1)
- C. DUCT AND VENT OPENINGS SHALL BE COVERED DURING CONSTRUCTION. (CBC Section 4.09.4.1)
- D. ADHESIVES, SEALANTS AND GROUTS SHALL BE COMPLIANT WITH VOC AND OTHER TOXIC COMPOUND LIMITS. (CBC Section 4.09.4.2)
- E. PAINTS, STAINS AND OTHER COATINGS SHALL BE COMPLIANT WITH VOC LIMITS. (CBC Section 4.09.4.2)
- F. AEROSOL PAINTS AND COATINGS SHALL BE COMPLIANT WITH VOC LIMITS. (CBC Section 4.09.4.2)
- G. DOCUMENTATION SHALL BE PROVIDED TO VERIFY THAT COMPLIANT VOC LIMIT. (CBC Section 4.09.4.2)
- H. CARPET AND CARPET SYSTEMS SHALL BE COMPLIANT WITH VOC LIMITS. (CBC Section 4.09.4.2)
- I. 80 PERCENT OF FLOOR AREA RECEIVING RESIDENT FLOORING SHALL COMPLY WITH THE (CBC) HIGH PERFORMANCE PRODUCTS DATABASE OR COMPLIANT WITH CRI'S GREENLAB EVALUATION OF VOLATILE ORGANIC COMPOUND EMISSIONS FROM INDOOR SOURCES USING ENVIRONMENTAL CHAMBERS. (CBC Section 4.09.4.2)
- J. PATIENT ROOMS, MEDICAL OFFICES, FREESTANDING (UNIT) AND LABORATORY WARD USED IN INTERIOR FINISH SYSTEMS SHALL COMPLY WITH LOW FORMALDEHYDE EMISSION STANDARDS. (CBC Section 4.09.4.2)
- K. MOISTURE CONTENT OF BUILDING MATERIALS USED IN EXPOSED WALL AND FLOOR FRAMING IS TO BE MEASURED BEFORE ENCLOSURE AND CANNOT EXCEED 19% (CBC Section 4.09.4.2)
- L. HVAC SYSTEM INSTALLERS ARE TRAINED AND CERTIFIED IN THE PROPER INSTALLATION OF HVAC SYSTEMS. (CBC Section 7.2.2.1)

City of St. Helena

## Project Statement- Accessory Shed

Charlotte Temple, 1017 North Crane Avenue

apn: 009-322-003

This proposed project is for addition of an accessory structure in the rearyard of existing Residential single family, single story house (SB construction) in MR zoned district of City of St. Helena. Charlotte Temple, Owner, proposes to build an accessory fireproof photography storage shed measuring 15' x 27' in plan and 12'-8" from grade to the top of the roof vent strip. A fire rated exterior double door along the driveway side will have concrete impervious paving, an outdoor LED 'nightsky' type service light and the placement of the new structure will require the removal of two 2" caliper olive trees.

We are working with Juan Escudero, Structural Engineer (lic#35404) to provide structural analysis and details for the structure. To make the structure fireproof, it will have concrete block walls, concrete slab on grade and a concrete slab over the top with added wood gable truss to match the existing house slope and exterior roofing finishes. The exterior walls will be sided to match the house exterior finishes with matching eaves and paint.

Mechanical systems will include a Daikin Quaternity mini split heat pump with humidity control and a fresh air intake on a continuous operating Panasonic WhisperComfort energy recovery ventilator. To keep the structure fireproof, the doors will be fire rated, the ducted air intake and exhaust will have intumescent fire sealing properties. The structure may also include a fire suppression system using Halon or other "dry" type systems to be designed/specified/installed and permitted by other (not part of this permit). There will be no water supply or waste line for the structure.

### Planning Exemption request:

As the accessory shed is a permitted use in the (MR) Medium Density Residential districts, and the structure is proposed for a backyard location not visible from the public street and compliant with listed setback requirements for accessory structures, we are applying for a design review exemption. As provided in 17.164.060 Exemptions, the proposed design as presented:

- a) 17.164.010 provides no problems for planning goals to not harm neighbors in the form of public views or public spaces, and no significant views over private fences into Ms. Temple's backyard.  
17.164.030 provides no problems for planning goals to not harm the residential district by allowing a non-permitted use, because the accessory use is permitted (17.40.020-H). The proposed structure is scaled to be smaller than the house and guest house, while using the same roof angles, roof overhang details and exterior materials and finishes. It does not impose in any way on other structures, nor the surrounding neighborhood area and minimizes changes to existing internal landscape elements and no effect on external landscape elements. The proposed structure has no water supply or wastewater. The mechanical system proposed to maintain steady indoor temperature and humidity for photography archive is the most efficient unit ever rated in the category by EnergyStar
- b) 17.164.020 is consistent with planning goals in bringing value to the community, fostering an attractive arrangement of residential use, preserving heritage and character (a photography

archive in service of this goal), and generally raising the community expectations for a quality environment through visual sensibility/acuity.

17.164.030 is consistent with planning goals in scale, detail, material and finishes, preserves landscape elements, uses no water and proposes to use an extraordinarily efficient mechanical system for energy conservation. It is also designed to be fireproof and in that sense, confers minimum fire risk to adjacent properties.

Please contact me via phone or email with questions or for clarifications.

Sincerely,

A handwritten signature in black ink, appearing to read 'David Hanawalt', with a long horizontal line extending to the right.

**CITY OF ST. HELENA  
PLANNING DEPARTMENT 1480 MAIN STREET- ST. HELENA, CA 94574  
PLANNING COMMISSION**

**March 7, 2017**

**AGENDA SECTION:** CONSENT CALENDAR

**AGENDA ITEM:**

**FILE NUMBER:** PL16-096

**SUBJECT:** Design Review Exemption for Harold Smith & Sons Concrete Reclaimer Replacement

**PREPARED BY:** Noah Housh, Planning Director

**REVIEWED BY:** Noah Housh, Planning Director

**APPLICATION FILED:** 12.06.16

**ACCEPTED AS COMPLETE:** 1.5.17

**LOCATION OF PROPERTY:** 800 Crane Avenue, St.Helena, CA 94574

**APPLICANT:** Pam Raybould      **PHONE:** 1(707) 963-7977

**APN:** 009-280-040

**GENERAL PLAN/ZONING:** I:Industrial

**PROPERTY DESCRIPTION:**

The subject property is an industrial lot of approximately 11.67 acres. The site supports an existing non-conforming (in that the business pre-dates the requirement for a use permit to operate) general engineering and construction operation that produces and stores ready mix concrete, landscaping material, sand, and gravel. The subject site is traversed by Sulphur Springs Creek.

**PROJECT DESCRIPTION:**

Applicant, Pam Raybould, is requesting a retroactive Design Review Exemption to authorize replacement of the existing rapid concrete reclaimer with a new concrete reclaimer of substantially the same size and processing capacity. The rapid concrete reclaimer serves as a component of the site's reclamation plan required under a July 1999 Cleanup and Abatement Order Number 99-016 issued by the California Regional Water Quality Control Board. The basic purpose of the reclaimer is to allow un-used cementitious material to be reclaimed from the equipment, improving the process and discarded process water quality.

The original reclaimer processed 20-30 truck rinse outs per day and processed 8-10 cubic yards of returned concrete per day; however, it was found that the original

800 Crane Avenue  
Design Review Exemption  
Harold Smith and Sons Concrete Reclaimer Replacement  
March 7, 2017

concrete reclaimer could not effectively remove aggregates in a way that they could be re-used. As such, the applicant is requesting a design review exemption to retroactively authorize the replacement of the original concrete reclaimer. Portions of the reclaimer equipment were replaced without the benefit of a permit or approval of the required Design Review Exemption. In addition to the equipment, the applicant is requesting approval to construct an open air, shed roof over the proposed equipment. This structure is over an existing impermeable surface and is below the maximum height of 15-feet allowed for accessory structures.

According to the applicant and as detailed in the project narrative (**Attachment 4**), the replacement reclaimer will process the same level of waste per day (20-30 truck rinses per day and process 8-10 cubic yards of returned concrete). The new reclaimer will be of substantially the same size and capacity, but would be relocated to the drying pit area and partially situated below natural grade so as to allow trucks to back into it. Reclaimed water will continue to be used by the reclaimer and as such, no net change in potable water use is expected.

## **ANALYSIS**

### **GENERAL PLAN**

The Industrial Land Use Designation provides for industrial parks, warehouses, light manufacturing, auto and farm related equipment sales and repairs, viticulture support services, and similar and compatible uses. This designation is found in two locations within the City: The area along Sulphur Springs Creek between Highway 29 and Valleyview Street (the subject site) and an area east of Highway 29 and south of Mills Lane.

Given that the project consists of in-kind replacement of existing machinery with no change or expansion in the existing use, the project proposal does not include any component that would be in conflict with the Industrial land use designation.

### **ZONING**

Consistent with the General Plan Designation, the Industrial (I) zoning district provides for industrial parks, warehouses, light manufacturing, auto and farm-related equipment sales and repairs, etc.. Under the Industrial Zoning Designation, "lumber and building materials yards" are conditionally allowed. Given that Harold Smith and Sons has been in operation at this site since 1917 and prior to the introduction of current zoning requirements (use permit requirements appear to have been required as early as the 1940s), the operation is considered a "legal non-conforming use." A legal non-conforming use is a legally established use of land which is not permitted in the zoning district in which it is located, or a use which is permitted by use permit but for which no use permit has been obtained, because the use was established prior to the use permit regulations of the zoning ordinance.

As detailed under St. Helena Municipal Code Section 17.140, land uses that are categorized as "legal non-conforming uses" may be continued indefinitely, subject to the provisions of Code Section 17.140, but shall not be permitted to expand operation or enlarge floor area. Consistent with the Code requirements, the proposal to replace the

800 Crane Avenue  
Design Review Exemption  
Harold Smith and Sons Concrete Reclaimer Replacement  
March 7, 2017

existing reclaimer will be in generally the same location as the original reclaimer and of substantially the same size and capacity and therefore, and therefore will not result in an expansion of use or otherwise conflict with any requirements enumerated under Code Section 17.140. The replacement reclaimer will measure 15' in height and features setbacks of over 100-feet from each property line.

#### **CEQA**

The project is categorically exempt in accordance with CEQA Section 15302 "Replacement or Reconstruction" as the replacement of a commercial structure with a new structure of substantially the same size, purpose, and capacity.

#### **WATER NEUTRALITY**

In August 2015 and pursuant to Ordinance 2015-5 the City of St. Helena established mandatory water efficiency measures for new construction, and adopted water demand offset requirements enumerated in Chapter 13.12.050 of the Municipal Code. Amongst these provisions is the requirement that any "new development" (i.e. construction that would introduce any freestanding building that contains water-using fixtures, any floor area additions to existing nonresidential structures, or any residential additions or remodeling that increases the number of independent living units) offset new demand by an amount of water equal to the new demand placed on the city water system using the methodology defined in Code section 13.12.050. The offset must be clearly demonstrated to the satisfaction of the Director of Public Works.

The new concrete reclaimer will continue to utilize reclaimed water and therefore is not expected to generate a net increase in water use. Accordingly, the proposed project would not be in conflict with any of the provisions of the water neutrality requirements (**Attachment 6**).

#### **DESIGN REVIEW**

The purpose of design review is to, amongst other things, promote the qualities that bring value to the community and foster attractiveness and functional utility of the community as a place to live and work. To approve design review, the Commission must find that the project is consistent with the design criteria prescribed by Section 17.164.030 and exhibits a quality of design that is compatible with adjacent development, features a siting, scale, massing and architectural style that is generally consistent with the predominant development patterns and that does not otherwise detract or negatively affect the established character of the surrounding neighborhood.

The approximately 11 acre site is distinct from the surrounding area given that it serves as one of only two industrial areas within the City. As an industrial site, the Harold Smith and Sons operation favors functionality over aesthetics. The proposed replacement reclaimer will be very similar to the existing reclaimer in size and scale and will not cause a deviation in the established industrial character of the site. Further, it will be located in generally the same location as the existing reclaimer and clustered with other industrial equipment components onsite. As such, the proposed replacement in-kind of the concrete reclaimer is expected to be consistent with all design review criterion enumerated below.

800 Crane Avenue  
Design Review Exemption  
Harold Smith and Sons Concrete Reclaimer Replacement  
March 7, 2017

Design Criteria

1. Consistency and compatibility with applicable elements of the general plan;
2. Compatibility of design with the immediate environment of the site;
3. Relationship of the design to the site;
4. Determination that the design is compatible in areas considered by the board as having a unified design or historical character;
5. Whether the design promotes harmonious transition in scale and character in areas between different designated land uses;
6. Compatibility with future construction both on and off the site;
7. Whether the architectural design of structures and their materials and colors are appropriate to the function of the project;
8. Whether the planning and siting of the various functions and buildings on the site create an internal sense of order and provide a desirable environment for occupants, visitors and the general community;
9. Whether the amount and arrangement of open space and landscaping are appropriate to the design and the function of the structures;
10. Whether sufficient ancillary functions are provided to support the main functions of the project and whether they are compatible with the project's design concept;
11. Whether access to the property and circulation systems are safe and convenient for pedestrians, cyclists and vehicles;
12. Whether natural features are appropriately preserved and integrated with the project;
13. Whether the materials, textures, colors and details of construction are an appropriate expression of its design concept and function and whether they are compatible with the adjacent and neighboring structure and functions;
14. In areas considered by the board as having a unified design character or historical character, whether the design is compatible with such character;
15. Whether the landscape design concept for the site, as shown by the relationship of plant masses, open space, scale, plant forms and foliage textures and colors create a desirable and functional environment and whether the landscape concept depicts an appropriate unity with the various buildings on the site;
16. Whether plant material is suitable and adaptable to the site, capable of being properly maintained on the site, and is of a variety which is suitable to the climate of St. Helena;
17. Whether sustainability and climate protection are promoted through the use of green building practices such as appropriate site/architectural design, use of green building materials, energy efficient systems and water efficient landscape materials.

800 Crane Avenue  
Design Review Exemption  
Harold Smith and Sons Concrete Reclaimer Replacement  
March 7, 2017

### **CORRESPONDENCE**

No comments have been received at the drafting of this staff report.

### **ISSUES**

Harrold Smith and Sons does not operate under a use permit, rather they are anon-conforming business. Based on this, no approval may authorize any expansions or other intensification in their use, unless a use permit is filed requesting to expand the non-confirming business. Therefore, any improvements to the business must not expand the current prodcuton capacity.

Staff has reviewed the proposed equipment, as compared with the existing equipment and finds that the overall concrete prodcuton of the business will not increase through the installation of the proposed equipment. Rather, the existing prodcuton levels will become more efficient in their use of water and ability to recycle concrete paste.

### **STAFF RECOMMENDATION**

The Planning and Community Improvement Department recommends that the Planning Commission:

1. Determine that the project is categorically exempt from the requirements of CEQA pursuant to CEQA Section 15302 "Replacement or Reconstruction" as the replacement of a commercial structure with a new structure of substantially the same size, purpose, and capacity.
2. Accept the required findings enumerated in Municipal Code Section 17.164.030 and adopt a resolution approving a Design Review Exemption for the proposed Harold Smith and Sons Concrete Reclaimer Replacement project.

### **ATTACHMENTS**

800 Crane Avenue  
Design Review Exemption  
Harold Smith and Sons Concrete Reclaimer Replacement  
March 7, 2017

**CITY OF ST. HELENA PLANNING COMMISSION**

**RESOLUTION PC20xx-xx**

**RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ST. HELENA  
GRANTING APPROVAL OF A DESIGN REVIEW EXEMPTION  
FOR THE HAROLD SMITH AND SONS CONCRETE RECLAIMER REPLACEMENT  
PROJECT LOCATED AT 800 CRANE AVENUE**

**PROPERTY OWNER:** Pam Raybould

**APN:** 009-280-040

**Recitals**

- A. Whereas,** Pam Raybould submitted an application for retroactive Design Review approval to replace an existing concrete reclaimer of substantially the same size and capacity as that previously existing and located at 800 Crane Avenue in the (I) Industrial Zoning District; and
- B. Whereas,** the Planning Commission of the City of St. Helena, State of California, considered the project, staff report, and all testimony, written and spoken, at a duly noticed public hearing on March 7, 2017.
- C. Now, therefore** let it be found that, the Planning Commission approves the requested Design Review Exemption on the following basis:

**Resolution**

- A.** The Planning Commission hereby finds that this project qualifies for a Class 2 Categorical Exemption pursuant to Section 15302, of the California Environmental Quality Act (CEQA).
- B.** The Planning Commission has considered the Design Review criteria identified in Municipal Code Section 17.164.030 to support the motion to approve the Design Review Exemption given that the project has been found to be substantially similar in size, capacity, and siting to the previously existing concrete reclaimer and would not depart from the established industrial character of the site and therefore demonstrates the following:
1. Consistency and compatibility with applicable elements of the general plan in that the project maintains the standards for lot sizes and development, identified in the Agriculture designation;
  2. Compatibility of design with the immediate environment of the site given that the design maintains historic design features and materials;
  3. Relationship of the design to the site given the scale of the addition, the proposed setbacks and the context of the neighborhood;

4. Determination that the design is compatible in areas considered by the Commission as having a unified design or historical character given the historic scale and design features incorporated into the proposal;
5. Whether the design promotes harmonious transition in scale and character in areas between different designated land use given the surrounding agricultural properties;
6. Compatibility with future construction both on and off the site given the access, context and historic nature of the surrounding neighborhood;
7. Whether the architectural design of structures and their materials and colors are appropriate to the function of the project providing appropriate design elements and exterior features;
8. Whether the planning and siting of the various functions and buildings on the site create an internal sense of order and provide a desirable environment for occupants, visitors and the general community which the project does through appropriate setbacks and thoughtful site planning;
9. Whether the amount and arrangement of open space and landscaping are appropriate to the design and the function of the structures which they are given the provided site plan, setback and landscaping proposed;
10. Whether sufficient ancillary functions are provided to support the main functions of the project and whether they are compatible with the project's design concept which the outdoor decks, pool and rear yard arbor are found to be;
11. Whether access to the property and circulation systems are safe and convenient for pedestrians, cyclists and vehicles which they are given the continuation of the single family use and maintenance of the existing access to the property;
12. Whether natural features are appropriately preserved and integrated with the project which the project seeks to do through careful site planning;
13. Whether the materials, textures, colors and details of construction are an appropriate expression of its design concept and function and whether they are compatible with the adjacent and neighboring structure and functions which they are given the historic design themes and elements;
14. In areas considered by the board as having a unified design character or historical character, whether the design is compatible with such character which the design is found to be, given the features and elements referenced above;
15. Whether the landscape design concept for the site, as shown by the relationship of plant masses, open space, scale, plant forms and foliage textures and colors create a desirable and functional environment and whether the landscape concept depicts an appropriate unity with the various buildings on the site which it does through careful and appropriate planting choices and locations;

16. Whether plant material is suitable and adaptable to the site, capable of being properly maintained on the site, and is of a variety which is suitable to the climate of St. Helena, which it is given the drought tolerant elements proposed;
17. Whether sustainability and climate protection are promoted through the use of green building practices such as appropriate site/architectural design, use of green building materials, energy efficient systems and water efficient landscape materials which is, based on the significant energy and water saving requirements of the California Building Code and City of St Helena development criteria

**D.** Now therefore be it further resolved that, the Design Review for the above described project is granted subject to compliance with all applicable provisions of the Zoning Code subject to each of the following conditions. Permit shall be in conformance with all City ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.

#### CONDITIONS OF APPROVAL

1. The Design Review shall be vested within one (1) year from the date of approval. A building permit for the use allowed under this approval shall have been obtained within one (1) year from the effective date of the Design Review decision or these approvals shall expire; provided however that the approved Design Review may be extended for up to two (2) one-year periods pursuant to the St. Helena Municipal Code, Section 17.08.030, Extension of Permits and Approvals.
2. This permit is valid for this design only and does not permit any expansion of the existing use, production capacity or any other activities deemed by the City to be an expansion of the non-conforming land use. New permits must be applied for any change in use. These permits will expire if the use is discontinued pursuant to then existing ordinances and regulations.
3. The Design Review shall not become effective until fourteen (14) calendar days after approval, providing that the action is not appealed by the City Council or any other interested party within that 14 day period.
4. Any request for an extension of the Design Review must be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.
5. All required fees, including planning fees, development impact fees, building fees, retrofit fees, and St. Helena Unified School District fees shall be paid prior to issuance of building permit.
6. Compliance with all permit conditions shall be clearly identified on all plans submitted for building permit approval, shall occur in accordance with specific regulations but in all cases no later than prior to occupancy or initiation of use unless another time is set

by law or by this approval. Occupancy or final inspection of a project may be withheld if all conditions, including payment of fees for services rendered by the City, are not met.

7. The applicant will defend and indemnify and hold the City, its agents, officers, and employees harmless of any claim, action or proceedings to attack, set aside, void or annul an approval so long as the City promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.
8. Provided they are in general compliance with the approved Design Review, minor modifications found to be in substantial conformance with the approved design may be approved by the Planning Director.
9. This Design Review shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.
10. The primary purpose of this review is for compliance with the General Plan and Zoning Ordinance. The owner/applicant is responsible for meeting with the Building Official / Fire Inspector to review compliance with Building and Fire Codes, including fire protection systems and the accessibility standards of Title 24.
11. Construction documents shall be in compliance with approved plans and exhibits.
12. This action approves the installation of new concrete reclaimer equipment and a shed roof over this equipment with a maximum height of 15-feet.

#### **Public Works Department Conditions of Approval**

13. Approval of this project shall be subject to the requirements of, and all improvements shall be designed and constructed in accordance with, the most current version at the time of improvement plan submittal, Caltrans Standards and Specifications, the City of St. Helena Municipal Code, the St. Helena Water and Sewer Standards, the St. Helena Street, Storm Drain and Sidewalk Standards, and all current federal, state and county codes governing such improvements.
14. The applicant shall repair all public improvements that are damaged by the construction process in accordance with the City Water/Sewer/Street/Storm Drain/Sidewalk Standards prior to Certificate of Occupancy.

#### **Fire Department Conditions of Approval**

15. One hour minimum fire resistant construction may be required on all exterior walls of other structures within 10' of property boundary. Fire resistant construction of interior walls shall be determined by type of occupancy.

#### **Building Department Conditions of Approval**

16. A building permit is required for all onsite demolition, construction and/or change of occupancy.
17. The applicant will be required to comply with the codes adopted at the time the applicant applies for a building permit. At this time the City of St. Helena utilizes the 2013 Title 24 codes however the 2016 Title 24 codes go into effect January 1, 2017.
18. When submitting plans for a building permit, the plans shall include all documentation listed on the building permit application checklist.
19. The applicant shall provide a construction waste management plan with the building permit application.
20. The plans for construction shall include a checklist for compliance with the California Green Buildings Standards Code, mandatory measures. Provide a reference on the checklist indicating where the mandatory measures can be found on the plans.
21. When submitting plans, the title page shall include all information referenced on the building permit application checklist Title Page requirements.
22. Building Permit application materials and plans shall include any documentation pertaining to special loads applicable to the design and the specified section of the code that addresses the condition; special inspections for any systems or components requiring special inspection; requirements for seismic resistance; and a complete list of deferred submittals at time of application. Any deferral of the required submittal items shall have prior approval of the Building Official however deferral of fire sprinkler design is not allowed.
23. Properties which are on septic systems and proposing substantial renovations may require approval from the Napa County Environmental Health Department. Applicants are encouraged to engage with the County early in the building permit review process to reduce the potential for delay.

**I HEREBY CERTIFY** that the foregoing Design Review was duly and regularly approved by the Planning Commission of the City of St. Helena at a regular meeting of said Planning Commission held on March 7, 2017, by the following roll call vote:

RE: Reclaimer Installation

Dear Noah and Darrell:

Thank you for meeting with John and Bob this week at your office. In order to understand this equipment you need to have the information about why we have this reclaimer. In 1999 Harold Smith & Son, Inc. purchased a Rapid Concrete Reclaimer Model RCR 210MKII from Dave Humphrey Enterprise, in order to help with our reclamation plan and to keep from depositing contaminated water into the creek and surrounding areas. This plan had come into existence due a July 1999 Cleanup and Abatement Order no. 99-016 copy attached, issued to Harold Smith by State Of California Regional Water Quality Control Board. In our reclamation plan it clearly calls out for the use of a reclaimer.

What this machine does is to take the waste wash water and ready mix that is still in the truck and separates the sand and rock and puts it in a stock pile it then pumps out the water and cement paste. The water and cement paste are further separated by the filter press that removes all the contaminated water from the cement paste so it can dry properly and be disposed of properly. That leaves the water so we can treat the water to make sure that it is the proper ph and has no concrete solids in it for reuse in our concrete.

The new reclaimer handles the same waste and is designed to process 20-30 truck rinse outs per day and process 8 – 10 cubic yards of returned concrete per day. These are the same parameters as we had on our Rapid reclaimer. We have tried to find print out information but this company no longer deals in these reclaimers and due to its age there is limited info. We also intend to use the same containments ponds to treat and handle the water as we have used since the remodel in 1999.

I also wanted to let you know that Bob is working on the layout for you and should have something to you early next week. Should you have any questions please feel free to contact us. Thank you,

Sincerely,

  
Pam Raybould  
President

### Scope of work for Replacement of Recycling Plant

Originally installed in early 2000's

Planned Replacement date 2016

- 1) As you can see by files back in 1999 we purchased our first Rapid Reclaimer MK11 and installed it without the need for design review per Jerry Cormack. The Reclaimer is how we have to process our waste product that returns from a readymix job. The old reclaimer was rated as being able to process this waste at 27 cubic yards per hr. It used 90 gallons of water per minute to accomplish this task (See Spec. sheet attached. Item #1).
- 2) 3-11,000 gallon ponds were built and the grade was changed to have all the process water (rain fall included) that were produced in the process triangle to run into the ponds to be separated using a systems of weirs and settlement (See drawing from purchase of machine. Item #2). The system was developed with the theory to pump the cement paste back into the truck loading. One of the problems encountered was that for every 6 sacks of cement paste retained required us to produce 45 yards of concrete to get rid of. Our experience showed that we average 8-10 yards of returned concrete per day. The system couldn't handle the amount of paste being returned and the reclaimer wasn't doing a sufficient job of cleaning to aggregates to be able to reuse them. We then had to put the waste material in a drying pond area and dry it out enough to be hauled off to the dump. In 2007 we started searching for a better way to reclaim the returned waste.

#### Information below for Reclaimer #2:

- 1) We choose to purchase a model KPI-JCI model no. 5036-25S, serial no. 413418 reclaimer screw, capable of washing 60,000# 30TPH or 15 yds per hour, using 360 gallons of water per minute to process the material (See attached work sheet Item #3. The water will be pumped from the existing ponds into the reclaimer screw. We will be removing the existing 8 hp pump in pond #3 and replacing it with a 10 hp pump. We will use some of the existing plumbing to direct the flow from pond 3 to the reclaimer, the slurry water will exit the reclaimer into a 3,000 gallon slurry tank where it will be pumped by a new 20 hp slurry pump into a separation tank where the paste will settle down to the bottom. It will then be pumped to the filter press where the paste will be dewatered and pressed into dry cakes to be recycled or hauled off to the dump.
- 2) Clean out remaining concrete waste from drying pit removal of approx. total material removed 162 yards to recess the reclaimer down to truck level
- 3) Rebar installation and concrete work performed on the following items:

Footings #5 12 inch centers with an additional cage.

Flooring #5 12 inch centers two mates.

Walls #5 12 inch centers (please see drawings).

We had our customer do a mock up of their work to show to their prospective customers. This customer is licensed contractor in this field. There was no charge for this work.

Scope of work to remove old reclaimer done back before 2008 as it had stopped working and was just in the way. Move location of new reclaimer to drying pit area and recess the reclaimer down to allow the trucks to back to it. Electrical and plumbing will be updated to current building codes. All work done by licensed contractors.

PLANNING DEPARTMENT 1480 MAIN STREET- ST. HELENA, CA 94574  
PLANNING COMMISSION**

**MARCH 7, 2017**

**AGENDA SECTION:** Public Hearing

**FILE NUMBER:** PL17-005

**SUBJECT:** Request by Shannon Coombs for a use permit in order to establish a clothing and fashion accessories boutique in a new tenant space located in the Menegon Building at 1380 Main Street in the CB: Central Business district.

**PREPARED BY:** Aaron Hecock, Senior Planner

**REVIEWD BY:** Noah Housh, Planning Director

**APPLICATION FILED:** 01/18/17

**ACCEPTED ASCOMPLETE:** 01/27/17

**LOCATION OF PROPERTY:** 1380 Main Street, Suite #103

**APN:** 009-212-001

**GENERAL PLAN/ZONING:** Central Business/CB: Central Business

**APPLICANT:** Shannon Coombs

**PHONE:** (304) 276-4405

**PROJECT DESCRIPTION**

The applicant is seeking use permit approval in order to open a clothing and accessories boutique in Suite #103 of the Menegon Building at 1380 Main Street. The store would occupy one of three tenant spaces on the ground floor of the building and would be approximately 750-sf in size. According to the applicant, the store's focus will be on women's wear split between upscale yet affordable casual wear and semi-formal attire along with hostess gifts and fashion accessories. They would also like to offer a selection of men's wear and feature local designers from time to time. They plan for the store to be open 7 days/week and to have one full-time employee and one to three part-time employees.

**ANALYSIS**

**CEQA**

Staff finds that the project is exempt from the requirements of CEQA pursuant to Section 15301, Class 1, which exempts the operation, leasing, or minor alteration of existing facilities. The proposed project is not subject to any of the exceptions to the use of a categorical exemption as outlined in CEQA Section 15300.2. The project site is not located on or near an environmentally sensitive area, is not visible from a scenic

1380 Main Street #103  
Use Permit  
March7, 2017

highway, is not included on a hazardous waste site, and will not impact historic resources or otherwise generate or contribute to any potentially significant impacts.

### **GENERAL PLAN**

The subject property has a General Plan land use designation of Central Business (CB). This designation provides for retail, personal service uses, offices, restaurants, hotels/motels, service stations, public and quasi-public uses, and similar and compatible uses that serve local residents and the surrounding area. Emphasis is on pedestrian-oriented retail and service uses on the ground floor level, with office and residential uses on the upper levels. The intent is for the CB district to remain primarily local resident-serving in character. New uses which serve both local residents and tourists are allowed. General Plan policies applicable to the proposed project include:

- **2.6.35** Maintain the Central Business District as the City's social and cultural core and the primary center for retail business.
- **2.6.38** Encourage primarily local serving businesses in the CB and SC designated areas.
- **3.4.2** Support the development of a responsible visitor-serving component to the City's economy as a valuable source of jobs, tax revenues, and cultural amenities.

### **ZONING**

Consistent with the Central Business land use designation in the General Plan, the site exhibits a zoning designation of CB: Central Business. This designation provides for retail, personal service uses, offices, restaurants, hotels/motels and other similar and compatible uses. The intent is for the CB district to remain primarily locally serving in character. New uses which serve both local residents and tourists are allowed; however, uses which are primarily tourist-serving are not permitted. Local serving businesses are considered to be those that derive a significant portion of their revenue from St. Helena residents, and which provide services and products which satisfy local resident's day to day needs. It is presumed that the "local" customer base is defined by regular repeat customers from the community.

Pursuant to Municipal Code Section 17.48.030, clothing stores limited to the sale of new clothing and clothing accessories requires approval of a Use Permit in the Central Business district. Therefore, the applicant is required to obtain a Use Permit in order to allow for the establishment of a new clothing store in the proposed tenant space.

#### *Use Permit*

The purpose of a use permit is to allow the proper integration of essential or desirable uses which may be suitable only in certain locations or zoning districts in the City, or to ensure that such uses are designed or arranged on the site in a particular manner. In its review of applications for use permits, the Planning Commission shall evaluate each proposed use in order to consider its impact on the City. Pursuant to Municipal Code Section 17.168 050, no use permit shall be granted unless the following findings can be made:

1380 Main Street #103  
Use Permit  
March 7, 2017

1. That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.
2. That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.
3. That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.
4. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.
5. That the proposed use would provide adequate ingress and egress to and from the proposed location.
6. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy.
7. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.
8. That the proposed use would not be in conflict with the City's General Plan.
9. That the proposed use would not be injurious to public health, safety, or welfare.
10. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.
11. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.
12. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use.

***Staff Response:** Staff finds that the project meets and/or complies with the required findings to approve a Use Permit as identified above. The findings included in the attached resolution identify this compliance.*

#### **PARKING**

As discussed, the applicant's tenant space is within the recently constructed Menegon Building at 1380 Main Street. This building was approved for retail uses on the ground floor and provides 11 on-site parking spaces. As the proposed retail store would be located within this approved retail area of the building, the project does not require additional off-street parking.

#### **SIGNAGE**

The applicant is not proposing any new or modified signage at this time.

1380 Main Street #103  
Use Permit  
March 7, 2017

**CORRESPONDENCE**

As of the completion of this report staff had received no correspondence related to this application.

**ISSUES**

Staff has not identified any issues that require additional discussion in relation to this application.

**STAFF RECOMMENDATION**

Staff recommends that the Planning Commission:

1. Determine that the project is exempt from the requirements of CEQA pursuant to Section 15301, Class 1, which exempts the operation, leasing, or minor alteration of existing facilities; and
2. Accept the required findings and approve a Use Permit for a new clothing store at 1380 Main Street Suite #103.

**ATTACHMENTS**

1. Resolution / Conditions of Approval
2. Applicant Statement
3. Floor Plan

**CITY OF ST. HELENA, STATE OF CALIFORNIA  
USE PERMIT NO.  
GRANTED TO 1380 MAIN STREET SUITE #103**

**PROPERTY OWNER:** Gary Menegon

**APN:** 009-212-001

**RECITALS**

1. The applicant requests a use permit in order to establish a clothing and fashion accessories boutique in a new tenant space located in the Menegon Building at 1380 Main Street in the CB: Central Business district.
2. The Planning Commission of the City of St. Helena, State of California, held a duly noticed public hearing on March 7, 2017.

**RESOLUTION**

The Planning Commission of the City of St. Helena, State of California, approved the Use Permit on the following basis:

- A. In making the findings in this Resolution, the Planning Commission relied upon and hereby incorporates by reference all of the documents referenced in this Resolution and the associated staff reports, City files for this matter, correspondence, presentations and other materials.
- B. The Planning Commission hereby finds that this project is exempt from the requirements of CEQA pursuant to Section 15301, Class 1, which exempts the operation, leasing, or minor alteration of existing facilities.
- C. In accordance with Municipal Code Section 17.168.050, the Planning Commission makes the following use permit findings to support the motion to approve the use permit:
  1. *That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community in that the use is retail in nature and would occur within an existing recently constructed building designed for retail uses.*
  2. *That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses in that the use is retail in nature and would occur within an existing recently constructed building designed for retail uses.*
  3. *That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan as project generated traffic will not increase the level of traffic noise on Highway 29 (Main Street).*
  4. *That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection in that the use is retail in nature and will therefore not make excessive demands on these services.*
  5. *That the proposed use would provide adequate ingress and egress to and from the proposed location as ingress and egress would not change for the existing building.*

1380 Main Street #103  
Use Permit  
March 7, 2017

6. *That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy in that the proposed use will serve the local community.*
7. *That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located as the proposed uses are consistent with the Central Business zoning district.*
8. *That the proposed use would not be in conflict with the City's General Plan in that it can be both local and tourist serving.*
9. *That the proposed use would not be injurious to public health, safety, or welfare in that it is retail in nature and within an existing building.*
10. *That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan in that this use permit only applies to this property and to these specific uses.*
11. *That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available in that the project's ability to meet required parking has been accounted for in approval of the new building and discussed in the staff report.*
12. *That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use in that the proposed uses will occur in an existing building, will generate very little traffic and can adequately be served by existing streets.*

#### **Planning Department Conditions of Approval**

D. The Use Permit for the above described use is granted subject to compliance with the following conditions. The Use Permit shall be in conformance with all City ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.

1. The Use Permit shall be vested within one (1) year from the date of approval. The permit may be extended for up to two (2) one-year periods pursuant to the St. Helena Municipal Code, Section 17.08.130, Extension of Permits and Approvals. Any request for an extension must be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.
2. This permit is valid for this use only. New permits must be applied for upon any change in use. This permit will expire if the use is discontinued pursuant to then existing ordinances and regulations.
3. The permit shall not become effective until fourteen (14) calendar days after approval, providing that the action is not appealed to the City Council within that 14 day period.
4. All required fees, including planning fees, development fees, housing fees, building fees toilet retrofit fees, and St. Helena Unified School District fees shall be paid prior to issuance of building permit. Fees shall be those in effect at the time of the issuance of the building permit.
5. Compliance with all permit conditions shall occur in accordance with specific regulations but in all cases no later than prior to occupancy or initiation of use unless

1380 Main Street #103  
Use Permit  
March 7, 2017

another time is set by law or by this approval. Occupancy or final inspection of a project may be withheld if all conditions, including payment of fees for services rendered by the City, are not met.

6. In any action or proceeding to attack, challenge, invalidate, set aside, void or annul the City's approval of applicant's project, in whole or in part, applicant shall defend, at its own expense and without any cost to the City, and with counsel acceptable to the City, and shall fully and completely indemnify and hold the City, its agents, officers, and employees harmless from and against any and all claims, causes of action, damages, costs, attorney's fees and liability of any kind, so long as the City reasonably promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.
7. Provided they are in general compliance with the permit, minor modifications may be approved by the Planning Director.
8. This permit shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.
9. The primary purpose of this review is for compliance with the General Plan and Zoning Ordinance. The owner/applicant is responsible for meeting with the Building Official/Fire Inspector to review compliance with Building and Fire Codes, including fire protection systems and the accessibility standards of Title 24.
10. Fire equipment shall be inspected annually by the Fire Department.
11. To reduce disturbance of residents in the project vicinity, construction activities which generate noise that can be heard at the property line of any parcel of real property within the City limits shall be limited to 8:00 a.m. to 5:00 p.m. Monday through Saturday. Delivery of materials/equipment and cleaning and servicing of machines/equipment shall be limited to 7:00 a.m. to 6:00 p.m. Exceptions to these time restrictions may be granted by the Public Works Director for one of the following reasons: (1) inclement weather affecting work, (2) emergency work, or (3) other work, if work and equipment will not create noise that may be unreasonably offensive to neighbors as to constitute a nuisance. The City Engineer must be notified and give approval in advance of such work. No construction activities shall occur on Sundays or federal or local holidays that generate noise that can be heard at the property line of any parcel of real property within the City limits.

#### **Public Works Department Conditions of Approval**

12. Approval of this project shall be subject to the requirements of, and all improvements shall be designed and constructed in accordance with, the most current version at the time of improvement plan submittal, Caltrans Standards and Specifications, the City of St. Helena Municipal Code, the St. Helena Water and Sewer Standards, the St. Helena Street, Storm Drain and Sidewalk Standards, and all current federal, state and county codes governing such improvements.
13. For any improvements outside the existing building envelope, a grading and drainage plan showing topographic data, all easements, infrastructure onsite and directly adjoining, and an erosion control plan shall be submitted for review and

approval by the City Engineer prior to the issuance of a building permit. If the project entails more than 50 cubic yards of soil disturbance, 10,000 square feet of disturbance area, a cut or fill of 3 feet or more, or alteration of any drainage pattern, a grading permit shall be required.

14. The applicant shall repair all public improvements that are damaged by the construction process in accordance with the City Water/Sewer/Street/Storm Drain/Sidewalk Standards prior to Certificate of Occupancy.
15. Existing streets being cut by new utility services will require edge grinding and an A.C. overlay per City standards, extent to be determined by the Public Works Department.
16. An encroachment permit shall be required for any work performed in the public right of way.

#### **Building Department Conditions of Approval**

17. The applicant will be required to comply with the codes adopted at the time the applicant applies for a building permit. At this time the City of St. Helena utilizes the 2013 Title 24 codes.
18. When submitting plans for a building permit, the plans shall include all documentation listed on the building permit application checklist.
19. The applicant shall provide a construction waste management plan with the building permit application.
20. The plans for construction shall include a checklist for compliance with the California Green Buildings Standards Code, mandatory measures. Provide a reference on the checklist indicating where the mandatory measures can be found on the plans.
21. When submitting plans, the title page shall include all information referenced on the building permit application checklist Title Page requirements.
22. Building Permit application materials and plans shall include any documentation pertaining to special loads applicable to the design and the specified section of the code that addresses the condition; special inspections for any systems or components requiring special inspection; requirements for seismic resistance; and a complete list of deferred submittals at time of application. Any deferral of the required submittal items shall have prior approval of the Building Official however deferral of fire sprinkler design is not allowed.

**I HEREBY CERTIFY** that the foregoing Use Permit was duly and regularly approved by the Planning Commission of the City of St. Helena at a regular meeting of said Planning Commission held on March 7, 2017 by the following roll call vote:

Grace Kistner  
Chair, Planning Commission

---

Noah Housh  
Planning Director

Dolly Donati LLC, DBA Material Movement is submitting a Use Permit request to apply for the opportunity to open a clothing and accessories boutique on Main Street, St. Helena, CA.

The focus will be on women's wear split between upscale yet affordable casual wear and semi-formal attire for functions such as wine dinners, cocktail parties, weddings, etc. along with gift items such as hostess gifts and accessories to compliment wardrobe. We will be targeting a trendier market than what is currently found in the local boutiques in St. Helena and compliment them as a local business owner attracting both local and tourism business. We will be concentrating on the twenty-two to sixty-year old demographic. A selection of men's wear is also something we would like to offer as well as to feature some local designers from time to time.

The boutique will be open Monday through Saturday 10-5:30/6 and Sundays 11-4. The amount of Employees will be one full-time and 1-3 part-time depending on the season.

There will not be any major interior modifications other than finishing the interior walls which are already studded out. The ceiling needs finished and interior painted.

With a current successful boutique history of 12 years, we look forward to becoming a part of the St. Helena business community and finding continued success in the retail industry.

Best,  
Shannon Coombs

PLANNING COMMISSION**

**March 7, 2017**

**AGENDA SECTION:** Public Hearing

**AGENDA ITEM:** #

**FILE NUMBER:** PL16-042; PL16-043

**SUBJECT:** *Culinary Institute of America (CIA) Campus Master Plan*  
1. Greystone Campus Design Review and Use Permit  
2. Vineyard Lodge Demolition Permit, Design Review, Use Permit, and Variance

**PREPARED BY:** Lilly Bianco, Contract Planner

**REVIEWED BY:** Noah Housh, Planning Director

**LOCATION OF PROPERTY:** 830 Pratt Avenue; 2555 Main

**APPLICANT:** Thomas Bensel, Managing Director of the Culinary Institute of America (CIA)

**PHONE:** 1(707) 967-2310

**APN:** APN.009-131-003 and 009-010-024

**GENERAL PLAN:** 2555 Main: Public; Quasi-Public  
830 Pratt: Agriculture

**ZONING:** 2555 Main: W/ PD Overlay /HP Overlay  
830 Pratt: PQP

**BACKGROUND**

On February 21, 2017 the Planning Commission heard the Culinary Institute of America's (CIA) request for design review and use permit approval for 2555 Main Street (Greystone Campus) and design review, use permit, demolition permit, and variances for 830 Pratt Avenue (Vineyard Lodge Housing site) which together, comprise the CIA Campus Master Plan project. In order to fully consider the lengthy application materials and public comments received, the Planning Commission closed the public hearing and continued it to a date certain (March 7, 2017).

At the Public Hearing, 24 public comments were heard both in support of the project and in opposition of the project. Those in support of the project cited the CIA's valuable role in St.Helena as an integral component of the community and feeling that the City

*CIA Campus Master Plan  
2555 Main Street and 830 Pratt Avenue  
March 7, 2017*

should promote the continuity of that. Those in opposition of the project voiced concern related to the project's use of public utilities and resources and the scale and massing of the proposed dormitory housing, as well as the extent to which the proposed housing complies with the established character of the vicinity.

To encourage a thoughtful and well-informed deliberation and to provide the Planning Commission the chance to more fully reconcile public comments with the project proposal, staff has provided an expanded discussion of key areas of concern. Specific topics addressed include: General Plan consistency, design merits, and wastewater capacity.

#### 1. General Plan Consistency

At the February 21<sup>st</sup> Public Hearing the project's consistency with applicable General Plan policies was questioned. Namely, the project's consistency with the following:

- 4.3.1 Preserve the Rural small town quality of St.Helena which includes the compact commercial core of one and two story buildings, and
- 4.3.5 Require future residential development to conform to the pattern and density of older, neighboring areas of town in order to complement existing town character and ensure that densities are high enough to protect against unnecessary incursion into vineyard agricultural areas.

First, staff would like to clarify that the consistency analysis provided in the February 21<sup>st</sup> Staff Report did not constitute an exhaustive list of every possible policy that may apply, but rather considered a representative list of policies most pertinent to the project at hand.

The St.Helena General Plan contains many different, sometimes competing provisions and policies that the City's decision-makers are to consider, weigh and harmonize. As detailed herein, the 1993 General Plan includes policies to preserve the rural small town quality and continue development patterns and character of historic neighborhoods. At the same time, the 2015-2023 Housing Element encourages the City to promote in-fill, innovative design, and higher density development to minimize sprawl and postpone the need to expand the Urban Service Area. Housing Element goal HE 2.F specifically calls for the City to, "Update the General Plan Land Use Element in consideration of the established Housing Element land use goals and policies. Amend General Plan Elements concurrent with adoption of the General Plan Update as needed to ensure internal consistency." The inclusion of HE 2.F highlights the fact that there is some level of conflict between the various policies and reinforces the importance of balancing what may be viewed as competing needs.

Ultimately, it is at the Lead Agencies discretion to determine how to interpret and balance the various goals and objectives of the General Plan and Housing

Element. It is widely acknowledged that a given project need not be in *perfect* conformity with each and every policy of the General Plan if those policies leave the city room for interpretation. The vast majority of policies applicable to the subject project are relatively nuanced and not worded such that they constitute specific, fundamental, or mandatory standards or actions. For those reasons, Staff maintains that the project can be found to exhibit overall consistency with applicable, and what are sometimes competing, policies of the 1993 General Plan and 2015-2023 Housing Element.

## 2. Design Merit

At the February 21<sup>st</sup> hearing much of the comment centered on the massing and scale of the proposed Vineyard Lodge Housing Buildings and a sense that it was not appropriate for the site at 830 Pratt Avenue. It was contended that the proposed buildings are not compatible with the character of the vicinity and are too massive.

As detailed in the February 21<sup>st</sup> Staff Report, to approve design review, the Commission must find that the project is consistent with the design criteria prescribed by Section 17.164.030 and exhibits a quality of design that is compatible with adjacent development, features a siting, scale, massing and architectural style that is generally consistent with the predominant development patterns and that does not otherwise detract or negatively affect the established character of the site or surrounding neighborhood.

To objectively illustrate the project's consistency with the Design Review Criteria the applicants prepared a Visual Impact Assessment based on the Bureau of Land Management's methodology. In short, projects that create a high level of contrast to the existing visual character of a project setting are more likely to generate adverse visual impacts due to the inherent visual compatibility. Conversely, projects that create a low level of contrast to the existing visual character are less likely to generate adverse visual impacts due to inherent visual compatibility. As detailed in the Staff Report, when considered relative to existing site conditions, the level of contrast was perceived to be limited to an extent that it would not significantly alter the existing character of the site or its relationship to surrounding properties.

What appears to be overlooked is the fact that the subject site is *already* developed with urban uses and features dormitory buildings. The established character of the site and its visual relationship to surrounding properties would clearly evolve under the proposed project, but it would not so substantially alter the *existing character* of the site or visual relationship to the extent that it would negatively impact the visual environment. Ultimately, staff concurs with the findings of the Visual Impact Assessment that the design elements (stepped design, neutral hues, landscaping to soften the buildings) endeavor to balance the aesthetic needs with functional needs of the project and therefore staff finds that the project exhibits overall consistency with required Design Review Criteria.

CIA Campus Master Plan  
2555 Main Street and 830 Pratt Avenue  
March 7, 2017

3. Wastewater Capacity.

Another topic of concern includes wastewater capacity, and, more specifically, the ability of the Crinella Pump Station to accommodate flows from the Vineyard Lodge Housing Site.

As detailed in the IS/MND and Response to Comments, The Culinary Institute expansion will not increase the frequency of sewer overflows and further, conveyance of all flows will be limited to off-peak times. Condition of Approval number 45 imposed on the Vineyard Lodge Housing component, requires the applicant to perform 7-day flow monitoring at the downstream sanitary sewer manholes (No. 6-5 and No. 6-18) to confirm the theoretical assumptions in the provided wastewater capacity study; peak sewer flows will not be allowed to exceed 2/3 full pipe. If insufficient capacity is available at the site and with the current infrastructure, a new sanitary sewer must be constructed with adequate capacity by the owner as a condition of the site development.

Last, the City's newly adopted rate study includes \$500,000 in upgrades to the Crinella Pump Station to be constructed in 2019/2020. This Project is envisioned to upgrade the pump station to new engineering designs, and to address any capacity and odor issues.

Given the above, Staff maintains the determination that the project would not negatively impact the Crinella Pump Station and in the event that the flows are found to exceed theoretical assumptions, this would be resolved by compliance with condition of approval imposed on the project.

### **STAFF RECOMMENDATION**

The Planning and Community Improvement Department recommends that the Planning Commission:

1. Adopt the Mitigated Negative Declaration and Mitigation and Monitoring Program for the project; and
2. Approve the requested Use permit and Design Review for 2555 Main Street and approve the Demolition Permit, Design Review, Use Permit, and Variances for 830 Pratt Avenue.

### **ATTACHMENTS**

1. Resolution
2. Public comments received after Feb 21, 2017 at 5pm
3. Supplemental information from Applicant, March 1, 2017
4. February 21, 2017 Planning Commission Packet Items

**CITY OF ST. HELENA PLANNING COMMISSION**

**RESOLUTION PC20xx-xx**

**RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ST. HELENA  
ADOPTING A MITIGATED NEGATIVE DECLARATION AND MITIGATION  
MONITORING AND REPORTING PROGRAM FOR THE CULINARY INSITUTE OF  
AMERICA CAMPUS MASTER PLAN AND GRANTING APPROVAL OF DESIGN  
REVIEW AND A USE PERMIT FOR 2555 MAIN STREET AND GRANTING APPROVAL  
OF A DEMOLITION PERMIT, DESIGN REVIEW, USE PERMIT, AND VARIANCES FOR  
830 PRATT AVENUE IN THE CITY OF ST.HELENA, CALIFORNIA**

**PROPERTY OWNER:** CULINARY INSTITUTE OF AMERICA

**APN:** 009-010-024  
and 009-131-003

**Recitals**

1. **Whereas**, The Culinary Institute of America submitted an application for Design Review and Use Permit approval to expand student enrollment to 300 students, introduce storage cave, and three modular storage units at the Greystone Campus at 2555 Main Street (APN.009-131-003); and
2. **Whereas**, The Culinary Institute of America also submitted an application for a Demolition Permit, Design Review, Use Permit, and Variances to expand the student housing at the Vineyard Lodge Housing Site at 830 Pratt Avenue (APN. 009-010-024); and
3. **Whereas**, Pursuant to CEQA Guidelines Sections 15072 and 15073, a Draft Mitigated Negative Declaration and included Initial Study was circulated for public review and comment from December 9, 2016 until January 23, 2017; and
4. **Whereas**, the Initial Study/Mitigated Negative Declaration concluded that implementation of the Project could result in a number of potentially significant effects on the environment and identified mitigation measures that would reduce the significant effects to a less-than-significant level; and
5. **Whereas**, in connection with the approval of a project involving the preparation of an initial study/mitigated negative declaration that identifies one or more significant environmental effects, CEQA requires the decision-making body of the lead agency to incorporate feasible mitigation measures that would reduce those significant environmental effects to a less-than-significant level; and.
6. **Whereas**, whenever a lead agency approves a project requiring the implementation of measures to mitigate or avoid significant effects on the environment, CEQA also

*2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
March 7, 2017*

requires a lead agency to adopt a Mitigation Monitoring and Reporting Program to ensure compliance with the mitigation measures during project implementation; and

7. **Whereas**, The Planning Commission of the City of St. Helena, State of California, considered the project, staff report, and all testimony, written and spoken, at a duly noticed public hearing on February 21, 2017 which was continued to a date certain, March 7, 2017.
8. **Whereas**, A public notice was published in the St. Helena Star and mailed to residents and occupants within 500 feet of the project site and in compliance with state and local law; and
9. **Now, therefore** let it be found that, the Planning Commission adopts the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, and approves the requested Use permit and Design Review for 2555 Main Street and approves the Demolition Permit, Design Review, Use Permit, and Variances for 830 Pratt Avenue on the following basis:

#### **Resolution**

1. In making the findings in this Resolution, the Planning Commission relied upon and hereby incorporates by reference all of the documents referenced in this Resolution and the associated staff report, City files for this matter, correspondence, presentations and other materials.
2. CEQA Findings
  1. The Planning Commission has independently reviewed and analyzed the Initial Study/Mitigated Negative Declaration and other information in the record and has considered the information contained therein, prior to acting upon or approving the Project,
  2. The Initial Study/Mitigated Negative Declaration prepared for the Project has been completed in compliance with CEQA and consistent with state and local guidelines implementing CEQA,
  3. On the basis of the whole record, there is no substantial evidence that the Project as designed, conditioned, and mitigated, will have a significant effect on the environment.
  4. The Initial Study/Mitigated Negative Declaration represents the independent judgment and analysis of the City as lead agency for the Project.
3. 2555 Main Street Findings and Conditions of Approval
  - A. **DESIGN REVIEW.** The Planning Commission finds that The Greystone Campus is historically significant as a good example of the late nineteenth century Richardsonian Romanesque architecture in California and provides a tangible link to the Napa Valley's historical viticultural operations of the last century. All project activities are either confined to the interior of buildings or less visible areas of the property such that any changes are not readily visible from main viewing areas. The exterior modifications proposed for the subject include the introduction of three new modular storage units at the rear of the property. The introduction of the proposed

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
March 7, 2017

modular units would be reversible and their removal in the future would not affect the historic integrity of the building. Given the very limited design changes and for the reasons described below, the project is found to be generally consistent with the design review requirements. As such, the Planning Commission determines the project is in compliance with the following Design Review criteria of Municipal Code Section 17.164.030:

1. Consistency and compatibility with applicable elements of the general plan;  
*As proposed the project will facilitate the continued use of the historic Greystone building and in doing so would preserve the historic resource as a valuable piece of St. Helena's heritage. As such, the project would be consistent with GP Policies, 2.6.30, 4.8.1, 4.8.2. Further, the Culinary Institutes' emphasis on food and wine education promotes the Valley's reputation of a world class destination for wine and the culinary arts. As such, the proposed project exhibits overall consistency with all applicable General Plan goals, policies, and objectives.*
2. Compatibility of design with the immediate environment of the site;  
*No exterior changes are proposed that would alter the design of the building or site.*
3. Relationship of the design to the site;  
*The design will greatly limit changes visible on the building exterior; for example, the proposed modular units will be located at the building's rear and not readily visible from public viewing areas. As such, the relationship of the design to the site is appropriate.*
4. Determination that the design is compatible in areas considered by the board as having a unified design or historical character;  
*All work will be performed in accordance with the Secretary of the Interior's Standards and will be consistent with the historic character of the subject site.*
5. Whether the design promotes harmonious transition in scale and character in areas between different designated land uses;  
*No substantial changes are proposed that would alter the existing scale or character.*
6. Compatibility with future construction both on and off the site;  
*No exterior changes are proposed that would alter compatibility with future construction on or off site.*
7. Whether the architectural design of structures and their materials and colors are appropriate to the function of the project;  
*The proposed modular units will be of simple design and materials which will ensure their functionality while also limiting changes to the visual environment.*
8. Whether the planning and siting of the various functions and buildings on the site create an internal sense of order and provide a desirable environment for occupants, visitors and the general community;

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
March 7, 2017

*The majority of changes are confined to the interior of the existing Greystone building and therefore would not alter the existing site configuration or overall functionality of the site. The proposed modular units and storage cave would be located conveniently with connectivity to the internal uses they serve. As such, proposed changes would be functional and would limit changes to the visual environment of the site.*

9. Whether the amount and arrangement of open space and landscaping are appropriate to the design and the function of the structures;

*No open space or landscaping is proposed as part of this project.*

10. Whether sufficient ancillary functions are provided to support the main functions of the project and whether they are compatible with the project's design concept;

*The project includes modular storage units and storage cave that will support the Culinary school use of the site. The ancillary components are either shielded from view, in the case of the modular units, or underground and not visible, in the case of the storage cave. Given the limited visibility of both components, they are expected to be compatible with the overall design of the Greystone property.*

11. Whether access to the property and circulation systems are safe and convenient for pedestrians, cyclists and vehicles;

*No changes to the circulation system are proposed.*

12. Whether natural features are appropriately preserved and integrated with the project;

*No changes to natural features are proposed.*

13. Whether the materials, textures, colors and details of construction are an appropriate expression of its design concept and function and whether they are compatible with the adjacent and neighboring structure and functions;

*Three modular units ranging in size from 633 sf to 1,337 sf are proposed on the west elevation (rear) of the building. The units will be accessed from an existing roadway, supported on new horizontal steel structure that spans the area and similar to existing modern mechanical equipment supports. Utilitarian in nature, the units are constructed of painted metal siding, doors, and flat roofs behind shallow parapets. The proposed modular units are located away from principal elevations, have been designed to fit below the historic eave of the building, and are minimal in size compared to the original structure. Proposed work will use materials to differentiate the additions from the historic exterior masonry. These characteristics reflect the project's compliance with the Secretary of the Interior Standards for Rehabilitation (SOISR). Given the above, the proposed new modular units are expected to be compatible with adjacent structures and functions.*

15. Whether the landscape design concept for the site, as shown by the relationship of plant masses, open space, scale, plant forms and foliage textures and colors create a desirable and functional environment and whether the landscape concept depicts an appropriate unity with the various buildings on the site;

*There is no new landscaping proposed.*

16. Whether plant material is suitable and adaptable to the site, capable of being properly maintained on the site, and is of a variety which is suitable to the climate of St. Helena;

*No landscaping is proposed.*

17. Whether sustainability and climate protection are promoted through the use of green building practices such as appropriate site/architectural design, use of green building materials, energy efficient systems and water efficient landscape materials.

*All outdated/inefficient fixtures and systems will be replaced with more efficient and environmentally friendly fixtures and as such, the project will further sustainability goals.*

- B. USE PERMIT. Pursuant to Municipal Code Section 17.168.050, the Planning Commission acknowledges that the Culinary Institute of America at Greystone endeavors to place a greater focus on occupational education. To achieve this, the applicant requests that the use permit authorize a total enrollment of 300 students, allow more flexibility in the operation of the retail store, and allow for a 58 seat student-run restaurant to replace the now closed, 190-seat Wine Spectator at Greystone Restaurant. It is determined that proposed changes do not substantially increase the intensity of the site or otherwise create an impact that would conflict with any of the requisite findings needed to approve a use permit. Accordingly, the Planning Commission makes the following Use Permit findings to support the motion to approve the use permit:

1. That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.

*No significant changes in the operation of the facility will change and there is no expectation that the proposed project would generate odors, fumes, dust, light, glare, radiation or refuse beyond what is currently typical of the culinary school use. As such, operation of the Greystone Campus consistent with the proposed project would not be injurious to surrounding uses or the community.*

2. That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.

*Levels of noise would be consistent with or less than existing noise levels given the reduction in events and size of the on-site restaurant.*

3. That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.

*As detailed in the Traffic Impact Report, the proposed project will not cause a substantial increase in traffic trips that would cause the ambient noise level to*

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
March 7, 2017

*exceed the normally acceptable range. Given the limited traffic trips associated with the proposed project, the project would not cause traffic noise to noticeably increase beyond existing level or otherwise exceed normally acceptable ranges.*

4. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.

*The level of demand placed on public services will remain consistent with that which currently exists due to the introduction of more efficient fixtures and systems, adherence to the water neutrality policy, and the fact that the proposed use will continue to operate in a manner consistent with what currently exists, as a culinary school with an ancillary retail and restaurant component.*

5. That the proposed use would provide adequate ingress and egress to and from the proposed location.

*No changes to ingress/ egress are proposed.*

6. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy.

*The proposed use is consistent with that which currently exists at the site and no changes are expected that would otherwise conflict with the City's goal of maintaining the economic viability of a local serving economy.*

7. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.

*No significant change in use or operation is proposed and as such, the proposed use would continue to be compatible with surrounding land uses.*

8. That the proposed use would not be in conflict with the City's General Plan.

*As detailed above, the use would be consistent with all applicable General Plan policies.*

9. That the proposed use would not be injurious to public health, safety, or welfare.

*The proposed use is largely consistent with that which currently exists at the subject site and is not expected to be injurious to public health, safety, or welfare.*

10. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.

*The findings related to this particular project are unique and applicable only to the CIA Campus Master Plan. There is no reason to expect that approval of this use permit would set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.*

11. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.

*No changes to parking are proposed. Students living off-site would continue to be required to utilize the shuttle for transportation between student housing and the Greystone Campus. As such, no demand that couldn't be accommodated by the existing level of parking is expected.*

12. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use.

*The surrounding roadways will continue to be able to accommodate automobile and truck traffic generated by the proposed project and is not expected to increase substantially beyond that which currently exists.*

- C. The Planning Commission approves the design review and use permit for the above-described project with the following conditions of approval. The project shall be in conformance with all city ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.

#### **Conditions of Approval**

1. Project approvals shall be vested within one (1) year from the date of final action. A building permit for the use allowed under this approval shall have been obtained within one (1) year from the effective date of this action or the approval shall expire, provided however that the approval may be extended for up to two (2) one-year periods pursuant to the St. Helena Municipal Code, Section 17.08.130, Extension of Permits and Approvals. Any request for an extension of this approval shall be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.
2. The approvals shall not become effective until fourteen (14) calendar days after approval, providing that the action is not appealed by the City Council or any other interested party within that 14-day period.

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
March 7, 2017

3. All required fees, including planning fees, development impact fees, residential in-lieu housing fees, building fees, toilet retrofit fees, and St. Helena Unified School District fees shall be paid prior to issuance of a building permit. Fees shall be those in effect at the time of the issuance of the building permit.
4. Upon approval of Resolution XX-XX, the Applicant shall provide the Planning Department with the Notice of Determination Fee required by Fish and Wildlife Code Section 711.4(d). The fee payment shall be made by check payable to the Napa County Clerk and in the amount required and published by the Napa County Clerk for such fee.
5. All Mitigation Measures enumerated in the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program are incorporated by reference and made conditions of approval.
6. Prior to issuance of any construction permits, these conditions of approval *and* the Mitigation and Monitoring and Reporting Program shall be included with the plan set. A copy of the approved plans shall be maintained on site when construction activities are underway.
7. Pursuant to St. Helena Municipal Code Section 17.08.110, this permit shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.
8. The primary purpose of this review is for compliance with the General Plan and Zoning Ordinance. The property owners or their designee shall be responsible for meeting with the Building Official, Fire Inspector and or Public Works Department to review compliance with Building Codes, Fire Codes and specific Public Works Standards including fire protection systems and any applicable accessibility standards of Title 24.
9. Construction shall be in compliance with plans submitted and reviewed by the Planning Commission on March 7, 2017, except as modified herein.
10. Minor modifications to approved plans may be approved by the Planning Director insofar as they are in substantial conformance with this approval.
11. The site shall be kept clear at all times of garbage and debris. No outdoor storage is permitted.
12. A final lighting plan delineating building mounted lights shall be reviewed and approved by the Planning and Community Improvement Director prior to building permit issuance.
13. Trash bins shall not be visible from public right-of-way.
14. All plantings shall be maintained in good growing condition. Such maintenance shall include, where appropriate, pruning, mowing, weeding, and cleaning of debris and trash, fertilizing and regular watering. Where necessary, plantings shall be replaced with other plant materials to insure continued compliance with applicable landscaping requirements, Irrigation systems shall be maintained in sound operating condition with heads periodically cleaned and replaced when missing to ensure efficient watering and to maintain good health and vitality of landscape materials.

15. No signage is approved by this permit. A separate sign permit in compliance with the Municipal Code shall be obtained prior to installation of signage.
16. Property owners shall recognize that there exists a right to farm properties within the district and in the vicinity of the district. There is a good faith expectation that no complaints will occur regarding legal, normal agricultural activities on properties in the district or in the vicinity of the district. Such activities may include day or night disbursement of chemicals, and creation of dust, noise, or fumes.
17. In any action or proceeding to attack, challenge, invalidate, set aside, void or annul the City's approval of applicant's Project, in whole or in part, applicant shall defend, at its own expense and without any cost to the City, and with counsel acceptable to the City, and shall fully and completely indemnify and hold the City, its agents, officers, and employees harmless from and against any and all claims, causes of action, damages, costs, attorney's fees and liability of any kind, so long as the City reasonably promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.

#### **Planning Department Conditions**

18. As applicable, the permittee shall comply with any and all previous conditions of approval for the CIA Greystone Campus except as they may be explicitly modified by this action. To the extent there is a conflict between previous conditions of approval enumerated in any previous resolutions relating to the subject site including, but not necessarily limited to: Resolution Nos. 93-105; 96-95; 97-162; 2001-60; 2003-42; 2004-112; 2006-07; 2006-130; or 2008-76 and these conditions of approval, these conditions shall control, superseding the prior approvals with respect to any such conflict.
19. The primary use shall be that of an advanced cooking school with ancillary uses limited to (1) 58 seat student run restaurant, (1) 35 seat bakery/café and, (1) 3,100 square foot retail store subject to the conditions herein.
20. The student population shall not exceed 300 students. Students shall be limited to those enrolled an Associate, Bachelor's, Master's and/or other Certificate Degree Program.
21. Only students actively enrolled at the CIA at Greystone campus shall be allowed to use school lodging accommodations. The student's length of stay shall be commensurate with the respective degree program.
22. As an ancillary component to the bakery and pastry education program and to help students satisfy educational requirements, a Bakery/Café with no more than 35 seats may be operated within the Greystone Cellars building.
23. A restaurant may be operated within the Flavor Discovery Center (FDC) as an accessory use to the school with seating limited to a total of 58 seats, including both

indoor and outdoor dining. Any outdoor dining shall be consistent with the Zoning Regulations in effect at the time of operation.

24. A 3,100 sf campus store may be operated as an accessory use to the school within the main winery building. The store shall be limited to the hours of operation of 10:00 a.m. – 7:00 p.m. Items sold at the retail store shall be directly related to the food and beverage industry or to the incidental needs of the student residents, such as toiletries and stationery. Bottled wine sales may be permitted. The store may be advertised in educational, food service, trade and Napa county newspapers of record. Site signage shall comply with the St. Helena sign ordinance. Wine tasting may occur within the store as an accessory and subordinate activity relating to the sale of wine but shall occur only during the hours the retail store is open."
25. Valet parking shall be provided for all special and community events if they are held during hours that the restaurant is open and/or when designated on-site parking is not adequate. No parking shall be permitted along Highway 29/Main Street or Deer Park Road.
26. The CIA may offer tours and limited educational experiences to the General Public so long as such activities are incidental and secondary to the primary degree and/or Certificate educational programs offered at Greystone.
27. The Applicant shall provide a Transportation Plan that describes the operation of (1) the shuttle service (2) the rental car service (3) parking permits for individual vehicles and (4) the specifics of the on-demand bike program as they relate to the Greystone Campus and Vineyard Lodge Housing Site. The Plan shall be subject to review and approval by the Planning and Community Improvement Director. A copy of the approved Transportation Plan shall be provided and kept in the hard copy and digital project file.
28. Modular Units and the underground cave shall be used for storage of products and wares used for the purposes of culinary education.
29. Prior to issuance of building permit, the applicant shall execute a Joint Water Use Agreement with the Vineyard Lodge Housing Site. The Joint Agreement shall authorize a maximum water allocation of 23.1 acre feet/year to be utilized by the two sites. The Joint Agreement shall include enforcement provisions and penalties if the allowance is exceeded in a given year.
30. Any significant change(s) to the operation of the approved use, including a change in hours of operation, intensity, or type(s) of uses shall require amendment to this use permit.

### **Public Works Conditions**

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
March 7, 2017

31. Approval of this project shall be subject to the requirements of, and all improvements shall be designed and constructed in accordance with, the most current version at the time of improvement plan submittal, Caltrans Standards and Specifications, the City of St. Helena Municipal Code, the St. Helena Water and Sewer Standards, the St. Helena Street, Storm Drain and Sidewalk Standards, and all current federal, state and county codes governing such improvements.
32. For any improvements outside the existing building envelope, a grading and drainage plan showing topographic data, all easements, infrastructure onsite and directly adjoining, and an erosion control plan shall be submitted for review and approval by the City Engineer prior to the issuance of a building permit. If the project entails more than 50 cubic yards of soil disturbance, 10,000 square feet of disturbance area, a cut or fill of 3 feet or more, or alteration of any drainage pattern, a grading permit shall be required.
33. A detailed Soils Investigation/Geotechnical Report shall be prepared and submitted for review. The report shall address, at a minimum, potential for liquefaction, R-values, expansive soils, seismic risk, cave wall and ceiling stability, etc. The improvement plans shall incorporate all design and construction criteria recommended in the Geotechnical Report.
34. Remodels or new construction which requires fire sprinklers shall install an appropriately-sized water service with appropriate backflow and meter devices prior to Certificate of Occupancy. Fire system calculations shall be submitted with the Grading and Drainage Plan to verify fire service lateral and meter sizing. Deferred submittals are not accepted.
35. The applicant shall be required to submit to the requirements for annual inspections of food/beverage service establishments and businesses that handle hazardous wastes for illicit stormwater discharges as required by the State National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges. The annual stormwater illicit discharge inspections are performed and invoiced by Napa County Department of Environmental Management.
36. Trash areas, dumpsters and recycling containers shall be enclosed and roofed per State and County standards to prevent water run-on to the trash area and water runoff from the area, to contain litter and trash so that it is not dispersed by the wind or run-off during waste removal. In the event that wine or food is disposed in these areas, they shall drain to the sanitary sewer system. An area drain connected to the sanitary sewer shall be installed in the enclosure area and a structural control such as an oil/water separator or sand filter shall be included. No other area shall drain into the trash enclosure. A sign shall be posted prohibiting the dumping of hazardous materials into the sanitary sewer.
37. The applicant shall incorporate water conservation practices into the proposed project per the Water Neutrality Calculations prepared by Summit Engineering, dated October 15, 2016. Any and all non-conforming appliances and plumbing

fixtures shall be removed from the premises. The water conservation requirements shall be replicated in full on the architectural plans.

38. Erosion and sediment control plans shall conform to the latest State and City codes at a minimum.
39. Grading plans shall identify off-haul routes and soil disposal sites, subject to review and approval by Public Works. All grading and spoils generated by construction of the project facilities, including cave spoils, shall be removed and/or permanently placed prior to final occupancy.
40. The Applicant shall keep adjoining public streets free and clean of project dirt, mud, materials, and debris during the construction period, as is found necessary by the City Engineer.
41. Any new and modified existing water laterals, meters and backflow prevention devices shall be required and constructed in accordance with the requirements of the City of St. Helena's Water Standards.
42. The applicant shall repair all public improvements that are damaged by the construction process in accordance with the City Water/Sewer/Street/Storm Drain/Sidewalk Standards prior to Certificate of Occupancy.
43. Existing streets being cut by new utility services will require edge grinding and an A.C. overlay per City standards, extent to be determined by the Public Works Department.
44. The applicant shall be required to obtain an encroachment permit for improvements on public right-of-ways prior to receiving a grading or building permit authorizing site work or construction activities on the site.

#### **Building Department Conditions**

45. A building permit is required for all onsite demolition, construction and/or change of occupancy.
46. The applicant will be required to comply with the codes adopted at the time the applicant applies for a building permit. At this time the City of St. Helena utilizes the 2013 Title 24 codes.
47. When submitting plans for a building permit, the plans shall include all documentation listed on the building permit application checklist.
48. The applicant shall provide a construction waste management plan with the building permit application.

49. The plans for construction shall include a checklist for compliance with the California Green Buildings Standards Code, mandatory measures. Provide a reference on the checklist indicating where the mandatory measures can be found on the plans.
50. When submitting plans, the title page shall include all information referenced on the building permit application checklist Title Page requirements.
51. Building Permit application materials and plans shall include any documentation pertaining to special loads applicable to the design and the specified section of the code that addresses the condition; special inspections for any systems or components requiring special inspection; requirements for seismic resistance; and a complete list of deferred submittals at time of application. Any deferral of the required submittal items shall have prior approval of the Building Official however deferral of fire sprinkler design is not allowed.

#### **Fire Department Conditions**

58. Fire sprinklers and fire hydrants shall be installed as required by the Fire Department

#### **4. 830 Pratt Avenue Findings and Conditions of Approval**

- A. DEMOLITION. Pursuant to Municipal Code Section 17.164.050(E), the Planning Commission finds that the Vineyard Lodge 1 (c.1960) is not eligible for listing on the California Register of Historic Resources (CRHR) and because the building is not particularly cohesive with the surrounding agricultural and residential character makes the following findings for the approval of a Demolition Permit:

1. That, based on the public record and testimony presented at a public hearing, the building is determined not to be a significant architectural or historical building.

*The applicant is requesting a permit to demolish the former Marlinda Convalescent Home and what is today known as "Vineyard Lodge 1". The building was constructed c.1960. Following review of available records, consultants, Architectural Resources Group, determined that the subject building proposed for demolition does not meet the Criteria for listing on the California Register of Historic Resources (CRHR) given that it does not exhibit architectural significance, is not associated with any significant themes or persons and is not expected to yield any information important to expand our understanding of history or prehistory. Staff concurs with this determination.*

2. That the demolition does not eliminate elements that are required to maintain the essential character of the neighborhood.

*As a 1960s era convalescent home located in an otherwise agriculture and residential area, the building was not found to be particularly cohesive with the existing environment. Given this, it's demolition is not expected to adversely impact the essential character of the neighborhood. Accordingly, Staff finds that the*

*demolition of the proposed building will not negatively impact a historic resource or existing visual environment.*

- B. DESIGN REVIEW. The Planning Commission determines the project's natural color palette, stepped design, retention of existing trees adjacent to the public right-of-way and the addition of new trees will be compatible with the surrounding character along Pratt Avenue and limit visual impacts such that it would be in compliance with the following Design Review criteria enumerated in Municipal Code Section 17.164.030, and as follows:

1. Consistency and compatibility with applicable elements of the general plan;

*As stated above, the subject project is consistent with General Plan policies 4.3.4, 2.6.2, 2.6.4, 2.6.5 and HE 1.5, 2.1, 2.2, and 2.6 in that the project would consist of infill on an already developed site, would occur in a logical and orderly manner proximate to urban services, and would be of a size and design that is consistent with existing site development. Further, the site would not encroach into or otherwise hinder agricultural activities in the vicinity of the subject site. As a previously developed site within approximately one mile of the Greystone Campus, the project location at 830 Pratt is well suited to accommodate student housing at a higher density and provide a creative solution to the need for affordable student housing. As such, the project is determined to exhibit overall consistency with the intent of the General Plan and Housing Element.*

2. Compatibility of design with the immediate environment of the site;

*The project site is situated at the northern border of St Helena's urban limits where medium density housing development is bordered by agricultural land uses immediately to the north and east. Adjacent development includes the Beringer Winery warehouse building and wastewater treatment facilities. Therefore, the visual character of the project area is comprised of both residential scale single-family residences (south and west) and agricultural uses including processing and storage (north, east, and west) building and facilities.*

*The subject site is currently developed with two dormitory buildings ranging from one to two stories in height. The one-story building will be demolished and the two story building is to be retained. The expansion of the Vineyard Lodge House is generally consistent with what is presently on the site and would not substantially alter the existing relationship of the site to its surroundings or otherwise make the site incompatible with the surroundings. The new construction would be clustered on the site and exhibit defined boundaries and generous vegetative screening. As such, compatibility of the site with its surroundings is found to be maintained.*

3. Relationship of the design to the site;

*As stated above, the site configuration will include a series of four buildings (3 new) clustered around a central courtyard and traversed by a one-way access road. Those buildings with frontage on Pratt Avenue will feature a stepped*

*design and a minimum setback of 20 feet from Pratt Avenue so as to limit visual prominence and provide continuity with other properties proximate to the site, which are developed with similar setbacks. Therefore, given the site constraints, the relationship of the design to the site appears to strike an appropriate balance between function and aesthetics.*

4. Determination that the design is compatible in areas considered by the board as having a unified design or historical character;

*The segments of Pratt Avenue proximate to the subject site do not exhibit a unified or historical character. The surrounding area features residential uses, industrial/agricultural production uses, and vineyards. The proposed design is generally consistent with Vineyard Lodge II and the existing character of the site and would not depart significantly from that existing character. The project is therefore not expected to impact an area having a unified or historical character.*

5. Whether the design promotes harmonious transition in scale and character in areas between different designated land uses;

*The subject buildings with frontage on Pratt Avenue will be stepped in height such that the buildings along Pratt will be two stories in front ( with max height of 29'2") with taller (3-story) portions confined to the rear of the site (max height of 40'2"). Similarly, the buildings will feature a minimum 20' setback from the Pratt Avenue Property line (50' from Pratt Centerline) in an effort to reduce the perceived massing and scale and promote a harmonious transition in scale relative to residential buildings proximate to the site and in relation to the agricultural production facilities nearby. Further, this site serves as a transition from the adjacent agricultural production and warehouse use on the Beringer property to the single family and vineyard uses further down Pratt Avenue.*

6. Compatibility with future construction both on and off the site;

*The project design is contemporary in style, but with traditional detailing. The buildings feature a neutral color palette. The proposed design would not introduce an element that was so unique or exceptional as to make it incompatible with future development on and/or off site.*

7. Whether the architectural design of structures and their materials and colors are appropriate to the function of the project;

*The proposed buildings will be contemporary in style, but feature some craftsman-like details including wood columns and brackets. The building will be supported by an exposed, parge coated foundation. Exterior walls would be clad in a combination of painted clapboard siding and stained red cedar siding and punctuated with clad windows. The buildings would feature articulated roof-lines with asphalt shingles. The proposed color palette includes neutral hues like brown, natural wood, and moss green. The proposed color and materials reflect traditional materials and colors that would help the buildings to more readily blend in with their surroundings. The architectural design, material, and colors are responsive to the needs of the site and appropriate to the function of the project and generally compatible with adjacent buildings and uses.*

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
March 7, 2017

8. Whether the planning and siting of the various functions and buildings on the site create an internal sense of order and provide a desirable environment for occupants, visitors and the general community;

*The proposed site configuration would feature three buildings clustered around a central courtyard. The site would be traversed by a one-way access road with parking clustered around the outer portions of the site, screened with significant amounts of vegetation. As such, the site configuration is expected to provide for a desirable environment that is both functional and aesthetically pleasing to residents and the general community.*

9. Whether the amount and arrangement of open space and landscaping are appropriate to the design and the function of the structures;

*The project proposes a generous level of landscaping and will retain a number of trees at the property frontage to promote screening. The level of landscaping will soften the look of the new buildings and appears to be appropriate for the use and to promote continuity with surrounding properties.*

10. Whether sufficient ancillary functions are provided to support the main functions of the project and whether they are compatible with the project's design concept;

*The project will include interior students commons and dining area as well as an outdoor courtyard and amenity area. In addition, the project will provide alternative forms of transportation to serve the student population and facilitate ease of travel between the subject site and Greystone Campus as well as other destinations. Given the on-site amenities and provision of alternative transportation, the project is expected to provide sufficient ancillary functions to support the functionality of the student dormitory use and which are of a design that is consistent with the overall aesthetic.*

11. Whether access to the property and circulation systems are safe and convenient for pedestrians, cyclists and vehicles;

*Primary automotive access will from Pratt Avenue and Vineyard Road, both of which were found to provide adequate circulation and access to the project site and have been conditioned to be improved to address project specific impacts. Onsite circulation and access is provided via one-way access road off of Vineyard Road and exiting at Pratt Avenue. This access road is expected to provide convenient vehicular site access. In addition, the project will be subject to Mitigation Measure Trans-2, which amongst other things, requires that the applicant introduce a Class II bike lane along westbound Pratt Avenue (northern side) extending from the project site to the intersection of SR 29 (Main Street) and Pratt Avenue and restripe for a fog line along eastbound Pratt (southern side) extending from the project site to the intersection of SR 29 thereby promoting more safe and convenient connectivity for bicyclists. Accordingly, the project is expected to promote safe and convenient access for all types of transportation.*

12. Whether natural features are appropriately preserved and integrated with the project;

*As a previously developed site, the Vineyard Lodge Housing site does not contain any significant natural features with the exception of some Coast Live Oak Trees. To accommodate the proposed buildings, the project will remove two (2) Coast Live Oaks, which pursuant to Mitigation Measure BIO-1, shall be replaced in-kind and at a ratio of three (3) new 15 gallon trees for every one tree removed. A portion of replacement oaks may be accommodated on the Greystone Campus if site constraints are such that all replacement trees cannot be accommodated within the proposed site plan. As such, the project will integrate natural features to the extent possible and where that is not possible, will mitigate accordingly.*

13. Whether the materials, textures, colors and details of construction are an appropriate expression of its design concept and function and whether they are compatible with the adjacent and neighboring structure and functions;

*Please refer to response No. 7.*

14. In areas considered by the board as having a unified design character or historical character, whether the design is compatible with such character;

*Please refer to response No. 4*

15. Whether the landscape design concept for the site, as shown by the relationship of plant masses, open space, scale, plant forms and foliage textures and colors create a desirable and functional environment and whether the landscape concept depicts an appropriate unity with the various buildings on the site;

*The proposed landscape plan will feature a variety of trees, shrubs, and sod. The majority of existing Camphor trees at property frontage will be maintained. The landscape plan will feature 21 plant types which will be distributed throughout the site and promote continuity and unity throughout the site as well as soften the look of paved parking areas around the periphery of the site and provide shade.*

16. Whether plant material is suitable and adaptable to the site, capable of being properly maintained on the site, and is of a variety which is suitable to the climate of St. Helena;

*With the exception of the sod, all proposed plant materials are considered "low" water use plantings and are expected to be adaptable to the St. Helena climate. Further, all plantings on site are required to comply with the City of St Helena Municipal Water Efficient Landscape Ordinance, which regulates landscaping water use.*

17. Whether sustainability and climate protection are promoted through the use of green building practices such as appropriate site/architectural design, use of green building materials, energy efficient systems and water efficient landscape materials.

*As detailed herein, the project will use efficient fixtures and comply with Title 24 building standards. In addition, most landscaping will be comprised of low water use planting and will comply with the City of St Helena Municipal Water Efficient*

*Landscape Ordinance. Further, the project will limit parking so as to avoid inducing vehicular travel demands and Green House Gas production by promoting use of alternative transportation and ride sharing. As such, the project will promote sustainable practices and climate protection.*

C. SETBACK VARIANCE. Pursuant to Municipal Code Section 17.172.050, the Planning Commission makes the following variance findings to support the motion to approve a setback variance:

- (a) A hardship peculiar to the property, not created by any act of the owner, exists. In this context, personal, family or financial difficulties, loss of prospective profits, neighboring violations, are not hardships justifying a variance.

*The currently configured parcel was created in 1971 subject to dedication of a 20 foot strip of land along the northwesterly side of Pratt Avenue, creating a 60 foot right of way. As demonstrated in the applicant's setback variance request, neighboring properties were either (1) not required to dedicate land, or (2) were required to dedicate only a 10 foot strip of land. In addition, the property has a unique triangle shape with its widest and most developable portion immediately adjoining the property line subject to the special Pratt Avenue setback requirement. Literal enforcement of the 36 foot setback requirement from the property line—which encroaches 10-20 feet more into the property than does the property line at neighboring properties—would create a hardship peculiar to the property.*

- (b) The Variance is necessary for the preservation and enjoyment of substantial property rights of the applicant which are possessed by other properties in the same district and in the same vicinity; and that a Variance, if granted, would not constitute a special privilege of the recipient not enjoyed by his or her neighbors.

*Granting a variance would not constitute a special privilege for the property relative to neighboring properties. Six neighboring homes on the northwesterly side of Pratt Avenue are situated within the special 36 foot setback, none of which were required to dedicate a 20 foot strip of land like that of the subject property. The proposed development plan will exhibit a greater setback than what currently exists for the Vineyard Lodge 1 building (proposed for demolition). In light of the above, it is found that granting a setback variance is necessary for the preservation and enjoyment of the applicant's substantial property rights that are possessed by nearby properties that are developed in similar proximity to the northwestern boundary of Pratt Avenue.*

- (c) The authorization of the Variance will not be of substantial detriment to adjacent properties, and will not materially impair the purpose and intent of this Chapter or the public interest, nor adversely affect the General Plan.

*Authorization of the Variance will not be of substantial detriment to adjacent properties, nor will it materially impair the public interest, as the new developed portion of the property will be located further from Pratt Avenue than the existing Vineyard Lodge I, proposed for demolition. In addition, large mature trees along a substantial portion of the site frontage and along its other borders will screen the views of the new dormitory development. Recognizing the unique nature of the property and granting a Variance does not impair the purpose and intent of the Code's Variance chapter.*

*The chapter's stated purpose is, in part, to allow for deviation from a strict application of the Code in the event that a property exhibits an unusual shape or other exceptional characteristic, and as a result would be subjected to practical difficulties or undue hardship in their development. Authorization of the Variance is consistent with St. Helena's longstanding efforts to manage growth by encouraging further development of already developed parcels, rather than removal of vineyards within City limits, and would not adversely affect the General Plan. The project's 123-bed expansion to serve a projected enrollment expansion of 100 students will allow students who currently compete for housing with members of the St. Helena workforce to move into student dormitories; freeing up that housing would benefit St. Helena families and employees.*

- (d) The condition or situation of the specific piece of property for which the Variance is sought is not so general or recurrent in nature as to make reasonably practicable the formulation of a general regulation for such condition or situation

*The property has a unique shape and was required to dedicate a larger strip of land relative to other nearby properties subject to the 36 foot special setback. Accordingly, the property's condition is not so general or recurrent in nature to make formulation of a general regulation addressing the issue reasonably practicable.*

- (e) The Variance and any buildings or structures permitted by the Variance will not be detrimental to the public health, safety and welfare of the community.

*Neither the Variance nor structures permitted by it will be detrimental to community public health, safety, and welfare. Granting the Variance will allow development of new student dormitories further removed from Pratt Avenue than the existing Vineyard Lodge I building. The applicant has designed the dormitory buildings to be partially screened by large, mature trees located along the site's borders. Reducing parking spaces on the site and restricting supply of parking permits for student dormitory residents will remove vehicles from the City's streets, particularly St. Helena Highway. Student residents will have ample transportation alternatives: the frequent shuttle service between the property and the Greystone Campus, free access to on-site bicycles and the new bicycle lane provided by the Culinary Institute of America along Pratt Avenue, and the St. Helena shuttle and VINE transportation. The parking Variance further*

*discourages private automobile trips by Culinary Institute of America students in and around St. Helena, and therefore confers a benefit to the community.*

D. PARKING VARIANCE. Pursuant to Municipal Code Section 17.172.050, the Planning Commission makes the following variance findings to support the motion to approve a parking variance:

- (a) A hardship peculiar to the property, not created by any act of the owner, exists. In this context, personal, family or financial difficulties, loss of prospective profits, neighboring violations, are not hardships justifying a variance.

*Imposition of the Code's parking requirement for a "rooming, boarding, or lodging house" or "hotel" in the student dormitory context would create a hardship peculiar to the property. Rooming, boarding, or lodging houses traditionally serve individuals unaffiliated with a college or university, who in a community such as St. Helena likely would require use of an automobile for daily activities. Similarly, hotels in St. Helena traditionally serve visitors exploring the region's amenities by private automobile. Requiring one parking space for each guestroom in those contexts is justifiable given the expected patterns of vehicle use, and the potential that failure to provide ample parking spaces could negatively affect neighboring properties. The Culinary Institute of America's students, on the other hand, are offered shuttle service for their daily trips to and from the Greystone Campus, do not require a car for the vast majority of their daily school-related activities, and are offered on-demand car rental for personal trips as well as access to free bicycles on site. Imposition of a one space per dormitory room requirement would create a hardship by dramatically changing the project as proposed and would require elimination of an open quad gathering area and potential reduction in number of student beds in favor of a hardscape parking lot.*

- (b) The Variance is necessary for the preservation and enjoyment of substantial property rights of the applicant which are possessed by other properties in the same district and in the same vicinity; and that a Variance, if granted, would not constitute a special privilege of the recipient not enjoyed by his or her neighbors.

*The Variance would not constitute a special privilege for the property relative to neighboring properties, none of which are developed with student dormitories that require limited on-site parking. Given the unique and limited travel patterns of student residents of the dormitory, with the Variance both the property and neighboring properties will be subject to minimum parking requirements tailored to actual expected travel patterns and parking space demand, and neither the property nor neighboring properties will be required to provide unnecessary parking spaces reducing enjoyment of substantial property rights.*

- (c) The authorization of the Variance will not be of substantial detriment to adjacent properties, and will not materially impair the purpose and intent of this Chapter or the public interest, nor adversely affect the General Plan.

*Authorization of the Variance will not be of substantial detriment to adjacent properties, nor will it materially impair the public interest. The Culinary Institute of America will provide shuttle and on-demand car rental service, will impose a highly restrictive permit system both at the property and the Greystone Campus discouraging students without assigned parking from bringing cars to St. Helena, will provide free bicycles for use by students, and is amenable to restrictions on parking in the surrounding area to benefit nearby residents by discouraging student parking off the property. The Variance serves the public interest by effectively removing vehicles from City streets, particularly St. Helena Highway, encouraging environmentally-friendly and efficient transportation to and from the Greystone Campus. The parking Variance does not impair the purpose and intent of the Code's Variance chapter. The chapter's stated purpose is, in part, to allow variation from strict application of the Code where extraordinary situations or conditions mean that literal enforcement would involve practical difficulties or would cause undue hardship. Here, requiring unnecessary parking spaces would work against the public interest and cause undue hardship to the property and the school. Authorization of the Variance is consistent with City and regional policies encouraging use of alternate modes of travel, both to reduce harm to the environment and to take traffic off local roads, and would not adversely affect the General Plan. These policies and goals are consistent with the project's shuttle service and free bicycle program that reduce the need for parking and provides further support for the parking Variance.*

- (d) The condition or situation of the specific piece of property for which the Variance is sought is not so general or recurrent in nature as to make reasonably practicable the formulation of a general regulation for such condition or situation

*Formulation of a general regulation is not reasonably practicable given the lack of other student dormitories in the City, the targeted transportation options provided to the Culinary Institute of America's students, and consistency with parking reduction practices at other California campuses as discussed in the Crane Transportation Memo that justify the Variance.*

- (e) The Variance and any buildings or structures permitted by the Variance will not be detrimental to the public health, safety and welfare of the community.

*Neither the Variance nor structures permitted by it will be detrimental to community public health, safety, and welfare. Granting the Variance will allow development of new student dormitories further removed from Pratt Avenue than the existing Vineyard Lodge I building. The applicant has designed the dormitory buildings to be partially screened by large, mature trees located along the site's*

*borders. Reducing parking spaces on the site and restricting supply of parking permits for student dormitory residents will remove vehicles from the City's streets, particularly St. Helena Highway. Student residents will have ample transportation alternatives: the frequent shuttle service between the property and the Greystone Campus, free access to on-site bicycles and the new bicycle lane provided by the Culinary Institute of America along Pratt Avenue, and the St. Helena shuttle and VINE transportation. The parking Variance further discourages private automobile trips by Culinary Institute of America students in and around St. Helena, and therefore confers a benefit to the community.*

E. Pursuant to Municipal Code Section 17.124.030 (H), the Planning Commission further finds that the Vineyard Lodge Housing Site constitutes an "unlisted use" and determines that based on the particularities of the proposed project, including the dormitory-use, established shuttle program, and provision of on-demand rental cars and bicycles, the provision of 69 designated parking spaces is sufficient to serve the project site.

F. USE PERMIT. Pursuant to Municipal Code Section 17.168.050, the Planning Commission finds that The Vineyard Lodge dormitories are appurtenant to the CIA at Greystone and provide affordable and convenient lodging for students enrolled in a culinary program. As conditioned, it is expected that the project would operate in an acceptable manner and therefore, the Planning Commission makes the following Use Permit findings to support the motion to approve the use permit:

1. That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.

*The site operation is expected to be substantially similar to that currently existing. There is no expectation that the expansion of the student housing would generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.*

2. That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.

*At project operation, the onsite land use at the Vineyard Lodge Housing Site and associated noise environment will continue to be typical of a multi-unit development (dormitories) and subject to the City's noise exposure standards. The expansion of the Vineyard Lodge Housing site is not expected to introduce a substantial permanent increase in the ambient noise environment due to activities onsite or as a result of stationary or mobile sources. The noise generating elements of the proposed project such as outdoor conversations, mechanical equipment, the operation of landscaping equipment, car engines and car doors would be similar to the existing noise environment present on-site and in the vicinity. The project is expected to introduce noise elements at levels that are generally consistent with the ambient noise conditions.*

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
March 7, 2017

3. That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.

*As detailed in the Noise Impact Study (Appendix L of the IS/MND), the project is expected to add less than 8 trips to Pratt Avenue during the a.m. and p.m. peak hours. This would constitute a negligible increase in traffic noise of less than 0.5 dB which falls well below the threshold of a perceptible change of 3 dB. As such implementation of the proposed project will not substantially increase traffic noise in the area.*

4. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.

*The Project will not result in substantial adverse impacts associated with any public facilities or services. The project site is located adjacent to the urban limit line and is well served by existing public utilities and services. The project will not generate a substantial increase in demands that warrant the expansion or construction of new public facilities. The project site is also located proximate to the police and fire stations. Additional fire service and police calls may occur as a result of the project. However, the project will be subject to the payment of development impact fees, including the Public Safety Impact Fee which funds equipment and facilities' costs for Police and the Fire Departments that may go towards vehicles, capital equipment, and building improvements so as to maintain a high level of public safety. Accordingly, the project will not place excessive demands on any public services.*

5. That the proposed use would provide adequate ingress and egress to and from the proposed location.

*The project's internal circulation plan has been reviewed and meets all requirements of the St. Helena Public Works & Utilities and Fire Departments. Site circulation was determined to be adequate, including sufficient street widths to allow for fire truck turn around and sufficient access to residential buildings. Therefore, ingress and egress is considered adequate.*

6. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy.

*The proposed student housing is appurtenant to the Culinary Institute of America Greystone Campus. The housing would not displace local serving uses nor impair the City's viability of maintaining a local serving economy.*

7. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.

*The Vineyard Lodge site exhibits a land use and zoning designation of PQP: Public-Quasi-Public. The PQP zoning designation does not prescribe specific development standards, but rather stipulates that all projects within the PQP zoning district be subject to a conditional use permit and that development standards shall be established through the use permit review process. These regulations help guarantee that incompatible development and/or activities can be avoided by requiring such projects be held to a high level of scrutiny and are vetted through the public review process, CEQA review, and would be conditioned accordingly. Given that the proposed use serves an infill and expansion of an existing use there is no expectation that the proposed project would introduce an element that would conflict with the intent of the PQP zoning designation.*

8. That the proposed use would not be in conflict with the City's General Plan.  
*As detailed, herein the project would comply with applicable General Plan policies.*
9. That the proposed use would not be injurious to public health, safety, or welfare.  
*The proposed project consists of infill student housing that would operate in a manner substantially similar to the existing Vineyard Lodge Housing. As such, the project would not be injurious to health, safety, or welfare.*
10. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.

*Use permits are considered on a case by case basis and based on the specific merits of a given project. Accordingly, the granting of this use permit would not influence future decisions or otherwise set a precedent.*

11. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.

*The applicant proposes to provide a level of parking commensurate with the demand exhibited by the current residents of Vineyard Lodge Housing Site. At present, 31 percent of residents hold parking permits. It is reasonably expected that this level of demand would continue with implementation of the proposed project which would translate to 69 designated spaces for the total proposed resident population of 224 students. .*

*There is no reason to believe that the student to vehicle ratio would substantially change under the proposed project, namely because (1) the CIA retains authority to issue or not issue parking permits, (2) the project will be subject to a condition of approval stipulating that it may not issue more than 69 parking permits, and (3) the site is uniquely operated in that it provides frequent reliable transportation to and from the Greystone Campus and to other locations, as needed, will provide three on-demand rental cars, and per mitigation measure LU-1, will be required to introduce a scalable bike share program that may be expanded as demand necessitates. As such, the project is expected to be able to accommodate long term parking needs for residents of the site.*

12. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use.

*As detailed in the Traffic Impact Report (Appendix Q of the IS/MND), the project's trip generation is minimal (approximately 4 trips during am and pm peak hours) and therefore the capacity of streets is presumed to be adequate.*

- G. The Planning Commission approves the demolition permit, design review, variances, and use permit for the above-described project with the following conditions of approval. The project shall be in conformance with all city ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.

#### **Conditions of Approval**

1. Project approvals shall be vested within one (1) year from the date of final action. A building permit for the use allowed under this approval shall have been obtained within one (1) year from the effective date of this action or the approval shall expire, provided however that the approval may be extended for up to two (2) one-year periods pursuant to the St. Helena Municipal Code, Section 17.08.130, Extension of Permits and Approvals. Any request for an extension of this approval shall be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.
2. The approvals shall not become effective until fourteen (14) calendar days after approval, providing that the action is not appealed by the City Council or any other interested party within that 14-day period.
3. All required fees, including planning fees, development impact fees, residential in-lieu housing fees, building fees, toilet retrofit fees, and St. Helena Unified School District fees shall be paid prior to issuance of a building permit. Fees shall be those in effect at the time of the issuance of the building permit.
4. Upon approval of Resolution XX-XX, the Applicant shall provide the Planning Department with the Notice of Determination Fee required by Fish and Wildlife Code Section 711.4(d). The fee payment shall be made by check payable to the

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
March 7, 2017

Napa County Clerk and in the amount required and published by the Napa County Clerk for such fee.

5. All Mitigation Measures enumerated in the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program are incorporated by reference and made conditions of approval.
6. Prior to issuance of any construction permits, these conditions of approval and the Mitigation and Monitoring and Reporting Program shall be included with the plan set. A copy of the approved plans shall be maintained on site when construction activities are underway.
7. Minor modifications to approved plans may be approved by the Planning Director insofar as they are in substantial conformance with this approval.
8. Pursuant to St. Helena Municipal Code Section 17.08.110, this permit shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.
9. The primary purpose of this review is for compliance with the General Plan and Zoning Ordinance. The property owners or their designee shall be responsible for meeting with the Building Official, Fire Inspector and or Public Works Department to review compliance with Building Codes, Fire Codes and specific Public Works Standards including fire protection systems and any applicable accessibility standards of Title 24.
10. Construction shall be in compliance with plans submitted and reviewed by the Planning Commission on March 7, 2017, except as modified herein.
11. The site shall be kept clear at all times of garbage and debris. No outdoor storage is permitted.
12. A final lighting plan delineating building mounted lights shall be reviewed and approved by the Planning and Community Improvement Director prior to building permit issuance.
13. Trash bins shall not be visible from public right-of-way. The trash enclosure(s) will be constructed of opaque materials and be of sufficient size to permit the storage, removal and replacement of standard commercial size trash bins. No collection, storage or stacking of garbage, trash and refuse is permitted outside the trash enclosure.
14. All plantings shall be maintained in good growing condition. Such maintenance shall include, where appropriate, pruning, mowing, weeding, and cleaning of debris and trash, fertilizing and regular watering. Where necessary, plantings shall be replaced with other plant materials to insure continued compliance with applicable landscaping requirements, Irrigation systems shall be maintained in sound operating condition with heads periodically cleaned and replaced when missing to ensure efficient watering and to maintain good health and vitality of landscape materials.

15. No signage is approved by this permit. A separate sign permit in compliance with the Municipal Zoning Code shall be obtained prior to installation of signage.
16. Property owners shall recognize that there exists a right to farm properties within the district and in the vicinity of the district. There is a good faith expectation that no complaints will occur regarding legal, normal agricultural activities on properties in the district or in the vicinity of the district. Such activities may include day or night disbursement of chemicals, and creation of dust, noise, or fumes.
17. In any action or proceeding to attack, challenge, invalidate, set aside, void or annul the City's approval of applicant's Project, in whole or in part, applicant shall defend, at its own expense and without any cost to the City, and with counsel acceptable to the City, and shall fully and completely indemnify and hold the City, its agents, officers, and employees harmless from and against any and all claims, causes of action, damages, costs, attorney's fees and liability of any kind, so long as the City reasonably promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.

**Planning Department Conditions**

18. As applicable, the permittee shall comply with any and all previous conditions of approval for the Vineyard Lodge Housing Site except as they may be explicitly modified by this action. To the extent there is a conflict between previous conditions of approval enumerated in Resolution No. 2004-33 or 2008-75 and these conditions of approval, these conditions shall supersede the previous permit and associated conditions.
19. Rental and/or occupancy of Vineyard Lodge dormitories shall be limited only to students who are actively enrolled at the Culinary Institute of America at Greystone in an Associate, Bachelor's, Master's and/or other Certificate Degree Programs with the exception that an on-site manager(s) shall reside on site consistent with State Housing Law, Title 25. The student's length of stay shall be commensurate with the respective degree program.
20. The Applicant shall provide a detailed Transportation Plan that describes the operation of (1) the shuttle service (2) the rental car service (3) parking permits for individual vehicles and (4) the specifics of the on-demand bike program as they relate to the Greystone Campus and Vineyard Lodge Housing Site. The Plan shall be subject to review and approval by the Planning and Community Improvement Director. A copy of the approved shall be provided and kept in the hard copy and digital project file and made available to the public as requested.
21. Parking Permits issued to students who are actively enrolled at the Culinary Institute of America at Greystone for the Vineyard Lodge Housing Site shall not exceed 69 permits at any one time.
22. No off-street parking is allowed on the Southside of Pratt Avenue, east of the Railroad Tracks.

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
March 7, 2017

23. The applicant shall obtain all required approvals in writing for communal kitchen facilities from the Napa County Department of Environmental Management. A copy of the approval shall be provided to the City and added to the project file.
24. Prior to issuance of building permit, the applicant shall enter into a Joint Water Use Agreement with the City and applicable to 830 Pratt Avenue and 2555 Main Street. The Joint Agreement shall authorize a maximum water allocation of 23.1 acre feet/year to be utilized by the two sites. The Joint Agreement shall include enforcement provisions and penalties if the allowance is exceeded in a given year. Said agreement is subject to the approval of the St Helena City Council.
25. Any significant change(s) to the operation of the approved use, including a substantial change in the operational characteristics of the site, intensity, or type(s) of uses shall require amendment to this use permit.

**Public Works Department Conditions**

26. Approval of this project shall be subject to the requirements of, and all improvements shall be designed and constructed in accordance with, the most current version at the time of improvement plan submittal, Caltrans Standards and Specifications, the City of St. Helena Municipal Code, the St. Helena Water and Sewer Standards, the St. Helena Street, Storm Drain and Sidewalk Standards, and all current federal, state and county codes governing such improvements.
27. For any improvements outside the existing building envelope, a grading and drainage plan showing topographic data, all easements, infrastructure onsite and directly adjoining, and an erosion control plan shall be submitted for review and approval by the City Engineer prior to the issuance of a building permit. If the project entails more than 50 cubic yards of soil disturbance, 10,000 square feet of disturbance area, a cut or fill of 3 feet or more, or alteration of any drainage pattern, a grading permit shall be required.
28. Drainage needs to be routed to prevent inundation of neighboring properties. Grading and/or site improvement plans shall show how 2-year and 10-year storm flows shall be infiltrated on site and/or diverted at the property lines to prevent inundation of neighboring properties. The applicant shall submit a drainage and hydrology analysis for the project impact, including downstream erosion potential, to the City of St. Helena Public Works Department with the Improvement Plan submittal in accordance with City of St. Helena, Napa County and State of California codes in effect at the time of improvement plan submittal.
29. Erosion and sediment control plans shall conform to the latest State and City codes at a minimum
30. The applicant shall adhere to the latest Water Agreement with the City and shall incorporate water conservation practices into the proposed project per the Water

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
March 7, 2017

Availability Analysis prepared by Summit Engineering, dated September 2, 2016. Any and all non-conforming appliances and plumbing fixtures shall be removed from the premises. The water conservation requirements shall be replicated in full on the architectural plans.

31. A detailed Post-Construction Stormwater Control Plan (SWCP) that identifies and sizes all permanent post-construction stormwater treatment BMPs shall be prepared and submitted for review approval. The Plan shall be prepared in accordance with the latest edition of the *Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual* and the requirements of the State Water Resources Control Board Phase II Municipal Separate Storm Water System (MS4) General Permit (Order 2013-0001 DWQ).
32. A Post Construction Stormwater Operations and Maintenance Plan that provides a color-coded plan sheet showing all storm drain and water quality infrastructure that is to be maintained, along with detailed instructions and schedules for the ongoing maintenance and operation of all post-construction stormwater BMPs shall be submitted for review and approval by the City Engineer. Once approved, the property owner shall enter into an agreement with the City that provides the terms, conditions, and security associated with the ongoing requirements of the Post Construction Stormwater Best Management Practices.
33. Prior to Certificate of Occupancy, the Applicant shall enter into and record a Post-Construction Stormwater Operations and Maintenance Agreement with the City.
34. If the project includes 500 square feet or more of new landscaping and/or 2,500 square feet or more of rehabilitated landscape, the proposed landscaping shall comply with the State's Model Water Efficient Landscape Ordinance (MWEL0).
35. A detailed Soils Investigation/Geotechnical Report shall be prepared and submitted for review. The report shall address, at a minimum, potential for liquefaction, R-values, expansive soils and seismic risk. The improvement plans shall incorporate all design and construction criteria recommended in the Geotechnical Report.
36. Unless otherwise explicitly permitted, all existing wells, septic tanks/systems and/or underground fuel storage tanks shall be abandoned under permit and inspection of Napa County Department of Environmental Services or other designated agency. If there are none, the project engineer shall provide a letter describing the scope of the search done to make this determination.

37. Site plan shall show the location of any trees within the project area. Provide a tree protection plan for approval by the Public Works Director prior to approval of the building permit. The plan shall be coordinated with any civil grading/drainage/improvement plans.
38. The Applicant shall keep adjoining public streets free and clean of project dirt, mud, materials, and debris during the construction period, as is found necessary by the City Engineer.
39. The developer shall underground all on-site utility lines per St. Helena Municipal Code. The cost of undergrounding shall be the responsibility of applicant.
40. Due to the economic and engineering infeasibility of undergrounding regional serving overhead power lines, such existing lines may remain on overhead power poles.
41. Provide details of any and all proposed fencing, gates and/or walls on all plans submitted for building permit review.
42. Any new and modified existing water laterals, meters and backflow prevention devices shall be required and constructed in accordance with the current requirements of the City of St. Helena's Water Standards and the California Department of Health Standards. Existing meter boxes located within a driveway shall be retrofitted with a traffic-rated box. New laterals shall be located perpendicular to the water main and outside any driveway/drive aisle.
43. Remodels or new construction which requires fire sprinklers shall install an appropriately-sized water service with appropriate backflow and meter devices prior to Certificate of Occupancy. Fire system calculations shall be submitted with the Grading and Drainage Plan to verify fire service lateral and meter sizing. Deferred submittals are not accepted.
44. No construction shall commence until adequate access to fire water supply is available to building sites, and the Fire Chief shall ensure adequate access to fire water supply prior to issuance of building permits.
45. In order to confirm the theoretical assumptions in the provided sewer capacity study, the applicant is required to perform 7-day flow monitoring at the downstream sanitary sewer manholes (No. 6-5 and No. 6-18) to verify that the existing sewer pipe has adequate capacity to accommodate the proposed additional flows prior to building permit approval. Peak sewer flows will not be allowed to exceed 2/3 full pipe. If insufficient capacity is available at the site and with the current infrastructure, a new sanitary sewer must be constructed with adequate capacity by the owner as a condition of the site development.

46. Construct frontage improvements in accordance with the *Frontage Improvement Plan* prepared by Summit Engineering, dated December 7, 2016. Said improvements shall include a full with grind and overlay of 0.10 feet and a cross section consisting of a minimum of 8' parallel parking, 5' bike lane, and 12' lanes (east and west).
47. Trash areas, dumpsters and recycling containers shall be enclosed and roofed per State and County standards to prevent water run-on to the trash area and water runoff from the area, to contain litter and trash so that it is not dispersed by the wind or run-off during waste removal. In the event that wine or food is disposed in these areas, the enclosed trash area shall drain to the sanitary sewer system. An area drain connected to the sanitary sewer shall be installed in the enclosure area and a structural control such as an oil/water separator or sand filter shall be included. No other area shall drain into the trash enclosure. A sign shall be posted prohibiting the dumping of hazardous materials into the sanitary sewer.
48. The applicant shall repair all public improvements that are damaged by the construction process in accordance with the City Water/Sewer/Street/Storm Drain/Sidewalk Standards prior to Certificate of Occupancy.
49. Existing streets being cut by new utility services will require edge grinding and an A.C. overlay per City standards, extent to be determined by the Public Works Department.
50. The applicant shall be required to obtain an encroachment permit for improvements on public right-of-ways prior to receiving a grading or building permit authorizing site work or construction activities on the site.

#### **Building Department Conditions**

51. A building permit is required for all onsite demolition, construction and/or change of occupancy.
52. The applicant will be required to comply with the codes adopted at the time the applicant applies for a building permit. At this time the City of St. Helena utilizes the 2013 Title 24 codes.
53. When submitting plans for a building permit, the plans shall include all documentation listed on the building permit application checklist.
54. The applicant shall provide a construction waste management plan with the building permit application.
55. The plans for construction shall include a checklist for compliance with the California Green Buildings Standards Code, mandatory measures. Provide a

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
March 7, 2017

reference on the checklist indicating where the mandatory measures can be found on the plans.

56. When submitting plans, the title page shall include all information referenced on the building permit application checklist Title Page requirements.

57. Building Permit application materials and plans shall include any documentation pertaining to special loads applicable to the design and the specified section of the code that addresses the condition; special inspections for any systems or components requiring special inspection; requirements for seismic resistance; and a complete list of deferred submittals at time of application. Any deferral of the required submittal items shall have prior approval of the Building Official however deferral of fire sprinkler design is not allowed.

**Fire Department Conditions**

58. Fire sprinklers and fire hydrants shall be installed as required by the Fire Department.

I HEREBY CERTIFY that the foregoing demolition permit, design review, and use permit for 2555 Main Street, and the foregoing demolition permit, design review, variances, and use permit for 830 Pratt Avenue were duly and regularly approved by the Planning Commission of the City of St. Helena at a regular meeting of said Planning Commission held on March 7, 2017 by the following roll call vote:

**From:** Elizabeth  
**To:** [Lilly Bianco](#)  
**Subject:** CIA Dorm Expansion  
**Date:** Tuesday, February 21, 2017 5:14:08 PM

---

Hi Ms. Bianco!

I received a flyer on my door regarding the CIA Dorm Expansion project on Pratt. I am at 1745 Crinella-although I am a block removed from Pratt, I do spend significant time walking there and also use Pratt/Main and Pratt Bridge (when open) for approximately 90% of my entrance and exit from our neighborhood.

A couple of thoughts I have had over the last year regarding the area that I hope to be addressed are:

Will the additional student cars be parking on street or in a lot? If on street-What is proposed to discourage and also clean-up the ridiculous amount of trash that is already left all over the ground around the existing dorms/street parking? Will the CIA provide ongoing street clean-up? Why aren't they already? Pratt will almost certainly become more tourist frequented once the cross Main hotel is completed. The trash is a blight on our city for both tourists and locals.

Which brings me to my next thought, with the soon to follow hotel traffic AND the proposed expansion of CIA Dorms-a traffic light will definitely be needed at the cross of Main and Pratt...it is already very difficult to make even a right hand turn from Pratt to Main due the short red zone prior to the northbound side (and the increase in speed in this area) when there is even one car parked on street directly behind the red zone-very difficult to see what's coming-even in a high profile vehicle! Making a left-hand turn southbound cross traffic is impossible-with the addition of the slight rise in street toward tree tunnel. Problems have increased substantially with just the construction workers vehicles parked in the area-this will be total chaos once hotel and CIA traffic are added in...not to mention the huge amount of foot traffic that will also be attempting that dangerous crossing.

Unfortunately I am unable to attend the Planning Committee meeting tonight to hear all sides of the issues-thank you so much for your consideration in all of this and the possible duplicate comments.

**Subject:** Regarding the CIA dorm expansion on Pratt avenue  
**Date:** Tuesday, February 21, 2017 5:34:17 PM

---

It is my opinion that the CIA should be given the same treatment locals have generally been given when trying to get their own projects facilitated. Historically, a normal small person, home builder, or small spec house investor may as well throw their money on a Craps table as get much of any understanding and help from city of St. Helena planning department. Normal legal uses are regularly interfered, significantly diminished or not allowed. Any deviation from city ordinance/law would be laughable for most. Money talks, we can see that by the current and ugly hotel project and I'm afraid this hearing will be a mere formality. There are trash and parking issues already on Pratt. If expansion is allowed extra traffic will make the Pratt intersection even more dangerous. A light is needed just with hotel construction traffic and pedestrians already. Visibility is bad there as you should know. Please treat us all with equal respect and consideration.

**CIA RESPONSE TO ERRONEOUS CLAIMS MADE IN OPPOSITION TO  
THE PRATT AVENUE STUDENT HOUSING**

Dear Chairperson Kistner, and Commissioners:

We recognize you received a large amount of written information and verbal testimony regarding this Project and that some of that information was confusing, and we believe erroneous. We thought it would be helpful to correct some of the factual errors that were presented to the Commission to help you accurately evaluate the Project's impacts.

**1. CLAIM THAT ACCESS ROAD IS 16' WIDE, DANGEROUS, AND ILLEGAL**

As Planning Director Housh clarified at the meeting, the Project's Access Road is the Vineyard Road located along the easterly-side of the property on the next door Treasury Parcel. The Vineyard Road is 25' wide and a two way road. The Planning Department determined that the 25' width requirement set forth Section 17.124.070(e) was applicable to the Project. Moreover, the Reciprocal Easement Agreement between the CIA and Treasury requires that the Vineyard Road be located a minimum of 7' from the end of the vineyard rows and without a curb to accommodate tractor turns. As a result, there will be a minimum clearance of 32' (and generally more) along the Vineyard Road for traffic to travel in an emergency.

The numerous references to the 16' Access Road were incorrect and misleading. Rather, there is a 16' one-way exit driveway that traverses the site and takes traffic to Pratt Avenue on the westerly side of the site. This driveway actually expands to 18' in the vicinity of the parking spaces to allow parked cars to maneuver. As noted by the Planning Director, the arguments regarding the Access Road "conflated" these two entirely different roadways.

**2. CLAIM THAT THE PROJECT WOULD CAUSE ADVERSE IMPACTS ON ST. HELENA'S SEWER SYSTEM.**

The following is a bullet point summary explanation of the non, or minimal, impact that the Project will have on the City's sewer collection system and wastewater treatment facility.

**Collection System**

- The existing pump station at the Vineyard Lodge discharges wastewater to the City's gravity sewer system at a manhole on Pratt Ave. The existing system discharges wastewater to the City sewer at a flowrate of 30 gallons per minute.
- The proposed pump station at the Vineyard Lodge will use the same discharge pump, and continue to discharge wastewater to the City's sewer system at 30 gallons per minute.

- Since there will be no increase in wastewater flowrate from the Vineyard Lodge, there will be no increase in the existing peak flow of the City's sewer between Pratt Ave and the Crinella Pump Station as a result of the Project. Maintaining the same flowrate mitigates any impact from the proposed Project on the capacity of City's sewer system.
- It is also very important to note that the current Vineyard Lodge system discharges wastewater as it is produced, following conventional patterns of wastewater flow which peak in the morning and in the evening when residential water use is at higher levels. This coincides with periods of expected high wastewater flow from the other residential connections contributing to the Crinella pump station.
- The proposed Project will store wastewater as it is produced, and then discharge it to the City sewer during off-peak hours late at night/early in the morning and during the middle of the day. These times coincide with periods of expected lower flow from the residential connections contributing to the Crinella pump station.
- Discharging wastewater during these periods of lower flow will actually remove 30 gallons per minute of wastewater flow from the City sewer during times of peak flow, decreasing the overall peak flowrates in the system resulting from this Project.

#### Wastewater Treatment Facility

- Though not a requirement for the Project, the CIA has chosen to provide septic tank treatment for all wastewater produced at the Vineyard Lodge.
- All septic tanks will be sized per Uniform Plumbing Code requirements for septic systems.
- The treatment provided by the septic tanks will reduce pollutants in the wastewater by an average of 60-70% compared to typical residential wastewater, minimizing the amount of treatment required at the wastewater treatment facility.

### 3. CLAIM THAT SUBMITTED PHOTOS ESTABLISHED THAT THE PROJECT WOULD HAVE AN ADVERSE VISUAL IMPACT ALONG PRATT AVENUE.

Mr. Hinds submitted several photos that purported to show that the deciduous trees along the Project perimeter did not provide sufficient screening. These photos were taken from private property, not from the street where visual impacts on Pratt Avenue traffic could be measured. Further, they were taken without accounting for new plantings at the 5th year of maturity as required for the Visual Impact Analysis. Lastly, they were taken and submitted without compliance with the Bureau of Land Management criteria that staff determined to be "the most technical visual impact assessment familiar to staff." The visual impact photos submitted by the CIA conformed to the standards required by staff.

### 4. CLAIM THAT THE MUNICIPAL CODE REQUIRES THE SAME PARKING REQUIREMENT FOR A DORMITORY AS A HOTEL BASED ON THE LANGUAGE IN THE MUNICIPAL CODE.

The "Definitions" section of the Municipal Code, Section 17.04.160 defines Hotel, generally as: "Hotel" means any building or portion thereof containing six or more guest rooms

used or intended or designed to be used, let or hired out to be occupied ... and shall include hotels, lodging and rooming houses, dormitories, public and private clubs and any such building of any nature whatsoever so occupied, designed or intended to be so occupied except jails, hospitals, ... ." But, Municipal Code Section 17.24.030 is the Code section that specifies the Parking Requirements imposed on Projects "residential" in nature, and differentiates among these categories included within the definition of Hotel.

The relevant subsections relating to multi-occupant facilities are:

Subsection 17.24.030 (A)(3). "Rooming, boarding, or lodging house: two spaces for the resident owner plus one space for each guest room".

Subsection 17.24.030(A)(4). "Hotel, motel, apartment hotel, and club: one space for each individual guest room, suite, or sleeping or living unit. Additional parking shall also be required for ancillary uses such as restaurants".

Subsection 17.24.030(A)(5). "Mobilehome parks: two spaces shall be provided for each mobilehome space, with at least one on the mobilehome space and the second within one hundred fifty (150) feet of the mobilehome space. Guest parking in a separate designated area shall be provided at the ratio of one space for every four mobilehome spaces."

Subsection 17.24.030(A)(6). "Rest homes, convalescent hospitals, residential care and similar group care facilities: one space for each four beds".

Within these provisions the Code includes references to numerous types of multi-occupant facilities. But, in none of these provisions is "dormitory" listed. As such, dormitories are an "Unlisted Use" and under subsection (H): "Unlisted Uses. The planning commission shall determine the parking requirements for uses not specifically listed. In determining such requirements, the planning commission shall use the above requirements as a general rule and guide."

At page 7 of the Staff Report, this issue was addressed: "The Municipal Code defines a 'lodging house' as a building, or portion thereof, other than a hotel, motel, or bed and breakfast inn, providing room and board or rooming only for compensation. Most often, this is understood as a house having furnished rooms for rent to lodgers. However, unlike a lodging house, the Vineyard Lodge site provides housing *and* transportation for a very specific type of tenant and has much more control over the activities of said tenants. The dormitory-use, established shuttle program, and provision of on-demand rental cars and bicycles, are such that the Vineyard Lodge Housing site operation would be distinctly different from that exhibited by a typical rooming/boarding or lodging house." And, obviously, the parking requirements at the dormitory are markedly different from the operation of hotel or motel where guests are here on a short-term basis touring the valley in their own vehicles the vast majority of the time.

We believe the clear language of Section 17.24.030 establishes that dormitories are not subjected to the same parking requirements as a motel, or a boarding/lodging house. This is not just an attempt to rely on a technicality – it's based on the requirement that there has to be a

nexus between the parking requirements and the use occurring on the property. In the Parking Memorandum from Crane Transportation standards are cited from the Institute of Traffic Engineers (ITE) Manual that parking requirements for colleges and universities are substantially lower than required by the Municipal Code for motels, hotels and/or lodging/boarding houses as addressed in the Staff Report. Given these distinguishing characteristics it is not reasonable, nor fair, to assume that the parking standards for rooming, boarding, or lodging houses is the appropriate standard to apply to this type of unlisted facility. Given that, we believe there is no basis for utilizing that standard to require the CIA to have to establish the requirements for a Variance. Instead, the Commission has the right, and we believe, obligation to impose a reasonable parking requirement for the Project which we have established is .31 spaces per room (which exceeds the one space for each four beds standard (.25) applicable to rest homes, convalescent hospitals and the like in subsection (6) because occupants of those facilities, like those at Vineyard Lodge, will not need regular access to their own vehicles).

We thank you for your continued patience regarding this matter.

**CITY OF ST. HELENA  
PLANNING DEPARTMENT 1480 MAIN STREET- ST. HELENA, CA 94574  
PLANNING COMMISSION**

**February 21, 2017**

**AGENDA ITEM:** #

**FILE NUMBER:** PL16-042

**SUBJECT:** *Culinary Institute of America (CIA) Campus Master Plan (Part 1 of 2)*  
Greystone Campus Design Review and Use Permit

**PREPARED BY:** Lilly Bianco, Contract Planner

**REVIEWED BY:** Noah Housh, Planning Director

**APPLICATION FILED:** 06.27.16      **ACCEPTED AS COMPLETE:** 10.05.16

**LOCATION OF PROPERTY:** 2555 Main Street

**APPLICANT:** Thomas Bensel, Managing Director of the Culinary Institute of America

**PHONE:** 1(707) 967-2310

**APN:** 009-131-003

**GENERAL PLAN:** Public; Quasi-Public;

**ZONING:** W:Winery; Planned Development; Historic Preservation Overlay

**PROPERTY DESCRIPTION:** The Greystone Campus at 2555 Main (APN. 009-131-003) is located on the west side of Main Street (SR 29) in northern St. Helena. The 14.7-acre site is situated at the western edge of the valley surrounded to the north, south, and west by oak woodlands and to the east, across Main Street/SR 29, by vineyards. Parcels to the south of the site support residential and agriculture (viticultural) uses. The site historically served agricultural uses as a cooperative winery. At present the site supports institutional and ancillary commercial uses associated with the Culinary Institute of America. The site is improved with four buildings and appurtenant parking (265 spaces). The four buildings include (1) the Rudd Center, a continuing education facility for the "Semester Away Wine program," (2) The Flavor Discovery Center, a Kitchen/demonstration space, (3) Guest House, which provides housing for 47 students (current occupancy is 45), and (4) the Greystone Cellars building which houses the balance of educational facilities and is the subject of the proposed project. Directly south of the property is the Carpy property which includes the Carpy house and is used for storage by the CIA.

CIA Campus Master Plan  
2555 Main Street  
February 21, 2017  
Page 1 of 12

**PROJECT BACKGROUND**

In September of 1993, the City of St. Helena authorized the Culinary Institute of America (CIA) to operate at the Greystone Cellars site when the City Council certified the Final EIR prepared for the project and issued a Use Permit per Resolution No. 93-105. The use permit issued for the project authorized use of the Greystone Cellars property as an advanced cooking school with ancillary commercial uses; conditions stipulated that the student enrollment not exceed 104 students. Amendments to the use permit were authorized in 1996, 1997, 2001, 2003, 2004, 2006, 2007, and again in 2008. As amended, the use permit allows for the operation of a culinary school with ancillary commercial uses and a student enrollment of 200 students. The site is supported by a total of 265 parking spaces.

| RESOLUTION 2008-76  | Amended conditions to update Regulated Food and Beverage Inventory; increase enrollment; allow more advertising; introduce new teaching kitchen; relocate existing teaching kitchen; and add 25-35 seat café/deli |

*For a comprehensive list of past entitlements issued to the Culinary Institute of America at Greystone see **ATTACHMENT 2**.*

**PROJECT DESCRIPTION**

The Culinary Institute of America (CIA) at Greystone is proposing a campus master plan to restructure and expand the educational facilities at the Greystone Campus (2555 Main Street) and expand student enrollment from 200 to 300 students. Also proposed is a 4,468 sf underground storage cave and the installation of three modular storage units at the rear of the building. The applicant is requesting Design Review and Use Permit entitlements for the Greystone site.

CIA Campus Master Plan  
2555 Main Street  
February 21, 2017  
Page 2 of 12

Student Enrollment

The CIA proposes to increase student enrollment by 100 students to accommodate a total of 300 Students. The 300 students would be enrolled in an occupational education program to obtain an associate's degree (two year program) or certificate (one year program).

Storage Cave

The applicant proposes the excavation of a 4,468-square-foot (sf) storage cave at the north end of the Greystone Cellars building, beneath the former WSGR. The introduction of the storage cave would include constructing entry tunnels extending from two portals at the Greystone loading dock retaining wall. The portal openings would be 10 feet high and 10 feet wide.

Revision of Interior Spaces

The interior changes include improvements to the student dining commons, the introduction of new teaching kitchens, and a new special events kitchen. Also proposed is the closure of the 190 seat Wine Spectator at Greystone Restaurant (WSGR) and relocation of the CIA restaurant to the 58-seat Flavor Discovery Center, resulting in a net reduction in restaurant capacity of 132 seats. The restaurant at the Flavor Discovery Center will be student-run, and will serve meals five days a week for 36 weeks (180 days) per year as opposed to the WSGR which operated 362 days per year and served both lunch and dinner.

More specifically, the interior changes will be as follows:

- Convert the WSGR to a Student Commons and Dining Area and build a new Special Events Kitchen on second floor. The CIA would then demolish first floor workshops and existing back offices, consolidate Staff and faculty offices in an open floor plan administrative wing, and construct a student learning commons.
- Demolish the education office on the 3rd Floor and build a new baking and pastry facility. The CIA will then rebuild a teaching kitchen on the third floor along with two new skill development kitchens in the former bakeshop area.
- Finally, complete a new teaching kitchen, a garde manger kitchen, a multi-use kitchen, an ala carte kitchen, walk-in and storeroom, and specialty kitchen all on the third floor north.

Modular Units

A series of three (3) modular storage units ranging in size from 633 sf to 1,337 sf would be installed at the rear of the third floor of the Greystone Cellars building. The installation of the units would be conducted in accordance with the Secretary of the Interior's Standards for the Treatment of Historic Properties so as to avoid impacting the building's historic integrity. The modular units will only be visible to students, staff and visitors who traverse the driveway at the rear of the property.

ANALYSIS

*CIA Campus Master Plan  
2555 Main Street  
February 21, 2017  
Page 3 of 12*

**GENERAL PLAN**

The Greystone Campus exhibits a General Plan Land Use Designation of Public; Quasi-Public. The Public; Quasi-Public Designation occurs throughout the City and provides for government-owned facilities, public and private schools, and quasi-public uses

General Plan policies applicable to the Greystone Campus Master Plan include:

- 2.6.30 Protect historic resources in the commercial areas and encourage their rehabilitation and re-use
- 3.4.3 Give preference to visitor serving uses whose orientation is toward a more discriminating upscale market consistent with the Valley's reputation as a producer of world class wines, and discourage the introduction of uses that are dependent upon a mass tourist market, while not increasing the total number of tourists.
- 4.8.1 Preserve historic buildings and landscapes throughout the City of St. Helena as an important component of the City's heritage
- 4.8.2 Where feasible adapt historic structures to modern uses to ensure their economic viability and to protect against possible loss.

Staff Response:

As proposed the project will facilitate the continued use of the historic Greystone building and in doing so would preserve the historic resource as a valuable piece of St. Helena's heritage. As such, the project would be consistent with GP Policies, 2.6.30, 4.8.1, 4.8.2. Further, the Culinary Institutes' emphasis on food and wine education promotes the Valley's reputation of a world class destination for wine and the culinary arts. As such, the proposed project exhibits overall consistency with all applicable General Plan goals, policies, and objectives.

**ZONING**

Consistent with the Public; Quasi-Public Land Use Designation, the Greystone Campus exhibits a zoning designation of W: Winery; PD: Planned Development overlay and HP: Historic Preservation Overlay. The PD overlay may be combined with an existing zoning district insofar as the design and the proposed use is consistent with the intent of the St. Helena General Plan.

The PD overlay is intended to provide for development which serves public objectives more fully than development permitted under conventional zoning regulations. The PD overlay provides flexibility to allow for deviations from the standards of the zoning ordinance, accommodate mixed land uses, a variety of housing types, the assembly of small parcels of land into a larger more effective unit, the preservation of open space, natural features or historical structures and structures with diverse building setbacks, lot sizes and building heights.

The HP Overlay is applied to the site given that the site is historically significant and listed on the National Register of Historic Places (NRHP). The purpose of the HP overlay district is to preserve the unique architectural character of structures which have contributed to the city's historic development.

With the proposed changes, the project will continue to meet the applicable development criteria prescribed by the Zoning Code and will meet the intent of the Public; Quasi-Public Land use designation. Further, the project will comply with the HP overlay provisions given that it will not result in exterior changes to the building facades, structures, or to passage ways that could adversely impact the building's historic integrity. As stipulated under Municipal Code Section 17.92.050 no permits for remodeling shall be issued for properties within the HP district which would result in exterior changes to building facades, structures, or to passage ways providing inter-accessibility within a block, unless such change is approved by the planning commission in accordance with the following findings:

1. *That the alteration is compatible with the architectural style of the existing structures;*
2. *That the alteration does not eliminate elements that are required to maintain the essential form and character of the structure;*
3. *That the alternation is compatible with adjoining structures and the use of such structures.*

Given that the project does not propose any such changes, the project would not alter or otherwise impact the integrity of a significant historic resource and therefore complies with the HP District Regulations.

#### **WATER NEUTRALITY**

In August 2015 and pursuant to Ordinance 2015-5 the City of St. Helena established mandatory water efficiency measures for new construction, and adopted water demand offset requirements enumerated in Chapter 13.12.050 of the Municipal Code. Amongst these provisions is the requirement that any "new development" (i.e., construction that would introduce any freestanding building that contains water-using fixtures, any floor area additions to existing nonresidential structures, or any residential additions or remodeling that increases the number of independent living units) offset new demand by an amount of water equal to the new demand placed on the city water system using the methodology defined in Municipal Code section 13.12.050. The offset must be clearly demonstrated to the satisfaction of the Director of Public Works.

The CIA Campus currently operates under two separate water agreements. The current water allotments authorized by the Agreements allocate an average of 15,900 gpd to the Greystone Campus and 4,750 gpd to the Vineyard Lodge Housing site. The total allotment across the two sites amounts to an average of 20,650 gpd or 23.1 acre feet (AF) per year.

Under the CIA Campus Master Plan, the applicant proposes to maintain the existing gross water allotment of 23.1 AF per year, by combining the allocations set forth in the existing two agreements into a single agreement. Specifically, the applicant proposes the rescission of the two existing Agreements and the adoption of a new Joint Water Use Agreement which would redistribute the gross water allotment across the two sites (which will accommodate an increase in water use at the Vineyard Lodge site as the water usage at the Greystone Campus is reduced). The ability of the project to remain within the current gross allotment of 23.1 AF per year is made possible through the installation of new more efficient fixtures at the respective project sites. In any event, the applicant will remain obligated to use not more than 23.1 AF per year.

A condition of approval will require that the new water use agreement which will include adequate enforcement methods that are trackable and sufficiently enforceable so as to ensure that the authorized allotment is not exceeded. Under the proposed Joint Water Use Agreement required per the condition of approval the project will not generate a net increase in water use relative to what was originally approved. As such, the project complies with the City's water neutrality policy.

#### **DESIGN REVIEW**

The purpose of design review is to, amongst other things, promote the qualities that bring value to the community and foster attractiveness and functional utility of the community as a place to live and work. To approve design review, the Commission must find that the project is consistent with the design criteria prescribed by Section 17.164.030 and exhibits a quality of design that is compatible with adjacent development, features a siting, scale, massing and architectural style that is generally consistent with the predominant development patterns and that does not otherwise detract or negatively affect the established character of the surrounding neighborhood.

The Greystone Campus is historically significant as a good example of the late nineteenth century Richardsonian Romanesque architecture in California and further, because it provides a tangible link to the Napa Valley's historical viticultural operations of the last century. Recognizing the historic significance, all project activities are either confined to the interior of the subject site or less visible areas of the property. For example, the three proposed modular units will be confined to the rear of the building and located at the third floor and not readily visible from the property frontage. The storage cave will be underground with entrances confined to loading dock areas and at the rear of the subject property such that it is not visible from main viewing areas. Given the limited nature of exterior changes, the project is expected to be consistent with all Design Criteria parameters, as detailed below.

#### Design Criteria

1. Consistency and compatibility with applicable elements of the general plan;  
*As detailed above, the project is consistent with all applicable General Plan policies*
2. Compatibility of design with the immediate environment of the site;

*No exterior changes are proposed that would alter the design of the building or site.*

3. Relationship of the design to the site;

*The design will greatly limit changes visible on the building exterior; for example, the proposed modular units will be located at the building's rear and not readily visible from public viewing areas. As such, the relationship of the design to the site is appropriate.*

4. Determination that the design is compatible in areas considered by the board as having a unified design or historical character;

*All work will be performed in accordance with the Secretary of the Interior's Standards and will be consistent with the historic character of the subject site.*

5. Whether the design promotes harmonious transition in scale and character in areas between different designated land uses;

*No substantial changes are proposed that would alter the existing scale or character.*

6. Compatibility with future construction both on and off the site;

*No exterior changes are proposed that would alter compatibility with future construction on or off site.*

7. Whether the architectural design of structures and their materials and colors are appropriate to the function of the project;

*The proposed modular units will be of simple design and materials which will ensure their functionality while also limiting changes to the visual environment.*

8. Whether the planning and siting of the various functions and buildings on the site create an internal sense of order and provide a desirable environment for occupants, visitors and the general community;

*Not applicable.*

9. Whether the amount and arrangement of open space and landscaping are appropriate to the design and the function of the structures;

*No open space or landscaping is proposed as part of this project.*

10. Whether sufficient ancillary functions are provided to support the main functions of the project and whether they are compatible with the project's design concept;

*Not applicable.*

11. Whether access to the property and circulation systems are safe and convenient for pedestrians, cyclists and vehicles;

*No changes to the circulation system are proposed.*

12. Whether natural features are appropriately preserved and integrated with the project;

*No changes to natural features are proposed.*

13. Whether the materials, textures, colors and details of construction are an appropriate expression of its design concept and function and whether they are compatible with the adjacent and neighboring structure and functions;

*Three modular units ranging in size from 633 sf to 1,337 sf are proposed on the west elevation (rear) of the building. The units will be accessed from an existing roadway, supported on new horizontal steel structure that spans the area and similar to existing modern mechanical equipment supports. Utilitarian in nature, the units are constructed of painted metal siding, doors, and flat roofs behind shallow parapets. The proposed modular units are located away from principal elevations, have been designed to fit below the historic eave of the building, and are minimal in size compared to the original structure. Proposed work will use materials to differentiate the additions from the historic exterior masonry. These characteristics reflect the project's compliance with the Secretary of the Interior Standards for Rehabilitation (SOISR). Given the above, the proposed new modular units are expected to be compatible with adjacent structures.*

15. Whether the landscape design concept for the site, as shown by the relationship of plant masses, open space, scale, plant forms and foliage textures and colors create a desirable and functional environment and whether the landscape concept depicts an appropriate unity with the various buildings on the site;

*There is no new landscaping proposed.*

16. Whether plant material is suitable and adaptable to the site, capable of being properly maintained on the site, and is of a variety which is suitable to the climate of St. Helena;

*No landscaping is proposed.*

17. Whether sustainability and climate protection are promoted through the use of green building practices such as appropriate site/architectural design, use of green building materials, energy efficient systems and water efficient landscape materials.

*All outdated/inefficient fixtures and systems will be replaced with more efficient and environmentally friendly fixtures.*

*The exterior modifications proposed for the subject site are largely limited to the introduction of three new modular storage units at the rear of the property. The proposed units would be stand-alone not additions to the building such that they are reversible and their removal in the future would not affect the historic integrity of the building. Given the very limited design changes and in light of the design criteria above, the project is found to be generally consistent with the design review requirements.*

#### **USE PERMIT**

The purpose of a use permit is to allow the proper integration of essential or desirable uses which may be suitable only in certain locations or zoning districts in the City, or to ensure that such uses are designed or arranged on the site in a particular manner. In its review of applications for use permits, the Planning Commission shall evaluate each

CIA Campus Master Plan  
2555 Main Street  
February 21, 2017  
Page 8 of 12

proposed use in order to consider its impact on the city. (Zoning Code Section 17.168 040).

The Greystone facility operates under use permit No. 93-105, which has been amended multiple times since approved in 1993. In its present form, the use permit authorizes the operation of a culinary school with a student population of 200 students, ancillary commercial uses, including a 35 seat café/bakery, the 190 seat Wine Spectator at Greystone Restaurant, and 3,100 sf retail store. The site is served by a total of 265 parking spaces with valet parking available for 60 vehicles.

The Applicant has requested to amend the use permit to better align with the facility's move toward occupational education and accommodate changing needs. Much of the CIA's large-scale special events and commercial activities have been transferred to the recently acquired, American Center for Wine Food & The Arts (COPIA) in the City of Napa. As such, the Greystone facility will see a much greater focus on the educational component. Specifically, the applicant is requesting that the use permit be revised to allow a total enrollment of 300 students, allow more flexibility in the operation of the retail store, and allow for a 58-seat student-run restaurant to replace the now closed, 190-seat Wine Spectator at Greystone Restaurant (**See Attachment 5**). The proposed changes do not substantially increase the intensity of the site or otherwise create an impact that would conflict with any of the requisite findings needed to approve a use permit.

The Greystone facility and uses therein have evolved significantly since the original use permit was issued in 1993. Accordingly, the recommended new use permit would incorporate and update items still applicable and add new conditions, as appropriate. As conditioned, the project will meet all applicable criteria, and Staff recommends approval of the new use permit.

The Findings required to approve a Use Permit are:

1. That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.

*No significant changes in the operation of the facility will change and there is no expectation that the proposed project would generate odors, fumes, dust, light, glare, radiation or refuse beyond what is currently typical of the culinary school use. As such, operation of the Greystone Campus consistent with the proposed project would not be injurious to surrounding uses or the community.*

2. That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.

*Levels of noise would be consistent with or less than existing noise levels given the reduction in events and size of the on-site restaurant.*

3. That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.

*As detailed in the Traffic Impact Report, the proposed project will not cause a substantial increase in traffic trips that would cause the ambient noise level to exceed the normally acceptable range. Given the limited traffic trips associated with the proposed project, the project would not cause traffic noise to noticeably increase beyond existing level or otherwise exceed normally acceptable ranges.*

4. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.

*The level of demand placed on public services will remain consistent with that which currently exists due to the introduction of more efficient fixtures and systems, adherence to the water neutrality policy, and the fact that the proposed use will continue to operate as a culinary school with an ancillary retail and restaurant component.*

5. That the proposed use would provide adequate ingress and egress to and from the proposed location.

*No changes to ingress/ egress are proposed.*

6. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy.

*The proposed use is consistent with that which currently exists at the site and no changes are expected that would otherwise conflict with the City's goal of maintaining the economic viability of a local serving economy.*

7. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.

*No significant change in use or operation is proposed and as such, the proposed use would continue to be compatible with surrounding land uses.*

8. That the proposed use would not be in conflict with the City's General Plan.

*As detailed above, the use would be consistent with all applicable General Plan policies.*

9. That the proposed use would not be injurious to public health, safety, or welfare.

*The proposed use is largely consistent with that which currently exists at the subject site and is not expected to be injurious to public health, safety, or welfare.*

10. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.

*The findings related to this particular project are unique and applicable only to the CIA Campus Master Plan. There is no reason to expect that approval of this use permit would set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.*

11. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.

*No changes to parking are proposed. Students living off-site would continue to be required to utilize the shuttle for transportation between student housing and the Greystone Campus. As such, no demand that couldn't be accommodated by the existing level of parking is expected.*

12. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use.

*The surrounding roadways will continue to be able to accommodate automobile and truck traffic generated by the proposed project and is not expected to increase substantially beyond that which currently exists.*

### **REGULATED FOOD & BEVERAGE ESTABLISHMENTS INVENTORY**

At present, the Regulated Food and Beverage Inventory lists 30 establishments. The project will result in the closure of the 190 seat Wine Spectator at Greystone Restaurant and introduction of the 58-seat restaurant at the Flavor Discovery Center, resulting in no net change in the number of establishments on site, but with a net reduction in seats of (132). The project will be conditioned such that restaurant seating not exceed 58 seats and that restaurant facilities remain an ancillary use to the overall educational use.

### **CEQA**

In accordance with Article 6 and Appendix G of the California Environmental Quality Act (CEQA) Guidelines, an Initial Study and Mitigated Negative Declaration (IS/MND) has been prepared for the proposed project and included as **Attachment 7**. The document contains a description of the proposed project, an analysis of potential environmental impacts resulting from the proposed project, as well as mitigation measures intended to reduce potentially significant impacts to less-than-significant levels.

The IS/MND found that although the proposed project would generate potentially significant impacts related to aesthetics, air quality, biological resources, cultural resources, geology and soils, land use, noise, and transportation, through the

CIA Campus Master Plan  
2555 Main Street  
February 21, 2017  
Page 11 of 12

introduction of mitigation measures agreed upon by the project applicant, all potentially significant impacts would be reduced to less than significant levels.

The Draft IS/MND was circulated for a 40-day public review period from December 9, 2016 to January 23, 2017. Twelve (12) comment letters were received during the public comment period which communicated concerns related to wastewater generation, water availability, traffic, aesthetics, and safety. A formal response to comments was prepared and is included as **Attachment 8**.

The Response to Comments addresses concerns raised on environmental issues and provide clarification and revision to the IS/MND, as appropriate. Included in Section 3 of the Response to Comments are changes made to the IS/MND. Modifications are denoted using strikethrough for deletions and underline for insertions. Modifications to the IS/MND are intended to provide clarification, expand discussion, and enhance understanding of the analysis, site conditions, and potential impacts of the project. No modifications to the IS/MND were so substantial as to warrant recirculation pursuant to CEQA Guidelines Section 15088.5

### **PUBLIC COMMENT/ ISSUES**

At the writing of the staff report a total of 18 comment letters were received on the project, 12 of those letters were provided during the public comment period and responded to as part of the CEQA Response to Comments. Issues raised centered on the Vineyard Lodge component and related to concerns about wastewater generation, water availability, traffic, aesthetics, and safety. A detailed discussion of these issues is provided in the Response to Comments, **Attachment 8**.

### **STAFF RECOMMENDATION**

The Planning and Community Improvement Department recommends that the Planning Commission:

1. Adopt the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the project; and
2. Accept the required findings enumerated in Municipal Code Section 17.164.030 and adopt a resolution approving Design Review and a Use Permit for the CIA at Greystone project.

Page 12 of 12*

**CITY OF ST. HELENA PLANNING COMMISSION**

**RESOLUTION PC20xx-xx**

**RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ST. HELENA  
ADOPTING A MITIGATED NEGATIVE DECLARATION AND MITIGATION  
MONITORING AND REPORTING PROGRAM FOR THE CULINARY INSITUTE OF  
AMERICA CAMPUS MASTER PLAN AND GRANTING APPROVAL OF DESIGN  
REVIEW AND A USE PERMIT FOR 2555 MAIN STREET AND GRANTING APPROVAL  
OF A DEMOLITION PERMIT, DESIGN REVIEW, USE PERMIT, AND VARIANCES FOR  
830 PRATT AVENUE IN THE CITY OF ST.HELENA, CALIFORNIA**

**PROPERTY OWNER:** CULINARY INSTITUTE OF AMERICA

**APN:** 009-010-024  
and 009-131-003

**Recitals**

1. **Whereas**, The Culinary Institute of America submitted an application for Design Review and Use Permit approval to expand student enrollment to 300 students, introduce storage cave, and three modular storage units at the Greystone Campus at 2555 Main Street (APN.009-131-003); and
2. **Whereas**, The Culinary Institute of America also submitted an application for a Demolition Permit, Design Review, Use Permit, and Variances to expand the student housing at the Vineyard Lodge Housing Site at 830 Pratt Avenue (APN. 009-010-024); and
3. **Whereas**, Pursuant to CEQA Guidelines Sections 15072 and 15073, a Draft Mitigated Negative Declaration and included Initial Study was circulated for public review and comment from December 9, 2016 until January 23, 2017; and
4. **Whereas**, the Initial Study/Mitigated Negative Declaration concluded that implementation of the Project could result in a number of potentially significant effects on the environment and identified mitigation measures that would reduce the significant effects to a less-than-significant level; and
5. **Whereas**, in connection with the approval of a project involving the preparation of an initial study/mitigated negative declaration that identifies one or more significant environmental effects, CEQA requires the decision-making body of the lead agency to incorporate feasible mitigation measures that would reduce those significant environmental effects to a less-than-significant level; and.
6. **Whereas**, whenever a lead agency approves a project requiring the implementation of measures to mitigate or avoid significant effects on the environment, CEQA also

*2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
February 21, 2017*

requires a lead agency to adopt a Mitigation Monitoring and Reporting Program to ensure compliance with the mitigation measures during project implementation; and

7. **Whereas**, The Planning Commission of the City of St. Helena, State of California, considered the project, staff report, and all testimony, written and spoken, at a duly noticed public hearing on February 21, 2017.
8. **Whereas**, A public notice was published in the St. Helena Star and mailed to residents and occupants within 500 feet of the project site and in compliance with state and local law; and
9. **Now, therefore** let it be found that, the Planning Commission adopts the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, and approves the requested Use permit and Design Review for 2555 Main Street and approves the Demolition Permit, Design Review, Use Permit, and Variances for 830 Pratt Avenue on the following basis:

#### **Resolution**

1. In making the findings in this Resolution, the Planning Commission relied upon and hereby incorporates by reference all of the documents referenced in this Resolution and the associated staff report, City files for this matter, correspondence, presentations and other materials.
2. **CEQA Findings**
  1. The Planning Commission has independently reviewed and analyzed the Initial Study/Mitigated Negative Declaration and other information in the record and has considered the information contained therein, prior to acting upon or approving the Project,
  2. The Initial Study/Mitigated Negative Declaration prepared for the Project has been completed in compliance with CEQA and consistent with state and local guidelines implementing CEQA,
  3. On the basis of the whole record, there is no substantial evidence that the Project as designed, conditioned, and mitigated, will have a significant effect on the environment.
  4. The Initial Study/Mitigated Negative Declaration represents the independent judgment and analysis of the City as lead agency for the Project.
3. **2555 Main Street Findings and Conditions of Approval**
  - A. **DESIGN REVIEW.** The Planning Commission finds that The Greystone Campus is historically significant as a good example of the late nineteenth century Richardsonian Romanesque architecture in California and provides a tangible link to the Napa Valley's historical viticultural operations of the last century. All project activities are either confined to the interior of buildings or less visible areas of the property such that any changes are not readily visible from main viewing areas. The exterior modifications proposed for the subject include the introduction of three new modular storage units at the rear of the property. The introduction of the proposed modular units would be reversible and their removal in the future would not affect

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
February 21, 2017

the historic integrity of the building. Given the very limited design changes and for the reasons described below, the project is found to be generally consistent with the design review requirements. As such, the Planning Commission determines the project is in compliance with the following Design Review criteria of Municipal Code Section 17.164.030:

1. Consistency and compatibility with applicable elements of the general plan;  
*As proposed the project will facilitate the continued use of the historic Greystone building and in doing so would preserve the historic resource as a valuable piece of St. Helena's heritage. As such, the project would be consistent with GP Policies, 2.6.30, 4.8.1, 4.8.2. Further, the Culinary Institutes' emphasis on food and wine education promotes the Valley's reputation of a world class destination for wine and the culinary arts. As such, the proposed project exhibits overall consistency with all applicable General Plan goals, policies, and objectives.*
2. Compatibility of design with the immediate environment of the site;  
*No exterior changes are proposed that would alter the design of the building or site.*
3. Relationship of the design to the site;  
*The design will greatly limit changes visible on the building exterior; for example, the proposed modular units will be located at the building's rear and not readily visible from public viewing areas. As such, the relationship of the design to the site is appropriate.*
4. Determination that the design is compatible in areas considered by the board as having a unified design or historical character;  
*All work will be performed in accordance with the Secretary of the Interior's Standards and will be consistent with the historic character of the subject site.*
5. Whether the design promotes harmonious transition in scale and character in areas between different designated land uses;  
*No substantial changes are proposed that would alter the existing scale or character.*
6. Compatibility with future construction both on and off the site;  
*No exterior changes are proposed that would alter compatibility with future construction on or off site.*
7. Whether the architectural design of structures and their materials and colors are appropriate to the function of the project;  
*The proposed modular units will be of simple design and materials which will ensure their functionality while also limiting changes to the visual environment.*
8. Whether the planning and siting of the various functions and buildings on the site create an internal sense of order and provide a desirable environment for occupants, visitors and the general community;

*The majority of changes are confined to the interior of the existing Greystone building and therefore would not alter the existing site configuration or overall functionality of the site. The proposed modular units and storage cave would be located conveniently with connectivity to the internal uses they serve. As such, proposed changes would be functional and would limit changes to the visual environment of the site.*

9. Whether the amount and arrangement of open space and landscaping are appropriate to the design and the function of the structures;

*No open space or landscaping is proposed as part of this project.*

10. Whether sufficient ancillary functions are provided to support the main functions of the project and whether they are compatible with the project's design concept;

*The project includes modular storage units and storage cave that will support the Culinary school use of the site. The ancillary components are either shielded from view, in the case of the modular units, or underground and not visible, in the case of the storage cave. Given the limited visibility of both components, they are expected to be compatible with the overall design of the Greystone property.*

11. Whether access to the property and circulation systems are safe and convenient for pedestrians, cyclists and vehicles;

*No changes to the circulation system are proposed.*

12. Whether natural features are appropriately preserved and integrated with the project;

*No changes to natural features are proposed.*

13. Whether the materials, textures, colors and details of construction are an appropriate expression of its design concept and function and whether they are compatible with the adjacent and neighboring structure and functions;

*Three modular units ranging in size from 633 sf to 1,337 sf are proposed on the west elevation (rear) of the building. The units will be accessed from an existing roadway, supported on new horizontal steel structure that spans the area and similar to existing modern mechanical equipment supports. Utilitarian in nature, the units are constructed of painted metal siding, doors, and flat roofs behind shallow parapets. The proposed modular units are located away from principal elevations, have been designed to fit below the historic eave of the building, and are minimal in size compared to the original structure. Proposed work will use materials to differentiate the additions from the historic exterior masonry. These characteristics reflect the project's compliance with the Secretary of the Interior Standards for Rehabilitation (SOISR). Given the above, the proposed new modular units are expected to be compatible with adjacent structures and functions.*

15. Whether the landscape design concept for the site, as shown by the relationship of plant masses, open space, scale, plant forms and foliage textures and colors create a desirable and functional environment and whether the landscape concept depicts an appropriate unity with the various buildings on the site;

*There is no new landscaping proposed.*

16. Whether plant material is suitable and adaptable to the site, capable of being properly maintained on the site, and is of a variety which is suitable to the climate of St. Helena;

*No landscaping is proposed.*

17. Whether sustainability and climate protection are promoted through the use of green building practices such as appropriate site/architectural design, use of green building materials, energy efficient systems and water efficient landscape materials.

*All outdated/inefficient fixtures and systems will be replaced with more efficient and environmentally friendly fixtures and as such, the project will further sustainability goals.*

- B. USE PERMIT. Pursuant to Municipal Code Section 17.168.050, the Planning Commission acknowledges that the Culinary Institute of America at Greystone endeavors to place a greater focus on occupational education. To achieve this, the applicant requests that the use permit authorize a total enrollment of 300 students, allow more flexibility in the operation of the retail store, and allow for a 58 seat student-run restaurant to replace the now closed, 190-seat Wine Spectator at Greystone Restaurant. It is determined that proposed changes do not substantially increase the intensity of the site or otherwise create an impact that would conflict with any of the requisite findings needed to approve a use permit. Accordingly, the Planning Commission makes the following Use Permit findings to support the motion to approve the use permit:

1. That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.

*No significant changes in the operation of the facility will change and there is no expectation that the proposed project would generate odors, fumes, dust, light, glare, radiation or refuse beyond what is currently typical of the culinary school use. As such, operation of the Greystone Campus consistent with the proposed project would not be injurious to surrounding uses or the community.*

2. That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.

*Levels of noise would be consistent with or less than existing noise levels given the reduction in events and size of the on-site restaurant.*

3. That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.

*As detailed in the Traffic Impact Report, the proposed project will not cause a substantial increase in traffic trips that would cause the ambient noise level to*

*exceed the normally acceptable range. Given the limited traffic trips associated with the proposed project, the project would not cause traffic noise to noticeably increase beyond existing level or otherwise exceed normally acceptable ranges.*

4. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.

*The level of demand placed on public services will remain consistent with that which currently exists due to the introduction of more efficient fixtures and systems, adherence to the water neutrality policy, and the fact that the proposed use will continue to operate in a manner consistent with what currently exists, as a culinary school with an ancillary retail and restaurant component.*

5. That the proposed use would provide adequate ingress and egress to and from the proposed location.

*No changes to ingress/ egress are proposed.*

6. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy.

*The proposed use is consistent with that which currently exists at the site and no changes are expected that would otherwise conflict with the City's goal of maintaining the economic viability of a local serving economy.*

7. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.

*No significant change in use or operation is proposed and as such, the proposed use would continue to be compatible with surrounding land uses.*

8. That the proposed use would not be in conflict with the City's General Plan.

*As detailed above, the use would be consistent with all applicable General Plan policies.*

9. That the proposed use would not be injurious to public health, safety, or welfare.

*The proposed use is largely consistent with that which currently exists at the subject site and is not expected to be injurious to public health, safety, or welfare.*

10. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.

*The findings related to this particular project are unique and applicable only to the CIA Campus Master Plan. There is no reason to expect that approval of this use permit would set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.*

11. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.

*No changes to parking are proposed. Students living off-site would continue to be required to utilize the shuttle for transportation between student housing and the Greystone Campus. As such, no demand that couldn't be accommodated by the existing level of parking is expected.*

12. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use.

*The surrounding roadways will continue to be able to accommodate automobile and truck traffic generated by the proposed project and is not expected to increase substantially beyond that which currently exists.*

- C. The Planning Commission approves the design review and use permit for the above-described project with the following conditions of approval. The project shall be in conformance with all city ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.

#### **Conditions of Approval**

1. Project approvals shall be vested within one (1) year from the date of final action. A building permit for the use allowed under this approval shall have been obtained within one (1) year from the effective date of this action or the approval shall expire, provided however that the approval may be extended for up to two (2) one-year periods pursuant to the St. Helena Municipal Code, Section 17.08.130, Extension of Permits and Approvals. Any request for an extension of this approval shall be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.

2. The approvals shall not become effective until fourteen (14) calendar days after approval, providing that the action is not appealed by the City Council or any other interested party within that 14-day period.
3. All required fees, including planning fees, development impact fees, residential in-lieu housing fees, building fees, toilet retrofit fees, and St. Helena Unified School District fees shall be paid prior to issuance of a building permit. Fees shall be those in effect at the time of the issuance of the building permit.
4. Upon approval of Resolution XX-XX, the Applicant shall provide the Planning Department with the Notice of Determination Fee required by Fish and Wildlife Code Section 711.4(d). The fee payment shall be made by check payable to the Napa County Clerk and in the amount required and published by the Napa County Clerk for such fee.
5. All Mitigation Measures enumerated in the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program are incorporated by reference and made conditions of approval.
6. Prior to issuance of any construction permits, these conditions of approval *and* the Mitigation and Monitoring and Reporting Program shall be included with the plan set. A copy of the approved plans shall be maintained on site when construction activities are underway.
7. Pursuant to St. Helena Municipal Code Section 17.08.110, this permit shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.
8. The primary purpose of this review is for compliance with the General Plan and Zoning Ordinance. The property owners or their designee shall be responsible for meeting with the Building Official, Fire Inspector and or Public Works Department to review compliance with Building Codes, Fire Codes and specific Public Works Standards including fire protection systems and any applicable accessibility standards of Title 24.
9. Construction shall be in compliance with plans submitted and reviewed by the Planning Commission on February 21, 2017, except as modified herein.
10. Minor modifications to approved plans may be approved by the Planning Director insofar as they are in substantial conformance with this approval.
11. The site shall be kept clear at all times of garbage and debris. No outdoor storage is permitted.
12. A final lighting plan delineating building mounted lights shall be reviewed and approved by the Planning and Community Improvement Director prior to building permit issuance.
13. Trash bins shall not be visible from public right-of-way.
14. All plantings shall be maintained in good growing condition. Such maintenance shall include, where appropriate, pruning, mowing, weeding, and cleaning of debris and

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
February 21, 2017

trash, fertilizing and regular watering. Where necessary, plantings shall be replaced with other plant materials to insure continued compliance with applicable landscaping requirements, Irrigation systems shall be maintained in sound operating condition with heads periodically cleaned and replaced when missing to ensure efficient watering and to maintain good health and vitality of landscape materials.

15. No signage is approved by this permit. A separate sign permit in compliance with the Municipal Code shall be obtained prior to installation of signage.
16. Property owners shall recognize that there exists a right to farm properties within the district and in the vicinity of the district. There is a good faith expectation that no complaints will occur regarding legal, normal agricultural activities on properties in the district or in the vicinity of the district. Such activities may include day or night disbursement of chemicals, and creation of dust, noise, or fumes.
17. In any action or proceeding to attack, challenge, invalidate, set aside, void or annul the City's approval of applicant's Project, in whole or in part, applicant shall defend, at its own expense and without any cost to the City, and with counsel acceptable to the City, and shall fully and completely indemnify and hold the City, its agents, officers, and employees harmless from and against any and all claims, causes of action, damages, costs, attorney's fees and liability of any kind, so long as the City reasonably promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.

#### **Planning Department Conditions**

18. As applicable, the permittee shall comply with any and all previous conditions of approval for the CIA Greystone Campus except as they may be explicitly modified by this action. To the extent there is a conflict between previous conditions of approval enumerated in any previous resolutions relating to the subject site including, but not necessarily limited to: Resolution Nos. 93-105; 96-95; 97-162; 2001-60; 2003-42; 2004-112; 2006-07; 2006-130; or 2008-76 and these conditions of approval, these conditions shall control, superseding the prior approvals with respect to any such conflict.
19. The primary use shall be that of an advanced cooking school with ancillary uses limited to (1) 58 seat student run restaurant, (1) 35 seat bakery/café and, (1) 3,100 square foot retail store subject to the conditions herein.
20. The student population shall not exceed 300 students. Students shall be limited to those enrolled an Associate, Bachelor's, Master's and/or other Certificate Degree Program.
21. Only students actively enrolled at the CIA at Greystone campus shall be allowed to use school lodging accommodations. The student's length of stay shall be commensurate with the respective degree program.

22. As an ancillary component to the bakery and pastry education program and to help students satisfy educational requirements, a Bakery/Café with no more than 35 seats may be operated within the Greystone Cellars building.
23. A restaurant may be operated within the Flavor Discovery Center (FDC) as an accessory use to the school with seating limited to a total of 58 seats, including both indoor and outdoor dining. Any outdoor dining shall be consistent with the Zoning Regulations in effect at the time of operation.
24. A 3,100 sf campus store may be operated as an accessory use to the school within the main winery building. The store shall be limited to the hours of operation of 10:00 a.m. – 7:00 p.m. Items sold at the retail store shall be directly related to the food and beverage industry or to the incidental needs of the student residents, such as toiletries and stationery. Bottled wine sales may be permitted. The store may be advertised in educational, food service, trade and Napa county newspapers of record. Site signage shall comply with the St. Helena sign ordinance. Wine tasting may occur within the store as an accessory and subordinate activity relating to the sale of wine but shall occur only during the hours the retail store is open."
25. Valet parking shall be provided for all special and community events if they are held during hours that the restaurant is open and/or when designated on-site parking is not adequate. No parking shall be permitted along Highway 29/Main Street or Deer Park Road.
26. The CIA may offer tours and limited educational experiences to the General Public so long as such activities are incidental and secondary to the primary degree and/or Certificate educational programs offered at Greystone.
27. The Applicant shall provide a Transportation Plan that describes the operation of (1) the shuttle service (2) the rental car service (3) parking permits for individual vehicles and (4) the specifics of the on-demand bike program as they relate to the Greystone Campus and Vineyard Lodge Housing Site. The Plan shall be subject to review and approval by the Planning and Community Improvement Director. A copy of the approved Transportation Plan shall be provided and kept in the hard copy and digital project file.
28. Modular Units and the underground cave shall be used for storage of products and wares used for the purposes of culinary education.
29. Prior to issuance of building permit, the applicant shall execute a Joint Water Use Agreement with the Vineyard Lodge Housing Site. The Joint Agreement shall authorize a maximum water allocation of 23.1 acre feet/year to be utilized by the two sites. The Joint Agreement shall include enforcement provisions and penalties if the allowance is exceeded in a given year.

30. Any significant change(s) to the operation of the approved use, including a change in hours of operation, intensity, or type(s) of uses shall require amendment to this use permit.

#### **Public Works Conditions**

31. Approval of this project shall be subject to the requirements of, and all improvements shall be designed and constructed in accordance with, the most current version at the time of improvement plan submittal, Caltrans Standards and Specifications, the City of St. Helena Municipal Code, the St. Helena Water and Sewer Standards, the St. Helena Street, Storm Drain and Sidewalk Standards, and all current federal, state and county codes governing such improvements.
32. For any improvements outside the existing building envelope, a grading and drainage plan showing topographic data, all easements, infrastructure onsite and directly adjoining, and an erosion control plan shall be submitted for review and approval by the City Engineer prior to the issuance of a building permit. If the project entails more than 50 cubic yards of soil disturbance, 10,000 square feet of disturbance area, a cut or fill of 3 feet or more, or alteration of any drainage pattern, a grading permit shall be required.
33. A detailed Soils Investigation/Geotechnical Report shall be prepared and submitted for review. The report shall address, at a minimum, potential for liquefaction, R-values, expansive soils, seismic risk, cave wall and ceiling stability, etc. The improvement plans shall incorporate all design and construction criteria recommended in the Geotechnical Report.
34. Remodels or new construction which requires fire sprinklers shall install an appropriately-sized water service with appropriate backflow and meter devices prior to Certificate of Occupancy. Fire system calculations shall be submitted with the Grading and Drainage Plan to verify fire service lateral and meter sizing. Deferred submittals are not accepted.
35. The applicant shall be required to submit to the requirements for annual inspections of food/beverage service establishments and businesses that handle hazardous wastes for illicit stormwater discharges as required by the State National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges. The annual stormwater illicit discharge inspections are performed and invoiced by Napa County Department of Environmental Management.
36. Trash areas, dumpsters and recycling containers shall be enclosed and roofed per State and County standards to prevent water run-on to the trash area and water runoff from the area, to contain litter and trash so that it is not dispersed by the wind or run-off during waste removal. In the event that wine or food is disposed in these areas, they shall drain to the sanitary sewer system. An area drain connected to the sanitary sewer shall be installed in the enclosure area and a structural control such as an oil/water separator or sand filter shall be included. No other area shall drain

into the trash enclosure. A sign shall be posted prohibiting the dumping of hazardous materials into the sanitary sewer.

37. The applicant shall incorporate water conservation practices into the proposed project per the Water Neutrality Calculations prepared by Summit Engineering, dated October 15, 2016. Any and all non-conforming appliances and plumbing fixtures shall be removed from the premises. The water conservation requirements shall be replicated in full on the architectural plans.
38. Erosion and sediment control plans shall conform to the latest State and City codes at a minimum.
39. Grading plans shall identify off-haul routes and soil disposal sites, subject to review and approval by Public Works. All grading and spoils generated by construction of the project facilities, including cave spoils, shall be removed and/or permanently placed prior to final occupancy.
40. The Applicant shall keep adjoining public streets free and clean of project dirt, mud, materials, and debris during the construction period, as is found necessary by the City Engineer.
41. Any new and modified existing water laterals, meters and backflow prevention devices shall be required and constructed in accordance with the requirements of the City of St. Helena's Water Standards.
42. The applicant shall repair all public improvements that are damaged by the construction process in accordance with the City Water/Sewer/Street/Storm Drain/Sidewalk Standards prior to Certificate of Occupancy.
43. Existing streets being cut by new utility services will require edge grinding and an A.C. overlay per City standards, extent to be determined by the Public Works Department.
44. The applicant shall be required to obtain an encroachment permit for improvements on public right-of-ways prior to receiving a grading or building permit authorizing site work or construction activities on the site.

#### **Building Department Conditions**

45. A building permit is required for all onsite demolition, construction and/or change of occupancy.
46. The applicant will be required to comply with the codes adopted at the time the applicant applies for a building permit. At this time the City of St. Helena utilizes the 2013 Title 24 codes.

47. When submitting plans for a building permit, the plans shall include all documentation listed on the building permit application checklist.
48. The applicant shall provide a construction waste management plan with the building permit application.
49. The plans for construction shall include a checklist for compliance with the California Green Buildings Standards Code, mandatory measures. Provide a reference on the checklist indicating where the mandatory measures can be found on the plans.
50. When submitting plans, the title page shall include all information referenced on the building permit application checklist Title Page requirements.
51. Building Permit application materials and plans shall include any documentation pertaining to special loads applicable to the design and the specified section of the code that addresses the condition; special inspections for any systems or components requiring special inspection; requirements for seismic resistance; and a complete list of deferred submittals at time of application. Any deferral of the required submittal items shall have prior approval of the Building Official however deferral of fire sprinkler design is not allowed.

#### **Fire Department Conditions**

58. Fire sprinklers and fire hydrants shall be installed as required by the Fire Department

#### **4. 830 Pratt Avenue Findings and Conditions of Approval**

- A. DEMOLITION. Pursuant to Municipal Code Section 17.164.050(E), the Planning Commission finds that the Vineyard Lodge 1 (c.1960) is not eligible for listing on the California Register of Historic Resources (CRHR) and because the building is not particularly cohesive with the surrounding agricultural and residential character makes the following findings for the approval of a Demolition Permit:

1. That, based on the public record and testimony presented at a public hearing, the building is determined not to be a significant architectural or historical building.

*The applicant is requesting a permit to demolish the former Marlinda Convalescent Home and what is today known as "Vineyard Lodge 1". The building was constructed c.1960. Following review of available records, consultants, Architectural Resources Group, determined that the subject building proposed for demolition does not meet the Criteria for listing on the California Register of Historic Resources (CRHR) given that it does not exhibit architectural significance, is not associated with any significant themes or persons and is not expected to yield any information important to expand our understanding of history or prehistory. Staff concurs with this determination.*

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
February 21, 2017

2. That the demolition does not eliminate elements that are required to maintain the essential character of the neighborhood.

*As a 1960s era convalescent home located in an otherwise agriculture and residential area, the building was not found to be particularly cohesive with the existing environment. Given this, it's demolition is not expected to adversely impact the essential character of the neighborhood. Accordingly, Staff finds that the demolition of the proposed building will not negatively impact a historic resource or existing visual environment.*

- B. DESIGN REVIEW. The Planning Commission determines the project's natural color palette, stepped design, retention of existing trees adjacent to the public right-of-way and the addition of new trees will be compatible with the surrounding character along Pratt Avenue and limit visual impacts such that it would be in compliance with the following Design Review criteria enumerated in Municipal Code Section 17.164.030, and as follows:

1. Consistency and compatibility with applicable elements of the general plan;

*As stated above, the subject project is consistent with General Plan policies 4.3.4, 2.6.2, 2.6.4, 2.6.5 and HE 1.5, 2.1, 2.2, and 2.6 in that the project would consist of infill on an already developed site, would occur in a logical and orderly manner proximate to urban services, and would be of a size and design that is consistent with existing site development. Further, the site would not encroach into or otherwise hinder agricultural activities in the vicinity of the subject site. As a previously developed site within approximately one mile of the Greystone Campus, the project location at 830 Pratt is well suited to accommodate student housing at a higher density and provide a creative solution to the need for affordable student housing. As such, the project is determined to exhibit overall consistency with the intent of the General Plan and Housing Element.*

2. Compatibility of design with the immediate environment of the site;

*The project site is situated at the northern border of St Helena's urban limits where medium density housing development is bordered by agricultural land uses immediately to the north and east. Adjacent development includes the Beringer Winery warehouse building and wastewater treatment facilities. Therefore, the visual character of the project area is comprised of both residential scale single-family residences (south and west) and agricultural uses including processing and storage (north, east, and west) building and facilities.*

*The subject site is currently developed with two dormitory buildings ranging from one to two stories in height. The one-story building will be demolished and the two story building is to be retained. The expansion of the Vineyard Lodge House is generally consistent with what is presently on the site and would not substantially alter the existing relationship of the site to its surroundings or otherwise make the site incompatible with the surroundings. The new construction would be clustered on the site and exhibit defined boundaries and*

*generous vegetative screening. As such, compatibility of the site with its surroundings is found to be maintained.*

3. Relationship of the design to the site;

*As stated above, the site configuration will include a series of four buildings (3 new) clustered around a central courtyard and traversed by a one-way access road. Those buildings with frontage on Pratt Avenue will feature a stepped design and a minimum setback of 20 feet from Pratt Avenue so as to limit visual prominence and provide continuity with other properties proximate to the site, which are developed with similar setbacks. Therefore, given the site constraints, the relationship of the design to the site appears to strike an appropriate balance between function and aesthetics.*

4. Determination that the design is compatible in areas considered by the board as having a unified design or historical character;

*The segments of Pratt Avenue proximate to the subject site do not exhibit a unified or historical character. The surrounding area features residential uses, industrial/agricultural production uses, and vineyards. The proposed design is generally consistent with Vineyard Lodge II and the existing character of the site and would not depart significantly from that existing character. The project is therefore not expected to impact an area having a unified or historical character.*

5. Whether the design promotes harmonious transition in scale and character in areas between different designated land uses;

*The subject buildings with frontage on Pratt Avenue will be stepped in height such that the buildings along Pratt will be two stories in front (with max height of 29'2") with taller (3-story) portions confined to the rear of the site (max height of 40'2"). Similarly, the buildings will feature a minimum 20' setback from the Pratt Avenue Property line (50' from Pratt Centerline) in an effort to reduce the perceived massing and scale and promote a harmonious transition in scale relative to residential buildings proximate to the site and in relation to the agricultural production facilities nearby. Further, this site serves as a transition from the adjacent agricultural production and warehouse use on the Beringer property to the single family and vineyard uses further down Pratt Avenue.*

6. Compatibility with future construction both on and off the site;

*The project design is contemporary in style, but with traditional detailing. The buildings feature a neutral color palette. The proposed design would not introduce an element that was so unique or exceptional as to make it incompatible with future development on and/or off site.*

7. Whether the architectural design of structures and their materials and colors are appropriate to the function of the project;

*The proposed buildings will be contemporary in style, but feature some craftsman-like details including wood columns and brackets. The building will be supported by an exposed, parge coated foundation. Exterior walls would be clad in a combination of painted clapboard siding and stained red cedar siding and*

*punctuated with clad windows. The buildings would feature articulated roof-lines with asphalt shingles. The proposed color palette includes neutral hues like brown, natural wood, and moss green. The proposed color and materials reflect traditional materials and colors that would help the buildings to more readily blend in with their surroundings. The architectural design, material, and colors are responsive to the needs of the site and appropriate to the function of the project and generally compatible with adjacent buildings and uses.*

8. Whether the planning and siting of the various functions and buildings on the site create an internal sense of order and provide a desirable environment for occupants, visitors and the general community;

*The proposed site configuration would feature three buildings clustered around a central courtyard. The site would be traversed by a one-way access road with parking clustered around the outer portions of the site, screened with significant amounts of vegetation. As such, the site configuration is expected to provide for a desirable environment that is both functional and aesthetically pleasing to residents and the general community.*

9. Whether the amount and arrangement of open space and landscaping are appropriate to the design and the function of the structures;

*The project proposes a generous level of landscaping and will retain a number of trees at the property frontage to promote screening. The level of landscaping will soften the look of the new buildings and appears to be appropriate for the use and to promote continuity with surrounding properties.*

10. Whether sufficient ancillary functions are provided to support the main functions of the project and whether they are compatible with the project's design concept;

*The project will include interior students commons and dining area as well as an outdoor courtyard and amenity area. In addition, the project will provide alternative forms of transportation to serve the student population and facilitate ease of travel between the subject site and Greystone Campus as well as other destinations. Given the on-site amenities and provision of alternative transportation, the project is expected to provide sufficient ancillary functions to support the functionality of the student dormitory use and which are of a design that is consistent with the overall aesthetic.*

11. Whether access to the property and circulation systems are safe and convenient for pedestrians, cyclists and vehicles;

*Primary automotive access will from Pratt Avenue and Vineyard Road, both of which were found to provide adequate circulation and access to the project site and have been conditioned to be improved to address project specific impacts. Onsite circulation and access is provided via one-way access road off of Vineyard Road and exiting at Pratt Avenue. This access road is expected to provide convenient vehicular site access. In addition, the project will be subject to Mitigation Measure Trans-2, which amongst other things, requires that the applicant introduce a Class II bike lane along westbound Pratt Avenue (northern side) extending from the project site to the intersection of SR 29 (Main Street)*

*and Pratt Avenue and restripe for a fog line along eastbound Pratt (southern side) extending from the project site to the intersection of SR 29 thereby promoting more safe and convenient connectivity for bicyclists. Accordingly, the project is expected to promote safe and convenient access for all types of transportation.*

12. Whether natural features are appropriately preserved and integrated with the project;

*As a previously developed site, the Vineyard Lodge Housing site does not contain any significant natural features with the exception of some Coast Live Oak Trees. To accommodate the proposed buildings, the project will remove two (2) Coast Live Oaks, which pursuant to Mitigation Measure BIO-1, shall be replaced in-kind and at a ratio of three (3) new 15 gallon trees for every one tree removed. A portion of replacement oaks may be accommodated on the Greystone Campus if site constraints are such that all replacement trees cannot be accommodated within the proposed site plan. As such, the project will integrate natural features to the extent possible and where that is not possible, will mitigate accordingly.*

13. Whether the materials, textures, colors and details of construction are an appropriate expression of its design concept and function and whether they are compatible with the adjacent and neighboring structure and functions;

*Please refer to response No. 7.*

14. In areas considered by the board as having a unified design character or historical character, whether the design is compatible with such character;

*Please refer to response No. 4*

15. Whether the landscape design concept for the site, as shown by the relationship of plant masses, open space, scale, plant forms and foliage textures and colors create a desirable and functional environment and whether the landscape concept depicts an appropriate unity with the various buildings on the site;

*The proposed landscape plan will feature a variety of trees, shrubs, and sod. The majority of existing Camphor trees at property frontage will be maintained. The landscape plan will feature 21 plant types which will be distributed throughout the site and promote continuity and unity throughout the site as well as soften the look of paved parking areas around the periphery of the site and provide shade.*

16. Whether plant material is suitable and adaptable to the site, capable of being properly maintained on the site, and is of a variety which is suitable to the climate of St. Helena;

*With the exception of the sod, all proposed plant materials are considered "low" water use plantings and are expected to be adaptable to the St. Helena climate. Further, all plantings on site are required to comply with the City of St Helena Municipal Water Efficient Landscape Ordinance, which regulates landscaping water use.*

17. Whether sustainability and climate protection are promoted through the use of green building practices such as appropriate site/architectural design, use of green building materials, energy efficient systems and water efficient landscape materials.

*As detailed herein, the project will use efficient fixtures and comply with Title 24 building standards. In addition, most landscaping will be comprised of low water use planting and will comply with the City of St Helena Municipal Water Efficient Landscape Ordinance. Further, the project will limit parking so as to avoid inducing vehicular travel demands and Green House Gas production by promoting use of alternative transportation and ride sharing. As such, the project will promote sustainable practices and climate protection.*

- C. SETBACK VARIANCE. Pursuant to Municipal Code Section 17.172.050, the Planning Commission makes the following variance findings to support the motion to approve a setback variance:

- (a) A hardship peculiar to the property, not created by any act of the owner, exists. In this context, personal, family or financial difficulties, loss of prospective profits, neighboring violations, are not hardships justifying a variance.

*The currently configured parcel was created in 1971 subject to dedication of a 20 foot strip of land along the northwesterly side of Pratt Avenue, creating a 60 foot right of way. As demonstrated in the applicant's setback variance request, neighboring properties were either (1) not required to dedicate land, or (2) were required to dedicate only a 10 foot strip of land. In addition, the property has a unique triangle shape with its widest and most developable portion immediately adjoining the property line subject to the special Pratt Avenue setback requirement. Literal enforcement of the 36 foot setback requirement from the property line—which encroaches 10-20 feet more into the property than does the property line at neighboring properties—would create a hardship peculiar to the property.*

- (b) The Variance is necessary for the preservation and enjoyment of substantial property rights of the applicant which are possessed by other properties in the same district and in the same vicinity; and that a Variance, if granted, would not constitute a special privilege of the recipient not enjoyed by his or her neighbors.

*Granting a variance would not constitute a special privilege for the property relative to neighboring properties. Six neighboring homes on the northwesterly side of Pratt Avenue are situated within the special 36 foot setback, none of which were required to dedicate a 20 foot strip of land like that of the subject property. The proposed development plan will exhibit a greater setback than what currently exists for the Vineyard Lodge 1 building (proposed for demolition). In light of the above, it is found that granting a setback variance is necessary for the preservation and enjoyment of the applicant's substantial property rights that*

*are possessed by nearby properties that are developed in similar proximity to the northwestern boundary of Pratt Avenue.*

- (c) The authorization of the Variance will not be of substantial detriment to adjacent properties, and will not materially impair the purpose and intent of this Chapter or the public interest, nor adversely affect the General Plan.

*Authorization of the Variance will not be of substantial detriment to adjacent properties, nor will it materially impair the public interest, as the new developed portion of the property will be located further from Pratt Avenue than the existing Vineyard Lodge I, proposed for demolition. In addition, large mature trees along a substantial portion of the site frontage and along its other borders will screen the views of the new dormitory development. Recognizing the unique nature of the property and granting a Variance does not impair the purpose and intent of the Code's Variance chapter.*

*The chapter's stated purpose is, in part, to allow for deviation from a strict application of the Code in the event that a property exhibits an unusual shape or other exceptional characteristic, and as a result would be subjected to practical difficulties or undue hardship in their development. Authorization of the Variance is consistent with St. Helena's longstanding efforts to manage growth by encouraging further development of already developed parcels, rather than removal of vineyards within City limits, and would not adversely affect the General Plan. The project's 123-bed expansion to serve a projected enrollment expansion of 100 students will allow students who currently compete for housing with members of the St. Helena workforce to move into student dormitories; freeing up that housing would benefit St. Helena families and employees.*

- (d) The condition or situation of the specific piece of property for which the Variance is sought is not so general or recurrent in nature as to make reasonably practicable the formulation of a general regulation for such condition or situation

*The property has a unique shape and was required to dedicate a larger strip of land relative to other nearby properties subject to the 36 foot special setback. Accordingly, the property's condition is not so general or recurrent in nature to make formulation of a general regulation addressing the issue reasonably practicable.*

- (e) The Variance and any buildings or structures permitted by the Variance will not be detrimental to the public health, safety and welfare of the community.

*Neither the Variance nor structures permitted by it will be detrimental to community public health, safety, and welfare. Granting the Variance will allow development of new student dormitories further removed from Pratt Avenue than the existing Vineyard Lodge I building. The applicant has designed the dormitory buildings to be partially screened by large, mature trees located along the site's*

*borders. Reducing parking spaces on the site and restricting supply of parking permits for student dormitory residents will remove vehicles from the City's streets, particularly St. Helena Highway. Student residents will have ample transportation alternatives: the frequent shuttle service between the property and the Greystone Campus, free access to on-site bicycles and the new bicycle lane provided by the Culinary Institute of America along Pratt Avenue, and the St. Helena shuttle and VINE transportation. The parking Variance further discourages private automobile trips by Culinary Institute of America students in and around St. Helena, and therefore confers a benefit to the community.*

D. PARKING VARIANCE. Pursuant to Municipal Code Section 17.172.050, the Planning Commission makes the following variance findings to support the motion to approve a parking variance:

- (a) A hardship peculiar to the property, not created by any act of the owner, exists. In this context, personal, family or financial difficulties, loss of prospective profits, neighboring violations, are not hardships justifying a variance.

*Imposition of the Code's parking requirement for a "rooming, boarding, or lodging house" or "hotel" in the student dormitory context would create a hardship peculiar to the property. Rooming, boarding, or lodging houses traditionally serve individuals unaffiliated with a college or university, who in a community such as St. Helena likely would require use of an automobile for daily activities. Similarly, hotels in St. Helena traditionally serve visitors exploring the region's amenities by private automobile. Requiring one parking space for each guestroom in those contexts is justifiable given the expected patterns of vehicle use, and the potential that failure to provide ample parking spaces could negatively affect neighboring properties. The Culinary Institute of America's students, on the other hand, are offered shuttle service for their daily trips to and from the Greystone Campus, do not require a car for the vast majority of their daily school-related activities, and are offered on-demand car rental for personal trips as well as access to free bicycles on site. Imposition of a one space per dormitory room requirement would create a hardship by dramatically changing the project as proposed and would require elimination of an open quad gathering area and potential reduction in number of student beds in favor of a hardscape parking lot.*

- (b) The Variance is necessary for the preservation and enjoyment of substantial property rights of the applicant which are possessed by other properties in the same district and in the same vicinity; and that a Variance, if granted, would not constitute a special privilege of the recipient not enjoyed by his or her neighbors.

*The Variance would not constitute a special privilege for the property relative to neighboring properties, none of which are developed with student dormitories that require limited on-site parking. Given the unique and limited travel patterns of student residents of the dormitory, with the Variance both the property and*

*neighboring properties will be subject to minimum parking requirements tailored to actual expected travel patterns and parking space demand, and neither the property nor neighboring properties will be required to provide unnecessary parking spaces reducing enjoyment of substantial property rights.*

- (c) The authorization of the Variance will not be of substantial detriment to adjacent properties, and will not materially impair the purpose and intent of this Chapter or the public interest, nor adversely affect the General Plan.

*Authorization of the Variance will not be of substantial detriment to adjacent properties, nor will it materially impair the public interest. The Culinary Institute of America will provide shuttle and on-demand car rental service, will impose a highly restrictive permit system both at the property and the Greystone Campus discouraging students without assigned parking from bringing cars to St. Helena, will provide free bicycles for use by students, and is amenable to restrictions on parking in the surrounding area to benefit nearby residents by discouraging student parking off the property. The Variance serves the public interest by effectively removing vehicles from City streets, particularly St. Helena Highway, encouraging environmentally-friendly and efficient transportation to and from the Greystone Campus. The parking Variance does not impair the purpose and intent of the Code's Variance chapter. The chapter's stated purpose is, in part, to allow variation from strict application of the Code where extraordinary situations or conditions mean that literal enforcement would involve practical difficulties or would cause undue hardship. Here, requiring unnecessary parking spaces would work against the public interest and cause undue hardship to the property and the school. Authorization of the Variance is consistent with City and regional policies encouraging use of alternate modes of travel, both to reduce harm to the environment and to take traffic off local roads, and would not adversely affect the General Plan. These policies and goals are consistent with the project's shuttle service and free bicycle program that reduce the need for parking and provides further support for the parking Variance.*

- (d) The condition or situation of the specific piece of property for which the Variance is sought is not so general or recurrent in nature as to make reasonably practicable the formulation of a general regulation for such condition or situation

*Formulation of a general regulation is not reasonably practicable given the lack of other student dormitories in the City, the targeted transportation options provided to the Culinary Institute of America's students, and consistency with parking reduction practices at other California campuses as discussed in the Crane Transportation Memo that justify the Variance.*

- (e) The Variance and any buildings or structures permitted by the Variance will not be detrimental to the public health, safety and welfare of the community.

*Neither the Variance nor structures permitted by it will be detrimental to community public health, safety, and welfare. Granting the Variance will allow development of new student dormitories further removed from Pratt Avenue than the existing Vineyard Lodge I building. The applicant has designed the dormitory buildings to be partially screened by large, mature trees located along the site's borders. Reducing parking spaces on the site and restricting supply of parking permits for student dormitory residents will remove vehicles from the City's streets, particularly St. Helena Highway. Student residents will have ample transportation alternatives: the frequent shuttle service between the property and the Greystone Campus, free access to on-site bicycles and the new bicycle lane provided by the Culinary Institute of America along Pratt Avenue, and the St. Helena shuttle and VINE transportation. The parking Variance further discourages private automobile trips by Culinary Institute of America students in and around St. Helena, and therefore confers a benefit to the community.*

- E. Pursuant to Municipal Code Section 17.124.030 (H), the Planning Commission further finds that the Vineyard Lodge Housing Site constitutes an "unlisted use" and determines that based on the particularities of the proposed project, including the dormitory-use, established shuttle program, and provision of on-demand rental cars and bicycles, the provision of 69 designated parking spaces is sufficient to serve the project site.
- F. USE PERMIT. Pursuant to Municipal Code Section 17.168.050, the Planning Commission finds that The Vineyard Lodge dormitories are appurtenant to the CIA at Greystone and provide affordable and convenient lodging for students enrolled in a culinary program. As conditioned, it is expected that the project would operate in an acceptable manner and therefore, the Planning Commission makes the following Use Permit findings to support the motion to approve the use permit:
1. That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.

*The site operation is expected to be substantially similar to that currently existing. There is no expectation that the expansion of the student housing would generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.*

2. That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.

*At project operation, the onsite land use at the Vineyard Lodge Housing Site and associated noise environment will continue to be typical of a multi-unit development (dormitories) and subject to the City's noise exposure standards. The expansion of the Vineyard Lodge Housing site is not expected to introduce a substantial permanent increase in the ambient noise environment due to activities onsite or as a result of stationary or mobile sources. The noise*

*generating elements of the proposed project such as outdoor conversations, mechanical equipment, the operation of landscaping equipment, car engines and car doors would be similar to the existing noise environment present on-site and in the vicinity. The project is expected to introduce noise elements at levels that are generally consistent with the ambient noise conditions.*

3. That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.

*As detailed in the Noise Impact Study (Appendix L of the IS/MND), the project is expected to add less than 8 trips to Pratt Avenue during the a.m. and p.m. peak hours. This would constitute a negligible increase in traffic noise of less than 0.5 dB which falls well below the threshold of a perceptible change of 3 dB. As such implementation of the proposed project will not substantially increase traffic noise in the area.*

4. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.

*The Project will not result in substantial adverse impacts associated with any public facilities or services. The project site is located adjacent to the urban limit line and is well served by existing public utilities and services. The project will not generate a substantial increase in demands that warrant the expansion or construction of new public facilities. The project site is also located proximate to the police and fire stations. Additional fire service and police calls may occur as a result of the project. However, the project will be subject to the payment of development impact fees, including the Public Safety Impact Fee which funds equipment and facilities' costs for Police and the Fire Departments that may go towards vehicles, capital equipment, and building improvements so as to maintain a high level of public safety. Accordingly, the project will not place excessive demands on any public services.*

5. That the proposed use would provide adequate ingress and egress to and from the proposed location.

*The project's internal circulation plan has been reviewed and meets all requirements of the St. Helena Public Works & Utilities and Fire Departments. Site circulation was determined to be adequate, including sufficient street widths to allow for fire truck turn around and sufficient access to residential buildings. Therefore, ingress and egress is considered adequate.*

6. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy.

*The proposed student housing is appurtenant to the Culinary Institute of America Greystone Campus. The housing would not displace local serving uses nor impair the City's viability of maintaining a local serving economy.*

7. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.

*The Vineyard Lodge site exhibits a land use and zoning designation of PQP: Public-Quasi-Public. The PQP zoning designation does not prescribe specific development standards, but rather stipulates that all projects within the PQP zoning district be subject to a conditional use permit and that development standards shall be established through the use permit review process. These regulations help guarantee that incompatible development and/or activities can be avoided by requiring such projects be held to a high level of scrutiny and are vetted through the public review process, CEQA review, and would be conditioned accordingly. Given that the proposed use serves an infill and expansion of an existing use there is no expectation that the proposed project would introduce an element that would conflict with the intent of the PQP zoning designation.*

8. That the proposed use would not be in conflict with the City's General Plan.  
*As detailed, herein the project would comply with applicable General Plan policies.*

9. That the proposed use would not be injurious to public health, safety, or welfare.  
*The proposed project consists of infill student housing that would operate in a manner substantially similar to the existing Vineyard Lodge Housing. As such, the project would not be injurious to health, safety, or welfare.*

10. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.

*Use permits are considered on a case by case basis and based on the specific merits of a given project. Accordingly, the granting of this use permit would not influence future decisions or otherwise set a precedent.*

11. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.

*The applicant proposes to provide a level of parking commensurate with the demand exhibited by the current residents of Vineyard Lodge Housing Site. At present, 31 percent of residents hold parking permits. It is reasonably expected that this level of demand would continue with implementation of the proposed*

*project which would translate to 69 designated spaces for the total proposed resident population of 224 students. .*

*There is no reason to believe that the student to vehicle ratio would substantially change under the proposed project, namely because (1) the CIA retains authority to issue or not issue parking permits, (2) the project will be subject to a condition of approval stipulating that it may not issue more than 69 parking permits, and (3) the site is uniquely operated in that it provides frequent reliable transportation to and from the Greystone Campus and to other locations, as needed, will provide three on-demand rental cars, and per mitigation measure LU-1, will be required to introduce a scalable bike share program that may be expanded as demand necessitates. As such, the project is expected to be able to accommodate long term parking needs for residents of the site.*

12. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use.

*As detailed in the Traffic Impact Report (Appendix Q of the IS/MND), the project's trip generation is minimal (approximately 4 trips during am and pm peak hours) and therefore the capacity of streets is presumed to be adequate.*

- G. The Planning Commission approves the demolition permit, design review, variances, and use permit for the above-described project with the following conditions of approval. The project shall be in conformance with all city ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.

#### **Conditions of Approval**

1. Project approvals shall be vested within one (1) year from the date of final action. A building permit for the use allowed under this approval shall have been obtained within one (1) year from the effective date of this action or the approval shall expire, provided however that the approval may be extended for up to two (2) one-year periods pursuant to the St. Helena Municipal Code, Section 17.08.130, Extension of Permits and Approvals. Any request for an extension of this approval shall be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.
2. The approvals shall not become effective until fourteen (14) calendar days after approval, providing that the action is not appealed by the City Council or any other interested party within that 14-day period.
3. All required fees, including planning fees, development impact fees, residential in-lieu housing fees, building fees, toilet retrofit fees, and St. Helena Unified School District fees shall be paid prior to issuance of a building permit. Fees shall be those in effect at the time of the issuance of the building permit.

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
February 21, 2017

4. Upon approval of Resolution XX-XX, the Applicant shall provide the Planning Department with the Notice of Determination Fee required by Fish and Wildlife Code Section 711.4(d). The fee payment shall be made by check payable to the Napa County Clerk and in the amount required and published by the Napa County Clerk for such fee.
5. All Mitigation Measures enumerated in the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program are incorporated by reference and made conditions of approval.
6. Prior to issuance of any construction permits, these conditions of approval and the Mitigation and Monitoring and Reporting Program shall be included with the plan set. A copy of the approved plans shall be maintained on site when construction activities are underway.
7. Minor modifications to approved plans may be approved by the Planning Director insofar as they are in substantial conformance with this approval.
8. Pursuant to St. Helena Municipal Code Section 17.08.110, this permit shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.
9. The primary purpose of this review is for compliance with the General Plan and Zoning Ordinance. The property owners or their designee shall be responsible for meeting with the Building Official, Fire Inspector and or Public Works Department to review compliance with Building Codes, Fire Codes and specific Public Works Standards including fire protection systems and any applicable accessibility standards of Title 24.
10. Construction shall be in compliance with plans submitted and reviewed by the Planning Commission on February 21, 2017, except as modified herein.
11. The site shall be kept clear at all times of garbage and debris. No outdoor storage is permitted.
12. A final lighting plan delineating building mounted lights shall be reviewed and approved by the Planning and Community Improvement Director prior to building permit issuance.
13. Trash bins shall not be visible from public right-of-way. The trash enclosure(s) will be constructed of opaque materials and be of sufficient size to permit the storage, removal and replacement of standard commercial size trash bins. No collection, storage or stacking of garbage, trash and refuse is permitted outside the trash enclosure.
14. All plantings shall be maintained in good growing condition. Such maintenance shall include, where appropriate, pruning, mowing, weeding, and cleaning of debris and trash, fertilizing and regular watering. Where necessary, plantings shall be replaced with other plant materials to insure continued compliance with applicable landscaping requirements, Irrigation systems shall be maintained in sound operating condition with heads periodically cleaned and replaced when missing to

ensure efficient watering and to maintain good health and vitality of landscape materials.

15. No signage is approved by this permit. A separate sign permit in compliance with the Municipal Zoning Code shall be obtained prior to installation of signage.
16. Property owners shall recognize that there exists a right to farm properties within the district and in the vicinity of the district. There is a good faith expectation that no complaints will occur regarding legal, normal agricultural activities on properties in the district or in the vicinity of the district. Such activities may include day or night disbursement of chemicals, and creation of dust, noise, or fumes.
17. In any action or proceeding to attack, challenge, invalidate, set aside, void or annul the City's approval of applicant's Project, in whole or in part, applicant shall defend, at its own expense and without any cost to the City, and with counsel acceptable to the City, and shall fully and completely indemnify and hold the City, its agents, officers, and employees harmless from and against any and all claims, causes of action, damages, costs, attorney's fees and liability of any kind, so long as the City reasonably promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.

#### **Planning Department Conditions**

18. As applicable, the permittee shall comply with any and all previous conditions of approval for the Vineyard Lodge Housing Site except as they may be explicitly modified by this action. To the extent there is a conflict between previous conditions of approval enumerated in Resolution No. 2004-33 or 2008-75 and these conditions of approval, these conditions shall supersede the previous permit and associated conditions.
19. Rental and/or occupancy of Vineyard Lodge dormitories shall be limited only to students who are actively enrolled at the Culinary Institute of America at Greystone in an Associate, Bachelor's, Master's and/or other Certificate Degree Programs with the exception that an on-site manager(s) shall reside on site consistent with State Housing Law, Title 25. The student's length of stay shall be commensurate with the respective degree program.
20. The Applicant shall provide a detailed Transportation Plan that describes the operation of (1) the shuttle service (2) the rental car service (3) parking permits for individual vehicles and (4) the specifics of the on-demand bike program as they relate to the Greystone Campus and Vineyard Lodge Housing Site. The Plan shall be subject to review and approval by the Planning and Community Improvement Director. A copy of the approved shall be provided and kept in the hard copy and digital project file and made available to the public as requested.
21. Parking Permits issued to students who are actively enrolled at the Culinary Institute of America at Greystone for the Vineyard Lodge Housing Site shall not exceed 69 permits at any one time.

22. No off-street parking is allowed on the Southside of Pratt Avenue, east of the Railroad Tracks.
23. The applicant shall obtain all required approvals in writing for communal kitchen facilities from the Napa County Department of Environmental Management. A copy of the approval shall be provided to the City and added to the project file.
24. Prior to issuance of building permit, the applicant shall enter into a Joint Water Use Agreement with the City and applicable to 830 Pratt Avenue and 2555 Main Street. The Joint Agreement shall authorize a maximum water allocation of 23.1 acre feet/year to be utilized by the two sites. The Joint Agreement shall include enforcement provisions and penalties if the allowance is exceeded in a given year. Said agreement is subject to the approval of the St Helena City Council.
25. Any significant change(s) to the operation of the approved use, including a substantial change in the operational characteristics of the site, intensity, or type(s) of uses shall require amendment to this use permit.

#### **Public Works Department Conditions**

26. Approval of this project shall be subject to the requirements of, and all improvements shall be designed and constructed in accordance with, the most current version at the time of improvement plan submittal, Caltrans Standards and Specifications, the City of St. Helena Municipal Code, the St. Helena Water and Sewer Standards, the St. Helena Street, Storm Drain and Sidewalk Standards, and all current federal, state and county codes governing such improvements.
27. For any improvements outside the existing building envelope, a grading and drainage plan showing topographic data, all easements, infrastructure onsite and directly adjoining, and an erosion control plan shall be submitted for review and approval by the City Engineer prior to the issuance of a building permit. If the project entails more than 50 cubic yards of soil disturbance, 10,000 square feet of disturbance area, a cut or fill of 3 feet or more, or alteration of any drainage pattern, a grading permit shall be required.
28. Drainage needs to be routed to prevent inundation of neighboring properties. Grading and/or site improvement plans shall show how 2-year and 10-year storm flows shall be infiltrated on site and/or diverted at the property lines to prevent inundation of neighboring properties. The applicant shall submit a drainage and hydrology analysis for the project impact, including downstream erosion potential, to the City of St. Helena Public Works Department with the Improvement Plan submittal in accordance with City of St. Helena, Napa County and State of California codes in effect at the time of improvement plan submittal.
29. Erosion and sediment control plans shall conform to the latest State and City codes at a minimum

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
February 21, 2017

30. The applicant shall adhere to the latest Water Agreement with the City and shall incorporate water conservation practices into the proposed project per the Water Availability Analysis prepared by Summit Engineering, dated September 2, 2016. Any and all non-conforming appliances and plumbing fixtures shall be removed from the premises. The water conservation requirements shall be replicated in full on the architectural plans.
31. A detailed Post-Construction Stormwater Control Plan (SWCP) that identifies and sizes all permanent post-construction stormwater treatment BMPs shall be prepared and submitted for review approval. The Plan shall be prepared in accordance with the latest edition of the *Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual* and the requirements of the State Water Resources Control Board Phase II Municipal Separate Storm Water System (MS4) General Permit (Order 2013-0001 DWQ).
32. A Post Construction Stormwater Operations and Maintenance Plan that provides a color-coded plan sheet showing all storm drain and water quality infrastructure that is to be maintained, along with detailed instructions and schedules for the ongoing maintenance and operation of all post-construction stormwater BMPs shall be submitted for review and approval by the City Engineer. Once approved, the property owner shall enter into an agreement with the City that provides the terms, conditions, and security associated with the ongoing requirements of the Post Construction Stormwater Best Management Practices.
33. Prior to Certificate of Occupancy, the Applicant shall enter into and record a Post-Construction Stormwater Operations and Maintenance Agreement with the City.
34. If the project includes 500 square feet or more of new landscaping and/or 2,500 square feet or more of rehabilitated landscape, the proposed landscaping shall comply with the State's Model Water Efficient Landscape Ordinance (MWELO).
35. A detailed Soils Investigation/Geotechnical Report shall be prepared and submitted for review. The report shall address, at a minimum, potential for liquefaction, R-values, expansive soils and seismic risk. The improvement plans shall incorporate all design and construction criteria recommended in the Geotechnical Report.
36. Unless otherwise explicitly permitted, all existing wells, septic tanks/systems and/or underground fuel storage tanks shall be abandoned under permit and inspection of Napa County Department of Environmental Services or other

designated agency. If there are none, the project engineer shall provide a letter describing the scope of the search done to make this determination.

37. Site plan shall show the location of any trees within the project area. Provide a tree protection plan for approval by the Public Works Director prior to approval of the building permit. The plan shall be coordinated with any civil grading/drainage/improvement plans.
38. The Applicant shall keep adjoining public streets free and clean of project dirt, mud, materials, and debris during the construction period, as is found necessary by the City Engineer.
39. The developer shall underground all on-site utility lines per St. Helena Municipal Code. The cost of undergrounding shall be the responsibility of applicant.
40. Due to the economic and engineering infeasibility of undergrounding regional serving overhead power lines, such existing lines may remain on overhead power poles.
41. Provide details of any and all proposed fencing, gates and/or walls on all plans submitted for building permit review.
42. Any new and modified existing water laterals, meters and backflow prevention devices shall be required and constructed in accordance with the current requirements of the City of St. Helena's Water Standards and the California Department of Health Standards. Existing meter boxes located within a driveway shall be retrofitted with a traffic-rated box. New laterals shall be located perpendicular to the water main and outside any driveway/drive aisle.
43. Remodels or new construction which requires fire sprinklers shall install an appropriately-sized water service with appropriate backflow and meter devices prior to Certificate of Occupancy. Fire system calculations shall be submitted with the Grading and Drainage Plan to verify fire service lateral and meter sizing. Deferred submittals are not accepted.
44. No construction shall commence until adequate access to fire water supply is available to building sites, and the Fire Chief shall ensure adequate access to fire water supply prior to issuance of building permits.
45. In order to confirm the theoretical assumptions in the provided sewer capacity study, the applicant is required to perform 7-day flow monitoring at the downstream sanitary sewer manholes (No. 6-5 and No. 6-18) to verify that the existing sewer pipe has adequate capacity to accommodate the proposed additional flows prior to building permit approval. Peak sewer flows will not be allowed to exceed 2/3 full pipe. If insufficient capacity is available at the site and

with the current infrastructure, a new sanitary sewer must be constructed with adequate capacity by the owner as a condition of the site development.

46. Construct frontage improvements in accordance with the *Frontage Improvement Plan* prepared by Summit Engineering, dated December 7, 2016. Said improvements shall include a full with grind and overlay of 0.10 feet and a cross section consisting of a minimum of 8' parallel parking, 5' bike lane, and 12' lanes (east and west).
47. Trash areas, dumpsters and recycling containers shall be enclosed and roofed per State and County standards to prevent water run-on to the trash area and water runoff from the area, to contain litter and trash so that it is not dispersed by the wind or run-off during waste removal. In the event that wine or food is disposed in these areas, the enclosed trash area shall drain to the sanitary sewer system. An area drain connected to the sanitary sewer shall be installed in the enclosure area and a structural control such as an oil/water separator or sand filter shall be included. No other area shall drain into the trash enclosure. A sign shall be posted prohibiting the dumping of hazardous materials into the sanitary sewer.
48. The applicant shall repair all public improvements that are damaged by the construction process in accordance with the City Water/Sewer/Street/Storm Drain/Sidewalk Standards prior to Certificate of Occupancy.
49. Existing streets being cut by new utility services will require edge grinding and an A.C. overlay per City standards, extent to be determined by the Public Works Department.
50. The applicant shall be required to obtain an encroachment permit for improvements on public right-of-ways prior to receiving a grading or building permit authorizing site work or construction activities on the site.

#### **Building Department Conditions**

51. A building permit is required for all onsite demolition, construction and/or change of occupancy.
52. The applicant will be required to comply with the codes adopted at the time the applicant applies for a building permit. At this time the City of St. Helena utilizes the 2013 Title 24 codes.
53. When submitting plans for a building permit, the plans shall include all documentation listed on the building permit application checklist.
54. The applicant shall provide a construction waste management plan with the building permit application.

2555 Main Street/ 830 Pratt Avenue  
Demolition Permit, Variance, Design Review and Use Permit  
February 21, 2017

55. The plans for construction shall include a checklist for compliance with the California Green Buildings Standards Code, mandatory measures. Provide a reference on the checklist indicating where the mandatory measures can be found on the plans.
56. When submitting plans, the title page shall include all information referenced on the building permit application checklist Title Page requirements.
57. Building Permit application materials and plans shall include any documentation pertaining to special loads applicable to the design and the specified section of the code that addresses the condition; special inspections for any systems or components requiring special inspection; requirements for seismic resistance; and a complete list of deferred submittals at time of application. Any deferral of the required submittal items shall have prior approval of the Building Official however deferral of fire sprinkler design is not allowed.

**Fire Department Conditions**

58. Fire sprinklers and fire hydrants shall be installed as required by the Fire Department.

I HEREBY CERTIFY that the foregoing demolition permit, design review, and use permit for 2555 Main Street, and the foregoing demolition permit, design review, variances, and use permit for 830 Pratt Avenue were duly and regularly approved by the Planning Commission of the City of St. Helena at a regular meeting of said Planning Commission held on February 21, 2017 by the following roll call vote:

CITY OF ST. HELENA, CALIFORNIA

Resolution No. 93-104

APPROVING A GENERAL PLAN AMENDMENT  
FOR CULINARY INSTITUTE OF AMERICA

## RECITALS

1. The Culinary Institute of America submitted an application for a General Plan Amendment, Rezoning and Use Permit on the property located on Main St. southwest of Deer Park Road, APN 9-131-03, on May 11, 1992.
2. The Planning Commission of the City of St. Helena, State of California, held a noticed public hearing on May 18, 1993; June 1, 1993; June 10, 1993; and June 29, 1993, on the Final EIR on the subject application and recommended certification of the Final EIR at the June 29, 1993, hearing.
3. The Planning Commission of the City of St. Helena, State of California, held a noticed public hearing on May 18, 1993; June 1, 1993; June 10, 1993; June 29, 1993; July 6, 1993; and July 20, 1993, on the subject application and recommended approval of a General Plan Amendment, Rezoning to PD and HP combining districts and a Use Permit at the the July 20, 1993, hearing.
4. The City Council of the City of St. Helena, State of California, held a noticed public hearing on August 10, and 24, 1993 and on September 14, 1993, on the Final EIR and subject application.

## RESOLUTION

## Section 1.

The City Council finds that:

- A. The project reflects changes in economic conditions such that the project site's size and topography and the characteristics of the main building and various outbuildings are not consistent with current winemaking practices and operations.

END OF DOCUMENT

- B. The naturally occurring physical constraints of the project's National Register historic Greystone Building and various outbuildings make the agricultural use of the project no longer feasible.

Section 2.

The City Council hereby approves a General Plan amendment for APN 9-131-03 from Agriculture to Public and Quasi-Public (PQP) subject to the adoption of the PQP designation in the new General Plan.

Approved by action of the City Council at a Regular Meeting held on September 14, 1993, by the following vote:

AYES: Mayor Hayne, Councilmembers Hardy, Gard, Heitz, Brown

NOES: None

ABSENT: None

Approved:

# RESOLUTION NO. 93-105

APPROVING A USE PERMIT OF THE CITY OF ST. HELENA,  
STATE OF CALIFORNIA, GRANTED TO THE  
CULINARY INSTITUTE OF AMERICA

PROPERTY OWNER: Culinary Institute of America APN: 9-131-03

WHEREAS, the Culinary Institute of America submitted an application for a Use Permit consisting of the re-use and renovation of the 117,000 square foot Greystone Cellars for a 200 student educational facility with educational, administrative, maintenance, receiving-storage, 125 seat restaurant and campus retail uses and the construction of two dormitories for 72 students, landscaping and parking on a 13 acre site located on Hwy. 29 southwest of Deer Park Road ; and

WHEREAS, the Planning Commission of the City of St. Helena, State of California, held a noticed public hearing on June 1, June 10, June 15, June 29, 1993, July 6, 1993, and July 20, 1993.

WHEREAS, the City Council of the City of St. Helena , State of California, held a noticed public hearing on August 10, August 24, and September 14, 1993.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of St. Helena as follows:

Section 1. The City Council has certified a Final Environmental Impact Report for the project.

Section 2. The City Council makes the following findings:

1. That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.

2. That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.

3. That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.

4. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.

5. That the proposed use would provide adequate ingress and egress to and from the proposed location.

6. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy.

7. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.

8. That the proposed use would not be in conflict with the City's General Plan.

9. That the proposed use would not be injurious to public health, safety, or welfare.

10. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.

11. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.

12. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use.

Section 3. The Use Permit for the above described use is granted subject to compliance with all mitigation measures identified in Resolution No. 93-102 and the mitigation monitoring program identified in Resolution No. 93-103 as well as the following conditions. Permit shall be in conformance with all City ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies so listed.

#### USE PERMIT CONDITIONS

Planning Department Standard Conditions:

1. The Use Permit must be used within one (1) year of approval of the General Plan Amendment and Rezonings by the City Council or it shall expire. This permit is valid for this use only. A new permit must be applied for upon any change in use. The permit will expire if the use is discontinued pursuant to then existing ordinances and regulations.
2. The Use Permit shall not become effective until ten (10) days after approval or as conditioned by the City, providing that the action is not appealed by the City Council or any other interested party within that 10 day period. The time within which judicial review of the final decision on the project must be sought is governed by the Code of Civil Procedure, 1094.6.
3. Any request for an extension of the Use Permit must be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.
4. All required fees shall be paid prior to issuance of building permit. Compliance with all permit conditions shall occur in accordance with specific regulations but in all cases no later than prior to occupancy or initiation of use unless another time is set by law or by this approval.
5. The applicant will defend and indemnify and hold the City, its agents, officers, and employees harmless of any claim, action or proceedings to attack, set aside, void or annul an approval so long as the City promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.
6. Provided they are in general compliance with the Use Permit, minor modification may be approved by the Planning Director.

Planning Department Special Conditions:

7. This Use Permit is valid for the facility as described herein as operated by the Culinary Institute of America. Should the applicant abandon or otherwise cease use of the site as an educational facility as granted by this permit, neither the applicant, a lessee nor a new owner may use this property for commercial/non-educational purposes without first obtaining permit approval from the City of St. Helena.
8. Construction activities and business operation shall be in compliance with all mitigation measures adopted in the certified Final EIR dated September, 1993.
9. The property shall be rezoned to a Public Quasi Public land use designation to establish conformity with the 1993 General Plan.

9a. This Use Permit shall not be valid until the City Council certifies the Final Environmental Impact Report and approves the General Plan Amendment and Rezoning to PD and HP.

10. Project Description. The project is limited to the following uses. Additional uses are subject to Use Permit Amendment.

A. The facility is to be used as an advanced cooking school. The student population shall not exceed 104 students; interim limits on student population are based on conditions regulating housing of students on site. (see Condition 12.F.) Students shall be limited to practicing professionals in the food and beverage industry. The school shall verify professional status of the students prior to enrollment.

B. Only instructors and students enrolled at the campus shall be allowed to use school accommodations. The length of stay shall not exceed the number of days of instruction.

The maximum stay for students at the campus shall be thirty (30) days; however, students may on occasion stay over 30 days in which case they shall be considered transient occupants for purposes of the transient occupancy tax. Weekends shall be included within the length of stay when the weekends occur within the time period of the class schedule.

The average length of instruction in any quarter shall be two weeks/student (i.e. 10 days/student). The average length of instruction is the summation of the number of students at each length of stay times that length of stay; the full value being divided by the total number of students. Records of length of instruction shall be reviewed by the City one year from the effective date of this permit.

C. A public restaurant may be operated as an accessory use to the school within the main winery building; restaurant seating shall be limited to a total of 125 seats, including both indoor and outdoor dining. The restaurant may be open six days per week, with one seating for lunch and one seating for dinner. Seating in the restaurant shall be limited to 11:30 a.m.-9:00 p.m. No banquet facilities or lounge area shall be provided.

Outdoor dining shall be limited to a new terrace to be located at the second story level on the north side of the main winery building. Outdoor dining shall be consistent with the Zoning Regulations in effect at the time of operation.

- D. A 3,100 s.f. campus store may be operated as an accessory use to the school within the main winery building. The store shall be limited to the hours of operation of 11:00 a.m. - 6:00 p.m. Items sold at the retail store shall be directly related to the food and beverage industry or to the incidental needs of the student residents, such as toiletries and stationary. Only food items prepared by students are permitted to be sold at the campus store. No other food items may be sold. Bottled wine sales may be permitted. No other retail spaces shall be created.

The intent of the store is to provide services to the instructors and students and not to provide merchandise for the general public nor cater to visitors to the campus. There shall be no exterior signage identifying the campus store. The school shall not advertise the store in its literature or other publications. No winetasting facility is authorized by this permit approval. The campus store shall not be subleased to another entity but may be managed by another entity. No retail or other space shall be sublet to operators other than C.I.A. One year from the effective date of this use permit the City Council shall review the store operation to determine consistency with store hours, items sold and management.

- E. The second and third floor south wing rooms may continue to be used by Napa County non-profit organizations for charity events, by the applicant for up to two community events per year, or by private parties for non-paying guests based upon availability and school needs. These events shall be regulated by any special events regulations in effect.

Valet parking shall be provided for all special and community events if they are held during hours that the restaurant is open and/or when designated on-site parking is not adequate. No parking shall be permitted along Highway 29/Main Street or Deer Park Road.

- F. The gatehouse and still house shall remain vacant. Future use shall be approved by Use Permit Amendment.
- G. Tours of the C.I.A. facility shall be limited to no more than eight (8) per month with a maximum of forty (40) persons per tour with no fees charged to the tour groups. C.I.A. shall not enter into any contractual agreements with tour agencies for visits to the facility including use of the restaurant. Promotional materials for the school shall not mention tours or retail sales. Signs shall indicate that no tours are allowed. This condition is not to discourage

carpooling or use of vans/buses by patrons of the restaurant.

11. Approval is given for the demolition of the following buildings which are not on the National Register: the existing storage/utility building; the exterior public restroom north of the main building; the boiler room west of the main building; and the small security building in front of the main building.
12. Construction shall be substantially in compliance with plans marked Exhibits A through H and dated June 29, 1993.
  - A. Phasing and floor areas shall be as shown on Proposed Project Phasing, Table 1, dated 6/29/93.  
  
Floor area which is vacant or undesignated shall not be used without a Use Permit Amendment.
  - B. No facade modifications/exterior changes beyond those shown on Exhibits A through H nor interior changes affecting historical features shall be made to the main winery building, the gatehouse, the stone entrance arch and the still house without further Design Review approval based on the Secretary's Standards.  
  
Applicant shall submit an inventory of existing counter-balanced wood doors indicating which doors are proposed for removal and the justification for removal. Planning Director shall approve removal of doors prior to issuance of building permits.
  - C. All structural plans shall be reviewed and approved by an independent preservation architect and approved by the Planning Director using the Secretary's Standards for Rehabilitation.
  - D. The design of the central atrium shall be subject to Final Design Review by the Planning Director and independent preservation architect prior to the issuance of building permits and shall be consistent with Exhibit I dated 8/24/93. The design shall be consistent with the Secretary of Interior Standards as specified in Mitigation Measure 42a of the Certified EIR.
  - E. The design of the outdoor terrace and restaurant entrance shall be subject to Final Design Review by the Planning Director and independent preservation architect prior to the issuance of building permits and shall be consistent with Exhibit J dated 8/24/93. No outdoor kitchens, except a grill, shall be permitted. The balusters proposed for the outdoor terrace and other design elements shall conform to the Secretary's

Standards for Rehabilitation as required by the certified EIR.

- F. In order to maximize the number of students residing on campus, all school accommodations shall be occupied first; residents of Napa County are exempt from this provision. Two dormitory buildings are authorized in conjunction with phases 1 and 2 of the project by this use permit. The total authorized school enrollment shall be the maximum capacity of the onsite accommodations plus the authorized offsite housing. Offsite housing shall be consistent with City regulations pertaining to transient housing.

Maximum enrollment allowed by this permit shall not exceed 104 students. Up to 68 students may be housed off-campus after the first dormitory is completed for no more than thirty-six (36) months. If no more than one dormitory building is constructed by the end of the 36th month, the maximum student enrollment shall immediately be reduced to 68 unless a use permit amendment is approved by the City. No students shall be enrolled until the first dormitory is completed and issued a certificate of occupancy. City shall evaluate ratio of off-site to on-site students no less than semi-annually based on housing information supplied to the City by the applicant including:

(1) data on off-site housing location including the total number of students that occupy off-site housing in St. Helena as well as the total number of students that find off-site housing outside of St. Helena. Data on students who occupy off-site housing in and outside St. Helena shall include addresses of places of stay (to determine if some of the students are staying in illegal units).

(2) number of students housed on-site and off-site including number of students that occupy off-site housing in St. Helena who also brought members of their family and/or other guests.

(3) class time duration of stay including average length of stay by all students.

(4) use of van service versus private transportation including number of students that either provided their own transportation or utilized CIA van service.

(5) number of Napa County residents enrolled

Final plans showing the design and phased construction of the first two dormitories shall be approved by the Planning Director prior to issuance of building permits

and shall conform to Exhibits K and L dated 8/24/93. The design of a third dormitory building shall be subject to a Use Permit Amendment. The maximum percent of school enrollment housed off-campus shall be reevaluated at the time of Use Permit Amendment for the third dormitory.

The total number of campus housing units after approval of a third dormitory shall be contained in no more than 3 new buildings which shall be constructed on existing building pads or in previously disturbed areas where no significant tree removal or grading is required. Housing may also be located in existing buildings subject to a Use Permit Amendment.

Height of buildings shall not exceed 36'. No buildings shall be located on the slope behind the Greystone Building with a height that exceeds the roofline of the Greystone building.

13. Water Use.

- A. Domestic water will be supplied by the City. Water use shall be limited to an average of 12,500 gpd. No City water shall be used for irrigation. Off-site well water shall be used for landscaping; reclaimed wastewater shall be used for agricultural irrigation.
- B. A phased retrofit program to install low flow toilets and shower fixtures in a minimum of 135 existing residential units shall be submitted and approved by the City Engineer prior to issuance of building permits. The City Council may require additional homes be retrofit or water-rationing be implemented if water use at Greystone Cellars exceeds an average of 12,500 gpd. Retrofit of existing residential units shall include, but not be limited to, replacement of toilets with low-water use fixtures and installation of water flow-restrictors on sink and shower facilities.
- C. Future improvements to the City water line resulting from the project, which may impact the Tunnel of the Elms shall be subject to CEQA environmental analysis and use permit amendment. Other water improvements related to this project may be subject to additional environmental analysis, Use Permit Amendment and Napa County and Regional Water Quality Control board approval.

14. Wastewater treatment shall be processed off-site at Markham Vineyards.

- A. Compliance with conditions specified in communication

from Napa County Department of Environmental Management dated June 9, 1993.

- B. Future connection to the City sewer line to serve this site which may impact the Tunnel of the Elms shall not be permitted. Other wastewater improvements related to this project may be subject to additional environmental analysis, a Use Permit Amendment, and Napa County and Regional Water Quality Control Board approval.

15. Traffic

- A. A left-turn pocket for northbound traffic on Hwy 29 shall be constructed with 75 foot acceleration tapers and 150 foot deceleration tapers, or other design standards as specified by Caltrans.
- B. The driveway from Hwy 29 should have a return radius of 30 feet per figure 405.7 of the Highway Design Manual.
- C. A bike shoulder shall be constructed along the project frontage of Hwy. 29.
- D. Internal circulation shall be provided by one entrance/exit (the use of the historic arch will be discontinued) and a one way internal system.
- E. A van service shall operate as necessary to connect CIA students to public transit, airport service, etc. Van service shall also be provided as needed for the students living off-campus to transport them to classes and non-school activities. Promotional materials and course flyers shall encourage the use of the shuttle service and public transportation in lieu of private vehicles.
- F. Installation of street improvements as required by the Public Works Director.

16. Parking is required as follows:

| <u>USE</u>              | <u>STANDARD</u> | <u>SPACES REQUIRED</u> |
|-------------------------|-----------------|------------------------|
| Restaurant/125 seats    | 1/5 seats       | 25                     |
| Dormitories/72 rooms    | 1/room          | 72                     |
| Store/3,100 sq. ft.     | 1/300 sq. ft.   | 10                     |
| Gate House/2,200 sq.ft. | 1/300 sq. ft.   | 7                      |
| Staff/45                | 1/staff         | 45                     |
| TOTAL                   |                 | 159                    |

The preliminary site plans show a total of 174 spaces for Phase I. Phase II will add 17 parking spaces for a total of 191. The additional parking spaces may be needed for additional dormitory spaces and/or special events.

The final parking and landscaping plan shall delineate areas for access and use by delivery vehicles.

17. Landscaping / Tree removal / Open Space Easement

- A. The construction of dormitories one and two will require removal of 20 trees, 11 of which are recommended for removal due to poor condition or crowding even without construction. Thirteen trees will be removed for the Phase 1 dorm and 7 for the Phase 2 dorm. The 20 trees to be removed shall be replaced on the site with 40 new trees of minimum 15 gallon size with a 5 year followup care and protection program.
- B. An open space management plan for the open space area to be dedicated by easement shall be prepared and approved by the Planning Director prior to issuance of grading permits. The plan shall specify that the undeveloped portion of this property shall be retained in its natural state with provisions for routine maintenance. Ongoing management shall also be included.
- C. A final landscape plan, shall be approved through Design Review prior to issuance of building permits. Landscaping shall be installed prior to occupancy. Said plan shall use native plants to blend into the natural area to the rear of the winery building and shall explore use native plants elsewhere on site. Plans shall also show exterior lighting.
- D. Landscape plans shall comply with Ordinance 92-20, Water Efficient Landscape Standards and Procedures, requiring drought tolerant landscaping and low water irrigation systems to be designed and verified by a landscape professional. Design compliance with the regulations, installation and water use shall be verified by a landscape professional. Landscaping shall not block vision from exits.
- E. Well water shall be used for all landscaping and reclaimed wastewater shall be used for all agricultural irrigation. A backflow prevention device shall be installed prior to occupancy unless waived by the Public Works Director.

18. No signs or awnings shall be installed without approval of a Sign Permit or Design Review. Signage shall not exceed the current sign area on the site and shall be designed within the context of the historical designation of the property.
19. Noise. All mechanical equipment and school operations shall meet the standards set forth in the City's Noise Element of the General Plan.
20. Additional construction requirements are as follows:
  - a. Exterior lighting shall be directed or shielded so as to prevent glare onto any residential property or public roadway.
  - b. Installation of approved interior fire sprinkler system and minimum fire flow for fire suppression, unless waived by the Fire Chief.
  - c. One hour minimum fire resistant construction on all exterior walls within 10' of property boundary. Fire resistant construction of interior walls shall be determined by type of occupancy.
  - d. Fire equipment shall be inspected annually by the Fire Department.
  - e. The applicant shall provide for the enclosed storage of trash and separated recyclable materials. The design of the trash storage and recycling area shall be reviewed and approved by the Planning Director. Trash bins shall not be visible from public right of way.

21. SCHOOL IMPACT CONDITION

The Project Sponsor shall enter into an agreement or memorandum of understanding with the St. Helena School District/Napa Valley College to provide for a scholarship program that would be equivalent to \$20,000. The scholarship will be provided to two students, one from Napa Valley College and one for someone who had graduated from the St. Helena school system. The terms of the agreement or memorandum of understanding shall be negotiated between the project sponsor and St. Helena School District/Napa Valley College and modifications may be made subject to agreement by affected parties. Copies of the agreement or memorandum of understanding shall be submitted to the City and included in the project file.

This condition is imposed based on representations made by the project sponsor as a matter of public record during the project hearings in response to school district impacts

END OF DOCUMENT

identified in the Environmental Impact Report prepared on the project.

22. Minor amendments to this Use Permit may be approved by the Planning Director.
23. This use permit shall not be effective until all fees due the City of St. Helena have been paid.
24. Applicant shall comply with all recommendations contained in the Harding Lawson Associates geotechnical report dated December 9, 1992.

Section 4. The City Clerk is hereby directed to record this Use Permit at the office of the County Recorder of the County of Napa.

I HEREBY CERTIFY that the foregoing Use Permit was duly and regularly adopted by the City Council of the City of St. Helena at a regular meeting of said City Council held on the 14th day of September, 1993, by the following roll call vote:

AYES: Mayor Hayne, Councilmembers Gard, Hardy, Heitz, Brown

### USE PERMIT AMENDMENT NO. 96-95

### USE PERMIT AMENDMENT OF THE CITY OF ST. HELENA STATE OF CALIFORNIA, GRANTED TO THE CULINARY INSTITUTE OF AMERICA

PROPERTY OWNER: Culinary Institute  
of America

APN: 09-131-03

#### Recitals

WHEREAS, Use Permit 93-105 was approved with conditions by the St. Helena City Council on September 14, 1993 to allow establishment of the Culinary Institute of America at the historic Greystone Cellars building located on a 13 acre site on the west side of Hwy 29 south of Deer Park Road; and

WHEREAS, Ferdinand Metz, on behalf of the Culinary Institute of America, submitted an application for a Use Permit Amendment to amend conditions 10C, 10D, 10G; and 12E

WHEREAS, The Planning Commission of the City of St. Helena, State of California, held noticed public hearings on October 15, 1996 and approved amendments to conditions 10C, 10D, 10G, and 12E.

WHEREAS, The City Council of the City of St. Helena, State of California, appealed the action of the Planning Commission and held a noticed public hearing on December 10, 1996 and approved the Use Permit Amendment as follows:

**Section 1.** The City Council hereby finds that the previously certified Environmental Impact Report remains adequate for the purpose of assessing the impacts associated with the proposed use permit amendments.

**Section 2.** The City Council makes the following findings:

1. That the proposed use permit amendments would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.
2. That the proposed use permit amendments would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.
3. That the proposed use permit amendments would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.
4. That the proposed use permit amendments would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.
5. That the proposed use permit amendments would provide adequate ingress and egress to and from the proposed location.
6. That allowing the proposed use permit amendments would not conflict with the City's goal of maintaining the economic viability of a local serving economy.
7. That the proposed use permit amendments would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.
8. That the proposed use permit amendments would not be in conflict with the City's General Plan.
9. That the proposed use permit amendments would not be injurious to public health, safety, or welfare.
10. That granting the use permit amendments would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.
11. That, as demonstrated by the applicant and conditions imposed by the city, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.
12. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use permit amendments.

**Section 3.** The Use Permit Amendment for the above described use is granted to amend only conditions 10C, 10D, 10G, and 12E. All other conditions included in Resolution 93-105 shall remain in effect as originally imposed when the Culinary Institute of America was approved to locate as the historic Greystone Cellars Building. This use permit and use permit amendment shall be in conformance with all City ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this use permit amendment and shall not be construed to permit violation of other laws and policies not so listed.

### **USE PERMIT CONDITIONS**

1. The Use Permit amendment is valid for one (1) year from the date of approval or it shall expire. This permit is valid for this use only. A new permit must be applied for upon any change in use. The permit will expire if the use is discontinued pursuant to then existing ordinances and regulations.
2. Any request for an extension of the Use Permit must be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.
3. A building permit shall be obtained prior to commencing any construction associated with this use permit amendments. All required fees shall be paid prior to issuance of building permits. Compliance with all permit conditions shall occur in accordance with specific regulations but in all cases no later than prior to occupancy or initiation of use unless another time is set by law or by this approval.
4. The applicant will defend and indemnify and hold the City, its agents, officers, and employees harmless of any claim, action or proceedings to attack, set aside, void or annul an approval so long as the City promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.
5. Provided they are in general compliance with the Use Permit and Use Permit Amendment, minor modification may be approved by the Planning Director.
6. This Use Permit Amendment shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.
7. Construction activities and business operation shall be in compliance with all mitigation measures adopted in the Environmental Impact Report certified prior to approval of the use permit to establish the use.
8. The City Council may require additional homes be retrofit or water-rationing be implemented if water use at Greystone Cellars exceeds an average of 12, 500 gpd. Retrofit of existing residential units shall include, but not be limited to, replacement of toilets with low-water use fixtures and installation of water flow-restrictors on sink and shower facilities.
9. Compliance with all conditions of the Napa County Conservation and Development Department and Napa County Environmental Management Department. The applicant shall provide documentation from these County agencies to the City of St. Helena verifying compliance with Napa County permits prior to establishment of the uses or business operations approved in conjunction with this use permit amendment.

10. This use permit amendment amends conditions 10C, 10D, 10G, and 12E as follows:

- 10C. A public restaurant may be operated as an accessory use to the school within the main winery building; restaurant seating shall be limited to a total of 125 seats, including both indoor and outdoor dining. the restaurant may be open seven days per week. Seating in the restaurant shall be limited to 11:00 a.m. - 10:00 p.m. No banquet facilities or lounge area shall be provided. Outdoor dining shall be limited to a new terrace to be located at the second story level on the north side of the main winery building. When outdoor seating is open indoor seating will be adjusted to ensure only 125 seats are active. Outdoor dining shall be consistent with the zoning regulations in effect at the time of operation.
- 10D. A 3,100 s.f. campus store may be operated as an accessory use to the school within the main winery building. The store shall be limited to the hours of operation of 10:00 a.m. - 7:00 p.m. Items sold at the retail store shall be directly related to the food and beverage industry or to the incidental needs of the student residents, such as toiletries and stationery. Only food items prepared by students or specialty products such as olive oils, vinegars and spices shall be permitted to be sold at the campus store. No deli food items may be sold. Bottled wine sales may be permitted. No other retail spaces shall be created. The store may be advertised in educational, food service, trade and Napa county newspapers of record. No advertising will be placed in national consumer publications or visitor oriented publications. Site signage will be placed to direct visitors to the store, a maximum of 2 in main lot, one by restaurant and one by the main entry. No signage for the campus store shall be visible from Hwy. 29. No wine tasting facility is authorized by this permit approval. The campus store shall not be subleased to another entity but may be managed by another entity. No retail or other space shall be sublet to operators other than CIA.
- 10G. The CIA. may offer tours to the general public. The tours shall be limited to no more than six per day between the hours of 10:00 a.m. and 3:00 p.m. The tours will be limited to 50 guests per tour. A minimum charge of \$5.00 per person will be collected unless the CIA chooses to donate a tour for a local civic group. The activity will include a presentation on the history and mission of CIA, a short cooking demonstration and a campus tour. Promotional materials for the school shall not mention tours or retail sales. Tours shall not be advertised in any publications nor shall any signs visible from Hwy 29 indicate that tours are offered at the facility. The tours approved by this condition are limited to visitors or students who have arrived at the CIA facility for other purposes; the tours are not intended to add additional impacts to use of the site. The tour schedule will include times convenient to lunch and dinner hours to reduce in and out traffic. These tours shall not ~~shall not~~ create a parking impact which exceeds the available on-site parking spaces provided. Parking attendants

END OF DOCUMENT

shall be provided if required by the Police Chief. CIA shall not enter into any contractual agreements with tour agencies for visits to the facility including use of the restaurant. The tour operation shall be reviewed within six months and again in twelve months from the date of approval of this use permit amendment or when excessive impacts are identified by staff, the Planning Commission or City Council. The purpose of this review is to address identified impacts and revisions to the tour operation may result as part of this review.

- 12E The design of the outdoor terrace and restaurant entrance shall be subject to final design review by the planning director and independent preservation architect prior to the issuance of building permits and shall be consistent with exhibit j dated 8/24/93. No outdoor kitchens, except a grill and wood fire oven, shall be permitted. The equipment must comply with the clean air act. The balusters proposed for the outdoor terrace and other design elements shall conform to the Secretary's Standards for Rehabilitation as required by the certified EIR.

**Section 3.** The City Clerk is hereby directed to record this Use Permit Amendment at the office of the County Recorder of the County of Napa.

**I HEREBY CERTIFY** that the foregoing Use Permit Amendment was duly and regularly approved by the City Council of the City of St. Helena at a regular meeting of said City Council held on December 10, 1996 by the following roll call vote:

USE PERMITAMENDMENT OF THE CITY OF ST. HELENA  
STATE OF CALIFORNIA, GRANTED TO THE  
CULINARY INSTITUTE OF AMERICA  
2555 MAIN STREET

*IVC*

PROPERTY OWNER: Culinary Institute of America APN: 009-131-003

Recitals

Roger Riccardi, representative of the Culinary Institute of America submitted an application for a Use Permit Amendment to convert approximately 3,000 sq. ft. of floor area on the third floor, south wing of the Greystone Building to offices in the Winery: Planned Development: Historic Preservation zoning district; and

The Planning Commission of the City of St. Helena, State of California, held a noticed public hearing on February 3, 1998.

The Planning Commission of the City of St. Helena, State of California, approved the Use Permit Amendment on the following basis:

**Section 1.** The Planning Commission hereby determines that the Environmental Impact Report adopted with the approval of this project on September 14, 1993 (Resolution 93-102) remains adequate for this project.

(97projects/97-162/UPA

9801 0002 0001

**Section 2.** The Planning Commission makes the following findings to support the motion to deny the Use Permit::

1. That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.
2. That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.
3. That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.
4. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.
5. That the proposed use would provide adequate ingress and egress to and from the proposed location.
6. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy.
7. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.
8. That the proposed use would not be in conflict with the City's General Plan.
9. That the proposed use would not be injurious to public health, safety, or welfare.
10. That granting the use permit amendment would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.
11. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.
12. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use.

**Section 3.** The Use Permit Amendment for the above described use is granted subject to compliance with the following conditions. Permit shall be in conformance with all City ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.

**USE PERMIT CONDITIONS**

1. The Use Permit Amendment is valid for one (1) year from the date of approval or it shall expire. This permit is valid for this use only. A new permit must be applied for upon any change in use. The permit will expire if the use is discontinued pursuant to then existing ordinances and regulations.
2. The Use Permit Amendment shall not become effective until fourteen (14) calendar days after approval, providing that the action is not appealed by the City Council or any other interested party within that 14 day period.
3. Any request for an extension of the Use Permit Amendment must be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.
4. All required fees, including planning fees, shall be paid prior to issuance of building permit. Fees shall be those in effect at the time of the issuance of the building permit.
5. Compliance with all permit conditions shall occur in accordance with specific regulations but in all cases no later than prior to occupancy or initiation of use unless another time is set by law or by this approval. Occupancy or final inspection of a project may be withheld if all conditions, including payment of fees for services rendered by the City, are not met.
6. The applicant will defend and indemnify and hold the City, its agents, officers, and employees harmless of any claim, action or proceedings to attack, set aside, void or annul an approval so long as the City promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.
7. Provided they are in general compliance with the Use Permit, minor modification may be approved by the Planning Director.
8. This Use Permit Amendment shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.
9. This Use Permit Amendment authorizes the conversion of approximately 3,000 square feet of the third floor, south wing of the Greystone building to offices consistent with the floor plan labeled Exhibit A, dated 2/3/98.

**Section 4.** The City Clerk is hereby directed to record this Use Permit Amendment at the office of the County Recorder of the County of Napa.

**END OF DOCUMENT**

**I HEREBY CERTIFY** that the foregoing Use Permit was duly and regularly approved by the Planning Commission of the City of St. Helena at a regular meeting of said Planning Commission held on February 3, 1998 by the following roll call vote:

**USE PERMIT AMENDMENT NO. 2001-60**

**USE PERMIT AMENDMENT OF THE CITY OF ST. HELENA  
STATE OF CALIFORNIA, GRANTED TO  
THE CULINARY INSTITUTE OF AMERICA FOR THE  
RESTORATION AND USE OF THE STILL HOUSE**

PROPERTY OWNER: Culinary Institute of America APN: 009-131-003

Recitals

Mark Erickson, representative of the Culinary Institute of America submitted an application for a Use Permit Amendment to allow the restoration and use of the Still House building located on the campus of the Culinary Institute of America at Greystone, 2555 Main Street, St. Helena, in the W:PD:HP: Winery:Planned Development: Historic Preservation Overlay zoning district.

The use of the Greystone Building as an educational facility for the Culinary Institute of America was approved by Use Permit in 1993. Condition 10 F of Use Permit 93-105 states that the buildings identified *as the gatehouse and still house shall remain vacant and that future use shall be approved by Use Permit Amendment.*

The still house was originally used by the Christian Brothers as a distillery for their winery. The site, primarily the Greystone Cellars and stone entry arch are listed on the National Register of Historic Places and the Napa County Historic Resources Inventory. The renovation of the still house was designed and will be overseen by Architectural Resources Group, a well respected architectural and planning firm that specializes in historic preservation projects. The renovation will be done in accordance with the Secretary of the Interior's Standards of Rehabilitation. The project will replace some missing historic features, including the east/west gables and cupola, through the use of historic photographs and the physical evidence presented by the building itself. Deteriorated features will be repaired rather than replaced. Replacement, when necessary, will conform to the original features of the building.

The Culinary Institute of America will relocate their Professional Wine Studies Program from classroom theaters within the Greystone Building where it is currently held. The space that

U:\data\Planning\2001 Projects\2001-60\UP 2001-60.doc

it vacates within the Greystone Building will be utilized by other instructional programs. No increase in the number of students is anticipated or requested with this project.

The Planning Commission of the City of St. Helena, State of California, held a noticed public hearing on October 2, 2001.

The Planning Commission of the City of St. Helena, State of California, approved the Use Permit Amendment on the following basis:

**Section 1.** The Planning Commission hereby finds that this project is exempt from the CEQA, the California Environmental Quality Act, pursuant to Section 15331 of the Guidelines. Class 31 consists of projects limited to maintenance, repair, stabilization, rehabilitation, restoration, preservation, conservation or reconstruction of historical resources in a manner consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitation, Restoring, and Reconstructing Historic Buildings. These federal standards describe means of preserving, rehabilitation, restoring, and reconstructing historic buildings without adversely affecting their historic significance.

**Section 2.** The Planning Commission makes the following Use Permit findings Section 27.439 to support the motion to approve the Use Permit:

1. That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.
2. That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.
3. That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.
4. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.
5. That the proposed use would provide adequate ingress and egress to and from the proposed location.
6. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy.
7. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.
8. That the proposed use would not be in conflict with the City's General Plan.
9. That the proposed use would not be injurious to public health, safety, or welfare.

U:\data\Planning\2001 Projects\2001-60\UP 2001-60.doc

10. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.
11. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.
12. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use.

**Section 3.** The Use Permit for the above-described use is granted subject to compliance with the following conditions. Permit shall be in conformance with all City ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.

#### **USE PERMIT CONDITIONS**

1. The Use Permit Amendment and Design Review shall be vested within one (1) year from the date of approval. A building permit for the use allowed under this Use Permit shall have been obtained within one (1) year from the effective date of the Use Permit or the Use Permit shall expire; provided however that the Use Permit may be extended for up to two (2) one-year periods pursuant to the St. Helena Municipal Code, Section 27.412, Extension of Permits and Approvals.
2. This permit is valid for this use only. New permits must be applied for upon any change in use. These permits will expire if the use is discontinued pursuant to then existing ordinances and regulations.
3. The Use Permit Amendment and Design Review shall not become effective until fourteen (14) calendar days after approval, providing that the action is not appealed by the City Council or any other interested party within that 14 day period.
4. Any request for an extension of the Use Permit Amendment and Design Review must be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.
5. All required fees, including planning fees, development fees, building fees toilet retrofit fees, and St. Helena Unified School District fees shall be paid prior to issuance of building permit. Fees shall be those in effect at the time of the issuance of the building permit.
6. Compliance with all permit conditions shall occur in accordance with specific regulations but in all cases no later than prior to occupancy or initiation of use unless another time is set by law or by this approval. Occupancy or final inspection of a project may be withheld if all conditions, including payment of fees for services rendered by the City, are not met.

U:\data\Planning\2001Projects\2001-60\UP 2001-60.doc

7. The applicant will defend and indemnify and hold the City, its agents, officers, and employees harmless of any claim, action or proceedings to attack, set aside, void or annul an approval so long as the City promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.
8. Provided they are in general compliance with the Use Permit, minor modification may be approved by the Planning Director.
9. This Use Permit Amendment and Design Review shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.
10. The primary purpose of this review is for compliance with the General Plan and Zoning Ordinance. The owner/applicant is responsible for meeting with the Building Official / Fire Inspector to review compliance with Building and Fire Codes, including fire protection systems and the accessibility standards of Title 24.
11. The use of the property by the Culinary Institute of America was approved in 1993 as authorized by Use Permit 93-105. This Use Permit Amendment complies with Condition 10 F of Use Permit 93-105 which states that the buildings identified *as the gatehouse and still house shall remain vacant and that future use shall be approved by Use Permit Amendment*. No other conditions of approval of Use Permit 93-105 are modified by this permit.
12. Construction shall be in compliance with plans marked Exhibits A-D, dated 10/02/01.
13. Use of the Still House shall be for meeting and lecture rooms for the Professional Wine Studies Programs of the Culinary Institute of America.
14. Landscaping shall be complete prior to occupancy of the building. Landscape plans shall comply with Ordinance 92-20, Water Efficient Landscape Standards and Procedures. Plans shall be designed and verified by a landscape professional and shall include drought tolerant landscaping and low water irrigation systems. Landscaping shall not block vision from exits or at street intersections. If the landscape area is 2,500 square feet or greater, a landscape water flow meter shall be installed for verification of the amount of water being used for landscaping.
15. Exterior lighting shall be directed or shielded to prevent glare onto the public roadway or adjacent properties.
16. The applicant shall provide for the enclosed storage of trash and separated recyclable materials. The design of the trash storage and recycling area shall be reviewed and approved by the Planning Director.
17. Fire equipment shall be inspected annually by the Fire Department.

U:\data\Planning\2001Projects\2001-60\UP 2001-60.doc

18. Installation of a rapid entry Knox Box system, unless waived by the Fire Chief.

19. No signs, awnings, or facade modifications shall be installed or constructed without approval of a Sign Permit or Design Review.

20. This property is located within an agricultural district. There exists a right-to-farm the adjoining properties. There is a good faith expectation that no complaints will occur regarding legal, normal agricultural activities on the adjacent land. Such activities may include day or night disbursement of chemicals, and creation of dust, noise, or fumes.

21. To reduce disturbance of residents in the project vicinity, construction activities which generate noise that can be heard at the property line of any parcel of real property within the City limits shall be limited to 8:00 a.m. to 5:00 p.m. Monday through Saturday. Delivery of materials/equipment and cleaning and servicing of machines/equipment shall be limited to 7:00 a.m. to 6:00 p.m. Exceptions to these time restrictions may be granted by the Public Works Director for one of the following reasons: (1) inclement weather affecting work, (2) emergency work, or (3) other work, if work and equipment will not create noise that may be unreasonably offensive to neighbors as to constitute a nuisance. The City Engineer must be notified and give approval in advance of such work. No construction activities shall occur on Sundays or federal or local holidays that generate noise that can be heard at the property line of any parcel of real property within the City limits.

**Section 4.** The City Clerk is hereby directed to record this Use Permit at the office of the County Recorder of the County of Napa.

**I HEREBY CERTIFY** that the foregoing Use Permit was duly and regularly approved by the Planning Commission of the City of St. Helena at a regular meeting of said Planning Commission held on October 2, 2001 by the following roll call vote:

OF THE CITY OF ST. HELENA, STATE OF CALIFORNIA,  
GRANTED TO THE CULINARY INSTITUTE OF AMERICA  
FOR THE RESTORATION AND USE OF THE GATE HOUSE**

PROPERTY OWNER: Culinary Institute of America APN: 009-131-003

Recitals

A. Mark Erickson, representative of the Culinary Institute of America, submitted an application for a Use Permit Amendment to allow the restoration and use of the Gate House building located on the campus of the Culinary Institute of America at Greystone, 2555 Main Street, St. Helena, in the W:PD:HP: Winery:Planned Development: Historic Preservation Overlay zoning district.

The use of the Greystone Building as an educational facility for the Culinary Institute of America was approved by Use Permit in 1993. Condition 10 F of Use Permit 93-105 states that the buildings identified as *the gatehouse and still house shall remain vacant and that future use shall be approved by Use Permit Amendment.*

The Culinary Institute site, primarily the Greystone Cellars and stone entry arch, was designated a California Point of Historical Interest in 1997, was listed on the National Register of Historic Places in 1977 and included in the Napa County Historic Resources Inventory in 1978. The Gate House and the Still House are listed as related features on the site and appear to have been constructed at the same time as the Greystone Cellars.

The proposed renovation of the Gate House was designed by and will be overseen by Architectural Resources Group, and will be done in accordance with the Secretary of the Interior's Standards of Rehabilitation.

The project includes a seismic retrofit of the building. The exterior river rock walls will be preserved and exterior doors, windows, eaves and soffits will be preserved. A new one story teaching kitchen will replace the existing deteriorated addition and the interior will be adapted for educational programs. Two existing windows on the rear façade of the building will be modified into doors leading to the patio and the kitchen. The new addition is 24' x 24' in size, slightly larger than the 20' x 20' addition that currently exists.

The structure will be used to study the pairing of food and wine. New accessible bathrooms will be constructed inside. The interior ceiling will be removed to provide a larger room with better light. No increase in the number of students is anticipated or requested with this project.

B. The Planning Commission of the City of St. Helena, State of California, held a noticed public hearing on August 5, 2003.

U:\data\Planning\2003 Projects\2003-42\UP 2003-42.doc

### Findings

1. The Planning Commission hereby finds that this project is exempt from the CEQA, the California Environmental Quality Act, pursuant to Section 15331 of the Guidelines. Class 31 consists of projects limited to maintenance, repair, stabilization, rehabilitation, restoration, preservation, conservation or reconstruction of historical resources in a manner consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitation, Restoring, and Reconstructing Historic Buildings. These federal standards describe means of preserving, rehabilitation, restoring, and reconstructing historic buildings without adversely affecting their historic significance.
2. The Planning Commission makes the following Use Permit findings Section 27.439 to support the motion to approve the Use Permit:
  1. That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.
  2. That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.
  3. That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.
  4. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.
  5. That the proposed use would provide adequate ingress and egress to and from the proposed location.
  6. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy.
  7. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.
  8. That the proposed use would not be in conflict with the City's General Plan.
  9. That the proposed use would not be injurious to public health, safety, or welfare.
  10. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.
  11. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.

U:\data\Planning\2003 Projects\2003-42\UP 2003-42.doc

12. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use.

**Section 3.** The Use Permit for the above-described use is granted subject to compliance with the following conditions. Permit shall be in conformance with all City ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.

1. The Use Permit Amendment and Design Review shall be vested within one (1) year from the date of approval. A building permit for the use allowed under this Use Permit shall have been obtained within one (1) year from the effective date of the Use Permit or the Use Permit shall expire; provided however that the Use Permit may be extended for up to two (2) one-year periods pursuant to the St. Helena Municipal Code, Section 27.412, Extension of Permits and Approvals.
2. This permit is valid for this use only. New permits must be applied for upon any change in use. These permits will expire if the use is discontinued pursuant to then existing ordinances and regulations.
3. The Use Permit Amendment and Design Review shall not become effective until fourteen (14) calendar days after approval, providing that the action is not appealed by the City Council or any other interested party within that 14 day period.
4. Any request for an extension of the Use Permit Amendment and Design Review must be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.
5. Compliance with all permit conditions shall occur in accordance with specific regulations but in all cases no later than prior to occupancy or initiation of use unless another time is set by law or by this approval. Occupancy or final inspection of a project may be withheld if all conditions, including payment of fees for services rendered by the City, are not met.
6. The applicant will defend and indemnify and hold the City, its agents, officers, and employees harmless of any claim, action or proceedings to attack, set aside, void or annul an approval so long as the City promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.
7. Provided they are in general compliance with the Use Permit, minor modifications may be approved by the Planning Director.
8. This Use Permit Amendment and Design Review shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.

9. The primary purpose of this review is for compliance with the General Plan and Zoning Ordinance. The owner/applicant is responsible for meeting with the Building Official / Fire Inspector to review compliance with Building and Fire Codes, including fire protection systems and the accessibility standards of Title 24.

10. All required fees, including planning fees, development impact fees, building fees, toilet retrofit fees, and St. Helena Unified School District fees shall be paid prior to issuance of building permit. Pursuant to City Council Resolution 2003-65, the owner and applicant are informed of the following:

*In recognition of the need for additional affordable housing, and to mitigate the effects of this development on the supply and demand of affordable housing, the permittee shall be subject to a Housing Impact Fee, an inclusionary requirement, an in-lieu fee, and/or similar fair and appropriate mechanisms, to provide funds for or to develop additional affordable housing, should such mechanisms be established by the City.*

11. The use of the property by the Culinary Institute of America was approved in 1993 as authorized by Use Permit 93-105. This Use Permit Amendment complies with Condition 10 F of Use Permit 93-105 which states that the buildings identified as *the gate house and still house shall remain vacant and that future use shall be approved by Use Permit Amendment*. No other conditions of approval of Use Permit 93-105 are modified by this permit.

12. Construction shall be in compliance with plans marked Exhibits A- D, dated 8/05/03.

13. Prior to issuance of building permits, the existing interior of the structure shall be recorded through preparation of a floor plan noting uses of rooms and building materials, and with photographs. The purpose of this is to supplement the historic record of the building and site.

14. Building permits that allow new or replacement plumbing for the Gate House shall not be issued until the following conditions have been met:

- a. The Use Permit Modification requested by the Markham Vineyards Combined Wastewater Management System has received approval from the County of Napa.
- b. The applicant has submitted a plan and time schedule to reduce municipal water use to 12,500 gallons per day and such plan has been reviewed and approved by the City Engineer. Such a plan may include provision of another source of water, such as a well or may include a request for an increase in water allotment from the City of St. Helena.

The intent of this condition is to allow permits to be issued that will allow the seismic retrofit of the building to commence.

15. A survey for hazardous materials shall be conducted prior to demolition activities for analysis of asbestos containing materials and lead based paint.

16. To preserve air quality, the following practices shall be observed during construction:

- 1. Water all active construction areas at least twice daily.
- 2. Cover all trucks hauling soil, sand, and other loose materials.

U:\data\Planning\2003 Projects\2003-42\UP 2003-42.doc

3. Apply water three times daily to all unpaved access roads, parking area, and staging areas at the construction site.
  4. Sweep adjacent public streets daily with water sweepers if visible soil material is carried onto streets.
17. A tree protection plan shall be submitted prior to issuance of building permits. The tree protection plan shall consider the following measures:
- a. Each tree or group of trees to be preserved shall be protected by enclosure with a six (6) foot fence prior to grading or movement of heavy equipment. The minimum distance of the fence from the tree shall be at the drip line, but may be extended an additional 10' to include the root zone which shall be determined by the project arborist or city arborist. Fencing shall remain in place until such time as the Building Official is assured the trees are no longer in danger of construction damage.
  - b. Landscaping under the protected tree shall be discouraged, but if landscaping is planted under the drip line of an existing native or protected tree, the landscaping shall be drought tolerant or California native plant materials. Landscaping shall not be planted within (six) 6 feet of the trunk. Shredded bark mulch is encouraged in this area. No lawns shall be planted within the drip line.
  - c. The following activities are prohibited under the drip line of the protected trees unless authorized by the Planning Director under the advice of the City arborist or project arborist:
    1. Change in the amount of irrigation provided to the protected from that which was provided prior to the commencement of construction activity.
    2. Trench, grade or pave into the drip line of a protected tree.
    3. Change the grade elevation by more than 6" within the drip line of the tree and for a distance of 30' outward from the drip line of the tree.
    4. Park or operate any motor vehicle within the drip line area of a protected tree, except within designated parking areas.
    5. Place or store any equipment or construction materials within the drip line area of the tree.
    6. Attach any signs, ropes, cables or any other items to the tree.
    7. Cut or trim any branch of the tree for temporary construction purposes.
    8. Place or allow flowing into or over the root zone area of any tree any oil, fuel, concrete mix, paint, solvent, plaster or other deleterious substance.
18. To reduce disturbance of residents in the project vicinity, construction activities which generate noise that can be heard at the property line of any parcel of real property within the City limits shall be limited to 8:00 a.m. to 5:00 p.m. Monday through Saturday. Delivery of materials/equipment and cleaning and servicing of machines/equipment shall be limited to 7:00 a.m. to 6:00 p.m. Exceptions to these time restrictions may be granted by the Public Works Director for one of the following reasons: (1) inclement weather

U:\data\Planning\2003 Projects\2003-42\UP 2003-42.doc

affecting work, (2) emergency work, or (3) other work, if work and equipment will not create noise that may be unreasonably offensive to neighbors as to constitute a nuisance. The City Engineer must be notified and give approval in advance of such work. No construction activities shall occur on Sundays or federal or local holidays that generate noise that can be heard at the property line of any parcel of real property within the City limits.

19. Property owners within this district shall recognize that there exist right-to-farm properties within the district and in the vicinity of the district. There is a good faith expectation that no complaints will occur regarding legal, normal agricultural activities on the adjacent land. Such activities may include day or night disbursement of chemicals, and creation of dust, noise, or fumes.

**I HEREBY CERTIFY** that the foregoing Use Permit and Design Review was duly and regularly approved by the Planning Commission of the City of St. Helena at a regular meeting of said Planning Commission held on August 5, 2003 by the following roll call vote:

**RESOLUTION 2004 - 112**

**APPROVING A USE PERMIT AMENDMENT  
AND WATER AGREEMENT TO INCREASE  
THE WATER USE LIMITATION FOR  
THE CULINARY INSTITUTE OF AMERICA  
AT 2555 MAIN STREET**

**RECITALS**

- A. Mark Erickson, representative of the Culinary Institute of America (CIA) submitted an application for a use permit amendment to condition 13A of Resolution 93-105, granting a use permit to the Culinary Institute of America. Condition 13A states:

*Domestic water will be supplied by the City. Water use shall be limited to an average of 12,500 gpd. No City water shall be used for irrigation. Off-site well water shall be used for landscaping; reclaimed wastewater shall be used for agricultural irrigation.*

- B. Use Permit Amendment 2003-42 authorizing the renovation and use of the Gate House for CIA programs required that the applicants submit a plan to show compliance with the 1993 water use limitation. The applicants showed evidence of on-going leak detection and water conservation measures, and an audit of all water fixtures located on the property.
- C. The CIA has requested an amendment to the use permit and to the year 2000 water use agreement to allow municipal water use of 17,500 gpd, an increase of 5,000 gpd. The amount of water requested is anticipated to cover all foreseen expansion of uses at Greystone including the food and wine programs at the renovated Still House and Gate House.
- D. Approval of the amendment to the use permit necessitates an amendment to a water use agreement executed between the City of St. Helena and the CIA in May 2000.
- E. The Planning Commission of the City of St. Helena, State of California, held a noticed public hearing on August 17, 2004 and recommended approval to the City Council.

**RESOLUTION**

NOW, THEREFORE, the City Council of the City of St. Helena resolves as follows:

1. The City Council finds that with a condition of approval to require an alternative equivalent to 80 retrofits, the proposed project is in compliance with the certified 1993 Final Environmental Impact Report and the adopted Mitigation Monitoring Program and Statement of Overriding Considerations for the Culinary Institute of America (Resolution 93-103).

2. Pursuant to Municipal Code section 17.168.050, the City Council makes the following findings for approval of an amendment to a use permit:

- a. That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.
- b. That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.
- c. That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.
- d. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.
- e. That the proposed use would provide adequate ingress and egress to and from the proposed location.
- f. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy.
- g. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.
- h. That the proposed use would not be in conflict with the City's General Plan.
- i. That the proposed use would not be injurious to public health, safety, or welfare.
- j. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.
- k. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.
- l. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use.

3. The Use Permit Amendment for the above described use is granted subject to compliance with the following conditions. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.
4. The applicant will defend and indemnify and hold the City, its agents, officers, and employees harmless of any claim, action or proceedings to attack, set aside, void or annul an approval so long as the City promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.
5. This permit shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.
6. This permit modifies condition 13A of Resolution 93-105 as follows:

*Domestic water will be supplied by the City of St. Helena. Water use shall be limited to an average of 17,500 gpd as reflected in a water use agreement limiting annual water use to 19.6 acre feet (8,545 billing units) per year. Well water or reclaimed wastewater shall be utilized for landscape and agricultural irrigation.*

7. The authorization of this amendment modifies the condition of approval in Use Permit 2003-42 requesting proof of compliance with the 1993 water use limitation.
8. This project is subject to the City's water use efficiency program. The requested 5,000 gallons of water per day increase may be offset by a credit of 3,100 gallons per day for the reduction in water use at the Culinary Institute of America's Marlinda dormitory facility located at 830 Pratt Avenue. The remaining 1,900 gallons per day or 2.12 acre feet per year increase shall be mitigated by a combination of the payment of in-lieu fees, water savings achieved through 30 retrofits, or by an equivalent alternative innovative method of mitigation of water use to be approved by the Public Works Director.
9. The site shall utilize tertiary water for irrigation when it becomes available.

Approved at a Regular Meeting of the St. Helena City Council on October 12, 2004, by the following vote:

## AGREEMENT

### CULINARY INSTITUTE OF AMERICA

THIS AGREEMENT, entered into on October 8, 2004, between the City of St. Helena, a municipal corporation (City), and the Culinary Institute of America at Greystone (Customer), provides as follows:

#### RECITALS

- A. Customer is the owner of real property (the Property) located at 2555 Main Street, St. Helena, Napa County, known as Assessor's Parcel No. 009-131-003, as more particularly described in Exhibit A attached hereto.
- B. On October 12, 2004, the St. Helena City Council approved Resolution 2004-112, which authorized an amendment to Resolution 93-105 and an amendment to the year 2000 water use agreement to allow an increase of water use by the Customer.
- C. The parties hereto wish to enter into this Water Agreement to fulfill the Resolution condition of approval requiring such an agreement.

NOW THEREFORE, in consideration of the mutual covenants contained herein, the parties agree as follows:

### AGREEMENT

1. City is obligated to provide water to the Property up to no more than an annual limitation (Annual Limitation) of 19.6 acre feet (8,545 hundred cubic feet/billing units) per Water Year upon the terms and conditions set forth herein. As used herein, the term Water Year shall mean the twelve-month period between the City's last water meter reading of a calendar year and the last water meter reading of the following calendar year.

2. City water shall be used only for those uses as authorized by the Resolution. City shall not be obligated to provide water service for any other use nor for any further expansion of the uses allowed by the Resolution.

4. While water is furnished to Customer pursuant to this Agreement, Customer shall be bound by and subject to all lawful resolutions, rules, regulations, directives, ordinances and orders of the City pertaining to water services as may be enacted from time to time for all other applicable users of City water, including, without limitation, provisions relating to rate charges and water shortage emergencies.

5. Customer shall monitor its water usage on a bimonthly basis and employ all measures necessary to ensure that the Annual Limitation is not exceeded. In the event the City Director of Public Works reasonably determines that the Annual Limitation inevitably will be exceeded or that the Annual Limitation has been exceeded, City may require Customer to undertake reasonable additional conservation measures and may require Customer, upon ten (10) days prior written notice, to terminate water service for nonessential uses. For purposes of this Agreement, the term "nonessential uses" shall mean uses for which non-potable water would suffice.

6. In the event Customer exceeds its Annual Limitation, it shall pay to City a penalty surcharge equal to 60% of the water rate charge for each hundred cubic feet, or portion thereof, used in excess of the Annual Limitation. Such penalty surcharge shall be due and payable within 30 days after calculation and demand by City. In addition to the 60% surcharge, City may avail itself of all rights and remedies set forth in Paragraph 8 of this Agreement.

7. In addition to any other rights or remedies, either party may institute legal action to cure, correct or remedy any default of this Agreement; to enforce any covenants or agreements herein or to enjoin any threatened or attempted violation thereof; to recover damages for any default; or to obtain any other remedy consistent with the purpose of this Agreement.

8. This Agreement shall be construed and enforced in accordance with the laws of the State of California. Should any legal action be brought by either party because of breach of this Agreement or to enforce any provision of this Agreement, the prevailing party in such action shall be entitled to all reasonable attorney's fees, court costs and necessary disbursements in connection with such action.

9. The parties hereto agree that the provisions of this Agreement are severable. If any provision of this Agreement is held invalid, the remainder of this Agreement shall not be affected and shall remain in full force and effect unless amended or modified by mutual consent of the parties in writing.

10. The provisions of this Agreement shall be binding on all tenants, heirs, assigns and successors in interest to the parties hereto and shall be a covenant that runs with the land.

Executed the day and year first above written.

**USE PERMIT AMENDMENT NO. 2006-07**

**USE PERMIT AMENDMENT OF THE CITY OF ST. HELENA  
STATE OF CALIFORNIA, GRANTED TO  
CULINARY INSTITUTE OF AMERICA  
2555 MAIN STREET**

PROPERTY OWNER: Culinary Institute of America

APN: 009-131-003

Recitals

1. The Culinary Institute of America (CIA) requested amendments to three conditions of approval that pertain to the operation of the school. These amendments will enable the school to offer classes for an Associates degree. The first amendment proposed would expand the level of student skill to include entry level classes in addition to the continuing education classes for professionals. The second amendment requested is to modify the language pertaining to the average length of stay at the school and the third modification is to change the condition of approval pertaining to housing/student ratio and recognize the provisions of on-site and off-site dormitories.

2. The Planning Commission of the City of St. Helena, State of California, held a noticed public hearing on March 21, 2006.

Resolution

The Planning Commission of the City of St. Helena, State of California, approved the Use Permit Amendment on the following basis:

A. The Planning Commission hereby finds that this project is exempt from the California Environmental Quality Act pursuant to Section 15301, Class 1 which exempts operation and minor expansion of use at existing structures.

B. The Planning Commission makes the following Use Permit Amendment findings, Section 17.168.050, to support the motion to approve the Use Permit Amendment:

1. That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.
2. That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.
3. That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.
4. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.

5. That the proposed use would provide adequate ingress and egress to and from the proposed location.
6. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy.
7. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.
8. That the proposed use would not be in conflict with the City's General Plan.
9. That the proposed use would not be injurious to public health, safety, or welfare.
10. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.
11. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.
12. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use.

C. The Use Permit Amendment for the above described use is granted subject to compliance with the following conditions. Permit shall be in conformance with all City ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.

1. The Use Permit Amendment shall be vested within one (1) year from the date of approval or it shall expire; provided however that the Use Permit may be extended for up to two (2) one-year periods pursuant to the St. Helena Municipal Code, Section 17.08.130, Extension of Permits and Approvals.
2. The Use Permit Amendment shall not become effective until fourteen (14) calendar days after approval, providing that the action is not appealed by the City Council or any other interested party within that 14 day period.
3. Any request for an extension of the Use Permit Amendment must be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.
4. The applicant will defend and indemnify and hold the City, its agents, officers, and employees harmless of any claim, action or proceedings to attack, set aside, void or annul an approval so long as the City promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.
5. Provided they are in general compliance with the Use Permit Amendment, minor modification may be approved by the Planning Director.
6. This Use Permit Amendment shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.
7. **Condition 10A** of Resolution 93-105 shall be amended as follows:

*The educational program at the facility shall have as its primary focus the delivery of advanced professional education for current professionals in the hospitality, food or beverage industries or students enrolled in a course of study leading to a professional career in these fields. The maximum student population shall not exceed 104 students.*

8. Condition 10 B of Resolution 93-105 shall be amended as follows:

*Only staff and students participating in educational programs enrolled at the campus shall be allowed to use school accommodations. The length of stay shall not exceed the number of days of instruction and the average length of stay shall equal or exceed two weeks per student.*

*All occupants of the housing provided onsite or at the CIA's dormitory on Pratt Avenue shall be treated as transient occupants regardless of length of stay. Transient occupancy tax shall be paid for any students occupying these facilities, even if their length of stay exceed thirty (30) days.*

9. Condition 12 F of Resolution 93-105 shall be amended as follows:

*Maximum enrollment allowed by this permit shall not exceed 104 students. The project has provided thirty-six (36) housing spaces in the Guest House on the Greystone Property and an additional forty (40) spaces in the dormitory commonly known as "Vineyard Lodge" located on Pratt Avenue. This combined number of units satisfies current requirements for housing for the CIA program and , in the event of any further expansion of the capacity of the CIA, the City of St. Helena shall decide whether additional housing units will need to be provided by the CIA, and the number of such additional units, if any.*

**I HEREBY CERTIFY** that the foregoing Use Permit Amendment was duly and regularly approved by the Planning Commission of the City of St. Helena at a regular meeting of said Planning Commission held on March 21, 2006 by the following roll call vote:

|                 |                                                    |

Carol Poole, Planning Director

  
Charles Henning, Managing Director  
Culinary Institute of America

**CITY OF ST. HELENA**

**RESOLUTION NO. 2006-130**

**APPROVING A USE PERMIT AMENDMENT, DESIGN REVIEW VARIANCE AND LOT LINE ADJUSTMENT FOR THE CARPY PROPERTY PORTION OF THE CULINARY INSTITUTE OF AMERICA, LOCATED AT 2401 MAIN STREET**

PROPERTY OWNER: Culinary Institute of America

APN: 009-131-028

**Recitals**

1. The applicant and property owner, the Culinary Institute of America, requests approval to grade a portion of the Carpy property, located immediately south of the Greystone property in order to construct a parking lot to accommodate approximately 85 vehicle for use of Culinary Institute guests and visitors, install of lighting in the proposed parking lot, use the existing Carpy house for guests of the Culinary Institute, remove existing asphalt from the site, relocate an existing driveway to the Carpy house, remove and replant trees and delete a previous approval for on-site dormitory space on the property.
2. The applicant's proposal requires the following actions or entitlements: a) a General Plan Amendment to extend the Urban Limit Line to the south to encompass the Carpy property; b) rezoning of the Carpy property from the A-20: Twenty-acre Agriculture district to the W:PD:HP, Winery:Planned Development Overlay:Historic Preservation Overlay districts to allow the proposed improvements; c) a Use Permit Amendment and Design Review to allow overnight lodging at the Carpy house, to delete the previously approved on-site dormitory space, to remove existing driveways on the site and relocate the existing driveway to the Carpy house, and to construct a parking lot; d) a variance to allow a portion of the relocated on-site access drive to the Carpy house to exceed the maximum roadway gradient of 16% for approximately 110 to 120 feet of the driveway that would have a grade of 18%; and e) a Lot Line Adjustment to increase the size of the Greystone property from 13.41 acres to 14.7 acres and to decrease the size of the Carpy property from 5.49 acres to 4.19 acres.
3. The applicant's proposal is subject to review of the California Environmental Quality Act (CEQA). An Initial Study was prepared on the proposed project and an Environmental Checklist was utilized to focus the Initial Study on the environmental factors that may be impacted or further impacted by implementation of the proposed project.
4. The Planning Commission of the City of St. Helena, State of California, held noticed public hearings on the applicant's proposal on August 15, 2006, reviewing the public record, including all application submittal materials, letters submitted regarding the proposal and staff reports, opening a public hearing to receive testimony from the applicant and interested persons, and deliberating on the project before making its recommendation to the City Council to approve the project with the recommended conditions and mitigation measures.

5. The City Council held a noticed public hearing to consider the Mitigated Negative Declaration on September 12, 2006.

Resolution

NOW, THEREFORE, the City Council for the City of St. Helena resolves as follows:

- A. The City Council determined that the project is subject to CEQA and adopted a Mitigated Negative Declaration, including the recommended mitigation measures attached to the Initial Study and Mitigation Monitoring and Reporting Program (MMRP). The Mitigated Negative Declaration prepared for this project and circulated in compliance with the requirements of CEQA established that although the proposed project could have a significant effect on the environment, there would not be a significant effect in this case because revisions to the project in the form of mitigation measures have been adopted;
- B. The City Council makes the following Use Permit findings, contained in Zoning Ordinance Section 27.439, to support the motion to approve a Use Permit Amendment to allow the proposed improvements on the subject parcel:
  - 1. That the proposed use would include construction of a parking lot and the operation of this use would not generate odors, fumes, radiation or refuse. Since the parking lot would include lighting, adherence to Mitigation Measure 1 contained in the Initial Study/Mitigated Negative Declaration would reduce light and glare impacts to a less-than-significant level on adjacent roads and surrounding properties by requiring approval of photometric plans for parking lot lighting to ensure that there will be no spillover of light and glare.
  - 2. That the proposed use could result in significant although short-term levels of noise that would be noticed by surrounding properties to the west and south. With adherence to Mitigation Measure 10 contained in the Initial Study/Mitigated Negative Declaration, short term construction noise impacts would be limited so that the project would not result in excessive noise that would adversely affect the health, safety or welfare of surrounding properties or uses.
  - 3. That, based on the traffic analysis prepared for the proposed project, there would be limited additional traffic trips generated to the proposed parking lot. There would therefore be limited additional traffic noise that would not exceed noise thresholds established in the General Plan.
  - 4. That the proposed parking lot landscaping would not use City water but would rely on a private water source for an irrigation source. Wastewater generated from the Carpy house would be treated on site and disposed of in off-site ponds on the east side of Main Street. Use of other City services would be minimal so that the project would not make excessive demands on City water wastewater, police, fire or other sources.
  - 5. That the proposed parking lot would continue to use the existing driveway on Main Street. The traffic analysis did not identify a significant safety issue with ingress and egress.
  - 6. That the proposed use would allow for the continued use of the CIA as a revenue generating use in the City and would not conflict with goals of maintaining the viability of the local economy.

7. That the proposed parking lot would represent a logical continuation of the Greystone parking lot immediately north of the project site, which contains a winery. Therefore, there would be no land use compatibility issues and the proposed use would be consistent with the intent of the W: Winery zoning district as identified above in the staff report.
  8. That, based on the analysis included in the staff report above, the proposed project is consistent with the A: Agriculture General Plan land use designation that allows for single family dwellings, wineries and similar uses. The proposed use includes continued use of the Carpy single-family house and expansion of the parking lot for the Culinary Institute of America, which is a winery related land use.
  9. That the proposed parking lot use would operate in a manner consistent with the requirements of the St. Helena Municipal Code that would ensure that the public health, safety and welfare would be protected at all times. The construction of the proposed parking lot would also be subject to mitigation measures set forth in the Initial Study/Mitigated Negative Declaration, which would provide additional health, safety and welfare protection to the public.
  10. That Approval of the requested use would not set a precedent for future similar projects since separate use permit approvals will be required for this type of use and the Culinary Institute is a unique land use in St. Helena.
  11. That the objective of the project is to provide approximately 85 additional off-street parking for the existing Culinary Institute facility so that more parking would be provided for employees and visitors to the facility.
  12. That the traffic analysis prepared by the Crane Transportation Group indicates that minimal additional trips would be added to Main Street as a result of project approval. Therefore, the proposed project would be consistent with this finding.
- C. The City Council approves the Design Review for construction of the Carpy property parking lot, relocated on-site driveway and landscaping, subject to the applicable Design Criteria contained in Zoning Ordinance Section 17.164.030. The improvements have been designed to fit into the context of the existing Culinary Institute of America landscaping and related facilities.
- D. The City Council makes the following Variance findings, contained in Zoning Ordinance Section 27.449, to support the motion to approve a Variance to allow construction of a relocated on-site driveway to the Carpy house with a gradient of 18% that exceeds the maximum 16% grade for a run of approximately 110 to 120 linear feet.
1. That a hardship peculiar to the property, not created by any act of the owner, exists in that the need for the variance is caused by the relatively steep topography on the westerly side of the Carpy property. In order to achieve on-site access from the lower elevation of the site to the higher elevation Carpy house without going beyond the boundary of the site a portion of the roadway would need to exceed the 16% grade for approximately 110 to 120 feet of the roadway.
  2. That the variance is necessary for the preservation and enjoyment of substantial property rights of the applicant which are possessed by other properties and that a variance, if granted, would not constitute a special privilege of the recipient not enjoyed by his or her neighbors

since, based on a field survey, other properties near the Carpy property have on-site access without the need for traversing another private property. Approval of the variance would therefore not be a grant of special privilege

3. That the authorization of the variance will not be of substantial detriment to adjacent properties, and will not materially impair the purpose and intent of this Chapter or the public interest, nor adversely affect the General Plan because the proposed stretch of private driveway that would exceed the normal maximum gradient would not be visible from adjacent public roadways and would not be inconsistent with the purposes of the W: Winery District, the A: Agriculture General Plan land use designation or the public interest.
  4. That the condition or situation of the specific piece of property of which the variance is sought is not so general or recurrent in the nature as to make reasonably practicable the formulation of a general regulation for such condition or situation since the City has not received similar variance requests in recent years.
  5. That the variance and any buildings or structures permitted by the variance will not be detrimental to the public health, safety and welfare of the community because the proposed variance has been reviewed by the Fire Chief and to ensure that the Fire Department can provide full service, construction of a 10,500 gallon on-site water tank has been recommended and will be provided to ensure the steep gradient of the driveway would not be detrimental to the public health safety or welfare.
- E. The City Council approves the Lot Line Adjustment between the Greystone Property that would transfer approximately 1.3 acres of land from the Greystone parcel to the Carpy parcel. Under the approved Lot Line Adjustment, the size of the Greystone parcel would increase from 13.41 acres to 14.7 acres of land. The size of the Carpy property would decrease from 5.49 acres to 4.19 acres.
- F. The City Council approves the project entitlements, as identified herein, subject to compliance with the following conditions. This project shall be in conformance with all City ordinances, rules, regulations and policies in effect at the time of issuance of the approval. The conditions noted below are particularly pertinent to this action and shall not be construed to permit violation of other laws and policies not so listed.
1. This approval shall be vested within one (1) year from the date of action. A grading permit for the use allowed under this Use Permit shall have been obtained within one (1) year from the effective date of the Use Permit Amendment or the Use Permit Amendment shall expire; provided however that the Use Permit may be extended for up to two (2) one-year periods pursuant to the St. Helena Municipal Code, Section 17.08.130, Extension of Permits and Approvals.
  2. This approval ("permit") is valid for this use only. New permits must be applied for upon any change in use. These permits will expire if the use is discontinued pursuant to then existing ordinances and regulations.
  3. Any request for an extension of the terms of this approval must be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.

4. All required fees, including planning fees, development impact fees, engineering or building fees, shall be paid prior to issuance of a building permit. Fees shall be those in effect at the time of the issuance of the building permit.
5. Compliance with all permit conditions shall occur in accordance with specific regulations, but in all cases no later than prior to occupancy or initiation of use unless another time is set by law or by this approval. Occupancy or final inspection of a project may be withheld if all conditions, including payment of fees for services rendered by the City, are not met.
6. The applicant will defend and indemnify and hold the City, its agents, officers, and employees harmless against any claim, action or proceedings to attack, set aside, void or annul an approval so long as the City promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.
7. Provided they are in general compliance with this permit, minor modifications may be approved by the Planning Director.
8. This permit shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and the benefit of the City of St. Helena.
9. The primary purpose of this review is for compliance with the General Plan and Zoning Ordinance. The owner/applicant is responsible for meeting with the Building Official/Fire Inspector to review compliance with Building and Fire Codes, including fire protection systems and the accessibility standards of Title 24.
10. Prior to submittal of a building permit application, all plan sheets shall be revised to be consistent with the City's approval and coordinated with the civil and landscaping plans.
11. Construction shall be in compliance with plans reviewed and approved by the City on September 12, 2006, as amended to comply with the applicable conditions provided herein and the associated adopted mitigation measures.
12. Prior to issuance of building permit, the applicant shall be required to obtain approval of the Napa County Department of Environmental Management for the upgraded on-site wastewater treatment facility related to the Carpy house.
13. Plant materials shall be purchased from a source that verifies they have been inspected for glassy winged sharpshooter to ensure that they will not contribute to the spread of Pierce's disease to the surrounding vineyards.
14. Unless otherwise provided in the Arborists Report for the project, each tree or group of trees to be preserved within the vicinity of the construction site shall be protected by enclosure with a six (6) foot chain link fence prior to grading or movement of heavy equipment. The minimum distance of the fence from the tree shall be at the drip line, but may be extended an

additional 10' to include the root zone which shall be determined by the project or City Arborist. Fencing shall remain in place until such time as the Building Inspector is assured the trees are no longer in danger of construction damage.

15. Unless otherwise provided in the Arborists Report for the project, the following activities are prohibited under the drip line of protected trees unless authorized by the Planning Director under the advice of the City Arborist or project arborist:
  - a. Change in the amount of irrigation provided to the protected tree from that which was provided prior to the commencement of construction activity.
  - b. Trench, grade or pave into the drip line of a protected tree.
  - c. Change the grade elevation by more than 6" within the drip line of the tree and for a distance of 30' outward from the drip line of the tree.
  - d. Park or operate any motor vehicle within the drip line area of a protected tree, except within designated parking areas.
  - e. Place or store any equipment or construction materials within the drip line area of the tree.
  - f. Attach any signs, ropes, cables or any other items to the tree.
  - g. Cut or trim any branch of the tree for temporary construction purposes.
  - h. Place or allow flowing into or over the root zone area of any tree any oil, fuel, concrete mix, paint, solvent, plaster or other deleterious substance.
16. The applicant shall be required to submit and receive approval of an encroachment permit from the California Department of Transportation (Caltrans) to allow for off-site disposal of stormwater prior to receiving a grading or building permit authorizing site work or construction activities on the site.
17. The applicant shall provide for the enclosed storage of trash and separated recyclable materials for the Carpy house. Should the area designated for trash storage prove insufficient to accommodate approved uses on the site, the applicant agrees to provide alternative means (e.g. expanded facilities, more frequent collection, etc.) to address this issue.
18. The applicant and/or construction manager shall notify all contractors and subcontractors that no trespassing is allowed on adjoining properties.
19. This property adjoins an agricultural district. There exists a right-to-farm the adjoining property. There is a good faith expectation that no complaints will occur regarding legal, normal agricultural activities on the adjacent land. Such activities may include day or night disbursement of chemicals, and creation of dust, noise, or fumes.
20. The applicant shall be responsible for compliance with all mitigations measures adopted as part of this project and listed in the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program (MMRP) adopted as part of the this permit. The following changes shall be made to the mitigation measures:

- a) Mitigation Measure 1 (b) shall be revised to read: "The height of light standards shall not exceed 14.5 feet in height."
  - b) Mitigation Measure 1 shall be amended by adding the following language: "(c) parking lot light fixtures shall be equipped with cut off lenses. " "(d) parking lot lights shall be turned off when not needed."
  - c) Mitigation 5 shall be deleted.
  - d) Mitigation 5 shall be revised to read as follows: "If historic, archeological, paleontological or Native American materials or artifacts are identified during project construction, including work within a State right-of-way, work on the project shall cease until a resource protection plan conforming to CEQA Section 15064.5 is prepared by a qualified archeologist and/or paleontologist and approved by the St. Helena Planning Director. For discoveries of cultural resources in a State right-of-way, the Caltrans District 4 Cultural Resource Study Office shall be contacted immediately. Project work may be resumed in compliance with such plans. If human remains are encountered, the County Coroner shall be contacted immediately and the provisions of State law carried out. This mitigation measure shall be noted on construction plans and specifications."
21. No signs shall be installed without approval of a Sign Permit, as required by the City's Sign Ordinance.
22. The applicant shall construct a temporary vehicular and pedestrian barrier between the Carpy property and the Conolly property to the south that shall remain in place during the construction period. The barrier shall be removed following granting of a Certificate of Occupancy by the City.
23. The existing on-site septic system for the Carpy house shall be disconnected and connected to the private septic system serving the Markham/CIA/Wine Country Inn prior to commencement of grading work on the parking lot. A sewer line permit shall be obtained from the Napa County Environmental Management Department.

**CITY OF ST. HELENA**

**RESOLUTION NO. 2008-76**

**APPROVING AN INCREASE TO THE REGULATED FOOD AND BEVERAGE  
ESTABLISHMENTS INVENTORY, A USE PERMIT AMENDMENT TO  
INCREASE ENROLLMENT, TO MODIFY CONDITIONS PERTAINING TO  
ADVERTISING, TO CONSTRUCT A NEW TEACHING KITCHEN, TO  
RELOCATE THE TEACHING KITCHEN AND TO ADD A  
CAFÉ/DELICATESSAN FOR THE CULINARY INSTITUTE OF AMERICA AT  
2555 MAIN STREET**

**RECITALS**

1. The Culinary Institute of America at Greystone (the "CIA") submitted an application to make improvements to its existing facilities to allow for an increase in enrollment and to meet the overall operational needs of the main campus and its off-site dormitory.

The project involves two sites; the Greystone Campus at 2555 Main Street and the Vineyard Lodge complex located at 830 Pratt Avenue. The modifications to the Pratt Avenue site are addressed in Resolution No. 2008-75 approved by the City Council on August 26, 2008.

2. The project components at the Greystone campus consist of an increase in student enrollment from 104 students to 200 students, establishment of a new 25-35 seat café/delicatessen, relocated retail store, construction of a new teaching kitchen, relocation of the chocolate room, and an amendment to the existing water use agreement.

3. The existing parking at the Greystone campus provides for 261 spaces. This includes the new parking lot which an additional 85 space parking lot to the existing 176 space primary parking lot in 2006.

4. The Culinary Institute of America was first approved in 1993. The original use permit #93-105 has been amended several times as reflected in permit amendments approved in the years 1996, 1997, 2001, 2003, 2004, 2006 and 2007.

5. The Planning Commission considered the project, including modifications to the 2555 Main Street campus and to the 830 Pratt Avenue campus at noticed public hearings held on July 1, 2008 and July 15, 2008.

6. An Initial Study was prepared and circulated for public comment from June 12, 2008 through July 15, 2008. The Commission recommended adoption of a Resolution Adopting a Mitigated Negative Declaration and Mitigation Monitoring Program for the project.

7. The Planning Commission recommended approval of the Use Permit Amendment to the City Council on July 15, 2008.

8. The City Council of the City of St. Helena, State of California, held a noticed public hearing for this project on August 26, 2008.

## RESOLUTION

NOW, THEREFORE, The City Council for the City of St. Helena resolves as follows:

A. The Planning Commission considered and adopted a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the project as reflected in Resolution No. 2008-74 approved by the City Council on August 26, 2008.

B. The Planning Commission makes the following Use Permit findings, Section 17.168.050, to support the motion to approve the Use Permit Amendment:

1. That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.
2. That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.
3. That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.
4. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.
5. That the proposed use would provide adequate ingress and egress to and from the proposed location.
6. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy.
7. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.
8. That the proposed use would not be in conflict with the City's General Plan.
9. That the proposed use would not be injurious to public health, safety, or welfare.
10. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.
11. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.
12. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use.

C. The Use Permit Amendment for the above described use is granted subject to compliance with the following conditions. Permit shall be in conformance with all City ordinances, rules, regulations and policies in effect at the time of issuance of a building permit. The conditions noted below are particularly pertinent to this permit and shall not be construed to permit violation of other laws and policies not so listed.

1. The Use Permit Amendment shall be vested within one (1) year from the date of approval. A building permit for the use allowed under this Use Permit shall have been obtained within one (1) year from the effective date of the Use Permit or the Use Permit shall expire; provided however that the Use Permit may be extended for up to two (2) one-year periods pursuant to the St. Helena Municipal Code, Section 17.08.130, Extension of Permits and Approvals.
2. This permit is valid for this use only. New permits must be applied for upon any change in use. These permits will expire if the use is discontinued pursuant to then existing ordinances and regulations.
3. The Use Permit Amendment shall not become effective until fourteen (14) calendar days after approval, providing that the action is not appealed by the City Council or any other interested party within that 14 day period.
4. Any request for an extension of the Use Permit Amendment must be justified in writing and received by the Planning Department at least thirty (30) days prior to expiration.
5. All required fees, including planning fees, development fees, housing fees, building fees toilet retrofit fees, and St. Helena Unified School District fees shall be paid prior to issuance of building permit. Fees shall be those in effect at the time of the issuance of the building permit.
6. Compliance with all permit conditions shall occur in accordance with specific regulations but in all cases no later than prior to occupancy or initiation of use unless another time is set by law or by this approval. Occupancy or final inspection of a project may be withheld if all conditions, including payment of fees for services rendered by the City, are not met.
7. The applicant will defend and indemnify and hold the City, its agents, officers, and employees harmless of any claim, action or proceedings to attack, set aside, void or annul an approval so long as the City promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.
8. The Planning Director may approve minor modification provided they are in general compliance with the project as approved by the City Council.

9. This permit shall run with the land and shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.
10. The primary purpose of this review is for compliance with the General Plan and Zoning Ordinance. The owner/applicant is responsible for meeting with the Building Official / Fire Inspector to review compliance with Building and Fire Codes, including fire protection systems and the accessibility standards of Title 24.
11. All uses shall be in compliance with the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Plan as adopted with Resolution No. 2008-74 approved by the City Council on August 26, 2008.
12. Condition 10A of Use Permit #93-105 is amended to allow an expansion of the student enrollment at the Greystone campus from 104 students to 200 students.
13. Construction shall be in compliance with plans marked Greystone Campus Exhibit B reviewed and approved by the Planning Commission on July 15, 2008. Use Permit #93-105 is amended to modify the floor plan and uses of the Greystone building as follows:
  - To relocate the existing retail store consistent with Greystone Campus Exhibit B. The proposed new location will occupy a portion of the current CIA museum and will remain at 3,100 sq. ft. The expansion is an effort to provide students with an educational retail environment not currently available on site.
  - To construct a new teaching kitchen consistent with Greystone Campus Exhibit B. The teaching kitchen will be located in the space occupied by the existing retail store. The kitchen will be 2,871 sq. ft. which will provide larger and more efficient educational facility for students.
  - To relocate the existing third floor chocolate room to the first floor consistent with Greystone Campus Exhibit B. The chocolate room will provide a larger and more efficient educational facility for students for making chocolates.
14. Use Permit #93-105, as amended in 1996 is amended as follows to remove restrictions pertaining to advertising of the retail store to allow advertising in national and/or visitor oriented publications and the applicant's web site. The revised condition shall state:

*A 3,100 s.f. campus store may be operated as an accessory use to the school within the main winery building. The store shall be limited to the hours of operation of 10:00 a.m. - 7:00 p.m. Items sold at the retail store shall be directly related to the food and beverage industry or to the incidental needs of the student residents, such as toiletries and stationery. Only food items prepared by students or specialty products such as olive oils, vinegars and spices shall be permitted to be sold at the campus store. No deli food items may be sold. Bottled wine sales may be permitted. No other retail spaces shall*

*be created. The store may be advertised in educational, food service, trade and Napa county newspapers of record. ~~No advertising will be placed in national consumer publications or visitor oriented publications.~~ Site signage will be placed to direct visitors to the store, a maximum of 2 in main lot, one by restaurant and one by the main entry. No signage for the campus store shall be visible from Hwy. 29. No wine tasting facility is authorized by this permit approval. The campus store shall not be subleased to another entity but may be managed by another entity. No retail or other space shall be sublet to operators other than the CIA.*

15. A new 25-35 seat café/delicatessen may be constructed on the first floor consistent with Greystone Campus Exhibit B. The primary purpose of the café is to satisfy an educational requirement of students in its Baking and Pastry Program. The Regulated Eating and Drinking Establishments Inventory shall be amended to reflect 31 restaurants.
16. Where the property adjoins agricultural districts, there exists a right-to-farm the adjoining property. There is a good faith expectation that no complaints will occur regarding legal, normal agricultural activities on the adjacent land. Such activities may include day or night disbursement of chemicals, and creation of dust, noise, or fumes.
17. To reduce disturbance of residents in the project vicinity, construction activities which generate noise that can be heard at the property line of any parcel of real property within the City limits shall be limited to 8:00 a.m. to 5:00 p.m. Monday through Saturday. Delivery of materials/equipment and cleaning and servicing of machines/equipment shall be limited to 7:00 a.m. to 6:00 p.m. Exceptions to these time restrictions may be granted by the Public Works Director for one of the following reasons: (1) inclement weather affecting work, (2) emergency work, or (3) other work, if work and equipment will not create noise that may be unreasonably offensive to neighbors as to constitute a nuisance. The City Engineer must be notified and give approval in advance of such work. No construction activities shall occur on Sundays or federal or local holidays that generate noise that can be heard at the property line of any parcel of real property within the City limits.

**GREYSTONE MASTER PLAN PROJECT DESCRIPTION**

City of St. Helena

The Culinary Institute of America (the "CIA") currently has an enrollment of 200 students at its historic property located at 2555 Main Street ("Greystone"). The CIA recently purchased the American Center for Wine Food & the Arts ("Copia") in the City of Napa. The acquisition of Copia allows the CIA to reduce the number of employees, culinary enthusiast education, and large scale events at Greystone by relocating employees, programs, and event activities to Copia. The CIA proposes a major reprogramming of the activities at Greystone ("Master Plan") under which it will renovate portions of the Greystone interior to provide additional and more efficient educational facilities while substantially reducing traffic, water, effluent and energy consumption at this historic facility. Under the Master Plan the CIA proposes expanding its current student enrollment of 200 students by 100 students to a total student capacity of 300 (a reduction of 20 students from that originally proposed in the CIA's neighborhood meeting in April). In conjunction with the Master Plan the CIA is requesting approval of additional student housing at the Vineyard Lodge property on Pratt Avenue.

To implement the Master Plan the CIA proposes certain modifications to the Greystone Campus, the vast majority of which are interior renovations not visible from the exterior. In a separate application the CIA proposes an expansion of housing at the Vineyard Lodge site that is intrinsically intertwined with the CIA's Master Plan by allowing it to build additional housing that will not only accommodate the expanded student enrollment, but also allow it to provide additional housing for students who are currently housed in the St. Helena community and elsewhere. The modifications to the Vineyard Lodge property are set forth in the Project Description for that property, but are requested as complementary improvements to the Master Plan.

1. Master Plan at Greystone Site:

The CIA proposes the following Use Permit amendments for the Greystone site:

- o Increase enrollment to 300 students.
- o Approval for excavation of a storage cave under the Wine Spectator Greystone Restaurant ("WSGR") and the addition of modular units secluded behind the Greystone building. A geotechnical report regarding the cave storage excavation from Condor Earth Technologies, Inc. is attached and concludes that these soils are appropriate for development of the cave. In addition, the CIA separately has requested approval of a very modest improvement for additional storage adjacent and behind the Williams Flavor Discovery Center ("FDC") in the original Greystone Gate House.
- o The Master Plan will then be implemented by an interior renovation project that accomplishes the following:

- areas along with a Student Learning Commons. At the north end of the first floor the CIA will excavate caves (under the current second floor terrace) that will provide storage areas.
- On the Second Floor, the WSGR will be closed and converted to a Student Dining Commons along with the development of a new Special Events Kitchen on the Second Floor.
- On the Third Floor and new Baking and Pastry Kitchen will be developed at the south end. The existing Teaching Kitchens on the north end will be demolished and rebuilt to provide two new Skill Development kitchens in the former bake shop area along with a Teaching Kitchen, a Garde Manager Kitchen, a Multi-use Kitchen, an Ala Carte Kitchen, storage and a Specialty Kitchen essential to provide the educational facilities necessary for professional culinary education in the 21st Century.
- Finally, a small number of additional storage facilities will be added on the outside of the Third Floor on the back of the historic Greystone facility, visible solely to those students, staff, and those visitors who traverse the driveway at the rear end of the property, and not at all visible from Main Street or elsewhere, and a minor storage addition has been proposed to the rear of the FDC that will also not be visible from off-site.

These modifications will result in a substantial reduction of impacts at Greystone, notwithstanding the expanded student capacity. The reduced impacts arise from the following changes to the programming at the site:

- The WSGR is currently operated as a 190 seat restaurant open 362 days per year with lunch and dinner service. The CIA has operated a teaching kitchen in the FDC for a number of years that allows students in the Farm to Table component of their educational program to have experience from growing and harvesting the food, to preparing and serving the food in an educational setting with 58 seats. In conjunction with the use permit amendments contemplated under this Master Plan, the WSGR will be eliminated and the CIA's restaurant on this property will be moved to the FDC with the capacity remaining at 58 seats, resulting in the elimination of 190 seats at this campus. The new restaurant will be student-run, and will serve meals only five days a week for 36 weeks (180 days) per year rather than the WSGR which operated 362 days per year and served lunches and dinners.
- The elimination of a 190 seat restaurant, along with the relocation of employees, programs, events to Copia, substantially reduces traffic (see enclosed report from Crane Transportation Group ("CTG") at the site. The CTG report calculates that, under the Master Plan, the traffic from Greystone would reduce traffic on State Route 29-128 by at least 15 two-

way trips during AM peak traffic periods, along with a reduction of 21 two-way trips during the peak PM traffic periods to and from the Greystone campus results in a significant and substantial overall reduction of traffic along this route during peak traffic hours. Most importantly, notwithstanding the implementation of the Master Plan, the traffic resulting from the project does not cause the intersection at Main Street – Pratt Avenue to exceed signal light warrants for that intersection, notwithstanding the development of the Las Alcobas Hotel development.

- In addition to the reduction in two-way trips at peak hours resulting from the Master Plan at Greystone, the Master Plan will also result in a substantial reduction in effluent disposal for activities at Greystone as set forth in the Wastewater Feasibility Analysis from Summit Engineering which concludes that the wastewater flows from Greystone will decrease below the design capacity and historical CIA allocation at the Markham Combined Wastewater System ("MCWS").
- In its Water Availability Analysis ("WAA") Summit also concludes that the use of City water under the CIA Greystone site Water Agreement with the City of St. Helena will be substantially reduced. Under the current Water Agreement the Greystone Property is allowed to utilize an Annual Limit equal to an average of 15,900 gpd. The dishwashing and other kitchen facilities are out-dated, and fail to meet current water use efficiency requirements. The renovation plan discussed above will result in the elimination of the existing three separate dish wash rooms, and replacement with a single dish room. The new dishwashing equipment alone will result in a savings of approximately 1,200,000 gallons per year. The elimination of the WSGR, the reduction of employees, and the relocation of programs and events to Copia will also contribute to a reduction in the quantity of water use at Greystone to only a proposed demand of 9,867 gpd. Under previous Use Permit Amendments, the CIA has transferred allowable usage from its Vineyard Lodge site to Greystone, and then later on the expansion of housing at Vineyard Lodge, has transferred allowable water usage back to the Vineyard Lodge. In addition to the 15,900 gpd allowed at the Greystone site, the CIA's Annual Limit at Vineyard Lodge is based on an allowable 4,750 gpd for a total combined Annual Limit based on an average of 20,650 gpd. Because these two facilities are inter-related, the CIA proposes in this application that the two separate Water Agreements for these two properties be combined into one single Water Agreement with a total Annual Limit based on 20,650 gpd. This combined Water Agreement would be "water neutral" because the total capacity would not exceed the current allowable use, but would simplify management and operational issues by allowing the CIA to apportion water use as needed between these two facilities that are jointly necessary for the delivery of its educational programs without the need to reallocate water use under separate Water Agreements.

- o Finally, this project is "water neutral" because the CIA has the ability to provide additional on-site water from previously approved wells on its parcels on Main Street. The CIA currently uses its on-site water well solely for landscaping needs, but the CIA received approval to utilize well water for domestic water in Resolution 2008-77. In conjunction with the Master Plan the CIA initially will continue to utilize its wells for landscaping purposes. In the event that water use increases beyond the levels calculated by Summit, the CIA has the ability to supplement domestic water use through the connection of its current wells to the domestic water system at Greystone once it receives proper permitting from the County of Napa Environmental Services Department.

## 2. Modification of Condition 10.D.

Section 10.D of the original Greystone Use Permit, Resolution 93-105, initially imposed strict restrictions on advertising the Retail Store within Greystone. In Resolution 2008-76 those advertising restrictions were eliminated, but Condition 10.D continued to provide specific requirements regarding signage, including the location of one sign "by the restaurant" (referencing the WSGR). Under this application the WSGR will be removed, and the FDC will become a new restaurant in a different location. The Condition further imposed restrictive provisions regarding the CIA's ability to structure operation of the store. The CIA believes that specific signage and operational restrictions are unnecessary when the CIA has proven over a number of years that it operates the property to the highest standards. As a result, the CIA proposes that Condition 10.D be revised to read as follows:

*A 3,100 s.f. campus store may be operated as an accessory use to the school within the main winery building. The store shall be limited to the hours of operation of 10:00 a.m. – 7:00 p.m. Items sold at the retail store shall be directly related to the food and beverage industry or to the incidental needs of the student residents, such as toiletries and stationery. Only food items prepared by students or specialty products such as olive oils, vinegars and spices shall be permitted to be sold at the campus store. No deli food items may be sold. Bottled wine sales may be permitted. No other retail spaces shall be created. The store may be advertised in educational, food service, trade and Napa county newspapers of record. Site signage shall comply with the St. Helena sign ordinance. No wine tasting facility is authorized by this permit.*

## Summary.

The CIA has continuously striven to develop a world class educational institution in the City of St. Helena, while providing a setting for local residents and non-profits to utilize the historic Greystone building for celebrations and fundraising activities. The purchase of the Copia property allows the CIA to relocate staff and programs that will reduce the intensity of operations at Greystone, and allow improvements at this site that will markedly enhance the educational experience while at the same time preserving facilities for important community activities. The CIA's students are a critical part of the employment workforce in the hospitality industry in St. Helena and the surrounding

area. The expansion of the educational program will provide additional restaurant workers during a period when identifying and hiring trained and qualified staff is increasingly difficult. With the expansion of its student enrollment, the CIA feels it has a responsibility to add even more housing than the additional number of students that will be enrolled so that its housing will improve the housing stock, not just maintain the status quo. The CIA's request for additional housing is included in its Use Permit Amendment request for the Vineyard Lodge, which is inter-related with this Master Plan approval.

**PROJECT DESCRIPTION:** The Culinary Institute of America (CIA) at Greystone is proposing a campus master plan to restructure and expand the educational facilities at the Greystone Campus (2555 Main Street) and expand student enrollment from 200 to 300 students. Also proposed is a 4,468 sf underground storage cave and the installation of three modular storage units at the rear of the building. Concurrently, student housing facilities (dormitories) at the Vineyard Lodge Housing Site (830 Pratt Avenue) will be expanded by 123 net new dorm rooms to accommodate a total of 224 residents. The applicant is requesting the following entitlements: Design Review, Use Permit(s), Demolition Permit, and Variance(s).

## PROJECT DESCRIPTION

The Culinary Institute of America (CIA) Campus Master Plan is a proposal to restructure educational facilities at the CIA at Greystone while expanding enrollment from 200 to 300 students. Also proposed is a 4,468 sf underground storage cave and the installation of three modular storage units at the rear of the building. Concurrently, student housing facilities (dormitories) at the Vineyard Lodge Site (830 Pratt Avenue) will be expanded by 123 net new dorm rooms to accommodate a total of 224 residents. The project location consists of two discontinuous sites; the Greystone Campus at 2555 Main Street (APN. 009-131-003) and the Vineyard Lodge Housing site at 830 Pratt Avenue (APN 009-010-024). The two project sites are located approximately one-half mile from each other in northern St. Helena, approximately one mile north of Downtown St. Helena. **Table 1**, included at the end of the project description identifies the existing, proposed, and net changes resulting from the implementation of the proposed project.

The CIA acquired the Greystone property in 1993 to serve as a west coast branch of the Hyde Park CIA campus in New York. The CIA originally envisioned the campus at Greystone to operate as a continuing education facility, but it has since evolved to serve solely as an occupational educational facility offering an Associate in Occupational Studies (AOS) degree program. In 2004 the CIA acquired the Vineyard Lodge Housing site at 830 Pratt Avenue to support the trend towards occupational education and provide affordable housing for students. Consistent with the requirements of the City's Municipal Code, the subject sites currently have active use permits (93-105 for the Greystone Campus; 2004-33 for the Vineyard Lodge Housing site).

## EXISTING CONDITIONS

### Greystone:

The Greystone Campus exhibits a General Plan land use of Public Quasi Public and Zoning Designation of Winery, Planned Development; Historic Overlay (W:PD:H). While the Winery Zoning Designation is typically confined to winery related uses; the designation is modified by the PD Overlay thereby allowing uses which serve public objectives more fully than development permitted under conventional zoning regulations and authorized by a use permit. The site is comprised of an irregularly formed parcel of approximately 14.7 acres and which is characterized by improved land substantially surrounded by oak woodland. The site features four buildings that include (1) the Rudd Center, a continuing education facility for the "Semester Away Wine program," (2) The Flavor Discovery Center, a student run demonstration kitchen (3) Guest House, which provides housing for 47 students, and (4) the Greystone Cellars building which houses the balance of educational facilities and is the subject of the proposed project. The historic Greystone Cellars building was built in the Richardsonian Romanesque style and constructed in 1888 to serve as a cooperative winery. In 1978 the National Trust for Historic Preservation (NTHP) listed the property on the National Register of Historic Places (NRHP). The western half (rear portion) of the site is devoted to oak woodlands, sloping up from the project area and subject to an open space easement. Southwest of the site is the former Carpy property (APN 009-131-028) which is also owned by the CIA; the house on Carpy property is used for storage by the CIA. In general, the Greystone site is substantially surrounded by woodland immediately on the north, south, and west, and by vineyards to the east, beyond SR 29.

Vehicular access is provided via a single driveway connection with a 150-foot-long left turn lane in place on the northbound SR 29 intersection approach. Truck deliveries access the site via the main entrance. The trucks circulate through to the driveway at the Greystone Building entrance level, to the loading area at the north end of the building. The total supply of on-site parking is 265 spaces concentrated in two major parking lots adjacent to and in front of the Greystone building; there is on-site parking for employees and the general public, as well valet parking for a total of 60 vehicles, a loading and unloading area, and spaces for service vehicles. Handicapped-accessible spaces are distributed throughout the site to serve the individual buildings. Daily shuttle service is provided every 15 minutes between the Greystone Campus and Vineyard Lodge Housing site on weekdays between the hours of 6:45 a.m. and 9:00 p.m. by two shuttles with 14 and 22 seats, respectively.

The Greystone Campus operates as a culinary school with ancillary commercial uses that include a retail space, special events spaces, and the Wine Spectator at Greystone Restaurant. The Greystone campus currently supports 61 faculty and administrators and 200 students. The Restaurant, Café, Store and Food Enthusiast programs include 73 employees. The Wine Spectator at Greystone Restaurant is open 362 days per year with lunch and dinner service, and has seating for 190 people. The Campus holds

approximately 12 conferences per year, two 200 person special events per month, plus a varying number of small events throughout the year.

#### Vineyard Lodge:

The Vineyard Lodge Housing site is located approximately one-half mile southeast of the Greystone Campus property and is currently developed with dormitories and appurtenant parking. The project site is substantially surrounded by residential and agricultural land uses. The site is bounded by Vineyard Road to the northeast, Napa Valley Railroad right-of-way (ROW) to the west, and Pratt Avenue to the south; the site is surrounded by vineyards and wastewater treatment ponds to the north. Single family residential uses, permitted under the "Agricultural" zoning designation exist along Pratt Avenue, east and west of the site, but do not directly abut the project site. Medium-density residential uses are located to the southwest, across Pratt Avenue. At present, the site features two dormitory buildings, Vineyard Lodge I and Vineyard Lodge II, housing 41 and 60 residents, respectively. The northernmost one-third of the project site remains unimproved and features decomposed granite. Vineyard Lodge I (c.1960), formerly the Marlinda Convalescent Home, is a one-story 15,050 square foot building situated in the southernmost corner of the site. Vineyard Lodge II (c.2008) is a two-story 12,612 square foot building situated in the northern corner of the site. Vineyard Lodge I and II are separated by a small courtyard and paved parking lot with 85 spaces. The site features landscaping that includes a variety of trees and shrubs.

The Vineyard Lodge Housing site currently provides housing for 101 residents, including one on-site manager (41 residents in Vineyard Lodge I and 60 residents in Vineyard Lodge II) for 44 weeks per year (assumes eight weeks of vacation). The student housing is managed by the CIA, and is occupied exclusively by CIA students from the Greystone Campus and one resident manager. Rules and regulations for the residents are outlined in the orientation packet that is distributed at student orientation, and prohibit amplified music and impose a 9:30pm curfew for noise generated by students, amongst others. Resident Assistants in each dorm monitor student compliance with rules and regulations. Resident students are not allowed to park at the Greystone Campus; they must utilize the existing CIA shuttle service, bike or walk to and from the Vineyard Lodge Housing site and the Greystone Campus. At present, the CIA provides two shuttles of 14 and 22 seats that transport students between the Greystone Campus and Vineyard Lodge Housing site. The shuttles run at 15-minute intervals, five days a week, between the hours of 6:45am and 9:00pm.

The Vineyard Lodge housing site currently provides 85 parking spaces, all of which require a permit. With 101 residents, only 31 parking permits have been issued for on-site parking. In addition, the CIA operates an on demand car rental operation on-site where students can rent cars on an as needed basis. At present, vehicular access at the Vineyard Lodge Housing site is provided via two driveways off Pratt Avenue. A sidewalk is provided along the west side of Pratt Avenue at property frontage.

#### PROPOSED PROJECT

##### Greystone

The Master Plan involves an expansion in student enrollment from 200 to 300 students for a net increase of 100 new students, plus seven new instructional staff. Concurrently, 49 employees would relocate to the recently acquired American Center for Wine, Food & the Arts (Copia) in the City of Napa, California. The net change in student and faculty at the Greystone Campus would constitute a net increase of 58 students and staff. The project would restructure the interior uses at the Greystone Campus to better accommodate the focus on occupational education. The interior changes include improvements to the student dining commons, the introduction of new teaching kitchens, and a new special events kitchen. Also proposed is the closure of the 190 seat Wine Spectator at Greystone Restaurant (WSGR) and relocation of the CIA restaurant to the 58 seat Flavor Discovery Center, resulting in a net reduction in restaurant capacity of 132 seats. The restaurant at the Flavor Discovery Center will be student-run, and will serve meals five days a week for 36 weeks (180 days) per year as opposed to the WSGR which operated 362 days per year and served both lunch and dinner.

To accommodate wastewater flows generated by the educational facility, Greystone intends to continue utilizing the onsite primary treatment, including one 3,000 gallon grease interceptor, two 7,500 gallon settling tanks and one 6,000 gallon settling tank, and a pump sump and pump to convey the SS flows to the Markham Combined Wastewater System (MCWS) located at Markham Winery on Highway 29, north of St. Helena. Improvements to the existing dishwashing and other kitchen facilities, including replacement with more water and energy efficient equipment, in addition to the closure of the WSGR, would reduce the overall water and

wastewater demand for the site. Taken together, the proposed improvements will lead to a net decrease in flows conveyed and treated at the MCWS and would remain within the authorized discharge amount of 14,850 gpd.

The proposal further includes the construction of a 4,468-square-foot (sf) storage cave at the north end of the Greystone Cellars building, beneath the former WSGR. In addition, a series of three modular storage units ranging in size from approximately 592 sf to 944 sf would be installed at the rear of the third floor of the Greystone Cellars building. Given that the majority of works is confined to the interior of the building, exterior changes would be very limited. Any work that may affect the exterior of the historic Greystone Cellars building (i.e. modular units) would be installed in accordance with the Secretary of the Interior's Standards for the Treatment of Historic Properties so as to avoid impacting the building's historic integrity.

The introduction of the storage cave would include constructing entry tunnels extending from two portals at the Greystone loading dock retaining wall. The loading dock retaining wall is a reinforced concrete wall over an older masonry retaining wall at the northwest end of the building. A reinforced concrete frame would be doweled to the loading dock wall face around the sides and top of the perimeters of the portals to improve the structural capacity of the wall (which will be compromised by making the portal openings). The frame would then be constructed before saw cutting and demolition.

The underground storage portals/entry would be created by saw-cutting the perimeter of the portal openings on the loading dock retaining wall, demolishing and removing the concrete within the saw cuts, exposing ground retained by the loading dock wall, and then mining the entry tunnels behind the openings. The portal openings would be 10 feet high and 10 feet wide. Cave construction would consist of excavating the tunnels using mechanical means (backhoe, milling head, and/or roadheader), and sequentially supporting the excavations with reinforced shotcrete. The tunnel floors would be cast-in-place reinforced concrete placed after completing the tunnel liner. Where underground utilities may conflict with the proposed tunnel excavations, they would be removed, and excavations made for removal would be backfilled before tunnel construction.

#### Vineyard Lodge

Project activities include the demolition of the 15,050 sf Vineyard Lodge I and the erection of three new residential building units:

Building A: 17,885 SF (70 beds)  
 Building B: 11,380 SF (52 beds)  
 Building C: 11, 380 (42 beds)

The new construction will be 40,645 sf, which equates to a net increase of 25,595 sf with the removal of Vineyard Lodge I. No changes will be made to Vineyard Lodge II (12,612 SF). Following completion of demolition and grading activities, infrastructure improvements and building foundations would be constructed and utilities, storm drains, and catch basins would be installed. All public utilities currently extend to the project site and as such, improvements would be limited to the installation of new laterals and tie-ins to connect the new buildings to the existing water, sewer, power, and gas services in place within Pratt Avenue. Wastewater will be generated by dormitory restrooms, showers, and common areas. The project will utilize the existing sanitary sewer (SS). Effluent would undergo primary treatment in septic tanks and then be conveyed to the municipal sewer system through the existing 3" SS. The SS management system will be resized to accommodate a peak daily wastewater flow of approximately 9,520 gallons per day (gpd) which equates to a projected net increase of 1,960 gpd over existing capacity.

The proposed Vineyard Lodges would range in height from 29'-0" to 40'-2" and exhibit a contemporary architectural style with Craftsman detailing. The three new buildings would be clustered on the most southerly one-third of the property and would contain 164 new beds primarily in single rooms, with some double units. Combined with the 60 beds in the existing Vineyard Lodge II, there will be a maximum occupancy of 224 residents on-site, which equates to a net increase of 123 students. Based on the current parking needs, the CIA proposes the retention of 72 spaces for the 224 occupants. Parking permits will continue to limit the total of number of student vehicles at Vineyard Lodge to approximately 31% of the residents or 69 spaces with 3 additional spaces allocated to three (3) on-demand rental cars. With relocation of vehicular access from Pratt to the Vineyard Road, exiting only is proposed from the southwest corner of the property onto Pratt Avenue. The majority of existing trees along the property frontage would also be retained.

Following project implementation, the CIA would continue to provide shuttles to transport students between the Greystone Campus and Vineyard Lodge Housing site and would add into the rotation a 32 seat shuttle to accommodate the increase in students. In all, the three shuttles would contain 32, 22, and 14 seats, respectively. The shuttles would continue to run at 15-minute intervals, five

days a week, between the hours of 6:45am and 9:00pm, resulting in no net increase in the number of shuttle *trips* between the two sites.

#### PROJECT PHASING

Construction activities at the respective project sites are expected to commence following issuance of entitlements and will be phased in a manner that limits disturbance to class schedules and curriculum and in accordance with the phasing plan, below:

|            |                     |                                                                           |
|------------|---------------------|---------------------------------------------------------------------------|
| Phase 1:   | Jan 2017 - Aug 2017 | Pratt Avenue Housing Building A,                                          |
| Phase 2:   | Mar 2017 - Sep 2017 | Greystone Cave, Modular Storage Units, and Administrative Reconfiguration |
| Phase 2.5: | Jun 2017 - Jan 2018 | Pratt Avenue Housing Building B and C                                     |
| Phase 3:   | Sep 2017 - Sep 2018 | Greystone Interior Remodel                                                |

#### WATER

The CIA Campus currently operates under two separate water agreements. The current water allotments authorized by the Agreements allocate an average of 15,900 gpd to Greystone and 4,750 gpd to the Vineyard Lodge Housing site. The total allotment across the two sites amounts to an average of 20,650 gpd or 23.1 acre feet (AF) per year. Under the CIA Campus Master Plan the applicant proposes to rescind the two separate agreements and adopt a new joint water agreement which would redistribute the gross water allotment across the two sites to accommodate the increase in housing at the Vineyard Lodge site while maintaining the existing water allotment of 23.1 AF per year.

##### Greystone

Under Resolution 2008-77, the City Council approved an amendment of the Water Agreement recorded as Document 2000-0021548 in the Official Records of Napa County authorizing that the Greystone Campus be allocated an average water use of 15,900 gallons per day (GPD). At present, interior fixtures, including the dishwashers and other kitchen facilities, do not meet current water efficiency requirements. The proposed renovation would eliminate the existing three separate dish washrooms, and replace them with a single dish room which would equate to a water savings of approximately 1,200,000 gallons per year. In addition, the Greystone Campus currently uses its on-site water well solely for landscaping needs while improvements are underway to upgrade the system for domestic water use as intended when the well was developed. As a part of the proposed project, the Greystone Campus would switch its landscaping irrigation needs to an existing well located on the adjacent Carpy property, and use its on-site well to supply domestic water, which would substantially replace the amount of water provided by the City. By using well water for landscape irrigation, relocating staff and programs to Copia, and reducing restaurant size and period of operation, the CIA expects to reduce water consumption to demand only 9,867 gpd.

##### Vineyard Lodge

Under Resolution 2008-77, the City Council approved an amendment of the Water Agreement, recorded as Document 2005-0033275 to authorize that the Vineyard Lodge Housing site be allocated 4,750 gpd to serve the current population of 101 residents. With the construction of three new dormitory buildings (123 net units) the water demand will increase to 10,783. Given that the Greystone Campus is expected to reduce water consumption by 2,080 gpd and to account for the increase in water usage at the Vineyard Lodge Housing site, the CIA is proposing to rescind the current Water Use Agreements and execute a joint Water Use Agreement such that the gross allocation of water will be re-allocated between the two sites as needed, but without any net increase in consumption. For a more detailed description of water usage see Hydrology Discussion.

## ENVIRONMENTAL SETTING

The City of St. Helena is located in the northern end of the Napa Valley, approximately 18 miles northwest of the City of Napa and 65 miles north of San Francisco. Napa valley is a long narrow northwest trending alluvial plane flanked by the mountain ridges of the Mayacama and Vaca Mountain range to the east and west, respectively. The Napa River extends along the eastern portion of St. Helena and is fed by several tributaries within St. Helena, including Sulphur Springs Creek and York Creek which serve as year round tributaries to the river.

The City's incorporated boundaries comprise 3,285 acres or 5.1 square miles. The City of St. Helena is divided into two distinct areas: a developed "urban service area" and a more, rural, agricultural area located around the periphery such that the City exhibits a rather traditional landscape whereby commercial land uses are concentrated in the city center and along SR 29, with residential development radiating outwards to the northeast and southwest. The outer edge of the urban service area is demarcated by the urban limit line (ULL) which is a parcel specific boundary that marks the limit of allowed urban development. The intent of the ULL is to discourage urban sprawl and promote sensitive development which preserves the rural and agricultural lands around the City.

The project involves two discontiguous sites: the Greystone Campus at 2555 Main (APN. 009-131-003) and the Vineyard Lodge Housing Site at 830 Pratt (APN 009-010-024). The two sites are located approximately one half mile from each other and connected via Main Street (SR 29) and Pratt Avenue. The Greystone site is located within in the boundaries of the ULL, whereas the Vineyard Lodge Housing Site, is located just outside of, but abutting, the ULL. The Greystone Campus at 2555 Main is located on the west side of Main Street (SR 29) in northern St. Helena. The 14.7-acre site is situated at the western edge of the valley surrounded to the north, south and west by oak woodlands and to the east, across Main Street/SR 29, by vineyards. Parcels to the south of the site support residential and agriculture (viticultural) uses. The site historically served agricultural uses as a cooperative winery. At present the site supports institutional and ancillary commercial uses associated with the Culinary Institute of America. The site is improved with four buildings and appurtenant parking.

The Vineyard Lodge Housing site at 830 Pratt Avenue is located in the middle of the valley floor and on the north side of Pratt Avenue; approximately one-quarter mile from Main Street(SR 29). The site features a 2.61-acre triangular shaped lot located on the north side of Pratt Avenue, adjacent to the Napa Valley Wine Train railroad right-of-way (ROW), and west of Vineyard Rd; beyond which the site is bounded by vineyard on all sides. There are residences located along both sides of Pratt Avenue to the east and west, but none directly adjacent to the site. Historically, the site served agricultural purposes, but was developed with a convalescent home in the 1960s. Since 2004, it has served as student housing for CIA students. At present, the site is relatively flat with urban/ruderal habitat. It is partially developed with a one story residential building at the southwest corner of the property and a two-story residential building (C.2008) in the middle one third; the northernmost corner remains unimproved.

## GENERAL PLAN AND ZONING

The City of St. Helena General Plan provides the vision for the community's natural and built environment through a series of goals and policies. To ensure that this desired vision is realized, the General Plan has been designed to be internally consistent and cross-referenced with other documents, including the City's Zoning Ordinance which guides, controls and regulates future growth and development in a sound and orderly manner. The Greystone Campus exhibits a General Plan Land Use Designation of Public Quasi Public, whereas the Vineyard Lodge Housing site exhibits a land use designation of Agriculture, providing for agricultural uses, wineries, single-family residences, and public and quasi-public uses.

The City of St. Helena Zoning Ordinance implements the goals and policies of the General Plan. Several different districts are identified in the Zoning Ordinance that are intended to, among other things, provide for a wide range of uses and enhance the community's vision to preserve, protect and enhance its unique character and quality of life. The Greystone Campus site is zoned as W; Winery with HP: Historic Preservation and PD: Planned Development overlays. The Vineyard Lodge site is zoned PQP: Public Quasi-Public.

## REQUIRED DISCRETIONARY ACTIONS

### Greystone Campus site (2555 Main Street):

- Use permit to authorize reconfiguration of interior uses and expand student enrollment by 100 students
- Design Review for exterior modifications
- Rescission of water use agreement (Document No. 2000-0021548)
- Adoption of new joint water use agreement

### Vineyard Lodge Housing site (830 Pratt Avenue):

- Use permit to authorize three new dormitory buildings (net increase of 123 new beds)
- Design Review to construct student housing
- Demolition permit to demolish Vineyard Lodge I
- Variance to allow for a lesser setback from Pratt Avenue as required under Municipal Code Section 17.112.050
- Rescission of water use agreement (Document 2005-0033275)
- Adoption of new joint water use agreement

## OTHER PUBLIC AGENCY REVIEW

There are no responsible or trustee agencies which have jurisdiction over a portion of whole of the project.

## DOCUMENTS INCORPORATED BY REFERENCE

CEQA Guidelines Section 15150 recognizes the desirability of reducing the volume of documentation necessary for environmental review and authorizes incorporation by reference any portion of relevant documents that provide general background to the environmental document. As such, this Initial Study incorporates the following documents, which were reviewed as part of the analysis of certain topical sections provided herein:

1. City of St. Helena, 1993 General Plan; and
2. City of St. Helena, Zoning Ordinance, as amended.

Additional documents not reflected in this section are identified and analyzed within the Initial Study. These documents are available for review at the City of St. Helena Planning Department, 1480 Main Street, St. Helena, CA 94574 (707) 967-2792.

## PURPOSE OF INITIAL STUDY

The fundamental premise, on which CEQA is based, is that environmental protection can be achieved through informing decision-makers and the public about a project's potential environmental effects and identifying ways to reduce them. As a public disclosure document, an Initial Study must identify all effects on the environment resulting from a project and indicate the manner in which these effects can be mitigated or avoided to a less-than-significant level. Where it is uncertain that a significant effect on the environment may occur, or where a significant effect is found to exist but cannot be mitigated to a less-than-significant level, an Environmental Impact Report (EIR) must be prepared.

## ENVIRONMENTAL PROCEDURES AND CHECKLIST

This Initial Study presents a preliminary evaluation of the potential environmental impacts resulting from the project. The Initial Study was prepared in accordance with the California Environmental Quality Act (Public Resources Code Section 21000-21178.1) and the Guidelines for Implementation of the California Environmental Quality Act (Chapter 3, Title 14, California Code of Regulations (*CEQA Guidelines*)). This Initial Study considers all aspects of the proposed project, as required by Section 15063(a) (1) of the CEQA Guidelines<sup>1</sup>.

<sup>1</sup> Section 15063(a) (1) of the CEQA Guidelines requires that all phases of project planning, implementation, and operation must be considered in the Initial Study of the project.

The Environmental Checklist provided below, as contained in Appendix G of the CEQA Guidelines, was utilized to focus this Initial Study on the environmental factors that may be impacted or further impacted by implementation of the proposed project. Following each of the topical areas presented in the Environmental Checklist, a brief discussion is presented regarding the topical environment setting, the relevance of the proposed project to the topical environment setting, any and all potential impacts within the topical area and, as appropriate, any mitigation measures necessary to reduce potentially significant impacts to a less-than-significant level.

#### SUMMARY OF ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below identify "Potentially Significant Impacts" affected by this project, as indicated by the checklist on the following pages. However, as demonstrated in this Initial Study in the applicable topical sections, mitigations are proposed for incorporation into the project that will reduce or eliminate these impacts to "Less Than Significant" or "No Impact."

#### DETERMINATION:

Based on information found in this initial evaluation, the City of St. Helena finds that:

- ☐ The proposed project COULD NOT have a significant effect on the environment and a NEGATIVE DECLARATION will be prepared.
- ☒ Although the proposed project could have a significant effect on the environment, there WILL NOT be a significant effect in this case because revisions in the project have been made or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- ☐ The proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- ☐ The proposed project MAY have a significant effect(s) on the environment, but at least one effect: 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards; and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets, if the effect is a "potentially significant impact" or "potentially significant unless mitigated." An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ☐ Although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

| <p><u>Setting</u></p> <p>The City of St. Helena is situated in the relatively narrow valley floor and framed by wooded foothills of the Mayacama and Vaca Mountain ranges located to the east and west, respectively. The valley floor undulates to the north and exhibits a gradual rise in elevation in a northerly direction of approximately 362 Feet above sea level which provides for the occasional interruptions in the vistas as viewed from the City. Foothills are readily visible from most locations in the flatland areas of the City, particularly from east/west oriented streets.</p> <p>Natural features that contribute to the distinct character of St. Helena include Sulphur Creek, York Creek, the Napa River, and oak and bay wooded hillsides located at the north end of St. Helena and at the base of Howell Mountain Road, east of the Napa River. Agricultural land uses, primarily viticulture, account for approximately 48 percent of the city's land use. As such, the vineyards serve as dynamic visual features and are central in defining the visual character of the City. The long established urban form within the City limits contrasts with the surrounding natural and agricultural features and provides for a distinct visual character. Notable visual features include distinctive architecture, tree lined streets, and the interspersed vineyards.</p> <p>The Greystone property is located on the west side of Highway 29 and features the historic Greystone Cellars (c.1888) a masonry building designed in the Richardsonian Romanesque architectural style. The Greystone property is highly visible and situated at the northern gateway to the City. Exterior modifications proposed for the Greystone building are limited to the introduction of a 4,468 square foot storage cave, which will be accessed from the loading dock retaining wall and not readily visible from the primary elevations, and the introduction of three modular storage units at the building rear which would be accessed via the existing roadway. The modular units will range in size from 592 sf to 944 sf and measure approximately 9'8" in height. The units will be located at the rear of the west elevation and supported on new structures that span across the existing exterior breezeway in a similar manner as the support structures used for HVAC units. The units will sit below the existing roof eave and will be utilitarian in nature and feature painted metal siding and doors with a flat roof shielded by a small parapet.</p> <p>The Vineyard Lodge site is a relatively flat, triangular lot located east of State Highway 29 and at the northern border of St. Helena and outside of the urban limits where medium density housing transitions to agricultural land uses to the north and east. It is comprised of 2.61 acres and improved with student housing (dormitories) associated with the CIA Greystone Campus. The site is substantially surrounded on all sides by agricultural land uses. Specifically, the site is bounded by Vineyard Road to the east, Pratt Avenue to the south, and the railroad right of way to the west. Current site improvements include two residential structures (Vineyard Lodge I and II) amenities, and parking. Vineyard Lodge 1 (constructed c.1960), is</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| <p>a single story, 15,050 sf residential complex situated on the southerly one third of the site exhibiting frontage on Pratt Avenue. In the northerly portion of the site is Vineyard Lodge II (const.2008), a two story, 12,612 square foot residential building. The most northerly one third of the site is unimproved and vacant.</p> <p>The proposed project includes removal of Vineyard Lodge I and construction of three (3) new dormitory buildings to be situated in the southerly corner of the site and configured around a central courtyard. The three new residential structures will exhibit a combined gross square footage of 40,645 sf and will house a maximum of 164 students.</p> <p><u>Impact Analysis:</u></p> <p>a, c <b>(Scenic Vistas; Visual Character) Less than significant with Mitigation:</b> A scenic vista is defined as a viewpoint that provides expansive views of a highly valued landscape for the benefit of the general public. The City has not identified any specific vistas, but rather states that the sense of a strong connection to the surrounding agricultural open space and hillsides should be preserved in the future and that views of Vineyards, hillsides, creeks and major landscape features should be maintained.</p> <p>To assess the project’s potential impacts to scenic vistas a Visual Impact Assessment was prepared by consultants, Architectural Resources Group (ARG). To account for the City’s strong agricultural character, the consultant used the Bureau of Land Management (BLM) methodology which attributes numerical ratings to the existing conditions and project build out conditions, as they relate to the presence of seven key landscape components that include landform, vegetation, water, color, adjacent scenery, scarcity, and cultural modifications. Projects that create a high level of contrast to the existing visual character of a project setting are more likely to generate adverse visual impacts due to the inherent visual compatibility. Conversely, projects that create a low level of contrast to the existing visual character are less likely to generate adverse visual impacts due to inherent visual compatibility.</p> <p>On this basis, projects impacts to the seven landscape components were assessed based on eight view sheds: two long distant viewpoints (SV1 and SV2) that assessed potential impacts from Hwy 29 at Pratt Avenue, an eligible (but undesignated) scenic highway, and the CIA at Greystone, a historic resource with a view of the project site and six viewpoints (VP1-VP6) along Pratt Avenue to assess impacts to nearby residential viewers. The visual simulation evaluated visual modifications to the foreground, midground, and background views. Shown below is a visual showing the site’s appearance before and after the new construction.</p> |                                                      |                                                    |                                    |                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|----------------------------------------------------|------------------------------------|------------------|
| <div></div> <p><b>Figure 5 View no. 4 (Pratt Ave. looking northeast) after proposed project.</b></p> <p>The Vineyard Lodge Site will endure more substantial changes to the visual environment relative to the Greystone Campus, but given that the Vineyard Lodge site is already developed with student housing; the proposed project will not deviate significantly from the existing condition. At present, the site features two buildings, Vineyard Lodge I, a horizontally oriented building constructed c.1960 and Vineyard Lodge II, a contemporary two-story building, constructed in 2008. The project will demolish Vineyard Lodge I and construct three new dormitories ranging in size from 11,380sf to 17,885sf, for total new construction of 40,645 sf. The dormitories will exhibit a maximum height of 40'2" and be stepped to reduce the visual prominence.</p> <p>Scenic Quality Rating scores for viewpoints VP2, VP3, VP5, and SV1 and SV2, indicate the proposed project does not measurably alter the viewer's perception of the environment when seen from Highway 29 and Pratt Avenue intersection, as well as from the CIA at Greystone and in some viewpoints along Pratt Avenue. In instances where the post project simulation indicates a greater level of visual change (i.e. VP1, VP4, and VP6) whereby residents and other viewer groups may experience reduced visual quality, those changes are expected to be alleviated by increasing the amount of landscaping within the setback along Pratt Avenue. To ensure adequate screening, the applicant shall comply with <b>Mitigation Measure AES-1</b> that requires the Planning and Community Improvement Director review and approve the final landscape plan so as to establish concurrence that the level of screening provided is consistent with that illustrated in approved plans and continues to be sufficient to reduce and soften the visual impact of new construction. Further, the landscape and building design, including materials and color selections, were devised to limit the visual prominence of the buildings and to be more consistent with the existing residential character and blend into the surrounding land features. Accordingly, with the natural color palette, stepped design, retention of existing trees adjacent to the public right-of-way and the addition of proposed new trees, and with compliance to <b>Mitigation Measure AES-1</b> the visual change is greatly minimized. As such, with mitigation, impacts to the visual environment associated with the Vineyard Lodge Site are expected to be less than significant.</p> <p>The proposed site modifications at the Greystone property are located at the rear and interior portions of existing buildings such that they will not generate any impacts to the visual character of the site. As such, any impacts to potential scenic vistas and the existing visual character are expected to be less than significant.</p> <p>b. <b>(Scenic Resources) No Impact:</b> In 1963 the California legislature established the California Scenic Highway Program with the purpose of preserving the character of scenic highways and protecting them from changes that could diminish the</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| <p>aesthetic value of adjacent lands. According to the California Scenic Highway Mapping System, State Route Highway 29, is considered eligible for listing, but is not officially designated. Further, the 1993 St. Helena General Plan established the goal of obtaining scenic route designation for SR 29. The CIA campus at Greystone exhibits frontage on SR 29; however, given the limited number of exterior modifications and that those modifications are confined to less visible areas of the site, project activities proposed for 2555 Main would not be expected to impact a designated (or eligible) state scenic Highway. As stated above, project activities at 830 Pratt are not expected to depart significantly from the existing visual setting and will further be screened by the introduction of trees and vegetation. As such, the project is not expected to substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings viewable from a designated (or eligible) State scenic highway. No impacts are expected.</p> <p>d. <b>(Light and Glare) No Impact:</b> The project would introduce site lighting to the Vineyard Lodge site. In order to prevent light pollution and/or glare onto adjacent properties and roadways, the project must comply with St. Helena Municipal Code provision 17.68.060(F) which requires that all exterior lighting be directed or shielded so as to prevent glare onto any public roadways and properties of residential character. Further, proposed landscaping will screen the site from the adjacent properties and roadways to further obscure and/or filter light and glare. Finally, exterior parking lot (pole mounted) lights are limited to a maximum height of 15-feet. With adherence to these uniformly applied development standards, including Municipal Code provision 17.68.060(F) and with the introduction of landscaping as delineated on project plans, no lighting impacts are expected.</p> <p><b>Mitigation Measures.</b> None Required.</p> <p>AES-1. The final Landscape Plan and proposed vegetative screening shall be subject to review and approval by the Planning and Community Improvement Director prior to issuance of building permit so as to confirm consistency with approved plans.</p> |                                                      |                                                    |                                    |                  |
| <b>2. AGRICULTURAL &amp; FORESTRY RESOURCES.</b> <i>Would the project:</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                      |                                                    |                                    |                  |
| a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                      |                                                    | ✓                                  |                  |

| <p>Agriculture remains a dominant land use in St. Helena and the greater Napa County. Located within the northern portion of the Napa Valley; the majority of the City's land is located on the valley floor, where soils, weather, and water resources are conducive to viticulture. Viticulture serves as the most prolific agricultural use and requires relatively large parcels in contrast to other land uses in St. Helena. According to the 1993 General Plan, agricultural land comprises 48% of the incorporated area, and of that total, the majority of acres are actively cultivated with vineyards. According to California's Farmland Mapping &amp; Monitoring Program (FMMP), St. Helena supports 966 acres of "Prime Farmland," 284 acres of "Farmland of Statewide Importance," 53 acres of "Unique Farmland," and 23 acres of "Farmland of Local Importance." The City of St. Helena promotes the retention of agricultural activities and discourages encroachment into agricultural lands through the application of land use designations directed to maintain large parcels for agricultural use and limiting residential and commercial development to within the Urban Limit Line (ULL) and to parcels already designated for such uses.</p> <p>Neither of the project sites (Greystone Campus or the Vineyard Lodge Housing Site) directly support any agricultural uses and do not exhibit any farmland designation. However, the Vineyard Lodge Housing site is bounded by prime farmland to the north, east, and west. Forested lands within St Helena are generally confined to hillside lands found to the east and west of its commercial and residential center. The Greystone Site is nearly fifty percent (50%) forested land and has been identified as important by California's Department of Conservation. The western half of the Greystone Site contains deciduous oak and mixed oak woodlands within its boundaries. The Vineyard Lodge Housing Site is not located in the vicinity of any forest lands.</p> <p><u>Impact Analysis</u></p> <p>a-b. <b>(Agricultural) Less than Significant:</b> The proposed project will not directly impact any prime farmland, unique farmland, or farmland of statewide importance. The Vineyard Lodge Housing site is contiguous to active agriculture lands devoted to viticulture. However, the proposed project improvements at the Vineyard Lodge Housing site are permitted under the PQP zoning, and do not physically create an impediment to continued agricultural use of surrounding properties. Further, pursuant to St. Helena Municipal Code, property owners within the PQP Zoning District are required to recognize that there exists a right-to-farm properties within the district and in the vicinity of the district. There is a good faith expectation that no complaints will occur regarding legal normal agricultural activities on properties in the district or in the vicinity of the district. This applies to activities that may involve disbursement of chemicals, and creation of dust, noise, or fumes. Given that the project will not directly impact any agricultural lands and through recognition and acceptance of the neighbor's right to farm pursuant to the Municipal Code and as required by condition of approval, the project will not indirectly impact any agricultural lands and any impacts will be less than significant.</p> <p>c-e. <b>(Forestry) No Impact:</b> The proposed project on the Greystone Site is located in an area of previously developed land downhill and separated from the deciduous oak and mixed oak forest resources at the rear of the site. No forest resources are located within the Vineyard Lodge project area. The proposed project at the Greystone Site and the Vineyard Lodge sites will not result in damage, reduction or removal of forested lands. The City of St. Helena does not support any active "timberlands," meaning "land, which is available for, and capable of, growing a crop of trees of a commercial species used to produce lumber and other forest products, including Christmas trees. Accordingly, no impacts are expected.</p> <p><b>Mitigation Measures:</b> None Required.</p> |                                                      |                                                    |                                    |                  |

Create objectionable odors affecting a substantial number of people?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                      |                                                    | ✓                                  |                  |
| f. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment or conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                      |                                                    | ✓                                  |                  |
| <p>Sources: 1993 St. Helena General Plan; General Plan EIR; Culinary Institute of America 830 Pratt GHG Emissions Analysis, Prepared by Gilleran Energy, September 16,2016;; Culinary Institute of America Greystone Rehabilitation GHG Emission Analysis, prepared by Gilleran Energy, September 18,2016; 2010 BAAQMD Guidelines</p> <p><u>Setting:</u></p> <p>The City of St. Helena is located within the San Francisco Bay Area air basin regulated by the Bay Area Air Quality Management District (BAAQMD). Air quality within the Bay Area Air Basin is affected by natural geographical and meteorological conditions as well as human activities such as construction and development, operation of vehicles, industry and manufacturing, and other anthropogenic emission sources. The Federal Clean Air Act and the California Clean Air Act establish national and state ambient air quality standards respectively. The BAAQMD is responsible for planning, implementing, and enforcing air quality standards within the Bay Area Air Basin, including the City of St. Helena.</p> <p>The Bay Area Air Basin is designated as non-attainment for both the one-hour and eight-hour state ozone standards; 0.09 parts per million (ppm) and 0.070 ppm, respectively. The Bay Area Air Basin is also in non-attainment for the PM10 and PM2.5 state standards, which require an annual arithmetic mean (AAM) of less than 20 µg/m3 for PM10 and less than 12 µg/m3 for PM2.5. In addition, the Basin is designated as non-attainment for the national 24-hour fine particulate matter (PM2.5) standard and will be required to prepare a State Implementation Plan (SIP) for PM2.5. All other national ambient air quality standards within the Bay Area Air Basin are in attainment.</p> <p>This Initial Study applies the BAAQMD's California Environmental Quality Act – Air Quality Guidelines, May 2012, including the BAAQMD thresholds of significance adopted in June 2010. In March 2012, the Alameda County Superior Court ordered BAAQMD to set aside use of the significance thresholds within the BAAQMD CEQA Guidelines until they complete an assessment of the environmental effects of the thresholds in accordance with CEQA. The Court found that the thresholds, themselves, constitute a “project” for which environmental review is required. Lead agencies may continue to rely on the BAAQMD CEQA Guidelines, “for assistance in calculating air pollution emissions, obtaining information regarding the health impacts of air pollutants, and identifying potential mitigation measures.”</p> <p>The BAAQMD CEQA Guidelines include the best available scientific data and most conservative thresholds available. Comparison of the project's emissions against the BAAQMD thresholds provides a conservative assessment as the basis for a determination of significance. In the absence of other applicable thresholds, the City of St. Helena, as lead agency, has chosen to utilize the June 2010 BAAQMD thresholds and May 2011 Guidelines as a means to conservatively assess the project's potential environmental effects to air quality. BAAQMD air quality thresholds are presented in <b>Table 2</b> below.</p> |                                                      |                                                    |                                    |                  |

Impact Analysis

a.(Air Quality Plan) No Impact: The BAAQMD adopted the Bay Area 2010 Clean Air Plan (CAP) in September 2010 to comply with state air quality planning requirements set forth in the California Health & Safety Code. The 2010 CAP serves to update the 2005 Ozone Strategy and provides control strategies to address air quality pollutants including ozone (O3), Particulate Matter (PM), toxic air contaminants (TACs), and greenhouse gases (GHGs). A total of 55 control strategies have been developed as part of the CAP for land use, energy and climate, stationary sources, transportation, and mobile sources. Control strategies are designed to reduce emissions of ozone precursors, PM, air toxics, greenhouse gases, and work towards attainment of state ozone standards, reduce transport of ozone to neighboring basins, and to protect public health and the climate. Measures to implement control strategies include the use of clean and efficient vehicles, Green Construction Fleets, enhanced bicycle and pedestrian access, energy efficiency, and others. The primary goals of the CAP include attainment of air quality standards, reductions in population exposure and protection of public health in the Bay Area and reduction in greenhouse gas emissions.

The BAAQMD CEQA Guidelines set forth criteria for determining consistency with the CAP. In general a project is considered consistent if a) the project supports the primary goals of the CAP, b) includes control measures and c) does not interfere with the implementation of CAP measures. The CIA Master Campus Plan is consistent with the CAP as it supports the primary goals by providing alternative (shuttle) transportation, would provide housing in close proximity to complimentary uses, and will feature efficient fixtures, amongst other things. Further, the project includes basic control measures, and would not result in any conflicts in implementing the CAP. In addition, the Bay Area 2010 CAP was based on land use and growth projections consistent with those used in the St. Helena General Plan. The project’s land use and development intensity is consistent with that assumed by the General Plan for the project including both the Greystone and the Vineyard Lodge sites. There are no other control measures of the 2010 CAP that apply to the project. As such, the project will not conflict with or obstruct implementation of the Bay Area 2010 Clean Air Plan. Therefore, the project would have no impacts due to a conflict with the regional Air Quality Plan.

b. (Air Quality Standard, Criteria Pollutant) Less Than Significant: Air quality emissions associated with the proposed project would result from short-term construction activities and ongoing operation. BAAQMD Guidelines, as adopted in 2010 include “screening criteria” that provide a conservative estimate above which a project would be considered to have a potentially significant impact to air quality. Projects that are below the screening criteria threshold are reasonably expected to result in less than significant impacts to air quality since pollutant emissions would be minimal. Additionally, when projects fall below the screening criteria levels, a quantitative analysis of the project’s air quality emissions is not required.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Potentially Significant Impact, Unmitigated | Potentially Significant Impact, Mitigated | Less Than Significant Impact | No New Impact |               |                            |                             |                                  |              |              |

| Air quality emissions of carbon monoxide (CO), ozone precursors (ROG and NOx) and particulate matter (PM <sub>10</sub> and PM <sub>2.5</sub> ) from construction and operation are evaluated pursuant to the 2010 CEQA Guidelines. There is no carbon monoxide (CO) emissions threshold applicable to construction emissions. For carbon monoxide (CO), the operational significance threshold is 9.0 particles per minute (8-hour average) and 20.0 ppm (1-hour average). The screening level criteria for a mid-rise apartment development (i.e. dormitories) are shown in <b>Table 3</b> below.                                                                                                                                                                                                                                                                                                                                                   |                                             |                                           |                              |               |               |                            |                             |                                  |              |              |

| Mid Rise Apartment (Dormitories)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 494 du (ROG)                                | 240 du (ROG)                              |                              |               |               |                            |                             |                                  |              |              |
| Construction activities may result in air quality emissions generated by the use of heavy-duty construction equipment, trenching, transport of materials, and workers commuting to and from the project site(s). <b>Table 3</b> above shows that the screening level to determine significant air quality impacts from construction of a mid-rise apartment development (dormitories) is 240 dwelling units. The Greystone Master Plan proposes the development of 164 or a net of 123 new dormitories, which falls well below the screening level. Therefore, construction activities associated with the Vineyard Lodge expansion would have a less than significant impact to air quality.                                                                                                                                                                                                                                                        |                                             |                                           |                              |               |               |                            |                             |                                  |              |              |
| At operation, the proposed Greystone Master Plan will continue to function in a similar manner as the existing condition, with a minor expansion of use. The Greystone component will have negligible change relative to the existing condition, whereas the Vineyard Lodge component will result in an increase of 123 new dormitories. Although there are no new stationary “point sources” created (large emitters such as manufacturing plants), the project will include small individual “area sources” such as residential furnaces, water heaters and consumer products such as solvents, cleaners, and paints. Most area source emissions generated onsite would come from the consumption of natural gas associated with the dormitories. Air quality emissions will also be generated during the operation of vehicles (mobile sources). To a much lesser extent onsite landscaping maintenance will also generate air quality emissions. |                                             |                                           |                              |               |               |                            |                             |                                  |              |              |
| <b>Table 3</b> above indicates that the operational project level screening size for mid- rise apartments (dormitories) is 494 dwelling units. As the proposed project will exhibit a net increase in dwelling units of 123 units, the project remains well below the established screening size for operational emissions. At operation, the CIA Campus Master Plan Project will not violate any air quality standard or result in a cumulatively considerable net increase of any criteria pollutant in non-attainment, namely O3, PM10, and/or PM2.5. Therefore, air quality emissions generated by the proposed project will result in less than significant impacts.                                                                                                                                                                                                                                                                            |                                             |                                           |                              |               |               |                            |                             |                                  |              |              |
| <b>d. (Sensitive Receptors) Less than Significant Impact with Mitigation:</b> The BAAQMD defines sensitive receptors as “facilities or land uses that include members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly and people with illnesses.” Sensitive receptors may include schools, hospitals or residential areas. In St. Helena, sensitive receptors include residential land uses, elementary, junior and high schools, and hospitals, care facilities and convalescent homes. The nearest sensitive receptors are located onsite at both the Greystone and the Vineyard lodge components house students. Due to the proximity of sensitive receptors onsite, the project has the potential to generate temporary air quality impacts associated with fugitive dust emissions during construction activities.                                                            |                                             |                                           |                              |               |               |                            |                             |                                  |              |              |
| In order to ensure that fugitive dust emissions are reduced to levels below significance <b>Mitigation Measure AQ-1</b> shall be implemented. AQ-1 is set forth pursuant to BAAQMD Basic Control Strategies and requires covering haul trucks, watering during active ground disturbance, limiting idling time, proper maintenance of equipment, and other standard measures. With implementation of AQ-1 potential impacts to sensitive receptors during construction will be reduced to levels below significance.                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                             |                                           |                              |               |               |                            |                             |                                  |              |              |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|----------------------------------------------------|------------------------------------|------------------|
| <p>At operation the project would not generate emissions that would impact sensitive receptors. As a proposed dormitory facility, air quality emissions generated on the Vineyard Lodge Housing site at operation would be minimal and similar to emissions generated by surrounding residential development. At operation of the Greystone site, activities will be similar the existing conditions and would not impact sensitive receptors residing onsite. Therefore, potential impacts related to exposure of sensitive receptors to pollutants at operation of the proposed project will remain below levels of significance.</p> <p>e. <b>(Odors) Less Than Significant Impact:</b> The proposed CIA Campus Master Plan will not result in changes to odor relative existing conditions. At the Vineyard Lodge Housing site, development of new dormitories may occasionally generate temporary odors during construction associated with street paving and architectural coating. Odors associated with construction are short term in duration and will cease once construction is complete. Similarly construction activities on the Greystone site have the potential to generate odors associated with use of equipment, paving, and coatings. The level of odors associated with construction will be minimal given the limited scope and scale of development. The project will not generate excessive odors or dust (as described above) that affects a substantial number of people. Therefore, the project will have less than significant impacts to air quality due to objectionable odors.</p> <p>f. <b>(Greenhouse Gases) Less Than Significant Impact:</b> The BAAQMD Guidelines use a three-tiered approach for setting a significance threshold for the project-level contributions to cumulative GHG impacts. Based on the BAAQMD Guidelines, a project is considered less-than-significant if it either:</p> <p>a) Complies with a legislatively adopted GHG Reduction Strategy which meets or exceeds one of the following three options:</p> <ol style="list-style-type: none"> <li>Reduces emissions to 1990 levels by 2020,</li> <li>Reduces emissions 15% below baseline (2008 or earlier) emission level by 2020, or</li> <li>Meets the plan efficiency threshold of 6.6 MT CO<sub>2</sub>e/service population/year;</li> </ol> <p>b) Emits a total of less than 1,100 metric tons (MT) CO<sub>2</sub>e per year; or</p> <p>c) Emits less than 4.6 MT/service population/year. Metric tons per capita for service population per year; service population includes residents and any employees.</p> <p>At present, the City of St. Helena does not maintain a “qualified” GHG reduction strategy pursuant to the BAAQMD Guidelines. As such, BAAQMD’s screening threshold of 1,100 metric tons (MT) of carbon dioxide equivalents per year (CO<sub>2</sub>e/yr.) is used to evaluate project level significance.</p> <p>The screening size for GHG emissions is 87 dwelling units for a mid-rise apartment complex. The proposed project size is above the screening threshold given that a net increase of 123 dormitories are proposed as well as improvements at the Greystone site. As such, a GHG analysis was conducted by Gilleran Energy. The California Emissions Estimator Model Version 2011.1.1 (CalEEMod) was used to predict net GHG emissions from construction and operation, assuming full-build-out of the project. CalEEMod modeling provides emissions for transportation, areas sources, electricity consumption, natural gas combustion, electricity usage associated with water usage and wastewater discharge, and solid waste land filling and transport.</p> <p><u><b>Construction GHG Emissions</b></u></p> <p>Construction GHG emissions capture demolition of the existing Vineyard Lodge 1 building, excavation of the storage cave, operation of heavy duty equipment, worker and vendor trips, grading and building. GHG emissions associated with construction of the Vineyard Lodge site were estimated to be 389 MT CO<sub>2</sub>. GHG emissions associated with construction at the Greystone site were estimated to be 193 MT CO<sub>2</sub>. As such, construction of the proposed CIA Campus Master Plan, inclusive of both sites, would result in a total GHG emission of 582 MT CO<sub>2</sub>. The BAAQMD does not have an adopted Threshold of Significance for construction-related GHG emissions. Rather, BAAQMD encourages the incorporation of best management practices to reduce GHG emissions during construction. Best management practices are specified under <b>Mitigation Measure AQ-1</b>. Therefore, with</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| <p>AQ-1 potential impacts associated with construction of the CIA Master Plan will be less than significant.</p> <p><u>Operational Emissions</u></p> <p>The CalEEMod model, along with the project vehicle trip generation rates, were used to predict annual emissions associated with operation of the fully-developed Vineyard Lodge site and Greystone site under the proposed project. In 2018, net annual emissions resulting from the proposed project are predicted to be 174 MT of CO<sub>2</sub>e (from Vineyard Lodge) and 114.93 MT of CO<sub>2</sub>e (from Greystone) and the project's total GHG emissions at operation would be 288.93 MT of CO<sub>2</sub>e. As operational emissions would fall well below the BAAQMD established threshold of significance (1,100 MT CO<sub>2</sub>e), impacts to air quality resulting from GHG emission would be less than significant.</p> <p><u>Mitigation Measures:</u></p> <p>AQ-1: The applicant shall incorporate Best Management Practices for all construction activities and clearly indicate these provisions in the specifications. In addition an erosion control plan shall be prepared and submitted to the City of St. Helena prior to any construction activity. BMPs shall include but not be limited to the BAAQMD Basic Construction Mitigation Measures as modified below:</p> <ol style="list-style-type: none"> <li>1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered three times per day;</li> <li>2. All haul trucks transporting soil, sand, or other loose material shall be covered;</li> <li>3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited;</li> <li>4. All vehicle speeds on unpaved roads shall be limited to 15 mph;</li> <li>5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible;</li> <li>6. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used;</li> <li>7. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points;</li> <li>8. All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation;</li> <li>9. Construction equipment staging shall occur as far as possible from existing sensitive receptors;</li> <li>10. The Developer shall designate a person with authority to require increased watering to monitor the dust and erosion control program and provide name and phone number to the City prior to issuance of grading permits. Post a publicly visible sign with the telephone number of designated person and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations; and</li> <li>11. The City's Public Works Inspector shall perform visual inspections during grading to assure that dust control is implemented and standard BMP are enforced.</li> </ol> |                                                      |                                                    |                                    |                  |

| c. Have a substantial adverse effect on Federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, etc.) through direct removal, filling, hydrological interruption, or other means?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                      |                                                    |                                    | ✓                |
| d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                      |                                                    |                                    | ✓                |
| e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                      | ✓                                                  |                                    |                  |
| f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                      |                                                    |                                    | ✓                |

| <p><u>Setting</u></p> <p>Biological resources are protected by statute including the Federal Endangered Species Act (FESA), the California Endangered Species Act (CESA), and the Clean Water Act (CWA). The Migratory Bird Treaty Act (MBTA) affords protection to migratory bird species including birds of prey. These regulations provide the legal protection for plant and animal species of concern and their habitat.</p> <p>As reported in the General Plan a number of plant and animal species with special-status have been recorded or are suspected to occur within the Urban limits of the City of St. Helena. The city also contains species that are identified in the California Natural Diversity Database (CNDDB) due to rarity and threats, and are considered sensitive resources.</p> <p>Based on a review of the California Natural Diversity Database (CNDDB), the following plant species could be present in the project vicinity: Greene's narrow-leaved daisy (<i>Erigeron angustatus</i>) and Clara Hunt's milk-vetch (<i>Astragalus claranus</i>). Greene's narrow-leaved daisy (<i>Erigeron angustatus</i>) is found in chaparral, on volcanic or serpentine substrates from 260 to 1,000 feet elevation, and was last recorded in 1891 as occurring within the project vicinity. It is not listed as rare, threatened, or endangered. Clara Hunt's milk-vetch (<i>Astragalus claranus</i>) is federally listed as endangered, state-listed as threatened, and on CNPS List 1B. Clara Hunt's milk-vetch is an annual herb in the Pea family (<i>Fabaceae</i>). It occurs in chaparral, cismontane woodland, valley and foothill grassland, often in open grassy hillsides with serpentinite or volcanic substrates, between 245 and 900 feet elevation.</p> <p>The Greystone site supports urban habitat and backs up to oak woodland. The Vineyard Lodge Housing site, likewise, features urban habitat and abuts agricultural development. The project sites have both been substantially developed and the areas of the sites subject to disturbance are not known to support any rare, endangered or special status plant or animal species.</p> <p><u>Impact Analysis</u></p> <p>a. <b>(Sensitive Species) No Impact:</b> The already developed project sites may support species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations, or by the California Department of</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|----------------------------------------------------|------------------------------------|------------------|
| <p>Fish and Wildlife or U.S Fish and wildlife service. However, development within the Greystone Campus would be confined to the interior of or beneath the existing building. Development at the Vineyard Lodge Housing site would also be confined to areas that have already been previously disturbed and developed. However, construction activities at the Vineyard Lodge Housing site would include the removal of 21 trees, two of which are coast live oak (<i>Quercus agrifolia</i>). A total of 23 trees would be transplanted. Onsite trees may provide perching and potential nesting opportunities to bird species including migratory birds that are protected under the MBTA. Adherence to the General Plan policy 6.2.13, as well as California Department of Fish and Wildlife Code Section 3503 and the MBTA will ensure that potential impacts to migratory bird species are avoided. Should construction activities and/or tree removal occur within the breeding season (Sept-July), a pre-construction bird survey conducted by a qualified biologist would be conducted pursuant to the mandatory compliance with the MBTA. Accordingly, with adherence to all applicable state and federal laws governing biological resources, such as those named above, no impacts are expected.</p> <p>b. <b>(Sensitive Natural Community) No Impact:</b> The only plant communities on the project sites include urban, ruderal with a limited amount of oak woodland on the Greystone Campus. There are no known wetlands, riparian habitat or other sensitive natural communities identified onsite. The Greystone Campus is located approximately one-half of a mile from the closest stream which is York Creek. The Vineyard Lodge Housing site is located approximately 400 feet from York creek. Given the projects location on two previously developed sites, and the fact that project activities will not encroach into any identified natural community on or near the respective project sites, development of the proposed project would not result in substantial impacts to riparian habitat or other natural communities, nor would it conflict with any policies or program protecting riparian resources. Therefore, the project would have no impacts.</p> <p>c. <b>(Wetlands). No impact:</b> No federally protected wetlands, including but not limited to, marsh, vernal pools or coastal wetlands, are known to exist within either of the project site boundaries or within the vicinity of the proposed project. Therefore, the project will have no impact to federally protected wetlands as defined by Section 404 of the Clean Water Act.</p> <p>d. <b>(Movement Corridor) No Impact</b> There is no evidence of migratory wildlife corridors or nursery sites on or in the vicinity of the project sites. The existing development and active agricultural lands surrounding the project sites makes it relatively inaccessible to many species and eliminates the possibility of the site functioning as a movement corridor. Additionally, development within the Greystone Campus would be confined to the interior of or beneath the existing building and development at the Vineyard Lodge Housing site would be confined to areas that have already been previously disturbed and developed. As such, the proposed project is not expected to substantially interfere with the movement of fish or other wildlife species including migrating species. Therefore, the project will have no impacts to wildlife corridors and species movements.</p> <p>e. <b>(Conflict with Local Policy) Less than Significant with Mitigation:</b> The vegetation and existing trees located on the project sites at the Greystone Campus and the Vineyard Lodge Housing site are predominantly ornamental. Construction activities at the Vineyard Lodge Housing site would remove 21 trees, and transplant another 23 trees. However, two (2) of the trees proposed for removal are coast live oak (<i>Quercus agrifolia</i>). The City of Saint Helena does not have an existing tree preservation policy or tree protection ordinance; however, the policies of Section 6.6 of the Open Space and Conservation Element of the 1993 St. Helena General Plan require the planting of replacement trees where existing significant trees cannot be saved.</p> <p>In accordance with <b>Mitigation Measure BIO-1</b> and given the historical, biological, and aesthetic importance of oaks in the Valley, all oaks proposed for removal from the site shall be replaced in-kind and at a ratio of three (3) new 15 gallon trees for every tree removed. In addition, given the potential for inadvertent disturbance within drip lines of trees proposed for retention or transplanting, the applicant shall be required to comply with <b>Mitigation Measure BIO-2</b> requiring the applicant adhere to the recommendations of the "Tree Protection Guidelines and Specifications</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| Developed for the Culinary Institute of America, 830 Pratt Avenue,” prepared by a certified arborist with Pacific Tree Care, September 2, 2016. The recommendations include specific measures to avoid disturbance within the tree protection zone (TPZ). Accordingly, with <b>Mitigation Measure BIO-1 and BIO-2</b> , impacts would be less than significant.                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                      |                                                    |                                    |                  |
| f. <b>(Conflict with Conservation Plan) No Impact:</b> At present, no Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state Habitat Conservation Plan exist for the City of St. Helena. The already developed project sites, located within the boundaries of the urban limit line, are not designated open space and do not support any significant animal or plant habitat. Therefore, the project is not expected to conflict with the provisions of an adopted Habitat Conservation Plan or any other Natural Community Conservation Plan approved by a local, regional or state body.                                                                                                                                |                                                      |                                                    |                                    |                  |
| <b>Mitigation Measures:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                      |                                                    |                                    |                  |
| BIO-1. All oaks proposed for removal from the Vineyard Lodge Housing site shall be replaced in-kind and at a ratio of three (3) new 15 gallon trees for every tree removed. A portion of replacement oaks may be accommodated on the Greystone Campus if site constraints are such that all replacement trees cannot be accommodated within the proposed site plan. The final Landscape plan showing the location of replacement trees shall be subject to review and approval by the Planning and Community Improvement Director prior to issuance of building permit.                                                                                                                                                                                                         |                                                      |                                                    |                                    |                  |
| BIO-1. The applicant shall comply with the recommendations of the “Tree Protection Guidelines and Specifications Developed for the Culinary Institute of America, 830 Pratt Avenue,” prepared by Pacific Tree Care, September 2, 2016.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                      |                                                    |                                    |                  |

| <b>Setting:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                      |                                                    |                                    |                  |
| St. Helena and the greater Napa Valley exhibit a long record of human occupation, possibly extending as far back as 10,000-12,000 years, when Native Americans first inhabited the Napa Valley. At the time of first contact with European settlers of the area, the Wappo had established a village near present day St. Helena known as Annakatanoma. As such, the Napa Valley is known to contain numerous traces of past human activity, ranging from early Native American sites and artifacts to the relicts of historic-era agricultural and ranching activities. Resources have been identified at many locations throughout Napa County and are protected under various federal, state, and local statutes, including the California Environmental Quality Act (CEQA). |                                                      |                                                    |                                    |                  |
| Within the City limits, more than 200 historic resources have been identified. Two major surveys conducted in 1978 and 2006 provide the basis for most of the historic resources identified in the City. Additionally individual resources and the Downtown Commercial District are listed on the National Register of Historic Places. St. Helena’s Historic Commercial                                                                                                                                                                                                                                                                                                                                                                                                        |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|----------------------------------------------------|------------------------------------|------------------|
| <p>District includes 35 contributing resources and 13 non-contributing resources<sup>2</sup>.</p> <p>The Greystone Campus features the former Greystone Cellars building, an 1888 Richardsonian Romanesque building that historically operated as a cooperative winery. The Greystone Cellars Building is listed on the National Register of Historic Places (NRHP). The proposed work at the Greystone Site includes re-configuration of interior functions, addition of three modular storage units along the west elevation, and excavation of storage tunnels at the building' north end.</p> <p>The Vineyard Lodge site at 830 Pratt Avenue historically served agriculture uses until the 1960s when it was developed with a convalescent home, now "Vineyard Lodge I". The Vineyard Lodge I was constructed in the early 1960s and therefore meets the age requirements to be eligible for listing as a historic resource on the California Register of Historic Resource (CRHR). However, review of available records indicates that the building does not meet the significance criteria required for listing on the CRHR. The building is not associated with important events, or persons, nor does it embody distinctive characteristics of a type, period, region, or method of construction, it is not the work of a master and is not expected to yield important information related to prehistory or history of the local area. Further, the building has undergone a number of modifications and additions. As such, the Vineyard Lodge site does not include any above-ground historic resources, but given the long record of human occupation in St. Helena and the greater Napa Valley, it may hold potential to yield archeological resources or native American remains.</p> <p>In accordance with the provisions of Public Resources Code §2080.3.1(d) and Assembly Bill 52, the City of St. Helena notified Tribes having jurisdiction over all or part of the project sites of the proposed project in a letter post stamped August 31,2016. In accordance with Public Resources Code §21083.3.1, 21083.3.2, and 21083.3 the Tribes had thirty (30) days to request consultation. The Yocha Dehe Wintun Nation Tribe contacted the City by mail on October 13, 2016 requesting to initiate consultation. The Yocha Dehe requested that a tribal monitor be present for ground breaking activities. Other tribes contacted did not request consultation under AB 52 for this project indicating that they have no concerns that the project may impact tribal (traditional) cultural resources.</p> <p><u>Impact Analysis:</u></p> <p><b>a) (Historic Resources) Less than Significant:</b> The proposed work at the Greystone Site is confined to the Greystone Cellars building, along the west elevation and below the north end of the building. Three modular units ranging in size from 592 sf to 944 sf are proposed on the west elevation (rear) of the building. The units will be accessed from an existing roadway, supported on new horizontal steel structure that spans the area and similar to existing modern mechanical equipment supports. Utilitarian in nature, the units are constructed of painted metal siding, doors, and flat roofs behind shallow parapets.</p> <p>The proposed siting and design will not alter character defining features, nor require removal of historic materials. It is anticipated the units will be self-supporting and will not require physical attachment. Should attachment to the historic masonry wall be required because of further investigation, this will be achieved using the least intrusive means possible and any connectors would be adhered to existing mortar joints so as to avoid damage to the historic masonry. This would ensure that, if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired. If units were removed in the future, repairs would be accomplished in a manner to match the physical characteristics of strength, color, size and texture of the historic mortar.</p> <p>The exterior of the Greystone Cellars building would be maintained in its current configuration, including alterations that may have acquired historic value over time. The distinctive masonry features will be preserved and the proposed work does not include replacement of any character-defining features. The proposed modular units are located away from principal elevations, have been designed to fit below the historic eave of the building, and are minimal in size compared to the original structure. Proposed work will use materials to differentiate the additions from the historic exterior masonry. These</p> |                                                      |                                                    |                                    |                  |

<sup>2</sup> Contributing resources date from the historic period of significance established for the district. Non-contributing resources are those that, due to date of construction, alterations, or other factors, do not contribute to the district's historic significance or character.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|----------------------------------------------------|------------------------------------|------------------|
| <p>characteristics reflect the project's compliance with the Secretary of the Interior Standards for Rehabilitation (SOISR). In accomplishing a compliant SOISR project, the impact to historic resources would be considered be less than significant.</p> <p>Neither Vineyard Lodge I nor II are eligible for listing on the CRHR and therefore are not considered "historic resources" for the purposes of CEQA. As such, there is no expectation that the project may result in an adverse effect to the significance of a historic resource and no impacts are anticipated from demolition of Vineyard Lodge I and development of the proposed Vineyard Lodge buildings.</p> <p>Accordingly, given that project activities at the Greystone site will be performed in accordance with the Secretary of the Interior's Standards for Rehabilitation and that project activities on the Vineyard Lodge site will not encounter any above-ground historic resources, the project is not expected to adversely impact any historic era resources and any impacts would be less than significant.</p> <p><b>b) (Archaeological) Less than Significant with Mitigation:</b> The Greystone Campus has been developed since the 1880s and the site has been subject to ground-disturbing activities including grading and terracing. To date no archaeological resources have been uncovered. The proposed project excavations are located within the limestone strata beneath the depth of human occupation and therefore are not expected to reveal any significant finds. The cave's exit located near the existing retaining wall of the site will surface with a minimum amount of soil disturbance. Based upon the size and location of disturbed soil, it is not expected that the excavation would result in the discovery of archaeological remains. Likewise, the Vineyard Lodge Site has been the location of varied soil-disturbing activities associated with the construction of the current Vineyard Lodge I and II. These former building campaigns have not revealed the presence of archeological resources, including Native American remains or paleontological resources.</p> <p>Although neither of the project sites are located within any areas of elevated potential for the occurrence of archeological resources, given the long history of human occupation in St. Helena, ground disturbing activities still hold the potential to impact unidentified resources. It is expected that the depth of disturbance at the Greystone Campus will range from approximately 24 to 73 feet below grade (FBG) and at the Vineyard Lodge site will range from 4 to 15 FBG.</p> <p>Given the potential for the presence of yet undiscovered cultural resources associated with past Prehistoric human occupation in the vicinity of the project sites, <b>Mitigation Measure CUL-1</b> is provided in to ensure that should any archeological resources be encountered during grading or excavation, all ground disturbing activity shall be halted immediately until a qualified archaeologist can evaluate the potential resource and recommend further action. Implementation of CUL-1 will ensure that in the event of accidental discovery the potential for the project to adversely impact or result in a change to the significance of archeological resources would be reduced to less than significant levels. Further, to comply with the provisions of the AB 52 and address concerns communicated by the Yocha Dehe Wintun Nation Tribe, Mitigation Measure CUL-2 has been added requiring that the project applicant authorize the Yocha Dehe Wintun Nation Tribe or qualified archeological professional to observe and monitor earth-moving, grading, and/or excavation at the Vineyard Lodge Housing Site to the extent that such activities would disturb soil profiles located 10 to 15 feet below grade. This will provide oversight of work in areas with elevated potential for the presence of traditional cultural resources. <b>With Mitigation Measures CUL 1 and CUL-2</b> Impacts will be less than significant.</p> <p><b>c) (Paleontological Resources) Less than Significant with Mitigation:</b> The St. Helena General Plan does not identify the presence of any paleontological or unique geological resources within the boundaries of the City Limits. Moreover, the project sites have been previously developed and subject to ground disturbance. Therefore limited expectation exists for paleontological resources to be present on either of the project sites. Nevertheless, potential remains for the discovery of buried paleontological resources. Because the potential for inadvertent discovery of paleontological or unique geological resources exists, <b>Mitigation Measure CUL-3</b>, as set forth below, will be instituted. CUL-3 will ensure that proper procedures are followed in the event of discovery; thereby reducing potential impacts to levels below significance.</p> <p><b>d) (Human Remains) Less than Significant</b> No evidence suggests that human remains have been interred within the</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| <p>boundaries of the project site. However, in the event that during ground disturbing activities, human remains are discovered to be present, the applicant would be subject to the CA Health and Safety Code Section 7050.5 which mandates the immediate cessation of ground disturbing activities near or in any area potentially overlying adjacent human remains, and requires contacting the Napa County Coroner upon the discovery of any human remains. If it is determined by the Coroner that the discovered remains are of Native American descent the Native American Heritage Commission shall be contacted immediately. If appropriate, the project sponsor shall retain a City-qualified archeologist to provide adequate inspection, recommendations and retrieval. It is expected that compliance with CA HSC Sect.7050.5 as required under state law and performance of actions therein will ensure that in the event of accidental discovery of historically significant remains all impacts will remain at levels below significance.</p> <p><b>Mitigation Measures:</b></p> <p>CUL-1. If during the course of ground disturbing activities, including, but not limited to excavation, grading and construction, a potentially significant prehistoric or historic resource is encountered, all work within a 100 foot radius of the find shall be suspended for a time deemed sufficient for a qualified and city-approved cultural resource specialist to adequately evaluate and determine significance of the discovered resource, confer with tribal representative, as appropriate, and provide treatment recommendations. Should a significant archeological resource be identified a qualified archaeologist shall prepare a resource mitigation plan and monitoring program to be carried out during all construction activities.</p> <p>CUL-2. The project applicant shall authorize the Yocha Dehe Winton Nation Tribe or qualified archeological professional to observe and monitor earth-moving, grading, and/or excavation at the Vineyard Lodge Housing Site to the extent that such activities would disturb soil profiles located 10 to 15 feet below grade.</p> <p>CUL-3. In the event that paleontological resources, including individual fossils or assemblages of fossils, are encountered during construction activities all ground disturbing activities shall halt and a qualified paleontologist shall be procured to evaluate the discovery and make treatment recommendations.</p> |                                                      |                                                    |                                    |                  |

| e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                      |                                                    | ✓                                  |                  |
| <p>Sources: Geotechnical Study Report prepared by RGH Consultants Inc., May 16, 2008; Geotechnical Engineering Study- Storage Caves: The Culinary Institute of America at Greystone 2555 Main Street, Prepared by Condor Earth Technologies Inc. June 22, 2016; Association of Bay Area Governments (ABAG), 2016 Napa County Earthquake Hazard Map, <a href="http://resilience.abag.ca.gov/earthquakes/napa/">http://resilience.abag.ca.gov/earthquakes/napa/</a>, Accessed 9.22.16; California Building Code (CBC), 2013; CA Department of Conservation.</p> <p><u>Setting:</u></p> <p>The Bay Area is one of the most seismically active regions in the Country. The City of St. Helena is located within the San Andreas Fault system, which is 44 miles wide and extends throughout much of the North Bay Area. The nearest active faults are the Rodgers Creek Fault Zone, located approximately 13 miles west of the City and the West Napa Fault located about 1 mile to the south. No active faults directly traverse the City; however, potential exists for geologic hazards in and around the urban limit line associated with ground shaking, including: liquefaction, ground failure, and seismically-induced landslides. The project sites are classified as California Building Code (CBC) Site Class C (Greystone) and Site Class D (Vineyard Lodge), and therefore are subject to stringent seismic design criteria.</p> <p>Geotechnical Consultants, Condor Earth Technologies, prepared a Geotechnical Engineering Study to provide recommendations for the proposed caves to be located on the Greystone site. The Greystone site is located on a sloped hillside and underlain by volcanoclastic alluvium of the Sonoma Volcanics beneath a layer of artificial fill. Fill materials are generally characterized as stiff to very stiff lean clay to lean sandy clay. The volcanoclastic alluvium is severely weathered and contains cobble to boulder sized volcanic rock. No groundwater was encountered. Subsurface exploration conducted as part of the Geotechnical Study relied on three drilled borings and four test pits to inform the design recommendations of the cave.</p> <p>As proposed, the cave would have a portal opening of 10 feet high by 10 feet wide. A concrete frame will be doweled to the loading dock wall face to provide reinforcement and structural support. Internally, the tunnel width will range from 8 to 14 feet. Ground cover above the cave will range from 2 to 4 feet at the entry to as much as 50 feet at the southwest side of the cave where the tunnels extends beneath the hillside. Maximum depth of excavation will range from approximately 24 feet below grade (FBG) beneath roadway portions to a maximum of 73 FBG at sections located beneath the hillside.</p> <p>Geotechnical considerations identified for the Greystone site include:</p> <ol style="list-style-type: none"> <li>1. The potential to encounter underground utilities;</li> <li>2. Presence of low ground cover and potential distress to existing site improvements; and</li> <li>3. The proposed caves ability to support loads associated with the ground weight, existing site improvements, and traffic.</li> </ol> <p>The Vineyard Lodge site extends over relatively level alluvial terrain outside of the Napa River Flood Plain. Natural drainage consists of sheet flows over the ground surface that concentrate in man-made surface drainage elements such as roadside ditches and natural drainage elements including swales and creeks. Overall, the ground surface at 830 Pratt Avenue is hard, but remains subject to settlement as the moisture content reaches saturation. Groundwater has been detected at depths ranging from 7 to 11 feet below ground surface (FBG). The site is within Zone X of the current FEMA flood Map 06055C0263E, effective 09/26/2008.</p> <p>In 2008, Consultants, RGH, prepared a Geotechnical Study for the Vineyard Lodge site in anticipation of the Vineyard Lodge II project. The study evaluated site conditions, seismic hazards, and geotechnical issues. The primary Geotechnical concerns identified include:</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| <ol style="list-style-type: none"> <li>1. The presence of two to three feet of weak, porous, compressible, clayey surface soils and heterogeneous fill;</li> <li>2. The detrimental effects of uncontrolled surface runoff and groundwater seepage on the long-term satisfactory performance of projects of this type, especially those constructed on alluvial fans, given the erosion potential and porous nature of surface soils; and</li> <li>3. Strong ground shaking predicted to impact the site during the life of the project.</li> </ol> <p><u>Impact Analysis</u></p> <p><b>a.i) ( Fault Rupture) No Impact:</b> Fault rupture occurs when the ground surface fractures as a result of fault movement during an earthquake and almost always follows preexisting fault traces, which are zones of weakness. Given that the project site is not considered part of the Alquist-Priolo Earthquake fault zone (APFZO) and no identified active faults traverse the site, there is no expectation that the site would be vulnerable to fault rupture. The nearest fault is the West Napa Fault, which had movement in 2014. The northern limit of rupture for the West Napa Fault was 15 miles to the south. Other nearby faults with surface rupture include the Rodgers Creek Fault, located approximately 12 miles southwest of the City and the San Andreas Fault zone, located 32 miles southwest. There is no risk of fault-related ground rupture during earthquakes within the limits of the site due to a known Alquist-Priolo Earthquake Fault Zone. Therefore, there are no impacts expected due to fault rupture for the Greystone site or on the Vineyard Lodge site.</p> <p><b>a.ii)( Ground shaking) Less than Significant Impact:</b> The proximity of the City to the active Rodgers Creek Fault and the West Napa Fault places it within Zone VII to VIII (strong to very severe) of the Modified Mercalli Intensity Shaking Severity Level. As such, the project site holds potential to expose people or structures to substantial adverse effects resulting from strong seismic ground shaking. The resulting vibrations would likely cause primary damage to buildings and infrastructure with secondary effects being ground failures in loose alluvium, landslide deposits or poorly compacted fill. Both the primary and secondary effects pose a risk of loss of life or property.</p> <p>Conformance with standards set forth in the Building Code of Regulations, Title 24, Part 2 (the California Building Code 3.7-20 Chapter 3: Setting, Impacts, and Mitigation Measures [CBC]) and the California Public Resources Code, Division 2, Chapter 7.8 (the Seismic Hazards Mapping Act) will ensure that potential impacts from seismic shaking are less than significant. The Geotechnical Study prepared by Condor found the Greystone project site to be classified as site Class C according to CBC 2013. Site Class C requirements include recommendations for foundation types, appropriate structural systems, and ground stabilization strategies. The adherence to Class C Specifications will ensure the proposed caves and tunnels proposed would not expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death as a result of seismic activity.</p> <p>The Geotechnical Study prepared by RGH Consultants found the Vineyard Lodge project site to be classified as site Class D; Site Class D requirements include recommendations for foundation types, appropriate structural systems, and ground stabilization strategies. The adherence to Class D Specifications will ensure the proposed dormitory buildings would not expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death as a result of seismic activity. With adherence to seismic design requirements as set forth in the California Building Code ground shaking would not adversely expose people or structures to elevated risk of loss. Therefore, the project is expected to have a less than significant impact as a result of seismic activity.</p> <p><b>a.iii (Seismic-related ground failure/liquefaction) Less Than Significant Impact:</b> Liquefaction is a phenomena associated with fine-grained, loosely-packed sands and gravels subjected to ground shaking as a result of seismic activity. Liquefaction can lead to total and/or differential settlement and is largely dependent upon the intensity of ground-shaking and response of soils underlying the site. According to the Geotechnical Study and assuming a peak ground acceleration of 0.33g generated by a 6.5 magnitude earthquake on the West Napa Fault, the liquefaction potential of the Vineyard Lodge site appears to be low. Similarly, the Geotechnical Study completed for the Greystone site concluded that based on subsurface conditions the site</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |


| <p>potential for liquefaction was low. Accordingly, hazards related to ground failure and/or liquefaction are not anticipated and impacts are expected to be less than significant.</p> <p><b>a.iv) (Landslides) Less than Significant Impact:</b> The risk of landslide is dictated by several factors including precipitation conditions, soil types, steepness of slope, vegetation, seismic conditions and level of human disturbance. When certain conditions are present landslides can be triggered as a result of seismic activity. Landslides have been known to occur within Napa County, but are typically confined to slopes steeper than 15% and occur in areas underlain by geologic units that have demonstrated stability problems. Based on Condor's Geotechnical Study, the Greystone project site does not contain any historic landslides and no evidence of past landslides were observed. Condor concluded that the potential for landslides was low and no mitigation was required. Therefore impacts due to loss of structures of life from landslides are expected to be less than significant at the Greystone site.</p> <p>The Vineyard Lodge site is relatively flat and not in close proximity to steep slopes therefore the proposed project is not expected to expose people or structures to substantial adverse effects, including the risk of loss, injury or death resulting from landslides and no impacts are anticipated. Based on sites flat topography and that it does not exhibit past issues, impacts associated with liquefaction and landslides are expected to be less than significant.</p> <p><b>b. (Soil erosion or the loss of topsoil) Less than Significant Impact:</b> Development of the project will require site preparation and grading activities that will potentially result in soil erosion or the loss of topsoil if not properly controlled. Water and wind serve as the primary catalyst of soil erosion, with steeper slopes intensifying the effects. Vegetation removal as part of the site preparation process as well as grading and ground disturbing activities associated with development can heighten the potential for and accelerate soil erosion. Further, the Vineyard Lodge site extends over an alluvial fan which is predisposed to erosion given its porous nature.</p> <p>Project activities are not expected to generate a substantial loss in topsoil beyond what has occurred during previous site development, but will involve demolition of Vineyard Lodge I and grubbing including the removal of vegetation such as brush, trees and root systems, and dense growths of grass. Accordingly, construction activities do hold the potential to result in erosion if not properly performed. All ground activities associated with the project are subject to the City of Saint Helena's Erosion and Sediment Control Plan requirements (Chapter 13.32.090 D.3 of the Municipal Code). The erosion control plan is required to identify techniques such as site watering, sediment capture, equipment staging and laydown pad, and other erosion control measures to be implemented during construction activity on the project site. Erosion associated with construction activities is also governed by the mandatory requirements of the National Pollution Discharge Elimination System (NPDES) General Permit, which is implemented through a Storm Water Pollution Prevention Plan (SWPPP). Compliance with these mandatory requirements would prevent substantial soil erosion and loss of topsoil.</p> <p>Adherence to uniformly applied development standards, including the preparation of a SWPPP and/or an Erosion and Sediment Control Plan will ensure that any potential impacts due to erosion and sedimentation will be reduced to less than significant levels. Therefore, the project will generate a less than significant impact related to soil erosion or loss of topsoil.</p> <p><b>c.(Unstable soil) Less than Significant Impact with Mitigation:</b> The Geotechnical Studies prepared for the Greystone site and the Vineyard Lodge site set forth specific recommendations to address potential stability concerns. The Geotechnical Study prepared for the Greystone site identified the presence of fills and shallow ground cover above the cave entrance that could be potentially unstable if not properly reinforced. As such the Geotechnical Study recommends specific design parameters and construction techniques to ensure that unstable soils do not result in impacts due to development.</p> <p>The Geotechnical Study prepared for the Vineyard Lodge Housing site identified the presence of heterogeneous fills of unknown quality and placement which can settle or heave under new loads. Weak and porous surface solids consistent with the Bale Clay Loam soil series may appear hard and strong under dry conditions but can lose strength rapidly and settle under new loads as</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| <p>their moisture content increases and approaches saturation. If the settlement is not uniform, or if collapse occurs, structural damage would likely result. To remediate the potential impacts associated with unstable geologic units, the preliminary geotechnical study, prepared in 2008, recommends that weak soils be excavated to a depth of three feet and replaced with properly compacted engineered fill and/or foundations may be engineered to extend to a depth below the weak surface soils. As such, to ensure that potential impact due to unstable soil conditions are reduced to less than significant levels, <b>Mitigation Measure GEO-1</b> as set forth below shall be implemented. <b>Mitigation Measure GEO-1</b> requires that development of the Greystone cave and tunnels, as well as the Vineyard Lodge dormitories, adhere to applicable recommendations made by the respective Geotechnical Studies for each site and as deemed appropriate by the City Engineer.</p> <p>GEO-1 requires that construction techniques adhere to the recommendations set forth in the Geotechnical Studies including that site preparation remove potentially weak and compressible fills and re-compaction prior to re-use onsite, adhere to compaction recommendations for structural fill and pavements, and focused attention on reinforcement of the cave tunnels. Adherence to those recommendations outlined in the project's geotechnical studies and <b>Mitigation Measure GEO-1</b> will ensure that potential impacts from unstable soils are reduced to less than significant levels.</p> <p><b>d.(Expansive soil) Less than Significant Impact:</b> The Geotechnical Studies prepared for the Greystone Master Plan identify a medium to low potential for expansive soils. The Greystone site exhibits a low to medium potential for plasticity and a low potential for volume changes between wet and dry soil conditions. Similarly, the Vineyard Lodge site indicates that the Bay Clay Loam soil series exhibits a medium to low expansive potential whereby they exhibit moderate to low strength and volume changes in reaction to seasonal fluctuations in moisture content. As such, neither site exhibits elevated concern associated with expansive soils and it is expected that standard construction techniques associated with Class C and D requirements will be adequate to ensure that soil expansion does not result in significant impacts. Therefore, potential impacts associated with expansive soils are expected to be less than significant.</p> <p><b>e.(Septic tanks or alternative wastewater disposal) Less than Significant Impact:</b> At present, the Vineyard Lodge Housing Site has a primary treatment system that includes two existing septic tanks of 2,000 and 2,500 gallons, respectively. In order to accommodate the increase in effluent generated by the new dormitories, the project will remove the existing 2,000 gallon tank currently serving Vineyard Lodge 1, and add three new septic tanks ranging in size from 2,500 gallons to 5,000 gallons. Given that the site has not displayed any instability problems related to the existing septic tanks and that, pursuant to the Geotechnical Study prepared for the site and <b>Mitigation Measure GEO-1</b>, any unstable soils will be engineered to an acceptable strength, any impacts related to the soils ability to support the installation of septic tanks would be less than significant.</p> <p><b>Mitigation Measures:</b></p> <p>GEO-1. All recommendations outlined in the Geotechnical Studies prepared by RGH (May 16, 2008) and by Condor Earth Technologies (dated June 22, 2016), including those related to site preparation and grading, excavation, seismic design, cave and tunnel design and foundation system design, are herein incorporated by reference and shall be adhered to insofar as they are applicable to the subject project and to ensure that construction of the proposed structures and buildings adequately accounts for the geotechnical particularities of the site. All recommendations are subject to review and approval by the City Engineer and may be modified at his/her discretion. Prior to Certificate of Occupancy, the geotechnical engineer shall inspect the site work and construction and shall certify in writing that the improvements have been performed in accordance with the Geotechnical Studies, or as modified by the City Engineer.</p> |                                                      |                                                    |                                    |                  |

| <p><u>Setting</u></p> <p>The California Department of Toxic Substances Control (DTSC) defines a hazardous material as: “a substance or combination of substances that, because of its quantity, concentration or physical, chemical, or infectious characteristics, may either: 1) cause, or significantly contribute to an increase in mortality or an increase in serious, irreversible, or incapacitating illness; or 2) pose a substantial present or potential hazard to human health or environment when improperly treated, stored, transported, disposed of, or otherwise managed.” Regulations governing the use, management, handling, transportation and disposal of hazardous waste and materials are administered by Federal, State and local governmental agencies. Pursuant to the Planning and Zoning Law, the Department of Toxic Substances Control (DTSC) maintains a hazardous waste and substances sites list (e.g., Cortese List). Existing hazardous materials and/or waste within St. Helena include underground storage tanks, Polychlorinated Biphenyls (PCBs), asbestos, and pesticides.</p> <p>Hazardous waste management in St. Helena is administered by the Napa County Department of Environmental Management (DEM) through the Certified Uniform Program Agency. The CUPA program oversees five hazardous materials programs: Hazardous Materials Management Plans (HMMP) program, California Accidental Release Prevention (CalARP) program, underground storage tank (UST) programs, aboveground storage tank (AST) programs, and hazardous waste generation and disposal. The California Department of Industrial Relations, Division of Occupational Safety and Health (DOSH) (formerly known as Cal/OSHA), is charged with enforcement of state regulation and the supervision of workplaces in California that are not under direct federal jurisdiction. State worker health and safety regulation applicable to construction workers include training requirements for hazardous waste operation and emergency response.</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less -------------------------------|------------------|
| <p>A review of available records, databases (EnviroStor and GeoTracker) and reports indicate that the Greystone Campus and Vineyard Lodge Housing site are located approximately 6,900 feet and 4,900 feet, respectively, from a PG &amp; E Voluntary Cleanup site. The Vineyard Lodge site historically supported residential and agricultural (viticulture) uses. According to historic aerials, the site was originally developed in 1902 with a single family residence and outbuilding with the remaining land devoted to vineyard. By 1968 the historic aerials indicate the presence of the Marlinda Convalescent home. In 2003, consultants, Kleinfelder, prepared a Phase I Environmental Site Assessment (ESA) for the Vineyard Lodge Site. The Phase I did not identify the presence of any recognized environmental conditions (REC).</p> <p><u>Impact Analysis</u></p> <p><b>a-b (Significant Hazard; Accident) Less than Significant:</b> The proposed project will involve the demolition of Vineyard Lodge I (c. 1960) followed by the construction of three new residential buildings. Site preparation, construction activities and material delivery may result in the temporary presence of potentially hazardous materials including, but not limited to fuels and lubricants, paints, solvents, insulation, and electrical wiring onsite. Although these potentially hazardous materials may be present onsite during construction the applicant is required to comply with all existing federal, state and local safety regulations governing the transportation, use, handling, storage and disposal of potentially hazardous materials. Once construction is complete there will not be any ongoing use or generation of hazardous materials other than common household hazardous waste onsite.</p> <p>Given that Vineyard Lodge I was constructed before 1978, the building has the potential to contain lead based paint (LBP) and or asbestos containing material (ACBM). Disturbance of the lead based paint during demolition activities could expose workers to potentially hazardous compounds or release such compounds into the environment if not properly managed. Title 17, California Code of Regulations (CCR), Division 1, Chapter 8: Accreditation, Certification and Work Practices for Lead-Based Paint and Lead Hazards, defines lead-based paint as paint or other surfacing coating that contains an amount of lead equal to, or in excess of, one milligram per square centimeter (1.0 mg/cm<sup>2</sup>) or more than 0.5% by weight. In practice, this is interpreted to mean that any detectable amount of lead is regulated. For example, employees who perform trigger tasks (such as manual demolition) are required to receive employer provided training, air monitoring, protective clothing, respirators, and hand washing facilities. In addition, there are standard work practices required such as the use of wet methods and vacuums. It is required that all demolition and general work activities be conducted pursuant to all federal, state and local regulation as required by DOSH, Federal OSHA, USEPA, DTSC and BAAQMD.</p> <p>In addition, demolition activities may hold the potential to release asbestos containing material given that the building's construction date preceded the banning of spray-applied asbestos in 1989. The EPA defines recognized asbestos containing materials (RACM) as any material exhibiting a composition with 1% or more of asbestos. National Emission Standard for Hazardous Air Pollutants (NESHAP), Regulation 40 CFR Part 61, stipulates that no emissions are allowed during building demolition or renovation activities involving RACM. In accordance with NESHAP, facilities proposed for demolition must be surveyed for total RACM, Category 1 non-friable ACM, and Category 11 Non-friable ACM prior to project activities. The Bay Area Air Quality Management District (BAAQMD) implements EPA regulations governing RACM through Regulation 11, Rule 2: Asbestos Demolition, Renovation, and Manufacturing. Regulation 11, Rule 2 establishes requirements for the identification, reporting, handling, and disposal of RACM. The due compliance with federal, state and local regulations described above will ensure that hazards associated with the potential presence of RACM and LBP will not exceed less than significant levels.</p> <p>Last, prior to the commencement of site preparation and construction activities, a Stormwater Pollution Prevention Plan (SWPPP) that includes Best Management Practices (BMPs) would be implemented in accordance with the California State Water Resources Control Board (SWRCB) requirements. BMP are required to include measures to prevent spills and require onsite materials for cleanup. The applicant is required to comply with all federal and state regulations as overseen by the Sonoma County's CUPA. Accordingly, compliance with all applicable state and federal laws will ensure</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| that impacts related to the creation of a significant hazard are less than significant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                      |                                                    |                                    |                  |
| <p><b>c. (Within 1/4 mile of a school) No Impact:</b> Neither of the project sites are located within a quarter mile of a school. The nearest school, Robert Louis Stevenson Middle School, is located approximately 0.5 miles southeast of the Greystone Campus and 0.4 miles south of the Vineyard Lodge Housing site. Therefore, no impacts related to the emission or handling of hazardous, or acutely hazardous materials, within one-quarter mile of an existing or proposed school are expected.</p> <p><b>d. (Cortese Site) No Impact:</b> The project site is not listed as a Cortese site. There is no indication of spills, leaks, or contaminated soils on the project site. Therefore, the project will not create a significant hazard to the public or the environment by virtue of it being located on an identified Cortese site.</p> <p><b>e,f. (Airport land use/airstrip) No Impact:</b> The project is not located within the boundaries of an airport land use plan or located in close proximity to a private airstrip; the nearest airport is the Napa County Airport located approximately 25 miles south of the project site. Therefore, the project would have no impacts associated with airport-related hazards.</p> <p><b>g. (Emergency Response plan) No Impact:</b> The project would not impair implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan. The project will not alter any emergency response or evacuation routes. Site plans include ingress and egress access that accommodate emergency vehicles and provide connectivity to the existing circulation and street system. California has developed an emergency response plan to coordinate emergency services by federal, state, and local government, including responding to hazardous materials incidents. The State Office of Emergency Services (OES) employs a Hazardous Materials (Haz Mat) Division which enforces multiple programs that address hazardous materials. There are no aspects of the proposed project that will interfere with an adopted emergency or evacuation plan and no impacts are anticipated.</p> <p><b>h. (Wildland Hazard) Less than Significant Impact:</b> The City is characterized by a narrow valley floor surrounded and intermingled with steep hill terrain, containing areas which are susceptible to wildland fires. Wildland fires are of concern particularly in expansive areas of native vegetation of brush, woodland, grassland and forest that have succumbed to prolonged drought conditions. However, both of the project sites are located within developed areas, and according to the 2007 CAL FIRE "Fire Hazard Severity Zones" Map, both sites are located outside of the "Very High Fire Hazard Severity Zone" and categorized as Non- VHFHZ. Accordingly, no impacts related to wildland hazards are expected.</p> <p><b>Mitigation Measures:</b> None Required.</p> |                                                      |                                                    |                                    |                  |

| d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                      |                                                    | ✓                                  |                  |
| e) Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                      |                                                    | ✓                                  |                  |
| f) Otherwise substantially degrade water quality?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                      |                                                    | ✓                                  |                  |
| g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                      |                                                    |                                    | ✓                |
| h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                      |                                                    |                                    | ✓                |
| i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                      |                                                    | ✓                                  |                  |
| j) Inundation by seiche, tsunami, or mudflow?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                      |                                                    |                                    | ✓                |
| <p>Sources: Napa County General Plan; 1993 St. Helena General Plan; Drainage and Hydrology Analysis prepared for the Culinary Institute of America Vineyard Lodge Use Permit Application by Summit Engineering, September 2, 2016; Stormwater Control Plan Culinary Institute of America Vineyard Lodge Use Permit, prepared by Summit Engineering, June 21, 2016; napawatersheds.org; City of St. Helena Comprehensive Flood Protection Project, year 3 Annual Status Report, prepared by Waterways Consulting, December 15, 2013.</p> <p><u>Setting:</u></p> <p>The Greystone Master Plan is located within the Napa River watershed which comprises an area of approximately 426 miles and extends in a northwesterly direction from San Pablo bay in the south to Mount St. Helena in the north over a distance of approximately 55 miles. The Napa River runs along the northern boundary of the City of St. Helena. The Napa River drains the watershed and discharges to the Napa Sonoma Marsh on the margins of the San Pablo Bay. Major tributaries serving the Napa River and proximate to the project sites include York Creek and Sulphur Creek. The Greystone and Vineyard Lodge sites are located near to, but outside of, dam inundation areas for nearby storage facilities including St. Helena Lower Dam (approximately 0.8 mile west of the site) and Bell Canyon Dam (approximately 2.5 miles north of the site).</p> <p>In 2011 the City completed major structural modifications to implement the St. Helena Flood Protection Project. The Flood Protection project introduced flood control facilities and drainage improvements to mitigate the 200 year flood event in areas proximate to the Napa River and it's confluence with Sulphur Creek. The Flood project included river channel improvements, a levee and floodwall construction. Subsequent to installation of flood improvements, FEMA approved a Letter of Map Revision (LOMR) effectively updating the flood insurance rate map (FIRM) and respective flood sensitive areas. The revised map went into effect on November 5, 2012. Both the Greystone and the Vineyard Lodge project sites are located outside of the 100 year floodplain and in FEMA Flood Zone X, as delineated on map number 06055C0263E.</p> <p>Section 402 of the Clean Water Act regulates the discharge of pollutants to waters of the US. Locally, this is implemented through the National Pollution Discharge Elimination System (NPDES) General Permit. The NPDES General Permit Requirements address post-construction conditions resulting from development including through Low Impact Development (LID) requirements. Under LID requirements, new development and redevelopment including the subject project are required to mimic pre-developed conditions, protect water quality, and retain runoff from impervious surfaces onsite. Stormwater discharge, grading, and erosion control requirements are further described in the St. Helena Stormwater and Runoff Pollution Control ordinance (Municipal Code Chp. 13.32).</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| <p>The City of St. Helena collects Storm Drainage Impact Fees which are assessed based on the square footage of new impervious surfaces as a means to offset any potential storm drainage impacts generated by development. Fees collected are used for ongoing maintenance of existing infrastructure and incremental expansion as envisioned by the City's stormwater control plan.</p> <p>Both the Greystone and Vineyard Lodge site are developed with existing storm drain drainage infrastructure that captures flows and convey runoff to storm drains and bioswale facilities. Development proposed at the Vineyard Lodge site will increase impervious surfaces relative to the existing condition. In order to accommodate increased impervious surfaces, the project plans include LID measures consistent with requirements including bio retention facilities and grass lined interceptor swales. As described in the Vineyard Lodge Stormwater Control Plan, the project follows the "Design Guidance for Stormwater Treatment and Control for Projects in Marin, Sonoma, Napa, and Solano Counties. Bioretention LID facilities meet the minimum 4% equivalent tributary area as specified by the NPDES permit.</p> <p><b>Hydrology and Water Quality Impact Discussion:</b></p> <p><b>3.9(a, f). (Water Quality and Degrade Water Quality) Less Than Significant Impact:</b> The CIA Campus Master Plan project applicant is required to file for coverage under the State Water Resources Control Board (SWRCB), Water Quality Order No. 2013-0001—DWQ, NPDES General Permit No. CAS000004 for Discharges of Storm Water Runoff Associated with Construction Activity (General Permit). Mandatory requirements cover construction activities including, but not limited to, clearing, grading, excavation, stockpiling, and reconstruction of existing facilities involving removal and replacement. Compliance is initiated through submittal of a Notice of Intent (NOI) to the State Water Resources Control Board (SWRCB) and carried out through a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP contains a site map, existing and proposed buildings, lots, roadways, storm water collection and discharge points, general topography both before and after construction, and drainage patterns across the project. The SWPPP must also identify Best Management Practices (BMPs) to protect storm water runoff.</p> <p>The installation of the bioretention, swales, and adherence to best management practices for erosion control during construction activities will ensure that water quality standards as prescribed by NPDES General Permit and the City of St. Helena Stormwater and Runoff Pollution Control ordinance and waste discharge requirements are met. No violations of any water quality standards or waste discharge requirements are expected.</p> <p>No other water quality degradations are expected to occur from the project development. Implementation of the required SWPPP will ensure that there are no other impacts to water quality due to the subject project. Pursuant to St. Helena Municipal Code and per condition of approval, implementation of a SWPPP is required prior to issuance of grading permit. As such, impacts are expected to be less than significant to water quality.</p> <p><b>3.9(b). (Groundwater depletion) Less Than Significant Impact:</b> The City has adequate water supply resources to accommodate development of the CIA Campus Master Plan Project without depleting, degrading or altering groundwater supplies or interfering substantially with groundwater recharge. The City acquires potable water supplies from three sources: 1) Bell Canyon reservoir, a surface water source, 2) the two Stonebridge Wells (deep groundwater sources fed by the Sonoma Volcanic aquifer), and 3) the City of Napa. There is one on-site well on the Greystone property which is used for landscape irrigation only and will continue to operate under the proposed project.</p> <p>The Greystone and Vineyard Lodge sites currently operate under an amended water use agreement, adopted per Resolution No. 2008-77. Under the Agreement 17.8 ac-ft./year is supplied to CIA at Greystone and 5.2 ac-ft./year is supplied to the Vineyard Lodge Site. The gross allotment between the two locations amounts to 23.1 ac-ft./year or 20,650 gallons per day (gpd). At present, both sites exceed the approved allotment. The average water use for the Greystone Campus during 2014/2015 indicate an annual water use of 18.78 ac-ft./year and the Vineyard Lodge site water use was 6.03 ac-ft./year for the same period. With proposed project improvements the water demand of the respective sites would be altered as a result of the proposed reconfiguration of uses and installation of new more efficient fixtures at both sites.</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|----------------------------------------------------|------------------------------------|------------------|
| <p>Under the proposed project, the Greystone Campus would generate a reduced demand of 11.51 ac-ft./year and the Vineyard Lodge would demand 8.98 ac-ft./year. Thus, the overall water use for the Greystone Master Plan under the proposed project would be 20.49 ac-ft./year, which is below the current water allotment of 23.1 ac-ft./year. Therefore, with the proposed project the water demand generated by the CIA Campus Master Plan would be within the allowed allocation. The project would not deplete groundwater supplies, result in a lowering of the aquifer or otherwise interfere with groundwater recharge. Therefore, impacts would be less than significant.</p> <p><b>3.9(c-d).(Drainage Pattern, Stormwater System and Runoff) Less Than Significant Impact:</b> The proposed project will not alter the course of a stream or river and the post development flow regime will largely mimic predevelopment conditions. A Stormwater Control Plan, dated June 21, 2016 was prepared by Summit Engineering to evaluate the pre and post-construction hydrological conditions to demonstrate that there will not be any increase in the Stormwater runoff volume or flow rate under the 10 year storm event; the post- curve number values, flowrate, and volume were shown to match the pre-project conditions.</p> <p>Pollutants from hardscape will be removed and runoff reduced through implementing Post-Construction Low Impact Design (LID) measures and through the use of bio-retention areas adjacent to each building at the Vineyard Lodge site and near new paved areas. Sidewalks and other impervious surfaces will be sloped or otherwise designed to direct stormwater in order to prevent pooling and disperse stormwater into bio-retention areas, and will not directly connect into the storm drain system until after they have had the opportunity to settle out and percolate. In addition to filtering and reducing the volume of water discharges from the introduction of impervious surfaces onsite, bio-retention areas are also designed to increase percolation and remove sediment from surface flows. With the proposed post construction LID measures, the introduction of new impervious surfaces onsite would not substantially increase the rate or amount of surface runoff in a manner that would result in flooding on or off site.</p> <p>Onsite drainage, consisting of appropriately sized pipes, is proposed to provide stormwater protection during storm events. The general direction and pattern of drainage proposed will match pre-development conditions. The project will not result in a drainage pattern that causes substantial erosion or siltation on- or off-site; nor will it result in flooding on- or off-site. Therefore, impacts to the drainage pattern, storm drain system and runoff as result of the proposed project would be less than significant.</p> <p><b>3.9(g-h). (Flood hazard Zone) No Impact:</b> Based on the Federal Emergency Management Agency's Flood Insurance Rate Map (FIRM) Panel 06055C0263E, both project sites are located in Zone X, or non-special flood hazard zone. The proposed project will not introduce a substantial flood hazard and will not impede or redirect flood flows. The project will not place housing or structures in a flood hazard area and, as a result, will not expose people or structures to risks related to flooding. As such, the project would have no impacts due to a flood hazard zone.</p> <p><b>3.9(i-j). (Levee, Dam failure, Inundation) No Impact.</b> The project site is not located within an area that could be affected a levee breach or dam failure, nor by seiche, tsunami, or mudflow. The Greystone Campus and Vineyard Lodge Housing sites are located near to, but outside of, dam inundation areas for nearby storage facilities including St. Helena Lower Dam (approximately 0.8 mile west of the site) and Bell Canyon Dam (approximately 2.5 miles north of the site). There are no substantial water bodies in the immediate vicinity of either project site. There will be no impact from inundation related to levee or dam failure as a result of project implementation.</p> <p><b>Mitigation Measures:</b> None required.</p> |                                                      |                                                    |                                    |                  |
| <b>9. LAND USE AND PLANNING. Would the project:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                      |                                                    |                                    |                  |

| b. Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                      | ✓                                                  |                                    |                  |
| c. Conflict with any applicable habitat conservation plan or natural community conservation plan?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                      |                                                    |                                    | ✓                |
| <p>Sources: St Helena General Plan, (1993); 2.0 Land Use and Growth Management; 6.0 Open Space &amp; Conservation Element</p> <p><b>Setting:</b> The City of St. Helena is divided into two distinct areas: a developed “urban service area” and a more, rural, agricultural area located around the periphery such that the City exhibits a rather traditional landscape whereby commercial land uses are concentrated in the City center and along SR 29, with residential development radiating outwards to the northeast and southwest. The outer edge of the urban service area is demarcated by the urban limit line (ULL) which is a parcel specific boundary that marks the limit of allowed urban development. The intent of the ULL is to discourage urban sprawl and promote sensitive development which preserves the rural and agricultural lands around the City.</p> <p>The Greystone Campus is located within the City of St. Helena Urban Limit Line (ULL), and exhibits a land use designation of Public; Quasi Public providing for agriculture uses, wineries and public; quasi-public uses, amongst others. The site is zoned W: HP: PD (Winery with Historic Preservation and Planned Development overlays) and subject to Use Permit No. 93-105. The applicant is requesting amendments to the use permit to allow for a re-configuration of interior educational facilities, introduction of new storage cave, and expansion of student enrollment from 200 to 300 students. The project does not propose any substantial changes to the existing culinary education use of the site and as such, it will remain in conformance with the applicable land use designations with only technical changes to the use permit.</p> <p>The Vineyard Lodge Housing site exhibits a General Plan land use designation of Agriculture, providing for, amongst other things, Public and Quasi-Public uses. The project is zoned PQP. As part of the project, the applicant is requesting variances to allow fewer parking spaces and a lesser setback than what is allowed under a strict interpretation of the Municipal Code.</p> <p>The proposed project is subject to land use policies outlined in the St. Helena General Plan which has been adopted for the purpose of avoiding or mitigating an environmental effect. Applicable policies are outlined below:</p> <p><b>Guiding Policies</b></p> <p>2.6.2 New development should be required to occur in a logical and orderly manner within well-defined boundaries, and be consistent with the ability to provide urban services.</p> <p>2.6.4 Permit infill development and higher densities within currently developed areas wherever possible to minimize and postpone the need for expansion of the Urban Service Area.</p> <p>2.6.5 Encourage the continuation of agricultural and low-intensity uses adjacent to the Urban Limit Line.</p> <p>4.8.1 Preserve historic buildings and landscapes throughout the City of St. Helena as an important component of the City’s heritage</p> <p>4.8.2 Where feasible adapt historic structures to modern uses to ensure their economic viability and to protect against possible loss.</p> <p><b>Impact Analysis:</b></p> <p><b>a. (Physical Division of An Established Community) No impact:</b> The Culinary Institute of America (CIA) at Greystone proposes a campus master plan to restructure and expand the educational facilities at the Greystone Campus (2555 Main Street) and expand student enrollment from 200 to 300 students. Also proposed is an underground storage cave and the installation of three modular storage units at the rear of the building. Concurrently, student housing facilities (dormitories)</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Potentially<br>Significant<br>Impact,<br>Unmitigated | ------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|----------------------------------------------------|------------------------------------|------------------|
| <p>at the Vineyard Lodge Site (830 Pratt Avenue) will be expanded to accommodate a total of 224 students.</p> <p>Division of an established community typically occurs when a new physical feature, in the form of an interstate or railroad, physically transects an area, thereby removing or severely limiting access within an established community. The division of an established community can also occur through the removal of an existing road or pathway which would reduce or remove access between a community and outlying areas. Given that the CIA Campus Master Plan project consists of the expansion of existing, allowed uses on what are previously developed sites, there is no expectation that the project would introduce an element that would cause the physical division of a community. Accordingly, the project will not generate any impacts.</p> <p><b>b.(Conflicts with Applicable Plans) Less than significant with Mitigation:</b> The proposed project activities at the Greystone Campus are allowed under the Public; Quasi-Public land use and Winery: Planned Development: Historic Preservation Overlay zoning district which specifically allows for educational uses. To expand enrollment, the applicant will be subject to a new use permit which would ensure that enrollment and changes to interior operations are of an intensity that is consistent with the intent of the General Plan and Zoning Ordinance. No changes are proposed to the site that would otherwise be in conflict with any applicable plan or regulation.</p> <p>The Vineyard Lodge site exhibits a land use and zoning designation of PQP: Public-Quasi-Public. The PQP zoning designation does not prescribe specific development standards, but rather stipulates that all projects within the PQP zoning district be subject to a conditional use permit and that development standards shall be established through the use permit review process. These regulations help guarantee that incompatible development and/or activities can be avoided by requiring such projects be held to a high level of scrutiny and are vetted through the public review process, CEQA review, and be conditioned accordingly. The Vineyard Lodge Housing Component will be subject to the provisions of a new use permit as required under PQP zoning which would govern the intensity and operation of the site to an extent that consistency with all applicable standards and guidelines is achieved.</p> <p><u>Variances</u></p> <p>Notwithstanding the use permit, the project is subject to other standard requirements stipulated by the Zoning Code, namely, parking and setback requirements which, given site constraints, the applicant maintains cannot be met. As such, the applicant has requested variances. The purpose of a variance is to allow deviation from a strict interpretation of the Code insofar as exceptional circumstances exist related to unusual shape, size, or condition of a property, because of adjacent land bordering a property, or enforcement of the respective standards would involve practical difficulties or undue hardship.</p> <p>Under Municipal Code Section 17.112.050 the Vineyard Lodge Housing site is subject to a special setback requirement of 36' which applies to the northwesterly side of Pratt Avenue extending from the railroad tracks to the Napa River. The Vineyard Lodge I building, proposed for demolition was previously developed within the 36' setback (encroaching 29 feet)<sup>3</sup>. However, in an effort not to increase non-conformance, the project proposes a setback of 20' from the property line. The applicant has identified that, based on site constraints, the project cannot meet the 36' special setback required under the Code. Given that the existing Vineyard Lodge I building is located within the 36' setback area, introduction of the replacement building would not result in a substantially greater impact relative to the existing condition (see Aesthetic analysis above). However, since the buildings location achieves a reduced setback of 20' rather than the required 36' setback, the applicant has applied for a variance to allow for the deviation from this Code provision.</p> <p>In addition, the project has requested a variance from the parking standards outlined in Municipal Code Section 7.124.30(A.3) and stipulated for "rooming, boarding, or lodging houses" (determined to be the closest applicable land use identified in the zoning code), which require two spaces for the "resident owner" and one space for each guest bed, for a total of 226 parking spaces based on this requirement for the gross total of 224 dormitory beds which would result at the Vineyard Lodge Housing Site. At present, the site features 85 parking spaces, but based on data provided by the applicant, only 31% of students have a demand for parking spaces. As described herein, the CIA provides a shuttle service to students for transport to and from the Vineyard Lodge to Greystone, as well as transport offsite. Staff, including cleaning and maintenance staff, are shared by both sites and as such, staff typically park at the Greystone site and are shuttled to the</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|----------------------------------------------------|------------------------------------|------------------|
| <p>Vineyard Lodge site as needed. Due in large part to the robust shuttle service, and supported by the rental car service also provided onsite, it has been identified that students do not heavily rely on individual vehicles. As such, the applicant is requesting that findings be made, either under a variance, or as part of the conditional use permit, to allow for 72 parking spaces (69 student spaces, and 3 spaces devoted to the rental cars) based on the unique operational characteristics of the land use and the expectation that only approximately 31% of student residents would be issued parking permits.</p> <p>To ensure that the number of available parking spaces equates with the demand, the Conditional Use Permit will include a condition capping the number of parking permits issued to be commensurate with the number of spaces available and prohibit overnight off site and street parking. The project will further be conditioned to prepare a Transportation Management Plan, subject to review and approval by the Planning and Community Improvement Director that details the operation of the Shuttle Service and rental cars. To further minimize reliance on vehicles and associated parking spaces and to ensure consistency with the St. Helena Bicycle Plan, the applicant shall be required to implement <b>Mitigation Measure LU-1</b> which requires at least five (5) on demand bicycles be made available to residents of the Vineyard Lodge Housing Site. The provision of on-demand bicycles will further reduce student's reliance on vehicles (and associated parking spaces) and promote use of alternative forms of transportation that better aligns with the City's transportation and sustainability goals. With approval of the requested variances for deviations from the zoning requirements for parking and setbacks, conditions of approval capping issuance of parking permits and requiring a Transportation Management Plan, and compliance with <b>Mitigation Measure LU-1</b>, the project will be in conformance with all applicable regulations and Land Use and Planning impacts would be reduced to levels less than significant.</p> <p><u>Growth Management System</u></p> <p>The City of St. Helena has a Growth Management system (GMS) which restricts the development of new market rate housing to nine (9) units per year. The category of "dormitories" is not explicitly referenced in the GMS and given that the dormitory use is not a residential development with units available to the open market and the proposed rooms are only available to students attending the CIA culinary program, it is determined that the GMS does not apply to the proposed project. Further, the dormitories serve as temporary student housing and would not be expected to induce growth of permanent residents.</p> <p><u>Conclusion</u></p> <p>The intensification of use at the Greystone Campus and Vineyard Lodge sites will occur on previously developed land that is well served by public services, nearby to transportation routes and commercial areas of the City. With approval of the requested variances for parking and setbacks at the Vineyard Lodge site and the implementation of <b>Mitigation Measure LU-1</b>, which will further reduce demand for vehicles and associated parking, the project will be and remain in conformance with all applicable land use standards. Therefore, impacts related to a conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project would be less than significant.</p> <p><b>C. (Conflict with any applicable habitat conservation plan) No Impact:</b> The project is not subject to a habitat conservation plan or a natural community conservation plan. There are no conservation plans that apply to the City of St. Helena. Therefore, the project will have no impact to any conservation plan or natural community plan.</p> <p><b>Mitigation Measures:</b></p> <p>LU-1. To minimize reliance on vehicles, the applicant shall provide a minimum of five (5) on-demand bicycles to be available to residents on an as-needed basis. If there is an increase in student demand for bicycles beyond the number provided, the applicant is required to increase the number of bicycles available for dormitory residents to meet the demand. Bikes shall be maintained in good functioning condition and be readily accessible to residents. The applicant shall provide a written statement detailing how the on-demand bike service will function for review and approval by the Planning and Community improvement Director prior to building permit issuance. The bikes shall be made available for use upon certificate of occupancy for whichever building is constructed first.</p> |                                                      |                                                    |                                    |                  |

| <u>Setting:</u><br><p>The California Surface Mining and Reclamation Act of 1975 (SMARA) identifies mineral resources within California. These maps identify and classify mineral resources as to their relative value for extraction. According to the 1993 General Plan, surface materials in the St. Helena area are classified as "recent alluvium." The depth of the alluvium is likely to be in the range of 250 to 500 feet. Additionally, the General Plan states that there are no known mineral deposits of significance within the City with the exception of the aggregate (gravel) being mined from the stream bed of Sulphur Springs, which is west of SR 29 and not proximate to either of the project sites. To date, no aggregate mineral resources or other significant mineral resources have been mapped within the City of St. Helena.</p> |                                                      |                                                    |                                    |                  |
| <u>Impact Analysis:</u><br><p><b>a,b (loss of mineral resources/ recovery sites) No Impact:</b> The project site has not been delineated as a locally-important mineral resource recovery site on any plans or as a result of past geotechnical investigation performed at either of the project sites. As such, the project is not expected to result in the loss of availability of a known resource, including locally important mineral resources. Therefore, the project will have no impact to mineral resources.</p>                                                                                                                                                                                                                                                                                                                                    |                                                      |                                                    |                                    |                  |

A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                      | ✓                                                  |                                    |                  |
| e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                      |                                                    |                                    | ✓                |
| f. For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                      |                                                    |                                    | ✓                |

| <p><u>Setting:</u></p> <p>Noise is generally defined as unwanted sound. It is characterized by various parameters that include the rate of oscillation of sound waves (frequency), the speed of propagation, and the pressure level or energy content (amplitude). The sound pressure level is the most common descriptor used to characterize the loudness of an ambient (existing) sound level. The decibel (dB) scale is used to quantify sound intensity, but given that the human ear is not equally sensitive to all frequencies in the entire spectrum, noise measurements are weighted more heavily for frequencies to which humans are sensitive in a process called "A-weighting," written as "dBA" and referred to as "A-weighted decibels". In general, human sound perception is such that a change in sound level of 1 dB cannot typically be perceived by the human ear, a change of 3 dB is just noticeable, a change of 5 dB is clearly noticeable, and a change of 10 dB is perceived as doubling or halving the sound level.</p> <p>The primary noise sources within the St. Helena City limits include vehicular traffic, the Napa Valley Wine Train, and agricultural activities (e.g. Vineyard frost fans, pumps in isolated areas, fixed machinery, and heavy vehicle traffic during harvest). Noise sources also include hot air balloon flyovers and limited industrial activities, particularly the Sulphur Springs gravel mining operation on Sulphur Springs Creek. The Napa Valley Wine train tracks are located southwest of the Vineyard Lodge Project site, with passages occurring twice a day, seven days per week, at approximately 1pm and 2pm. The slow speed of the train and the short duration are such that the train is not considered a significant noise source.</p> <p>The City of St. Helena Municipal Code Section 8.24.010 (C), limits Construction activities which generate noise that can be heard at the property line of any parcel of real property within the city limits to between the hours of eight a.m. to five p.m. and delivery of materials/equipment and cleaning and servicing of machines/equipment shall be limited to seven a.m. to six p.m. Exceptions to these time restrictions may be granted by the public works director. No construction activities which generate noise that can be heard at the property line of any parcel of real property within the city limits are allowed on Sundays or Holidays. Operational noise levels are addressed by the General Plan's Noise Element according to land use type. For example, residential land uses are considered completely compatible with noise exposures of up to 55dBA and tentatively compatible in noise exposure areas of up to 60dBA.</p> <p>Traffic is the primary noise generator in the vicinity of the project sites. The Vineyard Lodge site is also subject to noise generated by agricultural activities on adjacent properties. To characterize noise levels at the Vineyard Lodge Housing Site, a Noise Study was prepared by consultants, ICF International, on June 15, 2016. Noise monitoring was conducted on the Vineyard Lodge project site to characterize existing noise levels in the project area. The Napa Wine Train was not operating during this time and the existing housing facilities were not occupied as students were on break. The measured noise levels therefore represent the lowest noise levels likely to be encountered in the area. Overall, the noise measurements indicate that the noise environment in the project area is generally quiet and consistent with the rural setting.</p> <p><u>Impact Analysis:</u></p> <p><b>a.(Exposure to Excessive Noise Levels) Less than Significant:</b> Traffic serves as the primary noise generator in the vicinity of the Vineyard Lodge Housing Site. Measurements taken on the project site indicate that existing traffic noise levels at the project site are in the range of 57 to 63 Ldn. The project is expected to add less than 8 trips to Pratt Avenue during the a.m. and p.m. peak hours. This would constitute a negligible increase in traffic noise of less than 0.5 dB which falls well below the threshold of a perceptible change of 3 dB. As such implementation of the proposed project will not substantially increase traffic noise in the area. Further, conventional building construction with windows closed is expected to reduce exterior noise by at least 20 dB at interior locations. Accordingly interior noise levels at the new facility are expected to be 45 Ldn or less which is in compliance with the City standard for interior noise. Activities at the Greystone Campus will not generate or expose receptors to excessive noise levels. Impacts would be less than significant.</p> <p><b>b. (Ground borne vibration or noise) Less than Significant:</b> Operation of heavy construction equipment, particularly pile driving</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Potentially<br>Significant<br>Impact,<br>Unmitigated | --|----------------------------------------------------|------------------------------------|------------------|
| <p>and other impacts devices such as pavement breakers create seismic waves that radiate along the surface of the earth and downward into the earth. These surface waves can be felt as ground vibration. Vibration from operation of this equipment can result in effects ranging from annoyance of people to damage of structures. Varying geology and distance will result in different vibration levels containing different frequencies and displacements. In all cases, vibration amplitudes will decrease with increasing distance.</p> <p>Perceptible ground-borne vibration is generally limited to areas within a few hundred feet of construction activities. As seismic waves travel outward from a vibration source, they excite the particles of rock and soil through which they pass and cause them to oscillate. The rate or velocity (in inches per second) at which these particles move is the commonly accepted descriptor of the vibration amplitude, referred to as the peak particle velocity (PPV).</p> <p>Construction at the Vineyard Lodge Housing site would occur approximately 75 feet from nearby residences. According to the Noise Study, construction activity would generate vibration that is barely to distinctly perceptible at the nearest residence but is not at a level that could cause damage to nearby structures. Because periods of perceptible vibration would be brief and temporary, the project is not expected to expose people to excessive groundborne vibration. Likewise, construction activity at the Greystone Campus would occur proximate to the onsite student housing. Cave construction would consist of excavating the tunnels using mechanical means (backhoe, milling head, and/or roadheader) and may result in ground borne vibration; however periods of perceptible vibration would be brief and temporary, the project is not expected to expose people to excessive ground borne vibration and impacts would be less than significant.</p> <p><b>c.(Permanent Increase in Ambient Noise Levels) Less than Significant:</b> As mentioned above, the City of St. Helena regulates the noise environment through Chapter 8.25 of the Municipal Code, which identifies noise levels of 55 CNEL as completely compatible and provides that noise levels up to 60 CNEL are tentatively compatible for residential land uses.</p> <p>At project operation, the onsite land use at the Vineyard Lodge Housing Site and associated noise environment will continue to be typical of a multi-unit development (dormitories) and subject to the City' noise exposure standards. The expansion of the Vineyard Lodge Housing site is not expected to introduce a substantial permanent increase in the ambient noise environment due to activities onsite or as a result of stationary or mobile sources. The noise generating elements of the proposed project such as outdoor conversations, mechanical equipment, the operation of landscaping equipment, car engines and car doors would be similar to the existing noise environmental present on-site. The project is expected to introduce noise elements at levels that are generally consistent with the ambient noise conditions.</p> <p>New mechanical systems associated with heating, ventilation, and air conditioning may generate noise. The specific details on the design and location of these systems has not yet been determined. However, per Municipal Code Section 8.24.10(b), no commercial or other activity may create noise that can be heard at the property line of any private property between the hours of 10:00 p.m. and 7:00 a.m. As such, the project must shield/ attenuate noise generated by mechanical systems to comply with the Standard City requirements. With the requisite adherence to City Code provisions, there is no expectation that the proposed mechanical systems would generate a level of noise that would adversely impact adjacent properties.</p> <p>The facility will have a central quad area that may be used as a gathering place for students. Events such as barbeques and other social events could be held in the quad. Gatherings could include up to 120 students who would live on the site which would equate to a cumulative sound level of approximately 54 dBA at 50 feet. The nearest residence is about 260 feet from the center of the quad. A sound level of 54 dBA at 50 feet would drop to about 47 dBA at 260 feet assuming attenuation of 6 dB per doubling of distance. In addition the new buildings will surround the quad providing acoustical shielding of at least 5 dB between the quad and the nearest residence. The resultant sound level at the nearest residence would therefore be approximately 42 dBA. This is well below the measured daytime ambient sound levels that are in the range of 50 to 64 dBA. In addition, the CIA regulates activities at the Vineyard Lodge Housing Site to prohibit amplified music outside, enforces a 9:30pm n noise curfew, and prohibits non-residents from attending events in the quad.</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|----------------------------------------------------|------------------------------------|------------------|
| <p>Given the presence of this acoustical shielding and the rules that will be in place and required under the Use Permit, student activities are not expected to result in noise that can be heard at the property line between the hours of 10:00 p.m. and 7:00 a.m. Accordingly, the proposed Vineyard Lodge Housing project is not expected to result in noise that exceeds applicable local noise standards. This impact is therefore considered to be less than significant.</p> <p>Following implementation of the proposed changes at the Greystone Campus, interior and exterior noise levels would be similar to existing conditions. In other words, operational noises are not expected to generate additional sources of noise at the Greystone Campus and no impacts are expected.</p> <p><b>d.) (Temporary Increase in Ambient Noise) Less than Significant with Mitigation:</b> The City's Noise Ordinance establishes standards to minimize the temporary noise impacts associated with construction, such as limitations on the time of day and week when construction activities are acceptable. Construction activities associated with the CIA Campus Master Plan would result in temporary noise disturbances that could potentially impact nearby sensitive receptors due to the site's proximity to surrounding residential development. Noise generated during construction would vary depending on the construction phase and the type and amount of equipment used at the construction site. Construction activities that would generate noise include site grading, excavation, hauling and deliveries, foundation work, and to a lesser extent framing, and exterior and interior finishing. The highest noise levels would be generated during grading of the site, with lower noise levels occurring during building construction and finishing. No pile driving, jack hammering, or extensive work that would generate substantial groundborne vibration is anticipated.</p> <p>Construction activities associated with the proposed project have the potential to result in temporary noise levels that would impact nearby noise sensitive land uses periodically over the course of the construction period. Construction related noise impacts are typically only occasionally intrusive and cease once construction is complete. Nonetheless, in order to ensure that noise levels due to onsite construction are minimized <b>Mitigation Measure NOI-1</b>, set forth below shall be implemented. NOI-1 below, which goes beyond the requirements of the City's Noise Ordinance, will ensure that potential noise impacts due to the temporary exposure of sensitive receptors to excessive noise during construction are reduced to less than significant levels.</p> <p><b>(e-f) No Impact</b></p> <p>The proposed project is not located within two miles of a public airport or public use airport, nor is it located near a private airstrip and does not expose people residing or working in the project area to excessive noise levels. Residents or visitors onsite would not be exposed to excessive noise levels generated by the airport and no impacts due to excessive noise exposure would occur.</p> <p><b>Mitigation Measures:</b></p> <p>NOI-1. Due to the proximity of sensitive receptors to the project sites, all construction activities shall be required to comply with the following and be noted accordingly on construction contracts:</p> <ol style="list-style-type: none"> <li>1. Construction Equipment Mufflers and Maintenance: All construction equipment powered by internal combustion engines shall be properly muffled and maintained.</li> <li>2. Idling Prohibitions: All equipment and vehicles shall be turned off when not in use.</li> <li>3. Unnecessary idling of internal combustion engines is prohibited.</li> <li>4. Equipment Location and Shielding: All stationary noise-generating construction equipment, such as air compressors, shall be located as far as practical from the adjacent homes.</li> </ol> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|----------------------------------------------------|------------------------------------|------------------|
| <p>5. Acoustically shield such equipment when it must be located near adjacent residences.</p> <p>6. Quiet Equipment Selection: Select quiet equipment, particularly air compressors, whenever possible. Motorized equipment shall be outfitted with proper mufflers in good working order.</p> <p>7. Staging and Equipment Storage: The equipment storage location shall be sited as far as possible from nearby sensitive receptors.</p> <p>8. Noise Disturbance Coordinator: Applicant shall designate a "noise disturbance coordinator" who will be responsible for responding to any local complaints about construction noise. This individual would most likely be the contractor or a contractor's representative. The disturbance coordinator would determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and would require that reasonable measures warranted to correct the problem be implemented. The telephone number for the disturbance coordinator shall be conspicuously posted at the construction site.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                      |                                                    |                                    |                  |

Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                      |                                                    |                                    | ✓                |
| <p><u>Discussion:</u> A project will normally have a significant environmental effect if it will displace a large number of people or induce substantial growth or concentration of population. The CIA Campus Master Plan involves an expansion in student enrollment from 200 to 300 students for a net increase of 100 new students plus the addition of seven new instructional staff. Concurrently, 49 employees would relocate to the recently acquired American Center for Wine, Food &amp; the Arts (Copia) in the City of Napa, California. The net change in student and faculty at the Greystone Campus would amount to a net increase of 58 students and staff. The Vineyard Lodge Housing would be expanded by a net total of 123 student residents.</p> <p><u>Impact Analysis</u></p> <p><b>a.(Population Growth) Less than Significant:</b> The proposed project would increase the number of students from 200 to 300 (a total of 100 new students). Project construction activities at the Vineyard Lodge Housing site would result in a maximum occupancy of 224 student residents on-site, which equates to a net increase of 123 students. With the Greystone Guest House, which provides housing for 47 students, the project will be able to provide housing for 271 of its 300 students. The project would generate a net decrease in faculty. Given that the project will result in a net decrease in faculty, while providing housing for the majority of students, the project is not expected to significantly impact the existing or future housing supply in St. Helena. Accordingly, impacts will be less than significant.</p> <p><b>b,c.(Displacement of Housing) No Impact:</b> Project construction activities at the Vineyard Lodge Housing site include the demolition of Vineyard Lodge I. However, three new residential building units would be constructed, resulting in a net increase of 123 students on the project site. Therefore, the proposed project would not displace people or existing housing</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| v) Other Public Facilities?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                      |                                                    | ✓                                  |                  |
| <p><u>Setting</u></p> <p>Lands within the St. Helena City limits are well served by established public services including fire and police protection, schools and parklands. In order to offset the cost of improving or expanding City services to accommodate the demand generated by new development the City charges one-time impact fees on new private development. Development impact fees are necessary in order to finance required public service improvements and to pay for new development's fair share of the costs necessary to maintain acceptable levels of service related to fire and police protection services, open space, parkland and other such public services.</p> <p><u>Impact Analysis</u></p> <p><b>a,b.(Fire and Police Protection) Less than Significant Impact:</b> The project sites are located within or near the urban limit line and proximate to the police and fire stations and are currently well served by public services. Additional fire service and police calls may occur as a result of the project. However, the project will be subject to the payment of development impact fees, including the Public Safety Impact Fee which funds equipment and facilities' costs for Police and the Fire Departments that may go towards vehicles, capital equipment, and building improvements so as to maintain a high level of public safety. Accordingly, any impacts will be less than significant.</p> <p><b>c. (Schools) Less than Significant Impact:</b> The St. Helena Unified School District provides K-12 public educational services for the community. The District operates four schools, including a primary school, an elementary school, a middle school, and a high school. The CIA Campus Master Plan involves an expansion in student housing of 123 new student residents. A very limited number of the new residents may have school-aged children. Given that the CIA has moved towards and AOS degree program, most of the students are of college age and do not have school aged children. As such, it is expected that the St. Helena Unified School District would be able to accommodate any limited increase in new school-aged children that could be generated as a result of project implementation. Therefore, impacts would be considered less than significant.</p> <p><b>d. (Parks) Less Than Significant Impact:</b> The Parks Division of the Public Works Department maintains ten parks, four pathways, street trees, benches, and parking lots. These parks include a variety of recreational open spaces including walking trails, playgrounds, and picnic areas. The nearest park to both project sites is Lyman Park, located approximately 0.7 mile southeast of</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| <p>the Greystone Campus and approximately 0.5 mile south of the Vineyard Lodge Housing site. The net increase in 123 new residents would result in an increase in the local population that would use community parks.</p> <p>The General Plan identifies a low ratio of active parkland to population, as well as limited connection between passive and active recreational areas and developed areas of the City. The applicant is required to pay a civic improvement fee which is required of all new development to assist in amongst other things, the development and maintenance of recreational facilities in the community. Further, per <b>Mitigation Measure TRANS-2</b>, the applicant is required to install bike lane improvements on the portion of Pratt Avenue between the Vineyard Lodge Housing Site and the Pratt Avenue/ Highway 29 intersection, thereby helping to alleviate pressure on the City's parks and recreational facilities. Accordingly, with payment of impact fees and improvement of passive recreational facilities as required under <b>Mitigation Measure TRANS-2</b>, impacts related to maintaining service ratios and performance objectives related to park and recreational facilities would be less than significant.</p> <p><b>e. (Other Public Facilities) Less than Significant Impact:</b> The Project will not result in substantial adverse impacts associated with any other public facilities. The project sites are located within or adjacent to the urban limit line and are well served by existing public utilities. The project will not generate a substantial increase in demands that warrant the expansion or construction of new public facilities. Therefore, any impacts to other public facilities will be less than significant.</p> <p><b>Mitigation Measures:</b> None required.</p> |                                                      |                                                    |                                    |                  |
| <b>14. RECREATION.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                      |                                                    |                                    |                  |
| a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                      |                                                    | ✓                                  |                  |
| b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                      |                                                    |                                    | ✓                |

| <p><u>Setting</u></p> <p>St Helena provides twenty acres dedicated to recreational activities at five locations within the city's limits. Elementary school and high school facilities within the ULL are also utilized to help meet the community's recreational needs. Two nearby adjacent California State parks offer an additional 1,900 acres of camping, swimming, and hiking trails for local residents and tourists.</p> <p>The Parks Division of the Public Works Department maintains ten parks, four pathways, street trees, benches, and parking lots. These parks include a variety of recreational open spaces including walking trails, playgrounds, and picnic areas. The nearest park to both project sites is Lyman Park, located approximately 0.7 mile southeast of the Greystone Campus and approximately 0.5 mile south of the Vineyard Lodge Housing site.</p> <p>The CIA Campus Master Plan involves a net increase of 123 new student residents which will be housed at the Vineyard Lodge Housing Site, equating to a slight increase in potential park users.</p> <p><u>Impact Analysis</u></p> <p><b>a. (Deterioration of Parks) Less Than Significant Impact:</b> The proposed project would result in a net increase of 123 new student residents. The General Plan identifies a low ratio of active parkland to population, as well as, limited connection</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                      |                                                    |                                    |                  |

| <p>between passive and active recreational areas and developed areas of the City. In order to offset an increase in demand for recreational facilities and not further degrade the already stressed park and recreational systems, the applicant is required to pay a civic improvement fee which is required of all new development to assist in, amongst other things, the development and maintenance of recreational facilities in the community. Further, the project will be required to comply with <b>Mitigation Measure TRANS-2</b> requiring bike lane improvements along a portion of Pratt Avenue which will ensure the project aligns with the intent of the St. Helena Bicycle Plan, 2012. That particular stretch of bike path will provide linkage to pathways along Highway 29 and will contribute to the establishment of improved connectivity throughout the City which can be used for both passive and active recreational activities. Since the project is not expected to substantially increase the use of existing parks or other recreational facilities, and will introduce bike lane improvements along Pratt Avenue that will serve to improve recreational opportunities within the City, impacts to these amenities would be less than significant.</p> <p><b>b. (Additional Recreational Facilities) Less than significant Impact:</b> The project does not include active recreational facilities and does not require the construction or expansion of recreational facilities. Pursuant to <b>Mitigation Measure TRANS-2</b>, the applicant will be required to install bike lane improvements along Pratt Avenue between the Vineyard Lodge Housing Site and the Pratt Avenue/ Highway 29 intersection. The requisite improvements will be limited to previously disturbed areas and/or existing right-of-way and not expected to generate any adverse physical effects on the environment. Accordingly, any impacts would be less than significant.</p> <p><b>Mitigation Measures:</b> None Required.</p> |                                                      |                                                    |                                    |                  |
| <b>15. TRANSPORTATION/TRAFFIC. Would the project:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                      |                                                    |                                    |                  |
| a. Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                      | ✓                                                  |                                    |                  |

| <p><u>Setting</u></p> <p>The City of St. Helena lies on a north-west/south-east axis, with State Route (SR) 29/Main Street serving as the main route for intercity and regional travel. SR 29 is a two- to four-lane rural highway that stretches through Napa County from Vallejo at Napa County's southern border to Lake County in the north; within the City of St. Helena, SR 29 is confined to two travel lanes. Since SR 29 is a major north-south thoroughfare for Napa County, heavy through traffic is typical along Main Street. The street network to the west of SR 29 is a grid pattern of residential blocks connected to SR 29 by a series of east-west streets connecting residential areas. To the east of SR 29, the grid network is discontinuous due to the lack of parallel facilities to SR 29 to connect the east-west roadways.</p> <p>Within the City of St. Helena, SR 29 serves as a two-lane north-south highway. At the Pratt Avenue tee intersection the roadway is 48 feet wide curb to curb. A 75-foot-long left turn lane is provided on the southbound SR 29 approach to Pratt Avenue. Curb, gutter and sidewalk line both sides of the highway at Pratt Avenue. North of Pratt Avenue there is a tree-lined, unsurfaced pedestrian path along the west side of the highway and an unsurfaced bicycle pedestrian path along the east side of the highway.</p> <p>Pratt Avenue serves as a two-lane collector that connects Main Street to Silverado Trail on the north side of the City and provides access to both residential and winery uses, but lacks any north-south connections outside of Main Street. Despite its function as a major connection to Silverado Trail and as a bypass to congested conditions on Main Street, traffic is limited due to the poor sight distance and turning radius on the narrow Pratt Avenue Bridge that crosses the Napa River. It is about 40 feet wide in the vicinity of SR 29. Pratt Avenue is stop sign controlled on its approach to SR 29 and the westbound approach lane is 20 feet wide, allowing left and right turning vehicles to separate. Fronting Vineyard Lodge, the Pratt Avenue travel lanes are about 25.5 feet wide, and along the north side (the Vineyard Lodge frontage), there is a 13-foot wide, 160+-foot long parking bay. Sidewalks are in place fronting the project site, but sidewalks are discontinuous along the north and south sides Pratt Avenue.</p> <p><u>Public Transit</u></p> <p>Public transit service is readily available throughout Napa County. The primary transit service in Napa County is provided by the VINE, a fixed-route bus service providing service to Calistoga, St. Helena, Napa, American Canyon, Yountville, and parts of unincorporated Napa County. Two routes pass through St. Helena along S.R. 29: routes 10 and 29. Route 10 provides service from Calistoga to Napa, including stops in St. Helena, Rutherford and Oakville, running seven days a week, all day and including weekends. Route 29, the Vine Express, is a commuter bus operating from early morning through late afternoon, Monday through Friday. The Vine Express extends from Calistoga to the Vallejo Ferry Terminal and El Cerrito BART. Service hours are Monday through Friday, 5:20 am to 9:10 pm, Saturday 6:00 am to 8:10 pm, and Sundays 8:30 am to 7:00 pm. The bus stops nearest the project site are two Route 10 northbound stops located at the Pratt Avenue/SR 29 (Main Street) intersection and opposite CIA Greystone, on the east side of the highway.</p> <p>The St. Helena Shuttle is an on-demand shuttle service available for a fee of \$1.00 per trip. Service is available Monday through Friday 7:00 am to 9:00 PM, Friday and Saturday 7:00 am to 11:00 pm, and Sunday (May through November) 11:00am to 9:00 pm. VINE Go is an origin to destination, shared ride service which provides demand response for persons with disabilities in the cities of Calistoga, St. Helena, Napa, American Canyon, the Town of Yountville and the unincorporated areas of Napa County. VINE Go is the ADA paratransit service complementary to the fixed route operators and runs at times corresponding to the fixed routes.</p> <p><u>Bike and Pedestrian Facilities</u></p> <p>State Route 29 (Main Street) northbound from Pratt Avenue, is proposed as a link in the planned countywide Vine Trail Alignment, with a Class I Multi-Use Bike Path northbound, extending past the CIA-Greystone facility, north as far as Calistoga. Just east of S.R. 29 (Main Street) on Pratt Avenue, the Vine Trail Alignment loops north to connect to a proposed York Creek Class I Multi-Use Bike Path, then rejoins S.R. 29 just north of Pratt Avenue. State Route 29 (Main Street) southbound is an</p> |                                                      |                                                    |                                    |                  |

| <p>existing Primary Class II Bike Route and is proposed to have a Class II Bike Lane.</p> <p>Eastbound Pratt Avenue between State Route 29 (Main Street) and the railroad tracks is proposed to have a Class II Bike Lane; through this segment, westbound Pratt Avenue is proposed to have a Class I Multi-Use Bike Path and is a link in the planned Countywide Vine Trail Alignment. Eastbound Pratt Avenue between the railroad tracks and Silverado Trail, which includes the portion of Pratt Avenue fronting the Vineyard Lodge site, is proposed to have a Class III Bike Route. These facilities would connect with matching improvements on State Route 29 (Main Street) north of Pratt Avenue, and on Silverado Trail north and south of Pratt Avenue. Sidewalks are in place fronting the project site, but sidewalks are discontinuous along the north and south sides Pratt Avenue.</p> <p><i>The 1993 St. Helena General Plan prescribed the following City Roadway and Intersection Impact Criteria to identify potential impacts from proposed development projects:</i></p> <p>(a) All signalized intersections in St. Helena should maintain LOS C except along Main Street, where LOS D is permitted. Exceptions to this policy are that lower service levels shall be permitted at any location where the existing LOS does not meet this standard and in which case the LOS cannot be worsened any further.</p> <p>(b) All unsignalized intersections must maintain LOS C. If the LOS degrades below LOS C, an evaluation of the need for traffic signalization shall be undertaken according to standard Caltrans signal warrants as described below. If signals are not initially warranted, the location shall continue to be monitored for signal warrants on a regular basis.</p> <p><u>Impact Analysis</u></p> <p><b>a. (Plan, Policy Ordinance: Circulation System) Less Than Significant Impact with Mitigation:</b> The Traffic Impact reports (TIR) prepared by Crane Transportation for the Greystone site and Vineyard Lodge Site (dated November 17, 2016 and November 2, 2016) reviewed onsite circulation and access, and evaluated the Project's traffic impacts on the surrounding circulation network including two intersections in the project vicinity. Specifically, the analysis evaluated traffic impacts at the following unsignalized intersections:</p> <ol style="list-style-type: none"> <li>1. CIA Driveway/ SR HWY 29 EB</li> <li>2. Pratt Ave/ SR HWY 29 EB</li> <li>3. Pratt Ave/ SR HWY 29 WB</li> </ol> <p>The TIS evaluated existing conditions, existing plus project conditions, baseline/baseline plus project conditions (Yr 2018), and future/ future plus project conditions (Yr 2035). As described below, under existing conditions, all intersections are operating unacceptably at LOS D or worse, with the exception of CIA Driveway/ SR HWY 29 EB which is operating at LOS "C" under the AM peak hour scenario. The intersection LOS continues to deteriorate under all scenarios without the project. With the project, study intersections will improve slightly with the exception of Pratt Ave/ SR HWY 29 WB, which will operate unacceptably under LOS "F" during the AM and PM Peak hour with and without the project under both scenarios for baseline and Future conditions.</p> <p><u>Trip Generation</u></p> <p>As proposed, the CIA Master Plan project is expected to result in a net reduction in traffic trips. There are two reasons for the net decrease:</p> <ol style="list-style-type: none"> <li>1. With the acquisition of Copia 49 faculty and employees (and associated traffic trips) will be transferred to Napa and seven new faculty positions will be added at the Greystone Campus. As such, traffic trips associated with the CIA at Greystone would be reduced by 42 roundtrips.</li> <li>2. The applicant proposes to increase the size of shuttles employed from 14 and 22 to 22 and 32 seats, on an as-needed basis, which would accommodate the increased number of students (approximately 100) and therefore, the increase in enrollment/ housing would have a negligible change to traffic trips.</li> </ol> |                                                      |                                                    |                                    |                  |

|  |                                             |                                           |                              |               |
|--|---------------------------------------------|-------------------------------------------|------------------------------|---------------|
|  | Potentially Significant Impact, Unmitigated | Potentially Significant Impact, Mitigated | Less Than Significant Impact | No New Impact |
|--|---------------------------------------------|-------------------------------------------|------------------------------|---------------|

Accordingly, the project is expected to generate - (15) AM Peak Hour trips and -(21) PM Peak hour trips between Greystone and the Vineyard Lodge site. All new students are expected to reside at the Vineyard Lodge Housing site and therefore, no increase in students living off campus is expected. As such, there is no expected increase of trips generated by students living off campus.

Existing Conditions

With the exception of the CIA Driveway/ SR HWY 29 EB under the AM peak hour, all study intersections are operating unacceptably at LOS D or below during Am and PM peak hour traffic. With the addition of project-related trips to the existing conditions scenario, it is anticipated all study intersections will continue operating at the current level of service with very slight reductions in the seconds of delay. In accordance with 1993 GP significance criteria, if LOS of an unsignalized intersection degrades below LOS C, signal warrants shall be performed to determine need for signalization. According to the analysis, the intersections do not meet signal warrant thresholds under existing conditions.

**Table 4**  
**Summary of Existing and Existing plus Project Peak Hour Intersection LOS Calculations**

| Study Intersection Approach  | Existing Conditions                       |     |         |     | Existing plus Project |     |         |     |
|------------------------------|-------------------------------------------|-----|---------|-----|-----------------------|-----|---------|-----|
|                              | AM Peak                                   |     | PM Peak |     | AM Peak               |     | PM Peak |     |
|                              | Delay                                     | LOS | Delay   | LOS | Delay                 | LOS | Delay   | LOS |
| 1 CIA Driveway/ SR HWY 29 EB | 20.6                                      | C   | 29.3    | D   | 19.8                  | C   | 25.2    | D   |
| 2 Pratt Ave/ SR HWY 29 EB    | Driveway Intersection not yet operational |     |         |     |                       |     |         |     |
| 3. Pratt Ave/ SR HWY 29 WB   | 30.3                                      | D   | 39.3    | E   | 30.5                  | D   | 39.6    | E   |

Baseline Conditions

The project’s TIS reviewed baseline conditions (Yr 2018) in order to assess existing conditions in conjunction with projects that are expected to begin generating traffic in the foreseeable future (within two to three years). As shown in Table 5, under the “Baseline” scenario, all intersections will continue to operate unacceptably with the exception of the CIA Driveway/ SR HWY 29 intersection, which is expected to operate acceptably at LOS C under the AM peak hour scenario. Under “Baseline plus Project (YR 2018)” conditions, Table 5 shows that study intersections are expected to operate unacceptably with the exception of CIA Driveway/ SR HWY 29, during the AM peak hour which is projected continue operating acceptably at LOS C.

The project’s contribution to the study intersections would result in a minor improvement to the existing LOS, with the exception of Pratt Avenue/ SR HWY 29 WB where the addition of four (4) trips would further degrade the LOS under the AM and PM peak hours. Given the degraded LOS under Baseline conditions, a warrant analysis was undertaken. Under baseline conditions with and without the project, the intersections would not meet warrant thresholds. Given that the project would not degrade the LOS to the next lowest level at any of the study intersections impacts would be less than significant.

**Table 5**  
**Summary of Baseline and Baseline plus Project Peak Hour Intersection Calculations ( YR 2018)**

| Study Intersection Approach   | Baseline Conditions |     |         |     | Baseline plus Project |     |         |     |
|-------------------------------|---------------------|-----|---------|-----|-----------------------|-----|---------|-----|
|                               | AM Peak             |     | PM Peak |     | AM Peak               |     | PM Peak |     |
|                               | Delay               | LOS | Delay   | LOS | Delay                 | LOS | Delay   | LOS |
| 1 CIA Driveway/ SR HWY 29     | 21.8                | C   | 32.0    | D   | 20.9                  | C   | 27.2    | D   |

| <u>Future Conditions</u><br>The TIS reviewed future conditions for study intersections through applying a growth factor of 2.2 to the existing traffic volumes at all study intersections to project future volumes. As shown in Table 6 below, under future conditions without the project, it is expected that all study intersections will operate unacceptably at LOS E or worse. Under the Future plus Project scenario, Table 6 shows that, although the project would slightly improve the LOS at some intersections, all study intersections would continue to operate unacceptably at LOS “D” or worse. |                                                      |                                                    |                                    |                  |                     |     |         |     |

Signal Warrants  
Pursuant to 1993 General Plan significance criteria and at the direction of the City, the traffic consultant performed a traffic warrant analysis for the project study intersections. The warrants were based on the California Manual on Uniform Traffic Control Devices (CAMUTCD). The consultant applied the peak hour warrant (warrant 3) to the Pratt Avenue/SR HWY 29 intersection; which is often used as an initial check for signalization given the peak hour volume data is readily available and that warrant 3 is often the first one to be met. In addition, Warrant 1 (highest eight hour volumes) and Warrant 7 (Accidents) were performed. The TIS concludes that under scenarios *without* the project, the study intersections would not meet the signal warrant criteria for warrants 1, 3, or 7. Under the future plus project scenario, the projected volumes *approach* meeting signal warrant criteria 1 and 3, they do not, however, meet or exceed the thresholds. As such, signalization is not required under any of the traffic scenarios analyzed.

Tourist Generated Traffic Impacts  
As a tourist destination, the Greystone Campus does exhibit regular visitation by buses. While, this visitation may decrease with the relocation of many CIA activities to the former COPIA site in Napa, it is expected that buses will continue to arrive at the Greystone site at least on an occasional basis. Given the buses ability to impede traffic flow along SR 29 the applicant will be required to comply with **Mitigation Measure TRANS-1** which will require buses to make reservations and obtain prior approval from the Culinary Institute to visit the Greystone Campus. The requirement for prior approval shall be clearly indicated on the school’s website, promotional materials, and on signage at the entrance to Greystone prohibiting entry by buses without prior approval from the CIA. These measures will ensure that buses visiting the Greystone site will not inadvertently impede traffic flow along SR 29 and congestion will be further minimized. With **Mitigation Measure TRANS-1**, the projects impacts to the level of service at affected intersections will be less than significant.

Conclusion  
As described above, the project will not degrade any of the intersections to the next lowest level of service, particularly those exhibiting an LOS C or better, nor will the project generate volumes such that signal warrant criteria would be satisfied. Further, with **Mitigation Measure TRANS-1**, all buses visiting the Greystone site will require advance reservations to visit the Greystone Campus and this stipulation shall be clearly indicated on the CIA’s website and indicated on signage at the Greystone site entrance so as to prevent buses from causing traffic impediments. As such, with **Mitigation Measure TRANS-1**, traffic impacts are expected to be less than significant.

**(b) (Congestion Management Plan) No Impact:** Napa County has not adopted a Congestion Management Plan. As such, the proposed project would not exceed, either individually or cumulatively, a level of service standard established by the County

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| <p>Congestion Management Agency for designated roads or highways. No further analysis of this issue is required.</p> <p><b>(c) (Air Traffic Patterns) No Impact:</b> There are no airports in St. Helena. The closest airports are Angwin-Parrett Field (8.5 miles away), a public use general aviation airport located in Angwin; Napa County Airport, a public airport located in Napa (25 miles away); and Charles M. Schulz Airport (27 miles away), a public airport located in Santa Rosa. The project will have no impact on air traffic patterns, given the nature and location of the project, which is well outside of the established airport flight pattern.</p> <p><b>(d) (Design Feature Hazard) Less Than Significant Impact:</b> The project's TIS reviewed the adequacy of sight distance for vehicles exiting the project access driveways on Pratt Avenue; no changes are proposed for the Greystone driveway and therefore, it was not analyzed. Per the Caltrans <i>Highway Design Manual</i> the recommended site distance prescribed for minor-street approaches to driveways is based on stopping site distance using the approach travel speeds as the basis for determining appropriate site distance.</p> <p>Pratt Avenue exhibits a posted speed limit of 30 feet and therefore warrants a minimum stopping site distance of 200 feet. At higher speeds, up to 50 mph, the required stopping site distance would increase to 430 feet. At Pratt Avenue sight lines to the east and west extend beyond 500 feet and as such, site distance is expected to be adequate. The project's design provides sufficient set back from roadways and maintains visibility around corners. The preliminary landscaping plan considers visibility in the location of proposed trees and shrubbery. As proposed, there are no hazards that impede or block visibility or represent an incompatible design feature. Therefore, the project will have less than significant impact resulting from site design hazards or inadequate site distance.</p> <p><b>(e) (Emergency Access) Less Than Significant Impact:</b> The project's internal circulation plan has been reviewed and meets all requirements of the St. Helena Public Works &amp; Utilities and Fire Departments. Site circulation was determined to be adequate, including sufficient street widths to allow for fire truck turn around and sufficient access to residential buildings. Therefore emergency vehicle access is adequate and potential impacts will be less than significant.</p> <p><b>(f) (Transit, Bicycle, and Pedestrian Facilities) Less Than Significant Impact with Mitigation:</b> There is no proposed aspect of the project that would directly decrease performance or safety of existing alternative transportation facilities. However, the absence of bike lanes along Pratt Avenue inhibit the use of alternative transportation and opportunities exist to improve consistency with the City's Bike and Pedestrian Plan and are addressed in more detail below under "Bicycle Facilities".</p> <p><u>Public Transit</u></p> <p>The primary transit service in Napa County is provided by the VINE, a fixed-route bus service providing service to Calistoga, St. Helena, Napa, American Canyon, Yountville, and parts of unincorporated Napa County. Two routes pass through St. Helena along S.R. 29: routes 10 and 29. Route 10 provides service from Calistoga to Napa, including stops in St. Helena, Rutherford and Oakville, running seven days a week, all day and including weekends. Route 29, the Vine Express, is a commuter bus operating from early morning through late afternoon, Monday through Friday. The Vine Express extends from Calistoga to the Vallejo Ferry Terminal and El Cerrito BART. The bus stops nearest the project site are two Route 10 northbound stops located at the Pratt Avenue/SR 29 (Main Street) intersection and opposite CIA Greystone, on the east side of the highway.</p> <p>Additional public transit facilities include the St. Helena Shuttle, an on-demand shuttle service available for a fee of \$1.00 per trip, and VINE Go is the ADA paratransit service complementary to the fixed route operators and runs at times corresponding to the fixed route shared ride service which provides demand response for persons with disabilities in the cities of Calistoga, St. Helena, Napa, American Canyon, the Town of Yountville and the unincorporated areas of Napa County. Given that the project provides a regular and consistent shuttle service and will provide three rental cars to students, there is no expectation that the project would negatively impact current public transit facilities in St. Helena.</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| <p><b>Bike and Pedestrian Facilities</b></p> <p>State Route 29 (Main Street) northbound from Pratt Avenue, is proposed as a link in the planned countywide Vine Trail Alignment, with a Class I Multi-Use Bike Path northbound, extending past the CIA-Greystone facility, north as far as Calistoga. Just east of S.R. 29 (Main Street) on Pratt Avenue, the proposed Vine Trail Alignment loops north to connect to a proposed York Creek Class I Multi-Use Bike Path, then rejoins S.R. 29 just north of Pratt Avenue. State Route 29 (Main Street) southbound is an existing Primary Class II Bike Route and is proposed to have a Class II Bike Lane.</p> <p>Eastbound Pratt Avenue between State Route 29 (Main Street) and the railroad tracks is proposed to have a Class II Bike Lane; through this segment, westbound Pratt Avenue is proposed to have a Class I Multi-Use Bike Path and is a link in the planned Countywide Vine Trail Alignment. Eastbound Pratt Avenue between the railroad tracks and Silverado Trail, which includes the portion of Pratt Avenue fronting the Vineyard Lodge site, is proposed to have a Class III Bike Route. These facilities would connect with matching improvements on State Route 29 (Main Street) north of Pratt Avenue, and on Silverado Trail north and south of Pratt Avenue. Sidewalks are in place fronting the project site, but sidewalks are discontinuous along the north and south sides Pratt Avenue.</p> <p>In order to promote connectivity between the Vineyard Lodge Housing Site, Greystone Campus, and basic services and amenities in Downtown St. Helena, and to comply with the intent of the St. Helena Bicycle Plan, 2012, <b>Mitigation Measure TRANS-2</b>, will require that the applicant install a Class II Bike Lane along westbound Pratt Avenue in between the project site and the intersection with Main Street (SR29) and restripe for a fog line along the eastbound side of Pratt. It is determined that the requisite bike lane improvement would promote use of alternative forms of transportation while providing safe connectivity and also retaining the scenic qualities of the roadway. In addition, per <b>Mitigation Measure LU-1</b>, the applicant will provide at least five (5) on-demand bicycles to be used by residents of the Vineyard Lodge Housing Site which would provide a reliable source of bicycle transportation and help reduce reliance on fossil fuel burning vehicles. With <b>Mitigation Measures TRANS-1, TRANS-2, and LU-1</b>, included under the Land Use Section, the project will be consistent with the goals and objectives of the 1993 General Plan and St. Helena Bicycle Plan and impacts would be less than significant.</p> <p><b>Mitigation Measures:</b></p> <p>TRANS-1. Bus visitation shall require advance reservation and the size of buses allowed onto the Greystone property shall be limited to those which can successfully navigate the entrances to the property. This stipulation shall be clearly shown on (1) promotional materials and/or event flyers, (2) The Culinary Institute of America Website, and (3) On signage provided at the property entrance. The language employed shall be subject to review and approval by the Planning and Community Improvement Director in conjunction with the Chief of Police. Any physical signage shall be subject to the City's Sign Permit requirements enumerated in Municipal Code Section 17.148.</p> <p>TRANS-2. The applicant shall either (1) microsurface the full width of Pratt Avenue along the Project frontage extending to the intersection of SR29 (Main Street), introduce by thermoplastic a Class II bike lane along westbound Pratt Avenue (northern side) extending from the project site to the intersection of SR 29 (Main Street) and Pratt Avenue and restripe for a fog line along eastbound Pratt (southern side) extending from the project site to the intersection of SR 29 (Main Street) and Pratt Avenue in accordance with St. Helena Bicycle Plan, 2012, Appendix B – Design Standards for Class I, II, and III Bikeways OR (2) pay an in lieu fee of \$130,000 to provide funding for the City of St. Helena to perform the requisite improvements. For option (1) work shall be completed prior to Certificate of Occupancy for whichever building is constructed first or for option (2) the in lieu fee shall be paid prior to issuance of building permit.</p> |                                                      |                                                    |                                    |                  |

The volume of wastewater entering this facility is regulated by Napa County Department of Environmental Management. The Vineyard Lodge Housing site discharges to the City of St. Helena's wastewater treatment system. The City's existing wastewater treatment plant capacity is limited by permit to 0.5 mgd per day during the three dry months of the year. The City has been notified by the Regional Water Quality Control Board that treatment plant upgrades and an amended permit are required. The capacity issues of the wastewater treatment plant are a function of nutrient load (intensity of effluent) and dry weather flow (amount of effluent). The Regional Water Quality Control Board has not requested that there be a moratorium on new connections to the treatment plant.</p> <p><b>Solid Waste</b></p> <p>Solid waste (including recyclable material) generated during project construction and operation would be collected by</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| <p>Upper Valley Disposal and Recycling and delivered to the Clover Flat Landfill outside of Calistoga. The landfill is permitted to receive 600 tons per day and as of September 2012 had 2,870,000 cubic yards of capacity remaining,</p> <p><b>Water</b></p> <p>The City of St. Helena provides water to both project sites. The current water allotments authorized by the Agreements allocate an average of 15,900gpd to Greystone and 4,750gpd to the Vineyard Lodge Site. The total allotment across the two sites amounts to an average of 20,650 gpd or 23.1 acre feet per year. As part of the CIA Master Plan project, the applicant is requesting to rescind the two separate agreements and adopt a new joint water agreement which would redistribute the gross water allotment across the two sites while maintaining the current total allotment of 23.1 AF per year.</p> <p><u>Impact Analysis</u></p> <p><b>a.(Exceed Wastewater Treatment Requirements) Less Than Significant Impact:</b> The project is not expected to exceed wastewater treatment requirements set forth by the Regional Water Quality Control Board. To accommodate wastewater flows generated at the Greystone Campus, the existing onsite primary treatment would be used, including one 3,000 gallon grease interceptor, two 7,500 gallon settling tanks and one 6,000 gallon settling tank, and a pump sump and pump to convey the SS flows to the Markham Combined Wastewater System (MCWS) located at Markham Winery on SR 29, north of St. Helena. Improvements to the existing dishwashing and other kitchen facilities, including replacement with more water and energy efficient equipment, in addition to the closure of the WSGR would reduce the overall water and wastewater demand for the site. Taken together, the proposed improvements will lead to a net decrease in flows conveyed and treated at the MCWS and will be within the authorized discharge amount of 14,850 gpd.</p> <p>At the Vineyard Lodge Housing site, wastewater will be generated by dormitory restrooms, showers, and common areas. The project will utilize the existing sanitary sewer (SS). Effluent would undergo primary treatment in septic tanks and then be conveyed to the municipal sewer system through the existing 3" SS. The SS management system will be resized to accommodate a peak daily wastewater flow of approximately 9,520 gallons per day (gpd) which equates to a projected net increase of 1,960 gpd over existing capacity. The wastewater flows will be conveyed to the City of St. Helena Wastewater Treatment Plant, which has sufficient operating capacity to handle the additional flows generated at the Vineyard Lodge Housing site. Further, the project will be assessed the sewer impact fee which will help to maintain the existing system and contribute to the additional costs that will be incurred with the future expansion and upgrade of the wastewater treatment plant. Therefore, the project would not exceed wastewater treatment requirements and impacts would be less than significant.</p> <p><b>b.(New Wastewater treatment Facilities) Less Than Significant Impact:</b> There would be no new construction or expansion of domestic water or wastewater facilities as part of the proposed project. For the Greystone Campus, as stated above, wastewater flows are expected to decrease following project implementation. For the Vineyard Lodge Housing site, as stated above, the project would result in a net increase of 1,960 gpd of wastewater over existing flows. However, the City of St. Helena Wastewater Treatment Plant has sufficient operating capacity to handle the additional flows generated at the Vineyard Lodge Housing site. Further, a sewer impact mitigation fee will be assessed with the purpose of maintaining the existing system and to contribute to offset costs of future expansion and upgrade of the wastewater treatment plant. The sewer impact fee will be assessed against the dormitory project at the time of issuance of building permits, therefore, impacts would be less than significant</p> <p><b>c.(Require New Stormwater Drainage Facilities) Less Than Significant Impact:</b> New catch basin filters, storm drains, and a series of bio-retention facilities would be installed to accommodate stormwater flows at the Vineyard Lodge Housing site. The proposed stormwater facilities would follow the "Design Guidance for Stormwater Treatment and Control for Projects in Marin, Sonoma, Napa, and Solano Counties (DGSTC)", prepared for the Bay Area Stormwater Management Agencies Association (BASMAA). Bio-retention LID Facilities would be sized at a minimum of 4% of the equivalent tributary area, as specified in the Phase II Stormwater National Pollutant Discharge Elimination System (NPDES) Permit. Bio-retention LID</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|----------------------------------------------------|------------------------------------|------------------|
| <p>Facilities would vary in size depending on the impervious areas for which they serve and would be located adjacent to these areas. These facilities would be designed in accordance with the Bioretention Facility Design Criteria beginning on Page 4-3 of the DGSTC.</p> <p>Storm drains would be utilized throughout the project to direct stormwater from impervious areas, to the bioretention facilities at locations specified in the Stormwater Control Plan. The new pipes would be sized adequately to handle post project flow rates. Self-retaining areas would be designed in accordance with the criteria in “Areas draining to self-retaining areas” on page 4-2 of the DGSTC: a maximum ratio of two parts impervious to one part pervious area. Running parallel to the access drive, grass-lined interceptor swales would be utilized to convey and treat runoff from access drive. All swales would be designed to handle runoff from the 100-year storm event. In addition, the City of St. Helena collects Storm Drainage Impact Fees which are assessed based on the square footage of new impervious surfaces as a means to mitigating any potential storm drainage impacts generated by development. The proposed project is not expected to significantly increase runoff relative to the existing condition since the project site will be improved with an onsite storm drain system that conveys runoff to existing storm drain system with sufficient capacity. Therefore, the project is expected to result in less than significant impacts due to the expansion of existing storm water drainage facilities or construction of new facilities.</p> <p>Project activities at the Greystone Campus would be limited to the reconfiguration of interior uses and installation of a storage cave. Therefore, no new Stormwater facilities would be required at the Greystone Campus.</p> <p><b>d. (Sufficient Water Supplies) Less Than Significant Impact:</b> The CIA Campus currently operates under two separate water agreements. The current water allotments authorized by the amended Agreements allocate an average of 15,900 gpd to Greystone and 4,750 gpd to the Vineyard Lodge site. The total allotment across the two sites amounts to an average of 20,650 gpd or 23.1 acre-feet (AF) per year. Under the CIA Campus Master Plan, the applicant proposes to rescind the two separate agreements and adopt a new joint water agreement which would redistribute the gross water allotment across the two sites to accommodate the increase in housing at the Vineyard Lodge site, while maintaining the existing water allotment of 23.1af per year. Therefore, no new or expanded water entitlements are needed and impacts are considered less than significant.</p> <p><b>e. (Wastewater Treatment Capacity) Less Than Significant Impact:</b> As previously discussed under item a), the proposed improvements at the Greystone Campus will lead to a net decrease in flows conveyed and treated at the MCWS and will be within the authorized discharge amount of 14,850 gpd. Additionally, the City of St. Helena Wastewater Treatment Plant has sufficient operating capacity to handle the additional wastewater flows generated at the Vineyard Lodge Housing site. Therefore, the project will have less than significant impacts related to the adequacy or capacity of wastewater treatment facilities.</p> <p><b>f-g. (Landfill Capacity) Less Than Significant Impact:</b> During construction, the project would generate solid waste from building demolition, concrete and asphalt from the removal of existing impervious surfaces, and wood waste from tree removal. Consistent with the 2013 Cal Green Tier 1 Mandatory Measures, the applicant will be required to recycle or salvage at least 50 percent of nonhazardous construction and demolition waste and prepare a Construction Waste Management Plan that documents the diversion of materials as required by CalGreen. Accordingly, impacts associated with construction waste will be less than significant.</p> <p>At operation, the project would continue to generate additional solid waste. Although the waste stream generated by the project is expected to increase during construction and operation, it is not expected to exceed landfill capacity and is not expected to result in violations of federal, state, or local statutes and regulations related to solid waste. Therefore, implementation of the project will result in less than significant impacts to the local landfill’s permitted capacity for solid waste disposal, as well as federal, state, and local statutes and regulations.</p> <p><b>Mitigation Measures:</b> None Required.</p> |                                                      |                                                    |                                    |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Potentially<br>Significant<br>Impact,<br>Unmitigated | Potentially<br>Significant<br>Impact,<br>Mitigated | Less Than<br>Significant<br>Impact | No New<br>Impact |

| <b>XVII. Mandatory Findings of Significance.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                      |                                                    |                                    |                  |
| a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                      |                                                    | ✓                                  |                  |
| b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                      |                                                    | ✓                                  |                  |
| c. Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                      |                                                    | ✓                                  |                  |
| <p><b>a. (Degrade the Environment) Less Than Significant:</b> The project is consistent with the General Plan Land Use and goals, policies and programs. With implementation of mitigation measures set forth above under Aesthetics, Air Quality, Biological Resources, Cultural Resources, Geology and Soils, Land Use, Noise, and Transportation, the project's potential impacts would be reduced to levels below significance. As such, the project will not degrade the quality of the environment, reduce habitat, or adversely affect cultural resources. Therefore, the project will have less than significant impacts due to degradation of the environment.</p> <p><b>b. (Cumulatively Affect the Environment) Less Than Significant Impact:</b> As described in the analysis above, potential environmental impacts are expected to remain at, or be mitigated to, less than significant levels. The project does not increase the severity of any of the cumulatively considerable impacts from the levels identified and analyzed in the General Plan EIR. Therefore, the project's cumulative impacts will be less than significant.</p> <p><b>c. (Substantial Adverse Effect on Humans) Less Than Significant Impact:</b> As reflected in the analysis above for each environmental topic, the project does not have the potential to result in substantial adverse impacts to humans. Therefore the project will have less than significant impacts due to substantial adverse environmental effects.</p> |                                                      |                                                    |                                    |                  |

**Technical Appendices:** The following resources were prepared in order to further identify project specific parameters. Copies of these technical documents are incorporated herein by reference and are available for review during normal business hours at the City of St. Helena. Questions or requests to review any of the technical appendices listed below may be directed to the project planner, Lilly Bianco, at lbianco@cityofsthenela.org.

| <p>that all replacement trees cannot be accommodated within the proposed site plan. The final Landscape plan showing the location of replacement trees shall be subject to review and approval by the Planning and Community Improvement Director prior to issuance of building permit.</p> <p>BIO-2. The applicant shall comply with the recommendations of the "Tree Protection Guidelines and Specifications Developed for the Culinary Institute of America, 830 Pratt Avenue," prepared by Pacific Tree Care, September 2,2016.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Project Applicant | St. Helena Planning and Building Department | Prior to building permit issuance       |  |
| <p><b><u>CULTURAL RESOURCES</u></b></p> <p>CUL-1. If during the course of ground disturbing activities, including, but not limited to excavation, grading and construction, a potentially significant prehistoric or historic resource is encountered, all work within a 100 foot radius of the find shall be suspended for a time deemed sufficient for a qualified and city-approved cultural resource specialist to adequately evaluate and determine significance of the discovered resource, confer with tribal representative, as appropriate, and provide treatment recommendations. Should a significant archeological resource be identified a qualified archaeologist shall prepare a resource mitigation plan and monitoring program to be carried out during all construction activities.</p> <p>CUL-2. The project applicant shall authorize the Yocha Dehe Winton Nation Tribe or qualified archeological professional to observe and monitor earth-moving, grading, and/or excavation at the Vineyard Lodge Housing Site to the extent that such activities would disturb soil profiles located 10 to 15 feet below grade.</p> <p>CUL-3. In the event that paleontological resources, including individual fossils or assemblages of fossils, are encountered during construction activities all ground disturbing activities shall halt and a qualified paleontologist shall be procured to evaluate the discovery and make treatment recommendations.</p> | Project Applicant | St. Helena Planning and Building Department | Ongoing throughout project construction |  |

| <p>NOI- 1 Due to the proximity of sensitive receptors to the project sites, all construction activities shall be required to comply with the following and be noted accordingly on construction contracts:</p> <ol style="list-style-type: none"> <li>1. Construction Equipment Mufflers and Maintenance: All construction equipment powered by internal combustion engines shall be properly muffled and maintained.</li> <li>2. Idling Prohibitions: All equipment and vehicles shall be turned off when not in use.</li> <li>3. Unnecessary idling of internal combustion engines is prohibited.</li> <li>4. Equipment Location and Shielding: All stationary noise-generating construction equipment, such as air compressors, shall be located as far as practical from the adjacent homes.</li> <li>5. Acoustically shield such equipment when it must be located near adjacent residences.</li> <li>6. Quiet Equipment Selection: Select quiet equipment, particularly air compressors, whenever possible. Motorized equipment shall be outfitted with proper mufflers in good working order.</li> <li>7. Staging and Equipment Storage: The equipment storage location shall be sited as far as possible from nearby sensitive receptors.</li> <li>8. Noise Disturbance Coordinator: Applicant shall designate a "noise disturbance coordinator" who will be responsible for responding to any local complaints about construction noise. This individual would most likely be the contractor or a contractor's representative. The disturbance coordinator would determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and would require that reasonable measures warranted to correct the problem be implemented. The telephone number for the disturbance coordinator shall be</li> </ol> |  | <p>and Building Department</p> | <p>project construction</p> |  |

**City of St. Helena**

# **Culinary Institute of America Campus Master Plan**

Response to Comments  
on the  
Draft Initial Study/Mitigated Negative Declaration

February 21, 2017

## **RESPONSE TO COMMENTS ON THE DRAFT INITIAL STUDY AND MITIGATED NEGATIVE DECLARATION**

### **CULINARY INSTITUTE OF AMERICA CAMPUS MASTER PLAN GREYSTONE CAMPUS AND VINEYARD LODGE HOUSING**

This document provides responses to comments received on the Public Draft Initial Study/Mitigated Negative Declaration (IS/MND) for the Culinary Institute of America Campus Master Plan (hereinafter referred to collectively as the “project”). These responses address issues raised by the comments and clarify and reiterate discussion provided in the IS/MND. This document also includes corrections and additions to the IS/MND in response to comments received. These corrections and additions clarify or correct text in the IS/MND, but do not change the findings or conclusions of the analysis. This response to comments document along with the Draft IS/MND constitutes the Final IS/MND.

In accordance with the California Environmental Quality Act (CEQA) of 1970 (as amended) (California Public Resources Code 21000 et. seq.), the IS/MND was circulated for a 20-day public review and comment period from December 9 to January 3 and extended for another 20 days, until January 23, 2017, for a total comment period of 40 days. Twelve (12) comment letters were received on the IS/MND. To the extent possible, comment letters received outside of the public comment period were also responded to. As explained herein, in light of the whole record, the City of St. Helena finds that all potentially significant impacts have been adequately addressed in the IS/MND and this Response to Comments.

### **CEQA REQUIREMENTS**

CEQA Guidelines Section 15074 identifies the responsibilities of the Lead Agency when considering the adoption of a Negative Declaration or Mitigated Negative Declaration:

- (a) Any advisory body of a public agency making a recommendation to the decision-making body shall consider the proposed negative declaration or mitigated negative declaration before making its recommendation.
- (b) Prior to approving a project, the decision-making body of the lead agency shall consider the proposed negative declaration or mitigated negative declaration together with any comments received during the public review process. The decision-making body shall adopt the proposed negative declaration or mitigated negative declaration only if it finds on the basis of the whole record before it (including the initial study and any comments received), that there is no substantial evidence<sup>1</sup> that the project will have a significant effect on the environment and that the negative declaration or mitigated negative declaration reflects the lead agency’s independent judgment and analysis.

Consistent with CEQA requirements, the City of St. Helena has reviewed and considered all comments received on the IS/MND. CEQA does not require the lead agency to prepare a response to public comments received on a Negative Declaration or Mitigated Negative Declaration. Nevertheless, the City of St. Helena has prepared this document to fully disclose all public and agency comments received and to provide responses to those comments.

---

<sup>1</sup> “Substantial evidence” includes facts, fact-related reasonable assumptions, and expert opinions based on facts. It does not include arguments, speculation, unsubstantiated opinion or narrative, clearly inaccurate or erroneous evidence, or socioeconomic impacts not related to the physical environment. (Pub. Res. Code Secs. 21080(e), 21082.2(c); Guidelines § 15384).

## ORGANIZATION OF THIS DOCUMENT

Section 1 includes a “List of commenters on the Draft IS/MND.” The comments received on the Draft IS/MND and responses to those comments are included in Section 2, “Responses to Public Comments.” Section 3 provides, “Revisions to the IS/MND,” which includes corrections and additions to the IS/MND. Corrections and additions to the IS/MND are shown in underline for new text added and in ~~striketrough~~ for text that was deleted. Section 4, “Summary” contains a summary of this responses-to-comments process and subsequent action by the City of St. Helena regarding the project.

### 1. LIST OF COMMENTERS ON THE DRAFT IS/MND

The MND was circulated for a 40-day public review period that began December 9, 2016 and concluded on January 23, 2017. The City of St. Helena received a total of 12 comment letters on the IS/MND (see commenters 1-12 below). Written comments received during the public review of the IS/MND were from the individuals listed below:

1. Tom Thurmond, December 23, 2016
2. Tom Belt, December 23, 2016
3. Celia Lenson, December 26, 2016
4. George Caloyannidis, December 26, 2016
5. Donna Hinds, January 11, 2017
6. Tom Rinaldi, January 11, 2017
7. Dianna Varozza, January 17, 2017
8. D Packman, January 9, 2017
9. Carol Norfleet, January 18, 2017
10. Anthony Micheli, January 13, 2017.
11. Paul Bertoli, January 19, 2017
12. Priscilla Dell, January 24, 2017

Section 2, below, provides the City’s responses to comments received. A number of written comments received conflate points and opinions relevant to the project’s merits with points pertinent to the potentially significant environmental effects of the project. As required under CEQA, the Response to Comments focuses on points relevant to the environmental review and limits discussion of comments related to the project’s merits and which do not directly relate to the adequacy of the environmental document. Pursuant to CEQA Section 15073, a lead agency is not required to prepare formal written responses to comments on a mitigated negative declaration. Nonetheless, the City has prepared formal responses in an effort to provide a greater level of clarity and disclosure.

Comment letters received on the IS/MND involved variations of many of the same themes. To avoid redundancy and fully address all comments and concerns, the City has prepared “Master Responses,” which serve as topical responses to address those comments replicated across comment letters. The Master Responses are followed by responses to individual comments letters and which address points not covered under any Master Response. The City reviewed and

considered all comments received. In no instance did the comments result in the identification of a new or previously unidentified significant impact.

**Master Responses on the IS/MND centered on the following issues:**

1. Aesthetics
2. Public Utilities
3. Traffic
4. Safety
5. Project Alternatives
6. Preparation of an EIR

**2. RESPONSE TO COMMENTS RECEIVED**

**MASTER RESPONSE 1. AESTHETIC IMPACTS**

*The commenters assert that the building(s) proposed for 830 Pratt Avenue will adversely impact existing view sheds and that the scale and height are inconsistent with the rural character of the neighborhood and would cause an adverse impact to the visual environment.*

As described on page 13 of the IS/MND, the City of St. Helena has not identified any specific vistas or viewsheds subject to protection, but rather, states that the sense of a strong connection to the surrounding agricultural open space and hillsides should be preserved in the future and that views of Vineyards, hillsides, creeks and major landscape features should be maintained. Consistent with the requirements of CEQA Section 15125, projects are to be analyzed against baseline conditions, which is generally interpreted to mean the physical condition existing at the time the environmental document is prepared *and/or* in limited circumstances, the physical condition projected to exist when a project becomes operational. Accordingly, the baseline conditions against which the proposed project was analyzed include a previously developed site in an otherwise agricultural and residential area with two existing dormitories, one to two stories in height, and exhibiting a total of 27,662 square feet and a parking lot with 85 spaces. The subject site is directly proximate to a series of three water treatment ponds (northeast of the site), and the Beringer Winery production facility that includes warehouses, offices, and a tank farm. At present, the site provides for intermittent views of surrounding vineyards and hillsides located to the east and west.

Pursuant to CEQA, a project may cause a significant impact to the visual environment if it would, amongst other things, have a *substantial* adverse effect on a scenic vista or substantially degrade the existing visual character or quality of the site and its surroundings. To discern whether or not the project would cause a substantial adverse impact to a scenic vista or existing visual environment, the applicant prepared a Visual Impact Assessment based on the Bureau of Land Management methodology (**Appendix U of the IS/MND**). The Visual Impact Assessment evaluated modifications to the aesthetic environment for the foreground, mid-ground and background views from eight representative viewpoints and in relation to seven landscape components, namely, landform, vegetation, water, color, adjacent scenery, scarcity, and cultural modifications. It was determined that in most instances, the project would not measurably alter the viewers' perception of the visual environment, or degrade or obstruct existing scenic vistas i.e. the site would continue to read as multi-story dwelling units (dormitories) in an otherwise agricultural and residential area and continue to provide intermittent view of the surrounding agricultural areas and hillsides.

Certain viewpoints along Pratt Avenue, namely, VP1, VP4, and VP6 (as set forth in the Visual Impact Assessment, Appendix U of the IS/MND, would be subject to a greater level of change primarily due to the replacement of surface parking with buildings B and C. Nevertheless, it was concluded, based on the Visual Impact Assessment, that new construction would be of a scale and character consistent with the existing Vineyard Lodge II and that building design and colors will serve to limit changes to the visual environment. Last, mitigation measure AES-1 was introduced to ensure that the final landscape plan will exhibit a level of vegetative screening commensurate with that proposed, which will screen new buildings and therefore sufficiently limit visual changes to a less than significant level. Accordingly, the project is not expected to cause a *substantial* adverse effect on a scenic vista or *substantially* degrade the existing visual character or quality of the sites and its surroundings relative to the existing condition and impacts would be less than significant. No further analysis is therefore warranted.

#### MASTER RESPONSE 2. PUBLIC UTILITIES

*Commenters assert that the Crinella pump station and wastewater Treatment Plant are inadequate to serve the project. In addition, commenters have indicated a concern related to adequacy of potable water supplies and presumed use of groundwater.*

Under CEQA, a project may cause a significant impact if it would, "require or result in the construction of new water or wastewater facilities, the construction of which could cause significant environmental effects." As described on page 56 of the IS/MND under impact 16(B), the Vineyard Lodge project would result in a net increase of wastewater relative to existing conditions. However, the applicant is proposing on-site retention and treatment such that there would be no increase in instantaneous peak flows and therefore the loads placed on the sewer system would be largely consistent with those existing. This theoretical assumption will be confirmed pursuant to condition of approval No.45, which requires the applicant perform a sewer capacity study.

In addition, the applicant is subject to a sewer impact fee assessed with the purpose of funding future upgrades and expansions of the wastewater collection system, treatment plant and/or associated pump stations. The assessment of development impact fees constitutes a uniformly applied development standard which is reflected as a condition of approval. It is presumed that impact fees will be imposed on the project and because the assessment of mandatory impact fees would cover the project's fair share contribution, any impacts subject to said fees would be less than significant and therefore no mitigation is required.

It should be further noted that, under state law, impact fees may only be collected to cover the impact of new development on existing infrastructure. Impact fees cannot be used to correct "existing deficiencies". Funding for maintenance and improvements to the City's wastewater infrastructure to correct existing deficiencies is from Wastewater utility rates (paid by consumers).

#### **Crinella Pump Station**

The Crinella Pump station serves properties located in northeast St. Helena. According to available records, the Crinella Pump station has undergone recent upgrades pursuant to mitigation imposed on the Los Alcobas Hotel project, which included the installation of a new 6" force main (to replace the existing 4" main) and 10" containment pipe that extends a distance of 1,210 linear feet from the Crinella pump station to the existing sewer system at the intersection of Railroad and Fulton Avenues.

To address the net increase in effluent, the CIA project applicant proposes upgrades to the SS primary treatment system which will include new septic and pump tanks. In addition, a new equalization pump tank will be used to collect and store effluent. The equalization pump will utilize onsite storage capacity and equivalent pumps to maintain the same instantaneous peak flow of the existing facility. As a result, there will be *no* increase to the instantaneous peak flow rate to the Crinella Pump Station relative to that which currently exists. No increases in peak flows will occur from implementation of the proposed expansion of the dormitories. Similarly, timed dosing (conveyance) of primary treated effluent during off-peak hours would further reduce loads placed on the pump station and Wastewater Treatment Plant. The retention of the same instantaneous peak flow and timed dosing during off-peak hours will prevent any adverse impacts to the Crinella pump station. When considered individually *and* in conjunction with other approved/ reasonably foreseeable projects, the expansion of the Vineyard Lodge Housing is not expected to place a demand on the Crinella pump station that could not be accommodated by the current system.

#### **Wastewater Treatment Plant**

From the Crinella Pump stations, flows are conveyed to the St. Helena Wastewater Treatment Plant. The Treatment Plant exhibits a dry weather treatment capacity of .5 million gallons per day (MGD) and a wet weather capacity of upwards of 2.8 mgd. On average, the WW Treatment plant treats approximately 400,000 gallons per day. Accordingly, the expected increase in flows generated by the subject project, which equate to 3,232 gpd, would be considered minimal. Further, because the project will provide on-site treatment, the effluent conveyed to the WW Treatment plant is expected to have 45 percent less Biological Oxygen Demand (BOD) relative to typical domestic water. Likewise, on-site treatment will also reduce Total Suspended Solids (TSS) by 80 percent relative to typical domestic water. Given that the net increase in effluent constitutes a relatively negligible amount and that the project applicant proposes primary on-site treatment, the loads placed on the wastewater treatment plant are minimal and not expected to generate an adverse impact.

Commenters allude to the fact that the California Regional Water Quality Control Board has ordered that upgrades be made to the City's Wastewater and Treatment Plant as a basis for the asserting that the sewer systems is inadequate to accommodate the proposed project. As a condition of 2016 NPDES permit reissuance, the City must come into compliance with current effluent limits for BOD and TSS by the year 2021. The NPDES permit authorizes discharge into the Napa River (a non-tidal waterway) given the absence of other feasible alternatives, *with* the stipulation that the City meet more stringent standards for BOD and TSS which are attainable by implementing more advanced secondary treatment. The city has until 2021 to come into compliance with the effluent limits and in the meantime is required to meet "interim" effluent limits.

Given that the amount of effluent generated by the subject project is, in relative terms, a minimal amount and that the project would perform primary on-site treatment to significantly reduce the level of BOD and TSS, the loading capacity placed on the Wastewater Treatment plant can be accommodated and the project would not cause the Wastewater Treatment Plant to exceed any of the effluent limits imposed on the facility now or in the current permit term. Further, the applicant will be assessed a sewer impact fee between 71 cents/ sq.ft. (Multi-Family Residential) to 94 cents/Square foot (lodging), equating to a total assessment value between \$18,172.45 and 24,059.30. The sewer (wastewater) impact fee accounts for the costs associated with maintenance and improvement to the Wastewater Treatment Plant and Sewer Collection System in order to support new development. With sewer system upgrades proposed

by the project and the assessment of impact fees, the project is not expected to exceed or otherwise negatively impact the existing sewer system and infrastructure.

To conclude, given that the project would not increase the instantaneous wastewater peak flows of the site nor exceed the available capacity or effluent limits of the St. Helena Wastewater Treatment Plant and that the applicant would also pay the sewer impact fee which is commensurate with their fair share contribution, impacts related to wastewater would be less than significant. While no further analysis is warranted, the IS/MND will be updated to clarify and expand on the analysis to more accurately represent the project's relationship with the Wastewater Treatment system. In addition, an incorrect reference to the peak daily wastewater flows and anticipated increase will be corrected. The following changes to the language included on page 57 of the IS/MND, 16(a) will be made, as shown below:

**A. (Exceed Wastewater Treatment Requirements) Less Than Significant Impact:** The project is not expected to exceed wastewater treatment requirements set forth by the Regional Water Quality Control Board. To accommodate wastewater flows generated at the Greystone Campus, the existing onsite primary treatment would be used, including one 3,000 gallon grease interceptor, two 7,500 gallon settling tanks and one 6,000 gallon settling tank, and a pump sump and pump to convey the SS flows to the Markham Combined Wastewater System (MCWS) located at Markham Winery on SR 29, north of St. Helena. Improvements to the existing dishwashing and other kitchen facilities, including replacement with more water and energy efficient equipment, in addition to the closure of the WSGR would reduce the overall water and wastewater demand for the site. Taken together, the proposed improvements will lead to a net decrease in flows conveyed and treated at the MCWS and will be within the authorized discharge amount of 14,850 gpd.

At the Vineyard Lodge Housing site, wastewater will be generated by dormitory restrooms, showers, and common areas. The project will utilize the existing sanitary sewer (SS). Effluent would undergo primary treatment in septic tanks and then be conveyed to the municipal sewer system through the existing 3" SS. The SS management system will be resized to accommodate a peak daily wastewater flow of approximately ~~9,520~~ 9,605 gallons per day (gpd) which equates to a projected net increase of ~~1,960~~ 3,232 gpd over the existing ~~capacity~~ average recorded flow of 6,373. Effluent will undergo primary treatment in septic tanks, which will produce effluent that is of higher quality than residential wastewater. A new equalization pump tank will be used to collect and store effluent. The equalization tank will provide approximately 12.5 hours of retention time at the anticipated peak daily flowrate of 9,520 gpd, and is sufficiently sized to allow for only off-peak discharge to the City's sewer system. The equalization pump will utilize on site storage capacity and equivalent pumps to maintain the same instantaneous peak flow discharge as the existing facility. As a result, there will be no increase to the instantaneous flow rate to the City sewer system and therefore no adverse effect on the sewer system capacity. No increases in peak flows are proposed to the City sewer system, and the timed dosing of primary treated effluent during off-peak hours would prevent any adverse impacts to the City sewers.

The wastewater flows will be conveyed to the City of St. Helena Wastewater Treatment Plant, which has sufficient operating capacity to handle the additional flows generated at the Vineyard Lodge Housing site. Further, the project will be assessed the sewer impact fee which will help to maintain the existing system and contribute to the additional costs that will be incurred with the future expansion and upgrade of the wastewater treatment plant. Therefore, the project would not exceed wastewater treatment requirements and impacts would be less than significant.

**b.(New Wastewater treatment Facilities)** Less Than Significant Impact: There would be no new construction or expansion of domestic water or wastewater facilities as part of the proposed project. For the Greystone Campus, as stated above, wastewater flows are expected to decrease following project implementation. For the Vineyard Lodge Housing site, as stated above, the project would result in a net increase of ~~1,960~~ 3,232 gpd of wastewater over existing flows. However, the City of St. Helena Wastewater Treatment Plant has sufficient operating capacity to handle the additional flows generated at the Vineyard Lodge Housing site. Further, a sewer impact mitigation fee will be assessed with the purpose of ~~maintaining~~ improving the existing system and to contribute to offset costs of future expansion and upgrade of the wastewater treatment plant. The sewer impact fee will be assessed against the dormitory project at the time of issuance of building permits, therefore, impacts would be less than significant

#### Ground Water

*As stated above, several commenters purport that the proposed project will use groundwater and express concerns that there is not a sufficient level of groundwater in the aquifer to serve the subject project.*

As detailed on page 65 of the IS/MND, the CIA maintains two separate water agreements applicable to the Greystone Campus and Vineyard Lodge Housing Site. The current water allotments authorized by the Agreements allocate an average of 15,900 gpd to Greystone and 4,750 gpd to the Vineyard Lodge Site. The total allotment across the two sites amounts to an average of 20,650 gpd or 23.1 acre feet (AF) per year. As part of the CIA Master Plan project, the applicant is requesting to rescind the two separate agreements and adopt a new joint water agreement which would redistribute the gross water allotment across the two sites while maintaining the current total allotment of 23.1 AF per year.

The Greystone site has one existing well which may be used for landscape irrigation or domestic water use and will continue to be used as such under a new joint water use agreement. There is no new landscaping proposed for the Greystone site and no expectation that the project would result in a substantial increase to the amount of groundwater extracted from the onsite well. There are no groundwater wells at the Vineyard Lodge Housing Site and none are proposed. Rather, water supplies at the Vineyard Lodge Housing Site are provided by the City's municipal water supply, of which approximately 49% percent is sourced from Bell Canyon reservoir, 31% is provided by the City of Napa and approximately 20 % from Stonebridge Wells.

As specified in the IS/MND, the project will not result in a net increase to water use and will, like all water customers, be subject to water use restrictions imposed during dry years. Additionally, under the Water Agreements, the applicant will continue to be required to monitor and report City water use on a regular basis and be subject to penalties in the event that authorized water amounts are exceeded. Given the above, there is no expectation that the proposed project would exceed available water supplies or necessitate new or expanded water entitlements. Accordingly, no further analysis is warranted.

#### MASTER RESPONSE 3. TRAFFIC

*Commenters assert that the project would cause traffic impacts which may be cumulatively significant and that sufficiency of parking on the Vineyard Lodge Housing Site at 830 Pratt Avenue is inadequate.*

*Traffic impacts/ LOS delays*

The traffic analysis prepared by traffic consultant, Crane Transportation, was conducted in accordance with CEQA and appropriately determined that the project would not generate significant traffic impacts, cumulative or otherwise, and as detailed below.

The project's traffic impacts were evaluated consistent with the requirements of CEQA in Section 15, 'Transportation/Traffic,' of the IS/MND. The Traffic consultant, Crane Transportation, performed traffic counts on Thursday, May 12, 2016 for the period from 6:00 AM to 6:00 PM to establish the existing condition exhibited by the study intersections. Volumes were then seasonally adjusted consistent with Caltrans' PeMS (Performance Measurement System) peak season data for S.R. 29-128 to represent peak season conditions.

Traffic and intersection operations were evaluated using level of service calculations. Level of Service (LOS) provides for a qualitative description of operations that range from "LOS A," whereby the roadway exhibits excess capacity and little or no delay is present, to "LOS F," whereby the volume of traffic exceeds the capacity and generates long queues and excessive delays. Typically, "LOS E" represents "at capacity" conditions and "LOS F" represents "over capacity" conditions.

For side street stop-controlled intersections, such as that exhibited by the Pratt Avenue/ SR 29 intersection, operations are defined by the level of service and average control delay per vehicle (measured in seconds), with delay reported for the stop sign controlled approaches or turn movements. In an effort to evaluate the project's reasonably foreseeable impacts, traffic impacts were evaluated under existing, baseline (2018), and future (2035) scenarios.

As detailed in the Traffic Analysis, the significance criterion established by the 1993 St. Helena General Plan and applicable to the subject project reads, *"All unsignalized intersections must maintain LOS C. If the LOS degrades below LOS C, an evaluation of the need for traffic signalization shall be undertaken according to standard Caltrans signal warrants as described below. If signals are not initially warranted, the location shall continue to be monitored for signal warrants on a regular basis."*

Under existing conditions without the project, the Pratt Ave/ SR HWY 29 WB intersection exhibits an LOS "D" under the AM Peak hour and LOS "E" under the PM Peak Hour and therefore the level of service is *already* below that considered acceptable by the General Plan, which is LOS C. Under baseline and future scenarios, the intersection further degrades to LOS "F" under conditions *without* the project.

In accordance with the significance criteria applicable to the project, a warrant threshold analysis was undertaken to determine the need for signalization. There are 9 possible tests for determining whether a traffic signal should be considered for installation. As detailed on page 9 of the traffic Study (**Appendix Q**) These tests, called "warrants", consider criteria such as actual traffic volume, pedestrian volume, presence of school children, and accident history. The intersection volume data together with the available collision histories were compared to warrants contained in the Manual on Uniform Traffic Control Devices (MUTCD), Federal Highway Administration, 2014, California Supplement.

As stated in the Traffic Impact Report and on page 52 of the IS/MND, signal warrant thresholds were *not* met and therefore signalization is not needed and the project is not required to install signalization or otherwise mitigate for an impact. Accordingly, the Vineyard Lodge's contribution to traffic delay is determined not to be so substantial as to conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system and does not constitute a potentially significant impact necessitating mitigation.

The commenters' concerns related to the delay on Pratt Ave/SR Hwy 29 WB Intersection. While the traffic study does confirm the assertion that the Pratt Avenue/ SR Hwy 29 intersection exhibits a deteriorated LOS under all scenarios (existing, baseline, and future), the substantial delay is an existing condition and continues to occur under future scenarios both with *and without* the project. The project's contribution to the existing delay is not great enough to trigger the need for signalization. The need for signalization at the Pratt Avenue/SR 29 intersection will continue to be monitored as subsequent project's trigger the need for a traffic study/warrant analysis and as needed to inform the Napa Valley Transportation Authority (NVTA) circulation plan updates and Caltrans studies. Further, the project will be assessed a traffic impact fee which will help pay for circulation improvements to reduce the impacts of traffic generated by new development within the City. Finally, all subsequent projects subject to CEQA will be required to evaluate their respective traffic impacts and contributions to roadway delays and mitigate accordingly. Given the above, the IS/MND's conclusion that the project will have a less than significant impact and the determination that the project would not conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system remain valid.

#### *Cumulative Traffic Impacts.*

To determine whether impacts may be "cumulatively considerable" the City directed the traffic consultant to evaluate traffic under the existing, baseline, and future year scenarios. The baseline scenario accounts for traffic generated by "pipeline projects" or those which are approved and/or reasonably expected to be constructed in the next 2-3 years; the traffic study accounted for traffic generated by the Los Alcobas project; however, no other approved major projects were anticipated at the time the traffic study was prepared in November 2016. For the future year scenario, the traffic impacts included pipeline projects (Los Alcobas) *and* applied a 2.25 percent growth rate to reflect buildout of the General Plan in 2035.

Under CEQA, a traffic impact could occur if the project would (amongst other things) "Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system..." As stated above, the City's significance criterion applicable to the project is outlined in the General Plan, and reads: "*All unsignalized intersections must maintain LOS C. If the LOS degrades below LOS C, an evaluation of the need for traffic signalization shall be undertaken according to standard Caltrans signal warrants as described below. If signals are not initially warranted, the location shall continue to be monitored for signal warrants on a regular basis.*"

As detailed in the traffic study and MND, when the project's traffic impacts are combined with the anticipated traffic impacts of other past, present, and probable future projects in the area, they do not cumulatively increase traffic levels above the City's significance threshold ( i.e. warrant thresholds were not met under any of the scenarios). If this potential were to exist, the environmental document would be required to mitigate cumulative impacts. However, because, taken together, the existing, baseline, and future scenarios do not cumulatively exceed the significance thresholds, the projects traffic contributions are not "cumulatively considerable" meaning that the project does not have a potential to result in cumulative impacts and no further consideration of cumulative impacts is warranted.

#### Parking

*Commenters assert that the level of parking proposed for the Vineyard Lodge Housing expansion is not sufficient and that residents of the Vineyard Lodge will park along Pratt Avenue.*

A deficiency in parking does not in and of itself trigger a mandatory finding of significance nor is it necessarily considered a potential significant environmental impact; if however, the parking deficiency would contribute to or otherwise generate traffic congestion, safety hazards, etc., it may be a significant environmental impact. Because the Project and the proposed Vineyard Lodge Housing site has been planned and proposed to accommodate the transportation needs of its students through the provision of designated spaces and in conjunction with other means enumerated below, there will be no direct or indirect parking related impacts that would cause a potentially significant impact on the physical environment and no further analysis is warranted.

As stated on page 17 of the Traffic Impact Report (**Appendix Q**), the Traffic Consultant, Crane Transportation, performed hourly on-site parking surveys on Thursday May 12, 2016, which was considered to be a “typical day” at the CIA Greystone campus and Vineyard Lodge Housing Site. As detailed in the Traffic Impact Report (TIR) (which is incorporated into the IS/MND), at maximum, 42 vehicles were parked in the 85 space parking lot at the Vineyard Lodge Housing site. East of the main building, in the service parking area, there was one to three service vehicles parked throughout the day. At all times there were 43 or more available parking spaces in the parking lot. It was noted that permits were not readily displayed and therefore, the site did not appear to be monitored for permit holders versus visitors. Based on information obtained from the applicant, it is understood that 31 parking permits have been issued to students and therefore, it is assumed that vehicles in excess of that belong to visitors. The purpose of the parking analysis was to determine the appropriate number of parking spaces to provide a sufficient level of off- street parking for residents; as such, the TIR did not account for vehicles parked off-site and/or along Pratt Avenue.

As stated above, for the existing 101 rooms at the Vineyard Lodge Housing Site, only 31 parking permits have been issued. As such, it is reasonably concluded that the parking counts from May 2016 reflect the 31 permitted vehicles and approximately 10 visitor vehicles. With both resident and visitor vehicles, there remained an excess capacity of 43 parking spaces.

There is no reason to believe that the student to vehicle ratio would substantially change under the proposed project, namely because (1) the CIA retains authority to issue or not issue parking permits, (2) the project will be subject to a condition of approval stipulating that it may not issue more than 69 parking permits, and (3) the site is uniquely operated in that it provides frequent reliable transportation to and from the Greystone Campus and to other locations, as needed, will provide three on-demand rental cars, and per mitigation measure LU-1, will be required to introduce a scalable bike share program that may be expanded as demand necessitates. Mitigation Measure LU-1 specifies:

*“ To minimize reliance on vehicles, the applicant shall provide a minimum of five (5) on-demand bicycles to be available to residents on an as-needed basis. If there is an increase in student demand for bicycles beyond the number provided, the applicant is required to increase the number of bicycles available for dormitory residents to meet the demand. Bikes shall be maintained in good functioning condition and be readily accessible to residents. The applicant shall provide a written statement detailing how the on-demand bike service will function for review and approval by the Planning and Community improvement Director prior to building permit issuance. The bikes shall be made available for use upon certificate of occupancy for whichever building is constructed first.”*

By providing parking permits and spaces at a level consistent with the “typical” demand and complying with Mitigation Measures LU-1 which requires an on-demand bike program, the demand for parking is not expected to exceed that provided by the project. As such, the provision of 69 designated parking spaces consistent with the ratio currently exhibited by the

subject site, is reasonable and is not expected to cause an adverse physical impact on the environment.

Finally, in regards to on-street parking — parking is allowed along Pratt Avenue insofar as there is adequate shoulder widths (8 feet) and where adequate shoulder widths do not exist, parking is prohibited and denoted by red striping. Vehicles parked in appropriate locations along Pratt Avenue do not pose a safety hazard or otherwise generate a significant impact on the environment and therefore, no further consideration of this matter is warranted.

#### MASTER RESPONSE 4. SAFETY

*Commenters note the poor condition of the Pratt Avenue Roadway and indicate that its current condition is not sufficient to maintain safety and that the CIA should do more to remediate the unsafe road conditions.*

As stated on page 49 of the IS/MND, Pratt Avenue serves as a two-lane collector that connects Main Street to Silverado Trail on the north side of the City and provides access to both residential and winery uses. The condition of the Pratt Avenue roadway is an existing condition and would continue to deteriorate with *or without* the project. The project's contribution to roadway deterioration of Pratt Avenue is expected to be average and not exceptional relative to the contributions of other users.

The proposed project would result in an increase in the number of students residing at the Vineyard Lodge housing site and attending weekday classes at the Greystone facility. Regular shuttle service would continue to provide transportation between the Vineyard Lodge Housing site and the Greystone campus on weekdays, as students would not be allowed to use a personal vehicle to attend classes at Greystone as stated by the applicant and consistent with the current practice of students enrolled at the CIA. This prohibition will be detailed in the Transportation Management Plan required pursuant to Condition of Approval No. \_\_\_. Alternatively, some students may choose to walk or bike to classes. However, shuttle buses would continue to be provided from 5:30 am to 9:00 pm with no change in frequency of shuttle trips given the proposed increase in shuttle size. Three on-demand rental cars will be provided for non-school related trips. It is recognized that the increase in traffic trips generated by the project would contribute towards typical wear and tear of the roadway.

The CEQA Guidelines and recent case law, namely, *Dolan v. City of Tigard*, 512 U.S. 374 (1994), acknowledge that mitigation measures imposed on a project must have an "essential nexus" to a legitimate government interest and must bear a "rough proportionality" to a project's impacts; in other words, the mitigation must be related both in nature and extent to the impact of the proposed project.

The portion of Pratt Avenue that extends from the dormitories to the intersection with Main Street includes the section of roadway which would be most frequently used by the residents of the Vineyard Lodge Dormitory. To ensure that the applicant contribute their fair share towards the maintenance of the most readily affected portion of Pratt Avenue, mitigation measure Trans-2 would be imposed on the project and stipulates that, *"The applicant shall either (1) micro surface the full width of Pratt Avenue along the Project frontage extending to the intersection of SR29 (Main Street), introduce by thermoplastic a Class II bike lane along westbound Pratt Avenue (northern side) extending from the project site to the intersection of SR 29 (Main Street) and Pratt Avenue and restripe for a fog line along eastbound Pratt (southern side) extending from the project site to the intersection of SR 29 (Main Street) and Pratt Avenue in accordance with St. Helena Bicycle Plan, 2012, Appendix B – Design Standards for Class I, II, and III Bikeways OR*

*(2) pay an in lieu fee of \$130,000 to provide funding for the City of St. Helena to perform the requisite improvements.”*

There is no nexus to require the applicant to contribute towards repaving *all* of Pratt Avenue because the Project, as proposed, will not generate a substantial increase in trips along the entirety of Pratt Avenue and given that the deteriorated condition of Pratt is an existing condition. As such, repaving all of Pratt Avenue would be disproportionate to the impacts of the project. By Law impact fees can only be collected to cover the impact of new development on existing infrastructure. In other words, Impact fees cannot be used to correct “existing deficiencies”. Accordingly, the mitigation measure Trans-2, set forth in the MND is sufficient to offset project specific impacts and no changes are warranted.

To further clarify, normal street maintenance is performed by the City of St. Helena and may include upgrades to maintain pavement, striping, curb and gutter, street lighting, access ramps, sidewalks and storm drain infrastructure, etc. The City utilizes a computer-based program that helps prioritize roadway maintenance and construction projects based on current Pavement Condition Index and available funding. The program prioritizes roadway maintenance based on level of deterioration and public use. The list of projects are then vetted by City staff and presented to City Council for approval each year. Funding to undertake street maintenance is comprised of General Fund, gas tax, grants, sales tax, and Measure T funding (available 2018). Street maintenance projects programmed in the pavement management plan for Fiscal Year 2016/2017 and 2017/2018 do not currently include Pratt Avenue. However, Staff will develop a new two year pavement management plan in conjunction with the Fiscal Year 2017/2018 budget. This pavement management plan will include more funding than the recent past due to new funding anticipated from Measure T in 2019. Measure T is expected to provide over \$600,000 per year to the City of St Helena to be used towards maintenance of streets and sidewalks.

#### MASTER RESPONSE 5. PROJECT ALTERNATIVES

*Commenters ask that alternative sites, including the Greystone Campus, be considered to accommodate housing.*

Mitigated Negative Declarations do not require the consideration of alternatives and as such, the scope of the CEQA review was limited to the proposed project. Where an Initial Study establishes that a project will not create substantial or potentially substantial adverse changes to the physical conditions within the area of the project, a negative declaration or mitigated negative declaration is appropriate. Here, the required mitigation measures ensure that the Project will not create significant environmental impacts and as such, the environmental document includes those elements required of an MND: A brief description of the project, location, and proponent's name (CCR §15071[a,b]), proposed finding that the project will have no significant effect (CCR §15071[c]), initial study documenting reasons supporting the finding (CCR §15071[d]), and mitigation measures to avoid potentially significant effects (CCR §15071[e]). Negative declarations and mitigated negative declarations do not require analysis of project alternatives because the project as proposed will not have a significant environmental impact. Thus, no alternative sites were required to be analyzed as a part of the Project's environmental review.

#### MASTER RESPONSE 6. PREPARATION OF AN EIR

*Commenters assert that that the project may result in potentially significant impacts, requiring the City of St. Helena to prepare an EIR to comply with CEQA.*

Based on the whole record before the City of St. Helena including the Initial Study, all potentially significant impacts can be mitigated to less than significant levels. Therefore, an MND is the appropriate level of environmental review.

The commenters do not detail *how* the project will result in significant impacts nor detail how or why mitigation measures are insufficient. Likewise, there is no specificity as to what significant impacts the project would generate. None of the comment letters received and included herein present a fair argument based on substantial evidence that the Project may have a significant impact on the environment.

“Substantial evidence” includes facts, fact-related reasonable assumptions, and expert opinions based on facts. It does not include arguments, speculation, unsubstantiated opinion or narrative, clearly inaccurate or erroneous evidence, or socioeconomic impacts not related to the physical environment. (Pub. Res. Code §§21080(e), 21082.2(c); Guidelines § 15384). CEQA § 15204(c) advises reviewers that comments should be accompanied by factual support: Reviewers should explain the basis for their comments, and should submit data or references offering facts, reasonable assumptions based on facts, or expert opinion supported by facts in support of the comments. Pursuant to § 15064, an effect shall not be considered significant in the absence of substantial evidence. At the drafting of this Response to Comments no such factual support has been provided that raises a fair argument that the Project, as proposed, may have a significant impact on the environment.

The City of St. Helena as the Lead Agency, has duly considered all comments received in response to the Initial Study and Mitigated Negative Declaration (IS/MND). The City of St. Helena finds that the IS/MND document itself, and the Lead Agency’s responses to comments, are adequate in evaluating potential impacts of the subject project. The City of St. Helena finds that none of the comments on the IS/MND are supported by “substantial evidence” in light of the whole record to create a fair argument as to the significance of any particular impact, either individually or cumulatively, as all significant impacts are either avoided or reduced to less-than-significant levels.

Impacts will be reduced to less-than-significant levels through the following: implementation of the mitigation measures described in the IS/MND and this Response to Comments document; Conditions of Approval, which will be required by the City of St. Helena during the permit process; and compliance with City of St. Helena Ordinances and uniformly applied development standards.

The City of St. Helena has determined that the project does not meet any of the conditions under CEQA Section 15073.5, as described in Section 4.0 Summary below. Therefore, recirculation of a revised IS/MND or the preparation of an EIR is not required. Consistent with the CEQA Guidelines, this response to comments document clarifies the information and analyses in the IS/MND. As such, the IS/MND along with the response to comments achieves the intent of CEQA by disclosing all potential impacts of the project and identifying feasible mitigation measures that reduce impacts to levels below significant..

## INDIVIDUAL COMMENT LETTERS 1-12

---

Commenter: Tom Thurmond  
 Status: Individual  
 Date Received: December 23, 2016

---

### **Comment 1-1**

*“Pratt Avenue already has become very dangerous to drivers, bicyclists, and pedestrians. The road surface is in poor condition, which increases the likelihood of accidents leading to death or injury. Resurfacing the small portion from the CIA dorms to Main St. will not resolve that problem. The City needs to require a larger contribution from the CIA toward repaving ALL of Pratt Avenue...”*

**Response 1-1**

See Master Response 4.

**Comment 1-2**

*“There is a major problem with speeding along Pratt. Cars and trucks hurtle along day and night at speeds well over the limit, endangering other drivers, walkers, and bikers. The CIA expansion is bound to exacerbate this problem...”*

**Response 1-2**

The speeds on City arterials are regulated by state and local law which is enforced by the St. Helena Police Department. As detailed on page 46 of the IS/MND, The Vineyard Lodge Housing Site is located near the urban limit line and proximate to the police and fire stations and is well served by public services. Pratt Avenue is patrolled at a level consistent with any other secondary artery (St. Helena Police Department, 2016).. Speed limits are enforced on Pratt Avenue on a random basis (like the rest of the City) to prevent frequent drivers from establishing time periods considered “safe to speed”. The Police Department has further indicated that they increase patrols at the request of residents, which typically equates to a few times per year.

The St. Helena Police Department did not issue any speeding citations in 2015 and 7 citations were issued in 2016 — it is unknown whether these citations were issued to residents of Vineyard Lodge. The number of citations issued is not exceptional relative to other areas of the City. For example, in 2016, 10 citations were issued on Pope Street and 6 on Sulphur Springs. As detailed on page 11 of the Vineyard Lodge Traffic Impact Report (**IS/MND Appendix Q**), Accident data provided by the City of St. Helena from SWITRS (Statewide Integrated Traffic Reporting System) for the Pratt Avenue/Main Street intersection revealed that over the past five years, there have not been five or more reported crashes at this intersection within any 12-month period. At most, there were 4 crashes between 10/21/11 and 10/24/12. There were three reported crashes in 2011, one in 2012, two in 2013 and 2014, and one in 2015.

Residents of the Vineyard Lodge Housing site would continue to be subject to state and local laws regulating speeds along Pratt Avenue and elsewhere in the City. Further, that street will continue to be monitored by the St. Helena Police Department and all local and state laws will be enforced. There is no evidence indicating that the proposed project would cause unsafe driving conditions or exacerbate the problem of speeding along Pratt Avenue and no further analysis is warranted.

If speeding on Pratt is of particular concern to the neighbors it may benefit from further consideration. However, this is not a project specific impact and therefore will not be addressed further here.

**Comment 1-3**

*“It is now often nearly impossible to make a left turn from Pratt onto Main due to the heavy traffic on Main. The CIA expansion will further add to this problem. When you include the new Las Alcobas*

City of St. Helena

February 2017

*hotel on the west side of the intersection and the potential increase in traffic associated with Beringer's planned changes at their Pratt Avenue winery, it makes the situation even more dire. I realize that the Pratt/Main intersection is under State control. Nevertheless, the City should proactively be taking measures to mitigate the problem. With the current fiscal problems facing the City, it is incumbent on staff to require the maximum contribution from the CIA to help alleviate the problems they are making worse."*

**Response 1-3**

Please refer to Master Response 3 for a discussion of traffic impacts and discussion of cumulative traffic impacts. Traffic impacts are discussed in the IS/MND on pages 48 to 55.

Commenter: Tom Belt

Status: Individual

Date Received: Dec 23, 2016

---

**Comment 2-1**

*"The big bucks behind the CIA needs to pay for the increase in size of the waste water line that will be needed to handle the CIA's new dormitories and increased burden of affluent. The current waste water line is already at capacity that services the Crinella housing tract. Adding another 9,520 gallons a day will over burden the line. It's about time our city management makes these big developers pay for the costs of necessary up grades to our utility infrastructures rather than keep passing them on to the current water and waste water customers. All we hear about lately is how inadequate our waste water facility is and how poorly our city's reputation is with the State Water Board. And now the CIA wants to add to this problem. They need to pay!"*

**Response 2-1**

Please refer to Master Response 2.

**Comment 2-2**

*"Also, the article in the Star leads the reader to believe the CIA wants to reallocate its current water use by changing its agreements with the city. If I read the article correctly, it looks like the CIA wants to use more ground water to make up for the demand at the dormitories. Does anyone meter the ground water currently being taken by the CIA? St. Helena has a moratorium on drilling new wells in the residential area of St. Helena, yet the city is okay with allowing the CIA to pump even more water from the ground. Come on St. Helena City Management, get your act together and make these businesses pay for the adverse impacts these developers and developments place on the residents who live here!"*

**Response 2-2**

Please refer to Master Response 2.

Date Received: December 26, 2016

---

**Comment 3-1**

13

City of St. Helena

February 2017

*“ CIA Landscaping: Since the structure will double in size, I hope the City will consider that the dorms have beautiful landscaping to mitigate the size of the building. Such as Trees and California Native plants”*

**Response 3-1**

The applicant is proposing a generous amount of landscaping as detailed on project plans, (IS/MND **Appendix K**). As evidenced by the Visual Impact Assessment (**Appendix U**) retention of the existing camphor trees located along the property frontage and the introduction of the landscaping depicted in the landscape plan, will provide a level of screening so as to reduce and soften the visual impact of the proposed buildings. To ensure that the landscape plan is properly implemented and that the type and amount of vegetation is commensurate with that approved, the project is subject to mitigation measure AES-1, which states that, “The final Landscape Plan and proposed vegetative screening shall be subject to review and approval by the Planning and Community Improvement Director prior to issuance of building permit so as to confirm consistency with approved plans.”. Accordingly, the analysis and associated mitigation adequately address the aesthetic concerns of the project.

**Comment 3-2**

*“2. CIA Parking: The City has not enforced parking restrictions on CIA. Sometimes, all of Pratt Street looks like a sea of cars. This is a displeased to the Community. No one likes looking at a parking lot considering the cost of the homes on Pratt Street.”*

**Response 3-2**

See Master Response 3.

**Comment 3-3**

*“3. Bike Lanes: The bikes lanes are a great idea. I hope the City restricts Pratt parking to the residents on Pratt Street because CIA abuses the parking on Pratt. Many residents have complained... If all the issues are addressed, I welcome the dorms.”*

**Response 3-3**

Please see Master Response 3.

---

**Comment 4-1**

*“ Is there a definition to the application as to who qualifies as a student. I have to assume that whatever that definition is, any other tenants such as staff, instructors etc would be excluded and that there is associated language to that effect.”*

**Response 4-1**

The project will be conditioned such that only students, meaning those who are actively enrolled in either the certificate or associate degree programs (1 and 2 years, respectively) may reside on the Greystone Campus or at the Vineyard Lodge Housing Site. This would preclude other tenant types. To avoid ambiguity, the condition will be written to specify exactly who qualifies as a student.

**Comment 5-1**

The traffic study is inadequate

**Response 5-1**

See Master Response 3.

**Comment 5-2**

The noise study is inadequate; baseline noise measurements were not representative of typical conditions.

**Response 5-2**

As detailed under Section 11 and on page 42 of the IS/MND, to characterize noise levels at the Vineyard Lodge Housing Site, a Noise Study was prepared by consultants, ICF International, on June 15, 2016. Noise monitoring was conducted on the Vineyard Lodge project site to characterize existing noise levels in the project area. The Napa Wine Train was not operating during this time and the existing housing facilities were not occupied because students were on break. The measured noise levels therefore represent the lowest noise levels likely to be encountered in the area. As such, the baseline noise levels against which the project's noise contributions were analyzed served as the *most conservative* method of evaluating noise impacts of the project. The analysis was adequate and no changes are needed.

**Comment 5-3**

A parking variance should not be issued

**Response 5-3**

See Master Response 3.

**Comment 5-4**

There will be adverse visual impacts

**Response 5-4**

See Master Response 1.

**Comment 5-5**

The increased population would generate adverse impacts.

**Response 5-5**

The analysis in the IS/MND accounts for the increase in population across all impact categories, but in particular, under Section 12. Population and Housing, IS/MND pages 45-46. As stated in the IS/MND under section 12. A project will normally have a significant environmental effect if it will displace a large number of people or induce substantial growth or concentration of population. The CIA Campus Master Plan involves an expansion in student enrollment from 200 to 300 students for a net increase of 100 new students plus the addition of seven new instructional staff. Concurrently, 49 employees would relocate to the recently acquired American Center for Wine, Food & the Arts (Copia) in the City of Napa, California. The net change in student and faculty at the Greystone Campus would amount to a net increase of 58 students and staff. The Vineyard Lodge Housing would be expanded by a net total of 123 student residents. Given that the project will result in a net decrease in faculty, while providing housing for the majority of students, the project is not expected to significantly impact the existing or future housing supply in St. Helena. Similarly, given the fact that the CIA will provide dormitories sufficient to house all new students, the project would not displace existing housing or people and any impacts associated with the increase in population would be less than significant. No further analysis is therefore required.

**Comment 5-6**

There would be adverse impacts to sewer and water

**Response 5-6**

See Master Response 2.

**Comment 5-7**

There was no evaluation of alternatives which would generate fewer impacts

**Response 5-7**

Please see Master Response 5.

**Comment 5-8**

The requested setback variance contradicts the General plan policies

**Response 5-8**

The General Plan Guidelines published by the State Office of Planning and Research interpret "consistency" as follows: "An action, program, or project is consistent with the General Plan if, considering all its aspects; it will further the objectives and policies of the General Plan and not obstruct their attainment." As such, the standard for analysis used in the Initial Study IS/MND is predicated on *general* agreement with the policy language and furtherance of the policy intent (as determined by a review of the policy context).

Variances provide a limited waiver from the explicit requirements of the zoning code insofar as exceptional circumstances exist and very specific findings can be made. Variance may be granted in order to provide property owners equality of treatment from their neighbors. As detailed in Municipal Code Section 17.172.010 the purpose of a Variance is to allow variation from the strict application of the terms of this title where, by reason of the exceptional narrowness or unusual shape of a specific piece of property, or by reason of exceptional size, shape, topographic conditions or other extraordinary situation or condition of such piece of property; or because of the use or development of lands immediately adjoining such property, the literal enforcement of the

requirements of this title would involve practical difficulties or would cause undue hardship. (Prior code § 27.445).

The commenter cited General Plan policy 5.3.3 in support of their assertion that the project is inconsistent with the General Plan. That policy is as follows:

5.3.3 Preserve right of way for future collector streets within the Planning Area of the City as follows:

- Starr Avenue from Pratt Avenue to Adams Street and from the Urban Limit Line to Dowdell Lane
- Mills Lane from SR 29 to Starr Avenue, including potential realignment with Grayson Avenue at SR 2
- Oak Avenue from Vidovich Avenue to Grayson Avenue

*The City recognizes that development may or may not proceed along the lines envisioned in this plan, and that some areas not currently identified for potential development may in fact precede those that are so designated. The intent of the right-of-way preservation designation is to clearly define the interest of the City in maintaining the option for extending its collector street system into these areas. Special setback areas shall be established along collector streets to allow for future widening.*

Review of the above policy indicates that it does not apply to Pratt Avenue, but rather applies to specific portions of (1) Starr Avenue, (2) Mills Lane, and (3) Oak Avenue. As such, there is no indication that the requested variance would be in direct or indirect conflict with any goal, policy or objective of the St. Helena General Plan and that the variance may still be found to be generally consistent with the overall intent of the General Plan and policies therein. No further analysis is needed.

Last, it should be noted the determination that the proposed project or a component thereof, is consistent or inconsistent with the General Plan 2025 policies is ultimately the decision of the City of the lead agency.

#### **Comment 5-9**

The applicant does not have access rights to vineyard road.

#### **Response 5-9**

The applicant has provided a signed access agreement detailing access rights across Vineyard Road which has been reviewed and approved by the Public Works Department. No further consideration is warranted.

#### **Comment 5-10**

The project requires an Environmental Impact report given the significant size and potential impacts of the project.

#### **Response 5-10**

See Master Response 6.

City of St. Helena

February 2017

Commenter: D & S Packman  
 Status: Individual  
 Date Received: January 9, 2017

**Comment 6-1**

*"We've lived a year with constant worker traffic and construction noise from building Los Alcobas Resort; plus, all the cars constantly shutting CIA people and parked outside this house more than just a few times a year - we counted over 40 instances."*

**Response 6-1**

Comment noted.

**Comment 6-2**

*"We had to call police because we had one girl from CIA DORMS enter our home at night and sleep partially on our couch - use our upstairs bathroom (a strange sleepwalking matter) which was horrifying."*

**Response 6-2**

The incident described above is understood to be an isolated event and not an occurrence reasonably expected to result from the proposed project. Discussion with the Police Department indicated that for the year 2016 police received a total of six (6) calls associated with Vineyard Lodge Housing. It is reasonable to assume that there may continue to be occasional incidents such as those listed below, but there is no reason to believe that they would be so significant or recurrent as to constitute a physical impact to the environment. No further consideration is warranted.

Incidents Related to Vineyard Lodge for the year 2016:

|          |                                                                                                                   |
|----------|-------------------------------------------------------------------------------------------------------------------|
| 05/07/16 | Fire Alarm Sounding, False Alarm                                                                                  |
| 06/02/16 | Vehicle burglary reported by student, report taken                                                                |
| 07/15/16 | Alarm heard in the area, security already on site, all ok                                                         |
| 10/05/16 | Fire alarm sounding, False alarm                                                                                  |
| 10/16/16 | Late report of Domestic Violence from Santa Clara PD, occurred 10/4/16 at the Dorms, report taken & charges filed |
| 12/19/16 | Agency assist at the Dorms, no details listed                                                                     |

**Comment 6-3**

*"Plus there is water running down our street constantly- I would say 70% of time we've been here, including recently before rain--such that we put the trash cans out almost every week in middle of large pool of running water, soaking our shoes each time."*

**Response 6-3**

Comment noted. This is not a project related issue and therefore will not be addressed here.

**Comment 6-4**

City of St. Helena

February 2017

*"Not complaining - just stating that enough is enough and if you add this massive project and residential facility to Pratt Ave - it's too much for the wonderful people who are paying a huge amount of money to live here expecting peace and serenity."*

**Response 6-5**

Comment noted.

---

**Comment 7-1**

*"We have lived on Pratt Ave for more than 35 years, and have seen remarkable changes-many for the worse for small town living. With the remarkable expansion of Beringer, the new (UGLY) hotel at Grandview with a forgettable name on Hwy. 29, the railroad activity to Charles Krug, the waste water aromas of the ponds, the noise of the large neighborhood wineries, increased traffic, faster and faster cars coming through, the erosion of the quality of the road surface to below 3rd world countries; we have seen our neighborhood heading to hell."*

**Response 7-1**

Comments are noted; however, the concerns enumerated above are not project specific and therefore will not be addressed here.

**Comment 7-2**

*The ridiculous expansion of the dorm on Pratt Ave. will be a real nail in the crucifix. These students are people from all over the country who drive out here, do not help our local populace, waste water like tourists, leave as soon as they can, and add no value to this town.*

**Response 7-2**

Comment noted ; however, the concerns enumerated above are not project specific and therefore will not be addressed here.

**Comment 7-3**

*Finally, it appears the CIA is slowing or shutting down the Greystone Bldg. in preference for Copia, Napa. Are they going to shuttle them to Napa? Leave the CIA dorm as it is, please. If not, name it The West Coast Trump Tower!*

**Response 7-3**

As detailed in the project description on page 2 of the IS/MND, The CIA originally envisioned the campus at Greystone to operate as a continuing education facility, but it has since evolved to serve solely as an occupational educational facility offering an Associate in Occupational Studies (AOS) degree program and certificate programs. In 2004 the CIA acquired the Vineyard Lodge Housing site at 830 Pratt Avenue to support the trend towards occupational education and provide affordable housing for students. Consistent with the requirements of the City's Municipal Code, the subject sites currently have active use permits (93-105 for the Greystone Campus; 2004-33 for the

19

City of St. Helena

February 2017

Vineyard Lodge Housing site). Associate level classes will continue to be held at the Greystone Campus and there are no plans for a shuttle to transport Vineyard Lodge Residents to the Copia location.

#### **Comment 8-1**

*"The Crinella Pump station was built in 1965. It was only to service the Crinella subdivision of about 100 homes. Now the CIA has tied in on Pratt, all the recently built million dollar homes on Pratt with guesthouse, now the Las Alcobas hotel, with no upgrades from any of these developers. Yet the station is #8 on the list of improvements of capital expenses by the new wastewater cost increases. Why are we the residents paying for this and not the developers that are burdening the system. The CIA is going from 4750 gals/day to 10,783 gals/day in to the Crinella Pump station.*

*The enrollment was 101 students, now they want to more than double that size with 123 additional students without any impact fees or improvements to the Crinella Pump station. That is a 500% increase from the convalescent hospital capacity."*

#### **Response 8-1**

Please see Master Response 2.

#### **Comment 8-2**

*"In the report it says they want to take students out of homes they own and put them in these 3 new dormitory buildings. If that is true, then they have to provide the city with a legal document that they will sell these homes when the first dormitory is completed so these homes go back to hopefully the rental market that we desperately need. Also, their statement that their housing is affordable is not correct. I have spoken to students in their facilities and what they pay for a room is more than our rental market prices."*

#### **Response 8-2**

Comment noted.

#### **Comment 8-3**

*"Why are they able to build to 40' with these new buildings? I thought that we had a 35' height limit. These buildings are going to block the view for the neighbors of our beautiful hillsides. The view shed will be lost."*

#### **Response 8-3**

The Vineyard Lodge Housing site exhibits a zoning designation of PQP: Public Quasi Public. As detailed on page 39 of the IS/MND, The PQP zoning designation does not prescribe specific development standards, but rather stipulates that all projects within the PQP zoning district be subject to a conditional use permit and that development standards shall be established through the use permit review process. These regulations help guarantee that incompatible development and/or activities can be avoided by requiring such projects be held to a high level of scrutiny and are vetted

---

20

---

through the public review process, CEQA review, and be conditioned accordingly. The Vineyard Lodge Housing Component will be subject to the provisions of a new use permit as required under PQP zoning which would govern the intensity and operation of the site to an extent that consistency with all applicable standards and guidelines is achieved. As promulgated by Zoning Code Section 17.68.050, building height is to be established in conjunction with use permit review and therefore, it is at the discretion of the Planning Commission to determine whether a 40' height is appropriate within the context of this specific project. There is however, no existing regulation or standard that would explicitly preclude a 40' height within the PQP zoning district. For a response to the concerns related to view shed impacts please refer to Master Response 1. No further analysis is warranted.

#### **Comment 8- 4**

*"They claim they don't need additional parking. I drive by the dormitories at least 3 times per day, on average the parking lot is between 70% to 80% full most of the time. They claim they only give out 33 permits for the existing 101 students, well then who owns the other vehicles? They claim that the shuttle goes every 15 minutes. To me that adds a larger impact at Pratt and Main. Now with the Las Alcobas Hotel across the street this is a bad intersection. There needs to be a traffic study addressing this. In fact, I feel we need an electric stop lights at this intersection. Most of the day the traffic does not go out onto Main, including truck traffic. They cut through Park and on to Crinella to Main. This is a residential neighborhood they are cutting through."*

#### **Response 8-4**

Please refer to Master Response 3.

#### **Comment 8-5**

*"They are going to demo a 15,050 sqft one-story building that houses 41 students. Then they are going to build three 3 story buildings totaling 40,645 and claim there is no impact. Who are they trying to fool? The Planning Commission needs to say: We need time to assess the full impact of this project. We have been told over and over again about our ageing infrastructure that is in dire need of repair. We need to find out first the impact the Las Alcobas Hotel is going to have in this area. An environmental impact report is the only way to address all the concerns I have raised."*

#### **Response 8-5**

See Master Response 6.

#### **Comment 8-6**

*"Originally the CIA was going to build three dormitories on the school's campus. This was so they would not impact the neighborhoods. That did not happen as promised in their original use permit. I would suggest the CIA instead of building these new dormitories on Pratt Av to put them on their campus as they originally proposed. The CIA owns the adjacent property. I personally worked Chuck Carpy's house as a general contractor. The city should rezone the property so dormitories can be built there. Then you eliminate all traffic problems, all view shed issues and since they are reducing their water usage at Greystone the increase of the dormitories can be applied. Plus the city should require these dormitories not use the city's wastewater system but put it in to Greystone's system that discharges in to the pond on Deer Park Road."*

#### **Response 8-6**

City of St. Helena

February 2017

---

Comment Noted. Please see Master Response 5 in regards to the evaluation of project alternatives.

---

Commenter: Dianna Varozza

Status: Individual

Date Received: January 17, 2017

---

#### **Comment 9-1**

*In regards to the Pratt Avenue project... It should be separate from the Greystone site paperwork. Trying to read through this is too difficult to determine what is going on at which site. They should be separate applications as they are different locations on different streets.*

#### **Response 9-1**

The City did receive multiple entitlement applications and the entitlements will be considered individually. However, under CEQA, projects may not be piecemealed (segmented) so as to ensure that all potential impacts are captured. Given that the use of Greystone and Vineyard lodge are so intimately tied it was determined that both components should be considered together. Accordingly, no changes are warranted.

#### **Comment 9-2**

*Is there going to be a stop light at Pratt and Main?*

#### **Response 9-2**

As detailed in the Traffic Analysis, the significance criterion established by the 1993 St. Helena General Plan and applicable to the subject project reads, *"All unsignalized intersections must maintain LOS C. If the LOS degrades below LOS C, an evaluation of the need for traffic signalization shall be undertaken according to standard Caltrans signal warrants as described below. If signals are not initially warranted, the location shall continue to be monitored for signal warrants on a regular basis."*

In accordance with the significance criteria applicable to the project, a warrant threshold analysis was undertaken to determine the need for signalization. There are 9 possible tests for determining whether a traffic signal should be considered for installation. As detailed on page 9 of the traffic Study (**Appendix Q**) These tests, called "warrants", consider criteria such as actual traffic volume, pedestrian volume, presence of school children, and accident history. The intersection volume data together with the available collision histories were compared to warrants contained in the Manual on Uniform Traffic Control Devices (MUTCD), Federal Highway Administration, 2014, California Supplement. As stated in the Traffic Impact Report and on page 52 of the IS/MND, signal warrant thresholds were *not* met and therefore signalization is not needed and no signal will be installed as a result of this project.

#### **Comment 9-3**

*I definitely object to a three story building. Nothing else directly on the street is that tall and if you set precedence now pretty soon there will be three story apartment buildings and homes. This is a quiet street mostly agricultural and it is very dangerous during going work and home hours. Between Beringer employees racing to get to the trail and all of the construction workers parking on*

---

22

*Pratt and Main it has been a nightmare trying to pull out of the driveway or onto Main. More people used to walk on Pratt but now they are afraid.*

**Response 9-3**

See Master Response 1 and 4.

**Comment 9-4**

*"Where are all the construction workers going to park when they are working on this project? The garbage, pour parking jobs, construction trucks and deliveries have been chaos. The construction workers whip a u turn without looking and almost hit moving traffic. They block the view so pulling out onto main can be dangerous. They are trying to cross the street and almost get hit by cars. And now with Pratt closed why there isn't an officer there directing traffic. We can't even pull out and go to the store. It looks terrible having all those vehicles parked everywhere, delivery trucks, construction equipment. This all needs to be kept off Pratt Avenue."*

**Response 9-4**

As detailed on page 5 of the IS/MND, construction activities at the Vineyard Lodge Housing site are expected to occur in two overlapping phases following issuance of entitlements, Phase 1: January 2017 to August 2017 and Phase 2: June 2017- January 2018. Specific dates are subject to change, but the general phasing is expected to be consistent with what was assumed in the IS/MND. The applicant has indicated that construction staging would be located on site and in the proposed courtyard; site preparation and demolition staging is expected to occur on the existing parking lot. In order clarify this in the IS/MND; the project description will be updated to read:

**PROJECT PHASING**

Construction activities at the respective project sites are expected to commence following issuance of entitlements and will be phased in a manner that limits disturbance to class schedules and curriculum and in accordance with the phasing plan, below. Site preparation and demolition staging will occur on the existing parking lot and Construction phase staging will be located in the proposed courtyard between the new building and the existing Vineyard Lodge 1 for both phases.

**Comment 9-5**

*All of the dust created by construction is damaging to vineyard. If we get even a small amount of dust blowing we will have to get our lawyers involved. What are you going to do to mitigate the dust? I am just glad we weren't closer to the hotel construction. What a nightmare for the pour people on the corners.*

**Response 8-5**

As detailed on page 19 of the IS/MND and under section 3(D), the subject site is proximate to sensitive receptors, defined as those members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly and people with illnesses...Due to the proximity of sensitive receptors onsite, the project has the potential to generate temporary air quality impacts associated with fugitive dust emissions during construction activities.

In order to ensure that fugitive dust emissions are reduced to levels below significance Mitigation Measure AQ-1 would be implemented. AQ-1 is set forth pursuant to BAAQMD Basic Control Strategies and requires covering haul trucks, watering during active ground disturbance, limiting idling time, proper maintenance of equipment, and other standard measures. With implementation

of AQ-1 potential impacts to sensitive receptors during construction will be reduced to levels below significance. Specifically, AQ-1 stipulates that:

The applicant shall incorporate Best Management Practices for all construction activities and clearly indicate these provisions in the specifications. In addition an erosion control plan shall be prepared and submitted to the City of St. Helena prior to any construction activity. BMPs shall include but not be limited to the BAAQMD Basic Construction Mitigation Measures as modified below:

1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered three times per day;
2. All haul trucks transporting soil, sand, or other loose material shall be covered;
3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited;
4. All vehicle speeds on unpaved roads shall be limited to 15 mph;
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible;
6. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used;
7. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points;
8. All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation;
9. Construction equipment staging shall occur as far as possible from existing sensitive receptors;
10. The Developer shall designate a person with authority to require increased watering to monitor the dust and erosion control program and provide name and phone number to the City prior to issuance of grading permits. Post a publicly visible sign with the telephone number of designated person and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations; and
11. The City's Public Works Inspector shall perform visual inspections during grading to assure that dust control is implemented and standard BMP are enforced.

With implementation of AQ-1 and compliance with the provisions of the St. Helena Municipal Code potential impacts associated with fugitive dust and which could affect people or vineyards would be less than significant. No further analysis is therefore warranted.

#### **Comment 9-6**

*I would like an answer as to what we can do to stop the three story building and regulate the construction site parking and deliveries to be off Pratt. I am mostly concerned about the construction dust which will damage vineyards nearby. We are directly on the other side of the Beringer strip. They must be concerned about dust on their new block of vineyard.*

#### **Response 9-6**

City of St. Helena

February 2017

As stated above, under Response 9-4, construction staging will be located within the project site boundaries. For discussion of fugitive dust, please see Response 9-5.

**Comment 9-7**

*We live here and have guests at our winery and it needs to not look like a dump driving down Pratt Avenue.*

**Response 9-7**

Comment noted.

Commenter: Carol Norfleet

Status: Individual

Date Received: January 18, 2017

---

**Comment 10-1**

*My personal opinion is that the retirement home that was the original structure on the property should never have been changed to a dormitory for Culinary Institute students. I believe that if the CIA wants to have more students they should either construct a property on their Greystone campus on Highway 29 or build a new dormitory near the former Copia site in the city of Napa.*

**Response 10-1**

Comment noted.

**Comment 10-2**

*I believe the impact on Pratt Avenue and subsequent impact for the city of St. Helena all produce negative effects. Pratt Avenue is one of the poorest maintained streets in St. Helena. There are constant potholes in the road that are not properly repaired, the entire road needs repaving, there are no sidewalks, despite the fact that there is a CIA student bus that makes innumerable trips up and down the road there still are students regularly walking on the side of the road often in predawn and night hours creating a very dangerous situation. They are unable, generally, to walk on the traffic facing side of the street because at least six months of the year there is a stream of water running down the south side of the street that is emitted from a sump pump at the residence at 1055 Pratt Ave.*

**Response 10-2**

See Master Response 3.

**Comment 10-3**

*I strongly feel that the city either needs to create a storm drain to properly capture that water or to eliminate the exception that must've been created for dumping this sump pump water into the street. I will also note that despite the fact that rains stop in the area in the late winter that particular residence is in essence creating an artesian well in the full basement that pumps water seasonally into June creating a marsh and mosquito habitat at the intersection of Pratt Avenue and the railroad*

*tracks. It seems that every other street in St. Helena has proper gutter sidewalks and storm drains adjacent to residential homes except for this stretch of Pratt Avenue.*

**Response 10-3**

Comment noted. This comment does not relate to the subject project and therefore will not be addressed here.

**Comment 10-4**

*In examining the site plan for the new dormitory it's very clear that every single square foot of land is being used, packing on as much density as possible, exceeding height restrictions and visual sensibilities. There should not be a variance for building setback as proposed from 36 feet to 20 feet. Additionally the site plan has the exit from the plan coming directly into the intersection for the railroad tracks that are now being used for a wine train going up to Krug winery. A portion of the building is 40 feet high which is certainly not conducive to the rural nature of what this street is and clearly will affect other property owners in the area from a view point of view.*

**Response 10-4**

Comment noted. See Master Response 1 for a discussion of viewshed impacts.

**Comment 10-5**

*Despite the fact that there is a shuttle that goes to the Greystone campus it is inevitable that 123 new students are going to create much more traffic. I'd like to point that out several years ago there was a multiple fatality accident on Pratt at the end of the road involving some of the students from Greystone. It seems inevitable that doubling the size of the facility is going to significantly impact traffic use and noise on our street. This traffic impact also becomes immediately significant as one looks at the current extreme difficulty of making a left-hand turn from Pratt Avenue south on to Highway 29. It is currently extremely difficult to see what is approaching on the left-hand lane because of parked cars, at the very least the curb needs to be red painted at least six car lengths back from where it is now. Additionally with the pending opening of the Los Alcobas Hotel there will be additional significant difficulty in entering and exiting from Pratt Avenue. This will not only apply to the student buses but also to the students that would be coming and going from this dormitory. This currently is and will become a much more dangerous intersection certain to create accidents.*

**Response 10-5**

Comment Noted. It is expected that as a part of mitigation imposed on the Los Alcobas hotel project, parking will be prohibited along both sides of Main Street for a distance of 250 feet south of the Los Alcobas Hotel site, thereby improving site distance when making a left-hand turn from Pratt Avenue onto Main Street.

**Comment 10-6**

*We are all aware of some of the economic issues facing the city of St. Helena and clearly one way to solve them is to promote the development of architecturally appropriate high quality hotels that will attract individuals with the capability to afford a significant average daily rate and quality that would then provide subsequent TOT revenue to the town. What this proposal does instead is create a hotel with insignificant TOT from students who certainly are not going to significantly support high quality restaurants and retail shops within the city itself.*

City of St. Helena

February 2017

**Response 10-6**

Comment noted. Potential impacts to TOT revenue is not a potential environmental impact which is required to be analyzed pursuant to CEQA.

**Comment 10-7**

*As stated earlier our belief is that there should not be a variance for an expansion of the existing student housing facilities, instead CIA should examine other locations including their existing Greystone campus and or their new Copia campus in Napa to effectuate the expansion of their overall programs. Pratt Avenue should remain a rural and residential street not a street of student dormitories creating additional traffic noise water and sewer impacts with insignificant benefits for the existing residents of the street and the city of St. Helena.*

**Response 10-7**

Comment noted. As detailed in the IS/MND under Section XV11. Mandatory Findings of Significance, with implementation of mitigation measures set forth under Aesthetics, Air Quality, Biological Resources, Cultural Resources, Geology and Soils, Land Use, Noise, and Transportation, the project's potential impacts would be avoided or reduced to levels below significance. Therefore, the project will have less than significant impacts due to degradation of the environment.

Commenter: Paul Bertoli

**Comment 11-1**

*"...Turning this project surrounded by ag land into the most densely populated parcel in St Helena, would seem to be totally against the will of the general plan. The plan frowns upon putting high/medium density in ag land(leapfrogging)"*

**Response 11-1**

As detailed on IS/MND page 39 and under section 9(b), the Vineyard Lodge Housing site exhibits a General Plan land use designation of Agriculture, which provides for, amongst other things, Public and Quasi-Public uses. In 2008 and per Resolution No. 2008-5, the Vineyard Lodge Housing site was rezoned from A-20:Twenty Acre Agriculture to PQP: Public Quasi Public. The Council found that this was an appropriate action based on the following findings enumerated in the Resolution:

1. The existing urban/developed condition of the parcel would make conversion to agriculture difficult.
2. The small size of the parcel (2.61 acres) makes it improbable that the land can be converted to an economically viable agricultural parcel.
3. The parcel has been in urban use for the last 40 years.
4. The parcel has not been farmed or agriculturally productive for the last 40 years.
5. The parcel is already served by City services (water & sewer).
6. Rezoning the parcel to PQP keeps the existing A-20 zoning ordinance language intact, does not introduce new uses to agricultural parcels, thereby lessening the possibility that other agricultural land will be used for non-agricultural purposes.

27

The proposed project does not propose any zoning map amendments and proposes development consistent with the existing PQP zoning of the subject parcel which it has exhibited since 2008. As described on page 39 of the IS/MND, The PQP zoning designation does not prescribe specific development standards, but rather stipulates that all projects within the PQP zoning district be subject to a conditional use permit and that development standards shall be established through the use permit review process. These regulations help guarantee that incompatible development and/or activities can be avoided by requiring such projects be held to a high level of scrutiny and are vetted through the public review process, CEQA review, and be conditioned accordingly. The Vineyard Lodge Housing Component will be subject to the provisions of a new use permit as required under PQP zoning which would govern the intensity and operation of the site to an extent that consistency with all applicable standards and guidelines is achieved. No changes are warranted.

**Comment 11-2**

*"This will also add to the current traffic problem on Pratt, the new resort, wine train, Beringer/ treasury, ramping up production, redirection of traffic by apps,(waze, google, etc) the constant shuttles, will only add to the problem."*

**Response 11-2**

See Master Response 3.

**Comment 11-3**

*"Water& sewer issues, seeing hundreds of new toilets, while residents conserve water only to have the water rates skyrocket, just doesn't quite seem right."*

**Response 11-3**

As described herein and on page 56 of the IS/MND, The City of St. Helena provides water to both the Greystone Campus (2555 Main Street) and Vineyard Lodge Housing Site ( 830 Pratt Avenue). The current water allotments authorized by the Agreements allocate an average of 15,900gpd to Greystone and 4,750gpd to the Vineyard Lodge Site. The total allotment across the two sites amounts to an average of 20,650 gpd or 23.1 acre feet per year. As part of the CIA Master Plan project, the applicant is requesting to rescind the two separate agreements and adopt a new joint water agreement which would redistribute the gross water allotment across the two sites while maintaining the current total allotment of 23.1 AF per year. As such, *no* net increase in water use is proposed and the project will comply with the City's water neutrality requirements. No further analysis is needed.

**Comment 11-4**

*"The CIA doesn't allow student cars on campus, or want to rent homes in SH, this shouldn't be the resident's problem. People actually live here. I'm not so sure what this nonprofit, or not for profit status is, but I would suggest that they consider using only the facility they've already expanded .The community trusted it was all they needed. With our population at 4900 I would prefer seeing a reduction in enrollment, and a modest tuition increase, in order for the CIA to remain good neighbors."*

### 3. REVISIONS TO THE IS/MND

- *The following changes to the language included in Sections 16(a) and 16(b) and on page 16 of the IS/MND, will be made, as shown, below:*

A. **(Exceed Wastewater Treatment Requirements)** Less Than Significant Impact: The project is not expected to exceed wastewater treatment requirements set forth by the Regional Water Quality Control Board. To accommodate wastewater flows generated at the Greystone Campus, the existing onsite primary treatment would be used, including one 3,000 gallon grease interceptor, two 7,500 gallon settling tanks and one 6,000 gallon settling tank, and a pump sump and pump to convey the SS flows to the Markham Combined Wastewater System (MCWS) located at Markham Winery on SR 29, north of St. Helena. Improvements to the existing dishwashing and other kitchen facilities, including replacement with more water and energy efficient equipment, in addition to the closure of the WSGR would reduce the overall water and wastewater demand for the site. Taken together, the proposed improvements will lead to a net decrease in flows conveyed and treated at the MCWS and will be within the authorized discharge amount of 14,850 gpd.

At the Vineyard Lodge Housing site, wastewater will be generated by dormitory restrooms, showers, and common areas. The project will utilize the existing sanitary sewer (SS). Effluent would undergo primary treatment in septic tanks and then be conveyed to the municipal sewer system through the existing 3" SS. The SS management system will be resized to accommodate a peak daily wastewater flow of approximately ~~9,520~~ 9,605 gallons per day (gpd) which equates to a projected net increase of ~~1,960~~ 3,232 gpd over the existing ~~capacity~~ average recorded flow of 6,373. Effluent will undergo primary treatment in septic tanks, which will produce effluent that is of higher quality than residential wastewater. A new equalization pump tank will be used to collect and store effluent. The equalization tank will provide approximately 12.5 hours of retention time at the anticipated peak daily flowrate of 9,520 gpd, and is sufficiently sized to allow for only off-peak discharge to the City's sewer system. The equalization pump will utilize on site storage capacity and equivalent pumps to maintain the same instantaneous peak flow discharge as the existing facility. As a result, there will be no increase to the instantaneous flow rate to the City sewer system and therefore no adverse effect on the sewer system capacity. No increases in peak flows are proposed to the City sewer system, and the timed dosing of primary treated effluent during off-peak hours would prevent any adverse impacts to the City sewers.

The wastewater flows will be conveyed to the City of St. Helena Wastewater Treatment Plant, which has sufficient operating capacity to handle the additional flows generated at the Vineyard Lodge Housing site. Further, the project will be assessed the sewer impact fee which will help to maintain the existing system and contribute to the additional costs that will be incurred with the future expansion and upgrade of the wastewater treatment plant. Therefore, the project would not exceed wastewater treatment requirements and impacts would be less than significant.

**b.(New Wastewater treatment Facilities)** Less Than Significant Impact: There would be no new construction or expansion of domestic water or wastewater facilities as part of the proposed project. For the Greystone Campus, as stated above, wastewater flows are expected to decrease following project implementation. For the Vineyard Lodge Housing

site, as stated above, the project would result in a net increase of ~~1,960~~ 3,232 gpd of wastewater over existing flows. However, the City of St. Helena Wastewater Treatment Plant has sufficient operating capacity to handle the additional flows generated at the Vineyard Lodge Housing site. Further, a sewer impact mitigation fee will be assessed with the purpose of ~~maintaining~~ improving the existing system and to contribute to offset costs of future expansion and upgrade of the wastewater treatment plant. The sewer impact fee will be assessed against the dormitory project at the time of issuance of building permits, therefore, impacts would be less than significant

**b.(New Wastewater treatment Facilities)** Less Than Significant Impact: There would be no new construction or expansion of domestic water or wastewater facilities as part of the proposed project. For the Greystone Campus, as stated above, wastewater flows are expected to decrease following project implementation. For the Vineyard Lodge Housing site, as stated above, the project would result in a net increase of ~~1,960~~ 3,232 gpd of wastewater over existing flows. However, the City of St. Helena Wastewater Treatment Plant has sufficient operating capacity to handle the additional flows generated at the Vineyard Lodge Housing site. Further, a sewer impact mitigation fee will be assessed with the purpose of maintaining the existing system and to contribute to offset costs of future expansion and upgrade of the wastewater treatment plant. The sewer impact fee will be assessed against the dormitory project at the time of issuance of building permits, therefore, impacts would be less than significant\

- *The following changes to the language included on paragraph 1 page 5 of the IS/MND, will be made, as shown, below:*

#### PROJECT PHASING

Construction activities at the respective project sites are expected to commence following issuance of entitlements and will be phased in a manner that limits disturbance to class schedules and curriculum and in accordance with the phasing plan, below. Site preparation and demolition staging will occur on the existing parking lot and Construction phase staging will be located in the proposed courtyard between the new buildings and the existing Vineyard Lodge 1 for both phases.

- *Since the release of the IS/MND, the applicant has requested minor modifications related to the size of the storage units proposed as part of the Greystone component. Namely, the applicant has proposed slightly larger storage units ranging in size from 622 sf to 1,337 sf. The proposed changes have been reviewed and would not introduce any new impacts or change the conclusions of the IS/MND. To reflect these technical changes, the following revisions will be made to Sections pages 4,12 and 25, of the IS/MND and as shown below:*

*Project Description, Paragraph 1, page 4.*

The proposal further includes the construction of a 4,468-square-foot (sf) storage cave at the north end of the Greystone Cellars building, beneath the former WSGR. In addition, a series of three modular storage units ranging in size from approximately ~~592 sf to 944 sf~~ 633 sf to 1,337 sf would be installed at the rear of the third floor of the Greystone Cellars building. Given that the majority of works is confined to the interior of the building, exterior changes would be very limited. Any work that may affect the exterior of the historic Greystone Cellars building (i.e. modular units) would be installed in accordance with the Secretary of the Interior's Standards for the Treatment of Historic Properties so as to avoid impacting the building's historic integrity.

*Aesthetics, Setting, Page 12.*

The Greystone property is located on the west side of Highway 29 and features the historic Greystone Cellars (c.1888) a masonry building designed in the Richardsonian Romanesque architectural style. The Greystone property is highly visible and situated at the northern gateway to the City. Exterior modifications proposed for the Greystone building are limited to the introduction of a 4,468 square foot storage cave, which will be accessed from the loading dock retaining wall and not readily visible from the primary elevations, and the introduction of three modular storage units at the building rear which would be accessed via the existing roadway. The modular units will range in size from ~~592 sf to 944 sf~~ 633 sf to 1,337 sf and measure approximately 9'8" in height. The units will be located at the rear of the west elevation and supported on new structures that span across the existing exterior breezeway in a similar manner as the support structures used for HVAC units. The units will sit below the existing roof eave and will be utilitarian in nature and feature painted metal siding and doors with a flat roof shielded by a small parapet.

*Cultural Resources, Impact Analysis, Criterion A, Page 25.*

a) (Historic Resources) Less than Significant: The proposed work at the Greystone Site is confined to the Greystone Cellars building, along the west elevation and below the north end of the building. Three modular units ranging in size from ~~592 sf to 944 sf~~ 633 sf to 1,337 sf are proposed on the west elevation (rear) of the building. The units will be accessed from an existing roadway, supported on new horizontal steel structure that spans the area and similar to existing modern mechanical equipment supports. Utilitarian in nature, the units are constructed of painted metal siding, doors, and flat roofs behind shallow parapets.

- ***The following changes to the language included on the last paragraph of page 39 and in Section 9(b) of the IS/MND, will be made, as shown below:***

...In addition, the project has requested a variance from the parking standards outlined in Municipal Code Section 7.124.30(A.3) and stipulated for "rooming, boarding, or lodging houses" (determined to be the closest applicable land use identified in the zoning code), which require two spaces for the "resident owner" and one space for each guest room ~~bed~~, for a total of ~~226~~ 175 parking spaces based on this requirement for the gross total of 173 rooms (224 dormitory beds) which would result at the Vineyard Lodge Housing Site. At present, the site features 85 parking spaces, but based on data provided by the applicant, only 31% of students have a demand for parking spaces. As described herein, the CIA provides a shuttle service to students for transport to and from the Vineyard Lodge to Greystone, as well as transport offsite. Staff, including cleaning and maintenance staff, are shared by both sites and as such, staff typically park at the Greystone site and are shuttled to the

**4. SUMMARY**

In the course of preparing the written responses, information was generated and is presented throughout this document. The City of St. Helena carefully reviewed the information developed through the responses-to-comments process and determined that the project does not meet any of the conditions under CEQA Section 15073.5, as outlined below.

**15073.5. RECIRCULATION OF A NEGATIVE DECLARATION PRIOR TO ADOPTION.**

- a) A lead agency is required to recirculate a negative declaration when the document must be substantially revised after public notice of its availability has previously been given pursuant to Section 15072, but prior to its adoption. Notice of recirculation shall comply with Sections 15072 and 15073.

- b) A “substantial revision” of the negative declaration shall mean:
- 1) A new, avoidable significant effect is identified and mitigation measures or project revisions must be added in order to reduce the effect to insignificance, or
  - 2) The lead agency determines that the proposed mitigation measures or project revisions will not reduce potential effects to less than significance and new measures or revisions must be required.
- c) Recirculation is not required under the following circumstances:
- 1) Mitigation measures are replaced with equal or more effective measures pursuant to Section 15074.1.
  - 2) New project revisions are added in response to written or verbal comments on the project's effects identified in the proposed negative declaration which are not new avoidable significant effects.
  - 3) Measures or conditions of project approval are added after circulation of the negative declaration which are not required by CEQA, which do not create new significant environmental effects and are not necessary to mitigate an avoidable significant effect.
  - 4) New information is added to the negative declaration which merely clarifies, amplifies, or makes insignificant modifications to the negative declaration.
- d) If during the negative declaration process there is substantial evidence in light of the whole record, before the lead agency that the project, as revised, may have a significant effect on the environment which cannot be mitigated or avoided, the lead agency shall prepare a draft EIR and certify a final EIR prior to approving the project. It shall circulate the draft EIR for consultation and review pursuant to Sections 15086 and 15087, and advise reviewers in writing that a proposed negative declaration had previously been circulated for the project.

Therefore, the recirculation of a revised IS/MND or the preparation of an Environmental Impact Report (EIR) is not required. Consistent with the CEQA Guidelines, the added information clarifies the information and analyses in the IS/MND.

The City of St. Helena will consider the proposed IS/MND, together with this Response to Comments document, prior to approving the project.

Lilly:

I own the vineyard and residential property at 675 Pratt Ave. I have significant concern about the effect of the CIA dorm expansion and other development on the properties along Pratt.

Pratt Avenue already has become very dangerous to drivers, bicyclists, and pedestrians. The road surface is in poor condition, which increases the likelihood of accidents leading to death or injury. Resurfacing the small portion from the CIA dorms to Main St. will not resolve that problem. The City needs to require a larger contribution from the CIA toward repaving ALL of Pratt Avenue.

There is a major problem with speeding along Pratt. Cars and trucks hurtle along day and night at speeds well over the limit, endangering other drivers, walkers, and bikers. The CIA expansion is bound to exacerbate this problem.

It is now often nearly impossible to make a left turn from Pratt onto Main due to the heavy traffic on Main. The CIA expansion will further add to this problem.

When you include the new Las Alcobas hotel on the west side of the intersection and the potential increase in traffic associated with Beringer's planned changes at their Pratt Avenue winery, it makes the situation even more dire.

I realize that the Pratt/Main intersection is under State control. Nevertheless, the City should proactively be taking measures to mitigate the problem.

With the current fiscal problems facing the City, it is incumbent on staff to require the maximum contribution from the CIA to help alleviate the problems they are making worse.

Dear Ms. Bianco,

The big bucks behind the CIA needs to pay for the increase in size of the waste water line that will be needed to handle the CIA's new dormitories and increased burden of affluent. The current waste water line is already at capacity that services the Crinella housing tract. Adding another 9,520 gallons a day will over burden the line. It's about time our city management makes these big developers pay for the costs of necessary up grades to our utility infrastructures rather than keep passing them on to the current water and waste water customers. All we hear about lately is how inadequate our waste water facility is and how poorly our city's reputation is with the State Water Board. And now the CIA wants to add to this problem. They need to pay!

Also, the article in the Star leads the reader to believe the CIA wants to reallocate its current water use by changing its agreements with the city. If I read the article correctly, it looks like the CIA wants to use more ground water to make up for the demand at the dormitories. Does anyone meter the ground water currently being taken by the CIA? St. Helena has a moratorium on drilling new wells in the residential area of St. Helena, yet the city is okay with allowing the CIA to pump even more water from the ground. Come on St. Helena City Management, get your act together and make these businesses pay for the adverse impacts these developers and developments place on the residents who live here!

Good afternoon:

Thank you for posting the article in the Napa Valley Register regarding the expansions of the CIA dorms. My husband and I own house at 925 Pratt Avenue, St. Helena. The only concerns that I have are the following:

1. CIA Landscaping: Since the structure will double in size, I hope the City will consider that the dorms have beautiful landscaping to mitigate the size of the building. Such as Trees and California Native plants.
2. CIA Parking: The City has not enforced parking restrictions on CIA. Sometimes, all of Pratt street looks like a sea of cars. This is a displeased to the Community. No one likes looking at a parking lot considering the cost of the homes on Pratt Street.
3. Bike Lanes: The bikes lanes are a great idea. I hope the City restricts Pratt parking to the residents on Pratt street because CIA abuses the parking on Pratt. Many residents have complained

If all the issues are addressed, I welcome the dorms.

Dear Ms. Bianco,

I read in the St. Helena Star that questions regarding the CIA student dorm expansion may be directed to you.

Is there a definition to the application as to who qualifies as a student. I have to assume that whatever that definition is, any other tenants such as staff, instructors etc would be excluded and that there is associated language to that effect.

I would appreciate your response.

Thank you

George Caloyannidis

Noah,

Thank you for meeting with Brian Russell and me on Wednesday, January 11th. We appreciate your willingness to hear our concerns related to the CIA Dorm expansion project on Pratt Ave and evaluate them further. In summary, the following are the concerns we discussed:

- \* Inadequacies of traffic study;
- \* Inadequacies of noise study;
- \* Concerns related to parking variance;
- \* Concerns related to Visual impact;
- \* Concerns related to increased population;
- \* Concerns related to increased impacts on sewer/water;
- \* The lack of evaluation of alternative housing sites that would have less impacts on traffic, noise, visual, parking, etc.;
- \* The requested set back variance in contradiction with the general plan;
- \* The lack of rights to the vineyard road that is crucial to the project;
- \* The need for an Environmental Impact Report due to the significant size and potential impacts of the project.

What are the next steps? Will you be responding to these concerns? If so, when can we expect a response?

Best,

Donna Hinds

Dear Ms. Bianco:

Please do what you can to stop the CIA dorm expansion on Pratt Ave.

We have lived on Pratt Ave for more than 35 years, and have seen remarkable changes-many for the worse for small town living. With the remarkable expansion of Beringer, the new (UGLY) hotel at Grandview with a forgettable name on Hwy. 29, the railroad activity to Charles Krug, the waste water aromas of the ponds, the noise of the large neighborhood wineries, increased traffic, faster and faster cars coming through, the erosion of the quality of the road surface to below 3rd world countries; we have seen our neighborhood heading to hell.

The ridiculous expansion of the dorm on Pratt Ave. will be a real nail in the crucifix. These students are people from all over the country who drive out here, do not help our local populace, waste water like tourists, leave as soon as they can, and add **no value** to this town.

Finally, it appears the CIA is slowing or shutting down the Greystone Bldg. in preference for Copia, Napa. Are they going to shuttle them to Napa?

Leave the CIA dorm as it is, Please. If not, name it The West Coast Trump Tower!

Very respectfully yours,  
Tom Rinaldi

In regards to the Pratt Avenue project... It should be separate from the Greystone site paperwork. Trying to read through this is too difficult to determine what is going on at which site. They should be separate applications as they are different locations on different streets.

Is there going to be a stop light at Pratt and Main?

I definitely object to a three story building. Nothing else directly on the street is that tall and if you set precedence now pretty soon there will be three story apartment buildings and homes. This is a quiet street mostly agricultural and it is very dangerous during going work and home hours. Between Beringer employees racing to get to the trail and all of the construction workers parking on Pratt and Main it has been a nightmare trying to pull out of the driveway or onto Main. More people used to walk on Pratt but now they are afraid.

Where are all the construction workers going to park when they are working on this project? The garbage, pour parking jobs, construction trucks and deliveries have been chaos. The construction workers whip a u turn without looking and almost hit moving traffic. They block the view so pulling out onto main can be dangerous. They are trying to cross the street and almost get hit by cars. And now with Pratt closed why isn't there an officer there directing traffic. We can't even pull out and go to the store.

It looks terrible having all those vehicles parked everywhere, delivery trucks, construction equipment. This all needs to be kept off Pratt Avenue.

All of the dust created by construction is damaging to vineyard. If we get even a small amount of dust blowing we will have to get our lawyers involved. What are you going to do to mitigate the

**Public Comment 7**

dust? I am just glad we weren't closer to the hotel construction. What a nightmare for the poor people on the corners.

I would like an answer as to what we can do to stop the three story building and regulate the construction site parking and deliveries to be off Pratt. I am mostly concerned about the construction dust which will damage vineyards nearby. We are directly on the other side of the Beringer strip. They must be concerned about dust on their new block of vineyard.

We live here and have guests at our winery and it needs to not look like a dump driving down Pratt Avenue.

Best regards,

Dianna Varozza

Re: [redacted]

Jeffrey Lilly

Please is a complaint regarding the CIA access to process in the Planning.

Begin forwarded message:

From: Paul <[redacted]>  
Subject: Re: Big CIA Exposure On Front Ave Notice  
Date: January 5, 2017 at 7:24:11 PM PST  
To: "David Lerner" <[redacted]>, "Richard Lerner" <[redacted]>  
Cc: "Sherry Paul" <[redacted]>

Opinion: I think it's appropriate to comment and present this for whatever it's worth.

Please consider:

We've lived a year with constant worker traffic and construction noise from building (Los Angeles River); plus, all the cars constantly sharing CIA people and parked outside this house more than just a few times a year - we counted over 400 vehicles.

We had to call police because we had one girl from CIA (DOH) enter our house at night and sleep partially on our couch - we saw upstairs bedrooms (a strange sleeping matter) which was disturbing.

Plus there is noise coming down our street constantly - could say 70% of time we're home, including on early before rain, much that we get the trash cans out almost every week, to include, at large part of morning noise, making us sleep each time.

Not complaining - you saying that enough is enough and if you add this massive project and industrial facility to Front Ave - it's too much for the wonderful people who are paying a huge amount of money to live here expecting peace and serenity.

I hope you agree.

So I would not allow an someone who lives here and is trying to compare music quality and would not like to experience heavy construction noise and traffic for over 2 years that we join the neighbors here to present this.

Respect your property to let us know your thoughts.

This is covering our health options.

Thanks  
D.L.

**Subject:** Pratt Ave CIA Dormitory  
**Date:** Wednesday, January 18, 2017 9:02:37 AM

---

Dear Ms. Bianco,

I am writing to oppose the expansion of the Greystone Vineyard Lodge facilities on 830 Pratt Ave. in St. Helena.

My understanding is that the proposed expansion will create 224 beds which is an increase of 123 students. My personal opinion is that the retirement home that was the original structure on the property should never have been changed to a dormitory for Culinary Institute students. I believe that if the CIA wants to have more students they should either construct a property on their Greystone campus on Highway 29 or build a new dormitory near the former Copia site in the city of Napa.

I believe the impact on Pratt Avenue and subsequent impact for the city of St. Helena all produce negative effects. Pratt Avenue is one of the poorest maintained streets in St. Helena. There are constant potholes in the road that are not properly repaired, the entire road needs repaving, there are no sidewalks, despite the fact that there is a CIA student bus that makes innumerable trips up and down the road there still are students regularly walking on the side of the road often in predawn and night hours creating a very dangerous situation. They are unable, generally, to walk on the traffic facing side of the street because at least six months of the year there is a stream of water running down the south side of the street that is emitted from a sump pump at the residence at 1055 Pratt Ave. I strongly feel that the city either needs to create a storm drain to properly capture that water or to eliminate the exception that must've been created for dumping this sump pump water into the street. I will also note that despite the fact that rains stop in the area in the late winter that particular residence is in essence creating an artesian well in the full basement that pumps water seasonally into June creating a marsh and mosquito habitat at the intersection of Pratt Avenue and the railroad tracks. It seems that every other street in St. Helena has proper gutter sidewalks and storm drains adjacent to residential homes except for this stretch of Pratt Avenue.

In examining the site plan for the new dormitory it's very clear that every single square foot of land is being used, packing on as much density as possible, exceeding height restrictions and visual sensibilities. There should not be a variance for building setback as proposed from 36 feet to 20 feet. Additionally the site plan has the exit from the plan coming directly into the intersection for the railroad tracks that are now being used for a wine train going up to Krug winery. A portion of the building is 40 feet high which is certainly not conducive to the rural nature of what this street is and clearly will affect other property owners in the area from a view

## Public Comment 9

point of view.

Despite the fact that there is a shuttle that goes to the Greystone campus it is inevitable that 123 new students are going to create much more traffic. I'd like to point that out several years ago there was a multiple fatality accident on Pratt at the end of the road involving some of the students from Greystone. It seems inevitable that doubling the size of the facility is going to significantly impact traffic use and noise on our street. This traffic impact also becomes immediately significant as one looks at the current extreme difficulty of making a left-hand turn from Pratt Avenue south on to Highway 29. It is currently extremely difficult to see what is approaching on the left-hand lane because of parked cars, at the very least the curb needs to be red painted at least six car lengths back from where it is now. Additionally with the pending opening of the Los Alcobas Hotel there will be additional significant difficulty in entering and exiting from Pratt Avenue. This will not only apply to the student buses but also to the students that would be coming and going from this dormitory. This currently is and will become a much more dangerous intersection certain to create accidents.

We are all aware of some of the economic issues facing the city of St. Helena and clearly one way to solve them is to promote the development of architecturally appropriate high quality hotels that will attract individuals with the capability to afford a significant average daily rate and quality that would then provide subsequent TOT revenue to the town. What this proposal does instead is create a hotel with insignificant TOT from students who certainly are not going to significantly support high quality restaurants and retail shops within the city itself.

As stated earlier our belief is that there should not be a variance for an expansion of the existing student housing facilities, instead CIA should examine other locations including their existing Greystone campus and or their new Copia campus in Napa to effectuate the expansion of their overall programs. Pratt Avenue should remain a rural and residential street not a street of student dormitories creating additional traffic noise water and sewer impacts with insignificant benefits for the existing residents of the street and the city of St. Helena.

Respectfully submitted,

Carol

## **St Helena Planning Commission – CIA Dormitories on Pratt Ave**

### **Members Planning Commission**

In the beginning the CIA dormitories were a convalescent facility. There were from 30 to 40 people there. They took sponge baths and used very little of the bathroom facilities. I personally know as I had relatives there. Somebody needs to go back in the records and see how much water was used as compared to today with the CIA dormitories.

Those 30 to 40 guests more than doubled with the first expansion by the CIA about 7 years ago. The first expansion did not require any upgrades to the Crinella Pump station where the effluent ends up, or any water impact fees.

The Crinella Pump station was built in 1965. It was only to service the Crinella subdivision of about 100 homes. Now the CIA has tied in on Pratt, all the recently built million dollar homes on Pratt with guesthouse, now the Las Alcobas hotel, with no upgrades from any of these developers. Yet the station is #8 on the list of improvements of capital expenses by the new wastewater cost increases. Why are we the residents paying for this and not the developers that are burdening the system. The CIA is going from 4750 gals/day to 10,783 gals/day in to the Crinella Pump station.

The enrollment was 101 students, now they want to more that double that size with 123 additional students without any impact fees or improvements to the Crinella Pump station. That is a 500% increase from the convalescent hospital capacity.

In the report it says they want to take students out of homes they own and put them in these 3 new dormitory buildings. If that is true, then they have to provide the city with a legal document that they will sell these homes when the first dormitory is completed so these homes go back to hopefully the rental market that we desperately need. Also, their statement that their housing is affordable is not correct. I have spoken to students in their facilities and what they pay for a room is more than our rental market prices.

Why are they able to build to 40' with these new buildings? I thought that we had a 35' height limit. These buildings are going to block the view for the neighbors of our beautiful hillsides. The view shed will be lost.

They claim they don't need additional parking. I drive by the dormitories at least 3 times per day, on average the parking lot is between 70% to 80% full most of the time. They claim they only give out 33 permits for the existing 101 students, well then who owns the other vehicles? They claim that the shuttle goes every 15 minutes. To me that adds a larger impact at Pratt and Main. Now with the Las Alcobas Hotel across the street this is a bad intersection. There needs to be a traffic study addressing this. In fact, I feel we need an electric stop lights at this intersection. Most of the day the traffic does not go out onto Main, including truck traffic. They cut through Park and on to Crinella to Main. This is a residential neighborhood they are cutting through.

They are going to demo a 15,050 sqft one story building that houses 41 students. Then they are going to build three 3 story buildings totaling 40,645 and claim there is no impact. Who are they trying to fool?

The Planning Commission needs to say: We need time to assess the full impact of this project. We have been told over and over again about our ageing infrastructure that is in dire need of repair. We need to

find out first the impact the Las Alcobas Hotel is going to have in this area. An environmental impact report is the only way to address all the concerns I have raised.

Originally the CIA was going to build three dormitories on the school's campus. This was so they would not impact the neighborhoods. That did not happen as promised in their original use permit. I would suggest the CIA instead of building these new dormitories on Pratt Av to put them on their campus as they originally proposed. The CIA owns the adjacent property. I personally worked Chuck Carpy's house as a general contractor. The city should rezone the property so dormitories can be built there. Then you eliminate all traffic problems, all view shed issues and since they are reducing their water usage at Greystone the increase of the dormitories can be applied. Plus the city should require these dormitories not use the city's wastewater system but put it in to Greystone's system that discharges in to the pond on Deer Park Road.

Hopefully the Planning Commission will deny the project until these concerns are addressed.

Attn:contract planner,planning commission:

I am against the proposed expansion of the CIA Pratt Ave dorms.Turning this project surrounded by ag land into the most densely populated parcel in St Helena,would seem to be totally against the will of the general plan.The plan frowns upon putting high/medium density in ag land(leapfrogging)This will also add to the current traffic proplem on Pratt,the new resort,wine train,Beringer/treasury,ramping up production,redirection of traffic by apps,(waze,google,etc) the constant shuttles,will only add to the problem.Water&sewer issues,seeing hundreds of new toilets,while residents conserve water only to have the water rates skyrocket, just doesn't quite seem right.The CIA doesn't allow student cars on campus,or want to rent homes in SH,this shouldn't be the residents problem.People actually live here.Im not so sure what this non profit,or not for profit status is,but I would suggest that they consider using only the facility they've already expanded .The community trusted it was all they needed.With our population at 4900 I would prefer seeing a reduction in enrollment,and a modest tuition increase,in order for the CIA to remain good neighbors.

Noah Housh

Planning and Community Improvement Director

City of St. Helena

Dear Mr. Housh, I strongly object to the Culinary Institute of America building additional 123 room dormitory in the residential area of St. Helena. I object for the following reasons:

- They propose using groundwater. Although our aquifer is most likely adequately charged due to the recent rains it will not remain in that condition. This dormitory will be there for an undetermined length of time during which we will have the return of drought. We need our water for residents who live here and the industry that supports our economy. We are told that our wastewater system will require millions to bring it up to code. Why should we add this type of burden to the system?
- The Culinary Institute relocated to Napa the only business that brought any revenue into our City namely their restaurant. Why should we the citizens be asked to share our precious water resource while they bring absolutely nothing to the community? No, I don't believe that closing the restaurant will balance out having 224 students taking showers and other domestic uses.
- The height of the buildings will be offensive to nearby neighbors.
- This particular area of the City is already suffering from too much traffic and too little planning such as an additional stoplight at Pratt and Main.
- Why should they be allowed to build on agricultural land? This is seldom allowed to happen and why should it be allowed in this instance when they bring nothing of value to the community?

We need to make sure that these storage units don't end up here at the Pratt Ave location. This is a nice neighborhood and agriculture area. We are already picking up garbage and dealing with the traffic from the CIA dorms. More traffic and garbage would be really bad. All their event parking is done on Pratt also.

There is no employee parking for the hotel so they will park on Main St all the time. More foot traffic back and forth across Main Street and Pratt Avenue. With all the vehicles parked on that corner it has been a real challenge. Now they are going to have delivery trucks going back and forth to Beringer because that is where their storage is.

I don't shop in St. Helena anymore and that is because getting into town is a safety issue as well as a challenge. It is easier to go to Calistoga or Santa Rosa or Napa.

A lot of people walk on Pratt but these students from the CIA, hotel construction and the Beringer employees drive way to fast trying to get to a from work on the trail. It is like a raceway during commute hours or lunch times. The van from CIA is constantly trying to turn onto Pratt. Increase with more students and their trying to get to their storage units and that will make getting out on Pratt to go into town impossible. So people are going to go through Park and Crinella, there are small children playing and riding bikes there. Someone is going to get hurt or killed. A motorcycle pulled right out in front of me yesterday and if I hadn't been going really slow from turning off Main and because of the sign for the bridge I would have hit him. There were two large delivery trucks completely blocking the view of the street to the left.

There will always be deliveries once that hotel opens that will increase the traffic on Pratt significantly. Whether they are going to the hotel or to Beringer for unloading. Or trying to unload on the street and walk across.

If they want storage they need to build it up close to the CIA where they won't have to drive to get something.

They need to get rid of the third story because that is just going to cause problems all over town, if you let it in here, and it will block the view from the East side.

No more parking on the street and in the vineyard.  
 They need their own parking lot for events also.  
 The parking in the vineyards is going to be a real problem when they either get stuck in the mud or drive over a vine.

Public Comment 13

- Again using Pratt as a bypass and driving way too fast. Clogging up the access to the trail and main street for the people who actually live here and pay the taxes.

Look at the traffic when the trail was closed.

That is what is going to happen every day now that the bridge is closed. We can't even get off Pratt Avenue.

Do you want to know how many times I have turned off Pratt going North and the car in front of me SLAMS on their breaks and squeals the tires because that is the entrance to Beringer's tasting facilities. Now they are blocking North bound. Add in someone trying to cross Main in a truck to the hotel, a guest trying to turn in and go to the hotel or restaurant, a pedestrian and the South bound car coming out of the tunnel of trees at 50 mph. The CIA van trying to turn left onto Pratt.

You have a recipe for disaster and you better figure it out now before there is a death.

Dianna Varozza

Public Comment 14

Planning Commission

Dear Members,

We are writing to you at this time because we are opposed to the CIA expansion proposed to take place across the street from our property at 855 Pratt Avenue.

It is our opinion (which we expressed at that time) that the first CIA dormitory was not appropriate for the area of vineyards and single family residences. After that expansion we have had numerous problems. Frequent traffic with their shuttles and the occupants cars. Late night noise on many occasions. Pot smoking and beer drinking in our vineyard. When trespassers are asked to leave they often refuse to do so.

At the meeting for the previous expansion the CIA representative personally gave us his word that we had only to call him if we had any problems. Each time we called there was no response and never a call back. The situations were never resolved to our satisfaction.

As bad as it is now it will be much worse with twice as many transient occupants who have little or no interest in maintaining any good will with the neighbors during their brief stays.

We own two parcels directly across the street from the dorms. One 6 acre parcel has an old home and a cottage. Our son and his family reside there. The cottage is 500 sq. feet. We can only increase the footage to 800 sq. feet. The old house is supposedly of "historical significance" and hence cannot be razed or modified except to its original design. The original house was a single story with no bath or kitchen facilities.

On the 7 acre parcel we wanted to build a SINGLE story home located 300 feet back from Pratt and surrounded by 13 acres of vineyard. Permits were denied because it was deemed an inappropriate design for the area. We didn't realize if we wanted to build a three story house right next to Pratt we probably could have done so.

It is ironic that we were denied sensible uses for our property but a large commercial campus is being allowed in an area zoned for agriculture and single family housing. Is the continuous ruination of our neighborhood really worth the money the city will receive for allowing this expansion? We don't believe that it is. It certainly is not worth it to us as this very unattractive building just across the street with all its noise and traffic will lower the value of our property.

We strongly oppose any expansion of the CIA dormitory property either now or in the future.

Due to medical issues we may not be able to attend the meeting but we will try to attend.

Fred and Carol Papina  
855 Pratt Avenue

Handwritten signatures of Fred Papina and Carol Papina in cursive script.

## Public Comment 15

**Comments of Donna Hinds to  
Culinary Institute of America  
Campus Master Plan**

Dear Planning Commissioners,

Thank you for your time in serving on the Planning Commission and for considering these thoughts related to the CIA dorm expansion proposal for Pratt Ave. My comments and concerns related to this project stem not only from my ownership of two properties on Pratt Avenue,<sup>1</sup> but also from my interest in the general well-being of the City of St. Helena and the impacts this project will have on the City. The discussions in opposition to the project are based, in large part, on areas in which the project is in direct conflict with various provisions of the St. Helena Municipal Code ("Code"). I have quoted the Code throughout the discussion, and suggest that it may be beneficial to have a copy, for reference, while reading this paper. The project, as it relates to the Vineyard Lodge expansion, should be denied, as supported by the following facts and discussions.

**PROJECT FACTS:**

Due to the large volume of information submitted in the Initial Study/Mitigated Negative Declaration ("IS/MND"), together with five appendices, the following is a summary of factual information obtained from the IS/MND that will assist the reader while analyzing this project. (Page references are to the location of the information in the IS/MND)

- Proposed new building square footage: 40,645 (p. 6)
- Proposed demolition square footage: 15,050 (p. 6)
- Existing Vineyard Lodge II square footage: 12,612 (p. 4)
- Proposed Total square footage: 53,257 (12,612 + 40,645)
- Height of buildings: 36' to 40'2" (Appendix 4 Plans p. A101-A107)<sup>2</sup>
- Length of buildings: 112' to 162' (Appendix 4 Plans p. A 101-A107)
- Length of building B fronting on Pratt Ave: 150' (Appendix 4 Plans p. A 101-A107)
- Height of building B fronting on Pratt Ave: 36' (Appendix 4 Plans p. A 101-A107)
- Proposed front setback of building B: 20' (Appendix 4 Plans)
- Proposed side setback of building A: 13' (Appendix 4 Plans)
- Building A is 162' long x 87' wide x 40'2" high and has both 2 and 3 story elements. (Appendix 4 Plans p. A 101-A107)
- Building B is 150' long 42' wide and 36' high and is a two story building. (Appendix 4 Plans p. A 101-A107)
- Building C is 112' long x 42' wide and 40'2" high and is a three story building. (Appendix 4 Plans p. A 101-A107)
- Size of Pratt Vineyard Lodge Lot: 2.61 acre (p. 8)
- Zoning of Project Property: PQP (St. Helena Zoning Map)

## Public Comment 15

- Zoning surrounding proposed project: Agricultural (St. Helena Zoning Map)
- Location of project: Outside of Urban Limit Line (St. Helena Zoning Map)
- Current number of students at Vineyard Lodge: 101 (p. 5)
- Proposed number of students at Vineyard Lodge: 224 (p. 4)
- Net increase in students at Vineyard Lodge: 123 (p. 5)
- Proposed/Current Number of students at Greystone 47 (p. 4 )
- Total Increased students and Staff at Greystone: 58 (p. 3)
- Current Total number of students: 200 (p. 3)
- Proposed Total number of students: 300 (p. 3)
- Current number of students in outside housing: 52 (200 total, less 47 at Greystone, less 101 at Vineyard Lodge = 52 )<sup>3</sup>
- Proposed number of students in outside housing: 29 (300 total, less 47 at Greystone, less 224 at Vineyard Lodge = 29)
- Net decrease of students in outside housing: 23 (52 -29 = 23)
- Current number of parking places at Vineyard Lodge: 85 (p. 6)
- Proposed number of parking places at Vineyard Lodge: 72 (p. 6)
- Current ratio of students to parking at Vineyard Lodge: 101:85
- Proposed ratio of students to parking at Vineyard Lodge: 224:72

**DESIGN REVIEW CRITERIA:**

The following is a discussion of the design criteria that must be considered by the Planning Commission in reviewing all applicants. These are set forth in Section 17.164.030. While it requires the failure of only one factor for the Planning Commission to make a finding that the design criteria have not been met, this applicant has failed to meet the majority of the design criteria as follows:

**1. Consistency and compatibility with applicable elements of the general plan;** The project is not consistent and compatible with the applicable elements of the General Plan. The Vineyard Lodge is located beyond the Urban Limit Line ("ULL"). The intent of the ULL is to discourage urban sprawl and promote sensitive development which preserves the rural and agricultural lands around the City. The General Plan Guiding Policy 2.6.5, "*Encourages the continuation of agricultural and low-intensity uses adjacent to the ULL.*" The high intensity (massing, height, and building location near Pratt Ave.) of the Vineyard Lodge expansion project is not consistent with this General Plan Guiding Policy and, therefore, should be denied. The building setback variance that has been requested for Pratt Ave. is in direct violation of the General Plan. Pursuant to Section 17.112.050, there is a special setback of 36' on the northwest side of Pratt Ave. from the railroad track to the Napa River. The reason this provision was included in the Code is evidenced by Section 5.3.3 of the Transportation Element of the 1993 General Plan which provides: Guiding policies "*5.3.3 Preserve rights-of-way for future collector streets within the planning area of the City as follows: \* Starr Avenue from Pratt Avenue to Adams Street . . . The City recognizes that development may or may not proceed along the lines envisioned in this plan, and that some areas not currently identified for*

## Public Comment 15

*potential developments may in fact precede those that are so designated. The intent of the right-of-way preservation designation is to clearly define the interest of the City in maintaining the option for extending its collector street system into these areas. Special setback areas shall be established along collector streets to allow for future widening."* In summary, the special setback on Pratt Ave was established pursuant to the 1993 General Plan (our current governing General Plan) to allow for future widening due to Pratt's designation as a collector street. A variance to this special set back would be in direct contradiction of the General Plan and would result in the loss of ability to widen Pratt Ave in the future. It is not currently clear what traffic patterns will evolve over the next 5, 10 or 20 years and whether or not Pratt Ave. will be needed as a connector street. The topic was raised at the community workshop held on February 4, 2017, when a concerned citizen expressed the need of the City to preserve rights-of-way on connector streets and not give up these rights as was done on the Adams St. extension. As the traffic in St. Helena continues to increase, there may come a time in the future when the City wants to widen Pratt. The allowance of the requested variance would not only be inconsistent with the 1993 General Plan but would also be very short-sighted and result in the loss of the ability of the City to widen a collector street at some point in the future. The request for setback variance should be denied.

**2. Compatibility of design with the immediate environment of the site;** There is not compatibility of design with the immediate environment. The property surrounding the proposed project is zoned agricultural. The property is surrounded by vineyards, residences and residential home sites. The project is simply too massive, is in stark contrast and not compatible with the immediate environment and, therefore, should be denied.

**3. Relationship of the design to the site;** The proposed project is too large and not appropriate for the site. The project feasibility requires multiple variances from the Code and the use of a right-of-way from the neighboring property to the east. The main access road for the proposed project is located on this right-of-way. Section 17.112.010 provides "*Each building site in each zoning district shall be planned and arranged so as to occupy only that portion of a lot not otherwise required as a yard, setback easement, right-of-way, or other required open space;*" The easement has been included in the site plan, as if it is part of the property, but a close review of the northeast property line shows that the buildings have been placed within 13' of the property line. Has the City evaluated the rights under the easement? When will this easement expire? Does the easement allow all uses required by the project? Set back requirements from the northeast property line are not satisfied. Based on these facts, it is abundantly clear that the project design does not work within the site boundaries.

**5. Whether the design promotes harmonious transition in scale and character in areas between different designated land uses;** The design does not promote harmonious transition in scale and character in areas between different designated land uses. According to the St. Helena zoning map, the project is surrounded by A-20 zoning. Therefore, the Planning Commission should look to A-20 zoning requirements to determine whether there is harmonious transition in scale and character between the different designated land uses. The A-20 zoning sets forth development standards in Section 17.20.060. The front and side

## Public Comment 15

setbacks for A-20 zoning are 50'. The side setback from Building A to the property line on the northeast side is 13', far less than the 50' required by the surrounding zoning. In addition to the discussion related to the front setback in design review element 1., above, it is a standard zoning principle that the larger and taller the buildings, the greater the setback. The A-20 zoning provides for 30' maximum building height. The proposed 36' and 40'2" building heights are clearly not in harmonious transition with the surrounding vineyard and mountain view properties. The project should be denied for failure to promote harmonious transition in scale and character with the neighboring agricultural vineyard and residential properties.

**6. Compatibility with future construction both on and off the site;** Future construction on the site is not applicable. There are two future planned projects of residential construction located directly across the street from the proposed project. This proposed project is not compatible with these residential projects and should be denied.

**7. Whether the architectural design of structures and their materials and colors are appropriate to the function of the project;** The architectural design is not appropriate, due to the degree of intense massing (see prior discussions), and should be denied.

**8. Whether the planning and siting of the various functions and buildings on the site create an internal sense of order and provide a desirable environment for occupants, visitors and the general community;** The proposed buildings are so large that there is insufficient open space for the 224 proposed students. There appears to be insufficient outdoor green area. There is insufficient parking for students. There is no parking accommodations for visitors. Building B is located only 20 feet from Pratt Ave., which will subject the residents on the Pratt Ave. side of the building to road noise. The applicant has failed to meet design criteria 8 and the project should be denied.

**9. Whether the amount and arrangement of open space and landscaping are appropriate to the design and the function of the structures;** The amount and arrangement of open space and landscaping are not appropriate to the design and function of the structures. The visual impacts of this project cannot be properly mitigated by landscaping, due to the intensity of massing and height of the buildings, and the Applicant's request for a reduced setback from Pratt Ave. The PQP district includes the requirement for landscaping and screening.

"Screening" is defined as a "method of visually shielding or obscuring one abutting structure or use from another or from the public right-of-way by fencing, walls, berms or **densely planted vegetation**." Section 17.164.070 B.7 requires the proponent to submit a site plan showing the "location and size of existing and proposed planting and screening." Additionally, Section 17.68.060 B. provides "All planting strips, yards, setbacks and other required open space areas shall be landscaped in accord with a landscaping plan approved by the design review process." The Applicant's Landscaping Plan, shown in Drawing L2 of the Use Permit and Design Review submittal, the renderings of the front elevation of the 150 foot long, 36 foot tall Building B, which will be setback only 20 feet from Pratt Avenue, and the conclusion of the Vineyard Lodge Driveway Traffic Impact Report, Section E, regarding Sight Lines at the Vineyard Lodge Driveway, which states "Therefore, sight lines would be acceptable assuming that **no** landscaping is planted along the site frontage that would ultimately grow and block drivers

## Public Comment 15

views." are in contradiction with one another in the appropriate screening required by the Code. Additionally, the stand of American Sycamore trees, located along the northeast property line and proposed to screen the 162 foot long, 40 foot tall Building A, are deciduous and will not provide adequate screening of Building A particularly during the Fall and Winter months. The massing and height of the proposed dormitory buildings, combined with the requested front setback variance of 20 feet from Pratt Ave. and the stated traffic safety concern upon exiting the driveway, should landscaping be planted along the front of the property, renders the Applicant's Landscape Plan, Mitigation Measure (AES-1) ineffective and failing to meet Design Criteria 9 and, therefore, the project should be denied.

**10. Whether sufficient ancillary functions are provided to support the main functions of the project and whether they are compatible with the project's design concept;** There are several ancillary functions to support the main function that are lacking: parking; gathering space, green space, recreation area, and inadequate access drive for fire safety. (Some of these are discussed in more detail in other sections so will not be repeated here). The applicant has failed to meet design criteria 10 and therefore the project should not be approved.

**11. Whether access to the property and circulation systems are safe and convenient for pedestrians, cyclists and vehicles;** The preliminary grading and drainage plan that was provided on page UP4 of the plans (Page 113 of Appendix 4 of IS/MND) notes that the width of the access road is 16' in some places. Section 17.124.070 B. 1. provides that *"An access drive is a way located outside of the public right-of-way that provides vehicular access between the public street and the required parking for more than one lot, or for one lot if the length of the drive is greater than one hundred (100) feet."* The access drive in the Applicant's plans is greater than 100'. Section 17.124.070 B. 2. e. provides the following widths are the minimums that will allow for the safe passage of emergency vehicles. According to this Code Section, for residential developments having over 60 units, the minimum width (including two 2' shoulders) is 30'. Since the access roads for the proposed plans do not meet the minimum Code requirement for width, the project should be denied. Width of access roads are provided as minimums for safety of residents and should be strictly enforced. A reduction in the size of the access roads, contrary to the Code provisions, could result in future liabilities for the City. Section 17.124.070 B.2.a provides: *"All access drives shall be designed for two-way traffic, unless specified approval is obtained from the public works director and fire chief/fire code official to allow one-way access drives."* (Verification of approval of the fire chief should be obtained). Section 17.124.070 B.2.h. provides: *"An adequately sized firefighting operational area shall be provided as required by Chapter 15.36"* This required firefighting operational area is not evident on the plans and should, therefore, be verified. The Applicant has failed to meet design criteria 11 and, therefore, the project should be denied.

#### USE PERMIT FINDINGS:

The Findings required for a use permit are set forth in Section 17.168.050. as follows: ***"No use permit shall be granted unless all of the following general findings can be made:"*** This provision clearly states that if any one of these factors is not satisfied, "no use permit shall be

## Public Comment 15

granted." This project fails to meet Section 17.16.050 A., B., C., D., E., F., G., H., I., J., K., and L., as follows, and should, therefore, be denied:

**A. That the proposed use would not generate odors, fumes, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community;** Due to the large size of the project, the number of students, the number of cars, and the outdoor lighting, this project will generate odors, fumes, and light glare that will be injurious to surrounding uses of residential homes. In addition to existing nearby residences, there are two planned residential building sites located directly across from the proposed project site. The Applicant has failed to meet finding A. and should, therefore, be denied.

**B. That the proposed use would not generate levels of noise that adversely affect the health, safety or welfare of neighboring properties or uses;** The proposed project will increase the total number of students from 101 to 224 in a very concentrated area. The Applicant's submitted Noise Study states, "*Gatherings could include up to 120 students who would live on the site. Residential neighbors near the project site have expressed concern that these gatherings and other activities could generate noise.*" The Noise Study only contemplates 120 people speaking at the same time at an outdoor event. Numerous unanswered questions and unintended consequences arise, with respect to noise, when the other 104 residents have to be accounted for when participating in an outdoor event. A second statement in the Noise Study, "Student activities are not expected to result in noise that can be heard at the property line between the hours of 10:00 p.m. and 7:00 a.m." The Noise Study did not take into account the proximity of the two residential building sites located directly across the street from the Vineyard Lodge site. Notwithstanding the existing rules prohibiting outside amplified music, the observance of a 9:30 p.m. curfew, and non-residents not allowed to attend events, the idea that 224 college students will not generate an increased level of noise, at any hour, that exceeds the normally acceptable range is beyond credulity. Until proven otherwise, the Applicant has failed to meet the standards of use permit finding B and the project should be denied.

**C. That the proposed use would not generate traffic noise in excess of the normally acceptable range identified in the general plan;** The increase in traffic noise from the operation of 72 cars located onsite at the Vineyard Lodge was not addressed by the Noise Study. Rather, the Noise Study was limited in focus to the A.M. and P.M. peak shuttle bus trips to and from the Vineyard Lodge/Greystone. The Noise Study was conducted during a period when the Vineyard Lodge was unoccupied by students<sup>4</sup>, therefore, no student car derived noise was measured and included in the calculations to ascertain if the proposed 72 permitted cars will generate traffic noise in excess of the normally acceptable range. The Applicant has failed to adequately address use permit design criteria C and the project should be denied.

**D. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection and fire protection;** The proposed project could potentially make excessive

## Public Comment 15

demands on the municipal water supply and municipal sewer capacity as well as other public services. The Applicant's request to expand student enrollment from 200 to 300 students will be adding 100 people to our community. The Association of Bay Area Governments ("ABAG") projection that St. Helena's population will increase by 400 by 2040 does not include these additional 100 students. With a focus on managed residential growth in the City of St. Helena, the City's Residential Growth Management System limits growth in order to ensure the City can provide adequate public services and infrastructure. The proposed Vineyard Lodge expansion project is not exempted from the Residential Growth Management System, Section 17.152.040.<sup>5</sup> Given the scarcity and rising rates of the City's potable water supply and the tenuous condition of the municipal sewer system, the Applicant should not be granted a use permit based on the theoretical future demands of water allocation and wastewater discharge volumes. Notwithstanding the reported water allocation offsets of the proposed project, the Applicant's Water Availability Analysis reports historical annual water usage that has exceeded its corresponding annual water allocations. There is no certainty that the Applicant's proposed redistribution volumes will not exceed water allotment in the future. Similarly, with respect to wastewater discharge volumes, the Vineyard Lodge project is theoretically projected to increase from 6373 gpd to 9520 gpd (an increase of 49%) and the onsite equalization pump tank is sufficiently sized to allow for only off-peak discharge to the City sewer. Again, notwithstanding any theoretical wastewater offsets anticipated at the Greystone campus, the unintended consequences of increased wastewater discharge from the expanded Vineyard Lodge project have not been fully contemplated, as a function of future development, in the area of the City served by the Crinella Lift Station. In consideration of the limited public services of the City, the Applicant's requested increase in enrollment from 200 to 300 students, combined with the proposed expansion of the Vineyard Lodge project to house these additional students, as compared with the higher benefits of other market rate and affordable residential projects competing for the same limited resources and building permit allocations, is not supported and the use permit should be denied.

***E. That the proposed use would provide adequate ingress and egress to and from the proposed location;*** The project has failed to provide adequate ingress and egress to and from the proposed location and should be denied. (See previous discussion under Design Review Criteria 11, above.)

***F. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local-serving economy;*** The proposed project will conflict with the City's goal of maintaining the economic viability of a local-serving economy. Revenue generation is a key factor for St. Helena. The City is facing major challenges with regard to economic development. These challenges include, but are not limited to, the constrained capacity of local infrastructure, lack of available water supply and associated rising water rates and increasing traffic volume. The Applicant's request to increase enrollment from 200 to 300 students and increase the Vineyard Lodge housing capacity does not support increased local economic development. The Applicant has moved the majority of its tourist focused, revenue generating activities and services to the new Copia center in the City of Napa. The Greystone

## Public Comment 15

campus will become more student education and less tourist activity oriented. As a result, St. Helena will be allocating a portion of its finite infrastructure resources without any increased economic benefit. On the contrary, if these same limited infrastructure resources are allocated to higher economically beneficial uses (i.e. hotels, restaurants, ancillary supporting businesses) the City's local-serving economy and long-term economic sustainability will be greatly enhanced. The Applicant's proposed project presents a conflict to the goal of maintaining the economic viability of a local-serving economy and the use permit request should be denied.

**G. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located;** The proposed use is in conflict with the surrounding land uses and would conflict with the purpose established for the district within which it would be located. Since surrounding properties are agricultural and residential, the proposed use is clearly in conflict. (See discussion under Design Review Criteria 5, above.) The Applicant has failed to adequately address use permit finding G and the project should be denied.

**H. That the proposed use would not be in conflict with the City's general plan;** The proposed use is in conflict with the City's general plan. (See discussion under Design Review Criteria 1, above) and should be denied.

**I. That the proposed use would not be injurious to public health, safety or welfare;** The proposed use would be injurious to public health, safety or welfare. (See discussion under Design Review Criteria 8 and 11, and Use Permit Findings A, B, and C) and should be denied.

**J. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the general plan;** The granting of this project would set a precedent for the approval of very large three story buildings. I do not believe there are any other three story buildings, beyond the central business district, in the City of St. Helena. Allowing a three story, 40'2" tall building outside the Urban Limit Line will set a dangerous precedent. If the variance is allowed to the special Pratt Ave. setback, precedent will be set to allow variances along the entirety of Pratt Ave. Additionally, precedent will be set to allow variances to other special setbacks on other connector streets. These precedents would be detrimental and, therefore, the use permit for this project should be denied.

**K. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long-term parking needs of employees and business owners and customers is available;** The applicant has failed to provide for adequate off-street parking. Section 17.68.060, related to PQP standards and requirements, provides *on-site parking and loading shall be provided in accord with the provisions of Section 17.124*. Section 17.124.030 A. 3. sets forth the required number of parking spaces for "rooming, boarding, or lodging house as: two spaces for the resident owner plus one space for each guest room." Applicant is required to provide for a minimum of one space per room. The Applicant is proposing to increase student occupancy from 101 to 224 while decreasing parking spaces from 85 to 72. The Applicant is adding 123 students and decreasing parking spaces by 13. This proposal is

## Public Comment 15

based on the Applicant's contention that the current student parking demand at the Vineyard Lodge site is 31%. During the performance of the Traffic Impact Report, parking demand was counted at 44%. Further, the reported student parking demand at the Greystone Campus is 70% (TIR). This wide discrepancy in student parking demands is in contradiction with the Applicant's request for a variance of the parking requirements. Rather, it appears the basis for the Applicant's request for 72 parking spaces is based on the limitation in available remaining space due to the large building program on the property. Section 17.124.50 A. makes it very clear that an expansion or increase in occupancy can be made "*provided that **additional parking space shall be provided** in the extent of the change as required in Section 17.124.030.*" The Code language "shall" appears to be a mandate that changes in projects, such as this, must provide for additional parking. The proposed project has failed to meet minimum parking standards as required by the Code and should be denied.

***L. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use. Design Criteria (Zoning Code 17.164.030).*** The intersection of Pratt Avenue and Main Street is a major entry/exit point for the City of St. Helena. The City should take upmost precaution in approving projects that could potentially impact the traffic along the entire stretch of Main Street. The traffic impacts of the Los Alcobas property have not been fully realized and Beringer has proposed a project that will also have traffic implications. The City should proceed with great caution and insure that the traffic impact studies submitted by the Applicant are to the level that would be required by an Environmental Impact Report.

**ZONING DESIGNATION:**

The property on Pratt Ave. is zoned PQP. The original zoning was A-20 and changed to PQP in 2008 to accommodate the non-conforming dorm expansion. Chapter 17.68 of the Code sets forth the provisions related to PQP zoning. Section 17.68.010 A. states "*It is the purpose of the PQP public and quasi-public district to provide for government-owned facilities, public and private schools and quasi-public uses such as churches and cemeteries.*" The PQP zoning provisions do not seem to contemplate housing. The 2008 Planning Commission may have improperly zoned the property to PQP to allow for dormitories. If this is the case, the mistake of the improper zoning should not be extended further and additional dormitories on this property should not be allowed.

**ENVIRONMENTAL IMPACT REPORT:**

It seems evident that there is sufficient grounds to deny this project on the basis of design review and the failure to meet the requirements of a use permit. Since the project cannot pass on design review and use permit, the issue of requiring an Environmental Impact Report becomes irrelevant. In other words, the Applicant should not be required to perform an EIR if the Planning Commission determines that it is not able to approve the project based on design. In the event the Planning Commission does consider the necessity of an EIR, it is clear that an

## Public Comment 15

EIR is required for this project for the following reasons: Identification and mitigation of multiple significant impacts of this project have not been met.

#### **ALTERNATIVE HOUSING OPTIONS:**

Based on the numerous variances required and non-compliance with multiple Code provisions and design review standards, it is clear the proposed project does not work on the Vineyard Lodge site. Although it is not the role of the Planning Commissioners to instruct applicants as to how or where to design their projects, the CIA owns other properties in the area that may be more suitable for housing additional students. In 1993, the St. Helena Planning Commission approved plans for two dormitories on the CIA Greystone property. Another property owned by the Applicant is a 5.49 acres parcel located adjacent to the Greystone campus to the south. Locating additional dorms on either the Greystone campus or the property adjacent to the Greystone campus would have much less impacts in the community in terms of visual, parking, traffic, etc. than the proposed project. Another consideration is that Pacific Union College is currently under-enrolled and the dormitories are not at full capacity. Entering into an agreement with Pacific Union for housing additional students would have far fewer impacts than the proposed project and may be economically more beneficial to both PUC and the CIA.

#### **NEIGHBORHOOD MEETING:**

A neighborhood meeting was held on April 2, 2016. This meeting was noticed by the City Planning Department and was attended by Tom Bensel, Victor Carniglia (on behalf of the City) and several concerned neighbors. It seems as if this meeting was purely to “check a box” that the Applicant met with neighbors. Various questions and concerns were raised by the neighbors in attendance. Based on the plans submitted, the Applicant did not address any of the concerns raised at the meeting. Three of the concerns I raised related to the height of the buildings, the proximity of the buildings to Pratt Ave. (set back), and whether there would be sufficient off-street parking so that no overflow parking would occur on Pratt Ave. A follow up meeting was not held and I was never contacted by Tom Bensel again. When I saw the plans that were submitted to the City, it became very clear to me that the Applicant not only failed to address our concerns, but actually went in the opposite direction of the concerns expressed at the meeting. At the neighborhood meeting, the representation was made that the buildings would be two story. In spite of the fact that I expressed concern over the height of the buildings, the submitted plans include buildings that are three stories tall and 40’2” high. At the neighborhood meeting, I specifically asked how far back the buildings would be setback from Pratt Ave and stated that I felt they should be set back as far as possible. The applicant replied at the meeting that he did not know how far the buildings would be set back. When I saw the submitted plans, I was very disappointed to see that the setback from Pratt Ave. was proposed at 20’ and would require a variance from the special setback that applies to Pratt Ave. As to the question of sufficient parking, the design decreased parking by 13 while increasing the

## Public Comment 15

number of students by 123. Again, there is a feeling that the applicant only held this meeting to “check a box” and not to sincerely address the concerns of the neighbors.

**MERIT BASED DECISION:**

The CIA has voluntarily decided to purchase the COPIA building in the City of Napa for a reported \$12.3 million, plus renovation investment, and to relocate many of their tourist activities to the City of Napa. This reference to moving tourist activities is made throughout the IS/MND. As an example of the tourism activities moving to the City of Napa, the Flavor Napa Valley website (a large CIA event) lists hotel packages for tourists planning their stay for the event. All of the hotel packages are in the City of Napa.<sup>6</sup> What about St. Helena? There have been recent newspaper articles (San Francisco Chronicle and Napa Valley Register), quoting Tom Bensel, related to the opening of Copia. These newspaper articles are attached for your convenience. Some of the more relevant quotes from these articles are: *“The Culinary Institute of America is opening its newest campus, at the Copia building in Napa, in stages, beginning with classes this week. ‘This will be the public face of the CIA,’ said Tom Bensel, managing director for both Napa Valley campuses, including the original site at Greystone in St. Helena.”*<sup>7</sup> *“The opening of the Copia building allows the Greystone St. Helena campus to focus on education for the students and also to undertake much needed renovations, Bensel said.”*<sup>8</sup> In another article discussing the opening of the new Copia center in Napa: *“Tom Bensel, managing director of the institute’s California campuses, says it will increase the recreational cooking classes offered at St. Helena and move them to Napa.”*<sup>9</sup> The CIA has chosen to redirect the majority of its tourist revenue generating operations from St. Helena to the City of Napa and is now asking St. Helena to approve a project that will place additional burdens on the City’s infrastructure and finite resources. The proposed project does not meet the standards required for design review or for a use permit. The CIA has submitted this project, without regard for the comments and concerns of the neighbors, without deference to Municipal Code provisions, and without completing a full Environmental Impact Report which would clearly define all environmental impacts. It is incumbent upon the Planning Commission to make the determination of this project without regard for whom the applicant is, but rather, based on design review standards and use permit findings.

**CONCLUSION:**

There are multiple reasons this project should be denied. The proposed project fails to meet the design criteria required for approval of projects as set forth in Sections 17.164.030 A. 1., 2., 3., 5., 6., 7., 8., 9., 10., and 11. The proposed project fails to meet the requirements for a use permit set forth in Sections 17.16.050 A., B., C., D., E., F., G., H., I., J., K., and L. The proposed project also requires the granting of multiple variances that would be detrimental to the community and would set negative precedents for future projects. While there are multiple significant reasons this project fails to meet design review standards and use permit standards,

## Public Comment 15

it only takes a finding of one reason of the many outlined above to deny this project. For the reasons stated throughout this paper, this project should be denied.

## Footnotes:

<sup>1</sup> Rusty and Donna Hinds own a 1 acre property (777 Pratt Ave.) that is diagonally across the street from the CIA Dorm project. This property was purchased as a residential homesite. The Vineyard Lodge property is less than 50 feet from this property. Additionally, Rusty and Donna Hinds own a 1/3 acre property (1057 Pratt Ave.) this is located between the Vineyard Lodge project and Main Street.

<sup>2</sup> Applicant describes building heights as 29' to 40'2" (Page 4 of IS/MND) but buildings heights are typically measured at the highest point. If measured at the highest point the buildings range from 36' to 40'2".

<sup>3</sup> In the chart on P. 6 of IS/MND Off-site Beds are not stated as "N/A." Applicant has not discussed offsite housing.

<sup>4</sup> P. 9 IS/MND states "The existing CIA facility was unoccupied as students were on break."

<sup>5</sup> **17.152.040 Exempted and regulated development categories.**

A. Exempted Development Categories. This chapter shall not apply to the issuance of building permits for the following projects:

1. Industrial;
2. Commercial;
3. Commercial/residential (daily rental);
4. Replacement housing (on the same site as a preexisting unit which has been removed, demolished or burned within the immediately preceding two years) but not in conjunction with subsection (A)(5) of this section;
5. Relocation of units already existing in the city;
6. Additions, renovations and refurbishment of existing dwelling units;
7. Accessory buildings of any type (except dwelling units);
8. Guest cottages (detached bedroom(s) without kitchen facilities);
9. Second units as defined in Section 17.04.160 and regulated by Section 17.116.030;
10. Affordable Housing. Affordable units are those dwelling units which are required to be rented at affordable rents or purchased at an affordable sales price, consistent with Chapter 17.146. The number of affordable housing units constructed shall be determined by the city council at the time of review of the development agreement authorizing the units. The agreement shall contain guarantees that the dwelling units would continue to be affordable to persons of very low, low, or moderate income for an agreed upon period of time.

## CIA at Copia opens in stages

Sasha Paulsen spaulsen@napanews.com Oct 18, 2016

Phil Mansfield photo

Food and wine classes are now being offered at the Napa Valley Vintners Theater at the CIA at Copia in Napa.

The Culinary Institute of America is opening its newest campus, at the Copia building in Napa, in stages, beginning with classes this week.

"This will be the public face of the CIA," said Tom Bensei, managing director for both Napa Valley campuses, including the original site at Greystone in St. Helena.

Leading a tour through the Copia building, where renovations are ongoing, Bensei gave an overview of the plans as they are evolving for the space. When completed it will offer classes and food and wine programs for the public, extensive event space, a "lifestyle" shop, and a restaurant with a new

## Public Comment 15

approach to dining. There will be no entrance fee to the building, and Bensei stressed that the CIA wants to welcome both local residents and visitors to the facility when construction is complete. There will be fees for individual classes. He said a grand opening is planned for 2017.

The Vintners' Hall of Fame, now in the Barrel Room at the historic Greystone building will be relocated to Copia and renamed the Wine Hall of Fame, Bensei said. It's expected to be in place by spring 2017.

"CIA at Copia is a first for the Culinary Institute of America," he said, noting that the new facility will be "entirely dedicated" to offering food and wine education and experiences to the public. "It opens a window into what the CIA truly is: a visionary thought-leader and innovator in food and beverage, with world-class faculty and facilities."

The opening of the Copia building allows the Greystone St. Helena campus to focus on education for the students and also to undertake much needed renovations, Bensei said.

The CIA at Greystone opened 20 years ago in what had been the Christian Brothers Winery. Initially, it offered a pastry and dessert training, as well as specialized educational classes for chefs. Over the years, as public interest has grown in cooking programs, the CIA began offering classes for food and wine enthusiasts, and expanded its professional training programs.

The 80,000 square-feet of indoor and outdoor event and theater space at Copia will now be the site for daily programs, wine tasting and classes taught by CIA instructors and guest lecturers that feature seasonally-themed recipes designed for home kitchens.

Beginning on Monday, Oct. 17, the CIA is offering daily food and wine programs in newly named Napa Valley Vintners Theater, formerly the Meyer Food Forum. The 72-seat theater is equipped with a demonstration kitchen. The first classes include "Basic Flavor Interactions," "Cooking With Wine," "Fresh Home-made Cheese" and "How to Make Fresh Pasta."

Sundays have been designated "Family Fundays" beginning with an Oct. 23 class "Mac and Cheese," which will "re-imagine" the classic.

A complete schedule with tickets and prices is available at <http://ciaatcopia.eventbrite.com>.

"CIA at Copia's educational programming takes our enthusiast programming to another level, for people of all ages and interests," Bensei said.

### The Restaurant at CIA Copia

The anticipated opening date for The Restaurant at CIA Copia is mid-November. What was once Julia's Kitchen at Copia has undergone a face-lift for the new restaurant, which will be open for lunch and dinner, under the direction of Wally Malouf, CIA's senior director of food and beverage operations, and chef de cuisine Chris Aken.

Malouf, who is based at the CIA in Hyde Park, N.Y., told the Register that the plan for dinner service is to blend front and back of the house service for an innovative approach to service in which chefs will come out of the kitchen to offer dishes to diners. In this way, he said, guests will be able to see both the savory and dessert dishes and also meet the chefs who create them. Sharing dishes will be encouraged as part of this "experiential dining" approach. Dishes diners select will be marked on the menu, and the number of dishes selected will be tabulated at the end of a meal.

In the same way, Malouf said wines by the glass will be offered on a cart that will move through the restaurant. Guests will be able to taste as many as six wines before selecting one or more to drink with their meal.

## Public Comment 15

Lunch service will be more conventional, Malouf said. "People will be able to come in and order a burger or salad — usually that's when people are on a schedule."

Malouf described the menu as Mediterranean-inspired, California cuisine "with international influences." Produce from the Copia gardens, managed by CIA Farm Manager Matthew Gunn will be utilized.

The remodel of the original Copia building by CIA and Architectural Resources Group has extended the facade nearly eight feet from its original location, allowing the dining room to blend with the property's patio, gardens and olive grove. The restaurant has one private dining room that seats 12, and two private dining rooms that each seat 18, but can be combined to seat 36.

A 1975 graduate of the CIA, Malouf joined the administration of his alma mater in 2013. Before that, he spent 13 years as co-owner and chief operating officer of Beacon Restaurant in New York City. Malouf is known in the New York area for his time as executive chef and director of operations at the Rainbow Room and executive chef at the Hudson River Club and Le Cremaillere.

The signature cuisine he developed at the Hudson River Club featured the culinary riches of the Hudson Valley, which resulted in "The Hudson River Valley Cookbook" (Addison-Wesley, 1996). Malouf is also the author of "High Heat: Grilling and Roasting Year-Round" (Random House/Broadway Books, 2005).

He co-founded the Windows of Hope Family Relief Fund after Sept. 11, 2001 and remains one of the organization's three directors. He is also a former chairman of the CIA's Alumni Council and served on the college's Education Committee.

Aken has worked as executive chef at Avia Napa (now Andaz) and was opening executive chef at AKA Bistro. The former owner of Toast Catering, executive chef and partner at Jack London Lodge and Stomp at the Mt. View Hotel. Originally from Southern California, Aken began his culinary career in Oklahoma City in 1995 under Chef Kurt Fleischfresser and also worked at La Folie in San Francisco.

### Event space

Other renovations at the new CIA include windows on the lower level opening out to the river, creating a light-filled, modern atrium in the center of the building that will be available for evening receptions and can accommodate 800 guests in a standing reception or a 350-seat dinner.

Upstairs, the former exhibit hall is being turned into a teaching kitchen for hands-on cooking classes. Bensele said the plan is to have it completed by late summer 2017.

A mezzanine overlooking the atrium and the Napa River can host an event for up to 300. Adjacent to the mezzanine are two classrooms that can be used for breakout sessions, each seating 30. Outside, the newly terraced amphitheater seats 600 in rows or 375 at tables.

Meeting spaces upstairs at CIA at Copia include the Food Business School classroom with 25 seats; the boardroom with 25 seats, reception space for 50 on the balcony and a garden balcony that will accommodate 80 seated and 120 standing.

The main theater at Copia, used for movie screenings, speakers' series, and panel presentations, seats 250.

For private event bookings, contact Amy Thomason-Richardson at 707-967-2307. For additional information, visit [www.ciaatcopia.com](http://www.ciaatcopia.com).

## Napa's Copia to reopen as Culinary Institute of America campus

By Tara Duggan, San Francisco Chronicle | October 16, 2016 | Updated: October 16, 2016 5:00am

1

Photo: Talia Herman

The renovated restaurant at Copia in Napa, now part of the Culinary Institute of America.

Just after Halloween, Copia will rise from the dead in downtown Napa.

Drought-starved grapevines from its old garden have been pulled up and replaced by robust olive trees along the walk that leads to the former Copia: The American Center for Wine, Food and the Arts. The site will now be the CIA at Copia, a new public-facing campus for the Culinary Institute of America. When it opens in stages, starting in November, the CIA at Copia will have a renovated restaurant and store and will offer cooking demonstrations and wine tastings. Next year, it will open an exhibit space and offer hands-on cooking classes to nonprofessionals.

It's a big turnaround for the museum and event space, which first opened in 2001 with grandiose plans dreamed up by the late Robert and Margrit Mondavi, who were also major benefactors, and supporter Julia Child. But it closed and went into bankruptcy in 2008. Since then, its 80,000 square feet of exhibit halls, classrooms, theaters and a restaurant as well as an outdoor amphitheater have been largely empty.

The Culinary Institute of America, which is headquartered in Hyde Park, N.Y., and has had a branch at Greystone in St. Helena for 20 years, bought the property in October 2015 for \$12.5 million, a bargain compared to its original \$55 million price tag.

This will be the first branch of the institute that is oriented toward the public rather than professional cooks. Tom Bensel, managing director of the institute's California campuses, says it will increase the recreational cooking classes offered at St. Helena and move them to

IMAGE 1 OF 9

The restaurant at the new CIA at Copia in Napa.

Based on experiences at its other campuses, including in San Antonio, Texas, and nine public restaurants and bakeries, the institute is betting its mix of tastings and classes will have more traction than what was offered at the original Copia.

“People want to taste things, touch things and have an experience,” Bensel says. “They’ll be

## Public Comment 15

---

able to immerse themselves with what's going on rather than just observe.”

Copia's original exhibits are gone, but the new space will house Chuck Williams' personal collection of cookware — bequeathed to the school when the founder of Williams-Sonoma died in December. When the exhibit opens in late spring or summer, entry will be free, and Bensel makes pains to say it won't be called a museum.

The new owners “have heard all of the horror stories about what occurred and what they can improve upon,” says Steve Carlin, who developed the Ferry Plaza Marketplace and the similar Oxbow Public Market, which opened in 2007, right next to Copia. “From what I've seen, they have listened to that and will make the appropriate adjustments.”

During the first phase next month, the institute will start to offer daily food and wine demo classes (\$25 to \$95) in a 75-seat theater. A bit later, six tasting stations will be set up in the atrium with visiting wineries that will rotate quarterly.

“This gives an opportunity to many wineries that don't have tasting rooms,” says Bensel. There are also plans for a high-end wine salon to be located next to the restaurant. It will offer small pours of cult wines that would otherwise be difficult to taste.

The restaurant, called the Restaurant at the CIA Copia, is inspired by the cart-style service at San Francisco's State Bird Provisions. Especially at dinner, the cooks will bring out trays with dishes that diners can choose from and are meant to be shared, such as a whole roast trout, duck and foie gras served with onion marmalade, and roasted oysters with shallots and verjus.

“We really want the restaurant to be fun and casual,” says Waldy Malouf, who heads up food and beverage operations at the institute.

## Public Comment 15

Photo: Talia Herman

A classroom kitchen in the new Culinary Institute of America campus at Copia in Napa.

While the restaurant at Copia will have a professional staff, the one at Greystone will be student-run, and closed when school is not in session.

Bensel says the new campus is part of the evolution of the culinary institute, from which he graduated in 1976. Back then, the culinary arts were considered more of a trade. Over the years the institute has gone beyond its associate degree programming to offer bachelor of arts degrees, and now a Wine and Beverage Graduate Certificate Program at Greystone.

The CIA at Copia also plans to be part of an ongoing evolution in downtown Napa. Copia closed during the Great Recession, and when a renovation to the nearby bypass channel was diverting traffic from the neighborhood. Things improved by 2010, developer Carlin says, and sales at Oxbow Public Market have since tripled. New hotels have opened, with additional ones due to open soon.

Public Comment 15

At the original Copia, many say, another problem was a lack of involvement in the community.

“Whether it was intentional or not, there was a sense of exclusivity to it,” Bensel says. The CIA at Copia is trying to avoid that by hosting events and fundraisers, like one for Friends of the Napa Valley River that was held at its outdoor amphitheater last weekend.

If the new campus is successful, Bensel says, revenue will bolster its academic programming. And there’s one last side benefit to educating the public about food and wine: “Our graduates are going out and being part of successful restaurants,” he says. “We don’t want to just give them their certificates and be done.”

## **COMMENTS OF RUSTY HINDS TO CULINARY INSTITUTE OF AMERICA CAMPUS MASTER PLAN**

### **Historical Review**

A review of the historical record of the establishment of the CIA Greystone Campus, and its resident housing chronology, is very important in setting the context of this current proposal being made by the CIA.

- 1993: Original Use Permit approves the construction of two residential dormitories and stipulates a third, with Permit amendment, to be constructed on the Greystone Campus. The CIA requested enrollment of 200 students but a maximum permit limit of 104 students was granted. The Permit required a 1:1 room to parking space ratio. The City Council certified a Final Environmental Impact Report.
- 2004: CIA is granted a Use Permit to transform the former Marlinda Nursing facility to student housing. This property is located at 830 Pratt Avenue, beyond the Urban Limit Line, and was zoned A-20. The Planning Commission and City Council approved the transition based solely on a non-conforming replaced by a use of lesser intensity (Occupancy reduced from 70 beds to 40).
- 2008: CIA requested a change in the Vineyard Lodge Use Permit to add a second dormitory. As this would trigger non-conformance of greater intensity in the A-20 zone, the Planning Commission and City Council struggled with the dilemma of either changing the citywide zoning ordinance for A-20 or the site specific rezoning of the Vineyard Lodge parcel. After much debate, the Vineyard Lodge parcel was rezoned Public Quasi Public. Vineyard Lodge II was erected and houses 60 residents in 12,612 square feet. The Vineyard Lodge total resident population is 101 served by 85 parking spaces. In addition, resolution 2008-74 increased the enrollment at the Greystone campus from 104 to 200 students.

### **Summary (Hinds)**

In review of the Initial Study/Mitigated Negative Declaration ("IS/MND"), and associated documents submitted by the Culinary Institute of America ("CIA") for the proposed expansion of the Vineyard Lodge located at 830 Pratt Avenue, several elements either require the granting of multiple variances to the City of St. Helena Municipal Code or they do not satisfactorily identify and mitigate all of the potentially significant impacts. My comments will focus primarily on the high intensity (massing and height) of the new buildings, their forward location on the site near Pratt Avenue (requiring a front setback variance), the inadequate number of parking spaces (requiring a variance), the potential increase in noise, the potential increase in traffic, the increase in wastewater generation, the potential increase in water usage above the allocated volumes and the significantly incongruous nature of the project with the surrounding agricultural and residential land use.

## Public Comment 16

As such, the City of St. Helena Planning Department, the Planning Commission and the City Council should deny the proposed expansion of the Vineyard Lodge property. The Applicant has less environmentally impactful alternatives to fulfill its requisite student housing needs at its Greystone Campus, and adjacent owned parcel, which date back to the original 1993 Use Permit.

### **INITIAL STUDY/MITIGATED NEGATIVE DECLARATION (Vineyard Lodge Expansion)**

In an effort to assist the reader, I have structured the following presentation of the analysis of the Initial Study/Mitigated Negative Declaration ("IS/MND") and Appendices in the following order:

- Cite the category of environmental factor potentially affected;
- Applicant's presentation of the Potentially Significant Impact, either properly identified, or improperly characterized as Less than Significant;
- Presentation of the Applicant's Impact Analysis, as presented;
- Presentation of the Applicant's proposed Mitigation Measure(s) associated with the environmental factor;
- Presentation of Hinds' rebuttal of the manner in which the Applicant has failed to either properly characterize or mitigate each of the environmental factors which create a Potentially Significant Impact; and
- Page numbers are listed parenthetically to assist the reader in reference to where each issue is found in the IS/MND.

#### **Aesthetics:**

##### **Potentially Significant Impacts (IS/MND Page 12)**

- Substantial adverse effect on a scenic vista
- Substantially degrade the existing visual character or quality of the site and its surroundings

##### **Impact Analysis (IS/MND Pages 13-15)**

- Residents and other viewer groups may experience reduced visual quality
- New dorms maximum height of 40'-2"
- Project will introduce perimeter parking lot lighting

##### **Mitigation Measure AES-1 (IS/MND Page 15)**

- Landscaping Plan - Vegetative screening (Trees). To be approved by Planning and Community Director prior to issuance of Building Permit

## Public Comment 16

**The Applicant has failed to adequately mitigate the impacts for Aesthetics for the following reasons:**

- High intensity massing (40,645 sq. ft.) and location of new buildings too close to Pratt Avenue;
- Maximum height of proposed buildings (36'-40'). Surrounding land use (A-20, greater than two acres has a maximum height limitation of 30'. Municipal Code 17.20.060);
- Visual Site Assessment performed in Summer 2016, during the period when onsite trees had full foliage;
- American Sycamore trees located on the northeastern property line along, "Vineyard Road, provide no screening in Fall and Winter months. Also, this same stand of trees will not provide adequate year-round height to screen the tops of proposed Buildings A and C (40');
- No existing screening on the eastern portion of the front property line on Pratt Ave. where proposed Building B (height 36') will be located;
- Existing trees on the western portion of the front property line on Pratt Ave. will not provide adequate screening of proposed Building B (36');
- Lack of trees to properly screen height of proposed Building C (40') looking eastward from western site boundary;
- The Applicant's Landscaping Plan (AES-1) does not mitigate the aesthetic impact resulting from the proposed project. Due to the large size of the buildings, mitigation cannot be accomplished by landscaping. Even with the addition of the landscaping proposed by the Applicant, the permanent visual impact of these buildings will be very significant and will detract from the beauty of the surrounding vineyard/mountain vistas;
- The Traffic Impact Report for the Vineyard Lodge driveway specifically contradicts the Applicant's landscaping plan by stating, "Therefore, sight lines would be acceptable assuming that no landscaping is planted along the site frontage that would ultimately grow and block driver views."
- This mitigation measure is not adequate for the proposed project and, with all due respect, should not be determined at the sole discretion of the Planning and Community Director, as proposed by the Applicant.

## Public Comment 16

**Land Use and Planning****Potentially Significant Impacts (IS/MND Page 38)**

- Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect.

**Setting and Impact Analysis (IS/MND Pages 38-40)**

- The outer edge of the urban service area is demarcated by the urban limit line ("ULL") which is a parcel specific boundary that marks the limit of allowed urban development. The intent of the ULL is to discourage urban sprawl and promote sensitive development which preserves the rural and agricultural lands around the City. The proposed project is subject to land use policies outlined in the St. Helena General Plan (Guiding Policy 2.6.5 encourages the continuation of agricultural and **low-intensity** uses adjacent to the Urban Limit Line);
- The Vineyard Lodge Housing Site is located outside and adjacent to the ULL and is zoned Public Quasi Public ("PQP");
- The project is subject to other standard requirements, stipulated by the Zoning Code, namely, parking and setback requirements which, given site constraints, the applicant maintains cannot be met;
- Under Municipal Code 17.112.050, the Vineyard Lodge Housing site is subject to a special setback requirement of 36';
- In addition, the project has requested a variance from the parking standards outlined in Municipal Code Section 7.124.30 (A.3) which require two spaces for the resident owner and one space for each guest bed. Compliance with the Code will require 226 total parking spaces. Based on data supplied by the applicant, only 31% of students have a demand for parking spaces. As such, applicant is requesting a variance to allow for 72 parking spaces. To ensure that the number of available parking spaces equates with demand, applicant will cap the number of parking permits at 72 and will prohibit overnight offsite and street parking.

**Mitigation Measure LU-1 (IS/MND Page 40)**

- Requires at least five (5) on demand bicycles be made available to residents of the Vineyard Lodge Housing Site.

**The Applicant has failed to adequately identify and mitigate the impacts for Land Use and Planning for the following reasons:**

- Pursuant to Section 17.112.500.A of the St. Helena Municipal Code, there is a special setback of 36' on the northwest side of Pratt Avenue, from the railroad track to the Napa River. The reason this provision was included in the zoning code is evidenced by Section 5.3.3 of the Transportation Element of the 1993 General Plan (St. Helena's current

## Public Comment 16

governing General Plan) which provides, "Guiding Policies 5.3.3 Preserve rights-of-way for future collector streets within the planning area. The intent of the right-of-way preservation designation is to clearly define the interest of the City in maintaining the option for extending its collector street system into these areas. Special setback areas shall be established along collector streets to allow for future widening." In summary, the special setback on Pratt Avenue was established pursuant to the 1993 General Plan to allow for future widening due to Pratt Avenue being designated as a collector street. A variance to this special setback would be in direct contradiction of the General Plan and Zoning Code and would result in the loss of ability to widen Pratt Avenue in the future;

- The high intensity of the proposed Vineyard Lodge project (massing, height and building location near Pratt Avenue) is not consistent with the surrounding agricultural and residential land use (Municipal Code 17.168.050 G)(Municipal Code 17.164.030 A 3,5 and 8), the sensitive, low intensity development on parcels beyond the ULL (General Plan Guiding Policy 2.6.5) and the adjacent land use (A-20, greater than two acres) which mandates a maximum building height of 30 feet (Municipal Code 17.20.060);
- Applicant has not provided data demonstrating a strict 31% demand for onsite parking at the Vineyard Lodge Housing Site. The May 12, 2016, Vineyard Lodge Traffic Study (Dated November 2, 2016), references 96 student residents and 42 cars in the parking lot at the Vineyard Lodge (Demand ratio of 44%). The Greystone May 2016 traffic study (Table 7, Footnote 1, report dated November 17, 2016), references 45 students residing in the Greystone dormitory and parking demand is 70%. The Applicant's submitted documents clearly identify a significant parking demand discrepancy between student residents at the Vineyard Lodge (theoretical 31%, actual 44%) and Greystone (70%). The Applicant's requested parking variance should be denied and the required 1:1 ratio of beds to parking spaces should be required at the Vineyard Lodge;
- If Applicant wants to expand enrollment from 200 to 300 students, the Greystone and other Applicant owned sites should be evaluated to fulfill additional requisite housing and parking capacity requirements;
- The 1993 Use Permit (Resolution 93-105) approved the construction of two dormitories and allowed for a third dormitory, with Use Permit Amendment, on the Greystone Campus. "The CIA was previously approved to build two additional dormitories on the slope behind Greystone. The permits for those structures were not vested and have since lapsed." (Public Hearing Staff Report, August 28, 2008), This building site option remains as a viable alternative without the cumulative impacts of the Vineyard Lodge expansion project;
- The Greystone Campus has space to facilitate resident housing expansion, will eliminate the need for additional shuttle bus trips from the Vineyard Lodge and will not result in additional visual impact;

## Public Comment 16

- The Vineyard Lodge site is too small to expand the housing capacity from its current 101 to the proposed 224 student residents while maintaining compliance with the Municipal Code and General Plan of St. Helena. The Vineyard Lodge site is fully developed in its present state.

**Noise:****Potentially Significant Impact (Categorized Less than Significant, IS/MND Page 41)**

- A substantial permanent increase in ambient noise levels in the project vicinity above existing without the project.

**Setting/Impact Analysis (IS/MND Pages 42-44)**

- Noise study conducted on June 15, 2016. The existing housing facilities were not occupied as students were on break. The measured noise levels represent the lowest noise levels likely to be encountered in the area. Overall, the noise measurements indicate that the noise environment in the project area is generally quiet and consistent with the rural setting.
- At project operation, the onsite land use at the Vineyard Lodge, and associated noise environment, will continue to be typical of a multi-unit development (dormitories).
- The expansion of the Vineyard Lodge site is not expected to introduce a substantial permanent increase in the ambient noise environment.
- Gatherings could include up to 120 students who would live on the site.
- In addition, the CIA regulates activities at the Vineyard Lodge to prohibit amplified music outside, enforces a 9:30 p.m. noise curfew and prohibits non-residents from attending events on the quad.
- Student activities are not expected to result in noise that can be heard at the property line between the hours of 10:00 p.m. and 7:00 a.m.

**Mitigation Measure (Not Offered by Applicant)**

- Permanent noise was subjectively categorized as Less than Significant, therefore, no mitigation measure was offered.

**The Applicant has failed to identify and adequately mitigate the impacts for Noise for the following reasons:**

- The Noise Study was actually conducted in April-May 2016 while there were no students onsite at the Vineyard Lodge. As such, the results of the noise study are inaccurate since actual onsite student noise contribution was not measured and not considered for mitigation;

## Public Comment 16

- Key findings of the study were not predicated on the proposed 224 students residing at the Vineyard Lodge. The IS/MND states, "Gatherings could include up to 120 students that live onsite." Does this set a maximum outdoor activity limit of 120 students that live onsite? What about participation by the other 104 student residents?
- What is the compliance history of the CIA noise regulations including no amplified outdoor music, 9:30 p.m. curfew and prohibition of non-resident attendance? The CIA should be specific as to what means and by whom are these prohibitions enforced. The CIA should state the policy for violating any of these stated prohibitions.
- The Applicant should be required to address the increase in traffic noise resulting from the increase in number of permitted student cars from the reportedly 31 to 72?
- Applicant's statement, "Student activities are not expected to result in noise that can be heard at the property line between the hours of 10:00 p.m. and 7:00 a.m." is simply not believable. The proposed expanded Vineyard Lodge is a multi-unit college dormitory that will house 224 students with all parking located on the perimeter of the site. College students keep late hours and are typically loud.
- The Noise Study did not contemplate the effect of noise emanating from the Vineyard Lodge toward the two residential building sites located directly across Pratt Ave.

**Population and Housing:****Potentially Significant Impacts (Categorized Less than Significant, IS/MND Page 45)**

- Induced substantial population growth in an area.

**Impact Analysis (IS/MND Page 45)**

- Project construction activities at the Vineyard Lodge Housing site would result in a maximum occupancy of 224 students onsite, which equates to a net increase of 123 students.

**Mitigation Measure (Not Offered by Applicant)**

- Population Growth was subjectively categorized as Less than Significant, therefore, no mitigation measure was offered.

**The Applicant has failed to adequately identify and mitigate the impacts for Population and Housing for the following reasons:**

- The increase in resident student population from 101 to 224 is concentrating 123 additional students at the project site.

## Public Comment 16

- Notwithstanding the PQP zoning of the site, this significant increase in residential density is not consistent with the surrounding agricultural land use and scenic surroundings (Municipal Code 17.168.050 G)(Municipal Code 17.164.030 A 3,5 and 8) and is in conflict with the General Plan guiding principle (2.6.5) of sensitive development on parcels located beyond the ULL.

**Transportation/Traffic:****Potentially Significant Impacts (IS/MND Page 48)**

- Conflict with applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to, intersections, streets, highways and freeways, pedestrian and bicycle paths and mass transit?

**Impact Analysis (IS/MND Page 50)**

- With the project, the intersection of Pratt Ave/SR HWY 29 WB will operate unacceptably under Level of Service "F" during the AM and PM peak hours.

**Mitigation Measure (IS/MND Page 50 , Trip Capacity - Not formal Mitigation Measure)**

- The CIA is proposing to increase the capacity of its three shuttle buses that transport students from the Vineyard Lodge to Greystone.

**The Applicant has failed to adequately identify and mitigate the impacts for Transportation/Traffic for the following reasons:**

- The Traffic Impact Report ("TIR") only considers peak A.M. and P.M. shuttle bus trips from Vineyard Lodge to Greystone. The TIR fails to consider the full magnitude of personal trip usage of the 72 permitted cars located at Vineyard Lodge;
- The TIR incorporates a theoretical estimate of the traffic contribution from the Las Alcobas Hotel driveway, which is located at the intersection of Pratt Avenue/HWY 29. The TIR may prove to be inaccurate when the actual traffic impacts resulting from the Las Alcobas Hotel begins operating at full capacity (Sometime after its opening in 2017). Since the Las Alcobas Hotel is a large project (68 guest rooms plus a restaurant serving the general public), with potentially significant impacts in the same area as the proposed project and the proposed Beringer projects, it would be prudent to deny the proposed Vineyard Lodge expansion project until the actual full traffic impacts can be further determined.

## Public Comment 16

**Utilities/Public Services:****Potentially Significant Impacts (All categorized as Less than Significant, IS/MND Page 55)****Impact Analysis (IS/MND Page 56-57)**

- (Wastewater Treatment). At the Vineyard Lodge Housing Site, the sanitary sewer management system will accommodate a peak daily flow of approximately 9520 gpd which equates to a projected net increase of 1960 gpd over existing capacity (flow);
- (Sufficient Water Supplies). The total water allotment across the two sites amounts to an average of 20,650 gpd. The Applicant proposes to rescind the two separate agreements and adopt a new joint water agreement which would redistribute the gross water allotment across the two sites to accommodate the increase in housing at the Vineyard Lodge site.

**Mitigation Measure (None offered)**

- Utilities/Public Services was subjectively categorized as Less than Significant, therefore, no mitigation measures was offered.

**The Applicant has failed to adequately identify and mitigate the potential impacts for Utilities/Public Service for the following reasons:**

- The Wastewater Feasibility Analysis for the expanded Vineyard Lodge housing reports the anticipated peak daily flow of approximately 9520 gpd. The current average recorded flow is 6373 gpd. The actual increase in average daily flow from the expanded Vineyard Lodge will be a minimum of 3147 gpd (an increase of 49%, rather than the 1960 gpd cited above in the Impact Analysis);
- Additionally, the onsite equalization pump tank is sufficiently sized to allow for only off-peak discharge to the City sewer;
- Odor Control. The Wastewater Feasibility Study for the Vineyard Lodge references, "There should be no noxious odors from a properly designed and operated treatment system. See Alternative Courses of Action for operation alternatives." No odor control mitigation is listed under Alternative Courses of Action;
- The Water Availability Analysis - Greystone and Vineyard Lodge reports data records which reflect the Baseline Existing Demand of 23,478 gpd, which is well above the current allotment of 20,650 gpd;
- The Proposed Water Use Demand is expected to be 21,667 gpd (Annual use adjusted to 19,796 gpd.) These are theoretical calculations and actual water demand could continue to exceed water allotment volumes.

## Public Comment 16

**Mandatory Findings of Significance:**

(Degrade the Environment) Less than Significant (IS/MND Page 56)

(Cumulatively Affect the Environment) Less than Significant (IS/MND Page 56)

**The Applicant has failed to adequately identify the Mandatory Findings of Significance for the following reasons:**

As presented in this paper, the Applicant has failed to thoroughly analyze each of the environmental factors that are potentially affected. Many of the technical studies, which are the basis of the Applicant's subjective findings, are "nuanced" on a conditional set of variables, or factors, rather than evaluating the potential impact in its entirety. Contradictions in conclusions between the Applicant's technical reports have been brought forth to reflect the effect each has on the degree of significance of impact. As a result, the impact is either not mitigated or the mitigation measure offered is ineffective.

The Applicant's Initial Study/Mitigated Negative Declaration does not properly identify nor mitigate all of the Potentially Significant Impacts to the environment. Pursuant to CEQA Section 21082.2.d. "If there is substantial evidence, in light of the whole record before the lead agency, that a project may have a significant effect on the environment, an environmental impact report shall be prepared." In the event the Planning Commission and City Council find that the project does not fail on the criteria of Design Review or Use Permit findings, the Applicant should be required to perform an EIR to fully delineate the Potentially Significant Impacts to the environment.

**Subject:** PRATT AVENUE CIA DORMS  
**Date:** Wednesday, February 15, 2017 3:55:36 PM

---

My name is Linda Bertoli I have lived on Pratt Avenue for forty years. I see the CIA plans to expand. their facility on Pratt. I am not for this . For years the community has been asked to cut back on their water usage. We all try and do the best we can. We are a community and appreciate living here. We are friends and neighbors.

It is my understanding the CIA want to double the size of the existing dorms with 3 new multi-story buildings. With an increase of over 120 students, they will probably want sinks, toilets, showers and probably clean linens . I wonder if they would be sensitive to our constant water shortage . They would be strangers in our community. Pratt is a country lane with no side walks. There was an accident in front of our house killing 4.

Every day I drive to town I see worke'rs cars ( probably 40 or more) working on the hotel at Main and Pratt. I am sure no one knows the impact of that hotel. ( the corner of Pratt and Main) Then we will have several more years or worker's cars. I wonder how many of these workers are even from Napa County .

I wonder, also, who are these students? are they taking a year-long class or a couple from the east taking a 2-week class in egg whites and visiting the Napa Valley ( staying in the dorms with no hotel tax)

Do we have to say "yes " to every one who shows up with a wad of cash? Is there room on our roads for a couple hundred more cars?

So if anyone wants to know ..... I am against this CIA dorm expansion... Linda Bertoli 345 Pratt Ave.

Attn: Mayor Alan Galbraith, Grace Kistner, Chairperson, Bobbi Monnette, Commissioner, Sarah Parker, Commissioner,  
 Tracy Sweeney, Commissioner; Noah Housh, Planning & Community Improvement Director, Lilly Bianco, Contract Planner

In 1995, I had the pleasure of being part of the Opening Team for the Culinary Institute's Greystone Campus. In 2000, I moved to St Helena with my family where we now have our roots and a son who just graduated from the High School. I am a Faculty Member at the C.I.A. and am involved in our town as much as my time allows. For example, I am a long serving Board Member of the St. Helena Farmers' Market.

I am writing this letter in support of the expansion and beautification of the C.I.A's Student Housing on Pratt Avenue that will be discussed at the Planning Commission's Meeting next Tuesday.

Our students are committed to being positive and well behaved residents of St. Helena. Wherever I go in St Helena, I see them walking, biking and shopping with lots of energy and acting in a professional manner. I think we are very fortunate to have this "younger age group" in the valley at a time when 1) many of our towns are inhabited with an aging population and 2) an increasing number of homes have become second homes owned by people who only only spend a few months of the year in the valley.

In addition, the students take great pride in responding to the many requests for assistance at fundraising events from local Non-Profit Organizations such as the Cameo Cinema, the Fire Department, the Farmers' Market and many many more.

I hope you will agree that we are very fortunate to have this energetic and professional support in our town..

I am asking for your kind assistance in approving the proposed plans for the expansion and beautification of the Student Housing at Pratt Avenue - for today's students and those in the future.

I thank you for your consideration.

Best regards

**CITY OF ST. HELENA  
PLANNING DEPARTMENT 1480 MAIN STREET- ST. HELENA, CA 94574  
PLANNING COMMISSION**

**February 21, 2017**

**AGENDA ITEM:** #

**FILE NUMBER:** PL16-043

**SUBJECT:** *Culinary Institute of America (CIA) Campus Master Plan (Part 2 of 2)*  
Vineyard Lodge Demolition permit, Design Review, Use Permit, and  
Variance

**PREPARED BY:** Lilly Bianco, Contract Planner

**REVIEWED BY:** Noah Housh, Planning Director

**APPLICATION FILED:** 06.27.16      **ACCEPTED AS COMPLETE:** 10.05.16

**LOCATION OF PROPERTY:** 830 Pratt Avenue

**APPLICANT:** Thomas Bensel, Managing Director of the Culinary Institute of America  
(CIA)

**PHONE:** 1(707) 967-2310

**APN:** 009-010-024

**GENERAL PLAN:** Agriculture

**ZONING:** Public- Quasi-Public

**PROPERTY DESCRIPTION:** The Vineyard Lodge Housing site at 830 Pratt Avenue (APN 009-010-024) is located in the middle of the valley floor and on the north side of Pratt Avenue; approximately one-quarter mile from Main Street (SR 29). The site features a 2.61-acre triangular shaped lot located on the north side of Pratt Avenue, adjacent to the Napa Valley railroad right-of-way (ROW), and west of Vineyard Rd; beyond which the site is bounded by vineyard and agricultural uses, including the Beringer wastewater treatment pond directly to the east of the site.

Historically, the site served agricultural purposes, but was developed with a convalescent home in the 1960s. Since 2004, it has served as student housing for CIA students. At present, the site is relatively flat and is partially developed with a one story dormitory building at the southwest corner of the property and a two-story dormitory building (C.2008) in the middle one third; the northernmost corner remains unimproved.

CIA Campus Master Plan  
2555 Main Street and 830 Pratt Avenue  
February 21, 2017  
Page 1 of 26

**PROJECT BACKGROUND**

In 2004, the City issued a use permit authorizing the Culinary Institute of America (CIA) to convert the former Marlinda Convalescent Home at 830 Pratt Avenue to CIA student housing per Resolution No.2004-33. The City approved amendments to the permit which authorized construction of Vineyard Lodge II in 2008 per Resolution No. 2008-75. At present, the use permit authorizes Vineyard Lodge 1 and Vineyard Lodge II and a total of 71 rooms (101 beds). The site is supported by 85 parking spaces.

**HISTORY OF ACTIONS**

|                    |                                                                                  |

| RESOLUTION 2008-75 | Approved expansion of student housing and construction of Vineyard Lodge II      |

*For a comprehensive list of past entitlements issued to the Culinary Institute of America Vineyard Lodge site see **Attachment 2**.*

**Preliminary Project Review**

**March 2016:** In March 2016 the City Council held a study session which involved a presentation by the CIA of their conceptual Master Plan and included a proposal to introduce four new buildings at the Vineyard lodge site (135 new beds) and perform an interior remodel/reconfiguration at the Greystone property. Concerns voiced at the Study Session were limited and generally centered around water use, wastewater capacity, and how the CIA’s relationship with the City may evolve. There were no specific objections to the proposal voiced at the study session.

**April 2016:** In April of 2016, the applicant held a neighborhood meeting to obtain community input on the proposed project. At the neighborhood meeting concerns centered around the proposed scale and massing, visual prominence, and noise impacts of the proposed project. To address concerns voiced at the meeting, the applicant refined the project prior to submitting to the City; refinements included increasing the setback, adjusting massing, and introducing a central courtyard, amongst other things. For a more detailed discussion of the preliminary revisions see “Design Review” discussion, below.

**PROJECT DESCRIPTION**

As currently proposed, the project includes the expansion of housing facilities (dormitories) at the Vineyard Lodge Housing Site (830 Pratt Avenue) and appurtenant to the educational facility at Greystone to accommodate a total of 224 students. To achieve this, the applicant is proposing to demolish the existing Vineyard Lodge I (41 beds) and construct three new dormitories ranging in size from 11,380 sf to 17,885 sf and ranging in height from 29’ to approximately 40’. This would result in a net increase of 123 new beds. The site would feature 72 parking spaces (69 designated spaces and 3 on-demand rental car spaces) and a central courtyard. Shuttles with capacity of 14,

CIA Campus Master Plan  
2555 Main Street and 830 Pratt Avenue  
February 21, 2017  
Page 2 of 26

22 and 32 seats would provide transportation between the Greystone campus and the Vineyard Lodge Housing facility. The applicant is further requesting variances to allow for a lesser setback from Pratt Avenue as required under Municipal Code Section 17.112.050 and a variance to allow reduced number of parking spaces as required under Municipal Code Chapter 17.124

#### Site Plan

The proposed site plan features three (3) new buildings, denoted as Building A, B, and C, in addition to Vineyard Lodge II:

Building A: 17, 885 SF (39 rooms; 70 beds)  
 Building B: 11,380 SF (52 rooms; 52 beds)  
Building C: 11,380 SF (42 rooms; 42 beds )  
 Total: 40,645 SF (133 rooms;164 beds)

Building A forms an L-Shape along Vineyard Road and is comprised of two distinct wings that connect via second-story “connector porch” — note that there is a discrepancy on the plan set such that this connection is not readily shown on civil plans, but is clearly visible on architectural plans (pages A001- A103). Building B would extend along site frontage and building C would be oriented along the western site boundary. The three new buildings would be clustered toward the front of the site and oriented around a central courtyard. The buildings would be setback from the Pratt Avenue property line at a minimum of 20’. Vineyard Lodge II would be located behind the new buildings, but visually connected by the introduction of a pedestrian plaza in between the existing building and proposed new construction. Vineyard Lodge II is 12,612 SF and provides 60 beds. Taken together, the existing *plus* proposed development would provide housing for 224 students, which equates to a net increase of 123 students living on-site. A total of 72 parking spaces are proposed to support the student housing use and would be distributed around the periphery of the site. A 16’ wide internal access road would extend from Vineyard Road through the site to Pratt Avenue. An access agreement/easement with Beringer Vineyards has been negotiated to allow for the use of Vineyard Road as needed to access the subject site.

#### Visual Character

The project site is situated at the northern border of St Helena’s urban limits where medium density residential development is bordered by agricultural land uses immediately to the north and east. The existing visual character of the project area is therefore comprised of both residential scale single-family residences (south and west) and agricultural uses including processing and storage (north, east, and west).

The site design features multiple buildings of varying height. The proposed buildings will be contemporary in style, but feature craftsman-like details including wood columns and brackets. The building will be supported by an exposed, parge coated<sup>1</sup> foundation. Exterior walls would be clad in a combination of painted cementitious or poly ash clapboard siding and stained red cedar siding and punctuated with wood clad windows. The building would feature an irregular, multi-gabled roof with asphalt shingles. The

<sup>1</sup> Parge coat refers to a thin coat of a cementitious or polymeric mortar applied to concrete or masonry in order to refine the surface.

proposed color palette includes neutral hues like brown, natural wood, and green. Below is a table from the Visual Impact Assessment detailing the plan, height, and setback of the proposed buildings.

|                   | <i>Building Description</i>      | <i>Bldg. Height</i>                               | <i>Setback from street</i>                                                     |
|-------------------|----------------------------------|---------------------------------------------------|--------------------------------------------------------------------------------|
| Vineyard Lodge II | Existing                         | 32'                                               | Not provided.                                                                  |
| Building A        | 2 stories<br>3 stories @ rear    | 29'2" @ vineyard Road<br>40'2" at 3 story portion | 20' from Pratt Ave Property line                                               |
| Building B        | 2 stories<br>Rectangular plan    | 29'2"                                             | 20' from Pratt Avenue Property Line<br>50' from Centerline of Pratt Avenue ROW |
| Building C        | 3 stories<br>Rectangular in plan | 40'2"                                             | 145' from Pratt Avenue property line<br>175' from centerline of Pratt Ave ROW  |

#### Parking and Access

Primary site access would be provided via Vineyard Road, which runs along the eastern property line. A total of three access points would be located along Vineyard Road and would provide access to onsite parking areas. A 16' one way drive lane would extend from Vineyard Road, between Vineyard Lodge II and the proposed new buildings, to exit onto Pratt Avenue, thereby providing through-access from Vineyard Road to Pratt Avenue.

The Vineyard Lodge Housing site would feature a total of 72 parking spaces, 69 of which would be designated spaces for permitted vehicles and the remaining 3 would provide parking for the three on-demand rental cars. All of the 69 parking spaces would be by permit only, as required by Use Permit condition of approval (COA) number 21. Further, Mitigation Measure LU-1 imposed on the project requires that the applicant provide at least five (5) on-demand bicycles in order to further reduce reliance on vehicles and limit demand on parking spaces. These requirements are in addition to the maintenance of shuttle service at regular 15-minute intervals between the CIA dormitory property and the Greystone campus which will be detailed in the Transportation Plan, required by Condition of Approval No. 20

#### Trash Enclosures

The trash enclosure presently located in the northeast portion of the site along Vineyard Road frontage will be relocated to the southwest portion of the site adjacent to the internal access drive. Per condition of approval, the trash enclosure(s) will be constructed of opaque materials and be of sufficient size to permit the storage, removal and replacement of standard commercial size trash bins. No collection, storage or stacking of garbage, trash and refuse is permitted outside the trash enclosure.

#### Landscaping

The applicant is proposing a combination of trees, shrubs and sod. To accommodate the proposed development the applicant will remove 21 trees and transplant 23 trees. Two trees proposed for removal include two (2) coast live oaks. Per Mitigation Measure

BIO-1, removed trees will be replaced at a 3:1 ratio either at the Vineyard Lodge Site or Greystone site. Established Camphors located along the property frontage will be retained to provide continued shade and screening.

#### Operation

Operations of the site and its relationship to the Greystone campus will not change. Shuttle service will continue to be provided at regular intervals (every 15 minutes from approximately 6:45 a.m. to 9:00 p.m.). To accommodate the increase in students living at the Vineyard Lodge site, the Applicant will begin using a 32 seat shuttle as needed, currently a 14 and 22 seat shuttle is used; but no change in the frequency of trips is anticipated.

#### Off-site Improvements

Off-site improvements include standard roadway improvements at property frontage which will include a full width grind and asphalt overlay (0.10'), re-striping for the installation of a bike lane (in the westbound direction), centerline, and fog line (in the eastbound direction) of Pratt Avenue. Per mitigation imposed on the project as part of the MND and to ensure consistency with land use policies, the project's off-site improvements would be expanded to introduce a Class II bike lane along westbound Pratt, for the segment located between the project site and the Pratt Avenue/Highway 29 intersection (approximately 1500 feet) and a fog line for the same segment in the eastbound direction.

### **ANALYSIS**

#### **GENERAL PLAN**

The Vineyard Lodge Housing Site exhibits a General Plan Land Use Designation of Agriculture. The AG designation provides for agricultural uses, wineries, single-family residences, and public and quasi-public uses, like that of the project. The AG designation is applied to extensive areas of the valley floor that surround the urban core area. With the exception of those hillside areas designated WW, all lands outside the Urban Limit Line are designated AG regardless of their size or actual use.

General Plan policies applicable to the Vineyard Lodge Housing Component of the CIA Campus Master Plan include:

- 4.3.4** Strengthen community identity by appropriate building design, size, and site landscaping.
- 2.6.2** New development should be required to occur in a logical and orderly manner within well-defined boundaries, and be consistent with the ability to provide urban services.
- 2.6.4** Permit infill development and higher densities within currently developed areas wherever possible to minimize and postpone the need for expansion of the Urban Service Area.

**2.6.5** Encourage the continuation of agricultural and low-intensity uses adjacent to the Urban Limit Line.

**HE1.5** Encourage innovative housing types and designs.

**HE2.1** Encourage higher density development where appropriate.

**HE2.2** Ensure that higher density housing opportunity sites are not lost to lower density uses.

**HE2.6** Promote a balance of types of housing throughout the whole community.

#### Staff finding

According to the General Plan Guidelines published by the State Office of Planning and Research, “An action, program, or project is consistent with the General Plan if, considering all its aspects; it will further the objectives and policies of the General Plan and not obstruct their attainment.” As proposed, the project would serve as infill development on an existing site and proximate to the urban service area and which would not encroach into or otherwise hinder agricultural activities such that it would be consistent with GP policies, 2.6.2, 2.6.4, and 2.6.5, and named above. The project is further consistent with Housing Element goals, HE1.5, HE2.1, HE2.2 and HE2.6 in that the proposed dormitory expansion would promote a balance of housing types within St. Helena and serve as a reasonable solution to provide housing to an expanding student body when the availability and affordability of traditional housing options (single family homes, apartments, etc.) is seriously limited. The expansion of student housing on the site would not constitute a significant departure from the existing visual environment in that the site is already developed with student housing and substantially covered in hardscape. The proposed design, site configuration, and level of landscaping make an effort to balance functionality with aesthetic concerns and therefore appear generally consistent with GP Goal 4.3.4. Acknowledging the above, staff finds that the subject project is found to be consistent with applicable General Plan policies and objectives, and would not conflict with or otherwise obstruct the attainment of any General Plan goals, policies, or objectives.

#### **ZONING**

Consistent with the Agricultural Land Use Designation, the site exhibits a zoning designation of PQP:Public; Quasi-Public. It is the purpose of the PQP public and quasi-public district to provide for government-owned facilities, public and private schools and quasi-public uses such as churches and cemeteries. Due to the wide variety of possible public and quasi-public uses and legal relationships involved it is not possible to fully implement a traditional list of uses with fixed development standards. As such, all uses within the PQP Zoning District are subject to a use permit approval with the determination of appropriate development standards (e.g. setbacks, height, etc.,) being deferred to the Planning Commission.

#### Parking

For parking requirements, the Public and Quasi-Public Zoning standards defer to those standards outlined in Chapter 17.124. Historically, the City has applied the parking

standards for “rooming, boarding or lodging house” to the subject site. The code section stipulates that “rooming, boarding or lodging houses” shall provide two (2) spaces for the resident owner plus one (1) space for each guest room, meaning that the project should include a total of 175 parking spaces to accommodate the 173 rooms, plus two spaces for on-site manager(s). Note that the applicant’s narrative and the IS/MND had interpreted this provision to relate to number of beds (not rooms) which was incorrect; this has been corrected in the final IS/MND and as denoted in Section 3 of the Response to Comments. At present, the applicant proposes a total of 72 parking spaces (69 designated spaces and 3 spaces for on-demand rental cars). Given that the parking demand has historically only necessitated spaces for 31 percent of students (based on the experience of the CIA in operating the existing dormitory), the applicant is proposing to include parking commensurate with that historical demand. As the proposed parking deviates from that explicitly authorized for “rooming, boarding, or lodging houses”, the applicant is requesting a variance, described in more detailed on page 21.

In addition, Municipal Code Section 17.124.030(H) provides for “unlisted uses,” and authorizes the Planning Commission to determine the parking requirements for uses which are not specifically addressed by this Code section. It directs the Commission to consider the requirements outlined in Section 17.124.030 as a frame of reference when making a determination. Given that the dormitory use is unique in its operation and given that it will provide alternative forms of transportation, the Planning Commission may wish to make findings under Code Section 17.124.030(H), as a means to determine the appropriate level of parking.

The Municipal Code defines a “lodging house” as a building, or portion thereof, other than a hotel, motel, or bed and breakfast inn, providing room and board or rooming only for compensation. Most often, this is understood as a house having furnished rooms for rent to lodgers. However, unlike a lodging house, the Vineyard Lodge site provides housing *and* transportation for a very specific type of tenant and has much more control over the activities of said tenants. The dormitory-use, established shuttle program, and provision of on-demand rental cars and bicycles, are such that the Vineyard Lodge Housing site operation would be distinctly different from that exhibited by a typical rooming/boarding or lodging house and therefore, the Commission may want to also rely on Code Section 17.124.030(H) to determine an appropriate level of parking for the Vineyard Lodge Dormitories and to account for the uniqueness of this particular use.

To determine minimum parking standards for unlisted used and under Municipal Code Section 17.124.030, the Planning Commission may use Section 17.124.030 as a general rule and guide, while also accounting for the particularities of the specific project.

#### Setback

While the PQP District does not prescribe specific setbacks, Pratt Avenue is subject to “special setback requirements” prescribed under Municipal Code Section 17.112.050. According to the Code, properties located along the northwesterly side of Pratt between the Southern Pacific railroad tracks to the Napa River and are subject to a 36’ setback. However, given site constraints, the applicant is proposing a setback of 20’.

Given the proposed deviation, the applicant is asking for a variance as detailed on page 18.

Other development characteristics not explicitly addressed in the Zoning Code

As detailed above, the Zoning Code does not specify minimum or maximums related to the following development components. Rather, it is at the discretion of the Planning Commission that the following development components be found appropriate for the design and function of the site. As such, the specifics below are provided for informational purposes and may be considered as part of the use permit process.

**Height:** 29'2" to 40'2"

**Lot Coverage:**  $24,356 / 128,502 = 18.95\%$  (inclusive of VL2)

**Floor Area Ratio:**  $40.645 / 128,502 = 0.316$  (inclusive of VL2)

**Front Setback:** 20 feet

**Side Setback (Vineyard Rd):** 13'

**Rear Setback (RR):** 54'

Based on the discretion afforded to the Planning Commission under the PQP District regulations, should the Planning Commission make the required findings and approve the project as proposed, the project would be found to comply with all applicable zoning requirements and development standards.

### **WATER NEUTRALITY**

In August 2015 and pursuant to Ordinance 2015-5 the City of St. Helena established mandatory water efficiency measures for new construction, and adopted water demand offset requirements enumerated in Chapter 13.12.050 of the Municipal Code. Amongst these provisions is the requirement that any "new development" (i.e. construction that would introduce any freestanding building that contains water-using fixtures, any floor area additions to existing nonresidential structures, or any residential additions or remodeling that increases the number of independent living units) offset new demand by an amount of water equal to the new demand placed on the city water system using the methodology defined in Code section 13.12.050. The offset must be clearly demonstrated to the satisfaction of the Director of Public Works.

The CIA Campus currently operates under two separate water agreements with the City. The current water allotments authorized by the Agreements allocate an average of 15,900 gpd to Greystone and 4,750 gpd to the Vineyard Lodge Housing site. The total allotment across the two sites amounts to an average of 20,650 gpd or 23.1 acre feet (AF) per year.

Under the CIA Campus Master Plan, the applicant proposes to rescind the two separate Agreements and adopt a new Joint Water Use Agreement which would redistribute the gross water allotment across the two sites to reflect the reduction in water use at the Greystone site and accommodate the anticipated increase in water use at the Vineyard Lodge site, while maintaining the existing gross water allotment of 23.1 AF per year. The ability of the project to remain within the current gross allotment

of 23.1 AF per year is made possible through the installation of new more efficient fixtures at the two project sites.

A condition of approval will require that the applicant enter into a new water use agreement with the City which will impose adequate enforcement methods that are trackable and sufficiently enforceable so as to ensure that the authorized allotment is not exceeded. Under the proposed Joint Water Use Agreement required per condition of approval the project will not generate a net increase in water use relative to what was originally approved. As such, the project has been found to comply with the City's water neutrality policy.

### **DEMOLITION PERMIT**

Zoning Ordinance Section 17.164.050(E) implements the policy direction provided in the General Plan. As provided in this section, no permit authorizing the demolition of any building within any zoning district shall be issued until approved by the Planning Commission in accordance with the following findings. Staff analysis is shown in italic text.

1. That, based on the public record and testimony presented at a public hearing, the building is determined not to be a significant architectural or historical building.

*The applicant is requesting a permit to demolish the former Marlinda Convalescent Home and what is today known as "Vineyard Lodge 1". The building was constructed c.1960. Following review of available records, consultants, Architectural Resources Group, determined that the subject building proposed for demolition does not meet the Criteria for listing on the California Register of Historic Resources (CRHR) given that it does not exhibit architectural significance, is not associated with any significant themes or persons and is not expected to yield any information important to expand our understanding of history or prehistory. Staff concurs with this determination.*

2. That the demolition does not eliminate elements that are required to maintain the essential character of the neighborhood.

*As a 1960s era convalescent home located in an otherwise agriculture and residential area, the building was not found to be particularly cohesive with the existing environment. Given this, it's demolition is not expected to adversely impact the essential character of the neighborhood. Accordingly, Staff finds that the demolition of the proposed building will not negatively impact a historic resource or existing visual environment.*

### **DESIGN REVIEW**

The purpose of design review is to, amongst other things, promote the qualities that bring value to the community and foster attractiveness and functional utility of the community as a place to live and work. To approve design review, the Commission must find that the project is consistent with the design criteria prescribed by Section

17.164.030 and exhibits a quality of design that is compatible with adjacent development, features a siting, scale, massing and architectural style that is generally consistent with the predominant development patterns and that does not otherwise detract or negatively affect the established character of the surrounding neighborhood.

Project activities at the Vineyard Lodge Housing Site include demolition of the existing Vineyard Lodge I and construction of three new dormitories ranging in size from 11,380sf to 17,885sf, for total new construction of 40,645 sf. The dormitories will exhibit a maximum height of 40'2" and are stepped to reduce the visual prominence. Through the introduction of screening and strategic design elements, the design of the three new buildings endeavors to reduce visual impacts and promote compatibility with surrounding properties.

As detailed above, under "Project Background", the following comments were communicated at the neighborhood meeting held in April 2016:

- Reduce massing,
- Increase setback along Pratt to retain vegetative screening,
- Reduce square footage,
- Use design to shield/attenuate noise, and
- Make new construction more cohesive with existing VL 2

In response, the applicant implemented the following changes:

- Increased setback along Pratt Avenue from 5 to 20 feet,
- Confined three story portions of buildings to rear of the development
- Reduced square footage by 1,965 square feet,
- Introduced central courtyard such that surrounding construction will attenuate noise generated by student gatherings, and
- Better incorporated Vineyard Lodge II by introducing a courtyard, removing parking from the area between the existing and proposed construction, and introducing porches to the side of Building A

To further ensure that visual impacts of the proposed project are kept to a minimum, the applicant prepared a Visual Impact Assessment based on the Bureau of Land Management (BLM) methodology which attributes numerical ratings to the existing conditions and project build out conditions. These numerical ratings are tied to the presence of seven key landscape components that include landform, vegetation, water, color, adjacent scenery, scarcity, and cultural modifications. Projects that create a high level of contrast to the existing visual character of a project setting are more likely to generate adverse visual impacts due to the inherent visual compatibility. Conversely, projects that create a low level of contrast to the existing visual character are less likely to generate adverse visual impacts due to inherent visual compatibility. It is worth noting that this BLM methodology is the most technical visual impact assessment familiar to staff.

The Visual Impact Assessment (**Appendix U of the IS/MND**) found that with the natural color palette, stepped design, retention of existing trees adjacent to the public right-of-way and the addition of proposed new trees, the impact to the existing visual environment and character of this stretch of Pratt Avenue would not be adversely effected. Accordingly, Staff finds that the project is able to meet the Design Criteria parameters, as detailed below.

### Design Criteria

1. Consistency and compatibility with applicable elements of the general plan;

*As stated above, the subject project is consistent with General Plan policies 4.3.4, 2.6.2, 2.6.4, 2.6.5 and HE 1.5, 2.112.2, and 2.6 in that the project would consist of infill on an already developed site, would occur in a logical and orderly manner proximate to urban services, and would be of a size and design that is consistent with existing site development. Further, the site would not encroach into or otherwise hinder agricultural activities in the vicinity of the subject site. As a previously developed site within approximately one mile of the Greystone Campus, the project location at 830 Pratt is well suited to accommodate student housing at a higher density and provide a creative solution to the need for affordable student housing. As such, the project is determined to exhibit overall consistency with the intent of the General Plan and Housing Element.*

2. Compatibility of design with the immediate environment of the site;

*The project site is situated at the northern border of St Helena's urban limits where medium density housing development is bordered by agricultural land uses immediately to the north and east. Adjacent development includes the Beringer Winery warehouse building and wastewater treatment facilities. Therefore, the visual character of the project area is comprised of both residential scale single-family residences (south and west) and agricultural uses including processing and storage (north, east, and west) building and facilities.*

*The subject site is currently developed with two dormitory buildings ranging from one to two stories in height. The one-story building will be demolished and the two story building is to be retained. The expansion of the Vineyard Lodge House is generally consistent with what is presently on the site and would not substantially alter the existing relationship of the site to its surroundings or otherwise make the site incompatible with the surroundings. The new construction would be clustered on the site and exhibit defined boundaries and generous vegetative screening. As such, compatibility of the site with its surroundings is found to be maintained.*

3. Relationship of the design to the site;

*As stated above, the site configuration will include a series of four buildings ( 3 new) clustered around a central courtyard and traversed by a one-way access road. Those buildings with frontage on Pratt Avenue will feature a stepped design and a minimum setback of 20 feet from Pratt Avenue so as to limit visual prominence and provide continuity with other properties proximate to the site, which are developed with similar setbacks. Therefore, given the site constraints,*

*the relationship of the design to the site appears to strike an appropriate balance between function and aesthetics.*

4. Determination that the design is compatible in areas considered by the board as having a unified design or historical character;

*The segments of Pratt Avenue proximate to the subject site do not exhibit a unified or historical character. The surrounding area features residential uses, industrial/agricultural production uses, and vineyards. The proposed design is generally consistent with Vineyard Lodge II and the existing character of the site and would not depart significantly from that existing character. The project is therefore not expected to impact an area having a unified or historical character.*

5. Whether the design promotes harmonious transition in scale and character in areas between different designated land uses;

*The subject buildings with frontage on Pratt Avenue will be stepped in height such that the buildings along Pratt will be two stories in front ( with max height of 29'2") with taller (3-story) portions confined to the rear of the site (max height of 40'2"). Similarly, the buildings will feature a minimum 20' setback from the Pratt Avenue Property line (50' from Pratt Centerline) in an effort to reduce the perceived massing and scale and promote a harmonious transition in scale relative to residential buildings proximate to the site and in relation to the agricultural production facilities nearby. Further, this site serves as a transition from the adjacent agricultural production and warehouse use on the Beringer property to the single family and vineyard uses further down Pratt Avenue.*

6. Compatibility with future construction both on and off the site;

*The project design is contemporary in style, but with traditional detailing. The buildings feature a neutral color palette. The proposed design would not introduce an element that was so unique or exceptional as to make it incompatible with future development on and/or off site.*

7. Whether the architectural design of structures and their materials and colors are appropriate to the function of the project;

*The proposed buildings will be contemporary in style, but feature some craftsman-like details including wood columns and brackets. The building will be supported by an exposed, parge coated foundation. Exterior walls would be clad in a combination of painted clapboard siding and stained red cedar siding and punctuated with clad windows. The buildings would feature articulated roof-lines with asphalt shingles. The proposed color palette includes neutral hues like brown, natural wood, and moss green. The proposed color and materials reflect traditional materials and colors that would help the buildings to more readily blend in with their surroundings. The architectural design, material, and colors are responsive to the needs of the site and appropriate to the function of the project and generally compatible with adjacent buildings and uses.*

8. Whether the planning and siting of the various functions and buildings on the site create an internal sense of order and provide a desirable environment for occupants, visitors and the general community;

*The proposed site configuration would feature three buildings clustered around a central courtyard. The site would be traversed by a one-way access road with parking clustered around the outer portions of the site, screened with significant amounts of vegetation. As such, the site configuration is expected to provide for a desirable environment that is both functional and aesthetically pleasing to residents and the general community.*

9. Whether the amount and arrangement of open space and landscaping are appropriate to the design and the function of the structures;

*The project proposes a generous level of landscaping and will retain a number of trees at the property frontage to promote screening. The level of landscaping will soften the look of the new buildings and appears to be appropriate for the use and to promote continuity with surrounding properties.*

10. Whether sufficient ancillary functions are provided to support the main functions of the project and whether they are compatible with the project's design concept;

*The project will include interior students commons and dining area as well as an outdoor courtyard and amenity area. In addition, the project will provide alternative forms of transportation to serve the student population and facilitate ease of travel between the subject site and Greystone Campus as well as other destinations. Given the on-site amenities and provision of alternative transportation, the project is expected to provide sufficient ancillary functions to support the functionality of the student dormitory use and which are of a design that is consistent with the overall aesthetic.*

11. Whether access to the property and circulation systems are safe and convenient for pedestrians, cyclists and vehicles;

*Primary automotive access will from Pratt Avenue and Vineyard Road, both of which were found to provide adequate circulation and access to the project site and have been conditioned to be improved to address project specific impacts. Onsite circulation and access is provided via one-way access road off of Vineyard Road and exiting at Pratt Avenue. This access road is expected to provide convenient vehicular site access. In addition, the project will be subject to Mitigation Measure Trans-2, which amongst other things, requires that the applicant introduce a Class II bike lane along westbound Pratt Avenue (northern side) extending from the project site to the intersection of SR 29 (Main Street) and Pratt Avenue and restripe for a fog line along eastbound Pratt (southern side) extending from the project site to the intersection of SR 29 thereby promoting more safe and convenient connectivity for bicyclists. Accordingly, the project is expected to promote safe and convenient access for all types of transportation.*

12. Whether natural features are appropriately preserved and integrated with the project;

*As a previously developed site, the Vineyard Lodge Housing site does not contain any significant natural features with the exception of some Coast Live Oak Trees. To accommodate the proposed buildings, the project will remove two (2) Coast Live Oaks, which pursuant to Mitigation Measure BIO-1, shall be replaced in-kind and at a ratio of three (3) new 15 gallon trees for every one tree removed. A portion of replacement oaks may be accommodated on the Greystone Campus if*

CIA Campus Master Plan  
2555 Main Street and 830 Pratt Avenue  
February 21, 2017  
Page 13 of 26

*site constraints are such that all replacement trees cannot be accommodated within the proposed site plan. As such, the project will integrate natural features to the extent possible and where that is not possible, will mitigate accordingly.*

13. Whether the materials, textures, colors and details of construction are an appropriate expression of its design concept and function and whether they are compatible with the adjacent and neighboring structure and functions;

*Please refer to response No. 7.*

14. In areas considered by the board as having a unified design character or historical character, whether the design is compatible with such character;

*Please refer to response No. 4*

15. Whether the landscape design concept for the site, as shown by the relationship of plant masses, open space, scale, plant forms and foliage textures and colors create a desirable and functional environment and whether the landscape concept depicts an appropriate unity with the various buildings on the site;

*The proposed landscape plan will feature a variety of trees, shrubs, and sod. The majority of existing Camphor trees at property frontage will be maintained. The landscape plan will feature 21 plant types which will be distributed throughout the site and promote continuity and unity throughout the site as well as soften the look of paved parking areas around the periphery of the site and provide shade.*

16. Whether plant material is suitable and adaptable to the site, capable of being properly maintained on the site, and is of a variety which is suitable to the climate of St. Helena;

*With the exception of the sod, all proposed plant materials are considered "low" water use plantings and are expected to be adaptable to the St. Helena climate. Further, all plantings on site are required to comply with the City of St Helena Municipal Water Efficient Landscape Ordinance, which regulates landscaping water use.*

17. Whether sustainability and climate protection are promoted through the use of green building practices such as appropriate site/architectural design, use of green building materials, energy efficient systems and water efficient landscape materials.

*As detailed herein, the project will use efficient fixtures and comply with Title 24 building standards. In addition, most landscaping will be comprised of low water use planting and will comply with the City of St Helena Municipal Water Efficient Landscape Ordinance.. Further, the project will limit parking so as to avoid inducing vehicular travel demands and Green House Gas production by promoting use of alternative transportation and ride sharing. As such, the project will promote sustainable practices and climate protection.*

### **USE PERMIT**

The purpose of a use permit is to allow the proper integration in the city of essential or desirable uses which may be suitable only in certain locations or zoning districts, or to ensure that such uses are designed or arranged on the site in a particular manner. In its

review of applications for use permits, the planning commission shall evaluate each proposed use in order to consider its impact on the city. No use permit shall be granted unless all of the following general findings can be made (Zoning Code Section 17.168 040).

It is the purpose of the PQP public and quasi-public district to provide for government-owned facilities, public and private schools and quasi-public uses. Due to the wide variety of possible public and quasi-public uses and legal relationships involved it is not possible to fully implement a traditional list of uses with fixed development standards. As such, all uses within the PQP Zoning District are subject to a use permit approval with the determination of appropriate development standards (e.g. setbacks, height, etc.) being deferred to the Planning Commission.

The Vineyard Lodge dormitories are appurtenant to the CIA at Greystone and provide affordable and convenient lodging for students enrolled in a culinary program. At present the Vineyard Lodge Housing Site supports a total of 101 residents. Under the project, the facility would be expanded to accommodate a total of 224 residents, equating to a net increase of 123 on-site residents. The operation of the site would not substantially change, but the intensity would increase.

As conditioned, it is expected that the project would continue to operate in an acceptable manner and consistent with the findings enumerated below. Accordingly, staff finds that the project would comply with the Use Permit provisions, as detailed below.

#### Findings to approve a Use Permit

1. That the proposed use would not generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.

*The site operation is expected to be substantially similar to that currently existing. There is no expectation that the expansion of the student housing would generate odors, fumes, dust, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community.*

2. That the proposed use would not generate levels of noise that adversely affect the health, safety, or welfare of neighboring properties or uses.

*At project operation, the onsite land use at the Vineyard Lodge Housing Site and associated noise environment will continue to be typical of a multi-unit development (dormitories) and subject to the City's noise exposure standards. The expansion of the Vineyard Lodge Housing site is not expected to introduce a substantial permanent increase in the ambient noise environment due to activities onsite or as a result of stationary or mobile sources. The noise generating elements of the proposed project such as outdoor conversations, mechanical equipment, the operation of landscaping equipment, car engines and car doors would be similar to the existing noise environment present on-site and*

*in the vicinity. The project is expected to introduce noise elements at levels that are generally consistent with the ambient noise conditions.*

3. That the proposed use would not generate traffic noise in excess of the "normally acceptable" range identified in the General Plan.

*As detailed in the Noise Impact Study (Appendix L of the IS/MND), the project is expected to add less than 8 trips to Pratt Avenue during the a.m. and p.m. peak hours. This would constitute a negligible increase in traffic noise of less than 0.5 dB which falls well below the threshold of a perceptible change of 3 dB. As such implementation of the proposed project will not substantially increase traffic noise in the area.*

4. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection, and fire protection.

*The Project will not result in substantial adverse impacts associated with any public facilities or services. The project site is located adjacent to the urban limit line and is well served by existing public utilities and services. The project will not generate a substantial increase in demands that warrant the expansion or construction of new public facilities. The project site is also located proximate to the police and fire stations. Additional fire service and police calls may occur as a result of the project. However, the project will be subject to the payment of development impact fees, including the Public Safety Impact Fee which funds equipment and facilities' costs for Police and the Fire Departments that may go towards vehicles, capital equipment, and building improvements so as to maintain a high level of public safety. Accordingly, the project will not place excessive demands on any public services.*

5. That the proposed use would provide adequate ingress and egress to and from the proposed location.

*The project's internal circulation plan has been reviewed and meets all requirements of the St. Helena Public Works & Utilities and Fire Departments. Site circulation was determined to be adequate, including sufficient street widths to allow for fire truck turn around and sufficient access to residential buildings. Therefore, ingress and egress is considered adequate.*

6. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local serving economy.

*The proposed student housing is appurtenant to the Culinary Institute of America Greystone Campus. The housing would not displace local serving uses nor impair the City's viability of maintaining a local serving economy.*

7. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located.

*The Vineyard Lodge site exhibits a land use and zoning designation of PQP: Public-Quasi-Public. The PQP zoning designation does not prescribe specific development standards, but rather stipulates that all projects within the PQP zoning district be subject to a conditional use permit and that development standards shall be established through the use permit review process. These regulations help guarantee that incompatible development and/or activities can be avoided by requiring such projects be held to a high level of scrutiny and are vetted through the public review process, CEQA review, and would be conditioned accordingly. Given that the proposed use serves an infill and expansion of an existing use there is no expectation that the proposed project would introduce an element that would conflict with the intent of the PQP zoning designation.*

8. That the proposed use would not be in conflict with the City's General Plan.  
*As detailed, herein the project would comply with applicable General Plan policies.*
9. That the proposed use would not be injurious to public health, safety, or welfare.  
*The proposed project consists of infill student housing that would operate in a manner substantially similar to the existing Vineyard Lodge Housing. As such, the project would not be injurious to health, safety, or welfare.*
10. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the General Plan.

*Use permits are considered on a case by case basis and based on the specific merits of a given project. Accordingly, the granting of this use permit would not influence future decisions or otherwise set a precedent.*

11. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long term parking needs of employees and business owners and customers is available.

*The applicant proposes to provide a level of parking commensurate with the demand exhibited by the current residents of Vineyard Lodge Housing Site. At present, 31 percent of residents hold parking permits. It is reasonably expected that this level of demand would continue with implementation of the proposed project which would translate to 69 designated spaces for the total proposed resident population of 224 students. .*

*There is no reason to believe that the student to vehicle ratio would substantially change under the proposed project, namely because (1) the CIA retains authority to issue or not issue parking permits, (2) the project will be subject to a condition*

*of approval stipulating that it may not issue more than 69 parking permits, and (3) the site is uniquely operated in that it provides frequent reliable transportation to and from the Greystone Campus and to other locations, as needed, will provide three on-demand rental cars, and per mitigation measure LU-1, will be required to introduce a scalable bike share program that may be expanded as demand necessitates. As such, the project is expected to be able to accommodate long term parking needs for residents of the site.*

12. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use.

*As detailed in the Traffic Impact Report ( Appendix Q of the IS/MND), The project's trip generation is minimal (approximately 4 trips during am and pm peak hours) and therefore the capacity of streets is presumed to be adequate.*

### **VARIANCE**

The applicant has applied for two separate variances for (1) a reduced setback along Pratt Avenue and (2) a reduction in parking and discussed, below.

1. **Reduced setback along Pratt Avenue.**

Under Municipal Code Section 17.112.050, properties located along the northwesterly side of Pratt Avenue and in between the Railroad tracks and the Napa River are subject to a special 36' setback.

The applicant asserts that given that the property was required to dedicate a 20' strip of land at property frontage such that the property line intrudes 10', if not 20' further into the parcel relative to neighboring parcels and therefore a 36" setback as measured from the property line would be excessive. The Applicant purports that if neighboring properties were subject to the 20' ROW dedication, they would only exhibit an approximately 5 to 20' setback and could not reasonably meet the 36' special setback. As such, holding the Applicant to this standard prevents the Applicant from enjoying property rights possessed by other properties in the same District.

As detailed in the variance request (**Attachment 4**), Vineyard Lodge 1 is currently located seven (7) feet from the property line and substantially within the 36' special setback. Accordingly, in order to not introduce a greater non-conformity, the applicant is proposing to site the new construction such that it features a 20' setback from the property line which would effectively be a 36' setback from the Pratt Avenue ROW. The applicant offers that this would provide a 36" buffer along Pratt Avenue and therefore may meet the intent of the special setback. Last, the Applicant asserts that the level of landscaping and vegetative screening provided would further reduce any impact generated by the new construction and therefore, the project would not negatively affect the immediate environment or otherwise be detrimental to the public health, safety or welfare of

the community. Variance Criteria and a discussion of how the project meets each criterion are detailed, below.

To approve the setback variance, the Planning Commission must find that:

- (a) A hardship peculiar to the property, not created by any act of the owner, exists. In this context, personal, family or financial difficulties, loss of prospective profits, neighboring violations, are not hardships justifying a variance.

*The currently configured parcel was created in 1971 subject to dedication of a 20 foot strip of land along the northwesterly side of Pratt Avenue, creating a 60 foot right of way. As demonstrated in the applicant's setback variance request, neighboring properties were either (1) not required to dedicate land, or (2) were required to dedicate only a 10 foot strip of land. In addition, the property has a unique triangle shape with its widest and most developable portion immediately adjoining the property line subject to the special Pratt Avenue setback requirement. Literal enforcement of the 36 foot setback requirement from the property line—which encroaches 10-20 feet more into the property than does the property line at neighboring properties—would create a hardship peculiar to the property.*

- (b) The Variance is necessary for the preservation and enjoyment of substantial property rights of the applicant which are possessed by other properties in the same district and in the same vicinity; and that a Variance, if granted, would not constitute a special privilege of the recipient not enjoyed by his or her neighbors.

*Granting a variance would not constitute a special privilege for the property relative to neighboring properties. Six neighboring homes on the northwesterly side of Pratt Avenue are situated within the special 36 foot setback, none of which were required to dedicate a 20 foot strip of land like that of the subject property. The proposed development plan will exhibit a greater setback than what currently exists for the Vineyard Lodge 1 building (proposed for demolition). In light of the above, it is found that granting a setback variance is necessary for the preservation and enjoyment of the applicant's substantial property rights that are possessed by nearby properties that are developed in similar proximity to the northwestern boundary of Pratt Avenue.*

- (c) The authorization of the Variance will not be of substantial detriment to adjacent properties, and will not materially impair the purpose and intent of this Chapter or the public interest, nor adversely affect the General Plan.

*Authorization of the Variance will not be of substantial detriment to adjacent properties, nor will it materially impair the public interest, as the new developed portion of the property will be located further from Pratt Avenue than the existing Vineyard Lodge I, proposed for demolition. In addition,*

*large mature trees along a substantial portion of the site frontage and along its other borders will screen the views of the new dormitory development. Recognizing the unique nature of the property and granting a Variance does not impair the purpose and intent of the Code's Variance chapter.*

*The chapter's stated purpose is, in part, to allow for deviation from a strict application of the Code in the event that a property exhibits an unusual shape or other exceptional characteristic, and as a result would be subjected to practical difficulties or undue hardship in their development. Authorization of the Variance is consistent with St. Helena's longstanding efforts to manage growth by encouraging further development of already developed parcels, rather than removal of vineyards within City limits, and would not adversely affect the General Plan. The project's 123-bed expansion to serve a projected enrollment expansion of 100 students will allow students who currently compete for housing with members of the St. Helena workforce to move into student dormitories; freeing up that housing would benefit St. Helena families and employees.*

- (d) The condition or situation of the specific piece of property for which the Variance is sought is not so general or recurrent in nature as to make reasonably practicable the formulation of a general regulation for such condition or situation

*The property has a unique shape and was required to dedicate a larger strip of land relative to other nearby properties subject to the 36 foot special setback. Accordingly, the property's condition is not so general or recurrent in nature to make formulation of a general regulation addressing the issue reasonably practicable.*

- (e) The Variance and any buildings or structures permitted by the Variance will not be detrimental to the public health, safety and welfare of the community.

*Neither the Variance nor structures permitted by it will be detrimental to community public health, safety, and welfare. Granting the Variance will allow development of new student dormitories further removed from Pratt Avenue than the existing Vineyard Lodge I building. The applicant has designed the dormitory buildings to be partially screened by large, mature trees located along the site's borders. Reducing parking spaces on the site, and restricting supply of parking permits for student dormitory residents will remove vehicles from the City's streets, particularly St. Helena Highway. Student residents will have ample transportation alternatives: the frequent shuttle service between the property and the Greystone Campus, free access to on-site bicycles and the new bicycle lane provided by the Culinary Institute of America along Pratt Avenue, and the St. Helena shuttle and VINE transportation. The parking Variance further discourages private automobile trips by Culinary Institute of America students in and around St. Helena, and therefore confers a benefit to the community.*

## 2. **Reduced number of parking spaces at the Vineyard Lodge Housing Site.**

As detailed above under the Zoning Discussion, the Public and Quasi-Public development standards defer to Chapter 17.124 regarding parking spaces. Given that, of all the uses referenced in this code section, the dormitory use is most akin to "rooming, boarding or lodging house", those requirements have historically been applied to this site.

The code section stipulates that "rooming, boarding or lodging houses" shall provide two (2) spaces for the resident owner plus one (1) space for each guest room, meaning that the project should include a total of 175 parking spaces. At present, the applicant proposes a total of 72 parking spaces (69 designated spaces and 3 spaces for on-demand rental cars). Given that the parking demand has historically only necessitated spaces for 31 percent of students, the applicant is proposing to include parking commensurate with that historical demand.

With the operation of the shuttle service, rental cars, and the provision of at least five on-demand bikes as required pursuant to mitigation imposed on the project, it is expected that the demand for vehicles would be off set to such an extent that 69 designated parking spaces would be sufficient. Findings needed to approve a parking variance and accompanying justification for each is detailed below.

To approve a parking variance, the Planning Commission must find that:

- (a) A hardship peculiar to the property, not created by any act of the owner, exists. In this context, personal, family or financial difficulties, loss of prospective profits, neighboring violations, are not hardships justifying a variance.

*Imposition of the Code's parking requirement for a "rooming, boarding, or lodging house" or "hotel" in the student dormitory context would create a hardship peculiar to the property. Rooming, boarding, or lodging houses traditionally serve individuals unaffiliated with a college or university, who in a community such as St. Helena likely would require use of an automobile for daily activities. Similarly, hotels in St. Helena traditionally serve visitors exploring the region's amenities by private automobile. Requiring one parking space for each guestroom in those contexts is justifiable given the expected patterns of vehicle use, and the potential that failure to provide ample parking spaces could negatively affect neighboring properties. The Culinary Institute of America's students, on the other hand, are offered shuttle service for their daily trips to and from the Greystone Campus, do not require a car for the vast majority of their daily school-related activities, and are offered on-demand car rental for personal trips as well as access to free bicycles on site. Imposition of a one space per dormitory room requirement would create a hardship by dramatically changing the project as proposed and would require elimination of an open quad gathering area*

*and potential reduction in number of student beds in favor of a hardscape parking lot.*

- (b) The Variance is necessary for the preservation and enjoyment of substantial property rights of the applicant which are possessed by other properties in the same district and in the same vicinity; and that a Variance, if granted, would not constitute a special privilege of the recipient not enjoyed by his or her neighbors.

*The Variance would not constitute a special privilege for the property relative to neighboring properties, none of which are developed with student dormitories that require limited on-site parking. Given the unique and limited travel patterns of student residents of the dormitory, with the Variance both the property and neighboring properties will be subject to minimum parking requirements tailored to actual expected travel patterns and parking space demand, and neither the property nor neighboring properties will be required to provide unnecessary parking spaces reducing enjoyment of substantial property rights.*

- (c) The authorization of the Variance will not be of substantial detriment to adjacent properties, and will not materially impair the purpose and intent of this Chapter or the public interest, nor adversely affect the General Plan.

*Authorization of the Variance will not be of substantial detriment to adjacent properties, nor will it materially impair the public interest. The Culinary Institute of America will provide shuttle and on-demand car rental service, will impose a highly restrictive permit system both at the property and the Greystone Campus discouraging students without assigned parking from bringing cars to St. Helena, will provide free bicycles for use by students, and is amenable to restrictions on parking in the surrounding area to benefit nearby residents by discouraging student parking off the property. The Variance serves the public interest by effectively removing vehicles from City streets, particularly St. Helena Highway, encouraging environmentally-friendly and efficient transportation to and from the Greystone Campus. The parking Variance does not impair the purpose and intent of the Code's Variance chapter. The chapter's stated purpose is, in part, to allow variation from strict application of the Code where extraordinary situations or conditions mean that literal enforcement would involve practical difficulties or would cause undue hardship. Here, requiring unnecessary parking spaces would work against the public interest and cause undue hardship to the property and the school. Authorization of the Variance is consistent with City and regional policies encouraging use of alternate modes of travel, both to reduce harm to the environment and to take traffic off local roads, and would not adversely affect the General Plan. These policies and goals are consistent with the project's shuttle service and free bicycle program that reduce the need for parking and provides further support for the parking Variance.*

- (d) The condition or situation of the specific piece of property for which the Variance is sought is not so general or recurrent in nature as to make reasonably practicable the formulation of a general regulation for such condition or situation

*Formulation of a general regulation is not reasonably practicable given the lack of other student dormitories in the City, the targeted transportation options provided to the Culinary Institute of America's students, and consistency with parking reduction practices at other California campuses as discussed in the Crane Transportation Memo that justify the Variance.*

- (e) The Variance and any buildings or structures permitted by the Variance will not be detrimental to the public health, safety and welfare of the community.

*Neither the Variance nor structures permitted by it will be detrimental to community public health, safety, and welfare. Granting the Variance will allow development of new student dormitories further removed from Pratt Avenue than the existing Vineyard Lodge I building. The applicant has designed the dormitory buildings to be partially screened by large, mature trees located along the site's borders. Reducing parking spaces on the site, and restricting supply of parking permits for student dormitory residents will remove vehicles from the City's streets, particularly St. Helena Highway. Student residents will have ample transportation alternatives: the frequent shuttle service between the property and the Greystone Campus, free access to on-site bicycles and the new bicycle lane provided by the Culinary Institute of America along Pratt Avenue, and the St. Helena shuttle and VINE transportation. The parking Variance further discourages private automobile trips by Culinary Institute of America students in and around St. Helena, and therefore confers a benefit to the community.*

## **GROWTH MANAGEMENT**

The City of St. Helena has a Residential Growth Management System (GMS) that limits the number of residential building permits that can be issued each year for new residential units (Municipal Code Chapter 17.152). The stated purpose of the GMS is to regulate the residential growth of the City to approximately 2% per year, while providing for both market rate and affordable housing. Generally, permits are regulated for market rate housing and not for exempt categories of development including all non-residential development (including hotels), replacement or relocated housing, additions, guest cottages, second units and affordable housing.

The category of "dormitories" is not explicitly referenced in the GMS and given that the dormitory use is not a residential development with units available to the open market and the proposed rooms are only available to students attending the CIA culinary program, it is determined that the GMS does not apply to the proposed project. Further, the dormitories serve as temporary student housing and would not be expected to induce growth of permanent residents.

**CEQA**

In accordance with Article 6 and Appendix G of the California Environmental Quality Act (CEQA) Guidelines, an Initial Study and Mitigated Negative Declaration (IS/MND) has been prepared for the proposed project and included as **Attachment 7** of the CIA at Greystone packet. The document contains a description of the proposed project, an analysis of potential environmental impacts resulting from the proposed project, as well as mitigation measures intended to reduce potentially significant impacts to less-than-significant levels.

The IS/MND found that although the proposed project would generate potentially significant impacts related to aesthetics, air quality, biological resources, cultural resources, geology and soils, land use, noise, and transportation, through the introduction of mitigation measures agreed upon by the project applicant, all potentially significant impacts would be reduced to less than significant levels.

The Draft IS/MND was circulated for a 40-day public review period from December 9, 2016 to January 23, 2017. Twelve (12) comment letters were received during the public comment period which communicated concerns related to wastewater generation, water availability, traffic, aesthetics, and safety. A formal response to comments was prepared and is included as **Attachment 8** of the CIA at Greystone packet.

The Response to Comments addresses concerns raised on environmental issues and provide clarification and revision to the IS/MND, as appropriate. Included in Section 3 of the Response to Comments are changes made to the IS/MND. Modifications are denoted using ~~striketrough~~ for deletions and underline for insertions. Modifications to the IS/MND are intended to provide clarification, expand discussion, and enhance understanding of the analysis, site conditions, and potential impacts of the project. No modifications to the IS/MND were so substantial as to warrant recirculation pursuant to CEQA Guidelines Section 15088.5

**PUBLIC COMMENT/ ISSUES**

Issues raised include those topics enumerated above. As mentioned, all issues raised during the public comment period have been responded to in a formal response to comments, included as Attachment 8 of the Greystone Packet. Items of particular concern include the project's proposed reduction in parking and the appropriateness of dense student housing at the subject site. These and other issues raised are discussed in detail as part of the Response to Comments, Attachment 8 of the Greystone Packet.

**Parking**

The sufficiency of parking is of great concern to those who live proximate to the subject site and this issue was raised repeatedly in comments received.

As detailed in the Traffic Impact Report and described herein, the applicant has requested to provide parking for 31 percent of students which would be consistent with the historical demand shown by the dormitory residents. The applicant has indicated that the school's ability to restrict parking permits, together with the

established shuttle program, provision of on-demand rental cars and on-demand bicycles (as required pursuant to mitigation imposed on the project), there would not be a widespread need for personal vehicles and parking spaces and therefore it is fully expected that parking commensurate with the historical demand (31%) would be appropriate.

To further support a reduction in parking, the applicant provided a memorandum from their traffic engineer (**Attachment 6**) providing more in depth information related to parking supply and parking management policies for similar operations. The memorandum reviewed The Institute of Traffic Engineers (ITE) parking generation rates for University and College land uses as well as a number of representative case studies.

The ITE data found that the average parking supply ratio for suburban sites equated to 0.4 spaces per total population and for urban sites was 0.3 spaces. In reviewing parking policies for other representative California Campuses it was found that (1) parking supply is an issue for all campuses examined, (2) most campuses impose highly restrictive permitting policies, and (3) most campuses provided some form of alternative transportation. In light of the above, it can be concluded that the applicant's request to provide parking at a ratio of approximately 0.31 spaces is not unusual for other like uses (albeit more urban ones) and the provision of strict permitting requirements and alternative means of transport are a widely accepted and effective means to managing student parking. As such, there is strong evidence to indicate that providing parking for 31 percent of student residents may in fact be sufficient for this particular use.

#### Appropriateness of the Dormitory use.

Implicit in the public comments received is a concern that the public quasi-public (dormitory) use is not appropriate for the subject site. It should perhaps be clarified that in 2008 and per resolution 2008-5, the site was re-zoned from A-20 Twenty Acre Agriculture to PQP: Public Quasi Public based on the following reasons enumerated in the resolution:

1. The existing urban/developed condition of the parcel would make conversion to agriculture difficult.
2. The small size of the parcel (2.61 acres) makes it improbable that the land can be converted to an economically viable agricultural parcel.
3. The parcel has been in urban use for the last 40 years.
4. The parcel has not been farmed or agriculturally productive for the last 40 years.
5. The parcel is already served by City services (water & sewer).
6. Rezoning the parcel to PQP keeps the existing A-20 zoning ordinance language intact, does not introduce new uses to agricultural parcels, thereby lessening the possibility that other agricultural land will be used for non-agricultural purposes.

The property no longer exhibits an agricultural zoning designation, but rather it exhibits a PQP zoning Designation. Therefore, the subject project was considered in relation to the current designation of PQP and whether it complies with the intent of the PQP zoning District.

**STAFF RECOMMENDATION**

The Planning and Community Improvement Department recommends that the Planning Commission:

1. Adopt the Mitigated Negative Declaration and Mitigation and Monitoring Program for the project; and
2. Adopt a resolution approving a Demolition Permit, Design Review, a Use Permit, and Variance(s) for the Vineyard Lodge Housing component of the Campus Master Plan.

**Subject:** CIA Dorm Expansion  
**Date:** Friday, December 23, 2016 10:15:12 AM

---

Lilly:

I own the vineyard and residential property at 675 Pratt Ave. I have significant concern about the effect of the CIA dorm expansion and other development on the properties along Pratt.

Pratt Avenue already has become very dangerous to drivers, bicyclists, and pedestrians. The road surface is in poor condition, which increases the likelihood of accidents leading to death or injury. Resurfacing the small portion from the CIA dorms to Main St. will not resolve that problem. The City needs to require a larger contribution from the CIA toward repaving ALL of Pratt Avenue.

There is a major problem with speeding along Pratt. Cars and trucks hurtle along day and night at speeds well over the limit, endangering other drivers, walkers, and bikers. The CIA expansion is bound to exacerbate this problem.

It is now often nearly impossible to make a left turn from Pratt onto Main due to the heavy traffic on Main. The CIA expansion will further add to this problem.

When you include the new Las Alcobas hotel on the west side of the intersection and the potential increase in traffic associated with Beringer's planned changes at their Pratt Avenue winery, it makes the situation even more dire.

I realize that the Pratt/Main intersection is under State control. Nevertheless, the City should proactively be taking measures to mitigate the problem.

With the current fiscal problems facing the City, it is incumbent on staff to require the maximum contribution from the CIA to help alleviate the problems they are making worse.

**Cc:** [Ellsworth, Geoff](#); [Galbraith, Alan](#); [Mary Koberstein](#); [Paul Dohring](#); [Peter White](#)  
**Subject:** City Invites Public Comment on CIA Expansion, Dorm Plans  
**Date:** Friday, December 23, 2016 5:21:32 PM

---

Dear Ms. Bianco,

The big bucks behind the CIA needs to pay for the increase in size of the waste water line that will be needed to handle the CIA's new dormitories and increased burden of affluent. The current waste water line is already at capacity that services the Crinella housing tract. Adding another 9,520 gallons a day will over burden the line. It's about time our city management makes these big developers pay for the costs of necessary up grades to our utility infrastructures rather than keep passing them on to the current water and waste water customers. All we hear about lately is how inadequate our waste water facility is and how poorly our city's reputation is with the State Water Board. And now the CIA wants to add to this problem. They need to pay!

Also, the article in the Star leads the reader to believe the CIA wants to reallocate its current water use by changing its agreements with the city. If I read the article correctly, it looks like the CIA wants to use more ground water to make up for the demand at the dormitories. Does anyone meter the ground water currently being taken by the CIA? St. Helena has a moratorium on drilling new wells in the residential area of St. Helena, yet the city is okay with allowing the CIA to pump even more water from the ground. Come on St. Helena City Management, get your act together and make these businesses pay for the adverse impacts these developers and developments place on the residents who live here!

---

Good afternoon:

Thank you for posting the article in the Napa Valley Register regarding the expansions of the CIA dorms. My husband and I own house at 925 Pratt Avenue, St. Helena. The only concerns that I have are the following:

1. CIA Landscaping: Since the structure will double in size, I hope the City will consider that the dorms have beautiful landscaping to mitigate the size of the building. Such as Trees and California Native plants.
2. CIA Parking: The City has not enforced parking restrictions on CIA. Sometimes, all of Pratt street looks like a sea of cars. This is a displeased to the Community. No one likes looking at a parking lot considering the cost of the homes on Pratt Street.
3. Bike Lanes: The bikes lanes are a great idea. I hope the City restricts Pratt parking to the residents on Pratt street because CIA abuses the parking on Pratt. Many residents have complained

If all the issues are addressed, I welcome the dorms.

Dear Ms. Bianco,

I read in the St. Helena Star that questions regarding the CIA student dorm expansion may be directed to you.

Is there a definition to the application as to who qualifies as a student. I have to assume that whatever that definition is, any other tenants such as staff, instructors etc would be excluded and that there is associated language to that effect.

I would appreciate your response.

Thank you

George Caloyannidis

Noah,

Thank you for meeting with Brian Russell and me on Wednesday, January 11th. We appreciate your willingness to hear our concerns related to the CIA Dorm expansion project on Pratt Ave and evaluate them further. In summary, the following are the concerns we discussed:

- \* Inadequacies of traffic study;
- \* Inadequacies of noise study;
- \* Concerns related to parking variance;
- \* Concerns related to Visual impact;
- \* Concerns related to increased population;
- \* Concerns related to increased impacts on sewer/water;
- \* The lack of evaluation of alternative housing sites that would have less impacts on traffic, noise, visual, parking, etc.;
- \* The requested set back variance in contradiction with the general plan;
- \* The lack of rights to the vineyard road that is crucial to the project;
- \* The need for an Environmental Impact Report due to the significant size and potential impacts of the project.

What are the next steps? Will you be responding to these concerns? If so, when can we expect a response?

Best,

Donna Hinds

Dear Ms. Bianco:

Please do what you can to stop the CIA dorm expansion on Pratt Ave.

We have lived on Pratt Ave for more than 35 years, and have seen remarkable changes-many for the worse for small town living. With the remarkable expansion of Beringer, the new (UGLY) hotel at Grandview with a forgettable name on Hwy. 29, the railroad activity to Charles Krug, the waste water aromas of the ponds, the noise of the large neighborhood wineries, increased traffic, faster and faster cars coming through, the erosion of the quality of the road surface to below 3rd world countries; we have seen our neighborhood heading to hell.

The ridiculous expansion of the dorm on Pratt Ave. will be a real nail in the crucifix. These students are people from all over the country who drive out here, do not help our local populace, waste water like tourists, leave as soon as they can, and add **no value** to this town.

Finally, it appears the CIA is slowing or shutting down the Greystone Bldg. in preference for Copia, Napa. Are they going to shuttle them to Napa?

Leave the CIA dorm as it is, Please. If not, name it The West Coast Trump Tower!

Very respectfully yours,  
Tom Rinaldi

In regards to the Pratt Avenue project... It should be separate from the Greystone site paperwork. Trying to read through this is too difficult to determine what is going on at which site. They should be separate applications as they are different locations on different streets.

Is there going to be a stop light at Pratt and Main?

I definitely object to a three story building. Nothing else directly on the street is that tall and if you set precedence now pretty soon there will be three story apartment buildings and homes. This is a quiet street mostly agricultural and it is very dangerous during going work and home hours. Between Beringer employees racing to get to the trail and all of the construction workers parking on Pratt and Main it has been a nightmare trying to pull out of the driveway or onto Main. More people used to walk on Pratt but now they are afraid.

Where are all the construction workers going to park when they are working on this project? The garbage, pour parking jobs, construction trucks and deliveries have been chaos. The construction workers whip a u turn without looking and almost hit moving traffic. They block the view so pulling out onto main can be dangerous. They are trying to cross the street and almost get hit by cars. And now with Pratt closed why isn't there an officer there directing traffic. We can't even pull out and go to the store.

It looks terrible having all those vehicles parked everywhere, delivery trucks, construction equipment. This all needs to be kept off Pratt Avenue.

All of the dust created by construction is damaging to vineyard. If we get even a small amount of dust blowing we will have to get our lawyers involved. What are you going to do to mitigate the

**Public Comment 7**

dust? I am just glad we weren't closer to the hotel construction. What a nightmare for the poor people on the corners.

I would like an answer as to what we can do to stop the three story building and regulate the construction site parking and deliveries to be off Pratt. I am mostly concerned about the construction dust which will damage vineyards nearby. We are directly on the other side of the Beringer strip. They must be concerned about dust on their new block of vineyard.

We live here and have guests at our winery and it needs to not look like a dump driving down Pratt Avenue.

Best regards,

Dianna Varozza

Question: I think it's appropriate to comment and present this for whatever it's worth.

Please consider:

We've lived a year with constant worker traffic and construction noise from building (Los Angeles River); plus, all the cars constantly sharing CIA people and parked outside this house more than just a few times a year - we counted over 400 vehicles.

We had to call police because we had one girl from CIA (DOH) enter our house at night and sleep partially on our couch - we saw upstairs bedrooms (a storage shed/parking garage) which was horrifying.

Plus there is noise coming down our street constantly - would say 70% of time we're home here, including on early before rain, much that we get the trash cans out almost every week. In addition, if large pool of standing water, making us clean each time.

Non-compliance (you saying that enough is enough and if you add this massive project and industrial facility to State Ave - it's too much for the wonderful people who are paying a huge amount of money to live here expecting peace and serenity.

I hope you agree.

So I would not allow an entrance who lives here and is trying to compare music quality and would not like to experience heavy construction noise and traffic for over 2 years that we join the neighbors here to present this.

Respect your property to let us know your thoughts.

This is covering our health options.

**Subject:** Pratt Ave CIA Dormitory  
**Date:** Wednesday, January 18, 2017 9:02:37 AM

---

Dear Ms. Bianco,

I am writing to oppose the expansion of the Greystone Vineyard Lodge facilities on 830 Pratt Ave. in St. Helena.

My understanding is that the proposed expansion will create 224 beds which is an increase of 123 students. My personal opinion is that the retirement home that was the original structure on the property should never have been changed to a dormitory for Culinary Institute students. I believe that if the CIA wants to have more students they should either construct a property on their Greystone campus on Highway 29 or build a new dormitory near the former Copia site in the city of Napa.

I believe the impact on Pratt Avenue and subsequent impact for the city of St. Helena all produce negative effects. Pratt Avenue is one of the poorest maintained streets in St. Helena. There are constant potholes in the road that are not properly repaired, the entire road needs repaving, there are no sidewalks, despite the fact that there is a CIA student bus that makes innumerable trips up and down the road there still are students regularly walking on the side of the road often in predawn and night hours creating a very dangerous situation. They are unable, generally, to walk on the traffic facing side of the street because at least six months of the year there is a stream of water running down the south side of the street that is emitted from a sump pump at the residence at 1055 Pratt Ave. I strongly feel that the city either needs to create a storm drain to properly capture that water or to eliminate the exception that must've been created for dumping this sump pump water into the street. I will also note that despite the fact that rains stop in the area in the late winter that particular residence is in essence creating an artesian well in the full basement that pumps water seasonally into June creating a marsh and mosquito habitat at the intersection of Pratt Avenue and the railroad tracks. It seems that every other street in St. Helena has proper gutter sidewalks and storm drains adjacent to residential homes except for this stretch of Pratt Avenue.

In examining the site plan for the new dormitory it's very clear that every single square foot of land is being used, packing on as much density as possible, exceeding height restrictions and visual sensibilities. There should not be a variance for building setback as proposed from 36 feet to 20 feet. Additionally the site plan has the exit from the plan coming directly into the intersection for the railroad tracks that are now being used for a wine train going up to Krug winery. A portion of the building is 40 feet high which is certainly not conducive to the rural nature of what this street is and clearly will affect other property owners in the area from a view

## Public Comment 9

point of view.

Despite the fact that there is a shuttle that goes to the Greystone campus it is inevitable that 123 new students are going to create much more traffic. I'd like to point that out several years ago there was a multiple fatality accident on Pratt at the end of the road involving some of the students from Greystone. It seems inevitable that doubling the size of the facility is going to significantly impact traffic use and noise on our street. This traffic impact also becomes immediately significant as one looks at the current extreme difficulty of making a left-hand turn from Pratt Avenue south on to Highway 29. It is currently extremely difficult to see what is approaching on the left-hand lane because of parked cars, at the very least the curb needs to be red painted at least six car lengths back from where it is now. Additionally with the pending opening of the Los Alcobas Hotel there will be additional significant difficulty in entering and exiting from Pratt Avenue. This will not only apply to the student buses but also to the students that would be coming and going from this dormitory. This currently is and will become a much more dangerous intersection certain to create accidents.

We are all aware of some of the economic issues facing the city of St. Helena and clearly one way to solve them is to promote the development of architecturally appropriate high quality hotels that will attract individuals with the capability to afford a significant average daily rate and quality that would then provide subsequent TOT revenue to the town. What this proposal does instead is create a hotel with insignificant TOT from students who certainly are not going to significantly support high quality restaurants and retail shops within the city itself.

As stated earlier our belief is that there should not be a variance for an expansion of the existing student housing facilities, instead CIA should examine other locations including their existing Greystone campus and or their new Copia campus in Napa to effectuate the expansion of their overall programs. Pratt Avenue should remain a rural and residential street not a street of student dormitories creating additional traffic noise water and sewer impacts with insignificant benefits for the existing residents of the street and the city of St. Helena.

Respectfully submitted,

Carol

### **St Helena Planning Commission – CIA Dormitories on Pratt Ave**

#### **Members Planning Commission**

In the beginning the CIA dormitories were a convalescent facility. There were from 30 to 40 people there. They took sponge baths and used very little of the bathroom facilities. I personally know as I had relatives there. Somebody needs to go back in the records and see how much water was used as compared to today with the CIA dormitories.

Those 30 to 40 guests more than doubled with the first expansion by the CIA about 7 years ago. The first expansion did not require any upgrades to the Crinella Pump station where the effluent ends up, or any water impact fees.

The Crinella Pump station was built in 1965. It was only to service the Crinella subdivision of about 100 homes. Now the CIA has tied in on Pratt, all the recently built million dollar homes on Pratt with guesthouse, now the Las Alcobas hotel, with no upgrades from any of these developers. Yet the station is #8 on the list of improvements of capital expenses by the new wastewater cost increases. Why are we the residents paying for this and not the developers that are burdening the system. The CIA is going from 4750 gals/day to 10,783 gals/day in to the Crinella Pump station.

The enrollment was 101 students, now they want to more that double that size with 123 additional students without any impact fees or improvements to the Crinella Pump station. That is a 500% increase from the convalescent hospital capacity.

In the report it says they want to take students out of homes they own and put them in these 3 new dormitory buildings. If that is true, then they have to provide the city with a legal document that they will sell these homes when the first dormitory is completed so these homes go back to hopefully the rental market that we desperately need. Also, their statement that their housing is affordable is not correct. I have spoken to students in their facilities and what they pay for a room is more than our rental market prices.

Why are they able to build to 40' with these new buildings? I thought that we had a 35' height limit. These buildings are going to block the view for the neighbors of our beautiful hillsides. The view shed will be lost.

They claim they don't need additional parking. I drive by the dormitories at least 3 times per day, on average the parking lot is between 70% to 80% full most of the time. They claim they only give out 33 permits for the existing 101 students, well then who owns the other vehicles? They claim that the shuttle goes every 15 minutes. To me that adds a larger impact at Pratt and Main. Now with the Las Alcobas Hotel across the street this is a bad intersection. There needs to be a traffic study addressing this. In fact, I feel we need an electric stop lights at this intersection. Most of the day the traffic does not go out onto Main, including truck traffic. They cut through Park and on to Crinella to Main. This is a residential neighborhood they are cutting through.

They are going to demo a 15,050 sqft one story building that houses 41 students. Then they are going to build three 3 story buildings totaling 40,645 and claim there is no impact. Who are they trying to fool?

The Planning Commission needs to say: We need time to assess the full impact of this project. We have been told over and over again about our ageing infrastructure that is in dire need of repair. We need to

find out first the impact the Las Alcobas Hotel is going to have in this area. An environmental impact report is the only way to address all the concerns I have raised.

Originally the CIA was going to build three dormitories on the school's campus. This was so they would not impact the neighborhoods. That did not happen as promised in their original use permit. I would suggest the CIA instead of building these new dormitories on Pratt Av to put them on their campus as they originally proposed. The CIA owns the adjacent property. I personally worked Chuck Carpy's house as a general contractor. The city should rezone the property so dormitories can be built there. Then you eliminate all traffic problems, all view shed issues and since they are reducing their water usage at Greystone the increase of the dormitories can be applied. Plus the city should require these dormitories not use the city's wastewater system but put it in to Greystone's system that discharges in to the pond on Deer Park Road.

Hopefully the Planning Commission will deny the project until these concerns are addressed.

Attn:contract planner,planning commission:

I am against the proposed expansion of the CIA Pratt Ave dorms.Turning this project surrounded by ag land into the most densely populated parcel in St Helena,would seem to be totally against the will of the general plan.The plan frowns upon putting high/medium density in ag land(leapfrogging)This will also add to the current traffic proplem on Pratt,the new resort,wine train,Beringer/treasury,ramping up production,redirection of traffic by apps,(waze,google,etc) the constant shuttles,will only add to the problem.Water&sewer issues,seeing hundreds of new toilets,while residents conserve water only to have the water rates skyrocket, just doesn't quite seem right.The CIA doesn't allow student cars on campus,or want to rent homes in SH,this shouldn't be the residents problem.People actually live here.Im not so sure what this non profit,or not for profit status is,but I would suggest that they consider using only the facility they've already expanded .The community trusted it was all they needed.With our population at 4900 I would prefer seeing a reduction in enrollment,and a modest tuition increase,in order for the CIA to remain good neighbors.

Thanks

January 23, 2017

Noah Housh

Planning and Community Improvement Director

City of St. Helena

Dear Mr. Housh, I strongly object to the Culinary Institute of America building additional 123 room dormitory in the residential area of St. Helena. I object for the following reasons:

- They propose using groundwater. Although our aquifer is most likely adequately charged due to the recent rains it will not remain in that condition. This dormitory will be there for an undetermined length of time during which we will have the return of drought. We need our water for residents who live here and the industry that supports our economy. We are told that our wastewater system will require millions to bring it up to code. Why should we add this type of burden to the system?
- The Culinary Institute relocated to Napa the only business that brought any revenue into our City namely their restaurant. Why should we the citizens be asked to share our precious water resource while they bring absolutely nothing to the community? No, I don't believe that closing the restaurant will balance out having 224 students taking showers and other domestic uses.
- The height of the buildings will be offensive to nearby neighbors.
- This particular area of the City is already suffering from too much traffic and too little planning such as an additional stoplight at Pratt and Main.
- Why should they be allowed to build on agricultural land? This is seldom allowed to happen and why should it be allowed in this instance when they bring nothing of value to the community?

We need to make sure that these storage units don't end up here at the Pratt Ave location. This is a nice neighborhood and agriculture area. We are already picking up garbage and dealing with the traffic from the CIA dorms. More traffic and garbage would be really bad. All their event parking is done on Pratt also.

There is no employee parking for the hotel so they will park on Main St all the time. More foot traffic back and forth across Main Street and Pratt Avenue. With all the vehicles parked on that corner it has been a real challenge. Now they are going to have delivery trucks going back and forth to Beringer because that is where their storage is.

I don't shop in St. Helena anymore and that is because getting into town is a safety issue as well as a challenge. It is easier to go to Calistoga or Santa Rosa or Napa.

A lot of people walk on Pratt but these students from the CIA, hotel construction and the Beringer employees drive way to fast trying to get to a from work on the trail. It is like a raceway during commute hours or lunch times. The van from CIA is constantly trying to turn onto Pratt. Increase with more students and their trying to get to their storage units and that will make getting out on Pratt to go into town impossible. So people are going to go through Park and Crinella, there are small children playing and riding bikes there. Someone is going to get hurt or killed. A motorcycle pulled right out in front of me yesterday and if I hadn't been going really slow from turning off Main and because of the sign for the bridge I would have hit him. There were two large delivery trucks completely blocking the view of the street to the left.

There will always be deliveries once that hotel opens that will increase the traffic on Pratt significantly. Whether they are going to the hotel or to Beringer for unloading. Or trying to unload on the street and walk across.

If they want storage they need to build it up close to the CIA where they won't have to drive to get something.

They need to get rid of the third story because that is just going to cause problems all over town, if you let it in here, and it will block the view from the East side.

No more parking on the street and in the vineyard.  
 They need their own parking lot for events also.  
 The parking in the vineyards is going to be a real problem when they either get stuck in the mud or drive over a vine.

Public Comment 13

- Again using Pratt as a bypass and driving way too fast. Clogging up the access to the trail and main street for the people who actually live here and pay the taxes.

Look at the traffic when the trail was closed.

That is what is going to happen every day now that the bridge is closed. We can't even get off Pratt Avenue.

Do you want to know how many times I have turned off Pratt going North and the car in front of me SLAMS on their breaks and squeals the tires because that is the entrance to Beringer's tasting facilities. Now they are blocking North bound. Add in someone trying to cross Main in a truck to the hotel, a guest trying to turn in and go to the hotel or restaurant, a pedestrian and the South bound car coming out of the tunnel of trees at 50 mph. The CIA van trying to turn left onto Pratt.

You have a recipe for disaster and you better figure it out now before there is a death.

Dianna Varozza

Public Comment 14

Planning Commission

Dear Members,

We are writing to you at this time because we are opposed to the CIA expansion proposed to take place across the street from our property at 855 Pratt Avenue.

It is our opinion (which we expressed at that time) that the first CIA dormitory was not appropriate for the area of vineyards and single family residences. After that expansion we have had numerous problems. Frequent traffic with their shuttles and the occupants cars. Late night noise on many occasions. Pot smoking and beer drinking in our vineyard. When trespassers are asked to leave they often refuse to do so.

At the meeting for the previous expansion the CIA representative personally gave us his word that we had only to call him if we had any problems. Each time we called there was no response and never a call back. The situations were never resolved to our satisfaction.

As bad as it is now it will be much worse with twice as many transient occupants who have little or no interest in maintaining any good will with the neighbors during their brief stays.

We own two parcels directly across the street from the dorms. One 6 acre parcel has an old home and a cottage. Our son and his family reside there. The cottage is 500 sq. feet. We can only increase the footage to 800 sq. feet. The old house is supposedly of "historical significance" and hence cannot be razed or modified except to its original design. The original house was a single story with no bath or kitchen facilities.

On the 7 acre parcel we wanted to build a SINGLE story home located 300 feet back from Pratt and surrounded by 13 acres of vineyard. Permits were denied because it was deemed an inappropriate design for the area. We didn't realize if we wanted to build a three story house right next to Pratt we probably could have done so.

It is ironic that we were denied sensible uses for our property but a large commercial campus is being allowed in an area zoned for agriculture and single family housing. Is the continuous ruination of our neighborhood really worth the money the city will receive for allowing this expansion? We don't believe that it is. It certainly is not worth it to us as this very unattractive building just across the street with all its noise and traffic will lower the value of our property.

We strongly oppose any expansion of the CIA dormitory property either now or in the future.

Due to medical issues we may not be able to attend the meeting but we will try to attend.

## Public Comment 15

**Comments of Donna Hinds to  
Culinary Institute of America  
Campus Master Plan**

Dear Planning Commissioners,

Thank you for your time in serving on the Planning Commission and for considering these thoughts related to the CIA dorm expansion proposal for Pratt Ave. My comments and concerns related to this project stem not only from my ownership of two properties on Pratt Avenue,<sup>1</sup> but also from my interest in the general well-being of the City of St. Helena and the impacts this project will have on the City. The discussions in opposition to the project are based, in large part, on areas in which the project is in direct conflict with various provisions of the St. Helena Municipal Code ("Code"). I have quoted the Code throughout the discussion, and suggest that it may be beneficial to have a copy, for reference, while reading this paper. The project, as it relates to the Vineyard Lodge expansion, should be denied, as supported by the following facts and discussions.

**PROJECT FACTS:**

Due to the large volume of information submitted in the Initial Study/Mitigated Negative Declaration ("IS/MND"), together with five appendices, the following is a summary of factual information obtained from the IS/MND that will assist the reader while analyzing this project. (Page references are to the location of the information in the IS/MND)

- Proposed new building square footage: 40,645 (p. 6)
- Proposed demolition square footage: 15,050 (p. 6)
- Existing Vineyard Lodge II square footage: 12,612 (p. 4)
- Proposed Total square footage: 53,257 (12,612 + 40,645)
- Height of buildings: 36' to 40'2" (Appendix 4 Plans p. A101-A107)<sup>2</sup>
- Length of buildings: 112' to 162' (Appendix 4 Plans p. A 101-A107)
- Length of building B fronting on Pratt Ave: 150' (Appendix 4 Plans p. A 101-A107)
- Height of building B fronting on Pratt Ave: 36' (Appendix 4 Plans p. A 101-A107)
- Proposed front setback of building B: 20' (Appendix 4 Plans)
- Proposed side setback of building A: 13' (Appendix 4 Plans)
- Building A is 162' long x 87' wide x 40'2" high and has both 2 and 3 story elements. (Appendix 4 Plans p. A 101-A107)
- Building B is 150' long 42' wide and 36' high and is a two story building. (Appendix 4 Plans p. A 101-A107)
- Building C is 112' long x 42' wide and 40'2" high and is a three story building. (Appendix 4 Plans p. A 101-A107)
- Size of Pratt Vineyard Lodge Lot: 2.61 acre (p. 8)
- Zoning of Project Property: PQP (St. Helena Zoning Map)

## Public Comment 15

- Zoning surrounding proposed project: Agricultural (St. Helena Zoning Map)
- Location of project: Outside of Urban Limit Line (St. Helena Zoning Map)
- Current number of students at Vineyard Lodge: 101 (p. 5)
- Proposed number of students at Vineyard Lodge: 224 (p. 4)
- Net increase in students at Vineyard Lodge: 123 (p. 5)
- Proposed/Current Number of students at Greystone 47 (p. 4 )
- Total Increased students and Staff at Greystone: 58 (p. 3)
- Current Total number of students: 200 (p. 3)
- Proposed Total number of students: 300 (p. 3)
- Current number of students in outside housing: 52 (200 total, less 47 at Greystone, less 101 at Vineyard Lodge = 52 )<sup>3</sup>
- Proposed number of students in outside housing: 29 (300 total, less 47 at Greystone, less 224 at Vineyard Lodge = 29)
- Net decrease of students in outside housing: 23 (52 -29 = 23)
- Current number of parking places at Vineyard Lodge: 85 (p. 6)
- Proposed number of parking places at Vineyard Lodge: 72 (p. 6)
- Current ratio of students to parking at Vineyard Lodge: 101:85
- Proposed ratio of students to parking at Vineyard Lodge: 224:72

**DESIGN REVIEW CRITERIA:**

The following is a discussion of the design criteria that must be considered by the Planning Commission in reviewing all applicants. These are set forth in Section 17.164.030. While it requires the failure of only one factor for the Planning Commission to make a finding that the design criteria have not been met, this applicant has failed to meet the majority of the design criteria as follows:

**1. Consistency and compatibility with applicable elements of the general plan;** The project is not consistent and compatible with the applicable elements of the General Plan. The Vineyard Lodge is located beyond the Urban Limit Line ("ULL"). The intent of the ULL is to discourage urban sprawl and promote sensitive development which preserves the rural and agricultural lands around the City. The General Plan Guiding Policy 2.6.5, "*Encourages the continuation of agricultural and low-intensity uses adjacent to the ULL.*" The high intensity (massing, height, and building location near Pratt Ave.) of the Vineyard Lodge expansion project is not consistent with this General Plan Guiding Policy and, therefore, should be denied. The building setback variance that has been requested for Pratt Ave. is in direct violation of the General Plan. Pursuant to Section 17.112.050, there is a special setback of 36' on the northwest side of Pratt Ave. from the railroad track to the Napa River. The reason this provision was included in the Code is evidenced by Section 5.3.3 of the Transportation Element of the 1993 General Plan which provides: Guiding policies "*5.3.3 Preserve rights-of-way for future collector streets within the planning area of the City as follows: \* Starr Avenue from Pratt Avenue to Adams Street . . . The City recognizes that development may or may not proceed along the lines envisioned in this plan, and that some areas not currently identified for*

## Public Comment 15

*potential developments may in fact precede those that are so designated. The intent of the right-of-way preservation designation is to clearly define the interest of the City in maintaining the option for extending its collector street system into these areas. Special setback areas shall be established along collector streets to allow for future widening."* In summary, the special setback on Pratt Ave was established pursuant to the 1993 General Plan (our current governing General Plan) to allow for future widening due to Pratt's designation as a collector street. A variance to this special set back would be in direct contradiction of the General Plan and would result in the loss of ability to widen Pratt Ave in the future. It is not currently clear what traffic patterns will evolve over the next 5, 10 or 20 years and whether or not Pratt Ave. will be needed as a connector street. The topic was raised at the community workshop held on February 4, 2017, when a concerned citizen expressed the need of the City to preserve rights-of-way on connector streets and not give up these rights as was done on the Adams St. extension. As the traffic in St. Helena continues to increase, there may come a time in the future when the City wants to widen Pratt. The allowance of the requested variance would not only be inconsistent with the 1993 General Plan but would also be very short-sighted and result in the loss of the ability of the City to widen a collector street at some point in the future. The request for setback variance should be denied.

**2. Compatibility of design with the immediate environment of the site;** There is not compatibility of design with the immediate environment. The property surrounding the proposed project is zoned agricultural. The property is surrounded by vineyards, residences and residential home sites. The project is simply too massive, is in stark contrast and not compatible with the immediate environment and, therefore, should be denied.

**3. Relationship of the design to the site;** The proposed project is too large and not appropriate for the site. The project feasibility requires multiple variances from the Code and the use of a right-of-way from the neighboring property to the east. The main access road for the proposed project is located on this right-of-way. Section 17.112.010 provides "*Each building site in each zoning district shall be planned and arranged so as to occupy only that portion of a lot not otherwise required as a yard, setback easement, right-of-way, or other required open space;*" The easement has been included in the site plan, as if it is part of the property, but a close review of the northeast property line shows that the buildings have been placed within 13' of the property line. Has the City evaluated the rights under the easement? When will this easement expire? Does the easement allow all uses required by the project? Set back requirements from the northeast property line are not satisfied. Based on these facts, it is abundantly clear that the project design does not work within the site boundaries.

**5. Whether the design promotes harmonious transition in scale and character in areas between different designated land uses;** The design does not promote harmonious transition in scale and character in areas between different designated land uses. According to the St. Helena zoning map, the project is surrounded by A-20 zoning. Therefore, the Planning Commission should look to A-20 zoning requirements to determine whether there is harmonious transition in scale and character between the different designated land uses. The A-20 zoning sets forth development standards in Section 17.20.060. The front and side

## Public Comment 15

setbacks for A-20 zoning are 50'. The side setback from Building A to the property line on the northeast side is 13', far less than the 50' required by the surrounding zoning. In addition to the discussion related to the front setback in design review element 1., above, it is a standard zoning principle that the larger and taller the buildings, the greater the setback. The A-20 zoning provides for 30' maximum building height. The proposed 36' and 40'2" building heights are clearly not in harmonious transition with the surrounding vineyard and mountain view properties. The project should be denied for failure to promote harmonious transition in scale and character with the neighboring agricultural vineyard and residential properties.

**6. Compatibility with future construction both on and off the site;** Future construction on the site is not applicable. There are two future planned projects of residential construction located directly across the street from the proposed project. This proposed project is not compatible with these residential projects and should be denied.

**7. Whether the architectural design of structures and their materials and colors are appropriate to the function of the project;** The architectural design is not appropriate, due to the degree of intense massing (see prior discussions), and should be denied.

**8. Whether the planning and siting of the various functions and buildings on the site create an internal sense of order and provide a desirable environment for occupants, visitors and the general community;** The proposed buildings are so large that there is insufficient open space for the 224 proposed students. There appears to be insufficient outdoor green area. There is insufficient parking for students. There is no parking accommodations for visitors. Building B is located only 20 feet from Pratt Ave., which will subject the residents on the Pratt Ave. side of the building to road noise. The applicant has failed to meet design criteria 8 and the project should be denied.

**9. Whether the amount and arrangement of open space and landscaping are appropriate to the design and the function of the structures;** The amount and arrangement of open space and landscaping are not appropriate to the design and function of the structures. The visual impacts of this project cannot be properly mitigated by landscaping, due to the intensity of massing and height of the buildings, and the Applicant's request for a reduced setback from Pratt Ave. The PQP district includes the requirement for landscaping and screening.

"Screening" is defined as a "method of visually shielding or obscuring one abutting structure or use from another or from the public right-of-way by fencing, walls, berms or **densely planted vegetation**." Section 17.164.070 B.7 requires the proponent to submit a site plan showing the "location and size of existing and proposed planting and screening." Additionally, Section 17.68.060 B. provides "All planting strips, yards, setbacks and other required open space areas shall be landscaped in accord with a landscaping plan approved by the design review process." The Applicant's Landscaping Plan, shown in Drawing L2 of the Use Permit and Design Review submittal, the renderings of the front elevation of the 150 foot long, 36 foot tall Building B, which will be setback only 20 feet from Pratt Avenue, and the conclusion of the Vineyard Lodge Driveway Traffic Impact Report, Section E, regarding Sight Lines at the Vineyard Lodge Driveway, which states "Therefore, sight lines would be acceptable assuming that **no** landscaping is planted along the site frontage that would ultimately grow and block drivers

## Public Comment 15

views." are in contradiction with one another in the appropriate screening required by the Code. Additionally, the stand of American Sycamore trees, located along the northeast property line and proposed to screen the 162 foot long, 40 foot tall Building A, are deciduous and will not provide adequate screening of Building A particularly during the Fall and Winter months. The massing and height of the proposed dormitory buildings, combined with the requested front setback variance of 20 feet from Pratt Ave. and the stated traffic safety concern upon exiting the driveway, should landscaping be planted along the front of the property, renders the Applicant's Landscape Plan, Mitigation Measure (AES-1) ineffective and failing to meet Design Criteria 9 and, therefore, the project should be denied.

**10. Whether sufficient ancillary functions are provided to support the main functions of the project and whether they are compatible with the project's design concept;** There are several ancillary functions to support the main function that are lacking: parking; gathering space, green space, recreation area, and inadequate access drive for fire safety. (Some of these are discussed in more detail in other sections so will not be repeated here). The applicant has failed to meet design criteria 10 and therefore the project should not be approved.

**11. Whether access to the property and circulation systems are safe and convenient for pedestrians, cyclists and vehicles;** The preliminary grading and drainage plan that was provided on page UP4 of the plans (Page 113 of Appendix 4 of IS/MND) notes that the width of the access road is 16' in some places. Section 17.124.070 B. 1. provides that *"An access drive is a way located outside of the public right-of-way that provides vehicular access between the public street and the required parking for more than one lot, or for one lot if the length of the drive is greater than one hundred (100) feet."* The access drive in the Applicant's plans is greater than 100'. Section 17.124.070 B. 2. e. provides the following widths are the minimums that will allow for the safe passage of emergency vehicles. According to this Code Section, for residential developments having over 60 units, the minimum width (including two 2' shoulders) is 30'. Since the access roads for the proposed plans do not meet the minimum Code requirement for width, the project should be denied. Width of access roads are provided as minimums for safety of residents and should be strictly enforced. A reduction in the size of the access roads, contrary to the Code provisions, could result in future liabilities for the City. Section 17.124.070 B.2.a provides: *"All access drives shall be designed for two-way traffic, unless specified approval is obtained from the public works director and fire chief/fire code official to allow one-way access drives."* (Verification of approval of the fire chief should be obtained). Section 17.124.070 B.2.h. provides: *"An adequately sized firefighting operational area shall be provided as required by Chapter 15.36"* This required firefighting operational area is not evident on the plans and should, therefore, be verified. The Applicant has failed to meet design criteria 11 and, therefore, the project should be denied.

#### USE PERMIT FINDINGS:

The Findings required for a use permit are set forth in Section 17.168.050. as follows: ***"No use permit shall be granted unless all of the following general findings can be made:"*** This provision clearly states that if any one of these factors is not satisfied, "no use permit shall be

## Public Comment 15

granted." This project fails to meet Section 17.16.050 A., B., C., D., E., F., G., H., I., J., K., and L., as follows, and should, therefore, be denied:

**A. That the proposed use would not generate odors, fumes, light, glare, radiation or refuse that would be injurious to surrounding uses or to the community;** Due to the large size of the project, the number of students, the number of cars, and the outdoor lighting, this project will generate odors, fumes, and light glare that will be injurious to surrounding uses of residential homes. In addition to existing nearby residences, there are two planned residential building sites located directly across from the proposed project site. The Applicant has failed to meet finding A. and should, therefore, be denied.

**B. That the proposed use would not generate levels of noise that adversely affect the health, safety or welfare of neighboring properties or uses;** The proposed project will increase the total number of students from 101 to 224 in a very concentrated area. The Applicant's submitted Noise Study states, "*Gatherings could include up to 120 students who would live on the site. Residential neighbors near the project site have expressed concern that these gatherings and other activities could generate noise.*" The Noise Study only contemplates 120 people speaking at the same time at an outdoor event. Numerous unanswered questions and unintended consequences arise, with respect to noise, when the other 104 residents have to be accounted for when participating in an outdoor event. A second statement in the Noise Study, "Student activities are not expected to result in noise that can be heard at the property line between the hours of 10:00 p.m. and 7:00 a.m." The Noise Study did not take into account the proximity of the two residential building sites located directly across the street from the Vineyard Lodge site. Notwithstanding the existing rules prohibiting outside amplified music, the observance of a 9:30 p.m. curfew, and non-residents not allowed to attend events, the idea that 224 college students will not generate an increased level of noise, at any hour, that exceeds the normally acceptable range is beyond credulity. Until proven otherwise, the Applicant has failed to meet the standards of use permit finding B and the project should be denied.

**C. That the proposed use would not generate traffic noise in excess of the normally acceptable range identified in the general plan;** The increase in traffic noise from the operation of 72 cars located onsite at the Vineyard Lodge was not addressed by the Noise Study. Rather, the Noise Study was limited in focus to the A.M. and P.M. peak shuttle bus trips to and from the Vineyard Lodge/Greystone. The Noise Study was conducted during a period when the Vineyard Lodge was unoccupied by students<sup>4</sup>, therefore, no student car derived noise was measured and included in the calculations to ascertain if the proposed 72 permitted cars will generate traffic noise in excess of the normally acceptable range. The Applicant has failed to adequately address use permit design criteria C and the project should be denied.

**D. That the proposed use would not make excessive demands on the provision of public services including water supply, sewer capacity, energy supply, communication facilities, police protection and fire protection;** The proposed project could potentially make excessive

## Public Comment 15

demands on the municipal water supply and municipal sewer capacity as well as other public services. The Applicant's request to expand student enrollment from 200 to 300 students will be adding 100 people to our community. The Association of Bay Area Governments ("ABAG") projection that St. Helena's population will increase by 400 by 2040 does not include these additional 100 students. With a focus on managed residential growth in the City of St. Helena, the City's Residential Growth Management System limits growth in order to ensure the City can provide adequate public services and infrastructure. The proposed Vineyard Lodge expansion project is not exempted from the Residential Growth Management System, Section 17.152.040.<sup>5</sup> Given the scarcity and rising rates of the City's potable water supply and the tenuous condition of the municipal sewer system, the Applicant should not be granted a use permit based on the theoretical future demands of water allocation and wastewater discharge volumes. Notwithstanding the reported water allocation offsets of the proposed project, the Applicant's Water Availability Analysis reports historical annual water usage that has exceeded its corresponding annual water allocations. There is no certainty that the Applicant's proposed redistribution volumes will not exceed water allotment in the future. Similarly, with respect to wastewater discharge volumes, the Vineyard Lodge project is theoretically projected to increase from 6373 gpd to 9520 gpd (an increase of 49%) and the onsite equalization pump tank is sufficiently sized to allow for only off-peak discharge to the City sewer. Again, notwithstanding any theoretical wastewater offsets anticipated at the Greystone campus, the unintended consequences of increased wastewater discharge from the expanded Vineyard Lodge project have not been fully contemplated, as a function of future development, in the area of the City served by the Crinella Lift Station. In consideration of the limited public services of the City, the Applicant's requested increase in enrollment from 200 to 300 students, combined with the proposed expansion of the Vineyard Lodge project to house these additional students, as compared with the higher benefits of other market rate and affordable residential projects competing for the same limited resources and building permit allocations, is not supported and the use permit should be denied.

***E. That the proposed use would provide adequate ingress and egress to and from the proposed location;*** The project has failed to provide adequate ingress and egress to and from the proposed location and should be denied. (See previous discussion under Design Review Criteria 11, above.)

***F. That allowing the proposed use would not conflict with the City's goal of maintaining the economic viability of a local-serving economy;*** The proposed project will conflict with the City's goal of maintaining the economic viability of a local-serving economy. Revenue generation is a key factor for St. Helena. The City is facing major challenges with regard to economic development. These challenges include, but are not limited to, the constrained capacity of local infrastructure, lack of available water supply and associated rising water rates and increasing traffic volume. The Applicant's request to increase enrollment from 200 to 300 students and increase the Vineyard Lodge housing capacity does not support increased local economic development. The Applicant has moved the majority of its tourist focused, revenue generating activities and services to the new Copia center in the City of Napa. The Greystone

## Public Comment 15

campus will become more student education and less tourist activity oriented. As a result, St. Helena will be allocating a portion of its finite infrastructure resources without any increased economic benefit. On the contrary, if these same limited infrastructure resources are allocated to higher economically beneficial uses (i.e. hotels, restaurants, ancillary supporting businesses) the City's local-serving economy and long-term economic sustainability will be greatly enhanced. The Applicant's proposed project presents a conflict to the goal of maintaining the economic viability of a local-serving economy and the use permit request should be denied.

**G. That the proposed use would be compatible with surrounding land uses and would not conflict with the purpose established for the district within which it would be located;** The proposed use is in conflict with the surrounding land uses and would conflict with the purpose established for the district within which it would be located. Since surrounding properties are agricultural and residential, the proposed use is clearly in conflict. (See discussion under Design Review Criteria 5, above.) The Applicant has failed to adequately address use permit finding G and the project should be denied.

**H. That the proposed use would not be in conflict with the City's general plan;** The proposed use is in conflict with the City's general plan. (See discussion under Design Review Criteria 1, above) and should be denied.

**I. That the proposed use would not be injurious to public health, safety or welfare;** The proposed use would be injurious to public health, safety or welfare. (See discussion under Design Review Criteria 8 and 11, and Use Permit Findings A, B, and C) and should be denied.

**J. That granting the use permit would not set a precedent for the approval of similar uses whose incremental effect would be detrimental to the City or would be in conflict with the general plan;** The granting of this project would set a precedent for the approval of very large three story buildings. I do not believe there are any other three story buildings, beyond the central business district, in the City of St. Helena. Allowing a three story, 40'2" tall building outside the Urban Limit Line will set a dangerous precedent. If the variance is allowed to the special Pratt Ave. setback, precedent will be set to allow variances along the entirety of Pratt Ave. Additionally, precedent will be set to allow variances to other special setbacks on other connector streets. These precedents would be detrimental and, therefore, the use permit for this project should be denied.

**K. That, as demonstrated on a detailed plan submitted by the applicant, adequate off-street parking to accommodate the long-term parking needs of employees and business owners and customers is available;** The applicant has failed to provide for adequate off-street parking. Section 17.68.060, related to PQP standards and requirements, provides *on-site parking and loading shall be provided in accord with the provisions of Section 17.124*. Section 17.124.030 A. 3. sets forth the required number of parking spaces for "rooming, boarding, or lodging house as: two spaces for the resident owner plus one space for each guest room." Applicant is required to provide for a minimum of one space per room. The Applicant is proposing to increase student occupancy from 101 to 224 while decreasing parking spaces from 85 to 72. The Applicant is adding 123 students and decreasing parking spaces by 13. This proposal is

## Public Comment 15

based on the Applicant's contention that the current student parking demand at the Vineyard Lodge site is 31%. During the performance of the Traffic Impact Report, parking demand was counted at 44%. Further, the reported student parking demand at the Greystone Campus is 70% (TIR). This wide discrepancy in student parking demands is in contradiction with the Applicant's request for a variance of the parking requirements. Rather, it appears the basis for the Applicant's request for 72 parking spaces is based on the limitation in available remaining space due to the large building program on the property. Section 17.124.50 A. makes it very clear that an expansion or increase in occupancy can be made "*provided that **additional parking space shall be provided** in the extent of the change as required in Section 17.124.030.*" The Code language "shall" appears to be a mandate that changes in projects, such as this, must provide for additional parking. The proposed project has failed to meet minimum parking standards as required by the Code and should be denied.

***L. That the capacity of surrounding streets is adequate to serve the automobile and delivery truck traffic generated by the proposed use. Design Criteria (Zoning Code 17.164.030).*** The intersection of Pratt Avenue and Main Street is a major entry/exit point for the City of St. Helena. The City should take upmost precaution in approving projects that could potentially impact the traffic along the entire stretch of Main Street. The traffic impacts of the Los Alcobas property have not been fully realized and Beringer has proposed a project that will also have traffic implications. The City should proceed with great caution and insure that the traffic impact studies submitted by the Applicant are to the level that would be required by an Environmental Impact Report.

**ZONING DESIGNATION:**

The property on Pratt Ave. is zoned PQP. The original zoning was A-20 and changed to PQP in 2008 to accommodate the non-conforming dorm expansion. Chapter 17.68 of the Code sets forth the provisions related to PQP zoning. Section 17.68.010 A. states "*It is the purpose of the PQP public and quasi-public district to provide for government-owned facilities, public and private schools and quasi-public uses such as churches and cemeteries.*" The PQP zoning provisions do not seem to contemplate housing. The 2008 Planning Commission may have improperly zoned the property to PQP to allow for dormitories. If this is the case, the mistake of the improper zoning should not be extended further and additional dormitories on this property should not be allowed.

**ENVIRONMENTAL IMPACT REPORT:**

It seems evident that there is sufficient grounds to deny this project on the basis of design review and the failure to meet the requirements of a use permit. Since the project cannot pass on design review and use permit, the issue of requiring an Environmental Impact Report becomes irrelevant. In other words, the Applicant should not be required to perform an EIR if the Planning Commission determines that it is not able to approve the project based on design. In the event the Planning Commission does consider the necessity of an EIR, it is clear that an

## Public Comment 15

EIR is required for this project for the following reasons: Identification and mitigation of multiple significant impacts of this project have not been met.

#### **ALTERNATIVE HOUSING OPTIONS:**

Based on the numerous variances required and non-compliance with multiple Code provisions and design review standards, it is clear the proposed project does not work on the Vineyard Lodge site. Although it is not the role of the Planning Commissioners to instruct applicants as to how or where to design their projects, the CIA owns other properties in the area that may be more suitable for housing additional students. In 1993, the St. Helena Planning Commission approved plans for two dormitories on the CIA Greystone property. Another property owned by the Applicant is a 5.49 acres parcel located adjacent to the Greystone campus to the south. Locating additional dorms on either the Greystone campus or the property adjacent to the Greystone campus would have much less impacts in the community in terms of visual, parking, traffic, etc. than the proposed project. Another consideration is that Pacific Union College is currently under-enrolled and the dormitories are not at full capacity. Entering into an agreement with Pacific Union for housing additional students would have far fewer impacts than the proposed project and may be economically more beneficial to both PUC and the CIA.

#### **NEIGHBORHOOD MEETING:**

A neighborhood meeting was held on April 2, 2016. This meeting was noticed by the City Planning Department and was attended by Tom Bensel, Victor Carniglia (on behalf of the City) and several concerned neighbors. It seems as if this meeting was purely to “check a box” that the Applicant met with neighbors. Various questions and concerns were raised by the neighbors in attendance. Based on the plans submitted, the Applicant did not address any of the concerns raised at the meeting. Three of the concerns I raised related to the height of the buildings, the proximity of the buildings to Pratt Ave. (set back), and whether there would be sufficient off-street parking so that no overflow parking would occur on Pratt Ave. A follow up meeting was not held and I was never contacted by Tom Bensel again. When I saw the plans that were submitted to the City, it became very clear to me that the Applicant not only failed to address our concerns, but actually went in the opposite direction of the concerns expressed at the meeting. At the neighborhood meeting, the representation was made that the buildings would be two story. In spite of the fact that I expressed concern over the height of the buildings, the submitted plans include buildings that are three stories tall and 40’2” high. At the neighborhood meeting, I specifically asked how far back the buildings would be setback from Pratt Ave and stated that I felt they should be set back as far as possible. The applicant replied at the meeting that he did not know how far the buildings would be set back. When I saw the submitted plans, I was very disappointed to see that the setback from Pratt Ave. was proposed at 20’ and would require a variance from the special setback that applies to Pratt Ave. As to the question of sufficient parking, the design decreased parking by 13 while increasing the

## Public Comment 15

number of students by 123. Again, there is a feeling that the applicant only held this meeting to “check a box” and not to sincerely address the concerns of the neighbors.

**MERIT BASED DECISION:**

The CIA has voluntarily decided to purchase the COPIA building in the City of Napa for a reported \$12.3 million, plus renovation investment, and to relocate many of their tourist activities to the City of Napa. This reference to moving tourist activities is made throughout the IS/MND. As an example of the tourism activities moving to the City of Napa, the Flavor Napa Valley website (a large CIA event) lists hotel packages for tourists planning their stay for the event. All of the hotel packages are in the City of Napa.<sup>6</sup> What about St. Helena? There have been recent newspaper articles (San Francisco Chronicle and Napa Valley Register), quoting Tom Bensel, related to the opening of Copia. These newspaper articles are attached for your convenience. Some of the more relevant quotes from these articles are: *“The Culinary Institute of America is opening its newest campus, at the Copia building in Napa, in stages, beginning with classes this week. ‘This will be the public face of the CIA,’ said Tom Bensel, managing director for both Napa Valley campuses, including the original site at Greystone in St. Helena.”*<sup>7</sup> *“The opening of the Copia building allows the Greystone St. Helena campus to focus on education for the students and also to undertake much needed renovations, Bensel said.”*<sup>8</sup> In another article discussing the opening of the new Copia center in Napa: *“Tom Bensel, managing director of the institute’s California campuses, says it will increase the recreational cooking classes offered at St. Helena and move them to Napa.”*<sup>9</sup> The CIA has chosen to redirect the majority of its tourist revenue generating operations from St. Helena to the City of Napa and is now asking St. Helena to approve a project that will place additional burdens on the City’s infrastructure and finite resources. The proposed project does not meet the standards required for design review or for a use permit. The CIA has submitted this project, without regard for the comments and concerns of the neighbors, without deference to Municipal Code provisions, and without completing a full Environmental Impact Report which would clearly define all environmental impacts. It is incumbent upon the Planning Commission to make the determination of this project without regard for whom the applicant is, but rather, based on design review standards and use permit findings.

**CONCLUSION:**

There are multiple reasons this project should be denied. The proposed project fails to meet the design criteria required for approval of projects as set forth in Sections 17.164.030 A. 1., 2., 3., 5., 6., 7., 8., 9., 10., and 11. The proposed project fails to meet the requirements for a use permit set forth in Sections 17.16.050 A., B., C., D., E., F., G., H., I., J., K., and L. The proposed project also requires the granting of multiple variances that would be detrimental to the community and would set negative precedents for future projects. While there are multiple significant reasons this project fails to meet design review standards and use permit standards,

## Public Comment 15

it only takes a finding of one reason of the many outlined above to deny this project. For the reasons stated throughout this paper, this project should be denied.

## Footnotes:

<sup>1</sup> Rusty and Donna Hinds own a 1 acre property (777 Pratt Ave.) that is diagonally across the street from the CIA Dorm project. This property was purchased as a residential homesite. The Vineyard Lodge property is less than 50 feet from this property. Additionally, Rusty and Donna Hinds own a 1/3 acre property (1057 Pratt Ave.) this is located between the Vineyard Lodge project and Main Street.

<sup>2</sup> Applicant describes building heights as 29' to 40'2" (Page 4 of IS/MND) but buildings heights are typically measured at the highest point. If measured at the highest point the buildings range from 36' to 40'2".

<sup>3</sup> In the chart on P. 6 of IS/MND Off-site Beds are not stated as "N/A." Applicant has not discussed offsite housing.

<sup>4</sup> P. 9 IS/MND states "The existing CIA facility was unoccupied as students were on break."

<sup>5</sup> **17.152.040 Exempted and regulated development categories.**

A. Exempted Development Categories. This chapter shall not apply to the issuance of building permits for the following projects:

1. Industrial;
2. Commercial;
3. Commercial/residential (daily rental);
4. Replacement housing (on the same site as a preexisting unit which has been removed, demolished or burned within the immediately preceding two years) but not in conjunction with subsection (A)(5) of this section;
5. Relocation of units already existing in the city;
6. Additions, renovations and refurbishment of existing dwelling units;
7. Accessory buildings of any type (except dwelling units);
8. Guest cottages (detached bedroom(s) without kitchen facilities);
9. Second units as defined in Section 17.04.160 and regulated by Section 17.116.030;
10. Affordable Housing. Affordable units are those dwelling units which are required to be rented at affordable rents or purchased at an affordable sales price, consistent with Chapter 17.146. The number of affordable housing units constructed shall be determined by the city council at the time of review of the development agreement authorizing the units. The agreement shall contain guarantees that the dwelling units would continue to be affordable to persons of very low, low, or moderate income for an agreed upon period of time.

# CIA at Copia opens in stages

Sasha Paulsen [spaulsen@napanews.com](mailto:spaulsen@napanews.com) Oct 18, 2016

Phil Mansfield photo  
Food and wine classes are now being offered at the Napa Valley Vintners Theater at the CIA at Copia in Napa.

The Culinary Institute of America is opening its newest campus, at the Copia building in Napa, in stages, beginning with classes this week.

"This will be the public face of the CIA," said Tom Bensei, managing director for both Napa Valley campuses, including the original site at Greystone in St. Helena.

Leading a tour through the Copia building, where renovations are ongoing, Bensei gave an overview of the plans as they are evolving for the space. When completed it will offer classes and food and wine programs for the public, extensive event space, a "lifestyle" shop, and a restaurant with a new

Public Comment 15

approach to dining. There will be no entrance fee to the building, and Bensei stressed that the CIA wants to welcome both local residents and visitors to the facility when construction is complete. There will be fees for individual classes. He said a grand opening is planned for 2017.

The Vintners' Hall of Fame, now in the Barrel Room at the historic Greystone building will be relocated to Copia and renamed the Wine Hall of Fame, Bensei said. It's expected to be in place by spring 2017.

"CIA at Copia is a first for the Culinary Institute of America," he said, noting that the new facility will be "entirely dedicated" to offering food and wine education and experiences to the public. "It opens a window into what the CIA truly is: a visionary thought-leader and innovator in food and beverage, with world-class faculty and facilities."

The opening of the Copia building allows the Greystone St. Helena campus to focus on education for the students and also to undertake much needed renovations, Bensei said.

The CIA at Greystone opened 20 years ago in what had been the Christian Brothers Winery. Initially, it offered a pastry and dessert training, as well as specialized educational classes for chefs. Over the years, as public interest has grown in cooking programs, the CIA began offering classes for food and wine enthusiasts, and expanded its professional training programs.

The 80,000 square-feet of indoor and outdoor event and theater space at Copia will now be the site for daily programs, wine tasting and classes taught by CIA instructors and guest lecturers that feature seasonally-themed recipes designed for home kitchens.

Beginning on Monday, Oct. 17, the CIA is offering daily food and wine programs in newly named Napa Valley Vintners Theater, formerly the Meyer Food Forum. The 72-seat theater is equipped with a demonstration kitchen. The first classes include "Basic Flavor Interactions," "Cooking With Wine," "Fresh Home-made Cheese" and "How to Make Fresh Pasta."

Sundays have been designated "Family Fundays" beginning with an Oct. 23 class "Mac and Cheese," which will "re-imagine" the classic.

A complete schedule with tickets and prices is available at <http://ciaatcopia.eventbrite.com>.

"CIA at Copia's educational programming takes our enthusiast programming to another level, for people of all ages and interests," Bensei said.

#### The Restaurant at CIA Copia

The anticipated opening date for The Restaurant at CIA Copia is mid-November. What was once Julia's Kitchen at Copia has undergone a face-lift for the new restaurant, which will be open for lunch and dinner, under the direction of Walid Malouf, CIA's senior director of food and beverage operations, and chef de cuisine Chris Aken.

Malouf, who is based at the CIA in Hyde Park, N.Y., told the Register that the plan for dinner service is to blend front and back of the house service for an innovative approach to service in which chefs will come out of the kitchen to offer dishes to diners. In this way, he said, guests will be able to see both the savory and dessert dishes and also meet the chefs who create them. Sharing dishes will be encouraged as part of this "experiential dining" approach. Dishes diners select will be marked on the menu, and the number of dishes selected will be tabulated at the end of a meal.

In the same way, Malouf said wines by the glass will be offered on a cart that will move through the restaurant. Guests will be able to taste as many as six wines before selecting one or more to drink with their meal.

Public Comment 15

Lunch service will be more conventional, Malouf said. "People will be able to come in and order a burger or salad — usually that's when people are on a schedule."

Malouf described the menu as Mediterranean-inspired, California cuisine "with international influences." Produce from the Copia gardens, managed by CIA Farm Manager Matthew Gunn will be utilized.

The remodel of the original Copia building by CIA and Architectural Resources Group has extended the facade nearly eight feet from its original location, allowing the dining room to blend with the property's patio, gardens and olive grove. The restaurant has one private dining room that seats 12, and two private dining rooms that each seat 18, but can be combined to seat 36.

A 1975 graduate of the CIA, Malouf joined the administration of his alma mater in 2013. Before that, he spent 13 years as co-owner and chief operating officer of Beacon Restaurant in New York City. Malouf is known in the New York area for his time as executive chef and director of operations at the Rainbow Room and executive chef at the Hudson River Club and Le Cremaillere.

The signature cuisine he developed at the Hudson River Club featured the culinary riches of the Hudson Valley, which resulted in "The Hudson River Valley Cookbook" (Addison-Wesley, 1996). Malouf is also the author of "High Heat: Grilling and Roasting Year-Round" (Random House/Broadway Books, 2005).

He co-founded the Windows of Hope Family Relief Fund after Sept. 11, 2001 and remains one of the organization's three directors. He is also a former chairman of the CIA's Alumni Council and served on the college's Education Committee.

Aken has worked as executive chef at Avia Napa (now Andaz) and was opening executive chef at AKA Bistro. The former owner of Toast Catering, executive chef and partner at Jack London Lodge and Stomp at the Mt. View Hotel. Originally from Southern California, Aken began his culinary career in Oklahoma City in 1995 under Chef Kurt Fleischfresser and also worked at La Folie in San Francisco.

#### Event space

Other renovations at the new CIA include windows on the lower level opening out to the river, creating a light-filled, modern atrium in the center of the building that will be available for evening receptions and can accommodate 800 guests in a standing reception or a 350-seat dinner.

Upstairs, the former exhibit hall is being turned into a teaching kitchen for hands-on cooking classes. Bensen said the plan is to have it completed by late summer 2017.

A mezzanine overlooking the atrium and the Napa River can host an event for up to 300. Adjacent to the mezzanine are two classrooms that can be used for breakout sessions, each seating 30. Outside, the newly terraced amphitheater seats 600 in rows or 375 at tables.

Meeting spaces upstairs at CIA at Copia include the Food Business School classroom with 25 seats; the boardroom with 25 seats, reception space for 50 on the balcony and a garden balcony that will accommodate 80 seated and 120 standing.

The main theater at Copia, used for movie screenings, speakers' series, and panel presentations, seats 250.

For private event bookings, contact Amy Thomason-Richardson at 707-967-2307. For additional information, visit [www.ciaatcopia.com](http://www.ciaatcopia.com).

## Napa's Copia to reopen as Culinary Institute of America campus

By Tara Duggan, San Francisco Chronicle | October 16, 2016 | Updated: October 16, 2016 5:00am

Photo: Talia Herman

The renovated restaurant at Copia in Napa, now part of the Culinary Institute of America.

Just after Halloween, Copia will rise from the dead in downtown Napa.

Public Comment 15

Drought-starved grapevines from its old garden have been pulled up and replaced by robust olive trees along the walk that leads to the former Copia: The American Center for Wine, Food and the Arts. The site will now be the CIA at Copia, a new public-facing campus for the Culinary Institute of America. When it opens in stages, starting in November, the CIA at Copia will have a renovated restaurant and store and will offer cooking demonstrations and wine tastings. Next year, it will open an exhibit space and offer hands-on cooking classes to nonprofessionals.

It's a big turnaround for the museum and event space, which first opened in 2001 with grandiose plans dreamed up by the late Robert and Margrit Mondavi, who were also major benefactors, and supporter Julia Child. But it closed and went into bankruptcy in 2008. Since then, its 80,000 square feet of exhibit halls, classrooms, theaters and a restaurant as well as an outdoor amphitheater have been largely empty.

The Culinary Institute of America, which is headquartered in Hyde Park, N.Y., and has had a branch at Greystone in St. Helena for 20 years, bought the property in October 2015 for \$12.5 million, a bargain compared to its original \$55 million price tag.

This will be the first branch of the institute that is oriented toward the public rather than professional cooks. Tom Bensen, managing director of the institute's California campuses, says it will increase the recreational cooking classes offered at St. Helena and move them to

Napa.

“We want to start being a leader in how people perceive food and health and sustainability,” says Bensel. “It’s a great platform for us to be able to speak to the public.”

Photo: Talia Herman

IMAGE 1 OF 9

The restaurant at the new CIA at Copia in Napa.

Based on experiences at its other campuses, including in San Antonio, Texas, and nine public restaurants and bakeries, the institute is betting its mix of tastings and classes will have more traction than what was offered at the original Copia.

“People want to taste things, touch things and have an experience,” Bensel says. “They’ll be

## Public Comment 15

---

able to immerse themselves with what's going on rather than just observe.”

Copia's original exhibits are gone, but the new space will house Chuck Williams' personal collection of cookware — bequeathed to the school when the founder of Williams-Sonoma died in December. When the exhibit opens in late spring or summer, entry will be free, and Bensel makes pains to say it won't be called a museum.

The new owners “have heard all of the horror stories about what occurred and what they can improve upon,” says Steve Carlin, who developed the Ferry Plaza Marketplace and the similar Oxbow Public Market, which opened in 2007, right next to Copia. “From what I've seen, they have listened to that and will make the appropriate adjustments.”

During the first phase next month, the institute will start to offer daily food and wine demo classes (\$25 to \$95) in a 75-seat theater. A bit later, six tasting stations will be set up in the atrium with visiting wineries that will rotate quarterly.

“This gives an opportunity to many wineries that don't have tasting rooms,” says Bensel. There are also plans for a high-end wine salon to be located next to the restaurant. It will offer small pours of cult wines that would otherwise be difficult to taste.

The restaurant, called the Restaurant at the CIA Copia, is inspired by the cart-style service at San Francisco's State Bird Provisions. Especially at dinner, the cooks will bring out trays with dishes that diners can choose from and are meant to be shared, such as a whole roast trout, duck and foie gras served with onion marmalade, and roasted oysters with shallots and verjus.

“We really want the restaurant to be fun and casual,” says Waldy Malouf, who heads up food and beverage operations at the institute.

## Public Comment 15

Photo: Talia Herman

A classroom kitchen in the new Culinary Institute of America campus at Copia in Napa.

While the restaurant at Copia will have a professional staff, the one at Greystone will be student-run, and closed when school is not in session.

Bensel says the new campus is part of the evolution of the culinary institute, from which he graduated in 1976. Back then, the culinary arts were considered more of a trade. Over the years the institute has gone beyond its associate degree programming to offer bachelor of arts degrees, and now a Wine and Beverage Graduate Certificate Program at Greystone.

The CIA at Copia also plans to be part of an ongoing evolution in downtown Napa. Copia closed during the Great Recession, and when a renovation to the nearby bypass channel was diverting traffic from the neighborhood. Things improved by 2010, developer Carlin says, and sales at Oxbow Public Market have since tripled. New hotels have opened, with additional ones due to open soon.

Public Comment 15

At the original Copia, many say, another problem was a lack of involvement in the community.

“Whether it was intentional or not, there was a sense of exclusivity to it,” Bensel says. The CIA at Copia is trying to avoid that by hosting events and fundraisers, like one for Friends of the Napa Valley River that was held at its outdoor amphitheater last weekend.

If the new campus is successful, Bensel says, revenue will bolster its academic programming. And there’s one last side benefit to educating the public about food and wine: “Our graduates are going out and being part of successful restaurants,” he says. “We don’t want to just give them their certificates and be done.”

## **COMMENTS OF RUSTY HINDS TO CULINARY INSTITUTE OF AMERICA CAMPUS MASTER PLAN**

### **Historical Review**

A review of the historical record of the establishment of the CIA Greystone Campus, and its resident housing chronology, is very important in setting the context of this current proposal being made by the CIA.

- 1993: Original Use Permit approves the construction of two residential dormitories and stipulates a third, with Permit amendment, to be constructed on the Greystone Campus. The CIA requested enrollment of 200 students but a maximum permit limit of 104 students was granted. The Permit required a 1:1 room to parking space ratio. The City Council certified a Final Environmental Impact Report.
- 2004: CIA is granted a Use Permit to transform the former Marlinda Nursing facility to student housing. This property is located at 830 Pratt Avenue, beyond the Urban Limit Line, and was zoned A-20. The Planning Commission and City Council approved the transition based solely on a non-conforming replaced by a use of lesser intensity (Occupancy reduced from 70 beds to 40).
- 2008: CIA requested a change in the Vineyard Lodge Use Permit to add a second dormitory. As this would trigger non-conformance of greater intensity in the A-20 zone, the Planning Commission and City Council struggled with the dilemma of either changing the citywide zoning ordinance for A-20 or the site specific rezoning of the Vineyard Lodge parcel. After much debate, the Vineyard Lodge parcel was rezoned Public Quasi Public. Vineyard Lodge II was erected and houses 60 residents in 12,612 square feet. The Vineyard Lodge total resident population is 101 served by 85 parking spaces. In addition, resolution 2008-74 increased the enrollment at the Greystone campus from 104 to 200 students.

### **Summary (Hinds)**

In review of the Initial Study/Mitigated Negative Declaration ("IS/MND"), and associated documents submitted by the Culinary Institute of America ("CIA") for the proposed expansion of the Vineyard Lodge located at 830 Pratt Avenue, several elements either require the granting of multiple variances to the City of St. Helena Municipal Code or they do not satisfactorily identify and mitigate all of the potentially significant impacts. My comments will focus primarily on the high intensity (massing and height) of the new buildings, their forward location on the site near Pratt Avenue (requiring a front setback variance), the inadequate number of parking spaces (requiring a variance), the potential increase in noise, the potential increase in traffic, the increase in wastewater generation, the potential increase in water usage above the allocated volumes and the significantly incongruous nature of the project with the surrounding agricultural and residential land use.

## Public Comment 16

As such, the City of St. Helena Planning Department, the Planning Commission and the City Council should deny the proposed expansion of the Vineyard Lodge property. The Applicant has less environmentally impactful alternatives to fulfill its requisite student housing needs at its Greystone Campus, and adjacent owned parcel, which date back to the original 1993 Use Permit.

### **INITIAL STUDY/MITIGATED NEGATIVE DECLARATION (Vineyard Lodge Expansion)**

In an effort to assist the reader, I have structured the following presentation of the analysis of the Initial Study/Mitigated Negative Declaration ("IS/MND") and Appendices in the following order:

- Cite the category of environmental factor potentially affected;
- Applicant's presentation of the Potentially Significant Impact, either properly identified, or improperly characterized as Less than Significant;
- Presentation of the Applicant's Impact Analysis, as presented;
- Presentation of the Applicant's proposed Mitigation Measure(s) associated with the environmental factor;
- Presentation of Hinds' rebuttal of the manner in which the Applicant has failed to either properly characterize or mitigate each of the environmental factors which create a Potentially Significant Impact; and
- Page numbers are listed parenthetically to assist the reader in reference to where each issue is found in the IS/MND.

#### **Aesthetics:**

##### **Potentially Significant Impacts (IS/MND Page 12)**

- Substantial adverse effect on a scenic vista
- Substantially degrade the existing visual character or quality of the site and its surroundings

##### **Impact Analysis (IS/MND Pages 13-15)**

- Residents and other viewer groups may experience reduced visual quality
- New dorms maximum height of 40'-2"
- Project will introduce perimeter parking lot lighting

##### **Mitigation Measure AES-1 (IS/MND Page 15)**

- Landscaping Plan - Vegetative screening (Trees). To be approved by Planning and Community Director prior to issuance of Building Permit

## Public Comment 16

**The Applicant has failed to adequately mitigate the impacts for Aesthetics for the following reasons:**

- High intensity massing (40,645 sq. ft.) and location of new buildings too close to Pratt Avenue;
- Maximum height of proposed buildings (36'-40'). Surrounding land use (A-20, greater than two acres has a maximum height limitation of 30'. Municipal Code 17.20.060);
- Visual Site Assessment performed in Summer 2016, during the period when onsite trees had full foliage;
- American Sycamore trees located on the northeastern property line along, "Vineyard Road, provide no screening in Fall and Winter months. Also, this same stand of trees will not provide adequate year-round height to screen the tops of proposed Buildings A and C (40');
- No existing screening on the eastern portion of the front property line on Pratt Ave. where proposed Building B (height 36') will be located;
- Existing trees on the western portion of the front property line on Pratt Ave. will not provide adequate screening of proposed Building B (36');
- Lack of trees to properly screen height of proposed Building C (40') looking eastward from western site boundary;
- The Applicant's Landscaping Plan (AES-1) does not mitigate the aesthetic impact resulting from the proposed project. Due to the large size of the buildings, mitigation cannot be accomplished by landscaping. Even with the addition of the landscaping proposed by the Applicant, the permanent visual impact of these buildings will be very significant and will detract from the beauty of the surrounding vineyard/mountain vistas;
- The Traffic Impact Report for the Vineyard Lodge driveway specifically contradicts the Applicant's landscaping plan by stating, "Therefore, sight lines would be acceptable assuming that no landscaping is planted along the site frontage that would ultimately grow and block driver views."
- This mitigation measure is not adequate for the proposed project and, with all due respect, should not be determined at the sole discretion of the Planning and Community Director, as proposed by the Applicant.

## Public Comment 16

**Land Use and Planning****Potentially Significant Impacts (IS/MND Page 38)**

- Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect.

**Setting and Impact Analysis (IS/MND Pages 38-40)**

- The outer edge of the urban service area is demarcated by the urban limit line ("ULL") which is a parcel specific boundary that marks the limit of allowed urban development. The intent of the ULL is to discourage urban sprawl and promote sensitive development which preserves the rural and agricultural lands around the City. The proposed project is subject to land use policies outlined in the St. Helena General Plan (Guiding Policy 2.6.5 encourages the continuation of agricultural and **low-intensity** uses adjacent to the Urban Limit Line);
- The Vineyard Lodge Housing Site is located outside and adjacent to the ULL and is zoned Public Quasi Public ("PQP");
- The project is subject to other standard requirements, stipulated by the Zoning Code, namely, parking and setback requirements which, given site constraints, the applicant maintains cannot be met;
- Under Municipal Code 17.112.050, the Vineyard Lodge Housing site is subject to a special setback requirement of 36';
- In addition, the project has requested a variance from the parking standards outlined in Municipal Code Section 7.124.30 (A.3) which require two spaces for the resident owner and one space for each guest bed. Compliance with the Code will require 226 total parking spaces. Based on data supplied by the applicant, only 31% of students have a demand for parking spaces. As such, applicant is requesting a variance to allow for 72 parking spaces. To ensure that the number of available parking spaces equates with demand, applicant will cap the number of parking permits at 72 and will prohibit overnight offsite and street parking.

**Mitigation Measure LU-1 (IS/MND Page 40)**

- Requires at least five (5) on demand bicycles be made available to residents of the Vineyard Lodge Housing Site.

**The Applicant has failed to adequately identify and mitigate the impacts for Land Use and Planning for the following reasons:**

- Pursuant to Section 17.112.500.A of the St. Helena Municipal Code, there is a special setback of 36' on the northwest side of Pratt Avenue, from the railroad track to the Napa River. The reason this provision was included in the zoning code is evidenced by Section 5.3.3 of the Transportation Element of the 1993 General Plan (St. Helena's current

## Public Comment 16

governing General Plan) which provides, "Guiding Policies 5.3.3 Preserve rights-of-way for future collector streets within the planning area. The intent of the right-of-way preservation designation is to clearly define the interest of the City in maintaining the option for extending its collector street system into these areas. Special setback areas shall be established along collector streets to allow for future widening." In summary, the special setback on Pratt Avenue was established pursuant to the 1993 General Plan to allow for future widening due to Pratt Avenue being designated as a collector street. A variance to this special setback would be in direct contradiction of the General Plan and Zoning Code and would result in the loss of ability to widen Pratt Avenue in the future;

- The high intensity of the proposed Vineyard Lodge project (massing, height and building location near Pratt Avenue) is not consistent with the surrounding agricultural and residential land use (Municipal Code 17.168.050 G)(Municipal Code 17.164.030 A 3,5 and 8), the sensitive, low intensity development on parcels beyond the ULL (General Plan Guiding Policy 2.6.5) and the adjacent land use (A-20, greater than two acres) which mandates a maximum building height of 30 feet (Municipal Code 17.20.060);
- Applicant has not provided data demonstrating a strict 31% demand for onsite parking at the Vineyard Lodge Housing Site. The May 12, 2016, Vineyard Lodge Traffic Study (Dated November 2, 2016), references 96 student residents and 42 cars in the parking lot at the Vineyard Lodge (Demand ratio of 44%). The Greystone May 2016 traffic study (Table 7, Footnote 1, report dated November 17, 2016), references 45 students residing in the Greystone dormitory and parking demand is 70%. The Applicant's submitted documents clearly identify a significant parking demand discrepancy between student residents at the Vineyard Lodge (theoretical 31%, actual 44%) and Greystone (70%). The Applicant's requested parking variance should be denied and the required 1:1 ratio of beds to parking spaces should be required at the Vineyard Lodge;
- If Applicant wants to expand enrollment from 200 to 300 students, the Greystone and other Applicant owned sites should be evaluated to fulfill additional requisite housing and parking capacity requirements;
- The 1993 Use Permit (Resolution 93-105) approved the construction of two dormitories and allowed for a third dormitory, with Use Permit Amendment, on the Greystone Campus. "The CIA was previously approved to build two additional dormitories on the slope behind Greystone. The permits for those structures were not vested and have since lapsed." (Public Hearing Staff Report, August 28, 2008), This building site option remains as a viable alternative without the cumulative impacts of the Vineyard Lodge expansion project;
- The Greystone Campus has space to facilitate resident housing expansion, will eliminate the need for additional shuttle bus trips from the Vineyard Lodge and will not result in additional visual impact;

## Public Comment 16

- The Vineyard Lodge site is too small to expand the housing capacity from its current 101 to the proposed 224 student residents while maintaining compliance with the Municipal Code and General Plan of St. Helena. The Vineyard Lodge site is fully developed in its present state.

**Noise:****Potentially Significant Impact (Categorized Less than Significant, IS/MND Page 41)**

- A substantial permanent increase in ambient noise levels in the project vicinity above existing without the project.

**Setting/Impact Analysis (IS/MND Pages 42-44)**

- Noise study conducted on June 15, 2016. The existing housing facilities were not occupied as students were on break. The measured noise levels represent the lowest noise levels likely to be encountered in the area. Overall, the noise measurements indicate that the noise environment in the project area is generally quiet and consistent with the rural setting.
- At project operation, the onsite land use at the Vineyard Lodge, and associated noise environment, will continue to be typical of a multi-unit development (dormitories).
- The expansion of the Vineyard Lodge site is not expected to introduce a substantial permanent increase in the ambient noise environment.
- Gatherings could include up to 120 students who would live on the site.
- In addition, the CIA regulates activities at the Vineyard Lodge to prohibit amplified music outside, enforces a 9:30 p.m. noise curfew and prohibits non-residents from attending events on the quad.
- Student activities are not expected to result in noise that can be heard at the property line between the hours of 10:00 p.m. and 7:00 a.m.

**Mitigation Measure (Not Offered by Applicant)**

- Permanent noise was subjectively categorized as Less than Significant, therefore, no mitigation measure was offered.

**The Applicant has failed to identify and adequately mitigate the impacts for Noise for the following reasons:**

- The Noise Study was actually conducted in April-May 2016 while there were no students onsite at the Vineyard Lodge. As such, the results of the noise study are inaccurate since actual onsite student noise contribution was not measured and not considered for mitigation;

## Public Comment 16

- Key findings of the study were not predicated on the proposed 224 students residing at the Vineyard Lodge. The IS/MND states, "Gatherings could include up to 120 students that live onsite." Does this set a maximum outdoor activity limit of 120 students that live onsite? What about participation by the other 104 student residents?
- What is the compliance history of the CIA noise regulations including no amplified outdoor music, 9:30 p.m. curfew and prohibition of non-resident attendance? The CIA should be specific as to what means and by whom are these prohibitions enforced. The CIA should state the policy for violating any of these stated prohibitions.
- The Applicant should be required to address the increase in traffic noise resulting from the increase in number of permitted student cars from the reportedly 31 to 72?
- Applicant's statement, "Student activities are not expected to result in noise that can be heard at the property line between the hours of 10:00 p.m. and 7:00 a.m." is simply not believable. The proposed expanded Vineyard Lodge is a multi-unit college dormitory that will house 224 students with all parking located on the perimeter of the site. College students keep late hours and are typically loud.
- The Noise Study did not contemplate the effect of noise emanating from the Vineyard Lodge toward the two residential building sites located directly across Pratt Ave.

**Population and Housing:****Potentially Significant Impacts (Categorized Less than Significant, IS/MND Page 45)**

- Induced substantial population growth in an area.

**Impact Analysis (IS/MND Page 45)**

- Project construction activities at the Vineyard Lodge Housing site would result in a maximum occupancy of 224 students onsite, which equates to a net increase of 123 students.

**Mitigation Measure (Not Offered by Applicant)**

- Population Growth was subjectively categorized as Less than Significant, therefore, no mitigation measure was offered.

**The Applicant has failed to adequately identify and mitigate the impacts for Population and Housing for the following reasons:**

- The increase in resident student population from 101 to 224 is concentrating 123 additional students at the project site.

## Public Comment 16

- Notwithstanding the PQP zoning of the site, this significant increase in residential density is not consistent with the surrounding agricultural land use and scenic surroundings (Municipal Code 17.168.050 G)(Municipal Code 17.164.030 A 3,5 and 8) and is in conflict with the General Plan guiding principle (2.6.5) of sensitive development on parcels located beyond the ULL.

**Transportation/Traffic:****Potentially Significant Impacts (IS/MND Page 48)**

- Conflict with applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to, intersections, streets, highways and freeways, pedestrian and bicycle paths and mass transit?

**Impact Analysis (IS/MND Page 50)**

- With the project, the intersection of Pratt Ave/SR HWY 29 WB will operate unacceptably under Level of Service "F" during the AM and PM peak hours.

**Mitigation Measure (IS/MND Page 50 , Trip Capacity - Not formal Mitigation Measure)**

- The CIA is proposing to increase the capacity of its three shuttle buses that transport students from the Vineyard Lodge to Greystone.

**The Applicant has failed to adequately identify and mitigate the impacts for Transportation/Traffic for the following reasons:**

- The Traffic Impact Report ("TIR") only considers peak A.M. and P.M. shuttle bus trips from Vineyard Lodge to Greystone. The TIR fails to consider the full magnitude of personal trip usage of the 72 permitted cars located at Vineyard Lodge;
- The TIR incorporates a theoretical estimate of the traffic contribution from the Las Alcobas Hotel driveway, which is located at the intersection of Pratt Avenue/HWY 29. The TIR may prove to be inaccurate when the actual traffic impacts resulting from the Las Alcobas Hotel begins operating at full capacity (Sometime after its opening in 2017). Since the Las Alcobas Hotel is a large project (68 guest rooms plus a restaurant serving the general public), with potentially significant impacts in the same area as the proposed project and the proposed Beringer projects, it would be prudent to deny the proposed Vineyard Lodge expansion project until the actual full traffic impacts can be further determined.

## Public Comment 16

**Utilities/Public Services:****Potentially Significant Impacts (All categorized as Less than Significant, IS/MND Page 55)****Impact Analysis (IS/MND Page 56-57)**

- (Wastewater Treatment). At the Vineyard Lodge Housing Site, the sanitary sewer management system will accommodate a peak daily flow of approximately 9520 gpd which equates to a projected net increase of 1960 gpd over existing capacity (flow);
- (Sufficient Water Supplies). The total water allotment across the two sites amounts to an average of 20,650 gpd. The Applicant proposes to rescind the two separate agreements and adopt a new joint water agreement which would redistribute the gross water allotment across the two sites to accommodate the increase in housing at the Vineyard Lodge site.

**Mitigation Measure (None offered)**

- Utilities/Public Services was subjectively categorized as Less than Significant, therefore, no mitigation measures was offered.

**The Applicant has failed to adequately identify and mitigate the potential impacts for Utilities/Public Service for the following reasons:**

- The Wastewater Feasibility Analysis for the expanded Vineyard Lodge housing reports the anticipated peak daily flow of approximately 9520 gpd. The current average recorded flow is 6373 gpd. The actual increase in average daily flow from the expanded Vineyard Lodge will be a minimum of 3147 gpd (an increase of 49%, rather than the 1960 gpd cited above in the Impact Analysis);
- Additionally, the onsite equalization pump tank is sufficiently sized to allow for only off-peak discharge to the City sewer;
- Odor Control. The Wastewater Feasibility Study for the Vineyard Lodge references, "There should be no noxious odors from a properly designed and operated treatment system. See Alternative Courses of Action for operation alternatives." No odor control mitigation is listed under Alternative Courses of Action;
- The Water Availability Analysis - Greystone and Vineyard Lodge reports data records which reflect the Baseline Existing Demand of 23,478 gpd, which is well above the current allotment of 20,650 gpd;
- The Proposed Water Use Demand is expected to be 21,667 gpd (Annual use adjusted to 19,796 gpd.) These are theoretical calculations and actual water demand could continue to exceed water allotment volumes.

## Public Comment 16

**Mandatory Findings of Significance:**

(Degrade the Environment) Less than Significant (IS/MND Page 56)

(Cumulatively Affect the Environment) Less than Significant (IS/MND Page 56)

**The Applicant has failed to adequately identify the Mandatory Findings of Significance for the following reasons:**

As presented in this paper, the Applicant has failed to thoroughly analyze each of the environmental factors that are potentially affected. Many of the technical studies, which are the basis of the Applicant's subjective findings, are "nuanced" on a conditional set of variables, or factors, rather than evaluating the potential impact in its entirety. Contradictions in conclusions between the Applicant's technical reports have been brought forth to reflect the effect each has on the degree of significance of impact. As a result, the impact is either not mitigated or the mitigation measure offered is ineffective.

The Applicant's Initial Study/Mitigated Negative Declaration does not properly identify nor mitigate all of the Potentially Significant Impacts to the environment. Pursuant to CEQA Section 21082.2.d. "If there is substantial evidence, in light of the whole record before the lead agency, that a project may have a significant effect on the environment, an environmental impact report shall be prepared." In the event the Planning Commission and City Council find that the project does not fail on the criteria of Design Review or Use Permit findings, the Applicant should be required to perform an EIR to fully delineate the Potentially Significant Impacts to the environment.

## Public Comment 17

**To:** [Lilly Bianco](#)  
**Subject:** PRATT AVENUE CIA DORMS  
**Date:** Wednesday, February 15, 2017 3:55:36 PM

---

My name is Linda Bertoli I have lived on Pratt Avenue for forty years. I see the CIA plans to expand their facility on Pratt. I am not for this. For years the community has been asked to cut back on their water usage. We all try and do the best we can. We are a community and appreciate living here. We are friends and neighbors.

It is my understanding the CIA want to double the size of the existing dorms with 3 new multi-story buildings. With an increase of over 120 students, they will probably want sinks, toilets, showers and probably clean linens. I wonder if they would be sensitive to our constant water shortage. They would be strangers in our community. Pratt is a country lane with no side walks. There was an accident in front of our house killing 4.

Every day I drive to town I see worker's cars (probably 40 or more) working on the hotel at Main and Pratt. I am sure no one knows the impact of that hotel. (the corner of Pratt and Main) Then we will have several more years or worker's cars. I wonder how many of these workers are even from Napa County.

I wonder, also, who are these students? are they taking a year-long class or a couple from the east taking a 2-week class in egg whites and visiting the Napa Valley (staying in the dorms with no hotel tax)

Do we have to say "yes" to every one who shows up with a wad of cash? Is there room on our roads for a couple hundred more cars?

So if anyone wants to know ..... I am against this CIA dorm expansion... Linda Bertoli 345 Pratt Ave.

Attn: Mayor Alan Galbraith, Grace Kistner, Chairperson, Bobbi Monnette, Commissioner, Sarah Parker, Commissioner, Tracy Sweeney, Commissioner; Noah Housh, Planning & Community Improvement Director, Lilly Bianco, Contract Planner

In 1995, I had the pleasure of being part of the Opening Team for the Culinary Institute's Greystone Campus. In 2000, I moved to St Helena with my family where we now have our roots and a son who just graduated from the High School. I am a Faculty Member at the C.I.A. and am involved in our town as much as my time allows. For example, I am a long serving Board Member of the St. Helena Farmers' Market.

I am writing this letter in support of the expansion and beautification of the C.I.A's Student Housing on Pratt Avenue that will be discussed at the Planning Commission's Meeting next Tuesday.

Our students are committed to being positive and well behaved residents of St. Helena. Wherever I go in St Helena, I see them walking, biking and shopping with lots of energy and acting in a professional manner. I think we are very fortunate to have this "younger age group" in the valley at a time when 1) many of our towns are inhabited with an aging population and 2) an increasing number of homes have become second homes owned by people who only only spend a few months of the year in the valley.

In addition, the students take great pride in responding to the many requests for assistance at fundraising events from local Non-Profit Organizations such as the Cameo Cinema, the Fire Department, the Farmers' Market and many many more.

I hope you will agree that we are very fortunate to have this energetic and professional support in our town..

I am asking for your kind assistance in approving the proposed plans for the expansion and beautification of the Student Housing at Pratt Avenue - for today's students and those in the future.

I thank you for your consideration.

Best regards

Lars Kronmark

**City of St. Helena**

# **Culinary Institute of America Campus Master Plan**

Response to Comments  
on the  
Draft Initial Study/Mitigated Negative Declaration

February 21, 2017

## **RESPONSE TO COMMENTS ON THE DRAFT INITIAL STUDY AND MITIGATED NEGATIVE DECLARATION**

### **CULINARY INSTITUTE OF AMERICA CAMPUS MASTER PLAN GREYSTONE CAMPUS AND VINEYARD LODGE HOUSING**

This document provides responses to comments received on the Public Draft Initial Study/Mitigated Negative Declaration (IS/MND) for the Culinary Institute of America Campus Master Plan (hereinafter referred to collectively as the “project”). These responses address issues raised by the comments and clarify and reiterate discussion provided in the IS/MND. This document also includes corrections and additions to the IS/MND in response to comments received. These corrections and additions clarify or correct text in the IS/MND, but do not change the findings or conclusions of the analysis. This response to comments document along with the Draft IS/MND constitutes the Final IS/MND.

In accordance with the California Environmental Quality Act (CEQA) of 1970 (as amended) (California Public Resources Code 21000 et. seq.), the IS/MND was circulated for a 20-day public review and comment period from December 9 to January 3 and extended for another 20 days, until January 23, 2017, for a total comment period of 40 days. Twelve (12) comment letters were received on the IS/MND. To the extent possible, comment letters received outside of the public comment period were also responded to. As explained herein, in light of the whole record, the City of St. Helena finds that all potentially significant impacts have been adequately addressed in the IS/MND and this Response to Comments.

### **CEQA REQUIREMENTS**

CEQA Guidelines Section 15074 identifies the responsibilities of the Lead Agency when considering the adoption of a Negative Declaration or Mitigated Negative Declaration:

- (a) Any advisory body of a public agency making a recommendation to the decision-making body shall consider the proposed negative declaration or mitigated negative declaration before making its recommendation.
- (b) Prior to approving a project, the decision-making body of the lead agency shall consider the proposed negative declaration or mitigated negative declaration together with any comments received during the public review process. The decision-making body shall adopt the proposed negative declaration or mitigated negative declaration only if it finds on the basis of the whole record before it (including the initial study and any comments received), that there is no substantial evidence<sup>1</sup> that the project will have a significant effect on the environment and that the negative declaration or mitigated negative declaration reflects the lead agency’s independent judgment and analysis.

Consistent with CEQA requirements, the City of St. Helena has reviewed and considered all comments received on the IS/MND. CEQA does not require the lead agency to prepare a response to public comments received on a Negative Declaration or Mitigated Negative Declaration. Nevertheless, the City of St. Helena has prepared this document to fully disclose all public and agency comments received and to provide responses to those comments.

---

<sup>1</sup> “Substantial evidence” includes facts, fact-related reasonable assumptions, and expert opinions based on facts. It does not include arguments, speculation, unsubstantiated opinion or narrative, clearly inaccurate or erroneous evidence, or socioeconomic impacts not related to the physical environment. (Pub. Res. Code Secs. 21080(e), 21082.2(c); Guidelines § 15384).

## ORGANIZATION OF THIS DOCUMENT

Section 1 includes a “List of commenters on the Draft IS/MND.” The comments received on the Draft IS/MND and responses to those comments are included in Section 2, “Responses to Public Comments.” Section 3 provides, “Revisions to the IS/MND,” which includes corrections and additions to the IS/MND. Corrections and additions to the IS/MND are shown in underline for new text added and in ~~striketrough~~ for text that was deleted. Section 4, “Summary” contains a summary of this responses-to-comments process and subsequent action by the City of St. Helena regarding the project.

### 1. LIST OF COMMENTERS ON THE DRAFT IS/MND

The MND was circulated for a 40-day public review period that began December 9, 2016 and concluded on January 23, 2017. The City of St. Helena received a total of 12 comment letters on the IS/MND (see commenters 1-12 below). Written comments received during the public review of the IS/MND were from the individuals listed below:

1. Tom Thurmond, December 23, 2016
2. Tom Belt, December 23, 2016
3. Celia Lenson, December 26, 2016
4. George Caloyannidis, December 26, 2016
5. Donna Hinds, January 11, 2017
6. Tom Rinaldi, January 11, 2017
7. Dianna Varozza, January 17, 2017
8. D Packman, January 9, 2017
9. Carol Norfleet, January 18, 2017
10. Anthony Micheli, January 13, 2017.
11. Paul Bertoli, January 19, 2017
12. Priscilla Dell, January 24, 2017

Section 2, below, provides the City’s responses to comments received. A number of written comments received conflate points and opinions relevant to the project’s merits with points pertinent to the potentially significant environmental effects of the project. As required under CEQA, the Response to Comments focuses on points relevant to the environmental review and limits discussion of comments related to the project’s merits and which do not directly relate to the adequacy of the environmental document. Pursuant to CEQA Section 15073, a lead agency is not required to prepare formal written responses to comments on a mitigated negative declaration. Nonetheless, the City has prepared formal responses in an effort to provide a greater level of clarity and disclosure.

Comment letters received on the IS/MND involved variations of many of the same themes. To avoid redundancy and fully address all comments and concerns, the City has prepared “Master Responses,” which serve as topical responses to address those comments replicated across comment letters. The Master Responses are followed by responses to individual comments letters and which address points not covered under any Master Response. The City reviewed and

considered all comments received. In no instance did the comments result in the identification of a new or previously unidentified significant impact.

**Master Responses on the IS/MND centered on the following issues:**

1. Aesthetics
2. Public Utilities
3. Traffic
4. Safety
5. Project Alternatives
6. Preparation of an EIR

**2. RESPONSE TO COMMENTS RECEIVED**

**MASTER RESPONSE 1. AESTHETIC IMPACTS**

*The commenters assert that the building(s) proposed for 830 Pratt Avenue will adversely impact existing view sheds and that the scale and height are inconsistent with the rural character of the neighborhood and would cause an adverse impact to the visual environment.*

As described on page 13 of the IS/MND, the City of St. Helena has not identified any specific vistas or viewsheds subject to protection, but rather, states that the sense of a strong connection to the surrounding agricultural open space and hillsides should be preserved in the future and that views of Vineyards, hillsides, creeks and major landscape features should be maintained. Consistent with the requirements of CEQA Section 15125, projects are to be analyzed against baseline conditions, which is generally interpreted to mean the physical condition existing at the time the environmental document is prepared *and/or* in limited circumstances, the physical condition projected to exist when a project becomes operational. Accordingly, the baseline conditions against which the proposed project was analyzed include a previously developed site in an otherwise agricultural and residential area with two existing dormitories, one to two stories in height, and exhibiting a total of 27,662 square feet and a parking lot with 85 spaces. The subject site is directly proximate to a series of three water treatment ponds (northeast of the site), and the Beringer Winery production facility that includes warehouses, offices, and a tank farm. At present, the site provides for intermittent views of surrounding vineyards and hillsides located to the east and west.

Pursuant to CEQA, a project may cause a significant impact to the visual environment if it would, amongst other things, have a *substantial* adverse effect on a scenic vista or substantially degrade the existing visual character or quality of the site and its surroundings. To discern whether or not the project would cause a substantial adverse impact to a scenic vista or existing visual environment, the applicant prepared a Visual Impact Assessment based on the Bureau of Land Management methodology (**Appendix U of the IS/MND**). The Visual Impact Assessment evaluated modifications to the aesthetic environment for the foreground, mid-ground and background views from eight representative viewpoints and in relation to seven landscape components, namely, landform, vegetation, water, color, adjacent scenery, scarcity, and cultural modifications. It was determined that in most instances, the project would not measurably alter the viewers' perception of the visual environment, or degrade or obstruct existing scenic vistas i.e. the site would continue to read as multi-story dwelling units (dormitories) in an otherwise agricultural and residential area and continue to provide intermittent view of the surrounding agricultural areas and hillsides.

Certain viewpoints along Pratt Avenue, namely, VP1, VP4, and VP6 (as set forth in the Visual Impact Assessment, Appendix U of the IS/MND, would be subject to a greater level of change primarily due to the replacement of surface parking with buildings B and C. Nevertheless, it was concluded, based on the Visual Impact Assessment, that new construction would be of a scale and character consistent with the existing Vineyard Lodge II and that building design and colors will serve to limit changes to the visual environment. Last, mitigation measure AES-1 was introduced to ensure that the final landscape plan will exhibit a level of vegetative screening commensurate with that proposed, which will screen new buildings and therefore sufficiently limit visual changes to a less than significant level. Accordingly, the project is not expected to cause a *substantial* adverse effect on a scenic vista or *substantially* degrade the existing visual character or quality of the sites and its surroundings relative to the existing condition and impacts would be less than significant. No further analysis is therefore warranted.

#### MASTER RESPONSE 2. PUBLIC UTILITIES

*Commenters assert that the Crinella pump station and wastewater Treatment Plant are inadequate to serve the project. In addition, commenters have indicated a concern related to adequacy of potable water supplies and presumed use of groundwater.*

Under CEQA, a project may cause a significant impact if it would, "require or result in the construction of new water or wastewater facilities, the construction of which could cause significant environmental effects." As described on page 56 of the IS/MND under impact 16(B), the Vineyard Lodge project would result in a net increase of wastewater relative to existing conditions. However, the applicant is proposing on-site retention and treatment such that there would be no increase in instantaneous peak flows and therefore the loads placed on the sewer system would be largely consistent with those existing. This theoretical assumption will be confirmed pursuant to condition of approval No.45, which requires the applicant perform a sewer capacity study.

In addition, the applicant is subject to a sewer impact fee assessed with the purpose of funding future upgrades and expansions of the wastewater collection system, treatment plant and/or associated pump stations. The assessment of development impact fees constitutes a uniformly applied development standard which is reflected as a condition of approval. It is presumed that impact fees will be imposed on the project and because the assessment of mandatory impact fees would cover the project's fair share contribution, any impacts subject to said fees would be less than significant and therefore no mitigation is required.

It should be further noted that, under state law, impact fees may only be collected to cover the impact of new development on existing infrastructure. Impact fees cannot be used to correct "existing deficiencies". Funding for maintenance and improvements to the City's wastewater infrastructure to correct existing deficiencies is from Wastewater utility rates (paid by consumers).

#### **Crinella Pump Station**

The Crinella Pump station serves properties located in northeast St. Helena. According to available records, the Crinella Pump station has undergone recent upgrades pursuant to mitigation imposed on the Los Alcobas Hotel project, which included the installation of a new 6" force main (to replace the existing 4" main) and 10" containment pipe that extends a distance of 1,210 linear feet from the Crinella pump station to the existing sewer system at the intersection of Railroad and Fulton Avenues.

To address the net increase in effluent, the CIA project applicant proposes upgrades to the SS primary treatment system which will include new septic and pump tanks. In addition, a new equalization pump tank will be used to collect and store effluent. The equalization pump will utilize onsite storage capacity and equivalent pumps to maintain the same instantaneous peak flow of the existing facility. As a result, there will be *no* increase to the instantaneous peak flow rate to the Crinella Pump Station relative to that which currently exists. No increases in peak flows will occur from implementation of the proposed expansion of the dormitories. Similarly, timed dosing (conveyance) of primary treated effluent during off-peak hours would further reduce loads placed on the pump station and Wastewater Treatment Plant. The retention of the same instantaneous peak flow and timed dosing during off-peak hours will prevent any adverse impacts to the Crinella pump station. When considered individually *and* in conjunction with other approved/ reasonably foreseeable projects, the expansion of the Vineyard Lodge Housing is not expected to place a demand on the Crinella pump station that could not be accommodated by the current system.

#### **Wastewater Treatment Plant**

From the Crinella Pump stations, flows are conveyed to the St. Helena Wastewater Treatment Plant. The Treatment Plant exhibits a dry weather treatment capacity of .5 million gallons per day (MGD) and a wet weather capacity of upwards of 2.8 mgd. On average, the WW Treatment plant treats approximately 400,000 gallons per day. Accordingly, the expected increase in flows generated by the subject project, which equate to 3,232 gpd, would be considered minimal. Further, because the project will provide on-site treatment, the effluent conveyed to the WW Treatment plant is expected to have 45 percent less Biological Oxygen Demand (BOD) relative to typical domestic water. Likewise, on-site treatment will also reduce Total Suspended Solids (TSS) by 80 percent relative to typical domestic water. Given that the net increase in effluent constitutes a relatively negligible amount and that the project applicant proposes primary on-site treatment, the loads placed on the wastewater treatment plant are minimal and not expected to generate an adverse impact.

Commenters allude to the fact that the California Regional Water Quality Control Board has ordered that upgrades be made to the City's Wastewater and Treatment Plant as a basis for the asserting that the sewer systems is inadequate to accommodate the proposed project. As a condition of 2016 NPDES permit reissuance, the City must come into compliance with current effluent limits for BOD and TSS by the year 2021. The NPDES permit authorizes discharge into the Napa River (a non-tidal waterway) given the absence of other feasible alternatives, *with* the stipulation that the City meet more stringent standards for BOD and TSS which are attainable by implementing more advanced secondary treatment. The city has until 2021 to come into compliance with the effluent limits and in the meantime is required to meet "interim" effluent limits.

Given that the amount of effluent generated by the subject project is, in relative terms, a minimal amount and that the project would perform primary on-site treatment to significantly reduce the level of BOD and TSS, the loading capacity placed on the Wastewater Treatment plant can be accommodated and the project would not cause the Wastewater Treatment Plant to exceed any of the effluent limits imposed on the facility now or in the current permit term. Further, the applicant will be assessed a sewer impact fee between 71 cents/ sq.ft. (Multi-Family Residential) to 94 cents/Square foot (lodging), equating to a total assessment value between \$18,172.45 and 24,059.30. The sewer (wastewater) impact fee accounts for the costs associated with maintenance and improvement to the Wastewater Treatment Plant and Sewer Collection System in order to support new development. With sewer system upgrades proposed

by the project and the assessment of impact fees, the project is not expected to exceed or otherwise negatively impact the existing sewer system and infrastructure.

To conclude, given that the project would not increase the instantaneous wastewater peak flows of the site nor exceed the available capacity or effluent limits of the St. Helena Wastewater Treatment Plant and that the applicant would also pay the sewer impact fee which is commensurate with their fair share contribution, impacts related to wastewater would be less than significant. While no further analysis is warranted, the IS/MND will be updated to clarify and expand on the analysis to more accurately represent the project's relationship with the Wastewater Treatment system. In addition, an incorrect reference to the peak daily wastewater flows and anticipated increase will be corrected. The following changes to the language included on page 57 of the IS/MND, 16(a) will be made, as shown below:

**A. (Exceed Wastewater Treatment Requirements) Less Than Significant Impact:** The project is not expected to exceed wastewater treatment requirements set forth by the Regional Water Quality Control Board. To accommodate wastewater flows generated at the Greystone Campus, the existing onsite primary treatment would be used, including one 3,000 gallon grease interceptor, two 7,500 gallon settling tanks and one 6,000 gallon settling tank, and a pump sump and pump to convey the SS flows to the Markham Combined Wastewater System (MCWS) located at Markham Winery on SR 29, north of St. Helena. Improvements to the existing dishwashing and other kitchen facilities, including replacement with more water and energy efficient equipment, in addition to the closure of the WSGR would reduce the overall water and wastewater demand for the site. Taken together, the proposed improvements will lead to a net decrease in flows conveyed and treated at the MCWS and will be within the authorized discharge amount of 14,850 gpd.

At the Vineyard Lodge Housing site, wastewater will be generated by dormitory restrooms, showers, and common areas. The project will utilize the existing sanitary sewer (SS). Effluent would undergo primary treatment in septic tanks and then be conveyed to the municipal sewer system through the existing 3" SS. The SS management system will be resized to accommodate a peak daily wastewater flow of approximately ~~9,520~~ 9,605 gallons per day (gpd) which equates to a projected net increase of ~~1,960~~ 3,232 gpd over the existing ~~capacity~~ average recorded flow of 6,373. Effluent will undergo primary treatment in septic tanks, which will produce effluent that is of higher quality than residential wastewater. A new equalization pump tank will be used to collect and store effluent. The equalization tank will provide approximately 12.5 hours of retention time at the anticipated peak daily flowrate of 9,520 gpd, and is sufficiently sized to allow for only off-peak discharge to the City's sewer system. The equalization pump will utilize on site storage capacity and equivalent pumps to maintain the same instantaneous peak flow discharge as the existing facility. As a result, there will be no increase to the instantaneous flow rate to the City sewer system and therefore no adverse effect on the sewer system capacity. No increases in peak flows are proposed to the City sewer system, and the timed dosing of primary treated effluent during off-peak hours would prevent any adverse impacts to the City sewers.

The wastewater flows will be conveyed to the City of St. Helena Wastewater Treatment Plant, which has sufficient operating capacity to handle the additional flows generated at the Vineyard Lodge Housing site. Further, the project will be assessed the sewer impact fee which will help to maintain the existing system and contribute to the additional costs that will be incurred with the future expansion and upgrade of the wastewater treatment plant. Therefore, the project would not exceed wastewater treatment requirements and impacts would be less than significant.

**b.(New Wastewater treatment Facilities)** Less Than Significant Impact: There would be no new construction or expansion of domestic water or wastewater facilities as part of the proposed project. For the Greystone Campus, as stated above, wastewater flows are expected to decrease following project implementation. For the Vineyard Lodge Housing site, as stated above, the project would result in a net increase of ~~1,960~~ 3,232 gpd of wastewater over existing flows. However, the City of St. Helena Wastewater Treatment Plant has sufficient operating capacity to handle the additional flows generated at the Vineyard Lodge Housing site. Further, a sewer impact mitigation fee will be assessed with the purpose of ~~maintaining~~ improving the existing system and to contribute to offset costs of future expansion and upgrade of the wastewater treatment plant. The sewer impact fee will be assessed against the dormitory project at the time of issuance of building permits, therefore, impacts would be less than significant

#### Ground Water

*As stated above, several commenters purport that the proposed project will use groundwater and express concerns that there is not a sufficient level of groundwater in the aquifer to serve the subject project.*

As detailed on page 65 of the IS/MND, the CIA maintains two separate water agreements applicable to the Greystone Campus and Vineyard Lodge Housing Site. The current water allotments authorized by the Agreements allocate an average of 15,900 gpd to Greystone and 4,750 gpd to the Vineyard Lodge Site. The total allotment across the two sites amounts to an average of 20,650 gpd or 23.1 acre feet (AF) per year. As part of the CIA Master Plan project, the applicant is requesting to rescind the two separate agreements and adopt a new joint water agreement which would redistribute the gross water allotment across the two sites while maintaining the current total allotment of 23.1 AF per year.

The Greystone site has one existing well which may be used for landscape irrigation or domestic water use and will continue to be used as such under a new joint water use agreement. There is no new landscaping proposed for the Greystone site and no expectation that the project would result in a substantial increase to the amount of groundwater extracted from the onsite well. There are no groundwater wells at the Vineyard Lodge Housing Site and none are proposed. Rather, water supplies at the Vineyard Lodge Housing Site are provided by the City's municipal water supply, of which approximately 49% percent is sourced from Bell Canyon reservoir, 31% is provided by the City of Napa and approximately 20 % from Stonebridge Wells.

As specified in the IS/MND, the project will not result in a net increase to water use and will, like all water customers, be subject to water use restrictions imposed during dry years. Additionally, under the Water Agreements, the applicant will continue to be required to monitor and report City water use on a regular basis and be subject to penalties in the event that authorized water amounts are exceeded. Given the above, there is no expectation that the proposed project would exceed available water supplies or necessitate new or expanded water entitlements. Accordingly, no further analysis is warranted.

#### MASTER RESPONSE 3. TRAFFIC

*Commenters assert that the project would cause traffic impacts which may be cumulatively significant and that sufficiency of parking on the Vineyard Lodge Housing Site at 830 Pratt Avenue is inadequate.*

*Traffic impacts/ LOS delays*

The traffic analysis prepared by traffic consultant, Crane Transportation, was conducted in accordance with CEQA and appropriately determined that the project would not generate significant traffic impacts, cumulative or otherwise, and as detailed below.

The project's traffic impacts were evaluated consistent with the requirements of CEQA in Section 15, 'Transportation/Traffic,' of the IS/MND. The Traffic consultant, Crane Transportation, performed traffic counts on Thursday, May 12, 2016 for the period from 6:00 AM to 6:00 PM to establish the existing condition exhibited by the study intersections. Volumes were then seasonally adjusted consistent with Caltrans' PeMS (Performance Measurement System) peak season data for S.R. 29-128 to represent peak season conditions.

Traffic and intersection operations were evaluated using level of service calculations. Level of Service (LOS) provides for a qualitative description of operations that range from "LOS A," whereby the roadway exhibits excess capacity and little or no delay is present, to "LOS F," whereby the volume of traffic exceeds the capacity and generates long queues and excessive delays. Typically, "LOS E" represents "at capacity" conditions and "LOS F" represents "over capacity" conditions.

For side street stop-controlled intersections, such as that exhibited by the Pratt Avenue/ SR 29 intersection, operations are defined by the level of service and average control delay per vehicle (measured in seconds), with delay reported for the stop sign controlled approaches or turn movements. In an effort to evaluate the project's reasonably foreseeable impacts, traffic impacts were evaluated under existing, baseline (2018), and future (2035) scenarios.

As detailed in the Traffic Analysis, the significance criterion established by the 1993 St. Helena General Plan and applicable to the subject project reads, *"All unsignalized intersections must maintain LOS C. If the LOS degrades below LOS C, an evaluation of the need for traffic signalization shall be undertaken according to standard Caltrans signal warrants as described below. If signals are not initially warranted, the location shall continue to be monitored for signal warrants on a regular basis."*

Under existing conditions without the project, the Pratt Ave/ SR HWY 29 WB intersection exhibits an LOS "D" under the AM Peak hour and LOS "E" under the PM Peak Hour and therefore the level of service is *already* below that considered acceptable by the General Plan, which is LOS C. Under baseline and future scenarios, the intersection further degrades to LOS "F" under conditions *without* the project.

In accordance with the significance criteria applicable to the project, a warrant threshold analysis was undertaken to determine the need for signalization. There are 9 possible tests for determining whether a traffic signal should be considered for installation. As detailed on page 9 of the traffic Study (**Appendix Q**) These tests, called "warrants", consider criteria such as actual traffic volume, pedestrian volume, presence of school children, and accident history. The intersection volume data together with the available collision histories were compared to warrants contained in the Manual on Uniform Traffic Control Devices (MUTCD), Federal Highway Administration, 2014, California Supplement.

As stated in the Traffic Impact Report and on page 52 of the IS/MND, signal warrant thresholds were *not* met and therefore signalization is not needed and the project is not required to install signalization or otherwise mitigate for an impact. Accordingly, the Vineyard Lodge's contribution to traffic delay is determined not to be so substantial as to conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system and does not constitute a potentially significant impact necessitating mitigation.

The commenters' concerns related to the delay on Pratt Ave/SR Hwy 29 WB Intersection. While the traffic study does confirm the assertion that the Pratt Avenue/ SR Hwy 29 intersection exhibits a deteriorated LOS under all scenarios (existing, baseline, and future), the substantial delay is an existing condition and continues to occur under future scenarios both with *and without* the project. The project's contribution to the existing delay is not great enough to trigger the need for signalization. The need for signalization at the Pratt Avenue/SR 29 intersection will continue to be monitored as subsequent project's trigger the need for a traffic study/warrant analysis and as needed to inform the Napa Valley Transportation Authority (NVTA) circulation plan updates and Caltrans studies. Further, the project will be assessed a traffic impact fee which will help pay for circulation improvements to reduce the impacts of traffic generated by new development within the City. Finally, all subsequent projects subject to CEQA will be required to evaluate their respective traffic impacts and contributions to roadway delays and mitigate accordingly. Given the above, the IS/MND's conclusion that the project will have a less than significant impact and the determination that the project would not conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system remain valid.

#### *Cumulative Traffic Impacts.*

To determine whether impacts may be "cumulatively considerable" the City directed the traffic consultant to evaluate traffic under the existing, baseline, and future year scenarios. The baseline scenario accounts for traffic generated by "pipeline projects" or those which are approved and/or reasonably expected to be constructed in the next 2-3 years; the traffic study accounted for traffic generated by the Los Alcobas project; however, no other approved major projects were anticipated at the time the traffic study was prepared in November 2016. For the future year scenario, the traffic impacts included pipeline projects (Los Alcobas) *and* applied a 2.25 percent growth rate to reflect buildout of the General Plan in 2035.

Under CEQA, a traffic impact could occur if the project would (amongst other things) "Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system..." As stated above, the City's significance criterion applicable to the project is outlined in the General Plan, and reads: "*All unsignalized intersections must maintain LOS C. If the LOS degrades below LOS C, an evaluation of the need for traffic signalization shall be undertaken according to standard Caltrans signal warrants as described below. If signals are not initially warranted, the location shall continue to be monitored for signal warrants on a regular basis.*"

As detailed in the traffic study and MND, when the project's traffic impacts are combined with the anticipated traffic impacts of other past, present, and probable future projects in the area, they do not cumulatively increase traffic levels above the City's significance threshold ( i.e. warrant thresholds were not met under any of the scenarios). If this potential were to exist, the environmental document would be required to mitigate cumulative impacts. However, because, taken together, the existing, baseline, and future scenarios do not cumulatively exceed the significance thresholds, the projects traffic contributions are not "cumulatively considerable" meaning that the project does not have a potential to result in cumulative impacts and no further consideration of cumulative impacts is warranted.

#### Parking

*Commenters assert that the level of parking proposed for the Vineyard Lodge Housing expansion is not sufficient and that residents of the Vineyard Lodge will park along Pratt Avenue.*

A deficiency in parking does not in and of itself trigger a mandatory finding of significance nor is it necessarily considered a potential significant environmental impact; if however, the parking deficiency would contribute to or otherwise generate traffic congestion, safety hazards, etc., it may be a significant environmental impact. Because the Project and the proposed Vineyard Lodge Housing site has been planned and proposed to accommodate the transportation needs of its students through the provision of designated spaces and in conjunction with other means enumerated below, there will be no direct or indirect parking related impacts that would cause a potentially significant impact on the physical environment and no further analysis is warranted.

As stated on page 17 of the Traffic Impact Report (**Appendix Q**), the Traffic Consultant, Crane Transportation, performed hourly on-site parking surveys on Thursday May 12, 2016, which was considered to be a “typical day” at the CIA Greystone campus and Vineyard Lodge Housing Site. As detailed in the Traffic Impact Report (TIR) (which is incorporated into the IS/MND), at maximum, 42 vehicles were parked in the 85 space parking lot at the Vineyard Lodge Housing site. East of the main building, in the service parking area, there was one to three service vehicles parked throughout the day. At all times there were 43 or more available parking spaces in the parking lot. It was noted that permits were not readily displayed and therefore, the site did not appear to be monitored for permit holders versus visitors. Based on information obtained from the applicant, it is understood that 31 parking permits have been issued to students and therefore, it is assumed that vehicles in excess of that belong to visitors. The purpose of the parking analysis was to determine the appropriate number of parking spaces to provide a sufficient level of off-street parking for residents; as such, the TIR did not account for vehicles parked off-site and/or along Pratt Avenue.

As stated above, for the existing 101 rooms at the Vineyard Lodge Housing Site, only 31 parking permits have been issued. As such, it is reasonably concluded that the parking counts from May 2016 reflect the 31 permitted vehicles and approximately 10 visitor vehicles. With both resident and visitor vehicles, there remained an excess capacity of 43 parking spaces.

There is no reason to believe that the student to vehicle ratio would substantially change under the proposed project, namely because (1) the CIA retains authority to issue or not issue parking permits, (2) the project will be subject to a condition of approval stipulating that it may not issue more than 69 parking permits, and (3) the site is uniquely operated in that it provides frequent reliable transportation to and from the Greystone Campus and to other locations, as needed, will provide three on-demand rental cars, and per mitigation measure LU-1, will be required to introduce a scalable bike share program that may be expanded as demand necessitates. Mitigation Measure LU-1 specifies:

*“ To minimize reliance on vehicles, the applicant shall provide a minimum of five (5) on-demand bicycles to be available to residents on an as-needed basis. If there is an increase in student demand for bicycles beyond the number provided, the applicant is required to increase the number of bicycles available for dormitory residents to meet the demand. Bikes shall be maintained in good functioning condition and be readily accessible to residents. The applicant shall provide a written statement detailing how the on-demand bike service will function for review and approval by the Planning and Community Improvement Director prior to building permit issuance. The bikes shall be made available for use upon certificate of occupancy for whichever building is constructed first.”*

By providing parking permits and spaces at a level consistent with the “typical” demand and complying with Mitigation Measures LU-1 which requires an on-demand bike program, the demand for parking is not expected to exceed that provided by the project. As such, the provision of 69 designated parking spaces consistent with the ratio currently exhibited by the

subject site, is reasonable and is not expected to cause an adverse physical impact on the environment.

Finally, in regards to on-street parking — parking is allowed along Pratt Avenue insofar as there is adequate shoulder widths (8 feet) and where adequate shoulder widths do not exist, parking is prohibited and denoted by red striping. Vehicles parked in appropriate locations along Pratt Avenue do not pose a safety hazard or otherwise generate a significant impact on the environment and therefore, no further consideration of this matter is warranted.

#### MASTER RESPONSE 4. SAFETY

*Commenters note the poor condition of the Pratt Avenue Roadway and indicate that its current condition is not sufficient to maintain safety and that the CIA should do more to remediate the unsafe road conditions.*

As stated on page 49 of the IS/MND, Pratt Avenue serves as a two-lane collector that connects Main Street to Silverado Trail on the north side of the City and provides access to both residential and winery uses. The condition of the Pratt Avenue roadway is an existing condition and would continue to deteriorate with *or without* the project. The project's contribution to roadway deterioration of Pratt Avenue is expected to be average and not exceptional relative to the contributions of other users.

The proposed project would result in an increase in the number of students residing at the Vineyard Lodge housing site and attending weekday classes at the Greystone facility. Regular shuttle service would continue to provide transportation between the Vineyard Lodge Housing site and the Greystone campus on weekdays, as students would not be allowed to use a personal vehicle to attend classes at Greystone as stated by the applicant and consistent with the current practice of students enrolled at the CIA. This prohibition will be detailed in the Transportation Management Plan required pursuant to Condition of Approval No. \_\_\_. Alternatively, some students may choose to walk or bike to classes. However, shuttle buses would continue to be provided from 5:30 am to 9:00 pm with no change in frequency of shuttle trips given the proposed increase in shuttle size. Three on-demand rental cars will be provided for non-school related trips. It is recognized that the increase in traffic trips generated by the project would contribute towards typical wear and tear of the roadway.

The CEQA Guidelines and recent case law, namely, *Dolan v. City of Tigard*, 512 U.S. 374 (1994), acknowledge that mitigation measures imposed on a project must have an "essential nexus" to a legitimate government interest and must bear a "rough proportionality" to a project's impacts; in other words, the mitigation must be related both in nature and extent to the impact of the proposed project.

The portion of Pratt Avenue that extends from the dormitories to the intersection with Main Street includes the section of roadway which would be most frequently used by the residents of the Vineyard Lodge Dormitory. To ensure that the applicant contribute their fair share towards the maintenance of the most readily affected portion of Pratt Avenue, mitigation measure Trans-2 would be imposed on the project and stipulates that, *"The applicant shall either (1) micro surface the full width of Pratt Avenue along the Project frontage extending to the intersection of SR29 (Main Street), introduce by thermoplastic a Class II bike lane along westbound Pratt Avenue (northern side) extending from the project site to the intersection of SR 29 (Main Street) and Pratt Avenue and restripe for a fog line along eastbound Pratt (southern side) extending from the project site to the intersection of SR 29 (Main Street) and Pratt Avenue in accordance with St. Helena Bicycle Plan, 2012, Appendix B – Design Standards for Class I, II, and III Bikeways OR*

*(2) pay an in lieu fee of \$130,000 to provide funding for the City of St. Helena to perform the requisite improvements.”*

There is no nexus to require the applicant to contribute towards repaving *all* of Pratt Avenue because the Project, as proposed, will not generate a substantial increase in trips along the entirety of Pratt Avenue and given that the deteriorated condition of Pratt is an existing condition. As such, repaving all of Pratt Avenue would be disproportionate to the impacts of the project. By Law impact fees can only be collected to cover the impact of new development on existing infrastructure. In other words, Impact fees cannot be used to correct “existing deficiencies”. Accordingly, the mitigation measure Trans-2, set forth in the MND is sufficient to offset project specific impacts and no changes are warranted.

To further clarify, normal street maintenance is performed by the City of St. Helena and may include upgrades to maintain pavement, striping, curb and gutter, street lighting, access ramps, sidewalks and storm drain infrastructure, etc. The City utilizes a computer-based program that helps prioritize roadway maintenance and construction projects based on current Pavement Condition Index and available funding. The program prioritizes roadway maintenance based on level of deterioration and public use. The list of projects are then vetted by City staff and presented to City Council for approval each year. Funding to undertake street maintenance is comprised of General Fund, gas tax, grants, sales tax, and Measure T funding (available 2018). Street maintenance projects programmed in the pavement management plan for Fiscal Year 2016/2017 and 2017/2018 do not currently include Pratt Avenue. However, Staff will develop a new two year pavement management plan in conjunction with the Fiscal Year 2017/2018 budget. This pavement management plan will include more funding than the recent past due to new funding anticipated from Measure T in 2019. Measure T is expected to provide over \$600,000 per year to the City of St Helena to be used towards maintenance of streets and sidewalks.

#### MASTER RESPONSE 5. PROJECT ALTERNATIVES

*Commenters ask that alternative sites, including the Greystone Campus, be considered to accommodate housing.*

Mitigated Negative Declarations do not require the consideration of alternatives and as such, the scope of the CEQA review was limited to the proposed project. Where an Initial Study establishes that a project will not create substantial or potentially substantial adverse changes to the physical conditions within the area of the project, a negative declaration or mitigated negative declaration is appropriate. Here, the required mitigation measures ensure that the Project will not create significant environmental impacts and as such, the environmental document includes those elements required of an MND: A brief description of the project, location, and proponent's name (CCR §15071[a,b]), proposed finding that the project will have no significant effect (CCR §15071[c]), initial study documenting reasons supporting the finding (CCR §15071[d]), and mitigation measures to avoid potentially significant effects (CCR §15071[e]). Negative declarations and mitigated negative declarations do not require analysis of project alternatives because the project as proposed will not have a significant environmental impact. Thus, no alternative sites were required to be analyzed as a part of the Project's environmental review.

#### MASTER RESPONSE 6. PREPARATION OF AN EIR

*Commenters assert that that the project may result in potentially significant impacts, requiring the City of St. Helena to prepare an EIR to comply with CEQA.*

Based on the whole record before the City of St. Helena including the Initial Study, all potentially significant impacts can be mitigated to less than significant levels. Therefore, an MND is the appropriate level of environmental review.

The commenters do not detail *how* the project will result in significant impacts nor detail how or why mitigation measures are insufficient. Likewise, there is no specificity as to what significant impacts the project would generate. None of the comment letters received and included herein present a fair argument based on substantial evidence that the Project may have a significant impact on the environment.

“Substantial evidence” includes facts, fact-related reasonable assumptions, and expert opinions based on facts. It does not include arguments, speculation, unsubstantiated opinion or narrative, clearly inaccurate or erroneous evidence, or socioeconomic impacts not related to the physical environment. (Pub. Res. Code §§21080(e), 21082.2(c); Guidelines § 15384). CEQA § 15204(c) advises reviewers that comments should be accompanied by factual support: Reviewers should explain the basis for their comments, and should submit data or references offering facts, reasonable assumptions based on facts, or expert opinion supported by facts in support of the comments. Pursuant to § 15064, an effect shall not be considered significant in the absence of substantial evidence. At the drafting of this Response to Comments no such factual support has been provided that raises a fair argument that the Project, as proposed, may have a significant impact on the environment.

The City of St. Helena as the Lead Agency, has duly considered all comments received in response to the Initial Study and Mitigated Negative Declaration (IS/MND). The City of St. Helena finds that the IS/MND document itself, and the Lead Agency’s responses to comments, are adequate in evaluating potential impacts of the subject project. The City of St. Helena finds that none of the comments on the IS/MND are supported by “substantial evidence” in light of the whole record to create a fair argument as to the significance of any particular impact, either individually or cumulatively, as all significant impacts are either avoided or reduced to less-than-significant levels.

Impacts will be reduced to less-than-significant levels through the following: implementation of the mitigation measures described in the IS/MND and this Response to Comments document; Conditions of Approval, which will be required by the City of St. Helena during the permit process; and compliance with City of St. Helena Ordinances and uniformly applied development standards.

The City of St. Helena has determined that the project does not meet any of the conditions under CEQA Section 15073.5, as described in Section 4.0 Summary below. Therefore, recirculation of a revised IS/MND or the preparation of an EIR is not required. Consistent with the CEQA Guidelines, this response to comments document clarifies the information and analyses in the IS/MND. As such, the IS/MND along with the response to comments achieves the intent of CEQA by disclosing all potential impacts of the project and identifying feasible mitigation measures that reduce impacts to levels below significant..

## INDIVIDUAL COMMENT LETTERS 1-12

---

Commenter: Tom Thurmond  
 Status: Individual  
 Date Received: December 23, 2016

---

### **Comment 1-1**

*“Pratt Avenue already has become very dangerous to drivers, bicyclists, and pedestrians. The road surface is in poor condition, which increases the likelihood of accidents leading to death or injury. Resurfacing the small portion from the CIA dorms to Main St. will not resolve that problem. The City needs to require a larger contribution from the CIA toward repaving ALL of Pratt Avenue...”*

**Response 1-1**

See Master Response 4.

**Comment 1-2**

*“There is a major problem with speeding along Pratt. Cars and trucks hurtle along day and night at speeds well over the limit, endangering other drivers, walkers, and bikers. The CIA expansion is bound to exacerbate this problem...”*

**Response 1-2**

The speeds on City arterials are regulated by state and local law which is enforced by the St. Helena Police Department. As detailed on page 46 of the IS/MND, The Vineyard Lodge Housing Site is located near the urban limit line and proximate to the police and fire stations and is well served by public services. Pratt Avenue is patrolled at a level consistent with any other secondary artery (St. Helena Police Department, 2016).. Speed limits are enforced on Pratt Avenue on a random basis (like the rest of the City) to prevent frequent drivers from establishing time periods considered “safe to speed”. The Police Department has further indicated that they increase patrols at the request of residents, which typically equates to a few times per year.

The St. Helena Police Department did not issue any speeding citations in 2015 and 7 citations were issued in 2016 — it is unknown whether these citations were issued to residents of Vineyard Lodge. The number of citations issued is not exceptional relative to other areas of the City. For example, in 2016, 10 citations were issued on Pope Street and 6 on Sulphur Springs. As detailed on page 11 of the Vineyard Lodge Traffic Impact Report (**IS/MND Appendix Q**), Accident data provided by the City of St. Helena from SWITRS (Statewide Integrated Traffic Reporting System) for the Pratt Avenue/Main Street intersection revealed that over the past five years, there have not been five or more reported crashes at this intersection within any 12-month period. At most, there were 4 crashes between 10/21/11 and 10/24/12. There were three reported crashes in 2011, one in 2012, two in 2013 and 2014, and one in 2015.

Residents of the Vineyard Lodge Housing site would continue to be subject to state and local laws regulating speeds along Pratt Avenue and elsewhere in the City. Further, that street will continue to be monitored by the St. Helena Police Department and all local and state laws will be enforced. There is no evidence indicating that the proposed project would cause unsafe driving conditions or exacerbate the problem of speeding along Pratt Avenue and no further analysis is warranted.

If speeding on Pratt is of particular concern to the neighbors it may benefit from further consideration. However, this is not a project specific impact and therefore will not be addressed further here.

**Comment 1-3**

*“It is now often nearly impossible to make a left turn from Pratt onto Main due to the heavy traffic on Main. The CIA expansion will further add to this problem. When you include the new Las Alcobas*

City of St. Helena

February 2017

*hotel on the west side of the intersection and the potential increase in traffic associated with Beringer's planned changes at their Pratt Avenue winery, it makes the situation even more dire. I realize that the Pratt/Main intersection is under State control. Nevertheless, the City should proactively be taking measures to mitigate the problem. With the current fiscal problems facing the City, it is incumbent on staff to require the maximum contribution from the CIA to help alleviate the problems they are making worse."*

**Response 1-3**

Please refer to Master Response 3 for a discussion of traffic impacts and discussion of cumulative traffic impacts. Traffic impacts are discussed in the IS/MND on pages 48 to 55.

Commenter: Tom Belt

Status: Individual

Date Received: Dec 23, 2016

---

**Comment 2-1**

*"The big bucks behind the CIA needs to pay for the increase in size of the waste water line that will be needed to handle the CIA's new dormitories and increased burden of affluent. The current waste water line is already at capacity that services the Crinella housing tract. Adding another 9,520 gallons a day will over burden the line. It's about time our city management makes these big developers pay for the costs of necessary up grades to our utility infrastructures rather than keep passing them on to the current water and waste water customers. All we hear about lately is how inadequate our waste water facility is and how poorly our city's reputation is with the State Water Board. And now the CIA wants to add to this problem. They need to pay!"*

**Response 2-1**

Please refer to Master Response 2.

**Comment 2-2**

*"Also, the article in the Star leads the reader to believe the CIA wants to reallocate its current water use by changing its agreements with the city. If I read the article correctly, it looks like the CIA wants to use more ground water to make up for the demand at the dormitories. Does anyone meter the ground water currently being taken by the CIA? St. Helena has a moratorium on drilling new wells in the residential area of St. Helena, yet the city is okay with allowing the CIA to pump even more water from the ground. Come on St. Helena City Management, get your act together and make these businesses pay for the adverse impacts these developers and developments place on the residents who live here!"*

**Response 2-2**

Please refer to Master Response 2.

Commenter: Celia Lenson

Status: Individual, property owner at 925 Pratt Ave

Date Received: December 26, 2016

---

**Comment 3-1**

13

City of St. Helena

February 2017

*“ CIA Landscaping: Since the structure will double in size, I hope the City will consider that the dorms have beautiful landscaping to mitigate the size of the building. Such as Trees and California Native plants”*

**Response 3-1**

The applicant is proposing a generous amount of landscaping as detailed on project plans, (IS/MND **Appendix K**). As evidenced by the Visual Impact Assessment (**Appendix U**) retention of the existing camphor trees located along the property frontage and the introduction of the landscaping depicted in the landscape plan, will provide a level of screening so as to reduce and soften the visual impact of the proposed buildings. To ensure that the landscape plan is properly implemented and that the type and amount of vegetation is commensurate with that approved, the project is subject to mitigation measure AES-1, which states that, “The final Landscape Plan and proposed vegetative screening shall be subject to review and approval by the Planning and Community Improvement Director prior to issuance of building permit so as to confirm consistency with approved plans.”. Accordingly, the analysis and associated mitigation adequately address the aesthetic concerns of the project.

**Comment 3-2**

*“2. CIA Parking: The City has not enforced parking restrictions on CIA. Sometimes, all of Pratt Street looks like a sea of cars. This is a displeased to the Community. No one likes looking at a parking lot considering the cost of the homes on Pratt Street.”*

**Response 3-2**

See Master Response 3.

**Comment 3-3**

*“3. Bike Lanes: The bikes lanes are a great idea. I hope the City restricts Pratt parking to the residents on Pratt Street because CIA abuses the parking on Pratt. Many residents have complained... If all the issues are addressed, I welcome the dorms.”*

**Response 3-3**

Please see Master Response 3.

Commenter: George Caloyannidis-

Status: Individual

Date Received: Dec 27, 2016

---

**Comment 4-1**

*“ Is there a definition to the application as to who qualifies as a student. I have to assume that whatever that definition is, any other tenants such as staff, instructors etc would be excluded and that there is associated language to that effect.”*

**Response 4-1**

The project will be conditioned such that only students, meaning those who are actively enrolled in either the certificate or associate degree programs (1 and 2 years, respectively) may reside on the Greystone Campus or at the Vineyard Lodge Housing Site. This would preclude other tenant types. To avoid ambiguity, the condition will be written to specify exactly who qualifies as a student.

Commenter: Donna Hinds

Status: Individual

Date Received: January 11, 2017 and January 17, 2017

---

**Comment 5-1**

The traffic study is inadequate

**Response 5-1**

See Master Response 3.

**Comment 5-2**

The noise study is inadequate; baseline noise measurements were not representative of typical conditions.

**Response 5-2**

As detailed under Section 11 and on page 42 of the IS/MND, to characterize noise levels at the Vineyard Lodge Housing Site, a Noise Study was prepared by consultants, ICF International, on June 15, 2016. Noise monitoring was conducted on the Vineyard Lodge project site to characterize existing noise levels in the project area. The Napa Wine Train was not operating during this time and the existing housing facilities were not occupied because students were on break. The measured noise levels therefore represent the lowest noise levels likely to be encountered in the area. As such, the baseline noise levels against which the project's noise contributions were analyzed served as the *most conservative* method of evaluating noise impacts of the project. The analysis was adequate and no changes are needed.

**Comment 5-3**

A parking variance should not be issued

**Response 5-3**

See Master Response 3.

**Comment 5-4**

There will be adverse visual impacts

**Response 5-4**

See Master Response 1.

**Comment 5-5**

The increased population would generate adverse impacts.

**Response 5-5**

The analysis in the IS/MND accounts for the increase in population across all impact categories, but in particular, under Section 12. Population and Housing, IS/MND pages 45-46. As stated in the IS/MND under section 12. A project will normally have a significant environmental effect if it will displace a large number of people or induce substantial growth or concentration of population. The CIA Campus Master Plan involves an expansion in student enrollment from 200 to 300 students for a net increase of 100 new students plus the addition of seven new instructional staff. Concurrently, 49 employees would relocate to the recently acquired American Center for Wine, Food & the Arts (Copia) in the City of Napa, California. The net change in student and faculty at the Greystone Campus would amount to a net increase of 58 students and staff. The Vineyard Lodge Housing would be expanded by a net total of 123 student residents. Given that the project will result in a net decrease in faculty, while providing housing for the majority of students, the project is not expected to significantly impact the existing or future housing supply in St. Helena. Similarly, given the fact that the CIA will provide dormitories sufficient to house all new students, the project would not displace existing housing or people and any impacts associated with the increase in population would be less than significant. No further analysis is therefore required.

**Comment 5-6**

There would be adverse impacts to sewer and water

**Response 5-6**

See Master Response 2.

**Comment 5-7**

There was no evaluation of alternatives which would generate fewer impacts

**Response 5-7**

Please see Master Response 5.

**Comment 5-8**

The requested setback variance contradicts the General plan policies

**Response 5-8**

The General Plan Guidelines published by the State Office of Planning and Research interpret "consistency" as follows: "An action, program, or project is consistent with the General Plan if, considering all its aspects; it will further the objectives and policies of the General Plan and not obstruct their attainment." As such, the standard for analysis used in the Initial Study IS/MND is predicated on *general* agreement with the policy language and furtherance of the policy intent (as determined by a review of the policy context).

Variances provide a limited waiver from the explicit requirements of the zoning code insofar as exceptional circumstances exist and very specific findings can be made. Variance may be granted in order to provide property owners equality of treatment from their neighbors. As detailed in Municipal Code Section 17.172.010 the purpose of a Variance is to allow variation from the strict application of the terms of this title where, by reason of the exceptional narrowness or unusual shape of a specific piece of property, or by reason of exceptional size, shape, topographic conditions or other extraordinary situation or condition of such piece of property; or because of the use or development of lands immediately adjoining such property, the literal enforcement of the

requirements of this title would involve practical difficulties or would cause undue hardship. (Prior code § 27.445).

The commenter cited General Plan policy 5.3.3 in support of their assertion that the project is inconsistent with the General Plan. That policy is as follows:

5.3.3 Preserve right of way for future collector streets within the Planning Area of the City as follows:

- Starr Avenue from Pratt Avenue to Adams Street and from the Urban Limit Line to Dowdell Lane
- Mills Lane from SR 29 to Starr Avenue, including potential realignment with Grayson Avenue at SR 2
- Oak Avenue from Vidovich Avenue to Grayson Avenue

*The City recognizes that development may or may not proceed along the lines envisioned in this plan, and that some areas not currently identified for potential development may in fact precede those that are so designated. The intent of the right-of-way preservation designation is to clearly define the interest of the City in maintaining the option for extending its collector street system into these areas. Special setback areas shall be established along collector streets to allow for future widening.*

Review of the above policy indicates that it does not apply to Pratt Avenue, but rather applies to specific portions of (1) Starr Avenue, (2) Mills Lane, and (3) Oak Avenue. As such, there is no indication that the requested variance would be in direct or indirect conflict with any goal, policy or objective of the St. Helena General Plan and that the variance may still be found to be generally consistent with the overall intent of the General Plan and policies therein. No further analysis is needed.

Last, it should be noted the determination that the proposed project or a component thereof, is consistent or inconsistent with the General Plan 2025 policies is ultimately the decision of the City of the lead agency.

#### **Comment 5-9**

The applicant does not have access rights to vineyard road.

#### **Response 5-9**

The applicant has provided a signed access agreement detailing access rights across Vineyard Road which has been reviewed and approved by the Public Works Department. No further consideration is warranted.

#### **Comment 5-10**

The project requires an Environmental Impact report given the significant size and potential impacts of the project.

#### **Response 5-10**

**Comment 6-1**

*"We've lived a year with constant worker traffic and construction noise from building Los Alcobas Resort; plus, all the cars constantly shutting CIA people and parked outside this house more than just a few times a year - we counted over 40 instances."*

**Response 6-1**

Comment noted.

**Comment 6-2**

*"We had to call police because we had one girl from CIA DORMS enter our home at night and sleep partially on our couch - use our upstairs bathroom (a strange sleepwalking matter) which was horrifying."*

**Response 6-2**

The incident described above is understood to be an isolated event and not an occurrence reasonably expected to result from the proposed project. Discussion with the Police Department indicated that for the year 2016 police received a total of six (6) calls associated with Vineyard Lodge Housing. It is reasonable to assume that there may continue to be occasional incidents such as those listed below, but there is no reason to believe that they would be so significant or recurrent as to constitute a physical impact to the environment. No further consideration is warranted.

Incidents Related to Vineyard Lodge for the year 2016:

|          |                                                                                                                   |
|----------|-------------------------------------------------------------------------------------------------------------------|
| 05/07/16 | Fire Alarm Sounding, False Alarm                                                                                  |
| 06/02/16 | Vehicle burglary reported by student, report taken                                                                |
| 07/15/16 | Alarm heard in the area, security already on site, all ok                                                         |
| 10/05/16 | Fire alarm sounding, False alarm                                                                                  |
| 10/16/16 | Late report of Domestic Violence from Santa Clara PD, occurred 10/4/16 at the Dorms, report taken & charges filed |
| 12/19/16 | Agency assist at the Dorms, no details listed                                                                     |

**Comment 6-3**

*"Plus there is water running down our street constantly- I would say 70% of time we've been here, including recently before rain--such that we put the trash cans out almost every week in middle of large pool of running water, soaking our shoes each time."*

**Response 6-3**

Comment noted. This is not a project related issue and therefore will not be addressed here.

**Comment 6-4**

Date Received: January 11, 2017

---

**Comment 7-1**

*"We have lived on Pratt Ave for more than 35 years, and have seen remarkable changes-many for the worse for small town living. With the remarkable expansion of Beringer, the new (UGLY) hotel at Grandview with a forgettable name on Hwy. 29, the railroad activity to Charles Krug, the waste water aromas of the ponds, the noise of the large neighborhood wineries, increased traffic, faster and faster cars coming through, the erosion of the quality of the road surface to below 3rd world countries; we have seen our neighborhood heading to hell."*

**Response 7-1**

Comments are noted; however, the concerns enumerated above are not project specific and therefore will not be addressed here.

**Comment 7-2**

*The ridiculous expansion of the dorm on Pratt Ave. will be a real nail in the crucifix. These students are people from all over the country who drive out here, do not help our local populace, waste water like tourists, leave as soon as they can, and add no value to this town.*

**Response 7-2**

Comment noted ; however, the concerns enumerated above are not project specific and therefore will not be addressed here.

**Comment 7-3**

*Finally, it appears the CIA is slowing or shutting down the Greystone Bldg. in preference for Copia, Napa. Are they going to shuttle them to Napa? Leave the CIA dorm as it is, please. If not, name it The West Coast Trump Tower!*

**Response 7-3**

As detailed in the project description on page 2 of the IS/MND, The CIA originally envisioned the campus at Greystone to operate as a continuing education facility, but it has since evolved to serve solely as an occupational educational facility offering an Associate in Occupational Studies (AOS) degree program and certificate programs. In 2004 the CIA acquired the Vineyard Lodge Housing site at 830 Pratt Avenue to support the trend towards occupational education and provide affordable housing for students. Consistent with the requirements of the City's Municipal Code, the subject sites currently have active use permits (93-105 for the Greystone Campus; 2004-33 for the

City of St. Helena

February 2017

Vineyard Lodge Housing site). Associate level classes will continue to be held at the Greystone Campus and there are no plans for a shuttle to transport Vineyard Lodge Residents to the Copia location.

#### **Comment 8-1**

*"The Crinella Pump station was built in 1965. It was only to service the Crinella subdivision of about 100 homes. Now the CIA has tied in on Pratt, all the recently built million dollar homes on Pratt with guesthouse, now the Las Alcobas hotel, with no upgrades from any of these developers. Yet the station is #8 on the list of improvements of capital expenses by the new wastewater cost increases. Why are we the residents paying for this and not the developers that are burdening the system. The CIA is going from 4750 gals/day to 10,783 gals/day in to the Crinella Pump station.*

*The enrollment was 101 students, now they want to more than double that size with 123 additional students without any impact fees or improvements to the Crinella Pump station. That is a 500% increase from the convalescent hospital capacity."*

#### **Response 8-1**

Please see Master Response 2.

#### **Comment 8-2**

*"In the report it says they want to take students out of homes they own and put them in these 3 new dormitory buildings. If that is true, then they have to provide the city with a legal document that they will sell these homes when the first dormitory is completed so these homes go back to hopefully the rental market that we desperately need. Also, their statement that their housing is affordable is not correct. I have spoken to students in their facilities and what they pay for a room is more than our rental market prices."*

#### **Response 8-2**

Comment noted.

#### **Comment 8-3**

*"Why are they able to build to 40' with these new buildings? I thought that we had a 35' height limit. These buildings are going to block the view for the neighbors of our beautiful hillsides. The view shed will be lost."*

#### **Response 8-3**

The Vineyard Lodge Housing site exhibits a zoning designation of PQP: Public Quasi Public. As detailed on page 39 of the IS/MND, The PQP zoning designation does not prescribe specific development standards, but rather stipulates that all projects within the PQP zoning district be subject to a conditional use permit and that development standards shall be established through the use permit review process. These regulations help guarantee that incompatible development and/or activities can be avoided by requiring such projects be held to a high level of scrutiny and are vetted

---

20

---

through the public review process, CEQA review, and be conditioned accordingly. The Vineyard Lodge Housing Component will be subject to the provisions of a new use permit as required under PQP zoning which would govern the intensity and operation of the site to an extent that consistency with all applicable standards and guidelines is achieved. As promulgated by Zoning Code Section 17.68.050, building height is to be established in conjunction with use permit review and therefore, it is at the discretion of the Planning Commission to determine whether a 40' height is appropriate within the context of this specific project. There is however, no existing regulation or standard that would explicitly preclude a 40' height within the PQP zoning district. For a response to the concerns related to view shed impacts please refer to Master Response 1. No further analysis is warranted.

#### **Comment 8- 4**

*"They claim they don't need additional parking. I drive by the dormitories at least 3 times per day, on average the parking lot is between 70% to 80% full most of the time. They claim they only give out 33 permits for the existing 101 students, well then who owns the other vehicles? They claim that the shuttle goes every 15 minutes. To me that adds a larger impact at Pratt and Main. Now with the Las Alcobas Hotel across the street this is a bad intersection. There needs to be a traffic study addressing this. In fact, I feel we need an electric stop lights at this intersection. Most of the day the traffic does not go out onto Main, including truck traffic. They cut through Park and on to Crinella to Main. This is a residential neighborhood they are cutting through."*

#### **Response 8-4**

Please refer to Master Response 3.

#### **Comment 8-5**

*"They are going to demo a 15,050 sqft one-story building that houses 41 students. Then they are going to build three 3 story buildings totaling 40,645 and claim there is no impact. Who are they trying to fool? The Planning Commission needs to say: We need time to assess the full impact of this project. We have been told over and over again about our ageing infrastructure that is in dire need of repair. We need to find out first the impact the Las Alcobas Hotel is going to have in this area. An environmental impact report is the only way to address all the concerns I have raised."*

#### **Response 8-5**

See Master Response 6.

#### **Comment 8-6**

*"Originally the CIA was going to build three dormitories on the school's campus. This was so they would not impact the neighborhoods. That did not happen as promised in their original use permit. I would suggest the CIA instead of building these new dormitories on Pratt Av to put them on their campus as they originally proposed. The CIA owns the adjacent property. I personally worked Chuck Carpy's house as a general contractor. The city should rezone the property so dormitories can be built there. Then you eliminate all traffic problems, all view shed issues and since they are reducing their water usage at Greystone the increase of the dormitories can be applied. Plus the city should require these dormitories not use the city's wastewater system but put it in to Greystone's system that discharges in to the pond on Deer Park Road."*

#### **Response 8-6**

City of St. Helena

February 2017

---

Comment Noted. Please see Master Response 5 in regards to the evaluation of project alternatives.

---

Commenter: Dianna Varozza

Status: Individual

Date Received: January 17, 2017

---

#### **Comment 9-1**

*In regards to the Pratt Avenue project... It should be separate from the Greystone site paperwork. Trying to read through this is too difficult to determine what is going on at which site. They should be separate applications as they are different locations on different streets.*

#### **Response 9-1**

The City did receive multiple entitlement applications and the entitlements will be considered individually. However, under CEQA, projects may not be piecemealed (segmented) so as to ensure that all potential impacts are captured. Given that the use of Greystone and Vineyard lodge are so intimately tied it was determined that both components should be considered together. Accordingly, no changes are warranted.

#### **Comment 9-2**

*Is there going to be a stop light at Pratt and Main?*

#### **Response 9-2**

As detailed in the Traffic Analysis, the significance criterion established by the 1993 St. Helena General Plan and applicable to the subject project reads, *"All unsignalized intersections must maintain LOS C. If the LOS degrades below LOS C, an evaluation of the need for traffic signalization shall be undertaken according to standard Caltrans signal warrants as described below. If signals are not initially warranted, the location shall continue to be monitored for signal warrants on a regular basis."*

In accordance with the significance criteria applicable to the project, a warrant threshold analysis was undertaken to determine the need for signalization. There are 9 possible tests for determining whether a traffic signal should be considered for installation. As detailed on page 9 of the traffic Study (**Appendix Q**) These tests, called "warrants", consider criteria such as actual traffic volume, pedestrian volume, presence of school children, and accident history. The intersection volume data together with the available collision histories were compared to warrants contained in the Manual on Uniform Traffic Control Devices (MUTCD), Federal Highway Administration, 2014, California Supplement. As stated in the Traffic Impact Report and on page 52 of the IS/MND, signal warrant thresholds were *not* met and therefore signalization is not needed and no signal will be installed as a result of this project.

#### **Comment 9-3**

*I definitely object to a three story building. Nothing else directly on the street is that tall and if you set precedence now pretty soon there will be three story apartment buildings and homes. This is a quiet street mostly agricultural and it is very dangerous during going work and home hours. Between Beringer employees racing to get to the trail and all of the construction workers parking on*

---

22

*Pratt and Main it has been a nightmare trying to pull out of the driveway or onto Main. More people used to walk on Pratt but now they are afraid.*

**Response 9-3**

See Master Response 1 and 4.

**Comment 9-4**

*"Where are all the construction workers going to park when they are working on this project? The garbage, pour parking jobs, construction trucks and deliveries have been chaos. The construction workers whip a u turn without looking and almost hit moving traffic. They block the view so pulling out onto main can be dangerous. They are trying to cross the street and almost get hit by cars. And now with Pratt closed why there isn't an officer there directing traffic. We can't even pull out and go to the store. It looks terrible having all those vehicles parked everywhere, delivery trucks, construction equipment. This all needs to be kept off Pratt Avenue."*

**Response 9-4**

As detailed on page 5 of the IS/MND, construction activities at the Vineyard Lodge Housing site are expected to occur in two overlapping phases following issuance of entitlements, Phase 1: January 2017 to August 2017 and Phase 2: June 2017- January 2018. Specific dates are subject to change, but the general phasing is expected to be consistent with what was assumed in the IS/MND. The applicant has indicated that construction staging would be located on site and in the proposed courtyard; site preparation and demolition staging is expected to occur on the existing parking lot. In order clarify this in the IS/MND; the project description will be updated to read:

**PROJECT PHASING**

Construction activities at the respective project sites are expected to commence following issuance of entitlements and will be phased in a manner that limits disturbance to class schedules and curriculum and in accordance with the phasing plan, below. Site preparation and demolition staging will occur on the existing parking lot and Construction phase staging will be located in the proposed courtyard between the new building and the existing Vineyard Lodge 1 for both phases.

**Comment 9-5**

*All of the dust created by construction is damaging to vineyard. If we get even a small amount of dust blowing we will have to get our lawyers involved. What are you going to do to mitigate the dust? I am just glad we weren't closer to the hotel construction. What a nightmare for the pour people on the corners.*

**Response 8-5**

As detailed on page 19 of the IS/MND and under section 3(D), the subject site is proximate to sensitive receptors, defined as those members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly and people with illnesses...Due to the proximity of sensitive receptors onsite, the project has the potential to generate temporary air quality impacts associated with fugitive dust emissions during construction activities.

In order to ensure that fugitive dust emissions are reduced to levels below significance Mitigation Measure AQ-1 would be implemented. AQ-1 is set forth pursuant to BAAQMD Basic Control Strategies and requires covering haul trucks, watering during active ground disturbance, limiting idling time, proper maintenance of equipment, and other standard measures. With implementation

of AQ-1 potential impacts to sensitive receptors during construction will be reduced to levels below significance. Specifically, AQ-1 stipulates that:

The applicant shall incorporate Best Management Practices for all construction activities and clearly indicate these provisions in the specifications. In addition an erosion control plan shall be prepared and submitted to the City of St. Helena prior to any construction activity. BMPs shall include but not be limited to the BAAQMD Basic Construction Mitigation Measures as modified below:

1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered three times per day;
2. All haul trucks transporting soil, sand, or other loose material shall be covered;
3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited;
4. All vehicle speeds on unpaved roads shall be limited to 15 mph;
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible;
6. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used;
7. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points;
8. All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation;
9. Construction equipment staging shall occur as far as possible from existing sensitive receptors;
10. The Developer shall designate a person with authority to require increased watering to monitor the dust and erosion control program and provide name and phone number to the City prior to issuance of grading permits. Post a publicly visible sign with the telephone number of designated person and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations; and
11. The City's Public Works Inspector shall perform visual inspections during grading to assure that dust control is implemented and standard BMP are enforced.

With implementation of AQ-1 and compliance with the provisions of the St. Helena Municipal Code potential impacts associated with fugitive dust and which could affect people or vineyards would be less than significant. No further analysis is therefore warranted.

#### **Comment 9-6**

*I would like an answer as to what we can do to stop the three story building and regulate the construction site parking and deliveries to be off Pratt. I am mostly concerned about the construction dust which will damage vineyards nearby. We are directly on the other side of the Beringer strip. They must be concerned about dust on their new block of vineyard.*

#### **Response 9-6**

City of St. Helena

February 2017

As stated above, under Response 9-4, construction staging will be located within the project site boundaries. For discussion of fugitive dust, please see Response 9-5.

**Comment 9-7**

*We live here and have guests at our winery and it needs to not look like a dump driving down Pratt Avenue.*

**Response 9-7**

Comment noted.

---

Commenter: Carol Norfleet

Status: Individual

Date Received: January 18, 2017

---

**Comment 10-1**

*My personal opinion is that the retirement home that was the original structure on the property should never have been changed to a dormitory for Culinary Institute students. I believe that if the CIA wants to have more students they should either construct a property on their Greystone campus on Highway 29 or build a new dormitory near the former Copia site in the city of Napa.*

**Response 10-1**

Comment noted.

**Comment 10-2**

*I believe the impact on Pratt Avenue and subsequent impact for the city of St. Helena all produce negative effects. Pratt Avenue is one of the poorest maintained streets in St. Helena. There are constant potholes in the road that are not properly repaired, the entire road needs repaving, there are no sidewalks, despite the fact that there is a CIA student bus that makes innumerable trips up and down the road there still are students regularly walking on the side of the road often in predawn and night hours creating a very dangerous situation. They are unable, generally, to walk on the traffic facing side of the street because at least six months of the year there is a stream of water running down the south side of the street that is emitted from a sump pump at the residence at 1055 Pratt Ave.*

**Response 10-2**

See Master Response 3.

**Comment 10-3**

*I strongly feel that the city either needs to create a storm drain to properly capture that water or to eliminate the exception that must've been created for dumping this sump pump water into the street. I will also note that despite the fact that rains stop in the area in the late winter that particular residence is in essence creating an artesian well in the full basement that pumps water seasonally into June creating a marsh and mosquito habitat at the intersection of Pratt Avenue and the railroad*

*tracks. It seems that every other street in St. Helena has proper gutter sidewalks and storm drains adjacent to residential homes except for this stretch of Pratt Avenue.*

**Response 10-3**

Comment noted. This comment does not relate to the subject project and therefore will not be addressed here.

**Comment 10-4**

*In examining the site plan for the new dormitory it's very clear that every single square foot of land is being used, packing on as much density as possible, exceeding height restrictions and visual sensibilities. There should not be a variance for building setback as proposed from 36 feet to 20 feet. Additionally the site plan has the exit from the plan coming directly into the intersection for the railroad tracks that are now being used for a wine train going up to Krug winery. A portion of the building is 40 feet high which is certainly not conducive to the rural nature of what this street is and clearly will affect other property owners in the area from a view point of view.*

**Response 10-4**

Comment noted. See Master Response 1 for a discussion of viewshed impacts.

**Comment 10-5**

*Despite the fact that there is a shuttle that goes to the Greystone campus it is inevitable that 123 new students are going to create much more traffic. I'd like to point that out several years ago there was a multiple fatality accident on Pratt at the end of the road involving some of the students from Greystone. It seems inevitable that doubling the size of the facility is going to significantly impact traffic use and noise on our street. This traffic impact also becomes immediately significant as one looks at the current extreme difficulty of making a left-hand turn from Pratt Avenue south on to Highway 29. It is currently extremely difficult to see what is approaching on the left-hand lane because of parked cars, at the very least the curb needs to be red painted at least six car lengths back from where it is now. Additionally with the pending opening of the Los Alcobas Hotel there will be additional significant difficulty in entering and exiting from Pratt Avenue. This will not only apply to the student buses but also to the students that would be coming and going from this dormitory. This currently is and will become a much more dangerous intersection certain to create accidents.*

**Response 10-5**

Comment Noted. It is expected that as a part of mitigation imposed on the Los Alcobas hotel project, parking will be prohibited along both sides of Main Street for a distance of 250 feet south of the Los Alcobas Hotel site, thereby improving site distance when making a left-hand turn from Pratt Avenue onto Main Street.

**Comment 10-6**

*We are all aware of some of the economic issues facing the city of St. Helena and clearly one way to solve them is to promote the development of architecturally appropriate high quality hotels that will attract individuals with the capability to afford a significant average daily rate and quality that would then provide subsequent TOT revenue to the town. What this proposal does instead is create a hotel with insignificant TOT from students who certainly are not going to significantly support high quality restaurants and retail shops within the city itself.*

City of St. Helena

February 2017

**Response 10-6**

Comment noted. Potential impacts to TOT revenue is not a potential environmental impact which is required to be analyzed pursuant to CEQA.

**Comment 10-7**

*As stated earlier our belief is that there should not be a variance for an expansion of the existing student housing facilities, instead CIA should examine other locations including their existing Greystone campus and or their new Copia campus in Napa to effectuate the expansion of their overall programs. Pratt Avenue should remain a rural and residential street not a street of student dormitories creating additional traffic noise water and sewer impacts with insignificant benefits for the existing residents of the street and the city of St. Helena.*

**Response 10-7**

Comment noted. As detailed in the IS/MND under Section XV11. Mandatory Findings of Significance, with implementation of mitigation measures set forth under Aesthetics, Air Quality, Biological Resources, Cultural Resources, Geology and Soils, Land Use, Noise, and Transportation, the project's potential impacts would be avoided or reduced to levels below significance. Therefore, the project will have less than significant impacts due to degradation of the environment.

Date Received: January 19, 2017

---

**Comment 11-1**

*"...Turning this project surrounded by ag land into the most densely populated parcel in St Helena, would seem to be totally against the will of the general plan. The plan frowns upon putting high/medium density in ag land(leapfrogging)"*

**Response 11-1**

As detailed on IS/MND page 39 and under section 9(b), the Vineyard Lodge Housing site exhibits a General Plan land use designation of Agriculture, which provides for, amongst other things, Public and Quasi-Public uses. In 2008 and per Resolution No. 2008-5, the Vineyard Lodge Housing site was rezoned from A-20:Twenty Acre Agriculture to PQP: Public Quasi Public. The Council found that this was an appropriate action based on the following findings enumerated in the Resolution:

1. The existing urban/developed condition of the parcel would make conversion to agriculture difficult.
2. The small size of the parcel (2.61 acres) makes it improbable that the land can be converted to an economically viable agricultural parcel.
3. The parcel has been in urban use for the last 40 years.
4. The parcel has not been farmed or agriculturally productive for the last 40 years.
5. The parcel is already served by City services (water & sewer).
6. Rezoning the parcel to PQP keeps the existing A-20 zoning ordinance language intact, does not introduce new uses to agricultural parcels, thereby lessening the possibility that other agricultural land will be used for non-agricultural purposes.

The proposed project does not propose any zoning map amendments and proposes development consistent with the existing PQP zoning of the subject parcel which it has exhibited since 2008. As described on page 39 of the IS/MND, The PQP zoning designation does not prescribe specific development standards, but rather stipulates that all projects within the PQP zoning district be subject to a conditional use permit and that development standards shall be established through the use permit review process. These regulations help guarantee that incompatible development and/or activities can be avoided by requiring such projects be held to a high level of scrutiny and are vetted through the public review process, CEQA review, and be conditioned accordingly. The Vineyard Lodge Housing Component will be subject to the provisions of a new use permit as required under PQP zoning which would govern the intensity and operation of the site to an extent that consistency with all applicable standards and guidelines is achieved. No changes are warranted.

**Comment 11-2**

*"This will also add to the current traffic problem on Pratt, the new resort, wine train, Beringer/ treasury, ramping up production, redirection of traffic by apps,(waze, google, etc) the constant shuttles, will only add to the problem."*

**Response 11-2**

See Master Response 3.

**Comment 11-3**

*"Water& sewer issues, seeing hundreds of new toilets, while residents conserve water only to have the water rates skyrocket, just doesn't quite seem right."*

**Response 11-3**

As described herein and on page 56 of the IS/MND, The City of St. Helena provides water to both the Greystone Campus (2555 Main Street) and Vineyard Lodge Housing Site ( 830 Pratt Avenue). The current water allotments authorized by the Agreements allocate an average of 15,900gpd to Greystone and 4,750gpd to the Vineyard Lodge Site. The total allotment across the two sites amounts to an average of 20,650 gpd or 23.1 acre feet per year. As part of the CIA Master Plan project, the applicant is requesting to rescind the two separate agreements and adopt a new joint water agreement which would redistribute the gross water allotment across the two sites while maintaining the current total allotment of 23.1 AF per year. As such, *no* net increase in water use is proposed and the project will comply with the City's water neutrality requirements. No further analysis is needed.

**Comment 11-4**

*"The CIA doesn't allow student cars on campus, or want to rent homes in SH, this shouldn't be the resident's problem. People actually live here. I'm not so sure what this nonprofit, or not for profit status is, but I would suggest that they consider using only the facility they've already expanded .The community trusted it was all they needed. With our population at 4900 I would prefer seeing a reduction in enrollment, and a modest tuition increase, in order for the CIA to remain good neighbors."*

**Comment 12-4**

*"This particular area of the City is already suffering from too much traffic and too little planning such as an additional stoplight at Pratt and Main."*

**Response 12-4**

See Master Response 3.

**Comment 12-5**

*"Why should they be allowed to build on agricultural land? This is seldom allowed to happen and why should it be allowed in this instance when they bring nothing of value to the community?"*

**Response 12-5**

See response 11-1.

### 3. REVISIONS TO THE IS/MND

- *The following changes to the language included in Sections 16(a) and 16(b) and on page 16 of the IS/MND, will be made, as shown, below:*

A. **(Exceed Wastewater Treatment Requirements)** Less Than Significant Impact: The project is not expected to exceed wastewater treatment requirements set forth by the Regional Water Quality Control Board. To accommodate wastewater flows generated at the Greystone Campus, the existing onsite primary treatment would be used, including one 3,000 gallon grease interceptor, two 7,500 gallon settling tanks and one 6,000 gallon settling tank, and a pump sump and pump to convey the SS flows to the Markham Combined Wastewater System (MCWS) located at Markham Winery on SR 29, north of St. Helena. Improvements to the existing dishwashing and other kitchen facilities, including replacement with more water and energy efficient equipment, in addition to the closure of the WSGR would reduce the overall water and wastewater demand for the site. Taken together, the proposed improvements will lead to a net decrease in flows conveyed and treated at the MCWS and will be within the authorized discharge amount of 14,850 gpd.

At the Vineyard Lodge Housing site, wastewater will be generated by dormitory restrooms, showers, and common areas. The project will utilize the existing sanitary sewer (SS). Effluent would undergo primary treatment in septic tanks and then be conveyed to the municipal sewer system through the existing 3" SS. The SS management system will be resized to accommodate a peak daily wastewater flow of approximately ~~9,520~~ 9,605 gallons per day (gpd) which equates to a projected net increase of ~~1,960~~ 3,232 gpd over the existing ~~capacity~~ average recorded flow of 6,373. Effluent will undergo primary treatment in septic tanks, which will produce effluent that is of higher quality than residential wastewater. A new equalization pump tank will be used to collect and store effluent. The equalization tank will provide approximately 12.5 hours of retention time at the anticipated peak daily flowrate of 9,520 gpd, and is sufficiently sized to allow for only off-peak discharge to the City's sewer system. The equalization pump will utilize on site storage capacity and equivalent pumps to maintain the same instantaneous peak flow discharge as the existing facility. As a result, there will be no increase to the instantaneous flow rate to the City sewer system and therefore no adverse effect on the sewer system capacity. No increases in peak flows are proposed to the City sewer system, and the timed dosing of primary treated effluent during off-peak hours would prevent any adverse impacts to the City sewers.

The wastewater flows will be conveyed to the City of St. Helena Wastewater Treatment Plant, which has sufficient operating capacity to handle the additional flows generated at the Vineyard Lodge Housing site. Further, the project will be assessed the sewer impact fee which will help to maintain the existing system and contribute to the additional costs that will be incurred with the future expansion and upgrade of the wastewater treatment plant. Therefore, the project would not exceed wastewater treatment requirements and impacts would be less than significant.

**b.(New Wastewater treatment Facilities)** Less Than Significant Impact: There would be no new construction or expansion of domestic water or wastewater facilities as part of the proposed project. For the Greystone Campus, as stated above, wastewater flows are expected to decrease following project implementation. For the Vineyard Lodge Housing

site, as stated above, the project would result in a net increase of ~~1,960~~ 3,232 gpd of wastewater over existing flows. However, the City of St. Helena Wastewater Treatment Plant has sufficient operating capacity to handle the additional flows generated at the Vineyard Lodge Housing site. Further, a sewer impact mitigation fee will be assessed with the purpose of ~~maintaining~~ improving the existing system and to contribute to offset costs of future expansion and upgrade of the wastewater treatment plant. The sewer impact fee will be assessed against the dormitory project at the time of issuance of building permits, therefore, impacts would be less than significant

**b.(New Wastewater treatment Facilities)** Less Than Significant Impact: There would be no new construction or expansion of domestic water or wastewater facilities as part of the proposed project. For the Greystone Campus, as stated above, wastewater flows are expected to decrease following project implementation. For the Vineyard Lodge Housing site, as stated above, the project would result in a net increase of ~~1,960~~ 3,232 gpd of wastewater over existing flows. However, the City of St. Helena Wastewater Treatment Plant has sufficient operating capacity to handle the additional flows generated at the Vineyard Lodge Housing site. Further, a sewer impact mitigation fee will be assessed with the purpose of maintaining the existing system and to contribute to offset costs of future expansion and upgrade of the wastewater treatment plant. The sewer impact fee will be assessed against the dormitory project at the time of issuance of building permits, therefore, impacts would be less than significant\

- *The following changes to the language included on paragraph 1 page 5 of the IS/MND, will be made, as shown, below:*

#### PROJECT PHASING

Construction activities at the respective project sites are expected to commence following issuance of entitlements and will be phased in a manner that limits disturbance to class schedules and curriculum and in accordance with the phasing plan, below. Site preparation and demolition staging will occur on the existing parking lot and Construction phase staging will be located in the proposed courtyard between the new buildings and the existing Vineyard Lodge 1 for both phases.

- *Since the release of the IS/MND, the applicant has requested minor modifications related to the size of the storage units proposed as part of the Greystone component. Namely, the applicant has proposed slightly larger storage units ranging in size from 622 sf to 1,337 sf. The proposed changes have been reviewed and would not introduce any new impacts or change the conclusions of the IS/MND. To reflect these technical changes, the following revisions will be made to Sections pages 4,12 and 25, of the IS/MND and as shown below:*

*Project Description, Paragraph 1, page 4.*

The proposal further includes the construction of a 4,468-square-foot (sf) storage cave at the north end of the Greystone Cellars building, beneath the former WSGR. In addition, a series of three modular storage units ranging in size from approximately ~~592 sf to 944 sf~~ 633 sf to 1,337 sf would be installed at the rear of the third floor of the Greystone Cellars building. Given that the majority of works is confined to the interior of the building, exterior changes would be very limited. Any work that may affect the exterior of the historic Greystone Cellars building (i.e. modular units) would be installed in accordance with the Secretary of the Interior's Standards for the Treatment of Historic Properties so as to avoid impacting the building's historic integrity.
