City of St. Helena
Regular City Council Meeting
Tuesday, May 14, 2019 @ 6:00 PM
Vintage Hall Board Room - Second Floor
465 Main Street, St. Helena

PLEASE NOTE: Any person who wishes to speak regarding an item on the agenda or make a comment under the "Oral Communication" portion of the agenda may do so, but please observe the time limit of four minutes.

Page

1. CALL TO ORDER

2. PLEDGE OF ALLEGIANCE

3. ROLL CALL
Mayor: Geoff Ellsworth, Vice Mayor: Paul Dohring, City Council Members: Anna Chouteau, David Knudsen and Mary Koberstein

4. PUBLIC FORUM:
Members of the public are entitled to speak on matters of municipal concern not on the agenda during Public Forum. Each person's comments shall be limited to 4 minutes. Each person is entitled to speak on any non-agendized item only once at any meeting. Brief questions by Council Members for clarifications may be posed and answered, and Council Members may make requests that items be placed on future agendas, but in accordance with state law, no substantive discussion or action may take place unless and until the matter properly appears on the agenda.

5. REPORTS BY STAFF AND CITY COUNCIL, FUTURE AGENDA ITEMS, AND AB 1234 REPORTS:
Reports by staff and/or Council Members on items of general interest. Brief questions for clarification may be posed and answered, and Council Members may request that items be placed on a future agenda. Except under certain circumstances, the Brown Act prohibits any other discussion or action by the City Council.

6. PRESENTATIONS AND PUBLIC RECOGNITIONS

6.1. Proclamation for National Public Works Week 7
Proclamation

6.2. Proclamation for May is Mental Health Month 9 - 10
Proclamation

7. STAFF BRIEFING

7.1. None

8. CONSENT ITEMS
Members of the Council or the public may ask that any items be considered individually for purposes of considering alternative action, for extended discussion, or for public comment. Unless that is done, one motion may be used to adopt all recommended actions. (Roll Call Vote)

8.1. Consideration and proposed approval of Regular Meeting Minutes of April 9, 2019. 11 - 19

04-09-19 Regular City Council Meeting Minutes

8.2. Consideration of approval of a Resolution approving (1) Out-of-state travel for Officer Stephanie Lupien, the St. Helena Police Department's School Resource Officer to attend the 22nd Global Youth Justice Training in Las Vegas, Nevada from June 18 - 20, 2019 and (2) a budget increase of $800 to 238-4900-2155, POST training funds for the cost of the training. 21 - 24

CEQA Determination: Not a CEQA project
Prepared By: Timothy A. Foley, Chief of Police
Recommendation:
City Staff recommends City Council approving a resolution authorizing (1) Out-of-state travel for Officer Stephanie Lupien, the St. Helena Police Department's School Resource officer to attend the 22nd Global Youth Justice Training in Las Vegas, NV from June 18 - 20, 2019 and (2) a budget increase of $800 to 238-4900-2155, POST training funds for the cost of the training.

Staff Report - Pdf

8.3. Consideration and proposed approval of a Resolution Approving Amendment No. 2 of City Manager's Employment Contract; and in accordance with the requirement of California Code Section 54953(c)(3), providing an oral report summarizing the recommended final action for City Manager contract amendment beginning July 1, 2019 that provides for an additional one-year contract extension to June 30, 2024. 25 - 38

CEQA Determination: Not a CEQA project
Prepared By: April Mitts, Finance Director
Recommendation:
Staff recommends City Council approve Amendment No. 2 to the Employee Agreement between the City of St. Helena and Mark Prestwich.

Staff Report - Pdf

8.4. Consideration and proposed adoption of a Resolution accepting completion of the Ghilotti Construction Company, Inc. construction contract in the amount of $21,232 and directing the filing of the Notice of Completion for the Highway 29 Emergency Water Main Repair, Project W19-01 39 - 45

CEQA Determination: Exempt from the requirements of CEQA pursuant to Section 15301, Class 1, which exempts the operation, leasing, or minor alteration of existing facilities
Prepared By: Edrees Argand, Junior Assistant Engineer
Recommendation:
Adopt the attached Resolution accepting completion of the Ghilotti Construction Company, Inc. construction contract in the amount of

$21,232 and directing the filing of the Notice of Completion for the Highway 29 Emergency Water Main Repair, Project W19-01.

Staff Report - Pdf

Prepared By: Erica Ahmann Smithies, Public Works Director and City Engineer
Recommendation:
Adopt a resolution rescinding Resolution 2019-043 and adopting a revised list of projects for fiscal year 2019-20 funded by SB 1: The Road Repair and Accountability Act of 2017

Staff Report - Pdf

9. PUBLIC HEARINGS

9.1. Consideration and proposed Resolution approving the Annexation of Territory into the St Helena Municipal Sewer District (MSD) No. 1 MSD Annexation No. 136, 1710 Dean York Lane, St Helena, CA. 94574 (APN) 009-680-004-000. — 53 - 60

CEQA Determination: It is determined that the Ordinance is exempt from CEQA pursuant to Guidelines Sections 15061(b)(1), 15061(b)(2), and specifically, the “General Rule” Section 15061(b)(3), where is can be seen with certainty that the proposed action will have no significant effect on the environment.
Prepared By: Erica Ahmann Smithies, Public Works Director and City Engineer
Recommendation:
Adopt Resolution Approving the Annexation of Territory into the St Helena Municipal Sewer District No. 1 MSD Annexation No. 136, 1710 Dean York Lane, St Helena, CA. 94574 (APN) 009-680-004-000.

Staff Report - Pdf

9.2. Review and Certification of the draft Final Program Environmental Impact Report (EIR), including the Response to Comments, Mitigation Monitoring and Reporting Program (MMRP) and proposed Statement of Overriding Considerations, and adoption of the draft St. Helena 2040 General Plan Update including all properties Citywide and in three specific Study Areas located to the south and east of the current St. Helena City limits, as identified therein. — 61 - 2424

CEQA Determination: Environmental Impact Report
Prepared By: Noah Housh, Planning & Community Improvement Director
Recommendation:
It is recommended by the Planning Commission and the Community

Improvement Department that the City Council:

1. Certify the Final EIR and adopt the CEQA findings of fact and statement of overriding considerations for the St. Helena 2040 General Plan Update Transportation Network Enhancement Alternative (Exhibit A); and
2. Adopt the Mitigation Monitoring and Reporting Program for the St. Helena 2040 General Plan Update FEIR (Exhibit B); and
3. Approve and adopt the St. Helena 2040 General Plan Update, directing staff to make any desired revisions including those recommended by the Planning Commission including changes required to incorporate the Transportation Network Enhancement Alternative General Plan Update.

13. ADJOURNMENT

The next Regular City Council meeting is scheduled for May 28, 2019, at 6:00 p.m. in the Vintage Hall Board Room located at 465 Main Street.

This agenda was posted at City Hall, 1480 Main Street, and at Vintage Hall, 465 Main Street, St. Helena, California on May 3, 2019.

Cindy Tzafopoulos

Cindy Tzafopoulos, City Clerk

In Compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please call the City Clerk's Office (707) 967-2792. Notification 72 hours prior to the meeting as required by Section 202 of the Americans with Disabilities Act will enable the City to make reasonable arrangements to ensure accessibility to this meeting

CHALLENGING DECISIONS OF CITY ENTITIES

The time limit within which to commence any lawsuit or legal challenge to any quasi-adjudicative decision made by the City of St. Helena is governed by Section 1094.6 of the Code of Civil Procedure, unless a shorter limitation period is specified by any other provision, including without limitation Government Code section 65009 applicable to many land use and zoning decisions, Government Code section 66499.37 applicable to the Subdivision Map Act, and Public Resources Code section 21167 applicable to the California Environmental Quality Act (CEQA). Under Section 1094.6, any lawsuit or legal challenge to any quasi-adjudicative decision made by the City must be filed no later than the 90th day following the date on which such decision becomes final. Any lawsuit or legal challenge, which is not filed within that 90-day period, will be barred. Government Code section 65009 and 66499.37, and Public Resources Code section 21167, impose shorter limitations periods and requirements, including timely service in addition to filing.

If a person wishes to challenge the above actions in court, they may be limited to raising only those issues they or someone else raised at the meeting described in this notice, or in written correspondence delivered to the City of St. Helena, at or prior to the meeting. In addition, judicial challenge may be limited or barred where the interested party has not sought and exhausted all available administrative remedies.

SUPPLEMENTAL MATERIAL RECEIVED AFTER THE POSTING OF THE AGENDA

Any supplemental writings or documents distributed to a majority of the City Council regarding any item on this Agenda, after the posting of the Agenda, will be available for public review in the City Clerk's Office located at 1480 Main Street, St. Helena, California, during normal business hours. In addition, such writings or documents will be made available on the City's web site at https://sthelena.civicweb.net and will be available for public review at the respective meeting.

City of St. Helena

PROCLAMATION

National Public Works Week

WHEREAS, public works services provided in our community are an integral part of our citizens' everyday lives; and

WHEREAS, the support of an understanding and informed citizenry is vital to the efficient operation of public works systems and programs such as water, sewer, streets and highways, public buildings, and solid waste collection; and

WHEREAS, the health, safety and comfort of this community greatly depends on these facilities and services; and

WHEREAS, the quality and effectiveness of these facilities, as well as their planning, design, and construction, are vitally dependent upon the efforts and skill of public works crews; and

WHEREAS, the efficiency of the qualified and dedicated personnel who staff public works department is materially influenced by the people's attitude and understanding of the importance of the work they perform; and

WHEREAS, the year 2019 marks the 59th annual National Public Works Week sponsored by the American Public Works Association; and

NOW THEREFORE, BE IT RESOLVED, that the St. Helena City Council, City staff and the citizens of St. Helena do hereby proclaim the week of May 19-25, 2019 as "National Public Works Week" and encourage all citizens to join us in this worthy observance.

Dated: May 14, 2019

_____

Geoff Ellsworth, Mayor
City of St. Helena

PROCLAMATION

Mental Health Month 2019

WHEREAS, one in five individuals will experience mental health issues in their lifetimes, which can affect parents, sisters, brothers, spouses, co-workers and others in our lives; and

WHEREAS, it is essential to eliminate disparities in mental health by promoting well-being for all, regardless of race, ethnicity, sexual orientation, gender identity, language, place of residence or age and ensure equity of access, delivery of services and improvement of outcomes; and

WHEREAS, the Mental Health Division seeks to reduce barriers to access, improve community outreach and engagement that ensures culturally and linguistically competent care to diverse communities through culturally competent services and policies; and

WHEAREAS, while there is still much work to be done to eliminate disparities in services and increase education about mental illness, Napa County service providers are to be commended for their community collaborative approach when working with individuals in need; and

WHEREAS, a holistic approach to services which includes prevention and early intervention is an effective way to meet the needs of individuals at risk of developing mental health issues, individuals who are experiencing early onset of the symptoms of mental illness, or individuals with serious mental illness or severe emotional disturbance; and

WHEREAS, there is a strong body of research documenting that with support and treatment, between 70 and 90 percent of individuals with mental illness have a significant reduction in symptoms and improved quality of life; and

WHEREAS, every Napa County resident can be an ally by learning about and dispelling the myths related to mental illness and eliminating stigma by treating individuals with mental illness with respect.

Now, therefore let it be resolved, that I, Geoff Ellsworth, Mayor of the City of St. Helena, do hereby proclaim, May 2019 as Mental Health Month in St. Helena. As the Mayor, I also call upon the citizens, government agencies, public and private institutions, businesses and schools in St. Helena to recommit ourselves and our community to increasing awareness and understanding of mental health, to supporting our community members so that they can take action to protect their mental health, and to promoting appropriate and accessible services for all people with mental health conditions.

10.3 Discussion and Direction Regarding 2019 Work Plan Staffing and Assignments

CEQA Determination: Not a CEQA project
Prepared By: Mark T. Prestwich, City Manager
Recommendation:
It is recommended the City Council discuss, identify, and confirm 2019 Work Plan staffing and assignments for the planned policy initiatives.

City Manager Mark Prestwich reported on this item.

No public comment was received.

The City Council identified Council Members for the 2019 Work Plan assignments for the planned policy initiatives.

10.4 Consideration of approval of a Resolution 2019-39 supporting the St. Helena Little League's Fundraising Efforts for Improvements at Crane Park.

CEQA Determination: Not a CEQA project
Prepared By: April Mitts, Finance Director
Recommendation:
Staff recommends the City Council adopt a resolution supporting the St. Helena Little League Fundraising Efforts for Improvements at Crane Park.

City Manager Mark Prestwich reported on this item.

Jeff Blaum addressed the City Council.

11. NEW BUSINESS

11.1 Consideration and Proposed Adoption of a Resolution Authorizing the City Manager to Execute a Professional Services Agreement with HydroScience Engineers, in an Amount Not-to-Exceed $440,000 for Owner's Representative of the City of St. Helena Wastewater Treatment and Reclamation Plant Project to Perform Select Engineering Services, Facilitate the Procurement of a Design-Build Team, and to Ensure that the Design of the WWTRP Project Improvements are Constructed in a Manner and Cost that Meets the City of St. Helena's Needs and Budget in Response to San Francisco Bay Regional Water Quality Control Board Order R2-2016-004.

CEQA Determination: Project is exempt from the requirements under Section 15061(b)(3) the "General Rule" in that it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, Section 15262 Acceptance of Feasibility and Planning Studies and Section 15306 Information Collection in that it is purely the recommendation to negotiate a contract and the acceptance of a feasibility study. Any and all future funding and/or construction activities resulting from this action will be separately reviewed for compliance with CEQA and a formal determination made.
Prepared By: Felix Hernandez III, Utilities Operations Manager
Recommendation:
Staff recommends City Council adopt a resolution authorizing the City Manager to Execute a Professional Services Agreement with HydroScience Engineers, in an Amount Not-to-Exceed $440,000 for Owner's Representative of the City of St. Helena Wastewater Treatment and Reclamation Plant Project to Perform Select Engineering Services, Facilitate the Procurement of a Design-Build Team, and to Ensure that the Design of the WWTRP Project Improvements are Constructed in a Manner and Cost that Meets the City of St. Helena's Needs and Budget in Response to San Francisco Bay Regional Water Quality Control Board Order R2-2016-004.

Utilities Operation Manager Felix Hernandez reported on this item.

Richard Wolloch addressed the City Council.

Vice Mayor Paul Dohring moved to adopt the staff recommendation. The motion was seconded by Council Member Mary Koberstein and on roll call carried by the following vote:

AYES: Mayor Geoff Ellsworth, Vice Mayor Paul Dohring, Council Member Anna Chouteau, Council Member David Knudsen, and Council Member Mary Koberstein
NOES: None

Report to the City Council
Council Meeting of May 14, 2019

Agenda Section:

Subject: Consideration of approval of a Resolution approving (1) Out-of-state travel for Officer Stephanie Lupien, the St. Helena Police Department's School Resource Officer to attend the 22nd Global Youth Justice Training in Las Vegas, Nevada from June 18 - 20, 2019 and (2) a budget increase of $800 to 238-4900-2155, POST training funds for the cost of the training.

CEQA Determination: **Not a CEQA project**

Prepared By: Timothy A. Foley, Chief of Police

Reviewed By: April Mitts, Finance Director

Approved By: Mark T. Prestwich, City Manager

BACKGROUND

On October 5, 2018, the City of St. Helena applied for $396,628 in Tobacco Law Enforcement Grant Funding to fund a School Resource Officer (SRO) position to implement the goals and objectives of the grant which are to achieve significant reductions in the percentage of students using tobacco related products. On January 30, 2019, the City was notified via e-mail by the Office of the Attorney General, California Department of Justice that its grant application was approved for funding. On February 26, 2019, City Council approved acceptance of the grant and, on April 1, 2019, Officer Stephanie Lupien was appointed as the St. Helena Police Department's SRO.

DISCUSSION

One of Officer Lupien's assigned duties is to closely work with our Juvenile Diversion Officer, Stephanie Ortiz. To further enhance the working relationship and gain a greater understanding of the Juvenile Justice System, the Diversion Process, Peer/Youth Courts, and Juvenile Legal Issues Officer Lupien has been requested by the Up Valley Family Center to attend the 22nd Global Youth Justice Training in Las Vegas, Nevada

from June 18 - 20, 2019, with Juvenile Diversion Officer Ortiz. Topics covered during the training include, State Statutes, Juvenile Confidentiality, Developing Critical Partnerships, Identifying Key Stakeholders, Operating Mandated Community Services and Programs, Case Management and Referrals, Data Collection, Creating Annual Reports, and Evaluation. St. Helena City Council Resolution 85-44 requires City Council approval for out-of-state travel.

The total expected cost of the training will not exceed $800, which includes registration, airfare, hotel, ground transportation, and per diem.

FISCAL IMPACT

Fiscal impact is estimated to be approximately $800. Funds are available in Fund 238 from the fund balance.

RECOMMENDED ACTION

City Staff recommends City Council approving a resolution authorizing (1) Out-of-state travel for Officer Stephanie Lupien, the St. Helena Police Department's School Resource officer to attend the 22nd Global Youth Justice Training in Las Vegas, NV from June 18 - 20, 2019 and (2) a budget increase of $800 to 238-4900-2155, POST training funds for the cost of the training.

Resolution - Out-of-state travel S. Lupien

CITY OF ST. HELENA

RESOLUTION NO. 2019-___

Resolution Authorizing (1) Out-of-state travel for Stephanie Lupien to attend the 22nd Global Youth Justice Training in Las Vegas, NV from June 18 – 20, 2019, and (2) Authorizing a budget increase of $800 to 238-4900-2155.

RECITALS

A. City Council Resolution 85-44 requires City Council approval for staff to attend out-of-state meetings and training; and

B. On October 5, 2018, the City of St. Helena applied for $396,628 in Tobacco Law Enforcement Grant Funding to fund a School Resources Officer (SRO) position to implement the goals and objectives of the grant which are to achieve significant reductions in the percentage of students using tobacco related products; and

C. On January 30, 2019, the City was notified by the Office of the Attorney General, California Department of Justice that the grant application was approved for funding; and

D. On February 26, 2019, City Council approved acceptance of the grant and on April 1, 2019, Officer Stephanie Lupien was appointed as the St. Helena Police Department SRO; and

E. One of Officer Lupien's assigned duties is to closely work with the City's Juvenile Diversion Officer; and

F. To further enhance the working relationship and gain a greater understanding of the Juvenile Justice System, the Diversion Process, Peer/Youth Courts, and Juvenile Legal issues, Officer Lupien has been requested to attend the 22nd Global Youth Justice Training in Las Vegas, NV from June 18 – 20, 2019; and

G. The total expected cost of the training will not exceed $800, which includes registration, airfare, hotel, ground transportation, and per diem costs; and

H. Funds for the costs are available in Fund 238 – POST Training Funds.

RESOLUTION

The City Council of the City of St. Helena hereby resolves as follows:

1. Travel is not a CEQA project; and

2. Approves out-of-state travel for Officer Stephanie Lupien to attend the 22nd Global Youth Justice Training in Las Vegas, NV from June 18 – 20, 2019; and
3. Approves a budget increase of $800 to 238-4900-2155 – POST Training Funds for the cost of the training.

Approved at a Regular Meeting of the St. Helena City Council on May 14, 2019, by the following vote:

BACKGROUND

On June 27, 2017, the City Council approved an employment agreement with Mark Prestwich to serve as City Manager. On June 26, 2018, Amendment No. 1 to the employment agreement was approved extending the term of the contract one year to June 30, 2023, increasing the base salary by 3.5% for a cost-of-living adjustment, and revising the auto allowance to reflect a monthly amount of $500.

DISCUSSION

To recognize the City Manager's performance, the City Manager's Employment Agreement is being amended to extend the contract by one additional year thru June 30, 2024.

FISCAL IMPACT

There is no fiscal impact in extending the term of the City Manager's contract by one year.

RECOMMENDED ACTION

Staff recommends City Council approve Amendment No. 2 to the Employee Agreement between the City of St. Helena and Mark Prestwich.

STH CONTRACT: 2018-048

AMENDMENT No. 1 TO
CITY MANAGER EMPLOYMENT AGREEMENT

This Amendment No. 1 is made this day of June 26, 2018 and effective July 1, 2018, between the City of St. Helena, a municipal corporation (City), and MARK PRESTWICH (City Manager or Employee), collectively "the Parties." The Parties agree to amend the June 27, 2017 Employment Agreement between the City and the City Manager as set forth below.

1. Section 1 (Term) shall be amended to read in its entirety as follows:

   "The terms of this First Amended Agreement shall become effective on July 1, 2018 and shall remain in full force and effect until June 30, 2023, unless terminated earlier by the City or the Employee as provided in Section 7 of this Agreement.

2. Section 3 (Compensation), subsection A shall be amended to read in its entirety as follows (no change to Section 3B):

   "For the services to be provided pursuant to this Agreement, City agrees to pay an annual base salary of $196,526 (Base Salary), payable in installments at the same time as other management employees of the City and in accordance with established City procedure."

3. Section 4 (Benefits), subsection B shall be amended to read in its entirety as follows (no change to Section 4A, or 4C-4F):

   "**Vehicle.** Employee shall receive a vehicle allowance of $500 per month."

4. Except as specified above, all other provisions of the June 27, 2017 Agreement between the Parties shall remain unchanged.

IN WITNESS WHEREOF, the Parties hereto have accepted, made, and executed this Agreement upon the terms, conditions, and provisions above stated, the day and year first above written.

EMPLOYMENT AGREEMENT
BETWEEN THE CITY OF ST. HELENA
AND MARK PRESTWICH

INTRODUCTION

This Agreement is entered into by and between the CITY OF ST. HELENA (herein "City") and MARK PRESTWICH (herein "Employee"), an individual who has the education, training, and experience in local government management, to perform the duties and services of the position of City Manager. City and Employee agree as follows:

1. TERM

The terms of this Agreement shall become effective on July 31, 2017, and shall remain in full force and effect until June 30, 2022, unless terminated earlier by the City or the Employee as provided in Section 7 of this Agreement.

2. DUTIES AND AUTHORITY

A. City agrees to employ Mark Prestwich as City Manager of City, to be the chief executive officer of City, to perform the functions and duties specified in St. Helena Municipal Code Chapter 2.12, and to perform any other legally permissible and professionally appropriate duties and functions as the Council may assign from time to time.

B. Employee shall perform his obligations and responsibilities diligently within the time parameters specified by the City Council, applying a high degree of professionalism, ethics, integrity, and good workmanship to every aspect of his obligations.

C. The City Council recognizes that to meet the challenges facing the City it must spend time each year outside of the regular City Council meetings to work with the City Manager and staff on setting goals and priorities for the City government, and to work on any issues that in Council's view may prevent optimal achievement of City goals.

3. COMPENSATION

A. For the services to be provided pursuant to this Agreement, City agrees to pay an annual base salary of $189,880 (Base Salary), payable in installments at the same time as other management employees of the City and in accordance with law and established City procedure.

B. Thereafter, Employee's Base Salary shall be reviewed annually by City for consideration of increase. Any increase shall be effective only through approval of an amendment to this Agreement.

4. BENEFITS

A. **General Benefits.** Except as modified by this Agreement, Employee shall be entitled to the following benefits authorized by the Council for Department Heads as set forth in the following sections of the Unrepresented Compensation Program:

- Section 4 (Retirement Benefits),
- Section 5 (Insurance Benefits),
- Section 6 (Holidays), as modified by Section C.3 below,
- Section 7.2 (Vacation Accrual) as modified by Section C.1 below,
- Section 7.3 (Vacation Usage),
- Section 8 (Executive Leave), as modified by Section C.2 below,
- Section 9 (Other Leaves of Absence),
- Section 11.3 (Health Club Membership),
- Section 11.4 (Sick Leave Payout), and
- Section 11.5 (St. Helena Charity Based Events).

B. **Vehicle.** Employee shall receive a vehicle allowance of $250 per pay period.

C. **Leave.**

1. **Vacation:** Employee shall accrue vacation at a rate of 160 hours per fiscal year. This amount shall be prorated in the 2017-18 year to reflect the July 28, 2017 start date. The maximum vacation accrual is 240 hours, and no additional vacation leave shall be earned in any year above the 240 hour cap. The provisions of Sections 7.2, and 7.3 of the Unrepresented Compensation Program apply to Employee's use of vacation, except the vacation accrual cap for Employee shall be as stated in this Section C.1.

2. **Executive Leave:** Employee shall be credited with 40 hours (5 days) of Executive leave on January 1st of each year as required by Section 8 of the Unrepresented Compensation Resolution. In lieu of the first year proration provisions of Section 8 of the Unrepresented compensation Resolution, on July 28, 2017, Employee shall be credited with 80 hours of Executive Leave. This amount may not be carried over into the 2018 calendar year. With this exception all other requirements of Section 8 of the Unrepresented Compensation Resolution shall apply to Employee's Executive Leave.

3. **No Floating or Personal Convenience Holidays:** Notwithstanding any provisions of the Unrepresented Compensation Program, Employee shall not be entitled to any floating or personal convenience holidays.

4. **Sick Leave:** Effective July 28, 2017, Employee shall receive 80 hours of sick leave as an advance on the usual accrual of sick leave. After ten months of employment, Employee will accrue and may use sick leave and other leaves of absence in the same manner and under the same limitations provided

to and imposed upon Department Heads under Section 9 of the Unrepresented Compensation Program.

D. **Deferred Compensation.** City will match employee contribution up to $200 per month.

E. **General Business Expenses**

1. City recognizes that certain general expenses, including dues, subscriptions, travel, and subsistence expenses are reasonably incurred by Employee in the performance of job-related activities, functions, meetings, professional development, and professional conferences such as the annual International City/County Management Association (ICMA) and League of California Cities. City agrees to budget and pay for such general expenses incurred for job-related activities as necessary for full participation in national, state, or local professional associations such as ICMA and the California City Management Foundation.

2. City agrees to budget and pay for expenses related to educational courses, short courses, seminars, and institutes that will benefit the City and improve Employee's professional abilities.

3. City shall reimburse Employee for membership and participation in any community or civic organizations in which the City requires or encourages Employee to participate.

4. City shall reimburse Employee for expenses and travel as required by Municipal Code Section 2.12.050.

F. **CalPERS Retirement.**

1. **CalPERS Benefits.** Employee shall receive retirement benefits from, and make contributions to CalPERS as required by law and Section 4 of the Unrepresented Compensation Program. City makes no promises regarding any particular level of CalPERS pension benefits to which Employee may be entitled based on his employment with the City.

2. **Cost Sharing**. Employee shall be subject to the provisions of the miscellaneous member pension cost sharing requirements under the Unrepresented Compensation Program and related CalPERS contract for miscellaneous employees. These provisions are subject to future amendment pursuant to law and applicable City procedures. As of the effective date of this Agreement, these provisions require the Employee to contribute an additional 1% of his compensation earnable toward the City's required pension contribution amount, in addition to the CalPERS required employee contribution amount.

5. AT-WILL STATUS

Employee understands and acknowledges that he is an at-will employee of the City and, therefore, may be terminated by the City Council without cause.

6. SEPARATION

A. **Resignation.** Employee may resign at any time and agrees to give City a minimum of thirty (30) days advance written notice of the effective date of the resignation, unless the parties otherwise agree in writing.

B. **Retirement.** Notwithstanding the notice requirement set forth in Section 6.A, if Employee retires from full time public service with City, Employee shall provide City with a minimum of four months' advance notice. The Employee's actual retirement date will be mutually established.

C. **Termination.**

For the purpose of this agreement, termination shall occur when:

1. The term of Agreement as set forth in Section 1 ends – i.e., on June 30, 2022.

2. The majority of the City Council votes to terminate the employee at a properly noticed and duly authorized meeting. This subsection is subject to the limitations set forth in Municipal Code Section 2.12.040.

3. If the City reduces the base salary, compensation, or any other significant financial benefit of the Employee by a greater percentage than the average reduction of all department heads, the Employee shall have the right to declare such action(s) a termination.

4. If the City, citizens or the State legislature substantially changes the form of government, the Employee shall have the right to declare that such amendments constitute termination.

5. If the Employee resigns following an offer to accept resignation by the City as representative of the majority of the City Council that the Employee resign, then the Employee shall have right to declare such offer a termination as of the date of the offer.

6. The City terminates this Agreement for cause.

7. SEVERANCE

A. If the Employee is terminated without cause according to Section 6.C (2), (3), (4), or (5) above, then Employer shall provide a severance equal to his then current monthly base salary times the lesser of the number of months remaining on the contract, or the following amounts depending on the timing of the termination:

- If termination occurs within the first year of employment, nine (9) months;
- If termination occurs within the second year of employment, eight (8) months;

- If termination occurs within the third year of employment, seven (7) months;
- If termination occurs in any year after the third year of employment, six (6) months.

B. The severance pay provisions of Section 7.A are subject to and shall be interpreted to comply with the limitations set forth in Government Code Section 53260. Any severance shall be paid in a lump sum or in equal amounts distributed over the usual pay schedule, at the Employee's option. An election to receive severance pay distributed over the usual pay schedule does not extend the period of employment beyond the City-established termination date.

C. If Employee is unable to perform the requisite duties expected under this Agreement because of sickness, accident, mental incapacity, or health with reasonable accommodation, for a period of one month following exhaustion of accumulated sick leave then, the City shall have the option to terminate this Agreement and, notwithstanding the provisions of Section 7.A above, the Employee shall not be entitled to severance. If Employee is terminated because of permanent disability, Employee shall be compensated in a lump sum for any accrued vacation or other benefits to the extent such compensation is required by law.

D. Notwithstanding Section 7.A, above, the City shall not be obligated to pay any compensation, benefits, or severance under the provisions of this Agreement if Manager is terminated for cause, including, without limitation, because of a criminal conviction, criminal plea bargain, or adverse State Attorney General, Grand Jury, or Fair Political Practices Commission determination involving any felony, intentional tort, crime of moral turpitude, or violation of statute or law constituting forfeiture of office, misconduct in office, misuse of public funds, or conflict of interest. During the proceedings which may be necessary for City to confirm the cause for termination hereunder, the City may place Manager on paid administrative leave.

E. If Employee's termination from City employment is the result of the expiration and/or non-renewal of the term of this Agreement, Employee shall not be entitled to severance pay under Section 7.A of this Agreement, but shall receive any termination benefits and payments required by law.

F. Pursuant to Government Code Section 53243.4, all of the following requirements apply:

1. If this Agreement is terminated, any cash settlement related to the termination that Employee may receive from the City shall be fully reimbursed to the City if Employee is convicted of a crime involving an abuse of his office or position as defined by Government Code Section 53243.4.

2. If any express or implied provision of this Agreement, the Municipal Code of the City, or any policy or practice of the City provide paid leave salary to

Employee pending an investigation, this paid leave salary shall be full reimbursed by Employee to the City if Employee is convicted of a crime involving an abuse of his office or position as defined by Government Code Section 53243.4.

3. If any express or implied provisions of this Agreement, the Municipal Code of the City, or any policy or practice of the City provide for payment of funds for the legal criminal defense of Employee, the funds paid for his legal defense shall be fully reimbursed by Employee to the City if Employee is convicted of a crime involving an abuse of his office or position as defined by Government Code Section 53243.4.

8. PERFORMANCE EVALUATIONS

A. The Council shall review and evaluate the performance of Employee, including eligibility for any discretionary, performance-based increase, at least once annually no later than May of each year following Employee's commencement of employment.

B. The City Council and Employee shall annually develop mutually agreed upon performance goals and criteria which the City Council shall use in reviewing Employee's performance in the following year.

C. Employee shall be eligible for a performance bonus based on the Council's determination that Employee has significantly exceeded the mutually established and quantifiable objectives. Payment of this bonus in any year is at the sole discretion of the City Council.

9. HOURS OF WORK

The Employee shall perform all duties that may arise under this Agreement to the best of his ability in accordance with the highest professional and ethical standards of the profession, including that Employee shall devote full time and attention to those duties as necessary to meet the goals and objectives of the Council as established according to the terms of this Agreement. Employee is an exempt employee under the federal Fair Labor Standards Act.

10. OUTSIDE ACTIVITIES

Employee shall not engage in compensated teaching, consulting, or other non-City business without the prior approval of the Council. Such outside activities shall not interfere with the performance of Employee's duties under this Agreement.

11. CONFLICT OF INTEREST

Employee shall be subject to the conflict of interest provisions of the California Government Code and any conflict of interest code applicable to his employment as City Manager. Employee is responsible for submitting to the City Clerk the appropriate Conflict of Interest Statements at the time of appointment, annually thereafter, and at the time of separation from the position.

12. INDEMNIFICATION

To the extent required by the California Government Claims Act (Government Code Section 810, et seq.), City shall defend, save harmless, and indemnify Employee against any tort, professional liability claim or demand, or other legal action, whether groundless or otherwise, arising out of an alleged act or omission occurring in the performance of Employee's duties as City Manager. City has the discretion to determine whether to compromise and settle any such claim or suit and pay the amount of any settlement or judgment rendered thereon. Said indemnification shall extend beyond termination of employment, and the otherwise expiration of this Agreement, to provide full and complete protection to Employee as described herein, for any acts undertaken or committed in his capacity as City Manager, regardless of whether the notice of filing of a lawsuit for such tort, claim, demand, or other action occurs during or following Employee's employment with City as City Manager. The indemnification provisions of this Agreement shall not extend to any judgment for damages arising out of any willful wrongdoing or acts performed outside of the normal course and scope of Employee's employment as City Manager.

13. GENERAL PROVISIONS

A. **Notices.** Any notice to be given by either party to the other shall be in writing and shall be considered delivered when transmitted either by personal delivery or by mail, registered or certified, postage pre-paid with return receipt requested and properly addressed as follows:

To City:
MAYOR AND CITY COUNCILMEMBERS CITY OF ST. HELENA
1480 MAIN STREET
ST. HELENA, CA 94574

To Employee:
MARK PRESTWICH
Address on file with HR Department.

Any party may change its/his address for purposes of this section by giving the other party written notice of the new address in the manner set forth above.

B. **Waiver.** The waiver of any breach of any provision hereunder by either party to this Agreement shall not be deemed to be a waiver of any other provision or subsequent breach hereunder, nor shall any waiver constitute a continuing waiver. No waiver shall be binding unless executed in writing by the party making the waiver.

C. **Construction of Terms.** The language of all parts of this Agreement shall be construed according to their plain meaning and shall not be construed for or against either party. Any rule of construction to the effect that ambiguities are to be

resolved against the drafting party shall not apply in the interpretation of this Agreement or any amendment or exhibits hereto.

D. **Severability.** If any term, provision, covenant, or condition of this Agreement is held by a court of competent jurisdiction to be unenforceable, void, or invalid in whole or in part for any reason, the remainder of this Agreement shall remain in full force and effect. In the event of such entire or partial invalidity, the parties hereto agree to enter into supplemental or other agreements to effectuate the intent of the parties and the purpose of this Agreement.

E. **Controlling Law.** This Agreement shall be construed in accordance with and governed by the laws of the State of California with venue proper only in the County of Napa, State of California.

F. **Entire Agreement.** This Agreement constitutes the entire Agreement between the parties pertaining to the employment of Employee by City and supersedes all prior and contemporaneous agreements, representations, promises, and understanding of the parties whether oral or in writing. No supplement modification, or amendment of this Agreement shall be binding unless executed in writing by all parties and this Agreement may not be altered, amended, or modified by any other means. Each party waives any future right to claim, contend, or assert that this Agreement was modified, canceled, superseded, or changed by any oral agreement course of conduct, waiver, or estoppel.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement on the dates indicated.

AMENDMENT No. 2 TO
CITY MANAGER EMPLOYMENT AGREEMENT

This Amendment No. 2 is made this day of May 14, 2019, and effective July 1, 2019, between the City of St. Helena, a municipal corporation (City), and MARK PRESTWICH (City Manager or Employee), collectively "the Parties." The Parties agree to amend the June 27, 2017, Employment Agreement between the City and the City Manager as set forth below.

1. Section 1 (Term) shall be amended to read in its entirety as follows:

   "The terms of this Second Amended Agreement shall become effective on July 1, 2019 and shall remain in full force and effect until June 30, 2024, unless terminated earlier by the City or the Employee as provided in Section 7 of this Agreement."

2. Except as specified above, all other provisions of the June 27, 2017 Agreement between the Parties and Amendment No. 1 of the Agreement dated June 26, 2018 shall remain unchanged.

IN WITNESS WHEREOF, the Parties hereto have accepted, made, and executed this Agreement upon the terms, conditions, and provisions above stated, the day and year first above written.

CEQA Determination: **Exempt from the requirements of CEQA pursuant to Section 15301, Class 1, which exempts the operation, leasing, or minor alteration of existing facilities**

Prepared By: Edrees Argand, Junior Assistant Engineer

Reviewed By: Erica Ahmann Smithies, Public Works Director and City Engineer

Approved By: Mark T. Prestwich, City Manager

BACKGROUND

On Wednesday evening, March 20, 2019, Public Works staff were notified by an unincorporated County water customer on the City's water service that they were without water on Galleron Road. City Public Works staff arrived shortly after and discovered a major water leak on Highway 29 adjacent to Grgich Winery. After isolating the leak, staff were able to excavate and locate the section of the water main failure.

The depth of the City water main in the southern area is approximately 9' deep and any trench excavation 5' or greater requires a protective system (trench shoring). Due to the trench shoring requirements, Public Works staff called on two general contractors to see who was available to mobilize overnight. Ghilotti Construction Company, Inc. was the first to state they could come out immediately. The following Thursday morning, March 21, the contractor was able to isolate the failure to 13' of 12" water main. This section of pipe was replaced approximately 10 years ago with current industry standard C900 (blue pipe). The pipe had a longitudinal crack that could have initially occurred during construction over a decade ago.

At the time of the previous staff report, there was no initial estimate for the amount of work so staff recommended executing a contract of $100,000 based on time and materials to mobilize overnight, remove and replace a section of the 12" water main, follow required pressure and disinfection testing procedures, as well as backfill along Highway 29. Public Works recommended a contingency of $20,000 in order to authorize change orders for additional work that may occur beyond the current estimate. Ghilotti Construction did not forecast a number of working days at the time of the execution of the contract, but it was anticipated the water main would be repaired within a couple of days pending the extent of the damage and pending no other complications. Public Works staff remained onsite with the general contractor until all work was completed. They also coordinated directly with Ghilotti Construction on the repair work.

DISCUSSION

The Highway 29 Emergency Water Main Repair project replaced approximately 13 feet of the water main on Highway 29 approximately 1,600 ft south of Mee Lane. The contract was structured as a time and materials contract with an initial not-to-exceed amount of $100,000. There were no contract change orders for this project. The total construction contract with Ghilotti Construction Company, Inc. for the W19-01 Highway 29 Emergency Water Main Repair project is $21,232. The project was completed within the allocated budget. The Public Works Department has inspected the work and found the work to be completed satisfactorily.

FISCAL IMPACT

The contract for the W19-01 Highway 29 Emergency Water Main Repair project is structured as a time and materials contract with an initial not-to-exceed amount of $100,000. The Public Works Director recommended a contingency of $20,000 in order to process any necessary change orders for other unforeseen circumstances. Ghilotti Construction's total construction contract was $21,232 and City operation costs are estimated to cost $10,000.

RECOMMENDED ACTION

Adopt the attached Resolution accepting completion of the Ghilotti Construction Company, Inc. construction contract in the amount of $21,232 and directing the filing of the Notice of Completion for the Highway 29 Emergency Water Main Repair, Project W19-01.

CITY OF ST. HELENA

RESOLUTION NO. 2019-

Resolution accepting completion of the Ghilotti Construction Company, Inc. construction contract in the amount of $21,232 and directing the filing of the Notice of Completion for the Highway 29 Emergency Water Main Repair, Project W19-01

RECITALS

A. The City of St. Helena operates and maintains critical water infrastructure throughout the City and portions of the County; and

B. On March 20, Public Works was notified that residences on Galleron Road did not have water; and

C. Public Works discovered that a section of 12” water main was leaking on Highway 29 approximately 1,600 feet south of Mee Lane; and

D. Two contractors were contacted and Ghilotti Construction of Santa Rosa was able to respond and mobilize to the site within a couple of hours of being notified; and

E. The emergency repairs based on time and materials were initially estimated to be $100,000; and

F. Per St. Helena Municipal Code Section 3.04.170, the City Manager authorized this as emergency work and

sought ratification of the construction contract and budget retroactively; and

G. On March 26, 2019, the City Council adopted Resolution 2018-32 awarding the W19-01, Highway 29 Emergency Water Main Repair Project to Ghilotti Construction for an amount of $100,000 retroactively; and

H. On March 26, 2019, the City Council found the repair of the water main on Highway 29 to be exempt from the California Environmental Quality Act persistent to CEQA section 15301, Existing Facilities Class 1 which exempts the operation, repair, maintenance, and permitting of existing facilities involving negligible or no expansion of use including publicly owned utilities; and

I. The final contract amount, as amended, is $21,232; and

J. Ghilotti Construction Company, Inc. has completed the work in accordance with the contract documents for the project; and

K. If no liens or claims have been filled within 35 days of filing the Notice of Completion, the retained payment funds and any amount due will be released to Ghilotti Construction Company, Inc.

RESOLUTION

The City Council of the City of St. Helena hereby resolves as follows:

1. The contract entitled Highway 29 Emergency Water Main Repair, Project W19-01, with the final contract amount of $21,232, is accepted as complete, subject to the Contractor, Ghilotti Construction Company, Inc., completing the work prior to the release of the retention, and the Contractor’s continuing warranty and other obligations pursuant to the contract.

2. The Public Works Director/City Engineer is authorized to prepare a Notice of Completion and the City Clerk is directed to file a Notice of Completion with the Napa County Recorder.

Report to the City Council
Council Meeting of May 14, 2019

Agenda Section: **Consent**

Subject: **Consideration and proposed adoption of a resolution rescinding Resolution 2019-043 and adopting a revised list of projects for FY 2019-20 funded by SB 1: The Road Repair and Accountability Act of 2017**

CEQA Determination: **Exempt from the requirements of CEQA pursuant to Section 15301, Class 1, which exempts the operation, leasing, or minor alteration of existing facilities**

Prepared By: Erica Ahmann Smithies, Public Works Director and City Engineer

Reviewed By: April Mitts, Finance Director

Approved By: Mark T. Prestwich, City Manager

BACKGROUND

On April 28, 2017, the Governor signed Senate Bill (SB) 1, the Road Repair and Accountability Act of 2017. SB 1 increases per gallon fuel excise taxes; increases diesel fuel sales taxes and vehicle registration fees; and provides for inflationary adjustments to tax rates in future years. A percentage of the new RMRA funding will be apportioned by formula to eligible cities and counties pursuant to Streets and Highways Code Section 2032(h) for basic road maintenance, rehabilitation, and critical safety projects on the local streets and roads system. The anticipated RMRA revenue to the City for FY 2019-20 is approximately $101,263. The recommended action will ensure the City receives these revenues as anticipated.

Prior to receiving an apportionment of RMRA funds in FY 2019-20, the City is required to submit to the California Transportation Commission a list of projects proposed to be funded by May 1, 2019. The list of projects proposed to be funded with these funds shall include:

- A description of the project;
- The location of each proposed project;
- A proposed schedule for the project's completion; and

- The estimated useful life of the improvement

DISCUSSION

On April 23, 2019, City Council adopted Resolution 2019-043 which approved a list of projects to be funded by SB 1 funds in FY 2019-20. The adopted list of projects was then submitted to the State as required on May 1, 2019. The State has since requested that the City revise the list of projects to more accurately reflect the amount of SB 1 funds that can be spent on improvements and submit the revision no later than June 1, 2019. The anticipated revenue of FY 2019-20 SB 1 funds is approximately $108,000. City staff is therefore recommending the proposed project list be limited to the Downtown Sidewalk and Pedestrian Project, Project No. R18-81. The SB 1 funds do carryover from year to year and any unused funds can be spent on other City funded projects in accordance with local needs and priorities so long as the projects are consistent with SB 1 and adopted by City Council.

Staff recommends that City Council approve the revised SB 1 street project list for FY 2019-20 in order to meet the June 1, 2019 deadline.

FISCAL IMPACT

SB 1 requires the City to provide an annual general fund Maintenance of Effort (MOE) in the amount of $314,571. However, the MOE specific expenditures do not need to be reflected in the approved project list. The proposed FY 2019-20 Capital Improvements Plan Budget and proposed FY 2019-20 Operations Budget includes $379,189 in General Funds for City Streets to meet the MOE requirement of both SB 1 and Measure T funding. There is no additional fiscal impact with the adoption of the resolution approving the Road Maintenance and Rehabilitation Account Project List for FY 2019-20.

RECOMMENDED ACTION

Adopt a resolution rescinding Resolution 2019-043 and adopting a revised list of projects for fiscal year 2019-20 funded by SB 1: The Road Repair and Accountability Act of 2017

CITY OF ST. HELENA

RESOLUTION NO. 2019-__

RESOLUTION RESCINDING RESOLUTION 2019-043 AND ADOPTING A REVISED LIST OF PROJECTS FOR FISCAL YEAR 2019/20 FUNDED BY SB1: THE ROAD REPAIR AND ACCOUNTABILITY ACT OF 2017.

RECITALS

A. Senate Bill 1 (SB 1), the Road Repair and Accountability Act of 2017 (Chapter 5, Statutes of 2017) was passed by the Legislature and Signed into law by the Governor in April 2017 to address the significant multi-modal transportation funding shortfalls statewide; and

B. SB 1 includes accountability and transparency provisions that will ensure the residents of our City are aware of the projects proposed for funding in our community and which projects have been completed each fiscal year; and

C. The City must adopt by resolution a list of projects proposed to receive fiscal year funding from the Road Maintenance and Rehabilitation Account (RMRA), created by SB 1, which must include a description and the location of each proposed project, a proposed schedule for the project's completion, and the estimated useful life of the improvement; and

D. The City, will receive an estimated $101,263 in RMRA funding in Fiscal Year 2019-20 from SB 1; and

E. This is the third year in which the City is receiving SB 1 funding and will enable the City to continue essential road maintenance and rehabilitation projects, safety improvements, repairing and replacing aging bridges, and increasing access and mobility options for the traveling public that would not have otherwise been possible without SB 1; and

F. The City has undergone a robust public process to ensure public input into our community's transportation priorities/the project list; and

G. The City used a Pavement Management System to assist in developing the SB 1 project list to ensure revenues are being used on the most high-priority and cost-effective projects that also meet the community's priorities for transportation investment; and

H. The funding from SB 1 will help the City maintain and rehabilitate streets, roads, bridges, add active transportation infrastructure throughout the City this year and similar projects into the future; and

I. The 2018 California Statewide Local Streets and Roads Needs Assessment found that the City's streets and roads are in an at-risk condition and this revenue will help the City increase the overall quality of our road system and over the next decade will bring our streets and roads into a good to excellent condition; and

J. The SB 1 project list and overall investment in our local streets and roads infrastructure with a focus on basic maintenance and safety, investing in complete streets infrastructure, and using cutting-edge technology, materials and practices, will have significant positive co-benefits statewide.

K. The project is exempt from the requirements of CEQA pursuant to Section 15301, Class 1, which exempts the operation, leasing, or minor alteration of existing facilities.

RESOLUTION

NOW, THEREFORE, the City Council of the City of St. Helena resolves as follows:

1. The foregoing recitals are true and correct; and

2. The following list of previously proposed projects in Exhibit "A" will be funded in-part or solely with fiscal year 2019/20 Road Maintenance and Rehabilitation Account revenues.

BACKGROUND

Charles (Tim) Meadows, Jr. owner of 1710 Dean York Lane, St Helena, CA 94574, Napa County Assessor Parcel Number (APN) 009-680-004-000, has applied to be annexed into the St. Helena Municipal Sewer District No. 1 (District). A location map and description for the property is shown in Attachment 2. City Council approval of the connection is the formal administrative process to change the property's tax rate area code from septic to sanitary sewer for tax purposes.

DISCUSSION

The property is currently on a septic system and on April 23, 2019 the City Council ordered the annexation and set today's hearing to annex the territory into the St Helena Municipal Sewer District No. 1, MSD Annexation No. 136. The sewer impact fee has been paid and is calculated on the livable area currently on file with the Napa County Assessor's office. At the time of connection to the City sewer, the existing septic system will be destroyed in accordance with Napa County Department of Environmental Management guidelines.

On April 23, 2019, in accordance with Health & Safety Code §§ 4641 et seq., the City Council approved via consent to provide notice for this public hearing regarding the proposed annexation. The purpose of the public hearing is to hear from persons interested in the proposed annexation, and consider approval of this resolution to approve the annexation. This resolution for annexation requires at least four affirmative votes. (Health & Saf. Code §§ 4645-47.)

If the City Council approves this resolution, City staff will then process the annexation with Napa County and the State Board of Equalization to change the tax rate area code for the property and record the resolution. Staff will work with the Applicant to obtain required encroachment and sewer connection permits.

FISCAL IMPACT

The Applicant is responsible to construct the sewer lateral and connect to the house; pay annexation, connection, and impact fees in addition to any applicable Building Department fees.

RECOMMENDED ACTION

Adopt Resolution Approving the Annexation of Territory into the St Helena Municipal Sewer District No. 1 MSD Annexation No. 136, 1710 Dean York Lane, St Helena, CA. 94574 (APN) 009-680-004-000.

CITY OF ST. HELENA

RESOLUTION NO. 2019-

APPROVE THE ANNEXATION OF TERRITORY INTO THE ST. HELENA MUNICIPAL SEWER DISTRICT NO. 1

MSD ANNEXATION NO. 136

1710 Dean York Lane, St Helena, CA
(APN's) 009-680-004-000

RECITALS

A. The property at 1710 Dean York Lane, St. Helena, CA (APN) 009-680-004-000 will benefit from annexation into the St. Helena Municipal Sewer District No. 1; and

B. The owner of 1710 Dean York Lane has requested annexation into the St. Helena Municipal Sewer District No.1; and

C. The legal description and boundary for the territory to be annexed is described in Attachment 2 – Location Map and Description; and

D. A public hearing regarding this proposed annexation was ordered on April 23, 2019, and duly noticed and held on May 14, 2019 at a regular meeting of the City Council of the City of St. Helena; and

E. All annexation fees have been paid; and

F. The City has complied with all laws applicable to these annexation proceedings, including without limitation Health & Safety Code sections 4641 et seq.

RESOLUTION

The City Council of the City of St. Helena hereby resolves as follows:

1. The territory described in the attached Exhibit A – Annexation Description, commonly known as 1710 Dean York Lane, St Helena, CA (APN) 009-680-004-000 are hereby ordered annexed; and

2. The City Clerk shall cause a certified copy of this Resolution to be recorded with the official records of the County of Napa, pursuant to section 4647 of the Health & Safety Code.

Report to the City Council
Council Meeting of May 14, 2019

Agenda Section: **Public Hearing**

Subject: **Review and Certification of the draft Final Program Environmental Impact Report (EIR), including the Response to Comments, Mitigation Monitoring and Reporting Program (MMRP) and proposed Statement of Overriding Considerations, and adoption of the draft St. Helena 2040 General Plan Update including all properties Citywide and in three specific Study Areas located to the south and east of the current St. Helena City limits, as identified therein.**

CEQA Determination: **Environmental Impact Report**

Prepared By: Noah Housh, Planning & Community Improvement Director

Reviewed By: Mark T. Prestwich, City Manager

Approved By: Mark T. Prestwich, City Manager

BACKGROUND

The General Plan update formally began in April 2007, with the "Community Visioning and Existing Analysis" process undertaken by the General Plan Update Steering Committee (GPUSC). This effort involved extensive community input leading to the preparation of first full draft of the General Plan in the summer of 2010. Concurrently, environmental analysis was also taking place and lead to the completion of the General Plan Update Draft EIR in August 2010.

The General Plan Update Draft EIR was subsequently circulated for public review, comments were received, and a Final EIR (FEIR) was prepared in October 2010 in accordance with the requirements of CEQA. The Planning Commission completed its review and recommended City Council approval of the document in October 2010.

During the City Council review in late 2010, a number of issues surfaced, most notably concerning water supply. Ultimately, the City Council decided to postpone action on the

General Plan in order to appropriately address the issue of water supply. A “Safe Yield Committee” was formed and a Water Management Program was developed. The Water Management Program was adopted by Council in November 2012, and thereafter incorporated into the draft General Plan (see Element Four-Public Facilities and Services).

The City Council continued with a detailed review of the draft General Plan during numerous hearings held from late 2013 through June of 2014. In the late summer and fall of 2014, the Planning Commission reviewed the various changes made by the Council since the Commission had reviewed the General Plan in October 2010. However, no significant action was taken to formally update the associated EIR, as the focus appears to have been on updating the General Plan document itself. During this time frame, the Planning and Community Improvement Department also experienced significant staff turnover, impacting the ability for the City to efficiently manage the EIR and General Plan update process.

On April 15, 2015, the City Council held a Study Session on the St Helena General Plan update, and provided direction to City staff regarding the creation of a new residential land use category, Low-Medium Density Residential. This designation was intended to better fit the existing density and development pattern of a majority of the City’s single family neighborhoods (which are primarily developed at approximately 5-6 units per acre) than the current Medium Density Residential designation which allows an unusually wide density range of 5 to 16 dwelling units per acre.

Between April and August of 2016, the Planning Commission held six study sessions to review the 2016 draft of the St Helena General Plan Update (April 19, 2016, May 17, 2016, June 7, 2016, June 21, 2016, July 19, 2016, and August 2, 2016).

At the July 19, 2016, Planning Commission meeting the Chairperson and Vice Chairperson, presented a compilation of the comments and direction concerning the General Plan taken from the preceding Commission Study Sessions. This summary augmented and clarified the summary contained in the staff report prepared for the meeting. The Commission spent the majority of the July 19, 2016, Study Session reviewing and discussing the summary as prepared by the Commission Chair and Vice Chair. After a thorough discussion of the document, the Commission directed staff to incorporate into the summary the various changes/edits as agreed to by the Commission and further directed that staff present this revised summary to the Commission at the August 2, 2016, Commission meeting, which occurred.

On January 9, 2018, the City Council approved a contract with Dyett and Bhatia to finalize the St Helena 2040 General Plan Update and draft a new EIR for the document. In approving this contract, concerns over finalizing the scope of the General Plan Update and EIR analysis were expressed by the City Council.

On February 20, 2018, the Planning Commission and City Council met at a Joint Meeting to provide input and finalize the scope of both the 2040 General Plan Update

and the resulting environmental analysis (EIR) required to analyze the project under the California Environmental Quality Act (CEQA). The final scope of the General Plan Update was determined at this meeting, including input on the planned Study Areas located outside of the City boundary and co-terminus Sphere of Influence (SOI).

On April 1, 2018, the City issued a Notice of Preparation (NOP) informing community members, Responsible Agencies, and all other parties interested in the City's 2040 General Plan Update that an EIR analysis was going to commence. This NOP requested input from all interested parties regarding the Scope of the EIR analysis, with comments being requested between April 1, 2018 - May 1, 2018. The City held an EIR Scoping meeting at 6:00 pm on April 17, 2018, in the Vintage Hall Board Room, 465 Main St, St. Helena CA, to allow interested individuals to provide their input and feedback to directly to the Planning Commission, City staff, and the CEQA consultant. A summary of all comments received during this period is attached.

On August 14, 2018, the Planning Commission and City Council met at a Joint Meeting to provide final direction and input on the scope of both the 2040 General Plan Update and the resulting environmental analysis (EIR) required to analyze the project under the California Environmental Quality Act (CEQA). This meeting provided another opportunity for the public, Responsible Agencies, and any other interested party to provide input on the proposed scope of the EIR and/or General Plan Update.

On October 23, 2018, the City of St. Helena published the draft EIR for public review and comment, providing a 72-day comment period rather than the typical (and legally required) 45-day review and comment period. This period ended on January 2, 2019, and work began on the draft Final EIR, including the Response to Comments.

On March 19, 2019, the Planning Commission reviewed the 2040 General Plan and the draft Final EIR, including the Response to Comments and Mitigation Monitoring and Reporting Plan. After reviewing the documents, the staff report, and all verbal and written comments, the Planning Commission recommended a few additional changes be made to the 2040 General Plan (discussed in detail below) and identified their conceptual support for the environmentally superior Transportation Network Enhancement Alternative, which proposes improvements to the transportation network to facilitate access through the community for local residents traveling by all modes of transportation.

On April 2, 2019, the Planning Commission formalized their support for the 2040 General Plan Transportation Network Enhancement Alternative and adopted a resolution recommending that the City Council adopt this environmentally superior General Plan, while also making the required findings to support and recommend that the City Council first certify the draft Final EIR for this Plan (including the Response to Comments and the Mitigation Monitoring and Reporting Plan), including adopting a Statement of Overriding Considerations for the Project's significant and unavoidable impacts.

DISCUSSION

Project Description

The project before the City Council is adoption of the City of St. Helena 2040 General Plan Update and associated Program Environmental Impact Report (EIR), Transportation Network Enhancement Alternative. The 2040 General Plan, while informed by elements of the existing 1993 General Plan, is a complete update to the City's primary guiding policy document (the General Plan) and includes all elements and actions necessary to revise and replace the existing 1993 St. Helena General Plan.

2040 General Plan Update

Consistent with the procedural direction provided in Chapter 17.12 of the St. Helena Municipal Code, the City Council is being presented with the final draft of the St. Helena 2040 General Plan and Program EIR for adoption and certification. This General Plan Update is a complete and comprehensive re-write of the City's current 1993 General Plan, providing updated and expanded policy direction for nearly every aspect of City operations.

The General Plan is a policy document that serves as the City's "constitution" or "blueprint" for all future land use, development, infrastructure, circulation, and agricultural conservation decisions. General Plans must be comprehensive and long-term and therefore 2040 General Plan Update presents a vision for the City's future and a strategy to make that vision a reality, while also presenting policies to guide day-to-day decisions of the City. As summarized below, the Plan is the result of hundreds of hours of public meetings and the collective efforts of individuals from throughout the City who have articulated their hopes and expectations for the future.

As a comprehensive update, the 2040 General Plan provides a framework for the City's physical, economic, and social development, while also looking to preserve and protect environmental and agricultural resources within the community. It addresses all geographic areas within the City (and for the first time), begins to look at areas beyond the City's boundary, but where City services are provided and where external actions and development may affect City residents and the provision of these services.

The 2040 General Plan Update is broken in 13 chapters (Introduction; Land Use and Growth Management; Economic Sustainability; Public Facilities and Services; Circulation; Historic Resources; Community Design; Open Space and Conservation; Public Health; Safety and Noise; Climate Change; Housing (previously adopted in 2015); Parks and Recreation; and Arts and Culture), and sets forth a purpose, key findings, goals, policies and programs in each of the individual chapters.

Process Summary

As identified above, the City began the update process in April of 2007, creating a General Plan and Update Steering Committee (GPUSC) and initiating a Community Visioning and Existing Conditions Analysis which went through February 2008. Following this community engagement process, a Policy and Physical Framework

Development phase began, utilizing multiple land use and design charrettes to further engage the community, exploring key land use issues and opportunities. In April 2009, formal development of the draft General Plan document began and eight individual GPUSC meetings were held to review iterative drafts of the document. Two additional community design workshops were held in fall of 2009, to specifically discuss community design and circulation, which were followed by additional public meetings in early 2010 to review the entire draft document. The forth phase of the creation and adoption process began in summer of 2010, however this process stalled due to a number of factors including drought driven concerns over the City's water supply and infrastructure, staffing impacts in City Hall, and a series of changes in State level policy and regulations affecting the general plan drafting and update process. More detail is provided on each of these phases in Chapter One of the General Plan itself.

Through this 12-year process, the core of the General Plan Update document has remained significantly intact from a policy perspective, including the established purpose, key findings, goals, policies, and programs identified and prioritized (in each of the chapters) by the community. The primary changes in the document have resulted from updates to regional plans and supporting documentation, changes in regulations and requirements at the State level and, some minor language and policy changes initiated at the recommendation of the consultant, the Planning Commission and City Council. Specifically and in addition to the scope of the policy revisions, the 2040 General Plan does identify 13 'Land Use Change Areas' (where existing land use designations are proposed to be modified), and three 'Study Areas' located just beyond the established City boundary and co-terminus Sphere of Influence.

Finally, one further departure from the core 2040 General Plan Update, was the Planning Commission's recommendation that the City Council adopt an environmentally superior project alternative, namely the 2040 General Plan Transportation Network Enhancement Alternative. This is discussed in more detail below.

In accordance with common and generally accepted planning practice, the amount of development studied in the EIR is a reasonably foreseeable projection of the growth in population, housing units, and employment likely to occur by 2040 with implementation of the proposed General Plan. This projection was based on an analysis of building permits, development trends, and pipeline projects in St. Helena and was developed with reference to past and projected population, housing, and employment data from the California Department of Finance and the Association of Bay Area Governments (ABAG). The growth projection assumes the development of opportunity sites in the City’s adopted 2015-2023 Housing Element as well as additional residential and non-residential development, primarily in key change areas, through 2040. The growth projections assumed in the EIR represents the maximum increment anticipated under the 2040 General Plan. Any new development potential above the amount identified and studied in the EIR would require additional environmental review (and potentially an amendment to the General Plan).

Scope of the 2040 General Plan Update

As identified above, the 2040 General Plan Update is a comprehensive revision of the City's guiding policy document, the General Plan. As such, it includes both the legally required General Plan elements (Land Use; Circulation; Open Space and Conservation; Public Health, Safety and Welfare; and Housing) as well as a number of additional elements (Economic Sustainability; Public Facilities and Services; Historic Resources; Community Design; Climate Change; Parks and Recreation; and Arts and Culture) intended to specifically address and implement the community's vision and over-arching goals. Each of these Elements identifies Goals, Polices, and Implementing Actions associated with how the individual element is to be approached through City policy and action over the life of the Plan.

As part of the Update and environmental review process, the City considered the amount of new development that could reasonably be anticipated to occur throughout the City (including within the 13 proposed "change areas") through 2040, based on existing and proposed land use designations. This development potential was broken down by land use types, gross floor area, number of housing units, number of hotel rooms, jobs, etc. An EIR was prepared that analyzed the potential for environmental impacts associated with all elements of the proposed 2040 General Plan, including subsequent development, infrastructure needs and future service levels.

Given that this is a comprehensive update based on hours of public engagement and community input which proposes changes throughout the City, staff recommends interested individuals review the draft 2040 General Plan for information on this Update. However, information is provided below on some of the more significant land use changes proposed with the Plan.

Thirteen Change Areas

The most substantial land use changes in the 2040 Update are identified in the 13 "change areas", where the General Plan designations for approximately 50 parcels are proposed to be changed or modified. These are identified beginning on page 2-21 (and including Figure 2.8) of the General Plan document. Most changes intensify land use on parcels within close proximity to the City core; however, a few of the change areas include modification of the Urban Limit Line and reducing the allowable densities on several parcels.

Creation of the Mixed-Use Land Use Designation

One of the more notable change areas identified and discussed above, is the creation and application of a Mixed-Use land use designation to (approximately) 22 parcels totaling (approximately) 31.73 acres within St. Helena. This is most notable as there is currently no such land use designation on any parcels within St. Helena. The 2040 General Plan describes this designation as:

Mixed-Use (MU). The MU land use designation allows medium- to high-density residential mixed with retail, office, restaurant, or other commercial uses. The maximum allowable residential density in MU areas is 20 dwelling units per acre. The intent of this land use designation is to protect the Urban Limit Line by encouraging a mix of uses at infill locations and reduce greenhouse gas emissions by locating housing opportunities within close proximity to commercial and retail.

CEQA

After awarding the contract to Dyett and Bhatia, and finalizing the scope of the General Plan Update with the Planning Commission and City Council, the CEQA review process began in earnest. The first step in this process was to request comments and guidance on the scope and content of the EIR from responsible and trustee agencies, interested public agencies, organizations, and the general public (CEQA Guidelines §15082). This is done through the issuance of a Notice of Preparation (NOP), which the City issued on April 2, 2018, requesting that all comments be provided by May 1, 2018. The Planning Commission held a public scoping meeting on April 17, 2018, to both solicit verbal comments from interested individuals whom may not want to provide written comments, and to allow clarifying questions and answers to be discussed prior to the submission of written scoping comments. The EIR scoping process identified significant community concern in the areas of traffic, emergency evacuation and access (including flooding), and water supply.

After the conclusion of the scoping period, the City (through the consultant) formally began the analysis portion of the EIR, analyzing potential environmental impacts of the proposed 2040 General Plan Update. The EIR analyzed all areas of potential environmental impacts required under CEQA and included analysis of project specific impacts as well as cumulative impacts likely to result from implementation of the project.

This Draft EIR was circulated for a 72-day public review and comment period (extended beyond the required 45-day comment period to accommodate for holiday impacts and schedules) to allow responsible agencies as well as other interested agencies and the general public an opportunity to comment on the draft EIR. This comment period began on October 23, 2018, and ended on January 2, 2019. Similar to the scoping process, a public hearing to receive oral comments was held with the Planning Commission on December 4, 2018, at Vintage Hall, 465 Main St, St Helena, CA 94574.

<u>Public Comments</u>

During the comment period, over 350 individual comments were received; however, many were specific to the 2040 General Plan itself rather than the EIR analysis. While not legally required to generate a response, staff has directed the consultant to provide formal responses to certain specific General Plan comments which question the legal adequacy of the 2040 General Plan Update, as well as comments on the EIR itself (which do legally require a response).

Public and Agency Comments on the General Plan

Overall, public and agency comments on the Draft General Plan generally included recommendations for minor edits to improve the clarity of information in the document and did not recommend substantive changes to the content or policy framework. These edits are reflected in the Hearing Draft General Plan included as Attachment 1 to this packet. A punch list of edits made to create the Hearing Draft is included as Attachment 2 for reference.

Some of the public and agency comments on the Draft General Plan warrant highlighting here, as they relate to the legal requirements for a General Plan or because they require further consideration or direction from the Planning Commission and City Council:

-Levee/Floodwall Failure: One commenter requested a map of areas at risk in the event of levee/floodwall failure be included in the General Plan and provided several comments related to associated risks. A detailed response to these comments is included in the Final EIR, included in this packet as Attachment 4. In summary, the requirement for inclusion of a map of areas at risk in the event of levee/floodwall failure does not apply to St. Helena and maps already included in the Draft General Plan fulfill the basic requirements for the Safety Element. Nevertheless, a separate map showing the area potentially affected by a levee or floodwall failure is provided for informational purposes in the Final EIR and attached hereto as Attachment 8. This graphic depicts an area substantially similar to the FEMA FIRM area depicted on Figure 9.1 of the Draft General Plan.

-Farmland Mitigation: In response to a comment from the Division of Land Resource Protection of the California Department of Conservation, a new action (LU5.I) regarding the establishment of a farmland mitigation program has been incorporated into the General Plan to offset the loss of prime farmland in St. Helena as development occurs. While the Draft EIR cited numerous policies in the Draft General Plan which address the potential loss of prime farmland, the Division pointed out that, under CEQA, lead agencies must consider all feasible measures that address significant impacts and as such this additional action has been added to the General Plan to fulfill this legal requirement. Nevertheless, as noted in the Final EIR, even with the addition of this implementing action and implementation of other Proposed Plan policies that would reduce the impact as cited in Section 3.2 of the Draft EIR, the impact would remain significant and unavoidable as agricultural land is a finite and irreplaceable resource.

-Land Use Element Action LU1.A: A commenter has pointed out that a portion of this action in the Draft General Plan – specifically the section that reads “consider allowing the division of single-family homes into two or more units under appropriate circumstances” -- could be construed as being in conflict with recent State law regarding Accessory Dwelling Units (ADUs), given that ADUs need not be detached from the main dwelling unit and can be created from extensions or divisions of the main unit. To eliminate this issue, one solution supported by the Planning Commission would be to strike the quoted portion from the text of the action.

-Noise Evaluation Criteria: One commenter pointed out that the 1993 General Plan included a criterion whereby “An increase in the noise environment of 5 dBA or greater is considered to be subjectively significant and to constitute noise impact by the noise source in question” and recommended that this criterion be re-instated. Such a criterion is typically used in noise impact analysis under CEQA and is found in other California General Plans. Staff notes that as described in detail in Chapter 3.11 of the Draft EIR, buildout of the Proposed General Plan is not anticipated to increase noise levels greater than 3dBA CNEL over existing conditions.

-Implementation of Pedestrian Improvements: The Napa Valley Transportation Authority (NVTA) requested inclusion of an action to implement the improvements identified for St. Helena in the 2016 Napa Countywide Pedestrian Plan. To address this comment, the following action could be added to the General Plan: “Coordinate with NVTA, Napa County, and property and business owners and seek funding to implement the improvements identified for St. Helena in the 2016 Napa Countywide Pedestrian Plan.”

Public and Agency Comments on the EIR
The Final EIR contains the full text of all written public and agency comments on the Draft EIR as well as a summary of oral comments made at the December 4, 2018, Planning Commission meeting. Responses to these comments are presented alongside the original comment in a matrix in the Final EIR for ease of reference. The responses represent corrections or clarifications to the Draft EIR and do not constitute significant new information pursuant to Section 15088.5 of the CEQA Guidelines; rather these revisions merely clarify and/or make insignificant informational changes to an adequate EIR. Information presented in the Draft FEIR and this document support this determination.

<u>March 19 and April 2, 2019 Planning Commission Review</u>

On March 19 and April 2, 2019, the Planning Commission conducted a public hearing to review the 2040 General Plan Update and FEIR, including all comments received on the project, the Response to Comments, the Mitigation Monitoring and Reporting Program (MMRP), Alternative Analysis and all related and applicable appendices and attachments to these documents at regularly scheduled and notice public hearings of the Commission.

At these hearings, the Planning Commission reviewed all reports, written and oral, took multiple public comments (also written and oral) and deliberated extensively on the 2040 General Plan and draft Final EIR, including all alternatives analyzed and presented. Most of the public comments received at this meeting were specific to Change Area 10, where the General Plan identifies four parcels along Church Street (totaling 0.39 acres) be re-designated from Medium Density Residential to Mixed-Use or allow the parcels to be developed as a parking lot. These comments requested that the Planning Commission remove this change area, keeping the land use as Medium Density Residential.

In their review and primarily in response to the public comments received, the Planning Commission voted unanimously (5-0) to recommend that the City Council certify the Final EIR for the St. Helena 2040 General Plan Update and in doing so, made the following recommendations regarding modifications to the 2040 General Plan:

1. Modify General Plan Policy LU1.A to remove the reference to Accessory Dwelling Units and to state "...allow the division of single family homes into duplex and triplex units as by-right in the Medium and High Density Residential Zoning Districts" to make the policy more clear.

2. To maintain and ensure that the Significance Criteria for Noise related Impacts be a 5 dB threshold of significance.

3. Reference the County-wide Pedestrian Plan, without referencing a specific date or version, to assist with keeping the 2040 General Plan document up-to-date as additional County-wide plans are conducted over the life of the General Plan.

4. Remove the Mixed Use re-designation and parking lot references identified in Change Area 10, in favor of keeping the parcels Medium Density Residential.

5. After reviewing the environmental impacts of the associated Program EIR for the 2040 General Plan, the Planning Commission voted to support the environmentally superior alternative, the Transportation Network Enhancement Alternative. This Alternative is very similar to the Project analyzed under the 2040 General Plan Program EIR, however this alternative maintains the extension of Oak Avenue currently identified in the 1993 General Plan without requiring the "special study" and specific City Council approval referenced (in the 2040 General Plan) for all other street extensions to be constructed.

This Alternative was identified as reducing 200 vehicle trips off of Highway 29, reducing overall vehicle miles traveled (VMT) of the 2040 General Plan, enhancing the bicycle and pedestrian circulation network through the City and providing circulation options for students by improving school connections. The Planning Commission supported this Alternative for these reasons; the reasons identified and discussed in the resolution findings; for the overall delay and capacity improvements on Highway 29; the reduction in VMT and the associated Green House Gas emissions; the potential expanded safe routes to schools and for the improvements to the overall pedestrian experience in the community.

Summary of CEQA Findings

As shown in the EIR's Table ES-4: *Summary of Impacts and Mitigation Measures,* implementation of the 2040 General Plan Update will result in several significant and unavoidable environmental impacts, including impacts related to agricultural resources; air quality; energy; greenhouse gas emissions and climate change; and traffic and

circulation. These impacts will remain significant and unavoidable even after the implementation of all feasible mitigation measures. It is not uncommon for an EIR to find significant environmental impacts for which there are no feasible mitigation measures available to completely reduce the level of impact to a "less than significant" level.

It should be noted that significant and unavoidable impacts from the Plan related to air quality; energy; greenhouse gas emissions and climate change; and traffic and circulation are cumulative in nature, and are anticipated to result from implementation of the Proposed Plan in combination with other past, present and reasonably foreseeable projects in the City, the surrounding area and the wider region. Consequently, action by the City alone is not sufficient to avoid these impacts or to reduce them to a "less than significant" level. For that, additional action at the regional or state level would be required; however, no such action at the regional or state level has yet been identified and it is beyond the City authority to bring about such action. It is primarily for these reasons that the identified impacts are deemed to be significant and unavoidable.

The Draft EIR evaluated two alternatives to the "Proposed Project" (the 2040 General Plan draft), including the No Project Alternative, which represents the continuation of the City's currently adopted 1993 General Plan, and the Transportation Network Enhancement Alternative, which proposes improvements to the transportation network to facilitate access through the community for local residents traveling by all modes of transportation. While the proposed land use diagrams of the two alternatives and the Proposed Plan are similar, the policies included in the No Project Alternative in many cases do not address the broad range of environmental topics covered by the Transportation Network Enhancement Alternative and Proposed Plan, and are not up to date with current laws and practices concerning environmental impacts. Therefore, of the two alternatives analyzed, the Transportation Network Enhancement Alternative was identified as the environmentally superior alternative. However, while the Transportation Network Enhancement Alternative could relieve impacts related to vehicle congestion and improve access to transportation, making it the environmentally superior of the two alternatives, the proposed extension of Oak Street under this alternative would result in new potentially significant environmental impacts related to noise, air pollutants, GHG emissions, and hydrology not present with the Proposed Plan. Therefore, overall, the Proposed Project (the 2040 General Plan) was found to have fewer potentially significant and unavoidable impacts than either the Transportation Network Enhancement Alternative and the No Project Alternative.

In such cases, CEQA does not preclude the lead agency from proceeding with the "Proposed Project", or an Alternative analysed in the EIR. In order to approve the 2040 General Plan Update or the Transportation Network Alternative, despite their significant and unavoidable impacts, the City Council will have to make a specific finding called a "statement of overriding considerations" (consistent with CEQA Guidelines Section 15093) to explain the specific economic, legal, social, technological or other benefits of the 2040 General Plan Update that, on balance, outweigh and make the Project's significant and unavoidable impacts acceptable.

The attached resolution includes reasoning and justification articulated by the Planning Commission in recommending that the the Council adopt the Transportation Network Enhancement Alternative (identified as environmentally superior) and the associated and required statement of overriding considerations supporting the recommended project alternative

If the City Council certifies the EIR for the 2040 General Plan Update Transportation Network Alternative (or another Alternative), all future projects will be subject to any applicable mitigation measures contained in the adopted Mitigation Monitoring and Reporting Program (MMRP). Further, any projects that are within the parameters of the Plan may tier from the certified EIR when conducting their CEQA analysis. However, depending on the proposed project, further project-specific environmental analysis may be necessary. Any increases in the development potential beyond those analyzed, either as a general plan amendment, rezoning or project specific intensity not analyzed in the EIR analysis, would be required to undergo separate environmental review.

Additional Public Comment

All public comments received have been provided, responded to and in some cases thoroughly discussed in the attached documents and by the Planning Commission with the exception of one additional public comment (received after the April 2, 2019 meeting) which identified concerns over the Enhanced Transportation Improvement Alternative, due to the likely resulting changes on Oak Avenue.

FISCAL IMPACT

Given the comprehensive scope and 20-year horizon time line of the 2040 General Plan, the fiscal impacts to the City resulting from its implementation are both significant and unidentifiable. Increasing property values are likely to boost tax revenues as redevelopment occurs; development application and impact fee payments will be made into the General Fund and various impact accounts; the mix and volume of sales tax and Transit Occupancy Taxes will fluctuate as market forces affect the individual economy of St. Helena; and the City will continue to function as a "full service" city, providing a variety of services to each of the properties affected by the Plan. However, these effects would occur incrementally over the 20-year time period and given this, are not identified by staff as concerning or unmanageable.

RECOMMENDED ACTION

It is recommended by the Planning Commission and the Community Improvement Department that the City Council:

1. Certify the Final EIR and adopt the CEQA findings of fact and statement of overriding considerations for the St. Helena 2040 General Plan Update Transportation Network Enhancement Alternative (Exhibit A); and
2. Adopt the Mitigation Monitoring and Reporting Program for the St. Helena 2040 General Plan Update FEIR (Exhibit B); and
3. Approve and adopt the St. Helena 2040 General Plan Update, directing staff to make any desired revisions including those recommended by the Planning

Commission including changes required to incorporate the Transportation Network Enhancement Alternative General Plan Update.

CITY OF ST. HELENA

RESOLUTION NO. 2019-

RESOLUTION OF THE COUNCIL OF THE CITY OF ST. HELENA CERTIFYING THE ST. HELENA 2040 GENERAL PLAN UPDATE FINAL ENVIRONMENTAL IMPACT REPORT AND ADOPTING THE ST. HELENA 2040 GENERAL PLAN UPDATE TRANSPORTATION NETWORK ENHANCEMENT ALTERNATIVE, CITYWIDE AND INCLUSIVE OF THE THREE IDENTIFIED STUDY AREAS BEYOND THE CITY BOUNDARY

Recitals

A. State law requires the City of St. Helena to adopt and maintain a general plan and contains certain mandatory elements, describes the City's long-term goals and develops policies and programs to achieve those goals; and

B. The City of St. Helena last completed a comprehensive update of its General Plan, which was approved by the City Council in 1993; and

C. The General Plan update formally began in April 2007, with the "Community Visioning and Existing Analysis" process undertaken by the General Plan Update Steering Committee (GPUSC). This effort involved extensive community input leading to the preparation of first full draft of the General Plan in the summer of 2010. Concurrently, environmental analysis was also taking place, leading to the completion of the General Plan Update Draft EIR in August 2010; and

D. The General Plan Update Draft EIR was subsequently circulated for review, comments were received, and a Final EIR (FEIR) was prepared in October 2010. The Planning Commission completed its review and recommended City Council approval of the document in October 2010, and

E. During the City Council review in late 2010, a number of issues surfaced, most notably concerning water supply. Ultimately, the City Council decided to postpone action on the General Plan in order to appropriately address the issue of water supply. A "Safe Yield Committee" was formed and a Water Management Program was developed. The Water Management Program was adopted by Council in November 2012, and thereafter incorporated into the draft General Plan, and

F. The City Council continued with a detailed review of the draft General Plan during numerous hearings held from late 2013 through June of 2014; and

G. Between April and August of 2016, the Planning Commission held six study sessions to review the 2016 draft of the St Helena 2035 General Plan Update (April

19, 2016, May 17, 2016, June 7, 2016, June 21, 2016, and July 19, 2016, and August 2, 2016); and

H. On July 19, 2016, the Commission directed staff to incorporate various changes/edits and further directed that staff present this revised summary to the Commission at the August 2, 2016, Commission meeting, which occurred; and

I. On January 9, 2018, the City Council approved a contract with Dyett and Bhatia to finalize the St Helena 2040 General Plan Update (sometimes also hereinafter referred to as the "Project") and draft a new EIR for the document. In approving this contract, concerns over finalizing the scope of the General Plan Update and EIR analysis were expressed by the City Council; and

J. On February 20, 2018, the Planning Commission and City Council met at a Joint Meeting to finalize the scope of both the 2040 General Plan Update and the resulting environmental analysis (EIR) required to analyze the project under the California Environmental Quality Act (CEQA). The final scope of the General Plan Update was determined at this meeting, including input on the planned Study Areas located outside of the City boundary and co-terminus Sphere of Influence (SOI); and

K. On April 1, 2018, the City issued a Notice of Preparation (NOP) informing community members, Responsible Agencies and all other parties interested in the City's 2040 General Plan Update that an EIR analysis was going to commence. This NOP requested input from all interested parties regarding the Scope of the EIR analysis, with comments being requested between April 1, 2018 - May 1, 2018; and

L. The City held an EIR Scoping meeting at 6:00 pm on April 17, 2018, in the Vintage Hall Board Room, 265 Main St, St. Helena CA, to allow interested individuals to provide their input and feedback to directly; and

M. On August 14, 2018, the Planning Commission and City Council met at a Joint Meeting to provide final direction and input on the scope of both the 2040 General Plan Update and the resulting environmental analysis (EIR) required to analyze the project under the California Environmental Quality Act (CEQA); and

N. In accordance with Government Code Section 65302, a comprehensive update to the City's General Plan was prepared which, in addition to addressing the mandatory elements required by state law, addressed optional elements for Economic Sustainability; Public Facilities and Services; Historic Resources; Community Design; Climate Change; Parks and Recreation; and Art and Culture; and

O. The 2040 General Plan Update includes goals and policies regarding each of the General Plan elements; and

P. On October 23, 2018, the City of St. Helena published the Public Review draft of the 2040 General Plan update; and

Q. On October 23, 2018, the City of St. Helena published the Draft EIR analyzing the environmental impacts of the draft 2040 General Plan Update for public review and comment, and provided a 72-day public review and comment period on the Draft EIR. This period ended on January 2, 2019, and work began on preparing responses to all comments received on the Draft EIR. The Final EIR, including all responses to those comments was prepared in compliance with all CEQA requirements, which Final EIR is comprised of the Draft EIR dated October 23, 2018, together with the Final EIR dated March 19, 2019 (collectively, all of said documents are referred to herein as the "EIR"); and

R. Per Government Code 65300, the 2040 General Plan Update and EIR applies to the entire Planning Area identified including all of the incorporated City (approximately 3,024 acres) in addition to the three Study Areas (approximately 570 acres) identified therein; and

S. The St. Helena 2040 General Plan Update is a Citywide document that is an integrated and internally consistent statement of the official land use policy for the City of St. Helena; and

T. The City's Housing Element is a mandatory general plan element and was previously prepared for the 2015-2023 planning period and was certified by the California Department of Housing and Community Development (HCD) and adopted by the City in 2015 and the Housing Element document is found to be consistent with the policies and goals of and incorporated into the 2040 General Plan Update; and

U. The City of St. Helena sent the draft 2040 General Plan to affected entities and agencies in compliance with state law (CEQA Guidelines Section 15082) and contacted California Native American tribes that are on the contact list maintained by the Native American Heritage Commission to invite those tribes to consult on the proposed draft 2040 General Plan Update; and

V. On March 8, 2019, a public notice of hearing before the Planning Commission was published in the St. Helena Star/Napa Valley Register; and

W. On March 6, 2019, a mailed notice was sent to all parties owning property within the City's jurisdiction potentially affected by the proposed 2040 General Plan Update; and

X. A staff report to the Planning Commission dated March 19, 2019, and incorporated herein by reference, analyzed the 2040 General Plan Update and the EIR and discussed the Plan's consistency with all required element of the St. Helena Municipal Code, and

Y. On March 19, 2019, the Planning Commission of the City of St. Helena, State of California, held a public hearing and considered the 2040 General Plan Update and EIR, the staff report, and all testimony, written and spoken, at a duly noticed public hearing and indicated conceptual support for the Final EIR and its Transportation Network Enhancement 2040 General Plan Update Alternative; and

Z. On April 2, 2019, the Planning Commission of the City of St. Helena, State of California, at a public hearing, considered the 2040 General Plan Update and EIR, the staff report, and all testimony, written and spoken, at a duly noticed public hearing and formally voted unanimously (5-0) to adopt a Resolution recommending that the City Council certify the EIR and approve its Transportation Network Enhancement 2040 General Plan Update Alternative.

RESOLUTION

The City Council of the City of St. Helena, in the exercise of its independent judgment, makes and adopts the following findings to comply with the requirements of CEQA, including Sections 15091, 15092, and 15093 of the CEQA Guidelines, based upon the entire record of proceedings including the EIR which is expressly incorporated herein in its entirety by reference. All statements set forth in this Resolution constitute formal findings of the City Council, including the statements set forth in this paragraph and in the recitals above.:

1. The City Council was presented with, and has independently reviewed and analyzed the EIR and other information in the record and has considered the information contained therein prior to acting upon and approving the Project, and bases the findings stated below on such review. The documents, staff reports, technical studies, appendices, plans, specifications, and other materials that constitute the record of the proceedings on which this Resolution is based are on file for public examination during normal business hours at the Planning Division located at City of St. Helena City Hall, 1480 Main St, St. Helena CA; and
2. The findings made in this Resolution are based upon the information and evidence set forth in the EIR and upon other substantial evidence that has been presented at the hearings and in the record of the proceedings.; and
3. The City Council finds that all responsible and interested agencies and members of the public have been afforded ample and legally sufficient notice of and opportunity to comment on the EIR and the Project; and
4. Section 15091 of the State CEQA Guidelines requires that the City, before approving the Project, make one or more of the following written findings for each significant effect identified in the EIR accompanied by a brief explanation of the rationale for each finding: (1) Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the Final EIR; or, (2) Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency; or, (3) Specific economic, legal, social, technological, or other considerations, make

infeasible certain mitigation measures or project alternatives identified in the Final EIR. The City'sCEQA findings comply with this requirement and are provided in the attached Exhibit A and incorporated hereto by reference; and

5. Section 15093 of the State CEQA Guidelines requires that if the Project will cause significant unavoidable adverse impacts, the City must adopt a Statement of Overriding Considerations prior to approving the Project.The City Council's Statement of Overriding Considerations in included in the CEQA findings in the attached Exhibit A; and
6. The EIR considers a reasonable range of potentially feasible alternatives, sufficient to foster informed decision making, public participation and a reasoned choice, in accordance with CEQA; and
7. Public Resources Code Section 21081.6 requires the City to prepare and adopt a mitigation monitoring and reporting program for any project for which mitigation measures have been imposed to assure compliance with the adopted mitigation measures. The City's Mitigation Monitoring and Reporting Program for the 2040 General Plan Update is attached hereto as Exhibit B and incorporated herein by reference; and
8. Prior to taking this action, the City Council reviewed, considered and has exercised its independent judgment on the EIR and all of the information and data in the administrative record, and all oral and written testimony presented to it during meetings and hearings and finds that the EIR is adequate and was prepared in full compliance with CEQA. No comments or any additional information submitted to the City or included in the Final EIR qualify as substantial new information requiring recirculation of the EIR or additional environmental review of the Project under CEQA; and
9. The EIR provides an adequate basis for considering and acting upon the 2040 General Plan Update. The City Council has considered all of the evidence and arguments presented during consideration of the Project and EIR. In determining whether the Project may have a significant impact on the environment, and in adopting the findings set forth herein, the City Council certifies that it has complied with Public Resources Code Sections 21081, 21081.5, and 21082.2.

A. NOW, THEREFORE, BE IT RESOLVED that the City Council of the City of St. Helena:

   1. Certifies the EIR and adopts the CEQA findings of fact and statement of overriding considerations for the St. Helena 2040 General Plan Transportation Network Enhancement Alternative attached hereto as Exhibit A; and
   2. Adopts the Mitigation Monitoring and Reporting Program for the St. Helena 2040 General Plan Update attached here to as Exhibit B; and
   3. Approves and adopts the St. Helena 2040 General Plan Update as modified by the EIR's Transportation Enhancement Alternative.

Approved at a Regular Meeting of the St. Helena City Council on May 14, 2019, by the following vote:

Mayor Ellsworth: _____
Vice Mayor Dohring: _____
Councilmember Koberstein: _____
Councilmember Knudsen: _____
Councilmember Chouteau: _____

APPROVED: ATTEST:

_____ _____
Geoff Ellsworth, Mayor Cindy Tzafopoulos, City Clerk

Exhibit A

CEQA FINDINGS OF FACT AND STATEMENT OF OVERRIDING CONSIDERATIONS FOR THE ST. HELENA 2040 GENERAL PLAN UPDATE

I. INTRODUCTION

1. These California Environmental Quality Act (Pub. Res. Code § § 21000 et seq., "CEQA") findings are adopted by the City of St. Helena as lead agency, for the City of St. Helena 2040 General Plan Update ("the Plan"). These findings pertain to Environmental Impact Report SCH #2010042001 prepared for the Plan.
2. These CEQA findings are Exhibit A and are incorporated by reference into each and every resolution approving the Plan. Exhibit B is the Mitigation Monitoring and Reporting Program (MMRP). All Exhibits are incorporated by reference into each other and into the resolution to which the Exhibit is attached.
3. The statements, findings, determinations, and other actions set forth in this Exhibit are based on the substantial evidence contained the entire record before the City. References to specific reports and specific pages of documents are not intended to identify those sources as the exclusive basis for the findings.

II. THE PLAN

4. The Plan is the St. Helena 2040 General Plan Update (Plan or Project) analyzed under CEQA, which addresses growth and preservation within the City of St. Helena to the horizon year of 2040. The Plan replaces the existing 1993 General Plan. The Plan referred to in these findings is the Plan as approved by the St. Helena City Council on May 14, 2019.
5. The Plan is a document to be adopted by the City Council that serves the following purposes:
   (a) Establish a long-range vision that reflects the aspirations of the community and outlines steps to achieve this vision;
   (b) Establish long-range development policies that will guide City departments, Planning Commission, and City Council decision-making;
   (c) Provide a basis for judging whether specific development proposals and public projects are in harmony with plan policies;
   (d) Plan in a manner that meets future land needs based on the projected population and job growth;
   (e) Allow City departments, other public agencies, and private developers to design projects that will enhance the character of the community, preserve environmental resources, and minimize hazards; and
   (f) Provide the basis for establishing and setting priorities for detailed plans and implementing programs, such as the Zoning Ordinance, subdivision regulations, specific and master plans, and the Capital Improvement Program.
6. The Plan provides the basis for the City's land use and development policy and represents the basic community values, ideals, and aspirations that will govern

development and conservation through the planning horizon year of 2040. Specific objectives established for the Plan include the following:

(a) Encourage infill development in previously developed areas of the city to preserve agricultural and open space lands outside the urban limit line and foster a compact development pattern;

(b) Focus future development so that it is contiguous to existing developed areas and supports efficient delivery of public services and infrastructure;

(c) Preserve St. Helena's small-town character;

(d) Protect local historic resources and preserve St. Helena's agricultural heritage;

(e) Reduce traffic congestion by providing alternative transportation choices, enhancing regional public transit connections, and achieving an appropriate jobs-to-housing balance to reduce commuter trips;

(f) Protect and enhance the natural resources—including the riparian corridors, woodlands, flora, and fauna—that contribute to St. Helena's healthy environment, scenic beauty, and quality of life;

(g) Strengthen St. Helena's role as a rural commercial and business center serving the daily needs of local residents in town and in the surrounding unincorporated communities;

(h) Cultivate a healthy and diverse local economy;

(i) Promote sustainable, low-impact tourism that contributes to the local economy while maintaining St. Helena's character;

(j) Provide a high-quality network of parks, open spaces, and trails that enhances quality of life and connectivity in the community; and

(k) Foster a vibrant arts community that contributes to the local economy and enriches the cultural life of the community.

III. PROCEDURAL COMPLIANCE WITH CEQA AND ENVIRONMENTAL REVIEW OF THE PLAN

7. Pursuant to CEQA and the State CEQA Guidelines (Cal. Code Regs title 14, § § 15000 et seq, the City determined that an Environmental Impact Report (EIR) would be prepared. The NOP for the EIR was published on April 2, 2018, notifying State and local agencies and members of the public of the 30-day public scoping period and public Scoping Meeting. The EIR Scoping Meeting was conducted by the Planning Commission on April 17, 2018 to receive comments and suggestions on scope and content for the EIR; solicit input on potential impacts, mitigation measures, and alternatives to consider; and consult with public agencies responsible for natural resources, other regulatory bodies, neighboring communities, Native American tribes, and members of the public. The scoping period ended on May 1, 2018. The NOP and comments on the NOP received by the City are included as Appendix A of the EIR. A summary of scoping comments is included as Appendix B of the EIR.
8. A Draft EIR was prepared for the Plan to analyze its environmental effects. The EIR for the Plan assesses potential environmental impacts of the Plan in the areas of aesthetics; agricultural resources; air quality; biological resources; cultural, historic, and tribal cultural resources; energy, greenhouse gases, and climate change; geology and soils; hazards and hazardous materials; hydrology and water quality; land use, population, and housing; noise; public services and recreation; transportation; and

utilities and service systems. The EIR also considers growth-inducing impacts, significant irreversible environmental changes, and cumulative impacts. The NOP, comments on the NOP, and scoping comments are included as Appendices A and B of the Draft EIR. Appendices C through I provide further documentation of data and outreach utilized in the Draft EIR impact analyses.

9. The Draft EIR was circulated for public review and comment between October 23, 2018 and January 2, 2019. The City of St. Helena Planning Commission held a regular Planning Commission meeting to receive comments on the Draft EIR on December 4, 2018. The City received written and oral comments on the Draft EIR. The City prepared responses that evaluated the comments on environmental issues and made any necessary additions and revisions to the Draft EIR. The comments, responses to the comments, changes to the Draft EIR, and additional information were published in the Final EIR, including Comments and Responses, dated March 19, 2019.
10. The Planning Commission held a public hearing at regular Planning Commission meeting to review and hear public comment on the Final EIR on March 19, 2019. Subsequently, the Planning Commission held another public hearing at a regular meeting on April 16, 2019, to recommend certification of the EIR and adoption of the Plan.
11. The City Council held a properly noticed public hearing on the Final EIR (consisting of the Draft EIR dated October 23, 2018 and the Comments and Responses dated March 19, 2019) on May 14, 2019. The City certified the Final EIR and adopted the Plan on May 14, 2019. The Draft EIR and Final EIR comprise the "EIR" referenced in these findings.
12. The EIR provides a program-level analysis of the environmental impacts of the Plan and supports all levels of approval necessary to implement the Plan.

IV. THE RECORD

13. The record upon which all findings and determinations related to the Plan are based includes the following:

    (a) The preliminary scoping documents and draft versions of and the EIR and all documents referenced in or relied upon by the EIR.

    (b) All information (including written evidence and testimony) provided by City staff and consultants to the Planning Commission and City Council, relating to the EIR, the proposed approvals for the Plan, the Plan, and alternatives to the Plan.

    (c) All information (including written evidence and testimony) provided to the City or presented at any and all public hearings related to the EIR and the Plan, and all information incorporated into reports presented to any of the public bodies that conducted hearings on the EIR or the Plan.

    (d) For documentary and information purposes, all locally adopted land use plans and ordinances, including, without limitation, general plans, specific plans, and related ordinances, together with any related environmental review documents, findings, mitigation monitoring programs and other documentation relevant to the Plan.

    (e) The Mitigation Monitoring and Reporting Program for the Plan.

    (f) All other documents comprising the record pursuant to Public Resources Code section 21167.6(e).

14. The custodian of the documents and other materials that constitute the record of proceedings on which the City's decision is based is Planning and Community Improvement Director Noah Housh, or designee. Such documents and other materials are located at City Hall, 1480 Main Street, St. Helena, California 94574.

V. CERTIFICATION OF THE EIR

15. In accordance with CEQA and the CEQA Guidelines, the City certifies that the EIR has been completed in compliance with CEQA and was presented to the Planning Commission and the City Council. The City has reviewed and considered the information contained in the record and the EIR prior to certifying the EIR and approving or recommending approval of any aspect of the Plan. Preparation of the EIR was overseen by the City and the conclusions and recommendations in the EIR reflect the City's independent judgment and analysis as well as its conclusions and recommendations. By these findings, the City confirms and adopts the findings of the EIR as supplemented by these findings.
16. The City recognizes that the EIR may contain clerical errors and bases its determination on the substance of the information in the EIR.
17. The City certifies that the EIR complies with CEQA and is adequate to support the approval of the Plan, each alternative in the EIR, and variations on the range of alternatives evaluated in the EIR, each component of these alternatives, and any minor modifications to the Plan or the alternatives. The EIR is adequate for approval of the Plan, and any future discretionary approvals required or anticipated by the Plan. The EIR is adequate to support the Plan as approved by the City Council at the May 14, 2019 hearing on the Plan. Conditions imposed by the City Council will enhance the social, economic, and environmental benefits of the Plan and will not have any adverse physical impacts.

VI. FINDINGS ON DISAGREEMENT AMONG EXPERTS AND ABSENCE OF SIGNIFICANT NEW INFORMATION

18. To the extent the comment letters and correspondence submitted by the public or outside agencies or organizations are considered expert opinion, the City Council finds that the assumptions, data, methodology, and analysis included in the EIR (not including the comment letters) prepared by the City and its consultants, is supported by substantial evidence and was the appropriate assumption, data, methodology, and analysis to use to support the impact analysis and conclusions reached in the EIR.
19. The City recognizes that the EIR incorporates information obtained and produced after the Draft EIR was completed, and that the EIR contains additions, clarifications, and modifications. The City has reviewed and considered the Final EIR, and all of this information. The Final EIR does not add significant new information to the Draft EIR that would require recirculation of the EIR under CEQA. The new information added to the EIR does not involve a new significant environmental impact, a substantial increase in the severity of an environmental impact, or a feasible mitigation measure considerably different from others previously analyzed that would clearly lessen the significant environmental impacts of the Plan. No information indicates that the Draft EIR was inadequate or conclusory or that the public was deprived of a meaningful opportunity to review and comment on the Draft EIR.

20. Based on the above finding, the City finds that the changes and modifications made to the EIR after the Draft EIR was circulated for public review and comment do not individually or collectively constitute significant new information within the meaning of Public Resources Code section 21092.1 or CEQA Guidelines section 15088.5 and that recirculation of the EIR is neither necessary nor required.

VII. MITIGATION MONITORING AND REPORTING PROGRAM

21. Public Resources Code section 21081.6 and CEQA Guidelines section 15097 require the City to adopt a monitoring or reporting program to ensure that the mitigation measures for the Plan identified in the EIR are implemented. The Mitigation Monitoring and Reporting Program ("MMRP") is included in Exhibit B and is hereby adopted by the City. The MMRP is consistent with and satisfies the requirements of CEQA.
22. The mitigation measures set forth in the MMRP are specific and enforceable. As appropriate, some mitigation measures define performance standards to ensure no significant environmental impacts will result. The MMRP adequately describes implementation procedures, monitoring responsibility, reporting actions, compliance schedule, non-compliance sanctions, and verification of compliance in order to ensure that the Plan complies with the adopted mitigation measures. The MMRP ensures that the mitigation measures are in place, as appropriate, throughout the life of the Plan.
23. The mitigation measures contained in the MMRP will be imposed as enforceable conditions of approval of the Plan, primarily by requiring policy and program text changes in the General Plan Update, and individual development proposals to be approved by the City as the Plan is implemented. The City has adopted measures to substantially lessen or eliminate all significant effects where feasible.
24. The mitigation measures contained in the MMRP will not have new significant environmental impacts that were not analyzed in the EIR. In the event a mitigation measure recommended in the EIR has been inadvertently omitted from the MMRP, that mitigation measure is adopted and incorporated from the EIR into the MMRP by reference and adopted as part of the MMRP.

VIII. FINDINGS REGARDING ENVIRONMENTAL IMPACTS

25. In accordance with Public Resources Code section 21081 and CEQA Guidelines sections 15091 and 15092, the City adopts the findings and conclusions regarding the impacts and mitigation measures that are set forth in the EIR. These findings do not repeat the full discussions of environmental impacts contained in the EIR. The City ratifies, adopts, and incorporates the analysis, explanation, findings, responses to comments, and conclusions of the EIR. The City adopts the reasoning of the EIR, staff reports, and presentations provided by the staff as may be modified by this Resolution.
26. The City recognizes that the environmental analysis of the Plan raises controversial environmental issues, and that a range of technical and scientific opinion exists with respect to those issues. The City has, through review of the evidence and analysis presented in the record, considered the full scope of the environmental issues presented. These findings are based on a full appraisal of all viewpoints expressed

and evidence presented in the EIR and in the record, as well as other relevant information in the record of the proceedings for the Plan.

Less than Significant Impacts or No Impacts

27. Under Public Resources Code section 21081(a)(1) and CEQA Guidelines sections 15091(a)(1) and 15092(b), the City determines that the following potential impacts would not occur or would be less than significant, as defined by the EIR:

(a) Aesthetics: The following impacts were found to be less than significant:

(i) Impact 3.1-1: Implementation of the Plan would not have a substantial adverse effect on scenic vistas.

(ii) Impact 3.1-2: Implementation of the Plan would not substantially damage scenic resources, including, but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway.

(iii) Impact 3.1-3: Implementation of the Plan would not substantially degrade the existing visual character or quality of St. Helena and its surroundings.

(iv) Impact 3.1-4: Implementation of the Plan would not create new sources of substantial light or glare that could adversely affect day- or night-time views in the area.

(b) Agricultural Resources: The following impacts were found to be less than significant:

(i) Impact 3.2-2: Implementation of the Plan would not conflict with existing zoning for agricultural use or a Williamson Act contract.

(ii) Impact 3.2-3: Implementation of the Plan would not involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use.

(c) Air Quality: The following impacts were found to be less than significant:

(i) Impact 3.3-1: Development under the Plan would not conflict with or obstruct the implementation of the applicable air quality plan.

(ii) Impact 3.3-5: Development under the Plan would not create objectionable odors affecting a substantial number of people.

(d) Biological Resources: The following impacts would not occur or were found to be less than significant:

(i) Impact 3.4-1: Implementation of the Plan would not have a substantial adverse effect, either directly or through habitat modifications, on species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.

(ii) Impact 3.4-2: Implementation of the Plan would not have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service.

(iii) Impact 3.4-3: Implementation of the Plan would not have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

(iv) Impact 3.4-4: Implementation of the Plan would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

(v) Impact 3.4-5: Implementation of the Plan would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

(vi) Impact 3.4-6: Implementation of the Plan would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan.

(e) Cultural, Historic, and Tribal Cultural Resources: The following impacts were found to be less than significant:

(i) Impact 3.5-1: Implementation of the Plan would not cause a substantial adverse change in the significance of a historical resource, as defined as physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historic resource would be materially impaired.

(ii) Impact 3.5-2: Implementation of the Plan would not cause an adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5.

(iii) Impact 3.5-3: Implementation of the Plan would not directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

(iv) Impact 3.5-4: Development allowed by the Plan would not have the potential to disturb human remains, including those interred outside of formal cemeteries.

(v) Impact 3.5-5: Implementation of the Plan could cause an adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is: (a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or (b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

(f) Energy, Greenhouse Gases, and Climate Change: The following impacts were found to be less than significant:

(i) Impact 3.6-3: Development under the Plan would not cause wasteful, inefficient, and unnecessary consumption of energy during project construction, operation, and/or maintenance.

(ii) Impact 3.6-4: The Plan would not conflict with the CBC Energy Efficiency Standards, the CARB passenger vehicle GHG emission reduction targets for 2020 and 2040, or any other applicable energy conservation regulations.

(g) Geology, Soils, and Seismicity: The following impacts were found to be less than significant:

(i) Impact 3.7-1: Implementation of the Plan would not expose residents, visitors and employees, as well as public and private structures, to substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault; strong seismic ground shaking; seismic-related ground failure, including liquefaction; or landslides.

(ii) Impact 3.7-2: Implementation of the Plan would not result in substantial soil erosion or the loss of topsoil.

(iii) Impact 3.7-3: Implementation of the Plan would not result in development located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Plan, and potentially result in on or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse.

(iv) Impact 3.7-4: Implementation of the Plan would not locate structures on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property.

(v) Impact 3.7-5: Implementation of the Plan would not locate structures on soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater.

(h) Hazards and Hazardous Materials: The following impacts would not occur or were found to be less than significant:

(i) Impact 3.8-1: Development under the Plan would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials.

(ii) Impact 3.8-2: Development under the Plan would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.

(iii) Impact 3.8-3: Development under the Plan would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.

(iv) Impact 3.8-4: Development under the Plan would not result in a project located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 (the "Cortese List") and, as a result, create a significant hazard to the public or the environment.

(v) Impact 3.8-5: Development under the Plan would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.

(vi) Impact 3.8-6: Future development allowed under the Plan would not expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands.

(vii) Impact 3.8-7: Development under the Plan would not result in a safety hazard for people residing or working within an airport land use compatibility

plan area or, where such a plan has not been adopted, within two miles of a public airport or public use airport or in close proximity to a private air strip.

(i) Hydrology and Water Quality: The following impacts were found to be less than significant:

(i) Impact 3.9-1: Development under the Plan would not violate any federal, state, or local water quality standards or waste discharge requirements.

(ii) Impact 3.9-2: Development under the Plan would not substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted).

(iii) Impact 3.9-3: Development under the Plan would not substantially alter the existing drainage pattern of the City of St. Helena, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion, siltation, or flooding on- or off-site.

(iv) Impact 3.9-4: Development under the Plan would not create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff.

(v) Impact 3.9-5: Development under the Plan would not substantially degrade water quality.

(vi) Impact 3.9-7: Development under the Plan would not place within a 100-year flood hazard area structures which would impede or redirect flood flows.

(vii) Impact 3.9-8: Development under the Plan would not expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam.

(viii) Impact 3.9-9: Development under the Plan would not result in inundation by seiche, tsunami, or mudflow.

(j) Land Use, Population, and Housing: The following impacts would not occur or were found to be less than significant:

(i) Impact 3.10-1: Implementation of the Plan would not physically divide an established community.

(ii) Impact 3.10-2: Implementation of the Plan would not conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the Plan (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect.

(iii) Impact 3.10-3: Implementation of the Plan would not conflict with any applicable habitat conservation plan or natural community conservation plan.

(iv) Impact 3.10-4: Implementation of the Plan would not induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).

(v) Impact 3.10-5: Implementation of the Plan would not displace substantial numbers of existing housing or people, necessitating the construction of replacement housing elsewhere.

(k) Noise: The following impacts would not occur or were found to be less than significant:

(i) Impact 3.11-1: Implementation of the Plan would not expose persons to or generate noise levels in excess of the noise standards established in the proposed General Plan Noise Element or applicable standards of other agencies.

(ii) Impact 3.11-3: The development of the Plan would result in a substantial permanent increase in ambient noise levels above levels existing without the Proposed Plan.

(iii) Impact 3.11-4: The development of the Plan would not result in a substantial temporary or periodic increase in ambient noise levels above levels existing without the Proposed Plan.

(iv) Impact 3.11-5: The Plan would not expose people residing or working in the Planning Area to excessive noise levels related to its location within two miles of a public airport or public use airport.

(v) Impact 3.11-6: The Plan would not expose people residing or working in the Planning Area to excessive noise levels related to its location due to the lack of close vicinity of a private airstrip.

(l) Public Services and Recreation: The following impacts were found to be less than significant:

(i) Impact 3.12-1: Implementation of the Plan would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection, police protection, schools, parks, or other public facilities.

(ii) Impact 3.12-2: Implementation of the Plan would not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.

(iii) Impact 3.12-3: Implementation of the Plan would not include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

(m) Traffic and Transportation: The following impacts were found to be less than significant:

(i) Impact 3.13-2: Implementation of the Plan would not conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways.

(ii) Impact 3.13-3: Implementation of the Plan would not result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks.

(iii) Impact 3.13-4: Implementation of the Plan would not substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

(iv) Impact 3.13-5: Implementation of the Plan would not result in inadequate emergency access.

(v) Impact 3.13-6: Implementation of the Plan would not conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

(n) Utilities and Service Systems: The following impacts were found to be less than significant:

(i) Impact 3.14-1: Potential development that could be allowed under the Proposed Plan would not exceed wastewater treatment requirements of the San Francisco Regional Water Quality Control Board.

(ii) Impact 3.14-2: Potential development that could be allowed under the Proposed Plan would not require construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

(iii) Impact 3.14-3: Potential development that could be allowed under the Proposed Plan would not require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

(iv) Impact 3.14-4: Potential development that could be allowed under the Proposed Plan would have sufficient water supplies available to serve the Plan from existing entitlements and resources and would not require new or expanded entitlements.

(v) Impact 3.14-5: Potential development that could be allowed under the Proposed Plan would not result in a determination by the wastewater treatment provider that it has inadequate capacity to serve the projected demand in addition to the provider's existing commitments.

(vi) Impact 3.14-6: Potential development that could be allowed under the Proposed Plan would be served by a landfill with sufficient capacity to accommodate the Plan's solid waste disposal needs.

(vii) Impact 3.14-7: Potential development that could be allowed under the Proposed Plan would comply with federal, state, and local statutes or regulations related to solid waste.

(o) Forestry Resources: The following impacts would not occur:

(i) Implementation of the Plan would not conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)).

(ii) Implementation of the Plan would not result in the loss of forest land or conversion of forest land to non-forest use.

(iii) Implementation of the Plan would not involve other changes in the existing environment which, due to their location or nature, could result in conversion of forest land to non-forest use.

(p) Mineral Resources: The following impacts would not occur:

(i) Implementation of the Plan would not result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state

(ii) Implementation of the Plan would not result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan.

Significant but Mitigable Impacts

28. Under Public Resources Code section 21081(a)(1) and CEQA Guidelines sections 15091 (a)(1) and 15092(b), and to the extent reflected in the EIR, the City finds that changes or alterations have been required in, or incorporated into, the Plan that mitigate to a less than significant level or avoid the following potentially significant effects on the environment:

(a) Air Quality, Impact 3.3-4: Development under the Plan would expose sensitive receptors to substantial pollutant concentrations.

(i) Facts in Support of Finding: The EIR assessed the potential for the Plan to expose sensitive receptors to substantial concentrations of CO, asbestos, and toxic air contaminants (TACs). It found that the Plan did not have the potential to substantially increase CO hotspots or potential exposure to asbestos, but that it could, through construction and operation, increase exposure of sensitive receptors to TACs.

(ii) Effects of Proposed General Plan Policies and Remaining Impacts: There are no additional feasible policies that would further reduce impacts from construction. Policies within the Proposed Plan (Policy LU4.1 and implementation actions LU4.C, LU5.F, and LU5.H) require buffers and transitional zones between existing and potential sources of TACs and PM and commit the City to evaluating the compatibility of industrial uses between SR-29 and Crane Avenue. These policies would help to reduce impacts from operational sources of pollutants from some stationary sources, such as industrial and agricultural uses. However, the proposed policies do not specifically address the potential effects of stationary sources other than industrial or agricultural uses and do not provide criteria for measuring the effectiveness of required buffers. Therefore, the Proposed Plan alone could not guarantee that impacts would be reduced below a level of significance.

(iii) Rationale and Conclusion: The Plan would allow growth of new residential land uses that would be sensitive receptors and new non-residential land uses that are a potential for new emissions sources. Typically, these sources would be evaluated through the BAAQMD permit process and/or the CEQA process to identify and mitigate any significant exposures. Additionally, policies within the Proposed Plan aim to establish buffers between potential air pollution sources and sensitive receptors, as well as limit pollution during construction. This impact will be mitigated through imposition of Mitigation Measures AQ-1, AQ-2, AQ-3, AQ-4, AQ-5, and AQ-6, which require implementation of the following actions:

- ***AQ-1:*** *Require construction projects in the City of St. Helena to implement BMPs to reduce fugitive dust emissions. BMPs may include:*
    - *Watering all exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) three times per day using recycled water.*

- *Covering all haul trucks transporting soil, sand, or other loose material.*
- *Removing all visible mud or dirt track-out onto adjacent public roads using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.*
- *Limiting all vehicle speeds on unpaved roads to 15 mph.*
- *Completing all roadways, driveways, and sidewalks to be paved as soon as possible. Laying building pads soon as possible after grading unless seeding or soil binders are used.*
- *Minimizing idling times either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.*
- *Maintaining and properly tuning all construction equipment in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper working condition prior to operation.*
- *Staging construction equipment as far as possible from existing sensitive receptors (away from the southeast property line and surrounding residences).*
- *Posting a publicly visible sign with the telephone number and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations.*
- *Where warranted, the project sponsors shall incorporate the following language into construction specifications if significant risk is anticipated based on design level construction schedule, duration and concurrent construction activities:*
    - *Powering portable equipment by electricity if available or if electricity is not available, using propane or natural gas if feasible. Diesel engines shall only be used if electricity is not available and it is not feasible to use propane or natural gas.*
    - *Ensuring that all mobile diesel-powered off-road equipment larger than 25 horsepower and operating on the site for more than two days continuously or 20 hours cumulative meets, at a minimum, U.S. EPA particulate matter emissions standards for Tier 2 engines or equivalent and be equipped with diesel particulate matter filters that meet CARB-certified Level 2 or 3 Diesel Particulate Filters. Alternatively-fueled equipment (i.e., non-diesel) would meet this requirement.*

- ***AQ-2:*** *Require that applicants proposing development of projects within the City of St. Helena require contractors, as a condition of contract, to reduce construction-related fugitive ROG emissions by ensuring that low-VOC coatings that have a VOC content of 10 grams/liter (g/L) or less be used during construction. All project applicants shall submit evidence of the use of low-VOC coatings to the City of St. Helena and/or the BAAQMD (as applicable) prior to the start of construction.*
- ***AQ-3:*** *Require all development applications with the potential to create point-source air quality impacts be referred to the Bay Area Air Quality Management District (BAAQMD) for review and comment to ensure compliance with BAAQMD requirements prior to approval of the project.*
- ***AQ-4:*** *Require development projects to meet CARB setback recommendations from air contaminant sources for sensitive uses or conduct specific air quality and health risk impact analyses and identify project specific mitigation measures.*
- ***AQ-5:*** *To protect sensitive receptors require discretionary projects in proximity to Highway 29, Silverado Trail and the Rail Corridor to include an analysis of mobile source toxic air contaminant health risks. The analysis, if necessary, shall identify feasible mitigation measures to reduce health risks to acceptable levels.*
- ***AQ-6:*** *All applicants proposing development of projects within 1,000 feet of existing sensitive receptors, as defined by BAAQMD, shall prepare a site-specific construction health risk assessment (HRA) taking into account both project-level and cumulative health risks (including existing TAC sources). If the HRA demonstrates, to the satisfaction of the City, that the health risk exposures for adjacent receptors will be less than BAAQMD project-level and cumulative thresholds (as appropriate), then additional mitigation would be unnecessary. However, if the HRA demonstrates that health risks would exceed BAAQMD project-level and/or cumulative thresholds (as appropriate), additional feasible on- and offsite mitigation shall be analyzed by the applicant to help reduce risks to the greatest extent practicable.*

With the implementation of these mitigation measures, which set specific buffers between land uses as recommended by CARB and BAAQMD, as well as additional studies for projects located along SR-29 and Silverado Trail, impacts would be reduced to a less than significant level.

(b) Hydrology and Water Quality, Impact 3.9-6: Implementation of the General Plan Update would place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map.

(i) Facts in Support of Finding: Implementation of the Plan could result in development on sites partially or fully within the 100-year flood zone and could involve construction of new housing as part of residential or mixed-use projects within flood hazard zones (see EIR Figure 3.9-5: Land Use Change Areas and Flood Zones). Change Area 4, designated as Mixed-Use and Public and Quasi-Public, falls completely within the 100-flood hazard. Most of its Mixed-Use

portion, and some of its Public and Quasi-Public portion, also fall within the regulatory floodway. Change Area 5, designated as Mixed-Use, falls primarily within the 100-year flood hazard zone. It also overlaps slightly with the floodway. Other sites have less overlap with the 100-year flood hazard. Change Area 2, designated as Mixed-Use, and Change Area 3, designated as High Density Residential, fall partially within the 100-year flood hazard and have no overlap with the regulatory floodway. Change Area 6, designated as Mixed-Use, and Change Area 7, designated as Medium Density Residential, each have small portions of their sites designated as within the 100-year flood hazard, and no land area within the floodway. Further, some of the Key Opportunity Sites for constructing medium and high-density housing identified in the City's Housing Element have a risk of flooding: Sites 6 and 7 are adjacent to and partially within the regulatory floodway and a portion of Site 9 falls within the 100-year flood hazard. Development on these sites would constitute a potentially significant impact.

(ii) Effects of Proposed General Plan Policies and Remaining Impacts: Many policies within the Plan would help to mitigate any risks involved with development in flood risk areas. Some policies would ensure compliance with existing federal and local regulations. The Proposed Plan limits urban development in designated Flood Hazard Areas to that which complies with FEMA's regulations (OS1.N and PF5.E) and would ensure that the City's flood hazard regulations are in accordance with FEMA/National Flood Insurance Program regulations and reflect best practices (PS5.F). Change Areas 2, 3, 5, 6, and 7 and Housing Opportunity Site 9 all have some degree of overlap with the 100-year flood hazard zone; any development within the flood hazard areas would be required to comply with FEMA regulations, the St. Helena Municipal Code, and the Plan's policies for properties in flood risk zones described above, thereby minimizing the potential for loss, damage or injury to the maximum extent practicable. This and any other new development and redevelopment pursuant to the Proposed Plan would be required to comply with all flood protection provisions in the Municipal Code. Setbacks would be established along streambeds to protect the riparian corridors and all development would take place outside of the stream corridor (OS1.N). Other policies in the Plan would mitigate against actions that could impede or redirect flood flows by ensuring that base flood elevations do not increase and that development activities do not expand the floodplain (OS2.6, PF3.2, PF3.3, PS5.2, PS5.4, PS5.5, PS5.A, and PS5.C).

The Proposed Plan would prohibit new development within the floodway (PF5.5 and PF5.E) and prohibit creation of new residential lots that would be subject to periodic inundation by floodwaters by requiring building floor elevations to comply with the Municipal Code's required elevations above base flood level (PF3.C). Further, it would ensure that any new development complies with FEMA and State Department of Water Resources standards (PS5.1) and encourages leaving open spaces within the 100-year floodplain (PS5.3). It would also support flood management by encouraging open space uses within Special Flood Hazard Areas consistent with Living River Principles, including maintaining or restoring geomorphic equilibrium, maintaining natural slopes and channel widths,

maintaining the connection of the river or creek to its floodplain, and providing adequate development setbacks to allow the river or creek to meander (PS5.3 and OS2.6). The Plan would also provide for flood protection measures for lands adjacent to York Creek, Sulphur Creek, and the Napa River (PF3.3, PF3.A and PS5.B).

Therefore, while implementation of the Plan could lead to housing within the 100-year flood hazard area, adherence to FEMA standards, the St. Helena Municipal Code, and to applicable Plan policies would reduce the risks with respect to placement of people or structures within the 100-year flood hazard area to the maximum extent practicable. However, development within the floodway, including construction of housing, would constitute a significant risk, as FEMA designates these as channels which should flood regularly and provide unimpeded conveyance for floodwaters during a typical large storm event. Development within the floodway-designated portions of Change Areas 4 and 5 and Housing Opportunity Sites 6 or 7 would result in a significant impact.

(iii) Rationale and Conclusion: The EIR includes Mitigation Measure HYDRO-1 to mitigate impacts related to development within the floodway-designated portions of Change Areas 4 and 5 and Housing Opportunity Sites 6 or 7.

- ***HYDRO-1:*** *Any proposed development or redevelopment on land designated as regulatory floodway on current FEMA maps shall, prior to issuance of a construction permit, obtain and submit to the City a Letter of Map Revision (LOMR) from FEMA, demonstrating that a hydrologic and hydraulic analysis showed that grading modifications were performed such that the proposed development would no longer be within the floodway. These modifications shall be completed without raising the base flood level or impacting other properties.*

Compliance with Mitigation Measure HYDRO-1 would ensure that no development impedes waters in the floodway, raises base flood levels, or exposes housing to undue risk from flooding. Impacts would be reduced to a less than significant level with mitigation.

(c) Noise, Impact 3.11-2: Implementation of the General Plan Update would expose people to or generate excessive groundborne vibration or groundborne noise levels.

(i) Facts in Support of Finding: Future and existing development adjacent to construction sites could be exposed to excessive groundborne vibration temporarily (i.e. vibration that is distinctly perceptible). A pile driver, a hoe ram or large bull dozer (which generates vibration levels similar to an excavator), and loaded trucks all have the potential to generate vibration levels greater than the distinctly perceptible level of 0.04 PPV in/sec at a distance of 25 feet. At distances greater than 50 feet, only a pile driver (impact or vibratory/sonic) would be expected to generate distinctly perceptible vibration. An impact pile driver could create distinctly perceptible vibration (0.04 PPV in/sec) at distances of up to approximately 300 feet, and a sonic/vibratory pile driver could generate distinctly perceptible vibration at distances of up to 175 feet.

As construction equipment operating within 25 feet of sensitive land uses could generate distinctly perceptible vibration, non-pile driving construction activities occurring within 25 feet of sensitive uses could result in significant vibration impacts. In addition, pile driving occurring within approximately 175 feet or 300 feet of sensitive uses for vibratory/sonic pile drivers and impact pile drivers, respectively, could also result in significant vibration impacts. As the specific future projects to be developed under the Proposed Plan are not known at this time, and as the level of construction activity that would occur at various locations for future projects is also not known, it is possible the future construction activities could result in significant vibration impacts in portions of the Planning Area near historic structures and sensitive receptors such as schools and residences.

The City's Noise Ordinance would help reduce construction vibration effects at future and existing sensitive land uses by limiting the times at which construction could take place to certain time periods when it would not be a major disturbance to neighbors, including sensitive receptors. However, neither the Noise Ordinance nor the Proposed Plan provide a framework for determining specific construction vibration mitigation measures to ensure that potential vibration impacts are minimized and the impact would be potentially significant.

(ii) Effects of Proposed General Plan Policies and Remaining Impacts: There are no additional feasible policies that would further reduce impacts.

(iii) Rationale and Conclusion: This impact will be reduced to a level of less than significant by the inclusion of Mitigation Measure NO-1 as follows:

- *NO-1: Where vibration impacts have the potential to cause structural damage or distinctly perceptible human response (reference Tables 3.11-12 to 3.11-14, or more recent sources), require a vibration study, prepared by a qualified vibration consultant. The study should include a site-specific engineering assessment of potential vibration impacts to structures and sensitive receptors from construction activities and specify a mitigation plan to minimize the impacts using all reasonable and feasible means available. The mitigation plan should include a procedure for establishing threshold and limiting vibration values for potentially affected structures, based on an assessment of each structure's ability to withstand the loads and displacements due to*

construction vibrations and a commitment to develop a vibration monitoring plan during the engineering phase and to implement a compliance monitoring program during construction.

With the inclusion of Mitigation Measure NO-1, the potential impact would be reduced to a less-than-significant level.

Significant and Unavoidable Impacts

29. Under Public Resources Code section 21081(a)(1) and CEQA Guidelines sections 15091(a)(1) and 15092(b), the City determines that the following significant effects on the environment, as reflected in the EIR, and as mitigated as shown below, remain significant and unavoidable despite the fact that changes or alterations to the Project have been required in, or incorporated into, the Project that avoid or substantially lessen the significant environmental effects identified in the EIR. Further, the City finds that the following significant and unavoidable impacts are acceptable due to the overriding considerations described below. The City also finds that further mitigation measures and a No Project Alternative that may reduce the significance of any of these impacts are rejected as infeasible for the reasons given below.

(a) Agricultural Resources, Impact 3.2-1: Implementation of the General Plan Update would convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance.

(i) Facts in Support of Finding: The largest category of farmland classified by the Farmland Mapping and Monitoring Program (FMMP) in the Planning Area is Prime Farmland, which comprises 900 acres or 29 percent of the land in the city identified as agriculture by the FMMP. Additionally, there are approximately 279 acres of Farmland of Statewide Importance, 75 acres of Farmland of Local Importance, and 38 acres of Unique Farmland in the Planning Area.

The Plan includes various land use designations for areas with Prime, Statewide Important, Unique, and Local Important Farmland. While the General Plan Update would designate large areas along the periphery of the city as Agriculture, where agricultural and agriculturally-related uses would continue to be allowed, it also includes urban land use designations in areas of Prime, Statewide Importance, Unique, and Local Important Farmland, which would allow for new development that would result in farmland conversion. As discussed in Draft EIR Section 3.2: Agricultural Resources, urban land use designations in the Proposed Plan would cover 58 acres of Prime Farmland, 20 acres of Statewide Importance, 2 acres of Unique Farmland, and nearly 37 acres of Farmland of Local Importance. In total, the General Plan Update would allow for development on 118 acres of Prime, Important, or Unique farmland throughout the Planning Area, all located within city limits.

(ii) Effects of Proposed General Plan Policies and Remaining Impacts: The General Plan Update policies and implementing actions provide a framework to permit existing agricultural uses to continue operating and ensure that important farmland remains as farming or other related agricultural support uses for as long as such use is financially feasible. Land use policies included within the Plan would serve to reduce impacts to Important Farmland, including LU1.4, which encourages infill development within currently developed areas in order to

minimize the need to expand the Urban Limit Line; and policies LU1.3, LU5.1, CD4.3, OS2.1, and PR3.2, which provide support for agricultural uses within and adjacent to the city. Additionally, implementing actions LU5.B and PS2.H call for continued enforcement of "right-to-farm" provisions. The Final EIR noted the addition of Implementing Action LU5.I to the General Plan Update to further reduce impacts by establishing a Farmland Mitigation Program, in response to a comment on the Draft EIR that requested that the City consider the feasibility of additional measures to mitigate the impact. While these policies would reduce the impact, the potential loss of Prime Farmland, Farmland of Statewide Importance, and Unique Farmland would still be considered significant as Farmland as agricultural land is a finite and irreplaceable resource.

(iii) Rationale and Conclusion: Implementation of the General Plan Update could result in the loss of 118 acres of Prime Farmland, Farmland of Statewide Importance, and Unique Farmland. Conversion of agricultural land to urban use is not directly mitigable, aside from preventing development altogether, as agricultural land is a finite and irreplaceable resource. Beyond limiting the amount of total growth permitted, there are no feasible mitigation measures for agricultural land conversion that would also fulfill the objectives of and implement the General Plan Update. The impact is found to be significant and unavoidable under 14 CCR Section 15091(a)(3). This potential unavoidable significant impact is acceptable and overridden as set forth below in the Statement of Overriding Considerations.

(b) Air Quality, Impact 3.2-2: Development under the General Plan Update would violate air quality standards or contribute substantially to an existing or projected air quality violation.

(i) Facts in Support of Finding: Development under the General Plan Update that would exceed the Bay Area Air Quality Management District's (BAAQMD's) regional significance thresholds would contribute to the nonattainment designation of the San Francisco Bay Area Air Basin (SFBAAB), which constitutes an air quality violation. The SFBAAB is currently designated a nonattainment area for State and national ozone ambient air quality standards (AAQS), as well as the State particulate matter ($PM_{2.5}$ and PM_{10}) standards. Construction associated with new land use developments under the General Plan Update would result in the temporary generation of ozone precursors (reactive organic gas [ROG] and nitrogen oxides [NOX]), carbon monoxide [CO], and particulate matter emissions. Operational sources under the General Plan Update, including mobile, area, and energy sources, would result in a net increase in criteria pollutant emissions of ROG, PM_{10}, and $PM_{2.5}$ and potential violation of ROG and PM_{10} air quality standards.

(ii) Effects of Proposed General Plan Policies and Remaining Impacts: No policies in the General Plan Update would further reduce impacts related to construction; however, the General Plan Update includes numerous policies to reduce criteria air pollutants related to operation of subsequent projects. Policies within the General Plan Update, including PS1.1, PS1.2, and PS1.3, address adhering to air quality standards and reducing air pollution. Additionally, Implementing Action PS1.H calls for the adoption of BAAQMD Guidelines for

Assessing the Impacts of Projects and Plans thresholds of significance for determining the significance of project impacts under CEQA. Implementing Action PS4.J calls for educating the public about the use of green household products in an effort to reduce air pollution, including ROGs. The General Plan Update also includes policies specifically related to the reduction of VMT, which would reduce mobile-source emissions. Policies that reduce VMT address increasing density and maintaining growth within the city's Urban Limit Line (ULL). Land Use and Circulation policies encourage walking, biking, carpooling, public transit, and other alternatives to single-occupancy automobile use.

(iii) Rationale and Conclusion: The General Plan Update includes policies and implementing actions that would minimize air pollution to the extent feasible. Mitigation Measures AQ-1, AQ-2, and AQ-3 would further reduce ROGs from architectural coating, and particulate matter from construction, as well require all development with the potential to create point-source air quality impacts to receive BAAQMD review prior to approval.

Additionally, an analysis of emissions generated from the operation of development allowed under the General Plan Update would be individually compared to BAAQMD's project-level significance thresholds during individual environmental review. However, the total criteria air pollutant emissions from operation of future development under the General Plan Update is likely to be substantial and could contribute to increases in concentrations of air pollutants, which could contribute to ongoing violations of air quality standards. Because the detail of future projects allowed under the General Plan Update cannot be known at this time, the impact is considered significant and unavoidable. The impact is found to be significant and unavoidable under 14 CCR Section 15091(a)(3). This potential unavoidable significant impact is acceptable and overridden as set forth below in the Statement of Overriding Considerations.

(**c) Air Quality, Impact 3.3-3.** Development under the General Plan Update would result in a cumulatively considerable net increase of criteria pollutants for which the General Plan region is nonattainment under an applicable federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).

(i) Facts in Support of Finding: Development under the General Plan Update would result in a cumulatively considerable net increase of criteria pollutants for which the General Plan region is nonattainment under an applicable federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors). Criteria air pollutant emissions generated by cumulative development associated with buildout of the General Plan Update (ROG for the City of St. Helena and PM_{10} for the Planning Area) would exceed BAAQMD's project-level significance thresholds and would contribute to the nonattainment designations of the SFBAAB. The SFBAAB is currently designated as a nonattainment area for California and national ozone AAQS and California $PM_{2.5}$ and PM_{10} AAQS. The comprehensive suite of General Plan policies could reduce the severity of growth-oriented criteria pollutants, relative to conditions without the General Plan Update. Additionally, implementation Mitigation Measures AQ-1, AQ-2, and AQ-3 would ensure that

the construction-related impacts of the General Plan Update on air quality would be reduced to a less-than-significant level. However, operational sources under the General Plan Update would result in a significant and unavoidable and cumulatively considerable air quality impact associated with ROG and PM_{10} emissions. Air pollution is by nature a cumulative impact. No single project by itself would be sufficient in size to result in regional nonattainment of State or national AAQS. Instead, a project's individual emissions contribute to existing adverse air quality conditions, and together with other past, present, and reasonably foreseeable projects could result in a significant impact. Criteria air pollutant emissions generated by cumulative development associated with buildout of the General Plan Update (ROG for the City of St. Helena and PM_{10} for the Planning Area) would exceed BAAQMD's project-level significance thresholds and would contribute to the nonattainment designations of the SFBAAB. The SFBAAB is currently designated as a nonattainment area for California and national ozone AAQS and California $PM_{2.5}$ and PM_{10} AAQS.

Projects that exceed BAAQMD's significance thresholds would cumulatively contribute to health impacts in the SFBAAB. Land uses developed under the General Plan Update would increase emissions of ROG, which is an ozone precursor. Emissions of ROG generated by buildout of the General Plan Update could increase photochemical reactions and the formation of tropospheric ozone, which, at certain concentrations, could lead to respiratory symptoms (e.g., coughing), decreased lung function, and inflammation of airways. Although these health effects are associated with ozone, the impacts are a result of cumulative ROG emissions throughout the Bay Area. Accordingly, the incremental contribution of development supported by the General Plan Update to specific health outcomes related to criteria pollutant emissions would be limited. It is also important to note that growth-related emissions associated with the General Plan Update would not occur all at once but would instead occur incrementally over time as regional air quality improves and regulations to reduce emissions take effect.

(ii) Effects of Proposed General Plan Policies and Remaining Impacts: As discussed in the EIR under Impact 3.3-1, the General Plan Update would support the goals of BAAQMD's 2017 Clean Air Plan, include all applicable control measures, and would not conflict with its implementation. The comprehensive suite of General Plan Update policies could reduce the severity of growth-oriented criteria pollutants, relative to conditions without the General Plan Update. Even with the policies of the General Plan Update, individual development projects allowed under the General Plan Update may still generate construction emissions in excess of BAAQMD's project-level thresholds.

(iii) Rationale and Conclusion: The Draft EIR includes Mitigation Measures AQ-1, AQ-2, and AQ-3 to ensure that the construction-related impacts of the Proposed Plan on air quality would be reduced to a less-than-significant level. However, operational sources under the General Plan Update would result in a significant and unavoidable and cumulatively considerable air quality impact associated with ROG and PM_{10} emissions. Current nonattainment status and projected ROG and PM_{10} emissions at buildout in combination with past, present,

and reasonably foreseeable projects elsewhere within the SFBAAB demonstrate that the General Plan Update, even with implementation of applicable regulations, would result in a significant and unavoidable cumulative impact with respect to air quality and attainment of such standards. The impact is found to be significant and unavoidable under 14 CCR Section 15091(a)(3). This potential unavoidable significant impact is acceptable and overridden as set forth below in the Statement of Overriding Considerations.

(d) Energy, Greenhouse Gases, and Climate Change, Impact 3.6-1: Development under the General Plan Update would generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.

(i) Facts in Support of Finding: Assuming compliance with existing state and local policies and implementation of the General Plan Update's comprehensive suite of policies, which include efforts to reduce VMT, net operational GHG emissions in 2040 could exceed the efficiency metric of 2.3 MTCO2e per service population calculated in the Methodology and Assumptions section of Draft EIR Section 3.6. To reduce the General Plan Update's GHG emissions in 2040, Mitigation Measure GHG-1 is recommended:

- ***GHG-1:*** *The City of St. Helena shall adopt and begin to implement a Climate Action Plan within a goal of 18 months, but no later than 36 months, of adopting the Proposed Plan update to address the GHG reduction goals of Executive Order B-30-15 and Executive Order S-03-05 for GHG sectors that the City has direct or indirect jurisdictional control over. The Climate Action Plan shall include a community inventory of GHG emission sources, and quantifiable GHG emissions reduction targets for 2030 and 2050, and an interim target for the General Plan buildout year 2040, that are consistent with the statewide GHG reduction targets. The City shall monitor progress toward its GHG emissions reduction goals and prepare reports every five years detailing that progress.*

The adoption and implementation of a Climate Action Plan with specific and quantifiable goals to reduce emissions, as well as indicators to track progress, will help the City reduce the impacts associated with implementation of the General Plan Update. As the transportation sector is the largest source of emissions within the City of St. Helena in 2018 and is projected to remain the largest source in 2040, it has the most opportunity for reductions. Even with implementation of this mitigation measure, however, implementation of the Plan would generate GHG emissions in excess of the 2040 efficiency metric.

Development under the General Plan Update would result in a substantial increase in GHG emissions from baseline conditions by 2040, and would exceed the 2040 efficiency target. This would mean that the General Plan Update does not make substantial progress towards meeting the State's 2050 goal of an 80 percent reduction from 1990 levels pursuant to EO S-03-05. Additionally, since the significance thresholds are a reflection of emissions reductions needed to meet the 80 percent GHG reduction target as a State, St. Helena's failure to meet the thresholds may have a cumulative impact on whether or not the State will meet its target.

(ii) Effects of Proposed General Plan Policies and Remaining Impacts: Effects of the General Plan Update were factored into the above analysis to the extent that the reduction of GHGs from proposed policies could be quantified. Even accounting for these reductions, emissions levels under the General Plan Update would exceed the significance threshold.

(iii) Rationale and Conclusion: Mitigation Measure GHG-1 would require the adoption of a St. Helena Climate Action Plan that lays out a series of goals, policies, and actions to reduce GHG emissions to a level that is consistent with BAAQMD's efficiency targets and, therefore, State GHG reduction goals. Policies within the Climate Action Plan must set specific targets for GHG reductions where possible (i.e. source a specific percentage of the city's power through renewable sources, install a specific length of bicycle lanes, or install greywater systems in a specific percentage of homes in St. Helena). However, given that additional State and federal actions are necessary to ensure that State and federally regulated emissions sources (i.e., sources outside the City's jurisdictional control) are addressed to achieve the 2050 target, and that, at this time, there are no post-2030 State or federal measures in place that would assist the City in achieving the 2040 efficiency target, even with implementation of Mitigation Measure GHG-1, GHG impacts as a result of the General Plan Update are considered significant and unavoidable. The impact is found to be significant and unavoidable under 14 CCR Section 15091(a)(2). This potential unavoidable significant impact is acceptable and overridden as set forth below in the Statement of Overriding Considerations.

(e) Energy, Greenhouse Gases, and Climate Change, Impact 3.6-2: Development under the Plan would conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

(i) Facts in Support of Finding: Assembly Bill (AB) 32 and EO S-03-05 set targets for State GHG reductions of 40 percent below 1990 levels by 2030 and 80 percent below 1990 levels by 2050. The 2017 CARB Scoping Plan creates a pathway to achieving those goals by reducing GHG emissions to 4.0 MTCO2e per capita by 2030 and 2.0 MTCO2e per capita by 2050. BAAQMD's CEQA Guidelines, as discussed in the Methodology and Assumptions section, builds upon the CARB per capita thresholds by creating an efficiency threshold that uses service population in lieu of resident population, which is more appropriate for a land use plan, such as the General Plan Update.

Accounting for State and federal standards and for policies within the General Plan Update that can be quantified, the resulting 2040 per capita emissions exceed the significance threshold of 2.3 MTCO2e per service population. This means that, absent additional measures at the State level, development under the General Plan Update would conflict with CARB's 2017 Scoping Plan, AB 32, EO S-03-05, or BAAQMD's CEQA Guidelines (as they pertain to meeting the larger State goals for GHG reductions), as the City does not have direct control hover certain aspects of transportation emissions, such as vehicle fuel efficiency standards or regional traffic. Meeting the aggressive State GHG reduction goals will require a substantial change in terms of how energy is produced and consumed, as well as

other economy-wide changes, many of which can only be implemented by the State and federal government.

(ii) Effects of Proposed General Plan Policies and Remaining Impacts: Through implementation of the General Plan Update policies aimed at reducing GHG emissions, the General Plan Update would serve to implement numerous strategies and measures aimed at reducing GHG emissions. All of the policies and implementing actions within the Proposed Plan Climate Change Element could potentially decrease St. Helena's GHG emissions. Additionally, policies in the General Plan Update aim to reduce water use, construct more energy efficient buildings, provide walkable communities, decrease reliance on automobile transportation, and more. GHG-reducing policies and implementing actions can be found in nearly all of the elements in the General Plan Update, including the Land Use and Growth Management, Economic Sustainability, Public Facilities and Services, Circulation, Community Design, Open Space, Public Health, Safety, and Noise, Climate Change, and Parks and Recreation elements. While these policies and implementing actions could reduce GHG emissions, many do not set specific goals or targets for reductions, and therefore cannot be quantified at this time. As stated above, even accounting for the reduction in emissions from General Plan Update policies that can be quantified, the resulting 2040 per capita emissions could exceed the significance threshold.

(iii) Rationale and Conclusion: Implementation of Mitigation Measure GHG-1 would help to reduce conflict with the GHG emissions reduction trajectory for 2050 articulated under EO S-3-05 to the extent practicable and feasible; however, further action is necessary at the State and federal levels to achieve the deep cuts to emissions sources outside the City's jurisdictional control needed to meet the GHG emissions reductions targets laid out by the State. Given that, at this time, there are no post-2030 State or federal measures that would assist the City in achieving the efficiency target in 2040, even with implementation of Mitigation Measure GHG-1, the potential exists for the Proposed Plan to conflict with applicable plans, policies, or regulations adopted for the purpose of reducing the emissions of GHGs. The impact is found to be significant and unavoidable under 14 CCR sections 15091(a)(2) and 15091(a)(3). This potential unavoidable significant impact is acceptable and overridden as set forth below in the Statement of Overriding Considerations.

(f) Transportation and Traffic, Impact 3.13-1: Implementation of the Plan could result in conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit.

(i) Facts in Support of Finding: Potentially significant impacts are identified at seven intersections, as follows:

- *Intersection 8 – Main Street/Pratt Avenue*: Weekday PM peak hour intersection operations would remain at LOS F and the weekday PM peak hour delay would increase by more than five seconds. The Peak Hour Signal Warrant is met at this location for the weekday PM peak hour.

- *Intersection 9 – Main Street/Elmhurst Avenue*: Weekday PM peak hour intersection operations would remain at LOS F and the weekday PM peak hour delay would increase by more than five seconds. The Peak Hour Signal Warrant is met at this location for the weekday PM peak hour
- *Intersection 18 - Main Street/Pope Street-Mitchell Drive*: Weekday AM peak hour, weekday PM peak hour, and weekend midday peak hour intersection operations would remain at LOS F and the delay would increase by more than five seconds for each peak hour studied.
- *Intersection 19 - Main Street/Grayson Avenue*: While this intersection is projected to operate acceptably per the intersection operations analysis, the results of the Main Street/Pope Street-Mitchell Drive analysis indicate that queues from the Main Street/Pope Street-Mitchell Drive intersection would regularly impede northbound Main Street traffic flow at Main Street/Grayson Avenue. Vehicles making an eastbound left turn from Grayson Avenue to northbound Main Street may need to wait multiple cycles to complete a left turn if there is no room to complete the turn. Therefore, this intersection has been noted as a significant impact.
- *Intersection 20 - Main Street/Sulphur Springs Avenue*: Weekday PM peak hour intersection operations would deteriorate from an existing LOS D to a projected LOS E, and the weekday PM peak hour delay would increase by more than five seconds. The Peak Hour Signal Warrant is met at this location for the weekday PM peak hour.
- *Intersection 26 – Silverado Trail/Pope Street*: Weekday AM peak hour, weekday PM peak hour, and weekend midday peak hour intersection operations would remain at LOS F and the delay would increase by more than five seconds for each peak hour studied. The Peak Hour Signal Warrant is met at this location for all of the indicated peak hours studied.
- *Intersection 27 - Main Street/Mills Lane*: While this intersection is projected to operate acceptably per the intersection operations analysis, the results of the Main Street/Pope Street-Mitchell Drive analysis indicate that queues from the Main Street/Pope Street-Mitchell Drive intersection would regularly impede northbound Main Street traffic flow at Main Street/Mills Lane. Vehicles making a westbound right turn from Mills Lane to northbound Main Street may need to wait for long times for gaps in traffic to open to complete the turn. A similar situation may occur for vehicles making a southbound left turn from Main Street to Mills Lane Therefore, this intersection has been noted as a significant impact.

(ii) Effects of Proposed General Plan Policies and Remaining Impacts: The General Plan Update includes multiple policies and implementing actions that would seek to minimize congestion on the transportation network through a series of efforts to reduce single occupancy vehicle trips, improve circulation throughout St. Helena, and promote walking, bicycling and transit trips as viable transportation options. Additionally, The Plan contains multiple implementing actions that identify mechanisms for funding actions designed to alleviate transportation impacts resulting from new development under the General Plan Update. Specifically, Implementing Actions CR1.H and CR1.K provide for the

development of a methodology to measure automobile trips generated (ATG) by new development projects, and the adoption of a citywide, multi-modal Transportation Mitigation Fee program. While the City already has a traffic impact fee program in place, the proposed multi-modal fee program would seek to provide transportation improvements that offset the increase in vehicle trips resulting from new development. The Transportation Mitigation Fee program would determine how many peak hour trips could be mitigated by the strategy of completing the city's bicycle and pedestrian network, employing a citywide transportation demand management program and implementing other automobile trip reduction measures. Nevertheless, even with General Plan Update policies and implementing actions, impacts at the above stated intersections would be significant.

(iii) Rationale and Conclusion: The EIR includes the following Mitigation Measures to alleviate the significant impacts noted above:

- ***TR-1:*** *Main Street/Pratt Avenue: Install a traffic signal at the intersection.*
- ***TR-2:*** *Main Street/Elmhurst Avenue: Restripe the intersection to include the following:*
    - *Northbound approach: 1 left turn lane, 1 though lane*
    - *Southbound approach: 1 two-way left turn lane, 1 through-right turn shared lane*
    - *Eastbound approach: 1 left turn lane, 1 right turn lane*
- ***TR-3:*** *Main Street/Pope Street-Mitchell Drive: Construct one or more of the planned roadway extensions noted in General Plan Figure 5.2. Note that, per the General Plan, additional study of the connection(s) would be required, and the City Council would need to approve the connection at that time. Candidate extensions that may directly reduce the impacts at Main Street/Pope Street-Mitchell Drive include:*
    - *Connection 2A: College Avenue extension to Mills Lane (may require realignment of Mills Lane to meet Main Street/Grayson Avenue intersection)*
    - *Connection 3: Oak Avenue extension from Mitchell Drive to Grayson Avenue*
    - *Connection 2B, Connection 2C, Connection 5B, or a combination of Connections 1, 4 and 5A may provide congestion relief to Main Street/Pope Street-Mitchell Drive, but these improvements have additional considerations related to neighborhood traffic volumes and costs related to crossings of the Napa River.*
- ***TR-4:*** *Main Street/Sulphur Springs Avenue: Install a traffic signal at the intersection.*
- ***TR-5:*** *Silverado Trail/Pope Street: Install a traffic signal at the intersection. The nearby intersection of Silverado Trail/Howell Mountain Road may require signalization as well because the two intersections are closely spaced.*
- ***TR-6:*** *Main Street/Grayson Avenue and Main Street/Mills Lane: Realign Mills Lane to form a four approach to the existing Main Street/Grayson Avenue intersection.*

With the exception of the Silverado Trail/Pope Street intersection, these mitigation measures would require approval by Caltrans and/or further action by the City Council prior to implementation of the mitigation measure. As Main Street is a State highway (SR-29), mitigation measures along Main Street are subject to Caltrans approval, and thus the construction of the mitigation measures cannot be guaranteed by the City alone. Additionally, the mitigation measures along Main Street and Silverado Trail may be considered infeasible due to lack of funds to design and construct adequate improvements to accommodate future traffic volumes or due to lack of sufficient right-of-way to construct needed improvements. The impact is found to be significant and unavoidable under 14 CCR sections 15091(a)(2) and 15091 (a)(3). This potential unavoidable significant impact is acceptable and overridden as set forth below in the Statement of Overriding Considerations.

IX. FINDINGS REGARDING PLAN ALTERNATIVES

30. The City adopts the EIR's analysis and conclusions with respect to all of the alternatives discussed as supplemented by the findings below.
31. The two alternatives analyzed in the EIR, represent a reasonable range of potentially feasible alternatives that reduce one or more significant impacts of the Plan. These alternatives include the (1) No Project Alternative; (2) the Transportation Network Enhancement Alternative. The Transportation Network Enhancement Alternative was identified as the Environmentally Superior Alternative.
32. The City certifies that it has independently reviewed and considered the information on alternatives provided in the EIR and in the record. The EIR reflects the City's independent judgment as to the Plan alternatives. The City finds that the Transportation Network Enhancement Alternative would feasibly achieve the Project objectives articulated in the EIR and would reduce or avoid several significant and unavoidable impacts of the Proposed Plan, as described below. The No Project Alternative described and evaluated in the EIR is rejected as infeasible and for the reasons stated in the EIR and described below. Each individual reason presented below constitutes a separate and independent basis for rejection on the basis of infeasibility, and, when the reasons are viewed collectively, provide an overall basis for rejection.
33. No Project Alternative: Under this alternative, the proposed St. Helena General Plan Update would not be adopted and the existing (1993) General Plan would remain in effect. This would include General Plan amendments and amendments to the Zoning Ordinance that have been approved by the City of St. Helena since adoption of the 1993 General Plan. Under the No Project Alternative, the city would operate under the existing General Plan, using it to guide the city's future development. Under this alternative, the proposed changes to the existing General Plan would not occur. The existing land use classifications would remain in effect.
    - Growth under the No Project Alternative is projected to result in approximately 360 new residents, 200 new housing units, and 780 new jobs in the City of St. Helena by 2040, which represents a 6 percent increase in population and 14 percent increase in employment over 2018 conditions.

Anticipated growth under the No Project Alternative is consistent with ABAG growth projections for St. Helena in 2040.

- The No Project Alternative would have similar significant impacts to the Proposed Plan in the area of agricultural resources. The Proposed Plan would result in a significant and unavoidable impact related to the potential conversion of approximately 118.5 acres of Farmland land within the City limit and SOI to urban uses. As with the Proposed Plan, the No Project Alternative also includes urban land use designations in areas of Important Farmland, which would allow for new development that would result in farmland conversion. While the No Project Alternative would introduce Agricultural Resource and Agricultural, Watershed, and Open Space land use designations in north and southeast portions of the Planning Area, it would also result in the possible conversion of Farmland to urban uses within the Urban Limit Line. Similar to the Proposed Plan, the No Project Alternative would result in a significant impact, given that agricultural land is a finite and irreplaceable resource that is not directly mitigable, aside from preventing development altogether. However, as the No Project Alternative would not involve the same minor adjustments to the ULL as the Proposed Plan, this alternative would result in the conversion of less Farmland within the City limit and SOI to urban uses than under the Proposed Plan.
- The No Project Alternative is expected to have fewer significant impacts than the Proposed Plan in the area of air quality but could expose sensitive receptors to substantial pollutant concentrations. Implementation of Mitigation Measure AQ-1 in the Proposed Plan would be required to reduce the impact of the No Project Alternative to a less than significant level, as development on commercial and industrial facilities could expose nearby receptors to substantial air pollutant concentrations.
- The No Project Alternative includes some policies to protect biological resources, but not the full range included in the Proposed Plan. In particular, it would not include the proposed Policy OS1.3, which protects contiguous corridors of riparian vegetation along the Napa River and its tributaries to ensure that sensitive species and habitats, and wildlife corridors are not impacted by future development, or policy OS4.1 addressing the protections of tree resources in both developed and undeveloped areas. The No Project Alternative also would not include all of the Proposed Plan's implementation actions, which would require new development to minimize impact to biological resources through actions including but not limited to work plans for restoring sensitive habitat degraded by agriculture, biological assessments at special-status species habitat, management plans to restore sensitive habitat, and avoiding construction during nesting season through scheduling or a pre-construction survey to achieve policy goals. The No Project Alternative would not include policies designed to protect wetlands, thus could result in a significant and unavoidable impact. The No Project Alternative would include policies from the 1993 General Plan related to maintaining and enhancing biodiversity, protecting special-status species and their habitats, conserving habitats for native species, and protecting connectivity for wildlife movement.

Therefore, the No Project Alternative would include policies protecting biological resources but would not be as comprehensive and protective as the Proposed Plan and could result in significant impacts to special-status species, riparian habitat, and wetlands.

- The No Project Alternative includes policies to preserve historic sites and cultural resources, but it does not include policies pertaining to paleontological resources, nor does the No Project Alternative include a goal or policies specifically protecting Native American heritage or tribal cultural resources. Further, the No Project Alternative would not promote a compact, urban development pattern to the same extent as the Proposed Plan or the Transportation Network Enhancement Alternative. Therefore, while the No Project Alternative's impacts on historical and cultural resources would be less than significant, it could not guarantee that impacts on paleontological and tribal cultural resources could be reduced below a level of significance. Therefore, the No Project Alternative would be considered to have potentially significant impacts on paleontological and tribal cultural resources.
- The No Project Alternative would not include policies aimed at reducing GHG emissions and promoting sustainability and multi-modal transportation. While the increase in VMT under the No Project Alternative would be lower than the Proposed Plan (5 percent and 25 percent, respectively), the No Project Alternative would not propose the adoption and implementation of a Climate Action Plan with specific and quantifiable goals to reduce emissions as is the case with implementation of the Proposed Plan. Thus, impacts related to GHG emissions and subsequent impacts on the environment for the No Project Alternative are considered even more significant than the Proposed Plan. The No Project Alternative would conflict with goals to reduce GHG emissions established in CARB's 2017 Scoping Plan, AB 32, EO S-03-05, or BAAQMD's CEQA Guidelines and therefore would result in a further significant impact.
- Under the No Project Alternative, VMT would increase by 5 percent over existing conditions and could have a significant impact on traffic-related vibration in the City of St. Helena, though less than impacts associated with the Proposed Plan. The implementation of Mitigation Measure NOI-1 would be required to assess the potential vibration impact in order to reduce this impact to a level that is less than significant.
- The No Project Alternative is expected reduce level of service impacts associated with the Proposed Plan, as it is expected to have the least amount of daily VMT, but it would still contribute to the need for transportation improvements. The No Project Alternative would not include the wide range of multi-modal and Complete Streets policies and actions found in the Proposed Plan. Existing LOS impacts would worsen under the No Project Alternative with no policies or mitigation measures in place and would lead to a significant and unavoidable impact regarding level of service.
- **Findings and Supporting Facts:** Adoption of the No Project Alternative is infeasible; it would not allow the community to achieve the objective of updating the St. Helena General Plan to reflect current conditions and

community priorities, or to achieve the community's vision for the future. The No Project Alternative is further infeasible and rejected as an alternative because it would not include sufficient policies to promote the Guiding Principles that support the community vision. Specifically, it would not contain the same agricultural preservation policies, public health and police to address environmental justice, policies to address a diversity of needs for housing and services, policies to support the revitalization of Downtown, policies to strengthen job opportunities and training, or Complete Streets policies to create a balanced circulation network. Further, the No Project Alternative was found to have more potentially significant and unavoidable impacts than either the Transportation Network Enhancement Alternative or the Proposed Plan, as the policies included in the No Project Alternative in many cases do not address the broad range of environmental topics covered by the Proposed Project and are not up to date with current laws and practices concerning environmental impacts. Notably, the No Project Alternative could impact important biological, cultural, and historic resources existing in the City of St. Helena due to the lack of protective policies, and would not substantially lessen impacts on agricultural resources or climate change.

34. Transportation Network Enhancement Alternative. This alternative differs from the Plan only in its proposal to extend Oak Street south from its current terminus at Mitchell Lane to Grayson Avenue. The new roadway would be constructed as a two-lane Downtown/Mixed Use Street with bicycle lanes and sidewalks, consistent with the City's Engineering Standards, and a bridge would be constructed over Sulphur Creek. This roadway extension could also provide access to the Vine Trail. The Transportation Network Enhancement Alternative would retain the land use designations, citywide capital improvements, policy framework, and recommended mitigation measures of the Proposed Plan.
    - As with the Plan, implementation of the Transportation Network Enhancement Alternative is projected to result in 700 new residents, 400 new housing units, and 1,000 new jobs in the City of St. Helena by 2040, which represents a 12 percent increase in population and 19 percent increase in employment over 2018 conditions. This level of growth is generally consistent with ABAG projections, and both the Plan and the Transportation Network Enhancement Alternative include policies which encourage infill development.
    - The Transportation Network Enhancement Alternative would have similar significant impacts to the Plan in the area of agricultural resources. The Plan would result in the potential conversion of approximately 118.5 acres of Farmland within the city limit and SOI to urban uses. The Transportation Network Enhancement Alternative includes the same policy framework and urban land use designations in areas of Important Farmland as under the Plan, which would allow for new development that would result in farmland conversion. The Transportation Network Enhancement Alternative would also involve extending Oak Avenue south through additional parcels of Prime Farmland and Farmland of Statewide Importance, and would thus result in

greater impacts related to the conversion of Farmland to urban uses than the Plan.

- Impacts under the Transportation Network Enhancement Alternative are expected to be similar to those under the Plan as the two share policies that would protect or improve air quality. The Transportation Network Enhancement Alternative would have similar significant and unavoidable impacts related to the violation of air quality standards and the cumulatively considerable increase of criteria pollutants. Although future development under the Transportation Network Enhancement Alternative would be required to comply with applicable air quality plans, as with the Proposed Plan, there is no guarantee emissions would be mitigated below BAAQMD thresholds. As with the Plan, the Transportation Network Enhancement Alternative would result in a cumulatively considerable net increase of criteria pollutants and therefore impact attainment status for ROG, ozone, $PM_{2.5}$ (as ROG is a precursor of ozone and $PM_{2.5}$) and PM_{10} emissions. Under the Transportation Network Enhancement Alternative, as with the Plan, a quantitative evaluation of potential health risk impacts from construction-related pollution is not possible without specific details on the locations of building footprints or their construction schedules. Therefore, mitigation measures that would mitigate air quality impacts from construction as they affect the community are needed in order to reduce impacts on sensitive receptors to less than significant levels.
- The Transportation Network Enhancement Alternative would have similar significant impacts to the Plan in the area of greenhouse gases and climate change. The Transportation Network Enhancement Alternative includes the same land use development pattern and buildout projections as the Plan with the exception of one road extension within the city's ULL. Implementation of the Plan, and therefore the Transportation Network Enhancement Alternative, would increase VMT by 25 percent over existing conditions and would generate GHG emissions in excess of the BAAQMD emissions target of 2.3 MTCO2e per service population by 2040. Cumulative GHG emissions under the Transportation Network Enhancement Alternative, as with the Plan, would contribute to climate change and significant impacts on the environment. Even accounting for State and federal standards, policies aimed at the reduction of VMT, and the implementation of Mitigation Measure GHG-1, the potential exists for the Plan, and therefore the Transportation Network Enhancement Alternative, to conflict with applicable plans, policies, or regulations adopted for the purpose of reducing the emissions of GHGs.
- The Transportation Network Enhancement Alternative has the same land use development pattern and projected buildout as the Plan with the exception of the extension of Oak Avenue within the city's ULL. Therefore, differences in impacts on hydrology would result from construction and operation of the extension. Development within the floodway under both the Plan and Transportation Network Enhancement Alternative, including construction of housing, would constitute a significant impact, as FEMA designates these as channels which should flood regularly and provide unimpeded conveyance for

floodwaters during a typical large storm event. Mitigation Measure HYDRO-1 would result in the modification of floodway boundaries such that the proposed development would no longer be within the floodway pursuant to FEMA regulations. However, the extension of Oak Avenue would be within the floodway and could constitute a significant and unavoidable risk. Design of the extension and the bridge crossing Sulphur Creek that would reduce the impact of flooding on the Oak Avenue extension and nearby development would be required to reduce this impact to a level that is less than significant. However, impacts of the Transportation Network Enhancement Alternative on hydrology would be greater than those under the Proposed Plan.

- The Transportation Network Enhancement Alternative has the potential to result in a similar level of traffic-related noise as the Plan. Adherence to policies regarding noise levels and VMT reduction and the existing Napa County General Plan would reduce the potential traffic-related noise level impacts. However, the Transportation Network Enhancement Alternative would introduce an extension of Oak Avenue into area currently designated as Agricultural, resulting in a significant and permanent increase in ambient noise from traffic in the Planning Area. While implementation of the Transportation Network Enhancement Alternative would include policies aimed at reducing VMT and result in the paving of the Oak Avenue extension, this alternative could introduce a significant impact regarding traffic-related vibration in an area that is currently designated as Agricultural and contains the Sulphur Creek. Mitigation Measure NOI-1 would be required to assess the potential vibration impact of construction of this extension and the extension itself in order to reduce this impact to a level that is less than significant.
- **Findings and Supporting Facts:** The City finds that the Transportation Network Enhancement Alternative would be feasible and would allow the community to achieve the Plan objectives. Additionally, while the Transportation Network Enhancement Alternative could introduce potentially significant impacts related to agricultural resources, noise, and hydrology associated with the extension of Oak Street that would not occur under the Proposed Plan and is therefore not considered the environmentally superior alternative, the City nevertheless finds that the Transportation Network Enhancement Alternative would avoid or significantly reduce several of the impacts of the Proposed Plan. Specifically, the Transportation Network Enhancement Alternative would avoid significant and unavoidable traffic impacts that would result from the Proposed Plan at the following four intersections in 2040: Main Street/Pope Street-Mitchell Drive, Main Street/Grayson Avenue, Main Street/Sulphur Springs Avenue, and Main Street/Mills Lane. Under the Transportation Network Enhancement Alternative, it is projected that peak hour queuing conditions along Main Street south of the Downtown area would be equivalent to existing conditions, and thus impacts to upstream intersections related to queue spillback from the Downtown area would also be less than significant – an improvement over the Proposed Plan. Under the Transportation Network Enhancement Alternative, a total of three intersections (Main Street/Pratt Avenue, Main Street/Elmhurst

Avenue, and Silverado Trail/Pope Street) would operate at unacceptable LOS in 2040, four fewer than the Proposed Plan. Mitigation is available that would reduce impacts at these three intersections to a less than significant level; however, as Main Street is a State highway (SR-29), mitigation measures along Main Street are subject to Caltrans approval, and since there is currently no approved plan or funding to implement the mitigation measures, implementation cannot be guaranteed and impacts at these three intersections would remain significant and unavoidable. Additionally, the Transportation Network Enhancement Alternative would result in less VMT than the Proposed Plan and would therefore result in a slight reduction of GHG-related impacts than under the Proposed Plan, although GHG-related impacts would remain significant and unavoidable under the Transportation Network Enhancement Alternative as with the Proposed Plan.

XI. STATEMENT OF OVERRIDING CONSIDERATIONS

35. The City of St. Helena has: (1) independently reviewed the information in the EIR and the record of proceedings; (2) made a reasonable and good faith effort to eliminate or substantially lessen the impacts resulting from the Transportation Network Enhancement Alternative to the extent feasible by including in it policies and actions that effectively mitigate potential environmental impacts to the greatest extent feasible; and (3) balanced the Transportation Network Enhancement Alternative's benefits against its significant unavoidable impacts.
36. The City also finds that the No Project Alternative discussed in the EIR should not be adopted because it is infeasible given it does not succeed in reducing environmental impacts while adequately meeting the Plan objectives. The City finds that the Transportation Network Enhancement Alternative most fully implements the Plan objective of reflecting current conditions and community priorities, and achieving the community's vision for the future.
37. The City Council declares that it has adopted mitigation measures to reduce the Transportation Network Enhancement Alternative's environmental impacts to the extent feasible; considered the entire administrative record, including the Final EIR; and weighed the Transportation Network Enhancement Alternative's benefits against its environmental impacts. After doing so, the City Council has determined that the Transportation Network Enhancement Alternative's benefits outweigh its environmental impacts and deem them acceptable.
38. The City Council identified the following public benefits in making this determination. Each of these public benefits serves as an independent basis for overriding all unavoidable adverse environmental impacts identified in these Findings and the EIR. The City Council considers these impacts to be acceptable, consistent with 14 CCR Section 15093.
    - **Regional Agricultural Preservation.** Agriculture is a valued resource in the State of California, and particularly in Napa County and the surrounding region. As established in the vision for the Transportation Network Enhancement Alternative, St. Helena closely identifies with its agricultural heritage and owes much of its economy and character to past and present agricultural uses in and around the city. While the Transportation Network Enhancement Alternative

would result in the conversion of Prime Farmland, Farmland of Statewide Importance, and Unique Farmland to non-agricultural use, it does so in support of a long-term vision of preserving agricultural resources in the region. As a general plan, the Transportation Network Enhancement Alternative is charged with accommodating expected growth in St. Helena over the long term. As a developed community in a rural area, the city is a locus for future growth in a paradigm that emphasizes infill development around downtown St. Helena in order to discourage sprawl and reduce development pressures on agricultural uses outside of the city's developed urban core. Although this strategy would require making more land in the city's core available for development in the future, in combination with the Transportation Network Enhancement Alternative's policies to encourage the continuation of agricultural uses in the city's periphery and to ensure agricultural conservation statewide through 1:1 farmland mitigation, it would direct future housing and jobs development and densification to occur in portions of the city that have already largely been developed, in order to protect the viability of agricultural activities elsewhere.

- **Balanced Mix of Land Uses and Sustainable Land Use Pattern.** The community vision, stated as part of the planning process for the Transportation Network Enhancement Alternative, rests on the three objectives of a sustainable community, a stable economy, and environmental stewardship. The Transportation Network Enhancement Alternative is intended to achieve these objectives by guiding thoughtful land use decisions. Land uses and policies in the Transportation Network Enhancement Alternative were designed to balance the needs for housing, economic development, and environmental resource conservation over the long term. Land use designation changes in the community's core area would provide housing opportunities at a greater range of affordability levels while also allowing for non-residential land uses that can meet local needs for goods and services while generating additional revenue from sales and transient occupancy taxes to support the provision of high-quality public services. Together, a balance of housing and economic development can provide an environment where community members can live and work in the city while reducing the need for local employees to commute by car along SR-29, thus also reducing the city's contribution to air pollution and greenhouse gas emissions. Furthermore, by planning ahead for housing development, the Transportation Network Enhancement Alternative also increases the likelihood that the city will continue to meet its Regional Housing Needs Allocation (RHNA) and provide its fair share of regional housing opportunities.

  Additionally, the Transportation Network Enhancement Alternative makes the policy choice to allow higher densities and intensities in the center of the city to allow for the designation of areas along the periphery for open space preservation. As the Transportation Network Enhancement Alternative makes clear, open spaces are key to preserving biological diversity, water quality, air quality, and safety. The Transportation Network Enhancement Alternative represents a choice to proactively direct projected demand for housing into infill locations at higher densities in order to prevent both sprawl that can threaten the city's open spaces and a decline of housing affordability, while also reducing car dependency.

- **Construction Jobs.** In addition to economic development for local-serving and tourism businesses, growth envisioned in the Transportation Network Enhancement Alternative will provide development-related jobs for the construction industry as well as for architects, engineers, and other related professionals.
- **Managing the Effects of Regional Traffic.** Analysis in the EIR for the Transportation Network Enhancement Alternative found significant impacts related to conflicts with LOS standards established for monitoring the performance of the local circulation system at the following intersections with buildout of the Transportation Network Enhancement Alternative in 2040: Main Street/Pratt Avenue, Main Street/Elmhurst Avenue, and Silverado Trail/Pope Street. Some increase in traffic will be expected due to growth from the Transportation Network Enhancement Alternative; however, as stated previously, the growth envisioned in the Transportation Network Enhancement Alternative is desirable to the community for various reasons related to housing provision and affordability; economic stability; alleviation of projected increases in traffic congestion and vehicle queuing on SR-29 in 2040; and compact, balanced growth in the context of regional agricultural and open space conservation. Ultimately, mitigation of traffic impacts to SR-29 is outside of the City's control. SR-29 is a State highway and the main route between the Bay Area and the cities of Napa County. As such, any alterations to the roadway are under Caltrans jurisdiction rather than the City's. Furthermore, a substantial amount of traffic along SR-29 is regional in nature and is attributed to regional through traffic rather than trips originating or ending within St. Helena. Therefore, increases in traffic along SR-29 over the planning horizon will also be driven by growth in other communities and county/region-wide transportation patterns. While the City may not be able to reduce impacts related to conflicts with LOS standards from the Transportation Network Enhancement Alternative on regional roadways in St. Helena and the surrounding area below a level of significance, policies in the Transportation Network Enhancement Alternative that seek that promote compact development, balance jobs and housing to reduce commute trip length, improve multi-modal connectivity within the city, and manage transportation demand would reduce some of the effects of congestion on SR-29 and Silverado Trail as experienced by community members.
- **Shift to Multi-modal Circulation System.** Based on its compact land use pattern, circulation network, and circulation policies, the Transportation Network Enhancement Alternative would promote a shift to a multi-modal circulation system. Improvements to bicycle and pedestrian infrastructure would improve convenience and safety for residents, students, employees, and visitors seeking to make local trips without a car or using SR-29. In light of regional traffic along SR-29, expanding opportunities for multi-modal travel is one way that the City can improve quality of life for the community and over time help reduce locally-generated vehicle miles traveled and associated greenhouse gas emissions and air quality impacts.
- **Community Vision.** More generally, the Transportation Network Enhancement Alternative would allow for the achievement of the community's vision to be "a

well-integrated place linked by effective community institutions, safe neighborhoods and streets, and superior schools, parks, and public facilities. In addition, planning for thoughtful, well-managed development while maintaining its small-town, rural character…". The City finds that each of the specific economic, legal, social, technological, environmental, and other considerations described below and the benefits of the Transportation Network Enhancement Alternative summarized below independently outweigh its remaining significant adverse impacts and is an overriding consideration independently warranting approval. The remaining significant adverse impacts are acceptable in light of each of these overriding considerations.

XII. CONCLUSION

39. In summary, after balancing the specific economic, legal, social, technological, and other benefits of the Transportation Network Enhancement Alternative, the City of St. Helena finds that the unavoidable adverse environmental impacts identified may be considered "acceptable" due to the specific considerations listed above, which outweigh the unavoidable, adverse environmental impacts of the Transportation Network Enhancement Alternative.
40. The City of St. Helena has considered information contained in the EIR prepared for the Plan as well as the public testimony and record of proceedings in which the Plan was considered. Recognizing that significant unavoidable impacts related to agricultural resources; air quality; energy, greenhouse gases, and climate change; and transportation may result from implementation of the Transportation Network Enhancement Alternative, the City finds that the benefits of the Transportation Network Enhancement Alternative and overriding considerations outweigh the potential adverse effects. Having included all feasible mitigation measures in the EIR or as policies and actions in the Transportation Network Enhancement Alternative, and recognized all unavoidable significant impacts, the City of St. Helena hereby finds that each of the separate benefits of the Transportation Network Enhancement Alternative, as stated herein, is determined to be unto itself an overriding consideration, independent of other benefits, that warrants adoption of the Transportation Network Enhancement Alternative and outweighs and overrides its unavoidable significant effects, and thereby justifies the adoption of the Transportation Network Enhancement Alternative.
41. In reaching this conclusion and approving the Transportation Network Enhancement Alternative:
    - The City has considered the information contained in the Final EIR and fully reviewed and considered all of the public testimony, documentation, exhibits, reports, and presentations included in the record of these proceedings. The City Council specifically finds and determines that this Statement of Overriding Considerations is based upon and supported by substantial evidence in the record.
    - The City has carefully weighed the benefits of the Transportation Network Enhancement Alternative against any adverse impacts identified in the Final EIR that could not be feasibly mitigated to a level of insignificance. While the City has required all feasible mitigation measures, some impacts remain potentially significant.

- This Statement of Overriding Considerations applies specifically to those impacts found to be potentially significant and unavoidable as set forth in the Final EIR and the record of these proceedings.

Exhibit B

Mitigation Monitoring & Reporting Program

for the

2040 ST. HELENA GENERAL PLAN UPDATE
ENVIRONMENTAL IMPACT REPORT

SCH No. 2010042001

City of St. Helena

March 2019

This page intentionally left blank.

1 Purpose

State of California Public Resources Code Section 21081.6(a)(1) requires a lead or responsible agency that approves or carries out a project where an Environmental Impact Report (EIR) has identified significant environmental effects to adopt a reporting or monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment. The City of St. Helena (the "City") is the lead agency for the EIR prepared for the City of St. Helena General Plan Update (SCH No. 2010042001), hereafter referred to as "Proposed Plan," and therefore is responsible for the adoption and implementation of the required mitigation monitoring and reporting program. An EIR has been prepared for the Proposed Plan that addresses potential environmental impacts and, where appropriate, recommends measures to mitigate these impacts.

The Mitigation Monitoring and Reporting Program (MMRP) has been prepared in conformance with Public Resources Code Section 21081.6(a)(1). It is the intent of this program to:

1. Verify satisfaction of the required mitigation measures of the EIR;
2. Provide a methodology to document implementation of the required mitigation;
3. Provide a record of the monitoring program;
4. Identify monitoring responsibility;
5. Establish administrative procedures for the clearance of mitigation measures;
6. Establish the frequency and duration of monitoring; and
7. Utilize existing review processes wherever feasible.

The MMRP describes the procedures that will be used to implement the mitigation measures adopted in connection with the approval of the Proposed Plan and the methods of monitoring such actions. A monitoring program is necessary only for impacts which would be significant if not mitigated.

If, during the course of project implementation, any of the mitigation measures identified cannot be successfully implemented, the City shall immediately inform any affected responsible agencies. The City, in conjunction with any affected responsible agencies, will then determine if modification to the project is required, and/or whether alternative mitigation is appropriate.

The following consists of a monitoring program table noting the responsible entity for mitigation monitoring, the timing, and a list of all project-related mitigation measures.

This page intentionally left blank.

2 Mitigation Monitoring and Reporting Plan

Impact	*Mitigation Measure*	*Method of Verification*	*Timing of Verification*	*Responsibility for Verification*	*Verification Date*	*Complete Initial*
Air Quality						
Construction associated with implementation of the Proposed Plan would create new sources of fugitive PM_{10} and $PM_{2.5}$ dust emissions, resulting in short-term impacts to ambient air quality.	**AQ-1:** Construction projects in the City of St. Helena shall implement BMPs to reduce fugitive dust emissions, such as: • Watering all exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) three times per day using recycled water. • Covering all haul trucks transporting soil, sand, or other loose material. • Removing all visible mud or dirt track-out onto adjacent public roads using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited. • Limiting all vehicle speeds on unpaved roads to 15 mph. • Completing all roadways, driveways, and sidewalks to be paved as soon as possible. Laying building pads soon as possible after grading unless seeding or soil binders are used.	Project applicant shall require fugitive dust control BMPs in construction specifications. Planning and Community Improvement Department, Building Division and Public Works Department shall inspect the worksite regularly to ensure the BMPs are implemented.	During construction	Construction contractor; City of St. Helena Planning and Community Improvement Department, Building Division; City of St. Helena Public Works Department		

Impact	*Mitigation Measure*	*Method of Verification*	*Timing of Verification*	*Responsibility for Verification*	*Verification Date*	*Complete Initial*
	• Minimizing idling times either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points. • Maintaining and properly tuning all construction equipment in accordance with manufacturer's specifications. All equipment shall be checked by a certified automotive mechanic and determined to be running in proper working condition prior to operation at the beginning of each project. • Staging construction equipment as far as possible from existing sensitive receptors (for example, away from the southeast property line and surrounding residences). • Posting a publicly visible sign with the telephone number and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations. • Where warranted, the project sponsors shall incorporate the following language					

Impact	*Mitigation Measure*	*Method of Verification*	*Timing of Verification*	*Responsibility for Verification*	*Verification Date*	*Complete Initial*
	into construction specifications if significant risk is anticipated based on design level construction schedule, duration and concurrent construction activities: ○ Powering portable equipment by electricity if available or if electricity is not available, using propane or natural gas if feasible. Diesel engines shall only be used if electricity is not available and it is not feasible to use propane or natural gas. ○ Ensuring that all mobile diesel-powered off-road equipment larger than 25 horsepower and operating on the site for more than two days continuously or 20 hours cumulative meets, at a minimum, U.S. EPA particulate matter emissions standards for Tier 2 engines or equivalent and be equipped with diesel particulate matter filters that meet CARB-certified Level 2 or 3 Diesel Particulate Filters. Alternatively-fueled equipment (i.e., non-diesel) would meet this requirement.					
Construction associated with implementation of the Proposed Plan would create new sources of ROG	**AQ-2:** Require that applicants proposing development of projects within the City of St. Helena require contractors, as a condition of contract, to reduce construction-related fugitive ROG emissions by ensuring that low-VOC	Project applicants shall incorporate VOC content requirements into construction specifications and	Prior to issuance of construction permit	City of St. Helena Planning and Community Improvement Department,		

Impact	*Mitigation Measure*	*Method of Verification*	*Timing of Verification*	*Responsibility for Verification*	*Verification Date*	*Complete Initial*
emissions and would violate air quality standards.	coatings that have a VOC content of 10 grams/liter (g/L) or less be used during construction. All project applicants shall submit evidence of the requirement for the use of low-VOC coatings to the City of St. Helena prior to the start of construction.	submit to City for review. City to review specifications to confirm requirement.		Building Division		
Implementation of the Proposed Plan could create new point-source air quality impacts.	**AQ-3:** Require all development applications with the potential to create point-source air quality impacts be referred to the Bay Area Air Quality Management District (BAAQMD) for review and comment to ensure compliance with BAAQMD requirements prior to approval of the project.	Project applicants proposing development of new point sources, such as dry cleaners or gas stations, shall apply and obtain for BAAQMD stationary source permits in compliance with BAAQMD Regulation 2. City to confirm receipt of permits.	Prior to issuance of construction permit	BAAQMD; City of St. Helena Planning and Community Improvement Department		
Implementation of the Proposed Plan could expose sensitive receptors to stationary sources of toxic air contaminants.	**AQ-4:** Require development projects to meet CARB setback recommendations from air contaminant sources for sensitive uses, or conduct specific air quality and health risk impact analyses and identify project specific mitigation measures.	Project applicant shall submit drawings that demonstrate setback requirements are met or site-specific construction health risk assessment to City for review.	Prior to discretionary project approval	City of St. Helena Planning and Community Improvement Department		

Impact	*Mitigation Measure*	*Method of Verification*	*Timing of Verification*	*Responsibility for Verification*	*Verification Date*	*Complete Initial*
Implementation of the Proposed Plan could expose sensitive receptors to mobile sources of toxic air contaminants and associated health risks.	**AQ-5:** To protect sensitive receptors require discretionary projects within 500 feet of Highway 29, Silverado Trail or the Rail Corridor to include an analysis of mobile source toxic air contaminant health risks. The analysis, if necessary, shall identify feasible mitigation measures to reduce health risks to acceptable levels.	Project applicant shall prepare and submit site-specific mobile source air contaminant health risk assessment to City for review.	Prior to discretionary project approval	City of St. Helena Planning and Community Improvement Department		
Development of new projects associated with implementation of the Proposed Plan would expose sensitive receptors to project-level and cumulative health risks.	**AQ-6:** All applicants proposing development of projects within 1,000 feet of existing sensitive receptors, as defined by BAAQMD, shall prepare a site-specific screening level construction health risk assessment (HRA) taking into account both project-level and cumulative health risks (including existing TAC sources). If the HRA demonstrates, to the satisfaction of the City, that the health risk exposures for adjacent receptors will be less than BAAQMD project-level and cumulative thresholds (as appropriate), then additional mitigation would be unnecessary. However, if the HRA demonstrates that health risks would exceed BAAQMD project-level and/or cumulative thresholds (as appropriate), additional feasible on- and offsite mitigation shall be analyzed by the applicant to help reduce risks to the greatest extent practicable.	Project applicant shall prepare and submit site-specific construction health risk assessment to City for review.	Prior to discretionary project approval	City of St. Helena Planning and Community Improvement Department		

Impact	*Mitigation Measure*	*Method of Verification*	*Timing of Verification*	*Responsibility for Verification*	*Verification Date*	*Complete Initial*
Energy, Greenhouse Gases, and Climate Change						
Implementation of the Proposed Plan would generate greenhouse gases that could have a significant impact on the environment and conflict with the GHG emissions reduction trajectory for 2050 articulated under EO S-3-05, AB 32, and the 2017 CARB Scoping Plan.	**GHG-1:** The City of St. Helena shall adopt and begin to implement a Climate Action Plan within a goal of 18 months, but no later than 36 months, of adopting the Proposed Plan update to address the GHG reduction goals of Executive Order B-30-15 and Executive Order S-03-05 for GHG sectors that the City has direct or indirect jurisdictional control over. The Climate Action Plan shall include a community inventory of GHG emission sources, and quantifiable GHG emissions reduction targets for 2030 and 2050, and an interim target for the General Plan buildout year 2040, that are consistent with the statewide GHG reduction targets. The City shall monitor progress toward its GHG emissions reduction goals and prepare reports every five years detailing that progress.	Climate Action Plan adoption	Within 18 months, but no later than 36 months, of adoption of the Proposed Plan	City of St. Helena Planning and Community Improvement Department		
Hydrology and Water Quality						
Development associated with implementation of the Proposed Plan could place housing within a 100-year flood hazard area, and would constitute a significant risk and	**HYDRO-1:** Any proposed development or redevelopment on land designated as regulatory floodway on current FEMA maps shall, prior to issuance of a construction permit, obtain and submit to the City a Letter of Map Revision (LOMR) from FEMA, demonstrating that a hydrologic and hydraulic analysis showed that grading modifications were performed such that the proposed development would no longer be within the floodway.	Project applicant shall obtain and submit to the City a Letter of Map Revision from FEMA	Prior to discretionary project approval	City of St. Helena Planning and Community Improvement Department		

Impact	*Mitigation Measure*	*Method of Verification*	*Timing of Verification*	*Responsibility for Verification*	*Verification Date*	*Complete Initial*
conflict with FEMA standards.	These modifications shall be completed without raising the base flood level or impacting other properties.					
Noise						
Construction associated with implementation of the Proposed Plan would temporarily expose future and existing development to excessive groundborne vibration. All construction equipment would generate vibration levels greater than the distinctly perceptible level of 0.04 PPV in/sec at a distance of 25 of sensitive land uses. At a distance of 300 feet, pile driving activities would also result in significant vibration impacts to sensitive land uses.	**NO-1:** Where vibration impacts have the potential to cause structural damage or distinctly perceptible human response, require a vibration study, prepared by a qualified vibration consultant. The study should include a site-specific engineering assessment of potential vibration impacts to structures and sensitive receptors from construction activities and specify a mitigation plan to minimize the impacts using all reasonable and feasible means available. The mitigation plan should include a procedure for establishing threshold and limiting vibration values for potentially affected structures, based on an assessment of each structure's ability to withstand the loads and displacements due to construction vibrations and a commitment to develop a vibration monitoring plan during the engineering phase and to implement a compliance monitoring program during construction.	Project applicant shall submit the required vibration study to the City	Prior to issuance of construction permit	City of St. Helena Planning and Community Improvement Department		

Impact	*Mitigation Measure*	*Method of Verification*	*Timing of Verification*	*Responsibility for Verification*	*Verification Date*	*Complete Initial*
Transportation and Traffic						
Implementation of the Proposed Plan at buildout in 2040 would impact weekday PM peak hour intersection operations and delay at the Main Street and Pratt Avenue intersection. The Peak Hour Signal Warrant would be met at this intersection for the weekday PM peak hour at buildout in 2040.	**TR-1:** When the rural signal warrant is met, install a traffic signal at the Main Street/Pratt Avenue intersection.	Monitor conditions through applicant traffic studies as development projects are proposed. Require payments of Transportation Impact Fees as applicable.	Ongoing	City of St. Helena Public Works Department; City of St. Helena Planning and Community Improvement Department		
Implementation of the Proposed Plan at buildout in 2040 would impact weekday PM peak hour intersection operations and delay at the Main Street and Elmhurst Avenue intersection. The Peak Hour Signal Warrant would be met at this	**TR-2:** When the rural signal warrant is met, restripe the Main Street/Elmhurst Avenue intersection to include the following: • Northbound approach: 1 left turn lane, 1 through lane • Southbound approach: 1 two-way left turn lane, 1 through-right turn shared lane • Eastbound approach: 1 left turn lane, 1 right turn lane	Monitor conditions through applicant traffic studies as development projects are proposed. City shall require payments of Transportation Impact Fees as applicable.	Ongoing	City of St. Helena Public Works Department; City of St. Helena Planning and Community Improvement Department		

Impact	*Mitigation Measure*	*Method of Verification*	*Timing of Verification*	*Responsibility for Verification*	*Verification Date*	*Complete Initial*
intersection for the weekday PM peak hour at buildout in 2040.						
Implementation of the Proposed Plan at buildout in 2040 would impact weekday AM peak hour, weekday PM peak hour, and weekend midday peak hour intersection operations at the Main Street and Pope Street/ Mitchell Drive Intersection.	**TR-3:** Main Street/Pope Street-Mitchell Drive: Construct one or more of the planned roadway extensions noted in General Plan Figure 5.2. Note that, per the General Plan, additional study of the connection(s) would be required, and the City Council would need to approve the connection at that time. Candidate extensions that may directly reduce the impacts at Main Street/Pope Street-Mitchell Drive include: • Connection 2A: College Avenue extension to Mills Lane (may require realignment of Mills Lane to meet Main Street/Grayson Avenue intersection) • Connection 3: Oak Avenue extension from Mitchell Drive to Grayson Avenue • Connection 2B, Connection 2C, Connection 5B, or a combination of Connections 1, 4 and 5A may provide congestion relief to Main Street/Pope Street-Mitchell Drive, but these improvements have additional considerations related to neighborhood traffic volumes and costs related to crossings of the Napa River.	Monitor conditions through applicant traffic studies as development projects are proposed. City shall require payments of Transportation Impact Fees as applicable.	Ongoing	City of St. Helena Public Works Department; City of St. Helena Planning and Community Improvement Department		

Impact	*Mitigation Measure*	*Method of Verification*	*Timing of Verification*	*Responsibility for Verification*	*Verification Date*	*Complete Initial*
Implementation of the Proposed Plan at buildout in 2040 would impact weekday PM peak hour intersection operations and delay at the Main Street and Sulphur Springs Avenue intersection. The Peak Hour Signal Warrant would be met for this intersection for the weekday PM peak hour at buildout in 2040.	**TR-4:** When the rural signal warrant is met, install a traffic signal at the Main Street/Sulphur Springs Avenue intersection.	Monitor conditions through applicant traffic studies as development projects are proposed. City shall require payments of Transportation Impact Fees as applicable.	Ongoing	City of St. Helena Public Works Department; City of St. Helena Planning and Community Improvement Department		
Implementation of the Proposed Plan at buildout in 2040 would impact weekday AM peak hour, weekday PM peak hour, and weekend midday peak hour intersection operations and delay at the Silverado Trail and Pope Street intersection. The Peak Hour Signal	**TR-5:** When the rural signal warrant is met, install a traffic signal at the Silverado Trail/Pope Street intersection. The nearby intersection of Silverado Trail/Howell Mountain Road may require signalization as well because the two intersections are closely spaced.	Monitor conditions through applicant traffic studies as development projects are proposed. City shall require payments of Transportation Impact Fees as applicable.	Ongoing	City of St. Helena Public Works Department; City of St. Helena Planning and Community Improvement Department		

Impact	*Mitigation Measure*	*Method of Verification*	*Timing of Verification*	*Responsibility for Verification*	*Verification Date*	*Complete Initial*
Warrant would be met at this intersection for the weekday AM, weekday PM, and weekend midday peak hours at buildout in 2040.						
Implementation of the Proposed Plan at buildout in 2040 would impede Main Street traffic flow at the Main Street and Grayson Avenue and Main Street and Mills Lane intersections due to queues at these intersections.	**TR-6:** Main Street/Grayson Avenue and Main Street/Mills Lane: Realign Mills Lane to form a four lane approach to the existing Main Street/Grayson Avenue intersection.	Monitor conditions through City's ongoing traffic signal maintenance program or through applicant traffic studies as development projects are proposed. Through this monitoring effort, new traffic counts and field observations should be collected to verify LOS at the intersection and compare to the City's LOS standards. Mitigation measure shall be implemented when operations are found to be unacceptable relative to City's standards. City shall require payments of Transportation Impact Fees as applicable.	Ongoing	City of St. Helena Public Works Department; City of St. Helena Planning and Community Improvement Department

1 Introduction

This Final Environmental Impact Report (EIR) has been prepared by the City of St. Helena in accordance with the California Environmental Quality Act (CEQA) (Public Resources Code Section 21000 *et seq.*). The EIR analyzes potential environmental impacts of the adoption and implementation of the proposed St. Helena General Plan Update 2040, referred to as the "Proposed Plan." This Final EIR provides responses to comments on the Draft EIR as well as corrections and clarifications to the Draft EIR. The City of St. Helena is the lead agency responsible for ensuring that the proposed General Plan complies with CEQA. "Lead agency" is defined by Section 21067 of CEQA as "the public agency which has the principal responsibility for carrying out or approving a project which may have a significant effect upon the environment."

Purpose

This document, combined with the Draft EIR, published October 23, 2018, constitutes the Final EIR on the Proposed Plan as described in Chapter 2: Project Description of the Draft EIR. The primary purpose of the Final EIR is to revise and refine the environmental analysis in the Draft EIR in response to comments received during the public review period. The public review period for the Draft EIR (State Clearinghouse No. 2010042001) lasted for 71 days, from Tuesday, October 23, 2018 to Friday, January 2, 2019.

This Final EIR amends and incorporates by reference the Draft EIR. This document includes comments and responses to comments on the Draft EIR, and corrections and clarifications to the Draft EIR. The EIR is intended to disclose to City of St. Helena decision makers, responsible agencies, organizations, and the general public the potential impacts of implementing the Proposed Project using a program level of analysis. The Draft EIR and Public Review Draft St. Helena General Plan 2040 are available for review at the City of St. Helena website (http://www.ci.st-helena.ca.us/).

CEQA Process

Before the City may approve the various discretionary actions needed to implement the Proposed Plan, it must independently review and consider the information contained in the Final EIR, certifying that the Final EIR adequately discloses the environmental effects of the Proposed Plan, that the Final EIR has been completed in conformance with CEQA, and that the decision-making body of the Lead Agency independently reviewed and considered the information contained in the Final EIR. Certification of the Final EIR would indicate the City's determination that the Final

EIR adequately evaluates the environmental impacts that could be associated with the Proposed Plan.

For impacts identified in the EIR that cannot be reduced to a level that is less than significant, the City must make findings and prepare a Statement of Overriding Considerations for approval of the Proposed Project if specific social, economic, or other factors justify the Proposed Plan's unavoidable adverse environmental effects. If the City decides to approve the Proposed Plan for which the Final EIR has been prepared, it will issue a Notice of Determination.

The City of St. Helena has prepared this document pursuant to CEQA Guidelines Section 15132, which specifies that the Final EIR shall consist of:

- The Draft EIR or a revision of the Draft;
- A list of persons, organizations, and public agencies commenting on the Draft EIR;
- Comments and recommendations received on the Draft EIR;
- The response of the Lead Agency to significant environmental points raised in the review process; and
- Any other information added by the Lead Agency.

This Final EIR incorporates comments from public agencies and the general public. It also contains the Lead Agency's responses to those comments. Copies of the Final EIR have been provided to agencies and other parties that commented on the Draft EIR or have requested the Final EIR. The Final EIR can also be accessed through the City of St. Helena website.

New Information in the Final EIR

If *significant new information* is added to an EIR after notice of public review has been given, but before final certification of the EIR, the Lead Agency must issue a new notice and recirculate the EIR for further comments and consultation. Significant new information is that which discloses that:

- A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented;
- A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance;
- A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it; or
- The Draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

Corrections or clarifications to the Draft EIR identified in Chapter 3 of this document do not constitute *significant new information* pursuant to Section 15088.5 of the CEQA Guidelines; this

new information merely clarifies and makes insignificant changes to an adequate EIR. Information presented in the Draft EIR and this document support this determination.

Organization

This document contains the following components:

- **Chapter 1**
- **Chapter 2** lists all of the agencies, organizations and individuals that submitted written comments on the Draft EIR; reproduces all comments; and provides a unique number for each comment in the page margin.
- **Chapter 3** provides numbered responses to comments on the Draft EIR keyed to the comment letters included in Chapter 2, as well as revisions to the Draft EIR where necessary to clarify or amplify in the order that responses appear. Where such revisions are warranted in response to comments on the Draft EIR, deletions are shown in ~~strikethrough~~ and additions are shown <u>underlined</u> in the matrix of comments and responses. Map revisions required in response to comments are noted in the matrix and the revised maps are included at the end of this chapter.
- **Appendix A** provides the Notice of Preparation, Notice of Completion, and Notice of Availability for the 2018 Draft EIR to the St. Helena General Plan Update 2040 published for public review and comment, as well as the Notice of Availability for the 2016 Draft.

This page intentionally left blank.

2 Comments on the Draft EIR

This chapter contains copies of the comment letters received on the Draft EIR. A total of 18 comment letters and emails were received during the 71-day comment period. In addition, the City of St. Helena Planning Commission held a regular Planning Commission meeting to receive comments on the Draft EIR for the General Plan Update during the comment period on December 4, 2018. One member of the public and four St. Helena Planning Commissioners provided comments at the December 4, 2018 Planning Commission meeting. This chapter also includes a letter from the State Clearinghouse acknowledging the City's compliance with State Clearinghouse review requirements pursuant to CEQA and stating which comments were submitted by State agencies. Comments received are listed in Table 2-1.

Each letter is identified by a designator (e.g. "Letter A1"). Letters sent by the same commenter are grouped together (e.g. "Letter A1-B" designates a letter sent at a later date). Specific comments within each letter are identified by a designator in the page margin that reflects the sequence of the specific comment within the correspondence (e.g. "A1-1" for the first comment in Letter A1). Comments are organized by public agency comments and responses (Section A) and individual comments and responses (Section B). Comment B-10 includes all comments made by individual members of the public and Planning Commissioners at the December 4, 2018 Planning Commission meeting, which are responded to separately. Within each category, comments are listed in chronological order according to the date on the letter.

VIA EMAIL: NHOUSH@CITYOFSTHELENA.ORG
Mr. Noah Housh, Director
City of St. Helena
Planning and Community Department
1480 Main Street
St. Helena, CA 94574

Dear Mr. Housh:

DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE ST. HELENA GENERAL PLAN UPDATE 2040, SCH# 2010042001

The Department of Conservation's (Department) Division of Land Resource Protection (Division) has reviewed the Draft Environmental Impact Report for the St. Helena General Plan Update (Project). The Division monitors farmland conversion on a statewide basis and administers the California Land Conservation (Williamson) Act and other agricultural land conservation programs. We offer the following comments and recommendations with respect to the proposed project's potential impacts on agricultural land and resources.

Project Description

The proposed project consists of an update of the City's General Plan. The General Plan is a long-term policy document that establishes direction to guide future land use decisions, a framework to ensure the character and quality of development desired by the community, and the processes by which development and land use changes will take place. The General Plan is used by City staff to review development proposals to ensure that subsequent projects align with the community's vision. The Planning Commission and City Council use the General Plan to guide decision-making that would impact the city's physical environment.

Department Comments

A1-2

Although direct conversion of agricultural land is often an unavoidable impact under CEQA analysis, mitigation measures must be considered. In some cases, the argument is made that mitigation cannot reduce impacts to below the level of significance because agricultural land will still be converted by the project, and therefore, mitigation is not required. However, reduction to a level below significance is not a criterion for mitigation under CEQA. Rather, the criterion is feasible mitigation that lessens a project's impacts.

All mitigation measures that are potentially feasible should be considered. A measure brought to the attention of the Lead Agency should not be left out unless it is infeasible based on its elements. The Department suggests that the City consider the adoption of an agricultural land mitigation program that will effectively mitigate the conversion of agricultural land.

Agricultural conservation easements are an available mitigation tool that the City should consider. The Department highlights easements as a mitigation tool because of their acceptance and use by lead agencies as an appropriate mitigation measure under CEQA and because they follow an established rationale similar to that of wildlife habitat mitigation. A1-2

Programs that establish agricultural conservation easements and in-lieu fees for mitigation banking are most effective at conserving comparable quality agricultural land when the easement requirements or fees are determined concurrent with project approval. Should significant time elapse between initial approval and the applicant's receipt of a building or grading permit, conflict may arise over the agricultural quality or value of the land being converted.

Mitigation via agricultural conservation easements can be implemented by at least two alternative approaches: the outright purchase of easements or the donation of mitigation fees to a local, regional, or statewide organization or agency whose purpose includes the acquisition and stewardship of agricultural conservation easements. The conversion of agricultural land should be deemed an impact of at least regional significance. Hence, the search for replacement lands should not be limited strictly to lands within the project's surrounding area.

A source that has proven helpful for regional and statewide agricultural mitigation banks is the California Council of Land Trusts. They provide helpful insight into farmland mitigation policies and implementation strategies, including a guidebook with model policies and a model local ordinance. The guidebook can be found at:

http://www.calandtrusts.org/resources/conserving-californias-harvest/

Another source is the Division's California Farmland Conservancy Program (CFCP), which has participated in bringing about conservation easements throughout the State of California involving many California land trusts. Any other feasible mitigation measures should also be considered.

Conclusion

Thank you for giving us the opportunity to comment on the Draft Environmental Impact Report for the St. Helena General Plan Update. Please provide this Department with notices of any future hearing dates as well as any staff reports pertaining to this project. If you have any questions regarding our comments, please contact Farl Grundy, Environmental Planner at (916) 324-7347 or via email at Farl.Grundy@conservation.ca.gov. A1-3

Sincerely,

Monique Wilber
Conservation Program Support Supervisor

Comment Letter A2-A

From: Freeman, Brendon [mailto:bfreeman@napa.lafco.ca.gov]
Sent: Thursday, December 13, 2018 2:23 PM
To: Noah Housh
Cc: Mark Prestwich
Subject: St Helena Gen Plan DEIR

Good afternoon Noah,

Just want to give you a heads up that LAFCO will submit a comment letter on the City's DEIR by the 1/2/19 deadline. I've authorized Ascent Environmental to prepare the letter and they will call you sometime next week to discuss our respective interests. A2-A-1

LAFCO's core interest is ensuring we can rely on the City's EIR to satisfy our CEQA requirements for any potential sphere expansions involving the three study areas. The letter will also mention that the Cortese-Knox-Hertzberg Act includes a unique definition of "prime agricultural land" (Gov Code Section 56064) that differs from FMMP's "prime farmland", so we will request the DEIR at minimum identify prime ag lands within the study areas. A2-A-2 Finally, we will also request LAFCO be identified as a responsible agency where appropriate, assuming sphere expansions will indeed be pursued. A2-A-3

Please note I'll be out of the office the next two weeks for vacation, but I'll be checking emails. Feel free to email me with any questions, comments, concerns, or otherwise and I'll do my best to reply ASAP. You can also flesh out any issues with Ascent, as I'm heavily deferring to their professional expertise. A2-A-4

Best wishes for a happy holiday season,

St. Helena, California 94574
NHoush@cityofsthelena.org

SUBJECT: Comments on the City of St. Helena General Plan Update and Draft Environmental Impact Report

Mr. Housh:

On October 23, 2018, the City of St. Helena released the St. Helena General Plan Update 2040 and accompanying Draft Environmental Impact Report (EIR) for public review and comment. Ascent Environmental reviewed both documents for overall adequacy of analysis and sufficiency of evidence, as well as adherence to CEQA requirements for preparation of an EIR. The following comments are provided for consideration.

Napa County Local Agency Formation Commission (Napa LAFCO or Commission) appreciates the opportunity to comment on the St. Helena General Plan Update 2040 (project) and accompanying Draft Environmental Impact Report (EIR). Napa LAFCO will use both final documents in fulfilling its regulatory and planning responsibilities under the authority of the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000. These duties include, but are not limited to, regulating governmental boundary changes through annexations or detachments, approving or disapproving city incorporations, and forming, consolidating, or dissolving special districts. Under the California Environmental Quality Act (CEQA), LAFCO is a Responsible Agency for this project and it is in this role that Napa LAFCO is commenting on this EIR.

Comments on Noticing Procedures

The Notice of Preparation (NOP) for the St. Helena General Plan Update 2040 EIR was released for public review on April 2, 2018, and the Notice of Availability (NOA) was released on October 23, 2018. Napa LAFCO does not have a record of receiving the NOP or NOA for the project, as a Responsible Agency we request to be notified on all future proceedings related to this project and other projects where Napa LAFCO may have discretionary authority.

Margie Mohler, Chair
Councilmember, Town of Yountville

Brad Wagenknecht, Vice Chair
County of Napa Supervisor, 1st District

Gregory Rodeno, Commissioner
Representative of the General Public

Scott Sedgley, Commissioner
Councilmember, City of Napa

Diane Dillon, Commissioner
County of Napa Supervisor, 3rd District

Erik Lawrence, Alternate Commissioner
Representative of the General Public

Kenneth Leary, Alternate Commissioner
Councilmember, City of American Canyon

Ryan Gregory, Alternate Commissioner
County of Napa Supervisor, 2nd District

Brendon Freeman
Executive Officer

The 71-day public review period for the Draft EIR began on October 23, 2018 and ends on January 2, 2019. Although this extends beyond the mandated 45-day public review period, the 71-day public review period includes State holidays observed by members of the public and public agencies, including Napa LAFCO. This does not allow ample time to adequately review the 620-page Draft EIR and appendices. The public review period should be extended past the January 2, 2019 deadline to allow enough time to review the content of the Draft EIR and foster meaningful public discourse.

Comments on Chapter 2, Project Description

Planning Area

A2-B-2

The Planning Area for the St. Helena General Plan Update and Draft EIR encompasses approximately 3,594 acres including land within the City of St. Helena, the City's Sphere of Influence (SOI), and three adjacent unincorporated study areas outside of the City's SOI. Collectively, the three unincorporated study areas encompass approximately 450 acres. The location, size, and land use designations for each study area are described below:

- Study Area 1: The 165-acre area is located along the Napa River and includes residential development, the Meadowood Napa Valley resort, and St. Helena-owned utility infrastructure, including water tanks. Consistent with the Napa County General Plan, the land within Study Area 1 is designated Agriculture, Watershed, and Open Space.
- Study Area 2: The 100-acre area is located south of Chaix Lane near the southeastern boundary of the City and includes spray fields currently used to dispose of treated effluent from the City of St. Helena's Wastewater Treatment Plant. Consistent with the Napa County General Plan, the northern portion of Study Area 2 is designated Agriculture, Watershed, and Open Space. The southern portion of Study Area 2 is designated Agricultural Resource.
- Study Area 3: The 185-acre area is located south of Chaix Lane near the southwestern boundary of the City and includes parcels with existing commercial and residential development along State Route 29. Consistent with the Napa County General Plan, the land within Study Area 3 is designated Agricultural Resource.

Napa LAFCO established St. Helena's SOI in 1974 and the last jurisdictional change occurred in 1997. Currently, the City's SOI and City limits are coterminous with the exception of Lower Bell Reservoir, which is within the City's jurisdictional boundary and outside the City's SOI. Napa LAFCO data identifies the City's jurisdictional boundary as 3,046 acres in size. The St. Helena General Plan Update identifies on page 1-10 that the jurisdictional boundary comprises 3,024 acres. Please verify the acreage included within the legal jurisdictional boundary for the City limits and City's SOI.

The three study areas included within the City's Planning Area are under the jurisdiction of Napa County and have not been approved for inclusion in the City's SOI. The inclusion of the study areas expands the City's Planning Area beyond that proposed in the 1993 General Plan and extends beyond the City's jurisdictional authority. Approval of any SOI amendment is subject to the Napa LAFCO's discretionary review and approval authority

and will be reviewed in accordance with the policies and regulations of the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000 and Napa LAFCO's General Policy Determinations.

A2-B-3

The St. Helena General Plan Update Land Use Diagram designates the land within the three study areas as either Agricultural Resource or Agriculture, Watershed, and Open Space, which is consistent with the Napa County General Plan. However, inclusion of these areas in the Planning Area conflicts with the following Napa LAFCO policies related to SOIs:

- General Policy Determinations Section III (C)(4) Avoidance of Inclusion of Agricultural and Open-Space Lands: Land specifically designated as agricultural or open-space lands shall not be approved for inclusion within any city's sphere of influence for purposes of urban development unless exceptions are warranted based on the criteria outlined in Section B(3) and (4).
- General Policy Determinations Section III (C)(5) Preference for Infill: The Commission will consider the amount of vacant land within the established sphere of influence of a city when considering amendments and updates. The Commission encourages sphere of influence proposals that promote the infill of existing vacant or underdeveloped land thereby maximizing the efficient use of existing city services and infrastructure as well as discouraging urban sprawl. Conversely, the Commission discourages sphere of influence proposals involving vacant or underdeveloped land that requires the extension of urban facilities, utilities, and services where infill is more appropriate.
- General Policy Determinations Section III (C)(8)(b) The Commission shall encourage cities to first develop existing vacant and underdeveloped infill lands located within their jurisdictions and spheres of influence to maximize the efficient use of available services and infrastructure and discourage the premature conversion of agricultural and open-space lands to urban uses. The Commission shall encourage the development of vacant or underdeveloped infill lands located within cities' jurisdictions before the annexation of lands requiring the extension of urban facilities, utilities, and services.

Pursuant to the aforementioned policies, Napa LAFCO is unlikely to approve inclusion of land specifically designated as agricultural or open-space lands in St. Helena's jurisdictional boundary. In addition, pursuant to Measure J, adopted by Napa County voters in 1990, and Measure P, adopted by Napa County voters in 2008, Napa County lands designated for agricultural use shall not be included within a city's jurisdictional boundary for purposes of urban development. Chapter 2 should be updated to explain the reasoning for including unincorporated agricultural lands within the City's Planning Area.

Buildout Under the Proposed Plan

A2-B-4

Table 2.3-3 on page 2-21 of the Draft EIR includes potential residential development within the Planning Area through the year 2040. Under the "St. Helena" subheading, total residential development at buildout is estimated to be 3,100 units. However, the Existing total (2,700 units) and Future Development total (300 units) add up to 3,000 units. Under the "Study Areas" subheading, total residential development at buildout is estimated to be

A2-B-4

200 units. However, the Existing total (200 units) and Future Development total (100 units) add up to 300 units. The table should be updated to clarify the amount of residential development proposed.

Table 2.3-4 on page 2-21 of the Draft EIR includes projected population within the Planning Area by 2040. Under the "Study Areas" subheading, the total population is estimated to be 700 residents. However, the Existing total (600 residents) and Future Development total (200 residents) add up to 800 residents. Under the "Planning Area Total" subheading, the Existing total is estimated to be 6,400 residents. However, the St. Helena total (5,900 residents) and Study Areas total (600 residents) add up to 6,500 residents. The table should be updated to clarify the projected population estimates.

Table 2.3-5 on page 2-22 of the Draft EIR includes projected number of future jobs within the Planning Area through the year 2040. Under the "St. Helena" subheading, the total jobs at buildout is estimated to be 5,900. However, the Existing total (5,400 jobs) and Future Development total (900 jobs) add up to 6,300 jobs. Under the "Study Areas" subheading, the total jobs at buildout is estimated to be 1,100. However, the Existing total (500 jobs) and Future Development total (100 jobs) add up to 600 jobs. Under the "Planning Area Total" subheading, the total jobs at buildout is estimated to be 7,000. However, the Existing total (6,400 jobs) and Future Development (900 jobs) add up to 7,300 jobs. The table should be updated to clarify the projected number of jobs.

A2-B-5

Comments on Chapter 3.2, Agricultural Resources

Physical Setting

Figure 3.2-1 on page 3.2-3 of the Draft EIR identifies existing Agricultural Land Uses within the Planning Area. Land within the three study areas are shaded a light peach color. This color designation is not included in the figure legend. The figure legend should be updated to include all color designations.

A2-B-6

Chapter 3.2, "Agricultural Resources," of the Draft EIR, relies on the California Department of Conservation's Farmland Mapping and Monitoring Program (FMMP) to identify important farmland within the Planning Area. Although FMMP is a great resource of information related to statewide important farmland resources, LAFCOs are directed by the State Legislature in Government Code Section 56001 to protect and conserve prime agricultural resources:

> "The Legislature finds and declares that it is the policy of the state to encourage orderly growth and development which are essential to the social, fiscal, and economic well-being of the state.
>
> The Legislature recognizes that the logical formation and determination of local agency boundaries is an important factor in promoting orderly development and in balancing that development with sometimes competing state interests of discouraging urban sprawl, preserving open-space and prime agricultural lands, and efficiently extending government services. …"

Prime Agricultural lands are defined according to Government Code Section 56064 as follows: A2-B-6

> "Prime agricultural land" means an area of land, whether a single parcel or contiguous parcels, that has not been developed for a use other than an agricultural use and that meets any of the following qualifications:
>
> (a) Land that qualifies, if irrigated, for rating as class I or class II in the USDA Natural Resources Conservation Service land use capability classification, whether or not land is actually irrigated, provided that irrigation is feasible.
>
> (b) Land that qualifies for rating 80 through 100 Storie Index Rating.
>
> (c) Land that supports livestock used for the production of food and fiber and that has an annual carrying capacity equivalent to at least one animal unit per acre as defined by the United States Department of Agriculture in the National Range and Pasture Handbook, Revision 1, December 2003.
>
> (d) Land planted with fruit or nut-bearing trees, vines, bushes, or crops that have a nonbearing period of less than five years and that will return during the commercial bearing period on an annual basis from the production of unprocessed agricultural plant production not less than four hundred dollars ($400) per acre.
>
> (e) Land that has returned from the production of unprocessed agricultural plant products an annual gross value of not less than four hundred dollars ($400) per acre for three of the previous five calendar years.

Based on direction of the State Legislature through the Cortese-Knox Hertzberg Local Government Reorganization Act of 2000, Napa LAFCO evaluates the importance of farmland based on the methodology outlined in Government Code Section 56064. As shown in Figure 1, the Planning Area contains land designated as Grade 1 – Excellent. In addition, as shown on Figure 2, the Planning Area contains soils designated as USDA, Natural Resources Conservation Service Class I and Class II. Chapter 3.2 of the EIR should be updated to include an evaluation of the land within the City limits or SOI expansion areas that meets the definition of prime agricultural land as described in Government Code Section 56064. This analysis will provide members of the public, Napa LAFCO, and other decision makings bodies with a comprehensive description of existing important agricultural lands within the Planning Area and potential impacts that may result from the adoption and implementation of the St. Helena General Plan Update 2040. This type of analysis would provide Napa LAFCO the appropriate information for their potential consideration of any future SOI amendment requests.

Comments on Chapter 3.10, Land Use, Population, and Housing A2-B-7

Impact discussion 3.10-3 on page 3.10-27 of the Draft EIR, concludes that the project would not conflict with applicable land use plans, policies, or regulations from other agencies with jurisdiction in the Planning Area. As discussed above, pursuant to the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000, Napa LAFCO is responsible for the administration of the orderly formation and development of local

governmental agencies and services, preservation of agricultural and open-space resources, and discouraging urban sprawl. Therefore, the impact discussion should be revised to provide a consistency analysis with Napa LAFCO policies related to SOIs and the adopted 2008 Municipal Service Review for the City of St. Helena.

Comments on Chapter 4, Alternatives Analysis

A2-B-8

Description of Alternatives

According to the second paragraph under subheading, "No Project Alternative," on page 4-2 of the Draft EIR, the No Project Alternative would result in approximately 460 new residents, 200 housing units, and 780 new jobs in St. Helena by 2040. However, according to Table 4.2-1 on page 4-3 of the Draft EIR, the No Project Alternative would result in approximately 560 new residents and 1,380 new jobs. This section should be updated to clarify growth projections under the No Project Alternative.

According to the third paragraph under subheading, "Transportation Network Enhancement Alternative," on page 4-3 of the Draft EIR, the Transportation Network Enhancement Alternative would result in approximately 750 new residents, 335 new housing units, and 935 new jobs in St. Helena by 2040. However, according to Table 4.2-1 on page 4-3 of the Draft EIR the Transportation Network Enhancement Alternative would result in approximately 900 new residents, 400 new housing units, and 1,100 new jobs. This section should be updated to clarify growth projections under the Transportation Network Enhancement Alternative.

Comparative Impact Analysis of Alternatives

A2-B-9

State CEQA Guidelines Section 15126.6(a) states that:

*"*An EIR shall describe a range of reasonable alternatives to the project, or the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives…"

Chapter 4, "Alternatives Analysis," of the Draft EIR identifies one alternative, the Transportation Network Enhancement Alternative, other than the mandated No Project Alternative. This does not constitute a reasonable range of alternatives to the project as directed by the State CEQA Guidelines. In the spirit of full disclosure and consistent with CEQA Guidelines Section 15126.6 (c), Chapter 4 should be updated to explain why no other feasible alternatives were considered or proposed as part of the alternatives analysis.

A2-B-10

According to the last paragraph on page 4-2 of the Draft EIR, the Transportation Network Enhancement Alternative would reduce significant and unavoidable impacts related to vehicle congestion on State Route 29 in St. Helena. However, as described on page 4-21 of the EIR, the mitigation measures would require actions from the California Department of Transportation which is not subject to the City's control; therefore, the impact would remain significant and unavoidable. In addition, the alternative would result in new significant impacts at three intersections. Chapter 4 should be updated to clarify that the

project alternative would not reduce significant and unavoidable impacts with respect to transportation, rather it would result in environmental tradeoffs.

A2-B-11

According to page 4-29 of the Draft EIR, the Transportation Network Enhancement Alternative is the environmentally superior alternative. However, as shown on Table 4.4-1, the Transportation Network Enhancement Alternative would worsen impacts with respect to flood hazards and permanent ambient noise. In addition, when compared to the project all other impacts remained the same. Contradictory to State CEQA Guidelines Section 15126.6(a), the alternative does not avoid or substantially lessen any of the significant effects of the project but rather worsens impacts. Chapter 4 should be updated to include an analysis of alternatives that avoid or substantially lessen project impacts. This analysis will provide the decision-making bodies, Napa LAFCO, and members of the public with sufficient information for consideration prior to the adoption and certification of the St. Helena General Plan Update and Draft EIR.

RE: **City of St. Helena 2040 General Plan Update**
Draft Environmental Impact Report
Request for Extension of Comment Period

Dear Noah;

Thank you for providing Napa County an opportunity to comment on the draft St. Helena 2040 General Plan Update (Update). Napa County has several significant concerns with the most recent version of the Update, and requesting that the comment period on your Draft Environmental Impact Report (DEIR) be extended to provide time to engage in collaborative discussion seeking alignment of City and County objectives. A 120-day extension is requested. We request that a determination for an extension be made prior to 5:00 p.m. on December 21, 2018.

To the best of my knowledge, Napa County has never commented on any general plan environmental document prepared by the cities and town of Napa County, and instead we have addressed issues through dialogue focused on finding mutually-agreeable solutions. We are requesting that dialogue commence on several aspects of the proposed Update including, but not limited to, the Study Areas located outside of the existing city limits, housing, circulation, emergency services, water and wastewater facilities, and possibly climate action planning.

A3-A-2

As you may be aware, the County is in the midst of preparing a Strategic Plan. Throughout our community engagement process, we have consistently heard that the cities, town and County should be working together, working as partners to benefit our entire community. This necessary partnership step has not yet occurred with your Update. For example, the three very selective Study Areas located outside of the city limits and your Urban Limit Line have been included in the most recent draft of the Update without discussion between our agencies. Although the Update states that these areas are being studied for "informational purposes only" (Update, page 1-12), it is evident that the selective Study Area boundaries, and draft Policies LU1.G and LU1.H indicate the City's intent is to pursue annexation of these areas. The County has no issue with the City conducting meaningful analysis of unincorporated

A3-A-2

lands surrounding the community to inform the public and decision makers, but that is not what is occurring with these the Study Areas.

The boundaries of the Study Areas do not align with any of the reasons given for studying these select areas. The Draft Update implies that these areas must be studied because the City provides utilities and emergency services. Those statement are inaccurate. City water service boundaries, and fire mutual aid boundaries extend far beyond the Study Areas (see attached maps). Police and fire services are for mutual aid. The City is not the sole emergency service provider as is implied. Numerous properties within the Study Area boundaries do not receive City water service, including all of Study Area 2 which is the City-owned sewage treatment plant spray fields. The City provides no sewer service to any of these areas. The only obvious determining factor for the boundaries of Study Areas 1 and 3 is that they align quite strategically with several long-established major revenue generating developments. Smart land use planning principles dictate that the City should focus on expansion of urban growth areas within the city limits before considering expansion of the city limits.

A3-A-3

The latest draft of the Circulation Element calls for a number of new traffic lights, most notably on Silverado Trail. Adding traffic lights without expanding internal road network is not a solution to existing or future traffic conditions. This idea will likely result in greater congestion as well as have a negative ripple effect on County and State roadways. The City's high home values do not allow significant opportunities for lower wage service workers to reside in the community, and results significant commute traffic through unincorporated areas. New development called for in the Update will increase vehicle load within unincorporated areas that has not been satisfactorily addressed in the DEIR. Our agencies need to find a common vision on circulation before the DEIR is certified.

A3-A-4

A3-A-5

A3-A-6

The County would like to explore partnering on efficiencies in City services. We have very successful long running partnerships with the City of American Canyon providing law enforcement services and with the Town of Yountville providing both law and fire services that may merit consideration by St. Helena. As you know, staffing is the single greatest demand placed on local agency budgets, and the degree in which an agency can control those costs reduces pressure on the need to grow revenues. This salary/revenue relationship places a great deal of stress on the City's overarching goal to maintain St. Helena's small town character.

Partnering on affordable housing appears to be of mutual benefit to our agencies. The Update's time horizon is 2040, but housing allocations are only planned through 2023 (in accordance with State mandated housing cycles). It is likely that both St. Helena's and the County's Regional Housing Needs Allocation (RNHA) will be considerably larger in the next housing cycle starting 2023. The City has very limited ability to generate housing trust fund revenue through development impact fees. The County has limited areas where new housing can be placed outside of preserved agricultural lands, and the City has vast tracks of underdeveloped property within the city limits. Those areas should develop before any consideration of city limit expansion is undertaken. Some of those areas may be suitable for housing. A shared vision addressing affordable housing needs through the horizon year of your Update appears to be of critical importance to both of our agencies.

A3-A-7

We understand that the City may be anxious to complete the Update. We believe our request for extension of the DEIR comment period allowing time to partner on inter-jurisdictional issues is the most expedient and cost efficient path to successfully completing the Update. We look forward to meeting with you at your earliest convenience once extension of your DEIR comment period has occurred.

Sincerely,

David Morrison

RE: **City of St. Helena 2040 General Plan Update**
Draft Environmental Impact Report

Dear Mr. Housh;

Napa County is in receipt of your December 21, 2018 email denying my request to extend the comment period on the Draft Environmental Impact Report (DEIR) for the City of St. Helena (City) 2040 General Plan Update (Update). The time to review the DEIR has been constrained by the holidays; however, I have strong reservations about several aspects of the Update and DEIR. I believe that it would be best to address these issues through direct dialogue, but given the denial of the extension request, I am compelled to include my concerns as comment on the adequacy of the DEIR. Furthermore, the County of Napa has recently completed an unprecedented community outreach effort to develop a three-year strategic plan. In our nearly 40 community meetings, collaboration between the County and the cities and town was a reoccurring theme in many of the conversations. The County sees St. Helena's General Plan as an opportunity to collaborate and we request further engagement and collaboration on the issues outlined in this letter.

Both the Update and DEIR have serious issues that should preclude their adoption and certification until matters have been resolved to our mutual satisfaction. Napa County's comments are provided in detail below. However, in general, our primary concerns can be summarized as follows:

A3-B-2

1. There is inconsistency between many of the stated policies in the draft documents and in the methodology used to define the study areas, particularly as it relates to lands designated as agriculture. The documents place an emphasis on preserving agricultural lands within the city limits and state a policy of protecting agricultural lands immediately outside the city limits. At the same time, the documents pursue studying annexation of lands in the unincorporated area that are protected by Measure J and Measure P. The stated policies and intention of the study areas clearly contradict each other, as any annexation would remove the agricultural protections provided under

Measure J and Measure P. Further, if the City intends on pursuing future development, it would make greater sense to develop in areas currently within the City limits rather than pursuing lands in the unincorporated area and threatening agricultural protections put in place by the voters of Napa County. A3-B-2

2. Both the General Plan and the DEIR project significant job growth in the tourism and hospitality industries. While the number of jobs projected differ significantly between the two documents, regardless, the need for housing that is affordable to the existing and projected workforce is not adequately addressed. Failure to address existing and future housing needs in the City exacerbates the challenges the greater Napa County community faces in providing housing opportunities. A3-B-3

3. The Transportation Element does not address existing traffic congestion or consider further impacts on traffic created by an imbalance between job growth and housing. While the City of St. Helena has the option to adopt Statements of Overriding Consideration and accept that traffic congestion will increase as a result of an adopted General Plan the General Plan should clearly state this as a goal(s) and the DEIR should fully disclose the environmental impacts. A3-B-4

General Comments A3-B-5

1. As noted in my December 19, 2018, request, three Study Areas located outside of the city limits were included in the most recent draft Update. The stated purpose for including these areas was for "informational purposes only" so that the City could conduct meaningful analysis to inform both decision makers and the public. However, as noted in the letter, meaningful analysis in the DEIR does not correlate with the boundaries of the Study Areas. Instead, the DEIR more broadly looks at virtually all unincorporated areas surrounding the City and then applies a mistaken rationale that out-of-agency City services provided to these selective areas makes them eligible for annexation, which is not the case. For example, Study Area 2, which is a City owned spray field, generates no demand for library services, whereas the unincorporated community of Angwin located several miles from the City generates demand for City library services, but is not included within a Study Area. This inconsistent treatment of unincorporated areas purportedly relating to the selective Study Areas is a reoccurring inconsistency over most areas of analysis within the DEIR. This is confusing to the reader at a minimum, and may lead to incorrect assumptions regarding the extent to which study areas qualify for annexation.

2. Proposed Policies LU1.G and LU1.H seek annexation of unincorporated property. The DEIR does not address the potential environmental impacts associated with these policies, which will result in the urbanization of unincorporated farmland. Similarly, Policy LU1.G calls for the extension of sewer service to unincorporated areas. The DEIR does not evaluate this growth-inducing proposal. A3-B-6

3. Both the Update and DEIR identify that the State has ordered upgrading of the City's sewage treatment facilities, but the DEIR does not address how the City plans to overcome this critical A3-B-7

service-deficiency. The City cannot plan for sewer line extensions and the associated impacts of growth without knowing whether the sewage treatment facility can or will be allowed to operate in the future at the level needed to provide additional services. These are significant unmitigated public utility impacts. A3-B-7

4. Policy language in the Update is inconsistent in terms of how the City intends to interact with the County. For example, Policy LU5.2 encourages the County to promote agriculture and limit development on nearby unincorporated lands. As always, the County is eager to engage with the cities and town on this crucial topic. In contrast, Policies LU1.G and LU1.H acknowledge the need to collaborate with property owners and LAFCO in pursuing annexation, but leaves the County out of the stakeholder list despite the fact that annexation cannot occur without both the City and County agreeing to a tax-sharing agreement. The proposed expansion of the City Limits is further vexing by the inability to meet current municipal obligations as noted in number 5 below. A3-B-8

5. The DEIR should also evaluate an alternative that reduces the current extent of incorporated land. The City can clearly meet its projected needs for future growth within the existing city limits, even with the City designating 46 percent of the incorporated area as agriculture and not intended for urban development. The inclusion of farmland within the city limits but outside of the Urban Limit Line adopted by the City is problematic. In essence, the City is obligating itself to provide urban services to 1,451 acres of agriculture, including water, sewage, police, fire, and public administration. This significantly affects the ability of the City to meet their municipal obligations in a sustainable manner. A reduced development alterative that moves rural land out of the City's growth boundary would still meet all of the DEIR project objectives and would result in fewer significant and unavoidable environmental impacts than the proposed project, resulting in the environmentally superior alternative. A3-B-9

Study Areas

A3-B-10

6. The growth assumption methodology presented in the DEIR is confusing and needs clarification. Tables ES-1, ES-2 and ES-3 make little sense, even with the disclaimer footnote noting that figures are rounded to their nearest hundred. First, it is inappropriate to round figures to their nearest hundred in a setting such as St. Helena because the levels of growth in many cases do not reach 100. For example, the City's Regional Housing Needs Allocation is 31 units. Rounding that to the nearest 100 equates to zero. As this confusion relates to the Study Areas, the DEIR appears to have based some of the impact analysis on unrealistic growth assumptions. Table ES-1 suggests 100 new dwelling units in the Study Areas, when in actuality there does not appear to be enough vacant land to accommodate anywhere near this number within the three Study Areas combined. As these lands are protected by the County's Agricultural Preserve and Measures J and P, it is unclear how this projected level of growth can be obtained within the Study Areas, absent City incorporation and rezoning (land within the cities and town are not subject to Measures J and P).

   Likewise, the DEIR projects 1,100 new jobs within the Study Areas under existing City and County zoning/general plan, but only 600 forecasted if the Update is adopted. There is no logical

reason for this, and it appears simply to be a means justify adoption of the Update by comparing it to inaccurate assumptions regarding the status quo. The analysis makes it appear as if the proposed policies in the Update would result in much more intense development than would occur under the County. Proposed City policies call for the annexation of these areas (LU1.G/H), extension of sewer service outside of city limits, an increase in hotel rooms (ES2.6), encouragement of more restaurant seats (ES2.7), and additional water connections, which are all things that are not possible under County regulations. As presented, this information can lead to inaccurate conclusions, which could prevent sound policy decisions. A3-B-10

Finally, the inclusion of the Study Areas ignores the obvious existing availability of developable land currently labeled as Agriculture already located within existing city limits. A3-B-11

Transportation and Traffic A3-B-12

7. CR1.1 in the Update states a desire to promote connected streets; however, the Transportation Element does not include any new congestion relieving additional roadway segments/connections. The element defers to a later unspecified date, any segment improvements that could relieve local congestion.
8. With virtually no planned residential growth in the Update, the goal in CR3.3 of shifting work trips from predominantly single-occupancy vehicles to 45% carpool, transit, walking is unrealistic. The Economic Sustainability policies emphasize job growth in the lower paying sectors such as hotels, restaurants and retail, which will require more commuting at shifts throughout the day and evening. Without significantly increasing the number of people per household (the City is currently 9% lower than the countywide average), even more housing will be needed to house future workers, increasing the likelihood that they will commute from out of the plan area. There will be few homes available from which employees will be able to walk to work. Transit and carpooling are unlikely to meet nearly half of the demands of a service economy workforce. This is not a realistic basis for establishing long-term policy. A3-B-13
9. The discussion of Intersection Traffic Operations on page 3.13-42 of the DEIR includes a recognition of potential impacts to roadways within Napa County; however, the DEIR only evaluated one intersection. The analysis ignores the potential effects of future development in St. Helena on the need for improvements on County roads such as Deer Park Road, Pratt Avenue, or Zinfandel Lane. The DEIR did not comprehensively evaluate the impacts to all County roads within the potential area of impact, especially considering the likelihood of additional commuting referenced in Paragraph 8 above. A3-B-14
10. Any proposed traffic controls on major roadways within St. Helena (esp. State Hwy 29 and Silverado Trail and the crossroads) will cause backups/delays in unincorporated areas. This impact is not recognized or evaluated. A3-B-15
11. As stated in Impact 3.13-4 of the DEIR, the City is relying on development to connect significant circulation gaps in the street network; however, the needed gap closures are within areas that the Update does not designate or plan for future growth. The discussion regarding this Impact goes on to say the DEIR relies on the following to improve traffic congestion and make the roadways A3-B-16

safer: (1) City's support of the concept of complete streets; (2) Napa County's efforts to improvement countywide trails; and (3) Caltrans' work to reduce congestion on State Hwy 29. There is no defined capital improvement plan to ensure completion of the street network. Instead, mitigation relies on the contributions of other agencies, the benefits of which are speculative regarding traffic congestion within the City. This is not a feasible approach to addressing traffic management and is inadequate for the purposes of the DEIR. A full and appropriate traffic analysis should be prepared that considers the potential impacts of leaving the street network in place with no foreseeable future gap closures. A3-B-16

Water

12. It appears that the City water system is at capacity. The DEIR only considers conservation measures as a suggestion, not a requirement, and no new long-term sources or significant reductions are proposed. This seems to be a shortsighted approach and possibly a significant environmental impact when measured against the additional future demands created by the proposed annexation areas, as well as projected hotel and restaurant growth. A3-B-17

13. The documents seem to dismiss the creation and use of recycled water as infeasible but the conclusions lack any credible sources as to why recycled water is infeasible. Since the City owns and operates a wastewater treatment facility, it seems plausible and preferable to find ways to utilize this resource for irrigating the significant agricultural properties within the City limits, as well as other facilities such as playfields, parks, municipal landscaping, etc. A3-B-18

Sewage

14. The City is currently under order to upgrade the municipal wastewater treatment plant. Neither the Update nor the DEIR recognizes this critical issue. This is a significant constraint to the No Project alternative, as well as any future growth proposals. The City should revised the DEIR and the Update to address how wastewater treatment will be improved and funded, before any decision are made regarding new growth and annexation. A3-B-19

Housing

15. The Update calls for significant job growth in services that generally pay lower wages: hotels, restaurants, and retail. However, the Housing Element only plans for 31 residential units through 2023, far short of the General Plan horizon of 2040. This modest housing growth does not serve the current needs of the community and does not meet the future needs given the planned job growth, which is noted as a significant housing/jobs imbalance in the Transportation and Traffic Element (p3.13-2). This unresolved and ongoing imbalance has important implications for many other Impacts evaluated in the DEIR, and calls into question the adequacy of the entire document. A3-B-20

Alternative Analysis

As discussed in Paragraphs 12 and 14 above, the City has serious obstacles in continuing to provide adequate water and wastewater treatment. The DEIR acknowledges a jobs/housing balance without offering any solution and traffic congestion without requiring any relief. The Update is determined to have Significant and Unavoidable Impacts in the areas of farmland loss, air quality, climate change, and traffic Level of Service. The DEIR even concludes that another alternative, not the Update, is Environmentally Superior. Yet despite these concerns, the DEIR A3-B-21

nevertheless recommends the Update as the Preferred Alternative. This gives the appearance that the DEIR analysis does not provide an objective and impartial analysis, but is instead a means to justify the proposed Update. A3-B-21

Our shared community faces broad and fundamental issues that challenge the quality of life in both urban and rural areas. Finding solutions to address traffic, housing, water, and sustainability require regional approaches that involve governments working together. My goal in providing these comments is to establish a more complete analysis of pending policy and create an opening for the City and County to discuss meaningfully how we can achieve our mutual goals. Conflict is an unnecessary expense that does not benefit either participant and prevents the exploration of productive ideas. I look forward to starting our discussion. A3-B-22

If you have any questions regarding this letter, please contact me at (707) 253-4805 or at david.morrison@countyofnapa.org. Thank you for the opportunity to provide comments on the DEIR.

Respectfully,

David Morrison MCR

Comment Letter A4-1

NAPA VALLEY TRANSPORTATION AUTHORITY

MEMO

A4-1

Date: **December 26, 2018**

To: **Noah Housh, Planning Director**
City of St. Helena

From: **Napa Valley Transportation Authority**

Re: **St. Helena General Plan Update 2040**

Upon the review of the St. Helena General Plan Update 2040, the Napa Valley Transportation Authority would like to submit the following comments:

A4-2

General Comment – Please replace all "NCTPA" references to "NVTA" and use the updated logo and Vine brand and color scheme. Also, "VINE" is now "Vine".

P. 5-3
- Should mention the Countywide Bike Plan update now in progress

P. 5-4
- ACS reference, but no reference to the Napa Countywide Pedestrian Plan or Napa County Travel Behavior Study. The St. Helena Pedestrian Plan was adopted by the City Council on May 9, 2017 www.nvta.ca.gov/countywide-pedestrian-master-plan.

P. 5-7
- 2016 Pedestrian Plan should be included along with 2010 ADA Transition Plan.

P. 5-9
- Old Vine Go photo-need to update photos for Vine Transit in plan. NVTA will provide new Vine photos.

P. 5-10
- First bullet - revise sentence regarding Vine Trail-"will" connect St. Helena, not "connects"

P. 5-11
- Please reference the current Countywide Transportation Plan – Vision 2040 – Moving Napa Forward www.nvta.ca.gov/countywide-plan-vision-2040.
- No reference to other plans such as the Countywide Bike Plan, Ped Plan, Travel Behavior Study or Plan Bay Area etc.

P. 5-23

625 BURNELL STREET | NAPA CA 94559 | 707-259-8631 | NVTA.CA.GOV | VINETRANSIT.COM

A4-2

- Where did the reference regarding bike lane and shared parking come from? CVC does not allow parking in bike lanes.
- Class III-"vehicle barriers"-Class III facilities do not include barriers-Class IV includes separation.
- Add Class IV – separated bike lanes with description

P. 5-25

- When was this map completed? There are differences from some recommendations in the current Bike Plan Update that were reviewed by City Staff.
- Should reference Bike Plan Update currently underway.

P. 5-30

- c - These are identified in the countywide Bike and Ped Plans
- e - ACS is mentioned-should include Countywide Transportation Plan, Bike Plan and Ped Plan
- h – should state, "…in accordance with NVTA's Countywide Transportation Plan"

P. 5-32 through P. 5-43

CR1. A

- Include transit facilities

CR1.K

- Include transit improvements
- TDM strategies should coordinate with NVTA

CR2.1

- Figure 5.4 reference – These exist – there is no reference to the Pedestrian Plan or proposed facilities in Bike Plan update which have created these networks. Change to, "Update comprehensive bicycle and pedestrian networks identified in the Countywide Bike and Pedestrian plans that enhance neighborhood connectivity."

CR2.6

- No reference to the Safe Routes to School (SRTS) program which serves St. Helena schools.

P. 5-38 through P. 5-42

CR2.D

- Caltrans Bicycle Transportation Account has been replaced by the Active Transportation Program-there are new requirements under this program-see requirements in adopted 2016 Pedestrian Plan-update reference.

CR3.1

- TDM-no discussion of SB 1339 compliance/requirements or of NVTA's TDM programs.

CR3.4

- TDM Programs-include coordination with NVTA

CR 3.5

- Should mention SRTS program

CR4.5

- "a" SRTS program – should be "the" SRTS program

Subject: RE: Meeting

December 19, 2018

Hi Noah, thanks for the note.

Quick Background: I worked with Greg Desmond starting in around 2009 up through Victor Carniglia in mid-2016 on the Noise Element and the EIR. We made it a better document beyond the "boiler plate" stuff the sound consultants provide on a short budget. Everything I did and input provided was done "through channels" through Greg, to the GP consultants and then to the sound consultants. This work included a five month noise study I did on background noise levels in St. Helena, what are commonly called "ambient" noise levels, information the consultant failed to provide, or understand. All this work was done, not through the public comment process, but as a *pro bono* technical consultant to the City. B1-1

The EIR: I had done a review for Carniglia in July 2016 of the EIR pointing out a major flaw. It has been corrected in the current IER, so I have no comments to make on that. Other than, really, 90% of the EIR is total "boiler plate" and can be found verbatim in any other noise EIR the consultant has done. B1-2

The Noise Element: I do have comments on this, as I fear the current form has reverted back to the original, before the work we did between 2009 and 2016. B1-3

Let's meet the week of January 14th. We'll need some time, but this is about giving our City a quality document, right? About any time is fine with me, so let me know. B1-4

In the meantime, have a great time off. I will too. ☺

Yours,

Jerry

Subject: General Plan

B2-1

Noah,
I noted with interest in the newspaper that the recent public hearing on the EIR was "poorly attended". One of the reasons suggested for the crowd of 4 persons in attendance was that "their comments just don't matter". That sure strikes home to me.

When we bought our first home here on Tainter Street in 1986, I discovered that we needed to plan our trips to buy building materials at Central Valley Supply to avoid the back-up on 29 on our return. Often, we would loop around Sulphur Springs, Crane and Valley View Streets which I'm sure the neighbors appreciated.

After we moved, I had a new alternate plan; driving south on 29, across Zinfandel, and back up the Trail.

One day, in total frustration, I stopped into the Planning Department to ask the OBVIOUS QUESTION. Why isn't there an alternate to and through Saint Helena that provides access to the businesses south of town. I suggested perhaps an extension of Starr or some other street, or extending Dowdell or Vintage Streets to the Trail. I was told "that is in the Plan". That made sense to me. After all, it would allow businesses like Central Valley, Harold Smith and all the rest to provide better service to the community. Added to that, emergency vehicles could have better access North and South.

That was over thirty years ago.

Now, I know the wheels of government turn slowly so I would stop by the Department every five or ten years to check on that issue. At first I was told it was "difficult to cross farm property", even though I did that to drive my tractor to Lampson for service and repairs. Later, other reasons were given culminating in the latest nonsensical response; "But, we are planning to put more stop lights in on highway 29 and the Trail". WHAT??? So we now have the added inconvenience of providing signal light turn-in spacing for those entering the 29 backup. Consider, reducing the traffic congestion on highway 29 would increase SAFETY. Stop lights don't decrease vehicle counts.

But now, I get it. My comments just don't matter. That's why I don't stop by anymore.

For what's worth,
Glenn Cook

Comment Letter B3

B3-1

In 1997, I was selected by Friends of the Napa River to sit on the Committee appointed by St. Helena's City Council to decide the best way to spend our portion of Measure A funds which were to be used to minimize the risk of flooding on Napa River and Sulphur Creek inside City Limits, with the **requirement** that any alterations would be carried out within a "Living River" context, assuring that any changes would enhance the river's environmental health while benefiting us.

While most municipalities along the river (especially the City of Napa) made an honest effort to abide by the "Living River" requirement, the St. Helena Committee that took on this task was corrupt through and through, and no one other than I gave even a pretense of paying attention to "Living River" principles. It was an appalling experience for me. The fix was in from the beginning, and among the proposals that were floated was a cynical rerouting of Napa River above Pope Street bridge that would leave the riparian woodland intact for the moment, but was deliberately designed to erode and destroy both banks and all the riparian trees and habitat over a period of a few years. I made enough of a stink about that cynical plan that it was eventually dropped from consideration, but sadly nothing better was put forward.

In an attempt to get the Committee to understand what the implications of their proposals would be for people living downstream and the survival of Pope Street Bridge, I personally funded through Friends of the Napa River a brief study by the highly regarded hydrology experts Philip Williams and Associates, which we gave to the St. Helena Measure A Committee so they could begin to understand the downstream impacts above Pope Street Bridge and to the bridge itself if they did one or another of their plans. Williams' mapping of flow patterns revealed great downstream risks involving the plan they settled on: the building of a long, riverside levee that cut off a huge, undeveloped, low-lying area that accommodated flood water every time there was a major rain event and took pressure off the area just above the bridge. As I recall, I spent $20,000 on the Phil Williams study that gave the Committee basic prognostications that would help them understand the implications of what they were proposing; but to my knowledge, that study was completely ignored by every member of the Committee and the highly paid consultants as well. That's when I washed my hands of the crooked Committee and its phony "Living River" process and quit in disgust.

If anyone had genuinely cared, I was prepared to further fund Philip Williams to assure a legitimate "Living River" solution was developed, as **required** by Measure A, which, as you may recall, passed with more than the necessary two thirds majority of the county's vote! This "super majority" made the "Living River" provision a **mandatory** aspect of whatever alterations were carried out using Measure A funds, as opposed to a simple majority vote that could be given little more than lip service.

St. Helena's actual alteration: the huge, lengthy levee which destroyed many acres of our priceless existing floodplain, was in complete violation of both common sense and the "Living River" mandate. It was done for no reason but to destroy an existing, critically important and legally protected floodplain in order to turn all that low land into a huge housing development in the most unsuitable possible location. Now, during flood events, the changed river flow below the levee is destroying the once-stable bank just above Pope Street Bridge. A beautiful, historic mansion- I think it is 2240 Pope Street- is already being put at serious risk of toppling into Napa River as the high bank there is rapidly collapsing. This massive erosion, which will soon destroy the great old estate that existed safely there for more than a century, is a direct result of the changed flow dynamics caused by the levee's elimination of the flood plain that existed just above it. **I believe the City is directly liable for the upcoming destruction of that property!** The destructive, illegal levee, along with Hunter's proposed development that is bound to flood, has got to go **NOW!** This is all the product of a corrupt enterprise between a past Council, City staff and Hunter.

Re: Pope Street Bridge Park

Dear Mr. Mennen:

This was in fact done! PM 12-24-18

Jerry Cormack and I have both tried to return your calls but there was no answer nor answering machine at the number that we were given (963-~~2688~~). 2668-

The Pope Street Park Master Plan that you saw in our offices is a conceptual plan that was prepared from the recommendations of the Parks and Recreation Commission. The plan is currently being reviewed by staff and two members of the City Council. There are a number of concerns with the plan and alternatives will be reviewed.

I have not heard of any plans to rip-rap the riverbank next to the park. There are some existing areas of bank stabilization north of the bridge that are in need of repair. The proposed proximity of the ball field to the river is a concern to us also. Whatever park project occurs must be in compliance with the standards of the Department of Fish & Game who will establish the minimum distance that the improvements must be from the top of bank.

I (we) understood to believe the destruction of the Napa River was in compliance with the regulations for a Threatened/Endangered steelhead salmon spawning river in California

PM 12-24-18

We are planning to have preliminary meetings about the park with concerned groups and citizens. We would like to have some alternatives for them to look at as they express their concerns. These meetings will be followed by public hearings before the Planning Commission and the City Council for approval of a Use Permit for the park. No meetings have been scheduled yet, but we will notify you when they are.

Please call me at 963-2741 if you have any other questions.

Yours truly,

Carol Poole
Assistant City Planner

I was on this committee. My input and concerns were ignored.

Re: ***Fulton Lane Residents v. City of St. Helena***

Dear Peter:

To keep you apprised on how this case is developing, we have been fortunate to obtain two engineers who we have consulted with who have reviewed the construction drawings for the flood mitigation project in question. Fortunately, both engineers have identified errors in calculations and errors in assumptions that the City engineers relied upon. That is enough for us to initiate a lawsuit. Also, fortunately there is a ten year statute of limitations on any defective design cases. Since this is clearly a defective design, we don't have to worry about some of the limitations' issues that we were dealing with on some of the other causes of action.

We hope to have a lawsuit filed no later than mid next week with the assistance of our new engineers. I will keep you apprised as matters develop. Since you are part of the citizen's group involved in this action, we continue to have a confidential relationship and your identity will be treated as such.

Thank you again for all your assistance in this matter. I would like to possibly meet with you and Sampson early next week to give you a final once over before we file the action. Please call with any questions.

Very truly yours,

THE LAW OFFICES OF JAMES R. ROSE

JAMES R. ROSE

The Constitution of the landowners' property on the west side of the River just above the Pope Street bridge is the result of the errors made in the calculations and errors in assumptions that the City engineers relied upon!!!

Dear Peter,

I wanted to let you know that I received the materials you delivered to City Hall on January 28, 2016 related to the Flood Control Project.

I know this was and continues to be a controversial project for the citizens of St. Helena. My goal in hiring a forensic accountant is to review the revenues and expenditures related to all the projects in an effort to ensure all the funds are accounted for and were properly spent in accordance with contractual obligations. Although the scope of the review does not include engineering, environmental or other aspects of the projects, I will add your documents to the file and make them assessable to the forensic accountant.

Sincerely,

Jennifer Phillips
City Manager

12-24-18

Peter Mennen
PO Box 421
St. Helena CA
94574
March 15, 2002

Mike Praul, City Engineer
City of St. Helena
1480 main Street
St. Helena CA 94574

Dear Mr. Praul:

I was one of those selected to participate in the proposed design of a flood control project to be carried out using "Measure A" money that would reduce the impact of flooding on the community of St. Helena. As a bit of history, Measure A was passed by the voters of Napa County as a method of achieving flood control in ways that would be considerate of the biological integrity of the Napa River, as opposed to a flood control design proposed by the Army Corps of Engineers, which was rejected by the citizens of Napa County because it was destructive to river values.

A county wide community group which named itself "Friends of the Napa River" pulled together and began an extraordinary effort to rethink the way in which flood control could be designed so that the Napa River would benefit from sophisticated flood control methods that would help the river regain some of its former behavior in the days before we hedged it in and destroyed its ability to spread out into a flood plain during heavy rain events. This would be done in ways sensitive to the ecological values of napa River. This Measure A funding came to pass by a two thirds vote of the county because of the incredible work Friends of the Napa River did to educate county citizens of the way in which flood control could be handled in ways that would improve the beauty and functionality of napa river, which as you know has been declarted an impaired waterway by Congress, due to the many damaging alterations we have wreaked upon the river in the past hundred years.

I was selected to as a participant in the St. Helena process to represent the vision of Friends of Napa River, to assure the local plan would incorporate the standards for flood control that were integral to any project that would be put forward. After all, a river-friendly design was the whole impetus for Friends of the Napa River to do the extraordinary work that made measure A come to pass.

Regrettably, I found myself marginalized as the planning process went on, and I can recall at least one specific incident where i was told the concept of retaining a tree-lined riparian corridor along the river bank would be an impossible, and then later I learned this devestating concept was built into the design with the justification that, since i had not objected to it, Friends of the River must think it was okay. Toward the end, i was not even notified of upcoming meetings of the St. Helena flood design group, much less invited to participate in the role of a "Friends of the Napa River" advisor. I only learned after the fact that a meeting had taken place, when someone questioned me about why I was no longer attending.

Finally, after the committee agreed upon a proposed design without even an opportunity for "Friends of the Napa River" to have me participating in the proposal that went forward to the city, you were kind enough to give me a copy of the plan. I sent that copy to "Friends of the Napa River," who made the attached comments and sent thaem back to you on February 22, 2002. I am writing this letter just so that I can have some input into the process now, having been excluded in a manner I believe is illegal, and thus depriving "Friends of the Napa River" to have any legitimate input, or even an opportunity to review, the proposal before it was submitted to the St. Helena City Council. Since I

Wed, Feb 10, 1904 3:37 AM

B3-2

as selected as an official member of the committee, specifically to represent the interests of the "living river" concept that drove the passage of measure A in the first place, this whole process strikes me as bogus.

And not surprisingly, the fundamental design vision of all the possible proposals for flood reduction in St. Helena is antithetical to any kind of living river vision. In each of the possible projects, the riparian corridor along the river is utterly sacrificed, destroying any number of critical aspects of the living river vision. there are many mature and even landmark-sized, "heritage" trees within St. Helena city limits along the Napa River which, I am only now told, will be deliberately left in a narrow, eroding ridge between the current rivercourse and a new floodplain beyond the existing riparian corridor. I am informed that it is understood and expected that the entire riparian stand along both banks of the Napa River within St. Helena city limits will be destroyed over a short period of time as the river cuts into the banks and causes all those trees to come crashing down, leaving nothing of their shade protection for the river all along the banks of the river. In their place will be a great, vacant swath of little or no biological value, at a terrible price to the river. This is a mockery of the real measure A, which was to enhance the river's values as a part of flood control, not destroy them.

Also, a multitude of other benefits, beyond the loss of all their beauty to all of us citizens, will be lost. Many of those trees are mature oaks, whose wildlife value cannot be overestimated. they are the lynchy-pin of biological integrity along the river, and most of them already have been lost to human development. To deliberately destroy these last precious corridors of mature oaks and complex vegetation is intolerable and unacceptable. It is in direct defiance of the driving concept of Measure A. It makes our plan a farce. Just for your improved understanding of the value of oaks, I am including a copy of an excellent book on the complexity and value of oak trees entitled "The Life of an Oak." It was produced by the California Oak Foundation, with major funding from, among others, the Mennen Environmental Foundation. Perhaps you and others will gain some perspective on what you are attempting to throw away.

Measure A was not passed so that a few interest groups in Napa County could benefit at the expense of tremendous tax costs to the rest of us and the sacrifice of the Napa River. It was not put forward so that local politicians could make a lot of hay on its back by corraling a clot of special interest votes and make self-serving claims on campaign literature when they ran for larger office. Measure A had far loftier goals of spending our tax money to benefit both people and the Napa River, and that is the Initiative we as a county passed. St. Helena's Measure A oversight committee has unconscionably distorted the very heart of the "lving river" intent of the measure whose county tax money they (we?) were expected to spend in an appropriate way.

The Mennen Environmental Foundation has purchased acreage on Sulphur Creek to restore in a manner that will benefit flood control and biological values. Our expert evaluators have proposed solutions that are diametrically opposed to the proposal being forwarded to the City of St. Helena by the oversight committee. I absolutely wash my hands of the disgraceful and shameful set of proposals that "my" committee has certified for your consideration and acceptance. I am appalled. I am certain Friends of the Napa River would not touch these proposals with a ten foot pole. They are a joke- a slap in the face to everyone who put his/her heart and soul into bringing Measure A to fruition.

Sincerely,

Peter Mennen

RE: Clarification of Council Direction on Comprehensive Flood Study Environmental Impact Report

Cc: City Manager

BACKGROUND:

The environmental consultant for the Comprehensive Flood Study, CDM, has initiated the public input process to facilitate preparation of the draft environment impact report. At the Council meeting initiating this process, the Council directed staff to analyze three plans; the no action plan, the Minimum Plan and the Enhanced Minimum Plan. In response to a question by a member of the public, the Council also directed staff to analyze a plan that combined the extension of Adams Street with the Minimum Plan. Staff now presents the results of that analysis and requests clarification of the Council's prior direction.

DISCUSSION/ANALYSIS:

As the Council recalls, the Enhanced Minimum Plan (EMP) was a compromise alternative between the Maximum Plan (MaP) and the Minimum Plan (MiP). The MaP reduced the 100-year water surface elevation (WSE) 3.1 feet at the Hunt's Grove Apartments but required the relocation of 60 homes within the Vineyard Valley Mobile Home Park (Park). It included a fill area to the north of the Park on which the relocated homes would be placed. The MiP reduced the WSE 1.6 feet at the same location with the elimination of 17 spaces and loss of approximately 7 to 8 existing homes. The existing floodwall would have to be raised approximately 3.5 feet or a new levee constructed to the north of the wall at the same elevation. The EMP was developed as a compromise to the two distinctly different plans. It would reduce the WSE 2.4 feet and includes the relocation of 29 homes to the vineyard area north of the Park which would be flood proofed by the roadway embankment of an extension of Adams Street. The Council asked what is the feasibility of combining the Adams Street extension with the MiP.

MBK has computed the hydraulic benefits of a plan that would include the Adams Street extension but with the river terracing of the same area as the MiP, or the loss of 17 spaces within the Park. The resulting reduction of the 100-year WSE is about the same as the MiP, which is one foot less than the EMP. The elevation of the roadway embankment would need to be the same height as the levee north of the floodwall or about 3.5 feet above the elevation of the existing wall, a foot higher than the EMP.

Staff and the consultants believe that the environmental impacts of this revised alternative would be somewhere between the EMP and the MiP. While it would require a larger footprint than the

FOR 2018 EIR PM 12-24-18

C:\TEMP\Staff ReportMar doc

00146

MiP, the structural elements would be very similar with impacts to the Park residents also being very similar as the MiP.

B3-2

IMPACT:

Further analysis of this hybrid alternative will take additional time and funding. At the last Council meeting, representatives from the VVMHP Homeowners Association presented a petition in support of the EMP, which was signed by approximately 90% of the residents of the Park. The revised alternative would still eliminate some homes in the Park where the EMP would not.

FISCAL IMPACT:

Staff will return to Council at the meeting of March 26, 2002 to discuss the current financial status of the study and bring recommendations to extend the consultant agreements with the funding requests necessary to complete the study. Confirming the above direction will reduce the amount of analysis required for the EIR.

ALTERNATIVES:

1. Confirm prior direction to staff and the consultants to analyze the No Action, Minimum and Enhanced Minimum Plans through the EIR process.

2. Direct staff and the consultants to include a fourth alternative for further environmental analysis that combines the Minimum Plan with the Adams street extension.

RECOMMENDED COUNCIL ACTION:

Staff recommends that the Council confirm the prior direction to staff and consultants to analyze the No Action, Minimum and Enhanced Minimum Plan through the environmental review process.

AGENDA
REGULAR MEETING
ST. HELENA CITY COUNCIL
CARNEGIE BUILDING COUNCIL CHAMBERS
1360 OAK AVENUE, ST. HELENA
MARCH 12, 2002
6:45 P.M. CLOSED SESSION
7:00 P.M. REGULAR SESSION

Prior to the meeting the public may review available information at City Hall or at the George and Elsie Wood Public Library.

A person who is dissatisfied with a decision of the City Council may have the right to a review of the decision by a Court. The City of St. Helena has adopted California Code of Civil Procedures Section 1094.6, which generally limits to ninety (90) days the time within which a decision of the City Council may be judicially challenged. If a person challenges a decision in Court, he or she may be limited to raising only those issues that were raised at the Public Hearing described in this notice, or in written correspondence delivered to the City Council at, or prior to, the Public Hearing.

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact City Hall, (707) 967-2792. Notification 48 hours prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting (28 CFR35.102-35.104 ADA Title II). However, City staff will attempt to assist at any time with accessibility. The City Clerk has equipment to assist those with a hearing impairment.

The City Council will convene in Open Session at the stated time, but will then adjourn to any Closed Sessions(s) listed on the agenda. The Council will reconvene in Public Session at 7:00 p.m. at that time, if appropriate, any actions taken during the preceding Closed Session will be announced. If necessary, the Council may reconvene in Closed Session to continue discussion of listed items following the completion of other business.

St. Helena, CA 94574

Re: **Napa River Near St. Helena Technical Report for Hydraulic Analysis Results Prepared by: MBK as of November 27. 2001**

Dear Mr. Praul:

Friends of the Napa River would like to comment on the Technical Report by MBK in response to Scoping for an EIR pursuant to CEQA requirements. We appreciate the opportunity to provide early information through the public process to a Measure A project that must comply with the ***'Living River Guidelines'*** approved by the voters of Napa County.

The Technical Report lists three different plans to the St. Helena Flood Control project:
A. The "Non-Structural Plan" (NSP)
B. The "Minimum Plan" (MP)
C. The "Enhanced Minimum Plan" (EMP)
D. The "Maximum Plan" (MxP)

Friends of the Napa River have serious concerns and many questions with the plans B, C and D. We find the "Non-Structural Plan" the least intrusive and most in line with the 'Living River Guide Lines.'

To better understand the implications of the other plans, we would like the following questions answered and documents provided for public review:

1. The massive excavations of plans MP and MxP will create islands in the Napa River riparian corridor. Questions:
    a. Is this compliant with the 'Living River Guidelines'?
    b. How many native Valley Oak trees will be lost?
    c. How much riparian vegetation will be removed from the banks and the bed of the Napa River? What is the re-vegetation plan? What is the maintenance cost?
    d. How much erosion will occur in tons/year?
    e. What will this do to anadromous spawning gravel down stream?
    f. How will this change the bank and channel of the Napa River?

B3-2

FONR Comments to St. Helena Flood Control Project, page 2 of 2

g. What are the upstream and downstream erosion effects?
h. How will the loss of riparian vegetation and riparian function effect temperature in the Napa River?
i. How high will the temperatures get in the Napa River during the hot summer months due to loss of riparian vegetation?
j. When is it expected that the riparian cover is recovered / rebuild?

2. The initial excavations in plans MP and MxP seem to be enormous. Questions:
   a. What is the number of cubic yards (or tons) of excavation material?
   b. What is the destination of the spoil/other material resulting from excavation?
   c. Will the City of St. Helena be creating new housing locations with the excavated material and cane Measure A money be used for this?
   d. Would such new housing locations be growth inducing?

3. There will be cut down areas in the riparian zone (called flood terraces). Questions:
   a. How much aggradation will occur in the new excavated area?
   b. How many tons per year of sediment excavation/maintenance will need to be done?
   c. Where will the maintenance spoils/sediment be disposed?
   d. How will new riparian vegetation be protected in this area?
   e. What are the maintenance costs associated with this?

4. Could you provide the public with a map that shows the existing flood plain and the existing floodway?

5. What will the increased stream velocity be in the Pope Street Area?

6. In MP and MxP, steep bank formation will be creating a step-function. Questions:
   a. What is the associated erosion factor to this change in banks of the Napa River?
   b. What are the costs of maintenance of these banks and where will the money come from when Measure A money sunsets?
   c. Is this compliant with Measure A 'Living River Guidelines'?

7. What is the upstream flooding impact of the proposed Adams street extension and causeway?

8. Please detail the effects any of the plans would have on Sulphur Creek.

Sincerely

Bernhard Krevet
President, Friends of the Napa River

March 15, 2002

Mike Praul, City Engineer
City of St. Helena
1480 main Street
St. Helena CA 94574

Dear Mr. Praul:

I was one of those selected to participate in the proposed design of a flood control project to be carried out using "Measure A" money that would reduce the impact of flooding on the community of St. Helena. As a bit of history, Measure A was passed by the voters of Napa County as a method of achieving flood control in ways that would be considerate of the biological integrity of the Napa River, as opposed to a flood control design proposed by the Army Corps of Engineers, which was rejected by the citizens of Napa County because it was destructive to river values.

A county-wide community group which named itself "Friends of the Napa River" pulled together and began an extraordinary effort to rethink the way in which flood control could be designed so that the Napa River would benefit from sophisticated flood control methods that would help the river regain some of its former behavior in the days before we hedged it in and destroyed its ability to spread out into a flood plain during heavy rain events. This would be done in ways sensitive to the ecological values of Napa River. This Measure A funding came to pass by a two thirds vote of the county because of the incredible work Friends of the Napa River did to educate county citizens of the way in which flood control could be handled in ways that would improve the beauty and functionality of Napa River, which as you know has been declarted an impaired waterway by Congress, due to the many damaging alterations we have wreaked upon the river in the past hundred years.

I was selected to as a participant in the St. Helena process to represent the vision of Friends of Napa River, to assure the local plan would incorporate the "Living River" standards for flood control that were integral to any project that would be put forward. After all, a river-friendly design was the whole impetus for Friends of the Napa River to do the extraordinary work that made measure A come to pass.

Regrettably, I found myself marginalized as the planning process went on, and I can recall at least one specific incident where I was told the concept of retaining a tree-lined riparian corridor along the river bank would be an impossible, and then later I learned this devestating concept was built into the design with the justification that, since I had not objected to it, Friends of the River must think it was okay. Toward the end, i was not even notified of upcoming meetings of the St. Helena flood design group, much less invited to participate in the role of a "Friends of the Napa River" advisor. I only learned after the fact that a recent meeting had taken place, when someone questioned me about why I was no longer attending.

Finally, after the committee agreed upon a proposed design without even an opportunity for "Friends of the Napa River" to have me participating in the proposal that went forward to the city, you were kind enough to give me a copy of the plan. I sent that copy to "Friends of the Napa River," who made the attached comments and sent thaem back to you on February 22, 2002. I am writing this letter just so that I can have some input into the process now, having been excluded in a manner I believe is illegal, and thus depriving "Friends of the Napa River" to have any legitimate input, or even an

3-15-02

Fri, Jan 8, 1904 9:10 AM

B3-2

opportunity to review, the proposal before it was submitted to the St. Helena City Council. Since I was selected as an official member of the committee, specifically to represent the interests of the "Living River" concept that drove the passage of measure A in the first place, this whole process strikes me as bogus.

And not surprisingly, the fundamental design vision of all the possible proposals for flood reduction in St. Helena is antithetical to any kind of "Living River" vision. In each of the possible projects, the riparian corridor along the river is utterly sacrificed, destroying any number of critical aspects of the living river vision. There are many mature and even landmark-sized, "heritage" trees within St. Helena city limits along the Napa River which, I am only now told, will be deliberately left in a narrow, eroding ridge between the current rivercourse and a new floodplain beyond the existing riparian corridor. I am informed that it is understood and expected that the entire riparian stand along both banks of the Napa River within St. Helena city limits will be destroyed over a short period of time as the river cuts into the banks and causes all those trees to come crashing down, leaving nothing of their shade protection for the river all along both banks of the river. In their place will be a great, vacant swath of little or no biological value, at a terrible price to the river. This is a mockery of the real measure A, which was to enhance the river's values as a part of flood control, not destroy them.

Also, a multitude of other benefits, beyond the loss of all their beauty to all of us citizens, will be lost. Many of those trees are mature oaks, whose wildlife value cannot be overestimated. they are the lynch-pin of biological integrity along the river, and most of them beyond the river bank already have been lost to human development. To deliberately destroy these last precious corridors of mature oaks and complex vegetation is intolerable and unacceptable. It is in direct defiance of the driving concept of Measure A. It makes our plan a farce. Just for your improved understanding of the value of oaks, I am including a copy of an excellent book on the complexity and value of oak trees entitled "The Life of an Oak." It was produced by the California Oak Foundation, with major funding from, among others, the Mennen Environmental Foundation. Perhaps you and others will gain some perspective on what you are attempting to throw away.

Measure A was not passed so that a few interest groups in Napa County could benefit at the expense of tremendous tax costs to the rest of us and the sacrifice of the Napa River. It was not put forward so that local politicians could make a lot of hay on its back by corraling a clot of special interest votes and make self-serving claims on campaign literature when they ran for larger office. Measure A had far loftier goals of spending our tax money to benefit both people and the Napa River, and that is the Initiative we as a county passed. St. Helena's Measure A oversight committee has unconscionably distorted the very heart of the "lving river" intent of the measure whose county tax money they (we?) were expected to spend in an appropriate way.

The Mennen Environmental Foundation has purchased acreage on Sulphur Creek to restore in a manner that will benefit flood control and biological values. Our expert evaluators have proposed solutions that are diametrically opposed to the proposal being forwarded to the City of St. Helena by the oversight committee. I absolutely wash my hands of the disgraceful and shameful set of proposals that "my" committee has certified for your consideration and acceptance. I am appalled. I am certain Friends of the Napa River would not touch these proposals with a ten foot pole. They are a joke- a slap in the face to everyone who put his/her heart and soul into bringing Measure A to fruition.

Sincerely,

P.M. Peter Mennen

RE: Napa River Bridge Alternatives

Dear Commissioners:

Friends of the Napa River, as you know, is concerned that community action today safeguard the long-term health of the Napa River. Specifically, we are concerned that the placement of the new Pope Street bridge to cross the Napa River will have significant impacts on river stability and of great concern to St. Helena's dense build-out along the river, have an impact on flooding. We acknowledge the need for a new bridge and perhaps the impacts will only be positive, but it is better to ask the questions now rather than later.

The Alternative A is of particular concern as the abutment for the West side of the bridge is in the floodway of the Napa River, possibly backing the water up in an area where there are many variables to consider, not the least of which is residential. The abutment on the West side sits on Stonebridge Park, a park that carries flood waters at times. Placing a cement dam there would force water elsewhere. The bridge would have to be longer with a causeway to allow the passage for that water in an area that seems ill suited for it.

Alternative A has other problems associated with the troubled area it would be placed into: that is the confluence of Sulphur Creek and the Napa River, and upstream from the historic Pope Street Bridge that is a constriction in the river. It is not yet known what the cumulative effect of the increased flow and velocity of the stormwater runoff from the new developments along Sulphur Creek is going to be during heavy rains.

We have briefly consulted an hydraulic engineer who has done a complete computer analysis of the Napa River at that very point and would be able to plug in the variables to make sure Alternative A would not have the problems it does appear to have and to compare them with the other alternatives. He suggested that bridges have backflow problems that have to be considered carefully. We have learned in our education about river systems that you can not tell how things are until the numbers are run. On page 19 of your report you suggest the hydraulic scour evaluation would be conducted during the final design phase of the project. Suppose at that time the numbers don't come out well for Alternative A? Why not do the modeling now so the citizens can see what the options are and rest assured there will be no additional flooding or scouring problems with any of the alternatives? This would allow them to support a more informed decision.

We are enclosing the name and address of the engineer who has the computer model of this stretch of the river.

Respectfully submitted,

Dear Pat –

Re: Draft Environmental Impact Report Chapter 3.7-1 and 3.8-1

Dear Noah,

B4-A-1

My commendations on excellent maps in the sections above. However, some of the information is not current, such as the USGS Fact Sheet relied on from 2000 has been replaced by the USGS Fact Sheet from December 2014. These areas should be re-written to reflect current statistics and realities. A copy of the 2014 Fact Sheet with predictions is enclosed.

B4-A-2

If the drafters of the EIR would like to consult further on seismic and fault issues related to West Napa Fault, the two authorities are Belle Philibosian, Research Geologist of the Earthquake Science Center who is actively involved in pit studies of the West Napa Fault from St. Helena to beyond Calistoga. Belle can be reached at 650-329-4784 or by cell phone at 626-344-9159. Belle's e-mail address is bphilibosian@usgs.gov. The State Geological expert studying the West Napa Fault who has also traced with USGS its presence running through St. Helena and Calistoga to a length of 45 miles is Professor Michael Oskin, Chairman of the Department of Geology, U.C. Davis. Dr. Oskin also served the USGS and provided a map attached from December 2014 that shows seismic activity running the length of the valley on the "west" side of Hwy. 29. In other words, the fault does not stop at the south border of St. Helena and there are several published sources I've provided verifying this. There are also visible fault damaged areas from the 2014 Napa earthquake.

B4-A-3

A website that should be viewed by the preparers of the draft EIR is easily found using google. Enter "Hayward Fault Shake Map" where three "break points" are given showing magnification of damage from a 7.0 quake along that fault. If the fault breaks in Fremont or Oakland, St. Helena is in for a greater than 8.0 quake. So please take this seriously, since the probabilities are so high of one or more events of 6.7 or greater (72%) than noted in the

current draft EIR with its outdated materials. Again, I've attached information about this.

B4-A-3

The characterization made that St. Helena has less problems, otherwise there would be an Alquist-Priolo Map is inaccurate. The State Geological Survey is years behind and under-funded, thus the State's Gegological Survey group selects studies based on population densities. This can be verified by Richard who handles maps for California Geological Survey in Menlo Park. Since Yountville, St. Helena and Calistoga are smaller and more rural than Napa, the CGS focus was American Canyon and Napa, and there were no funds and less priority for the State to complete maps for the upper part of the valley due to smaller populations compared to many other areas of the state waiting in line for updated Alquist-Priolo Maps. As CGS told the press ("San Francisco Chronicle"), we have a 300 year backlog given the meager funding provided for development of Alquist-Priolo Maps."

B4-A-4

I don't believe the stark probabilities of a problem from a break in the West Napa Fault should be hidden from view. Burying one's head in the sand leaves people victims of their own city personnel's biases that are not founded on reality.

B4-A-5

The drafters of the EIR should also include in their references the State Guidelines for Seismically Active Area from 2008: "Special Publication 117A" and update their descriptions and systems as well, based on this Publication. I am sorry to see the EIR writers are so far removed from updating their records, relying on 2000 data for the most part from both the USGS and State GS. I provided you with a copy of this Publication for use by residents. Perhaps you can share it with the EIR preparers so they can update this chapter.

B4-A-6

I attach further information for your review once again. Please see that the preparers of the Draft EIR received all of the information provided with this letter. With the exception of the fault map, which isn't current, all other maps are an astounding improvement from those of years past, as are the descriptions of seismic hazards far superior. Since Napa County (not just the Bay Area) is described as Seismically Active, I believe a description should include this reality.

B4-A-7

Also of concern with respect to Hazards in Chapter 3.8 is a risk of CONFLAGRATION, which is a firestorm, or in the alternative, a seismic event that can trigger multiple fires and gas hazards. As a policy, the City should consider adding a section with some sound policies articulated, such as banning ornamental fire features within the City's Fire Emergency Response area. The 60 plus fire pits on balconies at Las Alcobas are under the control of guests, and it could take management some time to become aware of a problem in order to shut off a gas main. Other fire features of concern are ornamental fire walls like the one at Hall Winery on the second floor in their tasting room.

Earthquake "Shake" Map for breaks on the Hayward Fault - 3 scenarios of shaking intensities for a 7.0 M quake - San Pablo Bay (almost no affect on Napa County), Oakland (serious affect on Napa County), and Fremont (extreme shaking and most serious affect on Napa County).

In the foregoing scenarios, note that the location furthest away, Fremont, would produce the most damage in Napa County. This is similar to the effect of the quake in 2017 in Mexico city, where the origin was 65 miles from Mexico City but the shaking and magnitude of the quake increased and was most severe in Mexico City.

Another way to get to Hayward Fault info: Use Google.com, type in Hayward Fault Shake Map and there's as USGS link on the index that is generated.

B4-A-10

AN ANALYSIS OF BAY AREA EARTHQUAKES AND USGS FORECASTS

The USGS has been accurate in its 30-year forecasts, as there has been at least one 6.0 M quake or greater within their set timeframe since 1959. Prior to that, there was only one quake just under 6.0 M from 1906 forward. This information is from the "List of Earthquakes in California" (Google the term and look for the Wiki link) and historic USGS forecasts (Google "Earthquake Outlook for San Francisco Bay Region 2014-2043).

Each time there is a 6.0 or greater quake, a new 30-year forecast has been made by USGS. Here are the differences since Napa's 8/24/14 earthquake:

(1) Probabilities have moved from 72% to 98% for a quake of 6.0 M or greater for the first time. Before: Probabilities were 72% or 70%

(2) USGS in 2014 increased the probabilities to include one "or more" events as shown in their Earthquake Outlook for the first time

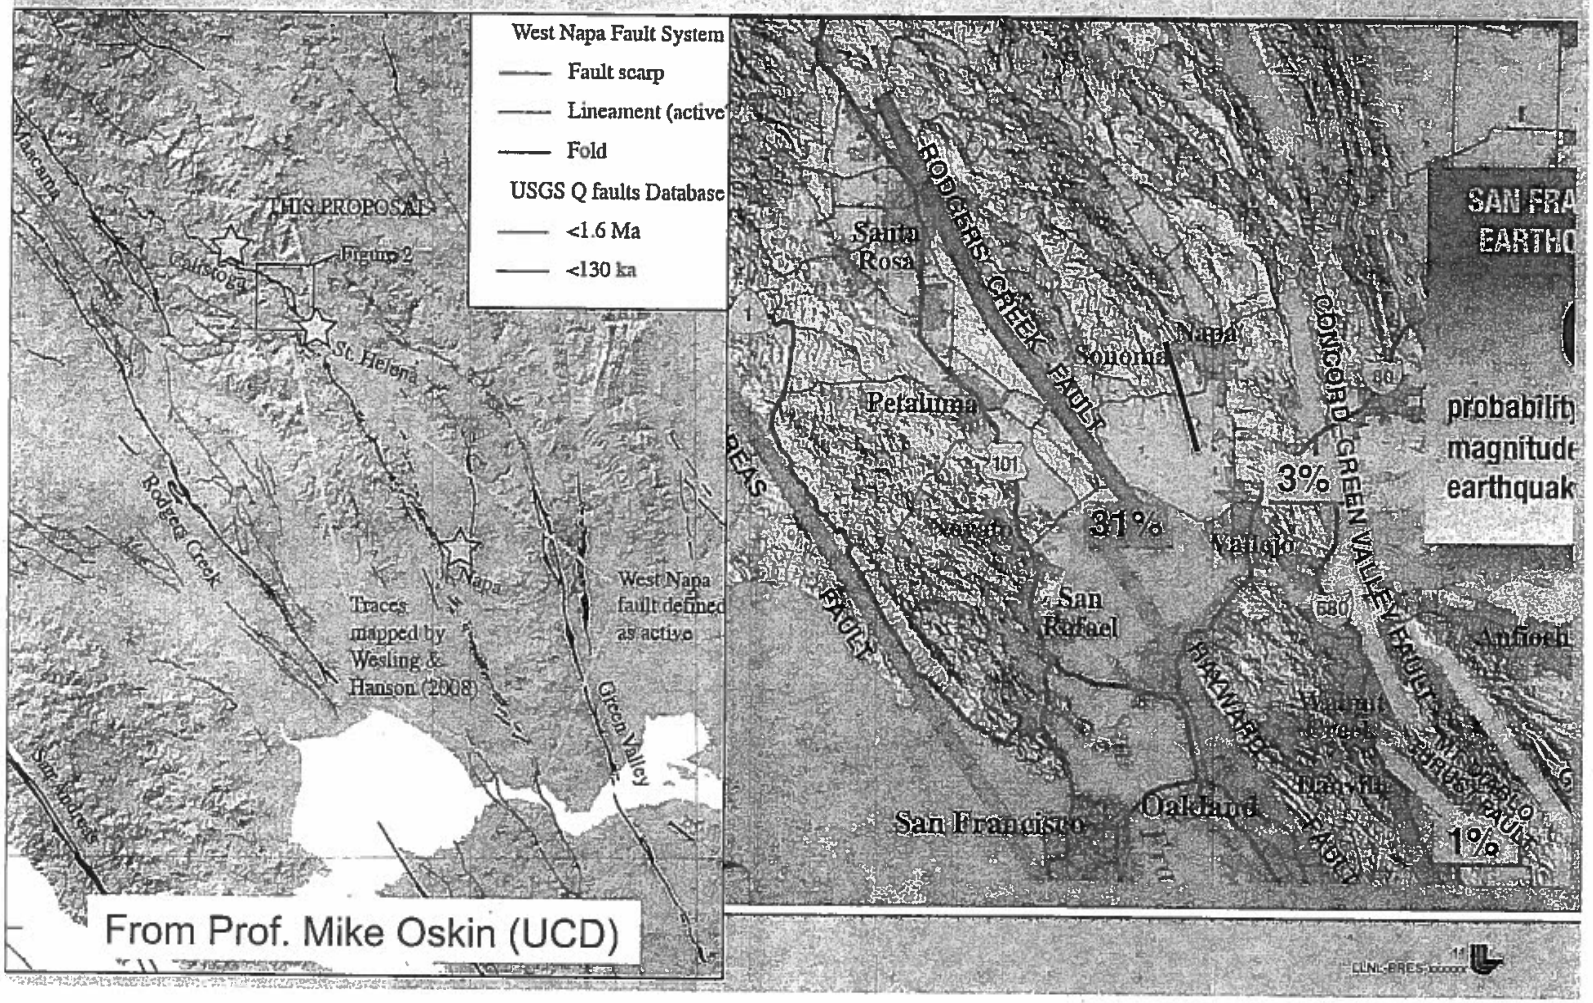
(3) USGS now adds the 72% probability of a 6.7 M or greater. This is the first time there has been a forecast probability for a 6.7 M or greater event.

All of this is new data since the Napa Earthquake of 8/24/14. The West Napa Fault erupted for the first time in 11,000 years to 45 miles in length.

We are more seismically active, as faults are building pressure, and are occurring within shorter time-frames. Hence the probability is 98%.

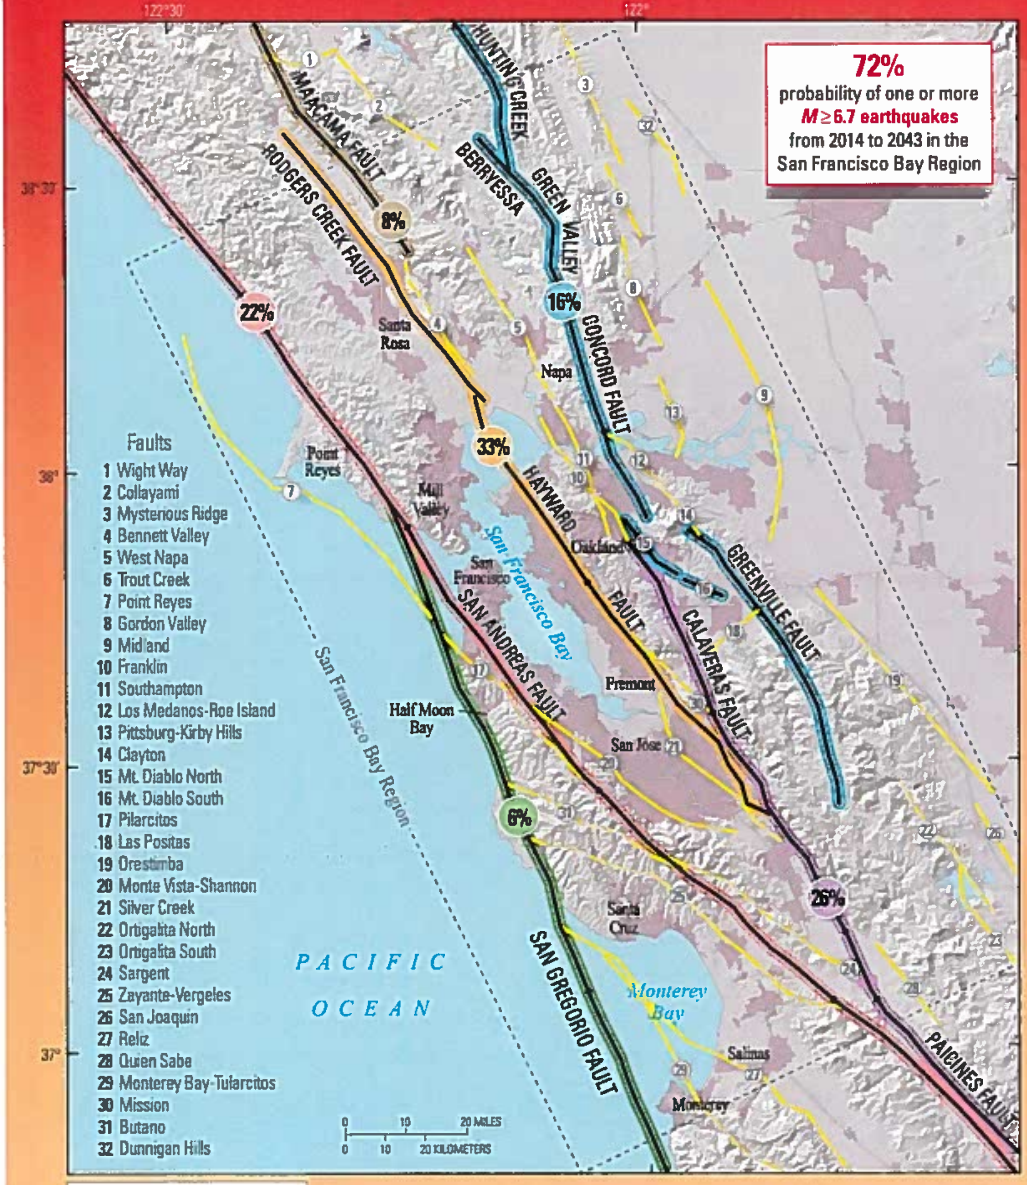
Since 1868, there have been four major earthquakes in San Francisco and the North/East Bay Area that have been felt in Napa: 1868 Hayward; 1906 San Francisco; 1989 Loma Prieta; 2014 West Napa. Three of the four occurred at night when people were in their beds between 1:20 a.m. and 5:19 a.m. Loma Prieta broke at approximately 5:00 p.m. Three of the four occurred just before or just after the Fall Equinox (Sept.). Only the San Francisco Earthquake of 1906 occurred just weeks after the Spring Equinox (Mar.) on April 18, 1906.

The West Napa Fault was identified as active, capable of M 6 event



USGS
science for a changing world

Earthquake Outlook for the San Francisco Bay Region 2014–2043



Map of known active faults in the San Francisco Bay region. The 72 percent probability of a magnitude 6.7 or greater earthquake includes the well-known major plate-boundary faults, lesser-known faults, and unknown faults. The percentage shown within each colored circle is the probability that a magnitude 6.7 or greater earthquake will occur somewhere on that fault system by the year 2043. The probability that a magnitude 6.7 or greater earthquake will involve one of the lesser-known faults is 13 percent.

Using information from recent earthquakes, improved mapping of active faults, and a new model for estimating earthquake probabilities, the 2014 Working Group on California Earthquake Probabilities updated the 30-year earthquake forecast for California. They concluded that there is a 72 percent probability (or likelihood) of at least one earthquake of magnitude 6.7 or greater striking somewhere in the San Francisco Bay region before 2043. Earthquakes this large are capable of causing widespread damage; therefore, communities in the region should take simple steps to help reduce injuries, damage, and disruption, as well as accelerate recovery from these earthquakes.

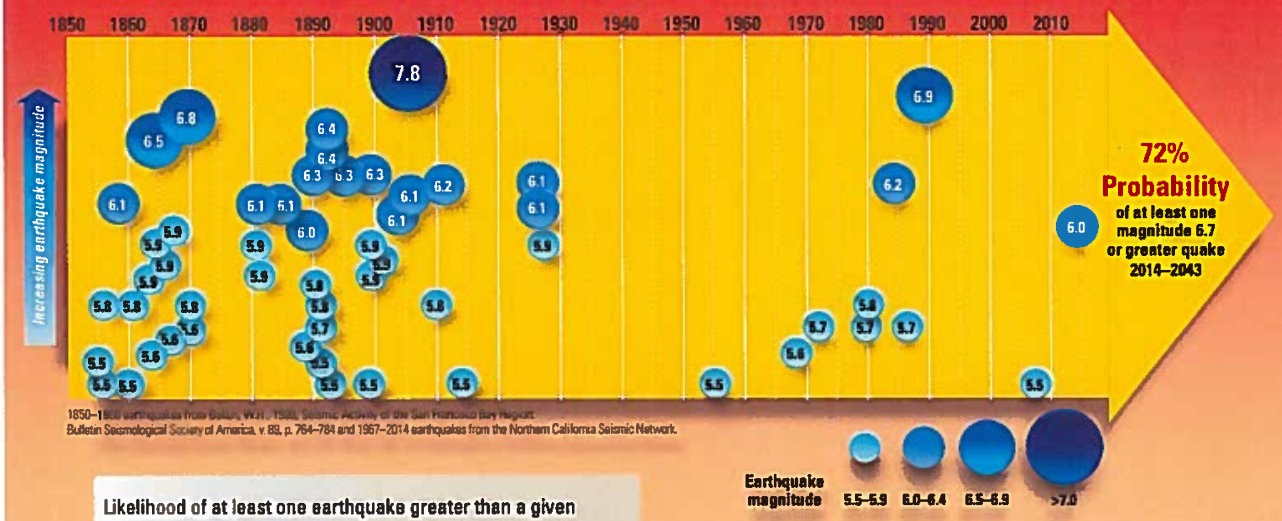
Fact Sheet 2015–3020
Revised August 2016 (ver. 1.1)

San Francisco Bay Region Earthquake Timeline



1850–1[illegible] earthquakes from Bolen, W.H., 1989, Seismic Activity of the San Francisco Bay Region: Bulletin Seismological Society of America, v. 89, p. 764–784 and 1967–2014 earthquakes from the Northern California Seismic Network.

Likelihood of at least one earthquake greater than a given magnitude in the San Francisco Bay region between 2014 and 2043.

Magnitude (*M*)	30-year likelihood of at least one earthquake in the San Francisco Bay region
$M \geq 6.0$	98 percent
$M \geq 6.7$	72 percent
$M \geq 7.0$	51 percent
$M \geq 7.5$	20 percent

Timeline of magnitude 5.5 and greater earthquakes in the San Francisco Bay region 1850–2014. In the 50 years prior to 1906, there were 13 earthquakes with a magnitude between 6 and 7, but only 6 earthquakes of similar magnitude in the 110 years since 1906. The rate of large earthquakes is expected to increase from this low level as tectonic plate movements continue to increase the stress on the faults in the region.

Earthquake Preparedness Helps

Early Sunday morning on August 24, 2014, the residents of Napa, California, were jolted awake by a strong, magnitude 6.0 earthquake. Within 30 minutes, the staff of Becoming Independent, a non-profit organization that helps adults with intellectual disabilities lead independent lives, called the people they serve in the affected area. The staff quickly visited all of the clients that needed help with cleanup and making their homes safe, a task made easier because both groups were trained in disaster preparedness and the clients had emergency kits with needed supplies on hand. The South Napa earthquake shifted houses off their foundations, damaged chimneys, started fires, and broke water mains throughout the city, causing hundreds of millions of dollars in economic losses. Many historic masonry buildings in downtown Napa were damaged. The earthquake was the largest in the San Francisco Bay region since the 1989 magnitude 6.9 Loma Prieta earthquake and a clear reminder of the seismic vulnerability of the region. The staff and clients of Becoming Independent showed that understanding and preparing for these events can improve how we live with future earthquakes.

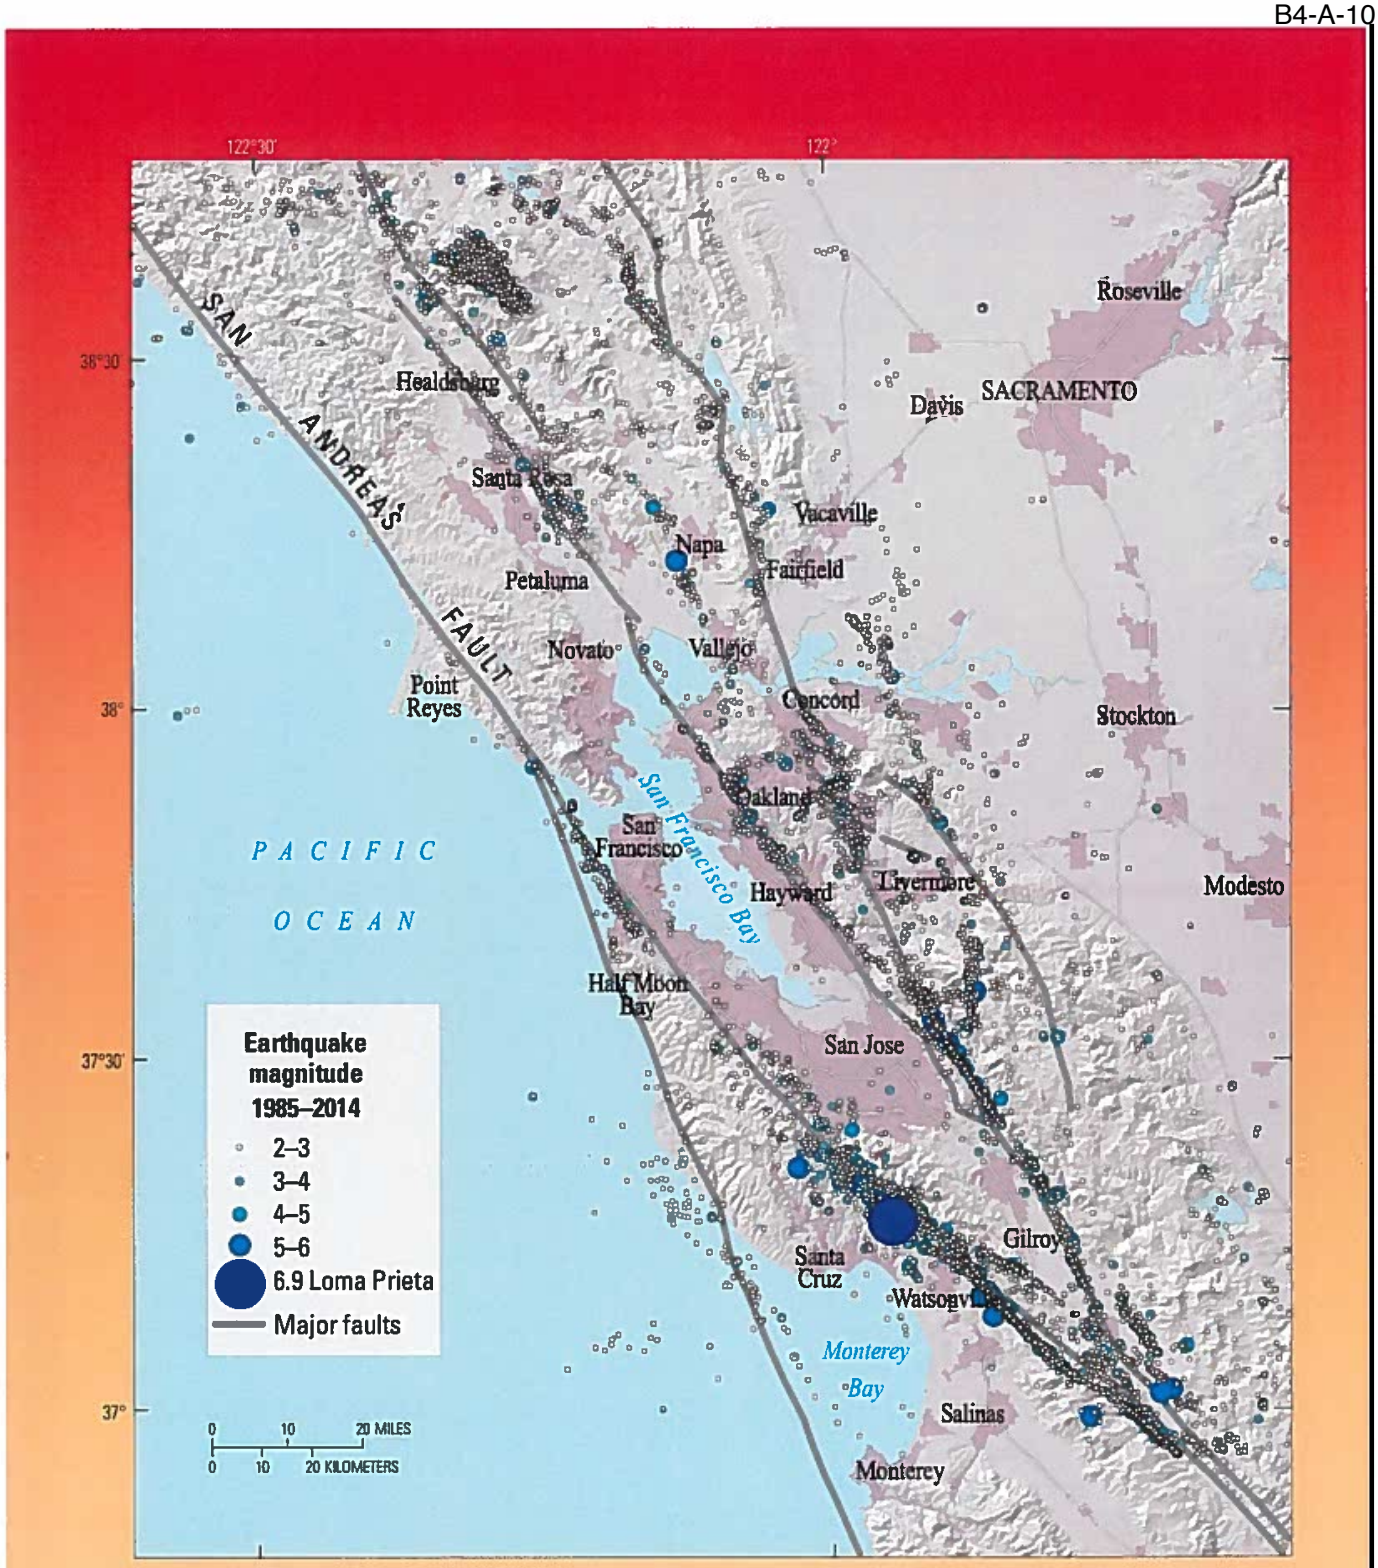
Why Does the San Francisco Bay Region Have Earthquakes?

The same geologic process that is responsible for the San Francisco Bay region's beautiful coastlines, bays, hills, and valleys is also the primary driving force for earthquakes along faults in the region. The Bay region is located within the active boundary between the Pacific and the North American tectonic plates, where the Pacific plate slowly and continually slides northwest past the North American plate. The San Andreas Fault, on which two magnitude 7.8–7.9 earthquakes have occurred in historical time, including the 1906 San Francisco earthquake, is the fastest slipping fault along the plate boundary. Other major plate boundary faults in the San Francisco Bay region include the Hayward, Rodgers Creek, Calaveras, Maacama, San Gregorio, Concord, Green Valley, and Greenville Faults.

How Do Scientists Calculate Earthquake Probability?

Scientists rely upon a variety of techniques to help understand the rate and magnitude of past earthquakes in order to estimate the likelihood of future earthquakes. The Global Positioning System (GPS) and other land surveying and geologic techniques have allowed scientists to make more accurate measurements of how the current plate motions—totaling 1.6 inches per year across the San Francisco Bay region—distribute stress onto these individual faults. Balancing plate motions with the slip during large earthquakes and slow creep on faults allows scientists to calculate average rates of earthquake occurrence over periods of hundreds to thousands of years. (Continued on page 4)

B4-A-10



Map of earthquakes greater than magnitude 2.0 in the San Francisco Bay region from 1985–2014. Small earthquakes occur on both major faults (shown by the gray lines) and minor faults (not shown). Because of the variability of fault geometry, earthquakes at depth do not always coincide with the mapped faults at the Earth's surface. There are sections of major faults, particularly the San Andreas Fault, with few or no small earthquakes but they will produce large earthquakes in the future. Compiled from the Northern California Seismic Network.

(Continued from page 2). A trench excavated across the Hayward Fault in Fremont revealed evidence of 12 large earthquakes over the past 1,900 years. The time interval between these earthquakes ranged from about 100 to 210 years. Historical records indicate that the most recent large earthquake on this fault occurred in 1868. However, detailed information about other past earthquakes in the San Francisco Bay region is difficult to obtain because seismograph records only go back to about 1900, historical accounts are sparse before 1850, and there are limited locations where faults can be trenched to identify and date prehistoric earthquakes.

Calculating accurate earthquake probabilities for short periods, such as 30 years, is also challenging. Although the 30-year time interval is convenient for humans, it is much less than the average time between large earthquakes on these faults, which can range from hundreds to thousands of years. The rate of large earthquakes in the San Francisco Bay region was high in the late 1800s but dropped abruptly after the 1906 San Francisco earthquake on the San Andreas Fault. Scientists believe that the post-1906 earthquake rate decreased because the large amount of slip along the San Andreas Fault in 1906 temporarily reduced the stress on many of the faults in the region. However, the ongoing motion of the tectonic plates began rebuilding stresses after the 1906 event, and earthquakes larger than magnitude 5.5 resumed during the second half of the 20th century. Future large, damaging earthquakes in the San Francisco Bay region, similar in size to the 1989 Loma Prieta and 1906 San Francisco earthquakes, may or may not be accompanied by the level of earthquake activity observed in the late 1800s.

The 2014 Uniform California Earthquake Rupture Forecast version 3 (http://pubs.usgs.gov/fs/2015/3009/) provides an updated estimate of the likelihood of large earthquakes in California over a 30-year time window from 2014 to 2043. The forecast accounts for how fast stress is accumulating on each fault due to plate motions and the time since its most recent large earthquake(s). In updating the probability calculations, scientists used a more complete set of faults for the San Francisco Bay region than those used in the previous (2008) calculations, adding 32 smaller faults to the 5 major fault systems. The new study has also incorporated more options for how multiple faults might rupture together in large earthquakes.

Probabilities of Earthquakes in the San Francisco Bay Region

Smaller earthquakes occur more frequently than larger earthquakes. The probability that an earthquake of magnitude 6.0 or larger will occur before 2043 is 98 percent. The probability of at least one earthquake of magnitude 6.7 or larger in the San Francisco Bay region is 72 percent, and for at least one earthquake of magnitude 7.0 or larger it is 51 percent. These probabilities include earthquakes on the major faults, lesser-known faults, and unknown faults.

The probability of a large earthquake occurring on an individual fault in the San Francisco region is lower than the probability of an earthquake occurring anywhere in the region. The faults in the region with the highest estimated probability of generating damaging earthquakes between 2014 and 2043 are the Hayward, Rodgers Creek, Calaveras, and San Andreas Faults. In this 30-year period, the probability of an earthquake of magnitude 6.7 or larger occurring is 22 percent along the San Andreas Fault and 33 percent for the Hayward or Rodgers Creek Faults. Individual sections of these faults have lower probabilities for large earthquakes to occur (continued on page 6);

Seven Steps to Earthquake Safety

PREPARE

Before the next big earthquake we recommend these four steps that will make you, your family, or your workplace better prepared to survive and recover quickly:

Step 1: Secure your space by identifying hazards and securing moveable items.

Step 2: Plan to be safe by creating a disaster plan and deciding how you will communicate in an emergency.

Step 3: Organize disaster supplies in convenient locations.

Step 4: Minimize financial hardship by organizing important documents, strengthening your property, and considering insurance.

SURVIVE

During the next big earthquake, and immediately after, is when your level of preparedness will make a difference in how you and others survive and can respond to emergencies:

Step 5: Drop, Cover, and Hold On when the earth shakes.

Step 6: Improve safety after earthquakes by evacuating if necessary, helping the injured, and preventing further injuries or damage.

RECOVER

After the immediate threat of the earthquake has passed, your level of preparedness will determine your quality of life in the weeks and months that follow:

Step 7: Reconnect and Restore. Restore daily life by reconnecting with others, repairing damage, and rebuilding community.

(continued from page 5) however, an earthquake of magnitude 6.7 or larger will cause strong shaking over a broad area. Therefore, it is important to estimate the probability of a large earthquake occurring anywhere in the San Francisco Bay region.

What is the Likelihood That an Earthquake Will Affect You?

Earthquake probabilities are only one component in the evaluation of earthquake hazards. Higher magnitude earthquakes have broader areas of intense shaking and cause more damage than lower magnitude earthquakes. In a magnitude 6.0 earthquake, strong shaking and damage are confined to a localized area, as illustrated by the 2014 South Napa earthquake. In comparison, the 1989 magnitude 6.9 Loma Prieta earthquake caused damage over a region nearly 100 miles long. Local soil and geologic conditions, bedrock type, quality of building construction, and susceptibility to flooding (caused by dam or levee failure) can also affect the amount of damage at a particular site. This was dramatically demonstrated by the 1989 Loma Prieta earthquake, which devastated vulnerable parts of Oakland and San Francisco, more than 50 miles from the fault rupture.

How Can You Protect Yourself and Your Family?

Taking simple steps before and during earthquakes can help protect you and your family, as well as speed your recovery from an earthquake.

Before the next earthquake:

- Assess your home and work space, identify hazards, and secure moveable items.
- Create an emergency plan and organize disaster supplies to sustain you and your family for 72 hours or longer.
- Practice "Drop, Cover, and Hold On" to protect yourself when the ground begins to shake. Learn and practice what to do at home, work, or in school.
- Stay prepared by repeating these steps on a regular basis. For example, reassess your preparedness every year and participate in the annual Great California ShakeOut drill on the third Thursday in October.

Lack of adequate shear walls on the garage level exacerbated damage to this building at the corner of Beach and Divisadero in the Marina District, San Francisco, during the October 1989 Loma Prieta earthquake.

Re: Draft Environmental Impact Report Chapter 3.7-1 and 3.8-1

Dear Noah,

My commendations on excellent maps in the sections above. However, some of the information is not current, such as the USGS Fact Sheet relied on from 2000 has been replaced by the USGS Fact Sheet from December 2014. These areas should be re-written to reflect current statistics and realities. A copy of the 2014 Fact Sheet with predictions is enclosed.

B4-B-2

If the drafters of the EIR would like to consult further on seismic and fault issues related to West Napa Fault, the two authorities are Belle Philibosian, Research Geologist of the Earthquake Science Center who is actively involved in pit studies of the West Napa Fault from St. Helena to beyond Calistoga. Belle can be reached at 650-329-4784 or by cell phone at 626-344-9159. Belle's e-mail address is bphilibosian@usgs.gov. The State Geological expert studying the West Napa Fault who has also traced with USGS its presence running through St. Helena and Calistoga to a length of 45 miles is Professor Michael Oskin, Chairman of the Department of Geology, U.C. Davis. Dr. Oskin also served the USGS and provided a map attached from December 2014 that shows seismic activity running the length of the valley on the "west" side of Hwy. 29. In other words, the fault does not stop at the south border of St. Helena and there are several published sources I've provided verifying this. There are also visible fault damaged areas from the 2014 Napa earthquake. It appears on the USGS Map attached reaching the base of Mt. St. Helena.

B4-B-3

A website that should be viewed by the preparers of the draft EIR is easily found using google. Enter "Hayward Fault Shake Map" where three "break points" are given showing magnification of damage from a 7.0 quake along that fault. If the fault breaks in Fremont or Oakland, St. Helena is in for a greater than 8.0 quake. So please take this seriously, since the probabilities

current draft EIR with its outdated materials. Again, I've attached information about this.

B4-B-3

The characterization made that St. Helena has less problems, otherwise there would be an Alquist-Priolo Map is inaccurate. The State Geological Survey is years behind and under-funded, thus the State's Gegological Survey group selects studies based on population densities. This can be verified by Richard who handles maps for California Geological Survey in Menlo Park. Since Yountville, St. Helena and Calistoga are smaller and more rural than Napa, the CGS focus was American Canyon and Napa, and there were no funds and less priority for the State to complete maps for the upper part of the valley due to smaller populations compared to many other areas of the state waiting in line for updated Alquist-Priolo Maps. As CGS told the press ("San Francisco Chronicle"), we have a 300 year backlog given the meager funding provided for development of Alquist-Priolo Maps."

B4-B-4

I don't believe the stark probabilities of a problem from a break in the West Napa Fault should be hidden from view. Burying one's head in the sand leaves people victims of their own city personnel's biases that are not founded on reality.

B4-B-5

The drafters of the EIR should also include in their references the State Guidelines for Seismically Active Area from 2008: "Special Publication 117A" and update their descriptions and systems as well, based on this Publication. I am sorry to see the EIR writers are so far removed from updating their records, relying on 2000 data for the most part from both the USGS and State GS. I provided you with a copy of this Publication for use by residents. Perhaps you can share it with the EIR preparers so they can update this chapter.

B4- B-6

I attach further information for your review once again. Please see that the preparers of the Draft EIR received all of the information provided with this letter. With the exception of the fault map, which isn't current, all other maps are an astounding improvement from those of years past, as are the descriptions of seismic hazards far superior. Since Napa County (not just the Bay Area) is described as Seismically Active, I believe a description should include this reality.

B4-B-7

Also of concern with respect to Hazards in Chapter 3.8 is a risk of CONFLAGRATION, which is a firestorm, or in the alternative, a seismic event that can trigger multiple fires and gas hazards. As a policy, the City should consider adding a section with some sound policies articulated, such as banning ornamental fire features within the City's Fire Emergency Response area. The 60 plus fire pits on balconies at Las Alcobas are under the control of guests, and it could take management some time to become aware of a problem in order to shut off a gas main. Other fire features of concern are ornamental fire walls like the one at Hall Winery on the second floor in their tasting room.

The rate of large earthquakes is expected to increase from this low level as tectonic plate movements continue to increase the stress on the faults in the region.

Earthquake Preparedness Helps

Early Sunday morning on August 24, 2014, the residents of Napa, California, were jolted awake by a strong, magnitude 6.0 earthquake. Within 30 minutes, the staff of Becoming Independent, a non-profit organization that helps adults with intellectual disabilities lead independent lives, called the people they serve in the affected area. The staff quickly visited all of the clients that needed help with cleanup and making their homes safe, a task made easier because both groups were trained in disaster preparedness and the clients had emergency kits with needed supplies on hand. The South Napa earthquake shifted houses off their foundations, damaged chimneys, started fires, and broke water mains throughout the city, causing hundreds of millions of dollars in economic losses. Many historic masonry buildings in downtown Napa were damaged. The earthquake was the largest in the San Francisco Bay region since the 1989 magnitude 6.9 Loma Prieta earthquake and a clear reminder of the seismic vulnerability of the region. The staff and clients of Becoming Independent showed that understanding and preparing for these events can improve how we live with future earthquakes.

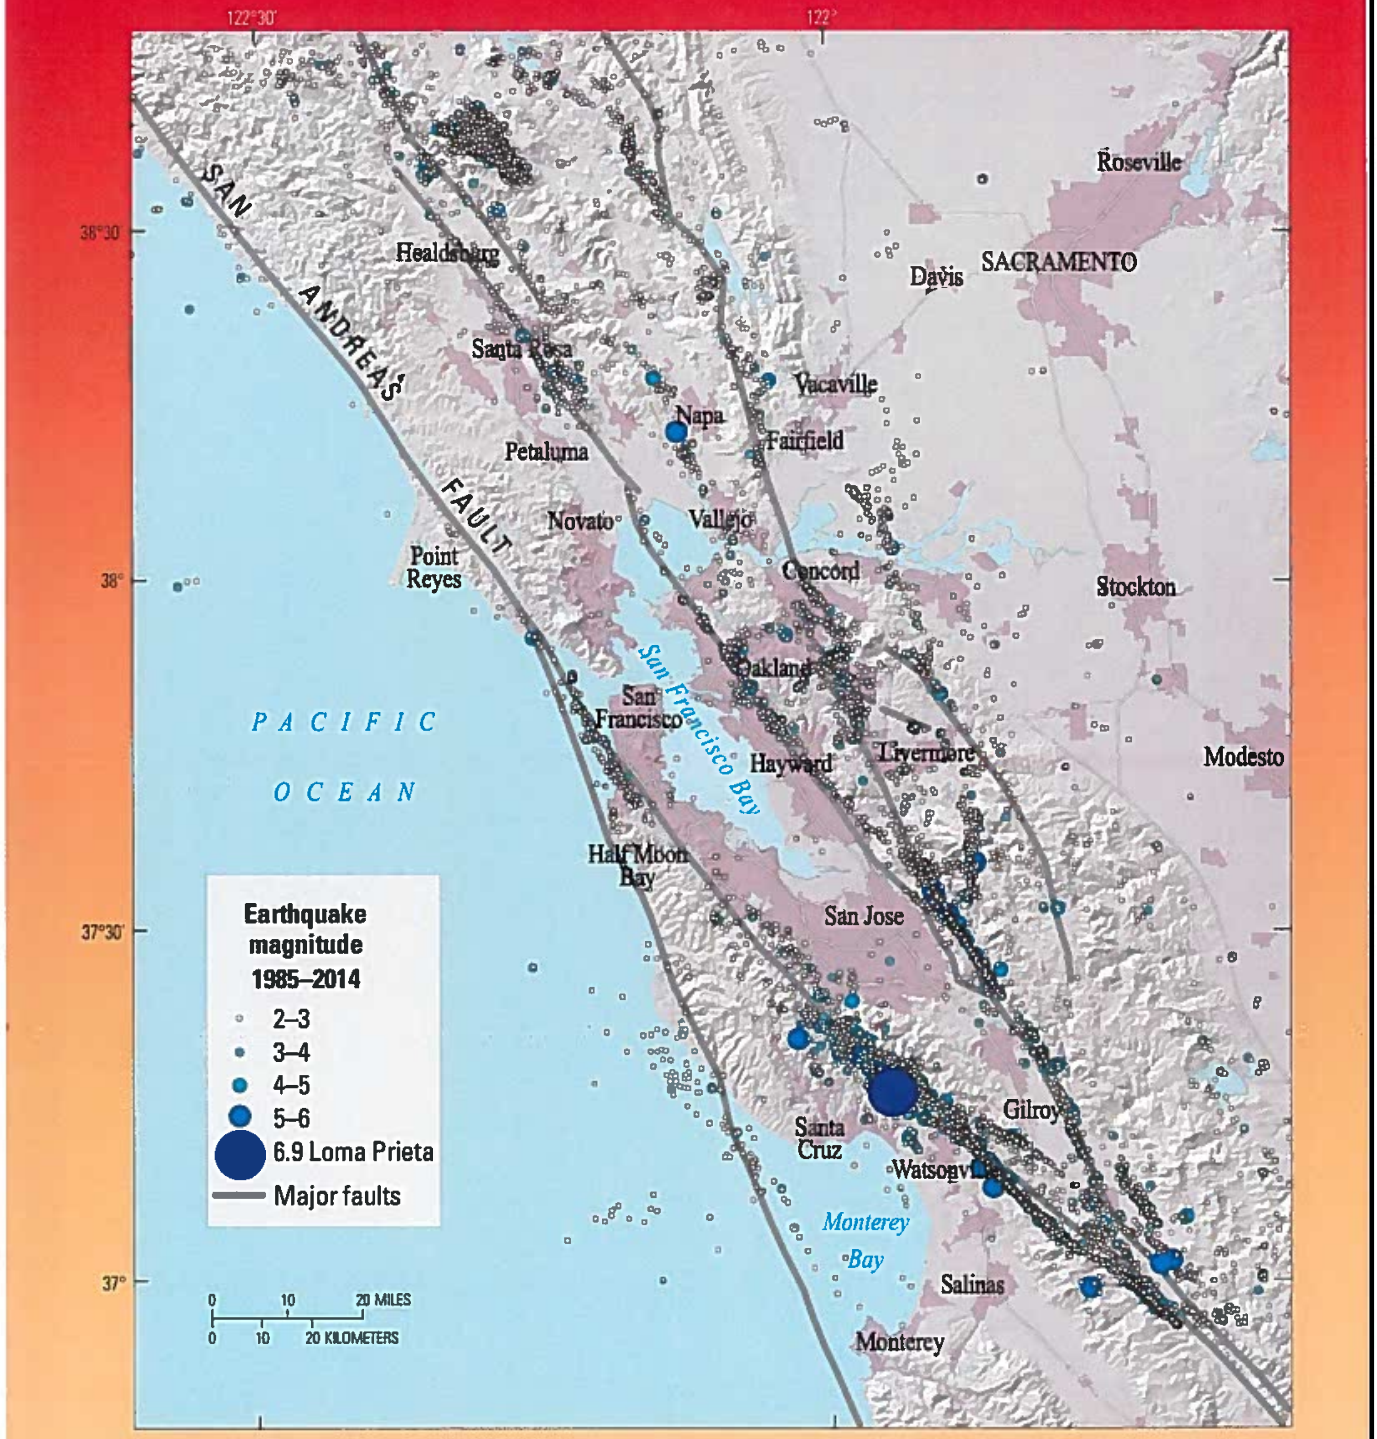
Why Does the San Francisco Bay Region Have Earthquakes?

The same geologic process that is responsible for the San Francisco Bay region's beautiful coastlines, bays, hills, and valleys is also the primary driving force for earthquakes along faults in the region. The Bay region is located within the active boundary between the Pacific and the North American tectonic plates, where the Pacific plate slowly and continually slides northwest past the North American plate. The San Andreas Fault, on which two magnitude 7.8–7.9 earthquakes have occurred in historical time, including the 1906 San Francisco earthquake, is the fastest slipping fault along the plate boundary. Other major plate boundary faults in the San Francisco Bay region include the Hayward, Rodgers Creek, Calaveras, Maacama, San Gregorio, Concord, Green Valley, and Greenville Faults.

How Do Scientists Calculate Earthquake Probability?

Scientists rely upon a variety of techniques to help understand the rate and magnitude of past earthquakes in order to estimate the likelihood of future earthquakes. The Global Positioning System (GPS) and other land surveying and geologic techniques have allowed scientists to make more accurate measurements of how the current plate motions—totaling 1.6 inches per year across the San Francisco Bay region—distribute stress onto these individual faults. Balancing plate motions with the slip during large earthquakes and slow creep on faults allows scientists to calculate average rates of earthquake occurrence over periods of hundreds to thousands of years. (Continued on page 4)

B4-B-10



Map of earthquakes greater than magnitude 2.0 in the San Francisco Bay region from 1985–2014. Small earthquakes occur on both major faults (shown by the gray lines) and minor faults (not shown). Because of the variability of fault geometry, earthquakes at depth do not always coincide with the mapped faults at the Earth's surface. There are sections of major faults, particularly the San Andreas Fault, with few or no small earthquakes but they will produce large earthquakes in the future. Compiled from the Northern California Seismic Network.

(Continued from page 2). A trench excavated across the Hayward Fault in Fremont revealed evidence of 12 large earthquakes over the past 1,900 years. The time interval between these earthquakes ranged from about 100 to 210 years. Historical records indicate that the most recent large earthquake on this fault occurred in 1868. However, detailed information about other past earthquakes in the San Francisco Bay region is difficult to obtain because seismograph records only go back to about 1900, historical accounts are sparse before 1850, and there are limited locations where faults can be trenched to identify and date prehistoric earthquakes.

Calculating accurate earthquake probabilities for short periods, such as 30 years, is also challenging. Although the 30-year time interval is convenient for humans, it is much less than the average time between large earthquakes on these faults, which can range from hundreds to thousands of years. The rate of large earthquakes in the San Francisco Bay region was high in the late 1800s but dropped abruptly after the 1906 San Francisco earthquake on the San Andreas Fault. Scientists believe that the post-1906 earthquake rate decreased because the large amount of slip along the San Andreas Fault in 1906 temporarily reduced the stress on many of the faults in the region. However, the ongoing motion of the tectonic plates began rebuilding stresses after the 1906 event, and earthquakes larger than magnitude 5.5 resumed during the second half of the 20th century. Future large, damaging earthquakes in the San Francisco Bay region, similar in size to the 1989 Loma Prieta and 1906 San Francisco earthquakes, may or may not be accompanied by the level of earthquake activity observed in the late 1800s.

The 2014 Uniform California Earthquake Rupture Forecast version 3 (http://pubs.usgs.gov/fs/2015/3009/) provides an updated estimate of the likelihood of large earthquakes in California over a 30-year time window from 2014 to 2043. The forecast accounts for how fast stress is accumulating on each fault due to plate motions and the time since its most recent large earthquake(s). In updating the probability calculations, scientists used a more complete set of faults for the San Francisco Bay region than those used in the previous (2008) calculations, adding 32 smaller faults to the 5 major fault systems. The new study has also incorporated more options for how multiple faults might rupture together in large earthquakes.

Probabilities of Earthquakes in the San Francisco Bay Region

Smaller earthquakes occur more frequently than larger earthquakes. The probability that an earthquake of magnitude 6.0 or larger will occur before 2043 is 98 percent. The probability of at least one earthquake of magnitude 6.7 or larger in the San Francisco Bay region is 72 percent, and for at least one earthquake of magnitude 7.0 or larger it is 51 percent. These probabilities include earthquakes on the major faults, lesser-known faults, and unknown faults.

The probability of a large earthquake occurring on an individual fault in the San Francisco region is lower than the probability of an earthquake occurring anywhere in the region. The faults in the region with the highest estimated probability of generating damaging earthquakes between 2014 and 2043 are the Hayward, Rodgers Creek, Calaveras, and San Andreas Faults. In this 30-year period, the probability of an earthquake of magnitude 6.7 or larger occurring is 22 percent along the San Andreas Fault and 33 percent for the Hayward or Rodgers Creek Faults. Individual sections of these faults have lower probabilities for large earthquakes to occur (continued on page 6);

Seven Steps to Earthquake Safety

PREPARE

Before the next big earthquake we recommend these four steps that will make you, your family, or your workplace better prepared to survive and recover quickly:

Step 1: Secure your space by identifying hazards and securing moveable items.

Step 2: Plan to be safe by creating a disaster plan and deciding how you will communicate in an emergency.

Step 3: Organize disaster supplies in convenient locations.

Step 4: Minimize financial hardship by organizing important documents, strengthening your property, and considering insurance.

SURVIVE

During the next big earthquake, and immediately after, is when your level of preparedness will make a difference in how you and others survive and can respond to emergencies:

Step 5: Drop, Cover, and Hold On when the earth shakes.

Step 6: Improve safety after earthquakes by evacuating if necessary, helping the injured, and preventing further injuries or damage.

RECOVER

After the immediate threat of the earthquake has passed, your level of preparedness will determine your quality of life in the weeks and months that follow:

Step 7: Reconnect and Restore. Restore daily life by reconnecting with others, repairing damage, and rebuilding community.

(continued from page 5) however, an earthquake of magnitude 6.7 or larger will cause strong shaking over a broad area. Therefore, it is important to estimate the probability of a large earthquake occurring anywhere in the San Francisco Bay region.

What is the Likelihood That an Earthquake Will Affect You?

Earthquake probabilities are only one component in the evaluation of earthquake hazards. Higher magnitude earthquakes have broader areas of intense shaking and cause more damage than lower magnitude earthquakes. In a magnitude 6.0 earthquake, strong shaking and damage are confined to a localized area, as illustrated by the 2014 South Napa earthquake. In comparison, the 1989 magnitude 6.9 Loma Prieta earthquake caused damage over a region nearly 100 miles long. Local soil and geologic conditions, bedrock type, quality of building construction, and susceptibility to flooding (caused by dam or levee failure) can also affect the amount of damage at a particular site. This was dramatically demonstrated by the 1989 Loma Prieta earthquake, which devastated vulnerable parts of Oakland and San Francisco, more than 50 miles from the fault rupture.

How Can You Protect Yourself and Your Family?

Taking simple steps before and during earthquakes can help protect you and your family, as well as speed your recovery from an earthquake.

Before the next earthquake:

- Assess your home and work space, identify hazards, and secure moveable items.
- Create an emergency plan and organize disaster supplies to sustain you and your family for 72 hours or longer.
- Practice "Drop, Cover, and Hold On" to protect yourself when the ground begins to shake. Learn and practice what to do at home, work, or in school.
- Stay prepared by repeating these steps on a regular basis. For example, reassess your preparedness every year and participate in the annual Great California ShakeOut drill on the third Thursday in October.

Lack of adequate shear walls on the garage level exacerbated damage to this building at the corner of Beach and Divisadero in the Marina District, San Francisco, during the October 1989 Loma Prieta earthquake.

Comment Letter B5

DEC. 29, 2018

RECEIVED
PLANNING DEPARTMENT
DEC 31 2018
CITY OF ST HELENA

TIM KLEIN
1110 PEPPERTREE CIRCLE
ST. HELENA, CA. 94574
(707) 963-8100

TO WHOM IT MAY CONCERN:

AS A LONG TIME RESIDENT OF ST. HELENA, I AM VERY CONCERNED ABOUT THE QUALITY OF LIFE HERE. IN THIS LETTER I WILL ONLY DISCUSS THE CURRENT NEED FOR THE CONTROL OF TRAFFIC FLOW, ESPECIALLY DURING RUSH HOURS, WEEKENDS, AND HOLIDAYS. IN THE LONG TERM THERE WILL BE A NEED FOR ADDITIONAL CONNECTOR STREETS TO MITIGATE "IN-TOWN" TRAFFIC CONGESTION. B5-1

FOR NOW, I FEEL THAT A "HIGH AND WIDE" ADAMS STREET BRIDGE, CROSSING THE NAPA RIVER AND ALIGNING WITH THE CURRENT MEADOWOOD ACCESS STREET ON THE EAST SIDE OF THE SILVERADO TRAIL, COULD BE THE CORE OF THE UPDATED SYSTEM. B5-2

THIS BRIDGE SHOULD BE A "500 YEAR" FLOOD LEVEL HEIGHT SINCE THE LONG TERM CLIMATE CAN BE UNPREDICTABLE, AND I REMEMBER HOW ISOLATED PEOPLE WERE DURING PAST FLOODING PERIODS.

ADDITIONALLY, THE NEW BRIDGE SHOULD BE AT

B5-2

LEAST THREE "WIDE" LANES WITH A PROTECTED BIKE AND PEDESTRIAN PATHWAY. THE TRAFFIC LANES SHOULD BE WIDE ENOUGH TO COMFORTABLY ACCOMODATE TRACTOR-TRAILER RIGS (18 WHEELER), LARGE BOX TRUCKS, LONG MOTOR HOMES, AND STRETCH "LIMOS" WITHOUT THE NEED TO CROSS INTO ADJOINING LANES WHILE MANEUVERING ONTO THE BRIDGE, OR ENTERING THE HIGHWAY FROM THE BRIDGE.

AFTER THE ADAMS STREET BRIDGE IS COMPLETED, I THINK THE EAST POPE STREET BRIDGE SHOULD BE CHANGED TO ONE WAY ONLY, EASTBOUND, WITH A PROTECTED BIKE AND PEDESTRIAN PATHWAY. TRACTOR-TRAILER RIGS AND BUSSES SHOULD BE DIRECTED TO THE ADAMS ST. BRIDGE. ENFORCEMENT COULD INCLUDE CAMERAS, ETC., ESPECIALLY DURING PEAK TRAFFIC PERIODS, WITH FOLLOW-UP BY POLICE.

LATER, STARR STREET SHOULD CONNECT NOT ONLY ADAMS AND POPE STREETS, BUT IT SHOULD CONTINUE NORTH TO DEER PARK AND SOUTH TO DOWDELL LANE

B5-3

SINCERELY—

Tim Klein

Proposed circulation element amendment to the general plan 10/26/80

Comment Letter B6

From: John Ponte
Sent: Sunday, December 30, 2018 3:54 PM
To: Noah Housh <NHoush@cityofsthelena.org>
Cc: Aaron Hecock <ahecock@cityofsthelena.org>
Subject: Comments GP EIR

B6-1

Good Afternoon, Noah.

I am writing to you from this address with comments on the GP EIR that are more editorial in nature than those that I expressed at the PC meeting. Most of these herein are more of a 'fix it' nature - wrong word, wrong name (in one case, wrong city), wrong place or poorly worded. A few are a bit larger than that but the most important ones were made from the dais in the hearing and with the endorsement (apparently) of my colleagues.

B6-2

These are lesser comments that I would have made if droning on for a couple of hours was either possible or desirable. However, in my opinion, such errors contribute to lowering the perceived veracity of any document and the GP EIR is a document one wishes to have very high perceived veracity. My colleagues have not seen or discussed these, they are my own.

The document needs a good editor. This is only a weak contribution to a start as I am not trained or talented in that area.

The comments were written in .odt but a .doc file - which may have made some automatic formatting changes - is also attached.

As always, questions or comments are invited -

John

B6-3

ES-1, third paragraph,third sentence. Consider adding federal environmental review as a possibility (albeit rare). Also consider not capitalizing “State” throughout the document, especially since federal is not capitalized anywhere in the document.

B6-4

B6-5

ES-1, Proposed Plan, first paragraph,last sentence. Consider changing “fully replace” since, as correctly noted further along in the document, the housing element will not be replaced.

B6-6

ES-4, Tables ES-1 and 2. Consider eliminating rounding to the nearest 100. Not only does this result in some intuitively confusing totals, but rounding to the nearest 100 with such small numbers leads to very large uncertainties on a percentage basis. In addition, in other locations in the document, exact

numbers are depicted. Even the State Department of Finance now uses exact numbers in their E-1 population estimates. B6-6

ES-5, Transportation Network Enhancement Alternative, second paragraph, third sentence. Please do not capitalize “downtown” as it is not a proper noun. Excess capitalization seemingly appears often in the document; please consider removing all such cases (“CALTRANS”, “Planning Area” or “Tribal Cultural” for examples). B6-7

ES-9, Transportation and Traffic, second paragraph. Please write out “Twenty-seven” (or any number if it begins a sentence). B6-8

ES-10, Identification of Environmentally Superior Alternative, first paragraph. Consider writing numbers consistently in the text. In this paragraph, some numbers are written (“six” and “seven”) while another one word number (“11”) is not. Generally either all numbers are written with numerals (except when beginning a sentence), no numbers are written with numerals or only numbers that can not be written with one or two words are shown as numerals. B6-9

1-2, Intended Uses of the EIR, last sentence. Please consider changing the name “Napa Valley Transit Authority” to the correct name. B6-10

2-14, Urban Limit Line,third sentence. Please consider changing the end of the sentence to read, for the sake of clarity, “as described in Table 2.3-2.” B6-11

2-21, Tables. Please see comment ES-4. B6-12

2-22, Table 2.3-5. Consider correcting the Study Areas column. B6-13

3.1-3, Open Space and Agriculture, second sentence. Is it 65 percent, 75 percent or 65 to 75 percent? Please clarify. B6-14

3.1-4, Light and Glare, last sentence. This reads as a flat conclusion but does not appear to be buttressed by data. Please consider either adding information or softening the sentence (for example, “...appear to be typical for an urbanized setting”). B6-15

3.1-10, CD5.E and 3.1-11, Impact 3.1-2 last sentence. It looks a bit odd calling for the city to consider having SR 29 designated a scenic highway (CD5.E) and at the same time writing that the new GP will not impact any scenic highway as the city has none. Consider deleting, “...lack of any designated state scenic highways with in the City and...”, or making it clear that even if SR 29 is designated as a scenic highway, the polices in the plan will ensure that there are no impacts to scenic resources. B6-16

3.1-12, second paragraph, second line from the end. Please consider replacing “main” with “all” as CD1.8 does not appear to limit itself to any particular roadway type. B6-17

3.2-2, Agricultural Context, second sentence. Consider replacing the value given for agricultural production in Napa county with a figure considerably larger than the $737,298 shown. B6-18

3.2-2, Farmland Characteristics. Consider rewording the second sentence, Agricultural uses as shown on Figure 3.2-1 are spread throughout the city, not simply adjacent to the ULL. B6-19

3.2-8, Napa County Measures J and P, second sentence. Consider replacing “Ma”with “Map”. B6-20

3.2-12, Methodology and Assumptions, second paragraph. Please consider replacing, “The Planning B6-21

Area for the Proposed Plan...” with the simpler, just as accurate and easier to read, “The planning area ...”. Consider a universal search and replace, as the wordy phrase is used multiple times. B6-21

3.3-3, Carbon Monoxide, fourth sentence. Please consider rewording – perhaps “not photochemically reactive” or “not an ozone precursor”. It is a reactive compound, burning easily and binding to hemoglobin much more readily than oxygen. B6-22

3.3-5, Table 3.3-1, Notes 4 and 5. For Note 4, please consider updating the expected designation date. For Note 5, please consider removing it from the Federal Standards Classification column for lead and adding it to the State Standards Classification column for both lead and vinyl chloride. B6-23

3.3-6, second paragraph, second sentence. Please consider rewording. The sentence appears to read that the air basin exceeded the state one-hour standard five times and the federal one-hour standard two times when Table 3.3-1 shows no federal one-hour standard. If the sentence is attempting to read that the the state one-hour standard was exceeded five times and the federal eight-hour standard was exceeded two times, please write that. B6-24

3.3-8, Federal Clean Air Act, first paragraph,second sentence. Consider changing “CAA” reference to the California Clean Air Act to CCAA. Further, consider moving the entire sentence on the CCAA to the following section covering that law. B6-25

3.3-14, Bay Area Air Quality Management District, second paragraph, first sentence. What is, “The air quality study area..”? If it is the planning area, please so state; if it is some other area, please describe how it is related to the planning area. B6-26

3.3-24, CR1.7. Consider altering the sentence to read “...with the owners ...” or perhaps “... with the new owners ...” - although not so new anymore. B6-27

3.3-30, Applicable Control Measures, first paragraph. Please capitalize “Buildings”(#4). B6-28

3.3-31, Table 3.3-6, TR8. Please consider rewording as St. Helena is not the only rural community in the Bay Area and opportunities for ridesharing services and incentives are well more than “somewhat” limited. Would suggest the deletion of “relatively” and “somewhat” and the addition of “most” between “to other”. B6-29

3.3-37, Table 3.3-7, Note 2. Please consider deleting “...such as the Proposed Plan,” as unnecessarily repetitive. B6-30
3.3-38, Table 3.3-8, Note 2. Please see above. Also consider “general plan” rather than”specific plan”.

3.3-42,AQ-1, fifth bullet. “Laying building pads ...”- is this intended to read “Pour”? In addition many structures in St. Helena have live, not poured floors. Is there a suggestion for those structures as well? B6-31

3.3-42,AQ-1, seventh bullet. Is the check by the certified mechanic (and certified by who for what?) supposed to take place each day, month, project? B6-32

3.3-42,AQ-1, eighth bullet. Consider adding “for example” just after the parenthetical statement begins.

3.3-42,AQ-1, what should be the tenth bullet. Consider placing a bullet before “Where warranted” and removing the underline. Also consider tabing in the next two paragraphs and beginning them with “Power” and “Ensure”, respectively.

3.3-47, second paragraph, first sentence. Consider “21-year”. B6-33

3.3-48, second paragraph, second sentence. Please consider ending the sentence with “approval” or perhaps “action by the city”. B6-34

3.3-48, Gasoline Stations. Wasn't Flyers near the corner of 29 and Inglewood in area 3? It is now an open and operating Mobil station. B6-35

3.3-50 Table 3.3-9. Consider including the address of Nella Oil and capitalizing “Main” in the address for St. Helena Petroleum. B6-36

3.4-1, Habitat Types, first sentence. Consider the wooded hillside and the interspersed housing on and near Howell Mountain Road on the east side of the city and alter the sentence accordingly. B6-37

3.4-4, Orchard-Vineyard, fifth sentence. It is probably an exaggeration to claim that “...under the vines are usually sprayed with a herbicide ...”, as there are many organic and semi-organic growers in the region. Consider “sometimes” or even “often”. B6-38

3.5-2, third and fifth paragraphs. Please consider removing all of the quotation marks. B6-39

3.5-4, third paragraph, first sentence. Calistoga will probably be surprised to find it is not in the Napa valley. Is this supposed to read “... extended from St. Helena to Calistoga ...”? B6-40

3.5, Figure 3.5-2. The figure includes 1380 Main Street. Wasn't that the old gas station that has been removed? B6-41

3.6-7, second paragraph,first sentence. Please consider writing out ozone. In addition “higher O3 days” means more days exceeding state and/or federal standards, higher concentrations or both? B6-42

3.6-8, Energy Star Program, second to the last sentence. Please consider deleting “though a Rater” as unneeded. If it is desirable to retain the phrase, consider “as determined by an approved rater”. B6-43

3.6-17,Executive Order S-1-07. Please consider writing out “LCFS” the first time it is used in the paragraph. B6-44

3.6-17, Plan Bay Area, first and third paragraphs. Consider writing out PDA in the first paragraph, rather than the third. B6-45

3.6-17, BAAQMD, first sentence. As is noted correctly elsewhere in the document, the BAAQMD covers most, but not all of the nine Bay Area counties. Please consider adding “most” to the sentence. B6-46

3.6-26, LU1.A. Consider rewording. State statute allows the division of single family homes into two units (one main unit and an ADU) by right. B6-47

3.6-31, PS1.I. Consider updating the reference to the BAAQMD's 2000 CAP to the 2017 CAP.

3.6.31, CC1.B. Consider updating by deleting the reference to a new transit center. NVTA has a new transit center just off Soscol Avenue in Napa.

3.6-33, CC3.A and CC3.B. Please consider shifting the deadline for these two new programs; while a 2020 target was fine in 2010, it is too short for a GP that will not be adopted until halfway through the

first quarter of 2019. B6-47

3.6-33 and -34, CC4.4 and CC4.J. The first calls for expanding the city's urban forestry program, while the second calls for the establishment of such a program. Shouldn't the policy call for the creation of the program as well as the implementing action if such a program does not exist? And if the program does exist, then the implementing action needs correction. Consider determining which is correct and then crafting the policy and implementing action accordingly.

3.6-36, Impact 3.6-1. Please consider including per year with the emissions target. Note that sometimes it is included in the chapter and sometimes it is not - leading to some possible confusion. B6-48

3.6-39, Transportation Improvements. The Wine Train is not - according to court determination - a transportation service; please do not reference it as such, imply that it is a transportation service or claim it is useable as a transportation service. There is no “Napa Valley Transit Authority”; please correctly reference the agency. Napa County does not provide transit services; thus partnering with the County of Napa will not be successful. NVTA operates all of the public transit based in the Napa communities. B6-49

3.6-44, Plan Bay Area. Please consider rewording. Some sections of the document credit MTC with the RTP/SCS, others credit both MTC and ABAG and this seemingly credits ABAG alone. Consider determining which is correct and remaining consistent. B6-50

3.7-17. Two sections on this page cover the Disaster Mitigation Act. Please consider combining the sections. B6-51

3.7-17, State Multi-Hazard Mitigation Plan, first sentence. Please consider adding “... which allows the state...” after “State of California”. B6-52

3.8-1, bullet points, second to the last sentence. The Pratt Street bridge may well be partially in the city and partially in the county – the county maintains the bridge. Please check and modify the sentence accordingly. B6-53

3.8-2, first paragraph,last sentence. Please consider deleting “... to a limited extent ...” as methane is a hazardous material and is used extensively in residential areas. B6-54

3.8-2, Hazardous Materials Transport, fourth sentence. Please consider deleting “...occasionally runs freight service ...” as it is non-existent in the St. Helena block and has been for years. B6-55

3.8-4,last paragraph, last full sentence. Consider rewording. The next five years would be out to 2023 or 24, not 2020. B6-56

3.8-5, Table 3.8-1. The Noble site at 1132Main Street is listed twice and it is not clear if this is due to an error or two different locations on the same property. The PG&E property is also listed twice, as is the property at 607 Highway 29, under SWRCB and DTSC locations. Are these double listings actually separate sites or the same sites as carried by different agencies? If they are the same sites, the total number of sites as depicted in the paragraph directly above the Table is not correct. The Table does not seem to identify the Mobile station near Inglewood and SR 29 as an SWRCB permitted site but does note it as a LUST site. Please clarify. B6-57

3.8-16, California Health and Safety Code, second sentence. Please consider changing the reference to B6-58

Napa County from Alameda County. B6-58

3.8-27, Impact 3.8-3, first paragraph,next to the last sentence. The St. Helena Catholic School has closed and it is not expected to reopen. B6-59

3.9, Figure 3.9-3. Please consider changing the percentage chance shown in the key for 500-year events to 0.2%. B6-60

3.10-3, Table 3.10-1. Please change “Row” to “ROW” after “Transportation/Road”. B6-61

Figure 3.10-1. Valley View Avenue appears to be incorrectly labeled as Crane Avenue. The incorrect label also appears on other maps (see, for example, Figure 3.11-1), but not all, in the document. B6-62

3.10-14, California Public Utilities Commission, last sentence. According to adjudicated determination, the city has significantly more than “some” authority to regulate particular activities of the excursion rail service – for selected actions, the decision is solely the city's. Please consider deleting “some”. B6-63

3.10-20, LU1.4. Please consider making “LU1.6” the beginning of a new bullet section. B6-64

3.10-21, LU1.E. Please consider making “LU2.1” the beginning of a new bullet section.

,

3.10-21, LU5.2. Please consider ending the sentence with one period.

3.11-7 & 8, Table 3.11-3. Please consider clarifying either though a note or an addition to the title that the nose levels were calculated based partly on traffic counts. It is also curious that Note 2 states that the truck volumes were set at two percent for all roadways. However, the truck volumes for Main Street are available from Caltrans and are significantly higher than two percent. Why was the more accurate Caltrans figures not utilized? Further, Note 3 states that the speeds were assigned based on road type while the posted speeds are readily available. B6-65

3.11-19, PS2.D. Is Ldn the same as DNL? If so, please consider being consistent in the use of terms. If not, please include in the definition of terms, Table 3.11-1. B6-66

3.11-20, PS2.H. Please consider deleting “vehicles and motorcycles” as it would likely be illegal to “regulate” them in such a way as to restrict access to residential (or nearly any) publicly owned street which may be adjacent to sensitive receptors, as defined. B6-67

3.1-23,Table 3.11-11. Please see comment for Table 3.11-3. B6-68

3.11-29, first paragraph. This paragraph claims that the proposed plan sets thresholds in CNEL while on page 3.11-19, where the relevant polices of the proposed plan are depicted, the term used, particularly in PS2.C, is LAdn. Are these terms identical? LAdn does not seem to appear in the Definition of Terms, Table 3.11-1. Please consider the consistent use of terms, particularly for the lay reader. B6-69

3.12-2, Table 3.12-1, Please consider deleting “Other:” as it only applies to the fire marshal. B6-70

3.12-6, Libraries, first paragraph. The data in the paragraph is putatively from the 2015-16 fiscal year, but the year reported in the citation is 2015. Please clarify. B6-71

3.12-7, Table 3.12-3, Community. There are eight bocce courts in Crane Park. B6-7 2

3.12-9,Figure 3.12-2. Please consider identifying Lewis Station. B6-73

3.12-11, first paragraph, second to the last sentence. Why is the city of St. Helena cited when the section references state code dealing with school districts? B6-74

3.12-12, Napa County General Plan Recreation and Open Space Element. Why is there no reference to the Napa County Regional Park and Open Space District and that agency's adopted parks master plan in any section? B6-75

3.12-16, Fire Service. The data in the paragraph for response times and calls is from 2017, but the citation is 2015. Please clarify B6-76

3.12-16, Police Service. Please consider using information from the recent SHAPE study on the adequacy of the existing station. B6-77

3.12-19, second paragraph, first sentence. Please reword. There are two state parks, not regional parks, in Napa county just outside St. Helena. Both are operated under contract to the state by the Park and Open Space District. B6-78

3.13-2, last paragraph. While it is true that the most of the jobs available in St. Helena do not pay sufficiently to afford a home in the community thus exacerbating the in in-commute as the paragraph correctly claims, it is also likely that the high housing costs also, but to a lesser degree, exacerbate the out-commute for those who seek and need a higher-paying job to live in the community than is generally offered locally. Thus the high housing costs contribute not only to a higher in-commute but a higher out-commute as well. B6-79

3.13-3, SR 29, first and third sentences. Please consider rewording. SR 29 in Napa county is not solely a two to four lane rural highway. It also has a freeway segment, an expressway segment and some other types of roadways. In addition, consider rewording the third sentence as the turn lane is not continuous between Dowdell and Madrona – it is missing or has a double-double yellow in two locations. B6-80

3.13-3, SR 29, second paragraph. Please consider providing evidence that X-X trips are presently diverting in significant numbers to local roadways in the city. Without such evidence, an old chestnut is reenforced that can lead to unhelpful projects and programs. It may become a problem in the future, but currently the traffic on those streets appears to be almost purely local. B6-81

The Silverado Trail is a special case, in that it works as nearly a couplet with SR 29 and given the very small length of the Trail that is within the city – the trips on the Trail for the City are nearly all X-X, X-I or I-X with no or nearly no I-I trips possible.

3.13-3, SR 29, last paragraph. Please reword. The channelization project actually goes back three decades to a time when maintenance projects were listed in the STIP and were debited to the county minimums. The project was split into two pieces and the first segment was completed in the 90's (Yountville to Mee Lane). When the STIP and SHOPP were split, the second half did not migrate to the SHOPP until the Napa communities traded the STIP funds to the Trancas/29 interchange to fill a shortfall and requested moving the Mee Lane to Charter Oak segment to the SHOPP. It may well have B6-82

been the oldest STIP/SHOPP programmed project in the state by the time it was actually constructed. B6-82

3.13-4,Figure 3.13-1. The figure includes and rates several private roads. Is that intentional? In addition, please consider the rating of Madrona west of Hudson. It has few houses but sizable vineyards face the street. The city may also have an agreement with one of the adjacent owners on the character of the street, which is intended to be rural, not residential. B6-83 B6-84

3.14-6, Madrona Street/Fulton Lane, last sentence. Please consider removing the quotes around dead end. B6-85

3.13-16, second paragraph, second sentence. Please consider another example that is a public and not private road. B6-86

3.13-17, Rail Service. The Wine Train is not a passenger service, please consider another term for its ridership. B6-87

3.17-20, Environmental Assessment Review and Comment, last sentence. Please consider replacing "Rohnert Park" with "St. Helena". B6-88

3.17-21, first paragraph,last sentence. Please consider deleting as it has noting to do with the STIP and Caltrans duties and powers were described in an earlier section. B6-89

3.17-22, Metropolitan Transportation Commission. Please consider rewording. MTC does not allocate funds under the control of transportation sales tax authorities, which is a very large portion of the funds expended on transportation projects in the Bay Area. The RTP is not an allocation document and in and of itself releases no funds. It does allow projects to proceed to programming and allocation in other documents and programs. B6-90

3.13-17, NVTA. Please consider rewording to be very clear which agency is discussed - and why the other is not. There are two NVTAs in the Napa communities. One is a transportation sales tax authority and the second is a joint powers agency that provides transportation planning, transportation programing, transit operations and the occasional transportation project for the Napa communities. They are independent entities with separate boards. It appears the section is concerned with the joint powers agency, not the transportation sales tax authority. In addition, the Napa communities do not have a CMA, having opted out of the requirement two decades ago. B6-91 B6-92

3.13-24, Significance Criteria, Criterion 5 & 6. Please consider moving the "or" on 6 to 5 and ending 6 with a period. B6-93

5-2, Population, first paragraph, third sentence. Please consider rewording. The stated historical growth rate of 0.16 percent per year is much smaller than the 0.60 percent rate projected. Although the 0.44 difference does not sound like much, it is an increase of 275 percent over the historical rate. That large of a change probably does not qualify as "slightly". What does ABAG predict for St. Helena, not Napa county? B6-94

5-3, Table 5.1-1. Please consider adding a vertical line between the figures for St. Helena and those for the planning area, centering St. Helena and Planning Area over their relative sections of the chart, using exact figures, not rounding to the nearest one hundred, deleting the superscript two for Housing Units and Population under St. Helena and under Planning Area (should these be ones?) and deleting the superscript three for Planning Area. B6-95

5.3, Public Facilities and Services, second to the last sentence. Please consider rewording as it implies B6-96

the city owns a solid waste facility. B6-96

5.5, Table 5.1-2. Please consider adding a vertical line between the figures for St. Helena and those for the planning area, using exact figures, not rounding to the nearest one hundred, deleting the superscript two for Jobs (which presently means it applies to all figures on the Jobs row) and explaining how one reasonably presents a ratio with two significant figures when the figures from which the ratio is defined are rounded to the nearest one hundred. B6-97

5.5, Cumulative Analysis, second sentence. Please add a comma after “air quality”. B6-98

5.7, Cumulative Effect on Cultural, Historic and Tribal Resources, last sentence. Please replace “I” with “is”. B6-99

5.9, Wastewater Treatment and Distribution, first sentence. Please consider deleting “other” as it implies that the St. Helena treatment facility is regional in nature. B6-100

Subject: FYI - bad reference in appendix to draft EIR

Noah,

B7-A-2

FYI, on pages A-4 and A-5 of the appendix to the draft EIR there are two references to Chalk Lane. The correct name is Chaix Lane.

Subject: comments to the 2040 General Plan and Draft Environmental Impact Report

Noah,

We hope your day is going well.

We have the following comments with regards to the draft EIR and General Plan.

B7-C-2

Guiding Principles and Objectives

First and foremost, the "guiding principles" of the 2040 General Plan beginning on page 1-14 and summarized in the draft EIR as "objectives," do not specifically speak to neighborhood livability. Protecting and improving the livability of our neighborhoods should be a top priority and be listed as an important guiding principle and objective of our 2040 General Plan.

Housing and housing impacts

Tables ES-1 and ES-2 of the draft EIR provide build out information. ES-1 provides that 300 additional housing units with an increased population of 700 at 2040 build out. ES-2 suggests 900 additional jobs at build out. This draft GP doesn't adequately balance anticipated future housing and job growth with infrastructure changes. Additional housing units and jobs will only exasperate the (current) sub-par housing and traffic situation. It is understood that the housing element is currently in the process of update. The GP needs to address the housing issue, and its impacts, head on and not leave it for later. Draft EIR areas of controversy note that traffic impacts from future development will exasperate the existing traffic issues. As such, circulation, local traffic, and neighborhood traffic impacts need strengthened directives within the appropriate GP elements. Planned improvements in the GP need to ensure successful results of better circulation: increased biking, walking, safe routes to school, and additional outside opportunities.

Circulation

The draft GP Circulation Section provides for "potential future road extensions." The road extensions (better described as connections as they are connecting the town together) are described as "Study Alternatives." These road connections (including a fully implemented Oak Street connection) have been reviewed and discussed since 1993. In-town traffic and circulation was bad then and has become nearly unbearable. The connections do not need to be "studied" any longer. The GP language should be stronger and note an immediate need to implement our connectivity. Additionally, the noted "special studies" should only be limited to the bike and walking infrastructure associated with the road

B7-C-2

extensions. Any infrastructure improvements should be subject to standard review with no special limitation or additional requirements.

Alternatives to the Proposed Plan in the draft EIR includes transportation network enhancement alternatives, including a full Oak street connection from Grayson to Mitchell. This alternative is absolutely correct, as per the 1993 General Plan. The circulation element needs to be updated and include this full street connection. St Helena needs to improve in-town circulation for it citizens coming in to and out of town. The Oak Street connection from Grayson to Mitchell is not about relieving traffic from SR-29, it is about in-town circulation and, most importantly, reducing local Vehicle Miles Traveled (VMT). If we have any hope of improving our local air quality and addressing our climate impacts we must reduce VMTs within our city limits. Improved circulation and adopting all the street connections included in the previous General Plan, including the Oak Street extension, will help us in these efforts.

Traffic safety and noise in residential neighborhoods

Various elements of the Plan should specifically provide how the City plans to control and mitigate the impacts of traffic noise and safety on neighborhoods. Residents have the right to the peaceful enjoyment of their properties. Plan elements need to ensure that neighborhoods and homes are not degraded by unsafe traffic, noise, air quality, development, and inappropriate zoning or uses contiguous to the streets we live on and where our kids play or go to school. Traffic issues within certain neighborhoods were acknowledged in the 1993 plan and subsequent analysis in 2006 and 2009. The GP needs to be more specific in directing how our in-town and through-town traffic issues will be mitigated to ensure safety and health. Getting folks out of their cars is a high priority of the Draft GP. We cannot accomplish this priority with high traffic streets and speeding cars. The GP needs to adopt stronger more specific guidance on neighborhood traffic issues.

The draft GP Circulation Section is practically silent as to one of the most pressing problems in St Helena now, and likely to grow in the future, and that is, traffic volumes and speeds in residential areas. The Circulation Section states "continue efforts to calm traffic, and minimize traffic volumes and speeds in residential areas". The GP does not, but should, address what types of measures could be utilized for traffic calming, what the policies are, and how those policies will be implemented to improve neighborhoods and pedestrian and bicyclist health and safety. The Nov, 2009 Fehr and Peers Transportation Report (included in the Appendices) identified excessive speeding and suggested "traffic calming measures which involve changes in street alignment, installation of barriers, and other physical measures to reduce traffic speeds and/or cut through volumes, in the interest of street safety, livability and other public purposes". The GP should identify specific types of traffic calming strategies for the most impacted cut-though residential neighborhoods; since this issue is predicted to only get worse in the future, metrics which would measure successful implementation could be useful.

Air Quality Issues/Measurements

The draft EIR addresses Air Quality and Energy, Greenhouse Gases, and Climate Change. As the draft EIR notes, both our current status and GP build out violate BAAQMD standards. This is obviously not acceptable. The 2040 GP as drafted is a health risk to current and future residents. The GP needs to address and mitigate these health risks before the Plan is adopted. Potential solutions that should be noted in the GP include limiting pesticide and herbicide use, reducing cultivation to significantly reduce airborne particulate matter, requiring alternative energy for all new construction or significant building improvements and remodeling, requiring all residences, businesses, government facilities to adopt 100%

MCE clean green, reducing cut through traffic and adding new EV charging stations. In the meantime, an air quality monitoring station should be initiated at the SH Primary School. This school is for 4-7 year olds and is adjacent to one of the (now) busiest residential streets in St Helena. This street has become the cut through street for residents and workforce alike, and the children at the school are outside on their playground adjacent to S Crane several times a day. The City needs to mitigate the impacts to these small children.

B7-C-2

SHUSD Mitigation Measures Identified in Negative Declaration

The GP should include a plan to require the SHUSD to implement the required traffic mitigation measures associated with the Primary School construction and the Negative Declaration Report the SHUSD issued at that time. The City and SHUSD have allowed the required mitigation measure for the additional school traffic to go unmet. Implementation of the required mitigation measure will help the City achieve its 2040 GP goals of in the areas of Air Quality, Climate Change, Traffic, Safety, Health, and Livability.

Please confirm receipt of this email.

B7-C-3

Thank you in advance for your efforts on this very important and long over due project.

Comment Letter B8

B8-1

Please consider these written public comments concerning both the General Plan Update and the corresponding Draft Environmental Impact Report. My comments are limited to the statutory requirement that a General Plan Update (GPU) include a map, diagram or other method of showing the inundation areas in the event of the failure of the St Helena levee and/or flood wall.

I have made comments on this subject numerous times during previous comment periods related to General Plan Updates and their corresponding Draft Environmental Impact Reports (DEIRs). The first time this issue was raised was during the public comment period ending in July 2016. The most recent oral comments made prior to the release of the 2040 GPU were at the Joint Meeting of the Planning Commission and the City Council to review the General Plan on August 14, 2018.

B8-2

When the 2040 GPU was released on October 23, 2018, I was out of the country. Upon my return to St Helena I notified Noah Housh by email on 11-20-18 that the updated General Plan Safety Element still did not include the areas of inundation in the event of a levee and/or flood wall failure. The statutory requirement for this appears at Government Code §65302(g)(2)(A)(viii). This requirement is also confirmed in the recently updated version of the Governor's Office of Planning and Research's General Plan Guidelines at page 143.

At the Planning Commission meeting on December 4, 2018, which was agendized for the purpose of taking public comment on the DEIR, I again made oral public comments on the lack of the required levee and flood wall failure areas of inundation. There was some discussion as to whether or not the levee protection map would suffice to satisfy this requirement. I pointed out that the map of the levee protection zones are separately required under Government Code §65302(g)(2)(A)(vii). One of the reasons there is a separate requirement for areas of inundation in the event of a levee or flood wall failure is because the force of the water and the damage it can cause are significantly greater in the even of a levee or flood wall failure than what would happen during a flooding event. The inundation map is not just the converse of the levee protection areas and wouldn't take into account what would happen in the event of a flood wall failure, which is also a requirement of Government Code §65302(g)(2)(A)(viii).

B8-3

The legislature would not have specifically required areas of inundation in the event of a levee and/or flood wall failure if there wasn't a need to have that information. But even if it was not such a requirement, the City should be interested in including that information for both safety and financial reasons.

Not only does the City need the information, but every resident impacted by a potential levee or flood wall failure deserves to know what the potential danger is for them. Especially important is the fact that many of those who would be imperiled by a levee or a flood wall failure are some of the most vulnerable in our community. Vineyard Valley, Hunt's Grove, Meadow Creek Circle and a lot of other areas of the eastern part of the City would be significantly impacted and they all deserve to know what the possibilities are. B8-3

During some of the rain storms in recent years, one of the City's main across-city access points between Highway 29 and the Silverado Trail was destroyed. The Pratt Avenue bridge has remained closed since that time. If there was a flood wall and/or levee failure it likely would cause severe damage to another important access to the Silverado Trail. The Pope Street Bridge is immediately adjacent to the flood wall and is located very close to the levee. A failure of either the levee or the flood wall could jeopardize the viability of and cause severe damage to the Pope Street Bridge, which would be a significant safety problem for the City and all of its residents and visitors.

To further complicate this situation our levee and flood wall are both located in an area of very high and high liquefaction. That information already appears is in the 2040 GPU. Liquefaction is a major and well-known cause of levee failures.

Not only should the General Plan Update include the areas of inundation resulting from a levee and/or flood wall failure, but the Draft Environmental Report should include the potential safety and environmental damage, which could be created when considering the intersection of the levee and flood wall failure inundation map, the liquefaction map (already in the 2040 GPU) and the earthquake map (also included in the 2040 GPU.) For example, this issue should be discussed in the Circulation Element when considering the potential impact of the loss or restriction of the use of the Pope Street Bridge if there is a levee or flood wall failure. There are other areas of the Draft Environmental Impact Report and General Plan Update where these issues should also be discussed. B8-4

Since the land immediately behind the levee is designated medium density residential, the areas of inundation in the Draft Environmental Impact Report must also consider the safety and environmental impacts of any housing being built and asphalt laid behind the levee. It is logical to conclude there would be significantly more damage to the environment if the flood plain behind the levee is built up with housing and asphalt, than the damage that B8-5

what would happen during a levee failure on the current unobstructed flood plain behind the levee. Since this would not be a hypothetical situation since there is a current project planned for that approximate 17 acre site, it must be included in the proposed General Plan Update and Draft Environmental Impact Report. B8-5

Thank you for your consideration. B8-6

To: Cindy Tzafopoulos <ctzafopoulos@cityofsthelena.org>
Subject: The supposed deadline today for public comments to the General Plan update Environemntal Report and no notice to the public

To: St. Helena City Council via City Clerk January 3, 2019
RE: General Plan 2040 - public comment deadline and notification to the public

Dear Mayor Ellsworth and City Council,
A number of us local residents have been hearing spotty information about a deadline today for us to provide public comments to the Environmental Report for the 2040 General Plan. We are notifying you that many people we know in town cannot find the deadline posted anywhere on the city website. And, we cannot even find anything about submitting comments (examples: how to do it, who to send it to, is there a format to follow, when it's due…). So, is this true?
Some of us may not be computer experts, but quite a few of us searched the city website and see NO notice asking for public comments or a deadline. HOW CAN THE PUBLIC KNOW WE CAN GIVE COMMENTS AND HAVE A DEADLINE WHEN THE CITY AND GP WEBSITE DOES NOT EVEN POST IT? The General Plan will be around for a very long time and will define our city and our childrens city and our grandcildrens city for years and years. You can look on the website for yourselves. We saw nothing. (See below where we printed the image of the Main city website AND the GP website page as it is TODAY). Then, since you are a NEW COUNCIL please start off on the right foot and work hard to make sure you are being transparent and really wanting public input by at least putting it somewhere noticeable on the website.
PLEASE PUT THIS LETTER INTO THE DRAFT EIR AS A COMMENT BECAUSE WE HAVE NOT HAD THE CHANCE TO SEND IN ANYTHING BECAUSE WE DIDN'T KNOW ABOUT IT. We want to make sure it goes on the record that we feel we were not notified.

Thank you very much Council.
Jim and Pat Reynolds, and friends, and neighbors, in St. Helena

Comment Letter B10

B10-1

PLANNING COMMISSION MEETING EIR COMMENTS SUMMARY

On December 4, 2018, the St. Helena Planning Commission held a regular Planning Commission meeting to receive comments on the Draft EIR for the General Plan Update. The meeting took place at 6:00 pm at 465 Main Street in St. Helena. The agenda, minutes, and video recording for the meeting can be viewed on the City's website at https://sthelena.civicweb.net/Portal/MeetingInformation.aspx?Id=368. Comments received at the meeting are summarized below.

Public Comments

Vicki Bradshaw, Resident

California Government Code Section 65302(g)(1)(A)(VIII) requires cities with a housing element update after 2009 (St. Helena's Housing Element was updated in 2015) with floodwalls and/or levees to show "areas subject to inundation in the event of the failure of the project or non-project levee or floodwall" in the safety element of the general plan, and the Office of Planning and Research recently issued updated general plan guidelines reconfirming the statutory requirement for inclusion of a levee/floodwall failure map.

The Proposed Plan does not currently include a levee/floodwall inundation map, but the map is important to have for safety and financial reasons. Vineyard Valley, Hunt's Grove, Meadowcreek Circle, and other areas in East St. Helena would be directly affected by a levee or floodwall failure and residents have a right to know what potential safety problems they may have. The levee/floodwall is located in areas mapped as having high and very high liquefaction hazard, and liquefaction is a well-known cause of levee and floodwall failure. In the July 25, 2016 public comments to the earlier Draft EIR for the General Plan Update at that time, there was a USGS satellite map of Napa and St. Helena that showed significant ground moving in the area of the levee at the time of the 2014 Napa earthquake, suggesting that had there been rain, there could have been liquefaction in that area with the potential to damage the levee/floodwall.

B10-2

A levee/floodwall failure inundation map is important for financial reasons, as many residents gave up flood insurance when the levee was built, and they have the right to know the potential financial damage they might experience in the event of a levee failure. St. Helena took $12 million in loans and grants from the State to build the Flood Control Project. As a result, the California Legislature passed and the Governor signed AB 1898, codified in California Water Code Section 12748.3, which states that,

> "…The State may provide funds in accordance with section 12585.7 to the City of St. Helena or to local agencies in the County of Napa for the project for flood control on the Napa River in the County of Napa. (c) A county or local agency may receive the funds only if it enters into an agreement with the Department [of Water Resources] pursuant to which the city or the local agency agrees to indemnify and hold and save harmless the State, its officers, agents, and employees, for any and all liability for damages that may result from the project. (d) For the purposes of this section, liability for damages includes, but is not limited to liability for damages relating to the construction or operation of the project or the failure of the project to operate as intended."

The City has indemnified the State in the event of a levee or floodwall failure so the financial responsibility would be entirely the City's, and residents have a right to know the potential damages there could be in the event of a levee/floodwall failure and the resulting potential financial liability of the City. B10-3

Inclusion of the required inundation map in the Proposed Plan should also involve a change to the EIR to discuss safety problems and potential environmental damage considering the intersection of the levee/floodwall failure inundation map, the liquefaction map, and the earthquake map. The EIR should also include comments as to the safety and environmental impacts in the event of a levee failure if housing and asphalt is built behind the levee, as the area would be designated Medium Density Residential, and the currently unobstructed floodplain would be negatively impacted. When the map is included, it should be considered a substantive change and trigger a new public comment period as it would be unfair to insert a map after the close of the comment period and not allow the public to comment on the source and adequacy of the map and EIR analysis.

The Government Code section also requires that cities show levee protection areas, which is different from areas subject to inundation. There is also a requirement that if a dam is present, there should be a dam failure inundation map, which has been included in this EIR. If there are levees with areas subject to inundation, a separate chart or description is required because if a levee fails, the water can be much more forceful and can create more damage than just normal flooding. B10-4

Planning Commission Comments B10-5

John Ponte, Planning Commissioner

- Regarding Mitigation Measure MM-AQ-2, is there a State law or Air District requirement that the submittal be to the Bay Area Air Quality Management District (BAAQMD)? He was concerned that everyone building a new home would have to make the submittal, and if so, he would prefer that the submittal be made locally to the City rather than involving BAAQMD and creating additional requirements and expenses for an applicant.
- Regarding Mitigation Measure MM-AQ-3, he sought to confirm that the number of these point sources would be very low. B10-6
- Regarding Mitigation Measure MM-AQ-6, is this mitigation measure statutory? Under this measure, every building project in the city would have to do a health risk assessment because everyone is within 1,000 of a residence, school, or other sensitive receptors. This could cost lots of money if all projects have to go through this. B10-7
- Regarding MM-GHG-1, why are we writing a Climate Action Plan that might not reach the target that the State has set, which it has not yet set? How would this mitigate the impact, and how would you assess the success of the mitigation since the State has not set targets, goals, or a way of reaching those targets and goals? Ninety percent of control measures would be at the State or regional level anyway, and the City would have a hard time meeting the targets based on what's under its control. B10-8
- Regarding Impact 3.13-2, the Napa Valley Transit Authority (NVTA) is not a congestion management agency (CMA). The County opted out of having a CMA and has no B10-9

congestion management plan (CMP). Since there is no CMP, this impact should be written similar to the airport section. B10-9

- Regarding transportation mitigation measures on page 3.13-44, the mitigation measure call for two new signals. As part of the analysis, the team looked into what happens to the string of signals as a whole with the two added signals. The only problem is that there is at least one intersection where the delay is so high it is reported as >120 seconds, which means that that is the edge of analysis for the software. Beyond 120 seconds could mean 121 seconds or 1,001 seconds. Does this analysis account for delays above 120 seconds? If it is in reality much longer, the mitigation measure can cause a cascading set of failures. For example, at Grayson/Main, the analysis finds that even though the individual intersection looks like it will pass, the delay at Pope/Main is so long that it causes problems at Grayson/Main. If the delay at Pope/Main exceeds the limits of calculations and could cause a cascade of failures. Also, at Main/Sulphur and Main/Pratt, would the mitigation measure make things worse? B10-10
- Regarding MM-TR-3, this reads as though at least one set of extensions must be implemented. In approving the environmental document, are these extensions also being approved? B10-11
- Regarding MM-TR-5, the signalization of Silverado/Pope may not be feasible without replacing the operationally deficient bridge, as the bridge approach is narrow and inadequate. B10-12
- Regarding Impact 3.13-5, there seems to be a disconnect between the conclusion for Impact 3.13-1, which finds a significant and unavoidable impact for level of service, and this conclusion, which is less than significant for emergency access. How are the same set of operationally deficient roads ok for emergency access? If there is a need for a satellite fire station under current conditions, then in 2040, with no through streets on either the west or east side of 29 and worse traffic, how would emergency access for fire, police, and other emergency services not be affected? The analysis indicates congestion and LOS F on 29 and parts of town cannot be reached without 29, so those sections of town could have a problem. This impact may be significant and unavoidable, and mitigation should be the same as MM-TR-3. B10-13

David Knudsen, Planning Commissioner

- Figure 3.13-1: Roadway Classification has an error in the depiction of Vallejo near Sulphur Spring. It should match Figure 3.13-2. B10-14

Lester Hardy, Planning Commissioner

- Regarding Impact 3.13-5, how can there be adequate emergency access if emergency vehicles have to go to Deer Park to access parts of the city? B10-15

Bobbi Monette

- How does the analysis account for significant impacts that could be caused by implementation of the mitigation measures? B10-16

3 Responses to Comments

This chapter includes responses to comments on environmental issues, in the same order as presented in Chapter 2: Comments on the Draft EIR. The chapter also includes responses to comments received at the Planning Commission meeting on the Draft EIR, which was held on December 4, 2018. Comments received at the meeting pertaining to the Draft EIR are summarized following the public comment letters. The responses are marked with the same number-letter designator as the comment to which they respond.

Responses to written comments received during the public review period and oral comments made at the December 4, 2018 Planning Commission meeting are summarized in the matrix below. The reference number and text of the comments are presented alongside the response for ease of reference. Where the same comment has been made more than once, a response may direct the reader to another numbered comment and response.

Responses focus on comments that raise important environmental issues or pertain to the adequacy of analysis in the Draft EIR or to other aspects pertinent to the potential effects of the Proposed Project on the environment pursuant to CEQA. Comments that address policy issues, opinions or other topics beyond the purview of the Draft EIR or CEQA are noted as such for the public record. Where comments are on the merits of the Proposed Plan rather than on the Draft EIR, these are also noted in the responses. Where appropriate, the information and/or revisions suggested in the comment letters have been incorporated into the Final EIR. Where such revisions are warranted in response to comments on the Draft EIR, deletions are shown in ~~strikethrough~~ and additions are shown <u>underlined</u> in the matrix of comments and responses. Map revisions required in response to comments are noted in the matrix and the revised maps are included at the end of this chapter. Appendix A includes public notices required by CEQA Guidelines Sections 15802 and 15085 provided by the City of St. Helena in support of the response to comment A2-B-1.

Comment ID	Comment	Response
A1-1	Mr. Noah Housh, Director City of St. Helena Planning and Community Department 1480 Main Street St. Helena, CA 94574 Dear Mr. Housh: DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE ST. HELENA GENERAL PLAN UPDATE 2040, SCH# 2010042001 The Department of Conservation's (Department) Division of Land Resource Protection (Division) has reviewed the Draft Environmental Impact Report for the St. Helena General Plan Update (Project). The Division monitors farmland conversion on a statewide basis and administers the California Land Conservation (Williamson) Act and other agricultural land conservation programs. We offer the following comments and recommendations with respect to the proposed project's potential impacts on agricultural land and resources. Project Description The proposed project consists of an update of the City's General Plan. The General Plan is a longterm policy document that establishes direction to guide future land use decisions, a framework to ensure the character and quality of development desired by the community, and the processes by which development and land use changes will take place. The General Plan is used _by City staff to review development proposals to ensure that subsequent projects align with the community's vision. The Planning Commission and City Council use the General Plan to guide decision-making that would impact the city's physical environment.	The comment summarizes the Department of Conservations Division of Land Resource Protection's understanding of the project and the agency's responsibility, and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
A1-2	Department Comments Although direct conversion of agricultural land is often an unavoidable impact under CEQA analysis, mitigation measures must be considered. In some cases, the argument is made that mitigation cannot reduce impacts to below the level of significance because agricultural land will still be converted by the project, and therefore, mitigation is not required. However, reduction to a level below significance is not a criterion for mitigation under CEQA. Rather, the criterion is feasible mitigation that lessens a project's impacts.	The comment acknowledges the finding of a significant and unavoidable impact for Impact 3.2-1, related to the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (important farmland), and recommends the use of agricultural conservation easements and/or in-lieu fees for mitigation banking as potentially feasible mitigation measures that could reduce the impact. The Draft EIR discusses impacts related to the loss of Farmland under the Proposed Plan on pages 3.2-14 through 3.2-18, citing numerous Proposed Plan policies and implementing actions that mitigate for the loss of Farmland, including policies LU1.3,

Comment ID	Comment	Response
A1-2	All mitigation measures that are potentially feasible should be considered. A measure brought to the attention of the Lead Agency should not be left out unless it is infeasible based on its elements. The Department suggests that the City consider the adoption of an agricultural land mitigation program that will effectively mitigate the conversion of agricultural land. Agricultural conservation easements are an available mitigation tool that the City should consider. The Department highlights easements as a mitigation tool because of their acceptance and use by lead agencies as an appropriate mitigation measure under CEQA and· because they follow an established rationale similar to that of wildlife habitat mitigation. Programs that establish agricultural conservation easements and in-lieu fees for mitigation banking are most effective at conserving comparable quality agricultural land when the easement requirements or fees are determined concurrent with project approval. Should significant time elapse between initial approval and the applicant's receipt of a building or grading permit, conflict may arise over the agricultural quality or value of the land being converted. Mitigation via agricultural conservation easements can be implemented by at least two alternative approaches: the outright purchase of easements or the donation of mitigation fees to a local, regional, or statewide organization or agency whose purpose includes the acquisition and stewardship of agricultural conservation easements. The conversion of agricultural land should be deemed an impact of at least regional significance. Hence, the search for replacement lands should not be limited strictly to lands within the project's surrounding area. A source that has proven helpful for regional and statewide agricultural mitigation banks is the California Council of Land Trusts. They provide helpful insight into farmland mitigation policies and implementation strategies, including a guidebook with model policies and a model local ordinance. The guidebook can be found at: http://www.calandtrusts.org/resources/conserving-californias-harvest/ Another source is the Division's California Farmland Conservancy Program (CFCP), which has participated in bringing about conservation easements	LU5.1, CD4.3, OS2.1, and PR3.2 as well as implmenting actions LU5.B and PS2.H. In spite of these mitigating policies and actions, the Draft EIR finds a significant and unavoidable impact with respect to the loss of Farmland. However, given that all feasible mitigation must be considered to address significant impacts under CEQA, the following additional implementing actionwill be added to the Proposed Plan: LU5.J Establish a Farmland Mitigation Program for future development that requires the permanent protection of farmland at a 1:1 ratio of the amount of farmland converted. The program should include provisions for the acquisition of agricultural conservation easements and payment of in-lieu fees as potential methods of farmland mitigation, where eligible agricultural mitigation lands must be located within the State of California and be of comparable or better soil quality than the land being converted, and in-lieu fees are to be used for the acquisition of a conservation easement, including costs associated with the transaction and long-term maintenance. Nevertheless, even with the addition of this implementing action and implementation of other Proposed Plan policies that would reduce the impact as cited in Section 3.2 of the Draft EIR, the impact would remain significant and unavoidable as agricultural land is a finite and irreplaceable resource. No other feasible mitigation measures are available at this time.

Comment ID	Comment	Response
	throughout the State of California involving many California land trusts. Any other feasible mitigation measures should also be considered.	
A1-3	Conclusion Thank you for giving us the opportunity to comment on the Draft Environmental Impact Report for the St. Helena General Plan Update. Please provide this Department with notices of any future hearing dates as well as any staff reports pertaining to this project. If you have any questions regarding our comments, please contact Farl Grundy, Environmental Planner at (916) 324-7347 or via email at Farl.Grundy@conservation.ca.gov. Sincerely, Monique Wilber Conservation Program Support Supervisor	The comment is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
A2-A-1	From: Freeman, Brendon (mailto:bfreeman@napa.lafco.ca.gov] Sent: Thursday, December 13, 2018 2:23 PM To: Noah Housh Cc: Mark Prestwich Subject: St Helena Gen Plan DEIR Good afternoon Noah, Just want to give you a heads up that LAFCO will submit a comment letter on the City's DEIR by the 1/2/19 deadline. I've authorized Ascent Environmental to prepare the letter and they will call you sometime next week to discuss our respective interests.	The comment is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
A2-A-2	LAFCO' s core interest is ensuring we can rely on the City's EIR to satisfy our CEQA requirements for any potential sphere expansions involving the three study areas. The letter will also mention that the Cortese-Knox-Hertzberg Act includes a unique definition of "prime agricultural land" (Gov Code Section 56064) that differs from FMMP's "prime farmland", so we will request the DEIR at minimum identify prime ag lands within the study areas.	This comment is noted. Please see response to comment A2-B-6 below.
A2-A-3	Finally, we will also request LAFCO be identified as a responsible agency where appropriate, assuming sphere expansions will indeed be pursued.	This comment is noted. Please see response to comments A2-B-1 and A2-B-7 below.

Comment ID	Comment	Response
A2-A-4	Please note I'll be out of the office the next two weeks for vacation, but I'll be checking emails. Feel free to email me with any questions, comments, concerns, or otherwise and I'll do my best to reply ASAP. You can also flesh out any issues with Ascent, as I'm heavily deferring to their professional expertise. Best wishes for a happy holiday season, Brendon Freeman, Executive Officer Local Agency Formation Commission of Napa County 1030 Seminary Street, Suite B Napa, California 94559 Office: (707) 259-8645 Mobile: (707) 363-1783 www.napa.lafco.ca.gov	The comment is the closing of the letter and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
A2-B-1	SUBJECT: Comments on the City of St. Helena General Plan Update and Draft Environmental Impact Report. Mr. Housh: On October 23, 2018, the City of St. Helena released the St. Helena General Plan Update 2040 and accompanying Draft Environmental Impact Report (EIR) for public review and comment. Ascent Environmental reviewed both documents for overall adequacy of analysis and sufficiency of evidence, as well as adherence to CEQA requirements for preparation of an EIR. The following comments are provided for consideration. Napa County Local Agency Formation Commission (Napa LAFCO or Commission) appreciates the opportunity to comment on the St. Helena General Plan Update 2040 (project) and accompanying Draft Environmental Impact Report (EIR). Napa LAFCO will use both final documents in fulfilling its regulatory and planning responsibilities under the authority of the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000. These duties include, but are not limited to, regulating governmental boundary changes through annexations or detachments, approving or disapproving city incorporations, and forming, consolidating, or dissolving special districts. Under the California Environmental Quality Act (CEQA), LAFCO is a Responsible Agency for this project and it is in this role that Napa LAFCO is commenting on this EIR.	The City of St Helena has been working to update the St. Helena General Plan since 2007. Through this time period, the City has published three draft EIRs analyzing the potential environmental impacts of the General Plan Update. Most recently, the City issued an RFP for CEQA consulting services to complete an EIR on the General Plan update on October 3, 2017; the City awarded a contract to consulting firm Dyett and Bhatia on January 9, 2018 at a publically noticed meeting for these services; on February 20, and March 27, 2018, the City held a discussion of the intended scope of this EIR, including discussion of the "study areas"; on March 29, 2018 the Public Notice regarding the City's intended Notice of Preparation (NOP) of the 2040 General Plan EIR was published in both the St. Helena Star and the Napa Valley Register and on April 2, 2018, the City issued a NOP identifying the intent to draft an EIR and requesting input and comments on the scope of that analysis and on April 17, 2018, the City held a publically noticed meeting requesting input and comments on the scope of the EIR analysis; and on December 4, 2018, the City held a public meeting to take verbal comments on the EIR. Copies of notices and advertisements are included in Appendix A of this Final EIR in evidence that the City complied with CEQA Guideline 15087 noticing requirements. It is the understanding of staff that LAFCO has not indicated interest or provided comment on this process at any point during the 12-year update process, until drafting the Dec. 2018, comment letter.

Comment ID	Comment	Response
A2-B-1	Comments on Noticing Procedures The Notice of Preparation (NOP) for the St. Helena General Plan Update 2040 EIR was released for public review on April 2, 2018, and the Notice of Availability (NOA) was released on October 23, 2018. Napa LAFCO does not have a record of receiving the NOP or NOA for the project, as a Responsible Agency we request to be notified on all future proceedings related to this project and other projects where Napa LAFCO may have discretionary authority. The 71-day public review period for the Draft EIR began on October 23, 2018 and ends on January 2, 2019. Although this extends beyond the mandated 45-day public review period, the 71-day public review period includes State holidays observed by members of the public and public agencies, including Napa LAFCO. This does not allow ample time to adequately review the 620-page Draft EIR and appendices. The public review period should be extended past the January 2, 2019 deadline to allow enough time to review the content of the Draft EIR and foster meaningful public discourse.	The Draft EIR's stated 71-day public review period was determined based on the CEQA Guidelines requirement that the public review period be no shorter than 45 days. According to the State of California Department of Human Resources, five state holidays occurred within the 71-day public comment period: Veteran's Day. Thanksgivign Day, the day after Thanksgiving, Christmas Day, and New Year's Day. While observance of these state holidays would have impacted available review time, the stated public review period included 26 additional days beyond the 45 required by the CEQA Guidelines, thus providing more than the standard period of time for review.
A2-B-2	Comments on Chapter 2, Project Description Planning Area The Planning Area for the St. Helena General Plan Update and Draft EIR encompasses approximately 3,594 acres including land within the City of St. Helena, the City's Sphere of Influence (SOI), and three adjacent unincorporated study areas outside of the City's SOI. Collectively, the three unincorporated study areas encompass approximately 450 acres. The location, size, and land use designations for each study area are described below: * Study Area 1: The 165-acre area is located along the Napa River and includes residential development, the Meadowood Napa Valley resort, and St. Helena-owned utility infrastructure, including water tanks. Consistent with the Napa County General Plan, the land within Study Area 1 is designated Agriculture, Watershed, and Open Space. * Study Area 2: The 100-acre area is located south of Chaix Lane near the southeastern boundary of the City and includes spray fields currently used to dispose of treated effluent from the City of St. Helena's Wastewater Treatment Plant. Consistent with the Napa County General Plan, the northern portion of Study Area 2 is designated Agriculture, Watershed, and Open Space. The	The comment summarizes LAFCO's understanding of the project's Planning Area. The acreage included within the legal jurisdictional boundary for the City of St. Helena limits and City's SOI was obtained utilizing GIS estimates and is not intended to supercede Napa LAFCO's acreage.

Comment ID	Comment	Response
	southern portion of Study Area 2 is designated Agricultural Resource. * Study Area 3: The 185-acre area is located south of Chaix Lane near the southwestern boundary of the City and includes parcels with existing commercial and residential development along State Route 29. Consistent with the Napa County General Plan, the land within Study Area 3 is designated Agricultural Resource. Napa LAFCO established St. Helena's SOI in 1974 and the last jurisdictional change occurred in 1997. Currently, the City's SOI and City limits are coterminous with the exception of Lower Bell Reservoir, which is within the City's jurisdictional boundary and	
A2-B-2	outside the City's SOI. Napa LAFCO data identifies the City's jurisdictional boundary as 3,046 acres in size. The St. Helena General Plan Update identifies on page 1-10 that the jurisdictional boundary comprises 3,024 acres. Please verify the acreage included within the legal jurisdictional boundary for the City limits and City's SOI. The three study areas included within the City's Planning Area are under the jurisdiction of Napa County and have not been approved for inclusion in the City's SOI. The inclusion of the study areas expands the City's Planning Area beyond that proposed in the 1993 General Plan and extends beyond the City's jurisdictional authority. Approval of any SOI amendment is subject to the Napa LAFCO's discretionary review and approval authority and will be reviewed in accordance with the policies and regulations of the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000 and Napa LAFCO's General Policy Determinations.	
A2-B-3	The St. Helena General Plan Update Land Use Diagram designates the land within the three study areas as either Agricultural Resource or Agriculture, Watershed, and Open Space, which is consistent with the Napa County General Plan. However, inclusion of these areas in the Planning Area conflicts with the following Napa LAFCO policies related to SOIs: * General Policy Determinations Section III (C)(4) Avoidance of Inclusion of Agricultural and Open-Space Lands: Land specifically designated as agricultural or open-space lands shall not be approved for inclusion within any city's sphere of influence for purposes of urban development unless exceptions are warranted based on the criteria outlined in Section B(3) and (4). * General Policy Determinations Section III (C)(5) Preference for Infill: The	The comment states that inclusion of the study areas within the Planning Area analyzed in the EIR conflicts with LAFCO policies related to SOIs, including General Policy Determinations Section III (C)(5) and Section III(C)(8)(b), and Napa County Measures J and P. Regarding the General Policy Determinations Sections, the inclusion of the three unincorporated study areas in the EIR analysis does not constitute a Sphere of Influence proposal and therefore are not in conflict with these policies. Regarding the Napa County measures, inclusion of the study areas in the Draft EIR analysis does not constitute including them within the City's jurisdictional boundary for purposes of urban development. As stated on

Comment ID	Comment	Response
A2-B-3	Commission will consider the amount of vacant land within the established sphere of influence of a city when considering amendments and updates. The Commission encourages sphere of influence proposals that promote the infill of existing vacant or underdeveloped land thereby maximizing the efficient use of existing city services and infrastructure as well as discouraging urban sprawl. Conversely, the Commission discourages sphere of influence proposals involving vacant or underdeveloped land that requires the extension of urban facilities, utilities, and services where infill is more appropriate. * General Policy Determinations Section III (C)(8)(b) The Commission shall encourage cities to first develop existing vacant and underdeveloped infill lands located within their jurisdictions and spheres of influence to maximize the efficient use of available services and infrastructure and discourage the premature conversion of agricultural and open-space lands to urban uses. The Commission shall encourage the development of vacant or underdeveloped infill lands located within cities' jurisdictions before the annexation of lands requiring the extension of urban facilities, utilities, and services. Pursuant to the aforementioned policies, Napa LAFCO is unlikely to approve inclusion of land specifically designated as agricultural or open-space lands in St. Helena's jurisdictional boundary. In addition, pursuant to Measure J, adopted by Napa County voters in 1990, and Measure P, adopted by Napa County voters in 2008, Napa County lands designated for agricultural use shall not be included within a city's jurisdictional boundary for purposes of urban development. Chapter 2 should be updated to explain the reasoning for including unincorporated agricultural lands within the City's Planning Area.	page 2-3 of the Draft EIR Project Description, the City included the study areas in the EIR analysis in order to document sensitive environmental resources and capacity constraints associated with the study areas, given the adjacency of the study areas, and the City's role in providing limited municipal services to the study areas. As stated on page 2-3, the City recognizes that it does not have jurisdiction in areas outside of City limits, including the unincorporated study areas. Thus, the Draft EIR does not conflict with Measure J or Measure P. Cities often consider the impacts of proposed General Plan policies on areas outside of their jurisdiction or spheres of influence where the areas bear relation to the cities' planning, consistent with California Government Code Section 65300. As previously stated, the Draft EIR assesses potential impacts of the City's General Plan on these study areas due to the presence of adjacent environmental resources and the provision of City services to the study areas, not for any proposed expansion of the current Sphere of Influence, Annexation or planned development of these proeprties. This consistency analysis has been added to the discussion under Impact 3.10-2 in Section 3.10: Land Use, Population, and Housing: "Conflicts with Applicable Land Use Plans, Policies, and Regulations from other Jurisdictions and Regulatory Agencies The Proposed Plan would not conflict with any applicable land use plans, policies, or regulations of outside agencies with jurisdiction in St. Helena. The City of St. Helena is the primary agency with jurisdiction over the city limits, and the Proposed Plan would represent the primary land use plan applicable to the area. In addition to the City of St. Helena, the CPUC has jurisdiction over the railroad right-of-way and Napa County has jurisdiction over the study areas located in unincorporated Napa County. As the Proposed Plan does not encourage any development in the railroad right-of-way or in the three study areas, the Proposed Plan does not conflict with other agency's plans, policies, or regulations. The inclusion of the three unincorporated study areas in the Proposed Plan does not constitute a Sphere of Influence proposal and therefore would not conflict with LAFCO policies related to SOIs, including General Policy Determinations Section III (C)(5) and Section III(C)(8)(b), and Napa County Measures J and P. Regarding the Napa County measures, inclusion of the study areas in the Proposed Plan does not constitute including them

Comment ID	Comment	Response
		within the City's jurisdictional boundary for purposes of urban development. The study areas are included in this analysis in order to document sensitive environmental resources and capacity constraints associated with the study areas, given the adjacency of the study areas, and the City's role in providing limited municipal services to the study areas. The City recognizes that it does not have jurisdiction in areas outside of City limits, including the unincorporated study areas. Thus, the Proposed Plan and Draft EIR do not conflict with Measure J or Measure P."
A2-B-4	Buildout Under the Proposed Plan Table 2.3-3 on page 2-21 of the Draft EIR includes potential residential development within the Planning Area through the year 2040. Under the "St. Helena" subheading, total residential development at buildout is estimated to be 3,100 units. However, the Existing total (2,700 units) and Future Development total (300 units) add up to 3,000 units. Under the "Study Areas" subheading, total residential development at buildout is estimated to be 200 units. However, the Existing total (200 units) and Future Development total (100 units) add up to 300 units. The table should be updated to clarify the amount of residential development proposed. Table 2.3-4 on page 2-21 of the Draft EIR includes projected population within the Planning Area by 2040. Under the "Study Areas" subheading, the total population is estimated to be 700 residents. However, the Existing total (600 residents) and Future Development total (200 residents) add up to 800 residents. Under the "Planning Area Total" subheading, the Existing total is estimated to be 6,400 residents. However, the St. Helena total (5,900 residents) and Study Areas total (600 residents) add up to 6,500 residents. The table should be updated to clarify the projected population estimates.	Typographical errors in Tables 2.3-3, 2.3-4, and 2.3-5 of Chapter 2: Project Description of the EIR have been corrected to reflect buildout totals used in the analysis. Please see also response to comment A-3-B-10. As noted in each table, figures are rounded to the nearest hundred and may not sum due to rounding. Therefore, estimated totals within Tables 2.3-3 and 2.3-4 area accurate and no change is necessary. Under the "St. Helena" subheading of Table 2.3-4 on page 2-21 of the DEIR, existing population has been revised to 5,800 jobs to accurately estimate the calculated existing total of 5,839 jobs. Under the "St. Helena" subheading of Table 2.3-5 on page 2-22 of the DEIR, total jobs at buildout is now estimated to be 6,400 jobs. Under the "Planning Area Total" subheading of Table 2.3-5, future development is now estimated to be 1,100 jobs and total jobs at buildout is estimated to be 7,000 jobs.
A2-B-4	Table 2.3-5 on page 2-22 of the Draft EIR includes projected number of future jobs within the Planning Area through the year 2040. Under the "St. Helena" subheading, the total jobs at buildout is estimated to be 5,900. However, the Existing total (5,400 jobs) and Future Development total (900 jobs) add up to 6,300 jobs. Under the "Study Areas" subheading, the total jobs at buildout is estimated to be 1,100. However, the Existing total (500 jobs) and Future Development total (100 jobs) add up to 600 jobs. Under the "Planning Area Total" subheading, the total jobs at buildout is estimated to be 7,000. However, the Existing total (6,400 jobs) and Future Development (900 jobs) add up to 7,300 jobs. The table should be updated to clarify the projected number of jobs.

A2-B-5	Comments on Chapter 3.2, Agricultural Resources Physical Setting Figure 3.2-1 on page 3.2-3 of the Draft EIR identifies existing Agricultural Land Uses within the Planning Area. Land within the three study areas are shaded a light peach color. This color designation is not included in the figure legend. The figure legend should be updated to include all color designations.	Figure 3.2-1 has been revised to include all color designations in the legend.
A2-B-6	Chapter 3.2, "Agricultural Resources," of the Draft EIR, relies on the California Department of Conservation's Farmland Mapping and Monitoring Program (FMMP) to identify important farmland within the Planning Area. Although FMMP is a great resource of information related to statewide important farmland resources, LAFCOs are directed by the State Legislature in Government Code Section 56001 to protect and conserve prime agricultural resources: "The Legislature finds and declares that it is the policy of the state to encourage orderly growth and development which are essential to the social, fiscal, and economic well-being of the state. The Legislature recognizes that the logical formation and determination of local agency boundaries is an important factor in promoting orderly development and in balancing that development with sometimes competing state interests of discouraging urban sprawl, preserving open-space and prime agricultural lands, and efficiently extending government services. …" Prime Agricultural lands are defined according to Government Code Section 56064 as follows: "Prime agricultural land" means an area of land, whether a single parcel or contiguous parcels, that has not been developed for a use other than an agricultural use and that meets any of the following qualifications: (a)Land that qualifies, if irrigated, for rating as class I or class II in the USDA Natural Resources Conservation Service land use capability classification, whether or not land is actually irrigated, provided that irrigation is feasible. (b) Land that qualifies for rating 80 through 100 Storie Index Rating. (c) Land that supports livestock used for the production of food and fiber and that has an annual carrying capacity equivalent to at least one animal unit per acre as defined by the United States Department of Agriculture in the National Range and Pasture Handbook, Revision 1, December 2003.	The comment notes that while the analysis in the Draft EIR discusses impacts with respect to Farmland as mapped by the FMMP, it also asserts that that analysis does not consider Prime Farmland as defined by LAFCO. Further, the comment provides maps of the Planning Area (Figures 1 and 2) that identify areas of important farmland as defined under Government Code Section 56064. When comparing Figure 1 and Figure 2 (provided by LAFCO) with Figure 3.2-2 on page 3.2-4 of the Draft EIR, the respective designations of "Grade 1 - Excellent" and "Grade 2 - Good," "Class 1" and "Class 2" Irrigated Capability, and "Prime Farmland," "Farmland of Statewide Importance," and "Farmland of Local Importance" follow almost identical patterns across the Planning Area. Discrepancies arise for two reasons. First, Figure 3.2-2 identifies important farmland resources by each parcel while Figures 1 and 2 utilize generalized boundaries. Thus, Figure 3.2-2 appears to cover less land due to parcel boundaries despite identifying the same important farmland resources in the Planning Area as the figures cited in this comment. Second, Figures 1 and 2 identify important farmland resources using irrigated capability and the Storie Index Rating. Figure 3.2-2 does in fact identify prime agricultural land in addition to other important farmland resources, but also identifies urban and built-up land that coincides with farmland identified as Grade 1, Grade 2, Class 1, and Class 2 on Figures 1 and 2 provided by LAFCO. Given that these addiitonal areas identified by LAFCO are designated as "Urban" land in Figure 3.2-2 and are already developed with urban uses, it would not be reasonable to identify such parcels as important farmland resources. Therefore, identification of Prime Farmland pursuant to the LAFCO definition does not identify additional farmland in the Planing Area over and above that which was identfied in the Draft EIR. Addtionally, the City notes that the General Plan Update Land Use and Growth Management Element includes multiple policies that encourage infill and redevelopment and preservation of existing

Comment ID	Comment	Response
	(d) Land planted with fruit or nut-bearing trees, vines, bushes, or crops that have a nonbearing period of less than five years and that will return during the commercial bearing period on an annual basis from the production of unprocessed agricultural plant production not less than four hundred dollars ($400) per acre. (e) Land that has returned from the production of unprocessed agricultural plant products an annual gross value of not less than four hundred dollars ($400) per acre for three of the previous five calendar years. Based on direction of the State Legislature through the Cortese-Knox Hertzberg Local Government Reorganization Act of 2000, Napa LAFCO evaluates the importance of farmland based on the methodology outlined in Government Code Section 56064. As shown in Figure 1, the Planning Area contains land designated as Grade 1 – Excellent. In addition, as shown on Figure 2, the Planning Area contains soils designated as USDA, Natural Resources Conservation Service Class I and Class II. Chapter 3.2 of the EIR should be updated to include an evaluation of the land within the City limits or SOI expansion areas that meets the definition of prime agricultural land as described in Government Code Section 56064. This analysis will provide members of the public, Napa, LAFCO, and other decision makings bodies with a comprehensive description of existing important agricultural lands within the Planning Area and potential impacts that may result from the adoption and implementation of the St. Helena General Plan Update 2040. This type of analysis would provide Napa LAFCO the appropriate information for their potential consideration of any future SOI amendment requests.	agricultural resources, and therefore supports the goal of LAFCO to protect existing prime agricultural resource while accounting for growth needs. Accordingly, the findings of the Draft EIR do not change; however, the text of Section 3.2 of the Draft EIR is hereby updated to identify Prime Farmland as defined by LAFCO. The definition of Prime Farmland as provided by LAFCO has been added to the Regulatory Settings of Section 3.2 of the DEIR. The discussion of Impact 3.2-1 has been revised as follows: "Implementation of the Proposed Plan would result in a significant impact if future development occurring in accordance with the Proposed Plan's land use designations and policies would convert Important Farmland to non-agricultural uses. Table 3.2-1 summarizes Important Farmland in the Planning Area as identified by the FMMP. The largest category of farmland classified by the FMMP in the Planning Area is Prime Farmland, which comprises 900 acres or 29 percent of the land in the city identified as agriculture by the FMMP, as well as 1060 acres or 36 percent of land identified as agriculture in the study areas. Additionally, there are nearly 282 acres of Farmland of Statewide Importance, 75 acres of Farmland of Local Importance, and 38 acres of Unique Farmland in the Planning Area, as shown in Figure 3.2-2. Prime farmland is also defined by LAFCO of Napa County as land that qualifies for rating as class I or class II in the USDA Natural Resources Conservation Service land use capability classification, or land that qualifies for rating 80 through 100 Storie Index Rating. The USDA Natural Resources Conservation Service and Storie Index Rating land classifications are both based on soil characteristics that govern the land's potential utilization and productivity capacity. The Planning Area contains land designated as Grade 1 and soils designated as USDA Natural Resources Conservation Service Class I and II. The land identified under these designations is almost identical to the Important Farmland identified by FMMP in Figure 3.2-2. Figure 3.2-2 identifies important farmland resources by each parcel while the USDA Natural Resources Conservation Service and Storie Index Rating land classifications utilize generalized boundaries. Thus, Figure 3.2-2 appears to cover less land due to parcel boundaries despite identifying the same important farmland resources in the Planning Area as defined by LAFCO. Additionally, Figure 3.2-2 identifies prime agricultural land and other important farmland resources, as described above, but also identifies urban

Comment ID	Comment	Response
		and built-up land that coincides with prime farmland as defined by LAFCO. Given that these additional areas identified by LAFCO are designated as "Urban" land in Figure 3.2-2 and are already developed with urban uses, it would not be reasonable to identify such parcels as important farmland resources. Therefore, identification of Prime Farmland pursuant to the LAFCO definition does not identify additional farmland in the Planning Area over and above that which was identified, and the FMMP farmland classifications are sufficient."
A2-B-7	Comments on Chapter 3.10, Land Use, Population, and Housing Impact discussion 3.10-3 on page 3.10-27 of the Draft EIR, concludes that the project would not conflict with applicable land use plans, policies, or regulations from other agencies with jurisdiction in the Planning Area. As discussed above, pursuant to the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000, Napa LAFCO is responsible for the administration of the orderly formation and development of local governmental agencies and services, preservation of agricultural and open-space resources, and discouraging urban sprawl. Therefore, the impact discussion should be revised to provide a consistency analysis with Napa LAFCO policies related to SOIs and the adopted 2008 Municipal Service Review for the City of St. Helena.	The comment states that the analysis for Impact 3.10-3 should include a discussion of the Proposed Plan's consistency with the Napa LAFCO policies related to SOIs and the 2008 Municipal Service Review for the City of St. Helena. The Regulatory Setting, Relevant Policies and Implementing Actions, and Impact 3.10-2 have been revised to include this discussion (Impact 3.10-3 relates to habitat conservation plans and natural community conservation plans and is not the appropriate location for this analysis) as follows: "State Regulations … Napa County Local Agency Formation Commission (LAFCO) The Napa County Local Agency Formation Commission (LAFCo) is an independent County agency established by State law. LAFCo has approval authority regarding changes in organization to cities, including annexations, detachments, new formations, and incorporations. LAFCo approval is necessary for changes to St. Helena's city limits or Sphere of Influence. Action by LAFCo in 2009 modified the Sphere of Influence to be co-terminus with the city limits. … Local Regulations … California Public Utilities Commission (CPUC) The California Public Utilities Commissions (CPUC) has jurisdiction over certain uses involving railroad right-of-way within St. Helena. CPUC regulates the safety of both publicly- and privately- owned railroad and rail transit companies, agencies, and rail crossings. The City has some authority

Comment ID	Comment	Response
		to regulate specific uses and activities.
A2-B-7		Napa County Local Agency Formation Commission (LAFCO) The Napa County Local Agency Formation Commission (LAFCO) is an independent County agency established by State law. LAFCO has approval authority regarding changes in organization to cities, including annexations, detachments, new formations, and incorporations. LAFCO approval is necessary for changes to St. Helena's city limits or Sphere of Influence. To help inform the sphere review process, LAFCO is responsible for preparing municipal service reviews to determine the level and range of governmental services provided in the region. As of February 2019, the most recently adopted municipal service review for the City of St. Helena was conducted in 2008. The municipal service review recommended that the City's SOI be expanded to include a study area long Howell Mountain Road, and that it exclude a study area containing the City's spray fields (identical to the area considered in this EIR as Study Area 2). In 2009, LAFCO modified the City's SOI to its current boundaries. In August 2017, LAFCO released a draft municipal service review update, which, as of February 2019, has not been finalized or adopted. LAFCO General Policy Determinations LAFCO has adopted a series of policies outlining its objectives and standards as it relates to fulfilling its regulatory and planning responsibilities. This includes establishing specific factors and procedures in reviewing, and processing boundary changes, sphere of influence amendments, outside service agreements, and municipal service reviews. Section III of the General Policy Determinations includes the Policies Concerning Spheres of Influence. Section III(B) establishes the General Guidelines for the Review of Spheres of Influence, including land use criteria, municipal service criteria, and the removal of land from an agency's SOI. Section III(C) addresses City Spheres of Influence, with considerations for the establishment, amendment, or update of a city's sphere of influence, including promoting orderly urban growth and development, reflecting existing and planned service capacities, exclusion of land designated as agricultural or open space, maximizing infill of existing vacant or underdeveloped land, and discouraging the extension of facilities and services where infill is more appropriate. Section III(C) also states that while an SOI shall generally be used to guide annexations,

Comment ID	Comment	Response
		inclusion of land within an SOI does not indicate automatic approval of annexation proposals; that for annexations proposed outside of a city's SOI, a change to the SOI must be considered and resolved prior to action on the annexation; and that SOIs shall be developed by LAFCO in cooperation with input from cities and the County. Section VII includes Policies Concerning Annexations, including policies concerning island annexations and municipally-owned land, and policies to facilitate concurrent annexations to cities and special districts where appropriate. … RELEVANT POLICIES AND IMPLEMENTING ACTIONS The following policies and implementing actions of the General Plan Update are relevant to land use and planning impacts as defined by the significance criteria above: Land Use and Growth Management Element … •LU1.E Restrict the use of housing units as short-term rentals, except for those allowed by the Short-Term Rental Ordinance. LU2.1 Promote a mix of housing types and price ranges that are consistent with the Housing Element RHNA categories of housing affordability. •LU1.G Work with property owners and the Napa County Local Agency Formation Commission to study the benefits of annexing lands adjacent to the City of St. Helena, where the City owns and operates critical municipal infrastructure, including utility infrastructure, and/or provides municipal services, or where the provision of municipal services to replace wells and aging sceptic systems would improve public health. •LU2.5Encourage the development of higher density housing in areas near the center of the city and close to recreation and services, such as transit, retail, and public facilities. … •LU2.AUpdate the zoning ordinance and map to be compatible with the General Plan land use map and designations. •LU3.6Continue to work with the County of Napa to review land use and design changes for projects in the unincorporated areas at the City's gateways. •LU3.BEstablish an inventory of all non-residential uses in the city and a

Comment ID	Comment	Response
		program for monitoring future non-residential development. Combine this inventory with efforts to balance jobs and housing. … Conflicts with Applicable Land Use Plans, Policies, and Regulations from other Jurisdictions and Regulatory Agencies The Proposed Plan would not conflict with any applicable land use plans, policies, or regulations of outside agencies with jurisdiction in St. Helena. The City of St. Helena is the primary agency with jurisdiction over the city limits, and the Proposed Plan would represent the primary land use plan applicable to the area. In addition to the City of St. Helena, the CPUC has jurisdiction over the railroad right-of-way and Napa County has jurisdiction over the study areas located in unincorporated Napa County. As the Proposed Plan does not encourage any development in the railroad right-of-way or in the three study areas, the Proposed Plan does not conflict with other agency's plans, policies, or regulations Potential development outlined in the Proposed Plan (approximately 332 new housing units in the city by 2040) is also consistent with ABAG's RHNA. Policies and implementing actions included in the Proposed Plan, such as LU1.D and LU2.1 would limit the rate of residential development, while providing for development of affordable housing, at a rate that exceeds the RHNA for the City of St. Helena. In addition, the Proposed Plan would not conflict with any applicable land use plans, policies, or regulations of the County or other agencies with jurisdiction outside of city limits. As St. Helena does not have jurisdiction on lands outside of its city limits, Proposed Plan policies would not apply in those unincorporated areas. In general, Proposed Plan policies promote cooperation between the City and other agencies such as LAFCO and Napa County regarding land use decisions such as potential annexations (Implementing Action LU1.G) and land use and design changes in unincorporated areas adjacent to the city's gateways (Policy LU3.6), consistent with LAFCO's General Policy Determinations and the Napa County General Plan. Further, the Proposed Plan's policies promoting infill through the ULL and the designation of most areas along the edges of the city as Agriculture, Open Space, or Woodlands and Watershed are consistent with Napa County's designation of lands surrounding the city as Agricultural Resource or Agriculture, Watershed, and Open Space.

Comment ID	Comment	Response
		minimizing the potential for land use conflicts at the city limits. Due to consistency with existing plans, policies, and regulations from other agencies with jurisdiction in the Planning Area, as well as policies and implementing actions within the Proposed Plan, there is no impact resulting from a conflict with an applicable land use plan, policy, or regulation."
A2-B-8	Description of Alternatives According to the second paragraph under subheading, "No Project Alternative," on page 4-2 of the Draft EIR, the No Project Alternative would result in approximately 460 new residents, 200 housing units, and 780 new jobs in St. Helena by 2040. However, according to Table 4.2-1 on page 4-3 of the Draft EIR, the No Project Alternative would result in approximately 560 new residents and 1,380 new jobs. This section should be updated to clarify growth projections under the No Project Alternative. According to the third paragraph under subheading, "Transportation Network Enhancement Alternative," on page 4-3 of the Draft EIR, the Transportation Network Enhancement Alternative would result in approximately 750 new residents, 335 new housing units, and 935 new jobs in St. Helena by 2040. However, according to Table 4.2-1 on page 4-3 of the Draft EIR the Transportation Network Enhancement Alternative would result in approximately 900 new residents, 400 new housing units, and 1,100 new jobs. This section should be updated to clarify growth projections under the Transportation Network Enhancement Alternative.	This comment refers to growth projections under the No Project Alternative for the entire planning area shown in Table 4.2-1 on page 4-3 of the DEIR. The paragraphs mentioned discusses growth only within the City of St. Helena, given that growth in the Study Areas would be the same as under the Proposed Plan. Additionally, Table 4.2-1 utilizes rounded estimates to provide generalized comparisons of the similarities and differences between each alternative and existing conditions. The first half of the comment highlights a discrepancy in this section with Table 4.2-1 concerning population growth within the city of St. Helena and job growth within the study areas under the No Project Alternative. This section has been updated as follows: "Overall, the No Project Alternative is projected to result in approximately ~~460~~ 360 new residents, 200 housing units, and 780 new jobs in St. Helena by 2040. Accounting for growth in the unincorporated study areas under the Napa County General Plan, a total of approximately 600 new jobs is anticipated in the Study Areas by 2040. Population and housing ~~G~~growth in the Study Areas would be the same as under the Proposed Plan." The second half of the comment refers to growth projections for the entire planning area, while the sentence refers to rounded growth projections for only the City of St. Helena. The section has been revised as follows to ensure consistent rounding in the chapter: "Overall, as with the Proposed Plan, the Transportation Network Enhancement Alternative would result in approximately 750 new residents, ~~335~~ 340 housing units, and ~~935~~ 940 new jobs in St. Helena by 2040. Growth in the Study Areas would be the same as under the Proposed Plan." A note has been added to Table 4.2-1 to clarify rounding discrepacies: "Note: Figures may not sum due to rounding." No further response is necessary.
A2-B-9	Comparative Impact Analysis of Alternatives State CEQA Guidelines Section 15126.6(a) states that: "An EIR shall describe a range of reasonable alternatives to the project, or the	The City notes that CEQA Section 15162.6 also states that "an EIR need not consider every conceivable alternative to a project;" that "an EIR is not required to consider alternatives which are infeasible;" and that "there is no

Comment ID	Comment	Response
	location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives…" Chapter 4, "Alternatives Analysis," of the Draft EIR identifies one alternative, the Transportation Network Enhancement Alternative, other than the mandated No Project Alternative. This does not constitute a reasonable range of alternatives to the project as directed by the State CEQA Guidelines. In the spirit of full disclosure and consistent with CEQA Guidelines Section 15126.6 (c), Chapter 4 should be updated to explain why no other feasible alternatives were considered or proposed as part of the alternatives analysis.	ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason." Given that the significant impacts of the Proposed Plan are generally cumulative in nature, related to regional traffic, air quality, and GHG emissions factors beyond the control of the City, there are relatively few feasible alternatives available to the City that would also attain the most basic objectives of the Proposed Plan. However, the City notes that in developing alternatives for the Draft EIR, a Reduced Development Alternative was considered but found infeasible and not carried forward. In order to effectively reduce the significant traffic, air quality and GHG emissions impacts of the Proposed Plan, the Reduced Development Alternative would have needed to substantially curtail residential growth in the City such that St. Helena would not have been able to meet it RHNA obligations. As such, this alternative was rejected as infeasible.
A2-B-10	According to the last paragraph on page 4-2 of the Draft EIR, the Transportation Network Enhancement Alternative would reduce significant and unavoidable impacts related to vehicle congestion on State Route 29 in St. Helena. However, as described on page 4-21 of the EIR, the mitigation measures would require actions from the California Department of Transportation which is not subject to the City's control; therefore, the impact would remain significant and unavoidable. In addition, the alternative would result in new significant impacts at three intersections. Chapter 4 should be updated to clarify that the project alternative would not reduce significant and unavoidable impacts with respect to transportation, rather it would result in environmental tradeoffs.	Please see response to comment A2-B-11. This alternative does in fact avoid or substantially lessen the transportation-related impacts of the Proposed Plan, although analysis found that impacts related to other topics would be greater. It is the purpose of this analysis to explore how an alternative may lessen or intensify potential impacts across all topic areas relative to the Proposed Plan to provide decision-makers with sufficient information about both the alternative and the Proposed Plan.
A2-B-11	According to page 4-29 of the Draft EIR, the Transportation Network Enhancement Alternative is the environmentally superior alternative. However, as shown on Table 4.4-1, the Transportation Network Enhancement Alternative would worsen impacts with respect to flood hazards and permanent ambient noise. In addition, when compared to the project all other impacts remained the same. Contradictory to State CEQA Guidelines Section 15126.6(a), the alternative does not avoid or substantially lessen any of the significant effects of the project but rather worsens impacts. Chapter 4 should be updated to include an analysis of alternatives that avoid or substantially lessen project impacts. This analysis will provide the decision-making bodies, Napa LAFCO, and members of the public with sufficient information for consideration prior to the adoption and certification of the St. Helena General Plan Update and Draft EIR.	The comment states that the analysis of the Transportation Network Enhancement Alternative is in contradiction to CEQA Guidelines Section 15126.6(a), which states that the EIR should analyze a reasonable range of alternatives which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. The comment states that the alternative does not avoid or substantially lessen any of the significant effects of the project but rather worsens impacts. As discussed in the Alternatives chapter, the Transportation Network Enhancement Alternative was selected due to its potential to avoid or substantially lessen significant effects of the Proposed Plan, specifically, to reduce the significance of Impact 3.13-1 by relieving relieve vehicle

Comment ID	Comment	Response
		congestion and queuing on SR-29. While the alternative would still be considered to have a significant and unavoidable impact, it was found to have fewer intersection impacts than the Proposed Plan, and would not have the queue spillback impacts of the Proposed Plan. Thus, this alternative does in fact avoid or substantially lessen the transportation-related impacts of the Proposed Plan, although analysis found that impacts related to other topics would be greater. It is the purpose of this analysis to explore how an alternative may lessen or intensify potential impacts across all topic areas relative to the Proposed Plan to provide decision-makers with sufficient information about both the alternative and the Proposed Plan.
A2-B-12	Please contact me with any questions by telephone at (707) 259-8645 or by e-mail at bfreeman@napa.lafco.ca.gov. Sincerely, Brendon Freeman Executive Officer. Cc: David Morrison, County of Napa Planning, Building & Environmental Services Director	The comment is the closing of the letter and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
A2-B-13	Attachments: 2 maps of study areas	The attachments were provided in support of comment A2-B-6 and are noted.
A3-A-1	City of St. Helena 2040 General Plan Update Draft Environmental Impact Report Request for Extension of Comment Period. Dear Noah; Thank you for providing Napa County an opportunity to comment on the draft St. Helena 2040 General Plan Update (Update). Napa County has several significant concerns with the most recent version of the Update, and requesting that the comment period on your Draft Environmental Impact Report (DEIR) be extended to provide time to engage in collaborative discussion seeking alignment of City and County objectives. A 120-day extension is requested. We request that a determination for an extension be made prior to 5:00 p.m. on December 21, 2018. To the best of my knowledge, Napa County has never commented on any general plan environmental document prepared by the cities and town of Napa County, and instead we have addressed issues through dialogue focused on finding mutually-agreeable solutions. We are requesting that dialogue commence on several aspects of the proposed Update including, but not limited	The comment requested a 120-day extension of the public review period for the Draft EIR. See response to comment A2-B-1. The City responded at the time the comment was received to inform the commenter that there would be no change to the stated 71-day public review period.

Comment ID	Comment	Response
	to, the Study Areas located outside of the existing city limits, housing, circulation, emergency services, water and wastewater facilities, and possibly climate action planning.	
A3-A-2	As you may be aware, the County is in the midst of preparing a Strategic Plan. Throughout our community engagement process, we have consistently heard that the cities, town and County should be working together, working as partners to benefit our entire community. This necessary partnership step has not yet occurred with your Update. For example, the three very selective Study Areas located outside of the city limits and your Urban Limit Line have been included in the most recent draft of the Update without discussion between our agencies. Although the Update states that these areas are being studied for "informational purposes only" (Update, page 1-12), it is evident that the selective Study Area boundaries, and draft Policies LUI.G and LUI.H indicate the City's intent is to pursue annexation of these areas. The County has no issue with the City conducting meaningful analysis of unincorporated lands surrounding the community to inform the public and decision makers, but that is not what is occurring with these the Study Areas. The boundaries of the Study Areas do not align with any of the reasons given for studying these select areas. The Draft Update implies that these areas must be studied because the City provides utilities and emergency services. Those statement are inaccurate. City water service boundaries, and fire mutual aid boundaries extend far beyonq the Study Areas (see attached maps). Police and fire services are for mutual aid. The City is not the sole emergency service provider as is implied. Numerous properties within the Study Area boundaries do not receive City water service, including all of Study Area 2 which is the City-owned sewage treatment plant spray fields. The City provides no sewer service to any of these areas. The only obvious determining factor for the boundaries of Study Areas 1 and 3 is that they align quite strategically with several long-established major revenue generating developments. Smart land use planning principles dictate that the City should focus on expansion of urban growth areas within the city limits before considering expansion of the city limits.	The comment regards the inclusion of the study areas in the Draft General Plan Update. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary. Please see also response to comment A2-B-3.
A3-A-3	The latest draft of the Circulation Element calls for a number of new traffic lights, most notably on Silverado Trail. Adding traffic lights without expanding internal road network is not a solution to existing or future traffic conditions. This idea will likely result in greater congestion as well as have a negative ripple effect on County and State roadways.	The purpose of signalization is to better balance right-of-way control for all motorists at an intersection, thus reducing system-wide delay. Generally, signalized intersections have a higher capacity as a whole versus stop-controlled intersections. Additionally, signalization may provide a secondary benefit to safety as it may reduce unsafe driver decisions associated with long

Comment ID	Comment	Response
		delays at stop signs. The installation of signals at the locations noted in the EIR would return intersection operations to acceptable operations (LOS D or better), which is indicative of minimal congestion.
A3-A-4	The City's high home values do not allow significant opportunities for lower wage service workers to reside in the community, and results significant commute traffic through unincorporated areas.	The comment is noted. The General Plan Update Housing Element includes multiple policies and implementing actions aimed at prioritizing and streamlining the development of affordable and workforce housing. Proposed Plan policy LU2.1 also would promote a mix of housing types and price ranges that are consistent with the Housing Element RHNA categories of housing affordability. Additionally, the DEIR does consider trips that begin within the Planning Area and end outside of the Planning Area, and vice versa, which accounts for impacts on commute traffic as shown on page 3.13-46 and in Table 3.13-6. Impact 3.13-1 finds that implementation of the Proposed Plan would result in a significant and unavoidable impact on the effectiveness of the circulation system.
A3-A-5	New development called for in the Update will increase vehicle load within unincorporated areas that has not been satisfactorily addressed in the DEIR. Our agencies need to find a common vision on circulation before the DEIR is certified.	This comment is noted. Please see response to comment A3-B-14.
A3-A-6	The County would like to explore partnering on efficiencies in City services. We have very successful long running partnerships with the City of American Canyon providing law enforcement services and with the Town of Yountville providing both law and fire services that may merit consideration by St. Helena. As you know, staffing is the single greatest demand placed on local agency budgets, and the degree in which an agency can control those costs reduces pressure on the need to grow revenues. This salary/revenue relationship places a great deal of stress on the City's overarching goal to maintain St. Helena's small town character. Partnering on affordable housing appears to be of mutual benefit to our agencies. The Update's time horizon is 2040, but housing allocations are only planned through 2023 (in accordance with State mandated housing cycles). It is likely that both St. Helena's and the County's Regional Housing Needs Allocation (RNHA) will be considerably larger in the next housing cycle starting 2023. The City has very limited ability to generate housing trust fund revenue	The comment expresses interest in partnering with the City of St. Helena on City services and affordable housing, and recognizes the budgetary restraints placed on the City. The comment states that underdeveloped property within city limits should be developed before jurisdiction expansion is considered. As stated on page 2-3 of the Draft EIR Project Description, the City included study areas in the analysis in order to document sensitive environmental resources and regulatory of capacity constraints associated with the study areas, given the adjacency of the study areas, and the City's role in providing limited municipal services to the study areas. Inclusion of the study areas in the Draft EIR analysis does not constitute expansion of the City's jurisdictional boundary for purposes of urban development; rather, multiple General Plan policies promote infill development.

Comment ID	Comment	Response
	through development impact fees. The County has limited areas where new housing can be placed outside of preserved agricultural lands, and the City has vast tracks of underdeveloped property within the city limits. Those areas should develop before any consideration of city limit expansion is undertaken. Some of those areas may be suitable for housing. A shared vision addressing affordable housing needs through the horizon year of your Update appears to be of critical importance to both of our agencies.	
A3-A-7	We understand that the City may be anxious to complete the Update. We believe our request for extension of the DEIR comment period allowing time to partner on inter-jurisdictional issues is the most expedient and cost efficient path to successfully completing the Update. We look forward to meeting with you at your earliest convenience once extension of your DEIR comment period has occurred. Sincerely, David Morrison Director of Planning Building and Environmental Services	The comment is the closing of the letter and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
A3-A-8	St. Helena Water Service Area Exhibit, Napa County-St. Helena Mutual Aid Exhibit	The attachments were provided in support of comment A3-A-2 and are noted.
A3-B-1	Dear Mr. Housh; Napa County is in receipt of your December 21, 2018 email denying my request to extend the comment period on the Draft Environmental Impact Report (DEIR) for the City of St. Helena (City) 2040 General Plan Update (Update). The time to review the DEIR has been constrained by the holidays; however, I have strong reservations about several aspects of the Update and DEIR. I believe that it would be best to address these issues through direct dialogue, but given the denial of the extension request, I am compelled to include my concerns as comment on the adequacy of the DEIR. Furthermore, the County of Napa has recently completed an unprecedented community outreach effort to develop a three-year strategic plan. In our nearly 40 community meetings, collaboration between the County and the cities and town was a reoccurring theme in many of the conversations. The County sees St. Helena's General Plan as an opportunity to collaborate and we request further engagement and collaboration on the issues outlined in this letter. Both the Update and DEIR have serious issues that should preclude their adoption and certification until matters have been resolved to our mutual	The comment acknowledges receipt of the City's response to the County of Napa's December 19, 2018 comment (see letter A3-A) stating that no change would be made to the stated 71-day public review period for the Draft EIR. It does not address the adequacy of the DIER; thus, no response is necessary.

Comment ID	Comment	Response
	satisfaction. Napa County's comments are provided in detail below. However, in general, our primary concerns can be summarized as follows:	
A3-B-2	1. There is inconsistency between many of the stated policies in the draft documents and in the methodology used to define the study areas, particularly as it relates to lands designated as agriculture. The documents place an emphasis on preserving agricultural lands within the city limits and state a policy of protecting agricultural lands immediately outside the city limits. At the same time, the documents pursue studying annexation of lands in the unincorporated area that are protected by Measure J and Measure P. The stated policies and intention of the study areas clearly contradict each other, as any annexation would remove the agricultural protections provided under Measure J and Measure P. Further, if the City intends on pursuing future development, it would make greater sense to develop in areas currently within the City limits rather than pursuing lands in the unincorporated area and threatening agricultural protections put in place by the voters of Napa County.	The comment pertains to the Draft General Plan, not to the merits of the environmental analysis in the Draft EIR. The City notes that the comment incorrectly characterizes goals and policies in the Draft General Plan. For example, the growth strategy principles articulated in the Land Use and Community Character Element of the Draft General Plan do not seek to protect agricultural lands immediately outside the city limits as the comment states; rather they seek to "protect agricultural lands located outside the Urban Limit Line" and to "preserve agriculture, green, and open space within the Urban Limit Line." As shown on Figure 1.2 of the Draft General Plan, the Urban Limit Line is wholly contained within the City limits. Further, as noted on page 1-10 of the Draft General Plan, the City of St. Helena does not have jurisdiction in areas outside of its City limits has no jurisdiction beyond the City limits and therefore cannot implement policies that pertain to "lands immediately outside the city limits." Additionally, the comment mischaracterizes Policy LU1.G and Policy LU1.H, which do not express an intent to annex any lands beyond the current City limit. Rather, Policy LU1.G commits the City only to studying the benefits of annexing adjacent lands without expressing intent or direction to pursue annexation. Similarly, Policy LU1.H does not express intent or commit the City to annexation. Therefore, the statement that policies related to lands designated as agriculture in the Draft General Plan are in conflict is false. Further, the City notes that numerous policies in the Draft General Plan promote infill development and preserve agriculture and open space lands beyond the Urban Limit Line.
A3-B-2		
A3-B-3	2. Both the General Plan and the DEIR project significant job growth in the tourism and hospitality industries. While the number of jobs projected differ significantly between the two documents, regardless, the need for housing that is affordable to the existing and projected workforce is not adequately addressed. Failure to address existing and future housing needs in the City exacerbates the challenges the greater Napa County community faces in providing housing opportunities.	See response to comment A3-A-4, above.

Comment ID	Comment	Response
A3-B-4	The Transportation Element does not address existing traffic congestion or consider further impacts on traffic created by an imbalance between job growth and housing. While the City of St. Helena has the option to adopt Statements of Overriding Consideration and accept that traffic congestion will increase as a result of an adopted General Plan the General Plan should clearly state this as a goal(s) and the DEIR should fully disclose the environmental impacts.	See response to comment A3-A-4, above.
A3-B-5	General Comments. 1. As noted in my December 19, 2018, request, three Study Areas located outside of the city limits were included in the most recent draft Update. The stated purpose for including these areas was for "informational purposes only" so that the City could conduct meaningful analysis to inform both decision makers and the public. However, as noted in the letter, meaningful analysis in the DEIR does not correlate with the boundaries of the Study Areas. Instead, the DEIR more broadly looks at virtually all unincorporated areas surrounding the City and then applies a mistaken rationale that out-of-agency City services provided to these selective areas makes them eligible for annexation, which is not the case. For example, Study Area 2, which is a City owned spray field, generates no demand for library services, whereas the unincorporated community of Angwin located several miles from the City generates demand for City library services, but is not included within a Study Area. This inconsistent treatment of unincorporated areas purportedly relating to the selective Study Areas is a reoccurring inconsistency over most areas of analysis within the DEIR. This is confusing to the reader at a minimum, and may lead to incorrect assumptions regarding the extent to which study areas qualify for annexation.	The comment contains several inaccuracies and mischaracterizations. First, the intent of including the study areas is not to "conduct meaningful analysis" as the comment states, but rather, as noted on page 2-3 of the Draft EIR, "the intent of including the three study areas within the Planning Area of the General Plan update is to document sensitive environmental resources and regulatory or capacity constraints associated with those areas." Further, it is incorrect that "the DEIR more broadly looks at virtually all unincorporated areas surrounding the City and then applies a mistaken rationale that out-of-agency City services provided to these selective areas makes them eligible for annexation." The Draft EIR makes no assumption that the study areas will be annexed to the City of St. Helena. On the contrary, the Draft EIR repeatedly states that St. Helena does not have jurisdiction in areas outside of its city limits and that the policies and actions in the Draft General Plan would not apply in the study areas. Additionally, the Draft EIR does not assume that growth in the study areas will increase demand for City of St. Helena library services; in fact, on page 3.12-18 of the Draft EIR, it is stated that the growth in resident and employee population would not substantially increase demand for library services or create a need for new or expanded library facilities. Please see also response to comment A3-B-2.
A3-B-6	2. Proposed Policies LUl.G and LUl.H seek annexation of unincorporated property. The DEIR does not address the potential environmental impacts associated with these policies, which will result in the urbanization of unincorporated farmland. Similarly, Policy LUl.G calls for the extension of sewer service to unincorporated areas. The DEIR does not evaluate this growth-inducing proposal.	The comment characterizes the inclusion of Proposed implementing actions LU1.G and LU1.H as an attempt to annex unincorporated property without adequate assessment of the associated environmental impacts. Implementing action LU1.G on page 2-33 of the General Plan Update recommends that the CIty of St. Helena "work with property owners and the Napa County Local Agency Formation Commission to study the benefits of annexing lands adjacent to the City of St. Helena" in locations where the CIty owns and operates municipal infrastructure and provides municipal services. Implementing action LU1.G asks that consideration of annexation would be collaborative between the City, LAFCO, and property owners and would

Comment ID	Comment	Response
		ensure continuous, successful delivery of critical municipal infrastructure and services needed in unincorporated areas. Implementing action LU1.H recommends advocating for "favorable tax-sharing agreements that ensure that the City receives the revenues necessary to support the municipal services and infrastructure required in those areas" if annexation occurs. Prior to annexation, policy LU1.2 requires that "Urban services, such as sewer, water, and storm drainage, will only be extended to development within the Urban Limit Line." As stated on page 2-3 of the Draft EIR Project Description, the City included the study areas in the EIR analysis in order to document sensitive environmental resources and regulatory of capacity constraints associated with the study areas, given the adjacency of the study areas, and the City's role in providing limited municipal services to the study areas. Impacts in both Chapter 3.12: Public Services and Recreation and Chapter 3.14: Utilities and Service Systems are assessed for the entire planning area and associated population, including the Study Areas, and are all found to be less than significant. Therefore, the statement that the DEIR does not adequately address the environmental impacts associated with potential expansion is not correct.
A3-B-7	Both the Update and DEIR identify that the State has ordered upgrading of the City's sewage treatment facilities, but the DEIR does not address how the City plans to overcome this critical service-deficiency. The City cannot plan for sewer line extensions and the associated impacts of growth without knowing whether the sewage treatment facility can or will be allowed to operate in the future at the level needed to provide additional services. These are significant unmitigated public utility impacts.	The comment states that the DEIR does not address how the City plans to overcome the service deficiency identified by the State's order to upgrade the City's sewage treatment facilities. In the discussion of Impact 3.14-1, the DEIR cites the Regional Water Quality Control Board (RWQCB) Cease and Desist Order (CDO) No R2-2016-0004, which requires the City to upgrade its treatment systems in order to meet waste discharge requirements. As stated in the DEIR, the CDO mandates a series of tasks and a timeline for the City to comply with the treatment system upgrades. Also stated in the DEIR, the City is actively working to finalize alternatives and meet the compliance schedule, including submission of the required feasibility study for the Wastewater Treatment and Reclamation Plant improvements, and must begin implementation by March 1, 2019. Thus, the City's plans to upgrade its facilities and resolve its waste discharge violations with the State have been sufficiently addressed in the DEIR.
A3-B-8	4. Policy language in the Update is inconsistent in terms of how the City intends to interact with the County. For example, Policy LUS.2 encourages the County to promote agriculture and limit development on nearby unincorporated lands.	The comment is noted; however, as the comment relates to the text of the Draft General Plan and does not raise any significant environmental issues or address the adequacy of the EIR, no further response is necessary.

Comment ID	Comment	Response
	As always, the County is eager to engage with the cities and town on this crucial topic. In contrast, Policies LUl.G and LUl.H acknowledge the need to collaborate with property owners and LAFCO in pursuing annexation, but leaves the County out of the stakeholder list despite the fact that annexation cannot occur without both the City and County agreeing to a tax-sharing agreement. The proposed expansion of the City Limits is further vexing by the inability to meet current municipal obligations as noted in number 5 below.	
A3-B-9	The DEIR should also evaluate an alternative that reduces the current extent of incorporated land. The City can clearly meet its projected needs for future growth within the existing city limits, even with the City designating 46 percent of the incorporated area as agriculture and not intended for urban development. The inclusion of farmland within the city limits but outside of the Urban Limit Line adopted by the City is problematic. In essence, the City is obligating itself to provide urban services to 1,451 acres of agriculture, including water, sewage, police, fire, and public administration. This significantly affects the ability of the City to meet their municipal obligations in a sustainable manner. A reduced development alterative that moves rural land out of the City's growth boundary would still meet all of the DEIR project objectives and would result in fewer significant and unavoidable environmental impacts than the proposed project, resulting in the environmentally superior alternative.	The comment states that the EIR should evaluate an alternative that reduces the current extent of incorporated land. This would not be a feasible alternative for the City to undertake for a number of reasons. Primarily, the City is already providing water, police, and fire services to all areas within City limits. If the City were to reduce its incorporated area, it would still be bound by mutual aid contracts to continue providing services to the newly unincorporated areas, but would have lost the tax revenue from those properties to support the services. Agricultural uses are also a large part of the city's character, and removing agricultural land from the city would be contradictory to the Proposed Plan's objective of preserving St. Helena's agricultural heritage.
A3-B-10	Study Areas 6. The growth assumption methodology presented in the DEIR is confusing and needs clarification. Tables ES-1, ES-2 and ES-3 make little sense, even with the disclaimer footnote noting that figures are rounded to their nearest hundred. First, it is inappropriate to round figures to their nearest hundred in a setting such as St. Helena because the levels of growth in many cases do not reach 100. For example, the City's Regional Housing Needs Allocation is 31 units. Rounding that to the nearest 100 equates to zero. As this confusion relates to the Study Areas, the DEIR appears to have based some of the impact analysis on unrealistic growth assumptions. Table ES-1 suggests 100 new dwelling units in the Study Areas, when in actuality there does not appear to be enough vacant land to accommodate anywhere near this number within the three Study Areas combined. As these lands are protected by the County's Agricultural Preserve and Measures J and P, it is unclear how this projected level of growth can be obtained within the Study Areas, absent City incorporation and rezoning (land within the cities and town are not subject to Measures J and P). Likewise, the DEIR projects 1,100 new jobs within the Study Areas under	Typographical errors in Tables ES-1, ES-2 and ES-3 are hereby corrected to reflect buildout totals used in the analysis. The comment states that rounding the buildout projections for the city and study areas to the nearest hundred is confusing and portrays future growth at levels that are unrealistic. As stated in the Project Description, buildout estimates should not be considered a prediction for growth, as the actual amount of development that will occur through 2040 is based on many factors outside of the City's control, including changes in regional real estate and labor markets and the decisions of individual property owners. Therefore, buildout estimates represent one potential set of outcomes rather than definitive figures. In rounding the buildout figures to the nearest hundred, the DEIR analysis is not suggesting that policies in the Proposed Plan would cause properties under County jurisdiction to develop at higher intensities than allowed under County regulations; rather, it is acknowledging the uncertainty inherent in the projection of future development and taking a more conservative approach to the environmental analysis by erring on the

Comment ID	Comment	Response
	existing City and County zoning/general plan, but only 600 forecasted if the Update is adopted. There is no logical reason for this, and it appears simply to be a means justify adoption of the Update by comparing it to inaccurate assumptions regarding the status quo. The analysis makes it appear as if the proposed policies in the Update would result in much more intense development than would occur under the County. Proposed City policies call for the annexation of these areas (LUl.G/H), extension of sewer service outside of city limits, an increase in hotel rooms (ES2.6), encouragement of more restaurant seats (ES2.7), and additional water connections, which are all things that are not possible under County regulations. As presented, this information can lead to inaccurate conclusions, which could prevent sound policy decisions.	side of overestimation rather than underestimation. It should be noted that where technical modeling was required for the transportation analysis, the unrounded estimates were used.
A3-B-11	Finally, the inclusion of the Study Areas ignores the obvious existing availability of developable land currently labeled as Agriculture already located within existing city limits.	The comment states that inclusion of the Study Areas within the Planning Area ignores the possibility of developing Agricultural land within city limits. Proposed Policy LU1.2 on page 2-30 of the DEIR clearly states that urban development may only occur within the Urban Limit Line, and that the "Urban Limit Line may only expand when the amount of developable land within the Urban Limit Line is insufficient to implement the General Plan policies or when logical to include developed lands receiving urban services from the City." Expansion would be considered only if it "does not result in adverse impacts to adjacent uses in either the urban or rural areas." The General Plan Update includes multiple additional policies which encourage infill development and redevelopment explicitly to postpone expansion of the CIty's Urban Limit Line. The General Plan Update also includes multiple policies that strictly limit development and conversion of agricultural land. Future development is subject to the City's existing Growth Management System and "right to farm" ordinance. Conversion of agricultural land within city limits would impact the economic benefits, aesthetic value, and agricultural resource value of existing and productive land.
A3-B-12 A3-B-12	Transportation and Traffic. 7. CRl.1 in the Update states a desire to promote connected streets; however, the Transportation Element does not include any new congestion relieving additional roadway segments/connections. The element defers to a later unspecified date, any segment improvements that could relieve local congestion.	The comment regards a policy in the Draft General Plan Update and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.

Comment ID	Comment	Response
A3-B-13	8. With virtually no planned residential growth in the Update, the goal in CR3.3 of shifting work trips from predominantly single-occupancy vehicles to 45% carpool, transit, walking is unrealistic. The Economic Sustainability policies emphasize job growth in the lower paying sectors such as hotels, restaurants and retail, which will require more commuting at shifts throughout the day and evening. Without significantly increasing the number of people per household (the City is currently 9% lower than the countywide average), even more housing will be needed to house future workers, increasing the likelihood that they will commute from out of the plan area. There will be few homes available from which employees will be able to walk to work. Transit and carpooling are unlikely to meet nearly half of the demands of a service economy workforce. This is not a realistic basis for establishing long-term policy.	The comment is noted; however, as the comment relates to the text of the Draft General Plan and does not raise any significant environmental issues or address the adequacy of the EIR, no further response is necessary.
A3-B-14	9. The discussion of Intersection Traffic Operations on page 3.13-42 of the DEIR includes a recognition of potential impacts to roadways within Napa County; however, the DEIR only evaluated one intersection. The analysis ignores the potential effects of future development in St. Helena on the need for improvements on County roads such as Deer Park Road, Pratt A venue, or Zinfandel Lane. The DEIR did not comprehensively evaluate the impacts to all County roads within the potential area of impact, especially considering the likelihood of additional commuting referenced in Paragraph 8 above.	It is relatively common that, for the purposes of evaluating an update to a General Plan under CEQA, an agency will study facilities within the jurisdiction itself for the purposes of determining how the addition of new trips affect operations. For example, the Napa County General Plan EIR (2007) evaluated traffic congestion impacts only in unincorporated County areas and not within the incorporated cities. Similarly, the 2018 Yountville General Plan EIR traffic analysis only studied intersections within the Town. The County of Napa recently adopted (on February 5, 2019) an updated Circulation Element with new policies that balance improving access, balancing congestion, and serving remote areas of the County, while preserving the area's rural character. Policy CIR-38 of the newly-adopted Element establishes a policy of LOS D as the acceptable peak hour LOS for signalized intersections and arterial roadways, but unsignalized intersection operations appear to not be subject to any LOS policy. Because the County does not establish policies related to traffic congestion at unsignalized intersections, any congestion-related impacts to the County-controlled, unsignalized intersections along Deer Park Road, Pratt Avenue and Zinfandel Lane at their intersections with SR 29 and Silverado Trail would not necessarily constitute a significant CEQA impact. The Pratt Avenue corridor was analyzed as part of the DEIR at its intersections of SR 29 (which is located within the City of St. Helena) and Silverado Trail (which is located in the unincorporated County). The Pratt

Comment ID	Comment	Response
		Avenue corridor is located wholly within the City, except for the portion of the corridor between the Napa River and Silverado Trail (a distance of about 120 feet); operations on this short segment of Pratt Avenue are fundamentally controlled by the intersection at Silverado Trail. The analysis of the Pratt Avenue/Silverado Trail found that the impact to intersection operations would be less-than-significant.
A3-B-14		The Deer Park Road corridor is defined as a two-lane Collector roadway in the County's Circulation Element (see Figure CIR-1 of the County's Circulation Element); therefore, the Deer Park Road corridor would not be subject to the County's peak hour LOS D policy. Similarly, the intersections at Deer Park Road/SR 29 and Deer Park Road/Silverado Trail are unsignalized, and therefore not subject to the peak hour LOS policy. It is also noted that the County's Supplemental EIR (SEIR) for the update to the Circulation Element included segment-level peak hour LOS analysis of the Deer Park Road corridor between SR 29 and Silverado Trail (as presented on page 15 in Table A of the SEIR). This segment-level peak hour LOS noted that the corridor would operate at LOS C with a volume-to-capacity ratio of less than 0.40 in the Year 2040 scenario. The volume-to-capacity ratio value suggests that there would be sufficient capacity to accommodate additional demand generated by implementation of the proposed City of St. Helena General Plan prior to degradation of corridor operations to LOS E (indicated by a volume-to-capacity ratio between 0.85 to 1.00). The Zinfandel Lane corridor is defined as a two-lane Arterial roadway in the County's Circulation Element (see Figure CIR-1 of the County's Circulation Element); therefore, the Deer Park Road corridor would be subject to the County's peak hour LOS D policy. The intersections at Zinfandel Lane/SR 29 and Zinfandel Lane/Silverado Trail are unsignalized, and therefore not subject to the peak hour LOS policy. The County's Supplemental EIR (SEIR) for the update to the Circulation Element included segment-level peak hour LOS analysis of the Zinfandel Lane corridor between SR 29 and Silverado Trail (as presented on page 16 in Table A of the SEIR). This segment-level peak hour LOS noted that the corridor would operate at LOS C with a volume-to-capacity ratio of 0.30 or less in the Year 2040 scenario. The volume-to-capacity ratio value suggests that there would be sufficient

Comment ID	Comment	Response
		capacity to accommodate additional demand generated by implementation of the proposed City of St. Helena General Plan prior to degradation of corridor operations to LOS E (indicated by a volume-to-capacity ratio between 0.85 to 1.00). The City recognizes the need for ongoing inter-agency coordination to reduce congestion in the vicinity of St. Helena, and is eager to participate in discussions with the County on how to balance reducing congestion at the interface between the City and County with maintaining the County's rural character. It is noted that the newly-adopted County Circulation Element contains Action Item CIR-6.1, which encourages the establishment of a countywide transportation impact fee program to address cumulative impacts associated with new development throughout Napa County. The City would support this concept, and will add a policy to the City of St. Helena General Plan Circulation Element to that effect.
A3-B-15	10. Any proposed traffic controls on major roadways within St. Helena (esp. State Hwy 29 and Silverado Trail and the crossroads) will cause backups/delays in unincorporated areas. This impact is not recognized or evaluated.	This comment is noted. As mentioned in response to comment A3-A-3, the purpose of signalization is to better balance right-of-way control for all motorists at an intersection, thus reducing system-wide delay. Generally, signalized intersections have a higher capacity as a whole versus stop-controlled intersections. Additionally, signalization may provide a secondary benefit to safety as it may reduce unsafe driver decisions associated with long delays at stop signs. The installation of signals at the locations noted in the EIR would return intersection operations to acceptable operations (LOS D or better), which is indicative of minimal congestion.
A3-B-16	11. As stated in Impact 3.13-4 of the DEIR, the City is relying on development to connect significant circulation gaps in the street network; however, the needed gap closures are within areas that the Update does not designate or plan for future growth. The discussion regarding this Impact goes on to say the DEIR relies on the following to improve traffic congestion and make the roadways safer: (1) City's support of the concept of complete streets; (2) Napa County's efforts to improvement countywide trails; and (3) Caltrans' work to reduce congestion on State Hwy 29. There is no defined capital improvement plan to ensure completion of the street network. Instead, mitigation relies on the contributions of other agencies, the benefits of which are speculative regarding traffic congestion within the City. This is not a feasible approach to addressing	This comment is noted. The Planned Roadway Improvements subsection on page 3.13-28 notes that the analysis assumes that none of the proposed capacity-enhancing improvements in the Proposed Plan are constructed as a baseline assumption given that these improvements are subject to further discretionary action by the City Council. The basis of this assumption is on page 5-19 of the Proposed Plan, whereby future roadway extensions "shall trigger a requirement for a 'Special Study', subject to City Council approval." Therefore, the traffic analysis as presented represents an analysis where the street network is in place with no foreseeable gap closures. The Proposed Plan Circulation Element includes Policy CR1.11 and

Comment ID	Comment	Response
	traffic management and is inadequate for the purposes of the DEIR. A full and appropriate traffic analysis should be prepared that considers the potential impacts of leaving the street network in place with no foreseeable future gap closures	Implementing Action CR1.K, which relate to the development of a multimodal transportation fee program that will fund transportation improvements including, but not limited to, roadway extensions. The General Plan EIR transportation analysis aids in the development of the future Captial Improvement Plan and multimodal transportation fee program by noting locations of impacts that require physical improvements.
A3-B-17	12. It appears that the City water system is at capacity. The DEIR only considers conservation measures as a suggestion, not a requirement, and no new long-term sources or significant reductions are proposed. This seems to be a shortsighted approach and possibly a significant environmental impact when measured against the additional future demands created by the proposed annexation areas, as well as projected hotel and restaurant growth.	The comment regarding the City's water supply capacity is factually inaccurate. As noted on page 3.14-4 of the Draft EIR, St. Helena's potable water demand is within its safe yield parameters, even for critical water emergency years. Further, as noted on page 3.14-5 of the Draft EIR, the City recognizes that water should be recycled and put to beneficial use, and has contracted with West Yost Associates to identify potential customers and users of recycled water within and contiguous to city limits and prepare cost estimates for the required infrastructure to achieve zero discharge into the Napa River. Additionally, Impact 3.14-4 assesses the Proposed Plan's impact on water supply. The analysis cites the City's Water Neutral Policy for Development, which is a local requirement for all new development to be water-neutral from the City-delivered water system through any combination of on-site water conservation measure s and/or off-site retrofitting and/or well water. The analysis also considers a range of Proposed Plan policies that promote water conservation through requirements for development and other mechanisms, and that commit the City to seeking new water supply sources. Together, the Water Neutral Policy for Development and Proposed Plan policies are sufficient to demonstrate that future development would not exceed existing entitlements and resources; therefore, no mitigation measures involving new long-term sources or significant reductions were required.
A3-B-18	The documents seem to dismiss the creation and use of recycled water as infeasible but the conclusions lack any credible sources as to why recycled water is infeasible. Since the City owns and operates a wastewater treatment facility, it seems plausible and preferable to find ways to utilize this resource for irrigating the significant agricultural properties within the City limits, as well as other facilities such as playfields, parks, municipal landscaping, etc.	The comment states that the Proposed Plan and DEIR dismiss the use of recycled water as infeasible; however, the DEIR considers the potential for recycled water as part of the environmental setting and analysis. DEIR section 3.14 includes background information on water recycling and non-potable water use, noting that while the City does not currently have a recycling water program, it recognizes the potential benefit of using recycled water and has undertaken a study of potential customers and cost estimates for infrastructure. The DEIR notes that while a net zero discharge program

Comment ID	Comment	Response
		was determined to be prohibitively expensive, the City hopes to develop a smaller recycled water program that does not require seasonal storage. The DEIR also cites Proposed Plan Implementing Action PF1.C, which suggests that the City explore recycled water as a potential water source, and Implementing Action PF2.B, which would require the City to continue wastewater treatment system upgrades to reduce the number and scale of implementation constraints on the recycled water program. Impact 3.14-2 considers the effect of Implementing Action PF2.B on water and wastewater facilities, and Impact 3.14-4 considers the effects of implementing actions PF1.C and PF2.B on water supply.
A3-B-19	14. The City is currently under order to upgrade the municipal wastewater treatment plant. Neither the Update nor the DEIR recognizes this critical issue. This is a significant constraint to the No Project alternative, as well as any future growth proposals. The City should revised the DEIR and the Update to address how wastewater treatment will be improved and funded, before any decision are made regarding new growth and annexation.	Please see also responses to comments A3-B-7 and A3-B-18. In the discussion of Impact 3.14-1, the DEIR cites the Regional Water Quality Control Board (RWQCB) Cease and Desist Order (CDO) No R2-2016-0004, which requires the City to upgrade its treatment systems in order to meet waste discharge requirements. As stated in the DEIR, the CDO mandates a series of tasks and a timeline for the City to comply with the treatment system upgrades. Also stated in the DEIR, the City is actively working to finalize alternatives and meet the compliance schedule, including submission of the required feasibility study for the Wastewater Treatment and Reclamation Plant improvements, and must begin implementation by March 1, 2019. Thus, the City's plans to upgrade its facilities and resolve its waste discharge violations with the State have been sufficiently addressed in the DEIR.
A3-B-20	15. The Update calls for significant job growth in services that generally pay lower wages: hotels, restaurants, and retail. However, the Housing Element only plans for 31 residential units through 2023, far short of the General Plan horizon of 2040. This modest housing growth does not serve the current needs of the community and does not meet the future needs given the planned job growth, which is noted as a significant housing/jobs imbalance in the Transportation and Traffic Element (p3.13-2). This unresolved and ongoing imbalance has important implications for many other Impacts evaluated in the DEIR, and calls into question the adequacy of the entire document.	The comment is noted. The General Plan Update Housing Element includes multiple policies and implementing actions aimed at prioritizing and streamlining the development of affordable and workforce housing. Proposed Plan policy LU2.1 also would promote a mix of housing types and price ranges that are consistent with the Housing Element RHNA categories of housing affordability. Additionally, the DEIR does consider trips that begin within the Planning Area and end outside of the Planning Area, and vice versa, which accounts for impacts on commute traffic as shown on page 3.13-46 and in Table 3.13-6. Impact 3.13-1 finds that implementation of the Proposed Plan would result in a significant and unavoidable impact on the effectiveness of the circulation system. The Vehicle Miles Traveled (VMT) calculated in Chapter 3.13 are used to calculate potential and cumulative air quality and GHG emissions in Chapter 3.3: Air Quality and Chapter 3.6:

Comment ID	Comment	Response
		Energy, Climate Change, and GHG Emissions. Impacts in both chapters associated with air pollutant and GHG levels, based on the estimated VMT increase accounting for workforce travel into the City, are found to be significant and unavoidable. Therefore, the DEIR does seriously assess the potential implications of this imbalance.
A3-B-21	Alternative Analysis. As discussed in Paragraphs 12 and 14 above, the City has serious obstacles in continuing to provide adequate water and wastewater treatment. The DEIR acknowledges a jobs/housing balance without offering any solution and traffic congestion without requiring any relief. The Update is determined to have Significant and Unavoidable Impacts in the areas of farmland loss, air quality, climate change, and traffic Level of Service. The DEIR even concludes that another alternative, not the Update, is Environmentally Superior. Yet despite these concerns, the DEIR nevertheless recommends the Update as the Preferred Alternative. This gives the appearance that the DEIR analysis does not provide an objective and impartial analysis, but is instead a means to justify the proposed Update.	The comment states that the DEIR recommends the Proposed Plan as the Preferred Alternative despite finding that the Transportation Network Enhancement Alternative is the Environmentally Superior Alternative. The DEIR does not recommend a "Preferred Alternative." The DEIR concludes that the Transportation Network Enhancement Alternative is environmentally superior to the No Project Alternative, and discloses that the Proposed Project was found to have fewer potentially significant and unavoidable impacts than the Transportation Network Enhancement Alternative, but makes no recommendations and states no preferences.
A3-B-22 A3-B-22	Our shared community faces broad and fundamental issues that challenge the quality of life in both urban and rural areas. Finding solutions to address traffic, housing, water, and sustainability require regional approaches that involve governments working together. My goal in providing these comments is to establish a more complete analysis of pending policy and create an opening for the City and County to discuss meaningfully how we can achieve our mutual goals. Conflict is an unnecessary expense that does not benefit either participant and prevents the exploration of productive ideas. I look forward to starting our discussion. If you have any questions regarding this letter, please contact me at (707) 253-4805 or at david.morrison@countyofnapa.org. Thank you for the opportunity to provide comments on the DEIR. Respectfully, David Morrison	The comment is the closing of the letter and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
A4-1	MEMO Date: December 26, 2018 To: Noah Housh, Planning Director City of St. Helena	The comment is the salutation of the letter and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.

	From: Napa Valley Transportation Authority Re: St. Helena General Plan Update 2040 Upon the review of the St. Helena General Plan Update 2040, the Napa Valley Transportation Authority would like to submit the following comments:	
A4-2	General Comment – Please replace all "NCTPA" references to "NVTA" and use the updated logo and Vine brand and color scheme. Also, "VINE" is now "Vine" P. 5-3 • Should mention the Countywide Bike Plan update now in progress P. 5-4 • ACS reference, but no reference to the Napa Countywide Pedestrian Plan or Napa County Travel Behavior Study. The St. Helena Pedestrian Plan was adopted by the City Council on May 9, 2017 www.nvta.ca.gov/countywide-pedestrian-master-plan. P. 5-7 • 2016 Pedestrian Plan should be included along with 2010 ADA Transition Plan. P. 5-9 • Old Vine Go photo-need to update photos for Vine Transit in plan. NVTA will provide new Vine photos. P. 5-10 • First bullet - revise sentence regarding Vine Trail-"will" connect St. Helena, not "connects" P. 5-11 • Please reference the current Countywide Transportation Plan – Vision 2040 – Moving Napa Forward www.nvta.ca.gov/countywide-plan-vision-2040. " • No reference to other plans such as the Countywide Bike Plan, Ped Plan, Travel Behavior Study or Plan Bay Area etc." P.5-23 • Where did the reference regarding bike lane and shared parking come from? CVC does not allow parking in bike lanes. • Class III-"vehicle barriers"-Class III facilities do not include barriers-Class IV includes separation. • Add Class IV – separated bike lanes with description P. 5-25 • When was this map completed? There are differences from some	The comment addresses policies and text in the Draft General Plan Update and is noted. The comment has resulted in one revision to the Draft EIR. One reference to NCTPA on page 3.6-18 of Chapter 3.6: Energy, Climate Change, and GHG Emissions has been updated as follows: "Preparation of this document was supported by BAAQMD, Napa Valley Transportation Authority (NVTA) ~~Napa County Transportation and Planning Agency (NCTPA)~~, Napa Valley Community Foundation, Napa County, and the cities of American Canyon, Calistoga, Napa, St. Helena, and Yountville." The remainder of the comment does not address the adequacy of the DEIR; thus, no response is necessary.

Comment ID	Comment	Response
	recommendations in the current Bike Plan Update that were reviewed by City Staff. • Should reference Bike Plan Update currently underway. P. 5-30 • c - These are identified in the countywide Bike and Ped Plans • e - ACS is mentioned-should include Countywide Transportation Plan, Bike Plan and Ped Plan • h – should state, "…in accordance with NVTA's Countywide Transportation Plan" P. 5-32 through P. 5-43 CR1. A • Include transit facilities Cr1.K • Include transit improvements * TDM strategies should coordinate with NVTA CR2.1 Figure 5.4 reference – These exist – there is no reference to the Pedestrian Plan or proposed facilities in Bike Plan update which have created these networks. Change to, "Update comprehensive bicycle and pedestrian networks identified in the Countywide Bike and Pedestrian plans that enhance neighborhood connectivity." CR2.6 No reference to the Safe Routes to School (SRTS) program which serves St. Helena schools. P. 5-38 through P. 5-42 CR2.D • Caltrans Bicycle Transportation Account has been replaced by the Active Transportation Program-there are new requirements under this program-see requirements in adopted 2016 Pedestrian Plan-update reference. CR3.1 TDM-no discussion of SB 1339 compliance/requirements or of NVTA's TDM programs. CR3.4 TDM Programs-include coordination with NVTA CR 3.5	

Comment ID	Comment	Response
	Should mention SRTS program CR 4.5 "a" SRTS program – should be "the" SRTS program	
Individual Letters		
B1-1	December 19, 2018 Hi Noah, thanks for the note. Quick Background: I worked with Greg Desmond starting in around 2009 up through Victor Carniglia in mid-2016 on the Noise Element and the EIR. We made it a better document beyond the "boiler plate" stuff the sound consultants provide on a short budget. Everything I did and input provided was done "through channels" through Greg, to the GP consultants and then to the sound consultants. This work included a five month noise study I did on background noise levels in St. Helena, what are commonly called "ambient" noise levels, information the consultant failed to provide, or understand. All this work was done, not through the public comment process, but as a pro bono technical consultant to the City.	The comment provides background on the commenter's engagement with the General Plan Update process and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B1-2	The EIR: I had done a review for Carniglia in July 2016 of the EIR pointing out a major flaw. It has been corrected in the current IER, so I have no comments to make on that. Other than, really, 90% of the EIR is total "boiler plate" and can be found verbatim in any other noise EIR the consultant has done.	The comment is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B1-3	The Noise Element: I do have comments on this, as I fear the current form has reverted back to the original, before the work we did between 2009 and 2016.	The comment regards the Noise Element of the Draft General Plan Update and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B1-4	Let's meet the week of January 14th. We'll need some time, but this is about giving our City a quality document, right? About any time is fine with me, so let me know. In the meantime, have a great time off. I will too. :) Yours, Jerry	The comment is the closing of the letter and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B2-1	Noah, I noted with interest in the newspaper that the recent public hearing on the EIR was "poorly attended". One of the reasons suggested for the crowd of 4 persons	The comment discusses the public process in the City of St. Helena and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.

Comment ID	Comment	Response
	in attendance was that "their comments just don't matter". That sure strikes home to me. When we bought our first home here on Tainter Street in 1986, I discovered that we needed to plan our trips to buy building materials at Central Valley Supply to avoid the back-up on 29 on our return. Often, we would loop around Sulphur Springs, Crane and Valley View Streets which I'm sure the neighbors appreciated. After we moved, I had a new alternate plan; driving south on 29, across Zinfandel, and back up the Trail. One day, in total frustration, I stopped into the Planning Department to ask the OBVIOUS QUESTION. Why isn't there an alternate to and through Saint Helena that provides access to the businesses south of town. I suggested perhaps an extension of Starr or some other street, or extending Dowdell or Vintage Streets to the Trail. I was told "that is in the Plan". That made sense to me. After all, it would allow businesses like Central Valley, Harold Smith and all the rest to provide better service to the community. Added to that, emergency vehicles could have better access North and South. That was over thirty years ago. Now, I know the wheels of government turn slowly so I would stop by the Department every five or ten years to check on that issue. At first I was told it was "difficult to cross farm property", even though I did that to drive my tractor to Lampson for service and repairs. Later, other reasons were given culminating in the latest nonsensical response; "But, we are planning to put more stop lights in on highway 29 and the Trail". WHAT??? So we now have the added inconvenience of providing signal light turn-in spacing for those entering the 29 backup. Consider, reducing the traffic congestion on highway 29 would increase SAFETY. Stop lights don't decrease vehicle counts. But now, I get it. My comments just don't matter. That's why I don't stop by anymore. For what it's worth, Glenn Cook	
B3-1	In 1997, I was selected by Friends of the Napa River to sit on the Committee appointed by St. Helena's City Council to decide the best way to spend our portion of Measure A funds which were to be used to minimize the risk of flooding on Napa River and Sulphur Creek inside City Limits, with the	The comment regards the dispensation of Measure A funds and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.

Page 279 of 2442

Agenda Item #9.2.

Comment ID	Comment	Response
	requirement that any alterations would be carried out within a "Living River" context, assuring that any changes would enhance the river's environmental health while benefiting us. While most municipalities along the river (especially the City of Napa) made an honest effort to abide by the "Living River" requirement, the St. Helena Committee that took on this task was corrupt through and through, and no one other than I gave even a pretense of paying attention to "Living River" principles. It was an appalling experience for me. The fix was in from the beginning, and among the proposals that were floated was a cynical rerouting of Napa River above Pope Street bridge that would leave the riparian woodland intact for the moment, but was deliberately designed to erode and destroy both banks and all the riparian trees and habitat over a period of a few years. I made enough of a stink about that cynical plan that it was eventually dropped from consideration, but sadly nothing better was put forward. In an attempt to get the Committee to understand what the implications of their proposals would be for people living downstream and the survival of Pope Street Bridge, I personally funded through Friends of the Napa River a brief study by the highly regarded hydrology experts Philip Williams and Associates, which we gave to the St. Helena Measure A Committee so they could begin to understand the downstream impacts above Pope Street Bridge and to the bridge itself if they did one or another of their plans. Williams' mapping of flow patterns revealed great downstream risks involving the plan they settled on: the building of a long, riverside levee that cut off a huge, undeveloped, low-lying area that accommodated flood water every time there was a major rain event and took pressure off the area just above the bridge. I recall, I spent $20,000 on the Phil Williams study that gave the committee basic prognostications that would help them understand the implications of what they were proposing; but to my knowledge, that study was completely ignored by every member of the Committee and the highly paid consultants as well. That's when I washed my hands of the crooked Committee and its phony "Living River" process and quit in disgust. If anyone had genuinely cared, I was prepared to further fund Philip Williams to assure a legitimate "Living River" solution was developed, as raguirad by Measure A, which, as you may recall, passed with more than the necessary two thirds majority of the county's vote! This "super majority" made the "Living River" provision a mandatory aspect of whatever alterations were carried out	

Comment ID	Comment	Response
	using Measure A funds, as opposed to a simple majority vote that could be given little more than lip service. St. Helena's actual alteration: the huge, lengthy levee which destroyed many acres of our priceless existing floodplain, was in complete violation of both common sense and the "Living River" mandate. It was done for no reason but to destroy an existing, critically important and legally protected floodplain in order to turn all that low land into a huge housing development in the most unsuitable possible location. Now, during flood events, the changed river flow below the levee is destroying the oncestable bank just above Pope Street Bridge. A beautiful, historic mansion- I think it is 2240 Pope Street- is already being put at serious risk of toppling into Napa River as the high bank there is rapidly collapsing. This massive erosion, which will soon destroy the great old estate that existed safely there for more than a century, is a direct result of the changed flow dynamics caused by the levee's elimination of the flood plain that existed just above it. I believe the City is directly liable for the upcoming destruction of that property. The destructive, illegal levee, along with Hunter's proposed development that is bound to flood, has got to go NOW. This is all the product of a corrupt enterprise between a past Council, City staff and Hunter. Peter Mennen PO Box 421 St. Helena CA 94574 707-963-1170	
B3-2	Attachments A, B, C, D, E, F, G, H, I, J	The attachments were provided to support comment B3-1 and are noted.
B4-A-1	Re: Draft Environmental Impact Report Chapter 3.7-1 and 3.8-1 Dear Noah, My commendations on excellent maps in the sections above.	The comment is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B4-A-2	However, some of the information is not current, such as the USGS Fact Sheet relied on from 2000 has been replaced by the USGS Fact Sheet from December 2014. These areas should be re-written to reflect current statistics and realities. A copy of the 2014 Fact Sheet with predictions is enclosed.	The Seismic Conditions section on page 3.7-5 is hereby revised as follows using statistics obtained from the 2014 USGS Fact Sheet: "In a fact sheet published in ~~2003~~ 2014, the U.S. Geological Survey estimated that there was a 72 ~~62~~ percent probability that between 2014 ~~2003~~ and ~~2032~~ 2043, a 6.7 or greater magnitude earthquake will occur in the San Francisco Bay Region. The probability of a 6.7 magnitude or greater earthquake occurring along individual faults was estimated to be 22 ~~21~~ percent along the San Andreas Fault, ~~27~~ 33 percent along the Hayward-Rodgers Creek Fault, and ~~11~~ 26 percent along the Calaveras Fault (USGS, 2014) (~~USGC, 2003~~)."

Comment ID	Comment	Response
		This modification is a clarification of the content of the Draft EIR and does not affect the findings or conclusions of the environmental analysis. As noted in the Draft EIR on pages 3.7-23 through 3.7-24, neither the San Andreas Fault nor the Hayward-Rodgers Creek Fault passes through St. Helena and compliance with existing regulations and Proposed Plan policies and implementing actions would reduce potential impacts from ground shaking to the maximum extent practicable. Associated impacts would continue to be less than significant level.
B4-A-3	If the drafters of the EIR would like to consult further on seismic and fault issues related to West Napa Fault, the two authorities are Belle Philibosian, Research Geologist of the Earthquake Science Center who is actively involved in pit studies of the West Napa Fault from St. Helena to beyond Calistoga. Belle can be reached at 650-329-4784 or by cell phone at 626- 344-9159. Belle's e-mail address is bphilibosian@usgs.gov. The State Geological expert studying the West Napa Fault who has also traced with USGS its presence running through St. Helena and Calistoga to a length of 45 miles is Professor Michael Oskin, Chainnan of the Department of Geology, U.C. Davis. Dr. Oskin also served the USGS and provided a map attached from December 2014 that shows seismic activity running the length of the valley on the "west" side of Hwy. 29. In other words, the fault does not stop at the south border of St. Helena and there are several published sources I've provided verifying this. There are also visible fault damaged areas from the 2014 Napa earthquake. It appears on the USGS Map attached reaching the base of Mt. St. Helena. A website that should be viewed by the preparers of the draft EIR is easily found using google. Enter "Hayward Fault Shake Map" where three "break points" are given showing magnification of damage from a 7.0 quake along that fault. If the fault breaks in Fremont or Oakland, St. Helena is in for a greater than 8.0 quake. So please take this seriously, since the probabilities are so high of one or more events of 6. 7 or greater (72%) than noted in the current draft EIR with its outdated materials. Again, I've attached information about this.	As noted in the Draft EIR on pages 3.7-5 through 3.7-10, the Planning Area is located in a seismically active region. While there are no major regional faults or Alquist-Priolo Zones mapped in St. Helena, as shown on Figure 3.7-2 of the Draft EIR, portions of the West Napa Fault classified as an Undifferentiated Quaternary (meaning it has beenactive in the last 130,000 to 1.6 million years) pass through the City of St. Helena, based on 2018 data from the USGS and CGS. Further, the Draft EIR notes that a number of unnamed, relatively small, older faults are located at the base of the Sonoma and Vaca mountains along the margins of the Napa Valley; however, as displacement of these faults occurred more than 10,000 years ago, these faults are considered inactive according to the USGS and CGS. Accordingly, the Draft EIR found fault rupture hazard in St. Helena to be low; however, in order to further clarify this conclusion and put it in context, the second to last sentence of the fourth paragraph on page 3.7-8 of the Draft EIR is hereby revised as folows: "In comparison to other communities in the Bay Area where Alquist-Priolo Zones are present, the fault rupture hazard for the city is considered to be low." This modification is a clarification of the content of the Draft EIR and does not affect the findings or conclusions of the environmental analysis. Please see also response to comment B4-A-2. Additionally, the source information shown on Figure 3.7-2 is hereby updated to reflect the fact that 2018 data from USGS and CGS was used to create the map.
B4-A-4	The characterization made that St. Helena has less problems, otherwise there would be an Alquist-Priolo Map is inaccurate. The State Geological Survey is years behind and under-funded, thus the State's Geological Survey group selects studies based on population densities. This can be verified by Richard who	See responses to comments B4-A-2 and B4-A-3. St. Helena is located in a seismically active region with significant earthquake risk; however, in comparison to other communities in the Bay Area where Alquist-Priolo

Comment ID	Comment	Response
	handles maps for California Geological Survey in Menlo Park. Since Yountville, St. Helena and Calistoga are smaller and more rural than Napa, the CGS focus was American Canyon and Napa, and there were no funds and less priority for the State to complete maps for the upper part of the valley due to smaller populations compared to many other areas of the state waiting in line for Alquist-Priolo Maps or updates. As CGS told the press ("San Francisco Chronicle"), "we have a 300 year backlog given the meager funding provided for development of Alquist-Priolo Maps."	Zones are present, the fault rupture hazard for the city is considered to be low.
B4-A-5	I don't believe the stark probabilities of a problem from a break in the West Napa Fault should be hidden from view. Burying one's head in the sand leaves people victims of their own city personnel's biases that are not founded on reality. A 45-miles fault line = a 7.0 quake were the West Napa Fault to break. It is building pressure.	See responses to comments B4-A-2 and B4-A-3.
B4-A-6	The drafters of the EIR should also include in their references the State Guidelines for Seismically Active Areas from 2008: "Special Publication 117 A" and update their descriptions and systems as well, based on this Publication. I am sorry to see the EIR writers are so far removed from updating their records, relying on 2000 data for the most part from both the USGS and State GS. I provided you with a copy of this Publication for use by residents. Perhaps you can share it with the EIR preparers so they can update this chapter. I attach further information for your review once again. Please see that the preparers of the Draft EIR received all of the information provided with this letter. With the exception of the fault map, which isn't current, all other maps are an astounding improvement from those of years past, as are the descriptions of seismic hazards far superior. Since Napa County (not just the Bay Area) is described as Seismically Active, I believe a description should include this reality.	The comment is noted. The following text has been added to the "Seismic Hazards Mapping Act, California Public Resources Code Sections 2690–2699.6" section within the Regulatory Settings of Chapter 3.7: "Special Publication 117, "Guidelines for Evaluating and Mitigating Seismic Hazards in California" was originally published in 1997 and most recently updated in 2008. The objectives of the State Guidelines are to assist in the evaluation and mitigation of earthquake-related hazards for projects within designated zones of required investigations and promote uniform and effective statewide implementation of the evaluation and mitigation elements of the Seismic Hazards Mapping Act. The Seismic Hazards Mapping Act establishes a statewide minimum public safety standard for mitigation of earthquake hazards, to reduce the risk of ground failure during an earthquake to a level that does not cause the collapse of buildings for human occupancy. Prior to approval of a project, the State requires preparation of a geotechnical report by a registered civil engineer or certified engineering geologist that evaluates of the nature and severity of seismic hazards at the site, and applicable mitigation measures as necessary. The geotechnical report should subsequently be independently reviewed by the lead agency to determine the adequacy of the hazard evaluation and proposed mitigation measures and to determine the requirements of Section 3724(a) are satisfied. The Guidelines provide an overview of this process, including investigation of potential seismic hazards, for use at the project level.

Comment ID	Comment	Response
		Public Resources Code Section 2699 directs cities and counties to "take into account the information provided in available seismic hazard maps" when it adopts or revises the safety element of the general plan and any land-use planning or permitting ordinances. The Guidelines state that if the CEQA process is completed prior to site-specific investigation, it may be desirable to discuss a broad range of potential mitigation measures and related impacts."
B4-A-7	Also of concern with respect to Hazards in Chapter 3.8 is a risk of CONFLAGRATION, which is the result of a wind-driven firestorm, or in the alternative, a seismic event that can trigger multiple fires and gas hazards.	The comment is noted. While conflagration resulting from a wind-driven firestorm or a seismic event could occur following implementation of the Proposed Plan, the purpose of the DEIR is to satisfy the evaluation of environmental impacts required by the CEQA Guidelines. Last updated in 2018, the only significance criteria associated with fire safety listed in Appendix G of the CEQA Guidelines is VIII. Hazards and Hazardous Materials, h) "Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?" (page 288 of the 2018 CEQA Guidelines, Appendix G). This impact is assessed on page 3.8-30 of the DEIR and is determined to be less than significant based on the requirements of the California Fire Code and California Building Code (both adopted by the St. Helena Municipal Code), the California Strategic Fire Plan, and Proposed Plan policies and implementing actions that address fire safety. The determination of risk for this impact is based on the California Department of Forestry and Fire Protection Fire Hazard Severity Zones (FHSZ) mapping and Fire Threat, Fire and Resource Assessment, which both carry regulatory implications on fire safety within development under Government Code, Section 511182. This method of assessment is comprehensive and based on authoritative maps, and is in line with CEQA requirements. While conflagration is a possibility, it would be difficult to assess for the purposes of the DEIR without basing conclusions on speculation.
B4-A-8	As a policy, the City should consider adding a section with some sound policies articulated, such as banning ornamental fire features within the City's Fire Emergency Response area. The 60 plus fire pits on balconies at Las Alcobas are under the control of guests, and it could take management some time to become aware of a problem in order to shut off a gas main. Other fire features of concern	The comment suggests policies for the Draft General Plan Update and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.

Comment ID	Comment	Response
	are ornamental fire walls or area dividers like the one at Hall Winery on the second floor in their tasting room.	
B4-A-9	Thank you for this opportunity to comment. Sincerely, Lois Ann Battuello	The comment is the closing of the letter and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B4-A-10	Attachments: USGS updates and seismic facts from historic reports	The attachments were provided in support of comments B4-A-2 and B4-A-3 and are noted.

B5-1	To whom it may concern As a long time resident of St Helena, I am very concerned about the quality of life here. In this letter I will only discuss the current need for the control of traffic flow. Especially during rush hours, week ends, and holidays. In the long term there will be a need for additional connector streets to mitigate "in-town" traffic congestion.	The comment is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B5-2	For now, I feel that a "High and wide" Adams St Bridge, crossing the Napa River and aligning with the current meadowood access street on the east side of the wilverado trail, could be the cure of the updated system. This bridge should be a "500 year" flood level height since the long term climate can be unpredictable, and I remember how isolated people were during past flooding periods. Additionally, the new bridge should be at least three "wide" lanes with a protected bike and pedestrian pathway. The traffic lanes should be wide enough to comfortably accommodate tractor-trailer rigs (18 wheelers), large box trucks, long motor homes, and stretch "limos" without the need to cross into adjoining	The comment regards the circulation network in St. Helena and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.

Page 287 of 2442
Agenda Item #9.2.

Comment ID	Comment	Response
	lanes while maneuvering onto the bridge, or entering the highway from the bridge. After the Adams St bridge is completed, I think the eat Pope St Bridge should be changed to one way only, eastbound, with a protected bike and pedestrian pathway. Tractor-trailer rigs and busses should be directed to the Adams St Bridge. Enforcement could include cameras, etc, especially during peak traffic periods, with follow-up by police. Later, Starr Street should connect not only Adams and Pope Streets, but it should continue north to Deer Park and south to Dowdell Lane.	
B5-3	Sincerely, Tim Klein	The comment is the closing of the letter and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B5-4	Attachments: Adams St Bridge, St Helena map from 1989	The attachment was provided in support of comment B5-2 and is noted.
B6-1	Good afternoon, Noah I am writing to you from this address with comments on the GP EIR that are more editorial in nature than those that I expressed at the PC meeting.	The comment is the salutation of the letter and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B6-2	Most of these herein are more of a 'fix it' nature - wrong word, wrong name (in one case, wrong city), wrong place or poorly worded. A few are a bit larger than that but the most important ones were made from the dais in the hearing and with the endorsement (apparently) of my colleagues. These are lesser comments that I would have made if droning on for a couple of hours was either possible or desirable. However, in my opinion, such errors contribute to lowering the perceived veracity of any document and the GP EIR is a document one wishes to have very high perceived veracity. My colleagues have not seen or discussed these, they are my own. The document needs a good editor. This is only a weak contribution to a start as I am not trained or talented in that area. The comments were written in .odt but a .doc file - which may have made some automatic formatting changes - is also attached. As always, questions or comments are invited - John	The comment refers to specific edits, questions, and comments listed in the letter. These comments are addressed in the responses below.
B6-3	ES-1, third paragraph, third sentence. Consider adding federal environmental review as a possibility (albeit rare).	The paragraph on page ES-1 has been revised as follows: "This EIR is a program EIR that examines the potential effects resulting from implementing designated land uses and policies in the Proposed Plan. The impact assessment evaluates the Proposed Plan as a whole and identifies the

Comment ID	Comment	Response
		broad, regional effects that may occur with its implementation. As a programmatic document, this EIR does not assess site-specific impacts. Any future development project made possible by the Proposed Plan would be subject to individual, site-specific environmental review, as required by State law. Any future development project that receives federal support, including transit projects receiving FTA funds, would be subject to federal environmental review, as required by NEPA."
B6-4	Also consider not capitalizing "State" throughout the document, especially since federal is not capitalized anywhere in the document.	The comment is noted. The capitalization of State refers to the State as an acting agency, similarly to the capitalization of the City throughout the DEIR in reference to the City of St. Helena. State in its capitalized form is used when referring to programs, policies, and regulations issued by the State of California. Federal is an adjective and does not require capitalization. Therefore, no change is necessary.
B6-5	ES-1, Proposed Plan, first paragraph, last sentence. Consider changing "fully replace" since, as correctly noted further along in the document, the housing element will not be replaced.	The sentence on page ES-1 has been revised as follows: "The Proposed Plan, which establishes a long-range planning framework and policies, would ~~fully~~ replace the City's existing General Plan if adopted by the City Council, but would retain the City's updated Housing Element."
B6-6	ES-4, Tables ES-1 and 2. Consider eliminating rounding to the nearest 100. Not only does this result in some intuitively confusing totals, but rounding to the nearest 100 with such small numbers leads to very large uncertainties on a percentage basis. In addition, in other locations in the document, exact numbers are depicted. Even the State Department of Finance now uses exact numbers in their E-1 population estimates.	See response to comment A3-B-10.
B6-7	ES-5, Transportation Network Enhancement Alternative, second paragraph, third sentence. Please do not capitalize "downtown" as it is not a proper noun. Excess capitalization seemingly appears often in the document; please consider removing all such cases ("CALTRANS", "Planning Area" or "Tribal Cultural" for examples).	The sentence on page ES-5 has been revised as follows: "The roadway would be designed to provide a high-quality bicycle and pedestrian connection to Ddowntown St. Helena, with a full Class I path along the west side of the street."
B6-8	ES-9, Transportation and Traffic, second paragraph. Please write out "Twenty-seven" (or any number if it begins a sentence).	The sentence on page ES-9 has been revised as follows: "~~27~~ Twenty-seven intersections were studied as part of the analysis under the General Plan Buildout."
B6-9	ES-10, Identification of Environmentally Superior Alternative, first paragraph. Consider writing numbers consistently in the text. In this paragraph, some	The comment is noted. Throughout the DEIR, numbers below 10 are written while numbers above 10 are written with numerals, with the exception of the

Comment ID	Comment	Response
	numbers are written ("six" and "seven") while another one word number ("11") is not. Generally either all numbers are written with numerals (except when beginning a sentence), no numbers are written with numerals or only numbers that can not be written with one or two words are shown as numerals.	sentence addressed above. The comment does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B6-10	1- 2, Intended Uses of the EIR, last sentence. Please consider changing the name "Napa Valley Transit Authority" to the correct name.	The sentence has been revised as follows: "Other agencies expected to use the EIR include: Napa County, the Napa County Local Agency Formation Commission (LAFCO), and the Napa Valley ~~Transit~~ Transportation Authority (NVTA), as well as State agencies such as the State Water Resources Control Board and Caltrans, and any other responsible or trustee agencies. "
B6-11	2-14, Urban Limit Line, third sentence. Please consider changing the end of the sentence to read, for the sake of clarity, "as described in Table 2.3-2.	The sentence has been revised as follows: "The Proposed Plan would adjust the ULL in two locations, at change areas 1 and 9 as described ~~below~~ in Table 2.3-2."
B6-12	2-21, Tables. Please see comment ES-4.	Please see response to comment B6-A-5, above.
B6-13	2-22, Table 2.3-5. Consider correcting the Study Areas column.	Please see response to comment A2-B-4, above.
B6-14	3.1-3, Open Space and Agriculture, second sentence. Is it 65 percent, 75 percent or 65 to 75 percent? Please clarify.	The sentence has been revised as follows: "The Proposed Plan designates approximately 65 ~~75~~ percent of the city as open space, agricultural land, woodlands/watershed, and/or parkland. Of this, about 71 percent is agricultural acreage."
B6-15	3.1-4, Light and Glare, last sentence. This reads as a flat conclusion but does not appear to be buttressed by data. Please consider either adding information or softening the sentence (for example, "...appear to be typical for an urbanized setting").	The sentence has been revised as follows: "The light and glare that exist in developed areas of the city ~~are~~ appear to be typical for an urbanized setting."
B6-16	3.1-10, CD5.E and 3.1-11, Impact 3.1-2 last sentence. It looks a bit odd calling for the city to consider having SR 29 designated a scenic highway (CD5.E) and at the same time writing that the new GP will not impact any scenic highway as the city has none. Consider deleting, "...lack of any designated state scenic highways with in the City and...", or making it clear that even if SR 29 is designated as a scenic highway, the polices in the plan will ensure that there are no impacts to scenic resources.	The paragraph has been revised as follows: "~~Due to the lack of any designated state scenic highways within the city and~~ As discussed, while the planning area does not currently contain any designated state scenic highways, SR-29 has been identified as eligible for such designation. However, policies and implementing actions included in the Proposed Plan would ensure that impacts on scenic resources within a state scenic highway would be less than significant."

Page 290 of 2442

Agenda Item #9.2.

Comment ID	Comment	Response
B6-17	3.1-12, second paragraph, second line from the end. Please consider replacing "main" with "all" as CD1.8 does not appear to limit itself to any particular roadway type	The sentence has been revised as follows: "Policy CD1.8 addresses the aesthetic effects of overhead wires and cables on ~~main~~ all roadways in the community."
B6-18	3.2-2, Agricultural Context, second sentence. Consider replacing the value given for agricultural production in Napa county with a figure considerably larger than the $737,298 shown.	The sentence has been revised as follows: "The Planning Area is located in Napa County, which ranked in the top 20 California counties for total value of production at $757,115,100 (Napa County, 2018). ~~$737,298 (CDFA, 2016).~~" The new source for this value is Napa County's 2017 Agricultural Crop Report, published in 2018.
B6-19	3.2-2, Farmland Characteristics. Consider rewording the second sentence, Agricultural uses as shown on Figure 3.2-1 are spread throughout the city, not simply adjacent to the ULL.	The sentence has been revised as follows: "Agricultural uses in the City of St. Helena are located throughout the city, with large areas around the periphery of the city adjacent to the City's Urban Limit Line (ULL)., ~~with large areas around the periphery of the city.~~ Agricultural uses surround the residential, commercial, and industrial land uses that are largely clustered in the center of the Planning Area."
B6-20	3.2-8, Napa County Measures J and P, second sentence. Consider replacing "Ma" with "Map".	The sentence has been revised as follows: "The Measure ensured that any lands designated as Agriculture, Watershed, and Open Space or Agricultural Resource on the Napa County General Land Use Map adopted in 1975 would remain so designated until December 1, 2020 unless annexed, redesignated by vote of the people, or redesignated by the Board of Supervisors given findings that the land is unsuitable for agriculture and not likely to be annexed, or to avoid unconstitutional taking of property, or to comply with State statutes concerning siting of solid waste facilities."
B6-21	3.2-12, Methodology and Assumptions, second paragraph. Please consider replacing, "The Planning Area for the Proposed Plan..." with the simpler, just as accurate and easier to read, "The planning area ...". Consider a universal search and replace, as the wordy phrase is used multiple times.	The sentence has been revised as follows: "The Planning Area ~~for the Proposed Plan~~ includes three study areas in unincorporated Napa County immediately adjacent to the city limits where the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities (see Chapter 2: Project Description for additional details)."
B6-22	3.3-3, Carbon Monoxide, fourth sentence. Please consider rewording – perhaps "not photochemically reactive" or "not an ozone precursor". It is a reactive compound, burning easily and binding to hemoglobin much more readily than oxygen.	The sentence has been revised as follows: "CO is an ~~non-reactive~~ air pollutant that dissipates relatively quickly and is not photochemically reactive; therefore, ambient CO concentrations generally follow the spatial and temporal distributions of vehicular traffic."

Comment ID	Comment	Response
B6-23	3.3-5, Table 3.3-1, Notes 4 and 5. For Note 4, please consider updating the expected designation date. For Note 5, please consider removing it from the Federal Standards Classification column for lead and adding it to the State Standards Classification column for both lead and vinyl chloride.	Note 4 has been revised as follows: "To attain this standard, the 3-year average of the 98th percentile of the daily maximum 1-hour average at each monitor within an area must not exceed 0.100ppm (effective January 22, 2010). ~~The US Environmental Protection Agency (EPA) expects to make a designation for the Bay Area by the end of 2017.~~ As of December 31, 2018, the Bay Area is in attainment of federal standards for sulfur dioxide per the US Environmental Protection Agency (EPA)." Table 3.3-1 on page 3.3-5 of Chapter 3.3: Air Quality has been revised to remove the Note 5 superscript from the Federal Standards Classification column for leas and to add the Note 5 superscript to the State Standards Classification columns for both lead and vinyl chloride.
B6-24	3.3-6, second paragraph, second sentence. Please consider rewording. The sentence appears to read that the air basin exceeded the state one-hour standard five times and the federal one-hour standard two times when Table 3.3-1 shows no federal one-hour standard. If the sentence is attempting to read that the the state one-hour standard was exceeded five times and the federal eight-hour standard was exceeded two times, please write that.	The paragraph has been revised as follows: "The most recent set of monitoring data from the Jefferson Street site indicates that ozone levels in Napa did not exceed federal standards in 2017 but did exceed state standards one day per year. In both 2013 and 2017, 8-hour ozone levels basin wide exceeded both state and federal standards on two days per year. Neither state nor federal standards for 1-hour or 8-hour ozone levels were exceeded between 2014 and 2016. ~~During this same period, 1-hour ozone levels basin-wide exceeded state standards on five days per year and federal standards on two days per year. During this same period, 8-hour ozone levels basin-wide exceeded state standards on six days per year and federal standards on two to six days per year, depending on the exact standard used.~~"
B6-25	3.3-8, Federal Clean Air Act, first paragraph, second sentence. Consider changing "CAA" reference to the California Clean Air Act to CCAA. Further, consider moving the entire sentence on the CCAA to the following section covering that law.	The sections have been revised as follows: "Federal Clean Air Act The Federal Clean Air Act governs air quality in the United States. In addition to being subject to federal requirements, air quality in California is also governed by more stringent regulations under the California Clean Air Act (CAA). At the federal level, the U.S. EPA administers the CCAA. Regulations under the CCAA are described below. State Air Quality Standards California Clean Air Act The California Clean Air Act (CCAA) is administered by CARB at the state level and by the Air Quality Management Districts at the regional and local levels. BAAQMD regulates air quality at the regional level for the nine-county Bay Area, including the City of St. Helena and Napa County. Under the CCAA, the U.S. EPA has established concentration-based

Comment ID	Comment	Response
		NAAQS for criteria air pollutants (see Table 3.3-3) and has identified hazardous air pollutants, for which emissions standards are developed. The NAAQS are periodically reviewed as new health information is made available."
B6-26	3.3-14, Bay Area Air Quality Management District, second paragraph, first sentence. What is, "The air quality study area…"? If it is the planning area, please so state; if it is some other area, please describe how it is related to the planning area.	The sentence has been revised as follows: ~~The air quality study~~ planning area falls under the jurisdiction of BAAQMD."
B6-27	3.3-24, CR1.7. Consider altering the sentence to read "...with the owners ..." or perhaps "... with the new owners ..." - although not so new anymore.	The comment suggests a revision to a Draft General Plan Update policy and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B6-28	3.3-30, Applicable Control Measures, first paragraph. Please capitalize "Buildings" (#4	The sentence has been revised as follows: "The control measures are classified for the following nine general sectors: (1) Stationary Sources; (2) Transportation; (3) Energy; (4) ~~b~~Buildings; (5) Agriculture; (6) Natural and Working Lands; (7) Waste Management; (8) Water; and (9) Super-GHG Pollutants."
B6-29	3.3-31, Table 3.3-6, TR8. Please consider rewording as St. Helena is not the only rural community in the Bay Area and opportunities for ridesharing services and incentives are well more than "somewhat" limited. Would suggest the deletion of "relatively" and "somewhat" and the addition of "most" between "to other"	The sentence has been revised as follows: "St. Helena is ~~relatively~~ rural ~~compared to other Bay Area communities~~, so opportunities to effectively expand rideshare services and incentives are ~~somewhat~~ limited compared to most other urban Bay Area communities."
B6-30	3.3-37, Table 3.3-7, Note 2. Please consider deleting "...such as the Proposed Plan," as unnecessarily repetitive. 3.3-38, Table 3.3-8, Note 2. Please see above. Also consider "general plan" rather than "specific plan".	Table 3.3-7, Note 2 has been revised as follows: "BAAQMD's project-level thresholds were developed to analyze emissions generated by a single project and so offer an extremely conservative evaluation of emissions from an entire general plan such as the Proposed Plan." Table 3.3-8, Note 2 has been revised as follows: "BAAQMD's project-level thresholds were developed to analyze emissions generated by a single project and so offer an extremely conservative evaluation of emissions from an entire general ~~specific~~ plan ~~such as the Proposed Plan~~."
B6-31	3.3-42, AQ-1, fifth bullet. "Laying building pads ..."- is this intended to read "Pour"? In addition many structures in St. Helena have live, not poured floors. Is there a suggestion for those structures as well?	The comment is noted. "Laying building pads" has the same meaning as to pour or build a slab foundation and no change is necessary. The mitigation measure refers only to poured floors in an attempt to minimize construction-related impacts on air quality for new developments.

Comment ID	Comment	Response
B6-32	3.3-42, AQ-1, seventh bullet. Is the check by the certified mechanic (and certified by who for what?) supposed to take place each day, month, project? 3.3-42, AQ-1, eighth bullet. Consider adding "for example" just after the parenthetical statement begins. 3.3-42, AQ-1, what should be the tenth bullet. Consider placing a bullet before "Where warranted" and removing the underline. Also consider tabing in the next two paragraphs and beginning them with "Power" and "Ensure", respectively.	AQ-1, Bullet 7 on page 3.3-42 has been revised as follows: "Maintaining and properly tuning all construction equipment in accordance with manufacturer's specifications. All equipment shall be checked by a certified automotive mechanic and determined to be running in proper working condition prior to operation at the beginning of each project." AQ-1, Bullet 8 has been revised as follows: "Staging construction equipment as far as possible from existing sensitive receptors (for example, away from the southeast property line and surrounding residences)." AQ-1, Bullet 10 has been revised as follows: "Where warranted, the project sponsors shall incorporate the following language into construction specifications if significant risk is anticipated based on design level construction schedule, duration and concurrent construction activities:" The sentence has been updated to remove the underline and create a new bullet, and is followed by the subsequent sub-bullets. The bullets have been tabbed to be sub-bullets within the tenth bullet, and have been revised as follows: "•Where warranted, the project sponsors shall incorporate the following language into construction specifications if significant risk is anticipated based on design level construction schedule, duration and concurrent construction activities: -Power~~ing~~ portable equipment by electricity if available or if electricity is not available, using propane or natural gas if feasible. Diesel engines shall only be used if electricity is not available and it is not feasible to use propane or natural gas. -Ensure~~ing~~ that all mobile diesel-powered off-road equipment larger than 25 horsepower and operating on the site for more than two days continuously or 20 hours cumulative meets, at a minimum, U.S. EPA particulate matter emissions standards for Tier 2 engines or equivalent and be equipped with diesel particulate matter filters that meet CARB-certified Level 2 or 3 Diesel Particulate Filters. Alternatively-fueled equipment (i.e., non-diesel) would meet this requirement."

Comment ID	Comment	Response
B6-33	3.3-47, second paragraph, first sentence. Consider "21-year".	The sentence has been revised as follows: "Construction activities under the Proposed Plan would be dispersed intermittently over a ~~22~~ 21-year period and would not expose an individual to a continuous source of pollution."
B6-34	3.3-48, second paragraph, second sentence. Please consider ending the sentence with "approval" or perhaps "action by the city".	The sentence has been revised as follows: "Additionally, Mitigation Measure AQ-3 requires any new use with the potential to generate point source pollution to be referred to the BAAQMD for review and comment prior to ~~adoption~~ action by the city.
B6-35	3.3-48, Gasoline Stations. Wasn't Flyers near the corner of 29 and Inglewood in area 3? It is now an open and operating Mobil station.	The section has been revised as follows: The City of St. Helena currently has ~~three~~ four gas stations located along State Route 29: Chevron, 76, ~~and~~ Napa Valley Petroleum, and Mobil. ~~A fourth gas station, Flyers, is permanently closed and~~ The Mobil gas station, previously Flyers, is located outside of the Planning Area."
B6-36	3.3-50 Table 3.3-9. Consider including the address of Nella Oil and capitalizing "Main" in the address for St. Helena Petroleum.	Table 3.3-9 on page 3.3-50 has been revised as follows: "St Helena Petroleum, Gasoline Station Plant G8851 1153 ~~m~~Main Street" The address of Nella Oil has been updated to "800 St. Helena Highway."
B6-37	3.4-1, Habitat Types, first sentence. Consider the wooded hillside and the interspersed housing on and near Howell Mountain Road on the east side of the city and alter the sentence accordingly.	The sentence has been revised as follows: "St. Helena is characterized by a mix of urban development and agricultural uses with ~~some undeveloped wooded hillsides to the east and west of the city center and~~ wooded hillsides interspersed with residential development to the east and west of the city center."
B6-38	3.4-4, Orchard-Vineyard, fifth sentence. It is probably an exaggeration to claim that "...under the vines are usually sprayed with a herbicide ...", as there are many organic and semi-organic growers in the region. Consider "sometimes" or even "often".	The sentence has been revised as follows: "Rows under the vines are often sprayed with herbicides to prevent growth of herbaceous plants, with the exception of organic and semi-organic vineyards."
B6-39	3.5-2, third and fifth paragraphs. Please consider removing all of the quotation marks.	The third paragraph on page 3.5-2 has been revised as follows: "Evidence of Emergent Period occupation, including Rattlesnake Series and Stockton Series projectile points, is commonly found at sites in St. Helena and the vicinity." The fifth paragraph on page 3.5-2 has been revised as follows: "This settlement pattern is similar to the tribelet or village community typical of most California groups at the time of Euro-American contact (Kroeber, 1932) (Kroeber, Handbook of the Indians of California, 1925)."

Comment ID	Comment	Response
B6-40	3.5-4, third paragraph, first sentence. Calistoga will probably be surprised to find it is not in the Napa valley. Is this supposed to read "... extended from St. Helena to Calistoga ..."?	The sentence has been revised as follows: "After 1868, when the railroad was extended from St. Helena ~~the Napa Valley~~ to Calistoga, the largely open, sparsely-setting farmland was rapidly parceled out."
B6-41	3.5, Figure 3.5-2. The figure includes 1380 Main Street. Wasn't that the old gas station that has been removed?	This comment is noted. Originally built in 1932, the historic gas station at 1380 Main Street was identified as a contributing historical resource in 2006, but was later demolished in 2014 and is now an office/retail building. Figure 3.5-2 in Chapter 3.5: Cultural, Historic, and Tribal Cultural Resources has been revised to reflect this change.
B6-42	3.6-7, second paragraph, first sentence. Please consider writing out ozone. In addition "higher O3 days" means more days exceeding state and/or federal standards, higher concentrations or both?	The sentence has been revised as follows: "Some of the potential impacts in California of global warming may include loss in snow pack, sea level rise, more extreme heat days per year, more days of higher ozone concentration ~~O3 days~~ per year, larger forest fires, and more drought years."
B6-43	3.6-8, Energy Star Program, second to the last sentence. Please consider deleting "though a Rater" as unneeded. If it is desirable to retain the phrase, consider "as determined by an approved rater".	The sentence has been updated as follows: "To earn the Energy Star certification in California, site-built or modular homes must meet energy efficiency the performance target as determined by energy modeling through a CEC-approved software program, construct the home using the preferred set of efficiency measures, and verify that the home meets every item on the National Rater Checklist as determined by an approved rater ~~through a Rater~~."
B6-44	3.6-17, Executive Order S-1-07. Please consider writing out "LCFS" the first time it is used in the paragraph.	The sentence on page 3.6-13 under heading Executive Order S-1-07 has been revised as follows: "Issued on January 18, 2007, Executive Order S-1-07 sets a declining Low Carbon Fuel Standard (LCFS) for GHG emissions measured in CO2e gram per unit of fuel energy sold in California."
B6-45	3.6-17, Plan Bay Area, first and third paragraphs. Consider writing out PDA in the first paragraph, rather than the third.	The first paragraph on page 3.6-17 has been revised as follows: "The Plan assists jurisdictions seeking to implement the Plan at the local level by providing funding for Priority Development Area (PDA) planning and transportation projects." The third paragraph on page 3.6-17 has been revised as follows: "Plan Bay Area also identifies strategic investments that provide support for focused growth in PDAs ~~Priority Development Areas~~ (of which St. Helena has none, due to its small size and limited public transportation infrastructure), including the new One Bay Area Grant program."

Comment ID	Comment	Response
B6-46	3.6-17, BAAQMD, first sentence. As is noted correctly elsewhere in the document, the BAAQMD covers most, but not all of the nine Bay Area counties. Please consider adding "most" to the sentence.	The sentence has been revised as follows: "The Bay Area Air Quality Management District (BAAQMD) has local jurisdiction over air quality in most of the San Francisco Bay Area, including projects in the Planning Area."
B6-47	3.6-26, LU1.A. Consider rewording. State statute allows the division of single family homes into two units (one main unit and an ADU) by right. 3.6-31, PS1.I. Consider updating the reference to the BAAQMD's 2000 CAP to the 2017 CAP. 3.6.31, CC1.B. Consider updating by deleting the reference to a new transit center. NVTA has a new transit center just off Soscol Avenue in Napa. 3.6-33, CC3.A and CC3.B. Please consider shifting the deadline for these two new programs; while a 2020 target was fine in 2010, it is too short for a GP that will not be adopted until halfway through the first quarter of 2019. 3.6-33 and -34, CC4.4 and CC4.J. The first calls for expanding the city's urban forestry program, while the second calls for the establishment of such a program. Shouldn't the policy call for the creation of the program as well as the implementing action if such a program does not exist? And if the program does exist, then the implementing action needs correction. Consider determining which is correct and then crafting the policy and implementing action accordingly.	The comment suggests a revision to a Draft General Plan Update policy and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B6-48	3.6-36, Impact 3.6-1. Please consider including per year with the emissions target. Note that sometimes it is included in the chapter and sometimes it is not - leading to some possible confusion.	All references to the efficiency metric have been revised to read MTCO2e per service population per year. All references to total emissions remain MTCO2e per year.
B6-49	3.6-39, Transportation Improvements. The Wine Train is not - according to court determination - a transportation service; please do not reference it as such, imply that it is a transportation service or claim it is useable as a transportation service. There is no "Napa Valley Transit Authority"; please correctly reference the agency. Napa County does not provide transit services; thus partnering with the County of Napa will not be successful. NVTA operates all of the public transit based in the Napa communities	The section has been revised as follows: "The City of St. Helena is accessible to neighboring communities via public transit and visitor-oriented rail service. The city is served by Napa Valley Transportation Authority (NVTA) bus routes ~~and the Wine Train~~, which connect St. Helena to Napa, Calistoga, and other surrounding cities. NVTA also runs the Vine para-transit shuttle, which is an on-call shuttle service for persons with disabilities. Proposed Plan policies seek to further transit improvement efforts by enhancing bus

Comment ID	Comment	Response
		and para-transit services, providing shuttle services, and partnering with NVTA ~~Napa County~~ to increase transit service and ridership (Policy 1.3 and implementing actions CC1.B and CC1.E). ~~Policies within the Circulation Element also look to explore options to utilize the Wine Train as a means to reduce VMT and driving trips (Policy CR1.7).~~"
B6-50	3.6-44, Plan Bay Area. Please consider rewording. Some sections of the document credit MTC with the RTP/SCS, others credit both MTC and ABAG and this seemingly credits ABAG alone. Consider determining which is correct and remaining consistent.	The section has been revised as follows: "The ~~ABAG~~ RTP/SCS adopted by MTC and ABAG, Plan Bay Area, includes a set of policy objectives related to mobility, system preservation and safety, social equity, healthy environment, and economic growth. The RTP will assist in ~~ABAG's~~ ABAG jurisdictions' implementation of SB 375, the California Global Warming Solutions Act of 2006, and regional GHG targets."
B6-51	3.7-17. Two sections on this page cover the Disaster Mitigation Act. Please consider combining the sections.	The comment is noted. The first section provides context for the Disaster Mitigation act as a federal regulation, while the second section provides local and state-level context. The two section have been combined under the State Regulations heading as follows: "Disaster Mitigation Act of 2000 The Disaster Mitigation Act of 2000 is a federal regulation which requires a state mitigation plan as a condition of disaster assistance, adding incentives for increased coordination and integration of mitigation activities at the state level through the establishment of requirements for two different levels of state plans: "Standard" and "Enhanced." States that develop an approved Enhanced State Plan can increase the amount of funding available through the Hazard Mitigation Grant Program. In addition, the Disaster Mitigation Act also established a requirement for local mitigation plans. The Disaster Mitigation Act of 2000 (DMA2K) (Public Law 106-390) also amended the Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1988 to establish a Pre-Disaster Mitigation (PDM) program and new requirements for the federal post-disaster Hazard Mitigation Grant Program (HMGP). DMA2K encourages and rewards local and state pre-disaster planning. It promotes sustainability and seeks to integrate state and local planning with an overall goal of strengthening statewide hazard mitigation. This enhanced planning approach enables local, tribal, and state governments to identify specific strategies for reducing probable impacts of natural hazards such as floods, fire, and earthquakes. In order to be eligible for hazard mitigation funding after November 1, 2004, local governments are required to develop a Hazard Mitigation Plan that incorporates specific program elements of the DMA2K law. In the Bay Area, the Association of

Comment ID	Comment	Response
		Bay Area Governments (ABAG) has adopted a multi-jurisdictional FEMA-approved 2010 Local Hazard Mitigation Plan Update, which cities and counties can adopt and use, in full or in part, in lieu of preparing all or part of a Local Hazard Mitigation Plan themselves (ABAG, 2010). The City of St. Helena has not adopted ABAG's multi-jurisdictional Plan but has participated in the Napa County Operational Area Hazard Management Plan."
B6-52	3.7-17, State Multi-Hazard Mitigation Plan, first sentence. Please consider adding "... which allows the state..." after "State of California".	The sentence has been revised as follows: "The State Hazard Mitigation Plan (SHMP) is a federally required official statement of the state's hazard identification, vulnerability analysis, and hazard mitigation strategy (44 Code of Federal Regulations, Subpart M, Section 206.401) under the DMA2K for the State of California which allows the state to receive federal funds for disaster assistance grant programs."
B6-53	3.8-1, bullet points, second to the last sentence. The Pratt Street bridge may well be partially in the city and partially in the county – the county maintains the bridge. Please check and modify the sentence accordingly.	The bullet point has been revised as follows: "The Pratt Street Bridge is also a crossing of the Napa River partially within St. Helena and partially within the larger Napa County; however, it is currently closed due to a landslide. The County is responsible for maintenance of the bridge but has not provided a schedule of the planned opening of the bridge."
B6-54	3.8-2, first paragraph, last sentence. Please consider deleting "... to a limited extent ..." as methane is a hazardous material and is used extensively in residential areas.	The sentence has been revised as follows: "Hazardous materials are commonly used in commercial, agricultural and industrial applications, as well as in residential areas in the case of methane. ~~to a limited extent.~~"
B6-55	3.8-2, Hazardous Materials Transport, fourth sentence. Please consider deleting "...occasionally runs freight service ..." as it is non-existent in the St. Helena block and has been for years.	The sentence has been revised as follows: "The Napa Valley Wine Train, which typically runs service for tourists through Napa Valley and runs through the City of St. Helena, ~~occasionally runs freight service, and~~ could be used to transport hazardous materials (Giaccio, 2018)."
B6-56	3.8-4, last paragraph, last full sentence. Consider rewording. The next five years would be out to 2023 or 24, not 2020.	The site referenced in the comment requires a 5-year review report due by the year 2020. The sentence has been revised as follows: "Groundwater cleanup of this site is nearing completion, with DTSC requiring monitoring wells to be in place for the next five years until the year 2020, when a five year review report is due (Department of Toxic Substances Control, 2018)."
B6-57	3.8-5, Table 3.8-1. The Noble site at 1132Main Street is listed twice and it is not clear if this is due to an error or two different locations on the same property. The PG&E property is also listed twice, as is the property at 607 Highway 29,	The Noble site at 1132 Main Street listed in Table 3.8-1 and addressed in the comment is listed twice under the SWQCB Cleanup Sites heading, but is in fact the same site. Table 3.8-1 has been revised to remove the duplicate

Comment ID	Comment	Response
	under SWRCB and DTSC locations. Are these double listings actually separate sites or the same sites as carried by different agencies? If they are the same sites, the total number of sites as depicted in the paragraph directly above the Table is not correct. The Table does not seem to identify the Mobile station near Inglewood and SR 29 as an SWRCB permitted site but does note it as a LUST site. Please clarify.	listing of the Noble site. The PG&E site at 1301-1301 Mitchell Drive listed under both the SWQCB Cleanup Sites and DTSC Cleanup Sites. While both listings refer to the same site, cleanup actions at the PG&E site are carried out by two separate agencies and remain in Table 3.8-1. The sentence in the proceeding section has been revised as follows: "A shown on Table 3.8-1 and Figure 3.8-2, of the 40 41 total hazardous materials sites in the Planning Area, 35 36 are now listed as closed cases by their regulatory agency." The SWQCB Geotracker tool identifies Tesoro (Flyers) at 800 St. Helena Highway as a Permitted Underground Storage Tank (UST). The Mobil station discussed in the comment has since replaced the original Flyers gas station at this location. Table 3.8-1 has been revised to include Mobil as an additional Permitted UST and the proceeding sentence has been updated with accurate totals. The updated numbers include the removal of the duplicate Noble site record, consideration of only one PG&E site in the total, and the additional Permitted Underground Storage Tank.
B6-58	3.8-16, California Health and Safety Code, second sentence. Please consider changing the reference to Napa County from Alameda County.	The sentence has been revised as follows: "In Napa ~~Alameda~~ County, these two programs are referred to as the Hazardous Materials Business Plan (HMBP) program and the California Accidental Release Program (CalARP)."
B6-59	3.8-27, Impact 3.8-3, first paragraph, next to the last sentence. The St. Helena Catholic School has closed and it is not expected to reopen.	The sentence has been revised as follows: "While nearly all schools within the Planning Area are within a one-quarter mile buffer of agriculture land uses, only two ~~three~~ schools (St. Helena High School, and St. Helena Primary School, ~~and St. Helena Catholic School~~) are open and in close proximity to industrial land uses."
B6-60	3.9, Figure 3.9-3. Please consider changing the percentage chance shown in the key for 500-year events to 0.2%.	The key for Figure 3.9-3 has been revised as follows: "500-Year Flood Zone (0.2% ~~2%~~ Annual Chance Flood Hazard)."
B6-61	3.10-3, Table 3.10-1. Please change "Row" to "ROW" after "Transportation/Road".	The entry in Table 3.10-1 has been revised to read "Railroad Row" instead of "Railroad ROW."
B6-62	Figure 3.10-1. Valley View Avenue appears to be incorrectly labeled as Crane Avenue. The incorrect label also appears on other maps (see, for example, Figure 3.11-1), but not all, in the document.	The comment is noted. All mislabeled figures in the DEIR have been updated to correctly label the roadway segment between Spring Street and Charter Oak Avenue as Valley View Street.
B6-63	3.10-14, California Public Utilities Commission, last sentence. According to adjudicated determination, the city has significantly more than "some" authority	The sentence has been revised as follows: "The City has ~~some~~ authority to regulate specific uses and activities."

Comment ID	Comment	Response
	to regulate particular activities of the excursion rail service – for selected actions, the decision is solely the city's. Please consider deleting "some".	
B6-64	3.10-20, LU1.4. Please consider making "LU1.6" the beginning of a new bullet section 3.10-21, LU1.E. Please consider making "LU2.1" the beginning of a new bullet section. 3.10-21, LU5.2. Please consider ending the sentence with one period.	A new bullet with LU1.6 has been added to page 3.10-20, a new bullet with LU2.1 has been added to page 3.10-20, and the duplicate period has been removed from the LU5.2 bullet on page 3.10-21.
B6-65	3.11-7 & 8, Table 3.11-3. Please consider clarifying either though a note or an addition to the title that the nose levels were calculated based partly on traffic counts. It is also curious that Note 2 states that the truck volumes were set at two percent for all roadways. However, the truck volumes for Main Street are available from Caltrans and are significantly higher than two percent. Why was the more accurate Caltrans figures not utilized? Further, Note 3 states that the speeds were assigned based on road type while the posted speeds are readily available.	The comment is noted. On page 3.11-8, Table 3.11-3 contains a note stating the following: "Notes: 1. Traffic volumes are per Fehr & Peers data received August 1, 2018. 2. Truck percentage assumed to be 2% for all roadways. 3. Speeds are estimated based on roadway type." Note 1, which addresses traffic volumes, implies that the existing noise traffic levels are based on traffic counts. No change is necessary. Noise levels for Main Street were calibrated directly based on noise measurements on-site. Therefore, the assumed parameters stated in Notes 2 and 3 do not apply to Main Street. Truck volumes are not available from Caltrans for all roadways within the Planning Area, thus Note 2 stands. Speeds were assigned based on road type rather than posted speeds in order to account for variation throughout the day in actual volume and speed of cars. The Notes section of Table 3.11-3 has been revised as follows to clarify this exception: "Notes: 1. Traffic volumes are per Fehr & Peers data received August 1, 2018. 2. Noise levels for Main Street calibrated directly based on noise measurements on-site. 3.2. Truck percentage assumed to be 2% for all roadways, with the exception of Main Street. 4.3. Speeds are estimated based on roadway type."
B6-66	3.11-19, PS2.D. Is Ldn the same as DNL? If so, please consider being consistent in the use of terms. If not, please include in the definition of terms, Table 3.11-1.	The comment is noted. Ldn and DNL both refer to the day-night average sound level, and can use interchangeably. This is noted in Table 3.11-11 on page 3.11-27. A sentence within the Railway subheading on page 3.11-8 has been revised as follows: "Day-night average noise levels are calculated to be 64 dBA ~~Ldn~~ DNL at a distance of 50 feet from the tracks assuming four trips per day between the hours of 7:00 a.m. and 10:00 p.m." However, this comment refers specifically to a General Plan policy and not the adequacy of the DEIR, so no change to PS2.D on page 3.11-19 is necessary.

Comment ID	Comment	Response
B6-67	3.11-20, PS2.H. Please consider deleting "vehicles and motorcycles" as it would likely be illegal to "regulate" them in such a way as to restrict access to residential (or nearly any) publicly owned street which may be adjacent to sensitive receptors, as defined.	The comment suggests a revision to a Draft General Plan Update policy and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B6-68	3.1-23,Table 3.11-11. Please see comment for Table 3.11-3.	Please see response to comment B5-A-65, above.
B6-69	3.11-29, first paragraph. This paragraph claims that the proposed plan sets thresholds in CNEL while on page 3.11-19, where the relevant polices of the proposed plan are depicted, the term used, particularly in PS2.C, is LAdn. Are these terms identical? LAdn does not seem to appear in the Definition of Terms, Table 3.11-1. Please consider the consistent use of terms, particularly for the lay reader.	The comment is noted. LAdn is the A-weighted day-night level of noise measured in A-weighted decibels (dbA), and is useful for describing transportation noise resulting from aircraft and vehicle activities. The terms LAdn and Ldn can be used interchangeably. CNEL is the average A-weighted noise level during a 24-hour day, obtained after addition of 5 decibels in the evening from 7:00 pm to 10:00 pm and after addition of 10 decibels to sound levels measured in the night between 10:00 pm and 7:00 am. For practical purposes, the tems LAdn, Ldn, DNL, and CNEL can be used interchangeably, as noted in Table 3.11-11.
B6-70	3.12-2, Table 3.12-1, Please consider deleting "Other:" as it only applies to the fire marshal.	The entry in Table 3.12-1 has been updated to read "Fire Marshal" instead of "Other: Fire Marshal."
B6-71	3.12-6, Libraries, first paragraph. The data in the paragraph is putatively from the 2015-16 fiscal year, but the year reported in the citation is 2015. Please clarify.	The citation refers to email communication with Chris Kreiden, the Library Director of the City of St. Helena, in 2015 and 2018. The citation refers to information provided by Mr. Kreiden regarding the adequacy of the facility to house the Children's department, provide study space, and offer sufficient space or parking for events. This comment refers to visits and circulation in the 2015-16 fiscal year, discussed in the second to last sentence of this paragraph. This information was obtained from the California State Library 2016 report. The paragraph has been revised as follows to clarify sources: "In 2015-16, the library had 51 visits per hour open and circulated 239,862 items (California State Library, 2016). The existing library facility does not adequately house the Children's department, provide enough private study areas for students, or offer sufficient space or parking for hosting events, which, collectively, were attended by over 17,000 individuals, most of whom drive automobiles to the library (Kreiden, 2015)."
B6-72	3.12-7, Table 3.12-3, Community. There are eight bocce courts in Crane Park.	The entry in Table 3.12-3 on page 3.12-7 has been revised as follows: "Six lighted tennis courts; ~~six~~ eight lighted bocce courts; two Little League baseball fields; horseshoe pits; children's playground; two restrooms; picnic areas; Farmer's Market; skate park:

Comment ID	Comment	Response
B6-73	3.12-9, Figure 3.12-2. Please consider identifying Lewis Station.	The comment is noted. Lewis Station is a "pocket park" located on the corner of Church Street and Hunt Avenue, and offers two picnic tables, some benches, and one restroom. While Lewis Station is a park, the scale of the facility is too small to be identified on the map. Church Street itself is not labeled in Figure 3.12-2 due to size constraints. Lewis Station is identified as a mini park in Table 3.12-3 on page 2.13-7.
B6-74	3.12-11, first paragraph, second to the last sentence. Why is the city of St. Helena cited when the section references state code dealing with school districts?	The reference to the City of St. Helena has been moved to the last sentence of the paragraph on page 3.12-11 to accurately cite the school district's policy. The section has been revised as follows: "As provided in California Government Code Section 65996, the payment of such fees is deemed to fully mitigate the impacts of new development on school services (City of St. Helena, 2017). Pursuant to this provision, the school district has enacted a requirement for fees (City of St. Helena, 2017)."
B6-75	3.12-12, Napa County General Plan Recreation and Open Space Element. Why is there no reference to the Napa County Regional Park and Open Space District and that agency's adopted parks master plan in any section?	The comment is noted. The Napa County Regional Park and Open Space District Master Plan lists future projects undertaken by the District but does not necessarily implement policies which regulate development within the planning area. Nonetheless, the following section has been added to the Regulatory Settings on page 3.12-12: Napa County Regional Park and Open Space District Master Plan In November of 2006 Napa County voters approved Measure I establishing the Napa County Regional Park and Open Space District. The District is authorized to protect and preserve natural areas, wildlife habitat and other open space resources, and to plan, improve and operate a system of public parks, trails, outdoor recreational facilities, and outdoor science and conservation education programs. Its jurisdiction includes all of Napa County, including the Planning Area. The District's Master Plan was published in 2009 to discuss ongoing District activities, funding, and projects and was last updated in 2012. The 2012 Master Plan Update documents progress on the 61 projects originally identified in the Plan, including ten open space parks and regional trails which the District has committed to owning and managing. Parks and open spaces under the jurisdiction of the District may be utilized by residents and visitors to the Planning Area.

Comment ID	Comment	Response
B6-76	3.12-16, Fire Service. The data in the paragraph for response times and calls is from 2017, but the citation is 2015. Please clarify	The citation refers to email communication with John Sorenson, the City of St. Helena Fire Chief, in 2018. The sentence has been revised as follows: "In 2017, the Department responded to approximately 69 percent of all calls in fewer than seven minutes, and the department does not anticipate the need to increase staffing levels or construct a new facility in order to provide service for future population growth (Sorenson, 2018 ~~2015~~)."
B6-77	3.12-16, Police Service. Please consider using information from the recent SHAPE study on the adequacy of the existing station.	The comment is noted. The SHAPE study determined that the existing Police Station is in fair but deteriorating condition, and suggests rebuilding the Police Station adjacent to the existing Fire Station in order to increase efficiency and provide new facilities. Proposed Policy LU6.1 encourages the provision of high quality facilities for public services, but the General Plan Update would not implement the SHAPE study suggestion discussed above. The DEIR therefore assesses the potential environmental impacts of implementation of the General Plan Update alone, and concludes that the growth-inducing impacts of the Plan would not necessitate the construction of new facilities in order to maintain acceptable service levels.
B6-78	3.12-19, second paragraph, first sentence. Please reword. There are two state parks, not regional parks, in Napa county just outside St. Helena. Both are operated under contract to the state by the Park and Open Space District.	The sentence on page 3.12-19 has been revised as follows: "Furthermore, as described above there are two state ~~regional~~ parks in Napa County, which are about 5 miles away from St. Helena and provide additional recreational resources."
B6-79	3.13-2, last paragraph. While it is true that the most of the jobs available in St. Helena do not pay sufficiently to afford a home in the community thus exacerbating the in in-commute as the paragraph correctly claims, it is also likely that the high housing costs also, but to a lesser degree, exacerbate the out-commute for those who seek and need a higher-paying job to live in the community than is generally offered locally. Thus the high housing costs contribute not only to a higher in-commute but a higher out-commute as well.	The comment is noted. See response to comment A3-A-4, above.
B6-80	3.13-3, SR 29, first and third sentences. Please consider rewording. SR 29 in Napa county is not solely a two to four lane rural highway. It also has a freeway segment, an expressway segment and some other types of roadways. In addition, consider rewording the third sentence as the turn lane is not continuous between Dowdell and Madrona – it is missing or has a double-double yellow in two locations.	These comments are noted, and the response combined for purposes of clarity. The paragraph has been revised as follows: "SR-29 is a State ~~two- to four-lane rural~~ highway that stretches through Napa County from Vallejo at Napa County's southern border to Lake County in the north. Portions of SR-29 to the south of the City of St. Helena are freeway and expressway facilities. Within the City of St. Helena, SR-29 has two travel lanes, one northbound and one southbound. SR-29 has parallel parking on both sides of the street and a non-continuous center turn lane between Dowdell Lane

Comment ID	Comment	Response
		and Madrona Street-Fulton Lane. SR-29 provides the primary route for travel within St. Helena and to further destinations around the region."
B6-81	3.13-3, SR 29, second paragraph. Please consider providing evidence that X-X trips are presently diverting in significant numbers to local roadways in the city. Without such evidence, an old chestnut is reenforced that can lead to unhelpful projects and programs. It may become a problem in the future, but currently the traffic on those streets appears to be almost purely local. The Silverado Trail is a special case, in that it works as nearly a couplet with SR 29 and given the very small length of the Trail that is within the city – the trips on the Trail for the City are nearly all X-X, X-I or I-X with no or nearly no I-I trips possible.	This comment is noted. Trip diversion to parallel local routes typically ocurrs on a case-by-case basis, whereas Silverado Trail is a longer, more well-known parallel route. The congestion along SR 29, while recurring, varies in severity within the city limits on a day-by-day basis. The paragraph has been updated as follows: "Since SR-29 is a major north-south thoroughfare for Napa County, heavy through traffic is typical along SR-29. Drivers often try to avoid congestion on SR-29 by using Silverado Trail to the east ~~and alternate parallel routes through residential neighborhoods such as Oak Avenue and the Valley View/Crane Avenue corridor.~~"
B6-82	3.13-3, SR 29, last paragraph. Please reword. The channelization project actually goes back three decades to a time when maintenance projects were listed in the STIP and were debited to the county minimums. The project was split into two pieces and the first segment was completed in the 90's (Yountville to Mee Lane). When the STIP and SHOPP were split, the second half did not migrate to the SHOPP until the Napa communities traded the STIP funds to the Trancas/29 interchange to fill a shortfall and requested moving the Mee Lane to Charter Oak segment to the SHOPP. It may well have been the oldest STIP/SHOPP programmed project in the state by the time it was actually constructed.	The comment is noted. The paragraph has been revised as follows: "The Highway 29 Channelization Project was undertaken by the California Department of Transportation (Caltrans) and was intended to rehabilitate pavement, widen northbound and southbound shoulders, construct a two-way left turn lane, and improve the railroad crossing at Whitehall Lane along SR-29. ~~The project limits were Mee Lane approximately 1.97 miles south of the St. Helena city limits to Charter Oak Avenue in the north, within the city limits.~~ The effort to rehabilitate SR 29 has been underway for three decades, and the first segment of the project between Yountville and Mee Lane was completed in the 1990s. The second half of the Channelization Project was proposed by Caltrans in 2007, prior to the 2009 commencement of the Proposed Plan project by the City of St. Helena. The project limits were Mee Lane approximately 1.97 miles south of the St. Helena city limits to Charter Oak Avenue in the north, within the city limits. The Channelization Project was constructed in 2017 and is now fully complete and operational."
B6-83	3.13-4,Figure 3.13-1. The figure includes and rates several private roads. Is that intentional?	This comment is noted. The purpose of the roadways on the figure is to provide reference to the transportation system as a whole. Also, the provision of roads on the figure provide additional context for the reader.
B6-84	In addition, please consider the rating of Madrona west of Hudson. It has few houses but sizable vineyards face the street. The city may also have an	This comment is noted. Madrona Avenue west of Hudson has been downgraded on the figure to a thinner linetype more indicative of the rural nature of the street.

Comment ID	Comment	Response
	agreement with one of the adjacent owners on the character of the street, which is intended to be rural, not residential.	
B6-85	3.14-6, Madrona Street/Fulton Lane, last sentence. Please consider removing the quotes around dead end.	The comment refers to Chapter 3.13: Transportation and Traffic. The sentence has been revised as follows: "To the east of SR-29, Madrona becomes Fulton Lane which provides dead end access to commercial and residential areas."
B6-86	3.13-16, second paragraph, second sentence. Please consider another example that is a public and not private road.	This comment is noted. Because the sentence is intended to be a general discussion regarding pedestrian facilities at the periphy of the City, the reference to the Dean York neighborhood has been removed. The sentence on page 3.13-16 now reads: "~~Areas such as the Dean York neighborhood, and a~~Areas adjacent to or outside the Urban Limit Line (ULL) have a rural character where concrete sidewalks (with curb and gutter) may not fit with the context of the neighborhood. "
B6-87	3.13-17, Rail Service. The Wine Train is not a passenger service, please consider another term for its ridership.	The comment is noted. However, the section clearly indicates that the Wine Train is a "private tourist rail service" and "passengers are not allowed to embark and disembark at St. Helena unless booked on a special tour package." The use of passengers is accurate given the context that only private tourists are able to use the service. The heading of the section has been updated to read "Private Rail Service." Further changes are not necessary for this section given that the Wine Train is a useful form of transportation for tourists who have privately booked its services.
B6-88	3.17-20, Environmental Assessment Review and Comment, last sentence. Please consider replacing "Rohnert Park" with "St. Helena".	This comment is noted, and refers to Chapter 3.13: Transportation and Traffic. The sentence has been updated as follows: "However, the ultimate mitigation measures and their implementations are to be determined based on consultation between Caltrans, the City of St. Helena ~~Rohnert Park,~~ and the project proponent."
B6-89	3.17-21, first paragraph,last sentence. Please consider deleting as it has noting to do with the STIP and Caltrans duties and powers were described in an earlier section.	The comment is noted, and refers to Chapter 3.13: Transportation and Traffic. The section has been updated as follows: "The California Transportation Commission (CTC) administers transportation programming, the public decision-making process that sets priorities and funds projects envisioned in long-range transportation plans. It commits expected revenues over a multi-year period to transportation projects. The State Transportation Improvement Program (STIP) is a multi-year capital improvement program of transportation projects on and off the State highway system, funded with revenues from the State Highway Account and

Comment ID	Comment	Response
		other funding sources. ~~The California Department of Transportation (Caltrans) manages the operation of State highways, including SR 29 through St. Helena."~~
B6-90	3.17-22, Metropolitan Transportation Commission. Please consider rewording. MTC does not allocate funds under the control of transportation sales tax authorities, which is a very large portion of the funds expended on transportation projects in the Bay Area. The RTP is not an allocation document and in and of itself releases no funds. It does allow projects to proceed to programming and allocation in other documents and programs.	This comment is noted. References to MTC as allocating local sales tax funds have been removed; references to MTC allocating state/regional funding have been revised. The related paragraph has been revised as follows: "The majority of federal and~~,~~ State~~, and local~~ financing available for transportation projects is ~~allocated~~ programmed at the regional level by the MTC, the transportation planning, coordinating, and financing agency for the nine-county Bay Area. MTC prepares the regional transportation plan (RTP), which is a long-range development plan for ~~allocating~~ identifying and programming projects that may be funded by state and federal transportation funds in the future. The MTC approved the Plan Bay Area in 2017 to guide future regional transportation through the year 2040. The RTP does not include any major regional transportation projects such as changes to SR-29 in St. Helena. Plan Bay Area also serves as the Sustainable Communities Strategy (SCS) document for the nine-county Bay Area region."
B6-91	3.13-17, NVTA. Please consider rewording to be very clear which agency is discussed - and why the other is not. There are two NVTAs in the Napa communities. One is a transportation sales tax authority and the second is a joint powers agency that provides transportation planning, transportation programing, transit operations and the occasional transportation project for the Napa communities. They are independent entities with separate boards. It appears the section is concerned with the joint powers agency, not the transportation sales tax authority.	The comment is noted. There is in fact only one NVTA in the Napa Community, which is a joint powers authority as discussed in the comment. The Napa Valley Transportation Authority-Tax Agency (NVTA-TA) is an independent oversight committee included within the larger NVTA, and its sole purpose is that of the transportation sales tax authority. The NVTA-TA Board of Directors is identical to the NVTA Board with the exception of the one non-voting representative of the Paratransit Coordinating Council. This information was provided by the NVTA. Section 3.13 concerns the NVTA as one singular entity and all associated responsibilities.
B6-92	In addition, the Napa communities do not have a CMA, having opted out of the requirement two decades ago.	NVTA is a joint powers authority which acts like the CMA for Napa County, and refers to itself as such on its website. As stated in the comment, the NVTA is not a CMA by legislation which requires the completion of a Congestion Management Plan (CMP). For accuracy, references to the NVTA as a CMA have been removed in the Local Regulations Section on page 3.13-22. The first paragraph under the Napa Valley Transportation Authority (NVTA) heading has been updated to the following language:

Comment ID	Comment	Response
		"The Napa Valley Transportation Authority (NVTA), formerly Napa County Transportation and Planning Agency (NCTPA), serves as the Congestion Management Agency (CMA) and the transportation planning agency for the incorporated and unincorporated areas of Napa County. Because the County does not have an adopted congestion management plan (CMP), NVTA works with the Metropolitan Transportation Commission (MTC) to prepare the Napa County portion of the RTP.
B6-93	3.13-24, Significance Criteria, Criterion 5 & 6. Please consider moving the "or" on 6 to 5 and ending 6 with a period.	The comment is noted. The Significance Criteria section has been updated as follows: "Criterion 5: Result in inadequate emergency access; or Criterion 6: Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities."
B6-94	5-2, Population, first paragraph, third sentence. Please consider rewording. The stated historical growth rate of 0.16 percent per year is much smaller than the 0.60 percent rate projected. Although the 0.44 difference does not sound like much, it is an increase of 275 percent over the historical rate. That large of a change probably does not qualify as "slightly". What does ABAG predict for St. Helena, not Napa county?	The section has been revised as follows: "The Planning Area will accommodate a population of approximately 7,300 people at buildout, as seen in Table 5.1-1. This represents a total increase of about 12 percent over the 2018 estimated existing population, an average of about 0.6 percent annually. The projected growth rate is ~~slightly~~ higher than St. Helena's historic growth rate of 0.16 percent annually from 2000 to 2018, but is consistent with the projections by the Association of Bay Area Governments (ABAG), which predicts a population growth rate of about 0.67 percent per year for Napa County. ABAG predicts a population growth of about 8 percent over the 2010 estimated existing population for St. Helena, an average of about 0.28 percent annually. The Proposed Plan would increase the growth rate of St. Helena beyond historic averages, but would retain a growth rate consistent with projections for the entirety of Napa County."
B6-95	5-3, Table 5.1-1. Please consider adding a vertical line between the figures for St. Helena and those for the planning area, centering St. Helena and Planning Area over their relative sections of the chart, using exact figures, not rounding to the nearest one hundred, deleting the superscript two for Housing Units and Population under St. Helena and under Planning Area (should these be ones?) and deleting the superscript three for Planning Area.	Table 5.1-1 has been revised to add a vertical line between the figures for St. Helena and those for the planning area and center St. Helena and Planning Area over their relative sections of the chart. The St. Helena section now includes only superscripts for Note 1. The Planning Area section now includes only superscripts for Note 1 and 2. Use of rounded figures provides a generalized comparison between the two areas and is consistent with multiple tables included in the DEIR.
B6-96	5.3, Public Facilities and Services, second to the last sentence. Please consider rewording as it implies the city owns a solid waste facility.	The comment is noted. The sentence does not imply that the city owns a solid waste facility, rather it is the facility used by the city. The sentence has been revised to clarify this point as follows: "Additionally, Clover Landfill,

Comment ID	Comment	Response
		the ~~St. Helena's~~ solid waste landfill used by residents and businesses in the city of St. Helena and unincorporated Napa County, has significant remaining capacity."
B6-97	5.5, Table 5.1-2. Please consider adding a vertical line between the figures for St. Helena and those for the planning area, using exact figures, not rounding to the nearest one hundred, deleting the superscript two for Jobs (which presently means it applies to all figures on the Jobs row) and explaining how one reasonably presents a ratio with two significant figures when the figures from which the ratio is defined are rounded to the nearest one hundred.	The comment requests changes to Table 5.1-2 and requests clarification on the jobs-to-housing ratio. Table 5.1-2 has been revised to add lines and adjust the superscript. As stated in response to comment A3-B-10, the buildout projections are approximations intended to provide a point of comparison, and are rounded to acknowledge the uncertainty inherent in the projection of future development and taking a more conservative approach to the environmental analysis by erring on the side of overestimation rather than underestimation. The jobs-to-housing ratio is similarly intended as a point of comparison, and shows the decimal points to allow readers to discern where the ratios lie relative to one another.
B6-98	5.5, Cumulative Analysis, second sentence. Please add a comma after "air quality".	The sentence has been revised as follows: "By their nature, the air quality, transportation, noise, energy, greenhouse gas emissions, and climate change analyses presented in Chapter 3 represent a cumulative analysis, because the effects specific to the Proposed Plan cannot reasonably be differentiated from the broader effects of regional growth and development."
B6-99	5.7, Cumulative Effect on Cultural, Historic and Tribal Resources, last sentence. Please replace "I" with "is".	The sentence has been revised as follows: "Given these protections in place for cultural, historic, and tribal resources, the Proposed Plan's impact on this potentially significant cumulative impact ~~I~~ is not cumulatively considerable."
B6-100	5.9, Wastewater Treatment and Distribution, first sentence. Please consider deleting "other" as it implies that the St. Helena treatment facility is regional in nature.	The sentence has been revised as follows: "The City of St. Helena handles its own wastewater treatment and distribution through its Wastewaster Treatment and Reclamation Plant, which is isolated from ~~other~~ regional wastewater treatment plants."
B7-A-1	Subject: FYI - bad reference in appendix to draft EIR Noah,	The comment is the subject and salutation of the letter. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B7-A-2	FYI, on pages A-4 and A-5 of the appendix to the draft EIR there are two references to Chalk Lane. The correct name is Chaix Lane.	The comment is noted. Page A-4 of Appendix A is part of the Notice of Preparation for the City of St. Helena General Plan Update DEIR and has already been published. It is best practice to retain the letter in its original form; therefore, no change is necessary. All references to Chalk Lane in the DEIR have been revised to read "Chaix Lane."

B7-B-3	Mark Smithers I Senior Vice President, Finance Trinchero Family Estates	The comment is the signature for the letter. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B7-C-1	Noah, We hope your day is going well. We have the following comments with regards to the draft EIR and General Plan.	The comment is the salutation of the letter and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.
B7-C-2	Guiding Principles and Objectives First and foremost, the "guiding principles" of the 2040 General Plan beginning on page 1-14 and summarized in the draft EIR as "objectives," do not specifically speak to neighborhood livability. Protecting and improving the livability of our neighborhoods should be a top priority and be listed as an important guiding principle and objective of our 2040 General Plan. Housing and housing impacts Tables ES-1 and ES-2 of the draft EIR provide build out information. ES-1 provides that 300 additional housing units with an increased population of 700 at 2040 build out. ES-2 suggests 900 additional jobs at build out. This draft GP doesn't adequately balance anticipated future housing and job growth with infrastructure changes. Additional housing units and jobs will only exasperate the (current) sub-par housing and traffic situation. It is understood that the housing element is currently in the process of update.	The comment addresses the Draft General Plan Update and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.

Comment ID	Comment	Response
	The GP needs to address the housing issue, and its impacts, head on and not leave it for later. Draft EIR areas of controversy note that traffic impacts from future development will exasperate the existing traffic issues. As such, circulation, local traffic, and neighborhood traffic impacts need strengthened directives within the appropriate GP elements. Planned improvements in the GP need to ensure successful results of better circulation: increased biking, walking, safe routes to school, and additional outside opportunities. Circulation The draft GP Circulation Section provides for "potential future road extensions." The road extensions (better described as connections as they are connecting the town together) are described as "Study Alternatives." These road connections (including a fully implemented Oak Street connection) have been reviewed and discussed since 1993. In-town traffic and circulation was bad then and has become nearly unbearable. The connections do not need to be "studied" any longer. The GP language should be stronger and note an immediate need to implement our connectivity. Additionally, the noted "special studies" should only be limited to the bike and walking infrastructure associated with the road extensions. Any infrastructure improvements should be subject to standard review with no special limitation or additional requirements. Alternatives to the Proposed Plan in the draft EIR includes transportation network enhancement alternatives, including a full Oak street connection from Grayson to Mitchell. This alternative is absolutely correct, as per the 1993 General Plan. The circulation element needs to be updated and include this full street connection. St Helena needs to improve in-town circulation for it citizens coming in to and out of town. The Oak Street connection from Grayson to Mitchell is not about relieving traffic from SR-29, it is about in-town circulation and, most importantly, reducing local Vehicle Miles Traveled (VMT). If we have any hope of improving our local air quality and addressing our climate impacts we must reduce VMTs within our city limits. Improved circulation and adopting all the street connections included in the previous General Plan, including the Oak Street extension, will help us in these efforts.	

Comment ID	Comment	Response
	Traffic safety and noise in residential neighborhoods Various elements of the Plan should specifically provide how the City plans to control and mitigate the impacts of traffic noise and safety on neighborhoods. Residents have the right to the peaceful enjoyment of their properties. Plan elements need to ensure that neighborhoods and homes are not degraded by unsafe traffic, noise, air quality, development, and inappropriate zoning or uses contiguous to the streets we live on and where our kids play or go to school. Traffic issues within certain neighborhoods were acknowledged in the 1993 plan and subsequent analysis in 2006 and 2009. The GP needs to be more specific in directing how our in-town and through-town traffic issues will be mitigated to ensure safety and health. Getting folks out of their cars is a high priority of the Draft GP. We cannot accomplish this priority with high traffic streets and speeding cars. The GP needs to adopt stronger more specific guidance on neighborhood traffic issues. The draft GP Circulation Section is practically silent as to one of the most pressing problems in St Helena now, and likely to grow in the future, and that is, traffic volumes and speeds in residential areas. The Circulation Section states "continue efforts to calm traffic, and minimize traffic volumes and speeds in residential areas". The GP does not, but should, address what types of measures could be utilized for traffic calming, what the policies are, and how those policies will be implemented to improve neighborhoods and pedestrian and bicyclist health and safety. The Nov, 2009 Fehr and Peers Transportation Report (included in the Appendices) identified excessive speeding and suggested "traffic calming measures which involve changes in street alignment, installation of barriers, and other physical measures to reduce traffic speeds and/or cut through volumes, in the interest of street safety, livability and other public purposes". The GP should identify specific types of traffic calming strategies for the most impacted cut-though residential neighborhoods; since this issue is predicted to only get worse in the future, metrics which would measure successful implementation could be useful. Air Quality Issues/Measurements The draft EIR addresses Air Quality and Energy, Greenhouse Gases, and Climate Change. As the draft EIR notes, both our current status and GP build	

Comment ID	Comment	Response
	out violate BAAQMD standards. This is obviously not acceptable. The 2040 GP as drafted is a health risk to current and future residents. The GP needs to address and mitigate these health risks before the Plan is adopted. Potential solutions that should be noted in the GP include limiting pesticide and herbicide use, reducing cultivation to significantly reduce airborne particulate matter, requiring alternative energy for all new construction or significant building improvements and remodeling, requiring all residences, businesses, government facilities to adopt 100% MCE clean green, reducing cut through traffic and adding new EV charging stations. In the meantime, an air quality monitoring station should be initiated at the SH Primary School. This school is for 4-7 year olds and is adjacent to one of the (now) busiest residential streets in St Helena. This street has become the cut through street for residents and workforce alike, and the children at the school are outside on their playground adjacent to S Crane several times a day. The City needs to mitigate the impacts to these small children. SHUSD Mitigation Measures Identified in Negative Declaration The GP should include a plan to require the SHUSD to implement the required traffic mitigation measures associated with the Primary School construction and the Negative Declaration Report the SHUSD issued at that time. The City and SHUSD have allowed the required mitigation measure for the additional school traffic to go unmet. Implementation of the required mitigation measure will help the City achieve its 2040 GP goals of in the areas of Air Quality, Climate Change, Traffic, Safety, Health, and Livability	
B7-C-3	Please confirm receipt of this email. Thank you in advance for your efforts on this very important and long over due project. Mark and Pam Smithers This email is sent from an employer address and only represents the thoughts of the sender. Mark Smithers | Senior Vice President, Finance Trinchero Family Estates	The comment is the closing of the letter and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.

	Office: 1-707-302-3027 | Ext. 2612 | Mobile: 1-707-290-4508 msmithers@tfewines.com<mailto:msmithers@tfewines.com>	
B8-1	Please consider these written public comments concerning both the General Plan Update and the corresponding Draft Environmental Impact Report. My comments are limited to the statutory requirement that a General Plan Update (GPU) include a map, diagram or other method of showing the inundation areas in the event of the failure of the St Helena levee and/or flood wall. I have made comments on this subject numerous times during previous comment periods related to General Plan Updates and their corresponding Draft Environmental Impact Reports (DEIRs). The first time this issue was raised was during the public comment period ending in July 2016. The most recent oral comments made prior to the release of the 2040 GPU were at the Joint Meeting of the Planning Commission and the City Council to review the General Plan on August 14, 2018.	The City acknowledges commenter efforts to provide comments and has provided responses to specific comments below in B8-2 to B8-5.
B8-2	When the 2040 GPU was released on October 23, 2018, I was out of the country. Upon my return to St Helena I notified Noah Housh by email on 11-20-18 that the updated General Plan Safety Element still did not include the areas of inundation in the event of a levee and/or flood wall failure. The statutory requirement for this appears at Government Code §65302(g)(2)(A)(viii). This requirement is also confirmed in the recently updated version of the Governor's Office of Planning and Research's General Plan Guidelines at page 143. At the Planning Commission meeting on December 4, 2018, which was agendized for the purpose of taking public comment on the DEIR, I again made oral public comments on the lack of the required levee and flood wall failure areas of inundation. There was some discussion as to whether or not the levee protection map would suffice to satisfy this requirement. I pointed out that the map of the levee protection zones are separately required under Government Code §65302(g)(2)(A)(vii). One of the reasons there is a separate requirement for areas of inundation in the event of a levee or flood wall failure is because the force of the water and the damage it can cause are significantly greater in the even of a levee or flood wall failure than what would happen during a flooding event. The inundation map is not just the converse of the levee protection areas and wouldn't take into account what would happen in the event of a flood wall failure, which is also a requirement of Government Code §65302(g)(2)(A)(viii).	This comment pertains to the Draft General Plan and does not raise any significant environmental issues or address the adequacy of the EIR. As such, no further response is required pursuant to CEQA; however, as the comment raises a claim regarding legal requirements for the General Plan, this response is provided for the purpose of clarification. Government Code §65302(g)(2)(A)(viii) requires that General Plans identify information regarding flood hazards, including but not limited to "identify areas subject to inundation in the event of the failure of project or nonproject levees or floodwalls." This requirement is also cited on page 143 of the General Plan Guidelines prepared by the Governor's Office of Planning and Research (OPR). The two terms "project" and "non-project" refer directly to State Plan of Flood Control (SPFC) levees (project levees) and levees that are under the jurisdiction of the state of California that are non-SPFC levees (nonproject); which are both under the jurisdiction of the Central Valley Flood Protection Board (CVFPB). The California Department of Water Resources' website (http://gis.bam.water.ca.gov/bam/) clearly shows the CVFPB's designated floodways, regulated streams, all project and nonproject levees and that none of these features exist within the City of St. Helena. Therefore, because the levee and flood wall adjacent to the City of St. Helena is not a "project" or "nonproject" levee/floodwall, the requirement of Government Code §65302(g)(2)(A)(viii) is not

Comment ID	Comment	Response
		applicable. Government Code §65302(g)(2)(A) also requires that General Plan identify other information regarding flood hazards, such as FEMA and Floodplain maps, and areas subject to inundation in the event of dam failure; however, there is no requirement that all of this information be presented on separate maps. The FEMA Flood Insurance Rate Map (FIRM), adequately meets or exceed items Government Code §65302(g)(2)(A)(ii), (vi), (vii), and (viii) under the code. The FEMA FIRM data, depicted on Figure 9.1 of the Draft General Plan and Figure 3.9-3 in the Draft EIR, shows the 100- and 500-year floodplains and areas with reduced flood risk due to levees. Due to the assumptions and behavior in a flood event for the river and breach scenarios required to map a failure (e.g., unsteady river hydrograph vs. steady-state peak flow assumed for the FIS, large levee/floodwall breach dimensions, short time to failure), the levee would not require a dynamic assessment as the comment suggests and the affected area would be adequately represented by the areas protected by the levee. Logically, with other conditions remaining the same, a dynamic simulation of a levee or floodwall failure could only result in a smaller area affected than what is shown on the FIRM as "Zone X - Area with reduced flood risk due to levee," which is based on steady-state modeling assuming no levee exists. This area is also based on a more conservative 500-year flood than the levee and floodwall design. Therefore, even though this modeling effort is not required for this levee, maps already included in the Draft General Plan would fulfill the basic requirement of the specific safety elements referenced by this comment. Nevertheless, a separate map showing the area potentially affected by a levee or floodwall failure is provided for informational purposes in this Final EIR.

Data Sources: City of St. Helena, 2018; Napa County, 2018; FEMA, 2018; Dyett & Bhatia, 2018; Mead & Hunt, 2019

- Floodwall
- Levee
- Railroads
- Stream
- Water Features
- Urban Limit Line
- City of St. Helena
- Approximate Levee Failure Inundation Area

This figure is for informational purposes only and is based on a conservative delineation of the inundation area for a 500-year flood event and levee failure. The approximate levee failure inundation area represents an event above and beyond the standard levels of protection for levee design in California and shall in no way replace, supersede or modify the approved Federal Emergency Management Agency's Flood Insurance Rate Map for the City of St. Helena.

City of St. Helena

Mead&Hunt

Comment ID	Comment	Response
B8-3	The legislature would not have specifically required areas of inundation in the event of a levee and/or flood wall failure if there wasn't a need to have that information. But even if it was not such a requirement, the City should be interested in including that information for both safety and financial reasons. Not only does the City need the information, but every resident impacted by a potential levee or flood wall failure deserves to know what the potential danger is for them. Especially important is the fact that many of those who would be imperiled by a levee or a flood wall failure are some of the most vulnerable in our community. Vineyard Valley, Hunt's Grove, Meadow Creek Circle and a lot of other areas of the eastern part of the City would be significantly impacted and they all deserve to know what the possibilities are. During some of the rain storms in recent years, one of the City's main across-city access points between Highway 29 and the Silverado Trail was destroyed. The Pratt Avenue bridge has remained closed since that time. If there was a flood wall and/or levee failure it likely would cause severe damage to another important access to the Silverado Trail. The Pope Street Bridge is immediately adjacent to the flood wall and is located very close to the levee. A failure of either the levee or the flood wall could jeopardize the viability of and cause severe damage to the Pope Street Bridge, which would be a significant safety problem for the City and all of its residents and visitors. To further complicate this situation our levee and flood wall are both located in an area of very high and high liquefaction. That information already appears is in the 2040 GPU. Liquefaction is a major and well-known cause of levee failures.	Please see response to comment B8-2. The City has met all requirements for identification of areas that are subject to a higher risk of flooding within St. Helena and has included that information in the Draft General Plan and Draft EIR, providing transparency for potential risks faced by City residents. Additionally, as noted on page 4-20, pages 9-4 through 9-6, and page 9-23 of the Draft General Plan, the Comprehensive Flood Control and Environmental Restoration Project and Napa River Flood Model Study improved flood protection in areas of the City subject to periodic historical flooding and included analysis and topography surrounding and including the Pope Street Bridge. A failure of the levee or floodwall, which are located upstream of the Pope Street Bridge, would logically result in a subsequent decrease in the Napa River flow at the Pope Street Bridge, and therefore could not be construed to contribute to a failure of the bridge. Further, the City notes that Policy PS5.6 in the Draft General Plan addresses risks associated with levee and flood wall failure, requiring the City to coordinate with the Napa County Flood Control and Water Conservation District and other responsible agencies to maintain protocols and funding for the regular inspection and maintenance of flood control facilities in the city, including levees, flood walls, floodplain terracing, stormwater detention ponds, and pumping facilities. The Operations and Maintenance Manual for the St. Helena Comprehensive Flood Protection Project stipulates procedures for operation; maintenance and inspection; emergency operations; surveillance; and personnel training that minimize the risk of levee/floodwall failure.
B8-4	Not only should the General Plan Update include the areas of inundation resulting from a levee and/or flood wall failure, but the Draft Environmental Report should include the potential safety and environmental damage, which could be created when considering the intersection of the levee and flood wall failure inundation map, the liquefaction map (already in the 2040 GPU) and the earthquake map (also included in the 2040 GPU.) For example, this issue should be discussed in the Circulation Element when considering the potential impact of the loss or restriction of the use of the Pope Street Bridge if there is a levee or flood wall failure. There are other areas of the Draft Environmental	CEQA Section 15126.2 requires that an EIR "evaluate any potentially significant impacts of locating development in areas susceptible to hazardous conditions (e.g., floodplains, coastlines, wildfire risk areas) as identified in authoritative hazard maps, risk assessments or in land use plans addressing such hazards areas." As noted by the commenter, the Draft EIR identifies liquefaction hazard areas on Figure 3.7-3 based on data from the Association of Bay Area Governments (ABAG) and discusses related impacts on pages 3.7-24 to 3.7-25 and 3.7-26 to 3.7-27. Also as noted by the commenter, the Draft EIR identifies active faults on Figure 3.7-2, based on data from the US Geological Survey and the California Geological Survey,

Comment ID	Comment	Response
	Impact Report and General Plan Update where these issues should also be discussed.	and discusses fault rupture-related impacts on 3.7-23 to 3.7-24 and hazards related to seismic ground-shaking on page 3.7-24. Additionally, Figure 3.9-3 in the Draft EIR shows flood hazard areas, including areas at risk in the event of levee failure, based on topography, flood flow, and other factors as modeled by FEMA, while Figure 3.9-4 shows dam inundation areas. Related impacts are discussed on pages 3.9-41 and 3.9-42 of the Draft EIR. As such, the Draft EIR evaluated potentially significant impacts related to these hazardous conditions on the basis of authoritative hazard maps and risk assessments as required under CEQA. However, as no authoritative hazard maps exist for the composite high risk, low probability scenario described by the commenter, evaluation of the compound risk resulting from levee/floodwall failure, liquefaction, and earthquake event together would be speculative and is therefore not required in the Draft EIR. The probability of such an event is very low, has not been calculated and would be well above the current state and federal requirements for levee design, flood risk reduction, and annual exceedence design requirements. The City notes that impacts related to emergency access are discussed on pages 3.13-51 through 3.13-52 of the Draft EIR and that impacts related to conflicts with adopted emergency responses plans or emergency evacuation plans are discussed on pages 3.8-29 through 3.8-30 of the Draft EIR.
B8-5	Since the land immediately behind the levee is designated medium density residential, the areas of inundation in the Draft Environmental Impact Report must also consider the safety and environmental impacts of any housing being built and asphalt laid behind the levee. It is logical to conclude there would be significantly more damage to the environment if the flood plain behind the levee is built up with housing and asphalt, than the damage that what would happen during a levee failure on the current unobstructed flood plain behind the levee. Since this would not be a hypothetical situation since there is a current project planned for that approximate 17 acre site, it must be included in the proposed General Plan Update and Draft Environmental Impact Report.	The DEIR recommends Measure HYDRO-1, which will require that development or redevelopment within the floodplain obtain a Letter of Map Revision (LOMR) from FEMA and must demonstrate the property will be above the FEMA base flood elevation and will not subsequently raise the base flood elevation. HYDRO-1 would mitigate and reduce associated impacts to less than significant. Impacts related to development in flood risk areas under the Draft General Proposed Plan, including dam and levee inundation areas, are discussed on pages 3.9-36 through 3.9-42 of the Draft EIR. Figure 3.9-5 shows Housing Element Opportunity Sites and proposed change areas in relation to flood risk areas.
B8-6	Thank you for your consideration. Vickie Bradshaw January 2, 2019	The comment is the closing and is noted. It does not raise any significant environmental issues or address the adequacy of the EIR; thus, no further response is necessary.

Comment ID	Comment	Response
B9-1	To: St. Helena City Council via City Clerk January 3, 2019 RE: General Plan 2040 - public comment deadline and notification to the public Dear Mayor Ellsworth and City Council, A number of us local residents have been hearing spotty information about a deadline today for us to provide public comments to the Environmental Report for the 2040 General Plan. We are notifying you that many people we know in town cannot find the deadline posted anywhere on the city website. And, we cannot even find anything about submitting comments (examples: how to do it, who to send it to, is there a format to follow, when it's due…). So, is this true? Some of us may not be computer experts, but quite a few of us searched the city website and see NO notice asking for public comments or a deadline. HOW CAN THE PUBLIC KNOW WE CAN GIVE COMMENTS AND HAVE A DEADLINE WHEN THE CITY AND GP WEBSITE DOES NOT EVEN POST IT? The General Plan will be around for a very long time and will define our city and our childrens city and our grandcildrens city for years and years. You can look on the website for yourselves. We saw nothing. (See below where we printed the image of the Main city website AND the GP website page as it is TODAY). Then, since you are a NEW COUNCIL please start off on the right foot and work hard to make sure you are being transparent and really wanting public input by at least putting it somewhere noticeable on the website. PLEASE PUT THIS LETTER INTO THE DRAFT EIR AS A COMMENT BECAUSE WE HAVE NOT HAD THE CHANCE TO SEND IN ANYTHING BECAUSE WE DIDN'T KNOW ABOUT IT. We want to make sure it goes on the record that we feel we were not notified. Thank you very much Council. Jim and Pat Reynolds, and friends, and neighbors, in St. Helena	The comment regards noticing of the public review period for the Draft EIR, stating that the deadline for submission of public comments was not clearly advertised, and that the City's website lacked information about the deadline. The General Plan Update process has been assigned its own web page on the City's website. This page has been regularly updated with information on the update process (link below). Any individuals whom expressed concerns over accessing the General Plan Update inforamtion to City staff was responded to as a top priority. The City held approximately 20 publically noticed meetings discussing te General Plan Update and EIR process from 2016 through the finalization of the EIR. Each of these is available for public review and access on the City's website (link below). http://www.cityofsthelena.org/planning/page/2040-general-plan-update https://sthelena.civicweb.net/Portal/MeetingTypeList.aspx
B9-2	Attachments	The attachments were provided to support comment B9-1 and are noted.

Comment ID	Comment	Response
B10-1	California Government Code Section 65302(g)(1)(A)(VIII) requires cities with a housing element update after 2009 (St. Helena's Housing Element was updated in 2015) with floodwalls and/or levees to show "areas subject to inundation in the event of the failure of the project or non-project levee or floodwall" in the safety element of the general plan, and the Office of Planning and Research recently issued updated general plan guidelines reconfirming the statutory requirement for inclusion of a levee/floodwall failure map. The Proposed Plan does not currently include a levee/floodwall inundation map, but the map is important to have for safety and financial reasons. Vineyard Valley, Hunt's Grove, Meadowcreek Circle, and other areas in East St. Helena would be directly affected by a levee or floodwall failure and residents have a right to know what potential safety problems they may have. The levee/floodwall is located in areas mapped as having high and very high liquefaction hazard, and liquefaction is a well-known cause of levee and floodwall failure. In the July 25, 2016 public comments to the earlier Draft EIR for the General Plan Update at that time, there was a USGS satellite map of Napa and St. Helena that showed significant ground moving in the area of the levee at the time of the 2014 Napa earthquake, suggesting that had there been rain, there could have been liquefaction in that area with the potential to damage the levee/floodwall. The City did not provide a response to the comment at that time.	Please see responses to comments B8-1 through B8-6. Neither Government Code §65302(g)(2)(A)(viii) nor the OPR Guidelines require that areas in St. Helena subject to flooding in the event of levee failure be identified or mapped. Nevertheless, as described response to comment B8-2 through B8-6, the City has identified, characterized, and addressed risk associated with levee and/or flood wall failure the Draft General Plan with textual descriptions and maps. Further, in 2004, the City prepared an EIR for the Comprehensive Flood Control and Environmental Restoration Project (State Clearinghouse #2002012078) that evaluated the direct and reasonably foreseeable indirect impacts from the Project in a study area that extends from Deer Park Road to Zinfandel Lane and includes the city and its residents, surrounding agriculture, and local businesses. The EIR analyzed a range of alternatives and considered the cumulative impacts of implementing the Comprehensive Flood Control and Environmental Restoration Project. Overall, the EIR determined that the Project would provide protection from larger flood events, including 100-year and 500-year flood events, and that it would have a beneficial impact with respect to flood protection. The EIR did not find that the Project would result in significant impacts related to flooding, levee/flood wall failure, liquefaction or earthquake hazards. The City Council certified the Comprehensive Flood Control and Environmental Restoration Project in 2004 and adopted an addendum in 2006, which confirmed that implementation of the revised project would not result in new or substantially more adverse environmental impacts. Further, the City notes that according to the USGS liquefaction is not cause by rain but rather results when earthquake waves cause water pressures to increase in the sediment and the sand grains to lose contact with each other, leading the sediment to lose strength and behave like a liquid.
B10-2	A levee/floodwall failure inundation map is important for financial reasons, as many residents gave up flood insurance when the levee was built, and they have the right to know the potential financial damage they might experience in the event of a levee failure. St. Helena took $12 million in loans and grants from the State to build the Flood Control Project. As a result, the California Legislature passed and the Governor signed AB 1898, codified in California Water Code Section 12748.3, which states that, "…The State may provide funds in accordance with section 12585.7 to the City	This comment pertains to the Draft General Plan Update and does not raise any significant environmental issues or address the adequacy of the EIR. As such, no further response is required pursuant to CEQA; however, as the comment raises a claim regarding the potential liability of the City under California law, this response is provided for the purpose of clarification. Under the statute cited in the comment, the state has required the City to indemnify it from liability based on the state's agreement to loan money for the flood project. However, although this indemnity requirement lessens the state's exposure, it does not expand or even address the City's liability.

Comment ID	Comment	Response
	of St. Helena or to local agencies in the County of Napa for the project for flood control on the Napa River in the County of Napa. (c) A county or local agency may receive the funds only if it enters into an agreement with the Department [of Water Resources] pursuant to which the city or the local agency agrees to indemnify and hold and save harmless the State, its officers, agents, and employees, for any and all liability for damages that may result from the project. (d) For the purposes of this section, liability for damages includes, but is not limited to liability for damages relating to the construction or operation of the project or the failure of the project to operate as intended." The City has indemnified the State in the event of a levee or floodwall failure so the financial responsibility would be entirely the City's, and residents have a right to know the potential damages there could be in the event of a levee/floodwall failure and the resulting potential financial liability of the City.	Under the applicable case law, a rule of reasonableness applies, under which the City is liable "if its conduct poses an unreasonable risk of harm to a potential plaintiff, the unreasonable conduct is a substantial cause of the damage to the plaintiff's property, and the plaintiff has taken reasonable measures to protect his property." In sum, the City is not strictly liable for damages caused by the flood control project and the typical public agency immunities would likely also be considered by a court assessing any alleged City liability associated with a levee failure/flooding event together with the factors relevant under this applicable rule of reasonableness standard, which include: 1) The overall public purpose being served by the improvement project; (2) the degree to which the plaintiff's loss is offset by reciprocal benefits; (3) the availability to the public entity of feasible alternatives with lower risks; (4) the severity of the plaintiff's damage in relation to risk-bearing capabilities; (5) the extent to which damage of the kind the plaintiff sustained is generally considered as a normal risk of land ownership; and (6) the degree to which similar damage is distributed at large over other beneficiaries of the project or is peculiar only to the plaintiff.
B10-3	Inclusion of the required inundation map in the Proposed Plan should also involve a change to the EIR to discuss safety problems and potential environmental damage considering the intersection of the levee/floodwall failure inundation map, the liquefaction map, and the earthquake map. The EIR should also include comments as to the safety and environmental impacts in the event of a levee failure if housing and asphalt is built behind the levee, as the area would be designated Medium Density Residential, and the currently unobstructed floodplain would be negatively impacted. When the map is included, it should be considered a substantive change and trigger a new public comment period as it would be unfair to insert a map after the close of the comment period and not allow the public to comment on the source and adequacy of the map and EIR analysis.	Please see responses to comments B8-1 through B8-6 and B10-1 through B10-4. Neither Government Code §65302(g)(2)(A)(viii) nor the OPR Guidelines require that areas in St. Helena subject to flooding in the event of levee failure be mapped. Additionally, as no authoritative hazard maps exist for the composite high risk, low probability scenario described by the commenter, evaluation of the compound risk resulting from levee/floodwall failure, liquefaction, and earthquake event together would be speculative and is therefore not required in the Draft EIR. Nevertheless, in St. Helena levee or flood wall failure is a compound issue tied to flooding and as such flood risk areas shown on Figure 3.9-3 and 3.9-5 in the Draft EIR represent areas at risk in the event of levee or flood wall failure, based on topography, flood flow, and other factors as modeled by FEMA. Therefore, there is no need to incorporate a new levee failure map or recirculate the Draft EIR. Further, as noted on pages 3.9-13 through 3.9-23 and 3.9-32 through 3.9-36

Comment ID	Comment	Response
		of the Draft EIR, new development under the Proposed Plan would be subject to existing federal, State, and local regulations regarding stormwater management, including the provisions of the MS4 Permit, the Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual adopted by the City of St. Helena, and the City of St. Helena Municipal Code. Compliance with these programs and regulations and implementation of associated BMPs as well as numerous Proposed Plan policies cited in the Draft EIR would ensure that development under the Proposed Plan would not result in a substantial adverse change in impervious surface area.
B10-4	The Government Code section also requires that cities show levee protection areas, which is different from areas subject to inundation. There is also a requirement that if a dam is present, there should be a dam failure inundation map, which has been included in this EIR. If there are levees with areas subject to inundation, a separate chart or description is required because if a levee fails, the water can be much more forceful and can create more damage than just normal flooding.	Please see responses to comments B8-1 through B8-6. Neither Government Code §65302(g)(2)(A)(viii) nor the OPR Guidelines require that areas in St. Helena subject to flooding in the event of levee failure be identified or mapped. Nevertheless, in St. Helena levee or flood wall failure is a compound issue tied to flooding and as such flood risk areas shown on Figure 3.9-3 and 3.9-5 in the Draft EIR represent areas at risk in the event of levee or flood wall failure, based on topography, flood flow, and other factors as modeled by FEMA.
B10-5	Regarding Mitigation Measure MM-AQ-2, is there a State law or Air District requirement that the submittal be to the Bay Area Air Quality Management District (BAAQMD)? He was concerned that everyone building a new home would have to make the submittal, and if so, he would prefer that the submittal be made locally to the City rather than involving BAAQMD and creating additional requirements and expenses for an applicant.	The comment is noted. Construction within the Planning Area is subject to VOC content limits mandated by the California Green Building Code, adopted by the St. Helena Municipal Code, and BAAQMD Regulation 8, Rule 3. BAAQMD Regulation 8, Rule 3 requires manufacturers of architectural coatings to clearly display the VOC content on each container of any coating subject to this rule. It is not a requirement of the State or Air District to submit evidence of the use of low-VOC coatings to the local Air District, only to comply with content limits. BAAQMD Regulation 8, Rule 4 requires that any person using coatings or solvents subject to that rule maintain an ongoing list of all coatings in use, and the usage quantity, that provides all data necessary to evaluate compliance. These records must be retained and made available for inspection, but initial submittal to BAAQMD is not required. It may be useful for a project applicant to confirm with BAAQMD that the applicant's proposed coatings are low-VOC coatings with a VOC content of 10 g/L or less. However, this additional confirmation would not be required given existing VOC content labeling requirements. The modification requested is a clarification of the content of the Draft EIR and does not affect the findings or conclusions of the

Comment ID	Comment	Response
		environmental analysis. The text of the mitigation measure if hereby modified as follows: "AQ-2: Require that applicants proposing development of projects within the City of St. Helena require contractors, as a condition of contract, to reduce construction-related fugitive ROG emissions by ensuring that low-VOC coatings that have a VOC content of 10 grams/liter (g/L) or less be used during construction. All project applicants shall submit evidence of the requirement for the use of low-VOC coatings to ~~BAAQMD~~ the City of St. Helena prior to the start of construction."
B10-6	Regarding Mitigation Measure MM-AQ-3, he sought to confirm that the number of these point sources would be very low.	Point sources of criteria air pollutants include external combustion boilers, internal combustion engines, industrial processes, petroleum and solvent evaporation, waste disposal, and food and agricultural processes. Creation of new point sources would occur in land uses designated as industrial. Implementation of the General Plan Update would not increase land designated as Industrial, currently limited to two percent of the city acreage under existing conditions. Other examples of point sources include gas stations and dry cleaners. The Planning Area contains four gas stations under existing conditions, and the number of either source is unlikely to substantially increase. Therefore, the amount of development affected by MM-AQ-3 would be low.
B10-7	Regarding Mitigation Measure MM-AQ-6, is this mitigation measure statutory? Under this measure, every building project in the city would have to do a health risk assessment because everyone is within 1,000 of a residence, school, or other sensitive receptors. This could cost lots of money if all projects have to go through this.	The implementation of mitigation measures recommended in the Draft EIR will be required if the St. Helena City Council certifies the General Plan EIR and adopts the mitigation monitoring and reporting program. MM-AQ-6 would apply only to new development proposed for construction and operation in the proximity of sensitive receptors and would not apply retroactively to existing development. Human health risk assessments are a standard requirement under CEQA throughout the state and are typically completed by environmental consultants for a relatively small fee in comparision to the overall cost of environmental review and permitting. Additionally, BAAQMD recommends that any proposed project that includes the siting of a new source or receptor assess associated impacts within 1,000 feet, taking into account both individual and nearby cumulative sources. As such, implementing this mitigation measure would not impose undue cost on developers in St. Helena and it would help to identify and mitigate potential health risks to sensitve populations such as children and seniors, including increased risk of cancer.

Comment ID	Comment	Response
		For clarification, Mitigation Measures AQ-5 and AQ-6 have been revised as follows: "AQ-5: To protect sensitive receptors require discretionary projects within 500 feet of Highway 29, Silverado Trail or the Rail Corridor to include an analysis of mobile source toxic air contaminant health risks. The analysis, if necessary, shall identify feasible mitigation measures to reduce health risks to acceptable levels. AQ-6: All applicants proposing development of projects within 1,000 feet of existing sensitive receptors, as defined by BAAQMD, shall prepare a site-specific screening level construction health risk assessment (HRA) taking into account both project-level and cumulative health risks (including existing TAC sources). If the HRA demonstrates, to the satisfaction of the City, that the health risk exposures for adjacent receptors will be less than BAAQMD project-level and cumulative thresholds (as appropriate), then additional mitigation would be unnecessary. However, if the HRA demonstrates that health risks would exceed BAAQMD project-level and/or cumulative thresholds (as appropriate), additional feasible on- and offsite mitigation shall be analyzed by the applicant to help reduce risks to the greatest extent practicable."
B10-8	Regarding MM-GHG-1, why are we writing a Climate Action Plan that might not reach the target that the State has set, which it has not yet set? How would this mitigate the impact, and how would you assess the success of the mitigation since the State has not set targets, goals, or a way of reaching those targets and goals? Ninety percent of control measures would be at the State or regional level anyway, and the City would have a hard time meeting the targets based on what's under its control.	The comment is noted. As discussed on pages 3.6-10, 3.6-12, and 3.6-44 of the DEIR, Executive Order B-30-15 and Executive Order S-03-05 establish greenhouse gas emissions targets for 2030 and 2050, respectively. While these emissions targets are State-mandated, the State did not provide specific roadmaps for jurisdictions to achieve these levels. The 2017 California Air Resources Board (CARB) Scoping Plan provides recommended per capita targets to achieve the goal established by EO B-30-15, which would not be met under implementation of the Proposed Plan or the Business As Usual scenario as described under Impact 3.6-1. The analysis states that further State and federal actions are necessary to ensure that targets are met, but it is the individual responsibility of each jurisdiction of the State of California to implement supplementary solutions to reach this target. Creation of a Climate Action Plan would be in line with the actions of cities across the State of California to reduce GHG emissions using feasible, comprehensive, and thoughtful strategies. Implementation of such strategies would ensure that the City of St. Helena reduces its overall contribution to cumulative GHG levels in the City and the State of California. While a Climate Action

Comment ID	Comment	Response
		Plan would not be sufficient to meet the ambitious targets established by the State in order to reduce the impact to a level that is less than significant, it would nonetheless be a valuable contribution. As stated in MM-GHG-1, the Climate Action Plan would apply to GHG sectors that the City has direct or indirect jurisdictional control over and would include a community inventory; quantifiable targets for 2030, General Plan Update buildout in 2040, and 2050; and monitoring including 5-year reports. This would be useful information for the City of St. Helena as the risks associated with GHG emissions and climate change become more prevalent.
B10-9	Regarding Impact 3.13-2, the Napa Valley Transit Authority (NVTA) is not a congestion management agency (CMA). The County opted out of having a CMA and has no congestion management plan (CMP). Since there is no CMP, this impact should be written similar to the airport section.	References to the NVTA as a CMA have been removed in the first paragraph under Impact 3.13-2 on page 3.13-50. The paragraph has been updated to: "NVTA is the ~~CMA~~ transportation planning agency for Napa County. NVTA has not published a formal CMP for Napa County; however, the Vision 2040 Moving Napa Forward Transportation Plan does outline several goals related to the transportation system. The Main Street (SR-29) and Silverado Trail corridors are included in the Vision 2040 Plan. Therefore, for the purposes of this EIR, a significant impact is identified if the implementation of the Proposed Plan would result in a conflict with one or more of the following goals of the Vision 2040 Plan:"
B10-10	Regarding transportation mitigation measures on page 3.13-44, the mitigation measure call for two new signals. As part of the analysis, the team looked into what happens to the string of signals as a whole with the two added signals. The only problem is that there is at least one intersection where the delay is so high it is reported as >120 seconds, which means that that is the edge of analysis for the software. Beyond 120 seconds could mean 121 seconds or 1,001 seconds. Does this analysis account for delays above 120 seconds? If it is in reality much longer, the mitigation measure can cause a cascading set of failures. For example, at Grayson/Main, the analysis finds that even though the individual intersection looks like it will pass, the delay at Pope/Main is so long that it causes problems at Grayson/Main. If the delay at Pope/Main exceeds the limits of calculations and could cause a cascade of failures. Also, at Main/Sulphur and Main/Pratt, would the mitigation measure make things worse?	This comment is noted. Table 3.13-5 on pages 3.13-32 and 3.13-33 presents delay and LOS information for Existing Conditions and proposed General Plan Buildout Conditions. Intersections with delays greater than 120 seconds are noted as ">120" because the calculation methodologies become less precise as delays grow beyond 120 seconds. The analysis and findings of impact significance consider delays beyond 120 seconds using the actual calculated values, but delays are reported in the delay and LOS tables as noted to promote clarity in the text. Typically, the cutoff choice in delay value for reporting in delay and LOS tables is done based on local convention and past precedent set by other traffic analyses (for consistency purposes). Appendix I provides transportation modeling outputs used in the population of Table 3.13-5. For the intersection of Pope Street/Main Street (the intersection that primarily generates the long queues noted in the comment), average whole-intersection delays were calculated to not be in

Comment ID	Comment	Response
		excess of 160 seconds. At Silverado Trail/Pope Street, the side street delay (noted in paratheses) is noted as ">120," with the calculated delay in excess of 200 seconds in some cases. The intersection of Grayson/Main was noted as a significant impact because the congestion associated with Pope Street/Main Street may affect operations at the intersection. The addtional signals on Main Street at Pratt Avenue and Sulphur Springs Avenue would mitigate the anticipated significant impact to side-street, stop-controlled operations at these locations, which are based on the side street delay. Additional benefits related to safety may ocurr through the installation of signals. Ultimately, the signal at Pope/Main is the controlling intersection throughout the system, and improvements related to capacity enhancements, traffic demand reallocation (through additions to the street grid discussed in the document), of traffic demand reductions (through sustainable transportation practices) must be implemented to improve the congestion generated by Pope/Main; reduced congestion at Pope/Main would have cascading benefits throughout the system.
B10-11	Regarding MM-TR-3, this reads as though at least one set of extensions must be implemented. In approving the environmental document, are these extensions also being approved?	This comment is noted. As noted in the response to comment A3-B-16, the Proposed Plan notes, on page 5-19, that a "Special Study" and City Council approval is required prior to construction of the roadway extensions identified in Figure 5.2 of the Proposed Plan.
B10-12	Regarding MM-TR-5, the signalization of Silverado/Pope may not be feasible without replacing the operationally deficient bridge, as the bridge approach is narrow and inadequate.	This comment is noted. The provision of signalization at Silverado Trail/Pope Street may not necessarily require the replacement of the Napa River bridge or the construction of a second crossing. As an engineering study for the installation of the signal is conducted, the engineering study should assess the adequacy of the bridge structure as it relates to the signalization of the intersection.
B10-13	Regarding Impact 3.13-5, there seems to be a disconnect between the conclusion for Impact 3.13-1, which finds a significant and unavoidable impact for level of service, and this conclusion, which is less than significant for emergency access. How are the same set of operationally deficient roads ok for emergency access? If there is a need for a satellite fire station under current conditions, then in 2040, with no through streets on either the west or east side of 29 and worse traffic, how would emergency access for fire, police, and other emergency services not be affected? The analysis indicates congestion and LOS F on 29 and parts of town cannot be reached without 29, so those sections of town could	Impact 3.13-1 is related to traffic congestion and delay effects on the general traveling public, while Impact 3.13-5 is related to emergency access. Because motorists must yield and move out of the way for emergency vehicles responding to an emergency, increases in congestion for the general public do not necessarily translate to impediments to emergency vehicle access, so long as sufficient room (such as shoulders, wide tarvel lanes, parking lanes, or center two-way left turn lanes) are provided for emergency vehicles to pass vehicles that have yielded. As noted in Impact 3.13-5, the Proposed Plan would not result in changes to roadways that would lead to spatial

Comment ID	Comment	Response
	have a problem. This impact may be significant and unavoidable, and mitigation should be the same as MM-TR-3.	impediments for vehicles to pull over and allow passage by emergency vehicles. The SR-29/Main Street corridor has existing space in the center of the roadway for a two-way left turn lane along much of its length. Additionally, Proposed Plan implementing action CR4.G requires that the City consider the use of emergency vehicle signal preemption technologies in locations where emergency response times are not met. Because the implementation of the Proposed Plan would not result in further impediments to emergency vehicle access, the impact is noted as less than significant.
B10-14	Figure 3.13-1: Roadway Classification has an error in the depiction of Vallejo near Sulphur Spring. It should match Figure 3.13-2.	The roadway classifications of Vallejo Avenue near Sulphur Springs do match, and no further response is required.
B10-15	Regarding Impact 3.13-5, how can there be adequate emergency access if emergency vehicles have to go to Deer Park to access parts of the city?	Adequacy of emergency access is related to the ability of emergency vehicles to respond to emergencies in a timely manner. As noted in the response to comment B10-10, implementation of the Proposed Plan would not result in roadway facilties whereby emergency vehicles could not bypass traffic yielding to emergency vehicles. Other policies and implementing actions are designed to require that the City review emergency vehicle access over the course of the implementation of the Proposed Plan and, in the case of implementing action CR4.G, install equipment to alleviate emergency access issues that arise in the future. Because the implementation of the Proposed Plan would not result in further impediments to emergency vehicle access, the impact is noted as less than significant.
B10-16	How does the analysis account for significant impacts that could be caused by implementation of the mitigation measures?	Proposed mitigation measures in the DEIR are considered at a program level prior to inclusion. In general, mitigation measures encompass requirements or conditions for new development, or commitments for the City to undertake programmatic or policy actions, but do not themselves propose site-specific projects. Where mitigation measures require action from developers, these would take place as part of the development review process, during which the environmental impacts of the project as a whole would be assessed according to CEQA and the City's Municipal Code. Where mitigation measures require the City to develop a plan or program, impacts of the resulting plan or program would be assessed according to CEQA requirements and other local procedures as warranted.

Comment ID	Comment	Response
		In the case of Section 3.13: Transportation and Traffic, mitigation measures would require specific improvements to certain intersections. Mitigation measures TR-1 through TR-6 call for traffic signals, a roadway extension, and an intersection realignment. In such cases, mitigation measures are also assessed at the program level – traffic impacts were modeled with and without the mitigation measures to ascertain that the measures would not worsen traffic impacts. Potential alignments were considered to determine that adequate right-of-way exists to accommodate the improvements. However, as the improvements have not yet been designed or planned at the project level, detailed project-level environmental review is not possible at this time, and would occur in accordance with CEQA at the time of implementation. Additionally, prior to implementation, the measures would be subject to further engineering study (for example, the installation of a signal would require a study at the time the project is commenced to determine turn pocket lengths for queuing, the appropriate signal timing to minimize delay using updated counts/forecasts, and other features that promote pedestrian, bicyclist and motorist safety).

- City of St. Helena

Mostly Landslides - Consists of mapped landslides, intervening areas typically narrower than 1500 feet, and narrow borders around landslides; defined by drawing envelopes around groups of mapped landslides.

Few Landslides - contains few, if any, large mapped landslides, but locally contains scattered small landslides and questionably identified larger landslides; defined by drawing envelopes around areas free of mapped landslides.

Appendix A

CEQA requires lead agencies to file and distribute public notices regarding the development of the Environmental Impact Report. Appendix A provides evidence of the City of St. Helena's compliance with CEQA Guidelines Sections 15802 and 15085, and includes the Notice of Preparation, Notice of Completion, and Notice of Availability for the 2018 Draft EIR to the St. Helena General Plan Update 2040 published for public review and comment, as well as the Notice of Availability for the 2016 Draft. These documents are provided in support of the response to Comment A2-B-1 from the Local Agency Formation Commission (LAFCO) of Napa County. Appendix A includes the following documents:

1. Ad Proof of 2016 Notice of Availability
2. 2016 Notice of Availability
3. Ad Proof of 2018 Notice of Preparation
4. 2018 Notice of Completion
5. 2018 Notice of Availability.

From:City of St. Helena
Planning Department
1480 Main Street
St. Helena, CA 94574

Notice: Notice is hereby given that the City of St. Helena ("City"), the Lead Agency under the California Environmental Quality Act (CEQA), will receive public comment and recommendations on a Revised Draft Environmental Impact Report (RDEIR) prepared for the General Plan Update. The review period commences on Thursday, **June 9, 2016**, and ends at 5:00 pm on Monday, **July 25, 2016**. All comments regarding the RDEIR must be received by this ending date /time.

Project Description: General Plan Update. The proposed project includes a comprehensive update to the current General Plan, adopted in 1993. The General Plan includes goals and policies to guide the physical development of the community from the date of adoption through the year 2035. The General Plan Update contains the following 11 elements: Land Use and Growth Management; Economic Sustainability; Public Facilities and Services; Circulation; Historic Resources; Community Design; Open Space and Conservation; Public Health, Safety and Noise; Climate Change; Parks and Recreation; and Arts, Culture and Entertainment. If approved, the General Plan Update could result in a population increase of up to 632 persons, 260 new

60001656 CITY OF ST HELENA **Order Nbr 66571**

housing units, approximately 300,000 new square feet of commercial space and approximately 875 new jobs.

Project Location: The General Plan EIR includes all properties within the City of St Helena and associated Sphere of Influence, approximately 3,024 acres of land in Napa County California.

Potential Environmental Impacts: The following potentially significant environmental effects are addressed in the RDEIR: land use and planning, agricultural and forestry resources, transportation and traffic, air quality, noise, aesthetics, biological resources, cultural resources, energy, greenhouse gas emissions, geology and soils, hazards and hazardous materials, hydrology and water quality, mineral resources, population and housing, public services, recreation, and utilities and service systems.

Public Review Period: The public review period for the RDEIR extends Thursday, **June 9, 2016**, and ends at 5:00 pm on Monday, **July 25, 2016.**

Location Where Document Can Be Reviewed: The City has prepared a RDEIR for the subject project pursuant to the California Environmental Quality Act. The RDEIR is available for public review at: 1) the St. Helena Public Library, 1492 Library Lane, St. Helena, CA 94574; 2) St. Helena Planning Department, 1480 Main Street, St. Helena, CA 94574 and 3) on the City's website at www.ci.st-helena.ca.us. All documents referenced in the RDEIR are available for public review at the St. Helena Planning Department, 1480 Main Street, St. Helena, CA 94574.

Comments on the Draft Environmental Impact Report must be received, in writing, by the end of the review period, July 25, 2016 at 5:00 p.m.
Submit comments to Noah Housh, Planning Director, City of St. Helena, Planning and Community Improvement Department

NOTICE OF PREPARATION

Program Environmental Impact Report
City of St. Helena General Plan Update

Date March 29, 2018
To Reviewing Agencies, Interested Parties, and Organizations
Subject Notice of Preparation of a Draft Environmental Impact Report for the City of St. Helena General Plan Update and Scheduling of a Scoping Meeting on April 17, 2018

The City of St. Helena (City) is preparing an update to its General Plan and has determined that an Environmental Impact Report (EIR) will be necessary to evaluate environmental impacts of this Project, pursuant to the California Environmental Quality Act (CEQA). In compliance with CEQA, the City will be the Lead Agency and will prepare the EIR. Attached are the Project description, location maps, and preliminary identification of the potential environmental issues to be explored.

The City is requesting comments and guidance on the scope and content of the EIR from responsible and trustee agencies, interested public agencies, organizations, and the general public (CEQA Guidelines §15082). If your agency is a responsible agency as defined by Section 15381 of the CEQA Guidelines, your agency may use the environmental documents prepared by the City when considering permits or approvals for action regarding the Project.

Potential Environmental Impacts to Be Considered

The EIR will evaluate potentially significant environmental impacts associated with the adoption and implementation of the Proposed Plan. Consistent with the State CEQA Guidelines (Appendix G), the following environmental resource categories will be analyzed in relation to the Project:

- Aesthetics
- Agricultural and Forestry Resources
- Air Quality
- Biological Resources
- Energy, Greenhouse Gas Emissions, & Climate Change
- Geology, Soils, and Seismicity
- Hazards and Hazardous Materials
- Cultural and Tribal Resources
- Hydrology and Water Quality
- Land Use, Population, and Housing
- Mineral Resources
- Noise
- Parks, Public Services & Recreation
- Public Utilities
- Transportation

All of the resource categories listed above will be considered in the EIR; however, given the local context of St. Helena, the following issues will be central to the environmental analysis:

- Agricultural resources, due to the agricultural characteristics and presence of prime and important farmland in and around the Planning Area;
- Biological resources, due to the presence of open space areas that could support habitats and wildlife corridors;
- Hydrology and water quality, due to the presence of waterways such as the Napa River, Sulphur Creek, and York Creek;
- Traffic, due to the reliance on SR 29 as a main thoroughfare and regional connection; and
- Public utilities, due to the importance of stable and secure water supply over the course of the planning process.

Public Scoping Period: April 2 to May 1, 2018

Lead Agency Contact:

Noah Housh, Director
Planning and Community Improvement Department
City of St Helena, 1480 Main Street, St. Helena, CA 94574
NHoush@cityofsthelena.org

A scoping meeting will be conducted as part of the regularly scheduled Planning Commission meeting at 6:00 p.m. on **April 17, 2018** to collect oral comments from agencies and the public. If you have questions regarding this NOP or the scoping meeting, please contact Noah Housh at (707) 968-2659 or via e-mail NHoush@cityofsthelena.org.

Notice of Availability

Draft Environmental Impact Report

for the Proposed City of St. Helena 2040 General Plan Update

State Clearinghouse Number 2010042001

To: Responsible Agencies, Interested Organizations and Members of the Public

The City of St Helena is the Lead Agency for a draft Environmental Impact Report (EIR) prepared to analyze the environmental impacts of the proposed 2040 St. Helena General Plan. This plan will establish policies governing all elements of City governmental operations including land use, utilities, public safety, recreation, the economy and the environment, citywide. Further, this plan analyzes three study areas for potential future expansion of the City's Sphere of Influence. The 2040 General Plan will guide all future City decisions and actions through the horizon year of 2040.

This Draft EIR is prepared pursuant to the California Environmental Quality Act (CEQA) and the City's established policies and procedures regarding implementation of CEQA. It follows a Notice of Preparation (NOP) and public scoping period that extended from April 1, 2018, to May 1, 2018. The EIR includes a description of the proposed project and its environmental setting, along with analysis of how the project would potentially impact the environment. Where impacts would be potentially significant, mitigation measures are identified to avoid or reduce those impacts. In addition, the EIR contains an analysis of several project alternatives, cumulative impacts and other considerations required under CEQA. The draft EIR identifies significant and unavoidable impacts associated with development under the 2040 General Plan in the following resource areas: Greenhouse Gas Emissions, Air Quality, Agricultural Resources and Transportation.

This Draft EIR will be circulated for a 72-day public review and comment period for responsible agencies as well as other interested agencies and the general public. This comment period begins on October 23, 2018 and will end on January 2, 2019. A public hearing to receive oral comments will be held with the Planning Commission at 6:00 PM on December 4, 2018, at Vintage Hall, 465 Main St, St Helena, CA 94574.

Please provide written comments to Noah Housh, Planning Director, City of St. Helena, 1480 Main St, St. Helena, CA 94574 by 5:00 PM on January 2, 2019, or by email at nhoush@cityofsthelena.org.

The Final EIR, Mitigation Monitoring and Reporting Program and Response to Comments, will then be submitted to the Planning Commission at a Public Hearing for review and

recommendation to the City Council, who has the final authority to adopt the documents. The final decision with the City Council is anticipated to occur in late winter/early spring 2019.

Drafty EIR Availability

An electronic version of the draft EIR is available on-line at:

http://www.cityofsthelena.org/planning/page/2040-general-plan-update

Draft EIR hard copies are available for review at the following locations:

St Helena City Hall 1480 Main Street St. Helena, CA 94574	St. Helena Library 1492 Library Lane St. Helena, CA 94574

Request for draft EIR digital or paper copies may be made to: nhoush@cityofsthelena.org or by calling 707-968-2659. There are a limited number of paper copies available.

Opportunities for Commenting

Please send (and postmark) any comments on the 2040 General Plan EIR by January 2, 2019, to be considered and responded to in the Final EIR. Comment should be addressed to:

Noah Housh
Planning Director
City of St Helena
1480 Main St.
St. Helena, CA 94574

You may also send comment via email to: nhoush@cityofsthelena.org. In addition, comments may be provided orally at the public hearing to be held on December 4, 2018, at 6:00 pm at the following address:

Vintage Hall
465 Main St.
St. Helena, CA 94574

The City of St. Helena appreciates your interest in this project and welcomes your involvement in the environmental review process for the 2040 General Plan.

Sincerely,

Noah Housh
Planning Director
City of St. Helena

Executive Summary

This Draft Environmental Impact Report (EIR) evaluates the potential impacts of the proposed St. Helena 2040 General Plan update, referred to as the "Proposed Plan." The Proposed Plan was developed in response to policy direction provided by the City Council, Planning Commission, and community. This Draft EIR has been prepared on behalf of the City of St. Helena, in accordance with the California Environmental Quality Act (CEQA). The City of St. Helena is the lead agency for this EIR, as defined by CEQA.

An EIR is intended to inform decision-makers and the general public of the potential significant environmental impacts of a proposed project. The EIR also considers the availability of mitigation measures to minimize significant impacts and evaluates reasonable alternatives to the Proposed Plan that may reduce or avoid one or more significant environmental effects. Based on the alternatives analysis, an environmentally superior alternative is identified.

This EIR is a program EIR that examines the potential effects resulting from implementing designated land uses and policies in the Proposed Plan. The impact assessment evaluates the Proposed Plan as a whole and identifies the broad, regional effects that may occur with its implementation. As a programmatic document, this EIR does not assess site-specific impacts. Any future development project made possible by the Proposed Plan would be subject to individual, site-specific environmental review, as required by State law. This EIR represents the best effort to evaluate the Proposed Plan given its planning horizon through the year 2040. It can be anticipated that conditions will change; however, the assumptions used are the best available at the time of preparation and reflect existing knowledge of patterns of development.

Proposed Plan

The Proposed Plan is intended to respond directly to emerging trends and topics in St. Helena since the preparation of the current General Plan (adopted in 1993), and to plan for city growth projected in coming decades. The Proposed Plan, which establishes a long-range planning framework and policies, would fully replace the City's existing General Plan if adopted by the City Council.

The General Plan update was initiated to comprehensively examine the existing conditions in the city and to create a vision for the city's future. Although the Proposed Plan does not specify or anticipate when buildout of the city will occur, a horizon of year 2040 is assumed for planning purposes. The purpose and objectives of the Proposed Plan, included below, underpin the policies and implementing actions of the Proposed Plan.

Planning Area

The Planning Area encompasses 3,594 acres including the City of St. Helena, its Sphere of Influence (SOI), and three adjacent unincorporated study areas. Although St. Helena does not have jurisdiction in areas outside of its city limits, the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities, to the three adjacent study areas. As such, what happens in those areas bears a relation to the City's planning and must be considered in the General Plan, per California Government Code Section 65300.

Purpose

California Government Code Section 65300 requires each city and county in California to adopt a general plan "for the physical development of the county or city, and any land outside its boundaries which…bears relation to its planning." The St. Helena General Plan can be considered the city's development constitution, containing both a statement of the community's vision of its long-term development as well as the policies to support that vision by guiding the physical growth of the city. The Proposed Plan contains policies to guide decision-making related to development, housing, transportation, environmental quality, public services, parks, and open spaces. The Proposed Plan is a document to be adopted by the City Council that serves the following purposes:

- Establish a long-range vision that reflects the aspirations of the community and outlines steps to achieve this vision;
- Establish long-range development policies that will guide City departments, Planning Commission, and City Council decision-making;
- Provide a basis for judging whether specific development proposals and public projects are in harmony with plan policies;
- Plan in a manner that meets future land needs based on the projected population and job growth;
- Allow City departments, other public agencies, and private developers to design projects that will enhance the character of the community, preserve environmental resources, and minimize hazards; and
- Provide the basis for establishing and setting priorities for detailed plans and implementing programs, such as the zoning ordinance, subdivision regulations, specific and master plans, and the Capital Improvement Program.

Objectives

The Proposed Plan provides the basis for the City's land use and development policy and represents the basic community values, ideals, and aspirations that will govern development and conservation. Specific objectives established for the project include the following:

1. Encourage infill development in previously developed areas of the city to preserve agricultural and open space lands outside the urban limit line and foster a compact development pattern;
2. Focus future development so that it is contiguous to existing developed areas and supports efficient delivery of public services and infrastructure;
3. Preserve St. Helena's small-town character;

4. Protect local historic resources and preserve St. Helena's agricultural heritage;
5. Reduce traffic congestion by providing alternative transportation choices, enhancing regional public transit connections, and achieving an appropriate jobs-to-housing balance to reduce commuter trips;
6. Protect and enhance the natural resources—including the riparian corridors, woodlands, flora, and fauna—that contribute to St. Helena's healthy environment, scenic beauty, and quality of life;
7. Strengthen St. Helena's role as a rural commercial and business center serving the daily needs of local residents in town and in the surrounding unincorporated communities;
8. Cultivate a healthy and diverse local economy;
9. Promote sustainable, low-impact tourism that contributes to the local economy while maintaining St. Helena's character;
10. Provide a high-quality network of parks, open spaces, and trails that enhances quality of life and connectivity in the community; and
11. Foster a vibrant arts community that contributes to the local economy and enriches the cultural life of the community.

Estimated Buildout of the Proposed General Plan

Buildout refers to the estimated amount of new development and corresponding growth in population and employment that is likely to take place under the Proposed Plan through the planning horizon year of 2040. Buildout estimates should not be considered a prediction for growth, as the actual amount of development that will occur through 2040 is based on many factors outside of the City's control. Therefore, buildout estimates represent one potential set of outcomes rather than definitive figures. Additionally, the designation of a site for a specific land use in the Proposed Plan does not guarantee that a site will be developed or redeveloped at the assumed density during the planning period, as future development will rely primarily on each property owner's initiative. Buildout projections of this EIR do not include the total amount of potential development that could be accommodated by the Proposed Plan. Rather, the buildout assumes that only a portion of the total potential development will occur by 2040.

Table ES-1 Residential Buildout (2040) describes the estimated housing units and population anticipated at buildout of the Proposed Plan according to analysis undertaken for the Proposed Plan. Table ES-2: Projected Jobs at Buildout (2040) describes the potential jobs anticipated to result from non-residential development shown on the proposed Land Use Diagram on vacant and underutilized sites.

Table ES-1: Residential Buildout (2040)

	St. Helena		*Study Areas*		*Planning Area Total*	
	Housing Units[1]	*Population*[2]	*Housing Units*[1]	*Population*[2]	*Housing Units*[1]	*Population*[2]
Existing (2018)[3]	2,700	5,900	200	600	2,900	6,400
Future Development[4]	300	700	100	200	400	900
Total at Buildout	**3,100**	**6,600**	**200**	**700**	**3,300**	**7,300**

Notes:

1. Figures are rounded to the nearest hundred and may not sum due to rounding.
2. Figures are rounded to the nearest hundred and may not sum due to rounding.
3. Existing residential units within the city of St. Helena were adjusted with reference to data from the California Department of Finance, the Association of Bay Area Governments, and the Napa County Assessor, updated with 2018 parcel data from the Napa County Assessor.
4. Future population was calculated assuming 2.45 persons per household in the city and 2.69 persons per household in the study areas.

Source: Dyett & Bhatia, 2018

Table ES-2: Projected Jobs at Buildout (2040)[1]

	St. Helena	*Study Areas*	*Planning Area Total*
Existing (2018)[3]	5,400	500	6,400
Future Development[2]	900	100	900
Total at Buildout	**5,900**	**1,100**	**7,000**

Notes:

1. Figures are rounded to the nearest hundred and may not sum due to rounding
2. Includes pipeline development
3. Employment assumptions were calibrated with reference to County Assessor data and the ABAG Projections 2013 dataset.

Alternatives to the Proposed Plan

The following alternatives are described and evaluated in this EIR, and are summarized in Table ES-3: Comparison of Key Characteristics; Existing, Alternatives, and Proposed General Plan.

Transportation Network Enhancement Alternative

The Transportation Network Enhancement Alternative proposes improvements to the transportation network to facilitate access through the community for local residents traveling by all modes of transportation. Specifically, Oak Avenue would be extended south from its current terminus at Mitchell Lane to Grayson Avenue in order to relieve vehicle congestion and queuing on SR 29 and to improve bicycle and pedestrian access to St. Helena Elementary, Robert Louis Stevenson Middle School, and St. Helena High School.

The new roadway would be constructed as a two-lane Downtown/Mixed Use Street with bicycle lanes and sidewalks, consistent with the City's Engineering Standards, and a bridge would be constructed over Sulphur Creek. The roadway would be designed to provide a high-quality bicycle and pedestrian connection to Downtown St. Helena, with a full Class I path along the west side of the street. Traffic calming measures, such as speed lumps, bulb outs, and/or chicanes would be constructed to limit travel speeds between intersections and optimize safety for all roadway users. Connection to the Vine Trail would also be provided.

Under this alternative, citywide capital improvements to expand the existing bicycle network would still be constructed, as under the proposed plan to provide safe, convenient access to destinations throughout the community and to encourage the use of bicycles as a non-automotive means of transportation. Additionally, the proposed Mixed Use land use designation would still be applied to encourage a mix of uses at infill locations in central St. Helena and provide for housing opportunities in close proximity to services and retail. Other policies and actions would be as under the proposed Plan. Overall, as with the Proposed Plan, the Transportation Network Enhancement Alternative would result in approximately 750 new residents, 335 housing units, and 935 new jobs in St. Helena and its SOI by 2040.

No Project Alternative

Consistent with Section 15126.6(e)(2) of the CEQA Guidelines, under the No Project Alternative, the Proposed Plan would not be adopted. The City's current General Plan land use map would remain in use, and future development in the Planning Area would continue to be subject to existing policies, regulations, development standards, and land use designations of the existing St. Helena General Plan and Municipal Code. Specifically, there would be no new Mixed Use land use designation, the Medium Density Residential density range would remain 5.1 to 12.0 units per acre, and the High Density Residential density range would remain 12.1 to 20.0 units per acre. All Proposed Plan change areas as identified in the Proposed Plan would retain their existing 1993 General Plan designations. Policies concerning topics such as transportation, economic development, parks, open space, the environment, health, and housing would also remain unchanged, and there would be no alterations to the Urban Limit Line.

Overall, the No Project Alternative is projected to result in approximately 460 new residents, 200 housing units, and 780 new jobs in St. Helena by 2040. Growth in the study areas would be the same as under the Proposed Plan.

Table ES-3: Comparison of Key Characteristics; Existing, Alternatives, and Proposed General Plan

	City of St. Helena			*Study Areas*			*Planning Area Total*		
	Population	*Housing*	*Jobs*	*Population*	*Housing*	*Jobs*	*Population*	*Housing*	*Jobs*
Existing (2018)	5,900	2,700	5,400	600	200	500	6,400	2,900	5,900
Proposed Plan (2040)	6,600	3,100	6,400	700	200	600	7,300	3,300	7,000
Transportation Network Enhancement Alternative (2040)	6,600	3,100	6,400	700	200	600	7,300	3,300	7,000
No Project Alternative (2045)	6,260	2,900	6,180	700	200	1,100	6,960	3,100	7,280

Areas of Controversy

During the drafting of the Proposed Plan and this EIR, public agencies and members of the public were invited to provide feedback on the documents. The following topics were identified as areas of controversy, based on comments at public meetings on the Proposed Plan and at the EIR Scoping Meeting, and responses to the Notice of Preparation (NOP):

- **Traffic Impacts.** Many of the comments addressed traffic impacts, including regarding visitor-generated traffic; existing congestion problems; potential traffic impacts due to increased Wine Train service; level of service non-compliance during peak periods; bike and pedestrian safety, including unsafe roadway crossings; and ease and comfort of crossing streets for pedestrian and bike users. Future development under the Proposed Plan could exacerbate existing congestion problems within the City of St. Helena through growth of population and jobs.
- **Emergency Evacuation and Access.** Impacts to emergency access and evacuation may be impacted under the Proposed Plan. Increased traffic congestion, as noted above, could slow emergency vehicle response times. Potentially impacted areas include Napa River crossing congestion and limited emergency vehicle access to parts of town only accessible by State Route 29.
- **Water Supply.** Early versions of the Proposed Plan led to community concern over availability of water to serve an increased population. Since that time, the City of St. Helena has enacted the Water Neutral Policy for Development, which requires all new development to fully offset new demands on the City's water supply by providing retrofits for existing water users within the City.

Additionally, environmental impacts classified as significant and unavoidable have been identified in the resource topics of agricultural resources; air quality; energy, greenhouse gases, and climate change; and transportation and traffic; and inasmuch as they may be controversial to the general public, agencies, or stakeholders, they are described briefly here.

AGRICULTURAL RESOURCES

Implementation of the Proposed Plan would allow for the conversion of Prime Farmland, Farmland of Statewide Importance, Unique Farmland, and Farmland of Local Importance to non-agricultural uses. Under the Proposed Plan, urban development could occur on 118 acres of these farmlands designated by the Farmland Mapping and Monitoring Program (FMMP). Urban development could further result in indirect impacts that exert pressure on agricultural lands to convert to non-agricultural use. Conversion of agricultural land to urban use is not directly mitigable, as agricultural land is a finite and irreplaceable resource. Beyond limiting the amount of total growth permitted, there are no feasible mitigation measures for agricultural land conversion that would also fulfill the objectives of and implement the Proposed Plan. The impact would remain significant and unavoidable.

AIR QUALITY

Development under the Proposed Plan could violate air quality standards or contribute substantially to an existing or projected air quality violation. Any development under the Proposed Plan that would exceed Bay Area Air Quality Management District (BAAQMD) regional significance thresholds would contribute to the nonattainment designation of the Air Basin, which constitutes an air quality violation. The Air Basin is currently designated a nonattainment area for California and national O3, California PM2.5, and California PM10 AAQS.

Construction activities associated with the Proposed Plan would cause short-term emissions of criteria air pollutants, including the temporary generation of ozone precursors (ROG, NOX), CO, and particulate matter emissions that could result in short-term impacts on ambient air quality in the Planning Area. While policies in the Proposed Plan would enforce air quality standards during construction, with respect to ROG, NOx and PM exhaust emissions, there could be foreseeable conditions under the Proposed Plan where the amount of construction activity for an individual development project, or a combination of these projects, could result in the generation of these pollutant emissions that exceed their respective BAAQMD significance thresholds (54 pounds/day for ROG and NOx, 82 pounds per day for exhaust PM10, and 54 pounds/day for exhaust PM2.5). Emissions of these pollutants may not be reduced to levels below BAAQMD's thresholds when multiple construction projects are concurrently ongoing in St. Helena. Therefore, the Proposed Plan would cumulatively contribute to the nonattainment designations of the Air Basin during construction, and impacts would be significant and unavoidable.

In addition to the short-term construction emissions, buildout of the Proposed Plan would generate long-term air emissions, and has the potential to result in air quality impacts from mobile, area, and energy sources. Future development under the Proposed Plan would be required to comply with applicable air quality plans, State Implementation Plan (SIP), California Air Resources Board (CARB) motor vehicle standards, BAAQMD regulations for stationary sources and architectural coatings, Title 24 energy efficiency standards, and the Proposed Plan policies; however, there is no guarantee that emissions would be mitigated below BAAQMD thresholds. Current nonattainment status and projected ROG and PM10 emissions at buildout in combination with past, present, and reasonably foreseeable projects elsewhere within the Air Basin demonstrate that the Proposed Plan, even with implementation of applicable regulations and Proposed Plan's principles and actions that would reduce impacts associated with long-term operational criteria pollutant emissions, would result in a significant and unavoidable cumulative impact with respect to air quality and attainment of such standards.

Therefore, development under the Proposed Plan could result in a cumulatively considerable net increase of criteria pollutants for which the General Plan region is nonattainment under an applicable federal or State ambient air quality standard, and could violate air quality standards or contribute substantially to an existing or projected air quality violation. Even with the mitigation measures in the Proposed Plan, the impacts would be significant and unavoidable.

ENERGY, GREENHOUSE GASES, AND CLIMATE CHANGE

Through implementation of the Proposed Plan policies aimed at reducing greenhouse gas (GHG) emissions, the Proposed Plan would serve to implement numerous strategies and mitigation measures aimed at reducing these emissions. However, even accounting for State and federal standards and for policies within the Proposed Plan that can be quantified, the resulting 2040 per capita emissions are still greater than the BAAQMD efficiency target and the CARB Scoping Plan target. This means that, absent additional measures at the State level, development under the Proposed Plan would conflict with CARB's 2017 Scoping Plan, AB 32, EO S-03-05, or BAAQMD's CEQA Guidelines, as the City does not have direct control over certain aspects of transportation emissions, such vehicle fuel efficiency standards or regional traffic. Further action is necessary at the State and federal levels to achieve the deep cuts to emissions sources outside the City's jurisdictional control needed to meet the GHG emissions reductions targets laid out by the State. Given that, at this time, there are no post-2030 State or federal measures that would assist the City in achieving the efficiency target in 2040, the potential exists for the Proposed Plan to conflict with applicable plans, policies, or regulations adopted for the purpose of reducing the emissions of GHGs. Therefore, the impact remains significant and unavoidable.

TRANSPORTATION AND TRAFFIC

Implementation of the Proposed Plan would contribute to population and job growth, resulting in projected higher amounts of traffic generation and congestion in the City of St. Helena. More specifically, it would cause a significant impact by causing several local intersections to perform below level of service (LOS) standards established by the City of St. Helena or Napa County, as applicable, causing a conflict with these established measures of effectiveness of the circulation system.

27 intersections were studied as part of the analysis under the General Plan Buildout. Analysis performed assuming no Oak Avenue Extension found significant impacts at seven intersections, including Main Street/Pratt Avenue, Main Street/Elmhurst Avenue, Main Street/Pope Street-Mitchell Drive, Main Street/Grayson Avenue, Main Street/Sulphur Springs Avenue, and Silverado Trail/Pope Street. Analysis performed assuming completion of the Oak Avenue Extension found significant LOS impacts are three intersections, including Main Street/Pratt Avenue, Main Street/Elmhurst Avenue, and Silverado Trail/Pope Street. The Proposed Plan includes multiple policies and implementing actions that would seek to minimize this congestion on the transportation network through a series of efforts to reduce single occupancy vehicle trips, improve circulation throughout St. Helena, and promote walking, bicycling and transit trips as viable transportation options. It also contains multiple implementing actions that identify mechanisms for funding actions designed to alleviate transportation impacts resulting from new development under the Proposed Plan. Nevertheless, even with Proposed Plan policies and implementing actions, impacts at the above stated intersections would be significant.

Further, as Main Street is a State highway (SR-29), mitigation measures along Main Street are subject to Caltrans approval, and thus the construction of the mitigation measures cannot be guaranteed by the City. Additionally, the mitigation measures along Main Street and Silverado Trail may be considered infeasible due to lack of funds to design and construct adequate improvements to accommodate future traffic volumes or due to lack of sufficient right-of-way to

construct needed improvements. Since the City cannot guarantee that the needed improvements will be implemented, the impact is deemed significant and unavoidable.

Impacts Summary and Environmentally Superior Alternative

IMPACTS SUMMARY

Table ES-4: Summary of Impacts and Mitigation Measures presents the summary of the significant impacts of the Proposed Plan identified in the EIR and the Proposed Plan mitigation measures that reduce these impacts. Detailed discussions of the impacts and proposed policies that would reduce impacts are in Chapter 3.

IDENTIFICATION OF ENVIRONMENTALLY SUPERIOR ALTERNATIVE

CEQA Guidelines (Section 15126.6) require the identification of an environmentally superior alternative among the alternatives analyzed. Table 4-4.1: Summary of Impacts for Alternatives, summarizes the alternatives' overall environmental impacts for each topic presented in Section 4.3. For the Proposed Plan, six impacts were expected to be significant and unavoidable, three impacts were expected to be less than significant with mitigation, 65 impacts were expected to be less than significant, and three were found to be no impact. For the Transportation Network Enhancement Alternative, seven impacts were expected to be significant and unavoidable, five impacts were expected to be less than significant with mitigation, 62 impacts were expected to be less than significant, and three were found to be no impact. For the No Project Alternative, 11 impacts were expected to be significant and unavoidable, two impacts were expected to be less than significant, 61 impacts were expected to be less than significant, and two were found to be no impact.

While the proposed land use diagrams of the two alternatives and the Proposed Plan are similar, the policies included in the No Project Alternative in many cases do not address the broad range of environmental topics covered by the Transportation Network Enhancement Alternative and Proposed Plan, and are not up to date with current laws and practices concerning environmental impacts. Therefore, of the two alternatives analyzed, the Transportation Network Enhancement Alternative is the environmentally superior alternative. However, while the Transportation Network Enhancement Alternative could relieve impacts related to vehicle congestion and improve access to transportation, making it the environmentally superior of the two alternatives, the extension of Oak Street under this alternative would result in several new potentially significant environmental impacts related to noise, air pollutant and GHG emissions, and hydrology not present with the Proposed Plan.

Overall, the Proposed Project was found to have fewer potentially significant and unavoidable impacts than either the Transportation Network Enhancement Alternative and the No Project Alternative.

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
3.1 Aesthetics			
3.1-1 Implementation of the Proposed Plan would not have a substantial adverse effect on scenic vistas.	None Required	Less than significant	N/A
3.1-2 Implementation of the Proposed Plan would not substantially damage scenic resources, including, but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway.	None Required	Less than significant	N/A
3.1-3 Implementation of the Proposed Plan would not substantially degrade the existing visual character or quality of St. Helena and its surroundings.	None Required	Less than significant	N/A
3.1-4 Implementation of the Proposed Plan would create new sources of substantial light or glare that could adversely affect day- or night-time views in the area.	None Required	Less than significant	N/A
3.2 Agricultural Resources			
3.2-1 Implementation of the Proposed Plan would convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance.	Implementation of the Proposed Plan could result in the loss of 118 acres of Prime Farmland, Farmland of Statewide and Local Importance, and Unique Farmland. Conversion of agricultural land to urban use is not directly mitigable, aside from preventing development altogether, as agricultural land is a finite and irreplaceable resource. Beyond limiting the amount of total growth permitted,	Significant and unavoidable	Significant and unavoidable

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
	there are no feasible mitigation measures for agricultural land conversion that would also fulfill the objectives of and implement the Proposed Plan. The impact would remain significant and unavoidable.		
3.2-2 Implementation of the Proposed Plan would not conflict with existing zoning for agricultural use or a Williamson Act contract.	*None Required*	Less than significant	N/A
3.2-3 Implementation of the Proposed Plan would involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use.	*None Required*	Less than significant	N/A
3.3 Air Quality			
3.3-1 Development under the Proposed Plan will not conflict with or obstruct the implementation of the applicable air quality plan.	*None Required*	Less than significant	N/A
3.3-2 Development under the proposed General Plan would violate air quality standards or contribute substantially to an existing or projected air quality violation.	**AQ-1:** Require construction projects in the City of St. Helena to implement BMPs to reduce fugitive dust emissions. BMPs may include:	Significant and unavoidable	Significant and unavoidable

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
	• Watering all exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) three times per day using recycled water. • Covering all haul trucks transporting soil, sand, or other loose material. • Removing all visible mud or dirt track-out onto adjacent public roads using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited. • Limiting all vehicle speeds on unpaved roads to 15 mph. • Completing all roadways, driveways, and sidewalks to be paved as soon as possible. Laying building pads soon as possible after grading unless seeding or soil binders are used. • Minimizing idling times either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of		

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
	California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points. • Maintaining and properly tuning all construction equipment in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper working condition prior to operation. • Staging construction equipment as far as possible from existing sensitive receptors (away from the southeast property line and surrounding residences). • Posting a publicly visible sign with the telephone number and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations.		

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
	Where warranted, the project sponsors shall incorporate the following language into construction specifications if significant risk is anticipated based on design level construction schedule, duration and concurrent construction activities: • Powering portable equipment by electricity if available or if electricity is not available, using propane or natural gas if feasible. Diesel engines shall only be used if electricity is not available and it is not feasible to use propane or natural gas. • Ensuring that all mobile diesel-powered off-road equipment larger than 25 horsepower and operating on the site for more than two days continuously or 20 hours cumulative meets, at a minimum, U.S. EPA particulate matter emissions standards for Tier 2 engines or equivalent and be equipped with diesel particulate matter filters that meet CARB-certified Level 2 or 3 Diesel Particulate Filters. Alternatively-fueled equipment (i.e.,		

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
	non-diesel) would meet this requirement. **AQ-2:** Require that applicants proposing development of projects within the City of St. Helena require contractors, as a condition of contract, to reduce construction-related fugitive ROG emissions by ensuring that low-VOC coatings that have a VOC content of 10 grams/liter (g/L) or less be used during construction. All project applicants shall submit evidence of the use of low-VOC coatings to BAAQMD prior to the start of construction. **AQ-3:** Require all development applications with the potential to create point-source air quality impacts be referred to the Bay Area Air Quality Management District (BAAQMD) for review and comment to ensure compliance with BAAQMD requirements prior to approval of the project.		
3.3-3 Development under the Proposed Plan would result in a cumulatively considerable net increase of criteria pollutants for which the General Plan	See Mitigation Measures AQ-1, AQ-2, and AQ-3 under Impacts 3.3-1 and 3.3-2.	Significant and Unavoidable	Significant and Unavoidable

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
region is nonattainment under an applicable federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).			
3.3-4 Development under the Proposed Plan would not expose sensitive receptors to substantial pollutant concentrations.	Mitigation Measures AQ-1, AQ-2, and AQ-3, as listed under Impacts 3.3-1 and 3.3-2, as well as the following measures: **AQ-4:** Require development projects to meet CARB setback recommendations from air contaminant sources for sensitive uses, or conduct specific air quality and health risk impact analyses and identify project specific mitigation measures. **AQ-5:** To protect sensitive receptors require discretionary projects in proximity to Highway 29, Silverado Trail and the Rail Corridor to include an analysis of mobile source toxic air contaminant health risks. The analysis, if necessary, shall identify feasible mitigation measures to reduce health risks to acceptable levels **AQ-6:** All applicants proposing development of projects within 1,000 feet of existing sensitive receptors, as defined by BAAQMD, shall prepare a site-specific construction health risk assessment (HRA) taking into account both project-level and cumulative health risks	Less than Significant with Mitigation	Less than Significant with Mitigation

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
	(including existing TAC sources). If the HRA demonstrates, to the satisfaction of the City, that the health risk exposures for adjacent receptors will be less than BAAQMD project-level and cumulative thresholds (as appropriate), then additional mitigation would be unnecessary. However, if the HRA demonstrates that health risks would exceed BAAQMD project-level and/or cumulative thresholds (as appropriate), additional feasible on- and offsite mitigation shall be analyzed by the applicant to help reduce risks to the greatest extent practicable.		
3.4 Biological Resources			
3.4-1 Implementation of the Proposed Plan would not have a substantial adverse effect, either directly or through habitat modifications, on species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service	None Required	Less than significant	N/A
3.4-2 Implementation of the Proposed Plan would not have a substantial adverse effect on any riparian habitat or other sensitive natural community	None Required	Less than significant	N/A

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service.			
3.4-3 Implementation of the Proposed Plan would not have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.	None Required	Less than significant	N/A
3.4-4 Implementation of the Proposed Plan would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.	None Required	Less than significant	N/A
3.4-5 Implementation of the Proposed Plan would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.	None Required	Less than significant	N/A
3.4-6 Implementation of the Proposed Plan would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan.	None Required	No impact	N/A

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
3.5 Cultural, Historic, and Tribal Cultural Resources			
3.5-1 Implementation of the Proposed Plan could cause a substantial adverse change in the significance of a historical resource, as defined as physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historic resource would be materially impaired (CEQA Guidelines Section 15064.5).	None Required	Less than significant	N/A
3.5-2 Implementation of the Proposed Plan could cause an adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5.	None Required	Less than significant	N/A
3.5-3 Implementation of the Proposed Plan would not directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.	None Required	Less than significant	N/A
3.5-4 Development allowed by the Proposed Plan would have the potential to disturb human remains, including those interred outside of formal cemeteries.	None Required	Less than significant	N/A
3.5-5 Implementation of the Proposed Plan could cause an adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is	None Required	Less than significant	N/A

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is: (a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or (b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.			
3.6 Energy, Greenhouse Gases, and Climate Change			
3.6-1 Development under the Proposed Plan would generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.	**GHG-1:** The City of St. Helena shall adopt and begin to implement a Climate Action Plan within a goal of 18 months, but no later than 36 months, of adopting the Proposed Plan update to address the GHG reduction goals of Executive Order B-30-15 and Executive Order S-03-05 for GHG sectors that the City has direct or indirect jurisdictional control over. The Climate Action Plan shall include	Significant and Unavoidable	Significant and Unavoidable

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
	a community inventory of GHG emission sources, and quantifiable GHG emissions reduction targets for 2030 and 2050, and an interim target for the General Plan buildout year 2040, that are consistent with the statewide GHG reduction targets. The City shall monitor progress toward its GHG emissions reduction goals and prepare reports every five years detailing that progress.		
3.6-2 Development under the Proposed Plan would conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.	Refer to Mitigation Measure GHG-1 under Impact 3.6-1.	Significant and Unavoidable	Significant and Unavoidable
3.6-3 Development under the Proposed Plan would not cause wasteful, inefficient, and unnecessary consumption of energy during project construction, operation, and/or maintenance.	None Required	Less than Significant	N/A
3.6-4 The Proposed Plan would not conflict with the CBC Energy Efficiency Standards, the CARB passenger vehicle GHG emission reduction targets for 2020 and 2040, or any other applicable energy conservation regulations.	None Required	Less than Significant	N/A
3.7 Geology, Soils, and Seismicity			
3.7-1 Implementation of the Proposed Plan would not expose residents, visitors and employees, as	None Required	Less than significant	N/A

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
well as public and private structures, to substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault; strong seismic ground shaking; seismic-related ground failure, including liquefaction, or landslides.			
3.7-2 Implementation of the Proposed Plan would not result in substantial soil erosion or the loss of topsoil.	None Required	Less than significant	N/A
3.7-3 Implementation of the Proposed Plan would not result in development located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Plan, and potentially result in on or off-site landslide, lateral spreading, subsidence, liquefaction or collapse.	None Required	Less than Significant	N/A
3.7-4 Implementation of the Proposed Plan would not locate structures on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property.	None Required	Less than significant	N/A
3.7-5 Implementation of the Proposed Plan would not locate structures on soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater.	None Required	Less than significant	N/A
3.8 Hazards and Hazardous Materials			

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
3.8-1 Development under the Proposed Plan could create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials.	None Required	Less than significant	N/A
3.8-2 Development under the Proposed Plan would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.	None Required	Less than significant	N/A
3.8-3 Development under the Proposed Plan could emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.	None Required	Less than significant	N/A
3.8-4 Development under the Proposed Plan could result in a project located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 (the "Cortese List") and, as a result, create a significant hazard to the public or the environment.	None Required	Less than significant	N/A
3.8-5 Development under the Proposed Plan would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.	None Required	Less than significant	N/A

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
3.8-6 Future development allowed under the Proposed Plan would not expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands.	None Required	Less than Significant	N/A
3.8-7 Development under the Proposed Plan would not result in a safety hazard for people residing or working within an airport land use compatibility plan area or, where such a plan has not been adopted, within two miles of a public airport or public use airport or in close proximity to a private air strip.	None Required	No impact	N/A
3.9 Hydrology and Water Quality			
3.9-1 Development under the Proposed Plan would not violate any federal, state, or local water quality standards or waste discharge requirements.	None Required	Less than significant	N/A
3.9-2 Development under the Proposed Plan would not substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted).	None Required	Less than significant	N/A

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
3.9-3 Development under the Proposed Plan would not substantially alter the existing drainage pattern of the Planning Area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion, siltation, or flooding on- or off-site.	None Required	Less than significant	N/A
3.9-4 Development under the Proposed Plan would not create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff.	None Required	Less than significant	N/A
3.9-5 Development under the Proposed Plan would not substantially degrade water quality.	None Required	Less than significant	N/A
3.9-6 Development under the Proposed Plan would not place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map.	**HYDRO-1:** Any proposed development or redevelopment on land designated as regulatory floodway on current FEMA maps shall, prior to issuance of a construction permit, obtain and submit to the City a Letter of Map Revision (LOMR) from FEMA, demonstrating that a hydrologic and hydraulic analysis showed that grading modifications were performed such that the proposed	Less than significant with Mitigation	Less than significant with Mitigation

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
	development would no longer be within the floodway. These modifications shall be completed without raising the base flood level or impacting other properties.		
3.9-7 Development under the Proposed Plan would not place within a 100-year flood hazard area structures which would impede or redirect flood flows.	None Required	Less than significant	N/A
3.9-8 Development under the Proposed Plan would not expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam.	None Required	Less than significant	N/A
3.9-9 Development under the Proposed Plan would not result in inundation by seiche, tsunami, or mudflow.	None Required	Less than significant	N/A
3.10 Land Use, Population, and Housing			
3.10-1 Implementation of the Proposed Plan would not physically divide an established community.	None Required	No Impact	N/A
3.10-2 Implementation of the Proposed Plan would not conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the Plan (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the	None Required	No Impact	N/A

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
purpose of avoiding or mitigating an environmental effect.			
3.10-3 Implementation of the Proposed Plan would not conflict with any applicable habitat conservation plan or natural community conservation plan	None Required	No Impact	N/A
3.10-4 Implementation of the Proposed Plan would not induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).	None Required	Less than significant	N/A
3.10-5 Implementation of the Proposed Plan would not displace substantial numbers of existing housing or people, necessitating the construction of replacement housing elsewhere.	None Required	Less than significant	N/A
3.11 Noise			
3.11-1 Implementation of the Proposed Plan would not expose persons to or generate noise levels in excess of the noise standards established in the Proposed Plan Noise Element or applicable standards of other agencies.	None Required	Less than Significant	N/A

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
3.11-2 Implementation of the Proposed Plan would not expose people to or generate excessive groundborne vibration or groundborne noise levels.	**NO-1:** Where vibration impacts have the potential to cause structural damage or distinctly perceptible human response (reference Tables 3.11-12 to 3.11-14, or more recent sources), require a vibration study, prepared by a qualified vibration consultant. The study should include a site-specific engineering assessment of potential vibration impacts to structures and sensitive receptors from construction activities and specify a mitigation plan to minimize the impacts using all reasonable and feasible means available. The mitigation plan should include a procedure for establishing threshold and limiting vibration values for potentially affected structures, based on an assessment of each structure's ability to withstand the loads and displacements due to construction vibrations and a commitment to develop a vibration monitoring plan during the engineering phase and to implement a compliance monitoring program during construction.	Less than significant with Mitigation	Less than significant with Mitigation
3.11-3 The development of the Proposed Plan would result in a substantial permanent increase in ambient noise levels above levels existing without the Proposed Plan.	None Required	Significant and unavoidable	Significant and unavoidable

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
3.11-4 The development of the Proposed Plan would not result in a substantial temporary or periodic increase in ambient noise levels above levels existing without the Proposed Plan.	None Required	Less than significant	N/A
3.11-5 The Proposed Plan would not expose people residing or working in the Planning Area to excessive noise levels related to its location within two miles of a public airport or public use airport.	None Required	No Impact	N/A
3.11-6 The Proposed Plan would not expose people residing or working in the Planning Area to excessive noise levels related to its location in the vicinity of a private airstrip.	None Required	No Impact	N/A
3.12 Public Services and Recreation			
3.12-1 Implementation of the Proposed Plan would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire	None Required	Less than significant	N/A

Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
protection, police protection, schools, parks, or other public facilities.			
3.12-2 Implementation of the Proposed Plan would not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.	None Required	Less than significant	N/A
3.12-3 Implementation of the Proposed Plan would not include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.	None Required	Less than significant	N/A
3.13 Transportation and Traffic			
3.13-1 Implementation of the Proposed Plan could result in conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit.	The following specific mitigation measures have been developed to alleviate the significant impacts noted above. With the exception of the Silverado Trail/Pope Street intersection, these mitigation measures would require approval by Caltrans and/or further action by the City Council prior to implementation of the mitigation measure. **TR-1:** Main Street/Pratt Avenue: Install a traffic signal at the intersection. **TR-2:** Main Street/Elmhurst Avenue: Restripe the intersection to include the following:	Significant and unavoidable	Significant and unavoidable

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
	• Northbound approach: 1 left turn lane, 1 though lane • Southbound approach: 1 two-way left turn lane, 1 through-right turn shared lane • Eastbound approach: 1 left turn lane, 1 right turn lane **TR-3:** Main Street/Pope Street-Mitchell Drive: Construct one or more of the planned roadway extensions noted in General Plan Figure 5.2. Note that, per the General Plan, additional study of the connection(s) would be required, and the City Council would need to approve the connection at that time. Candidate extensions that may directly reduce the impacts at Main Street/Pope Street-Mitchell Drive include: • Connection 2A: College Avenue extension to Mills Lane (may require realignment of Mills Lane to meet Main Street/Grayson Avenue intersection) • Connection 3: Oak Avenue extension from Mitchell Drive to Grayson Avenue • Connection 2B, Connection 2C, Connection 5B, or a combination of Connections 1, 4 and 5A may provide		

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
	congestion relief to Main Street/Pope Street-Mitchell Drive, but these improvements have additional considerations related to neighborhood traffic volumes and costs related to crossings of the Napa River. **TR-4:** Main Street/Sulphur Springs Avenue: Install a traffic signal at the intersection. **TR-5:** Silverado Trail/Pope Street: Install a traffic signal at the intersection. The nearby intersection of Silverado Trail/Howell Mountain Road may require signalization as well because the two intersections are closely spaced. **TR-6:** Main Street/Grayson Avenue and Main Street/Mills Lane: Realign Mills Lane to form a four approach to the existing Main Street/Grayson Avenue intersection.		
3.13-2 Implementation of the Proposed Plan could conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways.	None required.	Less than significant	N/A
3.13-3 Implementation of the Proposed Plan would not result in a change in air traffic patterns,	None required.	Less than significant	N/A

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
including either an increase in traffic levels or a change in location that results in substantial safety risks.			
3.13-4 Implementation of the Proposed Plan would not substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).	None required.	Less than significant	N/A
3.13-5 Implementation of the Proposed Plan would not result in inadequate emergency access.	None required.	Less than significant	N/A
3.13-6 Implementation of the Proposed Plan would not conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.	None required.	Less than significant	N/A
3.14 Utilities and Service Systems			
3.14-1 Potential development that could be allowed under the Proposed Plan would not exceed wastewater treatment requirements of the San Francisco Regional Water Quality Control Board.	None required.	Less than Significant	N/A
3.14-2 Potential development that could be allowed under the Proposed Plan could require construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.	None required.	Less than significant	N/A

Table ES-4: Summary of Impacts and Mitigation Measures			
Impact	*Mitigation Measures*	*Significance before Mitigation*	*Significance after Mitigation*
3.14-3 Potential development that could be allowed under the Proposed Plan would not require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.	None required.	Less than significant	N/A
3.14-4 Potential development that could be allowed under the Proposed Plan would have sufficient water supplies available to serve the project from existing entitlements and resources and would not require new or expanded entitlements.	None required.	Less than significant	N/A
3.14-5 Potential development that could be allowed under the Proposed Plan would not result in a determination by the wastewater treatment provider that it has inadequate capacity to serve the projected demand in addition to the provider's existing commitments.	None required.	Less than significant	N/A
3.14-6 Potential development that could be allowed under the Proposed Plan would be served by a landfill with sufficient capacity to accommodate the project's solid waste disposal needs.	None required.	Less than significant	N/A
3.14-7 Potential development that could be allowed under the Proposed Plan would comply with federal, state, and local statutes or regulations related to solid waste.	None required.	Less than significant	N/A

This page intentionally left blank.

1 Introduction

This Draft Environmental Impact Report (EIR) has been prepared on behalf of the City of St. Helena in accordance with the California Environmental Quality Act (CEQA) (Public Resources Code Section 21000 *et seq*.). The EIR analyzes potential environmental impacts of the adoption and implementation of the proposed St. Helena General Plan Update 2040, referred to as the "Proposed Plan." This chapter outlines the purpose and overall approach to the preparation of the EIR. The City of St. Helena is the lead agency responsible for ensuring that the Proposed Plan complies with CEQA. "Lead agency" is defined by Section 21067 of CEQA as "the public agency which has the principal responsibility for carrying out or approving a project which may have a significant effect upon the environment."

1.1 Purpose of the EIR

Pursuant to the provisions of CEQA and related case law, general plans and other programs must include analyses of the potential significant environmental impacts associated with implementation of their policies and proposals. The primary intent of CEQA is to ensure that public agency decision-makers document and consider the environmental implications of their actions in order to avoid or minimize environmental damage that could result from the implementation of a project wherever feasible, and to balance environmental, economic, and social objectives. The purpose of an EIR is to identify the significant effects on the environment of a project, to identify alternatives to the project, and to indicate the manner in which those significant effects can be mitigated or avoided (California Public Resources Code [PRC] Section 21002.1).

PURPOSE

This EIR serves the following purposes:

- To satisfy CEQA requirements for analysis of environmental impacts by including a complete and comprehensive programmatic evaluation of the physical impacts of adopting and implementing the Proposed Plan;
- To recommend a set of measures to mitigate any significant adverse impacts;
- To analyze a range of reasonable alternatives to the Proposed Plan;
- To inform decision-makers and the public of the potential environmental impacts of the Proposed Plan prior to taking action on the Proposed Plan, and to assist City officials in reviewing and adopting the proposed General Plan; and

- To provide a basis for the review of subsequent development projects and public improvements proposed within the Planning Area. Subsequent environmental documents may be tiered from the Final EIR.

The Proposed Plan consists of policies, diagrams, and standards to guide the future development of the City of St. Helena, as described in Chapter 2: Project Description. This EIR contains analysis of all potential environmental impacts expected to result from implementation of the various policies and programs identified as part of the Proposed Plan, including those that serve to avoid or minimize adverse environmental impacts. In accordance with CEQA requirements, this EIR also identifies and evaluates alternatives to the Proposed Plan, including the No Project Alternative, which represents the continued implementation of the current General Plan. An environmentally superior alternative is identified as part of the alternatives analysis.

This EIR represents the best effort, at a programmatic level, to evaluate the potential environmental impacts of the Proposed Plan given its 2040 planning horizon. It can be anticipated that conditions will change; however, the assumptions used are the best available at the time of preparation and reflect existing knowledge of patterns of development.

INTENDED USES OF THE EIR

The CEQA Guidelines (Section 15124(d)) require EIRs to identify the agencies that are expected to use the EIR in their decision-making, and the approvals for which the EIR will be used. This EIR will inform the City of St. Helena, in addition to other responsible agencies, persons, and the general public, of the potential environmental effects of the Proposed Plan and the identified alternatives. The City of St. Helena will use the EIR as part of its review and approval of the proposed General Plan. Other agencies expected to use the EIR include: Napa County, the Napa County Local Agency Formation Commission (LAFCO), and the Napa Valley Transit Authority (NVTA), as well as State agencies such as the State Water Resources Control Board and Caltrans, and any other responsible or trustee agencies.

1.2 Approach and Scope of the EIR

TYPE OF EIR

This EIR is a program EIR, defined in Section 15168 of the CEQA Guidelines as: "[An EIR addressing a] series of actions that can be characterized as one large project and are related either: (1) Geographically; (2) A[s] logical parts in the chain of contemplated actions; (3) In connection with the issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program; or (4) As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental impacts which can be mitigated in similar ways."

Program EIRs can be used as the basic, general environmental assessment for an overall program of future projects, policies, and related implementation actions, such as the Proposed Plan, intended to be developed or implemented over a 20-year planning horizon. A program EIR has several advantages. First, it provides a basic reference document to avoid unnecessary repetition

of facts or analysis in subsequent project-specific assessments. Second, it allows the lead agency to look at the broad, regional impacts of a program of actions before its adoption and eliminates redundant or contradictory approaches to the consideration of regional and cumulative effects.

As a programmatic document, this EIR presents a citywide assessment of the potential impacts of the Proposed Plan. It does not separately evaluate subcomponents of the Proposed Plan nor does it assess project-specific impacts of potential future projects under the Proposed Plan, all of which are required to comply with CEQA and/or the National Environmental Policy Act (NEPA) as applicable.

As a program EIR, the preparation of this document does not relieve the sponsors of specific projects from the responsibility of complying with the requirements of CEQA (and/or NEPA for projects requiring federal funding or approvals). As noted, individual projects are required to prepare a more precise, project-level analysis to fulfill CEQA and/or NEPA requirements. The lead agency responsible for reviewing these projects shall determine the level of review needed, and the scope of that analysis will depend on the specifics of the particular project. These projects may, however, use the discussion of impacts in this EIR as a basis of their assessment of these regional, citywide, or cumulative impacts, provided that the projects are consistent with the General Plan and the data and assumptions used in this EIR remain current and valid.

PLANNING HORIZON

For analytic purposes in this EIR, the base year is 2018 unless otherwise noted, and the horizon year representing future conditions is 2040. In cases where current data is not available, the most recent known data is used to depict baseline conditions. The horizon year of 2040 represents the target year of the Proposed Plan when projects and programs are anticipated to be fully implemented. In reality, full implementation of the Proposed Plan may take more or less than 20 years.

ENVIRONMENTAL ISSUE AREAS

Information gathered about the environmental setting is used to define relevant planning issues, determine thresholds of significance, and evaluate potential impacts. Based on the initial analysis of environmental setting and baseline conditions, comments received during the EIR Scoping Period, the following issues are analyzed in this program EIR:

- Aesthetics
- Agricultural and Forestry Resources
- Air Quality
- Biological Resources
- Cultural, Historic, and Tribal Cultural Resources
- Energy, Greenhouse Gas Emissions, and Climate Change
- Geology, Soils, and Seismicity
- Hazards and Hazardous Materials

- Hydrology and Water Quality
- Land Use, Population, and Housing
- Noise
- Public Services and Recreation
- Public Utilities
- Transportation

ALTERNATIVES

CEQA requires the EIR to evaluate a reasonable range of alternatives to the Proposed Plan that could feasibly attain most of the basic project objectives and would avoid or substantially lessen any of the significant environmental impacts. This EIR evaluates two alternatives, including the Transportation Network Enhancement Alternative and the No Project Alternative, which represents the continuation of the City's currently adopted General Plan.

1.3 Environmental Review Process

In accordance with CEQA Guidelines Section 15090, prior to adopting the Proposed Plan, the City must certify that the Draft and Final EIRs have been completed in compliance with CEQA and that the decision-making body of the lead agency considered the information contained in the Final EIR. This section describes the environmental review process undertaken for this EIR pursuant to CEQA.

NOTICE OF PREPARATION AND SCOPING

The Notice of Preparation (NOP) for the EIR on the Proposed Plan was submitted to the State Clearinghouse on April 2, 2018 and circulated among relevant State and local agencies, as well as to members of the public. The NOP provided a brief project description and requested comments and guidance on the scope and content of the EIR from responsible and trustee agencies, interested public agencies, organizations, and the general public. The City received comments during a 30-day review period, which ended May 1, 2018. Two comments were received, including a letter from Caltrans and a letter from a member of the public. The NOP and comments on the NOP received by the City are included as Appendix A of this EIR.

An EIR Scoping Meeting conducted by the Planning Commission was held on April 17, 2018 in the Vintage Hall Board Room to receive comments and suggestions on scope and content for the EIR and solicit input on potential impacts. A summary of comments received at the Scoping Meeting and during the Scoping Period is included as Appendix B of this EIR. Comments on the NOP, along with input received during public workshops and meetings over the course of the General Plan Update process, have helped to identify the major planning and environmental issues and concerns and establish the framework of this EIR.

TRIBAL CONSULTATION

Senate Bill (SB) 18, codified in California Government Code §65352.3, requires local governments to consult with California Native American tribes identified by the Native American Heritage Commission (NAHC) for the purpose of protecting, and/or mitigating impacts to cultural places prior to the adoption or amendment of a city's general plan. Additionally, Assembly Bill (AB) 52 requires tribal cultural resources to be addressed under CEQA and established requirements for consultation with Native American tribes as part of the CEQA process, providing both federal and non-federally recognized tribes the right to formal consultation with project lead agencies (California Public Resources Code Section 21080.3.1).

In accordance with SB 18, the City contacted the NAHC in May 2018 to request a consultation list of tribes traditionally and culturally affiliated with the Planning Area. The City contacted the six listed tribes, per SB 18 and AB 52, providing information about the planning process and inviting them to initiate consultation if desired. The City received one response, from the Federated Indians of Graton Rancheria, with no comments on the project at that time. Correspondence related to tribal consultation is included as Appendix C of this EIR.

Pursuant to SB 18 and AB 52, the City contacted the California Native American Heritage Commission (NAHC) in February 2016 and May 2018 to request a search of its Sacred Lands File and to obtain a list of California Native American tribes whom the City would engage for the purposes of avoiding, protecting, and/or mitigating impacts on cultural resources. The NAHC provided the City with a list of five California Native American tribes to contact in accordance with SB 18 – the Cortina Band of Indians, Middletown Rancheria of Pomo Indians, two contacts from the Federated Indians of Graton Rancheria, and the Yocha Dehe Wintun Nation. The City contacted the six listed tribes in per SB 18 and AB 52.[1]

Of the six tribes contacted by the City, only one response, from the Federated Indians of Graton Rancheria, was received. The tribal contact did not identify any cultural resources in the Planning Area (see Appendix C for related materials).

DRAFT EIR REVIEW

Upon completion of the Draft EIR, the City will file a Notice of Completion (NOC) with the Governor's Office of Planning and Research (OPR) and provide a Notice of Availability to the public to begin the mandated 45-day public review period. The public review period for this Draft EIR will be 71 days and will begin on Tuesday, October 23, 2018 and end on Friday, January 2, 2019. The EIR and appendices are available for review at the City of St. Helena City Hall at 1480 Main Street, St. Helena, CA 94574 and online at http://www.ci.st-helena.ca.us/.

[1] The City contacted four of the six tribes in April 2018 based on the list obtained from NAHC in 2016. Upon receiving an updated list from the NAHC in 2018, one new contact and one changed contact were subsequently contacted.

Please submit comments on the Draft EIR in writing or via email to:

Noah Housh, Director
City of St. Helena Planning and Community Improvement Department
1480 Main Street
St. Helena, CA 94574
NHoush@cityofsthelena.org

FINAL EIR AND CERTIFICATION

After the close of the public review period, City staff and CEQA consultants will review the comments, respond to the comments received, and revise the EIR as necessary. Responses to comments and revisions to the Draft EIR will be provided as the Final EIR. The City Council will then consider certification of the Final EIR. Subsequent to certification of the Final EIR, the City Council may approve the Proposed Plan. A decision to approve the Proposed Plan would be accompanied by written findings in accordance with CEQA Guidelines Section 15091 and Section 15093. If the City Council approves the Project, a Notice of Determination will be filed with the State Office of Planning and Research and the Clerk of Napa County.

RELEVANT PLANS AND ENVIRONMENTAL STUDIES

Other plans and studies relevant to the Proposed Plan include the following:

- Plan Bay Area 2040 (2017)
- Highway 29 Specific Plan (2005)
- Napa Countywide Bicycle Plan (2017)
- Napa Countywide Pedestrian Plan (2015)
- Vision 2040 Napa Countywide Transportation Plan (2018)
- Napa County General Plan (2008)

ORGANIZATION OF THE EIR

This Draft EIR is organized into the following chapters, plus appendices.

ES. **Executive Summary.** Summarizes the EIR by providing an overview of the Proposed Plan, the potentially significant environmental impacts that could result from the Proposed Plan, the mitigation measures identified to reduce or avoid these impacts, alternatives to the Proposed Plan, and identification of the environmentally superior alternative.

1. **Introduction.** Introduces the purpose for the EIR, explains the EIR process and intended uses of the EIR, and describes the overall organization of this EIR.
2. **Project Description.** Describes in detail the proposed General Plan Update, including the location and planning boundaries, purpose and objectives, buildout, and implementation of the Proposed Plan.

3. **Environmental Settings and Impacts.** Analyzes the environmental impacts of the Proposed Plan. Impacts are organized by major topic. Each topic area includes a description of the environmental setting, significance criteria, methodology and potential impacts.

4. **Analysis of Alternatives.** Presents a reasonable range of alternatives to the Proposed Plan, provides discussion of environmental impacts associated with each alternative, compares the relative impacts of each alternative to those of the Proposed Plan and other alternatives, discusses the relationship of each alternative to the Proposed Plan's objectives, and identifies the environmentally superior alternative.

5. **CEQA Required Conclusions.** Summarizes significant environmental impacts, including growth-inducing, cumulative, and significant and unavoidable impacts; significant irreversible environmental change; and impacts found not to be significant.

6. **References.** Lists documents and other information sources used in the preparation of the EIR.

7. **List of Preparers.** Identifies the persons and organizations that contributed to the preparation of the EIR.

8. **Appendices**. Includes the NOP and compilation of agency and public comments received on the NOP, as well as technical documentation of data used for environmental analysis in this EIR.

   - **Appendix A:** Notice of Preparation and Comment Letters
   - **Appendix B:** Summary of Scoping Comments
   - **Appendix C:** Tribal Correspondence
   - **Appendix D:** Buildout Methodology
   - **Appendix E:** Air Quality Modeling Results
   - **Appendix F:** List of Historic Resources
   - **Appendix G:** GHG Inventory Methodology
   - **Appendix H:** City of St. Helena General Plan 2030: Background Transportation Report (2009)
   - **Appendix I:** Transportation Modeling Results

This page intentionally left blank.

2 Project Description

This EIR evaluates the potential environmental impacts of the proposed St. Helena 2040 General Plan Update (General Plan Update), referred to as the "Proposed Plan." The Proposed Plan would be used to guide future land use decisions in the City of St. Helena. It would provide a long-term vision for the city and, through its policies and implementing actions, would indicate how that vision may be achieved over the life of the document. The Proposed Plan would be the primary policy document guiding growth and development within the City of St. Helena through the planning horizon year of 2040. California Government Code Section 65300 et seq. mandates that all counties and incorporated cities prepare a general plan that establishes policies and standards for future development, housing affordability, and resource protection. State law encourages cities to keep general plans current through regular updates. The Proposed Plan is intended to make significant revisions to the adopted 1993 General Plan, with an emphasis on new policies related to land use, economic sustainability, water conservation, circulation, preservation of agricultural land, climate change, and multi-modal transportation options.

This chapter introduces the purpose and objectives of the Proposed Plan and summarizes specific information to describe the Proposed Plan and complete the EIR analysis. This includes a description of the existing regional and local project setting, an outline of the projected population and employment growth rates and development patterns through the planning horizon year, the Proposed Plan land use diagram, key data tables, and a description of the Proposed Plan's policy direction. This project description provides the basis for the environmental analysis in Chapter 3 and Alternatives analysis in Chapter 4. Additional details are provided in the Proposed Plan itself, which can be reviewed on the City of St. Helena website (www.ci.st-helena.ca.us).

2.1 Regional Location and Project Boundaries

REGIONAL CONTEXT

St. Helena sits at the heart of the upper Napa Valley in Napa County, located approximately 65 miles north of San Francisco and 77 miles west of Sacramento. State Route (SR) 29 connects St. Helena to other communities in the Valley, including Calistoga to the north and Yountville, Napa, and American Canyon to the south. The regional context is shown in Figure 2.1-1.

PLANNING AREA

The Planning Area is the land area addressed by the General Plan. Shown in Figure 2.1-1, the Planning Area for the General Plan update encompasses approximately 3,594 acres including the City of St. Helena, its Sphere of Influence (SOI), and three adjacent unincorporated study areas. Although St. Helena does not have jurisdiction in areas outside of its city limits, the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities, to the three adjacent study areas. As such, what happens in those areas bears a relation to the City's planning and must be considered in the General Plan, per California Government Code Section 65300.

The three study areas include:

- **Study Area 1.** This 165-acre area is located along the Napa River and includes residential development, the Meadowood Napa Valley resort, and City-owned utility infrastructure, including water tanks. The City provides water service to Meadowood and some of the residential development in the area.
- **Study Area 2.** Located south of Chalk Lane immediately adjacent to the southeastern City limit, this area of approximately 100 acres comprises the spray fields currently used to dispose of treated effluent from the City's Wastewater Treatment Plant.
- **Study Area 3.** Comprising parcels with existing commercial and residential development fronting SR 29, this 185-acre area extends south from Chalk Lane to Zinfandel Lane. The City currently provides water utility service to many properties in this area, with the remaining structures relying on wells and individual septic systems of various ages and capacities.

The intent of including the three study areas within the Planning Area of the General Plan update is to document sensitive environmental resources and regulatory or capacity constraints associated with those areas.

2.2 Purpose and Objectives of the Proposed Plan

CEQA Guidelines (§15124) require a description of the Proposed Plan purpose and objectives.

PURPOSE

California Government Code Section 65300 requires each city and county in California to adopt a general plan "for the physical development of the county or city, and any land outside its boundaries which…bears relation to its planning." The St. Helena General Plan can be considered the city's development constitution, containing both a statement of the community's vision of its long-term development as well as the policies to support that vision by guiding the physical growth of the city. The Proposed Plan contains policies to guide decision-making related to development, housing, transportation, environmental quality, public services, parks, and open spaces. The Proposed Plan is a document to be adopted by the City Council that serves the following purposes:

- Establish a long-range vision that reflects the aspirations of the community and outlines steps to achieve this vision;
- Establish long-range development policies that will guide City departments, Planning Commission, and City Council decision-making;
- Provide a basis for judging whether specific development proposals and public projects are in harmony with plan policies;
- Plan in a manner that meets future land needs based on the projected population and job growth;
- Allow City departments, other public agencies, and private developers to design projects that will enhance the character of the community, preserve environmental resources, and minimize hazards; and
- Provide the basis for establishing and setting priorities for detailed plans and implementing programs, such as the zoning ordinance, subdivision regulations, specific and master plans, and the Capital Improvement Program.

The Proposed Plan would replace the existing 1993 General Plan in all elements, excluding the Housing Element, which was adopted and certified by the California Department of Housing and Community Development (HCD) in May 2015. The existing 1993 General Plan has a horizon year of 2010. The Proposed Plan would establish a planning and policy framework that would extend to horizon year 2040.

OBJECTIVES

The proposed Plan provides the basis for the City's land use and development policy and represents the basic community values, ideals, and aspirations that will govern development and conservation through the planning horizon year of 2040. Specific objectives established for the project include the following:

1. Encourage infill development in previously developed areas of the city to preserve agricultural and open space lands outside the urban limit line and foster a compact development pattern;
2. Focus future development so that it is contiguous to existing developed areas and supports efficient delivery of public services and infrastructure;
3. Preserve St. Helena's small-town character;
4. Protect local historic resources and preserve St. Helena's agricultural heritage;
5. Reduce traffic congestion by providing alternative transportation choices, enhancing regional public transit connections, and achieving an appropriate jobs-to-housing balance to reduce commuter trips;
6. Protect and enhance the natural resources—including the riparian corridors, woodlands, flora, and fauna—that contribute to St. Helena's healthy environment, scenic beauty, and quality of life;

7. Strengthen St. Helena's role as a rural commercial and business center serving the daily needs of local residents in town and in the surrounding unincorporated communities;
8. Cultivate a healthy and diverse local economy;
9. Promote sustainable, low-impact tourism that contributes to the local economy while maintaining St. Helena's character;
10. Provide a high-quality network of parks, open spaces, and trails that enhances quality of life and connectivity in the community; and
11. Foster a vibrant arts community that contributes to the local economy and enriches the cultural life of the community.

2.3 Proposed General Plan Update

PLANNING HORIZON

The planning horizon is the period of time for which the Proposed Plan looks ahead in order to comprehensively plan for the city's next major phase of growth, change, and investment. The Proposed Plan establishes a horizon year of 2040. The horizon year does not signify an end point for the policies in the document; rather, it provides the context for long-term decision-making. As planning is a continuous and dynamic process, the Proposed Plan is intended to be reviewed regularly and amended as necessary as new information becomes available and the community's priorities shift.

PLANNING PROCESS

Project History

The City's current General Plan was adopted in 1993. In 2007, the City began the process of comprehensively updating the General Plan to more accurately reflect current conditions and the community's goals. From 2007 to 2010, the City worked to develop a complete draft update of the General Plan with the assistance of a General Plan Update Steering Committee (GPUSC) composed of St. Helena residents, and a team of consultants.

The initial development of the Proposed Plan involved four phases. The first phase took place between April 2007 and February 2008 and involved both a thorough analysis of existing conditions and a community visioning process. The existing conditions analysis resulted in a series of working papers that described current conditions and key policy issues for the topics of community vision, community character, circulation, economics, infrastructure, climate change, the natural environment, sustainability, and regional context. The community visioning process consisted of a telephone survey, workshops, an open house, and a public forum, dedicated to exploring the major issues and opportunities faced by St. Helena, and the desires of its community moving forward. This process resulted in a clear articulation of the community's desire to build a sustainable future, reflected in the community vision included in the Proposed Plan.

The second phase started in October 2008 and focused on policy and physical framework development. During this phase, the City worked with the GPUSC and the community to develop the Proposed Plan goals, policies and implementing actions. The City launched its General Plan Update website and began publication of regular e-newsletters to keep community members informed of the process. The GPUSC met regularly during this stage, and hosted the first community workshop, a "land use and design charrette" aimed to explore key land use issues and opportunities. The City worked to refine existing land use maps, review background policy and technical documents, and analyze the existing General Plan Physical Framework and Land Use Element. The outcomes of this effort included identification of potential change areas (discussed below) in the city, identification of the likely impacts of this change, and the development of potential land use changes in the city.

In April 2009, the City began the third phase, developing the draft General Plan Update document. A series of eight GPUSC meetings were held to review drafts of the updated General Plan elements. Two community workshops were held to discuss community design and circulation in fall 2009. Additional community meetings were held to review the public review draft of the General Plan Update in early 2010.

Beginning in the summer of 2010, the fourth phase of plan development focused on preparing draft General Plan documents for review by the Planning Commission and the City Council. As part of the planning process, the City prepared a Draft EIR to identify potential impacts of implementing the then-proposed General Plan Update 2030. The Draft EIR was released in August 2010, and a Final EIR including response to comments received was prepared in October 2010. Subsequently, the Planning Commission reviewed the draft General Plan and Final EIR in October of 2010, and recommended approval to the City Council; however, during City Council review, concerns were raised in relation to water supply and the Council decided to postpone action on the draft General Plan in order to address these concerns. A "Safe Yield Committee" was formed to develop a Water Management Program, which was adopted by the City Council in November 2012. Since that time the City Council and Planning Commission continued to review the draft General Plan in an ongoing process involving a series of public hearings and study sessions and made subsequent recommendations for additional revisions to the draft document.

Changes Since 2010

Following incorporation of the Planning Commission's refinements to the 2010 draft described above, the General Plan Update was substantially complete, although some additional changes from that version were necessary to ensure consistency and compliance with State law. In January 2018, the City began the effort to make these additional refinements and finalize the Proposed Plan:

- An updated horizon year of 2040;
- Additional policies to address State general plan requirements that have been adopted since the 2010 draft of the General Plan was completed;
- Text revisions associated with new State requirements; and
- Documentation of sensitive environmental resources and regulatory or capacity constraints in the three additional study areas outside but adjacent to the city limits in

order to inform decision-makers and community members about associated issues and opportunities.

PROPOSED PLAN CONTENTS

The Proposed Plan is organized by topic in 11 elements. The Proposed Plan elements differ from the nine 1993 General Plan elements in the following ways: it introduces three new elements—Economic Sustainability, Climate Change, and Arts, Culture, and Entertainment—and incorporates the 1993 Tourism Management Element into the new Economic Sustainability Element. Each element contains related goals, policies, and implementing actions, as well as supporting background information. The Housing Element, while a required element of the City's General Plan, is not included in the Proposed Plan being considered in this EIR. Per the requirements of the California Department of Housing and Community Development, St. Helena's Housing Element was last updated and adopted in May 2015 (covering the period from 2015-2023) and underwent environmental review at that time.

The elements and goals of the Proposed Plan are summarized as follows:

- **Land Use and Growth Management.** This element presents a framework for decisions about allowable land use and desirable development patterns, aiming to manage growth effectively while encouraging innovative approaches, quality design, and infill strategies. Goals for this element include:
  - Managing growth and maintaining community character; and
  - Promoting high-quality and sustainable development.
- **Economic Sustainability.** This element recognizes the important role that economic sustainability plays in developing a sustainable economy that is responsive to short- and long-term community concerns and objectives. Goals for this element include:
  - Meeting residents' needs for housing, employment, goods, and services;
  - Creating and implement an Economic Sustainability Strategy;
  - Balancing the benefits and effects of visitors; and
  - Generating revenue.
- **Public Facilities and Services.** This element sets forth policy guidance for the provision of services, amenities, and infrastructure. The focus is on policies related to water, wastewater, storm drainage and flooding, solid waste, schools and libraries, fire, and police. Goals for this element include:
  - Ensuring high-quality public services and facilities; and
  - Promoting sustainable standards and practices.
- **Circulation.** This element establishes the policies needed to foster a comprehensive and multi-modal transportation network. The element addresses the principal components of the vehicle circulation system, as well as issues relating to parking, transit, and pedestrian and bicycle routes in order to achieve the goal of meeting current and future transportation needs with a balanced, multi-modal transportation system.

- **Historic Resources.** This element presents a framework for governing future decisions about rehabilitating, retrofitting, and adaptively reusing the City's historic buildings. Goals for this element include:
  - Maintaining St. Helena's sense of place and visual character;
  - Preserving and protecting St. Helena's historic resources; and
  - Celebrating St. Helena's distinct history and heritage.
- **Community Design.** This element presents a policy framework that corresponds directly with other General Plan elements in determining the form, quality, and character of St. Helena's built environment. Goals for this element include:
  - Respecting St. Helena's historic character and unique sense of place;
  - Promoting a high-quality and sustainable built environment and public realm;
  - Encouraging community design throughout the city that helps to build community, encourage human interaction, and support non-automobile transportation;
  - Strengthening the city's neighborhoods so that they retain desirable characteristics, while allowing for smart change and evolution.
- **Open Space and Conservation.** This element guides future decisions about sustaining a healthy network of open spaces and protecting natural resources for future generations. Goals for this element include:
  - Preserving, enhancing, and restoring natural resources;
  - Ensuring stewardship of water resources; and
  - Expanding sustainable agricultural practices.
- **Public Health, Safety, and Noise.** This element presents a framework for minimizing risks posed by environmental and human-caused hazards that may impact St. Helena's health and welfare. This element aims to ensure that residents, workers and visitors are protected from negative exposure to flooding, fires, hazardous materials, air pollution, and geologic and seismic hazards. Goals for this element include:
  - Maintaining high levels of health and safety; and
  - Effectively coordinating responses to emergencies and natural disasters.
- **Climate Change.** This element is the City's policy framework for responding to and planning for climate change, addressing the City's energy conservation concerns, renewable energy production and use, and transportation-related concerns. Goals for this element include:
  - Increasing citywide transportation-related energy efficiency;
  - Reducing energy demand through improved building and design;
  - Reducing consumption and diverting waste;
  - Ensuring the sustainable management of agriculture, natural resources, and urban forests;
  - Increasing community engagement and advocacy; and

  - Improving the efficiency of local government operations.
- **Parks and Recreation.** This element presents a framework for developing and maintaining a comprehensive system of quality parks, pedestrian and bicycle trails, and recreational facilities and programs. Goals for this element include:
  - Providing high-quality parks and recreational services; and
  - Developing a system of interconnected bicycle and pedestrian trails.
- **Arts, Culture, and Entertainment.** This element aims to preserve and protect St. Helena's unique identity, heritage, and cultural resources; celebrate its vibrant community; and expand opportunities for arts enrichment. Goals for this element include:
  - Celebrating arts, culture, and entertainment;
  - Strengthening and expanding arts, culture, and entertainment; and
  - Honoring culture and heritage.

PROPOSED LAND USE STRATEGY

The Proposed Plan's land use strategy, as described in the proposed Land Use and Growth Management Element, reflects the following principles for directing future development:

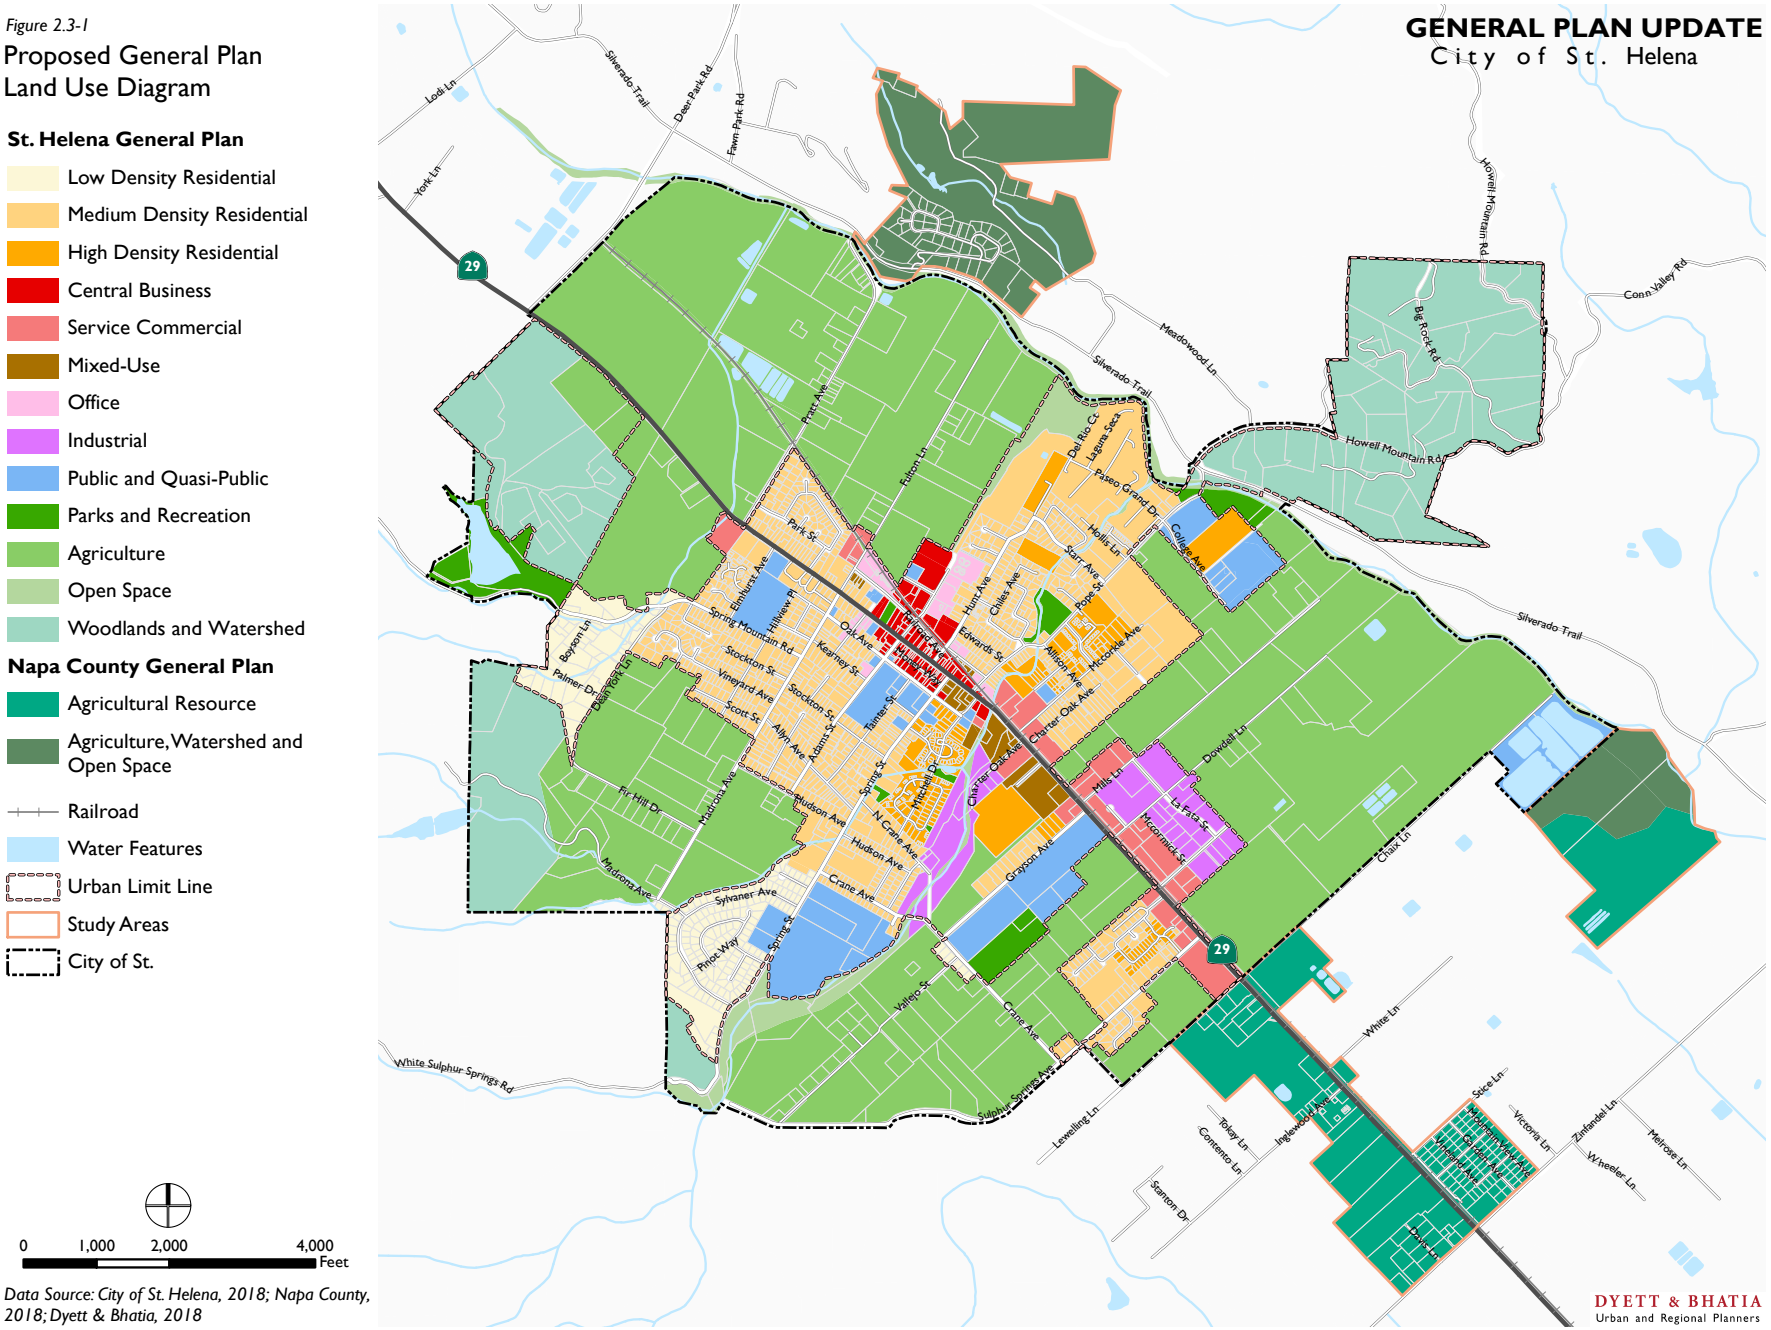
- Protect agricultural lands located outside of the Urban Limit Line (ULL);
- Preserve agriculture, green, and open space within the ULL to ensure that the city maintains a rural and small-town character with sufficient "fingers of green;"
- Focus new residential and commercial growth inward at appropriate infill sites; and
- Avoid "big box" development patterns and styles for commercial, industrial, and residential growth.

Land Use Diagram

The Land Use Diagram for the Proposed Plan is shown in Figure 2.3-1: Proposed General Plan Land Use Diagram. The Land Use Diagram designates the proposed general location, distribution, and extent of land uses. The diagram is to be used and interpreted only in conjunction with the text and other figures contained in the Proposed Plan. Upon adoption of the Proposed Plan, the City's Zoning Ordinance would be updated as necessary for consistency with the Land Use Diagram, and therefore would regulate development in a manner consistent with the updated General Plan. The Proposed Plan does not designate uses outside of St. Helena city limits.

Figure 2.3-1

Proposed General Plan Land Use Diagram



Data Source: City of St. Helena, 2018; Napa County, 2018; Dyett & Bhatia, 2018

Density and Intensity Standards

Density and intensity standards regulate how much development is permitted on a site. For residential uses, the density standards are expressed as the number of housing units per gross acre (dwelling units/acre, or DU/A) and typical lot size. For non-residential uses, development intensity is controlled by a measure known as Floor Area Ratio (FAR), which refers to the ratio between a building's total floor area and the total area of the site. Dwelling units per acre, typical lot size, and FAR are standard measures of site intensity that are used to evaluate development during the site planning and development review process. FAR applies to the entire development on a site, inclusive of any residential component, unless otherwise noted. Table 2.3-1: Density and Intensity Standards and Acreage Totals for Proposed Plan Land Use Designations, summarizes the density and intensity ranges for each land use designation, as well as the total acreage in each land use category as mapped on the Land Use Diagram.

Table 2.3-1: Summary of Proposed Land Use Designations

Proposed Plan Land Use Designation	*Residential Density (du/ac)*	*Non-Residential Density (Maximum FAR)*	*Acres*	*Percent of City Total*
Residential				
Low Density Residential	1.0 – 5.0	N/A	97	3%
Medium Density Residential	5.1 – 16.0	N/A	409	13%
High Density Residential	16.1 – 28.0	N/A	83	3%
Non-Residential				
Central Business	N/A	2.0	28	1%
Service Commercial	N/A	0.5	61	2%
Mixed Use	Up to 20.0	1.0	19	1%
Business and Professional Office	N/A	0.5	15	0%
Industrial	N/A	0.5	60	2%
Community and Natural Resource Areas				
Agriculture	N/A	N/A	1,451	46%
Open Space	N/A	N/A	72	2%
Parks and Recreation	N/A	N/A	57	2%
Public and Quasi-Public	N/A	0.5	156	5%
Woodlands and Watershed	N/A	N/A	451	14%
Subtotal	**N/A**	**N/A**	**2,959**	**94%**
Streets/ROW/Transportation	N/A	N/A	189	6%
Total	**N/A**	**N/A**	**3,149**	**100%**

Land Use Designations

The following land use descriptions apply to the land use designations shown on the Land Use Diagram. The designations are meant to be broad enough to give the City flexibility in implementing the Proposed Plan; however, they are also meant to be clear enough to provide sufficient direction regarding the expected type and location of land uses planned in the city, as well as describe the relative similarities and differences between uses. The City's Zoning Ordinance contains more detailed provisions and standards. More than one zoning district may be consistent with a single General Plan land use designation.

The Proposed Plan introduces a new Mixed Use land use designation and revises the allowable densities for two of the residential designations. The Mixed Use designation provides for medium density residential mixed with retail, office, restaurant, or other local-serving uses; it allows up to 20 dwelling units per acre and a maximum floor-area ratio (FAR) of 1.0. The Proposed Plan would revise the Medium Density Residential and High Density Residential land use designations to allow for higher maximum densities. The Medium Density Residential density range would change from 5.1 to 12.0 units per acre under the 1993 General Plan to 5.1 to 16.0 units per acre under the Draft General Plan. The High Density Residential density range would change from 12.1 to 20.0 units per acre to 16.1 to 28.0 units per acre. The City's Zoning Ordinance already allows for 5.1 to 16.0 units per acre in the Medium Density Residential district and 12.1 to 20.0 units per acre in the High Density Residential district; these revisions would allow the General Plan to match existing zoning regulations.

Residential

- **Low Density Residential (LDR).** The LDR land use designation includes single-family detached homes, secondary residential units, limited agricultural uses, and similar and compatible uses. This category permits residential densities between 1.0 and 5.0 dwelling units per acre. The LDR designation applies to limited areas of the city with large, residentially-subdivided parcels, particularly those near the city's perimeter.
- **Medium Density Residential (MDR).** The MDR land use designation includes single-family attached and detached homes, and compatible uses. This category permits residential densities between 5.1 and 16.0 dwelling units per acre. It is intended to maintain a development pattern in higher density areas that is consistent with historic development patterns.
- **High Density Residential (HDR).** The HDR land use designation currently includes single-family and multi-family residential housing, apartments, and group quarters. This category permits residential densities between 16.1 and 28.0 dwelling units per acre.

Non-Residential

- **Central Business (CB).** The CB land use designation includes retail and commercial uses that serve local residents and the surrounding area. Typical CB uses include offices, restaurants, specialty retail, and lodging, with particular emphasis on pedestrian-oriented retail and service uses on the ground floor level, and offices located on upper floors. Residential uses can be considered for upper floor areas but are subject to discretionary

use permit review and approval. The maximum allowable FAR in CB-designated areas is 2.0.

- **Service Commercial (SC).** The SC land use designation includes service and retail uses that have larger space needs than are available in the Central Business District. Potential SC uses include offices, restaurants, service stations, and lodging, with a maximum allowable FAR of 0.5.
- **Business and Professional Office (BPO).** The BPO classification allows for professional and administrative office uses, including medical, financial, and similar uses. Residential uses in this designation can be considered for upper floor areas, subject to discretionary review and approval. The maximum allowable FAR is 0.5. BPO areas are located throughout the City and provide a compatible, transitional use between commercial and residential areas.
- **Industrial (I).** The Industrial land use designation includes industrial parks, warehouses, light manufacturing, and auto- and farm-related uses. The maximum allowable FAR is 0.5. Designated I areas are located south of Mills Lane and west of SR-29 along Charter Oak Avenue.
- **Mixed Use (MU).** This is a new land use designation introduced in the Proposed Plan. The MU land use category allows medium- to high-density residential mixed with retail, office, restaurant or other commercial uses. The maximum allowable residential density in MU areas is 20 dwelling units per acre.

Community and Natural Resource Areas

- **Agriculture (AG).** The AG land use designation includes agricultural and winery uses with restricted single-family residential and public/quasi-public uses. This classification applies to large areas of the valley floor that surround the city's urban core. With the exception of hillside areas designated WW, all lands outside the Urban Limit Line are designated AG regardless of their size or actual use. Minimum parcel sizes for new parcels in AG areas range from 20 to 40 acres. However, wineries in AG land may utilize a small portion of on-site land for provision of affordable employee housing.
- **Open Space (OS).** The OS classification includes open spaces that are devoted to natural resource preservation and management, passive outdoor recreation, multi-use trails, public health and safety. All OS areas are associated with stream corridors that pass through or are adjacent to the city, including the Napa River, Sulphur Springs Creek, York Creek and Spring Creek.
- **Parks and Recreation (PR).** The PR land use designation includes public parks with recreation uses. It applies to all existing public parks and proposed park sites.
- **Public and Quasi-Public (PQP).** The PQP land use designation provides for government-owned facilities, public and private schools, and quasi-public uses such as churches, community/public serving endeavors, and cemeteries. The maximum FAR for the PQP district is 0.5. The PQP designation occurs throughout the City, and includes the St. Helena Public Library, all of the public schools, some of the private schools, all churches, cemeteries, and the wastewater treatment plant.

- **Woodlands and Watershed (WW).** The WW classification includes very low density residential that ensures the protection of wildlife, vegetation, open space and watershed resources. This designation applies to steep hillsides at the City's westernmost and easternmost boundaries, with the intent to accommodate low-density, estate type development in locations that are less suitable for agricultural use. The minimum allowable parcel size is five acres.

Growth Management

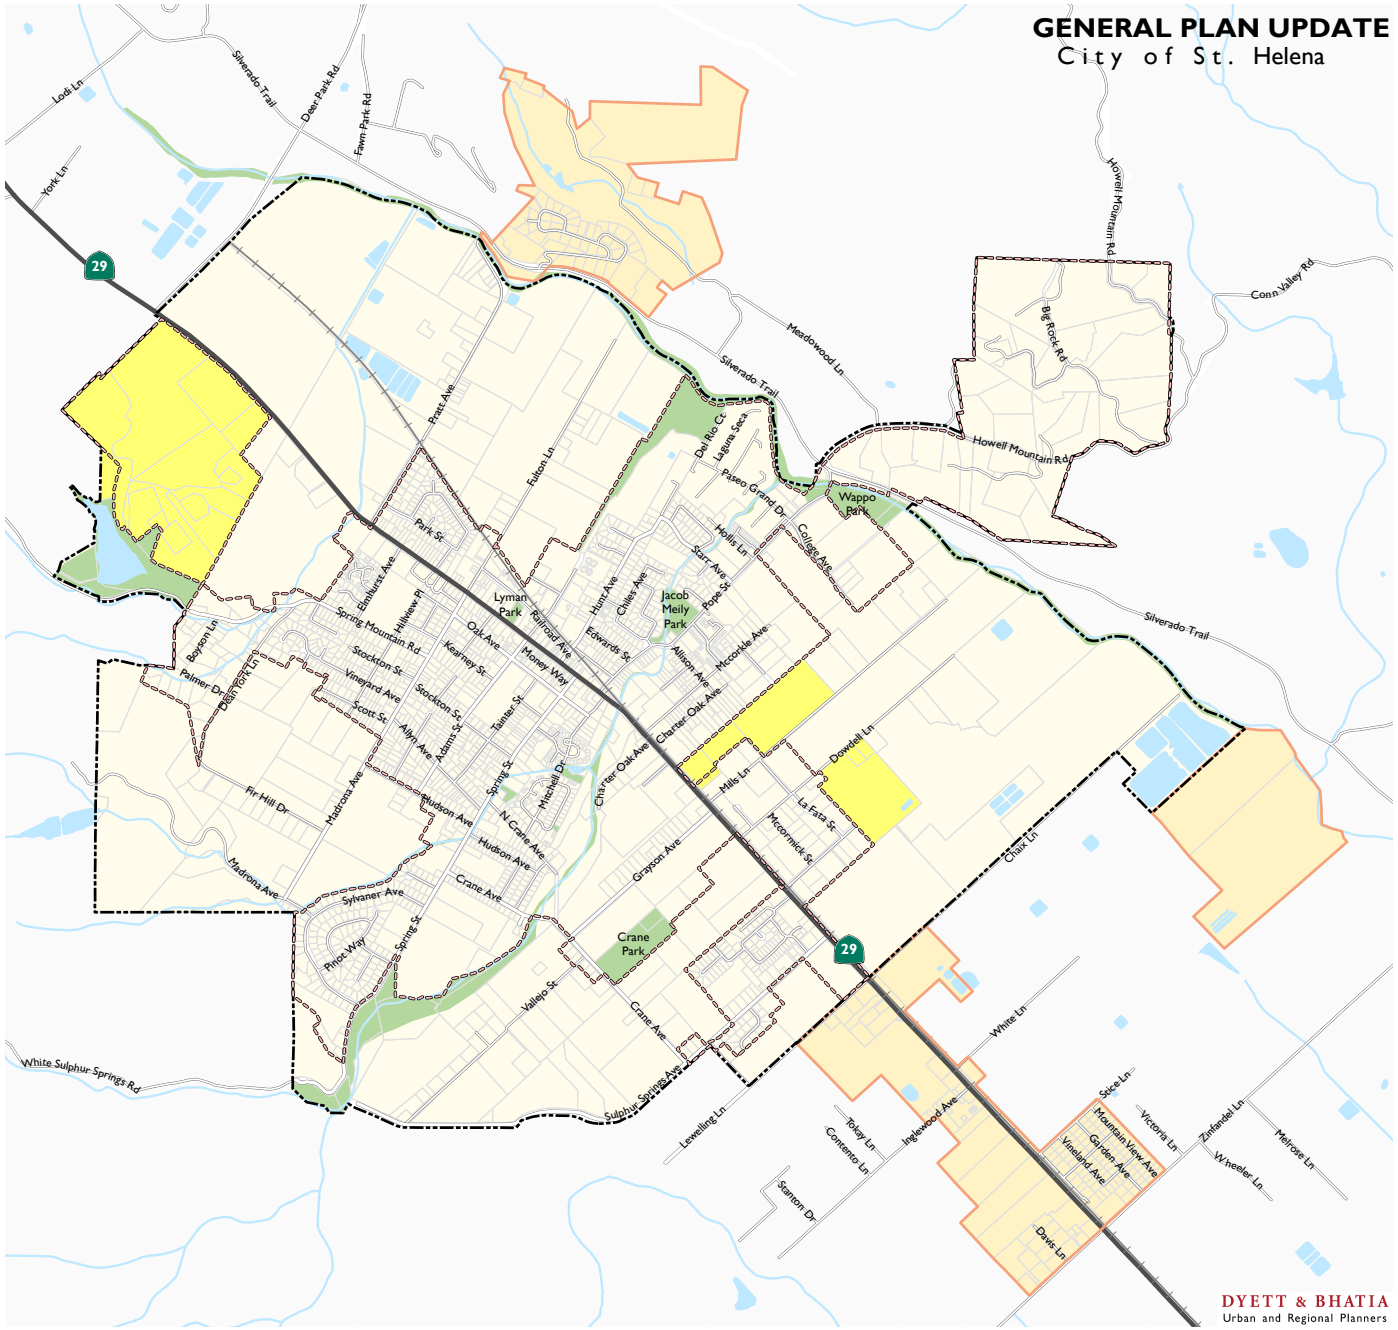
Urban Limit Line

The ULL is a parcel-specific boundary that marks the limit of where urban development is permitted within St. Helena. The intent of the ULL is to discourage urban sprawl by containing urban development within designated areas through the 2040 planning horizon. The Proposed Plan would adjust the ULL in two locations, at change areas 1 and 9 as described below. Figure 2.3-2 shows the proposed ULL. Land outside the Urban Limit Line but inside city limits is designated for agricultural uses. Given the long-term nature of the General Plan and the potential for unforeseen circumstances, the Proposed Plan anticipates the potential need to expand the urban area by identifying Urban Reserve Areas.

Figure 2.3-2

Urban Limit Line and Urban Reserve Areas

- Urban Reserve Areas
- Urban Limit Line
- Railroad
- Water Features
- Study Areas
- City of St. Helena



Data Source: City of St. Helena, 2018; Napa County, 2018; Dyett & Bhatia, 2018

Urban Reserve Areas

Urban Reserve Areas can be considered for urban development after urban sections within the ULL are developed and if additional land is needed for urban uses. The Urban Reserve Areas, which are contiguous with the existing urban area, have been located to encourage balanced growth and to ensure that further urban development will maintain the compact development pattern desired by the community. The Proposed Plan does not alter the Urban Reserve Areas, which will maintain their currently adopted boundaries.

Urban Reserve Areas are all designated Agriculture and are expected to remain in agricultural use or undeveloped for the foreseeable future. Zoning in the Urban Reserve Areas would be the same as in other areas designated for agriculture. Zoning designation changes of any specific Urban Reserve Areas will be determined by the City Council at the time of incorporation within the ULL. Such changes would depend upon many factors, including: compatibility with existing or proposed surrounding uses; availability of services; demand for the proposed uses; the availability of other suitable areas; and the agricultural resource value of the land.

Locational suitability and timing will be considered when evaluating changes to the ULL and incorporation of Urban Reserve Areas into the ULL. Requests for expansion of the ULL will be considered in logical groupings that reflect the best long-term interests of the city, and will not be considered on a parcel-by-parcel basis, or in a manner that would permit non-contiguous development.

Residential Growth Management System

The Residential Growth Management System (GMS), established in the City's Growth Management Ordinance, limits the number of building permits available for residential growth each year. That limit, as of June 2018, is nine residential units per year, with exceptions given for affordable housing, second units, and in other circumstances as detailed in the ordinance. The City, as part of its periodic review of the GMS, considers the current adopted Regional Housing Needs Allocation (RHNA) number as determined by the Association of Bay Area Governments (ABAG) for a given cycle when establishing limits. The Proposed Plan would not alter the GMS.

Land Use Designation Changes

Designation changes on the Proposed Plan land use diagram are limited to 13 change areas located primarily in the center of the city. Figure 2.3-3 shows the 13 change areas, and Table 2.3-2 summarizes the proposed changes.

Table 2.3-2: Proposed Plan Change Areas

#	*Location*	*1993 Designation*	*Proposed Designation*	*Description of Change*
1	Adams Street and Library Lane	Central Business, Agriculture	Central Business	Designate the site, except the library as Central Business and modify the ULL to increase the developable area
2	Main Street, Spring Street, and Oak Avenue	Central Business	Mixed Use	Allow a mix of commercial, office, and residential development
3	Mitchell Drive and Oak Avenue – Northwest	Medium Density Residential	High Density Residential	Allow for higher density residential development within walking distance of Downtown
4	Mitchell Drive and Oak Avenue – Southeast	Office	Mixed Use	Allow a mix of commercial, office, and residential development
5	Main Street and Charter Oak Avenue	Service Commercial	Mixed Use	Allow mixed uses on eastern portion of the parcel
6	Main Street and Vidovich Avenue	Service Commercial	Mixed Use	The Vineland Station Hotel Project, a mixed-use project, has been approved for this location
7	Spring Street and St. James Drive	High Density Residential	Medium Density Residential	Designate as Medium Density Residential to accurately reflect existing densities
8	Grayson Avenue	Low Density Residential	Medium Density Residential	Designate as Medium Density Residential to allow more flexibility for density in this area
9	West end of Spring Street	Woodlands & Watershed	Low Density Residential	Modify the ULL and expand Low Density Residential area to better reflect the flat portion of the parcel
10	Church Street Parking Lot	Medium Density Residential	Mixed Use	Allow mixed use or allow the parcels to be developed as a parking lot
11	Flood Control Project Site	Medium Density Residential	Open Space	Redesignate for the flood control project
12	Railroad Avenue	Medium Density Residential	Mixed Use	Allow for mixed use
13	City Hall Site	Public & Quasi-Public, Office, Parks and Recreation	Central Business	Redesignate to Central Business to provide flexibility in future redevelopment of the site.

BUILDOUT UNDER THE PROPOSED PLAN

Buildout refers to the estimated amount of new development and corresponding growth in population and employment that is likely to take place under the Proposed Plan through the horizon year of 2040. Buildout estimates should not be considered a prediction for growth, as the actual amount of development that will occur through 2040 is based on many factors outside of the City's control, including changes in regional real estate and labor markets and the decisions of individual property owners. Therefore, buildout estimates represent one potential set of outcomes rather than definitive figures. Additionally, the designation of a site for a specific land use in the Proposed Plan does not guarantee that a site will be developed or redeveloped at the assumed density during the planning period, as future development will rely primarily on each property owner's initiative. Outside of city limits and the SOI, lands remain under the development control of Napa County unless annexed.

For this EIR, buildout projections do not include the total amount of potential development that could be accommodated by the Proposed Plan. Rather, the buildout assumes that only a portion of the total potential development will occur by 2040, as described below.

Methodology

Buildout is calculated by summing existing development, development that is planned, permitted, or under construction (known as "pipeline development"), and an estimated amount of potential new development in the Planning Area. New development is generally expected to occur in the change areas or in areas identified by the City's 2015 Housing Element as "opportunity sites" (the housing sites most likely to develop given parcel size, environmental constraints, and current zoning), as well as on a portion of vacant properties in the city's neighborhoods. The methodology used to calculate buildout for this analysis is summarized below. A more detailed memorandum describing buildout methodology is included in Appendix D.

Existing Development

To establish existing population, housing units, and jobs in the Planning Area, the land use assumptions from the regional traffic model were adjusted with reference to data from the California Department of Finance (DOF), the Association of Bay Area Governments (ABAG), and the Napa County Assessor. To update the 2010 population and housing assumptions from the model, 2018 parcel data from the Napa County Assessor was used to determine the most up-to-date number of housing units in St. Helena as of May 2018. Citywide totals were compared with DOF estimates from 2018 to verify accuracy. The 2010 employment assumptions from the model were calibrated with reference to County Assessor data and the ABAG Projections 2013 dataset, which represents the best available data on citywide employment levels.

Pipeline Development

Pipeline projects include those projects that are currently under City review or that have been approved but not yet constructed. The list of pipeline projects considered in the projections was based on the list of Planning Projects on the City's website as of May 30, 2018 and a supplemental list provided by staff. Where possible, information on resulting dwelling units and jobs was

obtained through project application materials or information from City staff. Where project-specific information was not available, job numbers were estimated based on square feet per employee assumptions from the U.S. Green Building Council (USGBC) (USGBC, 2018).

Future Development

To estimate buildout for the planning horizon, assumptions were made about the density of development in each proposed land use designation, as well as the percentage of parcels that would actually develop depending on location and land use designation. Not all parcels identified as vacant or opportunity sites were assumed to fully develop by the planning horizon year of 2040 in order to reflect more realistic development patterns. Future development projected in the city considers potential development on the Housing Element housing inventory opportunity sites, in the draft General Plan Change Areas, and on vacant sites designated as residential in the Proposed Plan. Projections also consider the potential for accessory dwelling units (ADUs) assuming that the rate of two ADUs per year documented from 2011 to 2017 would continue.

For the study areas, which are located outside of the city, it was assumed that the Proposed Plan would not have an effect on development in the traffic analysis zones (TAZs) over the planning horizon, as no land uses or policies are proposed for areas outside of city limits; thus, development projections for the study areas relied on existing development controls and trends. Residential development in the study areas was projected based on Napa County's Growth Management System, which limits the number of new housing units permitted in the county per year to accommodate an annual population growth rate of not more than 1 percent. The projections assume enough single-family housing units to accommodate 1 percent of population growth annually through 2040, using an average household size of 2.69 from the 2010 Census for Napa County. For employment, the 2018 employment estimates for the study areas were compared to the 2010 model assumptions for the larger TAZs where the study areas were located, and the proportion of study area jobs to TAZ jobs was used to find the portion of the 2040 traffic model assumptions to be attributed to the study areas.

Residential Buildout

Table 2.3-3 describes potential residential development resulting from application of land uses shown on the Proposed Plan Land Use Diagram (Figure 2.3-1), according to analysis undertaken for the Proposed Plan.

Table 2.3-3: Projected Residential Units at Buildout (2040)[1]

	St. Helena			*Study Areas*			*Planning Area Total*		
	SFR[2]	*MFR[3]*	*Total*	*SFR*	*MFR*	*Total*	*SFR*	*MFR*	*Total*
Existing (2018)	2,100	600	2,700	200	0	200	2,300	600	2,900
Future Development[4]	200	200	300	100	0	100	200	200	400
Total at Buildout	**2,300**	**800**	**3,100**	**200**	**0**	**200**	**2,500**	**800**	**3,300**

Table 2.3-3: Projected Residential Units at Buildout (2040)[1]

Notes:

1. Figures are rounded to the nearest hundred and may not sum due to rounding
2. SFR = Single-Family Residential
3. MFR = Multi-Family Residential
4. Includes pipeline development

Source: Dyett & Bhatia, 2018

Buildout Population

The buildout population takes into consideration the population estimated for 2018, as well as additional population associated with housing units projected to be built through the planning horizon. The population projection assumes a residential vacancy rate of 14 percent based on DOF estimates from 2018 (DOF, 2018), 2.45 persons per household in the city as projected for 2040 by ABAG (ABAG, 2013), and 2.69 persons per household in the study areas as estimated in the 2010 Census for Napa County. Table 2.3-4 describes the projected population at buildout of the Proposed Plan.

Table 2.3-4: Projected Population at Buildout (2040)[1]

	St. Helena	*Study Areas*	*Planning Area Total*
Existing (2018)	5,900	600	6,400
Future Development[2]	700	200	900
Total at Buildout	**6,600**	**700**	**7,300**

Notes:

1. Figures are rounded to the nearest hundred and may not sum due to rounding
2. Includes pipeline development

Source: Dyett & Bhatia, 2018

Employment Projections

The projected number of future jobs was added to the estimated number of existing jobs (as of 2018). Table 2.3-5 describes projected non-residential development in terms of square feet and potential jobs.

Table 2.3-5: Projected Jobs at Buildout (2040)[1]

	St. Helena	*Study Areas*	*Planning Area Total*
Existing (2018)	5,400	500	6,400
Future Development[2]	900	100	900
Total at Buildout	**5,900**	**1,100**	**7,000**

POLICY AND REGULATORY IMPLEMENTATION

The City would use a variety of regulatory mechanisms and administrative procedures to implement the Proposed Plan. Under California law, St. Helena is required to ensure that its Zoning Ordinance is consistent with the General Plan. In fact, the consistency requirement is the keystone of General Plan implementation. Without a consistency requirement, there is no assurance that Proposed Plan policies broadly related to land use would be implemented.

Zoning Ordinance

The City's Zoning Ordinance translates General Plan policies into specific use regulations, development standards, and performance criteria that govern development on individual properties. The General Plan establishes the policy framework, while the Zoning Ordinance prescribes standards, rules, and procedures for development. The Zoning Map provides more detail regarding the desired location of specific uses than the General Plan Land Use Diagram. As noted above, the current Zoning Ordinance will be revised to implement the new land use provisions of the Proposed Plan, if the Plan is adopted.

Other Plans and Regulatory Items

Other plans and regulatory items specified in the Proposed Plan that will require development or updates to comply with the Proposed Plan include the Noise Ordinance, ordinances that protect habitats and important natural communities, and the Stormwater Master Plan. In addition, the Proposed Plan calls for the development or potential development of several plans and regulatory items, including a historic preservation ordinance, a green building and landscaping ordinance, dark sky ordinance, creek corridor enhancement ordinance, integrated pest management

ordinance, land dedication ordinance, tree ordinance, an ordinance to require new development and redevelopment to provide bicycle and pedestrian improvements and amenities, art in public places program and ordinance, waste management master plan, youth and families master plan, bicycle and pedestrian master plan, hazardous materials response plan, parks and recreation master plan, trail maintenance and operations plan, and arts education master plan.

This page intentionally left blank.

3 Environmental Settings and Impacts

Overview

Sections 3.1 through 3.15 analyze the potential environmental impacts that may occur as a result of implementation of the Proposed Plan. The environmental issues subject to detailed analysis in the following sections include those that were identified by the City as potentially significant in response to the NOP. There are 14 environmental issues addressed in the following sections, as well as a brief discussion of additional impacts that were determined to be not potentially significant. The environmental topics addressed are as follows:

3.1 Aesthetics
3.2 Agricultural Resources
3.3 Air Quality
3.4 Biological Resources
3.5 Cultural, Historic, and Tribal Cultural Resources
3.6 Energy, Greenhouse Gas Emissions, and Climate Change
3.7 Geology, Soils, and Seismicity
3.8 Hazards and Hazardous Materials
3.9 Hydrology and Water Quality
3.10 Land Use, Population, and Housing
3.11 Noise
3.12 Public Services and Recreation
3.13 Transportation
3.14 Utilities
3.15 Impacts Not Potentially Significant

These assessments do not satisfy the need for project-level CEQA analysis for individual projects. Individual projects under the Proposed Plan will require project-level analysis at the time they are proposed, based on the details of those projects and the existing conditions at the time such projects are pursued.

Impacts Considered

According to the CEQA Guidelines, the following general types of environmental impacts must be considered in this program EIR:

- **Direct or primary impacts,** which are caused by the project and occur at the same time and place as the project.
- **Indirect or secondary impacts,** which are caused by the project and occur later in time or farther removed in distance but are still reasonably foreseeable. Indirect or secondary impacts may include growth-inducing impacts and other impacts related to induced changes in the pattern of land use, population density, or growth rate, and related impacts on air and water and other natural systems, including ecosystems. Indirect or secondary impacts may also include cumulative impacts.
- **Short-term impacts,** which are those of a limited duration, such as the impacts that would occur during the construction phase of a project.
- **Long-term impacts,** which are those of greater duration, including those that would endure for the life of a project and beyond.
- **Significant unavoidable impacts,** which cannot be mitigated to a level that is less than significant.
- **Irreversible environmental changes,** which may include current or future irretrievable commitments to using non-renewable resources, or growth-inducing impacts that commit future generations to similar irretrievable commitments of resources. Such changes are addressed in Chapter 5: CEQA Required Conclusions.
- **Cumulative impacts,** which include two or more individual impacts that when considered together are considerable or which compound or increase other adverse environmental effects. The individual impacts may be changes resulting from a single project or a program of projects. The cumulative effect from several projects is the change in the environment that results from the incremental effect of the Proposed Plan when added to other closely related past, present, and reasonably foreseeable future projects. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time. Cumulative impacts are addressed in Chapter 5: CEQA Required Conclusions.

Organization

Each section is formatted to include a summary of existing conditions, including regulatory context; the criteria for determination of significance for each impact; evaluation of potential project impacts; a mitigation framework, if applicable; and a conclusion of significance after mitigation for impacts identified as significant.

The goals, policies, and implementing actions of the proposed General Plan reduce some impacts of the Proposed Plan, and cases in which existing and proposed regulations, policies, and implementing actions reduce the impacts to a less-than-significant level are documented.

Physical Setting

This subsection provides relevant information about the existing physical environment related to the particular environmental topic. In accordance with Section 15125 of the CEQA Guidelines, the discussion of the physical environment describes existing conditions within the Planning Area at the time the NOP was filed on May 24, 2017, unless otherwise noted.

Regulatory Setting

This subsection describes federal, State, regional, and local plans, policies, regulations, and laws that may apply to the environmental topic under evaluation.

Impact Analysis

This subsection focuses on an analysis of the potential environmental impacts of the Proposed Plan described in Chapter 2, "Project Description," of this EIR. All potential direct and indirect impacts in Chapter 3 are evaluated in relation to applicable City, State, and federal standards. Thresholds of significance based on Appendix G of the CEQA Guidelines are used to identify the potential environmental impacts of the Proposed Plan; the methods used to conduct the impact analysis are summarized; and the impacts analyzed in the respective sub-section are summarized. Following this is a more in-depth analysis of the potential environmental impacts, divided by impact significance criterion, presented in the following format:

Impact 3.X-X **The impact statement briefly summarizes the findings of the impact discussion based on the identified threshold of significance. The level of significance is included at the end of the impact statement. Levels of significance listed in this EIR (as described below) are *no impact, less than significant, less than significant with mitigation,* or *significant and unavoidable*.**

The impact discussion is contained in the paragraphs following the impact statement. The analysis compares implementation of the Proposed Plan to existing conditions. In addition, the effects of policies and implementing actions in the Proposed Plan that will reduce the impacts are discussed.

Mitigation Measures

If the impact is found to be less than significant, no mitigation measures are required. Where no mitigation measures have been identified that could reduce an impact to less than significant, the reason is stated and no mitigation measures are listed.

Determining Level of Significance

For each potential environmental impact identified in this EIR, a statement of the level of significance of the impact is provided. Impacts are assessed as one of the following categories:

The term "no impact" is used when the environmental resource being discussed would not be adversely affected by implementation of the Proposed Plan. It means no change from existing conditions. This impact level does not need mitigation.

A "less than significant" impact would cause a minor change in the physical environment but would not meet or exceed the significance threshold. This impact level does not require mitigation, even if feasible, under CEQA.

An impact that is "less than significant with mitigation" would have a substantial adverse effect on the physical environment but could be reduced to a less than significant level with mitigation. Under CEQA, mitigation measures must be provided, where feasible, to reduce the magnitude of significant or potentially significant impacts.

A "significant and unavoidable impact" would cause a substantial adverse effect on the environment, and no known feasible mitigation measures are available to reduce the impact to a less than significant level. Under CEQA, a project with significant and unavoidable impacts may be approved, but the lead agency (in this case, the City) must prepare a "statement of overriding considerations" in accordance with Section 15093 of the CEQA Guidelines, explaining how the benefits of the project outweigh the potential for significant impacts.

3.1 Aesthetics

This section assesses potential local and regional impacts on aesthetics from future development under the Proposed Plan, including issues related to scenic vistas, visual character, and light and glare. The section provides context regarding the Planning Area's existing visual character and scenic resources, as well as relevant federal, State, and local regulations and programs. There were no responses to the NOP regarding topics addressed in this section of the EIR.

Environmental Setting

PHYSICAL SETTING

Visual Character Overview

St. Helena's small-town character is embodied in its distinctive architecture, tree-lined streets, and the visually prominent vineyards at the city's entryways and interspersed throughout portions of the community. The general ambience is also characterized by many natural features that surround and adjoin residential and commercial areas, such as Sulphur Creek, York Creek, the Napa River, and the oak and bay wooded hillsides found at the north end of St. Helena and the far eastern edge along Howell Mountain Road (east of the Napa River). Vineyards form one of the main visual amenities within the city, with their changing seasonal qualities, ranging from vibrant summer and fall colors to bare branches in winter. The vineyards also provide view corridors to the hillsides west and east of the city center. Other open space amenities include the city's parks such as Jacob Meilly Park, Crane Park, Lyman Park, and Wappo Park. Architectural elements of significant merit include the many historic buildings found along Main Street and throughout St. Helena.

The three study areas are largely consistent in visual character to the City of St. Helena. Study Area 1 is mostly undeveloped land and single-family residential homes located on steep hillsides. The Meadowood Golf Club is located in the northwest portion of Study Area 1. Study Area 2 is flat, undeveloped land south of the wastewater treatment plant. Study Area 3 is located south of the City of St. Helena's boundary, along State Route (SR) 29, and is a mix of commercial, residential, and agricultural properties.

Scenic Resources and Vistas

The Planning Area is framed on the west and east by the undeveloped wooded foothills of the Mayacama and Vaca mountains, respectively. These foothills are visibly prominent from many locations in the flatland areas of the City of St. Helena, especially from east/west streets in the center of the city. While there are many scenic resources and vistas within the Planning Area, there

are no specific scenic resources or vistas designated for protection in the existing adopted General Plan.

Entries and Corridors

The major highway entry into the Planning Area from both the north and south is SR 29, also identified as Main Street within the City of St. Helena. Motorists and bicyclists using this corridor view large expanses of vineyards and various wineries along the highway when entering from the south. From the north, wooded hillsides frame the view on the western side of the highway, and vineyards and level areas of open space frame the view on the eastern side. The Planning Area is separated from Calistoga to the north and Yountville to the south by vineyards and undeveloped lands, allowing uninterrupted views along long stretches of SR 29 from both the north and south of the city.

The City of St. Helena sits in a relatively narrow valley, framed by foothills to the east and west. Transportation corridors in this area are limited to Main Street, the Silverado Trail to the east of the center of town, and two-lane, east/west streets. The main road connection to the west is Spring Mountain Road. Where this two-lane, rural road enters the Planning Area at the northwest corner of St. Helena, views are predominantly of low-density urban development.

From the east, visitors and residents enter the Planning Area along Deer Park Road and Pope Street. Deer Park Road is at the far northern edge of the city and passes through large undeveloped areas and wide expanses of vineyards. Pope Street is lined with low-density residential development, Wappo Park, the Napa River, and some large areas of open space and vineyards.

One highly visible feature along many of the roadway corridors within the Planning Area is overhead electrical lines, which can create a sense of "visual clutter" within important viewsheds. The northern entrance to the city includes such overhead lines. Electrical lines are also visible along the Wine Train railroad tracks, within alleys, and along many roadways where undergrounding of electrical lines has not occurred.

Scenic Roads

A scenic road may be considered (often in the CEQA context) as a highway, road, drive, or street that, in addition to its transportation function, provides opportunities for the enjoyment of natural and human-made scenic resources. Scenic roads direct views to areas of exceptional beauty, natural resources or landmarks, or historic or cultural interests. While several roads in the Planning Area have unique scenic qualities because of their natural setting as well as historical and cultural features, the City has not established any formal scenic road designations within the city boundary and has not created any development criteria or design guidelines related to scenic roadways.

Caltrans has designated Main Street (SR-29) as an eligible State Scenic Highway, but this route has not been officially listed by the State. No other roads in the Planning Area have been classified as a Scenic Highway.

Community Character

Downtown

Downtown St. Helena, a National Register Historic District, is a mixture of historic and newer buildings largely concentrated along Main Street. Key landmark buildings include the Starr, Galleron, Ritchie, Oddfellows, and Pritchard buildings. Street trees, wide sidewalks, street parking, and pedestrian features, such as benches, define this core area of the city. From Main Street, views to nearby natural features are generally screened by intervening buildings. Smaller side streets, such as Adams Street, Railroad Avenue, and Hunt Avenue, also include commercial businesses.

Many of the historic masonry and wooden structures built from stone, brick, and timber, typically three stories or less in height, and located along Main Street between Spring and Adams streets, were built during the City's second major period of growth in the late 19th and early 20th centuries. The architectural details of these structures, such as brick dentils, medallion insets, and window fenestration, are reflective of the many Italian and Swiss immigrants, who were trained stonemasons and quarrymen and were early settlers in St. Helena (St. Helena General Plan, 2018). These historic structures are an important part of St. Helena's visual character.

Similar to many western cities, St. Helena's historic street pattern and layout, largely visible Downtown, is characterized by a traditional grid pattern, with variances that result from the intersection of railroad lines, creeks, and regional roadways. As St. Helena grew during the latter part of the 20th century, a modified street pattern developed with wide curvilinear streets, cul-de-sacs, and fewer bicycle and pedestrian connections, which are characteristic of the residential neighborhoods east and west of Downtown.

Signage within Downtown, and throughout St. Helena, is regulated by the City's Zoning Ordinance. Prohibited signs, which are listed in St. Helena Municipal Code Section 17.148.030 ("Regulatory Settings" section below), include billboards, revolving or moving signs, signs with flashing illumination, roof signs, and more. These regulations reduce the visual clutter of Downtown and preserve the visual character of the historic neighborhood.

Open Space and Agriculture

Open space areas and agricultural lands provide a variety of benefits, including visual enjoyment and aesthetic beauty. The Proposed Plan designates approximately 65 75 percent of the city as open space, agricultural land, woodlands/watershed, and/or parkland. Of this, about 71 percent is agricultural acreage. When account for the entire Planning Area, including the study areas, the percent of land designated as these land uses is approximately 69 percent. Much of the open space and agricultural acreage is located outside of the City of St. Helena's Urban Limit Line (ULL) but within city boundaries. The entirety of the study areas is designated by Napa County as either Agricultural Resources or Agriculture, Watershed, and Open Space. The many vineyards within the Planning Area provide an important visual amenity, allowing uninterrupted views to nearby foothills and providing a dynamic visual feature that changes with each season. These vineyards, a majority of which are designated as agricultural land uses, are an important distinguishing feature of the Planning Area.

Light and Glare

Light and glare sources within the Planning Area are primarily associated with residential, commercial, and industrial land uses. Streetlights are provided with the greatest frequency along major streets, such as SR 29. Streetlights are located in lesser frequencies in the more rural and agriculture portions of the Planning Area. In commercial and industrial areas, signage and cars in parking lots may produce light. Glass and reflective surfaces on buildings, residences, and vehicles traveling in the area and in parking lots in the downtown contribute to a limited amount of glare. The light and glare that exist in developed areas of the city are typical for an urbanized setting.

REGULATORY SETTING

Federal Regulations

There are no relevant federal laws, policies, plans, or programs that apply to the Proposed Plan.

State Regulations

California Scenic Highways Program

The California Scenic Highway Program, established in 1963, identifies and designates certain highways, along with adjoining land uses and features, which require special conservation treatment. The responsibility for the management of the program is left to local cities and counties. Highways shown as "eligible" for listing are believed to have outstanding scenic value. Once a highway is shown in "Streets and Highways Code Section 263" (which is the case for SR 29), it may be nominated for official designation by the local governing body with jurisdiction over the lands adjacent to the proposed scenic highway. A visual assessment is required, and a number of other steps must be followed.

SR 29 through all of Napa County is shown as "eligible for designation as a scenic highway"; however, it has not been formally designated (California Department of Transportation, 2011). Neither the existing nor proposed St. Helena General Plan designates any St. Helena roadway as a scenic road.

California Energy Commission Lighting Standards

In November 2003, the California Energy Commission adopted changes to Title 24 (Building Energy Efficiency Standards) regarding outdoor lighting. These new standards addressed both reduced energy consumption and reduced glare from outdoor lighting. The standards vary by "lighting zone." Zone 1 refers to parks, recreation areas, and wildlife preserves. Zone 2 refers to rural areas, and Zone 3 refers to urban areas. Lighting Zone 4 is a special use district that may be adopted by a local government where high ambient lighting is permissible. Local jurisdictions can designate special neighborhoods as a different lighting zone when appropriate. For example, a special commercial district may be designated Lighting Zone 3 in a rural area. The Planning Area, including the City of St. Helena, would be considered a rural area, because it is not identified by the U.S. Census as an urban area. The City has not designated individual zones within its jurisdiction, based on these criteria. However, individual photometric studies (which do utilize these criteria) may be required for development projects as a part of CEQA review and analysis to assess individual project impacts.

Local Regulations

City of St. Helena Municipal Code

Chapter 12.24 Trees and Other Vegetation

Sections 12.24.110 to 12.24.150 address the designation, protection, maintenance, and removal of heritage trees. A "heritage tree" is defined by the City as "any tree or grove of trees within the city boundaries designated by a resolution of the city council and having met the requirements set forth in this chapter." These requirements include trees that have historical significance; are over thirty inches in diameter measured four and one-half feet above the ground; are a unique or rare horticultural specimen; are unique in size or age; have aesthetic value due to symmetry, form, color, or other qualities; are an outstanding specimen of a desirable species, especially native oak species; and/or have significance for habitat preservation, including where a tree is one of a group of trees each dependent on the other for survival. Maintenance of heritage trees in the city are strictly-regulated, as is the removal and protection of heritage trees during construction activities.

Chapter 17.48 Central Business (CB) District

Chapter 17.48 establishes a Central Business (CB) district to provide for "retail, personal service uses, offices, restaurants, hotels/motels, service stations, public and quasi-public uses, and similar and compatible uses that serve local residents and the surrounding area" (Section 17.48.010). This zoning prohibits the demolition of a significant architectural or historical building—as determined by the Planning Commission—unless the Commission finds that (1) the structure poses a threat to health, safety, and general welfare if it is not demolished; (2) that restoration of the structure is not feasible or practicable using current building codes including, but not limited to, the Historic Building Code provision of the Uniform Building Code of the state; and (3) that no public or other funding is available for financing State Historic Building Code, as amended and adopted by the City.

Chapter 17.64 Woodlands and Watershed (WW) District

Chapter 17.64 establishes a Woodlands and Watershed (WW) district to protect the natural environment of such designated lands, such as reducing erosion and fire potential, minimizing siltation and sedimentation in waterways, and preserving wildlife habitat, views, and ridgelines. This purpose is achieved through regulation of uses and urban design including setbacks and building height, prohibiting the location of structures on steep slopes, and protection of natural features, including streams, trees, and other biological resources.

Chapter 17.92 Historic Preservation Overlay (HP) District.

Chapter 17.92 establishes a Historic Preservation Overlay (HP) district "to preserve the unique architectural character of those certain specific structures which have contributed to the City's historic development" (Section 17.92.020). The Planning Commission must determine buildings that will be protected within an HP overlay district. Protections include restrictions on historically inappropriate exterior alterations, demolition and restoration, and economic incentives for the preservation of significant buildings.

Chapter 17.148 Signs

Chapter 17.148 Signs regulates the size, location, and types of signs permitted in the City of St. Helena. Prohibited signs, which are listed in Section 17.148.030, include billboards, revolving or moving signs, signs with flashing illumination, roof signs, balloon signs, vehicular signs, and more. New signs, additions to a sign, alterations of a sign, or the replacement of a sign must be approved by either an administrative or planning commission sign permit.

Chapter 17.164 Design Review

Chapter 17.164 of the St. Helena Zoning Ordinance addresses requirements for design review. The stated purpose of the design review process is the following:

- To promote those qualities in the environment which bring value to the community;
- To foster the attractiveness and functional utility of the community as a place to live and work;
- To preserve the character and quality of our heritage by maintaining the integrity of those areas which have a discernible character or are of special historic significance;
- To protect certain public investments in the area;
- To encourage, where appropriate, a mix of uses within permissible use zones; and
- To raise the level of community expectations for the quality of its environment.

Design review applies to most new development, as well as the modification of the exterior of many structures. For example, after a Tentative Subdivision Map is approved, building plans for individual residential lots must be submitted, as each residential unit is required to obtain discretionary design review approval.

Title 17 Zoning

Requirements for lighting to reduce light pollution and glare are located throughout the St. Helena Zoning Ordinance, including:

- Chapter 17.60 Industrial (I) District requires "exterior lighting shall be directed or shielded so as to prevent glare onto any residential property or public roadway."
- Chapter 17.68 Public and Quasi-Public (PQP) District requires "all exterior lighting shall be directed or shielded so as to prevent glare onto any public roadways and properties of a residential character."
- Chapter 17.76 Open Space (OS) District requires "all exterior lighting shall be directed or shielded so as to prevent glare onto any public roadways and properties of a residential character."
- Chapter 17.124 Parking and Loading Requirements requires "any lighting fixture used to illuminate a parking lot shall be affixed to buildings or standards at a height of not more than fifteen feet and shall be directed and/or shielded so as to not cause excessive glare visible on properties in surrounding residential districts."

Impact Analysis

SIGNIFICANCE CRITERIA

For the purposes of this EIR, a significant adverse impact would occur if implementation of the Proposed Plan would:

Criterion 1: **Have a substantial adverse effect on a scenic vista;**

Criterion 2: **Substantially damage scenic resources, including, but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway;**

Criterion 3: **Substantially degrade the existing visual character and quality of the site and its surroundings; or**

Criterion 4: **Create a new source of substantial light or glare that would adversely affect day- or night-time views in the area.**

METHODOLOGY AND ASSUMPTIONS

Aesthetics and visual resources are generally subjective by nature, and therefore the extent of visual impact associated with adoption and implementation of the Proposed Plan can be difficult to quantify. In addition, it is difficult to estimate the impact future development would have on scenic resources, since individual development projects can be designed to be compatible with and/or enhance the aesthetic quality of an area. As such, this analysis was based on the overall amount of new development at buildout of the Proposed Plan, the potential location of new development, and policies in the Proposed Plan.

The Planning Area for the Proposed Plan includes three study areas in unincorporated Napa County immediately adjacent to the city limits where the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities (see Chapter 2: Project Description for additional details). Existing conditions related to aesthetics in the whole of the Planning Area are documented above; however, as the City does not have jurisdiction outside of the city limits and sphere of influence (SOI), Proposed Plan policies and actions would not apply in the study areas. Therefore, implementation of the Proposed Plan would not result in direct impacts related to aesthetics in the study areas. Cumulative impacts related to aesthetics are discussed in Chapter 5: CEQA Required Conclusions.

RELEVANT POLICIES AND IMPLEMENTING ACTIONS

Land Use and Growth Management Element

- ***LU2.2*** Encourage new residential development that is consistent in design, size, color, and floor area ratio (FAR) footprint with the older residences in the neighborhood.
- ***LU2.3*** Protect residential neighborhood views of surrounding vineyards and mountains.
- ***LU2.6*** Allow residential density at the higher end of the permitted range for single family development within Medium and High Density Residential Land Use designations as long

as the development character of the single family area is maintained, including lot widths, orientation to street, building heights, onsite parking, traffic, and noise, among other considerations.

- ***LU2.B*** Develop and implement residential design guidelines and/or form-based codes, to provide oversight and guidance for new buildings and renovations. Guidelines should ensure that new residential development is consistent with the design, size, and footprint of older residences in the neighborhood. Consider the impact of new development on surrounding residences.

  (Also see the following elements: Community Design, Topic Area 3; and Economic Sustainability, Topic Area 3).

- ***LU2.C*** Implement view shed protection review for residential development as part of an updated design review process.
- ***LU2.E*** Update zoning standards to encourage the following criteria:
  - A variety of lot widths and sizes, such as that found in the older areas of town;
  - Garages at the rear of lots rather than on the street; or creative garage designs that incorporate the "garage door" frontage appearance to blend into the home;
  - Lot coverage and floor area ratio (FAR) that is consistent with the scale of historic and older areas;
  - Planting of street trees and planting strips along sidewalks; and
  - Setbacks, building massing, and configuration consistent with older parts of neighborhoods.
- ***LU3.6*** Continue to work with the County of Napa to review land use and design changes for projects in the unincorporated areas at the City's gateways.
- ***LU3.11*** Ensure that new commercial development does not obstruct view corridors to the mountains.
- ***LU4.B*** Develop and implement industrial design guidelines and/or form-based codes, to provide oversight and guidance for new buildings and renovations. Guidelines should ensure that new industrial development is consistent with the City's character.

Community Design Element

- ***CD1.8*** Require, to the extent feasible, that all new development include underground utilities to minimize their negative visual impact. In addition, funding sources to underground electrical lines shall be sought so the undergrounding of existing overhead lines can occur over time.
- ***CD2.4*** Ensure active and complete streets within commercial districts by providing sidewalk amenities, such as landscape buffers, berms, street trees, street furniture, outdoor dining, public art, signage, and wayfinding.
- ***CD2.5*** Encourage property owners to improve façades and landscaping surrounding existing buildings through the implementation of beautification programs.

- ***CD2.B*** Require street tree plantings along the commercial streets east and west of Main Street to reflect Main Street's existing planting pattern, in order to provide visual continuity and to create a pleasant pedestrian environment.
- ***CD2.E*** Adopt and implement façade and landscape beautification programs to provide assistance to owners of existing properties.
- ***CD2.F*** Explore the need for additional programs, such as commercial façade improvement programs and traffic-calming incentive programs.
- ***CD3.3*** Encourage the use of landscaping and tree plantings as buffers between sidewalks and residential uses. Discourage the removal of existing trees and adopt more comprehensive tree preservation standards.

  (See also the Open Space and Conservation Element for policies and implementing actions related to tree preservation).
- ***CD3.4*** Ensure safe bicycle and pedestrian-friendly character on all residential streets. Consider retrofitting existing wide residential streets, such as Starr Avenue, with landscaped medians, wide sidewalks, and adjacent Class I pedestrian and bicycle trails.
- ***CD3.C*** Encourage the design and location of parking to minimize its appearance on front façades, locating it to the side or rear of the building, where feasible.
- ***CD3.D*** Encourage property owners to install landscaping and tree plantings in front setbacks as a buffer between the sidewalk and residential uses.
- ***CD3.E*** Require new development to include landscaping and street trees.
- ***CD5.1*** Preserve the visual and physical connection to agriculture by protecting views from streets, parks and open spaces to vineyards, agriculture, and hillsides. Where new streets are extended adjacent to agriculture, encourage hillside and vineyard views by maintaining agricultural activities at the road edge. Existing east and west entries should be maintained in their current appearance, protecting and improving views of vineyards and the surrounding hillsides wherever possible.
- ***CD5.2*** Use public streets or pathways to form the edge of developed areas, allowing views of open space from streets.
- ***CD5.3*** Ensure that key gateways into the City receive special, character-defining treatments and landscaping. Consider establishing landmark trees along the roads that serve as gateways to the City. New commercial development on Main Street south of the Sulphur Creek bridge should be carefully designed to provide an appropriate gateway in to the downtown area.
- ***CD5.4*** Preserve and enhance the City's nighttime environment and quiet rural sounds of the night for residents and wildlife by limiting the negative effects of artificial lighting.
- ***CD5.A*** Working with CALTRANS, design and install a landscaping treatment for the northbound (State Route 29 from Chaix Lane north to Sulphur Creek) and westbound (from Silverado Trail west along Pope, and any future roadway segment from the Trail to downtown) gateways into the City. Consider a tunnel of trees similar to those located at the northern gateway.

- ***CD5.B*** Adopt a dark sky ordinance to preserve the City's rural character by limiting the negative effects of light pollution on wildlife and community aesthetics. Develop lighting design guidelines for new development that mitigate light pollution while ensuring adequate nighttime security.
- ***CD5.C*** New development shall not result in significant light, glare, and noise that could affect residents, visitors, and wildlife. Lighting shall be shielded to reduce glare and shall be cast downwards. Outdoor new lighting shall occur primarily for the purpose of security and safety. Upcast lighting shall be discouraged to minimize impacts on wildlife and to retain the agricultural ambience of St. Helena. All lighting shall conform to the Lighting Zone 2 requirements of Title 24 of the California Building Code.
- ***CD5.D*** The City shall encourage the undergrounding of any new electrical lines required to serve new development. In addition, funding sources to underground existing electrical lines shall be sought so that undergrounding of existing overhead electrical lines can occur over time.
- ***CD5.E*** The City shall investigate the possibility of designating all or a portion of State Route 29 that passes through the City of St. Helena as a scenic highway under the State's scenic highway program.

IMPACTS

Impact 3.1-1 Implementation of the Proposed Plan would not have a substantial adverse effect on scenic vistas. (*Less than Significant*)

Development as a result of the Proposed Plan would have a significant impact if it blocked or degraded scenic vistas. There are important viewsheds within the Planning Area, such as those of historic resources, vineyards, and hillsides, which contribute to the aesthetic quality of St. Helena. Development under the Proposed Plan would have the potential to obstruct such existing views within the city. Change Areas, as depicted in Figure 2.3-3 in Chapter 2, Project Description, have the greatest potential to undergo changes, especially where no development currently exists and where open space/vineyard lands are located.

Due to potential visual impacts of new development, the Proposed Plan includes policies that seek to preserve existing public and private scenic vistas from potential development. Nearly all new development under the Proposed Plan would be required to obtain design review approval (including meeting all design review criteria identified in Zoning Code Section 17.164). New development would also have to meet the view protecting policies of the Proposed Plan, ensuring development would not be out-of-scale with surrounding development in terms of mass and height, as well as preserve existing scenic resources and visual character. Scenic vistas would be protected by policies LU2.3, LU2.C, LU3.11, CD5.1, and CD5.2.

The combination of the City's design review process, the majority of new development within the City's Urban Limit Line occurring within close proximity to existing development, and the relevant Proposed Plan policies referenced above would reduce any potential impact on scenic vistas to a level that is less than significant.

Mitigation Measures

None required.

Impact 3.1-2 Implementation of the Proposed Plan would not substantially damage scenic resources, including, but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway. (*Less than Significant*)

New development associated with the Proposed Plan would not substantially damage scenic resources, including, but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway. As mentioned in the Environmental Setting section above, no designated scenic highways currently pass through St. Helena. However, SR-29 has been identified by the California Scenic Highway Program as eligible for such designation.

Policy LU3.6 calls for coordination with the County of Napa to review land use and design changes for projects in unincorporated areas at the City's gateways, which would provide an opportunity to identify and mitigate, if necessary, negative impacts on scenic resources from SR-29. Policy CD5.3 ensures that key gateways into the city would receive special character and defining treatments and would help to protect the view from SR-29 as it passes through St. Helena.

Due to the lack of any designated state scenic highways within the city and policies and implementing actions included in the Proposed Plan, impacts on scenic resources within a state scenic highway would be less than significant.

Mitigation Measures

None required.

Impact 3.1-3 Implementation of the Proposed Plan would not substantially degrade the existing visual character or quality of St. Helena and its surroundings. (*Less than Significant*)

Implementation of the Proposed Plan could substantially degrade the existing visual character or quality of the Planning Area if new development occurring under the Proposed Plan introduced built elements that were significantly out of character with existing development in terms of height, massing, or quality of design or materials. The visual character of the Planning Area is currently characterized by a historic Downtown, tree-lined streets, high-quality residential design, agricultural uses, and prominent natural features, such as the Napa River and surrounding hillsides. New development would not substantially degrade the existing visual character and quality of the site or its surroundings because of the City's current regulations and Proposed Plan policies.

Generally, the City of St. Helena design review process would regulate new development and redevelopment for consistency with existing style, character, and quality. The City has an adopted sign ordinance that limits the size, type, and lighting of signs to minimize visual intrusion and clutter within the city. The Urban Limit Line would also require new development to occur in close proximity to existing development, which would preserve the visual character of the city's rural and agricultural areas. Specific zoning designations and overlays within the Zoning Code protect various neighborhoods within the city from visually intrusive development. The Central Business

District and Historic Preservation Overlay protect the historic resources within Downtown. The Agricultural Preservation and Woodlands and Watershed districts aim to preserve existing agricultural, open space, and hillside areas.

In addition, the Proposed Plan's land use designations, policies, and implementing actions are intended to limit any visually incompatible development in the city while enhancing the area's overall visual quality. While in some cases the Proposed Plan may permit higher densities and intensities than what currently exists in the City of St. Helena, any new development would be subject to policies and implementing actions, including LU2.2, LU2.6, LU2.B, LU2.E, and LU4.B, in the Proposed Plan that emphasize visual compatibility with surrounding development. Policy LU3.6 encourages coordination with Napa County to ensure that projects in the unincorporated areas bordering St. Helena, including the study areas, are also consistent. Policy CD1.8 addresses the aesthetic effects of overhead wires and cables on main roadways in the community. Additionally, many of the policies listed above address general visual character and quality, such as street trees, landscaping, benches, bicycle racks, and other amenities to preserve the aesthetic value of the City of St. Helena.

Therefore, with compliance with existing regulations and implementation of the proposed policies, the impact of on the visual quality of the city from implementation of the Proposed Plan would be less than significant.

Mitigation Measures

None required.

Impact 3.1-4 Implementation of the Proposed Plan would create new sources of substantial light or glare that could adversely affect day- or night-time views in the area. (*Less than Significant*)

Existing developed areas in the city currently generate some light and glare, and new development that would be facilitated by the Proposed Plan could result in increased light and glare. Some elements of the built environment, such as parking lots, commercial buildings, and signs, may emit light for 24 hours a day. New sources of daytime glare could include new buildings with reflective surfaces, such as office buildings with glazed windows. Such light and glare could affect residential areas, as well as areas frequented by wildlife.

The St. Helena Zoning Code, as discussed in the Regulatory Settings section above, prohibits lighting that would negatively impact residential development and roadways. The City's design review process would further reduce light and glare for new construction or redevelopment projects through a discretionary process whereby projects must show compatibility with surrounding areas.

In addition to the Municipal Code, the Proposed Plan includes policies and actions to reduce the amount of new light and glare. Implementing Action CD5.B requires the City to adopt a "Dark Sky" ordinance to preserve the City's rural character by limiting the negative effects of light pollution on wildlife and community aesthetics. This Action also requires the implementation of lighting design guidelines for new development to minimize adverse effects of lighting while ensuring adequate nighttime security. Implementing Action CD5.C requires new development in

the community not to generate significant light or glare impacts. Future lighting shall be shielded and directed downwards to minimize glare, and upcast lighting is discouraged. Several Proposed Plan policies, such as CD2.4, CD2.5, CD3.3, CD3.4, CD5.3, CD5.4, and implementing actions, including LU2.E, CD2.B, CD2.E, CD3.C, CD3.D, CD3.E, and CD5.A, encourage landscaping and street trees, which can also help to reduce glare, especially in surface parking lots.

Adherence to implementing actions contained in the Proposed Plan, combined with the design review process generally required for new development and redevelopment, would reduce future light and glare impacts to a less than significant level.

Mitigation Measures

None required.

This page intentionally left blank.

3.2 Agricultural Resources

This section assesses potential environmental impacts on agricultural resources from future development under the Proposed Plan, including those related to Prime Farmland, Unique Farmland, and Farmland of Statewide Importance; agricultural zoning and Williamson Act contracts; and the conversion of farmland to non-agricultural uses. This section describes existing agricultural resources in the Planning Area, as well as relevant federal, State, and local regulations and programs.

Environmental Setting

PHYSICAL SETTING

Farmland Classification

The California Department of Conservation's Farmland Mapping and Monitoring Program (FMMP) classifies farmland into the following categories based on soil type and current land use:

- **Prime Farmland.** Land that has the best combination of physical and chemical characteristics for crop production. It has the soil quality, growing season, and moisture supply needed to produce sustained high yields of crops when managed (including water management) according to current farming methods. Prime Farmland must have been used for the production of crops within the last three years.
- **Farmland of Statewide Importance.** Land other than Prime Farmland that has a good combination of physical and chemical characteristics for crop production. Similar to Prime Farmland, Farmland of Statewide Importance must have been used for crop production within the last three years.
- **Unique Farmland.** Land that does not meet the criteria for Prime Farmland or Farmland of Statewide Importance, but which is currently used for the production of specific high economic value crops (as listed in the last three years by the California Department of Food and Agriculture). It has the special combination of location, soil quality, growing season, and moisture supply to produce sustained high quality or high yields of a specific crop (e.g., oranges, olives, avocados, rice, grapes, and cut flowers) when treated and managed according to current farming practices.
- **Farmland of Local Importance.** Land that is either currently producing crops or has the capability to do so. It is land other than Prime Farmland, Farmland of Statewide Importance, or Unique Farmland, but it may be important to the local economy due to its productivity.

- **Grazing Land.** Land on which the existing vegetation, whether grown naturally or through management, is suitable for livestock grazing.

All categories exclude publicly owned land for which there is an adopted policy preventing agricultural use. The FMMP designations are informational only and do not constitute any regulatory policy. Designations of Prime Farmland, Farmland of Statewide Importance, Unique Farmland, and Farmland of Local Importance are referred to collectively in this analysis as Important Farmland.

Agricultural Context

California is the country's leading agricultural producer and exporter. The Planning Area is located in Napa County, which ranked in the top 20 California counties for total value of production at $737,298 (CDFA, 2016). The county's top four commodities by gross value in 2016 were grapes/wine, cattle, miscellaneous nursery products, and walnuts. There are 31,609 acres of farmland in Napa County (Napa County, 2017).

In the State of California, productive farmland acreage has been gradually declining, due primarily to the conversion of farmland to non-agricultural uses. Between 1984 and 2010, the area of farm and grazing lands in the state declined by more than 1.4 million acres, including a loss of 662,000 acres of Prime Farmland, the farmland type with the best soils for agricultural production (Department of Conservation, 2014). While the average annual acreage count has been decreasing since 1984, Napa County has seen an increase in the total area of agricultural land since 2014, gaining nearly 365 net acres of agricultural land between 2014 and 2016, including an overall gain of 149 acres of Important Farmland and 216 acres of grazing land (FMMP, 2016).

Existing Farmland in the Planning Area

Farmland Characteristics

Agricultural uses, including wineries, occupy 916 acres (25 percent) of the total land area within the Planning Area. Agricultural uses in the City of St. Helena are located adjacent to the City's Urban Limit Line (ULL), with large areas around the periphery of the city. The majority of existing agricultural uses in the city are related to viticulture, with vineyards and winery facilities. Figure 3.2-1 shows existing agricultural land uses in the Planning Area, based on Napa County Assessor's data and review of aerial imagery. Areas indicated as Ag/Rural Residential consist primarily of vineyards with one or two single-family residences on the property. Areas shown as Agriculture are primarily vineyards. Areas shown as Winery generally include vineyards, but also include wine production facilities of varying sizes. In the unincorporated study areas, agricultural uses are mapped in Study Area 1, including Ag/Rural Residential uses, and Study Area 3, with some Ag/Rural Residential as well as Winery.

Important Farmland

Figure 3.2-2 illustrates the locations of lands classified by the FMMP as Important Farmland or Grazing Land within the City of St. Helena and the study areas. Table 3.2-1 summarizes the Planning Area's FMMP classifications. The city limits encompass approximately 956 acres of land identified as Prime Farmland, 284 acres of Farmland of Statewide Importance, 53 acres of Unique Farmland, and 33 acres of Farmland of Local Importance. No Grazing Land was mapped within the city limits.

Table 3.2-1: Farmland Types and Acreages (2016)

	City of St. Helena		*Study Areas*		*Planning Area Total*	
FMMP Categories	*Acres*	*Percent*	*Acres*	*Percent*	*Acres*	*Percent*
Prime Farmland	898.89	28.56%	161.89	35.95%	1060.78	29.48%
Farmland of Statewide Importance	278.65	8.85%	3.32	0.74%	281.98	7.84%
Unique Farmland	38.13	1.21%	-	-	38.13	1.06%
Farmland of Local Importance	75.23	2.34%	-	-	75.23	2.09%
Grazing Land	4.07	0.13%	-	-	4.07	0.11%
Total Agricultural Land	**1,294.97**	**41.14%**	**165.22**	**35.68%**	**1,460.19**	**40.58%**

Williamson Act Contracts

As of 2016, there were 171 acres of farmland under Williamson Act contracts in the Planning Area, as listed in Table 3.2-2 and shown in Figure 3.2-2. Six properties subject to Williamson Act contract are located within the city limits. Of these six properties, three are located on the west side of Main Street between the El Bonita Motel and Grayson Avenue, and the other three are located on Vallejo Street near the western city limits. All six properties are located outside of the Urban Limit Line. In addition, there are two properties located in Study Area 2 covering the City of St. Helena's seep fields, and one property located along State Route 29 (SR-29) just south of city limits. As of October 2017, none of the contracts in the Planning Area are in non-renewal. The Williamson Act is discussed in further detail in the Regulatory Setting below.

Table 3.2-2: Williamson Act Contracts

Location	*Acres*
Within City Limits	54.74
Within Study Areas	116.74
Total	171.47

Note: Numbers may not sum due to rounding.

Regulatory Setting

FEDERAL REGULATIONS

Federal Farmland Protection Policy Act, 7 U.S. Code Section 4201 and 7 Code of Federal Regulations 658

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) oversees the Farmland Protection Policy Act (FPPA) (7 U.S. Code [USC] Section 4201 et seq.; see also 7 Code of Federal Regulations [CFR] 658). The FPPA (a subtitle of the 1981 Farm Bill) is national legislation with the following stated purpose: "to minimize the extent to which federal programs contribute to the unnecessary conversion of farmland to nonagricultural uses." The FPPA applies to projects and programs that are sponsored or financed in whole or in part by the federal government and does not apply to private construction projects subject to federal permitting and licensing, projects planned and completed without assistance from a federal agency, federal projects related to national defense during a national emergency, or projects proposed on land already committed to urban development. The FPPA spells out requirements to ensure federal programs to the extent practical are compatible with state, local, and private programs and policies to protect farmland and calls for the use of the Land Evaluation and Site Assessment (LESA) system to aid in analysis.

U.S. Department of Agriculture Natural Resources Conservation Service

The U.S. Department of Agriculture's Natural Resources Conservation Service maps soils and farmland uses to provide comprehensive information necessary for understanding, managing, conserving, and sustaining the nation's limited soil resources. In addition to many other natural resource conservation programs, the NRCS manages the Farmland Protection Program, which provides funds to help purchase development rights to keep productive farmland in agricultural uses. Working through existing programs, USDA joins with state, tribal, or local governments to acquire conservation easements or other interests from landowners.

STATE REGULATIONS

Farmland Mapping and Monitoring Program

The California Department of Conservation FMMP classifies farmland into five different categories based on soil type and current land use, as described in the Physical Setting. The minimum mapping unit is 10 acres, with the exception of grazing land, which is 40 acres. See Table 3.2-1 for a listing of acreage by farmland classification in the Planning Area.

California Farmland Conservancy Program

The California Farmland Conservancy Program (Public Resources Code Section 10200 et seq.) supports the voluntary granting of agricultural conservation easements from landowners to qualified nonprofit organizations, such as land trusts, as well as local governments. Conservation easements are voluntarily established restrictions that are permanently attached to property deeds, with the general purpose of retaining land in its natural, open-space, agricultural, or other condition while preventing uses that are deemed inconsistent with the specific conservation purposes expressed in the easements. Agricultural conservation easements define conservation

purposes that are tied to keeping land available for continued use as farmland. Such farmlands remain in private ownership and the landowner retains all farmland use authority, but the farmland is restricted in its ability to be subdivided or used for non-agricultural purposes, such as urban uses.

California Land Conservation Act (Williamson Act)

Williamson Act Contracts

The California Land Conservation Act (Government Code Section 51200 et seq.) of 1965, commonly known as the Williamson Act, provides a tax incentive for the voluntary enrollment of agricultural and open space lands in contracts between local government and landowners. The contract restricts the land to agricultural and open space uses and compatible uses defined in State law and local ordinances. An agricultural preserve, which is established by local government, defines the boundary of an area within which a city or county will enter into contracts with landowners. Local governments calculate the property tax assessment for lands under contract based on the actual use of the land rather than the potential land value assuming full development.

Williamson Act contracts are effective for periods of 10 years and longer. The contract is automatically renewed each year, maintaining a constant, 10-year contract, unless the landowner or local government files to initiate non-renewal. Should that occur, the Williamson Act would terminate 10 years after the filing of a notice of non-renewal. Only a landowner can petition for a contract cancellation. Tentative contract cancellations can be approved only after a local government makes specific findings and determines the cancellation fee to be paid by the landowner.

Six properties subject to Williamson Act contract are located within the city limits. Of these six properties, three are located on the west side of Main Street between the El Bonita Motel and Grayson Avenue, and the other three are located on Vallejo Street near the western city limits. All six properties are located outside the Urban Limit Line.

The State of California has the following policies regarding public acquisition of and locating public improvements on lands in agricultural preserves and on lands under Williamson Act contracts (Government Code Section 5129051295):

- Avoid locating federal, State, or local public improvements and improvements of public utilities, and the acquisition of land, in agricultural preserves;
- Locate public improvements that are in agricultural preserves on land other than land under Williamson Act contract; and
- Any agency or entity proposing to locate such an improvement, in considering the relative costs of parcels of land and the development of improvements, consider the value to the public of land, particularly prime agricultural land, in an agricultural preserve.

Farmland Security Zone Contracts

Since 1998, another option in the Williamson Act Program has been established with the creation of Farmland Security Zone contracts. A Farmland Security Zone is an area created within an agricultural preserve by a board of supervisors upon the request of a landowner or group of

landowners. Farmland Security Zone contracts offer landowners greater property tax reduction and have a minimum initial term of 20 years. Like Williamson Act contracts, Farmland Security Zone contracts renew annually unless a notice of non-renewal is filed. Potential cancellation of Williamson Act and Farmland Security Zone contracts would be addressed in subsequent project-level documents.

Open Space Subvention

Under the Open Space Subvention Act of 1971, the State has provided annual subvention payments to counties for foregone property tax revenue due to Williamson Act contracts. The Budget Act of 2009 virtually eliminated these payments for the 2009-10 fiscal year. While partial funding was restored for the 2010-11 fiscal year, long-term State support to counties for agricultural land conservation is uncertain. Despite the elimination of most payments from the State, the California Department of Conservation has continued to release status reports of lands under Williamson Act contracts, with the most recent release occurring in 2015.

Solar Use Easements

In 2011, California passed Senate Bill (SB) 618 (Chapter 596, Statutes of 2011) authorizing property owners under Williamson Act or Farmland Security Zone contracts to rescind the contract and simultaneously enter into a solar-use easement. Solar-use easements require the land to be used for solar photovoltaic facilities for a term of 20 years.

LOCAL REGULATIONS

Napa County Measures J and P

In 1990, Measure J was adopted by Napa County voters for purposes of protecting existing agricultural, watershed, and open space lands from premature or unnecessary conversion to non-agricultural or non-open space uses. The Measure ensured that any lands designated as Agriculture, Watershed, and Open Space or Agricultural Resource on the Napa County General Land Use Ma adopted in 1975 would remain so designated until December 1, 2020 unless annexed, redesignated by vote of the people, or redesignated by the Board of Supervisors given findings that the land is unsuitable for agriculture and not likely to be annexed, or to avoid unconstitutional taking of property, or to comply with State statutes concerning siting of solid waste facilities. Measure J's term was extended beyond the original sunset date of 2020 when the voters adopted Measure P in 2008. Measure P is scheduled to sunset in the year 2058. Policies and regulations that implement Measure J and P are included in the Napa County General Plan and the Napa County Zoning Ordinance.

Napa County General Plan

Agricultural Preservation and Land Use Element

The Napa County General Plan includes an Agricultural Preservation and Land Use Element that envisions the county as a place where agriculture is the primary land use and where residential and employment growth is concentrated in the incorporated cities and town and the urbanized areas of the county. The element's seven goals include the following four goals directly related to agricultural preservation:

Goal AG/LU-1: Preserve existing agricultural land uses and plan for agriculture and related activities as the primary land uses in Napa County.

Goal AG/LU-2: Concentrate urban uses in the County's existing cities and town and urbanized areas.

Goal AG/LU-3: Support the economic viability of agriculture, including grape growing, winemaking, other types of agriculture, and supporting industries to ensure the preservation of agricultural lands.

Goal AG/LU-5: With municipalities, other governmental units, and the private sector, plan for commercial, industrial, residential, recreational, and public land uses in locations that are compatible with adjacent uses and agriculture.

Conservation Element

Goal One in the Napa County General Plan Conservation Element is to "minimize conflicts with the natural environments and the agriculture it supports." The goal is accompanied by policies and implementation measures to conserve resources by determining appropriate uses of land according to its natural suitability, and to improve and preserve agricultural land.

Napa County Municipal Code

Chapter 2.94 - Agriculture and Right to Farm

Chapter 2.94 of the Napa County Code includes the County's Agriculture and Right to Farm regulations, intended to preserve and protect its agricultural land. Issues covered in this chapter include:

- **Right-to-Farm Conditions.** This ordinance states that no agricultural activity, operation, or facility shall be considered a nuisance if it has been in operation for more than three years and was not a nuisance at the time it began, if conducted or maintained on agricultural lands for commercial purposes in a manner consistent with proper and accepted customs and standards as established and followed by similar agricultural operations in the same locality.
- **Disclosure Prior to Transfer of Real Property.** This ordinance requires a real estate disclosure upon any transfer of real property that a property adjacent or near to agricultural operations or agricultural lands may be subject to inconveniences or discomforts arising from such operations, including noise, odors, dust, chemicals, smoke, insects, operation of machinery during any 24-hour period, aircraft operation, and storage and disposal of manure.
- **Conditions of Approval of Entitlements for Use.** This ordinance states that no agency of the county shall issue a permit for use of a parcel adjacent to agricultural land until the owners of the property have signed a statement acknowledging that they are aware of the "right to farm" policy and have been provided with a copy of a statement containing the real estate disclosure previously mentioned.

Title 18 Zoning

The Zoning Code regulates development in the unincorporated County in accordance with the County's General Plan. The Zoning Code contains two agricultural zoning districts, the Agricultural Preserve (AP) district and the Agricultural Watershed (AW) district as follows:

- **Agricultural Preserve.** The AP district classification is intended to be applied in the fertile valley and foothill areas of Napa County in which agriculture is and should continue to be the predominant land use, where uses incompatible to agriculture should be precluded and where the development of urban-type uses would be detrimental to the continuance of agriculture and the maintenance of open space which are economic and aesthetic attributes and assets of the county.
- **Agricultural Watershed.** The AW district classification is intended to be applied in those areas of the county where the predominant use is agriculturally oriented, where watershed areas, reservoirs and floodplain tributaries are located, where development would adversely impact on all such uses, and where the protection of agriculture, watersheds and floodplain tributaries from fire, pollution and erosion is essential to the general health, safety and welfare.

Napa County agricultural zoning districts are shown in Figure 3.2-3.

Impact Analysis

SIGNIFICANCE CRITERIA

For the purposes of this EIR, a significant adverse impact would occur if implementation of the Proposed Plan would:

Criterion 1: **Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use;**

Criterion 2: **Conflict with existing zoning for agricultural use, or a Williamson Act contract; or**

Criterion 3: **Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use.**

METHODOLOGY AND ASSUMPTIONS

Farmland resource acreages were assessed based on the California Department of Conservation FMMP, a biennial report and mapping resource on the conversion of farmland and grazing land. Williamson Act contract lands were identified by geographic information systems (GIS) data from Napa County. Using these sources, the Proposed Plan was analyzed for potential conversion of Important Farmland, conversion of Williamson Act contract lands, and other changes resulting from the Proposed Plan that may result in the conversion of farmland to urban uses.

The Planning Area for the Proposed Plan includes three study areas in unincorporated Napa County immediately adjacent to the city limits where the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities (see Chapter 2: Project Description for additional details). Existing conditions related to agricultural resources in the whole of the Planning Area are documented above; however, as the City does not have jurisdiction outside of the city limits and sphere of influence (SOI), Proposed Plan policies and actions would not apply in the study areas. Therefore, implementation of the Proposed Plan would not result in direct impacts related to agricultural resources in the study areas. Cumulative impacts related to agricultural resources are discussed in Chapter 5: CEQA Required Conclusions.

RELEVANT POLICIES

The following policies and implementing actions of the General Plan Update are relevant to agricultural resource impacts as defined by the significance criteria above:

Land Use and Growth Management Element

- ***LU1.1*** Require new development to occur within well-defined boundaries and be consistent with the ability to provide urban services. New development should mitigate infrastructure impacts by using sustainable, best management practices in green building

and stormwater management, while minimizing impacts on sewer, water, energy and natural resources.

- ***LU1.2*** Allow urban development to occur only within the Urban Limit Line. Consider an exception for on-site employee housing on Agricultural lands. Urban services, such as sewer, water and storm drainage will only be extended to development within the Urban Limit Line.

  The Urban Limit Line may only expand when the amount of developable land within the Urban Limit Line is insufficient to implement the General Plan policies. Expansion outside the Urban Limit Line should first be considered in Urban Reserve Areas. Expansion into other areas outside the Urban Limit Line should be considered only when the proposed land use is found to further the goals and long-term objectives of the City and does not result in adverse impacts to adjacent uses in either the urban or rural areas.

- ***LU1.3*** Support agricultural and low-intensity uses beyond the Urban Limit Line.

- ***LU1.4*** In order to minimize and postpone the need for expansion of the Urban Limit Line, encourage infill development within currently developed areas.

- ***LU4.2*** Support the development of industries that are consistent with viticulture and winery support services and similar, compatible uses. Support the role of the City as an agriculturally-based service center for the surrounding area, including Calistoga, Angwin, Deer Park, Meadowood, Madrone Knoll, Rutherford, and the unincorporated area south of St. Helena.

- ***LU5.1*** Discourage conversion of existing agricultural farmland to non-agricultural uses.

- ***LU5.3*** Strictly limit development on properties existing at the time of the adoption of this General Plan that are designated as agricultural land.

- ***LU5.B*** Continue to enforce the City's "right to farm" ordinance that protects the right of agricultural operations in agriculturally-designated areas to continue their operations, even though such practices may generate complaints from nearby established urban uses. Explore the feasibility of a notification system (such as flags, web-based information, etc.) for agricultural spraying so nearby residences can prepare accordingly.

- ***LU5.C*** Explore the feasibility and desirability of implementing permanent agricultural protection for lands within the Urban Limit Line in the form of agricultural preserves.

- ***LU5.F*** Where proposed residential, commercial, or industrial development abuts lands devoted to agricultural use, require the non-agricultural uses to incorporate buffer areas to mitigate potential land use conflicts as a condition of approval for subdivision or use permit. The type and width of buffer areas shall be determined by the City based on the character, intensity, and sensitivity of the abutting land uses. Prepare and adopt guidelines and regulations to assist in the determination of the appropriate type and scope of agricultural buffer areas needed in circumstances that warrant the creation of such buffer areas.

Community Design Element

- ***CD4.2*** Integrate open space, including parks, community gardens, natural areas and agriculture into the community to strengthen the connection to St. Helena's agricultural heritage and provide a sense of openness.
- ***CD4.3*** Support agricultural and low-intensity uses beyond the Urban Limit Line. (Also see the Land Use and Growth Management Element, Topic Area 1)

Open Space and Conservation Element

- ***OS2.1*** Maintain agriculture as the mainstay of the local economy by preserving agriculturally-designated lands as an invaluable and irreplaceable open space resource. (Also see the Land Use and Growth Management Element for additional policies and implementing actions relating to agriculture.)

Climate Change Element

- ***CC4.A*** Establish programs to support and encourage local agriculture, food production, and school and community gardens.
- ***CC4.E*** Support efforts by local growers and restaurants to produce and use locally-grown food and remove associated regulatory hurdles.

Parks and Recreation Element

- ***PR3.2*** Protect sensitive habitat, agricultural land, and open space when planning and maintaining City park lands.

IMPACTS

Impact 3.2-1: Implementation of the Proposed Plan would convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (*Significant and Unavoidable*)

Implementation of the Proposed Plan would result in a significant impact if future development occurring in accordance with the Proposed Plan's land use designations and policies would convert Important Farmland to non-agricultural uses. Table 3.2-1 summarizes Important Farmland in the Planning Area as identified by the FMMP. The largest category of farmland classified by the FMMP in the Planning Area is Prime Farmland, which comprises 900 acres or 29 percent of the land in the city identified as agriculture by the FMMP, as well as 1060 acres or 36 percent of land identified as agriculture in the study areas. Additionally, there are nearly 282 acres of Farmland of Statewide Importance, 75 acres of Farmland of Local Importance, and 38 acres of Unique Farmland in the Planning Area, as shown in Figure 3.2-2.

The Proposed Plan includes various land use designations for areas with Prime, Statewide Important, Unique, and Local Important Farmland. Large areas along the periphery of the City of St. Helena would be designated Agriculture, where agricultural and agriculturally-related uses would continue to be allowed. The Proposed Plan also includes urban land use designations in areas of Prime, Statewide Importance, Unique, and Local Important Farmland, which would allow for new development that would result in farmland conversion. As shown in Table 3.2-3, the

acreage with urban land use designations is far less than acreage with agricultural land use designations. The urban land use designations in the Proposed Plan would cover just 58 acres of Prime Farmland, 20 acres of Statewide Importance, 2 acres of Unique Farmland, and nearly 37 acres of Farmland of Local Importance. In total, the Proposed Plan would allow for development on 118 acres of Important Farmland throughout the City of St. Helena.

Table 3.2-3: Prime, Statewide Important, and Unique Farmland in the Planning Area with Urban and Agricultural Land Use Designations

	Acres with an Urban Land Use Designation	*Acres with the Agricultural Land Use Designation*
Prime Farmland	58.74	1,011.04
Farmland of Statewide Importance	20.31	261.68
Unique Farmland	2.52	35.60
Farmland of Local Importance	36.96	38.27
Total	**118.53**	**1,346.59**

Sources: Farmland Mapping and Classification Program (FMMP), 2016; Proposed General Plan Land Use

The Proposed Plan policies and implementing actions provide a framework to permit existing agricultural uses to continue operating and ensure that important farmland remains as farming or other related agricultural support uses for as long as such use is financially feasible. Proposed land use policies that would reduce impacts to Important Farmland, including LU1.4, which encourages infill development within currently developed areas in order to minimize the need to expand the Urban Limit Line; policies LU1.3, LU5.1, CD4.3, OS2.1, and PR3.2, which provide support for agricultural uses within and adjacent to the city. Additionally, implementing actions LU5.B and PS2.H call for continued enforcement of "right-to-farm" provisions. While implementation of the proposed plan would reduce potential impacts to Important Farmland, the potential loss of 118 acres of Important Farmland in the city would be significant.

The Proposed Plan does not include land use designations or policies for the unincorporated study areas and would therefore have no impact on the conversion of Important Farmland in those areas.

Mitigation Measures

Implementation of the Proposed Plan could result in the loss of 118 acres of Prime Farmland, Farmland of Statewide and Local Importance, and Unique Farmland. Conversion of agricultural land to urban use is not directly mitigable, aside from preventing development altogether, as agricultural land is a finite and irreplaceable resource. Beyond limiting the amount of total growth permitted, there are no feasible mitigation measures for agricultural land conversion that would also fulfill the objectives of and implement the Proposed Plan. The impact would remain significant and unavoidable.

Impact 3.2-2: Implementation of the Proposed Plan would not conflict with existing zoning for agricultural use or a Williamson Act contract (*Less Than Significant*)

The Proposed Plan would not conflict with existing zoning for agricultural land uses or Williamson Act contracts. As discussed below, the Proposed Plan would not conflict with Napa County's zoning for agricultural uses, and would designate all areas within the city that are subject to Williamson Act contracts as Agriculture. Therefore, potential for impacts due to conflict with Williamson Act contracts or existing zoning for agricultural use is deemed would be less than significant.

Zoning for Agricultural Use

The Proposed Plan does not designate any land uses for unincorporated areas, maintaining consistency with the County's zoning districts. Within the City of St. Helena, if the Proposed Plan were to be adopted, the City's Zoning Ordinance would be revised in order to ensure consistency with the Proposed Plan. Therefore, there would be no impact related to conflicts with existing agricultural zoning.

Williamson Act Contracts

There are 171 acres of land under Williamson Act contracts in the Planning Area. Within the City of St. Helena, the Proposed Plan would designate all 55 acres of Williamson Act land as Agriculture, which is intended for primarily agriculture and winery uses with restricted single-family residential and is thus consistent with the continuation of agricultural operations on those properties. Impacts due to conflicts with Williamson Act lands within the city from implementation of the Proposed Plan would therefore be less than significant. The Proposed Plan does not include land use designations or policies for the unincorporated study areas, which are outside of the City's jurisdiction. There would be no impact from the Proposed Plan due to conflicts with Williamson Act lands in the study areas.

Mitigation Measures

None required.

Impact 3.2-3: Implementation of the Proposed Plan would involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use (*Less than Significant*)

Urban development can result in indirect impacts that exert pressure on agricultural lands to convert to non-agricultural use. Such indirect impacts can include the division of large tracts of continuous agricultural land into smaller, less agriculturally viable tracts; the presence of incompatible uses adjacent to existing agricultural operations that could lead to the restriction of chemical use and/or complaints regarding noise, dust, and odors; increases in land values and taxes that exert pressure on agricultural landowners to convert to urban uses; and loss of agricultural support infrastructure, such as processing facilities. In addition, urban growth may increasingly compete with agriculture for the use of water resources, and may conflict with operational use of area roadways.

The Proposed Plan includes measures to ensure that most of the city's agricultural land remains in agricultural use, including a proposed land use pattern that maintains carries most of the existing General Plan's agricultural land use designations forward, covering the majority of existing agricultural land uses; an ULL to prevent non-agricultural development from taking place outside of a predetermined area covering existing urban uses; and policies to support long-term agricultural operations.

Any existing farmland located in the proposed Agriculture designation or outside of the proposed ULL would be protected from conversion pressures by limitations on allowable land uses and proposed policies protecting agricultural use outside of the ULL (policies LU1.1, LU1.2, LU1.3, LU1.4, and LU5.3). While the Proposed Plan does not itself include individual projects that would convert existing farmland, existing farmland located in non-agricultural designations or within the ULL could face development pressures as new projects are proposed on or adjacent to the farmland. Additionally, the Proposed Plan would redesignate one site from Agriculture to Central Business and expand the ULL to include this site (see Change Area 1 in Figure 2.3-3).

Policies included in the Proposed Plan would reduce impacts related to indirect conversion of farmland, including Policy LU5.1, which discourages conversion of existing agricultural farmland; and policies and implementing actions to promote right-to-farm (LU5.B, PS2.4, and PS2.1); explore the potential to protect agricultural land within the ULL (LU5.C), reduce the potential for land use conflicts that could threaten agricultural uses (LU5.F), and foster a community character and local economy tied to agricultural practices (LU4.2, CD4.2, OS2.1, CC4.A, and CC4.E). Additionally, by focusing future development within the ULL, the Proposed Plan reduces the potential for sprawling development that could fragment the larger areas of contiguous agricultural land currently existing outside of the ULL, increasing the long-term viability of agricultural uses in those areas.

While the Proposed Plan does not include land use designations or policies and actions applicable to unincorporated areas and would thus not directly convert agricultural lands to non-agricultural uses, intensification of urban development and conversion of farmland within the city could indirectly increase development pressures in surrounding unincorporated areas, given their access to the city's jobs, services, and other amenities. Development in the unincorporated county is subject to the County General Plan and measures J and P, as described in the Regulatory Setting. To the extent these lands are designated Agricultural Resource and Agriculture, Watershed, and Open Space, it would require a vote of the people or Board of Supervisors to redesignate these areas for more intense development. The Proposed Plan's focus on infill development is also consistent with the County General Plan goal of concentrating development in urbanized areas in order to preserve agricultural uses elsewhere in the county. Proposed Plan land use designations adjacent to unincorporated areas is mostly agriculture, allowing for a transition from the more urbanized core of the city to primarily agricultural uses in the periphery and in the county that would reduce the potential for land use conflicts that could threaten agricultural uses. The Napa County Municipal Code's right-to-farm, disclosure, and conditions of approval standards would also ensure that land use conflicts that could lead to agricultural conversion would be kept to a minimum.

Thus, with implementation of the Proposed Plan and adherence to Napa County's existing policies and regulations, the impact would be less than significant.

Mitigation Measures

None required.

3.3 Air Quality

This section summarizes information on the air quality environment in St. Helena and provides an evaluation of the air quality-related effects of the Proposed Plan. The analysis considers existing and projected air quality along major roadways, in addition to other air pollutant sources in the Planning Area. Mitigation measures are recommended to ensure that emissions are reduced to the maximum extent feasible. This section focuses on criteria air pollutants and toxic air contaminants (TACs); greenhouse gases (GHGs) are evaluated in Section 3.6: Energy, Climate Change, and Greenhouse Gas Emissions. There were no responses to the NOP regarding topics addressed in this section of the EIR.

Environmental Setting

PHYSICAL SETTING

The City of St. Helena is located in the northern portion of Napa County, part of the nine-county San Francisco Bay Area Air Basin (SFBAAB). The SFBAAB encompasses approximately 5,600 square miles and includes all of Alameda, Contra Costa, Marin, San Francisco, San Mateo, Santa Clara, and Napa counties, and portions of southwestern Solano and southern Sonoma counties. The SFBAAB is characterized by a large, shallow basin surrounded by coastal mountain ranges tapering into sheltered inland valleys. The climate is characterized by warm dry summers and mild moist winters. The summer average maximum temperatures are in the 80s to low 90s, while winter average maximum temperatures are in the high 50s and low 60s, with minimum temperatures in the high to mid 30s.

Due to the climate and terrain of the Napa Valley, the potential for air pollution could be high if there were sufficient sources of air contaminants nearby. The summer and fall prevailing winds can transport ozone precursors northward from the San Pablo Bay and Carquinez Strait area into the Napa Valley, which effectively traps and concentrates pollutants when stable conditions are present. In addition, pollutants may be recirculated by the local upslope and downslope flows created by the surrounding mountains, contributing to buildup of air pollution within the valley. In the late fall and winter, particulate matter from motor vehicles, agriculture, and wood burning in fireplaces and stoves can build up in the valley because of the high frequency of light winds and stable atmospheric conditions.

Pollutants of Concern

Criteria Air Pollutants

Concentrations of ozone, carbon monoxide (CO), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), lead (Pb), and particulate matter (PM) are commonly used as indicators of ambient air quality conditions. These pollutants are known as "criteria pollutants" and are regulated by the U.S. Environmental Protection Agency (EPA) and the California Air Resources Board (CARB) through national and California ambient air quality standards (NAAQS and CAAQS), respectively. Ozone and NO_2 are considered regional pollutants because they (or their precursors) affect air quality on a regional scale. Pollutants such as CO, SO_2, and lead are considered local pollutants that tend to accumulate in the air locally. PM_{10} and $PM_{2.5}$ are both regional and local pollutants.

The primary criteria pollutants of concern in the Planning Area are ozone (including its precursors, nitrogen oxides [NO_X] and reactive organic gases [ROG][1]), CO, and PM. Principal characteristics surrounding these pollutants are discussed below, on the U.S. Environmental Protection Agency's (EPA) website for Criteria Air Pollutants and the CARB Glossary of Air Pollution Terms (U.S. Environmental Protection Agency, 2018). In California, sulfates, vinyl chloride, hydrogen sulfide, and visibility-reducing particles are also regulated as criteria air pollutants.

Nitrogen Dioxide. Most NO_2, like O_3, is not directly emitted into the atmosphere but is instead formed by an atmospheric chemical reaction between nitric oxide (NO) and atmospheric oxygen. NO and NO_2 are collectively referred to as NO_x and are major contributors to O_3 formation. High concentrations of NO_2 can cause breathing difficulties and result in a brownish-red cast to the atmosphere with reduced visibility. There is some indication of a relationship between NO_2 and chronic pulmonary fibrosis, and some increase in bronchitis in children (2 and 3 years old) has also been observed at concentrations below 0.3 parts per million by volume (ppm).

Reactive Organic Gases. ROGs (also known as Volatile Organic Compounds, or VOCs) are compounds made up primarily of hydrogen and carbon atoms. Internal combustion associated with motor vehicle usage is the major source of hydrocarbons. Other sources of ROG are emissions associated with the use of paints and solvents, the application of asphalt paving, and the use of household consumer products such as aerosols. Negative effects on human health are not caused directly by ROG, but rather by reactions of ROG to form secondary pollutants such as ozone.

Ozone. O_3 is a colorless gas that is formed in the atmosphere when ROGs and NO_x react in the presence of ultraviolet sunlight. O_3 is not a primary pollutant; it is a secondary pollutant formed by complex interactions of two pollutants directly emitted into the atmosphere. The primary sources of ROGs and NO_x, the precursors of O_3, are automobile exhaust and industrial sources. Meteorology and terrain play major roles in O_3 formation, and ideal conditions occur during summer and early autumn, on days with low wind speeds or stagnant air, warm temperatures, and cloudless skies. Short-term exposures (lasting for a few hours) to O_3 at levels typically observed in

[1] ROG is synonymous with volatile organic compounds (VOC), which is commonly used to describe compound limits for architectural coatings such as paint.

the SFBAAB can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes.

Carbon Monoxide. CO is a colorless and odorless gas formed by the incomplete combustion of fossil fuels. CO is emitted almost exclusively from motor vehicles, power plants, refineries, industrial boilers, ships, aircraft, and trains. Generally, automobile exhaust accounts for a majority of CO emissions. CO is a non-reactive air pollutant that dissipates relatively quickly; therefore, ambient CO concentrations generally follow the spatial and temporal distributions of vehicular traffic. CO concentrations are influenced by local meteorological conditions; primarily wind speed, topography, and atmospheric stability. CO from motor vehicle exhaust can become locally concentrated when surface-based temperature inversions are combined with calm atmospheric conditions, a typical situation at dusk in urban areas between November and February. The highest levels of CO typically occur during the colder months of the year when inversion conditions are more frequent. In terms of health, CO competes with oxygen, often replacing it in the blood, thus reducing the blood's ability to transport oxygen to vital organs. The results of excess CO exposure can be dizziness, fatigue, and impairment of central nervous system functions.

Particulate Matter. Particulate matter pollution consists of very small liquid and solid particles floating in the air, which can include smoke, soot, dust, salts, acids, and metals. Particulate matter can form when gases emitted from industries and motor vehicles undergo chemical reactions in the atmosphere. $PM_{2.5}$ and PM_{10} represent fractions of particulate matter. Fine particulate matter, or $PM_{2.5}$, is roughly 1/28 the diameter of a human hair. $PM_{2.5}$ results from fuel combustion (e.g., motor vehicles, power generation, and industrial facilities), residential fireplaces, and wood stoves. In addition, $PM_{2.5}$ can be formed in the atmosphere from gases such as sulfur oxides (SO_x), NO_x, and ROG. Inhalable or coarse particulate matter, or PM_{10}, is about 1/7 the thickness of a human hair. Major sources of PM_{10} include crushing or grinding operations; dust stirred up by vehicles traveling on roads; wood burning stoves and fireplaces; dust from construction, landfills, and agriculture; wildfires and brush/waste burning; industrial sources; windblown dust from open lands; and atmospheric chemical and photochemical reactions.

$PM_{2.5}$ and PM_{10} pose a greater health risk than larger-size particles. When inhaled, these tiny particles can penetrate the human respiratory system's natural defenses and damage the respiratory tract. $PM_{2.5}$ and PM_{10} can increase the number and severity of asthma attacks, cause or aggravate bronchitis and other lung diseases, and reduce the body's ability to fight infections. Very small particles of substances, such as lead, sulfates, and nitrates, can cause lung damage directly or be absorbed into the blood stream, causing damage elsewhere in the body. Additionally, these substances can transport absorbed gases, such as chlorides or ammonium, into the lungs, also causing injury. Whereas PM_{10} tends to collect in the upper portion of the respiratory system, $PM_{2.5}$ is so tiny that it can penetrate deeper into the lungs and damage lung tissues. Suspended particulates also damage and discolor surfaces on which they settle, as well as produce haze and reduce regional visibility.

Toxic Air Contaminants.

A substance is considered toxic if it has the potential to cause adverse health effects in humans, including increasing the risk of cancer upon exposure, or acute and/or chronic non-cancer health effects. A toxic substance released into the air is considered a toxic air contaminant (TAC). Examples include certain aromatic and chlorinated hydrocarbons, certain metals, and asbestos.

TACs are generated by a number of sources, including stationary sources such as dry cleaners, gas stations, combustion sources, and laboratories; mobile sources such as automobiles; and area sources such as landfills. Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and non-carcinogenic effects. Non-carcinogenic effects typically affect one or more target organ systems and may be experienced either on short-term (acute) or long-term (chronic) exposure to a given TAC. CARB has identified diesel engine exhaust particulate matter as the predominant TAC in California. Diesel particulate matter (DPM) is emitted into the air by diesel-powered mobile vehicles, including heavy-duty diesel trucks, construction equipment, and passenger vehicles. Certain ROGs may also be designated as TACs.

Although NAAQS and CAAQS have been established for criteria pollutants, no ambient standards exist for TACs. Many pollutants are identified as TACs because of their potential to increase the risk of developing cancer or because of their acute or chronic health risks. For TACs that are known or suspected carcinogens, CARB has consistently found no levels or thresholds below which exposure is risk-free. Individual TACs vary greatly in the risks they present. At a given level of exposure, one TAC may pose a hazard that is many times greater than another. The California Office of Environmental Health Hazard Assessment (OEHHA) identifies TACs and studies their toxicity.

Local Air Quality

Air Pollutants and Contaminants of Concern in the Bay Area

State and federal ambient air quality standards cover a wide variety of pollutants. However, only a few of these pollutants are problems in the Bay Area, either due to the strength of the emission or the climate of the region. Problem air pollutants in St. Helena and the Bay Area include O_3, PM_{10}, $PM_{2.5}$, and TACs. As shown in Table 3.3-1, the Bay Area is currently classified as a federal and state nonattainment area for ozone and $PM_{2.5}$ and a state nonattainment area for PM_{10}.

Ozone

Ozone is not a pollutant that adversely affects St. Helena, but emissions from motor vehicle use in the area may contribute to elevated ozone levels in the Napa Valley and high ozone levels in other parts of the Bay Area. Motor vehicles are the largest source of ozone precursor emissions (i.e., nitrogen oxides and reactive organic gases) in the Bay Area. The Bay Area is currently classified as a federal and state nonattainment area for ozone.

Particulate Matter

Although particulates are found naturally in the air, most particulate matter found in the Planning Area is emitted either directly or indirectly by motor vehicles, industry, construction, agricultural activities, and wind erosion of disturbed areas. Most $PM_{2.5}$ is comprised of combustion products such as smoke or formed in the atmosphere from regional emissions of nitrogen oxides. There are many sources of PM_{10} emissions, including combustion, industrial processes, grading and construction, and motor vehicles. The greatest quantity of PM_{10} emissions associated with motor vehicle uses is generated by re-suspended road dust. Wood burning in fireplaces and stoves is another significant source of particulate matter, primarily $PM_{2.5}$, in the City of St. Helena.

Toxic Air Contaminants (TACs)

TACs are another group of pollutants of concern in the Bay Area. Common sources of TACs include industrial processes, commercial operations such as gasoline stations and dry cleaners, and motor vehicle exhaust. Diesel particulate matter from exhaust has been identified as a TAC. Mobile sources, such as trucks, buses, and construction equipment are by far the largest source of diesel emissions. DPM is the most prevalent TAC in the state, due to the toxicity of DPM and the common sources that include trucks and construction equipment. There are very few stationary sources of TAC emissions in Napa County, however, due to the general land uses present in the County, DPM from on-road transportation emissions and off-road emissions from the agricultural sector is a concern within the Planning Area.

Table 3.3-1: Bay Area Air Quality Attainment Status (2017)

Pollutant	*Federal Standards Classification[1]*	*State Standards Classification[2]*
Ozone - One Hour	No federal standard[3]	Nonattainment
Ozone - Eight Hour	Nonattainment	Nonattainment
PM 10	Unclassified	Nonattainment
PM 2.5	Unclassified/Attainment	Nonattainment
Carbon Monoxide	Attainment	Attainment
Nitrogen Dioxide	Attainment	Attainment
Sulfur Dioxide	Unclassified/Attainment[4]	Attainment
Lead (Particulate)	Unclassified[5]	Attainment
Hydrogen Sulfide	No federal standard	Unclassified
Sulfates	No federal standard	Attainment
Visibility Reducing Particles	No federal standard	Unclassified
Vinyl Chloride	No federal standard	No information available

Notes:

1. See 40 CFR Part 81.
2. See CCR Title 17 Sections 60200-60210.
3. The national 1-hour ozone standard was revoked by U.S. EPA on June 15, 2005.
4. To attain this standard, the 3-year average of the 98th percentile of the daily maximum 1-hour average at each monitor within an area must not exceed 0.100ppm (effective January 22, 2010). The US Environmental Protection Agency (EPA) expects to make a designation for the Bay Area by the end of 2017.
5. ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure below which there are no adverse health effects determined.

Source: Bay Area Air Quality Management District, 2017, available at http://www.baaqmd.gov/research-and-data/air-quality-standards-and-attainment-status#eight

Air Quality Monitoring

Since 1972, the Bay Area Air Quality Management District (BAAQMD) has operated a multi-pollutant monitoring site on Jefferson Street in Napa, which allows the analysis of trends in air quality. Table 3.3-2 shows the Air Quality Monitoring Data from the Jefferson Street monitoring site, the closest monitoring site to the Planning Area, from 2013 to 2017. Air quality in and around

St. Helena is generally good due to the rural nature of the area and lack of upwind air pollution sources.

The most recent set of monitoring data from the Jefferson Street site indicates that ozone levels in Napa did not exceed federal standards in 2017 but did exceed state standards one day per year. During this same period, 1-hour ozone levels basin-wide exceeded state standards on five days per year and federal standards on two days per year. During this same period, 8-hour ozone levels basin-wide exceeded state standards on six days per year and federal standards on two to six days per year, depending on the exact standard used.

The Napa monitoring station only measured PM_{10} until 2013 when it also began monitoring $PM_{2.5}$. In 2017, the Napa station measured 13 days of levels above the $PM_{2.5}$ federal standard. From 2014 to 2016,[2] the Napa station measured 16 days above the PM_{10} federal standards and 19 days had levels above the state PM_{10} standards. In the Bay Area, $PM_{2.5}$ standards were exceeded on 13 measurement days per year (2017) and PM_{10} standards were exceeded on 19 to 22 measurement days per year (2016).

Measured levels of other criteria air pollutants such as nitrogen dioxide and carbon monoxide are well below federal and State standards in Napa County. Some pollutants, such as lead and sulfur dioxide, are not measured in or near Napa because there is no evidence that they would be at levels that would warrant concern (i.e., lack of emission sources). Current levels at the Napa monitoring station are about one-fourth of the most stringent federal and state standards. Carbon monoxide concentrations are expected to decrease further in the future as newer and cleaner vehicles replace older vehicles on the roadway.

Existing Sources of Air Pollution

Besides various small permitted sources (emergency generators and agricultural burns), there are no substantial sources of air pollution or toxic air contaminants in St. Helena. The primary source of air pollution within the City of St. Helena is vehicle traffic, particularly on State Route 29 (SR-29). BAAQMD lists stationary sources in St. Helena that include fueling stations, a dry cleaner, two auto body shops with spray painting operations, and some standby emergency and diesel generators. A review of the permit data for these sources shows that they would have very localized impacts.

[2] Data for 2017 PM_{10} levels was insufficient or not available as of August 2018.

Table 3.3-2: Jefferson Street Air Quality Data Summary (2013–2017)

	Monitoring Data by Year				
Pollutant	*2013*	*2014*	*2015*	*2016*	*2017*
Ozone, O3					
Maximum 1-hour concentration (ppm)	0.089	0.074	0.079	0.080	0.098
Maximum 8-hour concentration (ppm)	0.076	0.067	0.069	0.068	0.084
Number of days standard exceeded	0	0	0	0	0
CAAQS 1-hour (>0.09 ppm)	0	0	0	0	1
CAAQS 8-hour (>0.070 ppm)	2	0	0	0	2
NAAQS 8-hour (>0.070 ppm)	2	0	0	0	2
Fine Particulate Matter, $PM_{2.5}$					
National maximum 24-hour concentration ($\mu g/m^3$)	35.8	29.9	38.2	24.3	199.1
State maximum 24-hour concentration ($\mu g/m^3$)	35.8	29.9	38.2	24.3	199.1
National annual average concentration ($\mu g/m^3$)	11.7	11.9	10.6	8.5	13.7
State annual average concentration ($\mu g/m^3$)	11.7	11.9	10.6	8.4	13.1
Measured number of days standard exceeded	1.1	0	1.0	0	13.3
Suspended Particulate Matter, PM_{10}					
National maximum 24-hour concentration ($\mu g/m^3$)	37.6	37.7	51.5	32.2	No Data
State maximum 24-hour concentration ($\mu g/m^3$)	39.6	39.3	50.0	33.0	No Data
National annual average concentration ($\mu g/m^3$)	18.2	15.4	17.5	13.2	No Data
State annual average concentration ($\mu g/m^3$)	18.7	15.8	18.7	No Data	No Data
Measured number of days standard exceeded	0	0	0	No Data	No Data

Notes:

1. All data were measured at the Napa-Jefferson Avenue station.
2. ppm = parts per million; and $\mu g/m^3$ = micrograms per cubic meter.

Sources: CARB, Air Quality Summary, https://www.arb.ca.gov/adam/select8/sc8start.php; Dyett & Bhatia, 2018

Odors

Although offensive odors rarely cause any physical harm, they can be very unpleasant, leading to considerable stress among the public and often generating citizen complaints to local governments and the air district. Common sources of odors within St. Helena come from farming operations, wine production (crushing and fermenting grapes), restaurants, auto body shops, and the waste treatment facility in the southeast portion of the city.

Sensitive Populations and Receptors

Populations most likely to be affected by air pollution, as identified by CARB, include children, the elderly, athletes, and people with cardiovascular and chronic respiratory diseases. Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. Sensitive receptors include residences, schools, playgrounds, child care centers, athletic facilities, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes. Thus, there are numerous sensitive receptors in the Planning Area.

REGULATORY SETTING

Federal Air Quality Standards

Federal Clean Air Act

The Federal Clean Air Act governs air quality in the United States. In addition to being subject to federal requirements, air quality in California is also governed by more stringent regulations under the California Clean Air Act (CAA). At the federal level, the U.S. EPA administers the CAA.

Under the CAA, the U.S. EPA has established concentration-based NAAQS for criteria air pollutants (see Table 3.3-3) and has identified hazardous air pollutants, for which emissions standards are developed. The NAAQS are periodically reviewed as new health information is made available.

State Air Quality Standards

California Clean Air Act

The California Clean Air Act (CCAA) is administered by CARB at the state level and by the Air Quality Management Districts at the regional and local levels. BAAQMD regulates air quality at the regional level for the nine-county Bay Area, including the City of St. Helena and Napa County.

CAAQS are established by CARB for criteria air pollutants and also address some industry-specific pollutants that are not found to be an issue in the Napa Valley (see Table 3.3-3). The CAAQS are established based on health effects and are also periodically reviewed and updated, if necessary, as new information is made available. CARB also identifies TACs, which are similar to hazardous air pollutants identified by the U.S. EPA.

Table 3.3-3: Ambient Air Quality Standards

Pollutant	*Averaging Time*	*California Standards*[1]		*Federal Standards*[2]		
		Concentration[3]	*Method*[4]	*Primary*[3,5]	*Secondary*[3,6]	*Method*[7]
Ozone[8] (O_3)	1-Hour	0.09 ppm (180 µg/m³)	Ultraviolet Photometry	–	Same as Primary Standard	Ultraviolet Photometry

Vinyl Chloride[12]	24-Hour	0.01 ppm (26 µg/m^3)	Gas Chromatography			

Notes:

ppm= parts per million by volume µg/m^3 = micrograms per cubic meter mg/m^3= milligrams per cubic meter

1. California standards for O_3, carbon monoxide (except 8-hour Lake Tahoe), SO_2 (1- and 24-hour), NO_2, and suspended particulate matter (PM_{10}, $PM_{2.5}$, and visibility-reducing particles) are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.
2. National standards (other than O_3, particulate matter, and those based on annual averages or annual arithmetic mean) are not to be exceeded more than once per year. The O_3 standard is attained when the fourth-highest 8-hour concentration measured at each site in a year, averaged over 3 years, is equal to or less than the standard. For PM_{10}, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m^3 is equal to or less than 1. For $PM_{2.5}$, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over 3 years, are equal to or less than the standard. Contact the USEPA for further clarification and current federal policies.
3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr.

Table 3.3-3: Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards[1]		Federal Standards[2]		
		Concentration[3]	Method[4]	Primary[3,5]	Secondary[3,6]	Method[7]

Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

4. Any equivalent procedure which can be shown to the satisfaction of CARB to give equivalent results at or near the level of the air quality standard may be used.
5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.
6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.
7. Reference method as described by the USEPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the USEPA.
8. On October 1, 2015, the national 8-hour O_3 primary and secondary standards were lowered from 0.075 ppm to 0.070 ppm.
9. On December 14, 2012, the national annual $PM_{2.5}$ primary standard was lowered from 15 $\mu g/m^3$ to 12.0 $\mu g/m^3$. The existing national 24-hour $PM_{2.5}$ standards (primary and secondary) were retained at 35 $\mu g/m^3$, as was the annual secondary standard of 15 $\mu g/m^3$. The existing 24-hour PM_{10} standards (primary and secondary) of 150 $\mu g/m^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.
10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national standards are in units of ppb. California standards are in units of ppm. To directly compare the national standards to the California standards, the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.
11. On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until 1 year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

    Note that the 1-hour national standard is in units of ppb. California standards are in units of ppm. To directly compare the 1-hour national standards to the California standard, the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm
12. CARB has identified Pb and vinyl chloride as "toxic air contaminants" with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.
13. The national standard for Pb was revised on October 15, 2008, to a rolling 3-month average. The 1978 Pb standard (1.5 $\mu g/m^3$ as a quarterly average) remains in effect until 1 year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.
14. In 1989, CARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

CARB Air Quality and Land Use Handbook: A Community Health Perspective

In 2005, CARB released the final version of the Air Quality and Land Use Handbook, which is intended to encourage local land use agencies to consider the risks from air pollution before making decisions that approve the siting of new sensitive receptors, such as homes or day care centers, near sources of air pollution. Unlike industrial or stationary sources of air pollution, siting of new sensitive receptors does not require air quality permits but could result in adverse air quality issues. The primary purpose of the handbook is to highlight the potential health impacts associated with close proximity to common air pollution sources and to have those issues considered in the planning process. CARB makes recommendations regarding the distance of new sensitive land uses near freeways, distribution centers, rail yards, ports, refineries, chrome plating facilities, dry cleaners, and gasoline dispensing stations.

CARB acknowledges that land use agencies have to balance other siting considerations, such as housing and transportation needs, economic development priorities, and other quality-of-life issues. In addition, siting some sensitive receptors, such as residences, near transportation facilities, employment centers, and services would reduce overall emissions from a community.

These "advisory" siting recommendations (or buffer distances), summarized in Table 3.3-4, are based primarily on modeling information and may not be entirely reflective of conditions in the Planning Area. The siting of new sensitive land uses within the identified buffer distances may be possible, but only after site-specific studies are conducted to identify the potential health risks.

Table 3.3-4: CARB Recommendations on Siting New Sensitive Uses Land Uses

Source Category[1]	*Advisory Recommendations*
Freeways and High-Traffic Roads	Avoid siting new sensitive land uses within 500 feet of a freeway, urban roads with 100,000 vehicles/day, or rural roads with 50,000 vehicles/day.
Distribution Centers	Avoid siting new sensitive land uses within 1,000 feet of a distribution center (that accommodates more than 100 trucks per day, more than 40 trucks with operating transport refrigeration units (TRUs) per day, or where TRU unit operations exceed 300 hours per week). Take into account the configuration of existing distribution centers and avoid locating residences and other new sensitive land uses near entry and exit points.
Dry Cleaners Using Perchloroethylene	Avoid siting new sensitive land uses within 300 feet of any dry cleaning operation. For operations with two or more machines, provide 500 feet. For operations with 3 or more machines, consult with the local air district. Do not site new sensitive land uses in the same building with perc dry cleaning operations.

Table 3.3-4: CARB Recommendations on Siting New Sensitive Uses Land Uses

Source Category[1]	*Advisory Recommendations*
Gasoline Dispensing Facilities	Avoid siting new sensitive land uses within 300 feet of a large gas station (defined as a facility with a throughput of 3.6 million gallons per year or greater). A 50-foot separation is recommended for typical gas dispensing facilities.

Notes:
1. Additional Source Categories can be found on Table 1-1 of the Handbook.

CARB Revised Proposed 2016 State Strategy for the State Implementation Plan

On March 7, 2017, CARB released the Revised Proposed 2016 State Strategy for the State Implementation Plan (SIP), describing the proposed commitment to achieve the reductions necessary from mobile sources, fuels, and consumer products to meet federal ozone and $PM_{2.5}$ standards over the next 15 years. The State SIP Strategy proposes a suite of regulatory and incentive programs, referred to as State SIP measures, which, in combination with local actions, are designed to achieve the required emission reductions to meet federal air quality standards. The Revised Proposed 2016 State Strategy for the SIP was certified by CARB on March 23, 2017.

CalEPA / CARB Technical Advisory

The California Environmental Protection Agency (CalEPA) and CARB released a Technical Advisory titled, "Strategies to Reduce Air Pollution – Exposure Near High-Volume Roadways" in April 2017. The advisory is a technical supplement to CARB's Air Quality and Land Use Handbook: A Community Health Perspective. The Technical Advisory provides planners and other stakeholders involved in land use planning and decision-making with information on scientifically-based strategies to reduce exposure to traffic emissions near high-volume roadways in order to protect public health and promote equity and environmental justice. The Technical Advisory is intended to provide "guidance" for planners weighing options for reducing exposure to traffic emissions and is not intended as guidance for any specific project, nor does it create any presumption regarding the feasibility of mitigation measures for the purposes of compliance with CEQA.

The Technical Advisory identifies strategies to reduce air pollution exposure near high-volume roadways, such as: speed reduction mechanisms; traffic signal management; speed limit reductions on high-speed roadways (>55 mph); design that promotes air flow and pollutant dispersion along street corridors; solid barriers, such as sound walls; vegetation for pollutant dispersion; and indoor high efficiency filtration.

CARB's Mobile Source Strategy 15 contains a suite of measures that are being considered to simultaneously meet air quality standards, achieve GHG emission reduction targets, reduce petroleum consumption, and decrease health risk from transportation emissions over the next 15 years. Statewide, the Mobile Source Strategy would result in a 45 percent reduction in greenhouse gas emissions and a 50 percent reduction in the consumption of petroleum-based fuels.

Assembly Bill 2588

The Air Toxics "Hot Spots" Information and Assessment Act, or Assembly Bill 2588 (AB 2588), was enacted in 1987 and requires stationary sources to report the types and quantities of certain substances routinely released into the air. The goals of the Air Toxics "Hot Spots" Act are to collect emission data, to identify facilities having localized impacts, to ascertain health risks, to notify nearby residents of significant risks, and to reduce those significant risks to acceptable levels.

Building Energy Efficiency Standards (Title 24) and CALGreen

California's Energy Efficiency Standards for Residential and Nonresidential Buildings (Title 24 California Code of Regulations [CCR], Part 6) were first established in 1978 in response to a legislative mandate to reduce California's energy consumption.

In 2007, Governor Schwarzenegger directed the California Building Standards Commission (CBSC) to work with State agencies on the adoption of green building standards for residential, commercial, and public building construction for the 2010 code adoption process. A voluntary version of the California Green Building Standards Code, referred to as CalGreen, was added to Title 24 as Part 11 in 2009. The 2010 version of CalGreen took effect January 1, 2011, and instituted mandatory minimum environmental performance standards for all ground-up new construction of commercial and low-rise residential buildings, state-owned buildings, schools, and hospitals.

The most recent CalGreen code was adopted in 2016 and became effective in 2017. CalGreen contains voluntary Tier 1 and Tier 2 levels, which are designed to exceed energy efficiency and other standards by 15 percent or 30 percent, respectively.

The 2016 edition of CalGreen has been amended and adopted as Chapter 15.53 of the St. Helena Municipal Code. Notably, CalGreen sets VOC content limits for architectural coatings, sealants, adhesives, and formaldehyde for residential and non-residential buildings and construction projects.

The California Building Code (CBC) has been amended and adopted as Title 15 of the St. Helena Municipal Code, which regulates all building and construction projects within the city.

Local Regulations

Bay Area Air Quality Management District

Air quality districts have local responsibility in overseeing stationary-source emissions, approving permits, maintaining emissions inventories, maintaining air quality stations, overseeing agricultural burning permits, and reviewing air quality-related sections of environmental documents required by CEQA. The air quality districts are also responsible for establishing and enforcing local air quality rules and regulations that address the requirements of federal and State air quality laws and for ensuring that NAAQS and CAAQS are met.

The air quality study area falls under the jurisdiction of BAAQMD. Under the CCAA, BAAQMD is required to develop an air quality plan for nonattainment criteria pollutants in the air district. The Bay Area 2017 Clean Air Plan, adopted by BAAQMD on April 19, 2017, provides an integrated control strategy to reduce ozone, PM, TACs, and greenhouse gas (GHG) emissions in a manner

that is consistent with federal and State air quality programs and regulations. BAAQMD also adopted a redesignation plan for CO in 1994. The redesignation plan includes strategies to ensure the continuing attainment of NAAQS for CO in Air Basin.

Future development under the Proposed Plan may be subject to one or more of the following district rules, depending on the specific components of the individual project. These rules have been adopted by BAAQMD to reduce emissions throughout the area.

- **Regulation 2, Rule 2 (New Source Review).** This regulation contains requirements for Best Available Control Technology and emission offsets.
- **Regulation 2, Rule 5 (New Source Review of Toxic Air Contaminants).** This regulation outlines guidance for evaluating TAC emissions and their potential health risks.
- **Regulation 6, Rule 1 (Particulate Matter).** This regulation restricts emissions of PM darker than No. 1 on the Ringlemann Chart to less than 3 minutes in any 1 hour.
- **Regulation 6, Rule 3 (Wood Burning Devices).** This regulation restricts wood burning devices in all new development constructed after November 1, 2016.
- **Regulation 7 (Odorous Substances).** This regulation establishes general odor limitations on odorous substances and specific emission limitations on certain odorous compounds.
- **Regulation 8 (Organic Compounds).** This regulation limits the quantity of organic compounds (e.g., ROG) from various applications and process, including in architectural coatings and commercial cooking equipment and at gasoline dispensing facilities. The regulation outlines 53 rules based on the source type.
- **Regulation 9 (Inorganic Gaseous Pollutants).** This regulation limits emissions of inorganic gaseous pollutants (e.g., NO_X) generated by various sources, including natural gas-fired boilers and stationary internal combustion engines. The regulation outlines 14 rules based on the source type.
- **Regulation 11, Rule 2 (Asbestos Demolition, Renovation and Manufacturing).** This rule controls emissions of asbestos to the atmosphere during demolition, renovation, milling and manufacturing and establishes appropriate waste disposal procedures.

Additionally, BAAQMD's CEQA Guidelines document provides guidance to assist lead agencies in determining the level of significance of project-related emissions, and contain thresholds of significance for ozone, CO, PM_{10}, $PM_{2.5}$, TACs, and odors. More information these significance thresholds can be found in the "Methodology and Assumptions" subsection below.

Impact Analysis

SIGNIFICANCE CRITERIA

For the purposes of this EIR, a significant adverse impact would occur if implementation of the Proposed Plan would:

Criterion 1: Conflict with or obstruct implementation of the applicable air quality plan;

Criterion 2: **Violate any air quality standard or contribute substantially to an existing or projected air quality violation;**

Criterion 3: **Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors);**

Criterion 4: **Expose sensitive receptors to substantial pollutant concentrations; or**

Criterion 5: **Create objectionable odors affecting a substantial number of people.**

METHODOLOGY AND ASSUMPTIONS

Air Quality Modeling

This analysis focuses on the nature and magnitude of the change in the air quality environment due to implementation of the Proposed Plan. Air quality impacts are regional, and thus cumulative, in nature, as no single project anticipated under the Proposed Plan would by itself generate enough emissions to cause the SFBAAB to be designated a nonattainment area but could contribute to overall emissions in the basin. Air pollutant emissions associated with the Proposed Plan would result from operation of future land uses that would be developed in the City of St. Helena and from traffic volumes generated by these new developments. These emissions would not occur at once but over the course of the Proposed Plan's buildout period. Construction activities would also generate air pollutant emissions within the City of St. Helena and on roadways resulting from construction-related traffic.

For this analysis, impacts of the Proposed Plan's criteria pollutant emissions on air quality from construction were assessed qualitatively, while emissions from the Proposed Plan's operations were assessed quantitatively using standard and accepted software tools, techniques, and emission factors. The primary assumptions and key methods used to quantify emissions and estimate potential impacts are described below. Model inputs and calculation files are provided in Appendix E.

The impact analysis below provides a program-level overview of construction and operational emissions that could occur with buildout of the Proposed Plan. The Planning Area for the Proposed Plan includes three study areas in unincorporated Napa County immediately adjacent to the city limits where the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities (see Chapter 2: Project Description for additional details). Existing conditions related to air quality in the whole of the Planning Area are documented above; however, as the City does not have jurisdiction outside of the city limits and sphere of influence (SOI), and the Proposed Plan does not encourage any new development within the study areas, air pollutant emissions are shown for the City of St. Helena and the study areas separately. Any growth in the study areas between 2018 and 2040 buildout is the result of continued growth within unincorporated Napa County and not directly as the result of change areas or land use designation modifications identified within the Proposed Plan. Implementation of the Proposed Plan would not result in direct impacts related to air quality in the study areas, but could

result in indirect impacts as air pollution is, by nature, a cumulative impact and increased emissions from the Proposed Plan could affect air quality in surrounding areas. Similarly, while Proposed Plan policies and actions would not apply in the study areas, a decrease in air pollution in the City of St. Helena could have positive impacts on air quality throughout the Planning Area.

Construction Emissions

Land uses that could be developed under the Proposed Plan would generate construction-related emissions from mobile and stationary construction equipment exhaust, employee and haul truck vehicle exhaust, dust from land clearing, and application of architectural coatings. However, the specific size, location, and construction techniques and scheduling that would be utilized for each individual development project occurring within the City of St. Helena from implementation of the Proposed Plan is not currently known. With an anticipated buildout year of 2040, development of the various land uses associated with the Proposed Plan would occur over an extended period of time and would depend on factors such as local economic conditions, market demand, and other financing considerations. As such, without specific project-level details it is not possible to develop a refined construction inventory.[3] Consequently, the determination of construction air quality impacts for each individual development project, or a combination of these projects, would require the City to speculate regarding such potential future project-level environmental impacts. Thus, in the absence of the necessary construction information required to provide an informative and meaningful analysis, the evaluation of potential construction-related impacts resulting from implementation of the Proposed Plan is conducted qualitatively in this EIR. The analysis discusses the potential for future individual developments in the City of St. Helena to generate construction emissions that exceed BAAQMD's project-level thresholds and, where necessary, mitigation measures that are available to reduce those emissions.

Operational Emissions

Long-term (i.e., operational) regional emissions of criteria air pollutants and precursors, including mobile- and area-source emissions, were quantified for the Proposed Plan using the California Emissions Estimator Model (CalEEMod), version 2016.3.2. Mass mobile-source emissions were modeled based on the daily vehicle trips and vehicle miles traveled (VMT) data provided by Fehr & Peers, the Proposed Plan's traffic engineers, for the existing (2018) and Proposed Plan buildout year (2040) conditions.

Area and energy (natural gas) emissions were modeled according to the amount (i.e., commercial/industrial square footage or number of dwelling units) and type of land uses proposed. Area sources account for direct sources of air emissions, and includes those generated from hearth (e.g., natural gas fireplaces) usage, consumer product use, landscape maintenance equipment, and architectural coatings used for the repainting of buildings. Energy sources account for emissions associated with the combustion of natural gas for building heating and hot water. Emissions were quantified for existing (2018) and Proposed Plan buildout (2040) conditions based on current and anticipated land uses. CalEEMod defaults were assumed, with the exception of wood burning stoves and fireplaces, which were assumed to be prohibited for all new development under the

[3] Project-level information includes details such as the size and scale of the project to be constructed, construction schedule, equipment fleet, construction worker crew estimates, and demolition and grading quantities.

Proposed Plan per BAAQMD Regulation 6, Rule 3. Land use assumptions and CalEEMod output files are in Appendix E.

To evaluate the Proposed Plan's potential operational air quality impacts, the increase in criteria pollutant emissions resulting from its implementation in the City of St. Helena over existing conditions is assessed against BAAQMD's project-level thresholds (see "Establishing Thresholds" section below for more information).

Establishing Thresholds

Supplemental Criteria Pollutant Guidance

BAAQMD has provided guidance to assist lead agencies in determining the significance of criteria pollutant emissions. This analysis evaluates the impacts of the Proposed Plan using a two-tiered approach that considers both project- and plan-level guidance recommended by BAAQMD in their CEQA Guidelines (2017).

First, this analysis considers whether the Proposed Plan would conflict with the most recent air quality plan (2017 Clean Air Plan), consistent with BAAQMD Guidance (2017). The analysis evaluates whether the Proposed Plan supports the primary goals of the 2017 Clean Air Plan, include applicable control measures, and whether it would disrupt or hinder implementation of any 2017 Clean Air Plan control measure.

Second, criteria pollutant emissions, calculated using the methodology described above, are compared to BAAQMD's project-level thresholds. The ROG, NO_X, and PM thresholds are based on emissions levels identified under the New Source Review (NSR) program. The NSR program is a permitting program that was established by Congress as part of the CAA Amendments to ensure that air quality is not significantly degraded by new sources of emissions. The NSR program requires stationary sources receive permits before starting construction or use of the equipment. By permitting large stationary sources, the NSR program assures that new emissions would not slow regional progress toward attaining NAAQS. BAAQMD has concluded that the stationary pollutants described under the NSR program are equally significant to those pollutants generated with land use projects. BAAQMD's thresholds identified in Table 3.3-5 were set as the total emission thresholds associated within the NSR program to help attain NAAQS.

According to BAAQMD, projects with emissions in excess of the thresholds shown in Table 3.3-5 would be expected to have a significant impact on air quality because an exceedance of the thresholds is anticipated to contribute to CAAQS and NAAQS violations, and should be mitigated where feasible.

Table 3.3-5. Project-Level Emission Thresholds

Analysis	*BAAQMD*
Regional Criteria Pollutants (Construction)	ROG: 54 lbs/day NO_X: 54 lbs/day PM10: 82 lbs/day (exhaust only) PM2.5: 54 lbs/day (exhaust only)
Regional Criteria Pollutants (Operations)	ROG: Same as construction NO_X: Same as construction PM10: 82 lbs/day PM2.5: 54 lbs/day

Notes:
ROG = reactive organic gases
Lbs = pounds
NO_X = nitrogen oxide
PM10 = particulate matter that is 10 microns in diameter and smaller
PM2.5 = particulate matter that is 2.5 microns in diameter and smaller

Source: Bay Area Air Quality Management District, 2017

It should be noted that the BAAQMD's project-level thresholds were developed to analyze emissions generated by a single project, and thus do not lend well to an evaluation of emissions from a land use plan being evaluated at a programmatic level. Large-scale land use plans, including general plans, that consist of numerous individual projects will, by their nature, produce more criteria pollutants than single projects, even if the plans include efficiency measures to reduce future emissions. Use of the project-level thresholds to evaluate land use plans may therefore unfairly penalize the plans, yielding a significant and unavoidable conclusion simply due to scale. However, because a comparison to the project-level thresholds is informative to the analysis of the Proposed Plan's impacts on air quality, this analysis accounts for both project-level thresholds and overall consistency with the 2017 Clean Air Plan.

Although BAAQMD's CEQA Guidelines are intended to help lead agencies navigate through the CEQA process, BAAQMD indicates that the guidelines for implementation of its significance thresholds are advisory only and should be followed by local governments at their own discretion. Nonetheless, BAAQMD's proposed thresholds are supported by substantial evidence and are well-grounded in air quality regulations, scientific evidence, and scientific reasoning concerning air quality and GHG emissions. BAAQMD's 2010 Justification Report, found in Appendix D of BAAQMD's May 2017 CEQA Guidelines, explains the agency's reasoning and provides substantial evidence for developing and adopting their thresholds.

Supplemental Health Risk Guidance

As discussed in the Environmental Setting section above, all criteria pollutants are associated with some form of health risk (e.g., asthma, asphyxiation). Negative health effects associated with criteria pollutant emissions are highly dependent on a multitude of interconnected variables (e.g., cumulative concentrations, local meteorology and atmospheric conditions, the number and character of exposed individuals [e.g., age, gender]). Moreover, ozone precursors (ROG and NO_X) affect air quality on a regional scale. Health effects related to ozone, therefore, are the product of emissions generated by numerous sources throughout a region. Existing models have limited sensitivity to small changes in criteria pollutant concentrations, and as such, translating project-generated criteria pollutants to specific health effects would produce meaningless results. In other words, minor increases in regional air pollution from project-generated ROG and NO_X would have nominal or negligible impacts on human health.

Because localized pollutants generated by a project that could result from implementation of the Proposed Plan can directly affect adjacent sensitive receptors, the analysis of impacts on human health focuses only on those localized pollutants with the greatest potential to result in a significant, material impact on human health. This analysis is consistent with the current state-of-practice and published guidance by BAAQMD (2017), California Air Pollution Control Officers Association (CAPCOA) (2009), Office of Environmental Health Hazard Assessment (OEHHA) (2015), and CARB (2000). The pollutants of concern include (1) TACs and (2) localized CO. BAAQMD guidance and thresholds for each pollutant are identified below. A discussion of potential health effects from regional criteria pollutants is included under Impact 3.3-4 for informational purposes.

Toxic Air Contaminants

Potential health risks from development supported by the Proposed Plan are assessed based on BAAQMD's plan-level guidance. BAAQMD (2017) requires that overlay zones be established around all existing and planned sources of TACs, including stationary sources, high-traffic roadways, and railways. The overlay zones must identify goals, policies, and objectives to minimize potential TAC impacts to existing and future receptors.

BAAQMD has established project-level thresholds for cancer and non-cancer health hazards from TACs.[4] The health risk thresholds defined by BAAQMD are the probability of contracting cancer for the maximally exposed individual (MEI) exceeding 10.0 in 1 million, or the ground-level concentrations of non-carcinogenic TACs resulting in a hazard index (HI) greater than 1.0 for the MEI. BAAQMD has also adopted an incremental concentration-based significance threshold to evaluate receptor exposure to $PM_{2.5}$ exhaust, where a "substantial" contribution is defined as $PM_{2.5}$ exhaust (diesel and gasoline) concentrations exceeding 0.3 $\mu g/m^3$.

[4] DPM is the primary TAC of concern for mobile sources; of all controlled TACs, emissions of DPM are estimated to be responsible for approximately 70 percent of the total ambient TAC risk (California Air Resources Board 2000). Given the risks associated with DPM, tools and factors for evaluating human health impacts from project-generated DPM have been developed and are readily available. Conversely, tools and techniques for assessing project-specific health outcomes as a result of exposure to other TACs (e.g., benzene) remain limited. These limitations impede the ability to evaluate and precisely quantify potential public health risks posed by TAC exposure.

With respect to asbestos, which is a TAC, there are no quantitative thresholds related to receptor exposure. However, BAAQMD requires the demolition or renovation of asbestos containing building materials to comply with the limitations of the National Emissions Standards for Hazardous Air Pollutants (NESHAP) regulations as listed in the Code of Federal Regulations.

Localized Carbon Monoxide

BAAQMD considers localized CO emissions to result in significant impacts if concentrations exceed CAAQS (Table 3.3-4). The air district has adopted screening criteria that provide a conservative indication of whether project-generated traffic will cause a potential CO hot spot. BAAQMD (2017) indicates that if the screening criteria are not met, a quantitative analysis through site-specific dispersion modeling of project-related CO concentrations would not be necessary and the project would not cause localized exceedances of CO CAAQS.

Screening criteria adopted by BAAQMD include quantitative criteria based on the number of additional vehicles added to affected intersections. These quantitative metrics were established based on local modeling and provide a conservative estimate for the maximum number of vehicles that can be added to an intersection without an exceedance of the CO CAAQS. BAAQMD CO screening criteria are summarized below.

1. The project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour.

2. The project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, bridge underpass, natural or urban street canyon, below-grade roadway).

3. The project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, regional transportation plan, and local congestion management agency plans.

Supplemental Odor Guidance

BAAQMD (2017) and CARB (2005) have identified several types of land uses as being commonly associated with odors, such as landfills, wastewater treatment facilities, and animal processing centers. BAAQMD's CEQA Guidelines recommend that plan-level analyses identify the location of existing and planned odor sources and include policies to reduce potential odors impacts.

RELEVANT POLICIES AND IMPLEMENTING ACTIONS

The following relevant policies and implementing actions of the Proposed Plan address air quality and mitigate air quality impacts on the City of St. Helena.

Land Use and Growth Management Element

- ***LU1.2*** Allow urban development to occur only within the Urban Limit Line. Consider an exception for on-site employee housing on Agricultural lands. Urban services, such as sewer, water, and storm drainage, will only be extended to development within the Urban Limit Line.

- ***LU2.5*** Encourage the development of higher density housing in areas near the center of the city and close to recreation and services, such as transit, retail, and public facilities.
- ***LU2.6*** Allow residential density at the higher end of the permitted range for single family development within Medium and High Density Residential Land Use designations as long as the development character of the single family area is maintained, including lot widths, orientation to street, building heights, onsite parking, traffic, and noise, among other considerations.
- ***LU2.7*** Ensure safe, walkable and bikeable residential neighborhoods and vibrant, livable streets.
- ***LU2.8*** Ensure walkable and accessible neighborhoods through mixed-use development.
- ***LU3.2*** Enhance the pedestrian-oriented character of commercial areas and provide for convenient pedestrian and bicycle connections to encourage walking and reduce vehicle trips within the commercial area.
- ***LU3.3*** Support the redevelopment of auto-oriented commercial areas into pedestrian-friendly commercial uses.
- ***LU3.7*** Provide sufficient auto and bicycle parking in order to serve local businesses in the commercial districts. Ensure that all parking areas are well-designed, and that auto parking spaces are hidden from pedestrian view, whenever possible.
- ***LU3.10*** Encourage office development in Mixed-Use, Service Commercial and Central Business districts to complement the pedestrian orientation of surrounding development.
- ***LU3.A*** Identify sites in the Central Business and Service Commercial districts for mixed-use development that are close to services and facilitate walking, bicycling, and transit use.
- ***LU4.1*** Support and maintain a transitional zone around industrial areas to protect the health and safety of residential neighborhoods.
- ***LU4.C*** Evaluate the compatibility of the Industrial Area and existing heavy equipment use between Highway 29 and Crane Avenue and determine if re-zoning or other action is necessary to ensure safety and liability, hazard, and noise reduction in surrounding neighborhoods, schools, and parks.
- ***LU5.F*** Where proposed residential, commercial, or industrial development abuts lands devoted to agricultural use, require the non-agricultural uses to incorporate buffer areas to mitigate potential land use conflicts as a condition of approval for subdivisions or use permits. The type and width of buffer areas shall be determined by the City based on the character, intensity, and sensitivity of the abutting land uses.
- ***LU5.H*** Prepare and adopt guidelines and regulations to assist in the determination of the appropriate type and scope of agricultural buffer areas needed in circumstances that warrant the creation of such buffer areas.
- ***LU6.C*** Explore the feasibility and desirability of moving public facilities to the Adams Street property.

Economic Sustainability Element

- ***ES2.6*** Expand lodging in the downtown area to encourage walking, biking, and alternative transportation modes in order to reduce the need for automobile trips.

  (Also see the Circulation Element, Topic Area 4 for policies and implementing actions related to non-motorized transportation).

Public Facilities and Services Element

- ***PF1.1*** Require that the approval of new development be contingent upon the ability of the City to provide water without exceeding the safe annual yield of its water supply system.
- ***PF1.2*** Adopt and implement equitable water conservation measures for both residential and non-residential users so that the City can supply water within the safe yield of its water system.
- ***PF1.4*** Proactively reduce the City's commitment to provide water to uses outside the city limits.
- ***PF1.5*** Continue to implement and update as necessary the City's Water Management Plan Ordinance and the City's Ordinance containing the Water Use Efficiency Guidelines, along with other existing water conservation ordinances and measures.
- ***PF1.6*** Aggressively promote adoption of "best practices" for reducing water usage in the existing housing stock through the City existing Ordinances and Water Conservation Plans.
- ***PF1.H*** Ensure that water rates are designed to promote conservation, as well as to ensure that needed capital improvements are made in a timely manner.
- ***PF4.1*** Increase recycling and composting as part of a coordinated waste reduction and management program.
- ***PF4.A*** Develop and adopt a Waste Management Master Plan to enhance existing waste management services and systems. Assess the system's capacity to serve current and future residents, recommend improvements and identify funding mechanisms and implementation partners. The plan should include landfill space plans and a food waste composting program that incorporates approaches for on-site food waste composting for residences and businesses. Update the plan regularly to address changing needs and priorities.
- ***PF5.3*** Ensure that children have access to safe routes to school, especially by bicycle and walking.
- ***PF5.B*** Partner with the Napa County Office of Education, the Napa Valley Transportation Authority, the St. Helena Unified School District, and private schools in St. Helena to develop and implement local safe routes to school strategies to improve walking and bicycling access to schools and after-school programs; promote bicycling and walking to benefit students' health; decrease automobile traffic near schools; and support local efforts to improve the environment. Align safe routes to school strategies with the City's bicycle and pedestrian trail systems.

Circulation Element

- ***CR1.1*** Promote a connected street, bicycle and pedestrian network within the City to provide better internal automobile, bicycle and pedestrian connections for residents.
- ***CR1.5*** Avoid mitigation measures that negatively impact the walking and bicycling environment and encourage driving.
- ***CR1.6*** Continue to support NVTA in the provision of convenient transit, including regional and local service. Support more frequent and reliable transit service between communities to reduce the number of people traveling to or from St. Helena to work by private vehicle. Promote and encourage use of the St. Helena Vine Shuttle.
- ***CR1.7*** Explore the use of the rail corridor to reduce traffic, including working with new owners of the Wine Train to consider the possibility of developing hospitality and other tourist oriented uses that are primarily accessed by passengers riding on the Wine Train Corridor.
- ***CR1.8*** Reduce transportation-based GHG emissions from City-controlled sources by employing the following strategies:
  - Complete the City's bicycle and pedestrian network, which will increase transportation choices in the City and reduce the demand for vehicle travel;
  - Maximize the overall efficiency of the transportation system, including managing the transportation network through a citywide transportation system management program;
  - Implement "smart growth" and sustainable planning principles as defined in the Land Use Element;
  - Encourage jobs/housing match, as defined in the Housing Element; and
  - Encourage/provide incentives for employee car pools.
- ***CR1.9*** Promote a walking and bicycling environment that is comfortable and convenient. Ensure that all St. Helena streets have no more than a single through-automobile lane in each direction, plus a single left-hand turning lane where appropriate, even if this requirement increases vehicle travel times. Allow exceptions if an extra lane would reduce the possibility of collisions.
- ***CR2.1*** Create a comprehensive bicycle and pedestrian network that enhances neighborhood connectivity. Develop the system as shown in Figure 5.3 to expand and improve the pedestrian and bikeway system.
- ***CR2.2*** Promote walking and bicycling as safe and convenient modes of transportation.
- ***CR2.3*** Ensure secure, accessible and convenient bicycle parking facilities throughout St. Helena, including downtown, commercial areas, schools, and parks.
- ***CR2.4*** Preserve and enhance pedestrian connectivity and safety throughout St. Helena.
- ***CR2.5*** Improve the pedestrian experience through streetscape enhancements, focusing improvements where there is the greatest need, and by orienting development toward the street.

- ***CR2.6*** Encourage walking and bicycling trips to St. Helena schools.
- ***CR3.1*** Provide incentives and encourage existing major employers to develop and implement transportation demand management (TDM) programs to increase the number of people who bike, walk, and take transit to work and reduce peak-period trip generation. Strategies include the following:
  - Transit subsidies or reimbursement to residents and employees (often referred to as "commuter check" or "EcoPass");
  - Car-share, car-pooling and neighborhood electric vehicle programs, to reduce the need to have a car or second car;
  - Integrated bicycle parking and support facilities, primarily to reduce trips within the city;
  - Modified parking codes to manage the supply of parking that generates frequent turn-over and serves multiple users; and
  - Marketing and information programs to encourage alternative transportation modes.
- ***CR3.2*** Support the implementation of NVTA goals to reduce/restrain growth of automobile vehicle miles traveled (VMT).
- ***CR3.3*** Shift travel from single-occupancy vehicles to other modes so that by 2040, 45 percent of work trips by St. Helena residents and workers are by carpool, transit, walking or bicycling (see Table 5.5 at the end of this section for 2040 commute mode split targets).
- ***CR3.4*** Work with the wine and hospitality industries to manage congestion and create and promote car-free tourism services.

  (Also see the Environmental Sustainability Element, Topic Area 2)
- ***CR3.5*** Work with the school district to increase the use of carpooling and the bus system to reduce drive-alone trips to St. Helena schools.
- ***CR3.6*** Support development of the bikeway and pedestrian networks to provide a convenient opportunity for at least 20 percent of commuters to get to work by walking or bicycling.
- ***CR3.7*** Support compact, mixed-use development as outlined in the Land Use and Growth Management and Housing elements.
- ***CR4.2*** Ensure safety on residential neighborhood streets to promote walking and bicycling and preserve neighborhood livability.
- ***CR4.3*** Continue efforts to calm traffic, and minimize traffic volumes and speeds in residential areas.
- ***CR4.5*** Improve traffic safety and encourage walking and bicycling trips to St. Helena schools through a Safe Routes to School program.

Community Design Element

- ***CD1.3*** Require construction and development practices that reduce energy demand through conservation and efficiency, such as the use of green building materials, site design to maximize passive heating and cooling and energy generation, on-site water reuse, water efficient landscaping, and use of low-flow appliances, among others.

  (Also see the Climate Change Element, Topic Area 2)

- ***CD2.B*** Require street tree plantings along the commercial streets east of Main Street to reflect Main Street's existing planting pattern, in order to provide visual continuity and to create a pleasant pedestrian environment.

- ***CD3.3*** Encourage the use of landscaping and tree plantings as buffers between sidewalks and residential uses. Discourage the removal of existing trees and adopt more comprehensive tree preservation standards.

  (See also the Open Space and Conservation Element for policies and implementing actions related to tree preservation).

- ***CD3.D*** Encourage property owners to install landscaping and tree plantings in front setbacks as a buffer between the sidewalk and residential uses.

- ***CD3.E*** Require new development to include landscaping and street trees

Open Space and Conservation Element

- ***OS4.A*** Establish an urban forestry program to ensure a coordinated and comprehensive approach to maintaining and increasing the City's trees. Key program aspects will include the following:
  - A tree planting program to ensure that new trees are planted regularly;
  - A tree maintenance program to ensure that existing trees are healthy and pruned;
  - A tree inventory to create a comprehensive listing of the City's trees and tree-related needs;
  - A Tree Committee to oversee the implementation of the urban forestry program and approval of tree removals;
  - A landmark tree list that identifies trees that require additional protection from damage and/or removal; and
  - Appropriate Heritage tree deed restrictions.

Public Health, Safety, and Noise Element

- ***PS1.1*** Achieve and maintain clean, healthy air for the residents of St. Helena to preserve environmental quality and community health.

- ***PS1.2*** Support regional efforts to achieve and maintain state ambient concentration standards to protect public health, reduce adverse industrial plant effects and enhance the visual environment. In particular, provide local support for implementation of policies and measures set forth in the Napa County Congestion Management Program.

- ***PS1.3*** Encourage effective regulation of those sources of air pollution, both inside and outside of St. Helena, which affect air quality, by implementing as many of the recommendations of the Napa County Congestion Management Plan as is feasible.
- ***PS1.A*** Minimize local adverse air quality impacts related to construction by requiring dust abatement procedures for local projects.
- ***PS1.C*** Review project proposals for their potential to generate hazardous air pollutants.
- ***PS1.E*** Encourage and support regional efforts to use alternative modes of transportation.
- ***PS1.H*** Continue to implement an ordinance to restrict exposure to environmental tobacco smoke in new and existing multi-unit dwellings, public events, and outdoor areas, such as parks and playgrounds.
- ***PS1.J*** The potential for sources of odors that includes restaurants, auto body shops, or waste treatment facilities shall be considered when evaluating proposed residential projects and projects with sensitive recipients.

Climate Change Element

- ***CC1.1*** Promote a "walkable" and "bikeable" city.
- ***CC1.2*** Support transportation efforts to optimize fuel efficiency and reduce vehicle miles traveled on local roads.
- ***CC1.3*** Seek initiatives that provide efficient modes of transportation for visitors and residents.
- ***CC2.1*** Encourage measures to reduce energy demand through conservation and efficiency.
- ***CC2.2*** Support local efforts to improve the energy supply by switching from fossil fuels to renewables.
- ***CC2.C*** Implement Title 24 energy conservation standards for new buildings, and other State building code standards for high performance "green" buildings. Utilize established green building standards, such as Leadership in Energy and Environmental Design (LEED) and Build it Green.
- ***CC2.D*** Continue to reduce energy use by promoting domestic water conservation and requiring water-efficient landscape improvements associated with new construction.
- ***CC2.E*** Reduce greenhouse gas emissions from buildings and energy use. Require or request that new development projects analyze greenhouse gas emissions due to energy use and incorporate energy and safe yield water conservation measures into projects.
- ***CC2.F*** In support of countywide energy generation efforts, increase local renewable energy generation. Adopt production standards for the City based on quantifiable measures that increase per capita generation levels.
- ***CC2.G*** Remove regulatory impediments and economic disincentives associated with the generation and use of energy from renewable sources, such as wind, geothermal, and solar energy.

- ***CC3.1*** Enhance recycling, composting, and source reduction services for residential and commercial uses to support Napa County's countywide waste reduction goal to achieve overall waste diversion of 75 percent to 90 percent by 2020.

  (Also see the Public Facilities and Services Element, Topic Area: 4)

- ***CC4.1*** Support efforts to protect and increase the amount of vegetation and biomass in soil and reduce emissions from agricultural sources.

- ***CC4.3*** Strengthen water conservation measures that result in significant reductions in local water use and the protection of local water resources.

  (Also see the Community Design Element, Topic Area: 1)

- ***CC4.H*** Adopt landscape ordinances that promote drought resistant plants, and limit or restrict lawns and other high-water-demand plants unless irrigated with reclaimed or grey water systems.

- ***CC4.J*** Establish an urban forestry program to ensure a coordinated and comprehensive approach to maintaining and increasing the City's trees especially native varietals when possible.

- ***CC6.1*** Ensure that the City leads by example in managing its local government operations while implementing the following policy directions:
  - Encourage the reduction of fossil fuel consumption by local government operations.
  - Improve energy efficiency, implement alternative and renewable energy solutions, and reduce greenhouse gas emissions in City and county facilities and operations.
  - Reducing solid waste from City and County operations and facilities.
- ***CC6.E*** Convert street lighting, water pumping, water treatment, and other energy-intensive operations to more efficient technologies.

- ***CC6.F*** Ensure that new municipal or substantially-renovated municipal facilities incorporate cost-effective strategies for reducing greenhouse gas emissions, conserving energy and water, and utilizing sustainable construction practices.

IMPACTS

Impact 3.3-1 Development under the Proposed Plan will not conflict with or obstruct the implementation of the applicable air quality plan. (*Less than Significant)*

The CAA requires that an SIP or an air quality control plan be prepared for areas with air quality violating the NAAQS. The SIP sets forth the strategies and pollution control measures that states will use to attain the NAAQS. The CCAA requires attainment plans to demonstrate a five percent per year reduction in nonattainment air pollutants or their precursors, averaged every consecutive three-year period, unless an approved alternative measure of progress is developed. Air quality

attainment plans (AQAPs) outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date. As described in the Regulatory Setting, the current AQAP for the SFBAAB is BAAQMD's 2017 Clean Air Plan, which provides an integrated strategy to control ozone, PM, TACs, and GHG emissions. This and other previous AQAPs estimate future emissions in the SFBAAB and determine strategies necessary for emissions reductions through regulatory controls. Emissions projections are based on population, vehicle, and land use trends typically developed by BAAQMD, MTC, and ABAG.

The Proposed Plan would establish an updated regulatory framework that would amend the existing land use designations of the City's existing General Plan, as well as future modifications to the City's zoning regulations to be consistent with the General Plan, to guide private and public development within the city over the next 20 years. The development and population estimated at 2040 buildout of the Proposed Plan may differ from the population and employment growth estimates used in formulating the emissions limits and control measures of the 2017 Clean Air Plan. However, projections for 2040 based on buildout of the Proposed Plan are generally consistent with ABAG.

According to BAAQMD's (2017) CEQA Guidelines, the determination of AQAP consistency should consider the following for plan-level analyses:

1. Does the plan support the primary goals of the air quality plan?
2. Does the plan include applicable control measures from the air quality plan?
3. Does the plan disrupt or hinder implementation of any air quality plan control measures?

Support of 2017 Clean Air Plan Goals

The primary goals of the 2017 Clean Air Plan are to attain air quality standards, reduce population exposure and protect public health in the Bay Area, reduce GHG emissions, and protect the climate. To meet these goals, the Proposed Plan focuses on developing infill within the City's Urban Limit Line (ULL), constructing green buildings that are energy efficient and use environmentally-responsible materials, and protecting sensitive receptors from air quality pollution. Other fundamental components of the Proposed Plan also support the goals of the Clean Air Plan. The preservation of agricultural and open space lands outside of the ULL helps to reduce emissions by having green space that can sequester carbon. These types of low-density land uses also generally have fewer buildings and vehicle trips, thereby reducing energy consumption. The protection of public health is highlighted in the Public Safety Element and through policies and implementing actions to attain air quality standards, reduce emissions, and to have buffer zones around industrial areas and State Route 29. Additionally, the Proposed Plan contains numerous policies and implementing actions in support of the goals of the Clean Air Plan, as shown in Table 3.3-6.

With implementation of the Proposed Plan, per capita emissions in the CIty of St. Helena in 2040 would be lower than forecasted under the Clean Air Plan without the Proposed Plan, as the Clean Air Plan does not assume the sustainability policies and transit-oriented development patterns that would be implemented under the Proposed Plan. Reductions in per capita emissions would further help the region attain the AAQS. Based on the above analysis and proposed policies and implementing actions, the Proposed Plan would support the primary goals and implementation of

the 2017 Clean Air Plan. Relevant Proposed Plan policies that would support the 2017 Clean Air Plan goals are discussed below and provided in Table 3.3-6.

Applicable Control Measures

The 2017 Clean Air Plan contains 85 control measures aimed at reducing air pollution in the SFBAAB from a wide variety of emission sources. The control measures are classified for the following nine general sectors: (1) Stationary Sources; (2) Transportation; (3) Energy; (4) buildings; (5) Agriculture; (6) Natural and Working Lands; (7) Waste Management; (8) Water; and (9) Super-GHG Pollutants. Table 3.3-6 presents the control measures of the 2017 Clean Air Plan that are applicable to the Proposed Plan and how the Proposed Plan complies with each of the measures.

Table 3.3-6. BAAQMD 2017 Clean Air Plan Control Measures Applicable to Proposed Plan

Clean Air Plan Control Measures		*Relevant General Plan Update Policies and Implementing Actions*
Stationary Source		
SS20	Air Toxics Risk Cap and Reduction from Existing Facilities	Policy PS1.2 supports efforts to achieve state ambient concentration standards to reduce adverse industrial plant effects. Implementing Action PS1.E would develop guidelines to locate new sensitive uses away from air pollutant sources, including measures to mitigate air emissions from existing facilities and to design buildings to prevent exposure.
SS30	Residential Fan Type Furnaces	Policy CD1.3 would require construction and development practices such as site design to maximize passive heating and cooling, which would reduce use of indoor cooling/heating equipment and their associated emissions. Implementing Action PS1.C encourages the use of EPA-approved wood stoves or fireplace inserts, rather than fireplaces, to reduce emissions.
SS31	General Particulate Matter Emission Limitation	Implementing Action PS1.A requires dust abatement procedures for local construction projects to minimize air quality impacts.
SS36	PM from Trackout	See above for SS31.
Transportation		
TR1	Clean Air Teleworking Initiative	Policy CR3.1 would provide incentives and encourage existing major employers to develop and implement transportation demand management (TDM) programs to increase the number of people who bike, walk, and take transit to work and reduce peak-period trip generation.
TR2	Trip Reduction Programs	Policy CR3.3 aims to substantially reduce work trips made by St. Helena workers and residents. Policies LU3.10, CR1.6, CR1.7, and CR1.8 and Implementing Actions LU3.A and LU6.C would support development that would enable effective employer-based trip reductions.
TR5	Transit Efficiency and Use	While this is mostly a regionally-implemented transportation control measure (TCM), see Policies CR1.6, CR1.7, CR3.1, CR3.2, and CR3.4.

Table 3.3-6. BAAQMD 2017 Clean Air Plan Control Measures Applicable to Proposed Plan

Clean Air Plan Control Measures		*Relevant General Plan Update Policies and Implementing Actions*
TR6	Freeway and Arterial Operations	This is primarily a regional measure. St. Helena has a relatively small network of arterial roadways. Policies and implementing actions that directly and indirectly support management of arterial roadways include LU3.2, LU3.3, LU4.C, CR1.1, and CR3.4.
TR7	Safe Routes to School and Safe Routes to Transit	Proposed Plan policies and implementing actions promoting bicycling and walking near schools include PF5.B, PF5.3, CR2.6, CR3.5, and CR4.5.
TR8	Ridesharing, Last-Mile Connection	St. Helena is relatively rural compared to other Bay Area communities, so opportunities to effectively expand rideshare services and incentives are somewhat limited. Policy CR3.1 would provide incentives and encourage major employers to develop and implement TDM programs that promote rideshare services.
TR9	Bicycle and Pedestrian Access and Facilities	The Proposed Plan includes numerous policies and implementing actions that would encourage bicycling and improve bicycle access and facilities: LU2.8, LU3.2, LU3.7, LU3.9, LU3.10, LU3.A, LU6.D, LU6.E, ES2.D, PF5.B, PF5.3, CR1.1, CR1.5, CR1.9, CR2.1, CR2.2, CR2.3, CR2.4, CR2.6, CR3.1, CR3.3, CR3.6,CR4.2, and CR4.5.
TR10	Land Use Strategies	The Climate Change Element of the Proposed Plan addresses the primary programs that support the City's clean air programs and policies.
TR12	Smart Driving	Policy CR4.3 would continue St. Helena's efforts to calm traffic, minimizing traffic volumes and reducing traffic speeds.
TR13	Parking Policies	St. Helena does not currently have large parking facilities. Proposed Plan Policy CR3.1 would include TDM strategies that would modify parking codes to efficiently manage the supply of parking.
TR15	Public Outreach and Education	While this is mostly a regionally-implemented TCM, Policy CR3.1 would encourage the dissemination of marketing and information programs to encourage alternative transportation modes.
Energy		
EN1	Decarbonize Electricity Production	Policy CC6.1 addresses renewable energy use by local government operations and encourages implementation of alternative and renewable energy solutions. Policy CC2.2 and Implementing Actions CC2.F and CC2.G promote increasing local renewable energy production and removing regulatory and economic impediments associated with renewable energy.
EN2	Decrease Electricity Demand	Policies CC2.1 and CD1.3 promote local and construction practices that reduce energy demand through conservation and efficiency. Implementing action
Building		
BL1	Green Buildings	Policy CD1.3 requires construction and development practices that reduce energy demand through conservation and efficiency, such as the use of green building materials, site design to maximize passive

Table 3.3-6. BAAQMD 2017 Clean Air Plan Control Measures Applicable to Proposed Plan

Clean Air Plan Control Measures		*Relevant General Plan Update Policies and Implementing Actions*
		heating and cooling and energy generation on site, water reuse, water efficient landscaping and use of low-flow appliances. Implementing Action CC2.C requires improved energy conservation (Title 24) standards for new buildings, and other state building code standards for high performance "green" buildings, and the establishment of green building standards, such as Leadership in Energy and Environmental Design (LEED) and Build it Green.
BL2	Decarbonize Buildings	See above for BL1. Policy CC2.2 supports local efforts to switch from fossil fuels to renewables.
BL4	Urban Heat Island Mitigation	CD3.E and other implementing actions require new development to include landscaping and street trees.
Natural and Working Lands		
NW2	Urban Tree Planting	Implementing Action CC4.J would establish an urban forestry program to maintain and increase the City's trees. Implementing Actions CD2.B and CD3.D promote landscaping and tree planting in commercial and residential areas. Policy CD3.3 encourages landscaping and tree planting, discourages tree removal, and supports the adoption of a more comprehensive tree ordinance.
Waste Management		
WA1	Landfills	Policy PF4.1 and Implementing Action PF4.A would increase recycling and composting through the adoption of a Waste Management Master Plan to enhance existing management services and systems. This includes landfill space plans and a food composting program. Policy CC3.1 further enhances recycling, composting, and source reduction services to support Napa County's waste reduction goal.
WA2	Composting and Anaerobic Digesters	See above for WA1.
WA3	Green Waste Diversion	See above for WA1.
WA4	Recycling and Waste Reduction	See above for WA1.
Water		
WR2	Support Water Conservation	Various policies included in the Public Facilities and Services Element, including Policies PF1.1, PF1.2, PF1.4, PF1.5, and PF1.6, would support water conservation by new development in the city. Implementing Actions CC2.1, CC2.D, CC2.E, CC4.H, CC4.I, CC6.E, CC6.F and Policy CC4.3 strengthen water conservation measures.
Super-GHG		
SL1	Short-Lived Climate Pollutants	The promotion of transit, bicycling, pedestrian activities, and trip reductions would serve to reduce mobile-source emissions of GHGs. Policies that promote mixed-use development and the diversion of solid waste to landfills along with environmentally-sensitive design guidelines and standards that would be incorporated

Table 3.3-6. BAAQMD 2017 Clean Air Plan Control Measures Applicable to Proposed Plan

Clean Air Plan Control Measures	*Relevant General Plan Update Policies and Implementing Actions*
	into new development would reduce GHG emissions. Various policies included in the Climate Change Chapter would support the reduction of short-lived climate pollutants.

Sources: BAAQMD, 2017; City of St. Helena, 2018; Dyett & Bhatia, 2018

Stationary Sources

Stationary sources typically include oil refineries, cement plants, natural gas distribution facilities, crude oil and natural gas production facilities, gas stations, dry cleaners, metal fabricators, chemical and pharmaceutical production facilities, diesel generators, and large boilers used in commercial and industrial facilities. A total of 40 proposed stationary source control measures are included in the Clean Air Plan. Eleven of the proposed measures focus primarily on reducing GHG emissions, the remainder of the stationary source measures aim to protect public health by reducing emissions of criteria pollutants and TACs from oil refineries and other sources.

BAAQMD is primarily responsible for implementing the stationary source control measures through its rulemaking, permitting and enforcement programs. Generally, the City of St. Helena uses BAAQMD's CEQA Air Quality Guidelines, including adopted CEQA standards and thresholds, to evaluate air pollutant emissions from new stationary sources, as well as potential environmental impacts resulting from newly proposed stationary sources (see Policy PS1.H above).

Transportation

The transportation sector includes on-road motor vehicles, categorized by weight class, such as light-duty automobiles or heavy-duty trucks; off-road vehicles, including airplanes, locomotives, ships and boats; and off-road equipment, such as airport ground-support equipment, construction equipment and farm equipment. A total of 23 proposed transportation control measures are included in the 2017 CAP. The transportation measures proposed in the plan will decrease emissions of criteria pollutants, TACs, diesel PM, and GHGs by reducing demand for motor vehicle travel, promoting efficient vehicles and transit service, decarbonizing transportation fuels, and electrifying motor vehicles and equipment. While most of the transportation control measures are implemented at the regional level (that is, by the Metropolitan Transportation Commission (MTC), ABAG, BAAQMD, CARB or Caltrans), there are measures in which the Clean Air Plan relies upon local communities to assist with implementation. As shown in Table 3.3-6, the Proposed Plan would be consistent with the applicable transportation control measures contained in the 2017 Clean Air Plan.

Energy

The energy sector includes emissions of criteria pollutants, local air toxics, and GHGs from electricity generated and used within the Bay Area, as well as GHG emissions from electricity generated outside the Bay Area that is imported and used within the region. Two proposed energy

control measures are included in the 2017 CAP: EN1 – Decarbonize Electricity Production and EN2 – Decrease Electricity Demand. The energy measures proposed in the plan will reduce emissions of criteria air pollutants, TACs, and GHGs by decreasing (1) the amount of electricity consumed in the Bay Area, and (2) the carbon intensity of the electricity we use, by switching to less GHG-intensive fuel sources for electricity generation.

BAAQMD is primarily responsible for implementing the energy control measures through its funding, outreach, and education programs. The Proposed Plan contains policies and implementing actions to reduce energy demand through conservation and efficiency. Policy CD1.3 requires construction and development practices that reduce energy demand through conservation and efficiency, such as the use of green building materials, site design to maximize passive heating and cooling and energy generation, on site water reuse, water efficient landscaping and use of low-flow appliances, among others. Policy CC2.2 supports local efforts to improve the energy supply by switching from fossil fuels to renewables.

Buildings

The buildings sector includes residential, commercial, governmental, and institutional buildings. Buildings generate emissions through energy use for heating, cooling, and operating the building, and from the materials used in building construction and maintenance. Four proposed building control measures are included in the 2017 CAP: BL1 – Green Buildings, BL2 – Decarbonize Buildings, BL3 – Market-Based Solutions, and BL4 – Urban Heat Island Mitigation. BAAQMD has the authority to regulate emissions from certain sources in buildings such as boilers and water heaters but has limited authority to regulate buildings themselves. Therefore, the strategies in the control measures rely on local governments that have authority over local building codes and the ability to facilitate adoption of best GHG control practices and policies.

The Proposed Plan contains policies and implementing actions to reduce energy in existing and proposed buildings. Policy CD1.3 requires construction and development practices that reduce energy demand through conservation and efficiency, such as the use of green building materials, site design to maximize passive heating and cooling and energy generation on site, water reuse, water efficient landscaping, and use of low-flow appliances. Implementing Action CC2.C requires improved energy conservation (Title 24) standards for new buildings, and other state building code standards for high performance "green" buildings, and the establishment of green building standards, such as Leadership in Energy and Environmental Design (LEED) and Build it Green.

Agriculture

Sources of air pollution from agricultural operations include on- and off-road trucks and farming equipment, aircraft for crop spraying, animal waste, pesticide and fertilizer use, crop residue burning, travel on unpaved roads, and soil tillage. Four proposed agriculture control measures are included in the 2017 CAP. The BAAQMD regulates agricultural (biomass) burning via Regulation 5 and would rely on outreach and education to influence agricultural equipment and soil management.

Most of the agriculture in St. Helena is cultivated with vineyards; therefore, agriculture in the city does not produce significant sources of methane emissions. The Proposed Plan contains policies and implementing actions to reduce agricultural emissions. For example, Policy CC4.1 Support

efforts to protect and increase the amount of vegetation and biomass in soil and reduce emissions from agricultural sources.

Natural and Working Lands

The natural and working lands sector, including forests, woodlands, shrub lands, grasslands, rangelands, and wetlands. When properly managed, most lands within the natural and working lands sector help to mitigate global warming by sequestering carbon. Three proposed natural and working lands control measures are included in the 2017 Clean Air Plan. The control measures focus on urban tree planting and increasing carbon sequestration on rangelands and wetlands. The BAAQMD would focus on updating its guidelines to include tree planting and carbon sequestration mitigation.

The Proposed Plan contains policies and implementing actions to protect and enhance tree resources in developed and undeveloped areas. For example, Implementing Action OS4.A would establish an urban forestry program to ensure a coordinated and comprehensive approach to maintaining and increasing the City's trees.

Waste Management

The waste management sector includes GHG emissions from landfills and composting activities. A variety of air pollutants are produced as waste decomposes in landfills and composting operations. Four proposed waste management control measures are included in the 2017 Clean Air Plan. The control measures focus on reducing or capturing methane emissions from landfills and composting facilities, diverting organic materials away from landfills, and increasing waste diversion rates through efforts to reduce, reuse, and recycle. BAAQMD would implement these control measures through rulemaking and developing model policies to facilitate local adoption of ordinances and programs.

There are no landfills within the Planning Area, but the Proposed Plan contains policies and implementing actions to increase recycling and composting. For example, Implementing Action PF4.A entails the development and adoption of a Waste Management Master Plan, which would include a food waste composting program that incorporates approaches for on-site food waste composting for residences and businesses.

Water

Water is used in the city to support residential, commercial, agricultural, and industrial activities. Electricty needed to treat and distribute water results in criteria air pollutant and toxic air contaminants emissions, as well as GHG emissions. Two proposed water control measures are included in the 2017 CAP: WR1 – Limit GHGs from Publicly-Owned Treatment Works and WR2 – Support Water Conservation. BAAQMD would implement these control measures through rulemaking, public outreach, and education.

The Proposed Plan contains policies and implementing actions to support water conservation. For example, Policy PF1.6 calls for aggressively promoting the adoption of "best practices" for reducing water usage in the existing housing stock through the City's existing Ordinances and Water Conservation Plans. Implementing Action PF1.H would ensure that water rates are designed to promote conservation.

Super-GHG Pollutants

Super-GHGs include methane, black carbon and fluorinated gases (F-gases), which have a very high global warming potential on a per-unit basis, in comparison to CO_2. Three proposed super-GHG control measures are included in the Clean Air Plan. BAAQMD would implement these control measures through rulemaking, public outreach, education, and the development of a GHG air monitoring plan for the Bay Area. BAAQMD also plans to track progress in adoption and implementation of super-GHG reduction measures in local plans and programs. The Proposed Plan contains a Climate Change Element with policies and implementing actions to reduce GHGs.

As discussed above, the Proposed Plan includes numerous policies that promote mixed-use and transit-oriented development along with sustainable, environmentally-sensitive design. The Proposed Plan would not cause the disruption, delay, or otherwise hinder implementation of any applicable control measure from the 2017 Clean Air Plan. Rather, as shown in Table 3.3-6, the Proposed Plan has incorporated many of the control measures identified in the 2017 Clean Air Plan related to the transportation, building, energy, waste, and water sectors into its policies for implementation. Accordingly, development under the Proposed Plan would not fundamentally conflict with the 2017 Clean Air Plan and would result in a less than significant impact with respect to implementation of BAAQMD's Plan.

Mitigation Measures

None required.

Impact 3.3-2 Development under the Proposed Plan would violate air quality standards or contribute substantially to an existing or projected air quality violation. (*Significant and Unavoidable*)

Development under the Proposed Plan that would exceed BAAQMD's regional significance thresholds would contribute to the nonattainment designation of the SFBAAB, which constitutes an air quality violation. The SFBAAB is currently designated a nonattainment area for California and national O_3, California $PM_{2.5}$, and California PM_{10} AAQS. The attainment designations are based on the AAQS, which are set at levels of exposure that are determined to not result in adverse health. Exposure to fine particulate pollution and ozone causes myriad health impacts, particularly to the respiratory and cardiovascular systems:

- Linked to increased cancer risk ($PM_{2.5}$, TACs)
- Aggravates respiratory disease (O_3, $PM_{2.5}$)
- Increases bronchitis (O_3, $PM_{2.5}$)
- Causes chest discomfort, throat irritation, and increased effort to take a deep breath (O_3)
- Reduces resistance to infections and increases fatigue (O_3)
- Reduces lung growth in children ($PM_{2.5}$)
- Contributes to heart disease and heart attacks ($PM_{2.5}$)
- Contributes to premature death (O_3, $PM_{2.5}$)
- Linked to lower birth weight in newborns ($PM_{2.5}$)

Any development under the Proposed Plan that could produce a significant regional air quality impact in an area that is in nonattainment and contribute to health impacts discussed above. Although BAAQMD's CEQA Air Quality Guidelines only require an emissions inventory of criteria air pollutants for project-level analyses, an inventory of criteria air pollutants was generated for the Proposed Plan, since enough information regarding the buildout of the Proposed Plan is available to identify the magnitude of emissions from buildout and whether development allowed under the Proposed Plan would contribute to an air quality violation. Tables 3.3-7 and 3.3-8 identify the emissions associated with buildout of the Proposed Plan for the Planning Area and St. Helena. Subsequent environmental review of development projects would be required to more accurately assess potential impacts under BAAQMD's project-level thresholds.

Table 3.3-7. Estimated Maximum Daily Unmitigated Operational Emissions for the Proposed Plan (pounds per day), City of St. Helena

Analysis Condition/Source	*ROG*	*NOx*	*CO*	*PM10*	*PM2.5*
Baseline (2018)

Source: ICF, 2018

Construction

Construction associated with new land use developments under the Proposed Plan would result in the temporary generation of ozone precursors (ROG, NO_X), CO, and particulate matter emissions that could result in short-term impacts on ambient air quality in the City of St. Helena. Emissions would originate from mobile and stationary construction equipment exhaust, employee and haul truck vehicle exhaust, land clearing, demolition, architectural coatings, and asphalt paving. Construction-related emissions would vary substantially, depending on the level of activity, length of the construction period, specific construction operations, types of equipment, number of personnel, wind and precipitation conditions, and soil moisture content.

By its nature as a general plan, the Proposed Plan does not directly propose any specific development projects. Rather, construction of new land use developments allowable under the Proposed Plan would occur intermittently in the City of St. Helena throughout the course of the buildout period. As the timing and intensity of future development projects is not known at this time, the precise effects of construction activities associated with buildout of the City of St. Helena cannot be accurately quantified at this time. Therefore, impacts associated with construction emissions within the city are discussed at a qualitative level.

As noted previously, BAAQMD's project-level thresholds were developed to analyze emissions generated by a single project. While the construction emission impacts associated with each new individual development would be short-term in nature (relative to the buildout year) and limited to the period of time when construction activity is taking place for that particular development, the concurrent construction of a multitude of individual development projects that could occur at any one time in the City of St. Helena under the Proposed Plan could generate combined criteria pollutant emissions on a daily basis that would exceed BAAQMD's project-level thresholds. Additionally, depending on the size and scale of an individual development project, along with its construction schedule and other parameters, there may also be instances where the daily construction emissions generated by a single development project could also exceed BAAQMD's criteria pollutant thresholds. As such, construction emissions generated by implementation of the Proposed Plan could result in a potentially significant impact on air quality.

During construction of a development project, the activity that typically generates the highest NO_X and PM exhaust emissions is the operation of off-road equipment, whereas the activity that typically generates the highest ROG emissions is the application of architectural coatings. BAAQMD considers fugitive PM_{10} and $PM_{2.5}$ dust emissions significant without the application of standard best management practices (BMPs). Mitigation Measure AQ-1 would require construction projects in the City of St. Helena to implement BMPs to reduce these fugitive dust emissions. Mitigation Measure AQ-2 requires the use of low-VOC paints to reduce ROG emission levels would be required during construction activities in the City. Implementation of Mitigation Measures AQ-1 and AQ-2 would help reduce fugitive PM emissions and ROG impacts under the Proposed Plan.

However, with respect to ROG, NOx and PM exhaust emissions, there could be foreseeable conditions under the Proposed Plan where the amount of construction activity for an individual development project, or a combination of these projects, could result in the generation of these pollutant emissions that exceed their respective BAAQMD significance thresholds (54 pounds/day for ROG and NOx, 82 pounds per day for exhaust PM_{10}, and 54 pounds/day for exhaust $PM_{2.5}$). Even with implementation of Mitigation Measures AQ-1 and AQ-2 emissions of ROG, NOx, PM_{10}, and $PM_{2.5}$ exhaust may not be reduced to levels below BAAQMD's thresholds when multiple construction projects are concurrently ongoing in St. Helena. Accordingly, additional mitigation would be required to reduce these emissions impacts to a less-than-significant level. Thus, even with mitigation, construction emissions from the Proposed Plan remain significant and unavoidable.

Operation

As discussed, BAAQMD's CEQA Air Quality Guidelines only require an emissions inventory of criteria air pollutants for project-level analyses. As sufficient information is available regarding the

magnitude of emissions at buildout of the Proposed Plan, an inventory of criteria air pollutants at project-level significance thresholds was generated. This analysis utilizes the project-level standards for the purpose of a conservative analysis. These standards would apply to subsequent development under the Proposed Plan.

Buildout of the Proposed Plan has the potential to result in air quality impacts from mobile, area, and energy sources. Mobile sources would include vehicle trips generated by land uses proposed within the city. Area sources would include hearth usage, landscaping equipment, off-gassing during the reapplication of architectural coatings, and consumer products (e.g., solvents, cleaning supplies, cosmetics, toiletries). Energy sources would include onsite natural gas combustion for space and water heating. Each of these sources was taken into account in calculating the Proposed Plan's long-term operational emissions, which were quantified using the CalEEMod (see methodology discussion above).

Table 3.3-7 summarizes daily mobile, area, and energy source emissions generated under baseline (2018) and buildout (2040) conditions with the Proposed Plan. To evaluate the magnitude of the change in the air quality environment due to implementation of the Proposed Plan, the emissions under the Proposed Plan at buildout in 2040 are compared to the emissions under existing conditions, and the resulting net increase in emissions is compared to BAAQMD's project-level thresholds for the purpose of a conservative analysis. While the Planning Area includes three study areas in unincorporated Napa County, CalEEMod was run separately for the City of St. Helena and the Planning Area as a whole. Since the Proposed Plan does not include any development within the study areas and the Plan does not include policies that pertain to the study areas, as they are under the jurisdiction of Napa County, it is important to analyze the impacts of the Proposed Plan within the city limits. However, as air quality is by nature a cumulative impact, the results of CalEEMod for the entire Planning Area are also presented for comparison in Table 3.3-8.

As indicated in Table 3.3-7, operational sources under the Proposed Plan for the City of St. Helena would result in a net increase in criteria pollutant emissions of ROG, PM_{10}, and $PM_{2.5}$. However, only the increase in ROG exceeds BAAQMD's project-level thresholds. Emissions of NOx and CO show a net reduction would occur under the Proposed Plan when compared to existing conditions, which is primarily attributed to the continued improvement in mobile source emissions in California over time due to vehicle fleet turnover and the implementation of more advanced vehicle technologies, including lower emission fuels.

While vehicle fleet turnover and improved vehicle technologies over time would result in a reduction of PM_{10} and $PM_{2.5}$ exhaust emissions, the fugitive PM_{10} and $PM_{2.5}$ emissions generated by vehicle travel on roadways would still occur and would not receive the same emissions reduction benefits because those emissions are dependent on vehicle miles traveled (VMT). Since full buildout of the Proposed Plan in 2040 would result in an increase of total VMT over existing conditions, the fugitive PM_{10} and $PM_{2.5}$ emissions from on-road travel by vehicles would also increase over baseline conditions. While fugitive PM_{10} and $PM_{2.5}$ emissions made up approximately 98 and 93 percent of the total mobile source PM_{10} and $PM_{2.5}$ emissions, respectively, under baseline conditions in the City of St. Helena, fugitive PM_{10} and $PM_{2.5}$ emissions made up 99 percent of the total mobile source PM_{10} and $PM_{2.5}$ emissions under the Proposed Plan in 2040. Comparative proportions are observed within the Planning Area. These results indicate that exhaust emissions

of PM_{10} and $PM_{2.5}$ in 2040 would decline as a result of the benefits from vehicle fleet turnover and the implementation of more advanced vehicle technologies.

As discussed above, BAAQMD's project-level thresholds were developed to analyze emissions generated by a single project and so offer a conservative evaluation of emissions from implementation of an entire general plan. Accordingly, operational air quality impacts of the Proposed Plan are also evaluated for consistency with the 2017 Clean Air Plan to determine whether criteria pollutant emissions attributed to population and economic growth are significant. Impact 3.3-1 provides the 2017 Clean Air Plan consistency analysis based on the requirements of BAAQMD's 2017 CEQA Guidelines. The analysis demonstrates that the Proposed Plan would support the goals of the 2017 Clean Air Plan, include all applicable control measures, and would not conflict with its implementation.

The Proposed Plan includes numerous policies to reduce criteria air pollutants. Policies within the Proposed Plan, including PS1.1, PS1.2, and PS1.3, address adhering to air quality standards and reducing air pollution. Additionally, Implementing Action PS1.H calls for the adoption of BAAQMD Guidelines for Assessing the Impacts of Projects and Plans thresholds of significance for determining the significance of project impacts under CEQA. Implementing Action PS4.J calls for educating the public about the use of green household products in an effort to reduce air pollution, including ROGs.

The Proposed Plan also includes policies specifically related to the reduction of VMT, which would reduce mobile-source emissions. Policies that reduce VMT address increasing density and maintaining growth within the City's ULL, including LU 1.2, LU2.5, LU2.6, and CR3.7. Policies that encourage walking, biking, carpooling, public transit, and other alternatives to single-occupancy automobile use include LU2.7, LU2.8, LU3.2, LU3.3, LU3.7, LU3.10, ES2.6, PF5.3, CC1.1, CC1.2, CC1.3, CR1.1, CR1.5, CR1.6, CR1.7, CR1.8, CR1.9, CR2.1, CR2.2, CR2.3, CR2.4, CR2.5, CR2.6, CR3.1, CR3.2, CR3.3, CR3.4, CR3.5, CR3.6, CR4.2, and CR4.5.

In addition to policies and implementing actions within the Proposed Plan, Mitigation Measures AQ-1, AQ-2, and AQ-3 are recommended to further reduce criteria air pollutants. Mitigation Measure AQ-1 aims to reduce PM through best management practices (BMPs) for construction-related pollution. Mitigation Measure AQ-2 addresses a decrease in ROGs by requiring the use of low VOC coatings for developments. Pursuant to Mitigation Measure AQ-3, all development applications with the potential to create point-source air quality impacts must be referred to BAAQMD for review and comment to ensure compliance with BAAQMD requirements prior to approval of the project.

Future development under the Proposed Plan would be required to comply with applicable air quality plans, SIP, CARB motor vehicle standards, BAAQMD regulations for stationary sources and architectural coatings, Title 24 energy efficiency standards, and the Proposed Plan policies; however, there is no guarantee emissions would be mitigated below BAAQMD thresholds. Accordingly, operational sources under the Proposed Plan would result in a significant and unavoidable air quality impact associated with ROG and PM_{10} emissions.

Significance Before Mitigation: Significant

Mitigation Measures

AQ-1: Require construction projects in the City of St. Helena to implement BMPs to reduce fugitive dust emissions. BMPs may include:

- Watering all exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) three times per day using recycled water.
- Covering all haul trucks transporting soil, sand, or other loose material.
- Removing all visible mud or dirt track-out onto adjacent public roads using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- Limiting all vehicle speeds on unpaved roads to 15 mph.
- Completing all roadways, driveways, and sidewalks to be paved as soon as possible. Laying building pads soon as possible after grading unless seeding or soil binders are used.
- Minimizing idling times either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.
- Maintaining and properly tuning all construction equipment in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper working condition prior to operation.
- Staging construction equipment as far as possible from existing sensitive receptors (away from the southeast property line and surrounding residences).
- Posting a publicly visible sign with the telephone number and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations.

  Where warranted, the project sponsors shall incorporate the following language into construction specifications if significant risk is anticipated based on design level construction schedule, duration and concurrent construction activities:

- Powering portable equipment by electricity if available or if electricity is not available, using propane or natural gas if feasible. Diesel engines shall only be used if electricity is not available and it is not feasible to use propane or natural gas.
- Ensuring that all mobile diesel-powered off-road equipment larger than 25 horsepower and operating on the site for more than two days continuously or 20 hours cumulative meets, at a minimum, U.S. EPA particulate matter emissions standards for Tier 2 engines or equivalent and be equipped with diesel particulate matter filters that meet CARB-certified Level 2 or 3 Diesel Particulate Filters. Alternatively-fueled equipment (i.e., non-diesel) would meet this requirement.

AQ-2: Require that applicants proposing development of projects within the City of St. Helena require contractors, as a condition of contract, to reduce construction-related fugitive ROG emissions by ensuring that low-VOC coatings that have a VOC content of 10 grams/liter (g/L) or less be used during construction. All project applicants shall submit evidence of the use of low-VOC coatings to BAAQMD prior to the start of construction.

AQ-3: Require all development applications with the potential to create point-source air quality impacts be referred to the Bay Area Air Quality Management District (BAAQMD) for review and comment to ensure compliance with BAAQMD requirements prior to approval of the project.

Significance After Mitigation: Significant and Unavoidable. The Proposed Plan includes policies and implementing actions that would minimize air pollution to the extent feasible. Mitigation Measures AQ-1, AQ-2, and AQ-3 would further reduce ROGs from architectural coating, and PM from construction, as well require all development with the potential to create point-source air quality impacts to receive BAAQMD review prior to approval. Additionally, an analysis of emissions generated from the operation of development allowed under the Proposed Plan would be individually compared to BAAQMD's project-level significance thresholds during individual environmental review. However, the total criteria air pollutant emissions from operation of future development under the Proposed Plan is likely to be substantial and could contribute to increases in concentrations of air pollutants, which could contribute to ongoing violations of air quality standards. Because the detail of future projects allowed under the Proposed Plan cannot be known at this time, the impact is considered significant and unavoidable.

Impact 3.2-3 Development under the Proposed Plan would result in a cumulatively considerable net increase of criteria pollutants for which the General Plan region is nonattainment under an applicable federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors). (*Significant and Unavoidable*)

Air pollution is by nature a cumulative impact. No single project by itself would be sufficient in size to result in regional nonattainment of AAQS. Instead, a project's individual emissions contribute to existing adverse air quality conditions, and together with other past, present, and reasonably foreseeable projects could result in a significant impact. Criteria air pollutant emissions generated by cumulative development associated with buildout of the Proposed Plan (ROG for the City of St. Helena and PM_{10} for the Planning Area, as identified in Tables 3.3-7 and 3.3-8) would exceed BAAQMD's project-level significance thresholds and would contribute to the nonattainment designations of the Air Basin. The Air Basin is currently designated a nonattainment area for California and national O_3, California $PM_{2.5}$, and California PM_{10} AAQS.

Projects that exceed BAAQMD's significance thresholds cumulatively contribute to health impacts in the SFBAAB, such as those discussed under Impact 3.3-2. As shown in Tables 3.3-7, land uses developed under the Proposed Plan would increase emissions of ROG, which is an ozone precursor. Emissions of ROG generated by buildout of the Proposed Plan could increase photochemical reactions and the formation of tropospheric ozone, which, at certain concentrations, could lead to respiratory symptoms (e.g., coughing), decreased lung function, and inflammation of airways. Although these health effects are associated with ozone, the impacts are

a result of cumulative ROG emissions throughout the Bay Area. Accordingly, the incremental contribution of development supported by the Proposed Plan to specific health outcomes related to criteria pollutant emissions would be limited. It is also important to note that growth-related emissions associated with the Proposed Plan would not occur all at once but would instead occur incrementally over time as regional air quality improves and regulations to reduce emissions take effect.

As discussed above, BAAQMD has identified project-level thresholds to evaluate impacts on air quality (Table 3.3-5). The thresholds have been adopted to prevent further deterioration of ambient air quality, which is influenced by emissions generated by projects within a specific air basin. The project-level thresholds, therefore, consider relevant past, present, and reasonably foreseeable future projects within SFBAAB. For example, as noted in BAAQMD's (2017) CEQA Guidelines,

> In developing thresholds of significance for air pollutants, BAAQMD considered the emission levels for which a project's individual emissions would be cumulatively considerable. If a project exceeds the identified significance thresholds, its emissions would be cumulatively considerable, resulting in significant adverse air quality impacts to the region's existing air quality conditions. Therefore, additional analysis to assess cumulative impacts is unnecessary.

BAAQMD's project-level thresholds do not typically lend themselves well to the analysis of general plans. Rather, it is more appropriate to evaluate planning-level documents for their consistency with the most recently adopted AQAP, which is the 2017 Clean Air Plan for the SFBAAB. As discussed under Impact 3.3-1, the Proposed Plan would support the goals of BAAQMD's 2017 Clean Air Plan, include all applicable control measures, and would not conflict with its implementation. The comprehensive suite of Proposed Plan policies could reduce the severity of growth-oriented criteria pollutants, relative to conditions without the Proposed Plan.

As discussed under Impact 3.3-2, individual development projects may still generate construction emissions in excess of BAAQMD's project-level thresholds. Implementation of the mitigation measures listed below would ensure that the construction-related impacts of the Proposed Plan on air quality would be reduced to a less-than-significant level. However, operational sources under the Proposed Plan would result in a significant and unavoidable and cumulatively considerable air quality impacts associated with ROG and PM_{10} emissions. Current nonattainment status and projected ROG and PM_{10} emissions at buildout in combination with past, present, and reasonably foreseeable projects elsewhere within the SFBAAB demonstrate that the Proposed Plan, even with implementation of applicable regulations, would result in a significant and unavoidable cumulative impact with respect to air quality and attainment of such standards.

Significance Before Mitigation: Significant

Mitigation Measures

See Mitigation Measures AQ-1, AQ-2, and AQ-3 under Impacts 3.3-1 and 3.3-2.

Significance After Mitigation: Significant and Unavoidable. As discussed under Impact 3.3-2, while policies and mitigation measures would help to reduce ROG and PM emissions as a result of

the Proposed Plan, the increase in these pollutants, as calculated through CalEEMod, would exceed BAAQMD's threshold criteria. As such, the impact remains significant and unavoidable.

Impact 3.3-4 Development under the Proposed Plan would not expose sensitive receptors to substantial pollutant concentrations. (*Less than Significant with Mitigation*)

CO Hotspots

Areas of vehicle congestion have the potential to create pockets of CO called hotspots. These pockets have the potential to exceed the state one-hour standard of 20 ppm or the eight-hour standard of 9.0 ppm. Because CO is produced in the greatest quantities from vehicle combustion and does not readily disperse into the atmosphere, adherence to AAQS is typically demonstrated through an analysis of localized CO concentrations. Hotspots are typically produced at intersections, where traffic congestion is highest because vehicles queue for longer periods and are subject to reduced speeds.

Under existing and future vehicle emission rates, a plan would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour—or 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited by bridges or tunnels—in order to generate a significant CO impact. Buildout of the Proposed Plan could increase traffic volume and congestion at seven intersections but would not reach the volumes describes above (see Section 3.13, Transportation and Traffic).[5] In addition, buildout of the Proposed Plan would significantly decrease daily operational emissions of CO from mobile sources, counteracting a slight increase in CO from area sources in 2040 (Table 3.3-8). Therefore, the Proposed Plan would not have the potential to substantially increase CO hotspots at intersections in St. Helena.

In order to determine the potential for CO hotspots, BAAQMD considers consistency with the relevant Congestion Management Plan, because congested intersections generate unhealthy concentrations of CO. The Proposed Plan, once adopted, includes policies that would encourage bicycle, pedestrian, and transit use to tie land use and transportation, which ensures consistency with Napa County's CMP (policies LU2.7, LU2.8, LU3.2, LU3.3, LU3.7, LU3.10, ES2.6, PF5.3, CC1.1, CC1.2, CC1.3, CR1.1, CR1.5, CR1.6, CR1.7, CR1.8, CR1.9, CR2.1, CR2.2, CR2.3, CR2.4, CR2.5, CR2.6, CR3.1, CR3.2, CR3.3, CR3.4, CR3.5, CR3.6, CR4.2, and CR4.5).

Asbestos

Demolition of existing structures results in particulates that may disperse to adjacent sensitive receptor locations. ACMs were commonly used as fireproofing and insulating agents prior to the 1970s. The U.S. Consumer Product Safety Commission banned use of most ACM in 1977 due to their link to mesothelioma. However, buildings constructed prior to 1977 that would be demolished by the development supported by the Proposed Plan may have used ACM and could expose receptors to asbestos, which may become airborne with other particulates during demolition.

[5] Fehr & Peers, 2018

Many buildings that would be considered sensitive receptors, including schools, child care centers, rehabilitation centers, and residences, are located within the City of St. Helena. These facilities are clustered in the center of the city, where most development in St. Helena can be found. Land use change areas under the Proposed Plan, as seen in Figure 2.3-3, are similarly clustered in this area and may be adjacent to sensitive receptors. Figure 3.8-5 shows proposed land use within a quarter mile of schools in St. Helena, which includes Industrial and Agricultural. Additional land use change areas near sensitive receptors could result in demolition of existing structures to accommodate the new land use designations of Mixed-Use, Medium and High Density Residential, and Central Business. If structures to be demolished in this central area used ACM, nearby sensitive receptors could be exposed to asbestos.

However, all demolition activities are subject to EPA's asbestos NESHAP if asbestos is present at the existing facilities. The asbestos NESHAP regulations protect the public by minimizing the release of asbestos fibers during activities involving the processing, handling, and disposal of ACM. The asbestos NESHAP regulations for demolition and renovation are outlined in BAAQMD Regulation XI, Rule 11-2. Consequently, regulatory mechanisms exist that would ensure that impacts from ACM, if present during demolition under the Proposed Plan, would be less than significant.

Toxic Air Contaminants

Construction

In addition to impacts from criteria pollutants, project impacts may include emissions of pollutants identified by the State and federal governments as TACs or hazardous air pollutants (HAPs). State law has established the framework for California's TAC identification and control program, which is generally more stringent than the federal program and is aimed at HAPs that are a problem in California. The State has formally identified more than 200 substances as TACs, including the federal HAPs, and is adopting appropriate control measures for sources of these TACs. As examples, TACs include acetaldehyde, benzene, 1,3-butadiene, carbon tetrachloride, hexavalent chromium, para-dichlorobenzene, formaldehyde, methylene chloride, perchloroethylene, and DPM. Some of the TACs are groups of compounds that contain many individual substances (for example, copper compounds and polycyclic organic matter). The greatest potential for TAC emissions during construction would be diesel particulate emissions from heavy equipment operations and heavy-duty trucks and the associated health impacts to sensitive receptors. Sensitive receptors include residences, schools, playgrounds, child care centers, athletic facilities, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes. Sensitive receptors are spread throughout the city but are highly concentrated in Downtown St. Helena. This portion of the city contains the majority of medium and high density residential land, schools, and facilities such as rehabilitation centers and retirement homes. Development under the Proposed Plan would be concentrated in the downtown area, potentially exposing sensitive receptors clustered around State Route 29 and Downtown St. Helena to diesel particulate emissions from related construction activities.

Off-road diesel construction equipment and heavy-duty diesel trucks (e.g., concrete trucks, building materials delivery trucks), which are sources of diesel exhaust particulate matter, are regulated under three airborne toxic control measures (ATCMs) adopted by CARB. The ATCM for diesel construction equipment specifies particulate matter emission standards for equipment

fleets, which become increasingly stringent over time. Furthermore, most newly-purchased construction equipment introduced into construction fleets after 2013–2015, depending on the engine horsepower rating, are equipped with high-efficiency diesel particulate filters. One of ATCMs for heavy-duty diesel trucks specifies that commercial trucks with a gross vehicle weight rating over 10,000 pounds are prohibited from idling for more than 5 minutes unless the engines are idling while queuing or involved in operational activities. In addition, starting in model year 2008, new heavy-duty trucks must be equipped with an automatic shutoff device to prevent excessive idling or meet stringent NO_x requirements. Lastly, fleets of diesel trucks with a gross vehicle weight rating greater than 14,000 pounds are subject to another ATCM. This ATCM requires truck fleet operators to replace older vehicles and/or equip them with diesel particulate filters, depending on the age of the truck.

Construction activities under the Proposed Plan would be dispersed intermittently over a 22-year period and would not expose an individual to a continuous source of pollution. However, without specific details on the locations of building footprints or their construction schedules, a quantitative evaluation of potential health risk impacts is not possible. Recommended Mitigation Measures AQ-1, AQ-4, AQ-5, and AQ-6 would mitigate air quality impacts from construction as they affect the community and associated health risks. Mitigation Measure AQ-1 addresses construction-related fugitive dust emissions. Mitigation Measure AQ-4 requires development projects to meet CARB setback recommendations from air contaminant sources for sensitive uses or conduct specific air quality and health risk impact analyses and identify project specific mitigation measures. Mitigation Measure AQ-5 requires development projects in proximity to Highway 29, Silverado Trail and the Rail Corridor to include an analysis of mobile source TAC health risks in order to protect sensitive receptors and identify additional mitigation strategies. Mitigation Measure AQ-6 is also identified to provide a project-level evaluation of construction-related health risks from future projects within 1,000 feet of sensitive receptors, consistent with BAAQMD's guidelines.

With implementation of the above mitigation measures, the diesel exhaust particulate matter emissions from off-road construction equipment and trucks will be controlled substantially over the life of the project. Therefore, impacts of construction on sensitive receptors would be less than significant with mitigation.

Operation

STATIONARY SOURCES

When siting new sensitive receptors, the BAAQMD Guidelines advise that lead agencies examine existing or future proposed sources of TAC and/or PM emissions that would adversely affect individuals within the planned project. New residences and sensitive receptors could be located near stationary sources of TACs located throughout the city, such as emergency back-up diesel generators. Without proper setbacks or mitigation measures, these sources could result in TAC or PM levels that would be significant for new sensitive receptors. The 2005 CARB Air Quality and Land Use Handbook: A Community Health Perspective recommends a minimum setback of 1,000 feet between new sensitive land uses and distribution centers with 100 or more daily truck trips. There is only one distribution center in Downtown St. Helena, and two other distribution centers are located in the southeast portion of the Planning Area away from sensitive uses.

The City of St. Helena has several permitted stationary sources. These sources are located throughout the City, but mostly in commercial or semi-rural areas. The majority of sensitive receptors, such as schools, residences, and facilities like retirement homes and rehabilitation centers, are located in the downtown area of the city. The impact of these sources can only be addressed on a project-by-project basis, since impacts are generally localized. To assist lead agencies, BAAQMD has provided a database of permitted sources for each County. The database is contained in a Google Earth tool that allows a user to identify stationary sources within 1,000 feet of a receptor. The database can then be accessed through Google Earth to determine conservative screening levels of cancer risk, hazards, and PM concentrations. This allows many of the sources to be screened out of any additional analysis. Stationary sources that show the potential for significant community risk impacts after this first level of review are further analyzed by contacting BAAQMD for additional information and applying distance adjustment factors. A refined modeling analysis is required if there are sources that still have potentially significant impacts after this level of review. A refined analysis would include dispersion modeling of the source using emissions and source information provided by BAAQMD. If the source still has significant community risk impacts following this level of effort, then risk reduction strategies would have to be implemented by the project on a case-by-case basis.

Mitigation Measure AQ-4 would require development projects to meet CARB setback recommendations from air contaminant sources for sensitive uses, or conduct specific air quality and health risk impact analyses and identify project specific mitigation measures. Additionally, Mitigation Measure AQ-3 requires any new use with the potential to generate point source pollution to be referred to the BAAQMD for review and comment prior to adoption. There are also policies within the Proposed Plan (Policy LU4.1 and implementation actions LU4.C, LU5.F, and LU5.H) that evaluate the need for buffers and transitional zones between existing and potential sources of TACs and PM, such as industrial and agricultural uses. With the implementation of these policies and mitigation measures, impacts would be reduced to a less than significant level.

GASOLINE STATIONS

The 2005 CARB Air Quality and Land Use Handbook: A Community Health Perspective recommends a setback of 300 feet for large gasoline dispensing facilities (3.6 million gallons of throughput a year or greater) and 50 feet for typical gas dispensing facilities. The City of St. Helena currently has three gas stations located along State Route 29: Chevron, 76, and Napa Valley Petroleum. A fourth gas station, Flyers, is permanently closed and located outside of the Planning Area. However, none of these gas stations are considered to be a large volume gasoline station. The majority of schools in St. Helena, which are considered sensitive receptors, are located along State Route 29 (Figure 3.8-5). Additionally, the Proposed Plan includes new land use designations of Mixed-Use and High Density Residential near 76 and Napa Valley Petroleum. However, none of these sensitive receptors are located within 50 feet of existing gasoline stations. Mitigation Measure AQ-4 would require development projects to meet CARB setback recommendations from air contaminant sources for sensitive uses or conduct specific air quality and health risk impact analyses and identify project specific mitigation measures. Additionally, Mitigation Measure AQ-3 requires any new use with the potential to generate point source pollution to be referred to the BAAQMD for review and comment prior to adoption.

DRY CLEANING FACILITIES

There is one dry cleaning facility in St. Helena, which is located on Main Street over 1,000 feet from the nearest school. Perchlorethylene (Perc) is the solvent used commonly in past dry-cleaning operations. Perc is a TAC because it has the potential to cause cancer. In 2005, CARB recommended setbacks of 300 feet between dry cleaning facilities that emit Perc and sensitive land uses. If two or more machines are in operation, setbacks are greater. Since then, CARB has enacted new rules to substantially reduce Perc emissions and phase out the use of TACs in dry cleaning by 2023. Most of these operations have phased out Perc use and are no longer considered TAC sources. Implementation of Mitigation Measure AQ-4 would require development projects to meet CARB setback recommendations from air contaminant sources for sensitive uses or conduct specific air quality and health risk impact analyses and identify project specific mitigation measures. Additionally, Mitigation Measure AQ-3 requires any new use with the potential to generate point source pollution to be referred to BAAQMD for review and comment prior to adoption. New dry cleaning facilities could be constructed in commercial or mixed-use areas in the Proposed Plan. Land adjacent to the current dry cleaning facility or potential future facilities would be designated as Mixed-Use and High Density Residential under implementation of the Proposed Plan. Given existing CARB measures regarding setback and emissions requirements in combination with the recommended mitigation measures, emissions from dry cleaning facilities would have a less than significant impact on sensitive receptors.

EMERGENCY BACK-UP GENERATORS

Electricity generators that are powered by diesel engines are typically located at facilities where uninterrupted electricity is necessary. Diesel engines powering these generators are regulated by BAAQMD and CARB. CARB has established strict emissions limits and operating restrictions for engines larger than 50 horsepower. BAAQMD has developed criteria (Regulation 2 Rule 5) for approval of projects with new or modified emission sources of TACs. As a result, all new engines have very localized impacts and would not be permitted if they would cause significant cancer risks or hazards. Existing engines are only permitted to operate for a maximum of 50 hours per year for maintenance or routine testing.

Stationary sources in the Planning Area were identified using BAAQMD's Stationary Source Screening Analysis Tool, as described above. The BAAQMD data provide the screening risk, hazard and PM2.5 concentration levels associated with each source. Table 3.3-9 identifies the approximate setback distances from stationary sources that have potentially significant impacts using the screening data provided by BAAQMD and the Risk and Hazards Emissions Screening Calculator (Beta Version) tool. However, refined analysis of the effects from these sources through emissions and dispersion modeling would likely show lower TAC exposure.

Table 3.3-9: Approximate Screening Setback Distances for Stationary TAC Sources

Source	*Distance in Feet to Cancer Risk Threshold*	*Distance in Feet to PM2.5 Threshold*
Pacific Bell, generator, Plant 13512 1240 Oak	175	<10
Nella Oil, Gasoline Station Plant G10941 800	100	0
Saint Helena Chevron, Gasoline Station, Plant G11858 1400 Main Street	170	0
St Helena Petroleum, Gasoline Station Plant G8851 1153 main Street	140	0

Source: Illingworth & Rodkin, 2016

HIGHWAY AND ROADWAY TRAFFIC

CARB recommends that new sensitive land uses should be setback at least 500 feet from the following: a freeway, urban roads with 100,000 vehicles/day, or rural roads with 50,000 vehicles/day. State Route 29 is not classified as a freeway[6] and the vehicles/day on the urban and rural roads in the city do not exceed CARB's thresholds. Buildout of the Proposed Plan could increase traffic volume and congestion at seven intersections but would not reach the volumes describes above (see Section 3.13, Transportation and Traffic).[7]

The BAAQMD *Highway Screening Analysis Tool* and the *Roadway Screening Analysis Calculator* were used to predict screening distances along busy roadways in St. Helena in terms of cancer risk and $PM_{2.5}$ exposure. Table 3.3-10 identifies the approximate setback distances from highway sources that have potentially significant impacts, using the data provided by BAAQMD. However, refined analysis of the effects from these sources through emissions and dispersion modeling would likely show lower TAC exposure. Mitigation Measure AQ-5 requires discretionary projects in proximity to Highway 29, Silverado Trail, and the Rail Corridor to include an analysis of mobile source TAC health risks and identify feasible mitigation measures to reduce health risks to acceptable levels.

[6] A freeway is a highway where access to the roadway is controlled. Drivers can only enter a controlled-access highway by ramps. Traffic traveling in opposite directions is usually separated by a median, and vehicles wanting to cross a freeway must use an overpass or underpass. Freeways are usually in an urban setting and have higher speed limits.

[7] Fehr & Peers, 2018

Table 3.3-10: Screening Setback Distances for Roadway TAC Sources

Source	*Distance in Feet to Cancer Risk Threshold*	*Distance in Feet to PM2.5 Threshold*
Highway 29	75	<10
Silverado Trail (assumed ADT of 12,000)	40	<10

Source: Illingworth & Rodkin, 2016

In conclusion, the Proposed Plan would allow growth of new residential land uses that would be sensitive receptors and new non-residential land uses that are a potential for new emissions sources. Typically, these sources would be evaluated through the BAAQMD permit process and/or the CEQA process to identify and mitigate any significant exposures. Additionally, policies within the Proposed Plan aim to establish buffers between potential air pollution sources and sensitive receptors, as well as limit pollution during construction. Mitigation Measures AQ-1, AQ-2, AQ-3, AQ-4, AQ-5, and AQ-6 are recommended to reduce potential impacts on sensitive receptors. Specifically, Mitigation Measure AQ-6 is consistent with BAAQMD's guidelines to include a requirement for health risk assessment for all projects within 1,000 feet of existing sensitive receptors. Therefore, the potential future increases in TAC or PM, and their impacts on sensitive receptors, would be considered less than significant with mitigation.

Significance Before Mitigation: Significant

Mitigation Measures

Mitigation Measures AQ-1, AQ-2, and AQ-3, as listed under Impacts 3.3-1 and 3.3-2, as well as the following measures:

AQ-4: Require development projects to meet CARB setback recommendations from air contaminant sources for sensitive uses, or conduct specific air quality and health risk impact analyses and identify project specific mitigation measures.

AQ-5 : To protect sensitive receptors require discretionary projects in proximity to Highway 29, Silverado Trail and the Rail Corridor to include an analysis of mobile source toxic air contaminant health risks. The analysis, if necessary, shall identify feasible mitigation measures to reduce health risks to acceptable levels

AQ-6: All applicants proposing development of projects within 1,000 feet of existing sensitive receptors, as defined by BAAQMD, shall prepare a site-specific construction health risk assessment (HRA) taking into account both project-level and cumulative health risks (including existing TAC sources). If the HRA demonstrates, to the satisfaction of the City, that the health risk exposures for adjacent receptors will be less than BAAQMD project-level and cumulative thresholds (as appropriate), then additional mitigation would be unnecessary. However, if the HRA demonstrates that health risks would exceed BAAQMD project-level and/or cumulative thresholds (as appropriate), additional feasible on- and

offsite mitigation shall be analyzed by the applicant to help reduce risks to the greatest extent practicable.

Significance After Mitigation: Less than Significant with Mitigation. While development allowable under the Proposed Plan could expose sensitive receptors, especially residents, to air pollution, policies and implementing actions reduce the conflict of land uses through the use of buffers, as well as the reduction of air pollution. While these policies and actions alone could not sufficiently guarantee no significant impact, introduction of mitigation measures that set specific buffers between land uses as recommended by CARB and BAAQMD, as well as additional studies for projects located along SR-29 and Silverado Trail, are sufficient to reduce impacts to a less-than-significant after mitigation.

Impact 3.3-5 Development under the Proposed Plan would not create objectionable odors affecting a substantial number of people. (*Less than Significant*)

Potential impacts could occur if new sources of objectionable odors are placed near sensitive receptors. Objectionable odors can be generated from certain types of commercial and/or industrial land uses. In general, residential land uses are not associated with odor generation, but they do serve as sensitive receptors. Common sources of odors within St. Helena come from farming operations, wine production (crushing and fermenting grapes), restaurants, auto body shops, and waste treatment facilities. Although offensive odors rarely cause any physical harm, they can be very unpleasant, leading to considerable stress among the public and often generating citizen complaints to local governments and BAAQMD. A significant impact would occur if development under the Proposed Plan introduced new sources of odor that would be offensive to a substantial portion of the population within the Planning Area.

The BAAQMD CEQA Guidelines recommendation for assessing plan level odor impacts is to "identify the location of existing and planned odor sources in the plan and identify goals, policies, and objectives to minimize potentially adverse impacts in the plan." There are no identified sources of odors that result in frequent odor complaints in St. Helena. However, localized odor sources could create complaints if new development as a result of implementation of the Proposed Plan increased the number of residents placed in close proximity to these odor sources. An example would be new residences built next to a restaurant or coffee shop that has on-site coffee roasting. This type of conflict can result in odor complaints that could be avoided during project planning but would only be considered a significant impact if the odor affected a substantial number of people rather than individual taste.

Buildout permitted under the Proposed Plan could include new sources of odors, such as composting; food processing; wine production; and painting/coating operations, because these are permitted uses in the commercial and/or industrial areas in the Planning Area. Schools within the Planning Area, seen in Figure 2.3-3, are in the vicinity of, but not directly adjacent to, land designated as industrial and agricultural. Future environmental review could be required for industrial projects to ensure that sensitive land uses are not exposed to objectionable odors. Additionally, the City's Municipal Code adopted California Green Building Code standards regarding VOC content for architectural coatings, adhesives, and sealants, which would minimize odor impacts from construction and operation.

BAAQMD Regulation 7, Odorous Substances, requires abatement of any nuisance generating an odor complaint. Typical abatement includes passing air through a drying agent followed by two successive beds of activated carbon to render air odor free. The Proposed Plan update includes policies and implementing actions to discourage the siting of residential uses and sensitive receptors in close proximity to sources of odors. Implementing Action PS1.J requires that the potential for sources of odors that includes restaurants, auto body shops, or waste treatment facilities shall be considered when evaluating proposed residential projects and projects with sensitive recipients.

Review of development under the Proposed Plan using BAAQMD's odor screening distances during future CEQA review, policies and implementing actions in the Proposed Plan, and compliance with BAAQMD Regulation 7 and California Green Building Code would discourage siting sensitive receptors in proximity to odor sources, thus ensuring that odor impacts are minimized and are less than significant.

Mitigation Measures

None required.

This page intentionally left blank.

3.4 Biological Resources

This section assesses potential environmental impacts on existing biological resources from future development under the Proposed Plan, including those related to sensitive species and/or habitats, riparian or streamside resources under the jurisdiction of federal or State agencies, and adopted regulations or policies. The section describes biological resources in the Planning Area, including habitats, wetlands, critical habitat, and special-status species, as well as relevant federal, State, and local regulations and programs.

There was one comment on the NOP related to biological resources. The commenter requested that the impacts of new development in the industrial area located on the southeast side of the city be considered relative to biological resources and nearby riparian areas. Impacts of new development throughout the city on biological resources are discussed in the impact analysis below.

Environmental Setting

PHYSICAL SETTING

Habitat Types

St. Helena is characterized by a mix of urban development and agricultural uses with some undeveloped wooded hillsides to the east and west of the city center and wooded hillsides interspersed with residential development to the west of the city center. The Napa River and a narrow band of associated riparian vegetation form a large portion of the eastern and northern boundaries of the city. York Creek and Sulphur Creek flow from the hills west of the city, through the city and surrounding agricultural lands, and join the Napa River within the city limits.

Urbanization and extensive agricultural use limit the extent of native vegetation communities and associated high-quality wildlife habitats within St. Helena. The remaining vegetation communities dominated by native plants occur within the undeveloped lands in the hillsides to the east and west of the city, and within the stream and river corridors traversing the valley floor. The value of an area to wildlife depends on a number of physical and biological factors, including the quality of the remaining habitat and extent of protective cover, location relative to other land uses, and the uniqueness of the habitat within a regional context.

The following habitat types have been mapped within the Planning Area by the California Department of Fish and Wildlife (CDFW) as of April 2018. These classifications and descriptions are taken from the California Wildlife Habitat Relationships System (CWHR System) and identify vegetative communities and potentially associated wildlife. While each classification may not be

completely accurate in identifying exact species or conditions on the ground, they do provide useful information on what is likely to be found, as well as a starting point for further site-specific study for individual projects. Habitat types are shown in Figure 3.4-1: Habitat Types.

Annual Grassland

Annual Grassland is mapped on approximately 52 acres within the Planning Area, including portions along Sulphur Creek and the western edge of the city. Annual Grassland habitats are open grasslands composed primarily of annual plant species. Introduced annual grasses are the dominant plant species in this habitat, and can include species such as wild oats, brome grasses, and others, as well as forbs and perennial grasses. Different species of wildlife and plants benefit from different grazing intensities or mowing regimes, and frequencies of burning. Annual grasslands can be extremely productive wildlife habitats, providing abundant seed and insects as a food source for small mammals and birds, which in turn provide prey for numerous raptors and other predators. A variety of reptiles and mammals are characteristic of grassland habitats. These species include western fence lizard, common garter, gopher snake black-tailed jackrabbit, California ground squirrel, Botta's pocket gopher, western harvest mouse, California vole, and coyote. Common birds that breed in or near grassland habitats include western kingbird, loggerhead shrike, California horned lark, Savannah sparrow, western bluebird, Say's phoebe, and western meadowlark. Grasslands also provide important foraging habitat for a number of raptors, including golden eagle, northern harrier American kestrel, white-tailed kite, red-tailed hawk, and wintering ferruginous.

Blue Oak-Foothill Pine

The Blue Oak-Foothill Pine habitat type is mapped on three acres in the Planning Area, along the western edge of the city near Palmer Drive. This habitat is typically diverse in structure with a mix of hardwoods, conifers, and shrubs. The overstory is typically composed of blue oak and foothill pine, with blue oak usually most abundant. Blue Oak-Foothill Pine woodlands provide breeding habitats for a large variety of wildlife species, although no species is totally dependent on them for breeding, feeding, or cover. Most species breed during late winter and early spring. Snags are less common, and hence less critical to wildlife, in this than in other forest types. Most species of cavity-nesting birds, for example, use living oaks. The cavities are often in scars where limbs have broken from the trunk or a main branch and have developed a level of decay that makes them more easily excavated by primary cavity nesters.

Blue Oak Woodland

Blue Oak Woodland is mapped on 70 acres in the Planning Area, at the northwestern edge along State Route 29 (SR-29) and in the northeast along Howell Mountain Road. Blue oak is the dominant species of this habitat type, comprising 85 to 100 percent of the trees present. Previous studies of Blue Oak Woodland in California have found that 29 species of amphibians and reptiles, 57 species of birds, and 10 species of mammals find mature stages of this type suitable or optimum for breeding, assuming that other special habitat requirements are met.

Chamise-Redshank Chaparral

Chamise-Redshank Chaparral is mapped on 12 acres in the Planning Area, in the city along the Silverado Trail and in Study Area 1. Chamise-Redshank Chaparral may consist of nearly pure

stands of chamise or redshank, a mixture of both, or with other shrubs. The primary land management consideration for this habitat type is selection of alternative fire management treatments. Long-term fire suppression can lead to stand senescence and declines in deer, small mammals, birds, and reptiles. Most animal populations reach peak densities in the first two or three decades, frequently 1 to 15 years, after a fire.

Coastal Oak Woodland

Coastal Oak Woodland is mapped on 110 acres in the Planning Area, primarily north of the Napa River. Coastal oak woodlands are extremely variable. The overstory consists of deciduous and evergreen hardwoods sometimes mixed with scattered conifers. Composition of both overstory trees and understory of coastal oak woodland varies and reflects the environmental diversity over which this habitat occurs. Typical understory plants in dense coast live oak woodlands are shade tolerant shrubs such as California blackberry, creeping snowberry, toyon, and herbaceous plants such as bracken fern, California polypody, fiesta flower, and miner's lettuce. Where coast live oak woodlands intergrade with chaparral, species such as greenleaf manzanita, chamise, gooseberries, currants, and ceanothus species form the understory. Coastal oak woodlands provide habitat for a variety of wildlife species. Quail, turkeys, squirrels, and deer may be so dependent on acorns in fall and early winter that a poor acorn year can result in significant declines in their populations.

Douglas-Fir

Douglas-Fir is mapped on 169 acres in the Planning Area, mainly on the southwestern edge of the city and north of the Napa River. This habitat type supports a high abundance of wildlife species. Bird species typical of this habitat type include spotted owl, western flycatcher, chestnut-backed chickadee, golden-crowned kinglet, Hutton's vireo, solitary vireo, hermit warbler, and varied thrush. Among amphibians and reptiles, the distributions of northwestern salamander, Pacific giant salamander, Olympic salamander, Del Norte salamander, black salamander, clouded salamander, tailed frog, and northwestern garter snake are largely coincident with the distribution of Douglas-fir habitat. Although not restricted to this habitat, the ensatina is its most abundant amphibian. Typical mammals include fisher, deer mouse, dusky-footed woodrat western redbacked vole, creeping vole, Douglas' squirrel, Trowbridge's shrew, and shrew-mole.

Eucalyptus

Eucalyptus is mapped on 6 acres in the Planning Area, along the west side of SR-29 north of York Creek. Eucalyptus habitats range from single-species thickets with little or no shrubby understory to scattered trees over a well-developed herbaceous and shrubby understory. Characteristic species of this habitat include crow, raven, barn owl, and red-tailed and red-shouldered hawks. Eucalyptus are important as roosts, perches, and nest sites for a number of bird species, particularly raptors. Those eucalyptus with stringy bark or a tendency for rapid deposition of litter, create micro habitats for a number of small vertebrate species, including alligator lizard, gopher snake, and woodrat.

Mixed Chaparral

Mixed Chaparral is mapped on 20 acres in the Planning Area, mainly in Study Area 1 with a small area on the western edge of the city along York Creek. Mixed Chaparral is a structurally homogeneous brushland type dominated by shrubs with thick, stiff, heavily cutinized evergreen

leaves. No wildlife species are restricted to Mixed Chaparral. Most species are found in other shrub-dominated types, including Chamise-Redshank Chaparral, or the shrubs beneath several woodland and forest types. Wildlife management considerations usually focus on selecting alternative fire management treatments. Potential impacts of management actions in Mixed Chaparral generally are similar to Chamise-Redshank Chaparral.

Montane Hardwood

Montane Hardwood is mapped on 177 acres in the Planning Area, along the western edge of the city and along Howell Mountain Road in the northeast. A typical montane hardwood habitat is composed of a pronounced hardwood tree layer, with an infrequent and poorly developed shrub stratum, and a sparse herbaceous layer. Bird and animal species characteristic of the Montane Hardwood habitat type include disseminators of acorns (scrub and Steller's jays, acorn woodpecker, and western gray squirrel) plus those that utilize acorns as a major food source wild turkey, mountain quail, band-tailed pigeon, California ground squirrel, dusky-footed woodrat, black bear, and mule deer. Deer also use the foliage of several hardwoods to a moderate extent. Many amphibians and reptiles are found on the forest floor in the Montane Hardwood habitat. Among them are Mount Lyell salamander, ensatina, relictual slender salamander, western fence lizard, and sagebrush lizard. Snakes include rubber boa, western rattlesnake, California mountain kingsnake, and sharp tailed snake.

Montane Riparian

Montane Riparian is mapped on 130 acres in the Planning Area, along the creeks and river, at the northwestern edge of the city, and north of Howell Mountain Road in the northeast. The vegetation of montane riparian zones is quite variable and often structurally diverse. Usually, the montane riparian zone occurs as a narrow, often dense grove of broad-leaved, winter deciduous trees up to 30 m (98 ft) tall with a sparse understory. All riparian habitats have an exceptionally high value for many wildlife species. Such areas provide water, thermal cover, migration corridors and diverse nesting and feeding opportunities. The range of wildlife that uses the Montane Riparian habitat for food, cover and reproduction include amphibians, reptiles, birds and mammals.

Orchard-Vineyard

Orchard-Vineyard has the greatest coverage in the Planning Area, mapped on 1,385 acres throughout the city and Study Area 1. In the Planning Area, this habitat type is made up primarily of vineyards. Vineyards are composed of single species planted in rows, usually supported on wood and wire trellises. Vines are normally intertwined in the rows but open between rows. Rows under the vines are usually sprayed with herbicides to prevent growth of herbaceous plants. Between rows of vines, grasses and other herbaceous plants may be planted or allowed to grow as a cover crop to control erosion. Some species of birds and mammals have adapted to the vineyard habitats. Many have become “agricultural pests” which has resulted in intensive efforts to reduce crop losses through fencing, sound guns, or other management techniques. Wildlife such as deer and rabbits browse on the trees or vines; other wildlife such as squirrels and numerous birds feed on fruit or nuts. Some wildlife (e.g., mourning dove, California quail) are more passive in their use of the habitat for cover and nesting sites.

Urban

Urban areas are mapped on 1,391 acres in the Planning Area, covering the developed portions of the city and study areas. The structure of urban vegetation varies, with five types of vegetative structure defined: tree grove, street strip, shade tree/lawn, lawn, and shrub cover. Tree groves, common in city parks, green belts, and cemeteries, vary in height, tree spacing, crown shape, and understory conditions, depending upon the species planted and the planting design. However, they have a continuous canopy. Street tree strips show variation in spacing of trees, depending upon species and design considerations. Shade trees and lawns are typical of residential areas and reminiscent of natural savannas. Structural variation in the shade tree/lawn type is typical when a large number of species are incorporated in the landscape. Lawns are structurally the most uniform vegetative units of the California urban habitat. A variety of grass species are employed, which are maintained at a uniform height and continuous ground cover. The juxtaposition of urban vegetation types within cities produces a rich mosaic with considerable edge areas. The overall mosaic may be more valuable as wildlife habitat than the individual units in that mosaic.

Valley Oak Woodland

Valley Oak Woodland is mapped on 5 acres in the Planning Area, near the western edge of the city. This habitat type varies from savanna-like to forest-like stands with partially closed canopies, comprising mostly winter-deciduous, broad-leaved species. These woodlands provide food and cover for many species of wildlife. Oaks have long been considered important to some birds and mammals as a food resource (i.e., acorns and browse). Previous studies of the habitat type found that many bird species include acorns in their diet or use oak habitats for breeding; and that the ranges of about 80 mammal species overlap with valley oaks, and that several use valley oaks for food and shelter.

Special-Status Species

Special-status species are those plants and animals that, because of their acknowledged rarity or vulnerability to various causes of habitat loss or population decline, are recognized by federal, State, or other agencies as deserving special consideration. The California Natural Diversity Database (CNDDB) was used to identify special-status species with the potential to occur in the Planning Area based on previously reported occurrences of special-status species within five miles of the Planning Area. The CNDDB is an inventory of the status and locations of rare plants and animals in California maintained by CDFW. Figure 3.4-2: Critical Habitats and Special-Status Species shows a generalized range for where special-status species known to occur in the Planning Area have previously been sighted.

The CNDDB is regularly updated to track occurrences of previously documented special-status species; however, it contains only those records that have been submitted to CDFW. Thus, there may be additional occurrences of special-status species within this area that have not yet been surveyed and/or mapped. Lack of information in the CNDDB about a species or an area does not imply that the species does not occur or that there is a lack of diversity in that area. Additionally, species shown in Figure 3.4-2 have the potential to occur outside of the area delineated in the figure.

Special-Status Animal Species

Table 3.4-1 lists special-status animal species mapped with previously reported occurrences within five miles of the Planning Area, based on a search of the CNDDB conducted in July 2018. The CNDDB lists 17 animal species, including one species listed as Threatened under the Federal Endangered Species Act (FESA), and three species listed under the California Endangered Species Act (CESA) as Endangered, Threatened, or Candidate Threatened.

Table 3.4-1: CNDDB Special-Status Animal Species

Common Name (Scientific Name)	*Federal/State Status*	*Rank*[1]	*Other Status*[2]	*Habitat*
Amphibians				
California giant salamander (*Dicamptodon ensatus*)	None/None	G3/S2S3	CDFW:SSC IUCN:NT	Usually found in cool, moist, forest habitat and associated with rocky streams and springs.
Foothill yellow-legged frog (*Rana boylii*)	None/ Candidate Threatened	G3/S3	BLM:S CDFW:SSC IUCN:NT USFS:S	Found in or near rocky streams in a variety of habitats, including valley-foothill hardwood, valley-foothill hardwood-conifer, mixed chaparral
Birds				
Great egret (*Ardea alba*)	None/None	G5/S4	CDF:S IUCN:LC	Requires groves of trees suitable for nesting and roosting, relatively isolated from human activities, near aquatic foraging areas. Feeds and rests in fresh, and saline emergent wetlands, along the margins of estuaries, lakes, and slow-moving streams, on mudflats and salt ponds, and in irrigated croplands and pastures.
Great blue heron (*Ardea Herodias*)	None/None	G5/S4	CDF:S IUCN:LC	Common in in shallow estuaries and fresh and saline emergent wetlands. For nesting, prefers secluded groves of tall trees near shallow-water feeding areas.
Swainson's hawk (*Buteo swainsoni*)	None/ Threatened	G5/S3	BLM:S IUCN:LC USFWS:BCC	Typical habitat is open desert, grassland, or cropland containing scattered, large trees or small groves.

Table 3.4-1: CNDDB Special-Status Animal Species

Common Name (Scientific Name)	*Federal/State Status*	*Rank*[1]	*Other Status*[2]	*Habitat*
American peregrine falcon (*Falco peregrinus anatum*)	Delisted/ Delisted	G4T4/S3S4	CDF:S CDFW:FP USFWS:BCC	Frequents bodies of water in open areas with cliffs and canyons nearby for cover and nesting.
Bald eagle (*Haliaeetus leucocephalus*)	Delisted/ Endangered	G5/S3	BLM:S CDF:S CDFW:FP IUCN:LC USFS:S USFWS:BCC	Requires large, old-growth trees or snags in remote, mixed stands near water.
Double-crested cormorant (*Phalacrocorax auratus*)	None/None	G5/S4	CDFW:WL IUCN:LC	Found along the entire coast of California and on inland lakes, in fresh, salt and estuarine waters.
Purple martin (Progne subis)	None/None	G5/S3	CDFW:SSC IUCN:LC	Frequents old-growth, multi-layered, open forest and woodland with snags in breeding season. Forages over riparian areas, forest, and woodland. Found in a variety of open habitats in migration.
Fish				
Steelhead – central California coast (Oncorhynchus mykiss irideus pop. 8)	Threatened/ None	G5T2T3Q/S2S3	AFS:TH	Inhabits riparian, emergent, palustrine habitat. Spawning and rearing habitat is usually characterized by perennial streams with clear, cool to cold, fast-flowing water with a high dissolved-oxygen content and abundant gravels and riffles.
Mammals				
Pallid bat (Antrozous pallidus)	None/None	G5/S3	BLM:S CDFW:SSC IUCN:LC USFS:S WBWG:H	Occupies a wide variety of habitats, including grasslands, shrublands, woodlands, and forests from sea level up through mixed conifer forests. Prefers rocky outcrops, cliffs, and crevices with access to open habitats for foraging.

Table 3.4-1: CNDDB Special-Status Animal Species

Common Name (Scientific Name)	*Federal/State Status*	*Rank*[1]	*Other Status*[2]	*Habitat*
Townsend's big-eared bat (Corynorhinus townsendii)	None/None	G3G4/S2	BLM:S CDFW:SSC IUCN:LC USFS:S WBWG:H	Requires caves, mines, tunnels, buildings, or other human-made structures for roosting.
North American porcupine (Erethizon dorsatum)	None/None	G5/S3	IUCN:LC	Requires forest with a good understory of herbs, grasses, and shrubs. Prefers open stands of conifers. In spring and summer, uses meadows, brushy and riparian habitats for feeding. In winter, restricted to forests.
Fringed myotis (Myotis thysanodes)	None/None	G4/S3	BLM:S IUCN:LC USFS:S WBWG:H	Uses open habitats, early successional stages, streams, lakes, and ponds as foraging areas.
Insects				
Obscure bumble bee (Bombus caliginosus)	None/None	G4?/S1S2	IUCN:VU	Inhabits open grassy coastal prairies and Coast Range meadows. Nesting occurs underground as well as above ground in abandoned bird nests.
Western bumble bee (Bombus occidentalis)	None/None	G2G3/S1	USFS:S XERCES:IM	Found in open grassy areas, urban parks and gardens, chaparral and shrub areas, and mountain meadows.
Reptiles				
Western pond turtle (Emys marmorata)	None/None	G3G4/S3	BLM:S CDFW:SSC IUCN:VU USFS:S	Associated with permanent or nearly permanent water in a wide variety of habitats.

Notes:

1. The global rank (G-rank) is a reflection of the overall status of an element throughout its global range. The state rank (S-rank) is assigned much the same way as the global rank, but state ranks refer to the imperilment status only within California's state boundaries. Uncertainty about a rank is expressed as a range of values or by adding a "?" to the rank. A "?" represents more certainty than a range.
   G1/S1 = Critically Imperiled; G2/S2 = Imperiled; G3/S3 = Vulnerable; G4/S4 = Apparently Secure; G5/S5 = Secure; T = Rank applies to a subspecies or variety; Q = There are taxonomic questions associated with the element.

Special-Status Plant Species

Table 3.4-2 lists special-status plant species mapped with previously reported occurrences within five miles of the Planning Area, based on a search of the CNDDB. The CNDDB lists 21 plant species, including three species listed as endangered under the FESA and threatened or endangered under the CESA.

Table 3.4-2: CNDDB Special-Status Plant Species

Common Name (Scientific Name)	*Federal/State Status*	*Rank[1]*	*California Rare Plant Rank[2]*	*Other Status[3]*	*Habitat and Blooming Period*
Bent-flowered fiddleneck (Amsinckia lunaris)	None/None	G2G3/S2S3	1B.2	BLM:S	Annual herb found in coastal bluff scrub, cismontane woodland, and valley and foothill grassland; elevation 3 to 500 meters; blooming period March to June
Calistoga ceanothus (Ceanothus divergens)	None/None	G2/S2	1B.2	BLM:S	Perennial evergreen shrub found in chaparral; elevation 170 to 950 meters; blooming period February to April
Calistoga popcornflower (Plagiobothrys strictus)	Endangered/ Threatened	G1/S1	1B.1	--	Annual herb found in alkaline areas near thermal springs in meadows and seeps, valley and foothill grassland, and vernal pools; elevation 90 to

Sensitive Habitats

Critical Habitat

Critical habitat is defined by the Endangered Species Act as a specific geographic area that contains features essential for the conservation of a threatened or endangered species and that may require special management and protection. All stretches of the Napa River, York Creek, and Sulphur Creek in and within five miles of the Planning Area are designated by the United States Fish and Wildlife Service (USFWS) as critical habitat for the steelhead trout. Additionally, critical habitat

for the northern spotted owl is mapped in multiple locations within five miles of the Planning Area, although not in the Planning Area itself. Figure 3.4-2: Critical Habitats and Special-Status Species shows critical habitats within the Planning Area.

Sensitive Natural Communities

Sensitive natural communities are those protected by or of special concern to federal, state, or local resource conservation agencies and organizations. CDFW and CNPS both have programs that identify and track rare and/or diminishing native plant communities within California. Although some of these communities represent important biological resources and may be unique to California, they may have no legal or protected status under the California and/or federal Endangered Species Acts. Regardless, substantial losses of some of these plant communities may be considered significant under CEQA.

Data from CDFW accessed in April 2018 identifies six sensitive natural communities in the Planning Area (Figure 3.4-3). The following descriptions reference the CNPS online database of sensitive natural communities.

- ***Adenostoma fasciculatum* shrubland alliance (chamise chaparral).** Mapped on 12 acres at the northern edge of Study Area 1 and along the Napa River at Silverado Trail, this alliance overlaps with the Chamise-Redshank Chaparral habitat type. *Adenostoma fasciculatum* is dominant in the shrub canopy with *Adenostoma sparsifolium, Arctostaphylos glandulosa, Arctostaphylos manzanita, Arctostaphylos viscida, Ceanothus spp., Diplacus aurantiacus, Eriodictyon californicum, Eriogonum fasciculatum, Hesperoyucca whipplei, Heteromeles arbutifolia, Quercus berberidifolia, Quercus wislizeni, Salvia apiana, Salvia leucophylla, Salvia mellifera* and *Toxicodendron diversilobum*. Emergent trees may be present at low cover.
- ***Alnus rhombifolia* forest alliance (white alder groves).** Mapped on five acres along York Creek at the western edge of the city, this alliance overlaps a portion of the Montane Riparian habitat type. *Alnus rhombifolia* is dominant or co-dominant in the tree canopy with *Acer macrophyllum, Chamaecyparis lawsoniana, Fraxinus latifolia, Notholithocarpus densiflorus, Platanus racemosa, Populus fremontii, Populus trichocarpa, Pseudotsuga menziesii, Quercus lobata* and *Salix spp*.
- ***Pinus sabiniana* woodland alliance (foothill pine woodland).** Mapped on three acres at the western edge of the city, this alliance overlaps with the Blue Oak-Foothill Pine habitat type. *Pinus sabiniana* is dominant or co-dominant in the tree canopy with *Aesculus californica, Juniperus californica, Juniperus occidentalis, Pinus coulteri, Quercus chrysolepis* and *Quercus wislizeni*.
- ***Quercus agrifolia* woodland alliance (coast live oak woodland).** Mapped on 84 acres north of the Napa River, this alliance overlaps a portion of the Coastal Oak Woodland habitat type. *Quercus agrifolia* is dominant or co-dominant in the tree canopy with *Acer macrophyllum, Acer negundo, Arbutus menziesii, Juglans californica, Platanus racemosa, Populus fremontii, Quercus douglasii, Quercus engelmannii, Quercus kelloggii, Quercus lobata, Salix lasiolepis* and *Umbellularia californica*.
- ***Quercus douglasii* woodland alliance (blue oak woodland).** Mapped on 94 acres along the northwestern edge of the city and north of Howell Mountain Road, this alliance overlaps

with the Blue Oak Woodland habitat type and a portion of the Montane Hardwood habitat type. *Quercus douglasii* is dominant or co-dominant in the tree canopy with *Aesculus californica, Juniperus californica, Pinus sabiniana, Quercus agrifolia, Quercus lobata* and *Quercus wislizeni*.

- ***Quercus lobata* woodland alliance (valley oak woodland).** Mapped on 93 acres along the Napa River and York and Sulphur creeks, this alliance overlaps with the Valley Oak Woodland habitat type and portions of the Montane Riparian habitat type. *Quercus lobata* is dominant or co-dominant in the tree canopy with *Acer negundo, Alnus rhombifolia, Fraxinus latifolia, Juglans hindsii, Juglans hindsii × regia, Platanus racemosa, Populus fremontii, Quercus agrifolia, Quercus douglasii, Quercus kelloggii, Quercus wislizeni, Salix gooddingii* and *Salix lasiolepis*. Shrubs and lianas may include *Aristolochia californica* or *Vitis californica*.

Wildlife Corridors

A wildlife corridor is a linear landscape feature (such as a ridge or valley), allowing animal movement between two sections of habitat. Wildlife corridors can be regional or local in nature, and may be identified as functional for some species but insufficient for others. Wildlife corridors play an important role in preserving species diversity. In the absence of corridors, habitats become isolated islands surrounded by development. Fragmented habitats support significantly lower numbers of species and increase the likelihood of extinction for species restricted to small areas. Connections between areas of open space are an integral part of maintaining biological diversity and population viability. Preserving connectivity is one of the most practical and effective measures to protect native biodiversity.

Corridors are frequently constrained by development through the loss of cover, increased noise, and the increased presence of domestic animals. However, even constrained corridors may increase in importance when alternative, preferred corridors are disturbed or eliminated. With the continued loss of native habitats throughout Napa County, existing and even constrained corridors have taken on a heightened significance. Within the Planning Area, the Napa River, York Creek, and Sulphur Creek riparian corridors function as important wildlife corridors.

Wetlands and Other Waters

Wetlands are areas where water covers the soil, or is present either at or near the surface of the soil all year or for varying periods of time during the year, including during the growing season. Water saturation (hydrology) largely determines how the soil develops and the types of plant and animal communities living in and on the soil. Wetlands may support both aquatic and terrestrial species. The prolonged presence of water creates conditions that favor the growth of specially adapted plants (hydrophytes) and promote the development of characteristic wetland (hydric) soils (EPA). Wetlands provide a multitude of ecological, economic, and social benefits. They provide habitat for fish, wildlife, and plants, allow for groundwater recharge, reduce flooding, and support cultural and recreational activities. As discussed further below under Regulatory Framework, technical standards for delineating wetlands have been developed by the U.S. Army Corps of Engineers (USACE) and the USFWS. Based on existing information from CDFW, there are no wetlands mapped within the Planning Area; however, this does not preclude the future identification of wetlands during site-specific study.

In the Planning Area, jurisdictional waters under the Clean Water Act include the Napa River, Sulphur Creek, and York Creek. Many of the "water features" identified in Figure 3.4-1 are human-made reservoirs used for agricultural purposes and would most likely not be regulated by jurisdictional agencies. There remains a possibility that regulated waters may also include smaller tributary ephemeral and intermittent drainages that occur within the largely undeveloped hillsides in the western and eastern edges of the Planning Area; channelized drainages on the valley floor; or seasonal wetland features, seeps, and springs. Further site assessment would be required to confirm the extent of jurisdictional waters on undeveloped land proposed for development or conversion to agricultural uses. Such site-specific study is outside of the scope of this program EIR.

REGULATORY SETTING

Federal Regulations

On the federal level, the U.S. Fish and Wildlife Service (USFWS) is responsible for protection of inland non-anadromous fish through implementation of the federal Endangered Species Act[1] and the Migratory Bird Treaty Act. The National Marine Fisheries Service (NOAA Fisheries) is responsible for protection of anadromous fish and marine wildlife. The USACE has primary responsibility for protecting wetlands under Section 404 of the Clean Water Act.

Federal Endangered Species Act

The FESA was enacted to protect any species of plant or animal that is endangered or threatened with extinction. Section 9 of the FESA prohibits "take" of federally threatened or endangered wildlife. Take, as defined under the FESA, means to harass, harm, pursue, hunt, wound, kill, trap, capture, collect, or attempt to engage in any such conduct (16 USC 1532[19]). Section 9 also prohibits the removal and reduction of endangered plants from lands under federal jurisdiction, and the removal, cutting, digging, damage, or destruction of endangered plants on any other area in "knowing violation of State law or regulation." Section 9 of the FESA (16 USC 1538) prohibits take of a federally listed endangered species of fish or wildlife except pursuant to a permit and habitat conservation plan (HCP) approved under Section 10(a) of the FESA (16 USC 1539). The FESA prohibitions and requirements are different, however, for endangered species of plants. Section 9 prohibits the take of endangered plants only from areas under federal jurisdiction, or if such take would violate state law. For listed plants located on private land, formal consultation with the USFWS is required when a project has a federal "nexus" (i.e., a federal permit is required or federal funding is involved). In the absence of a federal nexus, a project does not require a permit under the FESA for impacts on listed plants on private lands.

Migratory Bird Treaty Act (MBTA)

The MBTA (16 United States Code 703 et seq.) is a federal statute that implements treaties with several countries on the conservation and protection of migratory birds. The number of bird species covered by the MBTA is extensive, and is listed at 50 Code of Federal Regulations (CFR) 10.13. The regulatory definition of "migratory bird" is broad and includes any mutation or hybrid of a listed species and any part, egg, or nest of such birds (50 CFR 10.12). Migratory birds are not necessarily federally listed endangered or threatened birds under the FESA. The MBTA, which is enforced by the USFWS, makes it unlawful "by any means or in any manner, to pursue, hunt, take, capture, [or] kill" any migratory bird, or attempt such actions, except as permitted by regulation. The applicable regulations prohibit the take, possession, import, export, transport, sale, purchase, barter, or offering of these activities, except under a valid permit or as permitted in the implementing regulations (50 CFR 21.11).

Clean Water Act (CWA)

The USACE regulates discharges of dredged or fill material into waters of the United States. These waters include wetlands and non-wetland bodies of water that meet specific criteria, including a

[1] The Federal Endangered Species Act (ESA) declares that all federal departments and agencies shall use their authority to protect endangered and threatened plant and animal species. The California Endangered Species Act (CESA) of 1984 parallels the policies of the ESA and pertains to California species.

direct or indirect connection to interstate commerce. The USACE regulatory jurisdiction pursuant to Section 404 of the Federal Clean Water Act (CWA) is founded on a connection, or nexus, between the water body in question and interstate commerce. This connection may be direct (through a tributary system linking a stream channel with traditional navigable waters used in interstate or foreign commerce) or indirect (through a nexus identified in the USACE regulations). The USACE typically regulates as non-wetland waters of the United States any body of water displaying an ordinary high water mark (OHWM). In order to be considered a jurisdictional wetland under Section 404, an area must possess three wetland characteristics: hydrophytic vegetation, hydric soils, and wetland hydrology. Each characteristic has a specific set of mandatory wetland criteria that must be satisfied in order for that particular wetland characteristic to be met.

In 2006, the United States Supreme Court addressed CWA jurisdiction over wetlands adjacent to or abutting navigable, non-navigable, and ephemeral tributaries, and over permanent and relatively permanent non-navigable tributaries. According to the United States Supreme Court, the CWA does not assert jurisdiction over upland erosional features, gullies, or roadside ditches that have infrequent, low volume, and short duration of water flow; instead, the USACE uses a "significant nexus" analysis. A water body is considered to have a "significant nexus" with a traditional navigable water (TNW) if its flow characteristics and functions, in combination with the ecologic and hydrologic functions performed by all wetlands adjacent to such a tributary, affect the chemical, physical, and biological integrity of a downstream TNW. Additional information is provided in two joint documents prepared by the U.S. Environmental Protection Agency (EPA) and the USACE: (1) a memorandum titled "Clean Water Act Jurisdiction Following the U.S. Supreme Court's Decision in *Rapanos v. United States & Caravell v. United States*," dated June 5, 2007; and (2) "Jurisdictional Determination Form Instructional Guidebook."

State Regulations

California Endangered Species Act

Under the CESA (Fish and Game Code Sections 2050 to 2116), the CDFW has the responsibility for maintaining a list of threatened and endangered species (California Fish and Game Code 2070). The CDFW also maintains a list of "candidate species," which are species formally noticed as being under review for addition to either the list of endangered species or the list of threatened species. In addition, CDFW maintains lists of "species of special concern," which serve as "watch lists." Pursuant to the requirements of CESA, an agency reviewing a proposed project within its jurisdiction must determine whether any State-listed endangered or threatened species could be present on the project site and determine whether the proposed project could have a potentially significant impact on such species. In addition, the CDFW encourages informal consultation on any proposed project that may impact a candidate species.

California Fish and Game Code

Section 1602

Under Section 1602 of the California Fish and Game Code, public agencies are required to notify the CDFW before undertaking any project that would divert, obstruct, or change the natural flow, bed, channel, or bank of any river, stream, or lake. Preliminary notification and project review occur generally during the environmental process. When an existing fish or wildlife resource may be substantially adversely affected, the CDFW is required to propose reasonable project changes

to protect the resources. These modifications are formalized in a streambed-alteration agreement that becomes part of the plans, specifications, and bid documents for the project.

Sections 3503 and 3503.5

Section 3503 of the California Fish and Game Code prohibits the destruction of bird nests. Section 3503.5 prohibits the killing of raptor species and the destruction of raptor nests.

Section 3511 (Fully Protected Birds)

The California Fish and Game Code provides protection from take for a variety of species, referred to as fully protected species. Section 3511 lists fully protected birds and prohibits take of these species. The California Fish and Game Code defines take as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." Except for take related to scientific research, all take of fully protected species is prohibited.

California Native Plant Protection Act

State listing of plant species began in 1977 with the passage of the California Native Plant Protection Act (NPPA), which directed the CDFW to carry out the legislature's intent to "preserve, protect, and enhance endangered plants in this state." The NPPA gave the California Fish and Game Commission the power to designate native plants as endangered or rare and to require permits for collecting, transporting, or selling such plants. The California Endangered Species Act expanded upon the original NPPA and enhanced legal protection for plants. CESA established threatened and endangered species categories, and grandfathered all rare animals—but not rare plants—into the act as threatened species. Thus, there are three listing categories for plants in California: rare, threatened, and endangered.

Regional Water Quality Control Board

The Regional Water Quality Control Board (RWQCB) is responsible for the administration of Section 401 of the CWA at the State level, through water quality certification of any activity that may result in a discharge to jurisdictional waters of the U.S. The RWQCB may also regulate discharges to "waters of the State," including wetlands, under the California Porter-Cologne Water Quality Control Act (see Section 3.9: Hydrology and Water Quality).

Local Regulations

St. Helena Municipal Code

Chapter 12.24 of the St. Helena Municipal Code pertains to trees and other vegetation. This chapter provides for protection of "heritage trees" and other protected trees. As defined by the ordinance, a "heritage tree" means any tree or grove of trees within the city boundaries designated by a resolution of the City Council, and "protected tree" includes a heritage tree or a protected replacement tree planted as a condition of mitigation for the removal of any existing native or heritage trees, street tree, and city tree. A Tree Committee is charged with the responsibility of reviewing all matters pertaining to tree resources and reporting back in an advisory capacity to the City Council, Planning Director, Parks and Recreation Commission, Planning Commission, and the public. As of 2018, the City of St. Helena has mapped 15 heritage trees throughout the city, as shown in Figure 3.4-4.

Napa County General Plan

The 2008 Napa County General Plan includes a conservation element that addresses natural resources in the unincorporated county. Goals related to biological resources include maintaining and enhancing biodiversity, protecting special-status species and their habitats, conserving habitats for native species, protecting connectivity for wildlife movement, and preserving forests, woodlands, and commercial timberlands. The Napa County General Plan applies to the unincorporated study areas.

Impact Analysis

SIGNIFICANCE CRITERIA

For the purposes of this EIR, a significant adverse impact would occur if implementation of the Proposed Plan would:

Criterion 1: **Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service;**

Criterion 2: **Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service;**

Criterion 3: **Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;**

Criterion 4: **Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;**

Criterion 5: **Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; or**

Criterion 6: **Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan.**

METHODOLOGY AND ASSUMPTIONS

The Proposed Plan's Land Use Diagram was compared against existing biological conditions shown in Figures 3.4-1 through 3.4-4 to determine potential impacts on biological resources that could result from implementation of the Proposed Plan. No new field studies or other research were conducted for the preparation of this EIR, as existing resources contained information on all

pertinent aspects of biological resources in the Planning Area at an appropriate level of detail for a program level environmental assessment. Future project specific detailed biological surveys may be necessary to confirm presence or absence of sensitive resources on future development sites.

The Planning Area for the Proposed Plan includes three study areas in unincorporated Napa County immediately adjacent to the city limits where the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities (see Chapter 2: Project Description for additional details). Existing conditions related to biological resources in the whole of the Planning Area are documented above; however, as the City does not have jurisdiction outside of the city limits and sphere of influence (SOI), Proposed Plan policies and actions would not apply in the study areas. Therefore, implementation of the Proposed Plan would not result in direct impacts related to biological resources in the study areas. Cumulative impacts related to biological resources are discussed in Chapter 5: CEQA Required Conclusions.

RELEVANT POLICIES AND IMPLEMENTING ACTIONS

The following relevant policies and implementing actions of the Proposed Plan address biological resources:

Open Space and Conservation Element

- ***OS1.1*** Preserve and enhance St. Helena's riparian corridors for their value in providing wildlife habitat, biodiversity, natural drainage, and visual amenity.
- ***OS1.2*** Prohibit development, alteration, and/or removal of native vegetation from riparian areas. Disallow invasive species that degrade habitat quality.
- ***OS1.3*** Protect and enhance contiguous corridors of riparian vegetation along the Napa River and its tributaries in order to support regional wildlife movement and enhance aquatic habitat.
- ***OS1.4*** Protect natural habitats that have the potential to support rare, endangered, or special-status wildlife and plant species. Control invasive species that degrade habitat quality.
- ***OS1.5*** Restrict development of hillside areas in order to protect wildlife, vegetation, viewsheds, and open space characteristics.
- ***OS1.6*** Manage invasive species that degrade habitat quality, especially along the Napa River and its tributaries.
- ***OS1.7*** Promote, encourage, and require sustainable agricultural practices that are sensitive to natural habitat and do not harm wildlife.
- ***OS1.A*** Develop and adopt an ordinance for the protection, restoration, and enhancement of creek corridors. The ordinance should consider the following:
  - Establish setbacks for all new development projects to protect stream function and riparian habitat, while allowing for limited recreational uses and access to the stream corridor for maintenance and flood control;

  - Limit use of herbicides and insecticides associated with aquatic toxicity in areas near and adjacent to creeks, and ensure best environmental management practices for all developments and industries;
  - Provide access for creek maintenance and public use through easements and cooperative agreements with landowners;
  - Establish sufficient buffer width adjacent to waterways to allow for wildlife habitats, trails, and greenbelts;
  - Adhere to Living River Principles that allow the river to meander, maintain its natural floodplain and retain natural channel features to support continuous fish migration and the health of riparian corridors;
  - Encourage the use of bioswales, off-stream detention ponds, and other green best practices for stormwater management;
  - Implement an Integrated Pest Management ordinance that includes provisions to minimize the reliance on pesticides that threaten water quality and to require the use of integrated pest management in municipal operations; and
  - Incorporate relevant actions and performance standards in TMDL implementation strategies for the Napa River to control discharges of pathogens and sediment.

- ***OS1.B*** Restrict development on open space-designated parcels along Sulphur Creek west of the Crane Avenue Bridge. All development must be outside the stream corridor and structures must be set back from the creek's edge, consistent with California Department of Fish and Game standards.
- ***OS1.C*** Coordinate with the California Department of Fish and Game, the Living Rivers Council, the Regional Water Quality Control Board and other federal, State, and local regional agencies with regulatory authority for water quality, protected plant and animal species, and streams and wetlands to restore and maintain creek corridors.
- ***OS1.D*** Coordinate with the County, the California Department of Fish and Game, and other regional agencies to augment water flow in the Napa River and its tributaries in order to enhance year-round fish habitat and minimize stagnation and pollution.
- ***OS1.E*** Create a work plan for restoring sensitive habitat that has been degraded by agriculture or other past practices. Where applicable, encourage agricultural enterprises to participate in restoration efforts and in efforts to prevent further degradation.
- ***OS1.F*** Create a set of guidelines for the protection of special-status species and sensitive natural communities. Guidelines can include appropriate survey methods consistent with the California Department of Fish and Game, the U.S. Fish and Wildlife Service, NOAA Fisheries, and CEQA requirements.
- ***OS1.G*** Require a biological assessment of any proposed project site where species or the habitat is defined as sensitive or special-status by the California Department of Fish and Game, NOAA Fisheries, or the U.S. Fish and Wildlife Service might be present, including the installation of new wind turbines for alternate energy. Avoid potential impacts of sensitive resources as part of new development to the maximum extent feasible. Where complete avoidance is not possible, the project applicant must secure any required

authorizations from jurisdictional agencies and provide adequate replacement mitigation to ensure there is no net loss in habitat acreage or values.

- ***OS1.H*** Require all proposed projects adjacent to a creek corridor or located in the city's hillside areas to submit a management plan for protecting natural habitats, including provisions to:
  - Employ supplemental planting and maintenance of grasses, shrubs, and trees of similar quality and quantity to provide adequate vegetation cover to keep the watersheds on steep slopes and along streams in good condition, and to provide shelter and food for wildlife;
  - Provide protection for wildlife habitat.
- ***OS1.I*** Require new development to be sited to maximize the protection of native tree species, riparian vegetation, important concentrations of natural plants, and sensitive wildlife habitat.
- ***OS1.J*** Discourage and minimize the installation of deer fencing to maintain wildlife corridors and support regional wildlife movement.
- ***OS1.K*** Require environmental review of new agricultural uses, including, but not limited to, farming, horticulture, floriculture and viticulture, animal husbandry, and livestock farming. The environmental review shall ensure that no sensitive biological resources would be adversely affected. Viticulture review must include the replanting of existing vineyards in accordance with County regulations.
- ***OS1.L*** Discourage removal of trees for agricultural or other development in hillside areas. Ensure Woodlands and Watershed restrictions are followed.
- ***OS1.N*** Conduct a study to determine if the build-up of gravel in Sulphur Creek will result in a high risk of flooding. Limit development in Flood Risk Hazard Areas using FEMA's 100-year flood zone regulations at a minimum, and inform property owners of existing development so they are aware of flood risks and available State and federal insurance opportunities. Ensure that implementation measures contribute positively to the preservation of the creek and its corridor.
- ***OS1.O*** As part of new development, avoid disturbance to and loss of bird nests in active use by scheduling vegetation removal and new construction during the non-nesting season (September through January) or by conducting a preconstruction survey by a qualified biologist if vegetation removal and construction is initiated during the nesting season (February through August). Surveys for nesting birds will be conducted no earlier than 14 days prior to tree removal and/or breaking ground. In the event that nesting birds are found, the project applicant will consult with CDFG and obtain approval for nest-protection buffers prior to tree removal and/or ground-breeding activities. Nest protection buffers will remain in effect until the young have fledged.
- ***OS1.P*** Avoid potential impacts on jurisdictional wetlands and other waters as part of new development to the maximum extent feasible. Where complete avoidance is not possible, the project applicant must secure any required authorizations from jurisdictional agencies and provide adequate replacement mitigation to ensure there is not less in habitat acreage or values.

- ***OS1.Q*** Carry out the removal of the Upper Dam on York Creek sufficient to allow the passage of fish, especially Central California steelhead, a threatened species, and complete the restoration of historical fish habitat above the dam.
- ***OS2.5*** Limit public access to habitat areas when public access will significantly impact the sensitivity of the habitat area.
- ***OS2.B*** Adopt a land dedication ordinance that requires developers to provide land and improvements, such as trails and re-vegetation, along both sides of water corridors as a condition of subdivision approval for areas adjacent or in the vicinity of St. Helena waterways. The width of dedicated corridors should be established in consultation with the California Department of Fish and Game.
- ***OS4.A*** Establish an urban forestry program to ensure a coordinated and comprehensive approach to maintaining and increasing the City's trees. Key program aspects will include the following:
  - A tree planting program to ensure that new trees are planted regularly;
  - A tree maintenance program to ensure that existing trees are healthy and pruned;
  - A tree inventory to create a comprehensive listing of the City's trees and tree-related needs;
  - A Tree Committee to oversee the implementation of the urban forestry program and approval of tree removals;
  - A landmark tree list that identifies trees that require additional protection from damage and/or removal; and
  - Appropriate Heritage tree deed restrictions.
- ***OS4.C*** Develop and adopt a Tree Ordinance for the purpose of protecting trees and identifying replacement trees. In coordination with an urban forestry program, existing, significant trees should be integrated into future development. In cases where existing trees cannot be saved, require the planting of replacement trees consistent with guidelines included in the Master Tree List.

IMPACTS

Impact 3.4-1 Implementation of the Proposed Plan would not have a substantial adverse effect, either directly or through habitat modifications, on species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service. (*Less than Significant*)

A range of special-status species have been observed in and around the Planning Area as described above in the Physical Setting and listed in Tables 3.4-1 and 3.4-2. Additionally, critical habitat for special-status species has been mapped in and around the Planning Area. Future development under the Proposed Plan could have a significant direct or indirect impact on these species if it would result in the removal or degradation of the species or potentially suitable habitat.

Development under the Proposed Plan is anticipated to take place primarily within the developed footprint of the Planning Area, limiting the potential for adverse impacts on special-status species and sensitive natural communities. The 13 land use change areas (see Chapter 2: Project Description) are generally clustered around the center of the city on urban parcels rather than parcels mapped with habitats shown in Figure 3.4-1. Two exceptions include change area 9, which redesignates an area mapped as Douglas-Fir habitat as Low Density Residential, and change area 11, which would redesignate an area mapped as Orchard-Vineyard as Open Space. Outside of the land use change areas, the Proposed Plan includes urban and agricultural land use designations on parcels mapped with habitats on Figure 3.4-1. These include areas mapped as Orchard-Vineyard in the central part of the city; areas mapped as Montane Riparian along York Creek and Sulphur Creek; and areas mapped as Montane Hardwood, Douglas-Fir, and Blue Oak-Foothill Pine along the western edge of the Urban Limit Line (ULL). If future development were to degrade or remove suitable habitat for special-status species in these or any as-yet unmapped habitats, there could be a significant impact on special-status species. This could occur as a result of grading, excavation, and construction activities, or from ongoing operation and/or maintenance of a project. The Proposed Plan does not include any land use designations for the study areas, which are outside of the City of St. Helena's jurisdiction, and would therefore have no direct impacts on resources in those areas.

Policies in the Proposed Plan would serve to reduce potential impacts. Policy OS1.4 and Implementing Actions OS1.F, OS1.O, and OS1.G in particular address direct impacts on special-status species and their habitats, including requirements to conduct surveys for nesting birds and ensuring CDFW-approved mitigation for any nesting birds found, and biological assessments for sensitive species and habitats to ensure no loss of habitat or values. Additionally, Policy OS1.7 and Implementation Action OS1.K would require new agricultural developments to undergo environmental review and adopt sustainable agricultural practices sensitive to habitats and wildlife. Other policies (OS1.1, OS1.2, OS1.3, OS1.5) and implementation actions (OS1.A, OS1.B, OS1.C, OS1.D, OS1.H, OS1.P, OS2.B) would protect the integrity of the city's habitats, including riparian corridors, hillsides, waterways, and wetlands. Additional policies and implementation actions would improve the quality of habitats through managing invasive species (OS1.6), limit access to habitat areas if it would impact the value of the area (OS2.5), restore sensitive habitats (OS1.E), protect native trees and vegetation (OS1.I and OS1.L). With implementation of these policies, the impact of future development under the Proposed Plan on species identified as candidate, sensitive, or special-status species would be reduced to less than significant.

Mitigation Measures

None required.

Impact 3.4-2 Implementation of the Proposed Plan would not have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service. (*Less than Significant*)

As shown in Figure 3.4-1 and Figure 3.4-3, the Planning Area includes Montane Riparian habitat along waterways and six sensitive natural communities located along in the western portion of the city and north of the Napa River. Implementation of the Proposed Plan could have a significant

impact on riparian habitat or other sensitive natural communities if future development under the Proposed Plan resulted in the removal or degradation of the habitat. The Proposed Plan does not include any land use designations for the study areas, which are outside of the City of St. Helena's jurisdiction, and would therefore have no direct impacts on resources in those areas.

As discussed under Impact 3.4-1, future development under the Proposed Plan would take place primarily in previously developed portions of the Planning Area, limiting the potential for disruption to undeveloped habitat areas. In addition, a portion of *Quercus lobata* alliance located along Sulphur Creek and some additional swathes of Montane Riparian habitat long the creek would be designated as Open Space, which is intended solely for low-impact uses such as natural resource preservation and management, passive outdoor recreation, and public safety. However, the remainder of the Montane Riparian habitat and sensitive communities would have land use designations that could allow development. These designations include Woodlands and Watershed, which allows for very low density residential uses, and which would cover the *Quercus douglasii* alliance at the northwest edge of the city and all sensitive natural communities north of the Napa River; Agriculture, which would allow agricultural and winery uses with restricted single-family residential and public/quasi-public uses where *Quercus lobata* alliance is mapped near Madrona Avenue; Low Density Residential where *Pinus sabiniana* and *Quercus lobata* is mapped near Dean York Lane; and a mix of Industrial, Mixed-Use, Service Commercial, Central Business, Medium Density Residential, High Density Residential, and Parks and Recreation uses along Sulphur Creek as it passes through central St. Helena.

In the case of Woodlands and Watershed, although the land use designation would allow for low-density residential development, it is also intended to ensure the protection of wildlife, vegetation, open space, and watershed resources; thus development in those areas would be expected to minimize any impacts to sensitive habitats. For development occurring in other land use designations, the policies and implementing actions cited under Impact 3.4-1 would serve to reduce potential impacts on sensitive habitats, particularly those that establish requirements for the protection of riparian habitats (Policies OS1.1, OS1.2, OS1.3, and OS1.6; and Implementation Actions OS1.A, OS1.B, OS1.C, OS1.H, OS1.N, and OS2.B) and sensitive habitats in general (Policy OS2.5 and Implementation Action OS1.I). Implementation Actions OS1.A and OS1.H specifically provide for setbacks and buffers, limits on herbicides and insecticides, sediment discharge, vegetation maintenance, and the protection of wildlife habitat in riparian corridors. Thus, with implementation of these policies, the impact of future development on riparian habitat or other sensitive communities would be reduced to less than significant.

Mitigation Measures

None required.

Impact 3.4-3 **Implementation of the Proposed Plan would not have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means. (*Less than Significant*)**

No wetlands have been mapped in the Planning Area; however, wetlands have the potential to occur anywhere water is present for prolonged periods of time. Within the Planning Area, this

could include areas around the Napa River or its tributaries, and other water features. The determination of any given habitat as a wetland would be made on a case by case basis according to criteria established under the Clean Water Act. Implementation of the Proposed Plan could have a significant impact on federally protected wetlands if future development under the Proposed Plan would adversely affect the wetlands either directly through fill or indirectly through the alteration of the hydrologic regime.

Future development under the Proposed Plan would be subject to the requirements of Clean Water Act Section 404 and 401 permitting requirements, which would limit and/or mitigate impacts from projects that would discharge pollutants or dredged or fill materials into waters of the state, including wetlands. Future development would also be subject to the CDFW Lake and Streambed Alteration Program, which would require any project that could substantially divert or obstruct the flow of; substantially change or use any material from; or deposit debris into a river, stream, or lake to agree to measures that would protect existing fish or wildlife resources.

Proposed Plan policies and implementing actions would further reduce potential impacts by protecting habitats with the potential to support special-status species (OS1.4) and avoiding potential impacts on jurisdictional wetlands (OS1.P), and protecting habitats around the Planning Area's waterways as well as the Planning Area's hydrology (OS1.1, OS1.2, OS1.3, OS1.6, OS1.A, OS1.B, OS1.C, OS1.D, OS1.H, OS1.I, and OS1.N). With compliance with existing State and federal law, and implementation of the Proposed Plan's policies, the impact of implementation of the Proposed Plan on jurisdictional wetlands would be less than significant.

Mitigation Measures

None required.

Impact 3.4-4 Implementation of the Proposed Plan would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites. (*Less than Significant*)

In the Planning Area, contiguous undeveloped areas outside of the ULL may serve as wildlife corridors for common and special-status species, and the Napa River and Sulphur and York creeks provide corridors for aquatic and riparian species, including steelhead trout. The Planning Area also includes forested habitats that may provide nesting sites for birds and other species. Implementation of the Proposed Plan would have a significant impact on migratory species, corridors, or nursery sites if the siting, construction, or operation of development allowed under the Proposed Plan would impede on or remove migratory corridors or nursery sites.

As discussed under Impact 3.4-2, the Proposed Plan includes policies and implementation actions to protect and, in some cases, restore riparian habitat along the river and creeks. The Proposed Plan also includes policies and implementation actions that specifically address wildlife movement, including establishing sufficient buffers around waterways to allow for wildlife trails and retaining natural channel features to support continuous fish migration (OS1.A), enhancing year-round fish habitat (OS1.D), minimizing deer fencing to support regional wildlife movement (OS1.J), avoiding disturbance of bird nesting sites (OS1.O), and removing the Upper Dam on York

Creek to allow the passage of fish (OS1.Q). With implementation of the Proposed Plan's policies and existing regulations, impacts on wildlife movement or wildlife nursery sites would be less than significant.

Mitigation Measures

None required.

Impact 3.4-5 Implementation of the Proposed Plan would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. (*Less than Significant*)

The City of St. Helena Municipal Code Chapter 12.24 provides for the protection of heritage trees, replacement trees, street trees, and City trees. Napa County has a General Plan, which addresses the protection of biological resources, but does not currently have a local ordinance protecting biological resources. Implementation of the Proposed Plan would have a significant impact if it conflicted with either the St. Helena Municipal Code or the Napa County General Plan.

The Proposed Plan policies are generally consistent with the City's code regarding tree preservation. The Proposed Plan includes implementation actions that support the code, including establishing an urban forestry program to maintain and increase the City's trees (OS4.A), and developing a Tree Ordinance to protect trees and identify replacement trees (OS4.C). These policies echo the standards and mechanisms of Municipal Code Chapter 12.24. The Proposed Plan does not include any designations or policies for the study areas, which are outside of the City's jurisdiction, and would therefore have no effect on the implementation of the Napa County General Plan. Therefore, implementation of the Proposed Plan would not conflict with any policies or ordinance regarding biological resources and the impact would be less than significant.

Mitigation Measures

None required.

Impact 3.4-6 Implementation of the Proposed Plan would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan. (*No Impact*)

There is one Habitat Conservation Plan (HCP) that would apply within the Planning Area. Pacific Gas & Electric (PG&E) has prepared a multi-species Habitat Conservation Plan (HCP) for PG&E's gas and electric transmission and distribution facilities, rights-of-way, buffer lands, areas owned by PG&E and/or subject to PG&E easements, access routes, and those areas acquired as mitigation to offset the impacts resulting from covered activities in the nine Bay Area counties: including Napa County. Activities that are covered under the HCP include activities associated with the operation and maintenance (including limited minor new construction) of PG&E's gas and electric transmission and distribution system as mandated for public safety. There are no Natural Community Conservation Plans at the county level that include land within the Planning Area. Implementation of the Proposed Plan would have a significant impact if it would conflict with the provisions of the HCP.

The Proposed Plan does not include any policies that would interfere with the ability of a private entity such as PG&E to implement an HCP. The intent of the HCP is generally consistent with the Proposed Plan's policies to limit and mitigate impacts on special-status species. Therefore, there would be no impact related to conflicts with any applicable habitat conservation plan or natural community conservation plan from implementation of the Proposed Plan would be less than significant.

Mitigation Measures

None required.

This page intentionally left blank.

3.5 Cultural, Historic, and Tribal Cultural Resources

This section assesses potential environmental impacts on historic and cultural resources from future development under the Proposed Plan, including those related to historic, archaeological, tribal cultural resources (including human remains), and paleontological resources. Cultural resources refer broadly to prehistoric and historic buildings, structures, objects, districts, and sites exhibiting important historical, cultural, scientific, or technological associations. This definition extends to Tribal Cultural resources which refer to sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe. For the purposes of CEQA, cultural resources are separated into four subcategories: historic resources, archeological resources, Native American tribal resources and remains, and paleontological resources. The section describes the historical setting of the Planning Area, as well as the context for cultural resources in the Planning Area. It also includes a description of relevant federal, State, and local regulations and programs related to cultural resources. Information for this chapter was compiled primarily from a records search for archaeological, historical, and/or Native American resources on file with the Northwest Information Center (located at Sonoma State University in Rohnert Park), past historical resource evaluations analyzing the historic structures within St. Helena, and historical analysis analyzing the paleontology, pre-history, and history of St. Helena. There were no responses to the NOP regarding topics addressed in this section of the EIR.

Environmental Setting

PHYSICAL SETTING

The historical, cultural, and tribal cultural analysis includes the Planning Area and a quarter-mile buffer beyond the Planning Area boundaries. Development within the city limits should not affect the areas outside the Planning Area since historic, paleontological, and archeological impacts are generally site-specific; however, the records search and sensitivity assessment for the City extends a quarter mile beyond the Planning Area boundaries to account for sprawling or linear cultural resources which may be located along and extend beyond the boundaries of the Planning Area. Historic, paleontological, and/or archeological resources encountered beyond the city limits would be managed subject to the jurisdiction in which they are located.

Historical Setting

Prehistoric and Ethnographic Periods

The Paleo-Archaic-Emergent cultural sequence developed by Fredrickson (Frederickson, 1974), (Frederickson, Archaeological Taxonomy in Central California Reconsidered, 1994) is commonly used to interpret the prehistoric occupation of Central California. The sequence consists of three broad periods: the Paleoindian Period (10,000-6000 B.C.); the three-staged Archaic Period, consisting of the Lower Archaic (6000-3000 B.C.), Middle Archaic (3000-500 B.C.), and Upper Archaic (500 B.C.-A.D. 1000); and the Emergent Period (A.D. 1000-1800).

The Paleo Period began with the first entry of people into California. These people probably subsisted mainly on big game and minimally processed plant foods and had few or no trade networks. Current research, however, indicates more sedentism, plant processing, and trading than previously believed. During the Lower Archaic, milling stones for plant processing were abundant and hunting was less important than obtaining plant foods. Artifacts were predominantly of local materials, suggesting that few, if any, extensive trade networks were established at this time. During the Middle Archaic, the subsistence base began to expand and diversify with a developing acorn economy, as evidenced by the mortar and pestle, and the growing importance of hunting. Status and wealth distinctions were evidenced in the Upper Archaic archaeological record, and regional trade networks were well established for the exchange of goods and ideas, such as obsidian and Kuksu ceremonial practices involving spirit impersonations. Increasing social complexity continued during the Lower Emergent, with well-established territorial boundaries and regularized inter-group exchanges involving more and varied goods, people, and ideas. Bow and arrow technology was also introduced. By the Upper Emergent, a monetary system based on the clamshell disk bead had been established. Native population reached its zenith during this time, as evidenced by high site densities and large village sites in the archaeological record.

Native American occupation of the Upper Napa Valley dates from at least the Middle Archaic and continued until the Upper Emergent. Middle Archaic occupation is evidenced at a prehistoric archaeological site near St. Helena, characterized by an assemblage that includes thick-leaf and concave-base projectile points, and millingslabs and handstones. Evidence of Emergent Period occupation, including “Rattlesnake Series” and “Stockton Series” projectile points, is commonly found at sites in St. Helena and the vicinity.

At the time of Euro-American contact, St. Helena was within the territory of the Wappo, one of two Yukian language groups (Shipley, 1978). Wappo territory included approximately the area between the City of Napa, Cobb Mountain, and Alexander Valley (Sawyer, 1978). Little is known about the Napa Valley Wappo during the historical contact period, and knowledge of the Wappo derives mostly from Driver’s ethnography of an Alexander Valley Wappo tribe (Driver, 1936).

According to Barrett the Wappo villages in or closest to the Planning Area are Annakotanoma, on the town site of St. Helena, and Tsemanoma, in the foothills on the eastern side of Napa Valley, about 2 miles northeast of St. Helena (Barrett, 1908). Wappo habitation sites were of two kinds (Driver, 1936): permanent, or winter villages, and temporary, or summer villages. This settlement pattern is similar to the “tribelet” or “village community” typical of most California groups at the

time of Euro-American contact (Kroeber, 1932) (Kroeber, Handbook of the Indians of California, 1925). These village communities consisted of a principal winter village, where the chief resided, with outlying, secondary settlements used during the spring and summer to exploit seasonal resource patches. A village community, ranging in population from about 100 to 2,000 persons, claimed communal lands in which members could hunt, fish, or gather plant food without limitations of private ownership (Kroeber, Handbook of the Indians of California, 1925).

Archaeological data indicate numerous permanent and temporary villages in the Upper Napa Valley. These sites are frequently identified by the presence of midden soils—anthropogenic soils that develop from the accumulation of organic debris—and can include shell, faunal bone, and culturally flaked stone, such as obsidian and chert.

St. Helena History

In 1842, Rancho Carne Humana, in Napa County, was granted to a young English surgeon, Dr. Edward Bale. Comprised of the entire Napa Valley north of George C. Yount's Rancho Caymus, Rancho Carne Humana included the future site of the City of St. Helena.

By 1851, Henry Still and his partner Walters had purchased 100 acres from the estate of Dr. Bale, that would become St. Helena. This 100-acre parcel was bounded by what are now Main Street to the northeast, Sulphur Creek to the southeast, Madrona Avenue to the northwest, and the foothills to the southwest.

The first structure built in what would become St. Helena was a house by Still and Walters in 1851. According to Smith and Elliot, the store building constructed by Still and Walters was located on a site subsequently occupied by G.F. Brown (Smith & Elliott Publishers, 1878). In 1854, the Sons of Temperance formed a post in the town, naming themselves the St. Helena Division, giving the town its name.

By 1855, in an effort to attract business to the new town, Still gave away parcels adjacent to the County Road (now known as Main Street). In 1856, John Howell erected his blacksmith shop, near what is currently Main Street, and A. Tainter built a hotel at Pope and Main streets. Other early businessmen included John S. Keister, who ran a shoe store, and Robert Calderwood, who ran a wagon store. By 1855, St. Helena had seven thriving businesses serving the surrounding farmlands.

The first record of a vineyard in Napa County is one of Mission grapes started by J.N. Pachett in 1850, and the first shipment of wine from the county occurred in 1857. George Belden Crane, viticulture pioneer of the 1850s, had his first experimental vineyards on the land now occupied by the St. Helena High School at 437 Main Street. Charles Krug began making wine on the site of the present Charles Krug winery in St. Helena in 1861. In 1874, John Thomman, a Swiss winemaker, established his winery south of town. Along Sulphur Springs Avenue were the vineyard and orchard estates of the Lewelling family, Mrs. W.B. Bourn, Charles Langley, General Keyes, and the Heath family. By the 1870s, grazing and grain lands surrounding the town were profitably converted to viticulture and horticulture.

St. Helena's burgeoning role as an agricultural crossroads in the Napa Valley was improved when railway transportation came to the area in the 1860s. In March 1864, a bill to aid the construction

of a railroad in Napa County was introduced in the Legislature by Chancellor Hartson. After passage of the bill on April 24, 1864, the Napa Valley Railroad Company was organized with Hartson as president. The Napa Valley Railroad originally was built from Suscol to Napa, and eventually to St. Helena, reaching the town on February 27, 1868. The Napa Valley Railroad underwent foreclosure in 1896 and was acquired by the California Pacific Railroad. In April 1899, the California Pacific Railroad was taken over by the Southern Pacific Railroad, which used the railroad as a freight line.

St. Helena received its city charter on March 24, 1876. By the 1880s, the land from Napa to 18 miles north of St. Helena was basically one continuous vineyard (Napa County Landmarks, Inc., 1978). An 1886 Sanborn Fire Insurance Map shows the W.A.C. Smith Special Bonded Warehouse for wines located on the south side of Church Street, between Pope Street and Hunt Avenue. The warehouse had a storage capacity of 120,000 gallons and is evidence of St. Helena's early history of wine production. The City of St. Helena was later reincorporated on May 14, 1889.

After 1868, when the railroad was extended from the Napa Valley to Calistoga, the largely open, sparsely-setting farmland was rapidly parceled out. Farmers could now profitably ship their produce down the valley to Napa by train, and from there by train or boat to markets in San Francisco. Fruit, vegetables, grain, dairy products, and other agricultural products were in high demand and commanded high prices. Cutting cordwood and poles on the forested slopes outside of the city continued at a brisk pace, and the area northeast of the railroad was home to woodworking and planing mills.

St. Helena became a major commercial center for the developing countryside and a central shipping point for agricultural and extractive industries for the upper Napa Valley and beyond. The original railroad depot located at Railroad Avenue and Hunt Avenue could not handle the increasing volume of freight and passenger traffic by the 1880s when the Southern Pacific Railroad had taken over the line. According to Sanborn Fire Insurance Maps, as early as 1899, Southern Pacific built a larger standardized depot at the present location on Railroad Avenue and Pine Street.

Main Street has been St. Helena's main thoroughfare since the city's founding, connecting the city to Napa to the south and Calistoga to the north. By the 1880s, wooden sidewalks were installed for pedestrians to walk on along Main Street, and by 1900 sewers had been installed and the wooden sidewalks replaced by concrete. Seven years later, an electric railway was installed on Main Street, providing public transportation. In 1937, the electric railway was discontinued, and Main Street was paved with concrete and asphalt, which is how it appears today (Loeber, 1955).

During the Prohibition years of 1920 to 1933, St. Helena's economy, as well as most of the region's, fell into a slump because of the devastation that the Volstead Act and resulting Eighteenth Amendment caused to viticulture. Most wineries and vineyards either had to find a new cash crop or shut down completely. Some farmers were able to find alternative crops to produce, such as fruits, nuts, and grains while others went into ranching. Only a small handful of vineyards in the entire region, such as the Beringer Vineyard, were able to survive with special permits to produce sacramental wines.

After the end of Prohibition in 1933, wineries and vineyards could legally reopen; however, many proprietors remained closed due to the harsh financial times caused by the Great Depression. Not until after World War II did commercial production of wine in the Napa Valley return to pre-Prohibition levels (Heintz, 1999). After 1945, the viticulture industry around St. Helena gradually recovered. During this time, the tourist industry developed and grew, with an emphasis on the wineries and vineyards in the area. Today, wines from St. Helena and its environs are considered to be some of the best in the world.

Historic Built Environment

Over time, St. Helena has developed from a rural agricultural community into a small city focused on the wine industry and related tourism. The agricultural roots of the area are clearly visible in the area's built environment. The city's main industry has always been viticulture, and many historic wineries, complete with farmhouses, agricultural outbuildings, and vineyards, are located within the city limits. As the city grew to become an agricultural crossroads in the late-nineteenth century, commercial buildings, typically constructed of brick and local stone, were erected along Main Street. Mills and industrial buildings that processed the area's agricultural resources were located to the northeast of the railroad. The city's residential areas developed both to the northeast and southwest of the railroad and Main Street, the city's commercial core. St. Helena's historic residential areas include a variety of architectural styles.

Architectural Typologies

Winery Architecture

The design, construction, and spatial organization of St. Helena's wineries, like all ranches in the West, depended on many factors, including climate, soils, availability of water and building materials, and the ethnicity and class of their builders. These factors, as well as the ingenuity of individual ranchers or their employees affected the handling of materials and use of building technologies.

The most significant character-defining feature of rural agricultural buildings in California is their utilitarian appearance, a function of the inexpensive materials and design for flexibility. As functional buildings set back far from the main house or the road, outbuildings such as field barns, pump houses, chicken coops, and bunkhouses were typically designed without the aid of an architect. Most were instead built from pattern books, traditional know-how passed from generation to generation, or a combination of both. Ethnic and regional influences played a part as well. The typical two-story, gable-and-shed roof California barns of the nineteenth-century are thought to have derived from the "crib-and-shed" type barns of Tennessee. Composed of a central gable-roofed "nave" illuminated by monitor windows and flanked by shed-roofed side aisles, the crib-and-shed barn disseminated westward through the Plains states, where it was modified to employ timber framing instead of log construction. In this guise, the "three portal crib barn" eventually infiltrated the valleys of the Pacific West, including the Willamette Valley of Oregon and the San Joaquin, Sacramento, Santa Clara, and Salinas valleys of California, where the original prototype was gradually modified in response to local environmental conditions and crops.

In addition to the simple, utilitarian timber-frame, three-portal barn, many wineries in St. Helena also contain examples of more substantial stone outbuildings and associated features, such as wine-aging caves. Influenced by St. Helena's large ethnic communities and the skills of immigrant

stonemasons, some buildings in St. Helena were constructed of local stone, typically tufa stone. Stonemasonry drew on a wide range of ethnic backgrounds, including Swiss and Italian. The availability of stone craftsmanship in St. Helena made it economically viable to build in stone rather than other materials. Commercial buildings, residential basements, simple industrial warehouses, and even agricultural outbuildings were constructed of stone. Utilitarian outbuildings and features such as winery storage buildings, well houses, and tunnels, which benefit from the cooling properties of stone, were constructed in local stone. These typically utilitarian structures are unique for their inclusion of detailed stonework and ornamentation such as quoins. One of the most notable of these features is the wine-aging tunnels that Chinese immigrants excavated from the late 1870s to early 1880s into the side of Spring Mountain at Beringer Winery. These tunnels extend approximately 1,200 linear feet and were constructed using picks, shovels, and black powder.

In addition to barns, tankhouses for storing water were a common building type in the vicinity of St. Helena. Tankhouses were erected between the late 1800s and late 1930s in the western United States. In St. Helena, as in many rural areas that have been developed, many tankhouses have been torn down, although some remain within the city, often converted to other uses.

Residential Architecture

By 1876, the physical fabric of today's City of St. Helena had already begun to take shape. Buildings appear in the Greek Revival, Gothic, Italianate, Second Empire, and other styles. Many buildings were not designed in a recognizable architectural style, as they were folk-designed structures that made use of local materials. Designed for practical purposes and often with limited resources, many of St. Helena's early buildings can be described as being of vernacular design.

Few historic images of St. Helena buildings have been found; therefore, the understanding of vernacular architecture in St. Helena is based largely on existing historic buildings. A historical architectural survey from 2006 revealed a wide variety of vernacular building types in addition to popular architectural styles such as Stick/Eastlake, Queen Anne, Shingle, Romanesque, Arts & Crafts, Art Deco, Spanish Colonial Revival, and Mission Revival (Page & Turnbull, Inc., 2006). Much of the common vernacular residential architecture in St. Helena includes easily recognizable rural vernacular house forms, including rectangular massing, gabled or hipped roofs, wood-frame construction, extended porches, simple locally-available materials, including redwood siding, and little ornamental detail.

St. Helena's residential development can generally be categorized into three areas with unique styles: houses on Main Street, houses northeast of Main Street, and houses southwest of Main Street. Main Street residential architectural styles include Craftsman and Georgian Revival. Historical residences in this area are often sited on large lots with elegant landscaping, as seen in the residential neighborhood of Alexander Court just off Main Street. Residences northeast of the city's commercial core along Main Street were largely influenced by the presence of the railroad. Much of this housing was worker housing rendered in simple vernacular styles that made use of readily available local materials. Residences in this area are also situated on large agricultural lots that functioned as small family farms and contained a main house and agricultural outbuildings. The area southwest of the city's commercial core was more densely developed than other areas of the city, with majority of houses constructed between the late-19th and early-20th century in a vernacular style, although other notable styles including Stick, Craftsman, Italianate, and Folk Victorian, are present. Many of the

residences southwest of Main Street were constructed on small lots, but set back from the lot lines, giving the neighborhood a rural character.

Commercial Architecture

The late-19th and early-20th century architecture of St. Helena's commercial corridor along Main Street has been recognized as a National Register Historic District (St. Helena Historic Commercial District). Main Street, however, also contains many historically significant mid-20th century commercial properties that have not been formally recorded as contributors to the St. Helena Historic Commercial District. While the area's economy was severely affected by both Prohibition and the Great Depression, a few commercial buildings were constructed along Main Street in the 1930s and 1940s in the Streamline Moderne style. These modern buildings, which include the El Bonita Motel (195 Main Street), Gott's Roadside Tray Gourmet (933 Main Street), and the Main Street Service Station (1380 Main Street), were set in contrast to St. Helena's other architecture from that time, which was largely derived from historic precedents, not modern styles. In addition to the unique architectural style employed, the commercial buildings were also typical of the era's automobile-focused culture. These 1930s- and 1940s-era commercial buildings were typically constructed on large lots and included large setbacks from Main Street allowing for ample automobile parking.

Designated Historic Resources

Generally, to be considered a significant historic or cultural resource for the purposes of CEQA, a resource must be formally recognized by a lead agency as a historic resource and/or be eligible for listing on the California Register of Historic Resources (CRHR) (Pub. Res. Code, § 5024.1, Title 14 CCR, Section 4852). However; the fact that a resource is not yet identified as a historic resource or found eligible for the CRHR does not preclude a lead agency from determining that it may be a historic resource as defined in Public Resources Code sections 5020.1(j) or 5024.1.

Appendix F lists all recorded historical buildings and structures within the city limits by address (if available) and type of designation, including property on the National Register of Historic Places, California State Landmark, Eligible for State and/or National Designation, Historic District, and Locally-Designated Historic Resource, based upon the National Register Status Code assigned to each property by the California Office of Historic Preservation, as identified by the Northwest Information Center, and by the City through the historic resource inventories completed in 1978 and 2006. Some buildings, including those inventoried by Page & Turnbull in 2006, have not yet been assigned a National Register Status Code, although most of these appear to be eligible for the National and California registers.

Figure 3.5-1 identifies the 34 buildings in the St. Helena Historic Commercial District considered to be contributors to the district's historic character or significance. It does not include non-contributors, which are those buildings that, due to date of construction, alterations, or other factors, do not contribute to the historic character of the district.

Numerous historical buildings and structures have been recorded within city limits (see Appendix F). The most common historical property types consist of residences and commercial buildings, although other property types are present, including barns, warehouses, wineries, churches, schools, bridges, a culvert, street lights, a motel, tankhouses, stonework, roads, a railroad depot, and

government buildings. The majority of these properties were recorded as part of the 1977-1978 Napa County Historic Resources Inventory conducted by Napa Landmarks, Inc. and the historical architectural survey conducted by Page & Turnbull, Inc. in 2006.

Eleven historical resources within the city are listed in the National Register of Historic Places and California Register of Historical Resources, as listed in Appendix F and shown in Figure 3.5-1. Two of these historical resources—the Beringer Winery Historic District and the Main Street Commercial Historic District—include multiple buildings and structures. Numerous other historical buildings in St. Helena appear eligible for listing in the National and California registers, which would qualify such properties as historical resources for purposes of CEQA (see Appendix F).

Paleontological Setting

St. Helena lies in an alluvial valley formed by tectonic faulting. The Vaca Mountain range lies to the east, and the Mayacamas Mountains to the west; both consist mostly of Sonoma Volcanics. The erosion of Sonoma Volcanics in and around St. Helena and the subsequent fluvial transportation of sediment resulted in the deposition of alluvium (Sloan, 2006; U.C. Davis Soil Resource Laboratory, 2009). The sediments that underlie St. Helena are Quaternary (1,800,000 years B.P.[1] to present) alluvial deposits laid down by the Napa River and the York, Heath Canyon, and Sulphur Creeks exiting the hills to the west of St. Helena. The Quaternary deposits in St. Helena include moderately sorted, coarse-grained Holocene (10,000 years B.P. to present) alluvium and poorly sorted Late Pleistocene (126,000 to 10,000 years B.P.) alluvium.

Geologic Units

St. Helena is underlain by the following geological units, described in stratigraphic sequence from youngest (Quaternary Deposits) to oldest (Franciscan Complex). See Section 3.7 Geology and Seismicity for more detailed information on the geology of the Planning Area.

Quaternary Deposits

Quaternary deposits of Pleistocene (1,800,000 to 10,000 years B.P.) and Holocene (10,000 years B.P. to present) age occur in the Napa Valley. These deposits consist of loosely consolidated sand and gravel deposited in fluvial systems (Helley, La Joie, Spangle, & Blair, 1979). Older Pleistocene deposits typically occur as terraces incised by Holocene fluvial drainages. Locally, Late Pleistocene (126,000 to 10,000 years B.P.) deposits contain invertebrate and extinct vertebrate fossils, many of which are representative of the Rancholabrean land mammal age (Bell, et al., 2004). Fossils found in alluvium of this age include, but are not limited to, bison, mammoth, ground sloths, saber-toothed cats, dire wolves, horses, cave bears, rodents, birds, reptiles, and amphibians (Bell, et al., 2004) (Helley, La Joie, Spangle, & Blair, 1979) (Helley, LaJoie, & Burke, 1972) (Hertlein, 1951) (Savage, 1951) (Stirton, 1951).

Sonoma Volcanics

Underlying the Quaternary alluvium, at an unknown depth, is a sequence of Pliocene (53,000,000 to 1,800,000 years B.P.) Sonoma Volcanic andesitic tuff (Wagner & Bortugno, 1999). Andesitic tuff may contain invertebrate and extinct vertebrate fossils representative of the Hemphillian (9,000,000 to 4,750,000 years B.P.) and Blancan (4,750,000 to 1,800,000 years B.P.) land mammal ages (Berkeley Natural History Museum, 2009).

Franciscan Complex

Presumably underlying the Napa Valley at great depth is the Franciscan Complex, a group of high-pressure and low-temperature metamorphic rocks formed during the Middle and Upper Jurassic (175,000,000 to 144,000,000 years B.P.) and the Lower Cretaceous (144,000,000 to 100,000,000 years B.P.). The Franciscan Complex is composed of metamorphosed and unmetamorphosed sandstone, shale, conglomerate, chert, greenstone, and metagraywacke, and is the basement rock of the region (Wagner & Bortugno, 1999) (Sloan, 2006). Marine fossils, including *Icthysaurus*, *Belemnoidea*,

[1] Before Present (B.P.).

Buchia, and *Inoceramus*, occur in the unmetamorphosed rocks of the Franciscan Complex (Berkeley Natural History Museum, 2009).

Identified Paleontological Resources

Under the California Environmental Quality Act (CEQA) paleontological resources are also analyzed for cultural resource impacts and are generally defined as fossil plants and animals and evidence of past life such as trace fossils and tracks. Paleontological resources are the fossil remains or traces of past life forms, including both vertebrate and invertebrate species, as well as plants.

While no recorded paleontological resources have been identified in the Planning Area, including a search of the University of California Museum of Paleontology Specimen Search, the general area is underlain by Quaternary period Holocene and Pleistocene deposits, the latter of which can contain significant Rancholabrean fossils. The depths of these deposits are unknown, but likely extend for several feet below the ground surface. Below these Quaternary deposits are deposits that date from the Pliocene to the Middle Jurassic periods. These older deposits, due to their potential to contain sensitive or significant paleontological resources, are most likely at considerable depths below the ground surface. Additionally, paleontological resources have been recorded within Napa County. Therefore, there is a possibility for paleontological resources to be discovered in St. Helena.

Archaeological Resources

The National Parks Service defines archaeological resources as any material remains of human life or activities that are at least 100 years of age and are capable of providing scientific or humanistic understandings of past human behavior, cultural adaptation, and related topics. The St. Helena area contains 49 recorded archaeological resources, including 34 recorded Native American archaeological resources, 15 historic-period archaeological resources, as well as two informal Native American archaeological resources. These sites include habitation and tool processing sites, hearths, bedrock milling features, burials, fences, trash scatters, orchards, and ranches. The California Office of Historic Preservation has assigned a National Register Status Code of "2S2" to prehistoric[2] archaeological site P-28-000151, indicating this resource was "determined eligible for National Register by a consensus through Section 106 process. Listed in the California Register."

Additional prehistoric archaeological deposits may be located within the Planning Area, and project-specific reviews would need to be done to assess potential impacts on archaeological sites. While St. Helena has witnessed commercial and residential development, such development does not preclude the possibility of intact historical archaeological deposits. Native American archaeological resources in Napa County have been found throughout the Napa Valley, on ridges, midslope benches, near the hill to valley interface, in valleys lands, near ecotones, and near intermittent and perennial watercourses. Additionally, Sanborn Fire Insurance maps from 1886, 1890, 1899, and 1910 indicate numerous buildings and structures within the Planning Area. Given the presence of known archaeological resources, there is a high potential for additional unrecorded Native American resources and historic-period archaeological resources in to be discovered within

[2] The prehistoric period is the period in human history before recorded events, known mainly through archaeological discoveries, study, research, etc.

the Planning Area during implementation of the Proposed Plan. The possibility of such deposits, however, must be evaluated on a project-specific basis.

Tribal Cultural Resources

A tribal cultural resource is a site, feature, place, cultural landscape, sacred place, or object with cultural value to a tribe that is included or determined to be eligible for inclusion in the California Register of Historic Resources, included in a local register of historical resources, or otherwise determined to be significant by the lead agency of an environmental review process.

AB 52 expands the government-to-government consultation originally outlined in SB 18 and requires CEQA documents to examine tribal cultural resources, which is a more broadly-defined concept that is more akin to traditional tribal landscapes (i.e., geographic areas or features) than to the specific archaeological sites or artifacts that were considered in the past. Since this is a program EIR for a general plan, the City is required to consult with local Native American tribal groups/representatives under both SB 18 and AB 52 (see "Regulatory Setting" below for more information).

Pursuant to SB 18 and AB 52, the City contacted the California Native American Heritage Commission (NAHC) in February 2016 and May 2018 to request a search of its Sacred Lands File and to obtain a list of California Native American tribes whom the City would engage for the purposes of avoiding, protecting, and/or mitigating impacts on cultural resources. The NAHC provided the City with a list of five California Native American tribes to contact in accordance with SB 18- the Cortina Band of Indians, Middletown Rancheria of Pomo Indians, two contacts from the Federated Indians of Graton Rancheria, and the Yocha Dehe Wintun Nation. Of the six tribes contacted by the City, the five previously listed as well as the Mishewal Wappo Tribe of Alexander Valley, only one response, from the Federated Indians of Graton Rancheria, was received. The tribal contact did not identify any cultural resources in the Planning Area (see Appendix F for related materials).

An NWIC records search of the Planning Area yielded 34 recorded and two informally-recorded Native American archaeological resources, which included burials. A search of the Native American Heritage Commission (NAHC) Sacred Lands File for the Planning Area in May 2018 identified sacred sites in the Planning Area. The location of these resources has not yet been identified, but the opportunity exists for future developments to discover tribal cultural resources.

REGULATORY SETTING

Federal Regulations

National Historic Preservation Act and Section 106

The intent of the National Historic Preservation Act is to preserve historic and archaeological sites across the United States. The Act solidified the role of the National Parks Service as lead agency in the historic preservation program and created cooperative partners in the process, including the Advisory Council on Historic Preservation, State Historic Preservation Offices, and Tribal Historic Preservation Offices. Section 106 of the National Historic Preservation Act requires federal agencies to consider the effects of their actions on historic properties. The goal of the Section 106 process is to identify historic properties potentially affected by the action in question, assess the

effects, and provide ways to avoid, minimize, or mitigate any adverse effect that may occur to a historic property.

National Register of Historic Places

The National Register of Historic Places (NRHP) is the nation's official list of historic places. The register is overseen by the National Park Service and requires that a resource eligible for listing on the register meet one of several criteria at the national, State, or local level and also retain sufficient physical integrity of those features necessary to convey historic significance. Resources listed in the National Register are automatically listed in the California Register. The criteria for listing are:

- Property is associated with events that have made a significant contribution to the broad patterns of our history;
- Property is associated with the lives of persons significant in our past. Eligible properties based on this criterion are generally those associated with the productive life of the individual in the field in which it achieved significance;
- Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction; or
- Property has yielded, or is likely to yield, information important to prehistory or history.

In addition to meeting at least one of these four criteria, listed properties must also retain sufficient physical integrity of those features necessary to convey historic significance. The register has identified the following seven aspects of integrity: (1) location, (2) design, (3) setting, (4) materials, (5) workmanship, (6) feeling, and (7) association. Properties are nominated to the register by the State Historic Preservation Officer of the state in which the property is located, by the Federal Preservation Officer for properties under federal ownership or control, or by the Tribal Preservation Officer if on tribal lands.

Listing in the NRHP provides formal recognition of a property's historic, architectural, or archeological significance based on national standards used by every state. Once a property is listed on the NRHP, it becomes searchable in the NRHP's database of research information. Documentation of a property's historic significance helps encourage preservation of the resource. Listing in the NRHP provides incentives to property owners such as: federal preservation grants for planning and rehabilitation federal investment tax credits, preservation easements to nonprofit organizations, international building code fire and life safety code alternatives, state tax benefits, and grant opportunities. The Federal Tax Incentive Program encourages private sector rehabilitation of historic buildings and is a successful and cost-effective community revitalization program, which generates jobs and creates moderate and low-income housing in historic buildings. Listing does not lead to public acquisition or require public access. In addition, listing does not place any obligations on the private property owners; and there are no restrictions on use, treatment, transfer, or disposition of private property.

There are several properties within the Planning Area that are listed on the NRHP, as seen on Figure 3.5-1 and in Appendix F.

National Environmental Policy Act

The National Environmental Policy Act (NEPA) was signed into law on January 1, 1970. NEPA created an environmental review process requiring federal agencies to consider the effects of their actions on the environment. Under NEPA, all federal agencies must carry out their regulations, policies, and programs in accordance with NEPA's policies for environmental protection, including project compliance with Section 106 of the National Historic Preservation Act, as previously discussed.

National Native American Graves Protection and Repatriation Act

The Native American Graves Protection and Repatriation Act (NAGPRA) was passed in 1990 to provide for the protection of Native American graves. The act conveys to Native American's of demonstrated lineal decent, the human remains, including the funerary or religious items, that are held by federal agencies and federally supported museums, or that have been recovered from federal lands. NAGPRA makes the sale or purchase of Native American remains illegal, whether or not they were derived from federal or Native American lands.

State Regulations

California Historic Resources

The California Office of Historic Preservation (OHP) offers four different registration programs, including the California Historical Landmarks, California Points of Historical Interest, California Register of Historical Resources, and the NRHP. Each registration program is unique in the benefits offered and procedures required. If a resource meets the criteria for registration, it may be nominated by any individual, group, or local government to any program at any time. Resources do not need to be locally designated before being nominated to a state program nor do they need to be registered at the state level before being nominated to the National Register. The California Register includes buildings and the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California. Resources on the California Register have met criteria for designation or have been included due to their presence on the NRHP, the State Historical Landmark program, or the California Points of Historical Interest program.

State Historical Landmark Program

California Historical Landmarks are buildings, structures, sites, or places that have been determined to have statewide historical significance by meeting at least one of several criteria. The resource must be the first, last, only, or most significant of its type in the state or within a large geographic region; associated with an individual or group having a profound influence on California history; or be a prototype of, or outstanding example of, a period, style, architectural movement, or construction, or be one of the more notable works or best surviving work in a region of a pioneer, designer, or master builder. There is one building within the Planning Area that is designated as a State Historical Landmark, as seen on Figure 3.5-1 and in Appendix F.

California Points of Historical Interest

In addition to Landmarks, the Planning Area contains California Points of Historical Interest, which are sites, buildings, features, or events of local (city or county) significance, having

anthropological, cultural, military, political, architectural, economic, scientific or technical, religious, experimental, or other value. Criteria are the same as those for Historical Landmarks but directed to local areas. No historical resource may be designated as both a Landmark and a Point; if a Point is subsequently granted status as a Landmark, the Point designation will be retired (California OHP).

California Environmental Quality Act

A "historical resource" includes, but is not limited to, any object, building, site, area, place, record, or manuscript that is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California. CEQA mandates that lead agencies consider a resource "historically significant" if it meets the criteria for listing in the California Register of Historic Resources (California Register). Such resources meet this requirement if they (1) are associated with events that have made a significant contribution to the broad patterns of California history, (2) are associated with the lives of important persons in the past, (3) embody distinctive characteristics of a type, period, region, or method of construction, and/or (4) represent the work of an important creative individual or possesses high artistic value. These criteria mimic the criteria utilized to determine eligibility for the National Register.

In addition, Public Resources Code Section 21083.2 and CEQA Guidelines Section 15064.5(f) recognize that historical or unique archaeological resources other than potential Native American burials may be accidentally discovered during project construction. This guideline recommends that immediate evaluation defined by qualified archaeologists be included in mitigation measures. This guideline also recommends that if the find is determined to be a historical or unique archaeological resource, that contingency funding and time allotments sufficient to allow for implementation and avoidance measures be available.

California Government Code Section 65040.2(g)

California Government Code Section 65040.2(g) provides guidelines for consulting with Native American tribes for the following: (1) the preservation of, or the mitigation of impacts on places, features, and objects described in Sections 5097.9 and 5097.993 of the Public Resources Code; (2) procedures for identifying through NAHC the appropriate California Native American tribes; (3) procedures for continuing to protect the confidentiality of information concerning the specific identity, location, character, and use of those places, features, and objects; and (4) procedures to facilitate voluntary landowner participation to preserve and protect the specific identity, location, character, and use of those places, features, and objects.

Senate Bill 18 (SB 18)

Signed into law in September 2004, and effective March 1, 2005, SB 18 permits California Native American tribes recognized by the NAHC to hold conservation easements on terms mutually satisfactory to the tribe and the landowner. The term "California Native American tribe" is defined as "a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC." The bill also requires that, prior to the adoption or amendment of a city or county's general plan, the city or county consult with California Native American tribes for the purpose of preserving specified places, features, and objects located within the city or county's jurisdiction. SB 18 also applies to

the adoption or amendment of specific plans. This bill requires the planning agency to refer to the California Native American tribes specified by the NAHC and to provide them with opportunities for involvement.

Assembly Bill 52 (AB 52)

AB 52, passed in 2014, establishes a consultation process with all California Native American Tribes on the Native American Heritage Commission List and federally non-recognized tribes. It establishes a new class of resources: tribal cultural resources, and consideration is now given to Tribal Cultural Values in the determination of project impacts and mitigation. It requires Tribal notice and meaningful consultation (Public Resources Code 21080.3.2(b)). Consultation ends when Parties either agree to mitigation measures or avoid a significant effect on tribal cultural resources. Per AB 52 requirements, NAHC was contacted in 2016 and 2018 to request a tribal consultation list and review of the Sacred Lands File. Results of that outreach are included in the Setting section above and are included in Appendix F.

Tribes must submit a written request to the lead agency requesting to be notified of proposed projects in the geographic area that is traditionally and culturally affiliated with the tribe. (§21080.3.1(b)(1)). The lead agency must submit written notification to the tribe that requested notification within 14 days of determining that an application for a project is complete – notification must include project description and proposed location. (§21080.3.1(d)). Tribes must submit written response within 30 days of receiving notification requesting consultation. Tribes must designate a lead contact person. If no designation, or if a tribe designates multiple lead contacts, the lead agency shall consult with Native American Heritage Commission's SB 18 list contact person. (§21080.3.1(b)(2)). Consultation shall begin prior to the release of the environmental document. (§21080.3.1(b)). Consultation shall include discussion regarding alternatives, recommended mitigation measures, or significant effects, but only if the tribe requests consultation regarding these issues. (§21080.3.2(a)).

Consultation may include discussion concerning the type of environmental review necessary (in circumstances where consultation begins prior to that determination), the significance of tribal cultural resources, the significance of a project's impacts on tribal cultural resources, and, if necessary, project alternatives or mitigation measures. (§21080.3.2(a)). Any mitigation measures agreed upon during consultation must be recommended for inclusion in the environmental document. (§21082.3 (a)). Consultation shall be concluded when either occurs (§21080.3.2(b)):

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that a mutual agreement cannot be reached.

A "tribal cultural resource" is one of the following (§21074):

a. A site, feature, place, cultural landscape, sacred place, and object with cultural value to the tribe that is either (1) included or determined to be eligible for inclusion in the California Register of Historical Resources or (2) included in a local register of historical resources; or

b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying these criteria, the lead agency must consider the significance of the resource to a California Native American tribe.

California Public Resources Code

Sections 5097–5097.6 of the California Public Resources Code outline the requirements for cultural resource analysis prior to the commencement of any construction project on state lands. The state agency proposing the project may conduct the cultural resource analysis or they may contract with the State Department of Parks and Recreation. In addition, this section stipulates that the unauthorized disturbance or removal of archaeological, historical, or paleontological resources located on public lands is a misdemeanor. It prohibits the knowing destruction of objects of antiquity without a permit (expressed permission) on public lands and provides for criminal sanctions. This section was amended in 1987 to require consultation with the California NAHC whenever Native American graves are found. Violations for the taking or possessing remains or artifacts are felonies.

The Public Resources Code Section 5097.9-991, regarding Native American heritage, outlines protections for Native American religion from public agencies and private parties using or occupying public property. Also protected by this code are Native American sanctified cemeteries, places of worship, religious or ceremonial sites, or sacred shrines located on public property.

California Health and Safety Code

The California Health and Safety Code Section 7050.5 states that if human remains are discovered, no further disturbance shall occur until the County Coroner has made a determination of origin and disposition. If the Coroner determines that the remains are not subject to his or her authority and if the Coroner recognizes the human remains to be those of a Native American, or has reason to believe that they are those of a Native American, he or she shall contact, by telephone within 24 hours, the NAHC. This regulation is applicable to any project where ground disturbance would occur. Section 7052 of the California Health and Safety Code makes the willful mutilation, disinterment, or removal of human remains a felony.

Local Regulations

St. Helena Municipal Code

Chapter 16.32 Design Standards and Improvements

Section 16.32.140 of the Municipal Code requires that subdivisions[5] affecting resources described in the existing General Plan and any applicable specific plan include a survey by a qualified archaeologist prior to development "whenever significant archeological or paleontological sites may be located within the project area." Mitigation measures for archaeological and/or paleontological resources must be implemented prior to development of the project site.

Chapter 17.48 Central Business (CB) District

Chapter 17.48 establishes a Central Business (CB) district to provide for "retail, personal service uses, offices, restaurants, hotels/motels, service stations, public and quasi-public uses, and similar

and compatible uses that serve local residents and the surrounding area" (Section 17.48.010). This zoning prohibits demolition of a significant architectural or historical building—as determined by the Planning Commission—unless the Commission finds that (1) the structure poses a threat to health, safety and general welfare if it is not demolished; (2) that restoration of the structure is not feasible or practicable using current building codes including, but not limited to, the Historic Building Code provision of the Uniform Building Code of the state; and (3) that no public or other funding is available for financing State Historic Building Code, as amended and adopted by the City.

Chapter 17.92 Historic Preservation Overlay (HP) District

Chapter 17.92 establishes a Historic Preservation Overlay (HP) district "to preserve the unique architectural character of those certain specific structures which have contributed to the City's historic development" (Section 17.92.020). The Planning Commission must determine buildings that will be protected within an HP overlay district. Protections include restrictions on historically inappropriate exterior alterations, demolition, and restoration, and economic incentives for preservation of significant buildings.

Chapter 17.164 Design Review

Per Chapter 17.164 of the St. Helena Municipal Code, all demolition of an existing building is discretionary under the design review process, except when required for the emergency protection of public health, safety or welfare as determined by the city manager.

Impact Analysis

SIGNIFICANCE CRITERIA

For the purposes of this EIR, a significant adverse impact would occur if implementation of the Proposed Plan would:

Criterion 1: **Cause a substantial adverse change in the significance of a historical resource as defined in CEQA § 15064.5;**

Criterion 2: **Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA § 15064.5;**

Criterion 3: **Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature;**

Criterion 4: **Disturb any human remains, including those interred outside of formal cemeteries; or**

Criterion 5: **Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape, sacred place, or object with cultural value to a California Native Tribe and that is:**

- **i) Listed or eligible for listing in the California Register of Historical Resources or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or**
- **ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.**

METHODOLOGY AND ASSUMPTIONS

The analysis of potential cultural resources impacts is based upon a comprehensive records search conducted at the NWIC at Sonoma State University. The records search included a review of all recorded historic and prehistoric cultural resources within the Planning Area. In addition, the

California State Historic Property Data File (HRI), which includes the National Register of Historic Places (National Register), California Historical Landmarks, and California Points of Historical Interest was examined. The analysis also included a search of the NAHC Sacred Lands File, consultation with NAHC and local tribes, review of City of St. Helena documents, State regulations, and Proposed Plan goals, policies, and actions.

The Planning Area for the Proposed Plan includes three study areas in unincorporated Napa County immediately adjacent to the city limits where the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities (see Chapter 2: Project Description for additional details). Existing conditions related to historic, cultural, and tribal cultural resources in the whole of the Planning Area are documented above; however, as the City does not have jurisdiction outside of the city limits and sphere of influence (SOI), Proposed Plan policies and actions would not apply in the study areas. Therefore, implementation of the Proposed Plan would not result in direct impacts related to historic, cultural, and tribal cultural resources in the study areas. Cumulative impacts related to historic, cultural, and tribal cultural resources are discussed in Chapter 5: CEQA Required Conclusions.

RELEVANT POLICIES AND IMPLEMENTING ACTIONS

The Proposed Plan includes the following policies and implementing actions that address cultural resources and are relevant to the current analysis:

Land Use Element

- ***LU3.4*** Protect historic resources in the commercial areas and encourage appropriate rehabilitation and adaptive reuse.

Historic Resources Element

- ***HR1.1*** Preserve the City's historic and cultural resources, so that they may contribute to the special character and quality of the City and support its economic base.
- ***HR1.2*** Protect the historic resources that exist in the downtown commercial area.
- ***HR1.3*** Encourage the adaptive reuse, rehabilitation and retrofit of historic buildings in which the original use is no longer feasible.
- ***HR1.5*** For development and redevelopment proposals in archaeologically, tribal cultural, and paleontologically sensitive areas of St. Helena, require an assessment of the potential presence of archaeological, tribal cultural and paleontological resources, including a site survey and a records search of the California Historical Resources Information System at the Northwest Information Center (NWIC). As warranted by the results of the assessment, require additional studies to identify and address project-specific impacts on archaeological, tribal cultural, and paleontological resources. The City shall incorporate the study recommendations as project conditions of approval to ensure that impacts on archaeological, tribal cultural, and/or paleontological resources are mitigated to the extent possible. Studies shall be prepared according to National Register Bulletin 24: Guidelines for Local Surveys: A Basis for Preservation Planning and the Secretary of the Interior's Standards and Guidelines for Archaeology and Historic Preservation.

- ***HR1.6*** For development or redevelopment on a site that contains any structures over 45 years old, require a records search of the California Historical Resources Information System at the Northwest Information Center (NWIC) to determine the presence of historic resources. As warranted by the results of the records search, the City shall require evaluation of structures over 45 years old to determine their historical significance. Studies shall be prepared according to National Register Bulletin 24: Guidelines for Local Surveys: A Basis for Preservation Planning and the Secretary of the Interior's Standards and Guidelines for Archaeology and Historic Preservation.
- ***HR1.A*** Adopt a historic preservation ordinance to implement the policies recommended in the Historic Resources Element.
- ***HR1.D*** Develop an incentive program to encourage property owners to participate in historic preservation efforts. Potential program measures can include alternate building codes for historic structures and financial incentives, where necessary.
- ***HR1.E*** Consolidate and update the existing inventories of historic buildings and houses and develop criteria to add to the list.
- ***HR1.H*** Regularly update the Historic Resources Inventory to ensure that is includes a current list of historic structures in the City.
- ***HR1.I*** Incorporate the preservation of historic resources into a citywide urban design plan.
- ***HR2.1*** Strengthen public awareness of and support for the preservation and protection of the City's historic resources.
- ***HR2.D*** Conduct a survey of historic resources to determine different architectural types in the City and develop design guidelines specific to style and period.

Community Design Element

- ***CD1.6*** Encourage the adaptive reuse, rehabilitation and retrofitting of historic buildings in which the original use is no longer feasible.

IMPACTS

Impact 3.5-1 Implementation of the Proposed Plan could cause a substantial adverse change in the significance of a historical resource, as defined as physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historic resource would be materially impaired (CEQA Guidelines Section 15064.5). (*Less than Significant*)

New development as a result of implementation of the Proposed Plan could result in a significant impact if construction caused the demolition, destruction, relocation, or alteration of a historic resource. Historic resources are located throughout the Planning Area, with a majority of resources located along Main Street between Spring and Adams streets. No new development is proposed within a historic district in the Proposed Plan, and while most of the Change Areas identified in Figure 2.1-4 do not overlap with any historic structures, several Change Areas, including change areas 3, 5, 7, and 13, do overlap with potential historic resources. Therefore, while implementation is unlikely to negatively impact any known historic resources, future development and

redevelopment permitted under the Proposed Plan could result in changes that affect both known and undiscovered historic resources.

To reduce the potential impact of construction on historic resources, at the time development or redevelopment projects are proposed, the project-level CEQA document would need to identify potential impacts on known or potential historic sites and structures. CEQA Guidelines require a project that will have potentially adverse impacts on historical resources to conform to the Secretary of the Interior's Standards for the Treatment of Historic Properties. Section 16.32.140 of the St. Helena Municipal Code establishes procedures for archaeological surveys and mitigation measures for archaeological and/or paleontological resources. Additionally, chapters 17.48 and 17.92 establish protections for significant architectural or historical buildings within the city, including discretionary permits for demolition.

As listed above, the Proposed Plan includes multiple policies and implementing actions that attempt to mitigate impacts on historical built resources through protection, rehabilitation, and adaptive reuse. These policies and actions encourage (1) design/development standards for new construction and remodeling projects to ensure that such projects would not adversely affect the historical integrity of adjacent historical buildings and structures, (2) adaptive reuse of historic buildings, and (3) preservation of historic buildings and neighborhoods. These policies and implementing actions would also mitigate potential impacts on historic districts or historical buildings from development that may occur in Change Areas identified in the Proposed Plan (see Figure 2.1-4 in Chapter 2, Project Description, of this EIR) by use of design standards and/or form-based codes that ensure new construction would complement the neighborhood's historical setting. Specifically, policies LU3.4, HR1.1, HR1.2, HR1.3, and HR 1.4, and implementing actions HR1.A, HR1.D, HR1.I, and CD1.6 encourage the preservation and reuse of historic resources. Policy HR1.6 and implementing actions HR1.E, HR1.H, HR2.1, and HR2.D protect historic resources by ensuring records of existing resources are accurate and easily accessible.

Therefore, the impact of implementation of the Proposed Plan on historical resources would be less than significant with implementation of existing regulations and the proposed policies and implementing actions.

Mitigation Measures

None required.

Impact 3.5-2 Implementation of the Proposed Plan could cause an adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5. (*Less than Significant*)

Future public and private development projects could create a significant impact if it results in the disturbance of recorded and unrecorded archaeologic resources due to site grading, construction of building foundations, trenching for utilities and/or similar activities that would disturb existing ground surfaces.

Although implementation of the Proposed Plan may result in actions that could adversely affect archaeological resources, policies in the Proposed Plan and existing regulations would minimize or avoid impacts by requiring the protection and preservation of such resources. Proposed Plan

Policy HR1.5 would require the City to conduct a records search at the Northwest Information Center (NWIC) for future development projects that have the potential for archaeological resources to determine the potential to affect cultural resources and to incorporate any recommendations provided by the NWIC into the final design of the project.

Regarding undiscovered resources, Public Resources Code Section 21083.2 and CEQA Guidelines Section 15064.5(f) recognize that historical or unique archaeological resources may be accidentally discovered during project construction and guidelines recommend that if a potential resource has been discovered, that an immediate evaluation by a qualified archaeologist be included in mitigation measures. Policy HR1.5 requires that the City incorporate the NWIC study recommendations as project conditions of approval to ensure that impacts on archaeological resources are mitigated.

The impact of implementation of the Proposed Plan on archaeological resources would be less than significant, with implementation of existing State recommendations and the proposed policy listed above.

Mitigation Measures

None required.

Impact 3.5-3 Implementation of the Proposed Plan would not directly or indirectly destroy a unique paleontological resource or site or unique geologic feature. (*Less than Significant*)

Future development and redevelopment allowed under the Proposed Plan could result in direct or indirect impacts on paleontological resources. Construction activities such as grading, excavation, and ground-disturbing activities may result in the accidental destruction or disturbance of paleontological sites. While no paleontological resources have been discovered within the Planning Area to-date there is potential that resources could be found in the future.

Policy HR1.5 in the Proposed Plan would reduce the potential impact on paleontological resources by requiring an assessment of the potential for paleontological resources, including a site survey, for development and redevelopment proposals in paleontologically sensitive areas of St. Helena. This policy also requires, as warranted by the results of the assessment, additional studies to identify and address project-specific impacts on archaeological and paleontological resources that shall be incorporated as project-specific conditions of approval to ensure that impacts on paleontological resources are mitigated. The impact of implementation of the Proposed Plan on paleontological resources would therefore be less than significant with implementation of Policy HR1.5.

Mitigation Measures

None required.

Impact 3.5-4 Development allowed by the Proposed Plan would have the potential to disturb human remains, including those interred outside of formal cemeteries. (*Less than Significant*)

Human remains, particularly those interred outside of formal cemeteries, could be disturbed during grading, excavation, or other ground-disturbing activities associated with future development or redevelopment projects allowed under the Proposed Plan. Of the 34 recorded Native American archaeological resources found in the Planning Area, some have been described as burials. While the exact location of these resources is unknown, they are most commonly found within Napa County on ridges, midslope benches, near the hill to valley interface, in valleys lands, near ecotones, and near intermittent and perennial watercourses. Therefore, these types of locations within the Planning Area may be most sensitive to the discovery of Native American resources, including human remains.

The treatment of Native American human remains is regulated by Public Resources Code Section 5097.98, as amended by Assembly Bill 2641, which addresses the disposition of Native American burials, protects remains, and appoints the NAHC to resolve disputes. In addition, as noted in the Regulatory Setting, California Health and Safety Code Section 7050.5 includes specific provisions for the protection of human remains in the event of discovery, and Section 7052 makes the willful mutilation, disinterment, or removal of human remains a felony. The Health and Safety Code is applicable to any project where ground disturbance would occur.

Policy HR1.5 in the Proposed Plan would further reduce the potential impact on archaeological and tribal cultural resources, including human remains, by requiring an assessment of the potential for such resources, including a site survey and a records search of the California Historical Resources Information System at the Northwest Information Center (NWIC), for development and redevelopment proposals in archaeologically or tribal cultural sensitive areas of St. Helena. This policy also requires, as warranted by the results of the assessment, additional studies to identify and address project-specific impacts on archaeological resources that shall be incorporated as project-specific conditions of approval to ensure that impacts on such resources are mitigated.

The impact of implementation of the Proposed Plan on human remains would therefore be less than significant with implementation of existing State regulations and proposed General Plan Policy HR1.5.

Mitigation Measures

None required.

Impact 3.5-5 Implementation of the Proposed Plan could cause an adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size

and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:

(a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or

(b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe. (*Less than Significant*)

Future development allowed under the Proposed Plan could result in direct or indirect significant impacts through grading, overland vehicle travel, or other ground-disturbing activities, or through facilitation of public access to culturally significant sites. As a result of tribal consultation and an NWIC records request, the Planning Area contains 34 known recorded Native American archaeological resources and two informally-recorded Native American archaeological resources. While the exact location of these resources is not public information, it is typical for Native American resources to be located near water bodies, therefore development near the Napa River or creeks within the Planning Area may result in the discovery of additional resources.

Policy HR1.5 in the Proposed Plan would minimize or avoid potential impacts on any resources known or not known at this time that may be encountered in the future and would promote coordination with Native American tribes if any tribal resources are discovered at development sites. The impact of implementation of the Proposed Plan on Native American tribal cultural resources would therefore be less than significant with implementation of the proposed policies and actions of the Proposed Plan.

Mitigation Measures

None required.

This page intentionally left blank.

3.6 Energy, Greenhouse Gases, and Climate Change

This section assesses potential environmental impacts related to energy use, greenhouse gases (GHGs), and climate change from future development under the Proposed Plan. This section describes existing energy usage, GHG emissions, and sources of GHGs in the Planning Area, as well as relevant federal, State, and local regulations and programs. There were no responses to the NOP regarding topics addressed in this section of the EIR.

Environmental Setting

PHYSICAL SETTING

Energy

California is the second largest consumer of energy in the United States. However, California's per capita energy consumption is relatively low, due in part to mild weather that reduces energy demand for heating and cooling and in part to the State's energy efficiency programs and standards. As of 2016, petroleum and natural gas supply the majority of the energy consumed in California (U.S. Energy Information Administration, 2017).

The concept of sustainable energy generally refers to renewable energy sources, such as solar power, wind power, wave power, geothermal power, tidal power, and biomass, as well as technologies that improve energy efficiency. Energy conservation refers to efforts made to reduce energy consumption in order to preserve future resource capacities and reduce pollutants. Energy conservation can be achieved through increased energy efficiency, decreased energy consumption, and/or reduced consumption from conventional, nonrenewable energy sources.

State Energy Conditions

Electricity

In 2017, California used over 292,000 gigawatt-hours of electricity (California Energy Commission, 2018). Electricity use in California for differing land uses varies substantially by the type of uses in a building, type of construction materials, and the efficiency of electricity-consuming devices.

Because of the State's energy efficiency standards, as well as efficiency and conservation programs, California's per-capita electricity use has remained stable for more than 30 years while the national average steadily increased. The California Energy Commission's (CEC's) 2017 Integrated Energy

Policy Report Update estimates that electricity consumption will grow by up to 1.59 percent per year between 2017 and 2030, with peak demand growing at an average of 1.52 percent annually over the same period. Projections for energy consumptions have increased since 2016, largely due to the increasing use of electric vehicles and the growing industrial sector (Chris, et al., 2018).

Of electricity generated in California in 2017, 43.4 percent is from natural gas, 17.9 percent from hydroelectric, 8.7 percent is from nuclear power plants, and 11.8 percent is from solar production. Other sources include coal-fired power plants and other renewable energy sources, such as wind turbines. California also imports electricity from out of state (California Energy Commission, 2018).

Natural Gas

In 2016, California used approximately 13 billion therms of natural gas (Chris, et al., 2018). California is the second largest natural gas consumer in the United States, representing more than 10 percent of the total national natural gas consumption. In 2016, residential uses accounted for the greatest amount of the state's natural gas demand (33.5 percent), followed by industrial uses (27.7 percent), mining (20.7 percent), and commercial uses (15.4 percent) (Leon, Orta, Puglia, Dixon, & Gulliksen, 2017). California remains heavily dependent on natural gas to generate electricity, which comprise roughly 43 percent of the state's natural gas demand (California Energy Commission, 2018).

The CEC's 2017 Integrated Energy Policy Report forecasts that natural gas consumption by end users (excluding electricity generation) is expected to grow by up to 0.77 percent annually through 2030 (Chris, et al., 2018).

Petroleum

In 2016, California used approximately 672 million barrels of petroleum, predominantly as transport fuels in products such as motor gasoline, distillate fuel, liquefied petroleum gases, and jet fuel (U.S. Energy Information Administration, 2017). However, due to the rising costs of these fuels and the enforcement of federal Renewable Fuel Standard (RFS) and the California Low Carbon Fuel Standard (LCFS), California is diversifying its transportation energy sources, increasing fuel efficiency, and adapting land use and development to reduce energy use for transportation.

Local Energy Conditions

The City of St. Helena joined Marin Clean Energy (MCE), a Community Choice Aggregation (CCA) program, in 2016. In 2002, California Assembly Bill (AB) 117 passed, allowing groups of communities to purchase power on behalf of their residents and businesses, completely supported by revenues rather than taxpayer subsidies. AB 117 paved the way for CCAs to form as alternatives to Investor Owned Utilities (IOUs), such as Pacific Gas and Electric (PG&E), where communities could source electricity more directly and have more ownership about the amount of renewable energy in a utility's portfolio.

MCE, which launched in 2010 as the first CCA in California, generates its electricity from hydroelectric, natural gas, geothermal, wind, solar, and biomass/biowaste resources. A portion of MCE's 2016 power mix is also from unspecified sources of power, which means it is not traceable

to specific generation sources. Residents of the City of St. Helena are automatically enrolled in the Light Green Power Mix, which sources at least 50 percent of its energy from renewable sources. Customers can also opt-up to the Deep Green Power Mix, which is 100 percent renewable energy, or opt-out and be provided electricity through PG&E. Unincorporated Napa County, including the study areas, is also served by MCE. It is estimated that approximately 11 percent of Napa County has opted out of MCE (Marin Clean Energy, 2016). PG&E's 2017 power mix was approximately 33 percent renewable energy (Schmitz, 2018).

Table 3.6-1: Annual Residential, Commercial, and Industrial Electricity Use shows approximate electricity usage in the City of St. Helena for the residential, commercial, and industrial sectors in 2017. Due to privacy rules, commercial and industrial electricity use have been aggregated. In St. Helena, commercial and industrial uses comprise 69 percent of electricity use and residential approximately 31 percent. Based on a 2017 state electricity usage of 292,000 gigawatt-hours and an estimated population of 38,650,000 (U.S. Census Bureau, 2016), the California per capita electricity usage is approximately 7,555 kWh per capita. For the City of St. Helena, the 2017 electricity usage per capita was higher at 9,966 kWh per capita.

Table 3.6-2: Annual Residential, Commercial, and Industrial Natural Gas Use shows approximate natural gas usage in the City of St. Helena for the residential, commercial, and industrial sectors in 2017. As in electricity usage, due to privacy reasons, commercial and industrial nature gas usage has been aggregated. In St. Helena, the residential sector consumes 51 percent of natural gas and the commercial and industrial sectors total 49 percent of natural gas use. Based on a 2017 state natural gas usage of 13 billion therms and a population of 38,650,000, the California per capita natural gas usage is approximately 335 therms per capita. For the City of St. Helena, the 2017 natural gas usage per capita was greater at approximately 435 therms per capita.

Table 3.6-1: Annual Residential, Commercial, and Industrial Electricity Use, St. Helena

Sector	*Usage (kWh)*	*Percent of Total*

Greenhouse Gas Emissions

The Greenhouse Effect and Greenhouse Gases

Greenhouse gases (GHGs) are gases that trap heat in the atmosphere and regulate the earth's temperature. This effect, known as the Greenhouse Effect, is responsible for maintaining a habitable climate. The most common GHGs are carbon dioxide and water vapor, followed by methane (CH_4), nitrous oxide (N2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). These are released into the earth's atmosphere through a variety of natural processes and human activities. Key points about GHGs include the following:

- Carbon dioxide and nitrous oxide are byproducts of fossil fuel combustion;
- Nitrous oxide is also associated with agricultural operations such as fertilization of crops;
- Methane is commonly created by off-gassing from agricultural practices (e.g. keeping livestock), composting and landfill operation;
- Chlorofluorocarbons were widely used as refrigerants, propellants, and cleaning solvents, but their production has been mostly eliminated by international treaty;
- Hydrofluorocarbons are now used as a substitute for chlorofluorocarbons in refrigeration and cooling; and
- Perfluorocarbons and sulfur hexafluoride emissions are commonly created by industries such as aluminum production and semi-conductor manufacturing.

Each GHG has its own potency and effect upon the earth's energy balance. This is expressed in terms of a global warming potential (GWP), with carbon dioxide being assigned a value of 1 and sulfur hexafluoride being several orders of magnitude stronger with a GWP of 23,900. In GHG emission inventories, the weight of each gas is multiplied by its GWP and is measured in units of carbon dioxide equivalents (CO_2e).

California Contributions to Greenhouse Gas Emissions

In 2016, the United States produced 6,511 million metric tons of CO_2e ($MMTCO_2e$). The primary GHG emitted by human activities in the United States was CO_2, representing approximately 81.6 percent of total GHG emissions. The largest source of CO_2, and of overall GHG emissions, was fossil-fuel combustion, which accounted for approximately 93.5 percent of the CO_2 emissions and 77 percent of overall GHG emissions (United States Environmental Protection Agency, 2018).

According to the 2016 GHG inventory compiled by the California Air Resources Board (CARB) California emitted 429 $MMTCO_2e$ of GHGs, including emissions resulting from out-of-state electrical generation. While transportation is the primary contributor to GHG emissions in California, other sources include industrial uses, electric power production from both in-state and out-of-state sources, agriculture and forestry, and commercial and residential activities (California Air Resources Board, 2018). Sources of GHG emissions in California and their respective contributions in 2016 are presented in Table 3.6-3: GHG Sources in California.

Table 3.6-3: GHG Sources in California (2016)

Source Category	*Annual GHG Emissions ($MMTCO_2e$)*	*Percent of Total*
Transportation	174.0	41%
Industrial uses	100.4	23%
Electricity generation (In State)	42.7	10%
Electricity generation (Imports)	26.3	6%
Agriculture and forestry	33.8	8%
Residential	28.3	7%
Commercial	23.0	5%
Not Specified	0.8	<1%
Total	**429.4**	**100.0**

Source: CARB, 2018

Local GHG Emissions

For the General Plan, an updated GHG emissions inventory was conducted for the City of St. Helena using best available data (see Appendix G for more detailed inventory methodology) and modeled for a baseline year of 2018. The inventory found that St. Helena's emissions totaled 76,012 $MTCO_2e$. As shown in Table 3.6-4: 2018 GHG Emissions Summary by Sector ($MTCO_2e$), the transportation sector was responsible for the largest source of emissions, generating 44,531 $MTCO_2e$, 59 percent of total emissions.[1] Electricity and natural gas use from the commercial/industrial sector was the second largest source of emissions, generating approximately 12,773 $MTCO_2e$, 17 percent of total emissions. Electricity and natural gas consumption within the residential sector was the third largest source of emissions, generating 9,890 $MTCO_2e$, 13 percent of total emissions.

[1] The substantial increase in transportation emissions between 2010 and 2018 can be attributed to a change in methodology in accounting for vehicle miles traveled (VMT). In 2010, it is assumed that transportation emissions from VMT were calculated only using trips within the boundaries of the City of St. Helena. Best practices for compiling a GHG inventory state that a shared accounting method should be used that includes VMT for trips within the City of St. Helena plus 50 percent of trips that begin or end in the city boundaries. A shared accounting method was used in the baseline inventory and therefore increased the transportation emissions of the City significantly. More information about the methodology for quantifying GHG emissions can be found in Appendix G.

Table 3.6-4: 2018 GHG Emissions Summary by Sector, St. Helena ($MTCO_2e$)

Sector	*Annual GHG Emissions (MTCO2e)*	*Percent of Total*
Residential	9,890	13.0%
Commercial/Industrial	12,773	16.8%
Transportation	44,531	58.6%
Solid Waste	3,734	4.9%
Water Transport, Distribution, and Treatment	138	0.2%
Wastewater	181	0.2%
Off-Road Equipment	4,631	6.1%
Public Lighting	37	>0.1%
Agriculture	97	0.1%
TOTAL	**76,012**	**100.0%**

Climate Change

Climate change refers to a change in the average global climate that may be measured by wind patterns, storms, precipitation, and temperature. The term climate change is often used interchangeably with the term global warming. Global warming refers to an average increase in the temperature of the atmosphere near the Earth's surface, which can contribute to changes in global climate patterns. However, rising temperatures are just one aspect of climate change.

The U.S. Environmental Protection Agency's (EPA's) indicators of climate change include (U.S. Environmental Protection Agency, 2016):

- **Greenhouse Gases.** The amount of GHGs emitted into the atmosphere through human activities, the concentrations of these gases in the atmosphere, and how emissions and concentrations have changed over time.
- **Weather and Climate.** Frequency of heat waves, increased drought conditions, increased average precipitation and shifting weather patterns, and the intensity of tropical storms.
- **Oceans.** Increased ocean heat affecting water temperature, sea level, and currents; changes in sea level; increased ocean acidity affecting marine organisms.
- **Snow and Ice.** Reduced Arctic sea ice, diminished glaciers, decreased time that lakes stay frozen, decreased snow cover and snowpack.
- **Health and Society.** Heat-related illnesses, increased length of growing season reflecting earlier spring warming and later fall/winter frosts, prolonged allergy seasons.
- **Society and Ecosystems.** Shifts in plant hardiness zones reflecting higher winter temperatures, changes in bird migration patterns as a result of temperature variability.

Potential Effects of Human Activity on Climate Change

Among scientists, global climate change is now a widely accepted phenomenon. Scientific societies and organizations worldwide have endorsed the Intergovernmental Panel on Climate Change (IPCC) position of January 2001, which states: "An increasing body of observations gives a collective picture of a warming world and other changes in the climate system. There is new and stronger evidence that most of the warming observed over the last 50 years is attributable to human activities." Since 1976, every year has been warmer than the 20th-century average temperature. In 2015, the average temperature across global land and ocean surfaces was 1.62°F (0.90°C) above the twentieth-century average (National Oceanic and Atmospheric Administration (NOAA), 2017). To date, no scientific body of national or international standing has maintained a dissenting opinion; the last was the American Association of Petroleum Geologists, which in 2007 updated its 1999 statement rejecting the likelihood of human influence on recent climate with its current non-committal position (American Association of Petroleum Geologists (AAPG), 2007).

Some of the potential impacts in California of global warming may include loss in snow pack, sea level rise, more extreme heat days per year, higher O_3 days, larger forest fires, and more drought years. Several recent studies have attempted to explore the possible negative consequences that climate change, if left unchecked, could have in California. These reports acknowledge that climate scientists' understanding of the complex global climate system and the interplay of the various internal and external factors that affect climate change remains too limited to yield scientifically valid conclusions on such a localized scale. Substantial work has been done at the international and national levels to evaluate climatic impacts, but far less information is available on regional and local impacts.

REGULATORY SETTING

Global climate change resulting from GHG emissions is an emerging environmental concern being raised and discussed at the international, national, and state levels. At each level, agencies are considering strategies to control emissions of gases that contribute to global warming.

Federal Regulations

Energy Policy and Conservation Act

In 1975, Congress enacted the Energy Policy and Conservation Act, which established the first fuel economy standards for on-road motor vehicles in the United States. Pursuant to the act, the EPA and National Highway Traffic Safety Administration (NHTSA) are responsible for establishing additional vehicle standards. In 2012, new Corporate Average Fuel Economy (CAFE) standards were approved to increase the fuel economy to 54.5 miles per gallon average for cars and light trucks by Model Year 2025 (EPA, 2012). Fuel economy is determined based on each manufacturer's average fuel economy for the fleet of vehicles available for sale in the United States.

The regulations also include targeted incentives to encourage early adoption and introduction into the marketplace of advanced technologies to dramatically improve vehicle performance, including:

- Incentives for electric vehicles, plug-in hybrid electric vehicles, and fuel cell vehicles;

- Incentives for hybrid technologies for large pickups and for other technologies that achieve high fuel economy levels on large pickups;
- Incentives for natural gas vehicles; and
- Credits for technologies with potential to achieve real-world GHG reductions and fuel economy improvements that are not captured by the standards test procedures.

Energy Star Program

Energy Star is a joint program of the EPA and the U.S. Department of Energy (DOE). The program establishes criteria for energy efficiency for household products and labels energy efficient products with the Energy Star seal. For example, homes can earn the Energy Star certification if they are verified to meet the EPA's guidelines for energy efficiency. To earn the Energy Star certification in California, site-built or modular homes must meet energy efficiency the performance target as determined by energy modeling through a CEC-approved software program, construct the home using the preferred set of efficiency measures, and verify that the home meets every item on the National Rater Checklist through a Rater. Energy Star certified homes typically feature more efficient walls, windows, air ducts, HVAC system, and lighting and appliances that allow homeowners to operate their homes using less power and resources.

Massachusetts vs. EPA

On April 2, 2007, in Massachusetts v. EPA, the U.S. Supreme Court directed the EPA Administrator to determine whether GHG emissions from new motor vehicles cause or contribute to air pollution that may reasonably be anticipated to endanger public health or welfare, or whether the science is too uncertain to make a reasoned decision. In making these decisions, the EPA Administrator is required to follow the language of Section 202(a) of the Clean Air Act (CAA). On December 7, 2009, the Administrator signed a final rule with two distinct findings regarding GHGs under Section 202(a) of the CAA:

- The Administrator found that elevated concentrations of GHGs—CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6—in the atmosphere threaten the public health and welfare of current and future generations. This is referred to as the "endangerment finding."
- The Administrator further found the combined emissions of GHGs—CO_2, CH_4, N_2O, and HFCs—from new motor vehicles and new motor vehicle engines contribute to the GHG air pollution that endangers public health and welfare. This is referred to as the "cause or contribute finding."

These two findings were necessary to establish the foundation for regulation of GHGs from new motor vehicles as air pollutants under the CAA.

Energy Independence and Security Act

The Energy Independence and Security Act of 2007 (EISA) set increased CAFE standards for motor vehicles and established other provisions related to energy efficiency:

- Renewable Fuel Standard (RFS) (EISA Section 202);
- Appliance and Lighting Efficiency Standards (EISA Sections 301–325); and

- Building Energy Efficiency (EISA Sections 411–441).

This federal legislation requires ever-increasing levels of renewable fuels to replace petroleum. The EPA is responsible for developing and implementing regulations to ensure that transportation fuel sold in the United States contains a minimum volume of renewable fuel. The RFS program regulations were developed in collaboration with refiners, renewable fuel producers, and many other stakeholders.

The RFS program was created under the Energy Policy Act of 2005 and established the first renewable fuel volume mandate in the United States. As required under the act, the original RFS program (RFS1) required 7.5 billion gallons of renewable fuel to be blended into gasoline by 2012. Under the EISA, the RFS program was expanded in several key ways that lay the foundation for achieving significant reductions of GHG emissions from the use of renewable fuels, for reducing imported petroleum, and encouraging the development and expansion of our nation's renewable fuels sector. The updated program is referred to as RFS2 and includes the following:

- EISA expanded the RFS program to include diesel, in addition to gasoline.
- EISA increased the volume of renewable fuel required to be blended into transportation fuel from 9 billion gallons in 2008 to 36 billion gallons by 2022.
- EISA established new categories of renewable fuel and set separate volume requirements for each one.
- EISA required the EPA to apply life-cycle GHG performance threshold standards to ensure that each category of renewable fuel emits fewer GHGs than the petroleum fuel it replaces.

Additional provisions of the EISA address energy savings in government and public institutions, promoting research for alternative energy, additional research in carbon capture, international energy programs, and the creation of "green jobs."

Carbon Pollution Standards and Clean Power Plan

On August 3, 2015, the EPA finalized the Carbon Pollution Standards, which established national limits on the amount of carbon pollution that new, modified, and reconstructed power plants would be allowed to emit. On the same date, the EPA also finalized the Clean Power Plan, setting national limits on carbon pollution from existing power plants.

State Regulations

Building Energy Efficiency Standards (Title 24) and CALGreen

California's Energy Efficiency Standards for Residential and Nonresidential Buildings (Title 24 California Code of Regulations [CCR], Part 6) were first established in 1978 in response to a legislative mandate to reduce California's energy consumption.

In 2007, Governor Schwarzenegger directed the California Building Standards Commission (CBSC) to work with State agencies on the adoption of green building standards for residential, commercial, and public building construction for the 2010 code adoption process. A voluntary

version of the California Green Building Standards Code, referred to as CalGreen, was added to Title 24 as Part 11 in 2009. The 2010 version of CalGreen took effect January 1, 2011 and instituted mandatory minimum environmental performance standards for all ground-up new construction of commercial and low-rise residential buildings, state-owned buildings, schools, and hospitals.

The most recent CALGreen code was adopted in 2016 and became effective in 2017. CALGreen contains voluntary Tier 1 and Tier 2 levels, which are designed to exceed energy efficiency and other standards by 15 percent or 30 percent, respectively.

The California Building Code (CBC) has been amended and adopted as Title 15 of the St. Helena Municipal Code, which regulates all building and construction projects within the city.

Pavley Fuel Economy Standards (Assembly Bill 1493)

In a response to the transportation sector accounting for more than half of California's CO_2 emissions, Assembly Bill (AB) 1493 was enacted in 2002. AB 1493 required CARB to set GHG emission standards for passenger vehicles, light-duty trucks, and other vehicles determined by the State board to be vehicles whose primary use is noncommercial personal transportation in the state. The bill required that CARB set GHG emission standards for motor vehicles manufactured in 2009 and all subsequent model years. CARB adopted the standards in September 2004.

Before these regulations could go into effect, the EPA had to grant California a waiver under the federal CAA, which ordinarily preempts State regulation of motor vehicle emission standards. The EPA Administrator granted the waiver on June 30, 2009. On March 29, 2010, the CARB Executive Officer approved revisions to the motor vehicle GHG standards to harmonize the State program with the national program for 2012–2016 model years (see *Energy Policy and Conservation Act* above). The revised regulations became effective on April 1, 2010.

Advanced Clean Cars Program

In 2012, CARB approved the Advanced Clean Cars (ACC) program, developed in coordination with the EPA. The components of the ACC program are the Low-Emission Vehicle (LEV) regulations that reduce GHG emissions from light- and medium-duty vehicles, and the Zero-Emission Vehicle (ZEV) regulation, which requires manufacturers to produce an increasing number of battery electric and fuel cell electric vehicles, with provisions to also produce plug-in hybrid electric vehicles in the 2018 through 2025 model years.

Executive Order S-3-05

In 2005, Executive Order S-3-05 established California's GHG emissions reduction targets: GHG emissions should be reduced to 2000 levels by 2010; GHG emissions should be reduced to 1990 levels by 2020; and GHG emissions should be reduced to 80 percent below 1990 levels by 2050. The California Environmental Protection Agency (CalEPA) Secretary is required to coordinate efforts of various agencies to collectively and efficiently reduce GHGs. The California Climate Action Team (CAT) is responsible for implementing global warming emissions reduction programs. Representatives from several State agencies comprise the CAT.

Assembly Bill 32

In furtherance of the goals established in Executive Order S-3-05, the Legislature enacted AB 32, the California Global Warming Solutions Act of 2006, signed by Governor Schwarzenegger on September 27, 2006. The GHG emissions limit is equivalent to the 1990 levels, which are to be achieved by 2020.

CARB has been assigned to carry out and develop the programs and requirements necessary to achieve the goals of AB 32. Under AB 32, CARB must adopt regulations requiring the reporting and verification of statewide GHG emissions. This program will be used to monitor and enforce compliance with the established standards. CARB is also required to adopt rules and regulations to achieve the maximum technologically feasible and cost-effective GHG emission reductions. AB 32 allows CARB to adopt market-based compliance mechanisms to meet the specified requirements. Finally, CARB is ultimately responsible for monitoring compliance and enforcing any rule, regulation, order, emission limitation, emission reduction measure, or market-based compliance mechanism adopted.

The first action under AB 32 resulted in the adoption of a report (June 21, 2007) listing early action GHG emission reduction measures. The early actions include three specific GHG control rules that meet the narrow legal definition of "discrete early action GHG reduction measures":

- A low-carbon fuel standard to reduce the "carbon intensity" of California fuels;
- Reduction of refrigerant losses from motor vehicle air conditioning system maintenance to restrict the sale of "do-it-yourself" automotive refrigerants; and
- Increased methane capture from landfills to require broader use of state-of-the-art methane capture technologies.

On October 25, 2007, CARB approved an additional six early action GHG reduction measures under AB 32, which were also considered "discrete early action GHG reduction measures:"

- Reduction of aerodynamic drag, and thereby fuel consumption, from existing trucks and trailers through retrofit technology;
- Reduction of auxiliary engine emissions of docked ships by requiring port electrification;
- Reduction of PFCs from the semiconductor industry;
- Reduction of propellants in consumer products (e.g., aerosols, tire inflators, and dust removal products);
- Requirements that all tune-up, smog check, and oil change mechanics ensure proper tire inflation as part of overall service in order to maintain fuel efficiency; and
- Restriction on the use of SF_6 from non-electricity sectors if viable alternatives are available.

As required under AB 32, on December 6, 2007, CARB approved the 1990 GHG emissions inventory, thereby establishing the emissions limit for 2020. The 2020 emissions limit was set at 427 $MMTCO_2e$. In addition to the 1990 emissions inventory, CARB also adopted regulations requiring mandatory reporting of GHGs for large facilities that account for 94 percent of GHG

emissions from industrial and commercial stationary sources in California. About 800 separate sources fall under the new reporting rules and include electricity generating facilities, electricity retail providers and power marketers, oil refineries, hydrogen plants, cement plants, cogeneration facilities, and other industrial sources that emit CO_2 in excess of specified thresholds.

On December 11, 2008, CARB approved the Climate Change Proposed Scoping Plan: A Framework for Change to achieve the goals of AB 32. The scoping plan establishes an overall framework for the measures that will be adopted to reduce California's GHG emissions. The scoping plan evaluates opportunities for sector-specific reductions, integrates all CARB and CAT early actions and additional GHG reduction measures by both entities, identifies additional measures to be pursued as regulations, and outlines the role of a cap-and-trade program.

The key elements of the scoping plan include:

- Expanding and strengthening existing energy efficiency programs as well as building and appliance standards;
- Achieving a statewide renewables energy mix of 33 percent;
- Developing a California cap-and-trade program that links with other Western Climate Initiative partner programs to create a regional market system and caps sources contributing 85 percent of California's GHG emissions;
- Establishing targets for transportation-related GHG emissions for regions throughout California, and pursuing policies and incentives to achieve those targets;
- Adopting and implementing measures pursuant to existing State laws and policies, including California's clean car standards, goods movement measures, and the LCFS; and
- Creating targeted fees, including a public goods charge on water use, fees on high GWP gases, and a fee to fund the administrative costs of California's long-term commitment to AB 32 implementation.

Senate Bill 32 (Executive Order B-30-15) and 2017 CARB Scoping Plan

Executive Order B-30-15 issued in 2015 established an interim target to reduce GHG emissions to 40 percent below 1990 levels by 2030. In 2016, the Legislature passed Senate Bill (SB) 32, which codified the 2030 GHG emissions reduction target. Pursuant to SB 32, CARB updated the prior AB 32 Scoping Plan to address implementation of GHG reduction strategies to meet the 2030 reduction target. The final plan was approved in December 2017. The 2017 plan continues the discussion from the original scoping plan and 2014 update of identifying scientifically-backed policies within six of the state's economic sectors to reduce GHGs. The updated Scoping Plan includes various elements, including doubling energy efficiency savings, increasing the low carbon fuel standard from 10 to 18 percent, adding 4.2 million zero-emission vehicles on the road, implementing the Sustainable Freight Strategy, implementing a post-2020 Cap-and-Trade Program, creating walkable communities with expanded mass transit and other alternatives to traveling by car, and developing an Integrated Natural and Working Lands Action Plan to protect land-based carbon sinks.

CARB's 2017 Climate Change Scoping Plan recommends that local governments target 6 $MTCO_2e$ per capita per year in 2030 and 2 $MTCO_2e$ per capita per year in 2050. Since the statewide per capita targets are based on the statewide GHG emissions inventory that includes all emissions sectors in the State, the Scoping Plan states that it is appropriate for local jurisdictions to derive evidence-based local per capita, or another metric that the local jurisdiction deems appropriate (e.g., mass emissions, per service population), goals based on local emissions sectors and population projections that are consistent with the framework used to develop the statewide per capita targets.

Senate Bill 1368

In September 2006, Governor Schwarzenegger signed SB 1368, which requires the CEC to develop and adopt regulations for GHG emissions performance standards for the long-term procurement of electricity by local publicly owned utilities. These standards must be consistent with the standards adopted by the California Public Utilities Commission (CPUC). This effort will help protect energy customers from financial risks associated with investments in carbon-intensive generation by allowing new capital investments in power plants whose GHG emissions are as low or lower than new combined-cycle natural gas plants, by requiring imported electricity to meet GHG performance standards in California and by requiring that the standards be developed and adopted in a public process.

Executive Order S-1-07

Issued on January 18, 2007, Executive Order S-1-07 sets a declining LCFS for GHG emissions measured in CO_2e gram per unit of fuel energy sold in California. The target of the LCFS is to reduce the carbon intensity of California passenger vehicle fuels by at least 10 percent by 2020. The carbon intensity measures the amount of GHG emissions in the lifecycle of a fuel, including extraction/feedstock production, processing, transportation, and final consumption, per unit of energy delivered. CARB adopted the implementing regulation in April 2009. The regulation is expected to increase the production of biofuels, including those from alternative sources such as algae, wood, and agricultural waste. In addition, the LCFS would drive the availability of plug-in hybrid, battery electric, and fuel-cell power motor vehicles.

Senate Bill 97

In August 2007, the legislature enacted SB 97, which directs the Governor's Office of Planning and Research (OPR) to develop guidelines under the California Environmental Quality Act (CEQA) for the mitigation of GHG emissions. OPR was to develop proposed guidelines by July 1, 2009, and the Natural Resources Agency was directed to adopt the guidelines by January 1, 2010. On April 13, 2009, OPR submitted to the Secretary for Natural Resources its proposed amendments to the CEQA Guidelines.

The Natural Resources Agency adopted the CEQA Guidelines amendments on December 30, 2009 and transmitted them to the Office of Administrative Law on December 31, 2009. On February 16, 2010, the Office of Administrative Law completed its review and filed the amendments with the Secretary of State. The amendments became effective on March 18, 2010. The amended guidelines establish several new CEQA requirements concerning the analysis of GHGs, including the following:

- Requiring a lead agency to "make a good faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate the amount of GHG emissions resulting from a project" (CEQA Section 15064.4(a)).
- Providing a lead agency with the discretion to determine whether to use quantitative or qualitative analysis or performance standards to determine the GHG emissions resulting from a particular project (CEQA Section 15064.4(a)).
- Requiring a lead agency to consider the following factors when assessing the significance of impacts from GHG emissions on the environment (CEQA Section 15064.4(b)):
  - The extent to which the project may increase or reduce GHG emissions as compared to the existing environmental setting;
  - Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project; and
  - The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions.
- Allowing lead agencies to consider feasible means of mitigating the significant effects of GHG emissions, including, among others (CEQA Section 15126.4(c)):
  - Measures in an existing plan or program for reduction of emissions that are required as part of the lead agency's decision;
  - Reductions in emissions through the implementation of project features or off-site measures, including offsets that are not otherwise required; and
  - In the case of the adoption of a general plan, mitigation may include the identification of specific measures that may be implemented on a project-by-project basis. Mitigation may also include the incorporation of specific measures or policies found in an adopted ordinance or regulation that reduces the cumulative effect of emissions.

The amended CEQA guidelines also establish two new guidance questions in the Environmental Checklist regarding GHG emissions (CEQA Guidelines Appendix G):

- Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?
- Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

The adopted amendments do not establish a GHG emission threshold, and instead allow a lead agency to develop, adopt, and apply its own thresholds of significance or those developed by other agencies or experts. The Natural Resources Agency also acknowledges that a lead agency may consider compliance with regulations or requirements implementing AB 32 in determining the significance of a project's GHG emissions.

Senate Bill 375

In August 2008, the legislature passed and on September 30, 2008, Governor Schwarzenegger signed SB 375, which addresses GHG emissions associated with the transportation sector through

regional transportation and sustainability plans. Regional GHG reduction targets for the automobile and light-duty truck sector for 2020 and 2035, as determined by CARB, are required to consider the emission reductions associated with vehicle emission standards (see AB 1493), the composition of fuels (see Executive Order S-1-07), and other CARB-approved measures to reduce GHG emissions. Regional metropolitan planning organizations (MPOs) will be responsible for preparing a Sustainable Communities Strategy (SCS) within their regional transportation plans (RTPs).

The goal of an SCS is to establish a development plan for the region, which, after considering transportation measures and policies, will achieve, if feasible, the GHG reduction targets. If an SCS is unable to achieve the GHG reduction target, an MPO must prepare an alternative planning strategy demonstrating how the GHG reduction target would be achieved through alternative development patterns, infrastructure, or additional transportation measures or policies. SB 375 provides incentives for streamlining CEQA requirements by substantially reducing the requirements for "transit priority projects," as specified in SB 375, and eliminating the analysis of the impacts of certain residential projects on global warming and the growth-inducing impacts of those projects when the projects are consistent with the SCS or alternative planning strategy. On September 23, 2010, CARB adopted the SB 375 targets for regional MPOs. Achieving these goals through adoption of an SCS will be the responsibility of the MPOs.

The Metropolitan Transportation Commission (MTC) is the MPO for the nine counties that comprise the San Francisco Bay Area, which includes the City of St. Helena. MTC adopted an SCS as part of their regional transportation plan (RTP) in 2013 known as Plan Bay Area. The plan targets reductions of 10 percent and 16 percent in per capita GHG emissions by 2020 and 2035, respectively. On July 26, 2017, the strategic update to this plan, known as Plan Bay Area 2040, was adopted by the Association of Bay Area Governments (ABAG) and the MTC. See "Plan Bay Area" under the Local Regulations section for more information.

Executive Order S-14-08

On November 17, 2008, Governor Schwarzenegger issued Executive Order S-14-08. This executive order focuses on the contribution of renewable energy sources to meet the electrical needs of California while reducing the GHG emissions from the electrical sector. The governor's order requires that all retail suppliers of electricity in California serve 33 percent of their load with renewable energy by 2020. Furthermore, the order directs State agencies to take appropriate actions to facilitate reaching this target. The California Natural Resources Agency, through collaboration with the CEC and California Department of Fish and Wildlife (CDFW), is directed to lead this effort. Pursuant to a Memorandum of Understanding between the CEC and the CDFW creating the Renewable Energy Action Team, these agencies will create a "one-stop" process for permitting renewable energy power plants.

Executive Order S-21-09

On September 15, 2009, Governor Schwarzenegger issued Executive Order S-21-09. This Executive Order directed CARB to adopt a regulation consistent with the goal of Executive Order S-14-08 by July 31, 2010. CARB is further directed to work with the CPUC and CEC to ensure that the regulation builds upon the Renewable Portfolio Standard (RPS) program and is applicable to investor-owned utilities, publicly owned utilities, direct access providers, and community choice

providers. Under this order, CARB is to give the highest priority to those renewable resources that provide the greatest environmental benefits with the least environmental costs and impacts on public health and can be developed the most quickly in support of reliable, efficient, cost-effective electricity system operations. On September 23, 2010, CARB adopted regulations to implement a "Renewable Electricity Standard," which would achieve the goal of the executive order (contribution of renewable energy to meet the state's electrical needs) with the following intermediate and final goals: 20 percent for 2012 to 2014, 24 percent for 2015 to 2017, 28 percent for 2018 to 2019, and 33 percent for 2020 and beyond. Under the regulation, wind; solar; geothermal; small hydroelectric; biomass; ocean wave, thermal, and tidal; landfill and digester gas; and biodiesel would be considered sources of renewable energy. The regulation would apply to investor-owned utilities and public (municipal) utilities.

SB X1-2

On April 12, 2011, Governor Jerry Brown signed SB X1-2 in the first extraordinary session, which would expand the RPS by establishing a goal that renewable energy shall constitute 20 percent of the total electricity sold to retail customers in California per year, by December 31, 2013, and 33 percent by December 31, 2020, and in subsequent years. Under the bill, a renewable electrical generation facility is one that uses biomass, solar thermal, photovoltaic (PV), wind, geothermal, fuel cells using renewable fuels, small hydroelectric generation of 30 megawatts or less, digester gas, municipal solid waste conversion, landfill gas, ocean wave, ocean thermal, or tidal current, and that meets other specified requirements with respect to its location. In addition to the retail sellers covered previously, SB X1-2 adds local publicly owned electric utilities to the RPS. By January 1, 2012, the CPUC is required to establish the quantity of electricity products from eligible renewable energy resources to be procured by retail sellers in order to achieve targets of 20 percent by December 31, 2013; 25 percent by December 31, 2016; and 33 percent by December 31, 2020. The statute also requires that the governing boards for local publicly owned electric utilities establish the same targets, and the governing boards would be responsible for ensuring compliance with these targets. The CPUC will be responsible for enforcement of the RPS for retail sellers, while the CEC and CARB will enforce the requirements for local publicly owned electric utilities.

Senate Bill 350

SB 350 was approved by the California legislature in September 2015 and signed by Governor Brown in October 2015. Its key provisions are to require the following by 2030: (1) a renewables portfolio standard of 50 percent, and (2) a doubling of energy efficiency (electrical and natural gas) by 2030, including improvements to the efficiency of existing buildings. These mandates will be implemented by future actions of the CPUC and CEC.

Assembly Bill 341

In 2011, AB 341 set the goal of 75 percent recycling, composting, or source reduction of solid waste by 2020 calling for the California Department of Resources Recycling and Recovery (CalRecycle) to take a statewide approach to decreasing California's reliance on landfills. This goal was an update to the former goal of 50 percent waste diversion set by AB 939. Reductions in solid waste disposal has the potential to reduce GHG emissions from landfills.

California Air Pollution Control Officers Association

The California Air Pollution Control Officers Association (CAPCOA) is the association of air pollution control officers representing all 35 air quality agencies throughout California. CAPCOA is not a regulatory body but has been an active organization in providing guidance in addressing the CEQA significance of GHG emissions and climate change as well as other air quality issues.

Local Regulations

Plan Bay Area

Plan Bay Area is the Sustainable Communities Strategy adopted by the Metropolitan Transportation Committee (MTC) and Association of Bay Area Governments (ABAG) in 2013. This was the Bay Area's first Sustainable Communities Strategy adopted under SB 375. The Plan assists jurisdictions seeking to implement the Plan at the local level by providing funding for PDA planning and transportation projects. Plan Bay Area also provides jurisdictions with the option of increasing the efficiency of the development process for projects consistent with the plan and other criteria included in SB 375. An updated Plan Bay Area 2040 was adopted in 2017. As a limited and focused update, Plan Bay Area 2040 builds upon the growth pattern and strategies developed in the original Plan Bay Area with updated planning assumptions that incorporate key economic, demographic, and financial trends since 2013.

Plan Bay Area is one element of a broader statewide effort to reduce GHG emissions (as detailed in the discussion above). Plan Bay Area focuses on where the region is expected to grow and what transportation investments will support that growth.

Plan Bay Area structures an infrastructure investment plan in a systematic way to support the region's long-term land use strategy, relying on a performance assessment of scenarios and individual projects. The plan makes investments in the region's transportation network that support job growth and new homes in existing communities by focusing the lion's share of investment on maintaining and boosting the efficiency of the existing transit and road system. Plan Bay Area also identifies strategic investments that provide support for focused growth in Priority Development Areas (of which St Helena has none, due to its small size and limited public transportation infrastructure), including the new One Bay Area Grant program.

Plan Bay Area transportation revenue forecasts total $292 billion over the 28-year period. Over two-thirds (68 percent) of these funds are from regional and local sources, primarily dedicated sales tax programs and bridge tolls. Making up the remainder of the pie are state and federal revenues (mainly derived from fuel taxes). Of the total revenues, $60 billion are "discretionary," or available for assignment to projects and programs through Plan Bay Area. The plan invests those discretionary funds via six key investment strategies including maintaining the current transportation system; boosting the efficiency of the existing transportation system; supporting focused growth; increasing climate protection efforts; and investing in the next generation of public transit.

Bay Area Air Quality Management District (BAAQMD)

The Bay Area Air Quality Management District (BAAQMD) has local jurisdiction over air quality in the San Francisco Bay Area, including projects in the Planning Area. BAAQMD has adopted

advisory emission thresholds to assist CEQA lead agencies in determining the level of significance of a project's GHG emissions, including long range plans (e.g., general plans, specific plans), which are outlined in its California Environmental Quality Act: Air Quality Guidelines (CEQA Guidelines). The CEQA Guidelines also outline methods for quantifying GHG emissions, as well as potential mitigation measures.

Napa Countywide Community Climate Action Framework

The community review draft of the Napa Countywide Community Climate Action Framework was released in December 2009. Preparation of this document was supported by BAAQMD, Napa County Transportation and Planning Agency (NCTPA), Napa Valley Community Foundation, Napa County, and the cities of American Canyon, Calistoga, Napa, St. Helena, and Yountville. The Community Climate Action Framework provides a consensus-based context for further, more detailed planning efforts. Building upon the emissions inventories developed for all six Napa County jurisdictions (including St. Helena), the framework outlines a package of 53 actions that, when translated into locally specific programs and projects countywide, will help meet climate protection targets. This policy framework is meant to be followed by locally appropriate implementation plans, designed for each jurisdiction, focusing on specific programs and projects. The Climate Action Framework document has not yet been adopted.

Napa County Climate Action Plan

Napa County began an effort to adopt a Climate Action Plan (CAP) that pertains to unincorporated Napa County, including the study areas, upon direction from the 2008 General Plan Update. A proposed CAP was recommended for adoption by the Planning Commission in early 2012 and later considered by the Board of Supervisors, who sent the document back for further review. The Board has several suggestions, including revising the CAP to better address transportation-related emissions. In July 2015, a contract was awarded to Ascent Environmental to assist Napa County staff in completing a CAP which addresses the concerns with the previous effort, is legally defensible, and meets all applicable State requirements. Ascent Environmental completed an updated GHG inventory for unincorporated Napa County in 2016 and a Draft CAP in June 2017.

City of St. Helena Greenhouse Gas Emission Reduction Action Plan

The City of St Helena is implementing the International Council for Local Environmental Initiatives (ICLEI) program to reduce the GHG emissions from City-controlled sources (Tellus, 2009). The City of St Helena Greenhouse Gas Emission Reduction Action Plan provides five measure-specific plans to reduce City-controlled GHG emissions by more than 20 percent. These plans consist of numerous measures to reduce GHG emissions, reduce energy costs, address equipment problems, and reduce the volatility of the City's annual energy costs. This plan does not address community-wide emissions reductions.

St. Helena Building Code

Title 15 of the City of St. Helena Municipal Code adopts the 2016 California Building Standards Code, which includes energy efficiency measures as described under the State Regulations section above. Chapter 15.53 California Green Buildings Standards Code adopted the 2016 Edition of the California Green Building Standards Code, known as the California Code of Regulations, Title 24,

Part 11, as amended in Section 15.53.020 for provisions specific to Northern California, such as indoor water use and fireplaces.

Impact Analysis

SIGNIFICANCE CRITERIA

The State of California has developed guidelines to address the significance of climate change impacts based on Appendix G of the CEQA Guidelines, which provides guidance that implementation of the Proposed Plan would have a significant environmental impact if it would:

Criterion 1: **Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or**

Criterion 2: **Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.**

The CEQA Guidelines Appendix G does not contain specific thresholds that identify when a significant energy-use impact would occur. CEQA Guidelines Appendix F, Energy Conservation, provides direction as to the type of information, analysis, and mitigation that should be considered in evaluating a proposed project, but does not provide specific energy conservation thresholds.

Other guidance on the content and standards for EIR energy evaluations has come from case law. On August 27, 2009, the California Court of Appeal, Third Appellate District, issued the first ever CEQA decision on the requirements of an energy conservation impacts analysis in the case of Tracy First v. City of Tracy 177 Cal.App. 4th 912 (2009). The court ruled it was appropriate for the EIR to rely upon the CBC Energy Efficiency Standards, which are part of the State's Title 24 Building Code, to determine that the project's energy impacts would be less than significant. The court also held that CEQA does not require that an EIR discuss "every possible energy impact or conservation measure" listed in Appendix F of the CEQA Guidelines.

In accordance with Appendix F of the CEQA Guidelines and case law, and for the purposes of this EIR, the Proposed Plan would result in a significant impact on energy conservation if it would:

Criterion 3: **Cause wasteful, inefficient, and unnecessary consumption of energy during project construction, operation, and/or maintenance; or**

Criterion 4: **Conflict with the CBC Energy Efficiency Standards, the CARB passenger vehicle GHG emission reduction targets for 2020 and 2035, or any other applicable energy conservation regulations.**

METHODOLOGY AND ASSUMPTIONS

Greenhouse Gas Inventory

GHG emissions associated with the Proposed Plan would result from operation of future land uses that would be developed in the Planning Area and from traffic volumes generated by these new developments. These emissions would not occur at once but over the course of the Proposed Plan's

buildout period. Construction activities would also generate GHG emissions within the Planning Area and on roadways resulting from construction-related traffic. This analysis provides a program-level overview of construction and operational emissions that could occur with buildout of the Proposed Plan. Subsequent project-level environmental review, including quantification of construction GHG emissions, would be conducted during the processing of individual applications for subsequent future projects under the Proposed Plan.

Operational GHG Emissions

Operation of the land uses introduced by the Proposed Plan would generate long-term emissions from residential energy consumption, commercial/industrial energy consumption, on-road and off-road mobile sources, the treatment and distribution of water and wastewater, decomposition of solid waste, and energy from public lighting. GHG emissions information for each sector was modeled from the best available data. For several sectors, including residential, commercial/industrial, agriculture, water, and wastewater, the 2010 GHG inventory compiled by ICLEI was used as a starting point and updated with newer information, when available, such as population, housing units, emissions factors, energy mix, and water consumption. Transportation emissions were estimated using vehicles miles traveled information from Fehr & Peers provided in August 2018 and emissions factors from California Air Resources Board (CARB). Emissions from and waste were estimated using CalRecycle's Waster Characterization Study. The methodology and assumptions made for each sector of the GHG inventory is outlined in Appendix G.

The Planning Area for the Proposed Plan includes three study areas in unincorporated Napa County immediately adjacent to the city limits where the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities (see Chapter 2: Project Description for additional details). Since electricity, natural gas, off-road vehicles, water, wastewater, and off-road vehicles emissions were not available for the specific portions of unincorporated Napa County that make up the study areas, the GHG inventory presented only includes emissions for the City of St. Helena. Additionally, the emissions from unincorporated Napa County would be accounted for under the emissions inventory for Napa County; therefore, only including the City of St. Helena avoids double-counting. As the City does not have jurisdiction outside of the city limits and sphere of influence (SOI), Proposed Plan policies and actions would not apply in the study areas. While implementation of the Proposed Plan would not result in direct impacts related to energy, GHGs, and climate change in the study areas, development as a result of the Proposed Plan may indirectly affect GHG emissions from VMT in the surrounding study areas. Any increase or decrease in emissions outside of the city's jurisdiction would be reflected in Napa County's GHG inventories.

Business as Usual Forecast

The Business as Usual (BAU) forecast estimates emissions through the year 2040, based on the Proposed Plan land use and circulation system. However, it does not include the effects of the RPS or the 2016 Title 24 Building Energy Efficiency Standards. The Pavley regulations and the ACC program are already accounted for in the transportation emission factors output by the EMFAC2014 model, so these are automatically included in the BAU forecast. Conversely, the Low Carbon Fuel Standard (LCFS) is not included in the EMFAC2014 model because LCFS GHG reductions come from upstream emissions, rather than tailpipe emissions, as discussed in the

EMFAC2014 Technical Documentation (California Air Resources Board (CARB), 2015). Additionally, the BAU forecast does not include the effects of policies in the Proposed Plan discussed in the Modified Baseline: GHG Reductions from Proposed Plan Policies and Actions section below.

The forecast predicts all direct GHG emissions[2] from sources within the City of St. Helena. Indirect emissions associated with the consumption of energy that is generated outside the borders of the city are also included. Other indirect or embodied emissions are not covered in the forecast, in accordance with ICLEI standards. The forecast tallies emissions from 10 sectors:

- Residential;
- Commercial;
- Industrial;
- Transportation;[3]
- Solid waste;
- Water;
- Wastewater;
- Off-Road Equipment;
- Public Lighting; and
- Agriculture.

The emissions projected in the forecast use the activity data (or usage) from the baseline emissions inventory as an initial value. The predicted growth in each sector is projected to scale with various St. Helena characteristics, such as population growth and increase in commercial building square footage. The BAU forecast is discussed under Impact 3.5-1 as a baseline for which to compare the impacts of State and regional actions, as well as additional policies in the Proposed Plan, on the trajectory of GHG emissions in St. Helena.

Construction GHG Emissions

Potential development under the Proposed Plan would generate construction-related GHG emissions from mobile and stationary construction equipment exhaust and employee and haul truck vehicle exhaust. With an anticipated buildout year of 2040, development of the various land uses associated with the Proposed Plan would occur over an extended period of time and would depend on factors such as local economic conditions, market demand, and other financing considerations. As such, the specific size, location, and construction techniques and scheduling that would be utilized for each individual development project occurring within the City of St.

[2] GHGs considered in the report are carbon dioxide (CO_2), methane (CH_4), and nitrous oxide (N_2O). The emissions have been converted to carbon dioxide equivalent (CO_2e), which converts the three other GHGs into the equivalent mass of carbon dioxide.

[3] For transportation trips that originate or end in the City of St. Helena, emissions for half of the entire trip are included, and not just for the miles traveled within the city; however, trips that just pass through the City of St. Helena are excluded, as their emissions would be reflected at their trip ends.

Helena under the Proposed Plan is not currently known. Without specific project-level details it is not possible to develop a refined construction inventory,[4] and the determination of construction emission impacts associated with GHGs for each individual development project, or a combination of these projects, would require the City to speculate regarding such potential future project-level environmental impacts. Thus, in the absence of the necessary construction information required to provide an informative and meaningful analysis, the evaluation of potential construction-related impacts resulting from implementation of the Proposed Plan is conducted qualitatively in this EIR and assessed against applicable BAAQMD criteria.

Emissions Target

A number of lead agencies throughout the state have drafted and/or adopted various threshold approaches and guidelines for analyzing 2020 operational GHG emissions in CEQA documents consistent with AB 32 reduction requirements. These different thresholds include compliance with a qualified GHG reduction strategy (i.e., a Climate Action Plan), performance-based reductions,[5] numeric bright-line thresholds, and efficiency-based thresholds. The recent California Supreme Court's Newhall Ranch decision confirmed that there are multiple potential pathways for evaluating GHG emissions consistent with CEQA, depending on the circumstances of a given project.[6] While the decision did not foreclose other methodologies that may be used by lead agencies, it affirmed that "thresholds only define the level at which an environmental effect 'normally' is considered significant; they do not relieve the lead agency of its duty to determine the significance of an impact independently." Additionally, the decision also identified the need to analyze both near-term and post-2020 emissions, as applicable, stating that an "EIR taking a goal-consistency approach to CEQA significance may in the near future need to consider the project's effects on meeting longer term emissions reduction targets."

As the Proposed Plan is located within the San Francisco Bay Area Air Basin (SFBAAB), which is under jurisdiction of BAAQMD, GHG emissions are evaluated using guidance and thresholds outlined in BAAQMD's CEQA Guidelines. However, it should be noted that these thresholds currently only account for consistency with GHG reduction targets for 2020 established in AB 32, while the future buildout year for the Proposed Plan is in 2040. As such, GHG emissions will be evaluated by modifying the existing BAAQMD GHG threshold for 2020 (per AB 32) to the 2040 period, taking into account the GHG reduction targets in SB 32 for 2030 and EO S-3-05 for 2050, as discussed below. Additionally, it should be noted that the BAAQMD CEQA Guidelines are voluntary. They are utilized within this analysis as the best available established threshold and are widely used throughout the Bay Area. An update to these guidelines is in process that addresses changes to the data and assumptions underlying the analytical methodologies, thresholds, and mitigation strategies; the increased focus and prominence of the risks to public health and air

[4] Project-level information includes details such as the size and scale of the project to be constructed, construction schedule, equipment fleet, construction worker crew estimates, and demolition and grading quantities.

[5] Performance-based reductions include the "percent below Business as Usual" threshold approach, which has been used widely in the past. This approach was the subject of the Newhall Ranch case and presently is subject to uncertainty until the issues raised in the Supreme Court ruling are resolved.

[6] *Center for Biological Diversity v. Department of Fish and Wildlife* (2015) 62 Cal.4th 204, known as the Newhall Ranch decision

quality posed by global climate change; and recent substantial court decisions related to CEQA litigation.

Threshold Criteria

BAAQMD's guidelines establish two potential analysis criteria for the operational GHG emissions of plan-level projects (e.g., general plans, community plans, specific plans, regional plans, congestion management plans, etc.) relative to 2020:

- Compliance with a Qualified GHG Reduction Strategy, with a goal consistent with AB 32; or
- Compliance with a GHG efficiency threshold of either 6.6 metric tons (MT) CO_2e per service population (SP) (employees + population) for general plans, or a GHG efficiency threshold of 4.6 MT CO_2e per SP for all other plans (e.g., specific plan, congestion management plans, etc.).

BAAQMD thresholds are based on the AB 32 GHG reduction goals and a "gap analysis" that attributes an appropriate share of GHG emissions reductions to new land use development projects in BAAQMD's jurisdiction. The efficiency threshold was calculated by dividing the AB 32 GHG reduction target for GHG emissions in California by the estimated 2020 population and employment level. Thus, BAAQMD thresholds are tied directly to AB 32 and statewide emissions reduction goals for 2020. However, given that the Proposed Plan's buildout year would occur beyond 2020, threshold criteria that are tied to the State's post-2020 reduction goals should be used to evaluate the Proposed Plan's GHG emissions. As discussed previously, long-term goals for 2030 have been statutorily established in SB 32 and long-term goals for 2050 have been articulated in EO S-3-05.[7] SB 32 extends the 2020 statewide target and requires a 40 percent reduction below 1990 levels by 2030. The 2030 Scoping Plan includes per capita reduction targets consistent with SB 32, which are 6 metric tons CO2e per capita by 2030 and 2 metric tons CO_2e per capita by 2050. Although not legislatively adopted, EO S-3-05 outlines a long-range target of 80 percent below 1990 emissions levels by 2050.

The Association of Environmental Professionals (AEP) Climate Change Committee recommended in a 2016 white paper that CEQA analyses for multiple-phase projects with post-2020 development, such as the Proposed Plan, not only "consider consistency with the 2020/AB 32 based framework, but also analyze the consequences of post-2020 GHG emissions in terms of their impacts on the reduction trajectory from 2020 toward 2050." AEP further recommends that the "significance determination…should be based on consistency with "substantial progress" along a post-2020 trajectory." The 2016 AEP white paper is advisory only and is not binding guidance or an adopted set of CEQA thresholds. However, the CEQA Guidelines do authorize a lead agency to consider thresholds of significance recommended by experts such as members of the AEP Climate Change Committee, which consists of leaders of climate action planning practices from consulting firms and agencies that have led many of the local GHG reduction planning efforts across California.

[7] Executive orders are binding only on State agencies.

While BAAQMD's current efficiency threshold only accounts for consistency with AB 32's established GHG reduction targets for 2020, efficiency-based thresholds can also be derived to assess a project's consistency with the State's post-2020 reduction targets. Efficiency-based thresholds consist of identifying a GHG efficiency level needed for new development that would support statewide reduction planning for future milestones. Projects that attain the efficiency target, with or without mitigation, would result in less-than-significant GHG emissions. While the Newhall Ranch decision did not specifically recommend the efficiency-based approach, the ruling did note that numerical threshold approaches may be appropriate for determining significance of GHG emissions and to emphasize the consideration of GHG efficiency. Efficiency-based thresholds are typically calculated by dividing GHG emissions by service population, which is the sum of jobs and residents within the same geography.

For the purpose of this analysis, GHG efficiency and substantial progress thresholds based on the emissions reduction targets under AB 32, SB 32, and EO S-3-05 that are applicable to the geographical area under the jurisdiction of BAAQMD, which includes all of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, and portions of Solano and Sonoma counties, are first established. To establish these metrics, the 1990 GHG emissions for BAAQMD's geographical jurisdiction were obtained from BAAQMD's 2011 GHG emissions inventory and used to calculate the GHG emission targets based on the percent reduction targets for future statewide milestone years (i.e., 1990 emission levels by 2020; 40 percent below 1990 emission levels by 2030; and 80 percent below 1990 emission by 2050). Population and employment data are then used to calculate the efficiency metrics for those years. For projects that have buildout years that fall outside of milestone years 2020, 2030, and 2050, GHG efficiency thresholds can be estimated by interpolating the GHG emission targets between the appropriate milestone years and using service population obtained for those years from ABAG. As such, for the Proposed Plan, the GHG emission target for 2040 is calculated by assuming a linear reduction in emissions between 40 percent in 2030 and 80 percent in 2050. This results in a goal of reducing GHG emissions 60 percent below 1990 emission levels in 2040. The GHG efficiency thresholds calculated for milestone years 2020, 2030, and 2050 for BAAQMD's jurisdictional area, along with the corresponding efficiency thresholds for the Proposed Plan's future 2040 buildout year are shown in Table 3.6-5.

Table 3.6-5. Operational GHG Thresholds/Substantial Progress Efficiency Metrics for BAAQMD

Year	*GHG Emissions (Metric Tons CO_2e)*	*Total Service Population*	*Threshold/Metric (MT CO_2e per service Population)*	*Threshold Basis*
2020	67,100,000	10,073,327	6.7	GHG emissions reduced to 1990 levels by 2020 per AB 32
2030	40,260,000	10,827,438	3.7	GHG emissions reduced to 40 percent below 1990 levels per SB 32
2040	26,840,000	11,745,220	2.3	GHG emissions reduced to 60 percent below 1990 levels (interpolated between 2030 and 2050)
2050	13,420,000	12,663,002	1.1	GHG emissions reduced to 80 percent below 1990 levels per Executive Order S-3-05

Note:

The emissions from BAAQMD's 2011 GHG emissions inventory for 1990 is used to represent the GHG emissions in 2020, as the emission reduction target under AB 32 requires GHG emissions to be reduced to 1990 levels by 2020. The GHG emissions for all subsequent years in this table are calculated from the 1990 emission level value and factoring in the Statewide milestone reduction targets. The total service population for each year analyzed in the table is calculated by summing the residential and employment population data obtained from ABAG's Projection 2013. The GHG efficiency threshold is calculated by dividing the total GHG emissions by the total service population.

Sources: Bay Area Air Quality Management District 2011; California Air Resources Board 2012b; Association of Bay Area Governments 2013; Dyett & Bhatia, 2018

To summarize, while the CARB scoping plan sets goals of reducing GHG emissions throughout the state to 4.0 MTCO2e per capita by 2040 and 2.0 MTCO2e per capita by 2050, in alignment with emissions reduction targets under AB 32, SB 32, and EO S-3-05, BAAQMD's CEQA Guidelines allow for an alternative efficiency threshold that is more appropriate for land use plans versus individual development projects. The efficiency threshold takes into account the impact that residents and businesses have on emissions, as a result of land use, transportation, and other sectors, by setting a per service population threshold instead of per capita, which only includes city residents. However, at the time of this EIR, the efficiency threshold is only established for the year 2020. Substantial progress thresholds are calculated in Table 3.6-5, which extrapolates the 2020 threshold based on emissions and service population projections, consistent with the State's 2030 and 2050 GHG reduction goals. While these substantial progress thresholds are estimates as to how the BAAQMD region can meet the State's goals and may change over time, they provide the best current estimate of an appropriate GHG threshold for a land use plan under CEQA, and is likely to provide a conservative estimate for the overall GHG reductions needed. Therefore, for the purposes of the Proposed Plan, when assessing the impact of GHG emissions at buildout, GHG emissions will be compared to the efficiency threshold of 2.3 MTCO2e per service population.

RELEVANT POLICIES AND IMPLEMENTING ACTIONS

Policies and implementing actions within the Proposed Plan that address reductions in GHG emissions include:

Land Use and Growth Management Element

- ***LU1.1*** Require new development to occur within well-defined boundaries and be consistent with the ability to provide urban services. New development should mitigate infrastructure impacts by using sustainable, best management practices in green building and stormwater management and paying its share of development impact fees, while minimizing impacts on sewer, water, energy, and natural resources.
- ***LU1.2*** Allow urban development to occur only within the Urban Limit Line. Consider an exception for on-site employee housing on Agricultural lands. Urban services, such as sewer, water, and storm drainage, will only be extended to development within the Urban Limit Line.

  The Urban Limit Line may only expand when the amount of developable land within the Urban Limit Line is insufficient to implement the General Plan policies or when logical to include developed lands receiving urban services from the City. Expansion outside the Urban Limit Line should first be considered in Urban Reserve Areas. Expansion into other areas outside the Urban Limit Line should be considered only when the proposed land use is found to further the goals and long-term objectives of the City and does not result in adverse impacts to adjacent uses in either the urban or rural areas.

- ***LU1.4*** In order to minimize and postpone the need for expansion of the Urban Limit Line, encourage infill development within currently developed areas.
- ***LU1.6*** Support the redevelopment of vacant and underutilized sites within the downtown area with mixed-use development opportunities. Encouraging infill development with a mix of uses will support a pedestrian-oriented, vibrant retail and commercial district that is centrally located and easily accessible to residents and neighborhoods.
- ***LU1.A*** Continue to allow the construction of second units – also known as accessory dwelling units – and consider allowing the division of single-family homes into two or more units under appropriate circumstances, in order to increase residential density and housing availability without requiring an extension of the Urban Limit Line.
- ***LU2.5*** Encourage the development of higher density housing in areas near the center of the city and close to recreation and services, such as transit, retail, and public facilities.
- ***LU2.7*** Ensure safe, walkable, and bikeable residential neighborhoods and vibrant, livable streets.
- ***LU2.8*** Ensure walkable and accessible neighborhoods through mixed-use development.
- ***LU3.2*** Enhance the pedestrian-oriented character of commercial areas and provide for convenient pedestrian and bicycle connections to encourage walking and reduce vehicle trips within the commercial area.

- ***LU3.3*** Support the redevelopment of auto-oriented commercial areas into pedestrian-friendly commercial uses.
- ***LU3.A*** Identify sites in the Central Business and Service Commercial districts for mixed-use development that are close to services and facilitate walking, bicycling, and transit use.

Economic Sustainability Element

- ***ES2.4*** Encourage green transportation options to circulate people throughout the community. Promote sustainable modes of travel and reduce the number and length of vehicle trips generated by visitors to the community.

Public Facilities and Services Element

- ***PF1.2*** Adopt and implement equitable water conservation measures for both residential and non-residential users so that the City can supply water within the safe yield of its water system.
- ***PF1.6*** Aggressively promote adoption of "best practices" for reducing water usage in the existing housing stock through the City existing Ordinances and Water Conservation Plans.
- ***PF1.A*** Continue to implement the City's water conservation ordinances and programs that act to reduce per capita water consumption. In addition, consider incentives to property owners to install rainwater collection barrels and continue to require water efficient irrigation systems and drought tolerant landscaping.
- ***PF1.J*** Develop and adopt regulations to ensure that total potable water usage is not greater than 1,950 acre-feet per year unless the project includes housing affordable to lower income households and a determination is made pursuant to Government Code 65589.7 that a "sufficient water supply" is available to serve that project and none of the exceptions set forth in 66589.7 (c) apply; or, new sources of water are made available to the City. Residential projects that contain affordable housing shall receive priority allocation of water.
- ***PF1.H*** Ensure that water rates are designed to promote conservation, as well as to ensure that needed capital improvements are made in a timely manner.
- ***PF1.K*** Aggressively promote adoption of "best practices" for reducing water usage in the existing housing stock.
- ***PF1.L*** Require that all new residential housing projects incorporate "best practices" for minimizing water usage.
- ***PF1.M*** Limit any future non-residential development to projects that incorporate "best practices" for water conservation.
- ***PF1.N*** Institute an ongoing process of mandatory audits of all existing non-residential water users to promote adoption of "best practices" for water conservation.

Circulation Element

- ***CR1.6*** Continue to support NVTA in the provision of convenient transit, including regional and local service. Support more frequent and reliable transit service between

communities to reduce the number of people traveling to or from St. Helena to work by private vehicle. Promote and encourage use of the St. Helena Vine Shuttle.

- ***CR1.7*** Explore the use of the rail corridor to reduce traffic, including working with the new owners of the Wine Train to consider the possibility of developing hospitality and other tourist-oriented uses that are primarily accessed by passengers riding on the Wine Train Corridor.

- ***CR1.8*** Reduce transportation-based GHG emissions from City-controlled sources by employing the following strategies:
  - Complete the City's bicycle and pedestrian network, which will increase transportation choices in the city and reduce the demand for vehicle travel;
  - Maximize the overall efficiency of the transportation system, including managing the transportation network through a citywide transportation system management program;
  - Implement "smart growth" and sustainable planning principles as defined in the Land Use and Growth Management Element;
  - Encourage jobs/housing match, as defined in the Housing Element; and
  - Encourage/provide incentives for employee car pools.

- ***CR1.9*** Promote a walking and bicycling environment that is comfortable and convenient. Ensure that all St. Helena streets have no more than a single through-automobile lane in each direction, plus a single left-hand turning lane where appropriate, even if this requirement increases vehicle travel times. Allow exceptions if an extra lane would reduce the possibility of collisions.
- ***CR1.E*** Support efforts to secure additional funding for regional transit service to St. Helena for residents, workers and visitors as a viable alternative to travel by private automobile. Focus on improving the bus service for use by commuters.
- ***CR1.G*** Study the potential for integrating Wine Train activities with car-free tourism strategies to provide an alternative for tourists to visit St. Helena without a car.
- ***CR2.2*** Promote walking and bicycling as safe and convenient modes of transportation.
- ***CR2.3*** Ensure secure, accessible, and convenient bicycle parking facilities throughout St. Helena, including downtown, commercial areas, schools, and parks.
- ***CR2.4*** Preserve and enhance pedestrian connectivity and safety throughout St. Helena.
- ***CR2.6*** Encourage walking and bicycling trips to St. Helena schools.
- ***CR2.A*** Implement a citywide bicycle and pedestrian master plan to improve bicycle and pedestrian safety, and to encourage community members to walk and bike more often. Build on St. Helena's existing partnership with the Napa Valley Transportation Authority (NVTA) to ensure that the City's master plan is consistent with countywide transportation planning efforts.

- ***CR2.B*** Develop guidelines for the design, construction and maintenance of bicycle and pedestrian paths in St. Helena. Coordinate the guidelines with Napa County or regional trail connections.
- ***CR2.C*** Require any new development and modifications to existing projects to provide bicycle and pedestrian improvements and amenities, consistent with adopted Engineering Standards and the St. Helena Bicycle Plan.
- ***CR2.J*** Consider the feasibility of a citywide bike sharing program for municipal and/or public use.
- ***CR2.L*** Require safe and accessible bicycle and pedestrian access for all newly-developed public facilities and sites.
- ***CR2.M*** Enhance the pedestrian environment within the commercial area, and support the development of bicycle trails throughout St. Helena with the goal of connecting to a countywide system. Encourage the use of group transit options in order to decrease tourist-generated traffic congestion. Encourage the use of pedi-buses by the school district to guide children safely and in a more healthful and sustainable manner to school.
- ***CR3.1*** Provide incentives and encourage existing major employers to develop and implement transportation demand management (TDM) programs to increase the number of people who bike, walk, and take transit to work and reduce peak-period trip generation. Strategies include the following:
  - Transit subsidies or reimbursement to residents and employees (often referred to as "commuter check" or "EcoPass");
  - Car-share, car-pooling, and neighborhood electric vehicle programs to reduce the need to have a car or second car;
  - Integrated bicycle parking and support facilities, primarily to reduce trips within the city;
  - Modified parking codes to manage the supply of parking that generates frequent turn-over and serves multiple users; and
  - Marketing and information programs to encourage alternative transportation modes.
- ***CR3.2*** Support the implementation of NVTA goals to reduce/restrain growth of automobile vehicle miles traveled (VMT).
- ***CR3.3*** Shift travel from single-occupancy vehicles to other modes so that by 2040, 45 percent of work trips by St. Helena residents and workers are by carpool, transit, walking or bicycling.
- ***CR3.5*** Work with the school district to increase the use of carpooling and the bus system to reduce drive-alone trips to St. Helena schools.
- ***CR3.6*** Support development of the bikeway and pedestrian networks to provide a convenient opportunity for at least 20 percent of commuters to get to work by walking or bicycling.
- ***CR3.7*** Support compact, mixed-use development as outlined in the Land Use and Growth Management and Housing elements.

- ***CR5.A*** Develop a "park-once" strategy for visitors to improve air quality, reduce congestion, promote alternatives to driving alone, and educate and involve businesses and residents. Work with employers to encourage employees to park on the fringes of downtown, thereby leaving convenient parking spaces open for shoppers.

Community Design Element

- ***CD1.2*** Promote the construction of sustainable buildings and landscaping in all public and private development projects.
- ***CD1.3*** Require construction and development practices that reduce energy demand through conservation and efficiency, such as the use of green building materials, site design to maximize passive heating and cooling and energy generation, on-site water reuse, water efficient landscaping, and use of low-flow appliances, among others.
- ***CD1.4*** Strengthen water conservation measures for development or construction that result in significant reductions in local water use and the protection of local water resources.
- ***CD1.B*** Adopt a Green Building and Landscaping Ordinance that establishes green building and landscaping site design standards customized to meet the unique climatic context of the community. Landscaping standards should limit impervious paving and identify standards and incentives that encourage the use of locally-propagated native, low-water, drought-tolerant planting, and integrated pest management practices.
- ***CD1.C*** Partner with third party agencies, such as PG&E, to encourage the inclusion of energy-efficient systems in remodels and retrofits of existing buildings and residences.
- ***CD1.D*** Consider offering incentives for improving energy-efficiency in existing buildings.
- ***CD6.2*** Promote the inclusion of bicycle and pedestrian trails and bicycle lanes throughout the City, as well as connections to regional trail systems, such as the Napa Valley Vine Trail.

Open Space Element

- ***OS3.E*** Promote the installation of drought tolerant and native plants in landscaping throughout the city. Potential measures include:
  - An education program that details water conservation measures for use in local landscaping;
  - Working with local nurseries to encourage education, demonstration, and sales of drought tolerant and native plants and water-wise irrigation systems. (Also see the Public Facilities and Services Element for additional policies and implementing actions relating to water conservation);
  - Require City parks and properties to be landscaped with drought tolerant native plants that allow for high shade capacity wherever possible and use water-wise irrigation systems as a model for residents and businesses.

Public Health, Safety, and Noise Element

- ***PS1.E*** Encourage and support regional efforts to use alternative modes of transportation.

- ***PS1.F*** Consider a citywide network to help commuters arrange carpools, including online coordination capabilities and designated areas for parking and pick-up.
- ***PS1.I*** Adopt a voluntary, employer-based transportation demand management (TDM) program for St. Helena businesses in compliance with the BAAQMD's 2000 Clean Air Program (CAP). Components of a TDM program should include measures to reduce the use of single-occupancy vehicles for work-related commuting, such as carpool/vanpool matching services and employer-sponsored transit passes.

Climate Change Element (New Element)

- ***CC1.1*** Promote a "walkable" and "bikeable" city.
- ***CC1.2*** Support transportation planning efforts to optimize fuel efficiency and reduce vehicle miles travelled on local roads.
- ***CC1.3*** Seek initiatives that provide efficient modes of transportation for visitors and residents.
- ***CC1.A*** Adopt and implement pedestrian and bicycle networks within St. Helena that may connect to a countywide multi-use trail that extends from Calistoga to American Canyon.
- ***CC1.B*** If feasible maintain and enhance existing express bus, local bus, and para-transit services. Provide shuttle service between the three upvalley towns. Support the establishment of a northbound express bus during peak commute hours. Ensure that these services provide opportunities to connect with proposed countywide service improvements, such as a centralized transit center in Downtown Napa.
- ***CC1.C*** Expand Park and Ride areas and other support facilities to encourage public transportation use and car and van pooling
- ***CC1.D*** Evaluate truck and freight rail routes through the city. Based on these findings, develop policies and strategies to improve circulation and neighborhood compatibility issues.
- ***CC1.E*** Adopt and implement transportation plans in accordance with the Napa Valley Transportation Authority's (NVTA) Strategic Transportation Plan to increase transit service and ridership in St. Helena and connections with County transit services.
- ***CC1.F*** Establish programs to reduce vehicle miles traveled by supporting local hiring, food production, farmers' markets, and community-based "buy local" campaigns. For General Plan purposes, "local" includes St. Helena and its residents, as well as the residents and areas of the surrounding towns and unincorporated County that have traditionally been served by St. Helena's commercial and retail services.
- ***CC1.G*** Evaluate parking standards to help reduce vehicle miles traveled and reduce vehicle idling.
- ***CC1.H*** Increase walkability and bikeability to encourage a reduction in local auto trips. Strengthen outreach to increase awareness of pedestrian and bicycle amenities throughout the city.

- ***CC1.I*** Require discretionary development projects to assess and mitigate the impacts of vehicle miles traveled using transportation demand management programs, including providing transit amenities.
- ***CC1.J*** Initiate programs that encourage car-free tourism through incentives, outreach, awareness, and creating a bicycle and pedestrian-friendly environment.
- ***CC1.K*** Adopt and implement programs to assist businesses and organizations switch from fossil fuel-powered fleet vehicles to vehicles powered by clean, renewable energy sources.
- ***CC1.L*** Develop parks and open spaces in support of efforts to create walkable, bikeable mixed-use neighborhoods, especially to complement higher-density development and connect lower-density areas.
- ***CC1.M*** Design and operate the public street system to optimize fuel efficiency. Consider fuel efficiency in the design of street extensions, connections, and right-of-way controls at intersections, and monitor and adjust traffic signals.
- ***CC2.1*** Encourage measures to reduce energy demand through conservation and efficiency.
- ***CC2.2*** Support local efforts to improve the energy supply by switching from fossil fuels to renewables.
- ***CC2.A*** Partner with the County of Napa to implement an AB811 program that makes funding available to residential and commercial property owners seeking to improve their properties to conserve energy and water, and to generate solar energy.
- ***CC2.B*** Pursue state and federal funding programs designed to reduce energy demand through conservation and efficiency.
- ***CC2.C*** Implement Title 24 energy conservation standards for new buildings, and other State building code standards for high performance "green" buildings. Utilize established green building standards, such as Leadership in Energy and Environmental Design (LEED) and Build it Green.
- ***CC2.D*** Continue to reduce energy use by promoting domestic water conservation and requiring water-efficient landscape improvements associated with new construction.
- ***CC2.E*** Reduce greenhouse gas emissions from buildings and energy use. Require or request that new development projects analyze greenhouse gas emissions due to energy use and incorporate energy and safe yield water conservation measures into projects.
- ***CC2.F*** In support of countywide energy generation efforts, increase local renewable energy generation. Adopt production standards for the City based on quantifiable measures that increase per capita generation levels.
- ***CC2.G*** Remove regulatory impediments and economic disincentives associated with the generation and use of energy from renewable sources, such as wind, geothermal, and solar energy.
- ***CC2.H*** Establish programs that encourage owners to retrofit existing structures to incorporate energy-efficient and "green" building standards.

- ***CC3.1*** Enhance recycling, composting, and source reduction services for residential and commercial uses to support Napa County's countywide waste reduction goal to achieve overall waste diversion of 75 percent to 90 percent by 2020.
- ***CC3.A*** Establish programs and create incentives to achieve a 75 to 90 percent citywide construction and demolition debris waste diversion level by 2020.
- ***CC3.B*** Establish programs and create incentives to achieve a 75 percent organic (food and green) waste diversion level by 2020.
- ***CC3.C*** Establish citywide collection services for segregated food waste from commercial sources.
- ***CC3.D*** Encourage home composting of organic waste.
- ***CC3.E*** Create and support other programs, such as the Napa County Green Business Program and the green restaurant program, that help achieve the 75 to 90 percent overall waste diversion goal.
- ***CC3.F*** Adopt environmentally-preferable purchasing measures and explore joint-purchasing agreements with partner agencies and businesses.
- ***CC4.1*** Support efforts to protect and increase the amount of vegetation and biomass in soil and reduce emissions from agricultural sources.
- ***CC4.2*** Encourage responsible and sustainable agricultural and landscaping practices.
- ***CC4.3*** Strengthen water conservation measures that result in significant reductions in local water use and the protection of local water resources.
- ***CC4.4*** Support efforts to expand and improve the City's managed urban forest program in order to reduce greenhouse gas emissions and improve overall air quality.
- ***CC4.5*** Promote community gardens to reduce emissions generated in food transportation.
- ***CC4.A*** Establish programs to support and encourage local agriculture, food production, and school and community gardens.
- ***CC4.B*** Promote edible landscaping where possible.
- ***CC4.C*** Establish programs and plans that create and enhance urban forests and greenways.
- ***CC4.D*** Assess the impact of land use changes, new vineyards, and urban development on carbon sequestration.
- ***CC4.E*** Support efforts by local growers and restaurants to produce and use locally-grown food and remove associated regulatory hurdles.
- ***CC4.F*** Revise ordinances to further protect habitat and mitigate the conversion of oak woodlands, natural resources, riparian habitat, and other important natural communities by permanently protecting similar habitats.
- ***CC4.G*** Support and promote the Napa Green Certified Winery Program and the Napa Green Certified Land Program.

- ***CC4.H*** Adopt landscape ordinances that promote drought resistant plants, and limit or restrict lawns and other high-water-demand plants unless irrigated with reclaimed or grey water systems.
- ***CC4.I*** Develop and adopt energy-saving and environmentally-sound domestic water conservation plans.
- ***CC4.J*** Establish an urban forestry program to ensure a coordinated and comprehensive approach to maintaining and increasing the City's trees especially native varietals when possible.
- ***CC5.1*** Support local efforts to market programs and conduct community outreach through schools, non-profit groups, community organizations, and the business community to increase participation in greenhouse gas (GHG) reduction efforts.
- ***CC5.2*** Engage and advocate for collaborative programs, policies, and legislative solutions at the regional, state, federal, and global levels to reduce global GHG emissions.
- ***CC5.3*** Expand local awareness about gardening, composting, and agriculture.
- ***CC5.A*** Partner with the St. Helena Unified School District, private schools, community-based non-profit organizations, and others to undertake public outreach and education efforts that broaden community involvement in reducing greenhouse gas emissions.
- ***CC5.B*** Market and encourage participation in incentive programs that improve energy efficiency.
- ***CC5.C*** Foster and build public-private partnerships that help achieve greater energy efficiency and reduce greenhouse gas emissions.
- ***CC5.D*** Promote programs designed to advance sustainable business practices in St. Helena. Use the Napa County Green Business Program as a model for a City-based effort.
- ***CC5.E*** Participate in and help develop effective regional, state, and federal solutions to reduce emissions.
- ***CC5.F*** Engage and assist local agencies and utility companies toward achieving greenhouse gas reduction targets.
- ***CC5.G*** Enable long-term solutions by investing in and supporting science and engineering education.
- ***CC5.H*** Support the United States' participation in international greenhouse gas reduction efforts.
- ***CC5.I*** Establish an outreach program to raise public awareness about gardening, composting, and agriculture. Utilize public access television, the City's website, public notices, and workshops to engage a broad and diverse range of residents.
- ***CC6.1*** Ensure that the City leads by example in managing its local government operations while implementing the following policy directions:
  - Encourage the reduction of fossil fuel consumption by local government operations.
  - Improve energy efficiency, implement alternative and renewable energy solutions, and reduce greenhouse gas emissions in City and county facilities and operations.

  - Reducing solid waste from City and County operations and facilities.

- ***CC6.A*** Transition City fleets to vehicles powered by clean, renewable energy sources.
- ***CC6.B*** Install electric vehicle charging stations with funding from state and federal sources.
- ***CC6.C*** Encourage alternatives to agency employees' use of single-occupancy vehicles by providing bicycle racks, preferential parking permits for carpools and vanpools, commuter information, and other incentives.
- ***CC6.D*** Conduct audits and regularly monitor the effectiveness of City and County energy efficiency implementation measures and adapt them to meet targets.
- ***CC6.E*** Convert street lighting, water pumping, water treatment, and other energy-intensive operations to more efficient technologies.
- ***CC6.F*** Ensure that new municipal or substantially-renovated municipal facilities incorporate cost-effective strategies for reducing greenhouse gas emissions, conserving energy and water, and utilizing sustainable construction practices.
- ***CC6.G*** Consider carbon emissions from the production, transportation, use, and disposal of goods as a criterion for City purchasing decisions.
- ***CC6.H.*** Establish a comprehensive, user-friendly recycling program that involves all City departments and facilities. Recover 70 to 85 percent of all waste generated in City operations.
- ***CC6.I.*** Install renewable energy systems at City facilities.
- ***CC6.J*** Review and update the implementation actions recommended by the City's Climate Protection Task Force (CPTF) on an annual basis.

Parks and Recreation Element

- ***PR6.1*** Promote walking and bicycling as safe and convenient modes of transportation.
- ***PR6.2*** Develop a comprehensive network of bicycle and pedestrian trails to enhance bicycle and pedestrian connectivity throughout the city and the region.
- ***PR6.3*** Promote the inclusion of bicycle and pedestrian trails, and bicycle lanes throughout the city, as well as connections to regional trail systems, such as the Napa Valley Vine Trail.
- ***PR6.A*** Develop and adopt a citywide bicycle and pedestrian master plan to improve bicycle and pedestrian safety, and to encourage community members to walk and bike more often. Build on St. Helena's existing partnership with the Napa Valley Transportation Authority (NVTA) to ensure that the City's master plan is consistent with countywide transportation planning efforts.
- ***PR6.B*** Develop guidelines for the design, construction, and maintenance of bicycle and pedestrian trails in St. Helena. Include guidelines for installing context-sensitive and solar lighting, and mitigating noise impacts from the trails. Include guidelines for wayfinding and interpretive exhibits that use signs, art, and other visual clues to enhance users'

experiences. Highlight the rich history of the City and provide education and information for users. Coordinate the guidelines with Napa County or regional trail connections.

- ***PR6.C*** Develop and adopt an ordinance that requires new development and redevelopment projects to provide bicycle and pedestrian improvements and amenities.

IMPACTS

Impact 3.6-1 Development under the Proposed Plan would generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment. (*Significant and Unavoidable*)

Implementation of the Proposed Plan would generate direct and indirect GHG emissions. Sources of direct emissions would include mobile vehicle trips, natural gas combustion, and landscaping activities. Indirect emissions would be generated by electricity consumption, waste and wastewater generation, and water use. Significance thresholds for GHG emissions were established using the methodology discussed above in the Methodology and Assumptions section. Using BAAQMD's CEQA Guidelines, the efficiency metric for general plans has been applied for the BAAQMD jurisdictional region, resulting in an emissions target of 2.3 $MTCO_2e$ per service population by 2040. The emission targets account for all emissions sectors in the state, statewide population forecasts, and the statewide reductions necessary to achieve the 2030 statewide target of a 40 percent reduction of emissions under SB 32 and the longer-term State emissions reduction goal of 80 percent below 1990 levels by 2050. These targets represent California's recognition of its "fair share" of global efforts to reduce GHG emissions to limit global warming below two degrees Celsius. This limit is consistent with the Paris Agreement, which sets out a global action plan to put the world on track to avoid dangerous climate change by limiting global warming to below two degrees Celsius (United Nations Framework Convention on Climate Change, 2018).

The following analysis is based on data gathered for the purposes of creating a current GHG inventory for a base year of 2018 and projecting emissions to 2030, the year for which Executive Order B-30-15 sets a GHG target, and 2040, the buildout year for the Proposed Plan. The City of St. Helena's GHG emissions from the baseline inventory were 76,012 $MTCO_2e$ per year, or 6.7 $MTCO_2e$ per year for the service population. To project future GHG emissions, the analysis provides a baseline forecast of GHG emissions, and models forecasts of future GHG emissions through 2040. The analysis then quantifies GHG reductions from State actions and the Proposed Plan policies and applies these reductions to the emissions forecast.

Business as Usual Forecast

Under BAU conditions, St. Helena's emissions are projected to be 72,591 $MTCO_2e$ in the year 2040. Emissions are projected to decrease between baseline and 2030, but then increase through 2040, which is a result of reduced emissions from transportation as a result of the ACC program and the Pavley Fuel Efficiency Standards, which do not yet set goals beyond 2030. Table 3.6-6 shows the citywide emissions for each sector and the total emissions for all sectors.

The greatest projected emissions would continue to be from the transportation sector, which accounts for 54 percent of emissions in 2030 and 50 percent of emissions in 2040. The

commercial/industrial sector would make up 20 percent of emissions in both 2030 and 2040. Residential emissions make up 15 percent of emissions in both 2030 and 2040.

Table 3.6-6: BAU Forecast Emissions by Sector, 2018 to 2040 ($MTCO_2e$ per year)

Sector	*2018*	*2030*	*2040*
Residential	9,890	10,529	11,092
Commercial/Industrial	12,773	13,859	14,832
Transportation	44,531	36,180	34,244
Solid Waste	3,734	4,170	4,572
Water Transport, Distribution, and Treatment	138	169	169
Wastewater	181	206	212
Off-Road Equipment	4,631	5,778	7,342
Public Lighting	37	39	41
Agriculture	97	91	87
TOTAL	**76,012**	**71,021**	**72,591**
$MTCO_2e$ Per Service Population	6.7	-	5.4

GHG Reductions from State and Regional Actions

GHG reductions from the State Renewable Portfolio Standard and Title 24 building efficiency standards are discussed in this section.

MCE Renewable Energy Goals

As previously discussed under the Environmental Settings section above, St. Helena joined MCE in 2016. A majority of St. Helena's residents have remained MCE customers instead of opting out to continue with PG&E service. Currently, the default option for St. Helena customers is MCE's "Light Green" option, which is sourced from a minimum of 55 percent renewable energy. Under the BAU scenario, it is assumed that the proportion of renewables in MCE's portfolio remains at its 2018 rate. However, in their 2018 Integrated Resource Plan, MCE has set a goal to increase the renewable energy in their portfolio to 80 percent for the Light Green option by 2025. Emissions reductions related to achieving this renewable energy goal are provided in Table 3.6-7 GHG Forecast with State and Regional Actions.

Renewable Portfolio Standard

California's RPS, discussed under the State Regulations section above, is one of the most ambitious renewable energy standards in the country. The RPS requires that investor-owned utilities, like PG&E, supply 33 percent of their electricity from renewable resources by 2020 and 50 percent of their electricity from renewable sources by 2030. Upon joining MCE in 2015, the majority of

residents and businesses within the City of St. Helena has received their electricity through MCE and not PG&E. MCE has already surpassed the RPS, with more than 50 percent of its electricity coming from renewable sources in 2017. However, it is estimated that approximately 11 percent of St. Helena has opted out of MCE and still receives power from PG&E. Therefore, a portion of St. Helena's electricity emissions would still be reduced by the RPS. Emissions reductions from the RPS for the City of St. Helena are provided in Table 3.6-7: GHG Forecast with State and Regional Actions.

Title 24 Building Efficiency Improvements

Title 24, discussed under the State Regulations section above, is California's Building Energy Code. The most recent Title 24 code became effective in 2017. The Title 24 building efficiency improvements' effects on emissions through the 2013 update were automatically incorporated into the baseline inventory since this code update was already in effect by 2018. Emissions reductions from Title 24 for the City of St. Helena are provided in Table 3.6-7: GHG Forecast with State and Regional Actions.

Emissions Reductions

The annual reductions from the above-referenced State and regional actions were combined. Table 3.6-7: GHG Forecast with State and Regional Actions lists the total BAU forecast for years 2030 and 2040, juxtaposed with reductions from State and regional actions.

Table 3.6-7: GHG Forecast with State and Regional Actions

	Year	
	2030	*2040*
BAU Forecast Emissions with General Plan Land Use and Circulation System (MTCO2e per year)	66,595	67,885
Emissions Reductions from Renewable Energy[1] (MTCO2e per year)	4,590	4,880
Emissions Reductions from Title 24 Building Efficiency Improvements (MTCO2e per year)	451	873
Total Forecast Emissions with General Plan Land Use and Circulation System & State/Regional Actions		
MTCO2e per year	65,980	66,838
MTCO2e per service population per year	-	**5.0**
BAAQMD Efficiency Threshold (MTCO2e per service population per year)	3.7	2.3

Notes:

1. Calculation includes reductions from both the RPS and MCE's renewable energy goals.

Numbers in **bold** represent emissions over the specified thresholds.

GHG Reductions from Proposed General Plan Transportation Policies

This section describes Proposed Plan policies that meet three requirements: (1) reduce GHG emissions, (2) quantify emissions reductions, and (3) explain how these policies will be implemented. There are many Proposed Plan policies that aim to reduce GHG emissions without specifying a target for reduction or how the policy will be implemented. While these policies can help reduce emissions, they cannot be quantified in their generalized form. Proposed Plan policies related to transportation that produce quantifiable reductions in GHGs are organized according to the following categories:

1. Pedestrian Improvements and Increased Connectivity;
2. Transportation Improvements; and
3. Increased density.

CAPCOA's *Quantifying Greenhouse Gas Mitigation Measures* report was developed as a resource for local governments to assess emissions reductions from GHG mitigation measures (California Air Pollution Control Officers Association, 2010). This GHG analysis uses the methodology outlined in the CAPCOA report for categories one through three listed above to quantify emissions reductions from the Proposed Plan policies.[8] The reductions are applied to the forecast to arrive at the "modified forecast." GHG reductions from Proposed Plan transportation policies are provided in Table 3.6-8: GHG Reductions from Proposed Plan policies and implementing actions ($MTCO_2e$ per year).

Pedestrian Improvements and Increased Connectivity

There are numerous improvements described in the Proposed Plan that would enhance connectivity for non-motorized transportation, including pedestrians, including policies CC1.1, CR3.3, and CR3.6 and implementing actions CC1.A, CC1.H, CC1.J, and CC1.L (listed above). Providing an improved pedestrian network and increasing connectivity encourages people to walk more and results in people driving less, causing a reduction in vehicles miles traveled (VMT). An estimate of a 1 percent reduction in VMT from pedestrian improvements and connectivity was assumed, which corresponds to a reduction of 362 $MTCO_2e$ per year in 2040 for the City of St. Helena, based on CAPCOA guidance. See Table 3.6-8: GHG Reductions from Proposed Plan Policies and Implementing Actions ($MTCO_2e$ per year) for policy-related reductions.

Transportation Improvements

The City of St. Helena is accessible to neighboring communities via public transit and visitor-oriented rail service. The city is served by Napa Valley Transit Authority (NVTA) bus routes and the Wine Train, which connect St. Helena to Napa, Calistoga, and other surrounding cities. NVTA also runs the Vine para-transit shuttle, which is an on-call shuttle service for persons with disabilities. Proposed Plan policies seek to further transit improvement efforts by enhancing bus and para-transit services, providing shuttle services, and partnering with Napa County to increase

[8] While many of the policies' impacts are project-level in nature, much of the supporting literature is from studies on a citywide, countywide, or regional context. The methodology in this analysis is based on these regional studies, which is therefore applicable to the General Plan policies listed in this analysis.

transit service and ridership (Policy 1.3 and implementing actions CC1.B and CC1.E). Policies within the Circulation Element also look to explore options to utilize the Wine Train as a means to reduce VMT and driving trips (Policy CR1.7).

According to CAPCOA's *Quantifying Greenhouse Gas Mitigation Measures*, transit system improvements can result in the following reductions: 0.1- to 8.2-percent VMT reduction from expanding the transit network, 0.5- to 24.6-percent VMT reduction from increasing transit accessibility, and 0.02- to 2.5-percent VMT reduction from increasing transit service frequency and speed. Conservatively assuming the combined effect of the proposed General Plan's transit policies, summing the low end of the VMT reduction ranges gives a 0.62-percent reduction in VMT emissions, or estimated 212 $MTCO_2e$ per year reduction by 2040.

Increased Density

As of 2018, the City of St. Helena has approximately 2,735 housing units and 2,358,000 square feet of commercial and industrial space. The Proposed Plan is projected to result in 3,067 housing units and 2,738,000 square feet of commercial and industrial space in 2040, for an increase of 12 percent and 16 percent over 2018 conditions, respectively. There is also a projected 23 percent increase in the number of jobs between 2018 and 2040. Since development under the Proposed Plan would be concentrated inside the Urban Limit Line (ULL) with only minor adjustments to the ULL border, the additional housing units and commercial space would result in a slight increase in density in St. Helena between 2018 and 2040. This increase in density can be correlated to a decrease in VMT, and therefore to reduced transportation emissions, as more residents and employees would be located in mixed-use in areas near the center of the city, near transit and other amenities.

According to CAPCOA's *Quantifying Greenhouse Gas Mitigation Measures*, the reductions in GHG emissions due to an increase in density is quantified based on reductions in VMT and the elasticity between VMT and density. Based upon the baseline and 2040 buildout scenario within the Proposed Plan, a dwelling units per acre increase of about 12 percent and increase of 23 percent for jobs per jobs acre can be assumed.[9] This correlates to a total emissions reduction due to density increases of approximately 1,213 MTCO2e.

Emissions Reductions

Table 3.6-8: GHG Reductions from Proposed Plan Policies and Implementation Actions ($MTCO_2e$ per year) shows the GHG reductions from each of the above components for St. Helena. The largest reduction would come from commute trip reductions and increased density. Transportation and pedestrian improvements would produce smaller reductions in VMT and transportation emissions.

[9] Residential density increase was taken by dividing the numbers of residential units in 2018 and 2040 by the areas designated as residential in the General Plan. Jobs per jobs acre was calculated by dividing the number of jobs in 2018 and 2040 by the areas designated as central business, service commercial, and industrial in the General Plan. Additional information on methodology can be found in the CAPCOA guidelines.

Table 3.6-8: GHG Reductions from Proposed General Plan Policies and Implementing Actions ($MTCO_2e$ per year)

Policy/Action Category	*2030*	*2040*
Pedestrian Improvements and Increased Connectivity	362	342
Transit Improvements	224	212
Increased Density	-	1,213
TOTAL	**586**	**1,767**

Source: Dyett & Bhatia, 2018

Modified Forecast

Table 3.6-9: Modified Forecast (Forecast Emissions with General Plan Land Use and Circulation System, State Actions, and Additional General Plan Policies) and Emissions Targets shows the total citywide emissions with the reductions from the following policies and actions described above:

- Proposed Plan land use and circulation system;
- State actions; and
- Proposed Plan policies and implementing actions (identified below).

Projected emissions drop from 2018 through 2030 from the combined effect of GHG reduction policies and actions but increase from 2030 through 2040. The projected emissions rise between 2030 and 2040 because there are no increases in federal or State standards related to renewable energy or other GHG reduction methods. While additional State and federal initiatives to reduce GHG emissions are likely to occur, as of 2018 none have been established for a horizon year beyond 2030 and cannot be modeled. Therefore, this increase represents a conservative estimate. With the effect of all the GHG reductions considered, the total City of St. Helena forecast emissions are 65,393 $MTCO_2e$ per year in 2030 and 65,070 $MTCO_2e$ per year in 2040.

Table 3.6-9: Modified Forecast and Emissions Targets shows that the City of St. Helena will not meet its targets for 2030 and 2040, even with currently defined State and regional actions and the GHG reduction measures in the Proposed Plan. New development and redevelopment under the Proposed Plan would result in a net increase in GHG emissions overall; however, 2040 emissions per service population would decrease in comparison to baseline (2018) conditions. Nevertheless, the resulting 2040 per capita emissions are still greater than the BAAQMD efficiency and the CARB Scoping Plan targets.

Table 3.6-9: Modified Forecast and Emissions Targets

	2030	*2040*
Total Modified Forecast (MTCO2e per year)[1]	65,393	65,070
Significance Threshold (MTCO2e per service population)[2]	3.7	2.3
Total Modified Forecast (MTCO2e per service population)	-	**4.9**

Notes:

1. Includes reductions from General Plan Land Use and Circulation System, State/Regional Actions, and Additional General Plan Policies.
2. For information on determining the significance threshold, see "Methodology and Assumptions" section.

Numbers in **bold** represent emissions over the specified thresholds.

Source: Dyett & Bhatia, 2018

As discussed previously, because full buildout of the Proposed Plan would occur post-2020, it is appropriate to evaluate the Proposed Plan against the substantial progress required to meet the statewide milestone reduction targets and to abate the more consequential aspects of climate change. As shown in Table 3.6-9, the Proposed Plan's net operational GHG emissions in 2040 would exceed the efficiency metric of 2.3 MT CO_2e per service population calculated in the Methodology and Assumptions section. As such, operational GHG emissions from full buildout of the Proposed Plan in 2040 could conflict with the GHG emissions reduction trajectory for 2050 under EO S-3-05.

As discussed below under Impact 3.6-2, in the analysis of consistency with the goals of SB 32 and S-03-05, the achievement of long-term GHG reduction targets will require substantial change in terms of how energy is produced and consumed, as well as other substantial economy-wide changes, many of which can only be implemented by the State and federal government. At the State level, the long-term policy and regulatory changes needed to meet the statewide 2050 emissions reduction target are unknown at this time. The extent to which the Proposed Plan's emissions and resulting impacts would be mitigated through implementation of statewide (and nationwide) changes is speculative, and any calculation of post-2030 emissions cannot take into account future State or federal actions that may be taken to achieve long-term reductions. As such, placing the entire burden of meeting long-term reduction targets on local government or new development would be disproportionate and likely ineffective. Nevertheless, given that the Proposed Plan's emission levels would exceed the significance threshold for 2040, as calculated in the Methodology and Assumptions section, the Proposed Plan would result in a potentially significant impact with respect to GHG emissions.

To reduce the Proposed Plan's GHG emissions in 2040, Mitigation Measure GHG-1 is recommended, which includes strategies derived to reduce GHG emissions to a level consistent with BAAQMD's efficiency threshold of 2.3 MTCO2e per service population. Currently, the City of St. Helena does not have a Climate Action Plan that addresses community GHG emissions reductions. Additionally, many of the policies and implementing actions within the Proposed Plan discuss improvements that would generally decrease emissions but do not set specific and quantifiable goals (i.e. setting a goal for 100 percent renewable energy by 2040 or installing 20 miles of bike lanes). The adoption and implementation of a Climate Action Plan with specific and

quantifiable goals to reduce emissions, as well as indicators to track progress, will help the City reduce the impacts associated with implementation of the Proposed Plan. As the transportation sector is the largest source of emissions within the City of St. Helena in 2018 and is projected to remain the largest source in 2040, it has the most opportunity for reductions.

As shown in the analysis above, the Proposed Plan would result in a substantial increase in GHG emissions from baseline conditions by 2040, and would exceed the 2040 efficiency target. This would mean that the Proposed Plan does not make substantial progress towards meeting the State's 2050 goal of an 80 percent reduction from 1990 levels pursuant to Executive Order S-03-05. Additionally, since the significance thresholds are a reflection of emissions reductions needed to meet the 80 percent GHG reduction target as a State, St. Helena's failure to meet the thresholds may have a cumulative impact on whether or not the State will meet its target.

Mitigation Measure GHG-1 would require the adoption of a St. Helena Climate Action Plan that lays out a series of goals, policies, and actions to reduce GHG emissions to a level that is consistent with BAAQMD's efficiency targets and, therefore, State GHG reduction goals. Policies within the Climate Action Plan must set specific targets for GHG reductions where possible (i.e. source a specific percentage of the City's power through renewable sources, install a specific length of bicycle lanes, or install greywater systems in a specific percentage of homes in St. Helena). However, given that additional State and federal actions are necessary to ensure that State and federally regulated emissions sources (i.e., sources outside the City's jurisdictional control) are needed to achieve the 2050 target, and that, at this time, there are no post-2030 State or federal measures in place that would assist the City in achieving the 2040 efficiency target, even with implementation of Mitigation Measure GHG-1, GHG impacts as a result of the Proposed Plan are considered significant and unavoidable.

Significance Before Mitigation: Significant

Mitigation Measures

GHG-1: The City of St. Helena shall adopt and begin to implement a Climate Action Plan within a goal of 18 months, but no later than 36 months, of adopting the Proposed Plan update to address the GHG reduction goals of Executive Order B-30-15 and Executive Order S-03-05 for GHG sectors that the City has direct or indirect jurisdictional control over. The Climate Action Plan shall include a community inventory of GHG emission sources, and quantifiable GHG emissions reduction targets for 2030 and 2050, and an interim target for the General Plan buildout year 2040, that are consistent with the statewide GHG reduction targets. The City shall monitor progress toward its GHG emissions reduction goals and prepare reports every five years detailing that progress.

Significance After Mitigation: Significant and unavoidable. While the Proposed Plan includes measures to align the City with the State's long-term GHG reductions, many of these policies and implementing actions are general and non-quantifiable. As such, the projected emissions at buildout in 2040 are expected to exceed the significance threshold. While Mitigation Measure GHG-1 would require the City to develop a Climate Action Plan that specifies a GHG reduction goal in line with the State's targets, as well as quantifiable and implementable policies, additional federal and State measures would be necessary to reduce GHG emissions to meet the long-term GHG reduction goals under Executive Order B-30-15, which identified a goal to reduce GHG

emissions to 40 percent of 1990 levels by 2030, and Executive Order S-03-05, which identified a goal to reduce GHG emissions to 80 percent of 1990 levels by 2050.

Impact 3.6-2 Development under the Proposed Plan would conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases. (*Significant and Unavoidable*)

Plan Bay Area

The ABAG RTP/SCS, Plan Bay Area, includes a set of policy objectives related to mobility, system preservation and safety, social equity, healthy environment, and economic growth. The RTP will assist in ABAG's implementation of SB 375, the California Global Warming Solutions Act of 2006, and regional GHG targets. With implementation of the Proposed Plan's policies related to sustainability and multi-modal transportation objectives, the Proposed Plan would complement the goals and policies of the RTP/SCS and would continue to carry out the goals of AB 32 and SB 375. For example, Plan Bay Area focuses growth in existing developed areas and the Proposed Plan allows for population and job growth within St. Helena's Urban Limit Line (ULL), while limiting growth that may encroach into agricultural or open space areas outside of the ULL. Plan Bay Area aims to expand public transit service, as well as increase bicycling and walking. The Proposed Plan includes extensive policies and action relating to improving St. Helena's access to public transit and to expand the cities bicycle and pedestrian network. These policies and implementing actions are listed in the Relevant Policies and Implementing Actions section above and can be found throughout the Proposed Plan, including the Land Use and Growth Management, Circulation, and Climate Change elements. Therefore, future development projects and land uses proposed under the Proposed Plan would, by nature, result in reduced transportation and energy GHG emissions relative to emissions under the scenario where only State actions would be implemented, as shown under Impact 3.6-1 above. This would be consistent with and help achieve the overarching goal of Plan Bay Area to reduce GHG emissions.

CARB Scoping Plan, AB32, and EO S-03-05

AB32 and EO S-03-05 set targets for State GHG reductions of 40 percent below 1990 levels by 2030 and 80 percent below 1990 levels by 2050. The 2017 CARB Scoping Plan creates a pathway to achieving those goals by reducing GHG emissions to 4.0 MTCO2e per capita by 2030 and 2.0 MTCO2e per capita by 2050. BAAQMD's CEQA Guidelines, as discussed in the Methodology and Assumptions section, builds upon the CARB per capita thresholds by creating an efficiency threshold that uses service population in lieu of resident population, which is more appropriate for a land use plan, such as the Proposed Plan. Through implementation of the Proposed Plan policies aimed at reducing GHG emissions, the Proposed Plan would serve to implement numerous strategies and measures aimed at reducing GHG emissions. All of the policies and implementing actions without the Climate Change Element referenced above could potentially decrease St. Helena's GHG emissions. Additionally, policies in the Proposed Plan aim to reduce water use, construct more energy efficient buildings, provide walkable communities, decrease reliance on automobile transportation, and more. GHG-reducing policies and implementing actions can be found in nearly all of the elements in the Proposed Plan, including the Land Use and Growth Management, Economic Sustainability, Public Facilities and Services, Circulation, Community Design, Open Space, Public Health, Safety, and Noise, Climate Change, and Parks and

Recreation elements. While these policies and implementing actions could reduce GHG emissions, many do not set specific goals or targets for reductions, and therefore cannot be quantified at this time.

Accounting for State and federal standards and for policies within the Proposed Plan that can be quantified, the resulting 2040 per capita emissions exceed the significance threshold of 2.3 MTCO2e per service population, as calculated in the Methodology and Assumptions section. . This means that, absent additional measures at the State level, development under the Proposed Plan would conflict with CARB's 2017 Scoping Plan, AB 32, EO S-03-05, or BAAQMD's CEQA Guidelines (as they pertain to meeting the larger State goals for GHG reductions), as the City does not have direct control over certain aspects of transportation emissions, such as vehicle fuel efficiency standards or regional traffic. Meeting the aggressive State GHG reduction goals will require a substantial change in terms of how energy is produced and consumed, as well as other economy-wide changes, many of which can only be implemented by the State and federal government.

Implementation of Mitigation Measure GHG-1, described above, would help to reduce conflict with the GHG emissions reduction trajectory for 2050 articulated under EO S-3-05 to the extent practicable; however, as described above, further action is necessary at the State and federal levels to achieve the deep cuts to emissions sources outside the City's jurisdictional control needed to meet the GHG emissions reductions targets laid out by the State. Given that, at this time, there are no post-2030 State or federal measures that would assist the City in achieving the efficiency target in 2040, even with implementation of Mitigation Measure GHG-1, the potential exists for the Proposed Plan to conflict with applicable plans, policies, or regulations adopted for the purpose of reducing the emissions of GHGs. Therefore, the impact remains significant and unavoidable.

Significance Before Mitigation: Significant.

Mitigation Measures

Refer to Mitigation Measure GHG-1 under Impact 3.6-1.

Significance After Mitigation: Significant and unavoidable. Projected emissions in 2040 are expected to exceed the efficiency threshold of 2.3MTCO2e per service population. As this threshold is a reflection of what each jurisdiction must accomplish to meet the State's goal, St. Helena's failure to meet the threshold may have a cumulative impact on the State's ability to achieve an 80 percent reduction in emissions below 1990 levels by 2050. While many of the policies and implementing actions within the Proposed Plan are meant to reduce GHG emissions and are therefore consistent with the intent of Plan Bay Area and the State's GHG emissions goals, without specified thresholds or goals, these emissions cannot be quantified. While Mitigation Measure GHG-1 would help to specify how the City can further reduce emissions through the development of a Climate Action Plan, it is unrealistic to place the entire burden of reducing emissions on the City since the majority of St. Helena's emissions result from transportation, which the City has limited direct control over due to trips that do not both start and end within the city limits and State or federal regulations governing fuel efficiency standards. At this time there are no post-2030 federal or State measures that would assist the City in achieving the efficiency target by 2040. Therefore, Impact 3.6-2 would remain significant and unavoidable.

Impact 3.6-3 Development under the Proposed Plan would not cause wasteful, inefficient, and unnecessary consumption of energy during project construction, operation, and/or maintenance. (*Less than Significant*)

As noted in Appendix F of the CEQA Guidelines, the means of achieving the goal of conserving energy and reducing wasteful, inefficient, and unnecessary consumption of energy include the following:

1. Decreasing overall per capita energy consumption.[10]
2. Decreasing reliance on fossil fuels such as coal, natural gas, and oil.
3. Increasing reliance on renewable energy sources.

Construction associated with future developments under the Proposed Plan would consume gasoline and diesel fuel through operation of heavy-duty, off-road construction equipment and on-road vehicles. The amount of fuel consumed by these activities would vary substantially depending on the level of activity, length of the construction period, specific construction operations, types of equipment, and number of personnel. Because the Proposed Plan does not propose any specific development projects, the precise level and intensity of construction activities that would occur in the Planning Area through 2040 is not known at this time.

For the purposes of this analysis, it is assumed that the types of land uses envisioned under the Proposed Plan, which includes residential, commercial, industrial, and agricultural uses, would involve construction activities typical of most land use developments within the Planning Area and in the SFBAAB. Because construction emissions from both mobile and stationary sources are considered to be relatively short-term emissions that would cease once construction of a project is complete, they would represent a relatively short demand on local and regional fuel supplies that would be easily accommodated. Therefore, construction activities associated with the Proposed Plan would not result in a wasteful, inefficient, and unnecessary usage of direct or indirect energy.

Future development under the Proposed Plan would generate vehicle trips once operational, which would consume gasoline and diesel. Future development would also result in the consumption of electricity and natural gas for power, heating, and cooking. Operational energy consumption (expressed in terms of million BTU) under existing conditions and 2040 conditions under the Proposed Plan is summarized in Table 3.6-10: Estimated Operational Energy Consumption. The projection of 2040 energy consumption includes electricity and natural gas use reductions from State actions and proposed General Plan policies, in addition to fuel savings achieved by proposed General Plan transportation policies that reduce overall VMT. More information on these policies and actions and their effect on GHG emissions is provided under Impact 3.6-1 above. Table 3.6-11: Estimated Energy Consumption Efficiency shows the estimated existing and projected 2040 energy consumption per service population.

As shown in Table 3.6-10: Estimated Operational Energy Consumption, implementation of the Proposed Plan would result in a net energy consumption decrease of 248,471 million BTUs at

[10] In the analysis below, per service population metrics are analyzed because energy from commercial and industrial land uses are considered.

buildout in 2040. While the number of residential units and commercial and industrial square footage would increase between 2018 and 2040 buildout, total energy use would decrease, primarily due to St. Helena's delivery of energy through MCE, which has much higher goals for renewable energy than PG&E, and the increase in fuel efficiency for vehicles that will result as more vehicles designed to meet stricter Pavley standards come into use.

As shown in Table 3.5-10: Estimated Operational Energy Consumption, a decrease in the per service population energy consumption would occur between 2018 and 2040 due to a decrease in energy consumption and an increase in service population. Whereas the 2018 per service population energy consumption is 106 million BTUs per year, the per service population energy consumption associated with the net new development introduced by the Proposed Plan at buildout in 2040 would be 71 million BTUs per year, which is approximately 33 percent lower when compared to baseline.

In addition, the Proposed Plan policies and implementing actions listed in "Relevant Policies and Implementing Actions" aim to reduce energy consumption and consequently would all help decrease GHG emissions. While many of the policies and implementing actions within the Proposed Plan do not set specific and quantifiable goals, they do address general concepts such as increasing energy efficiency and renewable energy, encouraging bicycle and pedestrian transit, decreasing car use by tourists, and more. When implemented, these actions would further decrease energy consumption from natural gas, electricity, and gasoline and diesel fuels.

Table 3.6-10: Estimated Operational Energy Consumption

Analysis Year/Source	*Million BTU/Year*
2018	
Electricity	331,843
Natural Gas	253,367
Mobile (gasoline and diesel)	609,226
Total	**1,194,436**
2040	
Electricity	251,092
Natural Gas	274,903
Mobile (gasoline and diesel)	419,970
Total	**945,966**
Net Decrease with Proposed Plan	(248,471)

Source: Dyett & Bhatia, 2018

Table 3.6-11: Estimated Energy Consumption Efficiency

	2018	*2040*	*Net Proposed Plan*
Energy consumption (million BTUs)	1,194,436	945,966	(248,471)
Service population	11,285	13,323	2,038
Million BTUs per service population	106	71	(35)
Percent Change from Existing	--	*-33%*	--

Source: Dyett & Bhatia, 2018

By decreasing demand for energy- and fuel-related energy resources both overall and on a per service population basis, operation of future land uses associated with the Proposed Plan would not result in a wasteful, inefficient, and unnecessary usage of direct or indirect energy. Therefore, this impact is considered less than significant.

Mitigation Measures

None required.

Impact 3.6-4 The Proposed Plan would not conflict with the CBC Energy Efficiency Standards, the CARB passenger vehicle GHG emission reduction targets for 2020 and 2040, or any other applicable energy conservation regulations. *(Less than Significant)*

All future development under the Proposed Plan would be required to comply with the latest CBC requirements, including CBC Energy Efficiency Standards, as well as all federal, State, and local rules and regulations pertaining to energy consumption and conservation. The Proposed Plan includes policies that emphasize energy reduction strategies, as described in Impact 3.4-3, and does not contain policies that would conflict with existing energy conservation regulations.

Through implementation of Proposed Plan policies as described under Impact 3.4-3, the Proposed Plan would support the CARB passenger vehicle GHG emissions reduction targets through measures that would reduce VMT in the Planning Area. Additionally, CARB's LCFS, which aims to reduce the carbon intensity of the life cycle of gasoline and diesel fuels by 10 percent by 2020, would further assist in meeting established energy reduction goals and GHG emission reduction targets. Therefore, impacts would be less than significant.

Mitigation Measures

None required.

3.7 Geology, Soils, and Seismicity

This section describes existing geologic conditions, including geologic and seismic hazards, in the Planning Area; applicable regulatory framework regarding geology, soils, and seismicity; and the potential geologic, soils, and seismic impacts of future development in the community in accordance with the Proposed Plan. There were no responses to the NOP regarding topics addressed in this section of the EIR.

Environmental Setting

PHYSICAL SETTING

The composition of topography, geologic material, soils, and groundwater conditions affect the geologic hazards in any given area. St. Helena is located within California's Coast Range Geomorphic Province, a geologically young and seismically active region. The Coast Range Province is characterized by a series of northwest-trending mountain ranges with intervening alluvium-filled valleys. Specifically, St. Helena is located in the northern portion of the Napa Valley where the alluvial fans of York and Sulphur creeks blend across the floor of the valley and intersect the Napa River.

Geology

The majority of land within the Planning Area is located on the floor of the Napa Valley. The valley floor is primarily layered with Holocene alluvium with small low lobes of Pleistocene alluvium exposed near the western margin. Alluvium consists mainly of unconsolidated gravel, sand, silt, and clay deposits that have been subject to redistribution by fluvial (stream) processes. St. Helena includes some upland areas both to the west (foothills of the Mayacamas Mountains) and east (foothills of the Vaca Mountains) of the valley floor. To the east, a 245-acre hillside area along Howell Mountain Road above Silverado Trail consists primarily of Sonoma Volcanics (Pliocene rhyolite, dacite, tuff, and pyroclastic rocks). To the northwest, between State Route 29 (SR-29) and Spring Mountain Road, additional low ridges of Sonoma Volcanics extend into the valley and into the city limits. Moderate hills of Franciscan Complex mélange (sandstone, shale, chert, conglomerate, and greenstone) wrap around the city to the south, southwest of Spring Mountain Road, with limited exposure areas of serpentinized ultramafic rock and Sonoma Volcanics amidst overlying hillslope deposits (Wagner & Bortugno, 1982; Graymer, et al., 2006). Table 3.7-1 provides an overview of the various geologic units in the Planning Area.

Table 3.7-1: Geologic Units in the Planning Area

Unit	*Age*	*Description*
Alluvium – Terrace Deposits	Holocene – Pleistocene	Alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated. Mostly nonmarine.
Sandstone – Conglomerate	Pliocene and/or Pleistocene	Sandstone, shale, and gravel deposits.
Dacite – Rhyolite	Tertiary	Volcanic flow rocks; minor pyroclastic deposits.
Rhyolite – Dacite	Tertiary	Pyroclastic and volcanic mudflow deposits
Franciscan Complex	Jurassic to Cretaceous	Sandstone with smaller amounts of shale, chert, limestone, and conglomerate.
Franciscan Complex – Mélange	Jurassic to Cretaceous	Mélange of fragmented and sheared Franciscan complex rocks.
Serpentinite – Peridotite	Middle to Late Jurassic	Ultramafic rocks, mostly serpentine. Minor peridotite, gabbro, and diabase.

Sources: Ludington, S., et. al., 2007; Dyett & Bhatia, 2018

Topography

The broad plain of the valley bottom slopes gently from the northwest to the southeast, with an elevation of approximately 320 feet NGVD[1] at the foot of the northwestern hills and approximately 200 feet NGVD near the filtration plant and Napa River to southeast. In the foothills of the Vaca Mountains east of the Napa River, the properties above Silverado Trail rise to a maximum elevation of approximately 720 feet NGVD. Along the western edge of the city, the incorporated area includes portions of the foothills of the Mayacamas to about 540 feet NGVD, with a maximum elevation of approximately 740 feet NGVD atop a small knob just west of Dean York Lane (USGS, 1993; USGS, 1973).

Soils

Soil is generally defined as the unconsolidated mixture of mineral grains and organic material that mantles the land surfaces of the earth. Soils can develop on unconsolidated sediments, such as alluvium, and weathered bedrock. The characteristics of soil reflect the five major influences on their development: topography, climate, biological activity, parent (source) material, and time.

The Planning Area contains approximately 20 different individual soil types; however, these are grouped by type and character into soil "associations" or "complexes." Generally, these groups

[1] National Geodetic Vertical Datum of 1929, which is roughly equivalent to mean sea level.

have similar geophysical characteristics. As shown in Figure 3.7-1, roughly 73 percent of the soils in the Planning Area (most of the valley floor) are Bale, Cole, Cortina, or Pleasanton loams. Many of these soils are moderately corrosive to concrete, and moderately to highly corrosive to steel. They are also moderately expansive and may cause shrink-swell damage to structures. Implications of soil characteristics from a geologic hazard perspective (e.g., expansive soils) are discussed below in the "Seismic and Geologic Hazards" subsection (United States Department of Agriculture, 2017).

Seismic Conditions

The Planning Area is located in the seismically active San Francisco Bay Area. The main feature generating seismic activity in the region is the tectonic plate boundary between the North American and Pacific plates. Locally, this boundary is referred to as the San Andreas Fault Zone (SAFZ) and includes numerous active faults determined by the California Geological Survey under the Alquist-Priolo Earthquake Fault Zoning Act to be "active" (i.e., to have evidence of fault rupture in the past 11,000 years). Some of the major active faults within the SAFZ include the San Andreas, Hayward, Rodgers Creek, Calaveras, San Gregorio-Seal Cove, Maacama, West Napa, Green Valley, Concord, Greenville, and Calaveras faults. St. Helena is located approximately 13 miles north of the Alquist-Priolo Earthquake Fault Hazard Zone (APEFHZ) for the West Napa Fault, 13 miles east of the Rodgers Creek Fault Zone and approximately 17 miles southwest of the APEFHZ for the Hunting Creek Fault. A less active portion of the West Napa Fault (active between 130,000 and 1.6 million years ago) is located in the southwestern portion of the City of St. Helena (USGS, 2006). Information on active regional faults is shown in Table 3.7-2, and active fault locations are shown in Figure 3.7-2.

Geologic and soil conditions in an area can influence the shaking effects of an earthquake. The Association of Bay Area Governments (ABAG) earthquake hazard mapping indicates that a magnitude 7.9 event on the San Andreas Fault (similar to the 1906 earthquake) or a 6.5 event on the West Napa Fault would result in strong to very strong (MMI-VII/VIII)[2] shaking in the area of St. Helena. Based on USGS mapping, the St. Helena vicinity ranges from a low hazard for liquefaction susceptibility (in the upland areas west of downtown) to highly susceptible in the lowlands adjacent to the Napa River, including Study Area 2, and Sulphur Creek. Slope stability issues and landslides have been mapped in the hillsides of the Napa Valley, and USGS maps indicate upland areas may be prone to slope instability and serve as sources for debris flows.

In a fact sheet published in 2003, the U.S. Geological Survey estimated that there was a 62 percent probability that between 2003 and 2032, a 6.7 or greater magnitude earthquake will occur in the San Francisco Bay Region. The probability of a 6.7 magnitude or greater earthquake occurring along individual faults was estimated to be 21 percent along the San Andreas Fault, 27 percent along the Hayward-Rodgers Creek Fault, and 11 percent along the Calaveras Fault (USGC, 2003).

On August 24, 2014, a 6.0 earthquake struck the Napa Valley. This was the largest earthquake to occur in the San Francisco Bay Area since the 1989 Loma Prieta quake. The earthquake occurred approximately four miles northwest of American Canyon, six miles southwest of Napa and 20 miles southeast of the Planning Area, according to the USGS. The quake was estimated to be about 11.3 kilometers deep and was considered "strong" by the USGS. Major quakes start at a 7.0 magnitude, according to the USGS scale. Seismologists identified the West Napa Fault as the causative fault of the quake. While some of the fault segments that ruptured on August 24 had been previously mapped as part of the West Napa fault system, the rupture also extended northward where no faults had been mapped before. The length of the rupture was about 12.5 kilometers, considered unusually long for an earthquake of that size. Additionally, scientists measured up to 46 cm of slip, considered a significant amount (USGS, 2015). While damage from the quake was substantial in parts of the City of Napa, particularly in the downtown area along with some limited

[2] MMI refers to Modified Mercalli Intensity Scale which measures the intensity of earthquakes.

damage in the City of Vallejo, St. Helena experienced very little to no damage as a result of the earthquake.

Table 3.7-2: Alquist-Priolo Earthquake Fault Zones in the Vicinity of St. Helena

Fault	*Location and Direction from St. Helena*	*Slip Rate[1] and Recurrence Interval[2]*	*Historical Seismicity*	*M_W[3]*
Rodgers Creek	13 miles west – Petaluma Valley. Connects by means of right steps the Hayward Fault to the Maacama Fault.	Greater than 5.0 mm/year. Recurrence interval of 131-370 years (best estimate of 230 years).	M5.6, 1969 M5.7, 1969 M6.4, 1898 M5.6, 1893	7.0
Maacama (Central)	14 miles northwest – From Laytonville in Mendocino County to Mark West Creek in Sonoma County.	Greater than 5.0 mm/year. Recurrence interval of 220 years.	No recorded earthquakes greater than M6.0.	7.1
Hunting Creek – Berryessa	17 miles northeast – From the Wilson Valley south-southeast to the Cedar Roughs area west of Lake Berryessa.	Approximately 6 mm/year. Recurrence interval ~194 years.	No recorded earthquakes greater than M6.0.	6.9
Concord – Green Valley	18 miles southeast – Wooden Valley south to Suisun Bay.	Between 1.0 and 5.0 mm/year. Recurrence interval unknown.	No recorded earthquakes greater than M6.0.	6.9
West Napa	21 miles south – Along the western edge of the Napa Valley.	Between 0.2 and 1.0 mm/year. Recurrence interval unknown.	M5.8, 1891 August 2014	6.5 6.0
San Andreas	33 miles west – The San Andreas fault zone extends 700 miles from the Gulf of California to the Mendocino.	Between 16 and 25 mm/year. Recurrence interval is approximately 227 years.	M7.1, 1989 M8.25, 1906 M7.0, 1838 Many <M6	7.9

Notes:

1. Slip Rate refers to the relative movement across the fault zone by opposing blocks, in millimeters (mm) per year.
2. Recurrence Interval estimates relies on studies of past individual fault activity for time between significant events.
3. Maximum Moment Magnitude (Mw) is the strongest earthquake that is likely to be generated along a fault zone, based on the geologic character of the fault and earthquake history (CDMG,1996).

Urban and Regional Planners

Seismic and Geologic Hazards

This subsection describes the hazards associated with the geologic conditions and the potential for seismic events in the Planning Area.

Fault Rupture Damage

Surface rupture occurs when the ground surface is broken due to fault movement during an earthquake. The location of surface rupture generally can be assumed to be along an active major fault trace.

Regional faults identified by the CGS are shown in Figure 3.7-2. The nearest Alquist-Priolo active or potentially active faults to the City of St. Helena are the West Napa Fault, which extends along the western edge of the Napa Valley, and the Rodgers Creek Fault, which extends from San Pablo Bay up the eastern flank of the Petaluma Valley. The related Maacama Fault has an active segment located just west of Franz Valley and extending to the northwest. The maximum expected earthquake for this fault complex is estimated to be magnitude (Mw) 7.0 (State of California Department of Conservation, 2013). Most recently, the West Napa Fault ruptured in August 2014, as described in detail above.

A number of unnamed, relatively small, older faults are located at the base of the Sonoma and Vaca mountains along the margins of the Napa Valley; however, based on available information, displacement of these faults occurred more than 10,000 years ago. The CGS has not mapped any of these as an Alquist-Priolo Earthquake Fault Zone, indicating that the CGS does not currently consider them likely to generate surface rupture. Accordingly, these faults are generally considered inactive. The fault rupture hazard for the city is considered to be low. Fault rupture hazards in the city would need to be reevaluated if future data were to suggest that such a hazard is present.

Seismic Shaking

Seismic shaking (or ground shaking) is a general term referring to all aspects of motion of the earth's surface resulting from an earthquake and is normally the major cause of damage in seismic events. The extent of ground shaking is controlled by the magnitude and intensity of the earthquake, distance from the epicenter, and local geologic conditions. Magnitude is a measure of the energy released by an earthquake and is assessed by seismographs that measure the amplitude of seismic waves. Intensity is a subjective measure of the perceptible effects of seismic energy at a given point and varies with distance from the epicenter and local geologic conditions. The Modified Mercalli Intensity Scale (MMI) is the most commonly used scale for measurement of the subjective effects of earthquake intensity (see Table 3.7-3). Intensity can also be quantitatively measured using accelerometers (strong motion seismographs) that record ground acceleration at a specific location, a measure of force applied to a structure under seismic shaking. Acceleration is measured as a fraction or percentage of the acceleration under gravity (g). In addition to the Rodgers Creek, Napa, and Green Valley faults noted above, major regional faults outside the City of St. Helena but in the Coast Ranges are capable of producing ground shaking in the Planning Area.

Table 3.7-3: Modified Mercalli Scale

M[1]	*Category*	*Definition*
	I	Not felt except by a very few under especially favorable circumstances.
3	II	Felt only by a few persons at rest, especially on upper floors of buildings. Delicately suspended objects may swing.
	III	Felt quite noticeably indoors, especially on upper floors of buildings, but many people do not recognize it as an earthquake. Standing motor cars may rock slightly. Vibration like passing of truck. Duration estimated.
4	IV	During the day felt indoors by many, outdoors by few. At night some awakened. Dishes, windows, doors disturbed; walls make cracking sound. Sensation like heavy truck striking building. Standing motor cars rocked noticeably.
	V	Felt by nearly everyone, many awakened. Some dishes, windows, etc., broken; a few instances of cracked plaster; unstable objects overturned. Disturbances of trees, poles, and other tall objects sometimes noticed. Pendulum clocks may stop.
5	VI	Felt by all, many frightened and run outdoors. Some heavy furniture moved; a few instances of fallen plaster or damaged chimneys. Damage slight.
6	VII	Everybody runs outdoors. Damage negligible in building of good design and construction; slight to moderate in well-built ordinary structures; considerable in poorly built or badly designed structures; some chimneys broken. Noticed by persons driving motor cars.
	VIII	Damage slight in specially designed structures; considerable in ordinary substantial buildings, with partial collapse; great in poorly built structures. Panel walls thrown out of frame structures. Fall of chimneys, factory stacks, columns, monuments, walls. Heavy furniture overturned. Sand and mud ejected in small amounts. Changes in well water. Persons driving motor cars disturbed.
7	IX	Damage considerable in specially designed structures; well-designed frame structures thrown out of plumb; great in substantial buildings, with partial collapse. Buildings shifted off foundations. Ground cracked conspicuously. Underground pipes broken.
8	X	Some well-built wooden structures destroyed; most masonry and frame structures destroyed with foundations; ground badly cracked. Rails bent. Landslides considerable from river banks and steep slopes. Shifted sand and mud. Water splashed (slopped) over banks.
	XI	Few, if any, (masonry) structures remain standing. Bridges destroyed. Broad fissures in ground. Underground pipelines completely out of service. Earth slumps and land slips in soft ground. Rails bent greatly.
	XII	Damage total. Practically all works of construction are damaged greatly or destroyed. Waves seen on ground surface. Lines of sight and level are distorted.

Notes:
1. Richter Magnitude correlation.

Peak Acceleration

The State of California has made estimates of the peak ground acceleration for the area based on probabilistic models that account for multiple seismic sources. Under these models, consideration of the probability of expected seismic events is incorporated into the determination of the level of ground shaking at a particular location. The expected peak horizontal acceleration (with a 10 percent chance of being exceeded in the next 50 years) generated by any of the seismic sources potentially affecting the Planning Area is estimated by the California Geological Survey at about 0.36g[3] on the alluvium of the valley floor to 0.31g in the foothills (CGS, 2003). This level of ground shaking is a potentially significant hazard.

Liquefaction

Liquefaction is the rapid transformation of saturated, loose, fine-grained sediment to a fluid-like state because of strong ground shaking. In the process, the soil undergoes transient loss of strength, which commonly causes ground displacement or ground failure to occur. Since saturated soils are a necessary condition for liquefaction, soil layers in areas where the groundwater table is near the surface have higher liquefaction potential than those in which the water table is located at greater depths. Liquefaction can result in substantial loss of life, injury, and damage to property. In addition, liquefaction increases the hazard of fires because of explosions induced when underground gas lines break and because the breakage of water mains substantially reduces fire suppression capability.

Most of the Planning Area is underlain by materials that have very low to moderate liquefaction potential (Knudsen et al., 2000). In particular, upland areas have a very low potential for liquefaction. Liquefaction potential increases in the vicinity of the Napa River at the east side of St. Helena in Study Area 2 and locally near creeks where loose granular sediments have accumulated as a result of stream processes. The approximate boundaries and hazard levels for liquefaction risk are shown in Figure 3.7-3. The potential for liquefaction also depends on soil conditions and groundwater levels, which may fluctuate. In general, where there is any potential for liquefaction, site-specific studies are needed to determine the extent of the hazard if development were to occur in the area.

Lateral Spreading

Lateral spreading is a form of horizontal displacement of soil toward an open channel or other "free" face, such as an excavation boundary. Lateral spreading can result from either the slump of low cohesion unconsolidated material or more commonly by liquefaction of either the soil layer or a subsurface layer underlying soil material on a slope, resulting in gravitationally driven movement. Lateral spreading, also known as lurching, may also occur where open banks and unsupported cut slopes provide a free face. Excavations for building foundations and other improvements, such as trenching for utilities installation, can provide opportunity for earth failures, such as lateral spreading, to occur. In addition, over-steepened banks and sudden grade changes, unless properly engineered, may also provide opportunity for lateral spreading. Ground shaking, especially when inducing liquefaction, may cause lateral spreading toward unsupported

3 Measured as a fraction or percentage of the acceleration compared to gravity (g).

slopes. Areas most prone to lateral spreading are those that consist of fill material that has been improperly engineered, that have steep, unstable banks, and that have high groundwater tables. Damage caused by liquefaction and lateral spreading is generally most severe when liquefaction occurs within 15 to 20 feet of the ground surface. Locations within the Planning Area that are on steep hillsides, on the banks of the Napa River, or have high liquefaction susceptibility as discussed previously have the highest risk of lateral spreading. This includes the foothills on the western and eastern side of St. Helena, as well as Study Areas 1 and 2.

Urban and Regional Planners

Landsliding and Slope Stability

The strong ground motions that occur during earthquakes are capable of inducing landslides, generally where unstable slope conditions already exist. Slope instability is discussed below. Slope failure can occur as either rapid movement of large masses of soil ("landslide") or slow, continuous movement ("creep"). The primary factors influencing the stability of a slope are (1) the nature of the underlying soil or bedrock, (2) the geometry of the slope (height and steepness), (3) rainfall, and (4) the presence of previous landslide deposits. Landslides are commonly triggered by unusually high rainfall and the resulting soil saturation, by earthquakes, or by a combination of these conditions. The general term "landslide" may include a wide range of slope failures, including but not limited to rock falls, deep failure of slopes, earthflows, and shallow debris flows. Some landslides occur as a result of human activities, such as timber harvest, undermining of a slope, or improper drainage-water management.

The Napa Valley floor, including the majority of the City of St. Helena and Study Areas 2 and 3, is mapped as Category 1, stable areas of less than five percent slope and not underlain by landslide deposits. As shown in Figure 3.7-4, the foothills in the western part of the Planning Area are mapped as having few landslides and includes slopes of five to 15 percent, or as areas greater than 15 percent that are not underlain by landslide deposits or are underlain by bedrock units that are not susceptible to landslide (Nilsen et al., 1979). The foothills of the Vaca Mountains (the eastern rise above the Napa River, including Study Area 1) are largely areas mapped as having few existing landslide deposits, in addition to a small area of underlain by mostly existing landslide deposits.

Expansive Soils

Expansion and contraction of soil volume can occur when expansive soils undergo alternating cycles of wetting (swelling) and drying (shrinking). During these cycles, the volume of the soil changes markedly. As a consequence of such volume changes, structural damage to buildings and infrastructure may occur if the potentially expansive soils were not considered in building design and during construction.

The United States Department of Agriculture National Resource Conservation Service (NRCS) analyzes the shrink-swell potential of each soil type based on its linear extensibility and clay content and categorizes it as "low," "moderate," "high," or "very high" (Rogers, Olshansky, & Rogers, 2001). Where the shrink-swell classification is moderate to very high, shrinking and swelling can cause damage to buildings, utilities, roads, and other structures and the gradual cracking, settling, and weakening of older buildings could create potential safety concerns and financial loss. The soils of the Planning Area area range from low to high shrink-swell potential. Moderate to high shrink-swell potential soils are classified as expansive soils and construction will require appropriate engineering. The majority of soils in the Planning Area are classified as "moderate" shrink-swell potential. Areas of high expansiveness occur in limited areas identified as "Maxwell Clay" and "Cole Silt Loam" on Figure 3.7-1 (United States Department of Agriculture, 2017).

Subsidence

Subsidence is the lowering of the land-surface elevation. The mechanism for subsidence is generally related to groundwater pumping and subsequent consolidation of loose aquifer sediments. The primary hazards associated with subsidence are increased flooding hazards and damage to underground utilities. Other effects of subsidence include changes in the gradients of stormwater and sanitary sewer drainage systems in which the flow is gravity-driven. Subsidence has not been reported to be a significant problem in the upper Napa Valley where the Planning Area is located (Jones and Stokes, 2005).

Differential Settlement

Differential settlement could occur if buildings or other improvements were built on low-strength foundation materials (including imported fill) or if improvements straddle the boundary between different types of subsurface materials (e.g., a boundary between native material and fill). Although differential settlement generally occurs slowly enough that its effects are not dangerous to inhabitants, it can cause significant building damage over time.

Portions of the Planning Area that contain loose or uncontrolled (non-engineered) fill may be susceptible to differential settlement. Regional surficial deposits mapping by the USGS does not indicate human-made fill in the vicinity of St. Helena (Helley, 1979); however, local dumping or casual fill activities may have occurred in the area and would not be mapped at the regional scale. Soil strength information is included with the individual soil descriptions by the NRCS, but interpretation of soil strength engineering implications for building projects requires site-specific soil identification and testing.

REGULATORY SETTING

This section describes the applicable federal, state, and local regulations that pertain to the Planning Area.

Federal Regulations

National Earthquake Hazards Reduction Program

The National Earthquake Hazards Reduction Program (NEHRP) was established by the U.S. Congress when it passed the Earthquake Hazards Reduction Act of 1977, Public Law (PL) 95–124. In establishing NEHRP, Congress recognized that earthquake-related losses could be reduced through improved design and construction methods and practices, land use controls and redevelopment, prediction techniques and early-warning systems, coordinated emergency preparedness plans, and public education and involvement programs. The four basic NEHRP goals remain unchanged:

- Develop effective practices and policies for earthquake loss reduction and accelerate their implementation;
- Improve techniques for reducing earthquake vulnerabilities of facilities and systems;
- Improve earthquake hazards identification and risk assessment methods and their use; and
- Improve the understanding of earthquakes and their effects.

Several key federal agencies contribute to earthquake mitigation efforts. There are four primary NEHRP agencies:

- National Institute of Standards and Technology (NIST) of the Department of Commerce;
- National Science Foundation (NSF);
- United States Geological Survey (USGS) of the Department of the Interior; and
- Federal Emergency Management Agency (FEMA) of the Department of Homeland Security.

Implementation of NEHRP priorities is accomplished primarily through original research, publications, and recommendations to assist and guide state, regional, and local agencies in the development of plans and policies to promote safety and emergency planning.

U.S. Geological Survey Landslide Hazard Program

The USGS created the Landslide Hazard Program in the mid-1970s; the primary objective of the program is to reduce long-term losses from landslide hazards by improving our understanding of the causes of ground failure and suggesting mitigation strategies. The federal government takes the lead role in funding and conducting this research, whereas the reduction of losses due to geologic hazards is primarily a state and local responsibility. In Napa County, plans and programs designed for the protection of life and property are coordinated by the Napa County Office of Emergency Services.

Disaster Mitigation Act

The Disaster Mitigation Act of 2000 requires a state mitigation plan as a condition of disaster assistance, adding incentives for increased coordination and integration of mitigation activities at the state level through the establishment of requirements for two different levels of state plans: "Standard" and "Enhanced." States that develop an approved Enhanced State Plan can increase the amount of funding available through the Hazard Mitigation Grant Program. In addition, the Disaster Mitigation Act also established a requirement for local mitigation plans.

State Regulations

State Multi-Hazard Mitigation Plan, 2013

The State Hazard Mitigation Plan (SHMP) is a federally required official statement of the state's hazard identification, vulnerability analysis, and hazard mitigation strategy (44 Code of Federal Regulations, Subpart M, Section 206.401) under the DMA2K for the State of California to receive federal funds for disaster assistance grant programs. The goal of the SHMP, prepared by the California Office of Emergency Services (OES), is to guide implementation activities to achieve the greatest reduction of vulnerability, which results in saved lives, reduced injuries, reduced property damage, and protection for the environment.

Disaster Mitigation Act of 2000

The Disaster Mitigation Act of 2000 (DMA2K) (Public Law 106-390) amended the Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1988 to establish a Pre-Disaster Mitigation (PDM) program and new requirements for the federal post-disaster Hazard Mitigation Grant Program (HMGP). DMA2K encourages and rewards local and state pre-disaster planning. It promotes sustainability and seeks to integrate state and local planning with an overall goal of strengthening statewide hazard mitigation. This enhanced planning approach enables local, tribal, and state governments to identify specific strategies for reducing probable impacts of natural hazards such as floods, fire, and earthquakes. In order to be eligible for hazard mitigation funding after November 1, 2004, local governments are required to develop a Hazard Mitigation Plan that incorporates specific program elements of the DMA2K law. In the Bay Area, the Association of Bay Area Governments (ABAG) has adopted a multi-jurisdictional FEMA-approved 2010 Local Hazard Mitigation Plan Update, which cities and counties can adopt and use, in full or in part, in lieu of preparing all or part of a Local Hazard Mitigation Plan themselves (ABAG, 2010). The City of St. Helena has not adopted ABAG's multi-jurisdictional Plan but has participated in the Napa County Operational Area Hazard Management Plan.

Alquist-Priolo Earthquake Fault Zoning Act (1972)

The Alquist-Priolo Earthquake Fault Zoning Act (A-PEFZA) was passed in December 1972 to mitigate the hazard of surface faulting to structures for human occupancy. The A-PEFZA's main purpose is to prevent the construction of buildings used for human occupancy across the surface trace of active faults. The A-PEFZA only addresses the hazard of surface fault rupture and is not directed toward other earthquake hazards. (As discussed below, the Seismic Hazards Mapping Act, passed in 1990, addresses non-surface fault rupture earthquake hazards, including liquefaction and seismically induced landslides.)

The A-PEFZA requires the State Geologist to establish regulatory zones, known as Earthquake Fault Zones, around the surface traces of active faults and to issue appropriate maps. The maps are distributed to all affected cities, counties, and state agencies for their use in planning and controlling new or renewed construction. Local agencies must regulate most development projects within the zones. Projects include all land divisions and the development of most structures for human occupancy. Before a project can be permitted, cities and counties must require a geologic investigation of the project site to demonstrate that proposed buildings will not be constructed across active faults. The evaluation of a specific site and written report must be prepared by a licensed geologist. If an active fault is found, any structure for human occupancy must be set back a minimum of 50 feet from the fault trace as the area within 50 feet of such active faults is presumed to be underlain by active branches of that fault unless proven otherwise by an appropriate geologic investigation and report. Alquist-Priolo Earthquake Fault Zones within the Planning Area are shown on Figure 3.7-2.

Seismic Hazards Mapping Act, California Public Resources Code Sections 2690–2699.6

In 1990, following the 1989 Loma Prieta earthquake, the California Legislature enacted the Seismic Hazards Mapping Act (SHMA) to protect the public from the effects of strong ground shaking, liquefaction, landslides, and other seismic hazards. The SHMA established a statewide mapping program to identify areas subject to violent shaking and ground failure. The program is intended to assist cities and counties in protecting public health and safety. The SHMA requires the State Geologist to delineate various seismic hazard zones and requires cities, counties, and other local permitting agencies to regulate certain development projects within these zones. As a result, the CGS is mapping SHMA Zones and has completed seismic hazard mapping for the portions of California most susceptible to liquefaction, ground shaking, and landslides – primarily the San Francisco Bay Area and Los Angeles basin. At the time of the preparation of this Draft EIR, the City of St. Helena had not yet been mapped in conformance with the SHMA, and CGS has not indicated a schedule for completion of the study.

California Building Standards Code

The California Building Standards Commission is responsible for coordinating, managing, adopting, and approving building codes in California. The State of California provides minimum standards for building design through the California Building Standards Code (CBC) (California Code of Regulations Title 24). Where no other building codes apply, Chapter 29 of the CBC regulates excavation, foundations, and retaining walls. The CBC applies to building design and construction in the state and is based on the Federal Uniform Building Code (FUBC) used widely throughout the country (generally adopted on a state-by-state or district-by-district basis). The FUBC has been modified for California conditions with numerous more detailed or more stringent regulations.

The State earthquake protection law (California Health and Safety Code Section 19100 et seq.) requires that structures be designed to resist stresses produced by lateral forces caused by wind and earthquakes. The CBC requires an evaluation of seismic design that falls into Categories A–F (where F requires the most earthquake-resistant design) for structures designed for a project site. The CBC philosophy focuses on "collapse prevention," meaning that structures are designed for prevention of collapse for the maximum level of ground shaking that could reasonably be expected

to occur at a site. Chapter 16 of the CBC specifies exactly how each seismic design category is to be determined on a site-specific basis through the site-specific soil characteristics and proximity to potential seismic hazards.

Chapter 18 of the CBC regulates the excavation of foundations and retaining walls. This chapter regulates the preparation of a preliminary soil report, engineering geologic report, geotechnical report, and supplemental ground-response report. Chapter 18 also regulates analysis of expansive soils and the determination of the depth to groundwater table. For Seismic Design Category C, Chapter 18 requires analysis of slope instability, liquefaction, and surface rupture attributable to faulting or lateral spreading. For Seismic Design Categories D, E, and F, Chapter 18 requires these same analyses plus an evaluation of lateral pressures on basement and retaining walls, liquefaction and soil strength loss, and lateral movement or reduction in foundation soil-bearing capacity. It also requires mitigation measures to be considered in structural design. Mitigation measures may include ground stabilization, selection of appropriate foundation type and depths, selection of appropriate structural systems to accommodate anticipated displacements, or any combination of these measures. The potential for liquefaction and soil strength loss must be evaluated for site-specific peak ground acceleration magnitudes and source characteristics consistent with the design earthquake ground motions. Peak ground acceleration must be determined from a site-specific study, the contents of which are specified in CBC Chapter 18.

Finally, Appendix Chapter J of the CBC regulates grading activities, including drainage and erosion control and construction on unstable soils, such as expansive soils and areas subject to liquefaction.

California Department of Transportation (Caltrans) Standards

Jurisdiction of the California Department of Transportation (Caltrans) includes State and interstate routes within California, including State Route 29 which runs through St. Helena. Any work within the right-of-way of a federal or State transportation corridor is subject to Caltrans regulations governing allowable actions and modifications to the right-of-way. Caltrans standards incorporate the CBC and contain numerous rules and regulations to protect the public from seismic hazards such as surface fault rupture and ground shaking. In addition, Caltrans standards require that projects be constructed to minimize potential hazards associated with cut and fill operations, grading, slope instability, and expansive or corrosive soils, as described in the Caltrans Highway Design Manual (HDM).

National Pollution Discharge Elimination System Permits

In California, the State Water Resources Control Board (SWRCB) and its Regional Water Quality Control Board (RWQCB) administer the National Pollution Discharge Elimination System (NPDES) program. The NPDES permit system was established as part of the Federal Clean Water Act to regulate both point source discharges and non-point source discharges to surface water of the United States, including the discharge of soils eroded from construction sites.

The NPDES program consists of characterizing receiving water quality, identifying harmful constituents (including siltation), targeting potential sources of pollutants (including excavation and grading operations), and implementing a comprehensive stormwater management program. Construction and industrial activities typically are regulated under statewide general permits that

are issued by the SWRCB. Additionally, the SWRCB issues Water Discharge Requirements that also serve as NPDES permits under the authority delegated to the RWQCBs, under the Clean Water Act. See Section 3.9 of this EIR, "Hydrology and Water Quality," for more information about the NPDES.

Local Regulations

Napa County Operational Area Hazard Management Plan (2013)

The City of St. Helena participated in the Napa County Operational Area Hazard Management Plan, which was adopted in 2013 and satisfies the requirements of the DMA2K. The plan includes a risk assessment that resulted in the profiling of hazards that pose risk to Napa County, assessment of the County's vulnerability to those hazards, and examined the capabilities in place to mitigate them. Vulnerabilities identified, profiled, and analyzed in this plan include flooding, earthquakes, and wildland/urban interface fires. The plan also identifies goals for reducing risks from hazards. Objectives of the plan are to:

- Protect life and property;
- Ensure emergency services;
- Increase public awareness and understanding of hazard mitigation;
- Protect critical facilities properties, infrastructure and other community assets from the impacts of hazards; and
- Continue to strengthen communication and build on the collaborative success already achieved.

In addition to county-wide risk assessment, the plan includes city-specific risk assessments. Information for the City of St. Helena is in Appendix E of the plan. Appendix A details the Napa County Operational Area, which includes the St. Helena SOI and three study areas analyzed under the General Plan and this EIR.

Napa County General Plan

Napa County has jurisdiction over the three unincorporated study areas analyzed in the Proposed Plan. The Conservation and Safety Elements of the Napa County General Plan includes measures to reduce erosion, risks due to seismic activity, landslides, and other issues related to geology, soils, and seismicity. The Conservation Element includes policies and actions specific to reducing the loss of topsoil and reduction of erosion on agricultural lands, which is the predominant land use designated within the three study areas per the Napa County General Plan.

St. Helena Municipal Code

Chapter 13.32 Stormwater and Runoff Pollution Control

Chapter 13.32 of the St. Helena Municipal Code aims to protect the health, safety, and general welfare of city of St. Helena residents by protecting water resources, improving water quality, and protecting habitats through pollution reduction, erosion prevention, and stormwater management. This chapter defines "Best Management Practices for Ground Disturbing Activities" that reduce erosion, sedimentation, and pollution. This chapter also regulates when an Erosion

and Sedimentation Control Plan and/or NPDES permit is required and how enforcement is carried out.

Title 15 Buildings and Construction

Title 15 of the St. Helena Municipal Code adopts the California Building Code (CBC) of the state of California in its entirety excepting additions, revisions, and omissions listed in Section 15.08.020. As discussed above, the CBC regulates seismic design, the excavation of foundations and retaining walls, analysis of slope instability, requirements for drainage and grading, and other aspects of building design and construction that relate to geology, soils, and seismicity.

Impact Analysis

SIGNIFICANCE CRITERIA

For the purposes of this EIR, a significant adverse impact related to geology, soils, or seismic hazards would occur if the proposed Plan would:

Criterion 1: **Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:**

- **Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map or based on other substantial evidence of a known fault,**
- **Strong seismic ground shaking,**
- **Seismic-related ground failure, including liquefaction, or**
- **Landslides.**

Criterion 2: **Result in substantial soil erosion or topsoil loss;**

Criterion 3: **Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse;**

Criterion 4: **Be located on expansive soil, as defined in Section 1803.5.3, Expansive Soil, of the California Building Standards Code (2013), creating substantial risks to life or property; or**

Criterion 5: **Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of waste water.**

METHODOLOGY AND ASSUMPTIONS

This evaluation of geologic, soils, and seismic hazard conditions was completed using published geologic, soils, and seismic maps and studies from U.S. Geological Survey (USGS), California Geological Survey (CGS), and the Association of Bay Area Governments (ABAG). In order to reduce or mitigate potential hazards from earthquakes or other local geologic hazards,

implementation of the Proposed Plan would ensure that development will continue to be completed in compliance with local and State regulations. These regulations include the CBC, the Seismic Hazard Mapping Act, and the City of St. Helena Municipal Code. Policies and implementing actions developed for the Proposed Plan include continued conformance with these applicable local and State building regulations.

The Planning Area for the Proposed Plan includes three study areas in unincorporated Napa County immediately adjacent to the city limits where the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities (see Chapter 2: Project Description for additional details). Existing conditions related to geology, soils, and seismicity in the whole of the Planning Area are documented above; however, as the City does not have jurisdiction outside of the city limits and sphere of influence (SOI), Proposed Plan policies and actions would not apply in the study areas. Therefore, implementation of the Proposed Plan would not result in direct impacts related to geology, soils, and seismicity in the study areas except for the potential impacts from the implementation of policies and actions related to municipal sewer system connections discussed below. Cumulative impacts related to geology, soils, and seismicity are discussed in Chapter 5: CEQA Required Conclusions.

RELEVANT POLICIES AND IMPLEMENTING ACTIONS

Public Facilities and Services Element

- ***PF2.1*** Ensure adequate sewage treatment capacity at the City treatment plant to meet the needs of population growth, taking into account the City's Growth Management System, the Regional Housing Needs Allocation, and the needs of non-residential users.
- ***PF2.2*** Require the extension of the City sewer to areas that are dependent upon septic systems prior to approval of future growth in these areas.
- ***PF2.3*** Reduce pumping costs and increase plant capacity by mitigating sewer system infiltration problems and explore alternate energy sources.
- ***PF2.4*** Increase sewer collection system efficiency by ensuring proper maintenance of sewer pipes.
- ***PF3.4*** Consider efforts to prevent risk to structures and property along Sulphur Creek.

Public Health, Safety, and Noise Element

- ***PS3.1*** Minimize risk of injury, loss of life, and property damage from seismically-induced and other known geologic hazards.
- ***PS3.2*** Restrict the intensity of development and the level of landform alteration in the hillside areas in order to minimize the potential for slope failure.
- ***PS3.3*** The required soils and geotechnical reports for new development shall include geotechnical analysis for construction in areas with potential geological hazards and/or for purposes of environmental analysis. The analysis shall investigate all potential geo-hazard issues for the site where there is substantial evidence of a potential risk.
- ***PS3.4*** Geologic reports for new development shall describe hazards and include mitigation measures to reduce risks to acceptable levels. Where appropriate, an engineer's or

geologist's certification shall be required stating that risks have been mitigated to an acceptable level.

- ***PS3.A*** Require a soils and geologic report to be submitted for new construction prior to the issuance of grading and building permits and the submission of final maps.
- ***PS3.B*** Prohibit any development—including any land alteration, grading for roads, and structural development—in areas of slope instability or other geologic concerns until mitigating measures are taken to limit potential damage to levels of acceptable risk.
- ***PS3.C*** Require prompt re-vegetation of development areas on slopes prone to instability. Use native and drought-tolerant plant species for landscaping on slopes where excess watering might induce landslides and/or erosion.

IMPACTS

Impact 3.7-1 Implementation of the Proposed Plan would not expose residents, visitors and employees, as well as public and private structures, to substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault; strong seismic ground shaking; seismic-related ground failure, including liquefaction; or landslides. *(Less than Significant)*

The Proposed Plan could result in increased development, population, and/or other physical changes in the City of St. Helena that could involve geological or seismic hazards (geohazards). Implementation of the Proposed Plan could therefore result in additional people and structures being exposed to geohazards, including fault rupture, ground shaking, liquefaction, and seismically-induced landslides. Some of these geohazards, particularly those related to ground shaking, could result in injuries and/or fatalities; all of the geohazards discussed below could result in damage to structures and property.

Fault Rupture

For the Proposed Plan, a significant impact due to fault rupture could occur if new structures were constructed within a designated Alquist-Priolo Earthquake Fault Zone. However, there are no designated Alquist-Priolo Fault Zones in the Planning Area (California Geological Survey, 2010) and there are no faults zoned under the Alquist-Priolo Earthquake Fault Zoning Act present within the Planning Area. The Alquist-Priolo Earthquake Fault Zones nearest to the Planning Area are associated with the West Napa Fault, approximately 13 miles to the south, Rodger's Creek, approximately 13 miles to the west. Although there are no mapped Alquist-Priolo faults within St. Helena, the significance criteria specify that faults be evaluated as indicated under the findings of the State Geologist or "as based on other substantial evidence of a known fault."

Although there are no mapped Alquist-Priolo Earthquake Fault Zones within the Planning Area, the West Napa fault does extend into the southwestern border of St. Helena. This portion of the West Napa fault is classified as an Undifferentiated Quaternary fault, which means it has been active in the last 130,000 to 1.6 million years.

The Proposed Plan includes policies and implementing actions that reduce impacts due to fault rupture. Policy PS3.1 aims to minimize the risk of injury, loss of life, and property damage from

seismically-induced and other geologic hazards. Policies PS3.3 and PS3.4 and implementing actions PS3.A, PS3.D, and PS3.E require and enforce soil and geologic reports, as well as mitigation, if necessary, for new development.

Due to the lack of any Alquist-Priolo Fault Zones within the Planning Area and policies and implementing actions included in the Proposed Plan, impacts due to fault rupture would be less than significant.

Ground Shaking

A significant impact due to ground shaking could occur if implementation of the Proposed Pan led to construction in an area that would experience ground shaking that could cause damage or harm to buildings or people. Generally speaking, fault activity has the potential to result in ground shaking, which can be of varying intensity depending the magnitude of the event, the epicenter distance, the response of geologic materials, and the design and construction quality of structures. Ground shaking tends to be more severe in softer sediments such as alluvial deposits than in bedrock materials, because in alluvial deposits surface waves can be amplified causing a longer duration of ground shaking. Areas where bedrock is exposed or located at relatively shallow depth tend to experience surface waves from an earthquake as more of a sharp jolt, compared to other areas.

Due to the distances to major regional faults, the Planning Area is subject to relatively low risk from violent seismic shaking. Nonetheless, active local faults like the Rodgers Creek, Maacama, Hunting Creek, or West Napa faults may result in significant shaking in St. Helena. Risks due to seismic ground shaking, in order to minimize damage, are legislated for structures intended for human habitation by the Seismic Hazards Mapping Act. Additionally, development occurring under the Proposed Plan would be required to conform to the current seismic design provisions of the most current version of the CBC. The CBC contains the latest seismic safety requirements to resist ground shaking through modern construction techniques, which are periodically updated to reflect the most recent seismic research.

Policy PS3.1 aims to minimize the risk of injury, loss of life, and property damage from seismically-induced and other geologic hazards, including ground shaking. Policies PS3.3 and PS3.4 and implementing actions PS3.A, PS3.D, and PS3.E require and enforce soil and geologic reports, as well as mitigation, if necessary, for new development.

Compliance with existing requirements, as well as policies and implementing actions within the Proposed Plan, would reduce potential impacts from ground shaking to a less than significant level.

Liquefaction

A significant impact due to liquefaction could occur if implementation of the Proposed Plan would result in construction in areas of elevated liquefaction risk. As shown in Figure 3.10-3, the majority of the Planning Area is prone to some level of liquefaction hazard. Most of the developed land within the city is subject to medium liquefaction hazards. The most at-risk portions of the Planning Area are in proximity to the Napa River, along the city's eastern border, including Study Area 1, and along Sulphur Creek. Very high or high susceptibility to liquefaction is common for soils that are often saturated or characteristic of wetlands. The majority of these high-risk areas would be

preserved as open space in the Proposed Plan and would not be developed with buildings or roadways. However, along Sulphur Creek, closer to downtown, a portion of the very high susceptibility areas is designated as industrial, which could result in exposure to geologic hazards due to liquefaction.

Risks due to seismic induced liquefaction are legislated for structures intended for human habitation by the Seismic Hazards Mapping Act. Similarly, Caltrans standards govern risk management for roadways in California. Damage from earthquake-induced ground failure associated with liquefaction could be high in buildings or roadways constructed on improperly engineered fills or saturated alluvial sediments that have not received adequate compaction or treatment in accordance with current building code or Caltrans standards.

In areas of liquefaction risk where buildings or roadways would be constructed, impacts from ground failure resulting from liquefaction would be addressed through site-specific geotechnical studies prepared in accordance with CBC requirements or Caltrans standards and standard industry practices, as required in policies PS3.3 and PS3.4, as well as implementing actions PS3.A and PS3.E within the Proposed Plan Policy PS3.2 and Implementing Action PS3.B prohibit development in areas with high soil and slope instability.

Conformance with listed regulatory requirements and policies and implementing actions within the Proposed Plan would reduce potential impacts related to ground-failure resulting from liquefaction to a less than significant level.

Seismically-Induced Landslides

Implementation of the Proposed Plan could have a significant impact due to seismically-induced landslides if new development were to be located in areas with high landslide risk. Landslides may occur on slopes of 15 percent or less; however, the probability is greater on steeper slopes that exhibit old landslide features such as steep slopes or banks, slanted vegetation, and transverse ridges. Landslide-susceptible areas are characterized by steep slopes and downslope creep of surface materials. While the majority of land within the Planning Area is relatively stable and flat, with no existing landslide deposits, both the western and eastern portions of the Planning Area are underlain with few existing landslide deposits. A small section of the foothills east of the Planning Area is mostly underlain with existing landslide deposits (see Figure 3.10-4). Most of this area is designated as parks, open space, woodlands, or other natural areas under the Proposed Plan. Therefore, impacts on people and property from seismically-induced landslides would be minimal.

The Seismic Hazards Mapping Act regulates construction for structures intended for human habitation within areas that have a risk of experiencing seismically-induced landslides. Similarly, Caltrans standards govern risk management for roadways in California. The potential for the development of future structures or roadways within the City of St. Helena to exacerbate existing landslide hazards would be addressed through site-specific geotechnical studies prepared in accordance with CBC requirements or Caltrans standards, respectively, as well as standard industry practices. These regulations would specifically address landslide hazards.

Within the Proposed Plan, Policy PS3.2 and Implementing Action PS3.B prohibit development in areas with high soil and slope instability, which would reduce the risk of landslides. Implementing

Action PS3.C requires prompt re-vegetation of areas on slopes to reduce instability. Policies PS3.3 and PS3.4, as well as implementing actions PS3.A and PS3.E require geologic and soil survey reports for new development, as well as mitigating measures, if necessary to reduce risks due to geologic hazards, such as landslides.

Compliance with CBC requirements or Caltrans standards, adherence to standard industry practices, and policies and implementing actions within the Proposed Plan would reduce adverse landslide impacts on people and property related to proposed changes from implementation of the Proposed Plan to a less than significant level.

Mitigation Measures

None required.

Impact 3.7-2 Implementation of the Proposed Plan would not result in substantial soil erosion or the loss of topsoil. *(Less than Significant)*

Development associated with implementation of the Proposed Plan would likely include earthwork activities that could expose soils to the effects of erosion or loss of topsoil. Once disturbed, through the removal of vegetation, asphalt, or an entire structure, exposed and stockpiled soils could be affected by wind and water. Generally, according to St. Helena Municipal Code Chapter 15.12 California Building Code Adopted, no grading shall be performed within the city without first having obtained a permit from the Building Official with approval from the City Engineer, except for minor grading activities or special project types outlined in the Code, which do not require a grading permit. Compliance with the St. Helena Municipal Code would minimize impacts from erosion.

In addition, construction that disturbs more than one acre would be subject to compliance with a NPDES permit. The NPDES permit requires implementation of best management practices (BMPs) and a Storm Water Pollution Prevention Plan (SWPPP). BMPs that are required under a SWPPP include erosion prevention measures that have proven effective in limiting soil erosion and loss of topsoil. Enforcement of NPDES requirements is outlined in St. Helena Municipal Code Chapter 13.32 Stormwater Runoff and Pollution Control.

Proposed Plan policies PS3.3 and PS3.4 and Implementing Action PS3.A require soils and geotechnical reports for new development, as well as mitigation measures to reduce risks.

Once construction is complete and exposed areas are re-vegetated per policies in the Proposed Plan or covered by buildings, asphalt, or concrete, the erosion hazard is substantially eliminated or reduced. Compliance with applicable codes and regulations would reduce the risk of substantial soil erosion or topsoil loss resulting from implementation of the Proposed Plan to a less than significant level.

Mitigation Measures

None required.

Impact 3.7-3 Implementation of the Proposed Plan would not result in development located on a geologic unit or soil that is unstable, or

that would become unstable as a result of the Plan, and potentially result in on or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse. *(Less than Significant)*

If implementation of the Proposed Plan promoted development located on an unstable geologic unit or soils that resulted in landslide, lateral spreading, subsidence, or liquefaction, it could result in a significant impact. Areas within the St. Helena with underlying materials that include undocumented fills, soft compressible deposits, or loose debris could be inadequate to support development, especially multi-story buildings. Structures, including residential units and commercial buildings, and roadways could be damaged as a result of settlement where structures or roadways are underlain by materials of varying engineering characteristics. Construction of new structures or roadways in the vicinity of relatively steep slopes could provide additional loading, causing landslides or slope failure from unstable soils or geologic units. Slope failure could also occur through earthwork and grading related activities.

As discussed above, while the majority of land within the Planning Area is relatively flat, with few landslide susceptible areas (See Figure 3.10-4), most of these areas are designated as parks, open space, woodlands, agriculture, or other areas of no or low-intensity development that should not be adversely impacted by landslides.

The potential hazards of unstable soil or geologic units would be addressed through the integration of geotechnical information into the planning and design process for future projects within the city. Geotechnical investigations for specific projects within the City of St. Helena would be required to evaluate site-specific geotechnical characteristics such as subsurface soils and bedrock to assess potential hazards and recommend site preparation and design measures to address any hazards that may be present. These measures would be enforced through compliance with CBC requirements to avoid or reduce hazards relating to unstable soils and slope failure. The City of St. Helena has adopted the CBC in Municipal Code Title 15.

Furthermore, policies and implementing actions in the Proposed Plan would prevent development on areas with unstable soils or geologic units. Specifically, Policy PF3.4 aims to reduce risk to structures along Sulphur Creek, where the most expansive soils are located, and Policy PS3.2 restricts development in hillside areas. Policies PS3.3 and PS3.4 and Implementing Action PS3.A require soils and geologic reports for new development, which is in conformance with the requirements of the CBC. Implementing Action PS3.B prohibits developing areas of slope instability until mitigation measures are taken, and Implementing Action PS3.C requires prompt re-vegetation of slopes prone to instability.

Therefore, due to compliance with standard industry practices, State requirements, and policies and implementing actions, impacts related to landslides, lateral spreading, subsidence, liquefaction, or collapse resulting from implementation of the Proposed Plan would be less than significant.

Mitigation Measures

None required.

Impact 3.7-4 Implementation of the Proposed Plan would not locate structures on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property. (*Less than Significant*)

Some improvements associated with implementation of the Proposed Plan could be located on geologic units or soils that are unstable, including expansive soils. As described above, the Planning Area consists of several soil types, including Bale, Cole, Cortina, and Pleasanton loams soils, which are moderately expansive. Soils that exhibit expansive properties when exposed to varying moisture content over time could result in damage to foundations, walls, or other improvements. The Planning Area consists mostly of soils which are moderately corrosive to concrete and moderately to highly corrosive to steel. Corrosive soils can constrain foundation and utility construction design. The majority of existing development within the City of St. Helena is located on the valley floor on moderately expansive soils.

Development in areas with expansive soils would require compliance with State and local building codes. Chapter 18 of the CBC regulates the excavation of foundations and retaining walls. This chapter regulates the preparation of a preliminary soil report, engineering geologic report, geotechnical report, and supplemental ground-response report. Chapter 18 also regulates analysis of expansive soils and the determination of the depth to groundwater table. Appendix Chapter J of the CBC regulates grading activities, including drainage and erosion control and construction on unstable soils, such as expansive soils and areas subject to liquefaction. The City of St. Helena has adopted the CBC in Municipal Code Title 15.

In addition to CBC requirements, Implementing Action PS3.A specifies that the City of St. Helena "require a soils and geologic report to be submitted for new construction prior to the issuance of grading and building permits and the submission of final maps." Implementing Action PS3.B would prohibit or limit development in areas of slope instability unless adequate measures are taken to limit potential damage to levels of acceptable risk.

Compliance with existing regulations and implementation of Proposed Plan policies and implementing actions would ensure that any impact is reduced to a less than significant level.

Mitigation Measures

None required.

Impact 3.7-5 Implementation of the Proposed Plan would not locate structures on soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater. (*Less than Significant*)

A significant impact could occur if new development under the Proposed Plan would locate structures in areas without connection to St. Helena's sanitary sewer system and on soils incapable of adequately supporting the use of septic tanks. The majority of existing development within the City of St. Helena is connected to the sanitary sewer system and does not rely on septic systems. Implementation of the Proposed Plan would not result in development in areas having soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal

systems. Additionally, the majority of new development resulting from implementation of the Proposed Plan would be in central areas served by the current sewer system.

Certain areas, including lands designated Woodland and Watershed and the three study areas, are outside the area served by the City of St. Helena's sanitary sewer system and would continue to be served by on-site wastewater systems. Applications for new development in areas not served by the City of St. Helena's sanitary sewer system would be required to apply to the Napa County Health and Human Services Department for installation of an on-site treatment system. St. Helena General Plan Policy PF2.2 would provide that nearly all new units (except those few previously mentioned) must connect to the City wastewater system and would limit system growth to areas within the St. Helena Urban Limit Line. The Proposed Plan does not propose or facilitate new development within the study areas.

The Napa County Health and Human Services Department application and review process includes engineering and testing requirements to ensure that appropriate soils are present and/or required specially designed systems are proposed to mitigate site constraints prior to system approval (County of Napa, 2010). For those areas within St. Helena served by the City system, Proposed Plan policies PF2.1 through PF2.4 would "ensure adequate sewage treatment capacity at the City treatment plant to meet the needs of population growth," as well as address system extension and capacity improvements to the system.

Thus, existing regulations and policies and implementing actions included in the Proposed Plan would reduce impacts related to septic systems to a less than significant level.

Mitigation Measures

None required

3.8 Hazards and Hazardous Materials

This section of the EIR presents a general discussion of hazardous materials and public health and safety impacts within the Planning Area. This section assesses potential impacts from future development under the Proposed Plan as related to hazards and hazardous materials, including those associated with the use, transportation, or disposal of hazardous materials; hazardous materials use in the vicinity of a school; hazardous materials sites; airport hazards; emergency response planning; and wildland fire hazards. For discussion of geologic and seismic hazards, see Section 3.6: Geology, Soils, and Seismicity. For discussion of hydrologic and flood hazards, see Section 3.9: Hydrology and Water Quality.

Responses to the NOP regarding topics addressed in this section included the following:

- A member of the public commented on access issues potentially affecting emergency response within the City of St. Helena. They stated that the only crossing in St. Helena over the Napa River exists at the Pope Street Bridge. During peak times, it may not be passable by emergency services due to traffic congestion. A second member of the public also commented on emergency service access issues regarding sections of town that are only accessible via State Route 29. This EIR addresses these topics by examining the emergency access throughout the Planning Area, as well as existing and proposed policies and procedures, to determine if additional measures are needed to adequately provide emergency response given the growth projected at build out. Additionally, the only crossing being at the Pope Street Bridge is a temporary condition. The Pratt Street Bridge is also a crossing of the Napa River within St. Helena; however, it is currently closed due to a landslide. The County has not provided a schedule of the planned opening of the bridge.

Environmental Setting

PHYSICAL SETTING

Hazardous materials and wastes can result in public health hazards if improperly handled, released into the soil or groundwater, or released into the air through vapors, fumes, or dust.

Hazardous Materials

Hazardous materials are substances or a combination of substances which, because of quantity, concentration or physical, chemical, or infectious characteristics, may either (1) cause or significantly contribute to an increase in mortality or an increase in serious, irreversible or

incapacitating irreversible illness; or (2) pose a substantial present or potential hazard to human health and safety, or the environment when improperly treated, stored, transported or disposed of. Title 22 of the California Code of Regulations, Division 4.5, Chapter 11, Article 3 groups hazardous materials into the following four categories based on their properties: toxic (causes human health effects), ignitable (has the ability to burn), corrosive (causes severe burns or damage to materials), and reactive (causes explosions or generates toxic gases). Hazardous materials are commonly used in commercial, agricultural and industrial applications, as well as in residential areas to a limited extent.

Hazardous Waste

A hazardous waste is any waste that may (1) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness, or (2) pose a substantial present or potential hazard to human health or the environment, due to factors including, but not limited to, carcinogenicity, acute toxicity, chronic toxicity, bio-accumulative properties, or persistence in the environment, when improperly treated, stored, transported, or disposed of, or otherwise managed (California Health and Safety Code, Section 25141).

Hazardous Materials Transport

Within the Planning Area, hazardous materials may be transported by vehicle along roadways, train tracks, or through transmission lines such as pipelines. The major transportation routes within the Planning Area are State Route (SR) 29 and Silverado Trail. As seen on Figure 3.8-1, SR 29 is designated as a truck route, which could be used to transport hazardous materials. The Napa Valley Wine Train, which typically runs service for tourists through Napa Valley and runs through the City of St. Helena, occasionally runs freight service, and could be used to transport hazardous materials (Giaccio, 2018). Additionally, a PG&E gas transmission pipeline is located along the entire length of SR 29 within the Planning Area (PG&E, 2018).

Hazardous Materials Sites

Sites where hazardous chemical compounds have been released into the environment can pose threats to human and ecologic systems' health. Both historic and current activities, most often associated with industrial or commercial uses (including gas stations, car washes, etc.), may result in the release, leak, or disposal of toxic substances on or below the ground surface, where they can then contaminate soil and ground water. Disturbance of the ground through grading or excavation can result in exposure of these chemicals to the public. Improper handling of contaminated sites may result in further exposure via airborne dust, surface water runoff, or vapors.

The California Department of Toxic Substances Control (DTSC) and State of California Water Resources Control Board (SWRCB) track and identify sites with known or potential contamination and sites that may impact groundwater in accordance with Section 65962.5 of the California Public Resources Code. The list produced in accordance with this code is also known as the Cortese List.

- **EnviroStor.** The DTSC EnviroStor hazardous waste facility and cleanup sites database identifies sites that have known contamination or potentially contaminated sites requiring further investigation, and facilities permitted to treat, store, or dispose of hazardous waste. The EnviroStor database includes lists of the following site types: federal Superfund sites; State Response, including military facilities and State Superfund; voluntary cleanup; and school sites.
- **GeoTracker.** The SWRCB GeoTracker database tracks sites that impact groundwater or have the potential to impact groundwater. It includes sites that require groundwater cleanup such as Leaking Underground Storage Tanks (LUSTs), Department of Defense, and Site Cleanup Program sites; as well as permitted facilities that could impact groundwater such as operating Underground Storage Tanks (USTs), irrigated lands, oil and gas production sites, and land disposal sites.

SWRCB records identify 39 hazardous materials release sites in the Planning Area, 34 in the City of St. Helena and five in Study Area 3, of which one is undergoing remediation and three are permitted sites. As shown in Table 3.8-1, the majority of hazardous materials release sites in the Planning Area are related to LUSTs. Although current regulations requiring double-wall construction and leak monitoring equipment for USTs should reduce the number of releases in the future, many USTs installed in previous decades have failed, causing petroleum contamination in soils and groundwater. These releases are often discovered during tank removal or upgrade activities.

Typically, the most significant hazardous materials sites affecting public health are overseen by the DTSC. DTSC reports two on-going cleanup sites in the Planning Area, one within the City of St. Helena and one located in Study Area 3. A manufactured gas plant (MGP) operated on Mitchell Drive within the City of St. Helena from 1883 until 1926. In 1930, PG&E acquired the site, dismantling the MGP upon introduction of natural gas to the region in 1931. Polycyclic aromatic hydrocarbons, petroleum hydrocarbons, arsenic, and lead have been detected in subsurface investigations at the site. Groundwater cleanup of this site is nearing completion, with DTSC requiring monitoring wells to be in place for the next five years until the year 2020 (Department of Toxic Substances Control, 2018). The second cleanup site, located along SR 29 within Study Area

3, is a wood-framed structure that has operated as a food market since 1949. During renovation of the structure in 1997, a preliminary site assessment detected hazardous levels of organochlorine pesticides, including DDT, in soil in the crawlspace beneath the building (Department of Toxic Substances Control, 2018).

A shown on Table 3.8-1 and Figure 3.8-2, of the 41 total hazardous materials sites in the Planning Area, 36 are now listed as closed cases by their regulatory agency. The remaining sites include a PG&E property, three gas stations, and a commercial property.

Aerially-Deposited Lead

Aerially-deposited lead is a common hazardous materials issue in urban areas. Soils adjacent to major roadways often contain elevated concentrations of lead. The lead deposition is the result of airborne particulates and surface water runoff associated with tailpipe emissions prior to the time lead was phased out of vehicle fuels. Studies by the California Department of Transportation (Caltrans) suggest that hazardous waste levels of lead, if present, are generally found in soils within 30 feet of the edge of the pavement (Department of Toxic Substances Control, 2000).

The City of St. Helena contains several heavily-trafficked roadways, including Main Street and Silverado Trail. Properties located adjacent to roadways may contain elevated concentrations of lead in exposed surface soils, which could pose a health hazard to construction workers and users of the properties. Lead is a State-recognized carcinogen (causes cancer) and reproductive toxicant (causes birth defects or other reproductive harm) (CalEPA, 2007). Exposure of construction workers or future site occupants to lead in soil could result in adverse health effects, depending on the duration and extent of exposure.

Hazardous Materials in Building Materials

Hazardous materials, such as lead and asbestos, may be found in building materials and disturbed during demolition and renovation activities associated with development or redevelopment. Lead compounds were commonly used in interior and exterior paints until they were banned in 1978. Prior to the 1980s, building materials often contained asbestos fibers, which were used to provide strength and fire resistance until they were banned. In addition, other common items present in buildings, such as electrical transformers, fluorescent lighting, electrical switches, heating/cooling equipment, and thermostats can contain hazardous materials, which may pose a health risk if not handled and disposed of properly.

Demolition of buildings has the potential to release lead particles, asbestos fibers, and/or other hazardous materials to the air where they may be inhaled by construction workers and the general public. Federal and State regulations govern the demolition of structures where lead or material containing lead is present. During demolition, lead-based paint that is securely adhering to wood or metal may be disposed of as demolition debris, which is a non-hazardous waste. Loose and peeling paint must be disposed of as a California and/or federal hazardous waste if the concentration of lead exceeds applicable waste thresholds. State and federal construction worker health and safety regulations require air monitoring and other protective measures during demolition activities where lead-based paint is present.

Federal, State, and local requirements also govern the removal of asbestos or suspected asbestos-containing materials (ACMs), including the demolition of structures where asbestos is present. All friable (crushable by hand) ACMs, or non-friable ACMs subject to damage, must be removed prior to demolition in accordance with applicable requirements, including notification to the Bay Area Air Quality Management District (BAAQMD). Friable ACM must be disposed of as an asbestos waste at an approved facility. Non-friable ACM may be disposed of as non-hazardous waste at landfills that will accept such wastes. Workers conducting asbestos abatement must be trained in accordance with State and federal Occupational Safety and Health Administration (OSHA) regulations.

Fluorescent lighting tubes and ballasts, computer displays, and several other common items containing hazardous materials are regulated as "universal wastes" by the State of California. Universal waste regulations allow common, low-hazard wastes to be managed under less stringent requirements than other hazardous wastes. Management of other hazardous wastes is governed under the DTSC hazardous waste rules.

Sensitive Receptors

Some populations, such as children, the elderly, and the infirm, are more susceptible to health effects of hazardous materials than the general population. Hazardous materials use near schools, day care centers, senior housing, and hospitals must consider potential health effects to these populations, often referred to as "sensitive receptors." Construction or redevelopment on contaminated properties that could potentially generate vapors or fugitive dust containing contaminants may potentially pose a health risk to these populations. In addition, commercial businesses in proximity to sensitive receptors may have hazardous emissions or handle hazardous or acutely hazardous materials or wastes that could pose a health risk to these sensitive receptors.

To protect sensitive receptors, Section 17210 et seq. of the State Education Code, Sections 21151.2, 21151.4, and 21151.8 of the Public Resources Code require that prospective school sites be reviewed to determine that such sites are not a current or former hazardous waste disposal site, a hazardous substance release site, or the site of hazardous substance pipelines. These laws also require consultation with local hazardous materials agencies and air quality districts to ensure that no sites within one-quarter mile of a school that handle or emit hazardous substances would potentially endanger future students or workers at the prospective school site.

Pursuant to the State Education Code, all school districts receiving State funds are required to prepare a Phase I environmental assessment on prospective school sites. The Phase I assessment would detail the historical uses of the property and indicate any potential for contamination. DTSC must review this assessment and make one of the following findings: 1) that no further action is required; or 2) that concerns about contamination exist and the district must conduct a Preliminary Endangerment Assessment (PEA). The PEA process entails site sampling and the development of a detailed risk assessment of any contaminants present on the proposed school property.

Airport Hazards

The City of St. Helena does not have an airport and no public use airports or private airstrips are present within the Planning Area. The nearest public use airport is Angwin-Parrett Field, located four miles northeast of the Planning Area. The nearest private airport is the Pope Valley Airport, located seven miles northeast of the Planning Area. The nearest regional airport is the Charles M. Schulz Sonoma County Airport, 19 miles west of the Planning Area.

Emergency Response

County-wide, the Napa County Office of Emergency Services (OES) works with County departments, State agencies, and community groups to handle major disasters that affect County residents. Napa County OES provides information about emergency preparedness, response and recovery; maintains and updates county emergency plans as needed; and trains the community for

disasters. In the event of a disaster, an Emergency Operations Center (EOC) is set up and staffed with trained professionals who coordinate all communications, logistics, resources, and recovery programs. In addition to services provided by the County, the City of St. Helena has a paid on-call,[1] part-time fire department and traditional police department which would be responsible for providing safety and guidance in the event an evacuation was required.

Fire Hazards

Wildland Fires

In accordance with California Public Resource Code Sections 4201-4204 and 51175-51189, the California Department of Forestry and Fire Protection (CDF) has mapped areas of significant fire hazards based on fuels, terrain, weather, and other relevant factors. These zones, referred to as Fire Hazard Severity Zones (FHSZ), represent the risks associated with wildland fires. Under Government Code, Section 511182 areas within a very high FHSZ must comply with specific building and vegetation management requirements intended to reduce property damage and loss of life within these areas. As shown on Figures 3.8-3, no portion of the Planning Area is classified as a very high FHSZ. However, Study Area 1 is classified as being in a moderate FHSZ. Other fire risk analysis is completed as part of CDF's Fire Threat, Fire and Resource Assessment, and is shown on Figure 3.8-4. In this analysis, the western uplands of the City of St. Helena and Study Area 1 are areas classified as having moderate to very high wildfire threat. The remainder of the Planning Area is classified as either moderate or low threat, with the more developed portions of the valley generally having a moderate risk and the undeveloped or agriculture portions as low. The City of St. Helena is classified as a Local Responsibility Area (LRA), meaning that the City and other local fire districts are responsible for fire protection services, while the study areas are part of the State Responsibility Area (SRA) since they are located within unincorporated Napa County. The City of St. Helena Fire Department provides fire protection services within the city limits and certain surrounding unincorporated areas, including the three study areas, pursuant to the Napa County mutual aid automatic aid agreement. This agreement also dictates, depending on the needs of the incident, that all fire departments in the county will respond to a call for services as requested or required. Napa County Station 26 (St. Helena) and Napa County Station 12 (Yountville) provide automatic aid on all residential and commercial structure fires in the City of St. Helena (Sorensen, 2017).

Urban Fires

In addition to wildfires, the Planning Area is also at risk of urban fires affecting structures and vegetation in areas already developed for urban and agricultural uses. Fire risk in the city is mitigated in a number of ways, including through the enforcement of updated fire codes and involvement of the County OES and City of St. Helena Fire Department in the development review process. Fire services are discussed in more detail in Section 3.12: Public Services and Recreation.

[1] A paid on call fire department is one where firefighters are paid per run and not on a salary basis.

REGULATORY SETTING

Hazardous materials and hazardous wastes are extensively regulated by federal, State, regional and local regulations, with the major objective of protecting public health and the environment. In general, these regulations provide definitions of hazardous substances; identify responsible parties; establish reporting requirements; set guidelines for handling, storage, transport, remediation, and disposal of hazardous materials and wastes; and require health and safety provisions for both workers and the public, such as emergency response and worker training programs. Sites which are subject to these regulations are identified on periodically-updated published lists at the federal, state, and local levels; the regulated sites include underground storage tank (UST) locations. The major regulations relevant to the Proposed Plan are summarized in the following subsections.

Federal Regulations

Environmental Protection Agency (EPA)

The Federal Toxic Substances Control Act (1976) and the Resource Conservation and Recovery Act of 1976 (RCRA) established a program administered by the U.S. EPA for the regulation of the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA was amended in 1984 by the Hazardous and Solid Waste Act (HSWA), which affirmed and extended the "cradle to grave" system of regulating hazardous wastes. The use of certain techniques for the disposal of some hazardous wastes was specifically prohibited by the HSWA.

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), commonly known as Superfund, was enacted by Congress on December 11, 1980. This law provided broad federal authority to respond directly to releases or threatened releases of hazardous substances that may endanger public health or the environment. CERCLA established requirements concerning closed and abandoned hazardous waste sites; provided for liability of persons responsible for releases of hazardous waste at these sites; and established a trust fund to provide for clean up when no responsible party could be identified. CERCLA also enabled the revision of the National Contingency Plan (NCP). The NCP provided the guidelines and procedures needed to respond to releases and threatened releases of hazardous substances, pollutants, or contaminants. The NCP also established the National Priorities List, which is a list of contaminated sites warranting further investigation by the U.S. EPA. CERCLA was amended by the Superfund Amendments and Reauthorization Act (SARA) on October 17, 1986.

United States Department of Transportation

The U.S. Department of Transportation (DOT) regulates the interstate transport of hazardous materials and waste through implementation of the Hazardous Materials Transportation Act. This act specifies driver-training requirements, load labeling procedures, and container design and safety specifications. Transporters of hazardous wastes must also meet the requirements of additional statutes such as RCRA, discussed previously.

Federal Emergency Management Agency

The primary mission of the Federal Emergency Management Agency is to reduce the loss of life and property and to protect the nation from all hazards, including natural disasters, acts of

terrorism, and other man-made disasters, by leading and supporting a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation.

Disaster Mitigation Act

The Disaster Mitigation Act of 2000 requires a state mitigation plan as a condition of disaster assistance, adding incentives for increased coordination and integration of mitigation activities at the state level through the establishment of requirements for two different levels of state plans: "Standard" and "Enhanced." States that develop an approved Enhanced State Plan can increase the amount of funding available through the Hazard Mitigation Grant Program. In addition, the Disaster Mitigation Act also established a requirement for local mitigation plans.

Emergency Planning and Community Right-To-Know Act

The Emergency Planning Community Right-to-Know Act (EPCRA) of 1986 was included under the Superfund Amendments and Reauthorization Act (SARA) law and is commonly referred to as SARA Title III. EPCRA was passed in response to concerns regarding the environmental and safety hazards proposed by the storage and handling of toxic chemicals. EPCRA establishes requirements for federal, state, and local governments, Indian Tribes, and industry regarding emergency planning and Community Right-to-Know reporting on hazardous and toxic chemicals. SARA Title III requires states and local emergency planning groups to develop community emergency response plans for protection from a list of Extremely Hazardous Substances contained in the Code of Federal Regulations, Title 40 (40 CFR) Appendix B. The Community Right-to-Know provisions help increase the public's knowledge of and access to information on chemicals at individual facilities, their uses, and their release into the environment.

Occupational Health and Safety Administration

The Occupational Health and Safety Administration (OSHA) published standard 1910.120, addressing dangers that hazardous materials pose in the workplace. The standard requires that employers evaluate the potential health hazard that hazardous materials pose in the workplace and communicate information concerning hazards and appropriate protective measures to employees.

Federal Aviation Regulations Part 77

22 CFR, Part 77 establishes:

- The requirements to provide notice to the Federal Aviation Administration (FAA) of certain proposed construction, or the alteration of existing structures;
- The standards used to determine obstructions to air navigation, and navigational and communication facilities;
- The process for aeronautical studies of obstructions to air navigation or navigational facilities to determine the effect on the safe and efficient use of navigable airspace, air navigation facilities, or equipment; and
- The process to petition the FAA for discretionary review of determinations, revisions, and extensions of determinations.

State Regulations

California Code of Regulations Title 3

The California Code of Regulations (CCR) Title 3: Food and Agriculture regulates the storage and transportation of pesticides. Pesticides, or any container or equipment that holds or has held a pesticide, shall not be stored, handled, emptied, disposed of, or left unattended in such a manner or at any place where they may present a hazard to persons, animals (including bees), food, feed, crops or property.

California Code of Regulations Title 22

The California Code of Regulations (CCR) Title 22 provides the following definition of hazardous materials:

> *A hazardous material is a substance or combination of substances which, because of its quantity, concentration or physical, chemical, or infectious characteristics, may either (1) cause or significantly contribute to an increase in mortality or an increase in serious, irreversible or incapacitating irreversible illness; or (2) pose a substantial present or potential hazard to human health and safety, or the environment when improperly treated, stored, transported or disposed of. Hazardous materials include waste that has been abandoned, discarded, or recycled on the property and as a result represents a continuing hazard as the development is proposed. Hazardous materials also include any contaminated soil or groundwater.*

Title 22 also provides standards applicable to generators and transporters or hazardous wastes, as well as standards for operators or hazardous waste transfer facilities, among other regulations.

California Environmental Protection Agency

The California Environmental Protection Agency (CalEPA) manages hazardous materials and waste within California. CalEPA was created by the State of California to establish a cabinet-level voice for the protection of human health and the environment and to assure the coordinated deployment of state resources.

California Health and Safety Code, Hazardous Materials Release Response Plans and Inventory

Two programs in the California Health and Safety Code (H&SC) Chapter 6.95 are directly applicable to the CEQA issue of risk due to hazardous substance release. In Alameda County, these two programs are referred to as the Hazardous Materials Business Plan (HMBP) program and the California Accidental Release Program (CalARP). The Napa County Environmental Health Division is responsible for the implementation of the HMBP program and the CalARP program in Napa County. The HMBP and CalARP programs provide threshold quantities for regulated hazards substances. When the indicated quantities are exceeded, an HMBP or Risk Management Plan is required pursuant to the regulations. Congress requires EPA Region 9 to make RMP information available to the public through the EPA's Envirofacts Data Warehouse. The Envirofacts Data Warehouse is considered the single point of access to select EPA environmental data. California H&SC Section 25270, Aboveground Petroleum Storage Act, requires registration

and spill prevention programs for above ground storage tanks that store petroleum. In some cases, Aboveground Storage Tanks (ASTs) for petroleum may be subject to groundwater monitoring programs that are implemented by the Regional Water Quality Control Boards (RWQCBs) and the State of California Water Resources Control Board (SWRCB).

Emergency Response to Hazardous Materials Incidents

California has developed an emergency response plan to coordinate emergency services provided by federal, state, and local governments and private agencies. Response to hazardous material incidents is one part of this plan. The plan is managed by the California Emergency Management Agency, which coordinates the responses of other agencies, including CalEPA, the California Highway Patrol, CDFW, and RWQCB.

Office of Environmental Health Hazard Assessment

The State of California Office of Environmental Health Hazard Assessment oversees implementation of many public health-related environmental regulatory programs within CalEPA, including implementing the provisions of the Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65). Proposition 65 requires the governor to publish, at least annually, a list of chemicals known to the state to cause cancer or reproductive toxicity. The proposition was intended to protect California citizens and the state's drinking water sources from chemicals known to cause cancer, birth defects, or other reproductive harm and to inform citizens about exposures to such chemicals.

California Department of Toxic Substances Control

Within CalEPA, the California Department of Toxic Substances Control (DTSC) has primary regulatory responsibility, with delegation of enforcement to local jurisdictions that enter into agreements with the state agency, for the management of hazardous materials and the generation, transport and disposal of hazardous waste under the authority of the Hazardous Waste Control Law. Since August 1, 1992, the DTSC has been authorized to implement the state's hazardous waste management program for the CalEPA.

The DTSC is responsible for compiling a list of hazardous materials sites pursuant to Government Code Section 65962.5, which includes five categories:

1. Hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the health and safety code;
2. Land designated as "hazardous waste property" or "border zone property;"
3. Properties with hazardous waste disposals on public land;
4. Hazardous substance release sites selected for (and subject to) a response action; and
5. Sites included in the Abandoned Site Assessment Program.

California Department of Transportation

The California Department of Transportation (Caltrans) manages more than 50,000 miles of California's highway and freeway lanes, provides inter-city rail services, permits more than 400 public-use airports and special-use hospital heliports, and works with local agencies. Caltrans is also the first responder for hazardous material spills and releases that occur on highway and freeway lanes and inter-city rail services.

State Water Resources Control Board

The SWRCB also regulates the handling, storage, and disposal of hazardous substances in construction projects. Permits and/or other action by the SWRCB may be required if contamination of water or soils occurs during the construction of the proposed project.

Disaster Mitigation Act of 2000

The Disaster Mitigation Act of 2000 (DMA2K) (Public Law 106-390) amended the Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1988 to establish a Pre-Disaster Mitigation (PDM) program and new requirements for the federal post-disaster Hazard Mitigation Grant Program (HMGP). DMA2K encourages and rewards local and state pre-disaster planning. It promotes sustainability and seeks to integrate state and local planning with an overall goal of strengthening statewide hazard mitigation. This enhanced planning approach enables local, tribal, and state governments to identify specific strategies for reducing probable impacts of natural hazards such as floods, fire, and earthquakes. In order to be eligible for hazard mitigation funding after November 1, 2004, local governments are required to develop a Hazard Mitigation Plan that incorporates specific program elements of the DMA2K law. In the Bay Area, the Association of Bay Area Governments (ABAG) has adopted a multi-jurisdictional FEMA-approved 2010 Local Hazard Mitigation Plan Update, which cities and counties can adopt and use, in full or in part, in lieu of preparing all or part of a Local Hazard Mitigation Plan themselves (ABAG, 2010). The City of St. Helena has not adopted ABAG's multi-jurisdictional Plan but has participated in the Napa County Operational Area Hazard Management Plan.

State Multi-Hazard Mitigation Plan, 2013

The State Hazard Mitigation Plan (SHMP) is a federally required official statement of the state's hazard identification, vulnerability analysis, and hazard mitigation strategy (44 Code of Federal Regulations, Subpart M, Section 206.401) under the DMA2K for the State of California to receive federal funds for disaster assistance grant programs. The goal of the SHMP, prepared by the California Office of Emergency Services (OES), is to guide implementation activities to achieve the greatest reduction of vulnerability, which results in saved lives, reduced injuries, reduced property damage, and protection for the environment.

California Strategic Fire Plan, 2010

The California Strategic Fire Plan is a statewide plan developed by the State Board of Forestry and Fire Protection and CAL FIRE to achieve a more resilient natural environment and man-made assets that are more resistance to the occurrence and effects of wildland fire through local, State, federal, and private partnerships. The plan focuses on fire suppression and prevention efforts,

including hazard and risk assessment, land use planning, cooperation between fire protection jurisdictions, fire-resistant development, as well as post-fire recovery efforts. Land use policies include providing for defensible space, fuel management, development review, and fire-resistant construction.

State of California Emergency Plan, 2009

California has developed an emergency response plan to coordinate emergency services provided by federal, State, and local governments and private agencies. Response to hazardous material incidents is one part of this plan. The plan is managed by the California Emergency Management Agency, which coordinates the responses of other agencies, including CalEPA, the California Highway Patrol, the California Department of Fish and Wildlife, and RWCBs.

State Underground Storage Tank Program

State laws also regulate Underground Storage Tanks (USTs) and ASTs containing hazardous substances. These laws are primarily found in the Health and Safety Code, and, combined with CCR Title 23, comprise the requirements of the State UST program. The laws contain requirements for UST permitting, construction, installation, leak detection monitoring, repairs and corrective actions and closures.

Carpenter-Presley-Tanner Hazardous Substance Account Act

The Carpenter-Presley-Tanner Hazardous Substance Account Act (HSAA), which is modeled after CERCLA, imposes liability for hazardous substance removal or remedial actions and requires the DTSC to adopt, by regulation, criteria for the selection and for the priority ranking of hazardous substance release sites for removal or remedial action under the act.

Public Resources Code 21151.4

Public Resources Code 21151.4 regulates hazardous materials near schools. Public Resources Code Section 21151.4 prohibits the certification of an EIR for a project involving the construction or alteration of a facility that might reasonably be anticipated to emit hazardous air emissions or handle extremely hazardous air emissions in a quantity greater than a certain threshold, within one-quarter mile of a school.

SB 1889, Accidental Release Prevention (ARP) Law/Chemical Accident Release Prevention Program

SB 1889 required California to implement a federally mandated program governing the accidental airborne release of chemicals listed under Section 112 of the Clean Air Act. Effective January 1, 1997, CalARP replaced the previous California Risk Management and Prevention Program (RMPP) and incorporated the mandatory federal requirements. CalARP addresses facilities containing specified hazardous materials that, if involved in an accidental release, could result in adverse off-site consequences. CalARP defines regulated substances as chemicals that pose a threat to public health and safety or the environment because they are highly toxic, flammable, or explosive.

Hazardous Materials Worker Safety Requirements

The Federal Occupational Safety and Health Administration (Fed/OSHA) and the California Occupational Safety and Health Administration (Cal/OSHA) are the agencies responsible for assuring worker safety in the handling and use of chemicals in the workplace. The federal regulations pertaining to worker safety are contained in the 29 CFR as authorized in the Occupational Safety and Health Act of 1970. They provide standards for safe workplaces and work practices, including standards relating to hazardous materials handling. In California, Cal/OSHA assumes primary responsibility for developing and enforcing workplace safety regulations; Cal/OSHA standards are generally more stringent than federal regulations.

The State regulations concerning the use of hazardous materials in the workplace are included in Title 8 of the California Code of Regulations, which contain requirements for safety training, availability of safety equipment, accident and illness prevention programs, hazardous substance exposure warnings, and emergency action and fire prevention plan preparation. Cal/OSHA also enforces hazard communication program regulations, which contain worker safety training and hazard information requirements, such as procedures for identifying and labeling hazardous substances, communicating hazard information relating to hazardous substances and their handling, and preparation of health and safety plans to protect workers and employees at hazardous waste sites.

Title 27, CCR

The California Department of Resources Recycling and Recovery (CalRecycle) and the Control Board jointly issue regulations pertaining to waste disposal on land, including criteria for all waste management units, facilities and disposal sites; documentation and reporting; enforcement, financial assurance; and special treatment, storage, and disposal units.

California Wildland Hazard/Building Code

On September 20, 2005, the California Building Standards Commission approved the Office of the State Fire Marshal's emergency regulations amending the California Code of Regulations (CCR), Title 24, Part 2, known as the California Building Code (CBC). According to the updated regulations, new buildings located in any Fire Hazard Severity Zone shall comply with one of the following:

1. State Responsibility Areas. New buildings located in any Fire Hazard Severity Zone within State Responsibility Areas, for which an application for a building permit is submitted on or after January 1, 2008, shall comply with all sections of this chapter.

2. Local Agency Very-High Fire Hazard Severity Zone. New buildings located in any Local Agency Very High Fire Hazard Severity Zone for which an application for a building permit is submitted on or after July 1, 2008, shall comply with all sections of this chapter.

According to CAL FIRE's maps of fire hazard severity zones, the City of St. Helena and Study Areas 2 and 3 are located in a Local Responsibility Area, and Study Area 1 is located in a State Responsibility Area. No areas within the Planning Area are identified as very high fire hazard severity areas. However, as described in the "Environmental Setting" section, the Planning Area does include high and moderate wildfire severity zones.

Local Regulations

CalEPA's Unified Program

In 1993, Senate Bill 1082 gave CalEPA the authority and responsibility to establish a unified hazardous waste and hazardous materials management and regulatory program, commonly referred to as the Unified Program. The purpose of this program is to consolidate and coordinate six different hazardous materials and hazardous waste programs, and to ensure that they are consistently implemented throughout the state. CalEPA oversees the Unified Program with support from the DTSC, RWQCBs, the OES, and the State Fire Marshal.

State law requires county and local agencies to implement the Unified Program. The agency in charge of implementing the program is called the Certified Unified Program Agency (CUPA). The Napa County Division of Environmental Health is the designated CUPA for the county.

Napa County Operational Area Hazard Management Plan, 2013

The City of St. Helena participated in the Napa County Operational Area Hazard Management Plan, which was adopted in 2013 and satisfies the requirements of the DMA2K. The plan includes a risk assessment that resulted in the profiling of hazards that pose risk to Napa County, assessment of the County's vulnerability to those hazards, and examined the capabilities in place to mitigate them. Vulnerabilities identified, profiled, and analyzed in this plan include flooding, earthquakes, and wildland/urban interface fires. The plan also identifies goals for reducing risks from hazards. Objectives of the plan are to:

- Protect life and property;
- Ensure emergency services;
- Increase public awareness and understanding of hazard mitigation;
- Protect critical facilities properties, infrastructure and other community assets from the impacts of hazards; and
- Continue to strengthen communication and build on the collaborative success already achieved.

In addition to county-wide risk assessment, the plan includes city-specific risk assessments. Information for the City of St. Helena is in Appendix E of the plan. Appendix A details the Napa County Operational Area, which includes the St. Helena SOI and the three study areas analyzed under the Proposed Plan and this EIR.

Napa County Department of Environmental Health (NCDEH)

NCDEH is the administrative agency that coordinates and enforces numerous local, state, and federal hazardous materials management and environmental protection programs in Napa County. As the CUPA for Napa County, NCDEH administers the following programs:

- Hazardous Materials Business Plan Program
- Hazardous Waste Generator Program

- Underground Storage Tank Program
- California Accidental Release Program
- Aboveground Storage Tank Program
- Emergency Response

St. Helena Municipal Code

Chapter 2.64 Emergency Services

Chapter 2.64 of the St. Helena Municipal Code aims to provide for the preparation and carrying out of plans for the protection of persons and property within the city in the event of an emergency; the direction of the emergency organization; and the coordination of the emergency functions with all other public agencies, corporations, organizations, and affected private persons. This chapter also establishes responsibilities for carrying out the City of St. Helena Emergency Plan.

Chapter 15.36 California Fire Code Adopted

Chapter 15.36 of the St. Helena Municipal Code adopts the California Fire Code (CFC) of the state of California, amended to address local climatic, geological, or topographic conditions pursuant to Health and Safety Code Section 17958. These additional provisions address the significant threat of wildfire due to drought and native vegetation that is highly flammable, earthquakes, and the geographic division of the city into two parts by the north to south flow of the Napa River. Additionally, the California Fire Code, Chapter 49, defines a Fire Hazard Severity Zone as any area classified as Very High, High, or Moderate in State Responsibility Areas, or classified as Very High Fire Hazard Severity Zone in a Local Agency Responsibility Area - wildland-urban interface (WUI) areas are those that have structures on or adjoining such areas. There are no Very High Fire Severity Zones in St. Helena's Local Agency Responsibility Area, but the City is adjacent to both High and Moderate Fire Severity Zones (see Figure 3.8-3), and, as such, these areas fall under the WUI guidelines set forth in Chapter 49 of the Fire Code and Chapter 7A of the Building Code.

Impact Analysis

SIGNIFICANCE CRITERIA

For the purposes of this EIR, a significant adverse impact related to hazards and hazardous materials would occur if the Proposed Plan would:

Criterion 1: **Create a significant hazard to the public or environment through the routine transport, use, or disposal of hazardous materials;**

Criterion 2: **Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment;**

Criterion 3: **Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;**

Criterion 4: **Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment;**

Criterion 5: **Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan;**

Criterion 6: **Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands; or**

Criterion 7: **For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport, public use airport, or private airstrip, would the project result in a safety hazard for people residing or working in the Planning Area.**

METHODOLOGY AND ASSUMPTIONS

This analysis considers the range and nature of foreseeable hazardous materials transport, use, storage, and disposal resulting from implementation of the Proposed Plan, and identifies the primary ways that these hazardous materials could expose individuals or the environment to health and safety risks. It also includes an analysis of the risks related to fire hazards within the City of St. Helena. Compliance with applicable federal, State, regional, and local health and safety laws and regulations by residents and businesses in the city is intended to protect the health and safety of the public. State and local agencies are required to enforce applicable requirements. In determining the level of significance, this analysis assumes that development, infill development, and redevelopment under the Proposed Plan would comply with relevant federal, State, regional, and local ordinances and regulations.

RELEVANT POLICIES AND IMPLEMENTING ACTIONS

The following relevant policies and implementing actions of the General Plan Update address hazards and hazardous materials:

Open Space and Conservation Element

- ***OS4.2.*** Encourage the clean-up of contaminated sites to protect the environment and public well-being.
- ***OS4.3.*** Promote best management practices that encourage protection of soil, groundwater, and surface water resources from industrial, agricultural and other uses that produce or dispose of hazardous or toxic substances.

Public Health, Safety, and Noise Element

- ***PS4.1.*** Use the Zoning Code to define a transitional zone around industrial areas to protect the health and safety of residential neighborhoods.
- ***PS4.2***. Limit development in areas of High and Very High wildfire hazard as defined and mapped by the California Department of Forestry and Fire Prevention (CalFire) in order to prevent the loss of lives, injuries, and property damage due to wildfires.
- ***PS4.3.*** Protect St. Helena residents from health and safety impacts related to the use, storage, manufacture, and transport of hazardous materials.
- ***PS4.4.*** Discourage new uses that rely extensively on the use of hazardous materials.
- ***PS4.5.*** Facilitate communication and education about fire safety, non-point source pollution, household hazardous waste disposal and recycling opportunities.
- ***PS4.6***. Ensure that all streets and roads are adequate in terms of width, turning radius and grade in order to facilitate access by City firefighting apparatus, and to provide alternative emergency routes of ingress and egress.
- ***PS4.A.*** Designate areas in St. Helena that are prone to fire hazards and make this information available to the community.
- ***PS4.B.*** Continue to require implementation of best practices in fire resistance for all new and remodeled structures in fire-prone areas, including fire fuel removal, creation of defensible space for firefighters, construction with fire-resistant building materials, and installation of automatic sprinkler systems. Study the need to designate a Wildland-Urban Interface Fire Area within St. Helena to provide protection in additional areas.
- ***PS4.C.*** Require all structures in high wildfire hazard areas to maintain a clearance of flammable vegetation away from structures, and to use fire-resistant ground covers. The minimum clearance distance should be 30 feet.
- ***PS4.D*** Require all new development to meet the minimum fire flow rates specified by the City's Fire Code.
- ***PS4.E*** Require all new development plans to be approved by the Fire Department prior to the issuance of building permits, grading permits or final map approval.
- ***PS4.F*** Develop a program to inform and educate the community about potential risks, resources and roles and responsibilities for addressing fire safety in St. Helena. Inform residents of homes adjacent to public lands of their responsibility to provide fire breaks adjacent to their homes.
- ***PS4.G*** Review all new development proposals for their potential to introduce the production, use, storage and/or transport of hazardous materials, and require reasonable controls on such materials.
- ***PS4.H*** Develop a Hazardous Materials Response Plan that includes guidelines, protocols and strategies to respond to a local hazardous materials spill.
- ***PS4.I*** Continue to require compliance with federal, State, and local regulations for the safe production, transport, handling, use, and disposal of hazardous materials that may

cause air, water, or soil contamination. Require buffers for operations which handle substantial amounts of hazardous materials. When siting new facilities or expanding existing facilities, require buffer zones between hazardous materials facilities and residential uses, parkland, trails, and open space facilities.

- ***PS4.J*** Develop and launch a citywide education campaign to encourage the use of green products in order to reduce non-point source pollution. Target efforts towards the reduction of household chemical use and hazardous waste disposal.
- ***PS4.K*** Require environmental assessments during the planning for development in areas previously used for agricultural, commercial or industrial uses. Remediation of identified contamination that may result from health risks or construction workers and future owners and users shall be required prior to approval of construction, demolition and grading permits for development.

IMPACTS

Impact 3.8-1 Development under the Proposed Plan could create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. *(Less than Significant)*

Current land uses, as well as future land uses under the Proposed Plan, involve or could involve the transport, use, storage, generation, and disposal of hazardous materials, including lead and asbestos from building materials, chemicals from commercial uses, or fertilizers and pesticides from agricultural uses. As described in the Setting Sections, many businesses in the Planning Area currently use hazardous materials and generate hazardous wastes, which require regulatory oversight to protect human health and the environment. This includes current and former hazardous materials use sites and agricultural tank sites at and adjacent to Potential Land Use Change Areas 1 through 13 (see General Plan Figure 2.8), as well as pesticides used for agriculture. These uses are regulated by the Napa County PBES under State and Federal laws and regulations, including the DTSC, which regulates the generation, transport, and disposal of hazardous waste, and the SWRCB, which enforces the Clean Water Act and protects the quality of ground and surface waters. Routine transport of hazardous materials on State Route 29 are regulated and monitored by USDOT, Caltrans, and the California Highway Patrol. Any hazardous material transport on the Napa Valley Wine Train rail tracks would be regulated and monitored by USDOT. Agricultural transport and use of pesticides, which takes place on most agricultural use-designated land within and adjacent to the Planning Area, is regulated by CCR Title 3, which mitigates risks of hazard through routine use. Additionally, General Plan Policy OS4.3 and Implementing Actions PS4.G, PS4.H, and PS4.I would require review of development proposals and use of best management practices, including buffer zones, to ensure hazardous materials are managed safely within the City of St. Helena and therefore would serve as mitigation measures to reduce impacts to less than significant levels.

Households in the Planning Area could also typically use small quantities of potentially hazardous materials for garden care and building maintenance, including but not limited to garden chemicals, paints, solvents and car care products. Similar materials are also maintained for public buildings and uses, such as the City Corporation Yard and City Hall. Title 27 of the CCR regulates

waste disposal, including hazardous materials, to reduce exposure to potential hazards. General Plan Policy PS4.5 and Implementing Action PS4.J address the education of St. Helena households regarding the use and disposal of hazardous wastes.

Although the use and storage of hazardous materials releases cannot feasibly be eliminated, the requirements of existing regulatory programs combined with implementation of Proposed Plan policies referenced above would reduce potential impacts of routine transport, use, or disposal of hazardous materials and reasonably foreseeable upset or accident conditions to a less-than-significant level.

Mitigation Measures

None required.

Impact 3.8-2 Development under the Proposed Plan would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. (*Less than Significant*)

Implementation of the Proposed Plan could result in future development of land uses that may involve the use, transportation, disposal, and storage of hazardous materials in the the City of St. Helena. Thus, personal injury, property damage, environmental degradation, or death could potentially result from the release of hazardous materials caused by upset or accident conditions.

Although the risk of upset and accident conditions involving the release of hazardous materials into the environment cannot be completely eliminated, it can be reduced to a manageable level. Existing regulations at the federal, State, and local levels serve to minimize the potential for upset during routine transportation, use, and disposal, including of agricultural pesticides. Additionally, regulations are in place to minimize the risk of upset or accident involving sites that have previously been contaminated by hazardous substances. Proper implementation of the County's CUPA programs would help to ensure documentation of releases and threatened releases as well as the development of risk management and hazardous materials release response plans.

Policies and implementing actions within the Proposed Plan would reduce risks associated with the accidental release of hazardous materials. Policy PS4.4 discourages new development that relies on toxic substances; Policy PS4.6 ensures that streets and roadways have proper turning radii and grade to facilitate emergency access; Implementing Action PS4.H calls for the development of a Hazardous Materials Response Plan; and Implementing Action PS4.I requires continued compliance with regulations regarding the safe production, transport, handling, use and disposal of hazardous materials that may cause air, water or soil contamination. Additionally, several policies and implementing actions, including PS4.5 and PS4.J, involve educating the community on hazardous materials.

Given existing regulations and programs and Proposed Plan policies and implementing actions that reduce the potential for hazardous materials upsets and promote the ability of emergency services to respond to incidents, impacts associated with the release of hazardous materials into the environment would be less than significant.

Mitigation Measures

None required.

Impact 3.8-3 Development under the Proposed Plan could emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. *(Less than Significant)*

Implementation of the Proposed Plan would allow land uses to be developed within a quarter-mile of existing schools that could be reasonably expected to handle hazardous materials or generate hazardous emissions. As shown on Figure 3.8-5, several schools within the City of St. Helena are located within a one-quarter mile of proposed industrial or agriculture land uses. These land uses are most likely to handle or emit hazardous materials. For example, in areas with industrial land use designations, uses could include light manufacturing, auto services, and contractors' yards, which could handle or emit toxic chemicals or volatile chemicals. Uses in the agriculture land use designation could emit pesticides and herbicides. While nearly all schools within the Planning Area are within a one-quarter mile buffer of agriculture land uses, only three schools (St. Helena High School, St. Helena Primary School, and St. Helena Catholic School) are in close proximity to industrial land uses. The Proposed Plan does not expand the agriculture or industrial land use designations, and would therefore not increase school exposure to hazardous materials.

Under State law, schools must be sited to prevent them from being located near hazardous materials sites. Therefore, future schools constructed within the City of St. Helena could not be located near hazardous material sites. According to the California Education Code, public schools are required to evaluate and potentially amend their school safety plan on an annual basis. Additionally, Policy PS4.1 and Implementing Action PS4.I of the Proposed Plan call for buffer zones between industrial properties and "residential uses, parkland, trails and open space facilities." Implementing Action PS4.K would require detailed analysis and remediation, if necessary, when properties historically devoted to agriculture, commercial or industrial are redeveloped for other uses, including schools.

These measures, as required by the Proposed Plan, in coordination with existing regulatory programs, would reduce potential impacts to a less-than-significant level.

Mitigation Measures

None required.

Data Source: City of St. Helena, 2018; Napa County, 2018; Dyett & Bhatia, 2018

Impact 3.8-4 Development under the Proposed Plan could result in a project located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 (the "Cortese List") and, as a result, create a significant hazard to the public or the environment*. (Less than Significant)*

Redevelopment of sites with existing soil or groundwater contamination in accordance with the Proposed Plan could potentially pose a significant hazard to the public or the environment through releases of hazardous materials into the environment. As discussed in the "Physical Setting" section, there are numerous sites in the Planning Area that are included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 (see Figure 3.8-2 and Table 3.8-1). The majority of these sites are closed and two are currently undergoing remediation, which is subject to various State and federal laws and regulators, including CERCLA, EPA, DTSC, and the RWQCB.

Many of the hazardous material sites within the Planning Area are concentrated along Highway 29, where some change areas are identified under the Proposed Plan. Existing regulations and CUPA programs would also require the reporting and documentation of any hazardous materials incidents in the Planning Area such that property owners could be aware of potential hazards. For future projects, the California Environmental Quality Act (CEQA) requires developers to reference the Cortese List and state if the project or any alternatives would be located on a listed site. Implementing Action PS4.K requires environmental assessments during the planning process for development in areas previously used for agricultural, commercial, or industrial uses and requires remediation, if necessary, before construction. Compliance with these policies, regulations, and programs would reduce the impact to less than significant.

Mitigation Measures

None required.

Impact 3.8-5 Development under the Proposed Plan would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. (*Less than Significant*)

Development under the Proposed Plan, including new land uses and increased densities, has the potential to create obstacles to the implementation of emergency response or evacuation plans adopted for the City of St. Helena. Relevant emergency response or evacuation plans in the Planning Area include the Napa County EOP and the Napa County Operational Area Hazard Management Plan. Several General Plan policies and implementing actions address the reduction of risk due to hazards, which, in turn, reduces the impact of new development on emergency response plans. Policies PS4.2, PS4.4, and PS4.6 discourage high risk new development (including development on hillsides and in fire hazard zones) and new uses that rely on hazardous materials, and ensure that new roadways have the proper turning radius to accommodate emergency vehicles. Implementing actions PS4.B, PS4.C, PS4.D, and PS4.E address development approvals, such as best practices for building codes in fire-prone areas, meeting minimum flow rates, and having all new development plans be approved by the Fire Department. While the City of St.

Helena does not currently have an emergency response plan, Implementing Action PS4.H calls for the development of a Hazardous Materials Response Plan. Regulations, policies, and implementation actions in the Proposed Plan would reduce the impact to less than significant.

Mitigation Measures

None required.

Impact 3.8-6 Future development allowed under the Proposed Plan would not expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands. (*Less than Significant*)

Implementation of the Proposed Plan could create a significant impact if future development were located in areas with high wildfire risk. As described in the "Environmental Setting" section above, a few areas within the Planning Area have been classified by the State as having "very high" fire risk, which require implementation of State wildfire prevention measures. Further, some areas in the western uplands of the city and Study Area 1 have been classified as having "high" fire threat (see Figure 3.8-4), including a portion of General Plan Potential Change Area 9 (see General Plan Figure 2.8). Chapter 15.36 of the St. Helena Municipal Code adopts an amended version of the California Fire Code, which regulates fire safety for new construction. The California Strategic Fire Plan also reduces the fire risk of new development by focusing on fire suppression and prevention efforts, including hazard and risk assessment, land use planning, cooperation between fire protection jurisdictions, fire-resistant development, and post-fire recovery efforts.

Additionally, several policies and implementing actions in the Proposed Plan address potential fire hazards. Policy PS4.2 would limit development in areas where potential wildfire hazards exist, and Policy PS4.5 encourages fire safety education. Implementing Actions PS4.A thorough PS4.F include the implementation of building design and vegetation management requirements in "high" fire risk areas comparable to State requirements for "very-high" risk areas. The requirements of Policy PS4.2, PS4.5, and Implementing Actions PS4.A through PS4.5, combined with the California Building Code standards and the review of all new structures and land uses in these areas, by the St. Helena Fire Department to ensure that hazards from wildfire will reduced potential impacts to a less-than-significant level.

Mitigation Measures

None required.

Impact 3.8-7 Development under the Proposed Plan would not result in a safety hazard for people residing or working within an airport land use compatibility plan area or, where such a plan has not been adopted, within two miles of a public airport or public use airport or in close proximity to a private air strip. (*No impact*)

There are no airport land use compatibility plans affecting any portion of the Planning Area. Additionally, as described in the "Environmental Setting" section above, no public airports, public use airports, or private airstrips are located within two miles of the Planning Area. The nearest public use airport is Angwin-Parrett Field, located four miles northeast of the Planning Area. The nearest private airport is the Pope Valley Airport, located seven miles northeast of the Planning Area. The nearest regional airport is the Charles M. Schulz Sonoma County Airport, 19 miles west of the Planning Area. Thus, implementation of the Proposed Plan would have no impact on safety hazards due to aviation, including smoke, fuel storage, or exposure to hazardous chemicals, on people working or residing within the City of St. Helena.

Mitigation Measures

None required.

This page intentionally left blank.

3.9 Hydrology and Water Quality

This section assesses potential environmental impacts on hydrology and water quality from future development under the Proposed Plan. Issues addressed include water quality standards, groundwater resources, drainage, and flood hazards related to rivers, sea level rise, dam failure, seiches, tsunamis, and mudflows. The section describes existing surface water and groundwater hydrology, water quality, and flood hazards in the Planning Area, as well as relevant federal, State, and local regulations and programs.

Responses to the NOP regarding topics addressed in this section included the following:

- The EIR should assess any safety issues related to the Flood Control Project based on documentation from the Federal Emergency Management Agency (FEMA) and the U.S. Army Corps of Engineers. This comment is addressed in Impact 3.9-8.

Environmental Setting

PHYSICAL SETTING

Climate

The City of St. Helena has a Mediterranean climate, with distinct wet and dry seasons. The climate is characterized by long, dry, warm summers and mild, relatively wet winters. The average maximum temperature during the months of July and August is about 90 degrees Fahrenheit (°F), and average minimum temperatures drop to 30 to 40°F in winter. The mean annual precipitation is about 37 inches, with most of the rainfall occurring between November and April and the highest average rainfall totals occurring in February and December (WorldClimate.com, 2018). Snowfall in Napa County is not uncommon at higher elevations. However, the vast majority of the precipitation occurs as rain, and snow generally does not persist for more than a few days following a storm event except at the very highest elevations.

Topography

The Planning Area is located within Napa Valley. Sited in the northern Coast Range of California, which parallels the coastline from the Oregon border to just north of the Los Angeles Basin, topography within the county consists of a series of parallel northwest-trending mountain ridges and intervening valleys. The Napa Valley is about three miles wide and 40 miles long.

The Planning Area is within the Napa River watershed, which consists of the valley floor surrounded by Coast Range mountains. Napa Valley floor elevations range from approximately

400 feet above mean sea level (msl) in the north to sea level at San Pablo Bay. The valley is bound to the west by the Coast Range Mayacama Mountains ranging from 1,000 to 2,700 feet above msl, to the north by Mount St. Helena, and to the east by the northwest-trending Coast Range Vaca Mountains that are generally 2,000 feet above msl and higher. The highest peak surrounding the valley is Mount St. Helena at an elevation of 4,343 feet (PMC, 2007).

Groundwater Resources

The Planning Area overlies the Napa Valley Subbasin (basin number 2-002.01) of the Napa-Sonoma Valley Basin (basin number 2-002). Other jurisdictions in the subbasin's boundaries include the City of Napa, the Town of Yountville, the City of Calistoga, and unincorporated portions of Napa County.

Groundwater recharge within the subbasin occurs primarily through infiltration and deep percolation of rainfall and applied irrigation water within the Napa Valley. Precipitation falling on upland areas adjacent to the Napa Valley can runoff and become streamflow and/or percolate to groundwater and contribute groundwater to the subbasin. Portions of the Planning Area located in the subbasin boundaries have been identified as containing geologic units with the greatest recharge potential, including Napa Valley alluvium, alluvial fan deposits, and Sonoma volcanics tuff (Luhdorff & Scalmanini, 2016). Recharge of groundwater also occurs through surface water infiltration of water flowing within stream and river channels; this occurs during times and at locations where groundwater levels are below the stream stage.

Groundwater level trends in the Napa Valley Subbasin of the Napa-Sonoma Valley Groundwater Basin are stable in the majority of wells. Some wells with long historical measurement records illustrate that the stability of these water level trends extends over several decades. While many wells have shown at least some degree of response to recent drought conditions, the water levels observed in recent years are generally higher than groundwater levels in the same wells during the 1976 to 1977 drought (Luhdorff & Scalmanini, 2016). Although the majority of wells exhibit stable trends, periods of year-to-year declines in groundwater levels have been observed in a few wells, including a well in the southeastern St. Helena Subarea (NapaCounty-132). These locations are characterized in part by relatively thin alluvial deposits, which may contribute to more groundwater being withdrawn from the underlying semi-consolidated deposits. Driven largely by the transition in agricultural sources of supply as identified by DWR land use surveys, groundwater has increased as a proportion of the overall sources of supply, while diversions of local surface water, particularly local diversions from the Napa River system within the subbasin itself have declined by about half of initial levels.

Surface Water Resources

The Planning Area's surface water resources are within the San Pablo Basin Hydrologic Planning Area, as designated in the San Francisco Bay Basin Water Quality Control Plan (Basin Plan) (RWQCB, 2017). The Napa River watershed is within this hydrologic planning area. The river drains numerous tributaries on its 55-mile run from its headwaters at Mount St. Helena to San Pablo Bay. The lowest reaches of the Napa River and tributaries in the lower Napa Valley are tidally influenced because of their proximity to San Pablo Bay; the Napa River is tidally influenced northward into the City of Napa, which is south of the Planning Area. Surface water resources in

the Planning Area include the Napa River and its tributaries, York Creek, and Sulphur Creek, as shown on Figure 3.9-1 and described below.

Beneficial uses of the Napa River include agricultural supply, municipal and domestic supply, groundwater recharge, cold freshwater habitat, fish migration, preservation of rare and endangered species, fish spawning, warm freshwater habitat, wildlife habitat, water contact recreation, non-contact water recreation, and navigation (RWQCB, 2017).

York Creek Subwatershed

York Creek originates on the eastern slope of the Mayacamas Mountains and flows easterly to its confluence with the Napa River. York Creek enters the Planning Area from the west near the Lower Reservoir and flows north into the Napa River west of Pratt Avenue. Within the city, York Creek has been modified through riparian vegetation removal, bank hardening, levee construction, and bridge placement.

The Upper Reservoir is located on York Creek approximately one and a half miles upstream of the Planning Area. Use of the Upper Reservoir for water storage and supply ended in the 1980s due to sedimentation issues, but the Upper York Creek Dam (UYCD) is still in place. Low flows from York Creek entering the reservoir are directed to a drop-inlet standpipe located just behind the face of the dam. During periods of high flow, a concrete spillway parallel to Spring Mountain Road conveys storm flows approximately 100 feet downstream, where the flows rejoin York Creek. The York Creek diversion dam is located about half a mile downstream of the Upper Reservoir. Its function is to divert water from York Creek to the Lower Reservoir.

The Upper Reservoir captures all of the coarse sediment produced in its 2.4-square-mile drainage area. The channel below the dam has adjusted to a sediment-starved condition over the last 100 years. Channel incision that has occurred in both York Creek and the Napa River has been attributed in part to the construction of the Upper Reservoir and the associated reductions in gravel supply (Prunuske Chatham, Inc., 2007).

Constructed in 1900, the UYCD is now out of service and is preventing access to upstream spawning and rearing habitat for the threatened CCC steelhead and from needed natural sediment flow to Lower York Creek and the Napa River. As a means of improving the Upper York Creek Dam habitat, the City of St Helena initiated a project known as the Upper York Creek Dam Removal and Ecosystem Restoration (UYCDR) project. The UYCDR project will modify the upper dam, by cutting a 23-foot-wide notch in the earthen dam, to allow for fish passage. This measure will establish habitat connectivity by providing access to 1.5 miles of spawning and rearing habitat for CCC steelhead and habitat connectivity for both anadromous and resident fish and other aquatic and riparian species. It will restore unimpeded flow to York Creek which has been prohibited for the past 115 years.

The UYCDR will reduce the potential for future downstream habitat degradation and fish kills by preventing potentially detrimental sediment releases during summer low-flow conditions that have caused fish and aquatic organism kills in the past. It will also provide a permanent solution to prevent short-term aquatic habitat impairment associated with possible dam breach/failure. Lastly, the project will restore approximately 3 acres of degraded riparian and aquatic habitat

within the existing UYCD area. Restoration of natural sediment transport processes will occur through the project site, with potential habitat improvements occurring in downstream reaches of York Creek and the Napa River. Disturbed areas in the project site will be revegetated over 4,000 trees and plants with a palette of multistory native plants to provide diverse habitats for aquatic, riparian and terrestrial species. The UYCDR has been a long-standing goal for ecosystem restoration and assistance for the threatened CCC steelhead (UYCDR EIR 2015). The project is expected to be completed in 2019.

Existing beneficial uses of York Creek include cold freshwater habitat, fish migration, preservation of rare and endangered species, fish spawning, warm freshwater habitat, wildlife habitat, water contact recreation, and non-contact water recreation. Potential beneficial uses include water contact recreation and non-contact water recreation (RWQCB, 2017).

Sulphur Creek Subwatershed

The Sulphur Creek watershed area is 9.3 square miles. Sulphur Creek has two main stems, Heath Canyon and the main stem of Sulphur Creek, which come to a confluence before Sulphur Creek exits Sulphur Canyon and flows across the valley. Heath Canyon and Sulphur Creek have a channel length of approximately 12.7 miles, and the lower one and a half miles of Sulphur Creek flow through the city. Sulphur Creek flows into the city from the south along Sulphur Springs Road and flows north and east to its confluence with the Napa River near the Pope Street Bridge.

Beneficial uses for Sulphur Creek are not specifically listed in the Basin Plan; however, the Basin Plan states that beneficial uses of any specifically identified water body generally apply to its tributaries (RWQCB, 2017).

Water Quality

The quality of surface water and groundwater resources is affected by past and current land uses within the watersheds as well as by the composition of geologic materials in the vicinity.

Groundwater Quality

Historically, groundwater in the subbasin has been generally of good quality. Poor groundwater quality exists in the south and the north-central parts of the County. The poor groundwater quality includes concentrations of metals such as arsenic, iron, and manganese that exceed drinking water standards. Groundwater in St. Helena is described as generally good. Recent groundwater studies in the subbasin found generally good water quality with stable conditions. Water quality standard exceedances in the subbasin were limited to the naturally-occurring constituent arsenic, with 4 of 26 sites showing maximum concentrations above the arsenic MCL of 10 µg/L, including one site within the Planning Area (Luhdorff & Scalmanini, 2016).

The City of St. Helena has two active groundwater wells that are sources of potable water for the city. These groundwater supplies are chlorinated prior to entering the City of St. Helena's distribution system (City of St. Helena, 2016). Drinking water supply is discussed in more detail in Section 3.14, Utilities and Service Systems, of this EIR.

Surface Water Quality

The Napa River and its tributaries are impaired by pathogens. The most common sources of pathogens are wastes from warm-blooded animals, including humans, livestock, domestic pets, and wildlife. In addition to pathogens, both animal and human wastes contain nutrients that in excess pose a threat to aquatic ecosystem beneficial uses; the Napa River is also listed as impaired by nutrients. Human and animal waste discharges have also led to the presence of other harmful constituents such as pharmaceuticals and steroids (RWQCB, 2017). Local surface waters, collected in the Bell Canyon Reservoir, make up about half of the City's yearly water supply; all sources are treated with filtration and chlorination before entering the City's water supply.

DYETT & BHATIA
Urban and Regional Planners

Flooding

Information on flooding and dam inundation zones within the Planning Area is available from the Federal Emergency Management Agency (FEMA), the California Office of Emergency Services (via the Association of Bay Area Governments [ABAG]), and the City of St. Helena's Comprehensive Flood Protection Project ("2006 Plan").

Napa River

The majority of the flooding in Napa County occurs within the Napa Valley floor. Napa River flows are largely influenced by precipitation, with peak flows occurring generally in January or February and the lowest flows occurring August through November. Four major floods, in 1986, 1995, 1997, and 2006, caused a cumulative $95.6 million in property damage (City of St. Helena, 2012).

In October 1998, the City of St. Helena joined in a collaborative effort with the Napa County Board of Supervisors and the Napa County Flood Control District to perform a joint study of the Napa River to better understand the hydraulics of flood flows in the Napa River from Deer Park Road to below Pope Street. The study's conclusions indicated a more serious flood hazard to the community than previously established by FEMA and resulted in the enlargement of the city's 100-year floodplain. In 2006, the City of St. Helena developed the components and design measures for a comprehensive flood protection project, referred to as the "2006 Plan." The primary components of the "2006 Plan" included construction of a floodplain terrace, levee, floodwall and detention basin; bank restoration; and riparian vegetation management along the Napa River just above its confluence with Sulphur Creek (City of St. Helena, 2012).

These flood control improvements, as envisioned in the 2006 Flood Control Plan have been constructed and FEMA updated the Flood Insurance Rate Map in 2016 for properties located adjacent to the Napa River based on the improved flood control infrastructure. The current map indicates that a smaller portion of St. Helena is designated as flood hazard as a result of completing the 2006 Plan. Figure 3.9-3 shows 100-year flood zones (Special Flood Hazard Areas) as designated by FEMA.

York Creek

Flooding from York Creek can significantly affect residential and industrial properties (Prunuske Chatham, Inc., 2007). In 2005, Beringer winery buildings and the Culinary Institute of America's dorms were inundated and sustained damage. In addition, the Beringer water treatment plant flooded and ponds overflowed into York Creek. Vineyards on both sides of York Creek downstream of Highway 29 to the Napa River were flooded and many had to be replaced.

Figure 3.9-3

Data Source: City of St. Helena, 2018; Napa County, 2018; FEMA, 2018; Dyett & Bhatia, 2018

Sulphur Creek

Flood hazards in the Sulphur Creek watershed are due primarily to channel bed aggradation in the lower reach where gravel mining was historically conducted. Sulphur Creek continues to supply and deposit substantial amounts of sediment in this reach, and local observations suggest that as much as five feet of material have accumulated in the channel bed since the cessation of gravel mining in 1999. Historically, gravel mining removed approximately 40,000 to 50,000 cubic yards of material annually. Consequently, the increased volume of sediment currently stored in the channel decreases the volume available for floodwater, potentially causing an increased flood hazard locally and within the City of St. Helena (Sulphur Creek Watershed Task Force et al., 2004). It is expected that the streambed will continue to aggrade without the removal of coarse sediment from the braided channel.

Multiple channel crossings and constrictions exist along Sulphur Creek and its tributaries. The main stem of Sulphur Creek has seven major road crossings comprised of bridges and box culverts. Additional, smaller crossings are located on tributaries. Most of the seven major crossings are large enough to handle flood flow, but many smaller crossings and culverts on the tributaries have been identified as undersized (Sulphur Creek Watershed Task Force et al., 2004). Channel modifications, including both on- and off-stream reservoirs, are altering flow patterns in the Sulphur Creek watershed. The watershed currently contains ten on- and off-stream reservoirs, which intercept and retain storm flows, acting to reduce the peak of the hydrograph and flooding. However, several of these reservoirs have inadequate overflow protection (i.e., spillways) and have the potential to cause severe erosion. Inadequate overflow protection also has the potential to cause catastrophic failure of a reservoir (Sulphur Creek Watershed Task Force et al, 2004).

Dam and Levee Failure Inundation Zones

Areas subject to flooding from structural dam failure are determined by the California Office of Emergency Services. One dam, the St. Helena Lower Reservoir with approximately 230 acre-feet of storage, is located within the City of St. Helena (Figure 3.9-4). Portions of the City of St. Helena that are mapped as a dam failure inundation zone, including inundation from the Bell Canyon Reservoir located outside city limits, are shown on Figure 3.9-4 (City of St. Helena, 2018). Failure of the St. Helena Lower Reservoir or Bell Canyon Reservoir could severely affect people and structures in the general vicinity of the mapped inundation zone. As discussed above, the St. Helena Upper Reservoir is currently not used for water storage, and consequently there is no current flooding risk associated with the structural failure of the Upper Reservoir. The active dams are overseen by the California Department of Water Resources, Division of Safety of Dams (DOSD).

The levee constructed just above the confluence of Suphur Creek and the Napa River was designed to withstand a 200-year flood hazard (City of St. Helena, 2011). The project was completed in 2011, and while it is currently new and well maintained, there is some risk of flooding if storm events exceed a 200-year flood hazard or cause the levee to fail in the future.

Coastal and Bay Hazards

Sea Level Rise

Although climate change is expected to seriously alter the coastlines of the San Francisco Bay Area, St. Helena is located at approximately 250 feet of elevation and about 40 miles from the coast. Sea levels are continuing to rise at a rate of about one-eighth of an inch per year (NOAA, 2018) indicating that sea level rise is not likely to affect St. Helena in the foreseeable future.

Seiche

A seiche is a standing wave in an enclosed or partially enclosed body of water. Seiches have been observed in lakes, bays, and harbors, and can be triggered by strong winds, changes in atmospheric pressure, earthquakes, tsunami, or tides.

Earthquake faults in the Bay Area such as the San Andreas Fault and the Hayward Fault, as well as active faults within Napa County such as the Green Valley, West Napa, Cordelia, and Hunting Creek faults, could produce ground shaking within the county. Seiches would be limited to the larger reservoirs in the county; however, the closest of these reservoirs to the Planning Area, Lake Barryessa and Bell Canyon Reservoir, are over two miles away.

Tsunamis

Tsunamis are long-period water waves caused by underwater seismic events, volcanic eruptions, or undersea landslides. Tsunamis affecting the San Francisco Bay region would most likely originate west of the bay, in the Pacific Ocean. Areas that are highly susceptible to tsunami inundation tend to be low-lying coastal areas, such as tidal flats, marshlands, and former bay margins that have been artificially filled. The California Department of Conservation's tsunami inundation zones maps show no risk of a tsunami affecting the Planning Area, or anywhere in Napa County north of the low-lying areas near San Pablo Bay (California Geological Survey, 2018).

Mudflows

Mudflows are landslides consisting of material that is wet enough to flow rapidly, and that contains at least 50 percent sand-, silt-, and clay-sized particles. Although the Planning Area is relatively flat, the United States Geological Survey (USGS) has classified two small areas on the eastern side of the Planning Area as historically having "Few Landslides" (as compared to no historic landslides in the remainder of the Planning Area) (see Figure 3.7-4: Landslide Susceptibility). Soils in this area are classified as Forward Gravelly Loam, Forward-Kidd Complex, Hambright-Rock Outcrop Complex, Aiken Loam, Pleasanton Loam, Bale Clay Loam, Felton Gravelly Loam, Maxwell Clay, and Cortina Very Gravelly Loam. Mudflows typically occur in small, steep channels and often occur simultaneously with flooding; there are few such channels within the Planning Area. Further information on landslide potential is provided in Section 3.7 of this EIR, Geology and Soils.

REGULATORY SETTING

Federal Regulations

Federal Clean Water Act (CWA) of 1972

The Clean Water Act (CWA) of 1972 is the primary federal law that protects the quality of the nation's surface waters, including lakes, rivers, and coastal wetlands, and is administered by the EPA. It operates on the principle that all discharges into the nation's waters are unlawful unless specifically authorized by a permit; permit review is the primary regulatory tool of the CWA.

The following sections of the CWA are particularly relevant to the implementation of the General Plan Update:

- Section 303 — Water Quality Standards and Implementation Plans
- Section 401 — Dredge/Fill and Wetlands Certification Program
- Section 402 — National Pollutant Discharge Elimination System
- Section 404 — USACE Fill or Dredge Discharge Permits

With the exception of the 404 permits, the EPA has delegated its authority to implement and enforce the provisions of these sections to the individual states. In California, the provisions are enforced by nine Regional Water Quality Control Boards under the auspices of the State Water Resources Control Board. Additional information on the requirements imposed by CWA Sections 303, 401, and 402 is provided below.

CWA Section 402—National Pollutant Discharge Elimination System (NPDES) Program

CWA Section 402, enacted as an amendment to the original act in 1972, regulates construction-, industrial-, and municipal-related stormwater discharges to surface waters through the National Pollutant Discharge Elimination System (NPDES) program. The NPDES program provides for general permits and individual permits. In California, the State Water Resources Control Board is authorized by the EPA to oversee the NPDES program through the Regional Water Quality Control Boards via the Porter- Cologne Act, as described below.

Stormwater runoff can entrain pollutants from a variety of sources. Many types of human activity, including new construction projects, industrial activity, agriculture, and urbanization, can result in discharge of pollutants to surface waters. The NPDES program contains several sub-programs including: the construction, industrial, and municipal stormwater runoff programs, as discussed under "State Regulations," below. These programs could apply to projects and activities in the City of St. Helena.

CWA Section 303(d)—Total Maximum Daily Load (TMDL) Program

Section 303(d) of the CWA requires that the states make a list of waters that are not attaining water quality standards after the technology-based limits on point sources are put into place. For impaired waters on this list, the states must develop TMDLs. A TMDL is a written plan that describes how an impaired water body will meet water quality standards. The plan must which contain:

- A measurable feature to describe attainment of the water quality standard(s);
- A description of required actions to remove the impairment; and
- An allocation of responsibility among dischargers to act in the form of actions or water quality conditions for which each discharger is responsible.

A TMDL must account for all sources of the pollutants that caused the water to be listed. Federal regulations require that the TMDL, at a minimum, account for contributions from point sources (federally permitted discharges) and contributions from non-point sources (such as agricultural runoff). The impaired water body list and TMDLs must be approved by the EPA prior to adoption by the State Water Resources Control Board and Regional Water Quality Control Board.

CWA Section 401—Dredge/Fill and Wetlands Certification

Section 401 of the CWA grants each state the right to ensure that the state's interests are protected in any federally permitted activity occurring in or adjacent to "Waters of the State." If a proposed project requires a USACE CWA Section 404 permit, or involves dredge or fill activities that may result in a discharge to "Waters of the State," the project proponent is required to obtain a CWA Section 401 Water Quality Certification and/or Waste Discharge Requirements (Dredge/Fill Projects) from the State Water Resources Control Board, to verify that the project activities will comply with state water quality standards. Section 401 of the CWA gives the State Water Resources Control Board the authority to consider the impacts of the entire project and require mitigation for volume, velocity, and pollutant load of the discharge from new outfalls to surface waters, when issuing certifications.

Federal Flood Insurance Program

In 1968, Congress created the National Flood Insurance Program (NFIP) in response to the rising cost of taxpayer-funded disaster relief for flood victims and the increasing amount of damage caused by floods. The NFIP makes federally backed flood insurance available for communities that agree to adopt and enforce floodplain management ordinances to reduce future flood damage, and federally-backed lenders require development in Special Flood Hazard Areas to obtain obtain flood insurance. FEMA manages the NFIP, and creates Flood Insurance Rate Maps (FIRMs) that designate 100-year floodplain zones and delineate other flood hazard areas. A 100-year floodplain zone is the area that has a one in 100 (one-percent) chance of being flooded in any one year based on historical data, and defines the base flood level for a given area (see Figure 3.9-3: Flood Zones for flood hazard areas). FEMA standards further prohibit development in regulatory floodways, which are channels of rivers and streams and adjacent floodplains the must be reserved to discharge the base flood without increasing the water level, unless the project can demonstrate that the encroachment would not result in elevated flood levels (FEMA). Within the 100-year flood hazard area, FEMA allows development as long as the lowest finished floor (including the basement) is elevated to or above the base flood level per Section 60.3 of FEMA's Floodplain Management Criteria (FEMA). Relevant flood management requirements for the City of St. Helena are discussed under "Local Regulations."

State Regulations

Porter-Cologne Act and State Implementation of Clean Water Act Requirements

The Porter-Cologne Water Quality Control Act (California Water Code, Division 7, Water Quality), promulgated in 1969, implements the federal CWA. It established the State Water Resources Control Board and divided the state into nine hydrologic regions, each overseen by a Regional Water Quality Control Board. The State Water Resources Control Board is the primary state agency responsible for protecting the quality of the state's surface water and groundwater resources, but much of its daily implementation authority is delegated to the nine Regional Water Quality Control Boards.

The Porter-Cologne Act also provides for the development and tri-annual review of Water Quality Control Plans (Basin Plans) that designate beneficial uses of California's major rivers and groundwater basins and establish narrative and numerical water quality objectives to protect the beneficial uses of those waters. Basin Plans are primarily implemented through NPDES permits, waste discharge requirements, TMDLs, discharge prohibitions, and watershed management efforts. Basin Plans provide the technical basis for determining waste discharge requirements, taking enforcement actions, and evaluating clean water grant proposals. The Porter-Cologne Act assigns responsibility for implementing the NPDES and Total Maximum Daily Load programs to the State Water Resources Control Board and the Regional Water Quality Control Boards. The Planning Area is located within the San Francisco Bay Basin Plan region.

Impaired Water Bodies and Total Maximum Daily Loads

The Napa River was included on the 2006 Clean Water Act (CWA) 303(d) list of water quality limited segments due to impairment from nutrients, pathogens, and sedimentation/siltation. Evaluation of the pathogen nutrient Total Maximum Daily Load (TMDL) has been completed by the San Francisco Bay Regional Water Quality Control Board (RWQCB) and the TMDL has been incorporated into the Basin Plan as an amendment. In 2014, the San Francisco Bay Regional Water Quality Control Board approved a proposal to delist the Napa River for nutrients resulting in excessive algae growth and to remove this water body from the EPA 303(d) list. The staff report detailing recent water quality assessments, lines of evidence, and interpretation of data is available for review on the San Francisco Bay RWQCB website. This delisting will be included in the Integrated Report submitted to U.S. EPA for the 2018 listing cycle.

The Basin Plan amendment includes water quality targets for pathogen indicators Escherichia coli (E. coli), fecal coliform, and total coliform, as well as density-based load limits for these pathogen indicators. The Basin Plan amendment also includes wasteload allocations for individual municipal dischargers including on-site sewage disposal systems, sanitary sewer systems, municipal stormwater runoff, grazing lands, and confined animal facilities.

The RWQCB also adopted a Basin Plan amendment incorporating a TMDL for sediment and a Habitat Enhancement Plan for the Napa River. The amendment includes numeric targets for spawning gravel permeability and streambed scour. The TMDL also includes load allocations (for non-point sources) for land areas upstream and downstream of dams, in addition to wasteload allocations for urban runoff and wastewater discharges. San Pablo Bay is on the 2006 Clean Water

Act (CWA) 303(d) list due to impairment from chlordane, DDT, dieldrin, dioxins and furans, exotic species, mercury, nickel, PCBs, and selenium. TMDLs in development include the PCB TMDL for San Francisco Bay (which includes San Pablo Bay), and the Selenium TMDL for the North San Francisco Bay (which includes a portion of the Sacrament/San Joaquin Delta, Suisun Bay, Carquinez Strait, San Pablo Bay, and the Central Bay).

The mercury TMDL for San Francisco Bay (which includes San Pablo Bay) has been completed and the Basin Plan amendment has been approved. The Basin Plan amendment includes numeric water quality objectives for mercury in fish tissue, and also includes load and wasteload allocations by source category, including urban stormwater and municipal wastewater.

In addition, the City of St. Helena is subject to the TMDL for diazinon and pesticide-related toxicity in all San Francisco Bay Area urban creeks, which was incorporated as a Basin Plan amendment in 2005. The TMDL imposes toxicity targets for urban creek water and sediment, and a diazinon concentration target for urban creeks. TMDL targets shall be achieved through regulatory programs, education and outreach, and research and monitoring. The TMDL attainment strategy will primarily focus on integrated pest management and the use of less toxic pest control methods. The U.S. Environmental Protection Agency (EPA) phased out urban diazinon applications at the end of 2004; however, replacements for diazinon (such as pyrethroids) may now pose potential water quality and sediment concerns.

Drinking Water Standards

Maximum contaminant levels (MCLs) are identified and are made enforceable regulatory standards under the federal Safe Drinking Water Act. Title 22 of the California Code of Regulations (CCR) outlines drinking water standards for California. MCLs must be met by all public drinking water systems to which they apply. At a minimum, surface water and groundwater with a designated beneficial use as domestic or municipal supply in the Basin Plan shall not contain concentrations of constituents in excess of the MCLs or secondary MCLs specified in Title 22, which are incorporated by reference into the Basin Plan.

Construction General Permit

Construction activities on one acre or more of land are subject to the permitting requirements of the NPDES General Permit for Discharges of Storm Water Runoff Associated with Construction and Land Disturbance Activities, Order No. 2009-0009-DWQ (Construction General Permit). To obtain coverage under the Construction General Permit, the discharger must provide via electronic submittal, a Notice of Intent, a Storm Water Pollution Prevention Plan (SWPPP), and other documents required by Attachment B of the Construction General Permit. Activities subject to the Construction General Permit include clearing, grading, and disturbances to the ground, such as grubbing or excavation. The permit also covers linear underground and overhead projects such as pipeline installations.

The Construction General Permit exercises a risk-based permitting approach and mandates certain requirements based on the risk level of the project (Level 1, Level 2, or Level 3). The risk level of the project is based on the risk of sediment discharge and the receiving water risk. The sediment discharge risk depends on the project location and timing (i.e., wet season versus dry season activities). The receiving water risk depends on whether the project would discharge to a

sediment-sensitive receiving water, defined by the beneficial uses of the receiving water in the Basin Plan (e.g., cold freshwater habitat), a listing on the 303(d) list due to sediment impairment, or having a TMDL in place to address excessive sedimentation.

The performance standard in the Construction General Permit is that dischargers shall minimize or prevent pollutants in stormwater discharges and authorized non-stormwater discharges through the use of controls, structures, and management practices that achieve Best Available Technology (BAT) for treatment of toxic and non-conventional pollutants and Best Conventional Technology (BCT) for treatment of conventional pollutants. The permit also imposes numeric action levels (Level 2 and Level 3 projects) and numeric effluent limits (Level 3 projects) for pH and turbidity, as well as minimum Best Management Practices (BMPs) that must be implemented at all sites.

A SWPPP must be prepared by a Qualified SWPPP Developer that meets the certification requirements in the Construction General Permit. The purpose of the SWPPP is to: (1) help identify the sources of sediment and other pollutants that could affect the quality of stormwater discharges; and (2) describe and ensure the implementation of BMPs to reduce or eliminate sediment and other pollutants in stormwater as well as non-stormwater discharges resulting from construction activity. BMPs must be overseen by a Qualified SWPPP Practitioner that meets the requirements in the permit. For Level 2 and Level 3 projects, the discharger must also prepare a Rain Event Action Plan as part of the SWPPP that must be designed to protect all exposed portions of the construction site within 48 hours prior to any likely precipitation event.

The SWPPP must also include a construction site monitoring program. Depending on the project risk level, the monitoring program will include visual observations of site discharges, water quality monitoring of site discharges (pH, turbidity, and non-visible pollutants, if applicable), and receiving water monitoring (pH, turbidity, suspended sediment concentration, and bioassessment).

Local oversight is provided by the RWQCB.

Industrial General Permit

Stormwater runoff from industrial sources and associated pollutants is regulated in California by the State Water Resources Control Board under the statewide General Permit for Stormwater Discharges associated with Industrial Activities (Water Quality Order No. 97-03-DWQ, General Permit No. CAS000001). The Industrial General Permit presents the requirements for compliance of certain industries with the NPDES program. A wide range of industries – including mining operations, lumber and wood products facilities, petroleum refining, metal industries, and some agricultural product facilities, such as dairies – are covered under the Industrial General Permit. Coverage is determined by Standard Industrial Classification (SIC) code. New industrial facilities with SICs requiring permit coverage are required to obtain coverage under the Industrial General Permit and comply with the permit requirements, which include preparation and implementation of a facility-specific SWPPP, monitoring, and annual reporting to the State Water Resources Control Board. Local oversight is provided by the RWQCB.

Municipal Stormwater Permit

California's municipal stormwater permitting program regulates stormwater discharges from municipal storm sewer systems (MS4s). MS4 Permits were issued in two phases. Under Phase I, which was initiated in 1990, the Regional Water Quality Control Boards adopted individual NPDES stormwater permits for medium municipalities (serving between 100,000 and 250,000 people) and large municipalities (serving 250,000 people). Most of these permits were issued to a group of co-permittees encompassing an entire metropolitan area. As part of Phase II, the State Water Resources Control Board adopted a statewide General Permit for the Discharge of Storm Water from Small MS4s (Water Quality Order No. 2003-0005-DWQ, General Permit No. CAS000004) (Phase II General Permit) to provide permit coverage for smaller municipalities, including non-traditional small MS4s such as military bases, public campuses, and prison and hospital complexes.

The City of St. Helena is regulated under the Phase II General Permit as part of the Napa County Stormwater Management Program; details are provided under "Local Regulations" below. Local oversight is provided by the RWQCB.

State Water Board Low Impact Development Policy

On January 20, 2005, the State Water Resources Control Board adopted the Low Impact Development (LID) Policy which, at its core, promotes the idea of "sustainability" as a key parameter to be considered during the design and planning process for future development. The State Water Resources Control Board has directed its staff to consider sustainability in all future policies, guidelines, and regulatory actions.

The sustainability practice promotes LID to benefit water supply and contribute to water quality protection. The Regional Water Quality Control Boards are advancing LID in California in various ways, including provisions for LID requirements in renewed Phase I municipal stormwater NPDES permits. The Phase II General Permit, includes additional LID requirements to achieve water quality goals and to protect against stream channel hydromodification.

Dam Inundation Mapping Requirement and Dam Oversight

Section 8589.5 of the California Government Code and Title 19 of the Code of Regulations, Sections 2575 to 2578.3 requires that dam owners submit flood routing information, land surveys to delineate the floodplain, and a technical report to support a dam failure inundation map to the California Office of Emergency Services. The purpose of the program is to provide decision support for emergency preparedness planning, mitigation, and response to and recovery from potential damage to life and property from dam inundation flood waves. Based upon approved inundation maps (or the delineated areas), cities and counties with territory in the mapped areas are required to adopt emergency procedures for the evacuation and control of populated areas below the dams.

The Lower Reservoir – the active dam with failure inundation zones within the City of St. Helena – and Bell Canyon Reservoir are overseen by the California Department of Water Resources, Division of Safety of Dams (DOSD). DOSD engineers and engineering geologists review and approve plans and specifications for the design of dams and oversee their construction to ensure

compliance with the approved plans and specifications. In addition, DOSD engineers inspect over 1,200 dams annually to ensure the dams are performing and being maintained in a safe manner.

California Assembly Bill 2140 (2006)

Assembly Bill 2140, enacted in September 2006, allows cities and counties to adopt a local hazard mitigation plan as part of the required safety element of the general plan. The hazard mitigation plan must include (1) an initial earthquake performance evaluation of public facilities that provide essential services, shelter, and critical governmental functions; (2) an inventory of private facilities that are potentially hazardous, including multi-unit, soft story, concrete tilt-up, and concrete frame buildings, and (3) a plan to reduce the potential risk to private and governmental facilities in the event of a disaster. Hazards mitigation plans are to include an evaluation of tsunami, seiche, and dam failure risks. Assembly Bill 2140 is not a mandate, and compliance is optional. Local jurisdictions that have not adopted a local hazard mitigation plan shall be given preference by the California Office of Emergency Services to receive FEMA funding to assist in developing such a mitigation plan. The City of St. Helena participates in the Napa County Operational Area Hazard Mitigation Plan, last updated in 2013.

California Assembly Bill 162 (2007)

Assembly Bill 162, enacted in October 2007, calls for flood safety planning to be better integrated into local general plans. Specifically, Assembly Bill 162 includes the following requirements related to flood risks:

- The land use element of the general plan must identify and annually review those areas covered by the general plan that are subject to flooding, as identified by floodplain mapping prepared by FEMA or the California Department of Water Resources.
- Upon the next revision of the housing element, on or after January 1, 2009, the conservation element of the general plan must identify rivers, creeks, streams, flood corridors, riparian habitat, and land that may accommodate floodwater for purposes of groundwater recharge and stormwater management.
- A city or county general plan must contain a safety element for the protection of the community from any unreasonable risks associated with the effects of seismically-induced surface rupture, ground shaking, ground failure, tsunami, seiche, and dam failure, slope instability leading to mudslides and landslides, subsidence, liquefaction, and other seismic, geologic, and fire hazards.

To comply with AB 162, the Proposed Plan includes flood safety planning within the Public Health, Safety and Noise element.

California Assembly Bill 1739 (201)/ California Senate Bills 1168 & 1319 (2014))

These three bills are collectively known as the Sustainable Groundwater Management Act (SGMA). The act requires the formation of local ground water sustainability agencies that must assess conditions in local water basins and adopt locally-based ground water sustainability plans for basins that cannot demonstrate sustainable yields for at least ten years.

In response to the 2014 SGMA, Napa County prepared a Basin Analysis Report (Luhdorff & Scalmanini, 2016) to achieve alternate compliance with the law by analyzing subbasin conditions and demonstrating that the basin has operated within its sustainable yield over a period of at least 10 years. The Report helps to support the ongoing management of the subbasin's resources.

Local Regulations

Napa County Stormwater Pollution Prevention Program

The cities of Napa and St. Helena, the Town of Yountville, and the County of Napa formed the Napa County Stormwater Pollution Prevention Program (NCSPPP). These jurisdictions, including the City of St Helena, are regulated under Phase II General MS4 Permit, Order No. 2013-0001.

Together the NCSPPP works for implementing BMPs, measurable goals and timetables for implementation in five program areas – Public Education, Public Participation, Illicit Discharge Detection and Elimination, Construction Site Storm Water Runoff Control, and Post Construction Storm Water Management. Although the County of Napa and each of the cities and towns implement their own individual stormwater pollution prevention programs, the NCSPPP allows for coordination and consistency of approaches among the individual participants and documents their efforts in annual reports that are submitted to the Regional Water Quality Control Board.

St. Helena Water Neutral Policy for Development

The St. Helena Water Neutral Policy, established in 2011, requires that applicants must be water-neutral (from the City-delivered water system) through any combination of on-site water conservation measures, offsite retrofitting, and well water, and that water neutrality shall be demonstrated in a quantitative water analysis of the project. The analysis must consist of the calculation of the baseline existing demand, the proposed water demand, a comparison of the two and the proposed retrofits to achieve a zero water use increase from the proposed development. If onsite retrofits cannot achieve net zero increase, the developer shall identify offsite retrofits or pay an in-lieu fee. Developer responsibilities are detailed in Section 13.12 of the City Municipal Code.

St. Helena Municipal Code

The following provisions of the St. Helena Municipal Code are relevant to hydrology and water quality issues.

Title 13, "Public Services," includes Chapter 13.32, "Stormwater and Runoff Pollution Control Ordinance," which details requirements that consist of:

- Prohibiting illicit discharges to the stormwater conveyance system;
- Establishing minimum requirements for stormwater management, including source control requirements, to prevent and reduce pollution;
- Establishing requirements for development project site design to reduce stormwater pollution and erosion;

- Establishing requirements for the management of stormwater flows from development projects, both to prevent erosion and to protect and enhance existing water-dependent habitats; and
- Establishing standards for the use of off-site facilities for stormwater management to supplement on-site practices at new development sites.

Title 15, "Buildings and Construction," includes Chapter 15.52, "Flood Damage Protection." This chapter calls for minimization of public and private losses from flood conditions in specific areas through provisions designed to:

- Protect human life and health;
- Minimize expenditure of public money for costly flood- control projects;
- Minimize the need for rescue and relief efforts associated with flooding and generally undertaken at the expense of the general public;
- Minimize prolonged business interruptions;
- Minimize damage to public facilities and utilities such as water and gas mains, electric, telephone and sewer lines, streets and bridges located in areas of special flood hazard;
- Help maintain a stable tax base by providing for the sound use and development of areas of special flood hazard so as to minimize future blighted areas caused by flood damage;
- Ensure that potential buyers are notified that property is in an area of special flood hazard; and ensure that those who occupy the areas of special flood hazard assume responsibility for their actions. (Ordinance 06-8, Section 3 [part]: prior code Section 5B.3);
- Ensure that any construction within a 100-year flood hazard zone is built such that the lowest floor is elevated at least eighteen inches above the base flood elevation; and
- Prohibit encroachments in the regulatory floodway which could raise flood levels.

Title 16, "Subdivisions," includes Chapter 16.32, "Design Standards and Improvements" and includes the following provisions:

- Section 16.32.070, "Drainage," which requires stormwater runoff from the subdivision to be collected and conveyed by an approved storm drainage system. The storm drainage system shall be designed by a registered civil engineer for ultimate development of the watershed and shall be capable of collecting and conveying runoff generated by the ten-year flood. The system shall provide for the protection of abutting and off-site properties that may be adversely affected by any increase in runoff attributed to the development; off-site storm drain improvements may be required to satisfy this requirement. In addition, retention ponds, drainage swales and/or check dams may be required to reduce off- site peak storm flow generated by projects to the historic flow.
- Section 16.32.170, Minimum Subdivision Elevation," which prohibits new residential lots created by subdivision which will be subject to periodic inundation or overflow from storm drainage or floodwaters. The building floor elevations shall be not less than the minimum building floor elevation established by the floodplain regulations of the zoning ordinance.

Title 17, "Zoning," includes:

- Section 17.88.030, "Subdivisions," which requires that all subdivision proposals and other proposed new developments be reviewed by the City engineer to assure that (1) all such proposals are consistent with the need to minimize flood damage; (2) all public utilities and facilities, such as sewer, gas, electrical and water systems are located, elevated, and constructed to minimize or eliminate flood damage; and (3) adequate drainage is provided so as to reduce exposure to flood hazards.
- Section 17.88.040, "Utilities," which requires that new or replacement water supply systems and/or sanitary sewer systems be designed to minimize or eliminate infiltration of floodwaters into the systems and discharges from the systems into flood waters, and on-site waste disposal systems shall be located so as to avoid impairment of them or contamination from them during flooding. (Prior code Section 27.168).
- Section 17.88.050, "FEMA Requirement," which requires that new construction or replacement of existing construction be in conformance with the standards and regulations of the Federal Emergency Management Agency (FEMA). (Prior code Section 27.169).

City of St. Helena Stormwater Management Standards (Construction and Post-Construction Standards)

The City of St. Helena has developed stormwater management standards to comply with the Phase II General Permit that apply to discretionary and ministerial projects submitting an application for a use permit, building permit, and/or grading permit (City of St. Helena, 2005a). The standards include both a construction and post-construction review and permitting process implemented by the St. Helena Public Works Department.

Construction-Phase Erosion Control Plans and Storm Water Pollution Prevention Plans

If a project is subject to construction-phase requirements, the applicant must prepare an Erosion Control Plan (ECP) for sites of less than one acre and a Storm Water Pollution Prevention Plan (SWPPP) for sites of one acre or more. The plans must depict BMPs that will be implemented during construction to eliminate or minimize the discharge of pollutants.

For projects with slopes of less than 15 percent, any person may prepare ECPs or SWPPPs. For projects with steeper slopes, however, only persons specified in the standards (e.g., a licensed civil engineer, a certified erosion and sediment control specialist) may prepare the documents. Prior to obtaining a building or grading permit, applicants with projects disturbing one or more acres must provide a copy of the Waste Discharge Identification Number issued for coverage under the Construction General Permit.

Grading deadlines in the standards mandate that clearing of vegetation, grading, and/or any other soil-disturbing activities shall only occur between April 15th and October 15th of any given year. Erosion and sediment control measures shall be fully implemented by October 15th of each year and maintained through April 15th. In addition, when the ECP/SWPPP requires installation of

sediment retention devices, these devices must be installed and functional no later than October 1st of that year.

The City's Public Works Department conducts site inspections to evaluate the effectiveness of the construction-phase BMPs using the following performance standards:

- No measurable increase of pollution (including but not limited to sediment, concrete and stucco, automotive fluids, hazardous materials, and pathogens) in runoff from the site;
- No slope erosion; and
- Water velocity moving offsite must not be greater than pre-construction levels.

Post-Construction Stormwater Runoff Management Plans

In order to comply with the Phase II General MS4 Permit, the City has adopted the Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual to regulate and provide design guidance to projects within the City. All projects within the City must comply with the BASMAA Manual, which uses a tiered approach to implement low impact development principles on all projects that create or replace 2,500 square feet or more of impervious surface.

Impact Analysis

SIGNIFICANCE CRITERIA

For the purposes of this EIR, a significant adverse impact would occur if implementation of the Proposed Plan would:

Criterion 1: **Violate any water quality standards or waste discharge requirements;**

Criterion 2: **Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted);**

Criterion 3: **Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site;**

Criterion 4: **Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;**

Criterion 5: **Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff;**

Criterion 6: **Otherwise substantially degrade water quality;**

Criterion 7: **Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map;**

Criterion 8: **Place within a 100-year flood hazard area structures which would impede or redirect flood flows; or**

Criterion 9: **Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam, or inundation by seiche, tsunami, or mudflow.**

METHODOLOGY AND ASSUMPTIONS

All project elements were analyzed by comparing baseline conditions, as described in the Physical Setting section, to conditions during construction and/or operation of the Proposed Plan. The analysis focused on issues related to surface hydrology, flood hazards, groundwater supply, and surface and groundwater quality. The key construction-related impacts were identified and evaluated qualitatively, based on the physical characteristics of St. Helena and the magnitude, intensity, location, and duration/frequency of activities. This analysis of hydrologic and water quality impacts is based on a determination of the potential for water quality degradation and individual project or cumulative projects potential to cause increased erosion, sedimentation, and adverse conditions associated with changes to stormwater runoff attributable to implementation of the Proposed Plan, with consideration of legally-mandated requirements for protecting water quality. The resultant effects can only be generalized relative to the significance criteria to determine if the project would result in significant impacts and if mitigation measures would be warranted.

The Planning Area for the Proposed Plan includes three study areas in unincorporated Napa County immediately adjacent to the city limits where the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities (see Chapter 2: Project Description for additional details). Existing conditions related to hydrology and water quality in the whole of the Planning Area are documented above; however, as the City does not have jurisdiction outside of the city limits and sphere of influence (SOI), Proposed Plan policies and actions would not apply in the study areas. Therefore, implementation of the Proposed Plan would not result in direct impacts related to hydrology and water quality in the study areas. Cumulative impacts related to hydrology and water quality are discussed in Chapter 5: CEQA Required Conclusions.

Surface Water Hydrology

The surface water hydrology impact analysis considers potential changes in the physical characteristics of water bodies, impervious surfaces, and drainage patterns throughout the City of St. Helena as a result of the Proposed Plan's implementation.

Groundwater Hydrology

Impacts on groundwater supply and recharge are assessed by comparing existing groundwater use and recharge capabilities with project conditions. Recharge is determined by the ability of water to infiltrate into the soil.

Water Quality

Impacts of the Proposed Plan on surface water and groundwater quality were analyzed by comparing existing water quality conditions and potential project water quality conditions. Potential project-related sources of water contaminants generated by residential, office, and industrial project operational activities, such as vehicle use, building maintenance, pesticide use, trash generation, and the storage or inadvertent release of hazardous materials during project construction, are considered. The potential for water quality objectives to be exceeded and beneficial uses to be compromised is also considered.

Flooding

The flood risk analysis uses FEMA data and historical flood information to determine the existing flood zone and whether the project area overlaps designated 100-year floodplains, whether it would affect the drainage system, and whether it was a flood risk. Pursuant to the recent Supreme Court case decision in California Building Industry Association v. Bay Area Air Quality Management District (2015) 62 Cal. 4th 369, Case No. S213478, CEQA does not require an analysis of how existing environmental conditions will affect a project's residents or users unless the project would exacerbate an existing environmental hazard. Accordingly, hazards resulting from a project that places development in an existing or future flood hazard area are not considered impacts under CEQA unless the project would exacerbate the flood hazard. Thus, the analysis evaluates whether the project would exacerbate existing or future flood hazards in the City of St. Helena, resulting in a substantial risk of loss injury or death. If evidence indicates it would not, then the analysis will conclude by stating such. If it would potentially exacerbate the issue, then evidence is provided to determine if the exacerbation would or would not be significant.

RELEVANT POLICIES AND IMPLEMENTING ACTIONS

Community Design Element

- ***CD1.5.*** Require stormwater management techniques that minimize surface water runoff in public and private developments. Utilize low impact development techniques such as bioswales and other best management practices to manage stormwater (Also see the Open Space and Conservation Element, Topic Area 3).
- ***CD1.B.*** Adopt a Green Building and Landscaping Ordinance that establishes green building and landscaping site design standards customized to meet the unique climatic context of the community. Landscaping standards should limit impervious paving and identify standards and incentives that encourage the use of locally-propagated native, low-water, drought-tolerant planting and integrated pest management practices.
- ***CD3.1.*** Limit building envelope sizes and require adequate side and rear setbacks to preserve the character of existing residential areas and to avoid overbuilt lots. Require future development to conform to the pattern and density of the neighboring areas in

order to complement existing town character and protect against incursion into vineyard agricultural areas.

- ***CD3.B.*** Review the existing ordinance language limiting lot coverage/floor area ratio according to parcel size in residential areas in order to preserve neighborhood character, reduce adverse view and shade impacts on existing homes, improve groundwater infiltration, and avoid overbuilt conditions. At the same time, care needs to be taken that any ordinance revision does not impair the ability to build second units on existing lots where appropriate.
- ***CD4.2.*** Integrate open space, including parks, community gardens, natural areas and agriculture into the community to strengthen the connection to St. Helena's agricultural heritage and provide a sense of openness.

Land Use and Growth Management Element

- ***LU1.1.*** Require new development to occur within well-defined boundaries and be consistent with the ability to provide urban services. New development should mitigate infrastructure impacts by using sustainable, best management practices in green building and stormwater management and paying its share of development impact fees, while minimizing impacts on sewer, water, energy and natural resources.
- ***LU1.2.*** Allow urban development to occur only within the Urban Limit Line. Consider an exception for on-site employee housing on agricultural lands. Urban services, such as sewer, water and storm drainage will only be extended to development within the Urban Limit Line.

Open Space and Conservation Element

- ***OS1.1.*** Preserve and enhance St. Helena's riparian corridors for their value in providing wildlife habitat, biodiversity, natural drainage and visual amenity.
- ***OS1.A.*** Develop and adopt an ordinance for the protection, restoration and enhancement of creek corridors. The ordinance should consider the following:
  - Establish setbacks for all new development projects to protect stream function and riparian habitat, while allowing for limited recreational uses and access to the stream corridor for maintenance and flood control.
  - Limit use of herbicides and insecticides associated with aquatic toxicity in areas near and adjacent to creeks, and ensure best environmental management practices for all developments and industries;
  - Provide access for creek maintenance and public use through easements and cooperative agreements with landowners;
  - Establish sufficient buffer width adjacent to waterways to allow for wildlife habitats, trails and greenbelts;
  - Adhere to Living River Principles that allow the river to meander, maintain its natural floodplain and retain natural channel features to support continuous fish migration and the health of riparian corridors; and

  - Encourage the use of bioswales, off-stream detention ponds and other green best practices for stormwater management.
  - Implement an Integrated Pest Management ordinance that includes provisions to minimize the reliance on pesticides that threaten water quality and to require the use of integrated pest management in municipal operations; and.
  - Incorporate relevant actions and performance standards in TMDL implementation strategies for the Napa River to control discharges of pathogens and sediment.

- ***OS1.B*** Restrict development on open space-designated parcels along Sulphur Creek west of the Crane Avenue Bridge. All development must be outside the stream corridor and structures must be set back from the creek's edge, consistent with California Department of Fish and Game standards.
- ***OS1.D*** Coordinate with the County, the California Department of Fish and Game, and other regional agencies to augment water flow in the Napa River and its tributaries in order to enhance year-round fish habitat and minimize stagnation and pollution.
- ***OS1.H.*** Require all proposed projects adjacent to a creek corridor or located in the city's hillside areas to submit a management plan for protecting natural habitats, including provisions to:
  - Employ supplemental planting and maintenance of grasses, shrubs and trees of similar quality and quantity to provide adequate vegetation cover to keep the watersheds on steep slopes and along streams in good condition, and to provide shelter and food for wildlife.
  - Provide protection for wildlife habitat.
- ***OS1.I.*** Require new development to be sited to maximize the protection of native tree species, riparian vegetation, important concentrations of natural plants and sensitive wildlife habitat.
- ***OS1.L.*** Discourage removal of trees for agricultural or other development in hillside areas. Ensure Woodlands and Watershed restrictions are followed.
- ***OS1.N.*** Conduct a study to determine if the build-up of gravel in Sulphur Creek will result in a high risk of flooding. Limit development in Flood Hazard Areas using FEMA's 100-year flood zone regulations at a minimum, and inform property owners of existing developments so they are aware of flood risks and available State and federal insurance opportunities. Ensure that implementation measures contribute positively to the preservation of the creek and its corridor.
- ***OS2.3*** Preserve open space for recreational uses, including a bicycle and pedestrian trail system along creek corridors when compatible with riparian vegetation and wildlife habitat. Where possible, integrate stream corridors with trails and other recreational open space, provided that the vegetation, habitat value and water quality is not significantly impacted.
- ***OS2.6.*** Support floodplain management strategies that ensure adequate open space for flood management consistent with Living River Principles, FEMA and State requirements

at a minimum. (Also see the Public Health, Safety and Noise Element for additional policies and implementing actions relating to flood management).

- ***OS3.1.*** Promote stormwater management techniques that minimize surface water runoff in public and private developments. Utilize low impact development techniques to best manage stormwater through conservation, on-site filtration and water recycling, and ensure compliance with the National Pollution Discharge Elimination System (NPDES) permit.
- ***OS3.2*** Reduce stormwater runoff in developed areas to protect water quality in creeks. Incorporate sustainable low impact design features in the design of infrastructure.
- ***OS3.A*** Manage stormwater runoff in compliance with the City's Stormwater and Runoff Pollution Control Ordinance, Stormwater Management Standards for Construction and Post-Construction, and the Development Manual Stormwater Standards, to ensure compliance with the City's NPDES permit. Implement a surface water quality monitoring program to evaluate the effectiveness of stormwater management program activities in reducing the discharge of pollutants to receiving waters to the maximum extent practicable.
- ***OS3.B***. Prevent water pollution from point and non-point sources, including runoff from agriculture through implementation of City adopted Best Management Practices in applicable permits, Total Maximum Daily Load (TDML), and the Plan for California's Nonpoint Source Pollution Control Program. Continue to adopt new and more effective and efficient best practices and programs.
- ***OS3.C*** Minimize stormwater runoff and pollution by encouraging low impact design features, such as pervious parking surfaces, bioswales and filter strips in new development projects. The City should be a model for incorporating low impact design elements as it implements streetscape and landscape improvements. In addition, the City should retrofit the existing public landscape with natural vegetative coverings and drainage systems that promote infiltration into the ground that can help detain stormwater and reduce pollution attributable to runoff.
- ***OS3.D*** Maintain the City's water management program for implementing water conservation efforts for households, businesses, industries, public infrastructure and agricultural activities. This program should include the following measures:
  - Identify building, plumbing and landscape standards and technologies that conserve water especially during water shortages;
  - Implement standards that require low-flow appliances and fixtures in all new developments; and
  - Encourage and model the use of drought tolerant and native plants in landscaping.
- ***OS3.E.*** Promote the installation of drought tolerant and native plants in landscaping throughout the city. Potential measures include:
  - An education program that details water conservation measures for the use in local landscaping;

  - Working with local nurseries to encourage education, demonstration and sales of drought tolerant and native plants and water-wise irrigation systems. (Also see the Public Facilities and Services Element for additional policies and implementing actions relating to water conservation);
  - Require City parks and properties to be landscaped with drought tolerant native plants that allow for high shade capacity whenever possible and use water-wise irrigation systems as a model for residents and businesses.

- ***OS3.F.*** Provide appropriate permitting documents for project applicants requiring coverage under the Statewide National Pollutant Discharge Elimination System (NPDES) General Construction and Industrial Permits.
- ***OS4.E.*** Explore a citywide education opportunity for residents, businesses, industries and agricultural uses to obtain information on pollution prevention, disposal of hazardous waste and chemicals, liability and clean-up.

Public Facilities and Services Element

- ***PF1.D*** The City of St. Helena should not draw or sell any groundwater beyond that currently allowed until a safe yield of the groundwater system has been identified through a study of the North Main Basin Aquifer by a qualified hydro geologist.
- ***PF1.E*** Permit no new development relying on groundwater unless and until it is determined that the incremental production of ground water to support the development will not adversely impact the water production capability of the aquifer supporting the City wells.
- ***PF1.F*** Track the drilling of new private wells in and around St. Helena and, if so recommended by the qualified hydrologist hired by the City's water system, request that the County impose a moratorium on new well drilling if needed to protect the production capability of the City wells.
- ***PF2.C.*** Urban services such as sewer, water and storm drainage will only be extended to development within the Urban Limit Line. Exceptions will be permitted when undue hardship can be demonstrated, and when proposed improvements are not found to induce growth.
- ***PF3.1.*** Ensure that new developments provide adequate drainage improvements and detention to mitigate flooding from increased stormwater runoff attributable to the development.
- ***PF3.2.*** Ensure that encroachments into the 100-year floodplain do not result in any increase in flood levels during the occurrence of the base flood discharge.
- ***PF3.3.*** Improve York Creek channel capacity in flood-prone areas through removal of channel-obstructing gravel bars and vegetation.
- ***PF3.A.*** Require developers to provide adequate drainage improvements and detention to mitigate storm runoff from the site to the nearest major waterway. Drainage improvements can include measures such as creating settling basins, bio-swales and the use of pervious materials for driveways and parking areas. Key waterways include York Creek, Sulphur Creek and the Napa River.

- ***PF3.C.*** Consistent with Municipal Code Section 16.32.170, continue to prohibit the creation of new residential lots that will be subject to periodic inundation from floodwaters. New development proposals on existing lots of record must identify flood hazard areas and mitigate all impacts to base flood levels and potential flood damage from grading filling and construction through proper drainage, construction, and location of utilities, in accordance with FEMA requirements.
- ***PF3.D.*** Update the City's Stormwater Master Plan to include changes and upgrades since the last plan and to help streamline the approval process.
- ***PF3.E.*** At the time of development review, require that post-project runoff be limited to pre-project peak flow rates for the five-year and ten-year storms as a condition of approval (See also Climate Change Element, Topic Area 4).
- ***PS5.1.*** Minimize the risk to people, property and the environment caused by flooding hazards. Site new development to minimize potential damage from a 100-year flood. Continue to require that any new development is constructed to FEMA standards. Prohibit the siting of uses within Flood Hazard Areas inconsistent with FEMA standards that could result in health and safety hazards, including those due to the release of chemicals or other substances as a result of inundation or erosion. Ensure that any new flood protection projects comply with State Department of Water Resources (DWR) standards.
- ***PS5.2.*** Ensure that new development or existing lots of record within the 100-year floodplain are properly graded sited, and constructed to mitigate flood effects and do not cause increases or expansion of the flood area that increase flood risk.
- ***PS5.3.*** Within the 100-year floodplain, encourage open space uses, such as parks or natural areas.
- ***PS5.4.*** Ensure that construction of flood barriers does not adversely affect natural floodplains, stream channels and natural barriers that help accommodate or channel flood waters.
- ***PS5.5.*** Prohibit new development within areas designated as Floodway in the current FEMA Flood Insurance Study (FIS) and Flood Insurance Rate Map (FIRM).
- ***PS5.A***. Coordinate with the County Flood Control District to ensure that stream channels are routinely cleared of vegetation and debris which could impede stormwater flows, while protecting riparian habitat.
- ***PS5.B.*** Require developers with land adjacent to the Napa River to construct or contribute a fair share toward the construction of necessary flood control improvements.
- ***PS5.C.*** Strengthen and enforce regulations that prohibit the dumping of litter, fill and waste materials into creeks and waterways. Educate the public about flooding and health hazards associated with these activities.
- ***PS5.E*** Prohibit the introduction of urban development in designated Floodway zones.
- ***PS5.F*** Review Municipal Code Chapter 15.52, Flood Damage Prevention, to ensure that regulations reflect best practices. Periodically update the City's flood hazard regulations in accordance with FEMA/NFIP regulations.

- ***PS6.1*** Ensure that City emergency procedures are adequate in the event of potential natural or man-made disasters.
- ***PS6.A*** Maintain and periodically update the City's Emergency Response Plan.
- ***PS6.C*** Continue to collaborate with regional agencies and neighboring jurisdictions to develop and implement a regional emergency coordination plan and agreement for police, fire and emergency medical services.

IMPACTS

Impact 3.9-1 Development under the Proposed Plan would not violate any federal, state, or local water quality standards or waste discharge requirements. (*Less than Significant*)

The Proposed Plan would have a significant environmental impact if it would violate water quality standards and waste discharge requirements set out in NPDES Permit CA0038016, issued to the City of St. Helena's Wastewater Treatment and Reclamation Plant, or the Phase II General Permit for Discharge of Storm Water from Small MS4s NPDES Permit in force for Napa County, of which the City of St. Helena is a member agency. Violation could occur if the Proposed Plan would substantially increase pollutant loading levels in the sanitary sewer system, either directly, through the introduction of pollutants generated by industrial or other land uses, or indirectly, through stormwater pollution.

According to the terms of NPDES permit CA0038016, the City's Department of Public Works implements and enforces a pretreatment program for effluent discharged into the Napa River. The City also complies with the RWQCB Monitoring and Reporting Program. The Proposed Plan would primarily involve construction and operation of residential and commercial uses and would involve few industries likely to substantially increase pollutant loading levels in the sanitary sewer system. Any new industrial uses would have to comply with the Industrial General Permit, as described in the Regulatory Setting section, above.

Additionally, in compliance with the SWRCB Construction General Permit, a SWPPP would be prepared for any projects resulting from the Proposed Plan, detailing the methods for preventing the pollution of stormwater with sediment, petrochemicals, or other pollutants associated with construction activities or equipment. Further, implementation of Phase II Municipal Stormwater NPDES Permit BMPs described below in Impacts 3.9-3 and 3.9-4, including construction of bio-retention areas, would provide natural filtration of stormwater, reducing the volume of contaminants entering the City's storm sewer system.

Several policies in the Proposed Plan would also ensure that federal, State, and local water quality standards and waste discharge requirements are met. The Proposed Plan would require compliance with the City's NPDES stormwater municipal permit discussed above, requiring full implementation of stormwater BMPs to reduce pollutants in stormwater runoff to the maximum extent practicable (LU1.1, CD1.5, OS3.1, OS3.2, OS1.A, OS3.A, and OS3.C). It would promote preservation of open space and existing vegetation and require development setbacks, use of drought-tolerant and native plants, and proper use of pesticides and herbicides and reduce the construction of impervious surfaces (CD4.2, OS1.1, CD1.B, CD4.A, OS1.B, OS1.C, OS1.H, OS1.L,

OS3.D, OS3.E and OS3.F). These policies and actions would reinforce and strengthen federal, State, and local requirements.

Therefore, development of the Proposed Plan would not violate established water quality standards or waste discharge requirements and the impact would be less than significant.

Mitigation Measures

None required.

Impact 3.9-2 Development under the Proposed Plan would not substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted). (*Less than Significant*)

Groundwater table stability is a balance between how much water infiltrates the aquifer and how much water is drawn out. From 2011 through 2015, groundwater drawn from the Napa Valley Subbasin accounted for about 18 percent of St. Helena's total water supply (Luhdorff & Scalmanini, 2016). The remainder is sourced from the local surface water at Bell Canyon or purchased from the City of Napa, as discussed in Chapter 3.14: Utilities and Service Systems of this EIR. Despite the about 700 new residents and 900 new jobs projected at buildout by the Proposed Plan, additional water would not be acquired from the groundwater supply. The City of St. Helena's 2006 Master Water Plan, in making sourcing projections for future growth, maintains consistent groundwater supplies while increasing purchases of surface waters from the City of Napa (City of St. Helena, 2006, pp. 3-4). Further, due to the 2011 implementation of the St. Helena Water Neutral Policy for Development, the Proposed Plan is not expected to result in a growth in total water demand, as new development is required to offset new demand with water conservation retrofits of existing facilities, or in-lieu payments to the City to carry out such retrofits.

The California SGMA of 2014 requires local authorities to achieve sustainable management of groundwater basins. Napa County prepared a Basin Analysis Report demonstrating that the groundwater basin has been operating within a sustainable yield for the past ten years, achieving compliance with the SGMA. The Napa Valley Subbasin Basin Analysis Report demonstrated that the basin has operated within its sustainable yield over a period of more than 20 years. Stable groundwater levels observed during recent drought conditions (from 2012 through 2015) suggest that recent rates of groundwater pumping have not exceeded the sustainable yield of the subbasin. The sustainable yield analysis establishes the maximum amount of water that can be withdrawn annually from the subbasin groundwater supply without causing an undesirable result: approximately 17,000 AFY to 20,000 AFY. Groundwater pumping averaged about 18,000 AFY during the 2012 to 2015 drought (Luhdorff & Scalmanini, 2016). Continued compliance with the SGMA legislation, by regularly demonstrating that the basin is not overdrafted, ensures that the groundwater draws will be carefully managed and sustainably used, and that the Proposed Plan will not substantially deplete groundwater supplies from increased demand.

Further, existing regulations would ensure that overall infiltration into the aquifer would remain robust, including LID techniques to capture and infiltrate stormwater runoff, consistent with BASMAA Manual, St. Helena Municipal Code required compliance with NPDES permitting, other City of St. Helena MS4 requirements, and/or General Waste Discharge Requirements, as applicable. Further, policies in the Proposed Plan would require LID techniques to manage stormwater, limit building envelope sizes and lot coverage, and promote open space, bioswales, detention ponds, and landscaped buffers, which would reduce the amount of impervious area associated with new development that could adversely affect groundwater recharge (CD1.5, CD3.1, CD3.B, CD4.2, LU1.1, and OS1.A). Additional policies would limit the use of groundwater to support new development, including ensuring that groundwater draws are within safe yield guidelines, ensuring that new groundwater draws will not adversely local aquifer water production capabilities, and tracking new private wells to protect groundwater production (PF1.D, PF1.E, and PF1.F). With implementation of these requirements, development under the Proposed Plan would not result in a substantial adverse change in impervious surface area or groundwater infiltration.

Overall, compliance with existing federal, State and local programs and regulations and implementation of the BMPs discussed above would ensure that impacts related to substantial decreases in groundwater supply or substantial interference with groundwater recharge from implementation of the Proposed Plan would be less than significant.

Mitigation Measures

None required.

Impact 3.9-3 Development under the Proposed Plan would not substantially alter the existing drainage pattern of the City of St. Helena, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion, siltation, or flooding on- or off-site. (*Less than Significant*)

The Planning Area is already largely built out, and implementation of the Proposed Plan would primarily involve redevelopment of previously developed sites with residential, commercial, and public uses compatible with existing development in the area. As such, the Proposed Plan would not substantially alter the existing drainage pattern of the City of St. Helena.

While under construction, projects developed under the Proposed Plan could involve excavation and disturbance of existing ground surface, exposing base soil and temporarily altering surface drainage patters. York Creek, Sulphur Creek, and the Napa River all run through the Planning Area, and the Proposed Plan would incentivize new construction in some parcels near these waterways, risking erosion and siltation impacts if stormwater is not properly managed. However, each individual project would be required to develop and implement a SWPPP with erosion and sediment control BMPs as required by the State's Construction General Permit and MS4 Permit regulations. Standard erosion and sediment control measures and other housekeeping BMPs, such as vehicle and equipment maintenance, material delivery and storage, and solid waste management, would be identified in the SWPPP. BMPs included in the SWPPP would represent the best available, economically achievable technology, and the best conventional pollutant control technology to reduce pollutants. These measures would be identified for each individual project and implemented during construction to reduce contamination and sedimentation in waterways.

The SWPPP would also include a range of stormwater control BMPs (e.g., installing silt fences, staked straw wattles, or geofabric to prevent silt runoff to storm drains or waterways); requirements for the stockpiling, protection, and replacement of topsoil and backfill at the conclusion of construction activities; and requirements for revegetation of turf, plants, and other vegetation upon completion of construction. Projects disturbing less than an acre of ground surface during construction would not be required to prepare a SWPPP, but would be required to implement the construction site control BMPs required by the City of St. Helena's Phase II Small NPDES permit (MS4). Projects would also be subject to requirements of the Construction General Permit, the City's Stormwater Management Standards for construction activity, and the City's grading requirements, as applicable. With implementation of erosion and sediment control BMPs, project construction activities would result in less than significant erosion, siltation, and flooding impact during project construction activities.

While in operation, if future individual projects create or replace 2,500 square feet or more of impervious surface, they would be required to comply with the BASMAA Post-Construction Manual (BASMAA, 2014), part of the City of St. Helena's Phase II Small MS4 General Permit compliance. The BASMAA Manual requires eligible projects to complete a Stormwater Control Plan, including adequately-sized bioretention facilities, and a Stormwater Facilities Operation and Maintenance Plan. These plans require applicants to maximize LID techniques at their projects. Through compliance with the Phase II MS4 Permit, the projects implemented within the City of St. Helena would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site.

Policies and actions of the Proposed Plan would provide additional safeguards: required drainage improvements would adequately mitigate for erosion and siltation (PF3.A), inclusion of low impact development and other stormwater BMPs into development projects, facilitating natural drainage, preserving open space, requiring development setbacks, and maintaining and adding vegetation adjacent to creek corridors, all of which would reduce or prevent substantial erosion or siltation (CD1.5, OS3.1, OS3.2, OS1.A, OS1.B, OS1.H, OS1.I, OS1.L, OS3.A, OS3.B, and OS3.C).

Therefore, compliance with applicable federal, State, and local programs and regulations and implementation of BMPs discussed above would ensure that risks associated with substantial alteration of the existing drainage pattern of the City of St. Helena in a manner which would result in substantial erosion, siltation, or flooding on- or off-site would be reduced to the maximum extent practicable and would be less than significant.

Mitigation Measures

None required.

Impact 3.9-4 Development under the Proposed Plan would not create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. (*Less than Significant*)

Buildout of the Proposed Plan is expected to generate a small increase in impervious surfaces with the development of up to 300 new housing units and up to 900 new jobs in manufacturing,

agriculture, retail, and the service industries. Although the Planning Area is already largely developed, implementation of the Proposed Plan would likely add some new impervious surfaces to the community, including sidewalks, pathways, parking areas and similar improvements. Unless properly treated, runoff from these surfaces could include various pollutants, such as asbestos, oils, solvents and other pollutants that could be transported to local creeks and ultimately the Napa River. By implementing these long-term changes to streetscapes and pedestrian walkways, increasing parking spaces, and otherwise introducing new impervious surfaces, implementation of the Proposed Plan could create or contribute polluted runoff.

However, any new development resulting from the proposed plan would be required to comply with the BASMAA Manual's design guidance for stormwater treatment, as required by Napa County's Phase II Small MS4 General Permit. These stormwater treatment guidelines would require new development within the City of St. Helena to detain storm runoff with bioretention facilities, minimize surface flow velocities, and make use of all applicable LID techniques. New development, during both construction and operations phases, would be required to comply with the City of St. Helena's Stormwater Management Standards, which require the preparation of a SWPPP and implementation of BMPs to mitigate risks of polluted runoff.

In addition, new inputs to the stormwater drainage system must comply with Title 16 of the Municipal Code, which requires a new stormwater drainage system to be designed by a registered civil engineer for ultimate development of the watershed, to convey runoff generated by the ten-year flood. Per Title 16, the stormwater drainage system must also be designed to provide for the protection of abutting and off-site properties, and off-site storm drain improvements may be required to satisfy this requirement. In addition, under Title 16, retention ponds, drainage swales, and/or check dams may be required to reduce the off-site peak storm flow that projects contribute to the historic flow.

Policies and actions in the Proposed Plan would further mitigate risk of polluted runoff. The Proposed Plan would require coordination with various agencies to augment the flow in the Napa River to minimize pollution (OS1.D), provide outreach to residents, businesses, industries, and agricultural uses on water quality pollution prevention (OS4.E), require the City to prevent water pollution from both point sources (such as stormwater runoff from developments) and non-point sources including agricultural runoff, (Implementing Action OS3.B), and direct the City to continue to comply with the NPDES permit requirements (OS3.A).

As discussed in Impact 3.9-3 above, other policies and actions would require new development to provide adequate drainage improvements and development setbacks and to incorporate stormwater BMPs, which would reduce peak flow rates and stormwater runoff volumes from smaller, more frequently occurring storms (CD1.5, LU1.1, OS1.1, OS1.A, OS1.B, PF3.1, PF3.4, PF3.A, and PF3.E). Projects would be required to show that post-project runoff be limited to pre-project peak flow rates for the five-year and ten-year storms as a condition of approval (PF3.E). Extending stormwater drainage system utilities to the Urban Limit Line and updating the City's Stormwater Master Plan would ensure that the storm drain system has adequate capacity to convey storm flows without flooding, accounting for existing and future land uses and development (LU1.2, PF2.C, and PF3.D). The Proposed Plan would also promote preservation of open space and existing vegetation and require development setbacks, use of drought-tolerant and native plants, and proper use of pesticides and herbicides and seek to limit the use of impervious paving

(CD4.2, CD4.A, CD1.B, CD4.A, OS1.1, OS1.B, OS1.H, OS1.L, OS3.D, and OS3.E). Open space conservation reduces impervious area, which may reduce stormwater pollutants. Use of native plants would improve water quality by reducing pesticide and fertilizer use and reducing irrigation requirements, which would reduce the volume of dry weather nuisance flows into the stormwater drainage system and/or receiving waters. Further, maintaining creek corridors and adhering to Living River Principles would help to maintain the natural hydrologic function of creeks, which can capture and sequester pollutants within vegetation and prevent downstream contamination in the San Francisco Bay (OS1.A, OS1.C, and OS1.N).

With continued compliance with the existing federal, State, and local regulations identified above, and with implementation of the policies and implementing actions of the Proposed Plan, projects within the City of St. Helena would not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site or generate substantial polluted runoff. Therefore, the impact of the Proposed Plan as related to increased runoff would be less than significant.

Mitigation Measures

None required.

Impact 3.9-5 Development under the Proposed Plan would not substantially degrade water quality. (*Less than Significant*)

As discussed in Impacts 3.9-3 and 3.9-4, construction and operational activities associated with implementation of the Proposed Plan would not violate water quality standards because specific projects developed under the Proposed Plan would be required to implement the NPDES requirements, Phase II Small MS4 Permit, for post-construction stormwater management including LID techniques. Construction activities would be required to comply with the City of St. Helena Stormwater Management Standards, implementing SWPPPs and BMPs to reduce impacts on water quality. These requirements would require stormwater runoff retainment onsite through the implementation of site design BMPs that would be maintained throughout development operation. Compliance with these requirements, along with adherence to applicable policies contained in the Proposed Plan, would prevent degradation of surface water quality from runoff in the City of St. Helena, and downstream water quality would be maintained. Therefore, the Proposed Plan would result in a less than significant impact associated with degrading water quality.

Mitigation Measures

None required.

Impact 3.9-6 Development under the Proposed Plan would not place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map. (*Less than Significant with Mitigation*)

FEMA standards prohibit development in regulatory floodways, which are channels of rivers and streams and adjacent floodplains that must be reserved to discharge the base flood without

increasing the water level, unless the project can demonstrate that the encroachment would not result in elevated flood levels (FEMA). Within the 100-year flood hazard, FEMA allows development as long as the lowest finished floor (including the basement) is elevated to or above the base flood level, defined as the water level during a 100-year flood, or that which has a 1% chance of occurring in any given year, per Section 60.3 of FEMA's Floodplain Management Criteria (FEMA). Further, federally-backed loan and mortgage lenders require the acquisition of federal flood insurance on any development within the 100-year flood hazard.

The City of St. Helena's Municipal Code incorporates FEMA standards, and allows for development within FEMA's mapped 100-year flood hazard, as long as flood damage and prevention measures are taken (Section 15.52) and as long as new construction or replacement of existing construction is in conformance with FEMA's standards and regulations (Section 17.88.050). These standards and regulations include the above requirements for avoiding encroachments in the regulatory floodway that would raise base flood levels and the requirement for the lowest floors to be elevated to or above the base flood level. The Municipal Code provides even more rigorous flood zone regulations, requiring that any new construction or substantial improvement of a residential structure within FEMA's 100-year flood hazard area shall have the lowest floor elevated to at least eighteen inches above the base flood elevation (Section 15.52.150). These requirements provide mitigation for risks to life and property in 100-year flood hazard zones, including housing.

Implementation of the Proposed Plan could result in development on sites partially or fully within the 100-year flood zone, and could involve construction of new housing as part of residential or mixed use projects within flood hazard zones (see Figure 3.9-5: Land Use Change Areas and Flood Zones). Change Area 4, designated as Mixed-Use and Public and Quasi-Public, falls completely within the 100-flood hazard. Most of its Mixed-Use portion, and some of its Public and Quasi-Public portion, also fall within the regulatory floodway. Change Area 5, designated as Mixed-Use, falls primarily within the 100-year flood hazard zone. It also overlaps slightly with the floodway. Other sites have less overlap with the 100-year flood hazard. Change Area 2, designated as Mixed-Use, and Change Area 3, designated as High Density Residential, fall partially within the 100-year flood hazard and have no overlap with the regulatory floodway. Change Area 6, designated as Mixed-Use, and Change Area 7, designated as Medium Density Residential, each have small portions of their sites designated as within the 100-year flood hazard, and no land area within the floodway. Further, some of the Key Opportunity Sites for constructing medium and high density housing identified in the City's Housing Element have a risk of flooding: Sites 6 and 7 are adjacent to and partially within the regulatory floodway and a portion of Site 9 falls within the 100-year flood hazard. Development on these sites constitutes a potentially significant impact.

Change Area 11 also falls partially within both the floodway and the 100-year flood hazard zone, but as it is designated as Open Space, it would not present a potential conflict with either existing regulations or the Proposed Plan, and thus would not construe a significant impact.

Many policies within the Proposed Plan would help to mitigate any risks involved with development in flood risk areas. Some policies would ensure compliance with existing federal and local regulations. The Proposed Plan limits urban development in designated Flood Hazard Areas to that which complies with FEMA's regulations (OS1.N and PF5.E), and would ensure that the City's flood hazard regulations are in accordance with FEMA /NFIP regulations and reflect best

practices (PS5.F). Change Areas 2, 3, 5, 6, and 7 and Housing Opportunity Site 9 all have some degree of overlap with the 100-year flood hazard zone; any development within the flood hazard areas would be required to comply with FEMA regulations, the St. Helena Municipal Code, and the Proposed Plan's policies for properties in flood risk zones described above, thereby minimizing the potential for loss, damage or injury to the maximum extent practicable. This and any other new development and redevelopment pursuant to the Proposed Plan would be required to comply with all flood protection provisions in the Municipal Code. Setbacks would be established along streambeds to protect the riparian corridors and all development would take place outside of the stream corridor (OS1.N). Other policies in the Proposed Plan would mitigate against actions that could impede or redirect flood flows by ensuring that base flood elevations do not increase and that development activities do not expand the floodplain (OS2.6, PF3.2, PF3.3, PS5.2, PS5.4, PS5.5, PS5.A, and PS5.C). The Proposed Plan would prohibit new development within the floodway (PF5.5 and PF5.E), and prohibit creation of new residential lots that would be subject to periodic inundation by floodwaters by requiring building floor elevations to comply with the Municipal Code's required elevations above base flood level (PF3.C). Further, it ensures that any new development complies with FEMA and DWR standards (PS5.1) and encourages leaving open spaces within the 100-year floodplain (PS5.3). It would also support flood management by encouraging open space uses within Special Flood Hazard Areas consistent with Living River Principles, including maintaining or restoring geomorphic equilibrium, maintaining natural slopes and channel widths, maintaining the connection of the river or creek to its floodplain, and providing adequate development setbacks to allow the river or creek to meander (PS5.3 and OS2.6). The Proposed Plan would also provide for flood protection measures for lands adjacent to York Creek, Sulphur Creek and the Napa River (PF3.3, PF3.A and PS5.B). Therefore, while implementation Proposed Plan would lead to housing within the 100-year flood hazard area, adherence to FEMA standards, the St. Helena Municipal Code, and to applicable Proposed Plan policies would reduce the risks with respect to placement of people or structures within the 100-year flood hazard area to the maximum extent practicable.

However, development within the floodway, including construction of housing, would constitute a significant risk, as FEMA designates these as channels which should flood regularly and provide unimpeded conveyance for floodwaters during a typical large storm event. Development within the floodway-designated portions of Change Areas 4 and 5 and Housing Opportunity Sites 6 or 7 would result in a significant impact, which can be mitigated by Measure HYDRO-1, defined below.

Significance Before Mitigation: Significant

Mitigation Measures

HYDRO-1: Any proposed development or redevelopment on land designated as regulatory floodway on current FEMA maps shall, prior to issuance of a construction permit, obtain and submit to the City a Letter of Map Revision (LOMR) from FEMA, demonstrating that a hydrologic and hydraulic analysis showed that grading modifications were performed such that the proposed development would no longer be within the floodway. These modifications shall be completed without raising the base flood level or impacting other properties.

Significance After Mitigation: Less than significant with mitigation. Compliance with Mitigation Measure HYDRO-1 will ensure that no development impedes waters in the floodway, raises base flood levels, or exposes housing to undue risk from flooding.

Impact 3.9-7 Development under the Proposed Plan would not place within a 100-year flood hazard area structures which would impede or redirect flood flows. (*Less than Significant*)

As discussed in Impact 3.9-6 above, the City of St. Helena's Municipal Code and provisions in the Proposed Plan would ensure that new development or substantial renovations to existing structures comply with FEMA regulations and do not impede or redirect flood flows within the 100-year flood hazard area.

However, public space improvements called for in the Proposed Plan, specifically the pedestrian and bicycle trail system along creek corridors, could impede or redirect flood flows if not built in accordance with other elements of the Proposed Plan. But policies in the Proposed Plan would mitigate any risks of the trail system impacting flood flows. The system would be required to be integrated with stream corridors only if there were no significant impact on vegetation and water quality (OS2.3), ensuring that trails are not invasive, and would need to comply with Living River Principles, FEMA, and State requirements for adequate open space for flood management. The City of St Helena Municipal Code Sections 15.52.190 and 17.88.050 also outline provisions for construction within flood hazard zones, and prohibit any encroachments in the floodway unless they will not result in any increase in flood levels during the occurrence of the base flood discharge. Further, given that trails would be narrow, flat surfaces no more than a few inches above existing grade, they would present very little chance of impeding or redirecting flood flows in any significant way.

Based on the extensive flood hazard management regulations applicable to any new or substantially modified development discussed in Impact 3.9-6 above, and on the small footprint of the proposed trail system and given compliance with existing local regulations and Proposed Plan policies, the impact of the Proposed Plan on flood flows within the 100-year flood hazard area would be less than significant.

Mitigation Measures

None required.

Impact 3.9-8 Development under the Proposed Plan would not expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam. (*Less than Significant*)

Future development that could be allowed under the Proposed Plan could expose future residents, employees and visitors to St. Helena to impacts from dam or levee failure.

The only levee that could impact the Planning Area is located just upstream of the confluence of Sulphur Creek and the Napa River. The levee is newly constructed to reduce flood risk to that area of St. Helena (see Figure 3.9-3). It is inspected and maintained by the Napa County Flood Control and Water Conservation District, and due to its new construction and future planned maintenance, the risk of failure and flooding is less than significant.

A portion of the potential growth areas identified in the Proposed Plan are within dam failure inundation areas. Bell Canyon Dam and St. Helena Lower Dam, which is within the Planning Area, both have corridors of failure inundation zones within the City of St. Helena. Much of the property identified as subject to any flooding risk associated with dam failure is designed as Agriculture, Park, or Woodlands and Watershed by the Proposed Plan, although there are some areas zoned as Low-, Medium-, and High-Density Residential, Service Commercial, and Public and Quasi-Public within the potential inundation zones.

However, these areas are already largely inhabited, and the population increase precipitated by the Proposed Plan, around 13% overall by 2040, would not significantly increase the risks of loss, injury, or death from flooding due to dam inundation. Further, the potential for dams to fail and inundate the city is low, due to oversight from the DOSD, which inspects each dam annually to ensure the dam is safe, performing as intended, and is not developing problems. Roughly a third of these inspections include in-depth instrumentation reviews of the dam surveillance network data. The DOSD also periodically reviews the stability of dams and their major appurtenances in light of improved design approaches and requirements, as well as new findings regarding earthquake hazards and hydrologic estimates in California. When unsafe conditions develop, the DOSD works with dam owners and their consultants to address and remedy the condition in a timely manner. To minimize risk, the DOSD may impose a reservoir restriction limiting the water surface to a level that is judged safe. The DOSD may request that the owner develop an emergency action plan in coordination with local authorities. Bell Canyon Dam and St. Helena Lower Dam are currently characterized by the DOSD as being in Satisfactory and Fair conditions, respectively (DOSD, 2018).

Further, policies and actions in the Proposed Plan (PS6.1, PS6.A and PS6.C) would require adequate emergency response procedures to be in place and periodically updated in the case of a dam or levee failure that requires evacuation. In addition, the City has initiated the process to remove the upper York Creek Dam, further reducing the risk associated with dam failure within the City. That work is expected to be complete in 2019.

Consequently, the potential flooding impacts associated with the failure of a dam or levee is determined to be less-than-significant.

Mitigation Measures

None required.

Impact 3.9-9 Development under the Proposed Plan would not result in inundation by seiche, tsunami, or mudflow. (*Less than Significant*)

As discussed in the Physical Setting section above, the City of St. Helena's elevation above mean sea level and its distance away from the coast and San Francisco/San Pablo Bay precludes the potential for inundation by a tsunami. A seiche, a standing wave in an enclosed or partially enclosed body of water, could occur in one of the nearby reservoirs in Napa County, but the closest of these, Bell Canyon Reservoir and Lake Hennessy, are each over two miles away from the Planning Area. Therefore, the risk of a seiche affecting the City of St. Helena is less than significant. Development under the Proposed Plan could not result in inundation by tsunamis or seiches.

Although the center of the Planning Area is relatively flat, the eastern and western sides of the city start to climb out of the valley floor. Low landslide potential exists in parts of the City's eastern and western portions, with a small eastern portion designated by USGS as "mostly landslides," based on historical mapping of past landslide hazards. As discussed in the Physical Setting section above, mudflows are landslides consisting of material that is wet enough to flow rapidly, and that contains at least 50 percent sand-, silt-, and clay-sized particles. Most of the City of St. Helena is not susceptible to such conditions. Further, policies and actions in the Proposed Plan discourage removal of trees in hillside areas, which ensures more stable soils (OS1.L), and protect riparian corridors and creeks, requiring development setbacks, vegetation cover on watersheds and creek banks, and Living River Principals, all of which maintain more stable creek banks and mitigate risks of mudflows to nearby properties and residents (OS1.1, OS1.A, OS1.B, OS1.H). Robust vegetation along slopes significantly reduces risks of erosion, and therefore mudflows. Other public safety policies (PS6.1, PS6.A and PS6.C) would require adequate emergency response procedures to be in place and periodically updated in the case of a mudflow that requires evacuation.

Therefore, based on existing conditions within the City of St. Helena and the relatively gentle topography, and with compliance with applicable programs and regulations, the risk of development under the Proposed Plan resulting in seiche, tsunami, or mudflow would be less than significant.

Mitigation Measures

None required.

This page intentionally left blank.

3.10 Land Use, Population, and Housing

This section assesses potential environmental impacts from future development under the Proposed Plan, as related to land use, population, and housing, including evaluation of the Plan's consistency with existing land use plans and regulations, community division, population growth, and housing displacement. This section describes existing land uses, demographics, and housing in the Planning Area, as well as relevant federal, State, and local regulations and programs. Agricultural uses and recreational uses are addressed separately in sections 3.2 and 3.12, respectively.

Responses to the NOP regarding topics addressed in this section included the following:

- A member of the public commented on the potential impacts of new development and business expansion in the industrial zone located on the southeast side of St. Helena. Additionally, they commented that the General Plan could consider redesignating this land for uses more compatible with surrounding residential areas. This section of the DEIR does not propose to redesignate or expand any land currently designated as industrial and examines the environmental impacts of the land use designations within the Proposed Plan.

Environmental Setting

PHYSICAL SETTING

Regional Setting

St. Helena is located in in the northern portion of Napa County within the San Francisco Bay Area and sits at the heart of the upper Napa Valley, a region known for its diverse soils, microclimates, and success as a center for agriculture and the wine-making industry. The city is located approximately 65 miles north of San Francisco and 77 miles west of Sacramento. State Route (SR) 29 connects St. Helena to other communities in the valley, including Calistoga to the north and Yountville, Napa, and American Canyon to the south. The main north-south roadway serving St. Helena is SR 29, also known as Main Street within the city, that continues north into Lake County.

The city serves as a commercial and business center for the surrounding towns and unincorporated areas, including Calistoga, Angwin, Deer Park, Rutherford and the unincorporated area surrounding St. Helena in Napa County, of which three unincorporated Study Areas are included within the Planning Area for the Proposed Plan, as seen on Figure 2.1-2.

Local Setting

The Planning Area encompasses a land area of approximately 3,598 acres, including the City of St. Helena, the Sphere of Influence (SOI), which is co-terminus with the city limits, and three adjacent, unincorporated Study Areas. The Planning Area contains agricultural lands, business and industrial uses, and single- and multi-family residential neighborhoods. The City of St. Helena has a downtown that extends along Main Street and serves as the commercial center for the city and surrounding communities.

Agricultural lands, including agriculture, winery, and rural/agricultural residential uses, comprise approximately 51 percent of the land area within the Planning Area, with most acreage actively cultivated with vineyards. Within the urbanized areas of the Planning Area, residential land uses occupy the majority of land area.

In order to address concern over the pressures of increasing growth, the City of St. Helena has established an Urban Limit Line (ULL), as shown in Figure 3.10-1, within the incorporated city limits that encompasses the urbanized areas of the city. The ULL is a parcel-specific boundary that marks the limit of where urban development is permitted within the incorporated area. The intent of the ULL is to discourage urban sprawl by containing urban development within designated areas during the planning period (2040). The ULL provides a clear delineation between the rural/urban core where development is concentrated and the surrounding open space and agricultural lands of St. Helena are intended to be preserved. With the exception of hillside areas designated Woodlands and Watersheds (WW) in the existing and proposed General Plan, all lands outside the ULL are designated Agriculture (AG) regardless of their size or actual use. To meet growth demands while protecting surrounding agricultural uses, certain infill areas within the ULL have been designated as higher intensity land uses, such as Mixed-Use.

Existing Land Use

Existing land use (2018), as provided by Napa County Assessor's parcel data, is shown in Figure 3.10-1. Existing land uses within the Planning Area include residential, commercial, industrial, public, parks and recreation, and agricultural uses. The existing land uses largely correspond to the existing and proposed General Plan land use designations. Table 3.10-1 lists existing land uses within the Planning Area by total acreage and by acreage within the City of St. Helena and the three study areas.

Residential Uses

The main core of residential development within the Planning Area is located along Main Street and in the west side of the Planning Area, extending in a northeast-southwest direction (see Figure 3.10-1). Housing in the residential areas consists mostly of single-family detached houses. Some residential areas, especially rural residential areas farther from the center of St. Helena, abut agricultural uses. Multi-family housing developments are situated mainly in the central core of the Planning Area, typically adjoining single-family areas.

As shown in Table 3.10-1, single-family housing occupies approximately 597 acres (16percent) of the total land area within the Planning Area. Single-family housing is a more prominent land use within the ULL—within ULL, single-family housing occupies 486 acres (33 percent) of total land area, while outside the ULL, single-family housing occupies 111 acres (5 percent) of the total land area. Multi- family housing occupies approximately 47 acres (1.3 percent) of the Planning Area. All multi-family land uses are within the ULL. Total existing residential land uses, including single-family, multi-family, mobile home parks, and townhomes within the Planning Area occupy approximately 707 acres (20 percent of land). Within the ULL, total existing residential land uses occupy 596 acres, or 41 percent of land. Outside the ULL, existing residential uses total 111 acres, or 5 percent of land.

Commercial Uses

Existing commercial land uses, including service commercial, retail, restaurants, office and other similar central business uses, are located along or near Main Street (see Figure 3.10-1). Commercial uses along Main Street extend from north of Adams Street to Lewelling Lane, at the southerly city limits, and occupy both sides of the street for most of this length. At the center of town, between Spring and Adams streets, the commercial uses expand beyond Main Street onto intersecting and parallel streets, such as Kearney Street, and Oak, Hunt, Library, and Railroad Avenues.

As shown in Table 3.10-1, commercial uses (retail, restaurant, and similar uses) occupy approximately 64 acres (about 2 percent) of the total land area within the Planning Area. Within the ULL, commercial uses occupy 54 acres, or about 4 percent of land, while outside the ULL, commercial uses occupy 10 acres, or about 0.5 percent of land. Office uses occupy 20acres (0.5 percent) of land uses within the total Planning Area. Office uses comprise 17 acres (or approximately 1 percent) of land within the ULL and about 3 acres (0.1 percent) of land outside the ULL. Mixed uses, which consist of combined office and commercial uses, are located predominantly along the southern portion of Main Street and make up approximately 20 acres (0.6 percent) of the Planning Area. There are no commercial uses within the City of St. Helena outside of the ULL, with the exception of wineries that may have tasting rooms. However, there are some commercial uses, including wineries and retail, located in Study Area 3 along SR-29. In total, existing commercial land uses, including hotel/lodging commercial, commercial, office, and mixed office and commercial uses, occupy approximately 202 acres (about 6 percent of land uses within the Planning Area). Within of the ULL, commercial uses total about 91 acres, or 6 percent of land, while outside of the ULL, commercial uses total about 110 acres, or 5percent of land.

Industrial Uses

Two main areas of existing industrial land use are identified in the Planning Area, within St. Helena: (1) a building materials establishment (Harold Smith & Sons) and other limited industrial uses north of Grayson Avenue, in the vicinity of Sulphur Creek; and (2) a light industrial park located east of Main Street and south of Mills Lane (see Figure 3.10-1). A small industrial area is also located in Study Area 3, along SR 29 south of Inglewood Avenue. As shown in Table 3.10-1, industrial uses occupy approximately 52 acres (1.5 percent) of the total land area within the Planning Area. Industrial uses occupy 50 acres, or about 4 percent of land within the ULL, and 2 acres, or about 0.1 percent of land outside of the ULL.

Public and Quasi-Public Uses

Public and quasi-public land uses in the Planning Area include government-owned facilities, schools and churches. These uses are located mainly in the area west of Main Street, along with St. Helena High School which is located west of Main Street just south of Grayson Avenue. As shown in Table 3.10-1, existing public and quasi-public, religious/institutional, and educational uses occupy approximately 152 acres (4.2 percent) of the total land area within the Planning Area. Within the ULL, public and quasi-public uses occupy 109 acres (7.5 percent of total land area), while outside the ULL, public and quasi-public uses occupy 42.5 acres (2 percent of total land area).

Parks, Recreation, and Open Space Uses

Parks and recreational uses are located throughout the central part of St. Helena. As shown in Table 3.10-1, park and recreational uses occupy approximately 26 acres (0.7 percent) of the total land area within the Planning Area. About 20 acres, or about 1.3 percent of land within the ULL is used for parks and recreation, while about 7 acres, or 0.3 percent of land outside of the ULL is used for this purpose.

Existing open space land uses within the Planning Area are primarily located along the Napa River and Sulphur Creek. Open space land uses include areas preserved for habitat, aesthetic value, such as views, or passive recreation. Within the Planning Area, approximately 93 acres (2.6 percent) are open space lands. This total includes the 21.7-acre, City-owned "Lower Reservoir" property that may be developed into a future park. In total, 29 acres, or about 2 percent of land within the ULL is open space, while about 64 acres, or 3 percent of land outside of the ULL is open space.

Agricultural Uses

As previously discussed, agriculture is the predominant existing land use by area in the Planning Area. Agricultural uses are adjacent to the City's ULL, with large areas in the northeast and southeast portions of the city, where they extend from approximately Main Street to the Napa River. Additionally, the three Study Areas include agricultural land uses. Most parcels used for agriculture are relatively large and most are used for viticulture. In some areas, agricultural lands adjoin or have been surrounded by urban uses. Most of the agricultural land is located outside the Urban Limit Line. As shown in Table 3.10-1, agricultural uses, including wineries and rural residential areasoccupy approximately 1,853 acres (51 percent) of the total land area within the Planning Area. Of that total, approximately 273 acres are located within the Urban Limit Line and approximately 1,579 acres are located outside the Urban Limit Line. Of this total, rural residential areas occupy approximately 937 acres (26.0 percent) of the Planning Area. Rural residential uses

comprise 184 acres (about 13 percent of land) within the ULL and 753 acres (35 percent of land) outside of the ULL.

For more discussion of agricultural uses, see Chapter 3.2 Agricultural and Forestry Resources, of this EIR.

Population, Housing, and Jobs

The Proposed Plan uses a baseline year of 2018. Past trends for population, housing units, and jobs data are presented using projections from the Association of Bay Area Governments (ABAG) or estimates from the California Department of Finance (DoF). The 2018 baseline population, housing units, and jobs in the City of St. Helena, were estimated using land use assumptions from the regional traffic model, adjusted with reference to data from the DoF, ABAG, and the Napa County Assessor. While a 2018 baseline for population, housing, and jobs was estimated for the Study Areas, DoF and ABAG data is only available at the state, city, county, or unincorporated area level, and is therefore not included in the "Past and Current Trends" section below.

Past and Current Trends

As shown in Table 3.10-2, the City of St. Helena has an estimated population in 2018 of 6,118, making it the third largest city in Napa County. This estimate represents an approximately 2.8 percent increase from 2000, when the city's population was 5,950. This population growth is much slower in comparison to Napa County, which increased by approximately 13.7 percent between 2000 and 2018, from a population of 124,279 to 141,294.

Between 2000 and 2018, the number of housing units increased throughout the Bay Area by approximately 13.2 percent, from 2,552,404 to 2,888,882 (California Department of Finance, 2012) (California Department of Finance, 2018). During this period, Napa County experienced an approximate 13.6 percent growth in the housing stock, adding about 6,603 units (California Department of Finance, 2012) (California Department of Finance, 2018). During the same time, the number of housing units in the City of St. Helena increased by approximately 0.6 percent, from 2,707 housing units in 2000 to 2,874 in 2018.[1]

Within the City of St. Helena, approximately 75.5 percent of housing units are single-family and 24.5 percent is multi-family. This is consistent with the ratio of single to multi-family housing in 2000. Compared to Napa County as a whole, the city has a slightly lower proportion of single-family housing and a slightly higher proportion of multi-family housing. Table 3.10-2 presents a comparison of housing types in St. Helena and in Napa County as a whole. The average household size in St. Helena is approximately 2.44 people, which is slightly lower than Napa County's average of approximately 2.77 people (California Department of Finance, 2018).

[1] 2018 housing unit total includes accessory dwelling units (ADUs).

Table 3.10-2: Population and Housing Trends: City of St. Helena & Napa County, 2000-2018

Sources: DoF, 2000; DoF, 2018; Dyett & Bhatia, 2018

In 2016, 21.9 percent of all ownership households with a mortgage in St. Helena paid more than 30 percent of the household income towards housing costs, and nearly half of renter households paid more than 30 percent (American Community Survey, 2016). Table 3.10-3: Housing Cost Overpayment (2016), shows the number and percentage of households in St. Helena with a housing cost burden, as defined as those households paying more than 30 percent of income on housing.

Table 3.10-3: Housing Cost Overpayment (2016)[1]

Housing Units with a Mortgage	*1,477*
Overpaying Owner Household	324
Percentage of Overpaying Owners	21.9%
Housing Units without a Mortgage	*672*
Overpaying Owner Household	119
Percentage of Overpaying Owners	17.7%
Rented Units	*1,059*
Overpaying Renter Households	502
Percentage of Overpaying Renter Households	47.4%

Notes:
1. Households paying in excess of 30% of income towards housing cost.
2. Numbers may not sum due to units that were not computed in the American Community Survey.

Source: 2012-2016, American Community Survey 5-Year Estimates

According to ABAG, there were approximately 5,900 jobs in St. Helena in 2015, an increase of 5.4 percent since 2000, when there were an estimated 5,600 jobs in the city. The greatest number of jobs within the Planning Area are in the service (33.7 percent), manufacturing (21.1 percent), retail (17.8 percent), and agriculture (16.3 percent) sectors. In comparison, the total number of jobs in Napa County increased by approximately 111.4 percent between 2000 and 2015, from 66,360 to 140,300 jobs. In Napa County, the largest job sectors are health, educational, and recreational services (29.5 percent), manufacturing (20.7 percent), service (12.1 percent), and retail (8.9 percent) (Association of Bay Area Governments (ABAG), 2013).

Projections

Using the 2018 baseline population of approximately 5,900 estimated for the Proposed Plan, the City of St. Helena's population is projected to increase 12.8 percent by 2040, to 6,585. The estimated study area population in 2018 is 553 people, for a total 2018 Planning Area population of 6,392. While growth is expected within the study areas, it is not as a result of development encouraged in the Proposed Plan. Therefore, the population of the Planning Area is projected to be 7,288 by full build out in 2040. For comparison, additional projections from ABAG and DoF are provided in Table 3.10-4 for population within the City of St. Helena.

St. Helena's status as the third largest city in Napa County is expected to continue through 2040. Higher growth rates, of about 12 to 16 percent, are projected for Napa County as a whole through 2040, with most of this growth occurring in the cities of Napa and American Canyon (Association of Bay Area Governments (ABAG), 2013).

Overall, there is greater capacity for market rate housing development within the city limits than would be allowed under the St. Helena Growth Management System over the planning horizon. The Growth Management System caps the number of market rate housing units that can be built in a given year at nine, although affordable units are exempted from this cap. While the city has seen construction of four affordable units per year on average in recent years, in view of new State housing legislation aimed at stimulating affordable housing production and policies in the

Proposed Plan, an additional six new affordable units per year, each year over the life of the Plan was assumed. As such, is assumed that 15 new housing units will be constructed each year through 2040.[2]

Using the methodology discussed above, as shown in Table 3.10-4, the number of housing units within the City of St. Helena is projected to increase by 12.1 percent from 2,735 to 3,067 between 2018 and 2040. The Study Areas are projected to experience a 30.4 percent increase in housing units, though no additional development is encouraged under the Proposed Plan within these areas. In total, the Planning Area is expected to add 383 housing units – 214 single-family units and 169 multi-family units.

Table 3.10-4: Population and Housing Units Projections (2040)

	Source	*Proposed Plan*		*DoF*		*ABAG*

Notes:
1. Estimated based on St. Helena accounting for 4.3 percent of the County population.
2. Includes the City of St. Helena, the Sphere of Influence, and three Study Areas.

Sources: DOF, 2018; ABAG, 2013; Dyett & Bhatia, 2018

As shown in Table 3.10-5, by 2040, the number of jobs in St. Helena is expected to increase by approximately 17.1 percent to a total of about 6,378 jobs according to the Proposed Plan. ABAG projects less job growth, at an 11.4 percent increase between 2015 and 2040. ABAG projections for Napa County show an 18.3 percent increase in jobs between 2015 and 2040 (Association of Bay Area Governments (ABAG), 2013).

A 28.9 percent increase in jobs is projected to occur in the study areas between 2018 and 2040, for a total of 633 jobs. In total, jobs within the Planning Area are projected to increase by 18.1 percent, from 5,937 to 7,011 between 2018 and 2040.

[2] Newly constructed ADUs would be counted as housing units.

REGULATORY SETTING

Federal Regulations

There are no relevant federal laws, policies, plans, or programs that apply to the Proposed Plan in relation to this issue area.

State Regulations

California Relocation Law, Public Resources Code Section 7260 et seq.

The California Relocation Law requires the fair and equitable treatment of persons displaced as a direct result of programs or projects undertaken by a public entity. The law requires agencies to prepare a relocation plan, provide relocation payments, and identify substitute housing opportunities for any resident that is to be displaced by a public project.

Government Code Sections 65919 to 65919.11

Government Code Sections 65919 to 65919.11 summarize procedures related to interagency referrals for different types of lead agency actions, including general plan updates. Among other referrals, this part of the Government Code provides a procedure and protocols for requesting counties keep cities informed regarding land use actions within the unincorporated portions of spheres of influences and planning areas.

Department of Housing and Community Development

The State Department of Housing and Community Development (HCD) is responsible for determining the regional housing need for all jurisdictions in California and ensuring the availability of affordable housing for all income groups.

Napa County Local Agency Formation Commission (LAFCO)

The Napa County Local Agency Formation Commission (LAFCo) is an independent County agency established by State law. LAFCo has approval authority regarding changes in organization to cities, including annexations, detachments, new formations, and incorporations. LAFCo approval is necessary for changes to St. Helena's city limits or Sphere of Influence. Action by LAFCo in 2009 modified the Sphere of Influence to be co-terminus with the city limits.

Sustainable Communities and Climate Protection Act of 2008 (Chapter 728, Statutes of 2008)

The Sustainable Communities and Climate Protection Act of 2008, otherwise known as Senate Bill (SB) 375, requires the integration of land use, housing, and transportation planning to achieve regional greenhouse gas (GHG) emission reductions, adopted by the California Air Resources Board. SB 375 requires Metropolitan Planning Organizations (MPOs) to develop a Sustainable Communities Strategy (SCS)—a new element of the regional transportation plan (RTP)—to plan for achieving these GHG reduction targets. The SCS must demonstrate the attainment of the regional GHG emissions reduction targets while accommodating the full projected population of the region.

Assembly Bill (AB) 317

AB 317 (2017) established the Napa County Farmworker Centers Account to assist in the financing, maintenance, and operation of the Napa County Housing Authority's (NCHA) Farmworker Centers for year-round use by migrant and non-migrant farm labor employees. The bill requires the department to award, annually, up to $250,000 in matching funds to the NCHA upon demonstration that it is capable of continuing to effectively serve the housing needs of migrant or other farmworkers in Napa County and requires the NCHA to provide equal or greater funds from local sources.

Local Regulations

Association of Bay Area Governments (ABAG) Plan Bay Area 2040

The Metropolitan Transportation Commission (MTC), Bay Area Air Quality Management District (BAAQMD), Association of Bay Area Governments (ABAG), and Bay Conservation and Development Commission (BCDC) adopted *Plan Bay Area* in July 2013. As described in Chapter 1 of this EIR, Introduction, *Plan Bay Area* is the integrated land use/transportation plan and demographic/economic forecast for the nine-county region of the San Francisco Bay Area. The plan coordinates housing plans, open space conservation efforts, economic development strategies, and transportation investments. In July 2017, the regional agencies adopted the first update to *Plan Bay Area*, which occurs every four years.

One of the main goals of *Plan Bay Area* is to reduce greenhouse gas emissions from cars and light-duty trucks through the year 2040 to meet state goals under SB 375, the Sustainable Communities and Climate Protection Act of 2008. Under SB 375, Metropolitan Planning Organizations such as MTC must develop a Sustainable Communities Strategy (SCS) as part of the Regional Transportation Plan (RTP). *Plan Bay Area* functions as both the SCS and the RTP for the region.

To reduce greenhouse gases emissions, *Plan Bay Area* promotes compact, mixed-use, infill development within walkable/bikeable neighborhoods close to public transit, jobs, schools, shopping, parks, recreation, and other amenities. Local jurisdictions voluntarily identified Priority Development Areas (PDAs) as appropriate locations for these types of neighborhoods. PDAs are eligible for capital infrastructure funds, planning grants, and technical assistance. The adopted *Plan Bay Area* estimates that approximately 80 percent of the region's future housing needs may be met within PDAs. The strategy of focusing growth in PDAs maximizes travel choices, reduces

dependency on driving, takes advantage of existing infrastructure capacity, and reduces pressure to develop open space. No PDAs have been identified within the Planning Area.

ABAG Regional Housing Needs Allocation

Assembly Bill 2853 (AB 2853), enacted in 1980, requires all cities to address their regional "fair share allocation" of housing needs by income group in their General Plan Housing Elements. The City of St. Helena must therefore evaluate "regional fair share" as projected by ABAG, which is the council of governments for the nine-county San Francisco Bay region. ABAG's determination of the local share of regional housing takes into consideration factors such as: market demand for housing; employment opportunities; availability of suitable sites and public facilities based on local plans; commuting patterns as they relate to the differences between job creation and labor supply; type and tenure of housing; and housing needs of farmworkers.

ABAG allocates housing needs for each city and county in the region according to four specified income levels, so that each jurisdiction can make plans to provide for its "fair share" of regional housing needs by income group. To describe these housing needs, ABAG uses the income categories of very low for household incomes of up to 50 percent of the median income for the region (i.e., the county), low for 51 to 80 percent of the regional median income, moderate for 81 to 120 percent of the regional median income.

ABAG's most recent projected housing needs are for the period 2015 to 2023. ABAG has determined that a total of 31 housing units would be needed in St. Helena during this eight -year period, consisting of 8 units affordable to very low-income households, 5 units affordable to low-income households, 8 units affordable to moderate-income households, and 13 units affordable to above moderate-income households (ABAG, 2015). These "fair-share" totals represent the ABAG-projected number of units that would need to be added to St. Helena's housing stock over the period 2015 to 2023 in order to achieve an equitable distribution of housing opportunities.

California Public Utilities Commission (CPUC)

The California Public Utilities Commissions (CPUC) has jurisdiction over certain uses involving railroad right-of-way within St. Helena. CPUC regulates the safety of both publicly- and privately- owned railroad and rail transit companies, agencies, and rail crossings. The City has some authority to regulate specific uses and activities.

Napa County General Plan

Provisions of the Napa County General Plan apply to unincorporated areas of Napa County, including the three study areas adjacent the St. Helena city limits analyzed in the Proposed Plan and EIR. The Napa County General Plan land use map designates the areas north and south of the city limits for Agricultural Resource land uses and the areas east and west of the city for Agricultural, Watershed & Open Space land uses. Figure 3.10-2 shows Napa County General Plan land use designations for the unincorporated portions of the Planning Area.

The Napa County General Plan contains a series of policies for an area identified as "South St. Helena," located immediately south of the city limits. Recognizing that this area is designated for Agricultural Resource land uses but contains existing residences and businesses, the County General Plan allows existing parcels zoned for commercial uses as of February 1, 1990 "to develop

commercial uses and mixed residential-commercial uses which are permitted by the existing commercial zoning as if they were designated on the land use map for these uses" (County of Napa, 2015).

Napa County Measure A and Growth Management System

Measure A, or the Napa County Slow Growth Initiative, was approved by the voters in 1980. Measure A limited the annual number of residential building permits issued in unincorporated Napa County to reflect an annual population growth rate no higher than that of the greater Bay Area region or 1 percent, whichever was less. The measure also stipulated that at least 15 percent of new housing units permitted each year be affordable to persons of average or below-average income.

Measure A expired in December 2000 and was replaced by the Housing Allocation Program in Napa County Code Chapter 8.02 (via Ordinance No. 1178). The Housing Allocated Program was amended in 2004 to comply with federal and state land use and fair housing law, in 2008 when the Napa County General Plan was adopted, and, most recently, in 2009, when the Housing Element was updated.

The current Napa County growth management system allows for a fixed number of new residential building permits annually in unincorporated Napa County. The number, which stands at 115 as of 2017, is updated each time the Housing Element is updated to reflect new population data. Non-residential development and some limited types of residential construction, including secondary dwelling units, are exempt from the growth management system. Residential building permits subject to the annual limit are divided into four categories: owner-builders (Category 1), small-scale homebuilders (Category 2), larger housing developers (Category 3), and affordable housing (Category 4). Pursuant to Measure A, Category 4 permits make up 15 percent of the total number of permits allowed. There is currently no required percentage for annual allocations in Categories 1-3. Unused permit allocations in Categories 1-3 can be carried over for future use for up to three years. Category 4 permits carry over indefinitely, and at the end of three years, unused Category 1-3 allocations become Category 4 allocations.

Napa County Housing Authority (NCHA)

The Napa County Housing Authority (NCHA) is an advisory body to the Housing Authority and Board of Supervisors of Napa County that works to address the need for safe and affordable housing for farm workers, particularly those in the migrant/seasonal category who, in turn, support the agricultural industry of Napa County. The NCHA oversees three publicly owned and operated farm worker housing centers in Napa County, which each house approximately 60 workers. One of the housing centers is located in St. Helena. The centers are funded by the owners of vineyards with at least 45,000 acres of vineyards, who pay a $10-per-acre annual housing assessment. In June 2018, Napa County supervisors voted to raise the assessment to $11 per acre. In addition to overseeing the housing centers, NCHA reviews any project requesting funding from the County's Affordable Housing Fund.

St. Helena Residential Growth Management System

The St. Helena Residential Growth Management System (Municipal Code Section 17.152) limits the residential growth rate in the city, while providing for development of both market-rate and affordable housing units. Under this system, no more than nine building permits for market-rate housing may be issued each year. Permits remaining unused at the end of the year are carried over into the subsequent years but are only available for allocation for the construction of market-rate units in development projects that include a minimum of 40 percent income restricted dwelling units. The number of income-restricted housing units constructed is determined by the City Council through the discretionary review process. Housing agreements that are required for income-restricted housing developments in the community, contain guarantees that the dwelling units would continue to be affordable to persons of very low, low, or moderate incomes for an agreed-upon period of time (City of St. Helena, 2010e). The City of St. Helena does not own or manage income-restricted housing within the city. This is done by non-profit entities (e.g., Bridge Housing, EAH Housing, etc.) and/or by contracts with the City of Napa's Housing Department.

St. Helena Municipal Code

Title 17 Zoning Ordinance

The St. Helena Zoning Ordinance (Title 17 of the Municipal Code) implements the General Plan and provides location-specific regulation, such as use restrictions and building height and bulk limitations. Permits to construct new buildings (or to alter or demolish existing ones) may not be issued unless the proposed action conforms to the Zoning Ordinance or a variance is granted pursuant to provisions of the Zoning Ordinance. For some projects, the site may be rezoned or the Zoning Ordinance may be amended.

The Zoning Ordinance establishes 22 zoning districts, consisting of 15 independent districts and 7 overlay districts, as follows (City of St. Helena, 2010d):

- Twenty-Acre Agriculture (A-20) District
- Winery (W) District
- Agricultural Preserve (AP) District

- Low Density Residential (LR) District
- Low Density Residential One Acre Minimum (LR-1A) District
- Medium Density Residential (MR) District
- High Density Residential (HR) District
- Central Business (CB) District
- Service Commercial (SC) District
- Business and Professional Office (BPO) District
- Industrial (I) District
- Woodlands and Watershed (WW) District
- Public and Quasi-Public (PQP) District
- Parks and Recreation (PR) District
- Open Space (OS) District
- Rural-Residential Overlay (RR) District
- Flood Plain Overlay (FP) District
- Historic Preservation Overlay (HP) District
- Planned Development Overlay (PD) District
- Mobilehome Park Overlay (MHP) District

The locations of these zoning districts are generally consistent with current land use patterns.

In addition to the districts listed above, Section 17.136.060 Stream Bank Stabilization regulates development in proximity to creeks and waterways. This section requires a building setback of 20 feet between a building or structure, except for an accessory building less than 500 square feet, and the top of stream, creek or river bank. Where the average depth of the bank is eight feet or greater, the required setback from the toe of the stream bank shall be two times the depth of the bank plus 20 feet, unless special provisions for bank stabilization are installed as approved by the Public Works Director.

City of St. Helena General Plan 2015 Housing Element

Article 10.6 of the California Government Code outlines the State's Housing Element requirements. A housing element must analyze existing and projected housing needs, examine special housing needs within the population, evaluate the effectiveness of current goals and policies, identify governmental and other constraints, determine compliance with other housing laws, and identify opportunities to incorporate energy conservation into the housing stock. The element must also establish goals, policies and programs to maintain, enhance, and develop housing.

The City of St. Helena's RHNA (as explained above under ABAG Regional Housing Needs Allocation) for the planning period (2015 through 2023) projected a need for the construction of an additional 31 housing units in St. Helena during this eight-year period, consisting of 8 units

affordable to very low-income households, 5 units affordable to low-income households, 8 units affordable to moderate-income households, and 13 units affordable to above moderate-income households. The City of St. Helena 2015-2023 Housing Element identifies key infill opportunity sites for medium- and high- density residential development to meet the RHNA target. It also includes policies and implementing actions to meet housing demands, such as ensuring that the General Plan's Growth Management Policies do not limit the ability to meet regional housing needs and encouraging higher density development where appropriate.

Impact Analysis

SIGNIFICANCE CRITERIA

For the purposes of this EIR, a significant adverse impact would occur if implementation of the Proposed Plan would:

Criterion 1: **Physically divide an established community;**

Criterion 2: **Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect;**

Criterion 3: **Conflict with any applicable habitat conservation plan or natural community conservation plan.**

Criterion 4: **Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure); or**

Criterion 5: **Displace substantial numbers of existing housing or people, necessitating the construction of replacement housing elsewhere.**

METHODOLOGY AND ASSUMPTIONS

This EIR analysis considers Proposed Plan policies and goals; existing and proposed land use, housing, and economic conditions within St. Helena; and applicable regulations and guidelines.

The Planning Area for the Proposed Plan includes three study areas in unincorporated Napa County immediately adjacent to the city limits where the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities (see Chapter 2: Project Description for additional details). Existing conditions related to land use, population, and housing in the whole of the Planning Area are documented above; however, as the City does not have jurisdiction outside of the city limits and sphere of influence (SOI), Proposed Plan policies and actions would not apply in the study areas. Therefore, implementation of the Proposed Plan would not result in direct impacts related to land use, population, and housing in the study areas. Cumulative impacts related to land use, population, and housing are discussed in Chapter 5: CEQA Required Conclusions.

RELEVANT POLICIES AND IMPLEMTING ACTIONS

The following policies and implementing actions of the General Plan Update are relevant to land use and planning impacts as defined by the significance criteria above:

Land Use and Growth Management Element

- ***LU1.1*** Require new development to occur within well-defined boundaries and be consistent with the ability to provide urban services. New development should mitigate infrastructure impacts by using sustainable, best management practices in green building and stormwater management and paying its share of development impact fees, while minimizing impacts on sewer, water, energy, and natural resources.
- ***LU1.2*** Allow urban development to occur only within the Urban Limit Line. Consider an exception for on-site employee housing on Agricultural lands. Urban services, such as sewer, water, and storm drainage, will only be extended to development within the Urban Limit Line.

  The Urban Limit Line may only expand when the amount of developable land within the Urban Limit Line is insufficient to implement the General Plan policies or when logical to include developed lands receiving urban services from the City. Expansion outside the Urban Limit Line should first be considered in Urban Reserve Areas. Expansion into other areas outside the Urban Limit Line should be considered only when the proposed land use is found to further the goals and long-term objectives of the City and does not result in adverse impacts to adjacent uses in either the urban or rural areas.
- ***LU1.4*** In order to minimize and postpone the need for expansion of the Urban Limit Line, encourage infill development within currently developed areas. ***LU1.6*** Support the redevelopment of vacant and underutilized sites within the downtown area with mixed-use development opportunities. Encouraging infill development with a mix of uses will support a pedestrian-oriented, vibrant retail and commercial district that is centrally located and easily accessible to residents and neighborhoods.
- ***LU1.7*** Continue to limit the approval of market rate residential development to the maximum allowed under the Growth Management System.
- ***LU1.A*** Continue to allow the construction of second units – also known as accessory dwelling units – and consider allowing the division of single-family homes into two or more units under appropriate circumstances, in order to increase residential density and housing availability without requiring an extension of the Urban Limit Line.
- ***LU1.B*** Rezone appropriate sites with land use designations such as Central Business, Service Commercial, and Mixed-Use, in accordance with the General Plan Land Use Map. Include provisions to allow for compatible uses on the same site, either in one structure or adjacent structures. The mix of uses can be vertical or horizontal and can include attached residential development in keeping with the integrity of historic structures and historic districts.
- ***LU1.C*** Continue to update the City's housing inventory to track the status of residential growth by unit type and affordability level.

- ***LU1.D*** Review the City's housing needs every five to eight years in conjunction with updates to the Housing Element to reassess housing priorities for the future years.
- ***LU1.E*** Restrict the use of housing units as short-term rentals, except for those allowed by the Short-Term Rental Ordinance. ***LU2.1*** Promote a mix of housing types and price ranges that are consistent with the Housing Element RHNA categories of housing affordability.
- ***LU2.5*** Encourage the development of higher density housing in areas near the center of the city and close to recreation and services, such as transit, retail, and public facilities.
- ***LU2.6*** Allow residential density at the higher end of the permitted range for single family development within Medium and High Density Residential Land Use designations as long as the development character of the single family area is maintained, including lot widths, orientation to street, building heights, onsite parking, traffic, and noise, among other considerations.
- ***LU2.7*** Ensure safe, walkable, and bikeable residential neighborhoods and vibrant, livable streets.
- ***LU2.A*** Update the zoning ordinance and map to be compatible with the General Plan land use map and designations.
- ***LU3.B*** Establish an inventory of all non-residential uses in the city and a program for monitoring future non-residential development. Combine this inventory with efforts to balance jobs and housing.
- ***LU4.A*** Update the zoning ordinance and map to be compatible with the General Plan land use map and designations.
- ***LU5.2*** Encourage the County to continue to promote agricultural uses and to limit further development in unincorporated areas surrounding the city..
- ***LU5.A*** Update the zoning ordinance and map to be compatible with the General Plan land use map and designations.

Economic Sustainability Element

- ***ES1.4*** Encourage the creation of workforce housing to support the local employment base in keeping with small town smart growth.

Circulation Element

- ***CR1.1*** Promote a connected street and bicycle and pedestrian network within the city to provide better internal automobile, bicycle, and pedestrian connections for residents.
- ***CR1.K*** Adopt and implement a citywide, Multimodal Transportation Mitigation Fee program to provide funding on a fair share bases for transportation improvements that reduce citywide automobile trips and contribute to the provision of a continuous path of travel for walking and bicycling from the development site to the center of downtown and other key destinations. Such transportation improvements include completing the bicycle and pedestrian network, implementing transportation demand and systems management strategies, and improving traffic signal coordination on State Route 29. Ensure that fees

take into consideration the contribution of new development to changes in net new automobile trips and change in travel time along State Route 29.

- ***CR2.1*** Create a comprehensive bicycle and pedestrian network that enhances neighborhood connectivity.

Community Design Element

- ***CD6.1*** Ensure a connected circulation system that maximizes pedestrian and bicycle connectivity.
- ***CD6.2*** Promote the inclusion of bicycle and pedestrian trails and bicycle lanes throughout the City, as well as connections to regional trail systems, such as the Napa Valley Vine Trail. (Also see the Parks and Recreation and Circulation elements for additional policies and implementing actions relating to bicycle and pedestrian trails and amenities.)

Housing Element

- ***HE1.1*** Ensure that the General Plan's Growth Management Policies do not limit our ability to meet regional housing needs.
- ***HE1.2*** Focus on key opportunity sites and work with property owners and developers to facilitate development of new affordable housing.
- ***HE1.4*** Address workforce housing needs by supporting an improved jobs/housing "match."
- ***HE1.A*** Continue to exempt permits for regulated affordable units as well as second units from the Growth Management System. The objective is to accommodate production to meet the Regional Housing Needs Allocation (RHNA) of 31 housing units (8 units for very low-income households, 5 for low-income households, 5 for moderate-income households, and 13 for above moderate-income households). Developers shall be encouraged to propose projects that meet this need.
- ***HE1.B*** Review and possibly amend the Growth Management System to encourage the production of regulated affordable and workforce housing units. Review the Growth Management System (GMS) to make sure that it is not disproportionately affecting the development of affordable housing. Exemptions for restricted "workforce" housing units should be explored, and adopt as appropriate, in addition to current exemptions for affordable housing units. Continue to allow a maximum of 9 market rate units per year and priority allocation of annual building permit allocations and carryover permits to market rate units in development projects that include a minimum of 40 percent affordable units.
- ***HE1.C*** Give projects that include affordable housing units priority access to water and sewer resources over other new projects should the capacity of the local water or sewer systems become inadequate to meet the full demand for new connections.
- ***HE2.1*** Encourage higher density development where appropriate.
- ***HE2.4*** Promote second unit production.
- ***HE2.5*** Allow conversion of single-family homes to multi-unit dwellings.

- ***HE2.A*** Provide incentives for higher density housing. Explore possible incentives for building attached market rate housing units for rent and for sale. Incentives to adopt as appropriate include, but are not restricted to, fast tracking development applications, deferred development fees, reduced parking and/or other city standards, and density bonuses.
- ***HE2.B*** Study potential modifications to the Zoning Ordinance to facilitate higher density housing [and discourage construction of oversize homes]. Modify the Zoning Ordinance to encourage higher density developments [and restrict construction of large single-family units], including current floor area ratios and yard and setback requirements.
- ***HE2.C*** Amend regulations to discourage exemptions from the minimum density requirements. The City shall discourage exemptions for minimum density requirements and establish mitigation measures for exemptions in the Zoning Ordinance.
- ***HE2.D*** Modify section 17.100 of the Zoning Ordinance to rename the Mobilehome Park Overlay District to "Manufactured Housing Overlay District." Develop policies to streamline the review process for this overlay district on residential land for projects that create land-ownership opportunities for residents. Support giving residents the right of first refusal if an existing park is to be sold.
- ***HE2.E*** Amend the "Subdivisions" section of the Municipal Code. The City will amend Title 16 of the Municipal Code to prevent subdivision activity from effectively resulting in lower densities and a loss of potential housing units on the site.
- ***HE2.I*** Review and revise development standards pertaining to second units. Ensure that the development of second units is physically and financially feasible in targeted areas. Give particular attention to parking standards, setbacks, and impact fees.
- ***HE2.J*** Provide financial incentives for second unit development. Incentives might include low interest loans or fee waivers.
- ***HE2.K*** Target specific areas for second unit incentives. Create incentives to construct second units in the medium density areas near downtown. Incentives to adopt as appropriate include, but are not restricted to, fast tracking development applications, deferred development fees, and reduced parking and/or other city standards.
- ***HE2.O*** Identify appropriate 'target' areas for conversion of single-family homes to multi-unit dwellings. Identify areas, zoning districts, or specific sites where conversion would be appropriate or desirable.
- ***HE2.P*** Develop a program to encourage affordable housing in clusters of 4-6 units on Infill parcels on west side of town. The City will post an inventory of potential sites on the City's web site. In addition the City will explore and adopt as appropriate incentives to encourage affordable housing clusters, including, but not limited to priority permit processing, reduced or waived development fees, reduced parking and/or other city standards, and an additional density bonus.
- ***HE3.1*** Protect the existing stock of affordable and market rate housing.
- ***HE3.B*** Charge an affordable housing impact fee whenever housing units are converted to other uses. Exempt conversion projects that create affordable for-sale housing from this impact fee.

- ***HE3.C*** Address the potential loss of assisted units. Identify assisted properties at risk of conversion to market rates and work with the property owners and/or other parties to ensure that they are conserved as affordable housing.
- ***HE3.D*** Continue to limit the conversion of market rate housing to vacation rentals. Abate the use of illegal vacation rentals, including time shares and fractional interests.

IMPACTS

Impact 3.10-1 Implementation of the Proposed Plan would not physically divide an established community. (*No Impact*)

The physical division of an established community typically refers to the construction of a linear feature, such as an interstate highway or railroad tracks, or removal of a means of access, such as a local bridge that would impact mobility within an existing community of between a community and outlying area. The Proposed Plan does not involve any such features, and would not remove any means of access or impact mobility.

While the Proposed Plan does not involve the construction of physical features that could divide a community, it still contains policies and implementing actions encouraging increased connections throughout the Planning Area. Policies LU2.7, CR1.1, CR2.1, CD6.1, and CD6.2 and Implementing Action CR1.K aim to create better connections for pedestrians and bicycles both within the City of St. Helena and regionally.

As no features within the Proposed Plan would physically divide a community, and the Plan contains policies and implementing actions to increase connectivity, there would be no impact under this provision from the Proposed Plan.

Mitigation Measures

None required.

Impact 3.10-2 Implementation of the Proposed Plan would not conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the Plan (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect. (*No Impact*)

Conflicts with Existing City of St. Helena Plans, Policies or Regulations

Since the Proposed Plan updates policies and land use designations for future development and would replace the 1993 General Plan, it may naturally be inconsistent with existing planning regulations outside of the proposed General Plan, such as density/intensity standards, zoning, and allowed uses, that were designed to implement the 1993 General Plan. These existing regulations would be updated to be consistent with and/or effectively implement the Proposed Plan, if it were adopted. Additionally, the City's Zoning Ordinance would be revised to implement the Proposed Plan, as required by State law (Government Code Section 65860[a]), and it would translate the proposed General Plan policies into specific use regulations, development standards, and performance criteria to govern development on individual properties. The Zoning Ordinance will

ultimately prescribe standards, rules, and procedures for development and the Zoning Map will provide more detail than the proposed General Plan Land Use Diagram.

In general, City of St. Helena zoning districts are similar to the land use designations in the Proposed Plan. Table 3.10-3 lists land use designations in the Proposed Plan and the corresponding zoning districts. As shown in the table, the only land use designation for which there is currently no corresponding zoning district is the proposed Mixed-Use land use designation. In order to maintain consistency with the General Plan, the Zoning Ordinance update will need to include establishment of a mixed-use zoning district and/or provide for other changes to the Zoning Ordinance.

Table 3.10-6: Proposed General Plan Update Land Use Designations and Corresponding Zoning Districts

Land Use Designation	*Allowable Uses*	*Allowable Density/ Intensity*	*Corresponding Zoning District*
Low Density Residential	Single-family detached homes, secondary residential units and limited agricultural uses	1.0 to 5.0 dwelling units per acre	LR: Low Density Residential LR-1A: Low Density Residential 1-Acre Minimum
Medium Density Residential	Single-family detached and attached homes and secondary residential units	5.1 to 16.0 dwelling units per acre	MR: Medium Density Residential
Higher Density Residential	Single-family and multi-family housing, including apartments, townhouses, and group homes	16.1 to 28.0 dwelling units per acre	HR: High Density Residential
Mixed-Use	Medium density residential mixed with retail, office, restaurant, or other local-serving uses	Up to 20 dwelling units per acre; maximum FAR 1.0	None (To be established)
Central Business	Retail and commercial businesses that serve residents and visitors, including restaurants, lodging, retail, office, etc.	Maximum FAR 2.0 with off-site parking	CB: Central Business
Service Commercial	Retail and service uses that are local-serving and may be auto-oriented, including offices, restaurants, service stations, etc.	Maximum FAR 0.50	SC: Service Commercial
Business and Professional Office	Administrative and professional office uses, including medical, financial, etc.	Maximum FAR 0.50	BPO: Business and Professional Office

Table 3.10-6: Proposed General Plan Update Land Use Designations and Corresponding Zoning Districts

Land Use Designation	*Allowable Uses*	*Allowable Density/ Intensity*	*Corresponding Zoning District*
Industrial	Industrial parks, warehouses, light manufacturing, auto and farm-related uses	Maximum FAR 0.50	I: Industrial
Open Space	Natural open spaces devoted to natural resource preservation and management, outdoor recreation, public health and safety	N/A	OS: Open Space
Parks and Recreation	Parks and public recreation uses	N/A	PR: Parks and Recreation
Public and Quasi-Public	Government-owned facilities, schools, churches, cemeteries, etc.	Maximum FAR 0.50.	PQP: Public and Quasi-Public
Woodland and Watershed	Very low density residential that ensures protection of wildlife, vegetation, open space, and watershed resources	Minimum parcel size 5 acres	WW: Woodlands and Watershed
Agriculture	Agricultural and winery uses with restricted single-family residential	Minimum parcel size 5 to 40 acres	A-20: Twenty-Acre Agriculture W: Winery AP: Agricultural Preserve
Overlay Zones (Can implement any General Plan designation in combination with base zone district)			
RR: Rural Residential			
SP: Specific Plan			
FP: Flood Plain			
HP: Historic Preservation			
PD: Planned Development			
MHP: Mobilehome Park			
PI: Parking Impact			

Sources: City of St. Helena, 2018; Dyett & Bhatia, 2018

In addition to the Zoning Ordinance, the Proposed Plan is consistent with the City of St. Helena's growth plans, including the ULL and the Residential Growth Management System, as the majority of development encouraged under the Proposed Plan is within the ULL and does not anticipate development of more than nine market-rate housing units per year. Any development outside of the ULL would be agricultural or rural residential, and therefore would be low-density and would not change the land uses and character of these outlying areas. Development is not located near creeks in a manner that would violate the City's regulations on creek setbacks.

Implementing Actions LU1.B, LU2.A, LU4.A, and LU5.A address updating the Zoning Ordinance to be consistent with the Proposed Plan. Policies LU1.1, LU1.2, LU1.4, LU1.7, and LU5.2 encourage development only within the ULL and that adheres to the City's Residential Growth Management System.

Due to policies and implementing actions within the Proposed Plan, there would be no conflict with existing City of St. Helena plans, policies, or regulations.

Conflicts with Applicable Land Use Plans, Policies, and Regulations from other Jurisdictions and Regulatory Agencies

The Proposed Plan would not conflict with any applicable land use plans, policies, or regulations of outside agencies with jurisdiction in St. Helena. The City of St. Helena is the primary agency with jurisdiction over the city limits, and the Proposed Plan would represent the primary land use plan applicable to the area. In addition to the City of St. Helena, the CPUC has jurisdiction over the railroad right-of-way and Napa County has jurisdiction over the study areas located in unincorporated Napa County. As the Proposed Plan does not encourage any development in the railroad right-of-way or in the three study areas, the Proposed Plan does not conflict with other agency's plans, policies, or regulations.

Potential development outlined in the Proposed Plan (approximately 332 new housing units in the city by 2040) is also consistent with ABAG's RHNA. Policies and implementing actions included in the Proposed Plan, such as LU1.D and LU2.1 would limit the rate of residential development, while providing for development of affordable housing, at a rate that exceeds the RHNA for the City of St. Helena.

Due to consistency with existing plans, policies, and regulations from other agencies with jurisdiction in the Planning Area, as well as policies and implementing actions within the Proposed Plan, there is no impact resulting from a conflict with an applicable land use plan, policy, or regulation.

Mitigation Measures

None required.

Impact 3.10-3 Implementation of the Proposed Plan would not conflict with any applicable habitat conservation plan or natural community conservation plan (*No Impact*)

A significant impact could occur if development under the Proposed Plan occurred in locations that are governed by an applicable habitat conservation or natural community conservation plan. However, there are no applicable habitat conservation plans or natural community conservation plans within the Planning Area. (See also Section 3.4, Biological Resources, of this EIR.) The closest natural community conservation plan is the Yolo County NCCP/HCP located east of Lake Berryessa. As there are no such applicable plans within or in close proximity to the Planning Area, the Proposed Plan has no impact.

Mitigation Measures

None required.

Impact 3.10-4 Implementation of the Proposed Plan would not induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure). (*Less Than Significant*)

The Proposed Plan could induce population growth in the City of St Helena. As discussed in Chapter 2, Project Description, the 2040 buildout is projected to include an estimated 746 new residents and 332 new housing units in the city by 2040. Estimated population at buildout falls between projections developed by ABAG and DoF. An additional 150 residents and 51 new housing units are projected in the study areas, though this growth is not attributed to the Proposed Plan. Additional population and housing units in the study areas is the result of continued growth in unincorporated Napa County, which has jurisdictional control over these areas. In total, the Planning Area is projected to increase by 896 residents and 383 housing units by 2040.

The 746-person population increase through 2040 represents an average annual growth rate of 0.6 percent. Considering that the City of St. Helena experienced a slight decrease in population between 2000 and 2010, the growth rate from 2018 to build out is comparable to the 0.2 percent average annual growth rate observed between 2000 and 2018.

Growth projected under the build out scenario is consistent with the Residential Growth Management System referenced in the Regulatory Setting section above, which allows a maximum of nine new market rate residential units to be constructed within a calendar year (subject to the constraints listed above). Development under the Proposed Plan is concentrated within the ULL as infill, which is consistent with state regulations, including SB375 and regional plans, such as Plan Bay Area, which call for growth in compact development and limits sprawl, thereby reducing the impacts of development. Limited amounts of new development may occur outside of the ULL in agricultural or rural residential land use areas, however, this development would be at a density consistent with existing development in the more rural parts of the city.

Policies and Implementing Actions included in the Proposed Plan would limit the rate of residential development (Policy LU1.7) provide for development of affordable housing (Implementing Actions LU1.A and LU1.C, Policies HE1.1 and HE1.2), encourage infill development (LU1.1, LU1.4, LU1.6), and seek to achieve a balance of jobs and housing (Implementing Action LU3.B, Policy ES1.4, Policy CC1.2, Policy HE1.4, and Implementing Actions HE1.A, HE1.B, HE1.C, HE1.E, and HE2.Q), thus helping to reduce the environmental impacts of population growth and the development needed to accommodate it to a less than significant level.

Mitigation Measures

None required.

Impact 3.10-5 Implementation of the Proposed Plan would not displace substantial numbers of existing housing or people, necessitating the construction of replacement housing elsewhere. (*Less than Significant*)

Development under the Proposed Plan could result in the displacement of existing residents or housing units if new development raised housing costs throughout St. Helena or called for the demolition or redevelopment of existing housing. However, the majority of developed land within the city is composed of residential and agricultural uses that are not anticipated to undergo substantial land use changes under the Proposed Plan. Additionally, the Proposed Plan does not propose converting established residential areas to non-residential land uses or changing the development character of existing developed residential areas.

Overall, the Proposed Plan is expected increase the number of dwelling units within the City of St. Helena. Additional growth is expected within the Study Areas, but not as a direct result of the Proposed Plan. The projected 332 new housing units within the city can accommodate the expected population growth of 746 residents with an average household size consistent with the 2018 baseline.

Despite additional housing, as shown in the Environmental Setting section above, a substantial portion of St. Helena residents are burdened by housing costs, as defined as paying more than 30 percent of household income towards housing costs. Therefore, increasing the supply of housing may not meet the housing needs of the residents. While the number of permits issued for market-rate housing units within the City of St. Helena is limited to nine per year, the number of affordable housing units is not capped. If there is additional demand for affordable housing, the Residential Growth Management System allows this demand to be met. The Proposed Plan assumes a total of 15 new housing units per year, which includes nine market-rate and six affordable units. This is greater than the amount of housing outlined in ABAG's RHNA.

State and local regulations aim to reduce displacement and protect existing residents. AB317 and the Napa County Housing Authority (NCHA) provide housing for migrant and non-migrant farm workers in Napa County. This housing is provided through three publicly owned and operated farm worker housing centers in the County, one of which is located in St. Helena. The centers are funded through assessments on large vineyards.

Policies and implementing actions in the Proposed Plan aim to ensure that the new housing serves the diverse needs of the community, with affordable, senior, and multi-family housing. Policy HE2.4 and Implementing Actions LU1.A, HE2.I, HE2.J, and HE2.K encourage development of accessory dwelling units. Policies LU2.5, LU2.6, HE2.1, HE.2.2, and HE2.5, and Implementing Actions HE2.A, HE2.B, HE2.C, HE2.E, HE2.O, and HE2.P encourage development at higher densities. Policies HE3.1 and HE3.2, as well as Implementing Actions LU1.E, HE2.D, HE.3.A, HE3.B, HE3.C, and HE3.D encourage the protection of the existing housing stock, including affordable housing and mobile homes. Policies LU1.2 and ES1.4 encourages the creation of workforce housing to reduce the city's jobs-housing imbalance and support the local employment base.

With adherence to existing regulations and implementation of policies and actions within the Proposed Plan, no net population or housing displacement would be expected, and any potential displacement of existing residents and housing units would be reduced to a less than significant level.

Mitigation Measures

None required.

3.11 Noise

This section assesses potential environmental impacts related to noise from future development under the Proposed Plan, including those associated with noise standards, groundborne vibration, ambient noise levels, and airport noise. The section describes the characteristics, measurement, and physiological effects of noise; characteristics of groundborne vibration; and existing sources of noise and vibration in the Planning Area, as well as relevant federal, State, and local regulations and programs.

There was one comment on the Notice of Preparation related to noise. The commenter requested that potential development in the industrial zone on the southeast side of the city be examined for potential noise impacts. Issues relevant to this area are discussed in this section in terms of stationary and traffic noise.

Environmental Setting

PHYSICAL SETTING

Noise

Noise Characteristics and Measurement

Noise is generally defined as unwanted sound and can consist of any sound that may produce physiological or psychological damage and/or interfere with communication, work, rest, recreation, and sleep. The classification of sound as noise is subjective and relies heavily on the quality and context of the sound.

The objectionable nature of noise may be caused by its pitch or its loudness. Pitch is the height or depth of a tone or sound, depending on the frequency of the vibrations that produce the sound. Higher pitched signals sound louder to humans than sounds with a lower pitch. Loudness is intensity of sound waves combined with the reception characteristics of the ear and is measured by the amplitude of the sound wave.

In addition to the concepts of pitch and loudness, there are several noise measurement scales that are used to describe noise in a particular location. A decibel (dB) is a unit of measurement that indicates the relative amplitude of a sound. The zero on the decibel scale is based on the lowest sound level that the healthy, unimpaired human ear can detect. Sound levels in decibels are calculated on a logarithmic basis. Thus, an increase of 10 decibels represents a ten-fold increase in acoustic energy, while 20 decibels is 100 times more intense, 30 decibels is 1,000 times more intense, and so on. There is a relationship between the subjective noisiness or loudness of a sound

and its intensity. Each 10-decibel increase in sound level is perceived as approximately a doubling of loudness over a fairly wide range of intensities. Technical terms are defined in Table 3.11-1.

Table 3.11-1: Definitions of Acoustical Terms

Term	*Definitions*
Decibel (dB)	A unit describing the amplitude of sound, equal to 10 times the logarithm to the base 10 of the ratio of two like quantities.
Frequency (Hz)	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz.
A-Weighted Sound Level (dBA)	The sound pressure level in decibels as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de- emphasizes low and high frequency components of the sound in a manner similar to the frequency response of the human ear.
Equivalent Noise Level (Leq)	The average A-weighted sound level during the measurement period.
Lmax, Lmin	The maximum and minimum A-weighted sound level during the measurement period with the sound meter using the fast time weighting.
L01, L10, L50, L90	The A-weighted sound levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level (DNL)	The average A-weighted sound level during a 24-hour day, obtained after the addition of 10 decibels to levels measured at night between 10:00 pm and 7:00 am.
Community Noise Equivalent Level (CNEL)	The average A-weighted noise level during a 24-hour day, obtained after addition of 5 decibels in the evening from 7:00 pm to 10:00 pm and after addition of 10 decibels to sound levels measured in the night between 10:00 pm and 7:00 am.
Ambient Noise Level	The sound level measured in the absence of an intrusive or extraneous noise.
Intrusive Noise	The noise from a source of specific origin which intrudes above the existing background sound level. The degree of intrusiveness of a sound depends upon its amplitude, duration, frequency, time of occurrence and tonal or informational content as in contrast to the prevailing background sound level which exists in the absence of the intrusive noise.

Source: Handbook of Acoustical Measurements and Noise Control, Harris, 1998

There are several methods of characterizing sound. The most common in California is the A-weighted sound level or dBA. This scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Representative outdoor and indoor noise levels in units of dBA are shown in Table 3.11-2. Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound or the statistical behavior of the variations must be used. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events. This energy-equivalent sound/noise descriptor is called Leq. The most common averaging period is hourly, but Leq can describe any series of noise events of arbitrary duration.

Table 3.11-2: Typical Noise Levels in the Environment

Common Outdoor Activities	*Noise Level (dBA)*	*Common Indoor Activities*
Jet fly-over at 1,000 feet	110 dBA	Rock band
Gas lawn mower at 3 feet	100 dBA	Food blender at 3 feet
Diesel truck at 50 feet at 50 mph	90 dBA	Garbage disposal at 3 feet
Noisy urban area, daytime	80 dBA	Vacuum cleaner at 10 feet
Gas lawn mower, 100 feet	70 dBA	Normal speech at 3 feet
Commercial area Heavy traffic at 300 feet	60 dBA	Large business office
Quiet urban daytime	50 dBA	Dishwasher in next room
Quiet urban nighttime	40 dBA	Theater, large conference room
Quiet suburban nighttime	30 dBA	Library
Quiet rural nighttime	10 dBA	Bedroom at night, concert hall (background)

Source: Technical Noise Supplement (TeNS), Caltrans, September 2013

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends upon the distance the receptor is from the noise source. Close to the noise source, the models are accurate to within about plus or minus 1 to 2 dBA.

Sensitivity to noise increases during the evening and at night, because excessive noise interferes with the ability to sleep. In order to capture the heighted sensitivity to noise during evening hours, 24-hour descriptors have been developed that incorporate artificial noise penalties added to quiet-time noise events. The Community Noise Equivalent Level (CNEL) is a measure of the cumulative noise exposure in a community, with a 5-dB penalty added to evening (7:00 PM to 10:00 PM) and a 10 dB-addition to nocturnal (10:00 PM to 7:00 AM) noise levels. The Day/Night Average Sound Level, DNL, is essentially the same as CNEL, with the exception that the evening time period (7:00 PM to 10:00 PM) is dropped and all occurrences during this three-hour period are grouped into the daytime period.

Effects of Noise

Audible increases (increases that are noticeable to humans) in noise levels generally refer to a change of 3 dB or greater, since this level has been found to be barely perceptible in exterior environments. Changes in the noise level between 1 and 3 dB has been found to be noticeable only in laboratory environments, and changes in noise level of less than 1 dB are inaudible to the human ear.

Physical damage to human hearing begins at prolonged exposure to noise levels higher than 85 dBA. Exposure to high noise levels affects the entire system, with prolonged noise exposure in excess of 75 dBA increasing body tensions and thereby affecting blood pressure and functions of

the heart and the nervous system. Extended periods of noise exposure above 90 dBA would result in permanent cell damage; at 120 dBA, sound levels reach the threshold of feeling in the ear; at 140 dBA, sound levels reach the threshold of pain; and a sound level of 160 to 165 dBA will potentially result in dizziness or loss of equilibrium.

Noise-Sensitive Receptors

Noise-sensitive receptors are land uses where the presence of unwanted sound could adversely affect the use of the land. Examples include residential areas, senior and child care facilities, schools, and religious facilities.

Sources of Noise

In the Planning Area, sources of noise include major roadways, land uses that rely on heavy equipment, the Napa Valley Wine Train, and intermittent sources. Common sources of noise are described below.

Traffic

Traffic noise levels generally depend on three major factors: the volume of traffic, the speed of traffic, and the number of trucks in the flow of traffic. Vehicle noise is a combination of the sounds produced by the engine, exhaust, tires, and the wind generated by taller vehicles. Other factors that affect the perception of traffic noise include distance from the roadway, terrain, vegetation, and natural and structural obstacles.

Major sources of transportation noise in the Planning Area include SR 29 and major roadways such as Silverado Trail, Starr Avenue, Railroad Avenue, Oak Avenue, Valley View Street, Elmhurst Avenue, Madrona Avenue, Fulton Lane, Adams Street, Hunt Avenue, Mitchell Drive, Pope Street, Spring Street, Grayson Avenue, and Sulphur Spring Avenue. Figure 3.11-1 shows existing noise contours for major streets in the Planning Area based on traffic volumes (see Section 3.13: Transportation for more information on traffic measurement and modeling) and a noise survey conducted between May 29 and June 2 of 2018. Noise survey locations are shown in Figure 3.11-2. Table 3.11-3 shows existing noise levels at 50 feet from the roadway centerline for major roads in the Planning Area.

Railway

The Napa Valley Wine Train is a source of railway noise as it passes through the Planning Area. The Wine Train makes up to two round trips per day, one during lunch and one during dinner (Napa Valley Wine Train, 2015), for a total of four one-way trips through the city. The railroad tracks roughly parallel Main Street in the south and central portions of the city and diverge near Pope Street, continuing northward to the terminus of the railroad line at about Pratt Avenue.

The most significant source of noise associated with the Wine Train is the train warning whistle. Unless a "quiet zone" has been established, trains that travel at a speed less than 45 mph are required to sound their warning whistle at all public grade crossings at least 15 seconds but not more than 20 second before entering a crossing to warn pedestrians and motorists of the oncoming train. These warning whistles can produce maximum noise levels up to 110 dBA Lmax at 50 feet. The sound produced by the Wine Train warning whistle is audible throughout the community.

Assuming one train passby per hour (significantly greater than the actual occurrence but accommodating for any future expansion of services), Napa Valley Wine Train operations generate an hourly average noise level of 66 dBA Leq at a distance of 50 feet from the tracks. Day-night average noise levels are calculated to be 64 dBA Ldn at a distance of 50 feet from the tracks assuming four trips per day between the hours of 7:00 a.m. and 10:00 p.m. Although the Wine Train travels at a relatively slow speed throughout St. Helena, the train is a source of perceptible groundborne vibration. Assuming a travel speed of about 20 mph, groundborne vibration levels

would be expected to be perceptible within approximately 50 to 75 feet from the center of the tracks.

Aircraft

The closest airport to St. Helena is Angwin-Parrett Field Airport, located approximately 4 miles northeast of the city limits. Aircraft operating out of this airport, as well as others in the Bay Area, intermittently contribute to ambient noise levels in the city. Aircraft based at Angwin-Parrett Field Airport include 38 single-engine airplanes, four multi-engine airplanes, and two ultralights. The airport averages about 27 aircraft operations per day (AirNav.com, 2016). Approximately 80 percent of aircraft operations are local general aviation and 20 percent are transient general aviation. Noise generated by these overflights, although audible and noticeable at times, does not measurably affect daily average noise levels in the city.

The nearest private airstrip to the Planning Area is Pope Valley Airport. There is one multi-engine aircraft based on the field and aircraft operations is 24 local general aviation operations per year (AirNav.com, 2018). Activity at small private landing strips is highly variable, thus it is generally not practical to develop CNEL contours for these airstrips. The 2007 Draft EIR for the Napa County General Plan provides data for typical sounds generated by small aircraft that may utilize private airstrips as a function of distance, shown in Table 3.11-4.

Table 3.11-4: Typical Sound Levels Generated by Small Aircraft (dBA)

Slant Distance (feet)	*Single Engine Takeoff*	*Single Engine Landing*	*Twin Engine Takeoff*	*Twin Engine Landing*
500	74	66	80	72
1,000	71	63	77	69
2,000	67	59	73	65
4,000	63	55	69	61
8,000	58	50	64	56

Source: Napa County, BDR, 2005 (from the 2007 Draft EIR for the Napa County General Plan Update)

Noise from Agricultural Activities

Agricultural activities in the Planning Area can be sources of intermittent noise. For example, high noise levels are generated by wind machines used for agriculture in the early spring, with noise levels of approximately 90 dBA at nearby residential receptors. Tractors and sulphur blowers that are also employed in the vineyards in the early hours of the morning create other agricultural-related noise.

Stationary Noise Sources

The predominant stationary noise source in the City of St. Helena is the concrete batch plant owned and operated by Harold Smith & Son, Inc. located at 800 Crane Avenue. Noise generated by this facility includes the sounds generated by the plant itself as well as the operation of trucks and other heavy equipment located on the site.

Noise is also generated on individual parcels whether industrial, commercial, or residential. These smaller sources of noise do not negatively affect the overall noise environment throughout the community.

Other Noise Sources

Other existing sources of noise include commercial, recreational, and school uses. Noise sources associated with commercial uses include mechanical equipment, as well as activities associated with parking lots, loading docks, and drive-throughs. Mechanical equipment is used extensively in buildings to provide heating, cooling, air circulation, and water supply. Mechanical equipment that produces noise includes motors, pumps, and fans. Although noise levels from these sources are generally low at nearby properties, such sources may operate continuously and may include pure tones that make them audible and sources of annoyance at a substantial distance.

Intermittent or temporary noise sources include portable power equipment such as leaf blowers, lawn mowers, portable generators, electric saws and drills the municipal fire siren (located adjacent to the City fire station) operated to alert the St. Helena Fire Department of emergency events and other similar equipment. The sirens sound on an average of two to three times per day, with approximately half of these soundings occurring during nighttime hours. Siren sound levels exceed 100 dBA at residences near the sirens and drop off to around 55 dBA at distant residential areas. Although these noise sources are typically short in duration, they are often loud and can be sources of annoyance.

Groundborne Vibration

Vibration Characteristics and Measurement

Ground vibration consists of rapidly fluctuating motions or waves. Several methods, including Peak Particle Velocity (PPV) and Root Mean Square (RMS) velocity, are typically used to quantify the amplitude of vibration. PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. RMS velocity is defined as the average of the squared amplitude of the signal. PPV and RMS vibration velocity amplitudes are used to evaluate human response to vibration.

Factors that influence groundborne vibration and noise include the following:

- **Vibration Source.** Vehicle suspension, wheel types and condition, track/roadway surface, track support system, speed, transit structure, and depth of vibration source.
- **Vibration Path.** Soil type, rock layers, soil layering, depth to water table, and frost depth.
- **Vibration Receiver.** Foundation type, building construction, and acoustical absorption.

Among the factors listed above, there are significant differences in the vibration characteristics when the source is underground versus at ground surface. In addition, soil conditions are known to have a strong influence on the levels of groundborne vibration. Among the most important factors are the stiffness and internal damping of the soil and the depth to bedrock. Vibration propagation is more efficient in stiff clay soils than in loose sandy soils, and shallow rock seems to concentrate the vibration energy close to the surface and can result in groundborne vibration

problems at a great distance from the source. Factors such as layering of the soil and depth to water table can have significant effects on the propagation of groundborne vibration. Soft, loose, sandy soils tend to attenuate more vibration energy than hard, rocky materials. Vibration propagation through groundwater is more efficient than through sandy soils.

Effects of Groundborne Vibration

Human response to ground vibration has been correlated best with the vibration velocity level. The vibration velocity level is expressed on the decibel scale. The abbreviation "VdB" is used in this document for vibration decibels to reduce the potential for confusion with sound decibels.

Typical background vibration levels in residential areas are usually 50 VdB or lower, well below the threshold of perception for most humans. Perceptible vibration levels inside residences are attributed to the operation of heating and air conditioning systems, door slams, and foot traffic.

Table 3.11-5 identifies common sources of vibration, the associated human reaction, and the potential for structural damage. Construction activities, train operations, and street traffic are some of the most common external sources of vibration that can be perceptible inside residences. Railroad trains, agricultural operations, and construction activities within the St. Helena Planning Area are potential sources of ground vibration.

Table 3.11-5: Typical Levels of Groundborne Vibration

Human/Structural Response	*Velocity Level, in Vibration Decibels (VdB)*	*Typical Events (50-Foot Setback)*
Threshold, minor cosmetic damage	100	Blasting, pile driving, vibratory compaction equipment Heavy tracked vehicles (Bulldozers, cranes, drill rigs)
Difficulty with tasks such as reading a video or computer screen	90	Commuter rail, upper range
Residential annoyance, infrequent events	80	Rapid transit, upper range Commuter rail, typical bus or truck over bump or on rough roads
Residential annoyance, occasional events	70	Rapid transit, typical
Residential annoyance, frequent events	60	Buses, trucks and heavy street traffic
Approximate human threshold of perception to vibration Lower limit for equipment ultra-sensitive to vibration	50	Background vibration in residential settings in the absence of activity

Source: Transit Noise and Vibration Impact Assessment, U.S. Department of Transportation Federal Transit Administration, May 2006

Table 3.11-6 describes the human response to different levels of ground-borne noise and vibration. The first column is the vibration velocity level, and the next two columns are for the corresponding noise level assuming that the vibration spectrum peaks at 30 Hz or 60 Hz (FTA, 2006). The annoyance levels shown in Table 3.11-6 should be interpreted with care since vibrations may be found to be annoying at much lower levels than those shown, depending on the level of activity or inactivity. Elderly, retired, or others staying mostly at home, people reading or studying in a quiet environment, and people involved in vibration-sensitive activities are examples of people potentially annoyed by vibration at very low levels. To these and other sensitive individuals, even vibrations at the threshold of perception can be annoying.

Table 3.11-6: Human Response to Different Levels of Groundborne Noise and Vibration

Vibration Velocity Level	*Noise Level*		*Human Response*
	Low Freq[1]	*Mid Freq*[2]	
65 VdB	25 dBA	40 dBA	Approximate threshold of perception for many humans. Low-frequency sound usually inaudible, mid-frequency sound excessive for quiet sleeping areas.
75 VdB	35 dBA	50 dBA	Approximate dividing line between barely perceptible and distinctly perceptible. Many people find transit vibration at this level annoying. Low-frequency noise acceptable for sleeping areas, midfrequency noise annoying in most quiet occupied areas.
85 VdB	45 dBA	60 dBA	Vibration acceptable only if there are an infrequent number of events per day. Low-frequency noise annoying for sleeping areas, mid-frequency noise annoying even for infrequent events with institutional land uses such as schools and churches.
Notes: 1. Approximate noise level when vibration spectrum peak is near 30 Hz. 2. Approximate noise level when vibration spectrum peak is near 60 Hz.			

Source: FTA, 2006

Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage. In high noise environments, which are more prevalent where groundborne vibration approaches perceptible levels, this rattling phenomenon may also be produced by loud airborne environmental noise, causing induced vibration in exterior doors and windows.

Sources of Vibration

Typical sources of groundborne vibration are construction activities (e.g., blasting, pile driving, and operating heavy-duty earthmoving equipment), steel-wheeled trains, and occasional traffic on rough roads. Problems with groundborne vibration and noise from these sources are usually localized to within about 100 feet of the vibration source, although there are examples of groundborne vibration causing interference out to distances greater than 200 feet (Federal Transit Authority, 2006). When roadways are smooth, vibration from traffic, even heavy trucks, is rarely

perceptible. Potential sources of vibration in the Planning Area include the Napa Valley Wine Train and heavy vehicle traffic on SR-29.

REGULATORY SETTING

Federal Regulations

Department of Housing and Urban Development

The U.S. Department of Housing and Urban Development's environmental criteria and standards are presented in 24 Code of Federal Regulations (CFR) Part 51. New construction proposed in high noise areas (exceeding 65 dBA DNL) must incorporate noise attenuation features to maintain acceptable interior noise levels. A goal of 45 dBA DNL is set forth for interior noise levels and attenuation requirements are geared toward achieving that goal. It is assumed that with standard construction, any building will provide sufficient attenuation to achieve an interior level of 45 dBA DNL or less if the exterior level is 65 dBA DNL or less. Approvals in a "normally unacceptable noise zone" (exceeding 65 dB, but not exceeding 75 dB) require a minimum of 5 dB of additional noise attenuation for buildings having noise sensitive uses if the DNL is greater than 65 dB, but does not exceed 70 dB, or a minimum of 10 dB of additional noise attenuation if the day-night average is greater than 70 dB, but does not exceed 75 dB.

Federal Highway Administration

An assessment of noise and consideration of noise abatement per Title 23 of the CFR, Part 772, "Procedures for Abatement of Highway Traffic Noise and Construction Noise," is required for proposed federal or federal-aid highway construction projects on a new location, or the physical alteration of an existing highway that significantly changes either the horizontal or vertical alignment or increases the number of through-traffic lanes. The FHWA considers noise abatement for sensitive receivers, such as picnic areas, recreation areas, playgrounds, active sport areas, parks, residences, motels, hotels, schools, places of worship, libraries, and hospitals when "worst-hour" noise levels approach or exceed 67 dBA L_{eq}. The California Department of Transportation (Caltrans) has further defined "approach" as meaning to be within 1 dB of the Noise Abatement Criteria (NAC).

Federal Transit Administration

The Federal Transit Administration (FTA) transit and train vibration impact criteria for residences and buildings where people normally sleep (e.g., nearby residences) are 72 VdB for frequent events (more than 70 events of the same source per day), 75 VdB for occasional events (30 to 70 vibration events of the same source per day), and 80 VdB for infrequent events (fewer than 30 vibration events of the same source per day).

Federal Railroad Noise Emissions Compliance Regulation

The Federal Railroad Administration's Office of Safety is responsible for enforcing the Railroad Noise Emissions Compliance Regulation that sets maximum sound levels from railroad equipment and for regulating locomotive horns.

State Regulations

California Noise Control Act of 1973

The California Noise Control Act of 1973 is in Sections 46000 through 46080 of the California Health and Safety Code. The act finds that excessive noise can result in physiological, psychological, and economic damage. This act states that it is the policy of the State of California to provide an environment for all Californians free from noise that jeopardizes their health or welfare and they are entitled to a peaceful and quite environment without the intrusion of noise that may be hazardous to their health or welfare.

California Health and Safety Code Section 118825–118830

This law addresses noise pollution regarding supersonic transport aircraft and prohibits the service of private or commercial aircraft landings or take offs within the state that do not comply with federal certification limits for subsonic jet transport aircraft.

State of California Building Code

The State of California's noise insulation standards are codified in the California Code of Regulations (CCR), Title 24. These noise standards are applied to new construction in California for the purpose of ensuring that the level of exterior noise transmitted to and received within the interior living spaces of buildings is compatible with their comfortable use. For new residential dwellings, hotels, motels, dormitories, and school classrooms, the acceptable interior noise limit for habitable rooms in new construction is 45 dBA CNEL or DNL. Title 24 requires acoustical studies for residential development in areas exposed to more than 60 dBA CNEL to demonstrate that the structure has been designed to limit interior noise in habitable rooms to acceptable noise levels. Where exterior noise levels are projected to exceed 60 dBA CNEL or DNL at the facade of a building, a report must be submitted with the building plans that describe the noise control measures that have been incorporated into the design of the project to meet the 45-dBA noise limit.

California Code of Regulations Title 21- Airport Noise Standards

Noise standards governing the operation of aircraft and aircraft engines for all airports are described in CCR Title 21, Division of Aeronautics, Subchapter 6 "Noise Standards." The regulations are designed to cause the airport proprietor, aircraft operator, local governments, pilots, and the Department of Aeronautics to work cooperatively to diminish noise. The regulations are achieved by controlling and reducing noise that affects communities in the vicinity of airports.

State of California Land Use Compatibility Criteria

The State of California adopts suggested land use noise compatibility levels as part of its General Plan Update Guidelines. These suggested guidelines are an integral tool to gauge the compatibility of land uses relative to existing and future noise levels. The guidelines identify normally acceptable, conditionally acceptable, and clearly unacceptable noise levels for various land uses. A conditionally acceptable designation implies new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements for each land use is made and needed noise insulation features are incorporated into the design. By comparison, a

normally acceptable designation indicates that standard construction can occur with no special noise reduction requirements.

Local Regulations

City of St. Helena Noise Ordinance

Unnecessary noise is defined in Chapter 8.24 of the St. Helena Municipal Code. The Municipal Code does not quantitatively regulate noise levels, but states that "… unnecessary noise which can be heard outside of any building by attaching any noise-producing attachment to any vehicle; or blowing or ringing any horn, whistle or bell; by operating a loudspeaker, public address system or sound amplification system; or by making any other loud or unusual noise which disturbs the peace of any other persons…" would violate the ordinance unless permitted by the chief of police.

Similarly, noise generated by commercial activities between the hours of 10:00 PM and 7:00 AM that can be heard at the property line of any parcel is prohibited, unless permitted by the Chief of Police (through the issuance of Noise Permit). Construction activities are limited to the hours between 8:00 AM and 5:00 PM Monday through Saturday. Construction is not allowed on Sundays and holidays (federal and local) if noise can be heard at the property line of any parcel of real property within the city limits (except in very limited occurrences for self-help affordable housing projects as identified in St. Helena Municipal Code Chapter 8.24). Delivery of materials/equipment and cleaning and servicing of machines/equipment are limited to between 7:00 AM and 6:00 PM. Noise generated by contracted landscape maintenance activities is limited to the hours between 8:00 AM and 5:00 PM Monday through Saturday and prohibited on Sundays and holidays (federal and local).

Napa County General Plan Community Character Chapter

The Napa County General Plan applies to the unincorporated portion of the Planning Area. The State-required noise element of the Napa County General Plan is located in the Community Character chapter of that document. Noise policies include standards for maximum exterior and interior noise levels, and compatibility guidelines for residential, commercial, and industrial land uses. Policies also address noise mitigation for new development and construction activities and establish that noises associated with agriculture are considered acceptable and not considered to be undesirable provided that normal and reasonable measures are taken to avoid significantly impacting adjacent uses.

Napa County Noise Control Regulations

Napa County Municipal Code Chapter 8.16 regulates noise and vibration in the unincorporated portion of the Planning Area. Interior noise limits are established for residential uses and are shown in Table 3.11-7. Exterior noise limits are shown in Table 3.11-8. Noise limits for construction activities are shown in Table 3.11-9.

Table 3.11-7: Napa County Noise Control Regulations Residential Interior Noise Limits

Time Interval	*Allowable Interior Noise Level (dBA)*
10:00 p.m. – 7:00 a.m.	55
7:00 a.m. – 10:00 p.m.	60

Source: Napa County Code Section 8.16.060.

Table 3.11-8: Napa County Noise Control Regulations Exterior Noise Limits (Levels not to be exceeded more than 30 minutes in any hour)

Receiving Land Use Category	*Time Period*	*Noise Level (dBA) Noise Zone Classification*[1]		
		Rural	*Suburban*	*Urban*
Residential	10:00 p.m. – 7:00 a.m.	45	45	50
Single and double	7:00 a.m. – 10:00 p.m.	50	55	60
Residential multiple and country	10:00 p.m. – 7:00 a.m.	45	50	55
	7:00 a.m. – 10:00 p.m.	50	55	60
Commercial	10:00 p.m. – 7:00 a.m.	–	60	–
	7:00 a.m. – 10:00 p.m.	–	65	–
Industrial, including wineries	Anytime	75	–	–

Note:

1. The classification of different areas of the county in terms of environmental noise zones shall be determined by the Noise Control Officer, based upon assessment of county noise survey data. Industrial noise limits are intended primarily for use at the boundary of industrial zones rather than for noise reduction within the zone.

Impact Analysis

SIGNIFICANCE CRITERIA

For the purposes of this EIR, a significant adverse impact would occur if implementation of the Proposed Plan would:

Criterion 1: **Expose persons to or generate noise levels in excess of standards established in the proposed General Plan Noise Element, or applicable standards of other agencies;**

Criterion 2: **Expose persons to or generate excessive groundborne vibration or groundborne noise levels;**

Criterion 3: **Result in a substantial permanent increase in ambient noise levels in the vicinity of the Planning Area above levels existing without the project; or**

Criterion 4: **Result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project.**

Criterion 5: **For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the Planning Area to excessive noise levels; or**

Criterion 6: **For a project within the vicinity of a private airstrip, expose people residing or working in the Planning Area to excessive noise levels**

METHODOLOGY AND ASSUMPTIONS

Construction Noise

Potential short-term construction noise impacts were evaluated using the FHWA Roadway Construction Noise Model (FHWA, 2006) and reference noise levels for each piece of construction equipment from the same model. Construction noise levels from a group of specific construction equipment that would operate together during the worst construction phase were calculated at a distance of 50 feet.

Potential short-term construction vibration impacts were evaluated using FTA methodology for construction vibration from FTA Transit Noise and Vibration Impact Assessment Manual (FTA, 2006). The distance within the construction vibration damage criteria was determined based on reference vibration levels for specific construction equipment.

Traffic Noise

The FHWA Highway Traffic Noise Prediction Model (FHWA RD-77-108) was used to evaluate traffic-related noise conditions. Future traffic volumes were those analyzed for Section 3.13: Transportation. This model requires various parameters, including traffic volumes, vehicle mix,

vehicle speed, and roadway geometry to compute typical equivalent noise levels during daytime, evening, and nighttime hours. The resultant noise levels are weighted and summed over 24-hour periods to determine the CNEL values.

The Proposed Plan's noise standards are at least as stringent as those found in the current St. Helena General Plan, and, if adopted, would replace existing General Plan noise standards and require updates to the City's Noise Ordinance. Thus, the Proposed Plan's noise standards are used to evaluate potential noise impacts from traffic sources in the City of St. Helena. The Napa County County General Plan and Noise Control Regulations are used to evaluate potential noise impacts in the unincorporated county.

Stationary Noise

Potential long-term (operational) noise impacts from stationary non-transportation sources are regulated by the City's Noise Ordinance and Napa County's Noise Control Regulations. The Proposed Plan's noise standards are at least as stringent as those found in the current St. Helena General Plan, and, if adopted, would replace existing General Plan noise standards and require updates to the City's Noise Ordinance. Thus, the Proposed Plan's noise standards are used to evaluate potential noise impacts from stationary sources in the City of St. Helena. The Napa County Noise Control Regulations are used to evaluate potential noise impacts in the unincorporated county.

Study Areas

The Planning Area for the Proposed Plan includes three study areas in unincorporated Napa County immediately adjacent to the city limits where the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities (see Chapter 2: Project Description for additional details). Existing conditions related to Noise in the whole of the Planning Area are documented above; however, as the City does not have jurisdiction outside of the city limits and sphere of influence (SOI), Proposed Plan policies and actions would not apply in the study areas. Therefore, implementation of the Proposed Plan would not result in direct impacts related to Noise in the study areas except as discussed below. Cumulative impacts related to Noise are discussed in Chapter 5: CEQA Required Conclusions.

RELEVANT POLICIES AND IMPLEMENTING ACTIONS

Circulation

- ***CR4.1*** Ensure adequate maintenance of transportation facilities such as streets, sidewalks and multi-use paths. Emphasize safety considerations, impacts on non-automobile modes of travel and overall impact on long-term resource needs as maintenance priorities.
- ***CR6.2*** Require concurrent infrastructure development for any new development projects that have impacts on the circulation system, including streets, paths, trails, sidewalks and public transit.

Public Health, Safety, and Noise

- ***PS2.1*** Preserve the current low levels of noise in St. Helena to maintain the City's rural atmosphere.

- ***PS2.2*** Maintain a citywide environment that balances various City objectives while minimizing the impact of highway, railroad and industrial noise. The City should manage both indoor and outdoor noise levels to protect health and safety. A combination of noise standards and existing noise levels should be used to determine impacts and mitigation measures.
- ***PS2.3*** Minimize potential noise impact conflicts between land uses by regulating incompatible land uses. Encourage noise-generating uses to reduce their impacts while promoting land use patterns that avoid conflicts. Employ compatibility guidelines, interior noise level criteria, the City noise standards and noise contour maps to determine the compatibility of land uses.
- ***PS2.4*** Require a reduction and/or control of the use of machinery. mechanical systems and other noise-making equipment and sources in and near residential areas where noise impacts would be considered intrusive to adjacent residential property, unless consistent with the right- to-farm.
- ***PS2.B*** Enforce the Land Use Compatibility Standards presented in the State of California's General Plan guidelines when siting new uses. These standards identify the acceptability of a project based on levels of noise exposure.
- ***PS2.C*** Adopt and enforce Title 24 Standards for all types of new residential construction including single family dwellings, duplexes, apartments, and dormitories.
  - An interior maximum noise level of LAdn-45 dBA in all habitable rooms for all dwelling units;
  - A maximum allowable interior noise level for bedrooms of an hourly LAeq-35 dBA;
  - A maximum noise level of LAdn-60 dBA for residential exterior activity areas;
  - If interior noise standards are met by requiring windows to be closed, cooling and outside air exchange must also be provided in the building's design.
- ***PS2.D*** Require an acoustical study, prepared by a qualified acoustical consultant for:
  - All proposed projects that are likely to be exposed to noise levels greater than the standards;
  - All proposed projects that would generate noise where impacts on other uses would be greater than the standards;
  - Any project exposed to outdoor noise at or above a day-night average sound level (Ldn) of 60 or for any noise source that could create such outdoor noise levels for adjacent uses; and
  - Any project exposed to or that creates noise which exceeds the adopted City standards.
- ***PS2.E*** Require new developments to implement noise mitigation measures when built in close proximity to noise sources, such as State Route 29 and the railroad tracks. These developments should consider the exterior and interior noise environment.
- ***PS2.F*** Require construction operations to use noise suppression devices and techniques and limit noisy construction activities that can be heard at the property line to the least noise-sensitive times, as per the noise ordinance.

- ***PS2.G*** Include appropriate noise attenuation techniques in the design of new streets. Such techniques could include the use of site planning, building orientation, buffer distances and the use of correctly-engineered acoustical barriers and berms where necessary. Adopt the noise standard for intrusive noise at residents in Table 9.4.
- ***PS2.H*** Amend the City's noise ordinance to regulate intrusive noise sources, such as the use of machinery and equipment, leaf blowers, and other landscaping and property maintenance devices, animals, vehicles and motorcycles, and idling buses or trucks in or near uses sensitive to noise.

IMPACTS

Impact 3.11-1 Implementation of the Proposed Plan would not expose persons to or generate noise levels in excess of the noise standards established in the proposed General Plan Noise Element or applicable standards of other agencies. (*Less than Significant*)

Implementation of the Proposed Plan may result in both temporary and permanent increases in noise levels, but the increases associated with construction, traffic, rail, and stationary noise sources would be less than significant.

Construction Noise

Future development associated with the implementation of the Proposed Plan would generate noise levels from construction activities. Two types of short-term noise impacts could occur during construction. First, construction crew commutes and the transport of construction equipment and materials to construction sites would incrementally increase noise levels on access roads leading to the sites. Although there would be a relatively high single-event noise exposure potential causing intermittent noise nuisance (passing trucks at 50 feet would generate up to 55 dBA Lmax), the effect on longer term (hourly or daily) ambient noise levels would be small. Therefore, short-term construction-related impacts associated with worker commute and equipment transport would be less than significant.

The second type of short-term noise impact is related to noise generated during grading and building erection on a project site. Construction is completed in discrete steps, each of which has its own mix of equipment, and consequently, its own noise characteristics. These various sequential phases would change the character of the noise generated on the site, and therefore, the noise levels surrounding the site as construction progresses. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase. Table 3.11-10 lists typical construction equipment noise levels recommended for noise impact assessments, based on a distance of 50 feet between the equipment and a noise receptor.

Table 3.11-10: Typical Construction Equipment Noise Levels

Equipment Description	*Spec 721.560[1] Lmax at 50 ft.*	*Actual Measured[2] Lmax at 50 ft.*
Backhoes	80	78
Compactor (ground)	80	83
Cranes	85	81
Dozers	85	82
Dump Truck	84	76
Excavators	85	81
Flat Bed Trucks	84	74
Front-End Loaders	80	79
Graders	85	N/A[3]
Jackhammer	85	89
Pickup Truck	55	75
Pneumatic Tools	85	85
Pumps	77	81
Rock Drill	85	81
Roller	85	80
Scrapers	85	84
Tractors	84	N/A
Vibratory Pile Driver	95	101

Notes:

1. Maximum noise levels were developed based on Spec 721.560 from the Central Artery/Tunnel (CA/T) program to be consistent with the City of Boston's Noise Code for the "Big Dig" project.
2. The maximum noise level was developed based on the average noise level measured for each piece of equipment during the CA/T program in Boston, Massachusetts.
3. Since the maximum noise level based on the average noise level measured for this piece of equipment was not available, the maximum noise level developed based on Spec 721.560 was used.

Lmax = maximum instantaneous sound level

N/A = not applicable

Noise levels reported in this table are rounded to the nearest whole number.

Source: Federal Highway Administration Roadway Construction Noise Model, 2006.

Typical noise levels can range up to 80 to 90 dBA Lmax at 50 feet during the noisiest construction phases. For example, the site preparation phase, which includes excavation and grading of the site, can generate high noise levels due to the use of equipment such as excavating machinery (dozers, excavators, and front-end loaders) and earthmoving and compacting equipment (compactors, scrapers, and graders). Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 or 4 minutes at lower power settings.

In general, construction projects under implementation of the Proposed Plan could require the use of equipment such as scrapers, bulldozers, and water trucks/pickup trucks. As seen in Table 3.11-10, the maximum noise level generated by each scraper can be assumed to be approximately 85 dBA Lmax at 50 feet from the scraper in operation. Each bulldozer would generate approximately 85 dBA Lmax at 50 feet. The maximum noise level generated by water trucks/pickup trucks is approximately 55 dBA Lmax at 50 feet from these vehicles. Each doubling of the sound source with equal strength increases the noise level by 3 dBA. Each piece of construction equipment operates as an individual point source. The worst-case composite noise level during this phase of construction would likely be between 80 and 90 dBA Lmax (at a distance of 50 feet from an active construction area).

The exact location of projects and extent of construction activities that would occur under the Proposed Plan are not known at this time. Within the city, construction noise is regulated under the General Plan and the Noise Ordinance of the Municipal Code. If approved, the Proposed Plan would replace the existing General Plan, including the noise standards and policies, and would amend the Noise Ordinance to be consistent with the Proposed Plan's goals (Policy PS2.H). Additionally, Proposed Plan policy PS2.F would require construction operations to use noise suppression devices and techniques and limit noisy construction activities that can be heard at the property line to the least noise-sensitive times in accordance with the Noise Ordinance. Compliance with the City's Noise Ordinance would be required for any future construction in the city. Thus, no conflicts with the General Plan or Noise Ordinance standards would be anticipated.

The Proposed Plan does not include any land use designations or policies for the study areas, which are outside of the City of St. Helena's jurisdiction. Compliance with the Napa County Noise Control Regulations and Napa County General Plan would be required for any future construction in the unincorporated county. Therefore, no noise impacts in exceedance of County standards would be expected to occur.

Traffic Noise

Implementation of the Proposed Plan would allow for an increase in population and traffic in the Planning Area, which would increase traffic noise levels along existing and future roadways. Table 3.11-11 compares projected traffic noise levels for the Proposed Plan with existing noise levels. The projected noise levels represent the worst-case scenario, which assumes that no shielding is provided between the traffic and the location where the noise contours are drawn. Figure 3.11-3: Projected Noise Contours (2040) shows projected noise level contours along local roadways and freeways within the Planning Area with the Proposed Plan.

Table 3.11-11: Existing and Future Traffic Noise Levels

Definition:

DNL (Day-Night Average Sound Level) – A descriptor for a 24-hour A-weighted average noise level. DNL accounts for the increased acoustical sensitivity of people to noise during the nighttime hours. DNL penalizes sound levels by 10 dB during the hours from 10 PM to 7 AM. For practical purposes, the DNL and CNEL are usually interchangeable. DNL is sometimes written as Ldn.

Comments/Assumptions

1) Traffic volumes are per Fehr & Peers data received 1 August 2018.

2) Truck % assumed to be 2% for all roadways.

3) Speeds are estimated based on roadway type.

Data Source: Charles M. Salter Associates, Inc, 2018; City of St. Helena, 2018; Napa County,2018; Dyett & Bhatia, 2018

According to the noise exposure guidelines in the Proposed Plan, the most stringent limit on exterior noise for any land use category is 60 dBA CNEL for residential and other sensitive land uses. The threshold for office buildings is 75 dBA CNEL, and the threshold for playgrounds and parks is 70 dBA CNEL. These standards are as stringent as those in the city's current General Plan. With approval of the Proposed Plan, the environmental impacts from future traffic on existing uses and on new development itself would be assessed on a case-by-case basis using project-level information and the proposed community noise exposure standards for the most representative assessment of individual development impacts.

Although not all roadway segments are located within 50 feet of a noise-sensitive land use, a reference distance of 50 feet was utilized in the noise modeling to conservatively assess potential noise impacts. As discussed in the Physical Setting section above, audible increases in noise levels generally refer to a change of 3 dB or greater, since this level has been found to be barely perceptible in exterior environments. Therefore, this analysis considers an increase in noise greater than 3 dBA as substantial. Modeling indicates that there are no roadway segments that would experience increases in noise levels greater than 3 dBA CNEL in 2040 with the Proposed Plan over existing conditions.

In addition, Proposed Plan policies and implementing actions such as PS2.2, PS2.B, PS2.D, PS2.E, PS2.G, and PS2.H directly address traffic noise impacts, calling for enforcement of noise compatibility standards, noise attenuation measures for new roadways, and noise mitigation for new development to attain noise standards. In the city, compliance with these policies would ensure that implementation of the Proposed Plan would not expose persons to or generate noise levels in excess of standards and impacts would be less than significant.

While the Proposed Plan does not include policies for the unincorporated study areas, traffic volume increases on roadways in and leading out of the city (Silverado Trail, SR-29) could cause noise increases in Study Areas 1 and 3. These would similarly be anticipated to be increases of less than 3 dBA CNEL. Given that the increase would not likely be perceptible

Rail Noise

The Proposed Plan includes a variety of land use designations along the railway, including agricultural, residential, mixed-use, and commercial. For all future developments within the Planning Area that fall within the required noise screening distances as specified in the FTA Noise and Vibration Manual, a detailed noise analysis would be required. The screening distance for commuter rail and freight trains are 750 feet with no obstruction between the rail line and receptor and 375 feet with intervening buildings. Additionally, new development under the Proposed Plan would be subject to proposed policies and implementing actions PS2.3, PS2.B, PS2.D, PS2.E, and PS2.C, which seek to enforce noise compatibility standards, require acoustical studies and noise mitigation measures for new development as needed, particularly along the rail line. Given these proposed policies, and since the Proposed Plan does not propose additional rail lines or rail service, impacts due to rail noise would be less than significant.

Stationary Noise

New development associated with implementation of the Proposed Plan could expose existing and/or new sensitive uses to stationary noise sources, such as industrial and/or commercial uses. The development of new commercial and industrial uses pursuant to the Proposed Plan may introduce new noise sources into the Planning Area. Industrial processing equipment and conducting outdoor industrial activities could also generate increased noise levels. New development would be subject to Proposed Plan noise compatibility standards, policies, and implementing actions such as PS2.4 to reduce or control the use of noise-making equipment, PS2.H to regulate intrusive noise sources, PS2.3 to minimize noise conflicts, and PS2.D to require acoustic studies for certain noise-generating uses. New development of sensitive receptors near existing stationary noise sources would be required to comply with Proposed Plan interior and exterior noise standards and compatibility standards. With adherence to these policies that woud reduce the impacts from stationary noise sources on sensitive land uses, the impact would be less than significant.

Mitigation Measures

None required.

Impact 3.11-2 Implementation of the Proposed Plan would not expose people to or generate excessive groundborne vibration or groundborne noise levels. (*Less than Significant with Mitigation*)

Implementation of the Proposed Plan may result in groundborne vibration. Increases associated with traffic and rail would be less than significant; increases associated with construction would be less than significant with mitigation, as discussed below.

Construction Vibration

Future development under the Proposed Plan could generate groundborne noise and vibration near construction sites and could expose people to groundborne vibration and noise. A significant impact would occur if such projects generate groundborne vibration or noise at levels that could result in damage to structures or prolonged exposure to continuous audible or feelable vibrations that could be considered annoying to people in buildings.

Heavy duty equipment associated with some construction activities can produce vibration that may be felt by adjacent uses. The main concern associated with this type of vibration is annoyance. In extreme cases, vibration can cause damage to buildings, particularly those that are old or otherwise fragile. Activities such as pile-driving, blasting, and drilling have the highest potential for creating groundborne vibration impacts. The potential construction-related vibration impacts depend on the proximity of construction activities to sensitive receptors, the presence of intervening barriers, the number and types of construction equipment, and duration of construction equipment use. Perceptible groundborne vibration is generally limited to areas within a few hundred feet of construction activities.

It is not known if and where pile driving or other activities that generate high levels of vibration, such as drilling, may occur. However, it is possible that excavation or the use of a large bulldozer, which also generates vibration, could occur for future development projects.

Table 3.11-12 summarizes typical vibration levels generated by construction equipment (Federal Transit Administration, 2006) at the reference distance of 25 feet and other distances.

Table 3.11-12: Vibration Source Levels for Construction Equipment

Equipment	*PPV at 25 Feet*	*PPV at 50 Feet*	*PPV at 75 Feet*	*PPV at 100 Feet*	*PPV at 175 Feet*
Pile driver (impact)[a]	0.65	0.230	0.125	0.081	0.035
Pile driver (sonic/vibratory)[a]	0.65	0.230	0.125	0.081	0.035
Hoe ram or large bulldozer	0.089	0.0315	0.0171	0.0111	0.0048
Large bulldozer	0.089	0.0315	0.0171	0.0111	0.0048
Loaded trucks	0.076	0.0269	0.0146	0.0095	0.0041
Jackhammer	0.035	0.0124	0.0067	0.0044	0.0019
Small bulldozer	0.003	0.0011	0.0006	0.0004	0.0002

Note:

a. The Caltrans Transportation and Construction Vibration Guidance Manual (Caltrans 2013b) is used as the source for vibration from a vibratory pile driver, in order to ensure consistency with the BART to Livermore Extension Project Draft EIR (San Francisco Bay Area Rapid Transit District, 2017).

Source: Federal Transit Administration, 2006.

Tables 3.11-13 and 3.11-14 summarize guidelines developed by the California Department of Transportation (Caltrans) for damage and annoyance potential from transient and continuous vibration that is usually associated with construction activity. Equipment or activities typical of continuous vibration include: excavation equipment, static compaction equipment, tracked vehicles, traffic on a highway, vibratory pile drivers, pile-extraction equipment, and vibratory compaction equipment. Equipment or activities typical of single-impact (transient) or low-rate repeated impact vibration include: impact pile drivers, blasting, drop balls, "pogo stick" compactors, and crack-and-seat equipment (California Department of Transportation, 2013b).

Table 3.11-13: Vibration Damage Potential Threshold Criteria Guidelines

	Maximum PPV (inches/second)	
Structure and Condition	*Transient Sources*	*Continuous/Frequent Intermittent Sources*
Extremely fragile historic buildings, ruins, ancient monuments	0.1	0.1
Fragile buildings	0.2	0.1
Historic and some old buildings	0.5	0.3
Older residential structures	0.5	0.3
New residential structures	1.0	0.5
Modern industrial/commercial buildings	2.0	0.5

Notes:

Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

PPV = peak particle velocity.

Source: California Department of Transportation 2013b.

Table 3.11-14: Vibration Annoyance Potential Criteria Guidelines

	Maximum PPV (inches/second)	
Human Response	*Transient Sources*	*Continuous/Frequent Intermittent Sources*
Barely perceptible	0.04	0.01
Distinctly perceptible	0.25	0.04
Strongly perceptible	0.9	0.10
Severe	2.0	0.4

Notes:

Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

PPV = peak particle velocity.

Source: California Department of Transportation 2013b.

Future and existing development adjacent to construction sites could be exposed to excessive groundborne vibration temporarily (i.e. vibration that is distinctly perceptible). Table 3.11-8 shows that a pile driver, a hoe ram or large bull dozer (which generates vibration levels similar to an excavator), and loaded trucks all have the potential to generate vibration levels greater than the distinctly perceptible level of 0.04 PPV in/sec at a distance of 25 feet. At distances greater than 50 feet, only a pile driver (impact or vibratory/sonic) would be expected to generate distinctly perceptible vibration. An impact pile driver could create distinctly perceptible vibration (0.04 PPV

in/sec) at distances of up to approximately 300 feet, and a sonic/vibratory pile driver could generate distinctly perceptible vibration at distances of up to 175 feet.

As construction equipment operating within 25 feet of sensitive land uses could generate distinctly perceptible vibration, non-pile driving construction activities occurring within 25 feet of sensitive uses could result in significant vibration impacts. In addition, pile driving occurring within approximately 175 feet or 300 feet of sensitive uses for vibratory/sonic pile drivers and impact pile drivers, respectively, could also result in significant vibration impacts. As the specific future projects to be developed under the Proposed Plan are not known at this time, and as the level of construction activity that would occur at various locations for future projects is also not known, it is possible the future construction activities could result in significant vibration impacts in portions of the Planning Area near historic structures and sensitive receptors such as schools and residences.

The City's Noise Ordinance would help reduce construction vibration effects at future and existing sensitive land uses by limiting the times at which construction could take place to certain time periods when it would not be a major disturbance to neighbors, including sensitive receptors. However, neither the Noise Ordinance nor the Proposed Plan provide a framework for determining specific construction vibration mitigation measures to ensure that potential vibration impacts are minimized. Therefore, the impact would be significant, but could be reduced to less than significant with Mitigation Measure NO-1, described below.

Significance before Mitigation: Significant.

Traffic Vibration

There is an anticipated increase in traffic in the Planning Area associated with both the increase in density and intensity allowed under the Proposed Plan and with regional increases in traffic generally (see Section 3.13: Transportation and Traffic). Vibration resulting from vehicle traffic is generated primarily by heavy truck passage over discontinuities in the pavement (such as potholes, bumps, and expansion joints) (Caltrans, 2013). Policies in the Proposed Plan would serve to limit the extent of such discontinuities in the city future by supporting proper maintenance of the roads in the Planning Area (CR4.1 and CR4.2). Thus, regardless of the vehicle mix in the future, the impact from traffic-related vibration is anticipated to be less than significant within city limits.

The Proposed Plan does not include policies for the unincorporated study areas as the City does not have jurisdiction in those areas. While the Proposed Plan would not affect pavement conditions in the study areas, it could influence the vehicle mix traveling along SR-29 through Study Area 3, as Proposed Plan policies seek to expand regional public transit, and future development could result in an increase in heavy trucks delivering goods into the Planning Area. Existing development in these areas are generally set back and buffered from the highway, reducing the amount of vibration that can be felt from the roadway. Furthermore, this analysis assumes that Caltrans will continue to maintain SR-29 such that the impact from traffic-related vibration is minimized regardless of vehicle mix. Thus, the impact from traffic-related vibration in the study areas is considered less than significant.

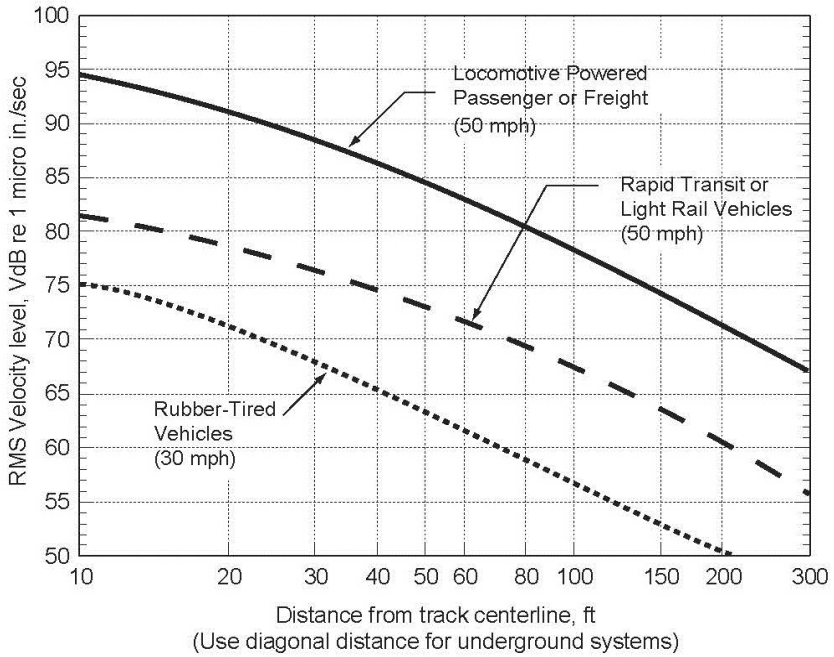
Rail Vibration

The Napa Valley Wine Train is the only source of rail vibration in the Planning Area. The Proposed Plan would not affect operations of the Wine Train; however, it would allow for future development adjacent to the rail corridor in some portions of the city. Typical vibration levels generated from trains are described in Figure 3.11-4: Generalized Ground Surface Vibration Curves, excerpted from the Federal Transit Administration Transit Noise and Vibration Impact Assessment guidance manual (2006). The majority of uses allowed along the rail corridor under the Proposed Plan are non-sensitive uses, including agriculture, commercial, and industrial uses. The area along the railway between Pratt Avenue and Fulton Lane designated as Medium Density Residential by the Proposed Plan is a pre-existing residential neighborhood.

For all future development within the Planning Area that fall within the required noise screening distances as specified in the FTA Noise and Vibration Manual, a detailed noise analysis would be required. The screening distance for commuter rail is 750 feet with no obstruction between the rail line and receptor and 375 feet with intervening buildings. Due to required noise analyses, vibration levels generated from trains would be considered less than significant.

The Proposed Plan does not include policies or land uses for the unincorporated study areas and would thus have no impact regarding exposure to rail vibration in those locations.

Figure 3.11-4: Generalized Ground Surface Vibration Curves



Source: FTA, 2006

Mitigation Measures

NO-1: Where vibration impacts have the potential to cause structural damage or distinctly perceptible human response (reference Tables 3.11-12 to 3.11-14, or more recent sources), require a vibration study, prepared by a qualified vibration consultant. The study should include a site-specific engineering assessment of potential vibration impacts to structures and sensitive receptors from construction activities and specify a mitigation plan to minimize the impacts using all reasonable and feasible means available. The mitigation plan should include a procedure for establishing threshold and limiting vibration values for potentially affected structures, based on an assessment of each structure's ability to withstand the loads and displacements due to construction vibrations and a commitment to develop a vibration monitoring plan during the engineering phase and to implement a compliance monitoring program during construction.

Significance after Mitigation: Less than Significant with Mitigation. Mitigation Measure NO-1 would provide a framework to determine specific vibration mitigation measures for future projects to ensure that potential vibration impacts are minimized to the extent feasible, as recommended by the FTA (2013).

Impact 3.11-3 The development of the Proposed Plan would result in a substantial permanent increase in ambient noise levels above levels existing without the Proposed Plan. (*Less than Significant*)

Future development under the Proposed Plan may result in permanent increases in ambient noise levels; however, the potential increases associated with traffic, rail, and stationary noise sources would be less than significant, as discussed below.

Traffic Noise

As discussed in the Physical Setting section above, audible increases in noise levels generally refer to a change of 3 dB or greater, since this level has been found to be barely perceptible in exterior environments. As shown in Table 3.11-7, projected traffic patterns at buildout of the Proposed Plan is not anticipated to increase noise levels greater than 3dBA CNEL over existing conditions. Additionally, Proposed Plan policies PS2.1 (to preserve the current low levels of noise in St. Helena), PS2.2 (to minimize the impact of highway, railroad, and industrial noise), and implementing actions PS2.D, PS2.E (to require new development o mitigate noise when built in close proximity to sources such as SR-29), PS2.G (including noise attenuation in the design of new streets), and PS2.H (to amend the City's Noise Ordinance to regulate intrusive noise sources such as vehicles in or near uses sensitive to noise) would serve to further reduce any potential impacts in the city.

While not all roadways in the study areas were modeled in the noise analysis, it can be assumed that traffic from the Proposed Plan in those adjacent areas would be consistent with projections for the modeled segments. Furthermore, the study areas would be subject to the Napa County General Plan, which includes policies such as CC-47 and CC-50 to reduce roadway noise and resolve noise conflicts with other jurisdictions. Thus, adherence to Proposed Plan policies and the existing Napa County General Plan would reduce potential impacts to ambient noise from traffic sources to a less than significant level.

Rail Noise

The Proposed Plan would have no effect on railway traffic in the Planning Area. Therefore, implementation of would have no impact on ambient noise from rail.

Stationary Noise

The development of new agricultural, commercial, and industrial uses pursuant to the Proposed Plan may increase noise levels in their vicinity due to the establishment of new stationary noise sources. Equipment and activities related to industrial and agricultural operations could also generate increased noise levels. In the city, new development under the Proposed Plan would be subject to Proposed Plan standards, including Table 9.4 limits for intrusive noise; policies PS2.1, PS2.3 (to encourage noise-generating uses to reduce impacts while avoiding land use conflicts), and PS2.4 (to require reduction and/or control of the use of noise-making equipment and sources in and near residential areas unless consistent with right-to-farm); and implementation actions PS2.D (to require acoustical studies for projects that would generate noise greater than the standards), and PS2.H. The Proposed Plan does not include any policies or land use designations for the study areas therefore would have no direct impacts on ambient noise in those area, although sound may carry from adjacent land uses. There are no proposed land use changes in portions of the city adjacent to the study areas, which are already largely developed with their designated uses. Therefore, policies reducing impacts from development in the city would also ensure that changes in ambient noise in the study areas from any future redevelopment of adjacent land uses would be consistent with the existing character of the Planning Area. Thus, with adherence to Proposed Plan policies, ambient noise impacts in the from stationary sources and associated operations under the Proposed Plan would be less than significant in both the city and the study areas.

Mitigation Measures

None required.

Impact 3.11-4 The development of the Proposed Plan would not result in a substantial temporary or periodic increase in ambient noise levels above levels existing without the Proposed Plan. (*Less than Significant*)

Construction noise generated from development associated with the Proposed Plan would temporarily increase ambient noise levels above existing noise levels without the Proposed Plan. As construction activities would comply with the City's Noise Ordinance and Napa County Noise Regulations, substantial temporary increase in ambient noise levels from construction noise would be considered less than significant.

Mitigation Measures

None required.

Impact 3.11-5 The Proposed Plan would not expose people residing or working in the Planning Area to excessive noise levels related to its location within two miles of a public airport or public use airport. (*No Impact*)

The Planning Area is not located within two miles of a public airport or public use airport. The nearest public use airport is Angwin-Parrett Field, located four miles northeast of the Planning Area. Therefore, there would be no impact regarding the exposure of people excessive noise levels related to the location of the Planning Area within two miles of a public airport or public use airport.

Mitigation Measures

None required.

Impact 3.11-6 The Proposed Plan would not expose people residing or working in the Planning Area to excessive noise levels related to its location in the vicinity of a private airstrip. (*No Impact*)

The nearest private airstrip is the Pope Valley Airport, located seven miles northeast of the Planning Area. While the airstrip does not have noise contours, it can be assumed from the data in Table 3.11-4 that receptors at a distance of farther than 8,000 feet would not be exposed to noise events from takeoffs or landings in excess of 65 dBA. As operations at the airstrip is reported to be 24 per year, they would be unlikely to affect daily average community noise levels in the Planning Area. Therefore, there would be no impact regarding the exposure of people to excessive noise levels related to the Planning Area's vicinity to a private airstrip.

Mitigation Measures

None required.

This page intentionally left blank.

3.12 Public Services and Recreation

This section provides an evaluation of potential impacts on public facilities and services as a result of the Proposed Plan, including impacts related to fire, police, and school services, and park and recreation facilities. This section describes existing public services and facilities in the Planning Area, as well as relevant federal, State, and local regulations and programs. There were no responses to the NOP regarding topics in this section.

Environmental Setting

PHYSICAL SETTING

Public Safety Services

Fire and Emergency Medical services

The City of St. Helena Fire Department provides fire protection services within the city limits and certain surrounding unincorporated areas, including the three study areas, pursuant to a mutual aid agreement between the City and the County of Napa. These services include fire suppression, fire prevention, education, emergency medical and rescue services, and response to incidents involving hazardous materials.

Staffing

The Fire Department is based at 1480 Main Street in St. Helena (Figure 3.12-1). A satellite fire station is located at 1025 Dowdell Lane in St. Helena. The Fire Department allocates positions for two full-time staff members and up to 31 part-time staff as listed in Table 3.12-1. Currently 29 firefighters work for the City on a part-time basis and are paid-per-call. The full-time equivalent for these 29 firefighters is 4.75. There are 1.20 FTE firefighter/EMT's who are paid-per-call. The department has a full-time Management Analyst, a part-time paid Fire Chief, as well as a part-time Fire Marshal. As a paid-per-call department, firefighters respond to the station when they receive a page, leaving the station unoccupied throughout the day.

Equipment

Equipment includes two Type 1 engines, one Type 2 engine, one Type 2 rescue vehicle, one Type 6 brush vehicle, one Ford F350 4x4 command vehicle, one Ford 250 utility vehicle, one Type 1 water tender, one Type 1 truck, and one medium-duty complement rescue trailer. (MSR, 2017).

Table 3.12-1: St. Helena Fire Department Staffing Levels by Type & Full-time Equivalent (FTE), 2016

Staff	*Career/Paid*	*Part-time/Paid- on-call*
Fire Chief	0.20	0.00
Firefighter	0.0	4.75
Management Analyst	1.00	0.00
Other: Fire Marshal	0.20	0.00
Total	**1.40**	**4.75**

Sources: St. Helena RFI, 2016a and St. Helena 16/17 Budget, 2016b

Service Calls and Response Times

The Fire Department has set a goal for a maximum response time of eight minutes within the St. Helena city limits. In 2017, the Department responded to approximately 69 percent of all calls in fewer than seven minutes (Sorensen, 2018). Within the Planning Area, the St. Helena Fire Department responds to all emergency calls in Study Areas 2 and 3, but only non-medical emergency calls in Study Area 1. In 2017, the Fire Department received a total of 977 calls (Sorensen, 2018).

The St. Helena Fire Department is part of the Napa County mutual aid automatic aid agreement. This agreement dictates, depending on the needs of the incident, that all fire departments in the county will respond to a call for services as requested or required. Napa County Station 26 (St. Helena) and Napa County Station 12 (Yountville) provide automatic aid on all residential and commercial structure fires in the City of St. Helena (Sorensen, 2017).

Fire Insurance Rating

In 2010, the Insurance Services Office (ISO) fire insurance rating improved from a level 5 to a level 4. In 2015, the ISO rating improved again, from a level 4 to a level 3. The ISO organization analyzes and provides statistical information on risk, which heavily impacts residential and commercial insurance rates. The ISO Public Protection Classification (PPC) rating is from 10 to 1, with "1" being the best rating available. ISO evaluates cities and assesses a PPC based on a variety of technical and demographic factors for each individual city and their fire department (such as the equipment a fire department owns, distance between fire hydrants, etc.). For example, ISO requests fire departments conduct 20 hours of training per firefighter, each month, in order to maximize points for every training aid. The improvement of the St. Helena Fire Department from an ISO rating of 4 to a rating of 3 is significant for a city of approximately 6,000 citizens. Historically, very few cities ever received a "Class 1" rating.

Emergency Water

Fire hydrant placement throughout the city is consistent with National Fire Protection Association (NFPA) standards, which the St. Helena Fire Department enforces in all new construction and redevelopment. Many residential areas of the city have low emergency water flows (“fire flows”) or water pressure. Fire flows in these areas, while below standard, would be adequate for a single

residential fire. However, they would be insufficient for multiple residential fires (i.e., a major conflagration) (City of St. Helena, 2017).

Hazardous Materials Remediation

The St. Helena Fire Department is the first responder to hazardous materials incidents in the city. The Fire Department's procedure is to call in the Napa County Hazardous Response Team, as Napa County maintains the equipment, supplies, and trained personnel to address hazardous spills. Hazardous materials issues are discussed in more detail in Section 3.7, Hazards and Hazardous Materials, of this EIR.

Development Review Procedures

The St. Helena Fire Department routinely reviews development applications and provides conditions of approval to address requirements for fire sprinklers, emergency access, and other fire-related concerns (City of St. Helena, 2017).

Police Service

The St. Helena Police Department (SHPD) provides police services within the city limits. The SHPD maintains 24-hour security patrol throughout the community (City of St. Helena, 2017). Specific services that SHPD provides include: crime prevention, animal control services, parking and traffic control, youth education, community awareness, and criminal investigations (MSR, 2017).

Staffing

The Police Department is based at 1480 Main Street in St. Helena (Figure 3.12-1). In 2018, the Police Department had 17 full-time employees (including the Acting Chief of Police and sworn officers), three part time employees, one contract employee, and seven volunteers, for a total of 28 personnel (Imboden, 2018). There is a possibility of hiring an interim contract Chief in the near term. The Police Department strives to maintain a staffing ratio of approximately two sworn police staff for every 1,000 residents (City of St. Helena, 2017).

Equipment

The Police Department maintains four patrol cars, one K9 unit, one Community Service Officer (CSO) vehicle, one admin vehicle, one training vehicle, one Global Electric Motocar (GEM), and one dual purpose motorcycle (MSR, 2017).

Service Calls and Response Times

In addition to calls within the City of St. Helena, the Police Department responds to incidents in surrounding unincorporated areas based on separate mutual aid agreements with California Highway Patrol, the Calistoga Police Department, and the County of Napa. The Police Department has an average response time goal for all Priority One calls of three minutes or less. In 2017, the Police Department's average response time Priority One calls was four minutes and 27 seconds (Imboden, 2017). The Police Department averaged roughly 4,567 calls for service from 2008-2015 with general consistency across all years (MSR, 2017).

Schools

Public Schools

The St. Helena Unified School District (SHUSD) provides educational services for students of all grades in elementary, junior, and high school in the Planning Area, as well as throughout nearby portions of Napa County. As shown in Figure 3.12-1, all four schools in the district are within the Planning Area. The district maintains four schools: a primary school, an elementary school, a middle school, and a high school. Enrollment trends for each SHUSD school in the are shown in Table 3.12-2.

Table 3.12-2: St. Helena Unified School District Enrollment Trends

Grades Served	*2014-2015 Enrollment*	*2015-2016 Enrollment*	*2016-2017 Enrollment*	*2017-2018 Enrollment*
Kindergarten	86	92	82	79
1st-6th grade	483	477	470	474
7th-8th grade	192	186	179	170
9th-12th grade	508	475	469	464
Total	**1,269**	**1,230**	**1,199**	**1,192**

Note: Numbers may not sum due to rounding.

Sources: California Department of Education, 2018; Dyett & Bhatia, 2018.

As of 2018, the district's schools served a total of 1,192 students in Transitional Kindergarten through 12th grade. With a general trend in declining enrollment in recent years, the district anticipates adequate capacity in the near term, and generally into the future (California Department of Education, 2018). SHUSD also participates in the District of Choice program, which allows students from outside of the district to enroll in the district's schools.

There have been recent improvements and measures taken to support ongoing and future provision of educational services by the District. Since 1997, the district has received community support for three General Obligation Bond programs that have funded a variety of facility projects over the years. The St. Helena Unified School District has a Facilities Master Plan from 2010, which projects enrollment for the next 10 years. It demonstrates there is no need for any new facilities, as enrollment is projected to be below capacity for every grade level. There was an update on the progress made in 2016, which included new facilities: a playground for St. Helena Elementary School, district-wide technology facility, St. Helena High School Performing Arts Center, softball field, baseball field, tennis courts, Robert Louis Stevenson Middle School roofing, and heating, ventilation, and air conditioning. That same year, the District also came out with a list of high-priority facility projects that were anticipating completion in 2016. These projects included shade structures, door locks, and roof replacements (St. Helena Unified School District,

2016). Additionally, in an effort to ensure adequate facilities are available to accommodate any potential future growth, the School district has development impact fees set in place for residential and commercial development projects.

Other Schools

There are 2 private schools in St. Helena: St. Helena Montessori (880 College Avenue), which educates students from preschool to 9th grade; and the Culinary Institute of America at Greystone (2555 Main Street), which is a private college specializing in culinary arts. CEQA is mainly concerned with public schools, as increased enrollment could trigger the need to spend public funds on construction that could result in environmental impacts.

Libraries

The St. Helena Public Library contains over 75,000 books, DVDs, CDs, newspapers, magazines and other media. The library also houses the archives of the Napa Valley Wine Library and the St. Helena Historical Society. The Robert Louis Stevenson Museum is also located on the library site (see Figure 3.12-1). In 2015-16, the library had 51 visits per hour open and circulated 239,862 items. The existing library facility does not adequately house the Children's department, provide enough private study areas for students, or offer sufficient space or parking for hosting events, which, collectively, were attended by over 17,000 individuals, most of whom drive automobiles to the library (Kreiden, 2015).

The library receives public funds and is also sustained by the fundraising efforts of the Friends & Foundation, St. Helena Public Library. This 501 (c)(3) not for profit public benefit corporation has subsidized the library's budget for materials and provided for its programming. St. Helena's library consistently ranks as one of the top public libraries in the state and offers a wide variety of services for residents of all ages. The library enjoys the highest circulation per capita in California, and nearly four times more visits than the state average per year in 2015-16 (California State Library, 2016).

The library does not have any plans to expand or construct a new facility, neither are there plans to increase staffing or equipment levels (Kreiden, 2018). Its only remodel was done in 2010. There is not an established service ratio that the City is required to meet.

Parks and Recreational Facilities

Existing Parks

As shown in Table 3.12-3 and Figure 3.12-2, the City of St. Helena maintains 11 public parks. There are eight mini parks, two neighborhood parks, and one community park. The parks provide a total of approximately 27 acres of parkland. St. Helena's public schools also add to the amount of parkland in the city, bringing the total to almost 34 acres.

Table 3.12-3: Existing Parks Within the City of St. Helena

Category	*Park*	*Number of Acres*	*Characteristics*
Mini	Baldwin Park	0.76	Mowed grass; picnic tables; handicapped-accessible from Voorhees Circle
	Lewis Station	0.13	"Pocket park" with picnic tables, benches, and restroom
	Lyman Park	0.89	Picnic tables; grassy areas; children's play area; gazebo for events; one restroom
	Mary Fryer Park	0.84	Picnic tables; play equipment designed for pre-school-aged children
	Mennen Park	0.17	Nut and fruit trees, barbeque amenities, walking paths, grassy areas
	St. Helena Skate Park	0.41	Skatepark
	Stephen C. McCullagh Park	0.14	Sandbox, climbing rock and rope structures, benches, play area
	Stonebridge Park	0.75	Located on the Napa River; grassy areas with limited parking
Neighborhood	Jacob Meily Park	5.42	Play field; heritage orchard; picnic area; children's playground; restroom
	Wappo Park	6.65	Trail and picnic facilities
Community	Crane Park	11.27	Six lighted tennis courts; six lighted bocce courts; two Little League baseball fields; horseshoe pits; children's playground; two restrooms; picnic areas; Farmer's Market; skate park
School	St. Helena Elementary School Field	2.41	Open grass area; baseball field; soccer field
	Robert Louis Stevenson Middle School Field	2.16	Track field
	St. Helena Primary School Field	1.85	Open grass area
Total (without school land)		27.43	
Total (with school land)		33.85	

Sources: City of St. Helena, 2018; Dyett & Bhatia, 2018

Compliance with Municipal Park Standards

The City of St. Helena has a standard of 5.0 acres per 1,000 residents, as provided in the 1993 General Plan. On the basis of the 2018 population of 5,900 and park acreage of 27.43, St. Helena's parkland to resident ratio is 4.65 acres per 1,000 residents. Factoring in six acres of school parkland, the City meets its standard and maintains 5.74 acres of parkland per 1,000 residents.

State Parks

Other parks in the vicinity include two state parks: Bothe-Napa Valley State Park, a 1,900-acre park located on the west side of State Route 29 which offers camping, picnicking, swimming, and hiking trails; and the adjoining 0.75-acre Bale Grist Mill State Historic Park, the site of a water- powered grist mill that was built in 1846 (California State Parks, 2018). Both parks are located about five miles outside of city limits.

Recreational Facilities

The City of St. Helena Recreation Department provides programming for youth, teens, adults, and seniors. The City offers a wide range of programming, including sports leagues, bocce ball, summer camps, yoga in the park, martial arts classes, aqua aerobics, and more. Some classes are held at the St. Helena Recreation Department, located at 1574 Railroad Ave, while other classes are held at the Carnegie Building at 1360 Oak Avenue. Most programs offered by the City have a participant fee, but some are free, such as yoga in the park.

As the Recreation Department does not have space for active uses, such as aquatics, tennis, and softball, the City utilizes the fields in public parks, as well as the pool at St. Helena High School when school is not in session.

The Carnegie Building, built in 1908, is over 5,000 square feet. According to St. Helena's SHAPE Committee (St. Helena Assets Planning Engagement), it cost $81,488 in repairs to bring the building up to code. It will cost another $537,627 to maintain the building for the next 10 years (SHAPE, 2018). Its primary use since 1978 has been as a recreation center.

REGULATORY SETTING

Federal Regulations

There are no relevant federal regulations that pertain to this topic.

State Regulations

California Fire Code, Code of Regulations Title 24, Part 9

The California Fire Code establishes regulations to safeguard against hazards of fire, explosion, or dangerous conditions in new and existing buildings, structures, and premises. The provisions of the Fire Code apply to the construction, alteration, movement, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal, and demolition of every building or structure throughout the State of California. The Fire Code includes regulations regarding fire-resistance-rated construction, fire protection systems, such as alarm and sprinkler systems, fire service features such as fire apparatus access roads, means of egress, fire safety during construction and demolition, and wildland-urban interface areas.

School Site Selection and Construction, California Education Code and California Public Resources Code

California Education Code Part 10.5, Chapter 1 School Sites

Sections 17210 to 17224 of the California Education Code governs the evaluation and selection of new sites and additions to existing sites for public schools, and for charter schools seeking state funding for school property acquisition or construction. Section 17211 requires the governing board of a school district to evaluate property proposed for a new school site or addition to an existing site at a public hearing prior to acquisition. Section 17212 requires the governing board of a school district to evaluate expert investigations into all factors affecting the public interest regarding a proposed school site prior to acquisition, including geological and soil engineering studies of such a nature as to preclude siting of a school in any location where the geological and site characteristics are such that the construction effort required to make the building safe for occupancy is economically infeasible. Under section 17212, the evaluation should also include the site's location in respect to population, transportation, water supply, waste disposal, utilities, traffic hazards, and surface drainage conditions, and other factors affecting the costs of the project. The chapter precludes the selection of a site where hazardous geological or soil conditions, hazardous substances, or proximity to an airport would pose a danger to public health or safety.

California Education Code Part 10.5, Chapter 3 Construction of Buildings

The California Department of Education (CDE) establishes standards for the selection of school sites pursuant to Education Code Section 17251. In 2000, the CDE School Facilities Planning Division (SFPD) updated the Guide to School Site Analysis and Development, which was originally published in 1966. The guide assists school districts in determining the amount of land needed to meet their educational purposes according to CDE recommendations.

California Education Code Part 10.5, Chapter 6 Development Fees, Charges, and Dedications

Pursuant to California Education Code Section 17620(a)(1), the governing board at any school district is authorized to levy a fee, charge, dedication, or other requirement against any

construction within the boundaries of the district, for the purpose of funding the construction or reconstruction of school facilities. As provided in California Government Code Section 65996, the payment of such fees is deemed to fully mitigate the impacts of new development on school services (City of St. Helena, 2017). Pursuant to this provision, the school district has enacted a requirement for fees.

California Public Resources Code Section 21151.8

Public Resources Code Section 21151.8 requires that an EIR or negative declaration for a project involving the purchase of a school site or the construction of a new elementary or secondary school by a school district must include information on potential safety and health hazards to school occupants, including the presence of hazardous waste, hazardous substance release, pipelines, and air quality risks.

SB 50 (Statutes of 1998), State School Funding, Education Code Section 17620

California Education Code 17620 establishes the authority of any school district to levy a fee, charge, dedication, or other requirements against any development within the school district for the purposes of funding the construction of school facilities, as long as the district can show justification for the fees. Senate Bill 50 was adopted in 1998. The legislation limits the power of cities and counties to require mitigation of school facilities impacts as a condition of approving new development. It also authorizes school districts to levy statutory developer fees at levels higher than previously allowed and according to new rules.

Quimby Act

The 1975 Quimby Act (California Government Code section 66477) authorized cities and counties to pass ordinances requiring that developers set aside land, donate conservation easements, or pay fees for park improvements. Under the Quimby Act, fees must be paid and land conveyed directly to the local public agencies that provide park and recreation services communitywide; however, revenues generated through the Quimby Act cannot be used for the operation and maintenance of park facilities. The act states that the dedication requirement of parkland can be a minimum of three acres per thousand residents or more, and equal to the existing parkland provision (up to five acres per thousand residents) if the existing ratio is greater than the minimum standard. In 1982, the act was substantially amended. The amendments further defined acceptable uses of or restrictions on Quimby funds, provided acreage/population standards and formulas for determining the exaction, and indicated that the exactions must show a reasonable relationship to a project's impacts as identified through studies required by CEQA.

Local Regulations

City of St. Helena Municipal Code

Chapter 3.32 Development Impact Fees

Section 3.32.050 mandates that the City of St. Helena collect public safety impact fees to provide adequate police and fire protection facilities.

Section 3.32.060 mandates that the City of St. Helena collects civic improvement impact fees to provide for adequate civic improvements, including the city's library and administrative facilities.

Napa County General Plan Recreation and Open Space Element

The Recreation and Open Space Element of Napa County's General Plan focuses on recreational open spaces. Policies in this element touch on the acquisition, design and maintenance of recreational open space, trails and facilities in ways that promote increased access to public parks, protect natural resources, enhance natural habitats, and conserve agricultural lands. Recognizing that jurisdictions within the County generally provide neighborhood and community parks and urban recreation, the priority of the County is generally to provide parks that are focused on nature-based recreation.

Impact Analysis

SIGNIFICANCE CRITERIA

For the purposes of this EIR, a significant adverse impact would occur if implementation of the Proposed Plan would:

Criterion 1: **Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:**

- **a) Fire protection,**
- **b) Police protection,**
- **c) Schools,**
- **d) Parks, or**
- **e) Other public facilities;**

Criterion 2: **Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated; or**

Criterion 3: **Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.**

METHODOLOGY AND ASSUMPTIONS

Schools

Demand for school facilities at buildout is based on the projected change in the number of housing units resulting from buildout of the Proposed Plan and factors representing the estimated number of students in each school associated with the number of housing units in the city, or student generation rates. The student generation rates were estimated based on the number of students enrolled in each school in 2018 and the number of housing units estimated in 2018. For 2018, 18

percent of the student body was assumed to be interdistrict/District of Choice transfers from outside of the city, based on information from a 2017 presentation on district enrollment (SHUSD, 2017). These rates were then adjusted based the expected change in the percentage of school aged children in Napa County, as projected by the Department of Finance (DOF) (DOF, 2018). The resulting student generation rates for 2040 are shown in Table 3.12-4. The rates reflect a projected overall decrease in the school-aged population in Napa County of about 18 percent between 2018 and 2040.

Table 3.12-4: Assumed Student Generation Rates (2040)

Grade	*Students per Housing Unit*
Kindergarten	0.02
1st-6th grade	0.12
7th-8th grade	0.04
9th-12th grade	0.11

Source: Dyett & Bhatia, 2018

Study Areas

The Planning Area for the Proposed Plan includes three study areas in unincorporated Napa County immediately adjacent to the city limits where the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities (see Chapter 2: Project Description for additional details). Existing conditions related to Public Services and Recreation in the whole of the Planning Area are documented above; however, as the City does not have jurisdiction outside of the city limits and sphere of influence (SOI), Proposed Plan policies and actions would not apply in the study areas. Therefore, implementation of the Proposed Plan would not result in direct impacts related to Public Services and Recreation in the study areas except for the potential impacts from the implementation of policies and actions related to the delivery of municipal services discussed below. Cumulative impacts related to Public Services and Recreation are discussed in Chapter 5: CEQA Required Conclusions.

PROPOSED RELEVANT POLICIES AND IMPLEMENTATION ACTIONS

Land Use and Growth Management Element

- ***LU2.D*** Continue to require residential developers to contribute toward the provision of community facilities and services (e.g. parks, recreation facilities and programs, education facilities, traffic and transportation facilities and services), consistent with State law requiring a nexus between project impacts and required mitigation.
- ***LU6.1*** Provide a wide-range of high-quality public facilities, including parks, multi-use trails, schools, fire and police services, water and wastewater systems, and community centers.
- ***LU6.A*** Update the zoning ordinance and map to be compatible with the General Plan use maps and designation and public facilities and services element.

- ***LU6.B*** Pursue sites for future public facilities, including parks, consistent with projected growth.

Economic Sustainability Element

- ***ES1.3*** Ensure the long-term infrastructure needs and priorities of the community are met as part of an economic approach to economic vitality and sustainability.

Public Facilities and Services Element

- ***PF5.4*** Require that the approval of residential, commercial or industrial development be contingent upon the mitigation of the impact of such development on the St. Helena Unified School District's ability to serve school-age children.
- ***PF5.A*** Assist the School District in collecting school facility development fees generated by new development. Partner with the District to identify, establish and implement additional measures to ensure that the highest quality of education is provided.

Open Space and Conservation Element

- ***OS2.3*** Preserve open space for recreational uses, including a bicycle and pedestrian trail system along creek corridors when compatible with riparian vegetation and wildlife habitat. Where possible, integrate stream corridors with trails and other recreational open space, provided that the vegetation, habitat value, and water quality is not significantly impacted.

Public Health, Safety, and Noise Element

- ***PS4.1*** Use the Zoning Code to define a transitional zone around industrial areas to protect the health and safety of residential neighborhoods.
- ***PS4.2*** Limit development in hillside areas where wildfire hazard is high to very low intensity, or maintain them as open space in order to prevent the loss of lives, injuries and property damage due to wildfires.
- ***PS4.3*** Protect St. Helena residents from health and safety impacts related to the use, storage, manufacture and transport of hazardous materials.
- ***PS4.4*** Discourage new uses that rely extensively on the use of hazardous materials.
- ***PS4.5*** Facilitate communication and education about fire safety, non- point source pollution, household hazardous waste disposal and recycling opportunities.
- ***PS4.6*** Ensure that all streets and roads are adequate in terms of width, turning radius and grade in order to facilitate access by City firefighting apparatus, and to provide alternative emergency routes of ingress and egress.
- ***PS4.A*** Designate areas in St. Helena that are prone to fire hazards and make this information available to the community.
- ***PS6.C*** Continue to collaborate with regional agencies and neighboring jurisdictions to develop and implement a regional emergency coordination plan and agreement for police, fire and emergency medical services.

Parks and Recreation Element

- ***PR1.3*** Identify park land opportunity sites to ensure that the City can meet to exceed its standard of 5.0 acres per 1,000 residents. Locate new parks to ensure that City park facilities are equitably distributed throughout all areas of the City and residents can access them safely and conveniently.
- ***PR1.A*** Develop a comprehensive, long-range Parks and Recreation Master Plan to aid the City in creating an integrated system of parks. The plan should be updated periodically to address changing recreation interests, trends, needs, and priorities. The Parks and Recreation Master Plan should:
  - Identify long-term goals for the Parks and Recreation Department and the community;
  - Describe current and future needs, interests, and community preferences for improving new parks and community facilities, and expanding or initiating new programs and services;
  - Present a long-range plan for physical park and community facility improvements;
  - Define performance standards (such as park function, size, and service area radii) and further develop park design guidelines and criteria;
  - Prioritize projects;
  - Identify the proportion of Civic Improvement Fees that will be contributed to the development and maintenance of parks and recreational facilities; and
  - Outline funding mechanisms and strategies for managing the City's commitments, so that new requests and initiative are considered in light of existing commitments

  Subsequent actions in this Element may be included in the Parks and Recreation Master Plan.
- ***PR1.B*** Create opportunities to develop additional parks at the following locations:
  - The City-owned land along the Napa River and Pratt Avenue for passive recreational uses;
  - Land adjacent to York and Sulphur Creeks, as well as the Napa River levee;
  - The water treatment plant site;
  - The City-owned Lower Reservoir area for a water-oriented community park and recreation facility.
  - Ensure that new parks are developed to include bicycle and pedestrian trails.
- ***PR4.C*** Identify locations to accommodate active recreational uses to meet citywide needs. Potential locations include:
  - Bicycle and pedestrian trails, interpretive areas, trail heads, and comfort stations along York and Sulphur creeks and the Napa River; and
  - A community park at the City-owned Lower Reservoir area.

IMPACTS

Impact 3.12-1 **Implementation of the Proposed Plan would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection, police protection, schools, parks, or other public facilities. (Less than Significant)**

Fire Service

The Fire Department has set a goal for a maximum response time of eight minutes within city limits. In 2017, the Department responded to approximately 69 percent of all calls in fewer than seven minutes, and the department does not anticipate the need to increase staffing levels or construct a new facility in order to provide service for future population growth (Sorenson, 2015). Although the projected addition of residents and employees by 2040 would likely increase the demand for emergency fire response and preventive services in St. Helena, the increase is modest enough that it is not expected to create a need for new or expanded fire protection facilities to serve the city or study areas.

Policies and implementing actions included in the Proposed Plan monitor the need for additional public facilities, pursue sites for future facilities consistent with projected growth, and ensure that new development contributes toward the provision of community facilities and services (Policy LU6.1 and Implementing Actions LU2.D, LU6.A, and LU6.B). Furthermore, proposed policies regarding emergency access, resiliency in the transportation system, and acceptable travel flow would ensure that emergency vehicles could efficiently gain access to sites, thereby reducing the need for new facilities located closer to new development and also keeping service demand increases to a minimum (Policies PS4.1 and PS4.6 and Implementing Actions PS4.A, PS4.F, and PS6.C). In addition, individual development projects would be subject to Fire Department review and approval and would be required to pay the City's standard public safety impact fees. Any new fire facilities would be sited and constructed according to policies in the Proposed Plan that address potential environmental impacts as discussed throughout this EIR.

Therefore, overall, the increase in service population would not require construction of new facilities or expansion of existing ones and continued compliance with applicable policies and regulations as well as implementation of Proposed Plan policies would ensure that impacts are less than significant.

Police Service

The projected addition of residents and employees by 2040 would likely increase the demand for police response the Planning Area. SHPD has set an average response time goal for all Priority One calls of three minutes or less. In 2017, the Department's average response time for Priority One calls was four minutes and 27 seconds, so demand for police services would increase, but a need for a new or expanded police facility is not currently expected (Imboden, 2017).

The Proposed Plan contains policies and implementing actions for monitoring the need for additional public facilities, pursuing sites for future facilities consistent with projected growth, and ensuring that new development contributes toward the provision of community facilities and services (Policy LU6.1 and Implementing Actions LU2.D, LU6.A, and LU6.B). In addition, individual development projects would be subject to Police Department review and approval and would be required to pay the City's standard public safety impact fees. Any new police facilities would be sited and constructed according to policies in the Proposed Plan that address potential environmental impacts as discussed throughout this EIR.

Based on these factors, coupled with the existing regulations and proposed policies and implementing actions, this impact is considered less than significant.

Schools

Applying the assumed student generation rates from Table 3.12-4, to the 3,100 projected housing units in the city at buildout, the total number of SHUSD students enrolled from the city is not expected to increase substantially through 2040. Accordingly, the SHUSD does not anticipate the need for new or expanded facilities to accommodate growth under the Proposed Plan (SHUSD, 2018). This reflects that although the number of housing units in the city are anticipated to increase, demographic changes in the county would cause the overall trend in declining enrollment to continue. Further, SHUSD may also elect to change its transfer policy, adjust class sizes, or consider the use of portable classrooms in order to ensure adequate space for students in the future (SHUSD, 2018). Any new school facilities would be sited, designed, and constructed according to the California Education Code and policies in the Proposed Plan that address potential environmental impacts as discussed throughout this EIR.

As there is no foreseeable need for the construction of new educational facilities to meet growth in enrollment this impact is considered less than significant.

Parks

St. Helena currently has approximately 27.5 acres of City parks and 6.5 acres of School fields. With a 2018 population of approximately 5,900 residents, this equates to 4.66 acres of City parks per thousand residents and 5.5 acres of City and School parkland per thousand residents. Proposed policies PR1.B and PR4.C call for the City to acquire land and construct a new park of 21.03 acres, increasing the ratio to 6.64 acres of parkland per 1,000 residents at buildout. Including school parkland, this ratio would increase even more to 7.52 acres (2040 data) per 1,000 residents. Thus, with implementation of proposed policies PR1.B and PR4.C at buildout in 2040, the City would have in excess of 5 acres of parkland per thousand residents, satisfying the established standard.

The Proposed Plan identifies five potential new park sites, shown in Figure 3.12-1. These include the 21.03-acre, City-owned "Lower Reservoir" property; a 15-acre flood control project site that would include provisions for passive open space use, such as pathways and interpretive trails; a park along the Napa River at Pratt Avenue; a park at Adams Street near City Hall; and a park along Sulphur Creek. With the exception of the proposed Adams Street park, the park sites are proposed in the vicinity of riparian corridors. Thus, development of these park facilities could have a significant impact if it adversely affected biological resources or hydrology in the riparian corridors or other sensitive habitats. As discussed in Section 3.4: Biological Resources, the Proposed Plan includes a range of policies to protect biological resources and sensitive habitats, particularly along

the river and creek corridors. Similarly, as discussed in Section 3.9: Hydrology and Water Quality, a combination of existing regulations and Proposed Plan policies would reduce any impacts to hydrology or water quality. Further, proposed Implementing Action OS2.3 would prioritize the quality of vegetation, habitat value, and water quality along any stream corridors where trails or recreational open space would be sited.

Development of future parks would be subject to separate environmental review to evaluate and mitigate any project-specific environmental impacts when the precise details of location and design are available. Therefore, overall, compliance with existing regulations and implementation of Proposed Plan policies would ensure that impacts related to the provision and construction of parks would be less than significant.

Other Public Facilities

St. Helena offers its residents the St. Helena Public Library, as well as the Carnegie Building, which is used for community recreation classes. The Library does not have an established service ratio or trigger for new facilities. The anticipated growth of the resident and employee population associated with implementation of the Proposed Plan would not substantially increase demands for library services or create a need for new or expanded library facilities (Kreiden, 2018). Likewise, there is no service ratio standard that needs to be met for recreation facilities in St. Helena, and there would not substantially increase demand for community recreational facilities such that construction of new or expanded facilities would be required.

Further, the Proposed Plan contains policies and implementing actions including LU6.1, ES1.3, LU2.D, LU6.A, and LU6.B, which monitor the need for additional public facilities, pursue sites for future facilities consistent with projected growth, and ensure that new development contributes toward the provision of community facilities and services. Therefore, compliance with existing regulations and the Proposed Plan policies and implementing actions would ensure that impacts associated with the construction and expansion of other public facilities would be less than significant.

Mitigation Measures

None required.

Impact 3.12-2 Implementation of the Proposed Plan would not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. (Less than Significant)

The projected increase in service population from implementation of the Proposed Plan could in turn place more physical demands on existing parks and facilities. An increase in the number of park users may cause parks and recreation centers to be in active use for longer periods of time and/or to be used more intensively over the course of a typical day. Without the construction of new parks, existing parks in St. Helena would continue to deteriorate and do so at a quicker pace than if there were more parks to enjoy, no matter how many park users there are. As a result, vital park elements such as vegetation, built structures, walking/biking paths, sport facilities, and others could face increased wear-and-tear over the course of the planning horizon and, without proper maintenance, their useful life could be shortened.

Potential impacts on existing facilities would be offset by the extensive list of policies and implementing actions providing for maintenance and improvement of existing parks and the planned park, thus preventing any substantial physical deterioration of existing or new facilities. Proposed implementing action, PR1.A, requires the implementation of a Parks and Recreation Master Plan that would provide a tool to track and plan for necessary improvements to the parks and recreation system. The Proposed Plan also includes policies such as PR1.3, which ensures that new parkland is distributed evenly throughout St. Helena, thus reducing the likelihood that any existing neighborhood, community, or regional parks, or other recreational facilities would experience overuse that could result in the physical deterioration of those facilities.

Furthermore, as described above there are two regional parks in Napa County, which are about 5 miles away from St. Helena and provide additional recreational resources. State parks are maintained by California through tax revenue. The modest population growth of 900 residents in the Planning Area that would occur incrementally over the next 20 years is not substantial enough to create a significant impact on regional parks or other recreational facilities. Therefore, impacts associated with substantial physical deterioration of park and recreation facilities resulting from implementation of the Proposed Plan would be less than significant.

Mitigation Measures

None required.

Impact 3.12-3 Implementation of the Proposed Plan would not include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment. (Less than Significant)

Other public facilities in the Planning Area include the Carnegie Building, where community recreation classes are typically held. With a projected increase of 900 new residents to the Planning Area over a 20-year period, the Proposed Plan would not require new or expanded recreational facilities. Therefore, impacts associated with new recreation facilities would be less than significant with implementation of existing regulations and Proposed Plan policies.

Mitigation Measures

None required.

This page intentionally left blank.

3.13 Transportation and Traffic

This section assesses potential environmental impacts on the transportation system from future development under the Proposed Plan, including those related to performance standards, congestion management, air traffic patterns, hazards, emergency access, and public transit, bicycle, and pedestrian facilities. This section describes the existing transportation system, characteristics, and operations at major intersections within, and in the vicinity of, the City of St. Helena, as well as relevant federal, State, and local regulations and programs.

Responses to the NOP regarding topics addressed in this section included the following:

- Traffic impacts should be addressed in a holistic fashion, including regarding visitor-generated traffic; existing congestion problems, including queuing at intersections along State Route 29; potential traffic impacts due to increased Wine Train service; level of service non-compliance during peak periods; bike and pedestrian safety, including unsafe roadway crossings; and ease and comfort of crossing streets for pedestrian and bike users. These comments are addressed in Impacts 3.13-1, 3.13-2, and 3.13-6.
- The EIR should consider impacts to emergency access and evacuation, including on the impact of congestion on emergency vehicle response times; Napa River crossing congestion; and limited emergency vehicle access to parts of town only accessible by State Route 29. These comments are addressed in Impacts 3.13-4 and 3.13-5, as well as in Chapter 3.8: Hazards and Hazardous Materials.
- Caltrans submitted a letter responding to the NOP, advising that: a) the transportation impact analysis be conducted using VMT; b) that the alternatives analysis should discuss buildout of potential transit improvement projects that would reduce VMT associated with visitor trips to St Helena; c) that the EIR analyze cumulative impacts affecting cyclists and pedestrians considering the Bike Plan's methodology and augmenting as necessary; d) that the EIR consider primary and secondary effects on pedestrians, bicyclists, disabled travelers, and transit users, including countermeasures and trade-offs resulting from mitigating VMT increases, consistent with MTC's Regional Transportation Plan/Sustainable Community Strategies; e) that the City consider expanding transit and active transportation and reducing VMT from tourism through a Transportation Demand Management (TDM) program; and f) that the City estimate project-generated travel demand, estimate the cost of transit and active transportation improvements needed to support this demand, and identify potential funding sources for the needed improvements. These comments are addressed in Impacts 3.13-1, 3.13-2, and 3.13-6.

Environmental Setting

PHYSICAL SETTING

The circulation network serving the Planning Area consists of roadways, transit, bicycle, and pedestrian facilities. A description of travel characteristics, major transportation facilities, and existing travel conditions in the city is provided in the City of St. Helena General Plan 2030: Background Transportation Report (2009); a summary of those key travel characteristics is included in this section, and the full report is included in Appendix H.

Travel Characteristics

The Napa County Travel Behavior Study (NVTA and Fehr & Peers, 2014) included estimates of trip origin-destination patterns for the City of St. Helena. This data is summarized below in Table 3.13-1.

Table 3.13-1: Origin of Vehicle Trips Traveling to St. Helena During the Week

Origin	*Destination*	*Number of Total Trips*	*Percentage of Total Trips*
City of Napa	St. Helena	1,793	11%
St. Helena	St. Helena	6,450	39%
Calistoga	St. Helena	444	3%
Yountville	St. Helena	246	1%
Remainder of Napa County	St. Helena	6,680	41%
Elsewhere in California	St. Helena	841	5%
	Total	**16,454**	**100%**

Source: Table 17, Napa County Travel Behavior Study, 2014

According to the 2014 trip origin and destination data, about 60 percent of all trips with a destination in St. Helena originate from outside of the city. This reflects the high level of tourist trip activity in the city, but it also suggests that a jobs/housing imbalance may exist in the city. The jobs/housing imbalance exists because the number of jobs in the City of St. Helena far exceeds the number of residential units that provide housing for employees working within the city. Jobs/housing balance is a measure of the equilibrium between employment and residential units in a specific area. A more balanced ratio between jobs and housing can reduce travel times and traffic congestion in a given area because commute trips would be shorter and would be more readily made by bicycle or walking (in lieu of driving). The jobs/housing imbalance is exacerbated by the accelerating costs of housing in the community, which results in workers moving farther away from the city in search of more affordable housing.

Motor Vehicle Circulation

Roadways

The Planning Area lies on a north-west/south-east axis, with Main Street providing the backbone and the main route for intercity and regional travel. Main Street carries the designation of both State Route 29 (SR-29) and SR-128. For simplicity, this roadway is referred to as SR-29 in this EIR.[1] Additionally, all streets parallel to SR-29 are referred to as north-south routes, while streets perpendicular to SR-29 are referred to as east-west routes.

The street network to the west of SR-29 is a grid pattern of residential blocks connected to SR-29 by a series of east-west streets connecting residential areas. To the east of SR-29, the grid network is discontinuous due to the lack of parallel facilities to SR-29 to connect the east-west roadways. The existing street network is depicted in Figure 3.13-1.

SR-29

SR-29 is a two- to four-lane rural highway that stretches through Napa County from Vallejo at Napa County's southern border to Lake County in the north. Within the City of St. Helena, SR-29 has two travel lanes, one northbound and one southbound. SR-29 has parallel parking on both sides of the street and a center turn lane between Dowdell Lane and Madrona Street-Fulton Lane. SR-29 provides the primary route for travel within St. Helena and to further destinations around the region.

Since SR-29 is a major north-south thoroughfare for Napa County, heavy through traffic is typical along SR-29. Drivers often try to avoid congestion on SR-29 by using Silverado Trail to the east and alternate parallel routes through residential neighborhoods such as Oak Avenue and the Valley View/Crane Avenue corridor.

The Highway 29 Channelization Project was undertaken by the California Department of Transportation (Caltrans) and was intended to rehabilitate pavement, widen northbound and southbound shoulders, construct a two-way left turn lane, and improve the railroad crossing at Whitehall Lane along SR-29. The project limits were Mee Lane approximately 1.97 miles south of the St. Helena city limits to Charter Oak Avenue in the north, within the city limits. The Channelization Project was proposed by Caltrans in 2007, prior to the 2009 commencement of the Proposed Plan project by the City of St. Helena. The Channelization Project was constructed in 2017 and is now fully complete and operational.

[1] The vast majority of residents and users of the transportation system in Napa County consider the State Route 29-128 corridor as simply State Route 29, and this nomenclature has been used in the document for clarity.

GENERAL PLAN UPDATE
City of St. Helena

North-South Streets

The following streets in St. Helena play key roles in the service of north-south automobile, bicycle, pedestrian and transit demand:

- **Main Street** serves as a regional conveyor of traffic volumes to and through downtown St. Helena. Main Street is signed as SR-29 and SR-128; continuations of Main Street as SR-29 lead to Lake County and Solano County. The St. Helena Fire Department and St. Helena Police Department typically use the Main Street corridor as a travel route during emergencies. Likewise, Main Street is a key connection to major hospital facilities, including St. Helena Hospital to the north of the city and Queen of the Valley Hospital in the City of Napa.
- **Silverado Trail** is parallel to SR-29 on the east side of St. Helena and extends between Soscol Avenue in the City of Napa to the south and Lake County Highway in the City of Calistoga to the north.
- **Spring Mountain Road** connects the City of St. Helena to the City of Santa Rosa and central Sonoma County. In the City of St. Helena, Spring Mountain Road provides a north-south
  connection in the western residential neighborhoods and runs near Robert Louis Stevenson Middle School.
- **Oak Avenue** is a two-lane intracity street that runs parallel to SR-29 to the west of the downtown commercial district. This street is the most immediate and continuous parallel route to SR-29 on the west side of the city and serves St. Helena Elementary School and Robert Louis Stevenson Middle School.
- **Valley View Street/Crane Avenue** is a two-lane, north-south street that that begins as a rural roadway at Sulphur Springs Avenue and transitions into a suburban residential collector north of Vallejo Street. This route provides an alternative connection (versus Main Street) for residences on the west side of the city to cross Sulphur Creek.

East-West Streets

The following streets in St. Helena play key roles in the service of east-west automobile, bicycle, pedestrian and transit trips:

- **Pratt Avenue** is a two-lane street that connects SR-29 to Silverado Trail on the north side of the city. Pratt Avenue provides access to both residential and winery uses, but lacks any north-south connections outside of SR-29. Pratt Avenue extends over a bridge above the Napa River to connect to Silverado Trail. As of July 2018, the bridge is closed due to storm damage from the winter of 2016/17. This bridge is anticipated to be reconstructed in the next few years.
- **Pope Street** is a two-lane street that runs parallel to Pratt Avenue (to the south) and connects SR-29 and downtown St. Helena to Silverado Trail via a historic bridge over the Napa River. Pope Street also provides access to suburban residential neighborhoods on the east side of SR-29.

- **Madrona Street/Fulton Lane** is a two-lane, east-west street. To the west of SR-29, Madrona Street provides access to residential neighborhoods and to Spring Mountain Road. To the east of SR-29, Madrona becomes Fulton Lane which provides "dead end" access to commercial and residential areas.
- **Adams Street and Spring Street** are both downtown streets that primarily provide access to the residential neighborhoods on the west side of the city.
- **Dowdell Lane** is a two-lane street to the east of SR-29 that provides access to a variety of agricultural and industrial uses located in the southeastern quadrant of the city.
- **Sulphur Springs Avenue** is two-lane street on the southern edge of the city that provides access to a variety of commercial and rural residential uses.

Other Streets

In addition to streets listed above, there are numerous local streets with low traffic speeds and volumes that provide direct access to abutting land uses. Most trips use local streets to reach the key north-south and east-west streets noted above. The low traffic speeds and volumes on these streets lend to their use for walking and bicycling.

Roadway Operations

Automobile Level of Service

Level of service (LOS) is a qualitative assessment of traffic conditions perceived by motorists. LOS generally reflects driving conditions such as travel time and speed, freedom to maneuver, and traffic interruptions. LOS uses quantifiable traffic measures such as average speed, intersection control delay, and vehicle volume-to-capacity ratio to determine driver satisfaction.

LOS is reported for individual intersections and is designated by a range of letters. LOS A represents the most uncongested conditions (free flow or low delay) and LOS F represents the most congested conditions (over-capacity with delays). LOS E represents conditions at facility capacity. Table 3.13-2 describes the characteristics of each LOS designation and presents the relationship between LOS and control delay for unsignalized and signalized intersections. For purposes of this EIR, the intersection level of service was analyzed.

Table 3.13-2: Intersection Level of Service Definitions

Level of Service (LOS)	*Unsignalized Intersection Control Delay (sec/veh)[1]*	*Signalized Intersection Control Delay (sec/veh)[a]*	*General Description*
A	0-10.0	0-10.0	Little to no congestion or delays.
B	10.1-15.0	10.1-20.0	Limited congestion. Short delays.
C	15.1-25.0	20.1-35.0	Some congestion with average delays.
D	25.1-35.0	35.1-55.0	Significant congestion and delays
E	35.1-50.0	55.1-80.0	Severe congestion and delays.
F	>50.0	>80.0	Total breakdown with extreme delays.

Note:
1. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and acceleration delay.

Source: 2010 Highway Capacity Manual, Transportation Research Board, 2010

Signalized delay is based on the whole-intersection average control delay, while unsignalized delay is based on the following criteria:

- **Side-street stop-controlled intersections.** Intersection control delay based on the worst stop-controlled approach for single-lane approaches or the worst stop-controlled movement for multi-lane approaches.
- **All-way stop-controlled intersections.** Intersection control delay based on the whole-intersection average control delay.

Existing Level of Service Standards

To assess the existing (2018) conditions for the roadway network, LOS for a series of study intersections in the Planning Area were compared to the LOS standards established in the existing (1993) City of St. Helena General Plan. The 1993 General Plan establishes LOS C as the desired standard for signalized intersections, except for signalized intersections on SR-29/Main Street, where LOS D is permitted. The existing General Plan establishes LOS C as the standard for unsignalized intersections.

Existing Intersection Conditions

Twenty-seven study intersections were analyzed to better understand the Planning Area's current traffic conditions. Of the 27 intersections studied, 26 are in the City of St. Helena; the only intersection in a study area is Pratt Avenue/Silverado Trail, which is under the jurisdiction of Napa County. These intersections were selected as those most likely to be affected by future development, based on a review of intersections evaluated in previous traffic studies in St. Helena. A weekday AM peak hour and weekday PM peak hour intersection analysis was performed for all 27 intersections. The study intersections are presented on Figure 3.13-2.

A Saturday midday peak hour analysis was performed at intersections where the ratio between the Saturday midday peak hour intersection total entering volume and the weekday AM or PM peak hour intersection total entering volume is at least 0.80. This calculation is summarized in Appendix

I. This screening calculation resulted in the inclusion of 12 of the 27 intersections in the Saturday analysis. These intersections include all study intersections along the Main Street corridor (nine intersections), all study intersections along the Silverado Trail corridor (three intersections), and the intersection of Mitchell Drive/Oak Avenue.

The intersection analysis included an extensive multi-modal transportation data collection effort (completed in late April and early May 2018) and analysis of intersection operations using the 2010 Highway Capacity Manual methodologies as applied in the Synchro 10 software package. The Existing Conditions Synchro models were calibrated to field-observed intersection operating conditions.

Intersections are typically analyzed based on the average delay (in seconds) that vehicles have to wait at an intersection before proceeding through. Table 3.13-3 shows the existing delay and LOS of the selected intersections. These values were calculated based on traffic counts conducted by Fehr & Peers in May 2018. Appendix I contains the LOS computations for these intersections.

	Type[a]	*Delay (sec)*[b]	*LOS*[c]	*Delay (sec)*[b]	*LOS*[c]	*Delay (sec)*[b]	*LOS*[c]
26. Silverado Trail/ Pope Street	SSSC	5.7 **(33.1)**	A **(D)**	7.0 **(37.1)**	A **(E)**	5.7 **(29.8)**	A **(D)**
27. Main Street/ Mills Lane	SSSC	0.1 (14.5)	A (B)	0.2 (14.4)	A (B)	0.2 (21.1)	A (C)

Notes:

a. Signal = Signalized intersection; AWSC = All-Way Stop-Controlled intersection; SSSC = Side-Street Stop-Controlled intersection

b. Side-Street Stop-Controlled intersection delay is presented as: Whole-intersection Average Delay (Worst Approach or Worst Movement Delay). Whole-intersection average delay presented for all other intersections.

c. LOS designations per 2010 Highway Capacity Manual. Similar to the delay values, LOS for Side-Street Stop-Controlled intersections is presented as: Whole-intersection Average LOS (Worst Approach or Worst Movement LOS). Whole-intersection average LOS presented for all other intersections.

d. Locations screened out of the weekend peak hour intersection analysis based on intersection total entering volumes. The weekday analysis provides an estimate of weekend conditions.

e. The Pratt Avenue Napa River Bridge is closed due to storm damage from the winter of 2016-17. Funding to correct the damage is in place, and Pratt Avenue is anticipated to be open by 2040.

Bold represents unacceptable operations. Based on the City's existing LOS standards, unacceptable operations are defined as LOS D, E or F, except at signalized intersection on Main Street where LOS D is acceptable

Source: Fehr & Peers, 2018

As shown in Table 3.13-3, six of the 27 intersections have an existing peak hour LOS that exceeds the City's current LOS standards. Four of the intersections are on SR-29 (Main Street), one is on Pope Street, and one is on the Silverado Trail. With the exception of Main Street/Pope Street-Mitchell Drive, existing LOS deficiencies occur at side-street stop-controlled intersections. The deficient operations at these stop-controlled intersections are due to excessive delays and long queues for the side-street stop-controlled traffic. The delays and queues are attributed to heavy through movements along SR-29, Pope Street, and Silverado Trail, and the lack of "gaps" in the vehicle stream available for vehicles to proceed through these unsignalized intersections. LOS F conditions at Main Street/Pope Street-Mitchell Drive result from high vehicle volumes and a lack of intersection capacity associated with special signal operations that account for the offset Pope Street and Mitchell Drive approaches. The Main Street/Pope Street-Mitchell Drive intersection was observed to be the primary bottleneck intersection in the City.

Existing Vehicle-Miles Traveled

The existing vehicle miles of travel (VMT) generated by uses in the Planning Area (City of St. Helena plus the three defined study areas) is presented in Table 3.13-4, which reflects two

accounting methods: 1) shared accounting, where the responsibility of IX or XI[2] trips is shared with the other jurisdictions (such as the County of Napa, City of Napa, City of American Canyon, etc.) and the IX and XI trip lengths are halved; and 2) total accounting, with the full length of trips presented.

Table 3.13-4: Existing Vehicle-Miles of Travel (VMT) in Planning Area[a]

	Base Year[b]	
Model Households	2,970	
Model Population	7,460	
Model Employment	8,734	
VMT	*Shared Accounting*	*Total Accounting*
Total Planning Area Daily VMT	299,700	425,000
Total Planning Area Daily VMT ÷ Households	77.34	143.10
Total Planning Area Daily VMT ÷ Service Population[c]	14.18	26.24

Notes:

a. The Planning Area includes the city limits, SOI, and three defined study areas.

b. Base year data used in the transportation analysis is from the existing regional travel model. Base Year model is Year 2010, with Planning Area land use data and Napa County-wide transportation system updated for Year 2018 conditions.

c. Service population reflects the sum of residents and jobs.

Source: Fehr & Peers, 2018

As further described in the Regulatory Setting, Senate Bill 743 will require agencies to use VMT per capita as a metric for determining level of impact significance for CEQA transportation analyses. However, the CEQA Guidelines update proposed to implement the requirement notes that it will not take effect until July 1, 2020. Therefore, the existing VMT information in Table 3.13-4 is provided for informational purposes only and will not be used in this EIR's evaluation of transportation impacts resulting from implementation of the Proposed Plan.

Emergency Access

Certain areas of the City of St. Helena have physical impediments to emergency access, including portions of town that have limited entrances via bridges or Main Street. Traffic congestion on Main Street and other city streets can interfere with the Fire Department's response to emergencies, including delaying firefighters responding to the station. The congestion also poses challenges for the City's collaboration with neighboring municipalities and agencies seeking to establish and

[2] IX trip = trip with an origin internal to the Planning Area and a destination external to the Planning Area; XI trip = trip with an origin external to the Planning Area and a destination internal to the planning area

implement regionally coordinated disaster planning for fire, emergency medical, and police services (City of St. Helena, 2017).

Bicycle Circulation

The Caltrans Highway Design Manual (HDM) (Chapter 1000: Bikeway Planning and Design) and California Assembly Bill 1193 codify four distinct classifications of bikeways. Bikeways offer various levels of separation from traffic based on traffic volume and speed, among other factors. Bikeway classifications and existing facilities of each type are described below.

- **Class I Bikeway (Bike Path)** paths provide a separate right-of-way and are designated for the exclusive use of people riding bicycles and walking with minimal cross-flow of vehicle traffic. Class I Bikeways can also offer opportunities not provided by the road system by serving as both recreational areas and/or desirable commuter routes.
- **Class II Bike Lanes** provide designated street space for bicyclists, typically adjacent to the outer vehicle travel lanes. Bike lanes include special lane markings, pavement legends, and signage. Bike lanes may be enhanced with painted buffers between vehicle lanes and/or parking, and green paint at conflict zones (such as driveways or intersections).
- **Class III Bike Routes** provide enhanced mixed-traffic conditions for bicyclists through signage, striping, and/or traffic calming treatments, and to provide continuity to a bikeway network. Bike routes are typically designated along gaps between bike trails or bike lanes, or along low-volume, low-speed streets. Bicycle boulevards provide further enhancements to bike routes to encourage slow speeds and discourage non-local vehicle traffic via traffic diverters, chicanes, traffic circles, and/or speed tables. Bicycle boulevards can also feature special wayfinding signage to nearby destinations or other bikeways.
- **Class IV Bikeway (Separated Bikeway)** Separated Bikeways, also referred to as cycle tracks or protected bikeways, are bikeways for the exclusive use of bicycles which are physically separated from vehicle traffic. Guidelines for Separated Bikeways were recently adopted by Caltrans in 2015. Types of separation may include, but are not limited to, grade separation, flexible posts, physical barriers, or on-street parking.

The existing and planned bicycle network included in the Circulation Element of the Proposed Plan is presented in Figure 3.13-3. Most existing bicycle facilities are Class III bike routes, with the exception of two segments of Class II bike lanes along Starr Avenue and Valley View Street. Class II bike lanes are also provided along Silverado Trail. SR-29 is designated as a Class III bikeway; the shoulder widening constructed as part of the Highway 29 Channelization Project provides additional separation between bicycle traffic and vehicle traffic. Other key bicycle facilities in the Planning Area include Class II bike lanes along Deer Park Road between SR-29 and Silverado Trail.

There are few Class I paths currently in the city. Plans for the County-wide Vine Trail would provide Class I, II, and III segments throughout the community, connecting St Helena to regional destinations throughout the Napa Valley. As outlined in a 2015 project fact sheet from the Napa Valley Transportation Authority (NVTA) website, construction of the Vine Trail segment between Calistoga and St. Helena may begin as early as 2019 (contingent on funding). Other segments of the Vine Trail between St. Helena and Yountville are expected to be constructed as funding becomes available.

Pedestrian Circulation

Downtown St. Helena was originally developed with a grid of streets that included a comprehensive network of sidewalks in most parts of the city. The central business district surrounding SR-29 is the city's core pedestrian district. Older neighborhoods surrounding the Downtown core generally have sidewalks that provide pedestrian access between residential areas and schools, community centers, and other walkable destinations. These sidewalks are aging, and maintenance has not kept pace with their deterioration or changing accessibility standards. Significant improvements are needed to maintain and upgrade existing sidewalks throughout the city.

Neighborhoods toward the city's periphery have fewer pedestrian amenities and lack sidewalks in some locations. Areas such as the Dean York neighborhood, and areas adjacent to or outside the Urban Limit Line (ULL) have a rural character where concrete sidewalks (with curb and gutter) may not fit with the context of the neighborhood. The study areas outside of the city limits typically lack pedestrian facilities as the roadway system is of rural character and pedestrian volumes are low.

Public Transit Network

Public transit services are available in all of the cities and in much of the unincorporated area of Napa County. The primary transit service in Napa County is provided by VINE Transit, a fixed-route bus service providing service to and within Calistoga, St. Helena, Napa, American Canyon, Yountville, and parts of unincorporated Napa County.

Development and land use patterns in the Napa Valley have resulted in low rates of transit ridership. According to the 2015 American Community Survey, 1.4 percent of St. Helena residents commute by transit, compared to 5.0 percent statewide.

The Planning Area is served by VINE Route 10, VINE Route 29 and the St. Helena Shuttle. The bus routes through the Planning Area and their operating parameters are as follows:

- **VINE Route 10**. A major intercity route in Napa County, Route 10 provides service between Calistoga and southern Napa (Napa Valley College) every 20 to 60 minutes from 5:00 AM to 11:15 PM on weekdays, about once an hour on Saturdays from 5:50 AM to 8:25 PM, and about once an hour on Sundays between 7:30 AM and 7:30 PM. Within St. Helena, Route 10 runs along SR-29 and makes stops at Pratt Avenue, Elmhurst Avenue, City Hall, Pope Street/Mitchell Drive, Mills Lane, and Dowdell Lane. Route 10 provides transit connections at the Napa Valley College transit center, which provides connections to other VINE routes that serve Napa County and other regional destinations.
- **VINE Route 29**. A major commuter route between Napa County and regional transit connections, Route 29 provides limited-stop service between Calistoga and El Cerrito del Norte BART (via the Vallejo Ferry Terminal). Two morning runs and two afternoon runs are made in both directions on weekdays; the route is not operational on weekends. Additional morning and afternoon runs may be accessed by using VINE Route 10 to access Route 29 at the Napa Valley College transit center in southern Napa. For runs that pass through St. Helena, Route 29 stops at the St. Helena Post Office.

- **St. Helena VINE Shuttle**. The St. Helena Shuttle provides fixed route and on-demand service within the City of St. Helena. One AM fixed route run is provided between 7:50 AM and 8:20 AM on weekdays. One PM fixed route run is provided between 3:15 PM and 4:05 PM on weekdays. At all other times (including the weekend), the shuttle is available for door-to-door service within St. Helena when a reservation is made on the same day of travel.

The above VINE routes and the VINE Shuttle service area are presented on Figure 3.13-4.

Rail Service

The Napa Valley Wine Train is a private tourist rail service that is operated by the Napa Valley Railroad. The Wine Train brings passengers from the City of Napa to the City of St. Helena. Generally, passengers are not allowed to embark or disembark at St. Helena unless booked on a special tour package. The Wine Train rail line runs parallel to SR-29 starting in Napa and passes through the towns of Yountville, Rutherford, and Oakville; the Wine Train runs two train sets per day. As of 2018, no additional stops have been added in St. Helena.

The Wine Train rail line generally parallels Main Street south of Pope Street and diagonally intersects the street grid north of Pope Street. The close proximity of the rail line to Main Street results in increased congestion when train crossing events occur. The rail line also acts as a barrier to east-west travel in the city as the number of public crossing points along the rail line are limited. No commuter or freight rail service exists in St. Helena.

Air Transportation

There are no airports in St. Helena. The closest airports are Angwin-Parrett Field, a public use general aviation airport located in Angwin; Napa County Airport, a public general aviation airport located in Napa; and Charles M. Schulz Airport, a public airport with general aviation and scheduled passenger service located in Sonoma County north of Santa Rosa.

REGULATORY SETTING

Federal Regulations

Federal Highway Administration (FHWA)

The Federal Highway Administration (FHWA) provides oversight of the construction, maintenance and preservation of the nation's highways, bridges, and tunnels. FHWA also provides technical assistance to State and local agencies in an effort to improve safety, mobility, and livability, and to encourage innovation. There are no highways or facilities in the City of St. Helena that are under the regulatory control of the FHWA. Caltrans serves as the FHWA agent and maintains authority over SR-29.

Americans with Disabilities Act

Titles I, II, III, and V of the Americans with Disabilities Act (ADA) of 1990 have been codified in Title 42 of the United States Code, beginning at Section 12101. Title III prohibits discrimination on the basis of disability in "places of public accommodation" (businesses and non-profit agencies that serve the public) and "commercial facilities" (other businesses). The regulation includes Appendix A to Part 36 (Standards for Accessible Design) establishing minimum standards for ensuring accessibility when designing and constructing a new facility or altering an existing facility.

Examples of key guidelines include detectable warnings for pedestrians entering traffic where there is no curb, a clear zone of 48 inches for the pedestrian travelway, and a vibration-free zone for pedestrians.

Surface Transportation Assistance Act of 1982

Sections 411 and 412 of the Surface Transportation Assistance Act (STAA) of 1982 establishes a National Network of facilities for use by large trucks. The STAA specifies large truck dimensions that must be accommodated on all facilities in the National Network. The National Network includes most interstate freeways and some U.S. and State routes. Facilities not on the National Network may be approved by Caltrans for Terminal Access; that is, STAA dimension-compliant trucks exceeding other Statewide or local truck dimension standards may be granted permission to travel on routes not on the National Network after confirming that the Terminal Access facility can accommodate movement of STAA trucks.

The SR-29 corridor between Calistoga and Vallejo, including Main Street within the City of St. Helena, has been designated as a Terminal Access route by Caltrans.

State Regulations

California Department of Transportation (Caltrans)

The California Department of Transportation (Caltrans) is the primary State agency responsible for transportation issues. One of its duties is the construction and maintenance of the State highway system. Caltrans has established standards for roadway traffic flow and developed procedures to determine if State-controlled facilities require improvements. For projects that may physically affect facilities under its administration, Caltrans requires encroachment permits before

any construction work may be undertaken. For projects that would not physically affect facilities, but may influence traffic flow and levels of services at such facilities, Caltrans may recommend measures to mitigate the traffic impacts of such projects. Caltrans facilities within the General Plan Update area include the Main Street/SR-29 corridor.

The following Caltrans procedures and directives are relevant to the project, particularly State roadway facilities:

- **Caltrans Project Development Procedures Manual.** This manual outlines pertinent statutory requirements, planning policies, and implementing procedures regarding transportation facilities. It is continually and incrementally updated to reflect changes in policy and procedures. For example, the most recent revision incorporates the Complete Streets policy from Deputy Directive 64-R1, which is detailed below.
- **Caltrans Deputy Directive 64.** This directive requires Caltrans to consider the needs of non-motorized travelers, including pedestrians, bicyclists, and persons with disabilities, in all programming, planning, maintenance, construction, operations, and project development activities and products. This includes incorporation of the best available standards in all of Caltrans' practices.
- **Caltrans Deputy Directive 64-RI.** This directive requires Caltrans to provide for the needs of travelers of all ages and abilities in all planning, programming, design, construction, operations, and maintenance activities and products on the State highway system. Caltrans supports bicycle, pedestrian, and transit travel with a focus on "complete streets" that begins early in system planning and continues through project construction, maintenance, and operations.
- **Caltrans Director's Policy 22.** This policy establishes support for balancing transportation needs with community goals. Caltrans seeks to involve and integrate community goals in the planning, design, construction, and maintenance and operations processes, including accommodating the needs of bicyclists and pedestrians.
