- **Environmental Assessment Review and Comment.** Caltrans, as a responsible agency under the CEQA, is available for early consultation on projects to provide guidance on applicable transportation analysis methodologies or other transportation related issues, and is responsible for reviewing traffic impact studies for errors and omissions pertaining to the State highway facilities. In relation to this role, Caltrans published the Guide for the Preparation of Traffic Impact Studies (December 2002), which establishes the Measures of Effectiveness. The Measures of Effectiveness are used to determine significant impacts on State facilities. The Guide also mandates that traffic analyses include mitigation measures to lessen potential project impacts on State facilities and to meet each project's fair share responsibilities for the impacts. However, the ultimate mitigation measures and their implementations are to be determined based on consultation between Caltrans, the City of Rohnert Park, and the project proponent.

State Transportation Improvement Program (STIP)

The California Transportation Commission (CTC) administers transportation programming, the public decision-making process that sets priorities and funds projects envisioned in long-range

transportation plans. It commits expected revenues over a multi-year period to transportation projects. The State Transportation Improvement Program (STIP) is a multi-year capital improvement program of transportation projects on and off the State highway system, funded with revenues from the State Highway Account and other funding sources. The California Department of Transportation (Caltrans) manages the operation of State highways, including SR 29 through St. Helena.

Assembly Bill 32 and Senate Bill 375

With the passage of Assembly Bill (AB) 32, the Global Warming Solutions Act of 2006, the State of California committed itself to reducing greenhouse gas (GHG) emissions to 1990 levels by 2020. The California Air Resources Board (CARB) is coordinating the response to comply with AB 32.

In 2007, CARB adopted a list of early action programs that could be put in place by January 1, 2010. In 2008, CARB defined its 1990 baseline level of emissions, and by 2011 it completed its major rule making for reducing GHG emissions. Rules on emissions, as well as market-based mechanisms like the proposed cap and trade program, took effect on January 1, 2012.

On December 11, 2008, CARB adopted its Proposed Scoping Plan for AB 32. This scoping plan included the approval of Senate Bill (SB) 375 as the means for achieving regional transportation-related GHG targets. SB 375 provides guidance on how curbing emissions from cars and light trucks can help the state comply with AB 32.

SB 375 contains the following major components:

- **Regional GHG Emissions Targets.** SB 375 addresses regional GHG emissions targets. CARB's Regional Targets Advisory Committee will guide the adoption of targets to be met by 2020 and 2040 for each Metropolitan Planning Organization (MPO) in the state. These targets, which MPOs may propose themselves, will be updated every eight years in conjunction with the revision schedule of housing and transportation elements.
- **Sustainable Communities Strategy.** MPOs are required to create a Sustainable Communities Strategy (SCS) that provides a plan for meeting regional targets. The SCS and the Regional Transportation Plan (RTP) must be consistent with each other, including action items and financing decisions. If the SCS does not meet the regional target, the MPO must produce an Alternative Planning Strategy that details an alternative plan to meet the target. The RTP/SCS for the nine-county San Francisco Bay Area region is Plan Bay Area, which is further described in the Metropolitan Transportation Commission subsection below.
- **Coordination of Housing and Transportation Plans.** SB 375 requires that regional housing and transportation plans be synchronized on eight-year schedules. In addition, Regional Housing Needs Assessment (RHNA) allocation numbers must conform to the SCS. If local jurisdictions are required to rezone land as a result of changes in the housing element, rezoning must take place within three years.
- **Transportation and Air Emissions Modeling.** Finally, MPOs must use transportation and air emissions modeling techniques consistent with guidelines prepared by the CTC.

Regional transportation planning agencies, cities, and counties are encouraged, but not required, to use travel demand models consistent with the CTC guidelines.

Senate Bill 743

On September 27, 2013, Senate Bill (SB) 743 was signed into law, building on legislative changes from SB 375, AB 32, and AB 1358, described above. SB 743 began the process to modify how impacts on the transportation system are assessed for purposes of CEQA compliance. These changes include the elimination of auto delay, LOS, and other similar measures of vehicular capacity or traffic congestion as a basis for determining significant impacts. SB 743 includes amendments that revise the definition of "infill opportunity zones" to allow cities and counties to opt out of traditional LOS standards established by congestion management programs (CMPs) and require the Office of Planning and Research (OPR) to update the CEQA Guidelines and establish criteria for determining the significance of transportation impacts of projects within transit priority areas.

As part of the new CEQA Guidelines, the new criteria "shall promote the reduction of greenhouse gas emissions, the development of multi-modal transportation networks, and a diversity of land uses."

The Governor's Office of Planning and Research (OPR) has prepared a proposed CEQA Guideline implementing SB 743 and transmitted it to the California Natural Resources Agency for formal adoption. The guidance recommends use of VMT as the CEQA transportation metric, along with the elimination of auto delay (i.e., LOS) for CEQA purposes. If the proposed CEQA Guideline is adopted, all agencies will need to implement the new methodology for determining the significance of transportation impacts in CEQA no later than July 1, 2020. As such, the City will be required to set new thresholds for transportation impacts based on VMT at that time. The California Natural Resources Agency is expected to adopt the new guidelines in late 2018.

Local Regulations

Metropolitan Transportation Commission (MTC)

The majority of federal, State, and local financing available for transportation projects is allocated at the regional level by the MTC, the transportation planning, coordinating, and financing agency for the nine-county Bay Area. MTC prepares the regional transportation plan (RTP), which is a long-range development plan for allocating state and federal transportation funds. The MTC approved the Plan Bay Area in 2017 to guide future regional transportation through the year 2040. The RTP does not include any major regional transportation projects such as changes to SR-29 in St. Helena. Plan Bay Area also serves as the Sustainable Communities Strategy (SCS) document for the nine-county Bay Area region.

Napa Valley Transportation Authority (NVTA)

The Napa Valley Transportation Authority (NVTA), formerly Napa County Transportation and Planning Agency (NCTPA), serves as the Congestion Management Agency (CMA) for the incorporated and unincorporated areas of Napa County. Because the County does not have an adopted congestion management plan (CMP), NVTA works with the Metropolitan Transportation Commission (MTC) to prepare the Napa County portion of the RTP.

In 1999, the NVTA adopted the Napa County Strategic Transportation Plan which the NVTA intended to be a long-range guide for decision-making and funding of Napa County roadways, transit, and bicycle facilities. The plan was updated through the Napa Transportation Future Study (Napa County 2009). In 2015, the NVTA released the updated Transportation Plan, Vision 2040 Moving Napa Forward.

The following goals are included in the Vision 2040 Plan:

- Serve the transportation needs of the entire community, regardless of age, income or ability;
- Improve system safety in order to support all modes and serve all users;
- Use taxpayer dollars efficiently;
- Support Napa County's economic vitality;
- Minimize the energy and other resources required to move people and goods; and
- Prioritize the maintenance and rehabilitation of the existing system.

Facilities that are included in the Strategic Plan include SR-29/128 and the Silverado Trail.

NVTA has also published the Napa Countywide Bicycle Plan (2012, currently undergoing an update) and the Napa Countywide Pedestrian Plan (2016), which provide policy frameworks and implementation plans for enhancing bicycle and pedestrian mobility and safety throughout Napa County.

Local Plans

Bicycle Master Plan

The City currently has a Bicycle Master Plan developed as part of the Napa County Transportation and Planning Agency's countywide Bicycle Master Plan that was adopted in 2012. The countywide Bicycle Master Plan identifies numerous improvements in and near the City of St. Helena. These include but are not limited to installation of a Class II trail along Zinfandel Lane from SR-29 to the Silverado Trail and a Class III trail along Spring Mountain Road from the Napa County Line to the St. Helena City Limit line. The countywide Bicycle Master Plan was adopted in 2012.

Highway 29 Specific Plan

In 2005, the City adopted the Highway 29 Specific Plan. The purpose of the Highway 29 Specific Plan is to guide and support the future development of properties located in the Highway 29 Specific Plan area.

The Highway 29 Specific Plan includes objectives and actions to implement the 1993 City of St. Helena General Plan for properties generally located south of Sulphur Creek, along the east and west sides of South Main Street (SR-29) and north of Grayson Avenue (west side of SR-29) and Dowdell Lane (east side of SR-29). The planning area consists of 108 acres of land. The Circulation concept includes the north-south extension of Oak Avenue between Grayson Avenue and Charter Oak, the relocation and reconstruction of the intersection of Grayson Avenue/Mills Lane and SR-

29 with the addition of a traffic signal at this intersection, the northerly extension of Fountain Street to intersect with Mills Lane, and the widening of Mills Lane through the Specific Plan area. Also proposed in the Specific Plan is a traffic signal installation at the intersection of Dowdell Lane and SR-29.

Napa County General Plan

The Napa County General Plan Circulation Element (2008) outlines objectives, goals, and policies associated with the transportation system in the County's jurisdiction. The Circulation Element notes that the LOS standard for arterial roadways in the unincorporated County is LOS D, except where maintaining the LOS D policy would require the installation of more travel lanes than specified on the County General Plan Circulation Map. The Circulation Element also includes several objectives, goals and policies related to coordinating with Napa County's incorporated cities on multimodal transportation improvements.

Impact Analysis

SIGNIFICANCE CRITERIA

For the purposes of this EIR, a significant adverse impact would occur if implementation of the Proposed Plan would:

Criterion 1: **Conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways, and freeways, pedestrian and bicycle paths, and mass transit;**

Criterion 2: **Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways;**

Criterion 3: **Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks;**

Criterion 4: **Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment);**

Criterion 5: **Result in inadequate emergency access;**

Criterion 6: **Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities; or**

Based on the City of St. Helena's current transportation impact criteria, transportation impact criteria for Napa County, and the state of the practice for evaluating impacts on the transportation system, the above general significance criteria are interpreted as follows in evaluating the Proposed Plan.

City of St. Helena Intersection Operations Impact Criteria

The City's current LOS standard is LOS D for signalized intersections on SR-29 and LOS C elsewhere (as outlined in Goal A in General Plan Section 5.4). Based on the City's 1993 General Plan LOS standard, Proposed Plan Circulation Element goals, and CEQA impact criteria used in previous project-level CEQA impact analyses,[3] traffic operations impacts are identified as significant if implementation of the Proposed Plan would cause:

- Operations at a signalized intersection along SR-29 to deteriorate from LOS D under existing conditions to LOS E or F under the Proposed Plan, or operations at other signalized intersections to deteriorate from LOS C under existing conditions to LOS D, E, or F under the Proposed Plan;
- The LOS to deteriorate to LOS F for signalized intersections that operate at LOS E under existing conditions;
- The average intersection delay to increase by more than five seconds for signalized intersections that operate at LOS F under existing conditions;
- The LOS to deteriorate to LOS D, E, or F for unsignalized intersections operating at LOS C or better under existing conditions, and the future forecasted traffic volumes would satisfy the Caltrans peak hour volume signal warrant criteria for traffic signal installation; or
- Average delay to increase by five or more seconds for unsignalized intersections operating at unacceptable levels (LOS D, E, or F; or LOS E or F on SR-29) under existing conditions, and the future forecasted traffic volumes would satisfy the Caltrans peak hour volume warrant criteria for traffic signal installation.

These criteria apply to all intersections analyzed in this document, except for Pratt Avenue/Silverado Trail (Intersection 24), which is under the jurisdiction of Napa County.

Napa County Intersection Operations Impact Criteria

The County's current LOS standard is LOS D for all arterials and signalized intersections, although exceptions are provided for cases where the constructing additional capacity is in conflict with the County General Plan Circulation Map or is physically infeasible. No LOS standard exists for unsignalized intersections, but unsignalized intersections are suggested to be analyzed on a case-by-case basis to determine if signal warrants are met. The decision by the California Court of

[3] Sources include the Revised Draft EIR for the Hunter Subdivision Project (October 2017) and the Initial Study/Mitigated Negative Declaration for the Culinary Institute of America and Greystone (December 2016).

Appeal in *East Sacramento Partnership for a Livable City v. City of Sacramento, et al. (2016)* notes that "compliance with a general plan policy does not conclusively establish there is not a significant environmental impact." Therefore, while unsignalized intersections are exempt from a County LOS policy, this exemption does not relieve the need for the determination of potential impacts to intersection operations at the study intersections.

Based on the County's General Plan LOS standard, CEQA impact criteria used in previous project-level CEQA impact analyses,[4] and the impact criteria used for the City of St. Helena, traffic operations impacts are identified as significant if implementation of the Proposed Plan would cause:

- Operations at a signalized intersection to deteriorate from LOS D under existing conditions to LOS E or F under the Proposed Plan;
- The LOS to deteriorate to LOS F for signalized intersections that operate at LOS E under existing conditions;
- The average intersection delay to increase by more than five seconds for signalized intersections that operate at LOS F under existing conditions;
- The LOS to deteriorate to from LOS D to LOS E or F for unsignalized intersections operating at LOS C or better under existing conditions, and the future forecasted traffic volumes would satisfy the Caltrans peak hour volume signal warrant criteria for traffic signal installation; or
- Average delay to increase by five or more seconds for unsignalized intersections operating at unacceptable levels (LOS E or F) under existing conditions, and the future forecasted traffic volumes would satisfy the Caltrans peak hour volume warrant criteria for traffic signal installation.

Note that these criteria are generally less stringent than the criteria for the City of St. Helena. These criteria apply only to the intersection of Pratt Avenue/Silverado Trail (Intersection 24), which is under the jurisdiction of Napa County. All other intersections analyzed are subject to the City of St. Helena criteria, discussed in the previous subsection.

Pedestrian Impact Criteria

The City of St. Helena does not have a standardized, quantifiable metric for use in the evaluation of the effectiveness of the pedestrian circulation system. Based on CEQA impact criteria used in previous project-level CEQA impact analyses and typical CEQA impact criteria used in the evaluation of land use plans in the Bay Area, implementation of the Proposed Plan would have a significant impact if it would:

[4] Sources include the Revised Draft EIR for the Hunter Subdivision Project (October 2017) and the Initial Study/Mitigated Negative Declaration for the Culinary Institute of America and Greystone (December 2016).

- Disrupt existing pedestrian facilities;
- Interfere with planned pedestrian facilities;
- Not provide accessible pedestrian facilities that conform to current ADA best practices; or
- Create inconsistencies with adopted pedestrian system plans, guidelines, policies, or standards.

Bicycle Impact Criteria

The City of St. Helena does not have a standardized, quantifiable metric for use in the evaluation of the effectiveness of the bicycle circulation system. Based on CEQA impact criteria used in previous project-level CEQA impact analyses and typical CEQA impact criteria used in the evaluation of land use plans in the Bay Area, implementation of the Proposed Plan would have a significant impact if it would:

- Disrupt existing bicycle facilities;
- Interfere with planned bicycle facilities;
- Conflict or create inconsistencies with adopted bicycle system plans, guidelines, policies, or standards; or
- Not provide secure and safe bicycle parking in adequate proportion to anticipated demand.

Transit Impact Criteria

The City of St. Helena does not have a standardized, quantifiable metric for use in the evaluation of the effectiveness of the public transit system. Based on CEQA impact criteria used in previous project-level CEQA impact analyses and typical CEQA impact criteria used in the evaluation of land use plans in the Bay Area, implementation of the Proposed Plan would have a significant impact if it would:

- Result in a significant increase in transit patronage beyond anticipated capacity; or
- Disrupt existing, or interfere with planned, transit services or facilities.

METHODOLOGY AND ASSUMPTIONS

Quantitative roadway impact analysis was conducted for Year 2040 land uses and transportation improvements described in the Proposed Plan. Impacts are identified based upon a comparison between existing conditions (based on data collected in 2018) and future projections (Year 2040) with Proposed Plan conditions. For purposes of this EIR, Proposed Plan conditions are based on forecasted Year 2040 land uses and transportation improvements described in the Proposed Plan. The transit, bicycle, and pedestrian analysis was limited to a review of the Proposed Plan policy framework and implementation program and a comparison with the identified significance criteria. If a potential inconsistency was discovered, a significant impact was identified.

The Planning Area for the Proposed Plan includes three study areas in unincorporated Napa County immediately adjacent to the city limits where the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities (see Chapter

2: Project Description for additional details). Existing conditions related to transportation and traffic in the whole of the Planning Area are documented above; however, as the City does not have jurisdiction outside of the city limits and sphere of influence (SOI), Proposed Plan policies and actions would not apply in the study areas. Therefore, implementation of the Proposed Plan would not result in direct impacts related to transportation and traffic in the study areas. Cumulative impacts related to traffic and transportation are discussed in Chapter 5: CEQA Required Conclusions.

Planned Roadway Improvements

The Proposed Plan carries over several street extensions from the 1993 General Plan to provide new connections and reduce traffic congestion within the city, particularly along SR-29. However, as the implementation of these extensions and connections are subject to further discretionary action by the City Council per Proposed Plan Implementing Action CR1.B, this EIR's analysis of future conditions does not assume that any of the proposed improvements carried from the 1993 General Plan that have not yet been constructed by 2018 (i.e. existing conditions) would be in place by 2040. This is a conservative assumption as conditions without the proposed improvements are projected to result in higher levels of congestion along SR-29 than they would with the proposed improvements; thus, the analysis assuming buildout without the proposed improvements accounts for the greater impacts that would be expected should the proposed improvements not be implemented.

Possible future street extensions are shown in Figure 3.13-5 and are listed below. The updated General Plan specifies that the future roadway extensions are for bike, pedestrian, and emergency vehicle access only. Any roadway improvements beyond this default condition which would permit vehicular traffic (automobile, truck, etc.) requires a traffic analysis, associated environmental review, and that the City Council make certain findings concerning traffic impacts on existing neighborhoods located in close proximity to such an extension. Future roadway extensions include:

- Starr Avenue extension north to Adams Street;
- Starr Avenue, College Avenue, or Allison Avenue extension to Mills Lane;
- Oak Avenue from Charter Oak Avenue to Grayson Avenue;
- Adams Street extension from its current eastern terminus to Starr Avenue; and
- Extension to Silverado Trail, by extending Adams Street or Mills Lane.

As discussed, since the above roadway extensions would require future study and City Council approval (Proposed Plan Implementing Action CR1.B), the Year 2040 transportation analysis of the Proposed Plan does not include these extensions in the analysis. An inclusion of a particular extension may be considered to alleviate significant intersection impacts (if significant impacts are found).

Figure 3.13-5

Future Roadway Extensions

- Potential Future Roadway for 2035 Plan
- Potential Future Bicycle/ Pedestrian Path for 2035 Plan (with access controls)
- Parks and Open Space
- Urban Limit Line
- Study Areas
- City of St. Helena

- 1 Starr Avenue extension north to Adams Street
- 2A College Avenue, Starr Avenue or Allison Avenue extension to Mills Lane
- 2B College Avenue, Starr Avenue or Allison Avenue extension to Mills Lane
- 2C College Avenue, Starr Avenue or Allison Avenue extension to Mills Lane
- 3 Oak Avenue from Charter Oak Avenue to Grayson Avenue with limited access from Mitchell Drive to Charter Oak Avenue
- 4 Adams Street from its current eastern terminus to Starr Avenue
- 5A Extension to Silverado Trail, by extending Adams Street or Mills Lane.
- 5B Extension to Silverado Trail, by extending Adams Street or Mills Lane.

Intersection Operations Analysis

A general trend nationwide has been that increases in trips and trip length proceed at a higher rate than growth in population. This is due in part to changing lifestyles (the prevalence of two-income families and a greater percentage of non-work trips on a day-to-day basis) and increased reliance on private automobiles. St. Helena's roadways currently experience congestion during peak travel periods. Even with substantial increases in the use of non-automobile transportation in the years ahead, automobile travel will likely remain the preferred mode of transportation used for most trips in St. Helena.

Year 2040 traffic volumes were forecast using existing (Year 2018) count data and the four-step Napa-Solano Travel Demand Model. The Base Year version of the model was calibrated and validated to year 2018 traffic volume counts based on validation targets documented in the *Caltrans 2017 Regional Transportation Plan Guidelines Update*; the calibration and validation procedure is a typical process in traffic volume forecasting whereby the model is fine-tuned to replicate observed travel behavior in the study area prior to developing forecasts. After the calibration procedure, the Base Year model met all validation targets for both the weekday AM peak hour and weekday PM peak hour model scenarios. Weekend midday traffic patterns and volumes mimic the weekday PM peak hour scenario, so travel demand model growth data from the PM peak hour model was used to inform the weekend midday traffic volume forecasts.

LOS was forecast at each of the study intersections based on the Year 2040 traffic volume forecasts. Data on local land use changes is based on projections in the Proposed Plan; regional land use growth projections are based on data from Plan Bay Area 2040 (Association of Bay Area Governments and MTC, July 2017). Peak hour LOS for each intersection was forecast for the weekday AM, weekday PM and weekend midday peak hour scenarios. As noted previously, the weekend midday peak hour analysis is for a select set of intersections, generally along the Main Street corridor. The results of the intersection operations analysis are presented in Table 3.13-5.

The California Manual on Uniform Traffic Control Devices (CA-MUTCD) peak hour volume signal warrant (Warrant 3B) was analyzed where unsignalized intersections are projected to operate deficiently in Year 2040 and where a significant impact to intersection operations may exist. As noted in the Significance Criteria subsection, the peak hour volume signal warrant must be satisfied in order to identify a significant impact at an unsignalized intersection. The peak hour volume signal warrant compares traffic volumes approaching the intersection along the major and minor intersection approaches. Generally, as major intersection approach volume increases, the minor intersection approach volume required to meet the warrant decreases.

The signal warrant analysis is intended to examine the general correlation between the current level of development in the region and the need to install new traffic signals. It estimates current traffic compared against a sub-set of the standard traffic signal warrants recommended in the Federal Highway Administration *Manual on Uniform Traffic Control Devices* and associated California MUTCD guidelines. This analysis should not serve as the only basis for deciding whether and when to install a signal. To reach such a decision, the full set of warrants should be investigated by an experienced engineer based on field-measured rather than forecast traffic data and a thorough study of traffic and roadway conditions. Furthermore, the decision to install a signal should not be based solely upon the warrants, since the installation of signals can lead to

certain types of collisions. The appropriate agency should undertake regular monitoring of actual traffic conditions and accident data, and timely re-evaluation of the full set of warrants to prioritize and program intersections for signalization.

Table 3.13- 5: Intersection Levels of Service: Existing and Proposed Plan

Intersection	Control	Weekday AM Peak Hour				Weekday PM Peak Hour				Weekend Midday Peak Hour			
		Existing Conditions		General Plan Buildout Conditions		Existing Conditions		General Plan Buildout Conditions		Existing Conditions		General Plan Buildout Conditions	
	Type[a]	Delay (sec)[b]	LOS[c]	Delay (sec)[b]	LOS[c]	Delay (sec)[b]	LOS[c]	Delay (sec)[b]	LOS[c]	Delay (sec)[b]	LOS[c]	Delay (sec)[b]	LOS[c]
22. Pope Street/Starr Avenue	SSSC	2.1 (15.4)	A (C)	3.1 (19.0)	A (C)	2.0 (14.1)	A (B)	3.3 (18.4)	A (C)	N/A[d]	N/A[d]	N/A[d]	N/A[d]
23. Pope Street/Paseo Grande Drive-College Avenue	SSSC	6.0 **(27.1)**	A **(D)**	8.0 **(45.6)**[e]	A **(E)**[e]	2.2 (15.5)	A (C)	2.4 (19.3)	A (C)	N/A[d]	N/A[d]	N/A[d]	N/A[d]
24. Silverado Trail/Pratt Avenue	SSSC	*Pratt Avenue closed under existing conditions.*[g]		0.9 (23.0)	A (C)	*Pratt Avenue closed under existing conditions.*[g]		1.8 **(39.2)**[e]	A **(E)**[e]	*Pratt Avenue closed under existing conditions.*[g]		N/A[d]	N/A[d]
25. Silverado Trail/Howell Mountain Road	SSSC	0.5 (14.6)	A (B)	0.6 (16.7)	A (C)	0.9 (17.8)	A (C)	0.9 (22.1)	A (C)	0.6 (15.2)	A (C)	0.8 (19.9)	A (C)
26. Silverado Trail/Pope Street	SSSC	5.7 **(33.1)**	A **(D)**	**35.1 (>120)**	**E (F)**	7.0 **(37.1)**	A **(E)**	**28.7 (>120)**	**D (F)**	5.7 **(29.8)**	A **(D)**	**31.0 (>120)**	**D (F)**
27. Main Street/Mills Lane	SSSC	0.1 (14.5)	A (B)	0.1 (14.9)[f]	A (B)[f]	0.2 (14.4)	A (B)	0.5 (15.5)[f]	A (C)[f]	0.2 (21.1)	A (C)	0.2 (13.5)[f]	A (B)[f]

Notes:
a. Signal = Signalized intersection; AWSC = All-Way Stop-Controlled intersection; SSSC = Side-Street Stop-Controlled intersection
b. Side-Street Stop-Controlled intersection delay is presented as: Whole-intersection Average Delay (Worst Approach or Worst Movement Delay). Whole-intersection average delay presented for all other intersections.
c. LOS designations per 2010 Highway Capacity Manual. Similar to the delay values, LOS for Side-Street Stop-Controlled intersections is presented as: Whole-intersection Average LOS (Worst Approach or Worst Movement LOS). Whole-intersection average LOS presented for all other intersections.
d. Locations screened out of the weekend peak hour intersection analysis based on intersection total entering volumes. The weekday analysis provides an estimate of weekend conditions.
e. Location impact less-than-significant as intersection does not satisfy peak hour volume signal warrant. As outlined in the Significance Criteria section, unsignalized intersection volumes must satisfy the CA-MUTCD peak hour volume signal warrant in order to identify an intersection as a significant impact.
f. Location noted as a significant impact due to the effects of queue spillback generated by the Main Street/Pope Street-Mitchell Drive intersection.
g. The Pratt Avenue Napa River Bridge is closed due to storm damage from the winter of 2016-17. Funding to correct the damage is in place, and Pratt Avenue is anticipated to be open by 2040.

Bold represents unacceptable operations. Based on the City's existing LOS standards, unacceptable operations are defined as LOS D, E or F, except at signalized intersection on Main Street where LOS D is acceptable.
Shaded values represent a significant impact.
Source: Fehr & Peers, 2018

RELEVANT POLICIES AND IMPLEMENTING ACTIONS

Land Use and Growth Management Element

- ***LU2.8*** Ensure walkable and accessible neighborhoods through mixed-use development.
- ***LU3.2*** Enhance the pedestrian-oriented character of commercial areas and provide for convenient pedestrian and bicycle connections to encourage walking and reduce vehicle trips within the commercial area.
- ***LU3.3*** Support the redevelopment of auto-oriented commercial areas into pedestrian-friendly commercial uses.
- ***LU3.7*** Provide sufficient auto and bicycle parking in order to serve local businesses in the commercial districts. Ensure that all parking areas are well-designed and that auto parking spaces are hidden from pedestrian view, whenever possible.
- ***LU3.9*** In Mixed-Use, Service Commercial and Central Business districts encourage residential and office uses in upper-story locations or locations along the periphery of the retail district. This will facilitate active and pedestrian-oriented commercial areas.
- ***LU3.10*** Encourage office development within Mixed-Use, Service Commercial and Central Business districts to complement the pedestrian orientation of surrounding development.
- ***LU3.A*** Identify sites in the Central Business and Service Commercial districts for mixed-use development that are close to services and facilitate walking, bicycling, and transit use.
- ***LU4.4*** Ensure access to and from industrial areas that allows for safe and efficient circulation of goods and people.

Economic Sustainability Element

- ***ES2.6*** Expand lodging in the downtown area to encourage walking, biking and alternative transportation modes in order to reduce the need for automobile trips.

Public Health, Safety, and Noise Element

- ***PS4.E*** Require all new development plans to be approved by the Fire Department prior to the issuance of building permits, grading permits or final map approval.
- ***PS4.6*** Ensure that all streets and roads are adequate in terms of width, turning radius, and grade in order to facilitate access by City firefighting apparatus, and to provide alternative emergency routes of ingress and egress.

Public Facilities and Services Element

- ***PF5.3*** Ensure that children have access to safe routes to school, especially by bicycle and walking.
- ***PF5.B*** Partner with the Napa County Office of Education, the Napa Valley Transportation Authority, the St. Helena Unified School District, and private schools in St. Helena to develop and implement local safe routes to school strategies to improve walking and bicycling access to schools and after-school programs; promote bicycling and

walking to benefit students' health; decrease automobile traffic near schools; and support local efforts to improve the environment. Align safe routes to school strategies with the City's bicycle and pedestrian trail systems.

Circulation Element

- ***CR1.1*** Promote a connected street, bicycle and pedestrian network within the City to provide better internal automobile, bicycle and pedestrian connections for residents.
- ***CR1.2.*** Provide complete streets that balance the diverse needs of users of the public right-of-way, in accordance with the California Complete Streets Act of 2008.
- ***CR1.3.*** Pursue appropriate funding for the development of a balanced transportation system.
- ***CR1.4*** Develop and use, in addition to intersection level of service standards, performance measures that consider all road users to determine transportation impacts of new development.
- ***CR1.5*** Avoid mitigation measures that negatively impact the walking and bicycling environment and encourage driving.
- ***CR1.6*** Continue to support NVTA in the provision of convenient transit, including regional and local service. Support more frequent and reliable transit service between communities to reduce the number of people traveling to or from St. Helena to work by private vehicle. Promote and encourage use of the St. Helena Vine Shuttle.
- ***CR1.7*** Explore the use of the rail corridor to reduce traffic, including working with the new owners of the Wine Train to consider the possibility of developing hospitality and other tourist oriented-uses that are primarily accessed by passengers riding on the Wine Train Corridor.
- ***CR1.8*** Reduce transportation-based GHG emissions from City-controlled sources by employing the following strategies:
  - Complete the City's bicycle and pedestrian network, which will increase transportation choices in the city and reduce the demand for vehicle travel;
  - Maximize the overall efficiency of the transportation system, including managing the transportation network through a citywide transportation system management program;
  - Implement "smart growth" and sustainable planning principles as defined in the Land Use and Growth Management Element;
  - Encourage jobs/housing match, as defined in the Housing Element; and
  - Encourage/provide incentives for employee car pools.
- ***CR1.9*** Promote a walking and bicycling environment that is comfortable and convenient. Ensure that all St. Helena streets have no more than a single through-automobile lane in each direction, plus a single left-hand turning lane where appropriate, even if this requirement increases vehicle travel times. Allow exceptions if an extra lane would reduce the possibility of collisions.

- ***CR1.10*** Strive to maintain a ten minute or less travel time during peak periods along State Route 29 and Silverado Trail, from the northern and southern city boundaries.
- ***CR1.11*** Establish a multimodal transportation impact fee program as part of the City's existing transportation impact fee, to finance and implement project mitigations that help achieve the City's traffic reduction goals. As part of the impact fee program, require new development to analyze travel demand and finance and construct all required off-site circulation improvements, including proposed road extensions, necessary to mitigate project impacts and to reduce the severity of cumulative transportation impacts to all modes of travel.
- ***CR1.A*** Use the street typologies as defined in the Circulation Element as a basis for improving and managing streets. Improve vehicle, pedestrian and bicycle facilities on streets based on this system.
- ***CR1.B*** Evaluate the following new connections to promote increased bicycle, pedestrian and non-automobile based transportation, consistent with the requirement for the preparation of a "Special Study," as described in the Circulation Element. Where feasible, preserve existing rights-of-way.
  - Starr Avenue extension north to Adams Street
  - Consider three options for a connection to Mills Lane: a) Starr Avenue extension to Mills Lane; b) College Avenue extension to Mills Lane; or c) Allison Avenue extension to Mills Lane
  - Oak Avenue from Charter Oak Avenue to Grayson Avenue and limited access from Mitchell Drive to Charter Oak Avenue
  - Adams Street from its current eastern terminus to Starr Avenue
  - Consider two options to connect downtown St. Helena to Silverado Trail: a) Adams Street extension to Silverado Trail; b) Mills Lane extension to Silverado Trail
- ***CR1.C*** Identify streets that should become "more complete," through consideration of transit priorities, sidewalk gap closures, new bikeways and vehicle traffic calming measures.
- ***CR1.D*** Adopt and implement transportation performance measures that promote an efficient transportation system from the perspective of all users. These performance measures shall supplement the City's traditional automobile Level of Service (LOS) thresholds with the goal of improving multimodal circulation and managing traffic congestion in St. Helena.
- ***CR1.E*** Support efforts to secure additional funding for regional transit service to St. Helena for residents, workers, and visitors as a viable alternative to travel by private automobile. Focus on improving the bus service for use by commuters.
- ***CR1.F*** Subject all rail corridor uses to use permit review; locate passenger facilities within zoning districts which minimize impacts to established and proposed land uses.
- ***CR1.G*** Study the potential for integrating Wine Train activities with car-free tourism strategies to provide an alternative for tourists to visit St. Helena without a car.

- ***CR1.H*** Measure total automobile trips generated by new developments on a per project basis, to reduce vehicle trips. Maintain a citywide trip generation analysis methodology that evaluates the effects of land use and built environment changes on travel choices and behavior.
- ***CR1.I*** Evaluate changes to vehicle travel times along State Route 29 on a per-development or per-project basis. Establish significance criteria for determining if an increase in travel time resulting from new development is significant.
- ***CR1.J*** As new land use development and redevelopment occurs, require the provision of links to existing streets, street right-of-way dedications, and improvements to the local roadway network (including pedestrian, transit, bicycle, and other non-motorized vehicle improvements), consistent with adopted Engineering Standards, public safety standards, and the St. Helena Bicycle Plan. Additionally, in the case of subdivisions, require the provision of sidewalks on all local streets within the development.
- ***CR1.K*** Adopt and implement a citywide, Multimodal Transportation Mitigation Fee program to provide funding on a fair share bases for transportation improvements that reduce citywide automobile trips and contribute to the provision of a continuous path of travel for walking and bicycling from the development site to the center of downtown and other key destinations. Such transportation improvements include completing the bicycle and pedestrian network, implementing transportation demand and systems management strategies, and improving traffic signal coordination on State Route 29. Ensure that fees take into consideration the contribution of new development to changes in net new automobile trips and change in travel time along State Route 29.
- ***CR1.L*** Continue to work with Caltrans to ensure regional coordination and manage congestion on State Route 29.
- ***CR2.1*** Create a comprehensive bicycle and pedestrian network that enhances neighborhood connectivity. Develop the system as shown in Figure 5.3 to expand and improve the pedestrian and bikeway system.
- ***CR2.2*** Promote walking and bicycling as safe and convenient modes of transportation.
- ***CR2.3*** Ensure secure, accessible and convenient bicycle parking facilities throughout St. Helena, including downtown, commercial areas, schools and parks.
- ***CR2.4*** Preserve and enhance pedestrian connectivity and safety throughout St. Helena.
- ***CR2.5*** Improve the pedestrian experience through streetscape enhancements, focusing improvements where there is the greatest need, and by orienting development toward the street.
- ***CR2.6*** Encourage walking and bicycling trips to St. Helena schools.
- ***CR2.B*** Develop guidelines for the design, construction and maintenance of bicycle and pedestrian paths in St. Helena. Coordinate the guidelines with Napa County or regional trail connections.
- ***CR2.C*** Require any new development and modifications to existing projects to provide bicycle and pedestrian improvements and amenities, consistent with adopted Engineering Standards and the St. Helena Bicycle Plan.

- ***CR2.D*** Identify and pursue funding opportunities for bicycle projects on the local, state and federal levels. Update the existing and proposed bicycle system as required by Caltrans to qualify for Bicycle Transportation Account funds.
- ***CR2.E*** Allocate funds and/or identify funding sources for pedestrian and streetscape improvements.
- ***CR2.F*** Improve street crossings and gaps in the sidewalk system through development review and capital improvement projects.
- ***CR2.G*** Adopt a crosswalk installation policy to promote pedestrian safety and accessibility.
- ***CR2.H*** Review pedestrian/bicycle-vehicle collision data on an annual basis and identify areas for pedestrian safety improvements.
- ***CR2.I*** Pursue state and federal grant opportunities to fund a Safe Routes to School program and other bike/pedestrian programs.
- ***CR2.J*** Consider the feasibility of a citywide bike sharing program for municipal and/or public use.
- ***CR2.K*** Require safe and accessible bicycle and pedestrian access for all newly-developed public facilities.
- ***CR2.L*** Enhance the pedestrian environment within the commercial area, and support the development of bicycle trails throughout St. Helena with the goal of connecting to a countywide system. Encourage the use of group transit options in order to decrease tourist-generated traffic congestion. Encourage the use of pedi-buses by the school district to guide children safely and in a more healthful and sustainable manner to school.
- ***CR3.1*** Provide incentives and encourage existing major employers to develop and implement transportation demand management (TDM) programs to increase the number of people who bike, and walk, and take transit to work and reduce peak-period trip generation. Strategies include the following:
  - Transit subsidies or reimbursement to residents and employees (often referred to as "commuter check" or "EcoPass");
  - Car-share, car-pooling and neighborhood electric vehicle programs, to reduce the need to have a car or second car;
  - Integrated bicycle parking and support facilities, primarily to reduce trips within the city;
  - Modified parking codes to manage the supply of parking that generates frequent turn-over and serves multiple users; and
  - Marketing and information programs to encourage alternative transportation modes.
- ***CR3.2*** Support the implementation of NVTA goals to reduce/restrain growth of automobile vehicle miles traveled (VMT).

- ***CR3.3*** Shift travel from single-occupancy vehicles to other modes so that by 2040, 45 percent of work trips by St. Helena residents and workers are by carpool, transit, walking or bicycling.
- ***CR3.4*** Work with the wine and hospitality industries to manage congestion and create and promote car-free tourism services.
- ***CR3.5*** Work with the school district to increase the use of carpooling and the bus system to reduce drive-alone trips to St. Helena schools.
- ***CR3.6*** Support development of the bikeway and pedestrian networks to provide a convenient opportunity for at least 20 percent of commuters to get to work by walking or bicycling.
- ***CR3.7*** Support compact, mixed-use development as outlined in the Land Use and Growth Management and Housing elements.
- ***CR3.A*** Study the feasibility of a citywide TDM program and review the effectiveness of the existing Traffic Impact Mitigation Fee.
- ***CR3.B*** If deemed feasible, as part of the municipal code, require TDM measures for all new non-residential development.
- ***CR3.C*** Regularly monitor progress toward increasing the number of residents and workers walking, biking and using public transit.
- ***CR3.D*** Work with the wine and hospitality industries, including the Wine Train, to manage congestion and create and promote car-free tourism services.
- ***CR4.1*** Ensure adequate maintenance of transportation facilities such as streets, sidewalks and multi-use paths. Emphasize safety considerations, impacts on non-automobile modes of travel and overall impact on long-term resource needs as maintenance priorities.
- ***CR4.2*** Ensure safety on residential neighborhood streets to promote walking and bicycling and preserve neighborhood livability.
- ***CR4.3*** Continue efforts to calm traffic, and minimize traffic volumes and speeds in residential areas.
- ***CR4.4*** Strive to bring all pedestrian facilities into compliance with Americans with Disabilities Act (ADA) specifications.
- ***CR4.5*** Improve traffic safety and encourage walking and bicycling trips to St. Helena schools through a Safe Routes to School program.
- ***CR4.A*** Review and update the Capital Improvement Program on a regular basis to identify and prioritize circulation facility improvements. Ensure that improvements support the goals, policies and implementing actions identified in the General Plan.
- ***CR4.B*** Develop strategies to calm traffic on streets that experience speeding or cut-through traffic, such as Starr Avenue. Include a range of solutions including enforcement, engineering and education efforts to calm vehicle traffic.

- ***CR4.C*** Establish a transition plan that identifies prioritization and funding mechanisms for improving street conditions to meet ADA specifications. Transition plans are an important part of meeting ADA standards.
- ***CR4.D*** Pursue Safe Routes to School grants to improve safety and encourage bicycling and walking trips to St. Helena schools.
- ***CR4.E*** To reduce the effect of regional traffic on local streets, monitor traffic volumes and speeds on potential regional cut-through routes, including Oak Avenue and Valley View Street and other problematic streets like Spring, Pope, Starr, etc. Due to the forecast potential for traffic volumes to increase on Oak Avenue and Valley View Street, the City shall consider installing traffic calming or traffic diverting devices to discourage regional cut-through traffic with the goal of ensuring that, over the duration of the General Plan, traffic volumes on these streets do not increase significantly.
- ***CR4.F*** To ensure the multimodal Transportation Mitigation Fee (TMF) program serves as acceptable mitigation for the increase in traffic volumes resulting from build out of the General Plan, the City shall explore TMF programs within 6 months of adoption of the General Plan Update. As part of this effort, the City shall conduct a fee study to ascertain whether the fees designated under the existing fee program should be revised. As part of the fee study development, the City should consult with other local agencies, including Caltrans and the California Public Utilities Commission (CPUC), to identify potential improvements to State Route 29 beyond those currently under construction, and to at-grade railroad crossings that could be incorporated into the TMF program.
- ***CR4.G*** The City shall consider the use of signal preemption for emergency response or evacuation in locations where Police and Fire Departments response times are not met.
- ***CR4.H*** Connect Vallejo Street to Sulphur Springs Avenue with a fully paved street connection meeting the City's established Street Standards.
- ***CR5.1*** Ensure an adequate balance of parking demand and supply. Closely manage and track parking supply within the downtown area by developing a parking management program and implementing a "park-once" strategy.
- ***CR5.2*** Maintain on-street parking and/or parklet on Main Street in the Central Business District for the convenience of shoppers and to provide a physical and psychological buffer between Main Street traffic and pedestrians.
- ***CR5.A*** Develop a "park-once" strategy for visitors to improve air quality, reduce congestion, promote alternatives to driving alone, and educate and involve businesses and residents. Work with employers to encourage employees to park on the fringes of downtown, thereby leaving convenient parking spaces open for shoppers.
- ***CR6.1*** Prioritize and implement improvements to the circulation system, with an emphasis on bicycle and pedestrian improvements and expanded transit service.
- ***CR6.2*** Require concurrent infrastructure development for any new development projects that have impacts on the circulation system, including streets, paths, trails, sidewalks and public transit.
- ***CR6.3*** Consider requiring dedications and mitigations in addition to traffic mitigation fees for any development that occurs adjacent to proposed street corridors in order to

reinforce circulation system continuity. Traffic mitigation fees are necessary to mitigate existing traffic congestion and congestion caused by new development. Consider revising fee schedules to fund needed vehicular, bike, and pedestrian improvements in order to appropriately mitigate impacts. The fee schedule must be based on an established "nexus" between new development and the planned improvements.

- ***CR6.A*** Evaluate and prioritize all new paths and trails (identified in Section E: St. Helena's Circulation and Mobility Future) when adequate funding is secured and concurrent with any new, adjacent developments.
- ***CR6.B*** Keep up to date the existing St. Helena Traffic Mitigation Fee program to provide funding for all new road connections and trails included in the Circulation Element, in order to ensure new connections and trails are constructed in a timely manner.

IMPACTS

Impact 3.13-1 Implementation of the Proposed Plan could result in conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit. (Significant and Unavoidable)

Intersection Traffic Operations

Intersection operations impacts are identified as significant if implementation of the Proposed Plan would cause the following to occur at intersections located in the City of St. Helena:

- Operations at a signalized intersection along SR-29 to deteriorate from LOS D under existing conditions to LOS E or F under the Proposed Plan, or operations at other signalized intersections to deteriorate from LOS C under existing conditions to LOS D, E, or F under the Proposed Plan;
- The LOS to deteriorate to LOS F for signalized intersections that operate at LOS E under existing conditions;
- The average intersection delay to increase by more than five seconds for signalized intersections that operate at LOS F under existing conditions;
- The LOS to deteriorate to LOS D, E, or F for unsignalized intersections operating at LOS C or better under existing conditions, and the future forecasted traffic volumes would satisfy the Caltrans peak hour volume warrant criteria for traffic signal installation; or
- Average delay to increase by five or more seconds for unsignalized intersections operating at unacceptable levels (LOS D, E, or F; or LOS E or F on SR-29) under existing conditions, and the future forecasted traffic volumes would satisfy the Caltrans peak hour volume warrant criteria for traffic signal installation.

Intersection operations impacts are identified as significant if implementation of the Proposed Plan would cause the following to occur at intersections located in Napa County:

- Operations at a signalized intersection to deteriorate from LOS D under existing conditions to LOS E or F under the Proposed Plan;
- The LOS to deteriorate to LOS F for signalized intersections that operate at LOS E under existing conditions;
- The average intersection delay to increase by more than five seconds for signalized intersections that operate at LOS F under existing conditions;
- The LOS to deteriorate to from LOS D to LOS E or F for unsignalized intersections operating at LOS C or better under existing conditions, and the future forecasted traffic volumes would satisfy the Caltrans peak hour volume signal warrant criteria for traffic signal installation; or
- Average delay to increase by five or more seconds for unsignalized intersections operating at unacceptable levels (LOS E or F) under existing conditions, and the future forecasted traffic volumes would satisfy the Caltrans peak hour volume warrant criteria for traffic signal installation.

As noted previously, the only intersection out of the 27 that is analyzed under the Napa County criteria is the intersection of Pratt Avenue/Silverado Trail (Intersection 24). All other intersections are analyzed under the City of St. Helena criteria.

Table 3-13.5 presents the year 2040 LOS at the 27 intersections studied as part of the analysis under Proposed Plan Buildout. Significant impacts are identified at seven intersections, as follows:

- Intersection 8 - Main Street/Pratt Avenue: Weekday PM peak hour intersection operations would remain at LOS F and the weekday PM peak hour delay would increase by more than five seconds. The Peak Hour Signal Warrant is met at this location for the weekday PM peak hour.
- Intersection 9 - Main Street/Elmhurst Avenue: Weekday PM peak hour intersection operations would remain at LOS F and the weekday PM peak hour delay would increase by more than five seconds. The Peak Hour Signal Warrant is met at this location for the weekday PM peak hour.
- Intersection 18 - Main Street/Pope Street-Mitchell Drive: Weekday AM peak hour, weekday PM peak hour, and weekend midday peak hour intersection operations would remain at LOS F and the delay would increase by more than five seconds for each peak hour studied.
- Intersection 19 - Main Street/Grayson Avenue: While this intersection is projected to operate acceptably per the intersection operations analysis, the results of the Main Street/Pope Street-Mitchell Drive analysis indicate that queues from the Main Street/Pope Street-Mitchell Drive intersection would regularly impede northbound Main Street traffic flow at Main Street/Grayson Avenue. Vehicles making an eastbound left turn from Grayson Avenue to northbound Main Street may need to wait multiple cycles to complete a left turn if there is no room to complete the turn. Therefore, this intersection has been noted as a significant impact.

- Intersection 20 - Main Street/Sulphur Springs Avenue: Weekday PM peak hour intersection operations would deteriorate from an existing LOS D to a projected LOS E, and the weekday PM peak hour delay would increase by more than five seconds. The Peak Hour Signal Warrant is met at this location for the weekday PM peak hour.
- Intersection 26 - Silverado Trail/Pope Street: Weekday AM peak hour, weekday PM peak hour, and weekend midday peak hour intersection operations would remain at LOS F and the delay would increase by more than five seconds for each peak hour studied. The Peak Hour Signal Warrant is met at this location for all of the indicated peak hours studied.
- Intersection 27 - Main Street/Mills Lane: While this intersection is projected to operate acceptably per the intersection operations analysis, the results of the Main Street/Pope Street-Mitchell Drive analysis indicate that queues from the Main Street/Pope Street-Mitchell Drive intersection would regularly impede northbound Main Street traffic flow at Main Street/Mills Lane. Vehicles making a westbound right turn from Mills Lane to northbound Main Street may need to wait for long times for gaps in traffic to open to complete the turn. A similar situation may occur for vehicles making a southbound left turn from Main Street to Mills Lane Therefore, this intersection has been noted as a significant impact.

The Proposed Plan includes multiple policies and implementing actions that would seek to minimize congestion on the transportation network through a series of efforts to reduce single occupancy vehicle trips, improve circulation throughout St. Helena, and promote walking, bicycling and transit trips as viable transportation options, including policies LU3.2, LU3.3, LU4.4, ES2.6, PF5.B, CR1.1, CR1.2, CR1.3, CR1.4, CR1.6, CR1.7, CR1.10, CR1.11, CR1.A, CR1.B, CR1.D, CR1.E, CR1.G, CR1.H, CR1.I, CR1.K, CR1.L, CR3.1, CR3.3, CR3.4, CR3.5, CR3.A, CR3.B, CR3.C, CR3.D, CR4.A, CR5.1, CR5.A, CR6.1, CR6.2, CR6.3, and CR6.B.

The Proposed Plan contains multiple implementing actions that identify mechanisms for funding actions designed to alleviate transportation impacts resulting from new development under the Proposed Plan. Specifically, Implementing Actions CR1.H and CR1.K provide for the development of a methodology to measure automobile trips generated (ATG) by new development projects, and the adoption of a citywide, multi-modal Transportation Mitigation Fee program. While the City already has a traffic impact fee program in place, the proposed multi-modal fee program would seek to provide transportation improvements that offset the increase in vehicle trips resulting from new development. The Transportation Mitigation Fee program would determine how many peak hour trips could be mitigated by the strategy of completing the City's bicycle and pedestrian network, employing a citywide transportation demand management program and implementing other automobile trip reduction measures. Nevertheless, even with Proposed Plan policies and implementing actions, impacts at the above stated intersections would be significant.

Significance Before Mitigation: Significant

Mitigation Measures

The following specific mitigation measures have been developed to alleviate the significant impacts noted above. With the exception of the Silverado Trail/Pope Street intersection, these mitigation

measures would require approval by Caltrans and/or further action by the City Council prior to implementation of the mitigation measure.

TR-1: Main Street/Pratt Avenue: Install a traffic signal at the intersection.

TR-2: Main Street/Elmhurst Avenue: Restripe the intersection to include the following:

- Northbound approach: 1 left turn lane, 1 though lane
- Southbound approach: 1 two-way left turn lane, 1 through-right turn shared lane
- Eastbound approach: 1 left turn lane, 1 right turn lane

TR-3: Main Street/Pope Street-Mitchell Drive: Construct one or more of the planned roadway extensions noted in General Plan Figure 5.2. Note that, per the General Plan, additional study of the connection(s) would be required, and the City Council would need to approve the connection at that time. Candidate extensions that may directly reduce the impacts at Main Street/Pope Street-Mitchell Drive include:

- Connection 2A: College Avenue extension to Mills Lane (may require realignment of Mills Lane to meet Main Street/Grayson Avenue intersection)
- Connection 3: Oak Avenue extension from Mitchell Drive to Grayson Avenue
- Connection 2B, Connection 2C, Connection 5B, or a combination of Connections 1, 4 and 5A may provide congestion relief to Main Street/Pope Street-Mitchell Drive, but these improvements have additional considerations related to neighborhood traffic volumes and costs related to crossings of the Napa River.

TR-4: Main Street/Sulphur Springs Avenue: Install a traffic signal at the intersection.

TR-5: Silverado Trail/Pope Street: Install a traffic signal at the intersection. The nearby intersection of Silverado Trail/Howell Mountain Road may require signalization as well because the two intersections are closely spaced.

TR-6: Main Street/Grayson Avenue and Main Street/Mills Lane: Realign Mills Lane to form a four approach to the existing Main Street/Grayson Avenue intersection.

Significance After Mitigation: Significant and unavoidable. As Main Street is a State highway (SR-29), mitigation measures along Main Street are subject to Caltrans approval, and thus the construction of the mitigation measures cannot be guaranteed by the City. Additionally, the mitigation measures along Main Street and Silverado Trail may be considered infeasible due to lack of funds to design and construct adequate improvements to accommodate future traffic volumes or due to lack of sufficient right-of-way to construct needed improvements. Since the City cannot guarantee that the needed improvements will be implemented, the impact is deemed significant and unavoidable.

Vehicle-Miles of Travel

VMT is not currently a CEQA metric used by the City of St. Helena to evaluate the transportation impacts of proposed development; and the following analysis was conducted for informational purposes only.

The Napa-Solano Travel Demand Model was used to estimate the VMT generated by land uses in the Planning Area after implementation of the Proposed Plan. To assess the VMT generated by St. Helena, an origin-destination (OD) method was used which tracks all vehicular trips generated by land uses in the Planning Area across the entire regional network. Four types of trips are isolated:

- **Internal-Internal (II) trips.** Include all trips that begin and end within the Planning Area.
- **Internal-External (IX) trips.** Include all trips that begin in within the Planning Area and end outside the Planning Area.
- **External-Internal (XI) trips.** Include all trips that begin outside the Planning Area and end inside the Planning Area.
- **External-External (XX) trips.** Trips that begin and end outside the Planning Area are not included. The City of St. Helena assumes no responsibility for External-External trip type VMTs.

Two separate accounting methods were used. The first shares the responsibility of IX or IX trips with the other jurisdiction with IX and XI trip lengths halved. The second method uses the full length of IX and IX trips. Results are presented in Table 3.13-6: Vehicle Miles of Travel Summary in the Planning Area.

Table 3.13-6: Vehicle-Miles of Travel (VMT) in Planning Area[a]

	Base Year[b]		*Year 2040 with Proposed Plan*	
Model Households	2,970		3,388	
Model Population	7,460		8,603	
Model Employment	8,734		10,772	
VMT	*Shared Accounting*	*Total Accounting*	*Shared Accounting*	*Total Accounting*
Total Planning Area Daily VMT	229,700	425,000	304,400	558,500
Total Planning Area Daily VMT ÷ Households	77.34	143.10	89.85	164.85
Total Planning Area Daily VMT ÷ Service Population[c]	14.18	26.24	15.71	28.83

Notes:

a. The Planning Area includes the city limits, SOI, and three defined study areas.

b. Base year data used in the transportation analysis is from the existing regional travel model. Base Year model is Year 2010, with Planning Area land use data and Napa County-wide transportation system updated for Year 2018 conditions.

c. Service population reflects the sum of residents and jobs.

Source: Fehr & Peers, 2018

As shown in Table 3.13-6, VMT would be expected to increase under the Proposed Plan. Part of the increase is associated with the addition of more employment and retail opportunities within the city that could have the potential to import vehicle trips from the surrounding communities. However, the model does not fully capture the potential for some existing and future trips to shift to alternative travel modes as the bicycle, pedestrian, and transit systems are enhanced, so actual VMT may be somewhat lower than the model predicts as this mode shift occurs over time.

The Proposed Plan includes policies that would reduce VMT generation on a per capita basis. This would, in turn, reduce VMT-related impacts. The policies include LU2.8, LU3.2, LU3.3, LU3.9, LU3.10, LU3.A, ES2.6, PF5.3, PF5.B, CR1.1, CR1.2, CR1.3, CR1.4, CR1.5, CR1.6, CR1.7, CR1.8, CR1.9, CR1.11, CR1.A, CR1.B, CR1.C, CR1.D, CR1.J, CR1.K, CR2.1, CR2.2, CR2.3, CR2.4, CR2.5, CR2.6, CF2.A, CR2.B, CR2.C, CR2.D, CR2.E, CR2.F, CR2.G, CR2.J, CR2.K, CR2.L, CR3.1, CR3.2, CR3.3, CR3.4, CR3.5, CR3.6, CR3.7, CR3.A, CR3.B, CR3.C, CR3.D, CR4.1, CR4.2, CR4.3, CR4.4, CR4.5, CR4.A, CR4.B, CR4.C, CR4.D, CR4.E, CR4.F, CR6.1, CR6.2, CR6.3, CR6.A, and CR6.B.

The Proposed Plan Land Use and Growth Management Element policies and implementing actions noted above reduce VMT generation though the promotion of pedestrian-oriented, mixed-use developments. These types of developments generally result in internal project site trip capture, which reduces VMT generation versus standalone, single-use developments. Other policies and implementing actions in the Land Use and Growth Management, Public Health, Safety and Noise, Economic Sustainability and Circulation Elements would promote a multi-modal transportation system that invites residents to walk, bike or take transit between land uses (in lieu of traveling by private automobile). Ultimately, VMT generation is the result of the interaction between land uses and the transportation network, and the policies listed above would contribute to a land

use/transportation interaction pattern that promotes a reduced VMT generation potential on a per-capita basis.

Mitigation Measures

None required.

Pedestrian Circulation

For this evaluation, the Proposed Plan would be considered to have an impact on pedestrian facilities if it implementation of the Proposed Plan would:

- Disrupt existing pedestrian facilities;
- Interfere with planned pedestrian facilities;
- Not provide accessible pedestrian facilities that conform to current ADA best practices; or
- Create inconsistencies with adopted pedestrian system plans, guidelines, policies, or standards.

Implementation of the Proposed Plan will enable the City to improve pedestrian infrastructure and programs throughout the city through policies LU2.8, LU3.2, LU3.3, LU3.A, PF5.3, PF5.B, CR1.1, CR1.2, CR1.3, CR1.4, CR1.5, CR1.8, CR1.9, CR1.11, CR1.A, CR1.B, CR1.C, CR1.D, CR1.J, CR1.K, CR2.1, CR2.2, CR2.3, CR2.4, CR2.5, CR2.6, CF2.A, CR2.B, CR2.C, CR2.D, CR2.E, CR2.F, CR2.G, CR2.H, CR2.I, CR2.J, CR2.K, CR2.L, CR3.1, CR3.6, CR3.A, CR4.1, CR4.2, CR4.3, CR4.4, CR4.5, CR4.A, CR4.B, CR4.C, CR4.D, CR4.E, CR4.F, CR6.1, CR6.2, CR6.3, CR6.A, and CR6.B.

The policies noted above would promote walking between mixed-use and other types of development that are pedestrian-oriented. The Circulation Element polices and implementing actions include multi-modal transportation impact/mitigation fee programs (CR1.11 and CR1.K) that would provide a funding source for the buildout of the Proposed Plan pedestrian circulation system, including multi-use, off-street trails that more effectively connect land uses in the city. The resulting improved connections along and between existing and planned facilities would improve pedestrian access in the city and serve to ensure that impacts to pedestrian circulation would be less than significant. The Proposed Plan does not include policies or improvements for the circulation system in the unincorporated study areas, where it would have no impact on pedestrian circulation.

Mitigation Measures

None required.

Bicycle Circulation

The Proposed Plan would be considered to have an impact on bicycle facilities if implementation of the Proposed Plan would:

- Disrupt existing bicycle facilities;
- Interfere with planned bicycle facilities;

- Conflict or create inconsistencies with adopted bicycle system plans, guidelines, policies, or standards; or
- Not provide secure and safe bicycle parking in adequate proportion to anticipated demand.

Implementation of the Proposed Plan would enable the City to improve bicycle infrastructure and programs throughout the city through policies LU2.8, LU3.2, LU3.3, LU3.A, PF5.3, PF5.B, CR1.1, CR1.2, CR1.3, CR1.4, CR1.5, CR1.8, CR1.9, CR1.11, CR1.A, CR1.B, CR1.C, CR1.D, CR1.J, CR1.K, CR2.1, CR2.2, CR2.3, CR2.6, CF2.A, CR2.B, CR2.C, CR2.D, CR2.H, CR2.I, CR2.J, CR2.K, CR2.L, CR3.1, CR3.6, CR3.A, CR4.1, CR4.2, CR4.3, CR4.4, CR4.5, CR4.A, CR4.B, CR4.C, CR4.D, CR4.E, CR4.F, CR6.1, CR6.2, CR6.3, CR6.A, and CR6.B.

The policies noted above would promote bicycling between mixed-use and other types of development that promote travel by modes other than private automobile. The Circulation Element polices and implementing actions include multi-modal transportation impact/mitigation fee programs (CR1.11 and CR1.K) that would provide a funding source for the buildout of the Proposed Plan bicycle circulation system, including multiuse, Class I bike paths that more effectively connect land uses in the city and connect the city to the countywide bicycle system. The resulting improved connections along and between existing and planned facilities would reduce impacts to bicycle circulation in the City of St. Helena to below a level of significance.

Mitigation Measures

None required.

Public Transit System

The Proposed Plan is considered to have an impact on public transit if implementation of the Proposed Plan would:

- Result in a significant unanticipated increase in transit patronage; or
- Disrupt existing, or interfere with planned, transit services or facilities.

Implementation of the Proposed Plan would enable the City to improve public transit infrastructure and programs throughout the city through policies LU3.A, ES2.6, CR1.1, CR1.2, CR1.3, CR1.4, CR1.5, CR1.6, CR1.7, CR1.8, CR1.10, CR1.11, CR1.A, CR1.B, CR1.C, CR1.D, CR1.E, CR1.F, CR1.I, CR1.K, CR1.L, CR3.1, CR3.2, CR3.3, CR3.4, CR3.5, CR3.A, CR3.B, CR3.C, CR3.D, CR4.1, CR4.A, CR4.F, CR6.1, CR6.2, CR6.3, CR6.A, and CR6.B.

While an increase in transit patronage in the city and between the city and study areas would be expected through the implementation of the Proposed Plan, policies in the Proposed Plan would result in coordination between the City and VINE Transit over time to improve transit usage and transit capacity. The Proposed Plan also includes implementing action CR1.E, whereby the City would support efforts to secure additional funding for regional transit service to and from St. Helena. Land use and other related policies would promote bicycling and walking between uses in the city and improve bicycle connectivity to the unincorporated county, thus tempering any

increase in local transit usage. Thus, impacts of the Proposed Plan on the public transit system to a level that is less than significant.

Mitigation Measures

None required.

Impact 3.13-2 Implementation of the Proposed Plan could conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways. (*Less than Significant*)

NVTA is the CMA for Napa County. NVTA has not published a formal CMP for Napa County; however, the Vision 2040 Moving Napa Forward Transportation Plan does outline several goals related to the transportation system. The Main Street (SR-29) and Silverado Trail corridors are included in the Vision 2040 Plan. Therefore, for the purposes of this EIR, a significant impact is identified if the implementation of the Proposed Plan would result in a conflict with one or more of the following goals of the Vision 2040 Plan:

- Serve the transportation needs of the entire community, regardless of age, income or ability;
- Improve system safety in order to support all modes and serve all users;
- Use taxpayer dollars efficiently;
- Support Napa County's economic vitality;
- Minimize the energy and other resources required to move people and goods; or
- Prioritize the maintenance and rehabilitation of the existing system.

The Proposed Plan includes multiple policies and implementing actions that strive to address impacts on the local and regional transportation network, including LU2,8, LU3.2, LU3.3, LU3.7, LU3.9, LU3.10, LU3.A, LU4.4, LU 6.E, ES2.6, PF5.3, PF5.B, and all policies and implementing actions in the Circulation Element. These actions seek to reduce single occupancy vehicle trips, improve circulation throughout St. Helena, and promote walking, bicycling and transit trips as viable transportation options. These policies and implementing actions would be consistent with the provisions of the Vision 2040 Plan. Therefore, the implementation of the Proposed Plan would not result in a conflict with the Vision 2040 Plan, and the impact would be less than significant.

Mitigation Measures

None required.

Impact 3.13-3 Implementation of the Proposed Plan would not result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks. (Less than Significant)

Implementation of the Proposed Plan would have a significant impact if it would increase air traffic levels, resulting in a substantial safety risk.

Due to the nature and scope of the Proposed Plan, its implementation would not have the potential to result in a change in air traffic patterns at any nearby public or private airport or airstrip, including the Angwin-Parrett Field airport in Angwin. Therefore, safety risks due to changes in air traffic patterns would be less than significant.

Mitigation Measures

None required.

Impact 3.13-4 Implementation of the Proposed Plan would not substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment). (Less than Significant)

Implementation of the Proposed Plan would have a significant impact if it would introduce a design feature that substantially increases traffic safety hazards.

The Proposed Plan includes policies that would promote the development of a transportation system that avoids hazards due to design features or incompatible uses. These policies include: LU2.8, LU3.2, LU3.3, LU4.4, PF5.3, PF5.B, CR1.1, CR1.2, CR1.3, CR1.4, CR1.5, CR1.8, CR1.9, CR1.10, CR1.11, CR1.A, CR1.B, CR1.C, CR1.D, CR1.F, CR1.H, CR1.I, CR1.J, CR1.K, CR2.1, CR2.2, CR2.3, CR2.4, CR2.5, CR2.6, CF2.A, CR2.B, CR2.C, CR2.D, CR2.E, CR2.F, CR2.G, CR2.H, CR2.I, CR2.J, CR2.K, CR2.L, CR4.1, CR4.2, CR4.3, CR4.4, CR4.5, CR4.A, CR4.B, CR4.C, CR4.D, CR4.E, CR4.F, CR5.1, CR5.A, CR6.1, CR6.2, CR6.3, CR6.A, and CR6.B.

Policy CR1.2 and implementing action CR1.A promote the improvement of the multi-modal transportation system, and other policies and implementing actions throughout the Proposed Plan would fund and promote design elements that generally correspond to an improvement in transportation safety conditions. Proposed implementing actions CR2.F outline that the transportation system will be reviewed as part of the development review process. Polices and implementing actions in other elements are designed to reduce vehicle trips and promote walking and bicycling between land uses.

None of the transportation system improvements in the Proposed Plan would introduce new safety hazards at intersections or along roadway segments. Most of the improvements—such as median installation, enhanced crosswalks for pedestrians, and the installation of bicycle lanes or wide curb lanes to enhance circulation for bicyclists—would be designed to improve safety. Therefore, from a programmatic perspective, this impact would be less than significant.

In general, the Proposed Plan land use diagram and policies emphasize transition areas and buffers between land uses of varying intensities, which would serve to reduce potential conflicts between users of the transportation system associated with each land use, including farm equipment, commercial and industrial truck traffic, commute traffic, pedestrians, and cyclists. The specific design and operations of individual future development projects cannot be known at this time; however, policies included in the Proposed Plan would serve to reduce potential impacts from future development. The Proposed Plan was developed with an emphasis on Complete Streets, which by their nature, would improve compatibility between different transportation modes as well as between the transportation system and adjacent land uses. Proposed Plan policies that promote bicycle and pedestrian safety as well as the development of safe routes to school, and that require mitigation of traffic-related impacts would help to identify and address potential safety concerns. Therefore, with adherence to policies included in the Proposed Plan, impacts increasing hazards due to a design feature or incompatible uses would be less than significant.

The Proposed Plan does not include any or improvements regarding the circulation system in the study areas, but does include policies to coordinate with the County on improvements to the countywide trails system and its connections to the city (CR2.B, CR2.M) and to work with Caltrans to address congestion on SR-29. Such policies may have a positive impact on traffic safety in the areas surrounding St. Helena; thus, impacts in the study areas would also be less than significant.

Mitigation Measures

None required.

Impact 3.13-5 Implementation of the Proposed Plan would not result in inadequate emergency access. (Less than Significant)

Implementation of the Proposed Plan could result in a significant impact if it created inadequate design features to accommodate emergency vehicle access and circulation, create obstacles or design features that obstruct emergency access, or resulted in a substantial decrease in travel speeds for emergency response vehicles such that emergency vehicles could be significantly delayed.

Traffic congestion has the potential to affect emergency response times. As discussed in Impact 3.13-1, buildout of the land uses and changes to the roadway network under the Proposed Plan would contribute to traffic volume at intersections on SR-29 that are expected to operate at unacceptable levels of service. Increased traffic volumes are projected to result in increased delays along Main Street, Pope Street, and other key emergency routes, which would likely increase delays for emergency response vehicles. Increased delays typically result in decreased travel speeds. Long queues are projected to form at some unsignalized intersections. And as noted in Impact 3.13-1, construction of the improvements needed to result in acceptable traffic operations at all study intersections are subject to funding, right-of-way and Caltrans approval constraints that result in the City not being able to guarantee that the improvements would be constructed.

However, the Proposed Plan includes numerous policies that would promote the development of a transportation system that promotes efficient emergency access. These policies include: LU3.2, LU3.3, LU4.4, ES2.6, PF5.B, CR1.1, CR1.2, CR1.3, CR1.5, CR1.7, CR1.8, CR1.9, CR1.10, CR1.11, CR1.A, CR1.B, CR1.C, CR1.D, CR1.F, CR1.H, CR1.I, CR1.J, CR1.K, CR1.L, CR2.1, CR2.2, CR2.3, CR2.4, CR2.5, CR2.6, CF2.A, CR2.B, CR2.C, CR2.D, CR2.E, CR2.F, CR2.G, CR2.H, CR2.I, CR2.J,

CR2.K, CR2.L, CR3.1, CR3.3, CR3.4, CR3.5, CR3.7, CR3.A, CR3.B, CR3.C, CR3.D, CR4.1, CR4.5, CR4.A, CR4.D, CR4.E, CR4.F, CR4.G, CR5.1, CR5.A, CR6.1, CR6.2, CR6.3, CR6.A, and CR6.B.

There will be no changes to roadways that could physically impede emergency vehicle access, and no spatial impediments for other vehicles to pull over to allow passage by emergency vehicles. The Proposed Plan requires that all new development plans be approved by the Fire Department prior to issuance of building permits, grading permits or final map approval, and requires that all streets and roads are adequate in terms of width, turning radius, and grade in order to facilitate access by City firefighting apparatus, and to provide alternative emergency routes of ingress and egress (PS4.E and PS4.6). Therefore, all new projects resulting from the Proposed Plan would have adequate design features to accommodate emergency access without obstruction.

As noted in the Physical Setting section above, some emergency access difficulty due to congestion already occurs in the City of St. Helena. To ensure that emergency vehicles are not further significantly delayed due to traffic congestion, proposed implementing action CR4.G requires the City to consider the use of signal preemption technologies for emergency response or evacuation in locations where response time goals are not met, which would minimize impacts from traffic on emergency vehicles. Other policies would ensure that traffic impacts from new development would be analyzed on a project-by-project basis, and would require the City to use performance measures to determine traffic impacts on all users, including emergency vehicles (CR1.I and CR1.4). The Proposed Plan also requires the City to strive to maintain a ten minute or less travel time during peak periods along Main Street and Silverado Trail, and to continue to coordinate with Caltrans to manage congestion along key routes (CR1.10 and CR 1.L).

Further, the while some increased traffic and congestion-related delays are anticipated to result from the Proposed Plan. As discussed in Impact 3.13-1, VMT would be expected to increase under the Proposed Plan with the addition of more employment and retail opportunities within the city that could have the potential to import vehicle trips from the surrounding communities. However, the model does not fully capture the potential for some existing and future trips to shift to alternative travel modes as the bicycle, pedestrian, and transit systems are enhanced, so actual VMT may be somewhat lower than the model predicts as this mode shift occurs over time. By creating appealing and safe options for alternative modes of travel, including by biking, walking, and transit, the policies listed above would, together, reduce the growth in VMT from what would be expected to occur from traditional development and would reduce traffic congestion arising from new development to the maximum extent practicable.

Given that the Proposed Plan would not result in any inadequate emergency vehicle access design features, would not obstruct emergency access, would consider the impacts to emergency access arising from any new development, and would enact measures to ensure that traffic congestion would not significantly impede emergency vehicle access, the impact is less than significant.

Mitigation Measures

None required.

Impact 3.13-6 Implementation of the Proposed Plan would not conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities. (Less than Significant)

A significant impact would be identified if implementation of the Proposed Plan would result in conflicts with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or if it would decrease the performance or safety of these facilities.

As noted in Impact 3.13-1, impacts on pedestrian circulation, bicycle circulation, and the public transit system would be less than significant as implementation of the Proposed Plan would allow the City to adopt a Complete Streets approach. The Complete Streets approach would improve connectivity, performance, and safety for pedestrians, bicyclists, and public transit riders. Further, the improvements for the pedestrian, bicycle and public transit system would enhance connectivity to adopted regional plans and programs such as NVTA's Vision 2040 Plan and would also promote the completion of the proposed Vine Trail. Therefore, implementation of the Proposed Plan would result in a less than significant impact.

Mitigation Measures

None required.

This page intentionally left blank.

3.14 Utilities and Service Systems

This section assesses potential environmental impacts from future development under the Proposed Plan as related to public utilities, including water, wastewater, stormwater, and sold waste systems. This section describes existing water, wastewater, stormwater, and solid waste infrastructure and services in the Planning Area, as well as relevant federal, State, and local regulations and programs.

Responses to the NOP regarding topics addressed in this section included the following:

- During heavy rains, the City storm drain outfall to Sulphur Creek can back up and cause flooding up to Tainter Street. This comment is addressed in Impact 3.14-3.

Environmental Setting

PHYSICAL SETTING

Water System

The City of St. Helena provides water service within the city limits as well as to several unincorporated properties, including the three study areas included in the Proposed Plan. The water supply data presented in this section applies to all areas within the city as well as the three study areas.

Existing and Planned Water Supply

The city receives potable water from three sources: Bell Canyon Reservoir, the Stonebridge Well Complex, and water purchased through a contract with the City of Napa (City of St. Helena, 2016). In addition, the city has two sources of non-potable water, the City's Lower Reservoir and a groundwater well located near Napa River.

Bell Canyon Reservoir, located northeast of St. Helena, is the city's primary potable water supply source. The Bell Canyon Reservoir watershed is a subwatershed of the Napa River watershed, encompassing approximately 3,647 acres (Palencia Consulting Engineers, 2014). Bell Canyon is an on-stream reservoir with a physical storage capacity of 2,400 acre-feet. Average historical yield from the reservoir is around 1,800 acre-feet per year (Luhdorff & Scalmanini, 2016). Sustainable yield, defined as the maximum amount of water that the City could withdraw from the reservoir each year and be confident that it could withdraw the same amount every year, ranges from approximately 500 acre-feet in critically dry years to approximately 1,100 acre-feet in wet years (West Yost Associates, 2010). The Bell Canyon Reservoir water supply is treated at the Louis Stralla

Treatment Plant, adjacent to the Bell Canyon Reservoir. It filters and disinfects water drawn from the Bell Canyon reservoir with a treatment capacity of 4.3 million gallon per day (mgd). The plant typically operates at 3.5 mgd, which is less than peak demand due to flow limitations in the inlet piping that restrict use of the plant to less than capacity (City of St. Helena, 2018).

The Stonebridge Well Complex, owned and operated by the City of St. Helena, contains two groundwater wells and a small adjacent water treatment plant and draws water from the Sonoma Volcanic aquifer (City of St. Helena, 2018). It supplies around 20 percent of the City's water supply in Normal years, and about 30 percent of its water supply in Below Normal, Dry, and Critically Dry years (West Yost Associates, 2010). From 2000 to 2015, St. Helena extracted an average of 290 AF of water per year from the two wells, which have a combined production capacity of approximately 595 gallons per minute (City of St. Helena, 2018). As discussed in Chapter 3.9: Hydrology and Water Quality, the groundwater basin has been operating within a sustainable yield for more than 20 years. Water extracted by the Stonebridge Wells is treated at the adjacent treatment plant on site, and has generally good water quality (Luhdorff & Scalmanini, 2016). The City maintains a groundwater level monitoring program in the area that monitors these wells (West Yost Associates, 2010).

The remainder of the City of St. Helena's potable water is purchased from the City of Napa, the result of a long-term water supply agreement that began in 2006 and was revised in 2009 and 2011. The initial term of the contract expires on December 31, 2035. Under the contract delivery terms, Napa is required to make available 600 acre-feet each year, and the City of St. Helena has the option to purchase additional water from Napa (above 600 acre-feet per year) if Napa has available water to sell. Napa's water comes from three sources: the Barker Slough in the Sacramento Delta, delivered via the North Bay Aqueduct and treated at the Edward I Barwick Jamieson Canyon Water Treatment Plan; Lake Hennessy, treated at the Hennessey Water Treatment Plant; and Lake Milliken, treated at the Milliken Water Treatment Plant (City of St. Helena, 2016). The water is received from the City of Napa water transmission system at the City of St. Helena's Rutherford Pump Station.

The annual yield from Bell Canyon Reservoir in recent years has declined significantly when compared to prior years because of the required water releases into the Napa River to support fish. Due to this trend, water purchased from the City of Napa has become an increasing percentage of the total supply. The City is also seeking to reduce withdrawal of groundwater in non-drought years, in order to give the aquifers in the Stonebridge Well Complex the ability to recharge (City of St. Helena, 2018).

Table 3.14- 1: Potable Water Supply, 2000-2015

Calendar Year	Bell Canyon Reservoir (acre-feet)	Stonebridge Wells (acre-feet)	City of Napa Water (acre-feet)[1]	Total Water Supplied (acre-feet)
2000	1,503	345	---	1,849
2001	1,653	468	---	2,121
2002	1,922	349	---	2,271
2003	1,683	463	---	2,146
2004	1,741	480	---	2,221
2005	1,709	382	---	2,091
2006	1,647	410	---	2,057
2007	1,011	521	413	1,944
2008	1,172	479	326	1,977
2009	993	508	314	1,815
2010	1,035	325	285	1,645
2011	874	227	644	1,745
2012	975	182	634	1,791
2013	737	526	583	1,846
2014	646	317	593	1,555
2015	713	244	582	1,450

Notes:

Before 2007, City of Napa water was purchased only for emergency water purposes. In 2007 and after, use of City of Napa water was through the City of Napa water agreement.

Source: Luhdorff & Salmanini, 2016

The City's total water supply makeup varies by annual rainfall as the City uses various sources to ensure sustainable yields, as summarized in Table 3.14-2 below. The safe yield thresholds were developed by the City's Safe Yield Committee.

Table 3.14- 2: Safe Yields

Source	*Normal Water Year (Annual Safe Yield)*	*Dry Year (Phase 2 Water Emergency)*	*Critical Year (Phase 3 Water Emergency)*
Bell Canyon Reservoir	1,000 AF	600 AF	500 AF
Stonebridge Well Complex	350 AF	514 AF	471 AF
City of Napa	600 AF	600 AF	600 AF
Total	***1,950 AF***	***1,714 AF***	***1,571 AF***

Source: City of St. Helena, 2018

St. Helena's potable water demand is within its safe yield parameters. Total existing metered potable water demand averaged about 1,900 acre-feet per year between 2000 and 2015, and has declined in recent years due to improved water use efficiency and short-term demand reductions. Table 3.14-3 lists average annual water demand for land uses within the city limits and within the three study areas. For land uses outside the city limits, metered potable water demand averaged 142 acre-feet per year based on average water demand for 2002-2008.

Table 3.14-3: Estimated Annual Water Demand by Land Use

Land Use	*Existing Units and Jobs (2018)*	*Existing Square Feet in thousands (2018)*[1]	*Existing Average Annual Metered Water Demand in acre-feet (2018)*	*Annual Unit Water Demand (acre-feet per unit)*[2]
Within the City/SOI				
Subtotal			**1,594**[3]	
Within the Study Areas				
Residential Units	168		69	0.41
Service, Retail, and Other Commercial	327	137	41	0.30
Agricultural/Industrial/ Manufacturing	164	97	29	0.30
Subtotal			**139**	
Total			**1,733**	

Notes:

1. Existing square feet estimated using employee-to-square footage ratios from the 1993 St. Helena General Plan (Dyett & Bhatia, 2018).
2. Annual unit water demand factors for Residential and Service, Retail, and Other Commercial taken from West Yost, 2010; for Agricultural/Industrial/Manufacturing from Napa LAFCO Municipal Services Review and Sphere of Influence Update for the City of St. Helena.
3. Water year figure taken from City of St. Helena Monthly Water Report total water delivery through June 31, 2017.

Sources: City of St. Helena, 2018; West Yost, 2010; Dyett & Bhatia, 2018; and City of St. Helena, 2018

To reduce water demand, the City has instituted several conservation measures, including a leak detection and repair program in its water distribution system. The City has a rate of "unaccounted-for" water[1] in the range of 12-16 percent of total water produced (West Yost, 2010).

Water Recycling/Non-Potable Uses

St. Helena does not participate in the North Bay Water Reuse Program and does not currently have its own program for recycling water (North Bay Water Reuse Program, 2016). The City recognizes that water should be recycled and that recycled water should be put to beneficial use, and has contracted with West Yost Associates to identify potential customers and users of recycled water within and contiguous to city limits and prepare cost estimates for the required infrastructure to achieve zero discharge into the Napa River. Potential customers include City turf areas (parks and schools), large landscape areas, and vineyards. The achievement of net zero discharge was

[1] "Unaccounted-for water" is the difference between the amount of water produced or purchased by the City and the amount of water sold to all City customers. This water is a resource that has been consumed but not metered due to leaks, unauthorized use, firefighting, system maintenance, inaccurate meters, and other unmetered consumptions.

determined to be prohibitively expensive, thus the City hopes to develop a smaller recycled water program that does not require seasonal storage in the future (City of St. Helena, 2018).

The City does provide non-potable water from the Lower Reservoir, which has a capacity of approximately 200 to 225 acre-feet for non-potable irrigation use, such as landscaping and agriculture. Roughly 50 acre feet per year is used by Spring Mountain Winery and by RLS Middle School for irrigation purposes, as well as additional water supplied to local contractors for construction purposes Untreated water is also provided to local contractors for construction purposes and can be used as a source of water for fighting fires (City of St. Helena, 2018).

Water System Infrastructure

To deliver water to St. Helena, the City owns and operates two reservoirs, six storage tanks, pumps, four pump stations, and a network of distribution pipelines. In 2015, St. Helena provided water service to approximately 2,312 connections. Of those, 348 connections are located outside the City's jurisdictional boundary. The City's Water Master Plan describes four water pressure zones based on the elevation of water storage facilities within the system (City of St. Helena, 2018).

Wastewater System

The City of St. Helena owns and operates all of its wastewater treatment facilities. St. Helena's Public Works Department is responsible for providing sewer services in the City.

The City maintains a network of more than 22 miles of pipe and trunk lines that collect sewage from homes and businesses, and currently provides sewer service to approximately 1,726 connections, of which 75 percent are residential. All sewer connections are located within city boundaries, with no out-of-agency boundary sewer services provided. Primary services provided by the City for the wastewater system are collection, treatment, disposal, and maintenance. Pipes adequately sized at 8-24 inches for dry weather flows, with the exception of the original town site's four-inch sewer lines, service the majority of the city. Private lateral lines connect a house to the city's main line, typically located within a street right-of-way. Several areas of the city's sewer system suffer from defects, which prevent free flow of sewage, resulting in backwater in the system. One lift station is located east of Main Street while the remaining system operates by gravity. The City's wastewater collection facilities face many challenges including age of infrastructure, reduced root maintenance, grease and oil from restaurants, and infiltration/inflow.

The City continues to address these challenges through updates to the city's Sewer System Management Plan (SSMP), which aims to maintain the collection system and prevent sanitary sewer overflows (SSOs). As of May 2016, 80 percent of inspections were completed in response to a problem, with 20 percent conducted for routine maintenance in areas were problems had previously occurred. The City also conducts sewer line video inspections of the entire collection system. Sewer line maintenance is completed by the City's Street Department and is generally performed twice per year. The City has a planned schedule in place for cleaning sewer lines that are highly susceptible to root intrusion, grease, and various debris.

St. Helena's sewer system conveys wastewater for the area within the city limits to the Wastewater Treatment and Reclamation Plant (WTRP), located within the City of St. Helena at 1 Chaix/Thomann Lane. The WTRP is a secondary level of treatment, low maintenance, advanced

integrated pond system that stores treated effluent and disposes effluent by spray irrigation onto a field owned by the City. The treatment processes at the plant includes a headworks, a comminuter, an advanced integrated waste pond system, chlorine disinfection, and dechlorination. Wastewater enters the plant at the influent pump station by gravity flow through two open channels. The influent is pumped into the primary pond influent control structure. From the pond influent control structure, wastewater enters two facultative ponds with in-pond digesters, via two submerged inlet ports at the bottom of each pond (California Regional Water Quality Control Board, Order No R2-2010-0105, 2010).

One pond serves as an aeration pond while the second serves as a settling pond for biological solids. The effluent control facility provides disinfection, a sampling point, and pumping equipment to dispose the effluent by spray irrigation onto a 90-acre grass field or into a third storage pond. This third storage pond allows for the most effective release of discharge into the Napa River. When pond storage capacity is exceeded during wet months, treated effluent may be discharged into the Napa River under strict regulations.

The City's treatment plant has a permitted dry-weather flow design capacity of 0.5 million gallons per day (mgd), a 3.73 mgd maximum wet weather flow, and a 2.8 mgd average wet weather flow. The City's sewer lines do not measure flow. However, sewage flow can be estimated based on use of treated municipal (fresh) water supplied to various land uses as measured with water meters.

Table 3.14-4: Summary of Wastewater Statistics

	2010	*2011*	*2012*	*2013*	*2014*	*2015*
Number new connections	0	0	1	11	3	18
Daily average treatment in millions (mgd)	0.577	0.577	0.542	0.408	0.403	0.384

Source: Administrative Draft MSR/SOI Updates, 2017

Table 3.14-5: Water Treatment Plant Design Capacity

Description	*Capacity/Flow*
Permitted Daily Dry-Weather Flow Capacity	0.50 mgd
Permitted Daily Wet Flow Capacity	2.8 mgd
Average Wet Weather Flow Volume	0.36 mgd
Peak Flow within the Past Year	1.03 mgd

Storm Drainage

The City of St. Helena provides stormwater/flood management within its borders, and owns and operates the Stormwater drainage system, a conveyance system of pipes and drains. Storm drainage infrastructure includes the City maintained storm drain line, privately maintained storm drain lines, and a Caltrans storm drain line. There are also several ponds, ditches and channels.

The City Public Works Department maintains drain inlets and drain manholes. Many of the storm drainage structures are located within sidewalks or other public rights-of-way.

The City's Stormwater system discharges storm water to Sulphur Springs Creek, York Creek, and the Napa River, local natural drainage features. All three of these waterways pass through the City limits and have some floodplain within the City (see Figure 3.9-3: Flood Zones). All precipitation and other water going into the City storm drains eventually runs to the Napa River then onward to the Pacific Ocean. The City is the floodplain manager for these waterways (St. Helena, 2016).

Maintenance by City staff includes actively watching for all types of potential hazards, storm drain blockages, and any other unforeseen safety problems. The City has an inspection program to routinely inspect and maintain storm water inlets and outfalls for debris and obstructions, sand and gravel build-up, and structural damage or vandalism.

Although the Napa River is usually relatively calm, it is subject to flash floods during storm events. Sulphur Creek is also prone to flooding. The neighborhood near the Vineyard Valley Mobile Home Park suffered from severe flooding in 1986 and 1995, primarily on the Napa River. The flooding was due to creek and river overflows, with some flooding due to sheet flow of water across agricultural land. The mobile home park is located within the 100-year floodplain contiguous to the west bank of the Napa River (see Figure 3.9-3: Flood Zones). To help deal with this flooding, the City developed the Flood Protection and Flood Corridor Restoration Project which included a large levee and floodwall to protect the Vineyard Valley area, bank stabilization, removal of a channel constriction, internal stormwater management, and creation of a terrace. The Vineyard Valley Levee was constructed in 2010.

For more detailed information on flooding within the City of St. Helena, please see Chapter 3.9: Hydrology and Water Quality.

Solid Waste

Upper Valley Disposal & Recycling (UVDS) provides solid waste services to residents and businesses in the City of St. Helena and unincorporated Napa County, including the three study areas. UVDS's services include refuse, recycling, and green waste collection. They also provide restaurant food composting services. The single-stream recycling program accommodates a wide array of wastes including plastic, glass, steel, tin, aluminum, and most types of paper and cardboard. The company also conducts public education to teach residents and businesses about composting and its recycling and electronic waste disposal programs. As of 2016, UVDS diverted approximately 69 percent of collected waste away from landfills (City of St. Helena, 2015; Abreu, 2010; and Abreu, 2018).

Solid waste is disposed of at the Clover Flat Landfill, located on the Silverado Trail north of St. Helena and is also operated by Upper Valley Disposal Company. The existing amount of solid waste received at the landfill is 50,000 tons per year. The landfill has a permitted capacity of 4.90 million cubic yards. As of 2018, the landfill has a remaining capacity of approximately 2.62 million cubic yards. The landfill's estimated closure date is 2047. The landfill has 10 years remaining on its existing franchise agreement with Napa County but has an estimated capacity to last approximately 30 years (City of St. Helena, 2015; Abreu, 2010; and Abreu, 2018).

The Clover Flat Landfill revised its Solid Waste Facility Permit in 2010 to comply with provisions of the State of California's Climate Change Scoping Plan. The changes provide for mandated commercial recycling processing services, production of organic feedstocks for composting, and renewable energy generation.

Hazardous waste is handled by Napa County, which operates the Napa-Vallejo Household Hazardous Waste Collection Facility, located at 889A Devlin Rd in American Canyon.

REGULATORY SETTING

Federal Regulations

Federal Safe Drinking Water Act

The Safe Drinking Water Act (SDWA), administered by the U.S. EPA in coordination with the states, is the main federal law that ensures the quality of drinking water. Under the SDWA, the U.S. EPA sets standards for drinking water quality and oversees the states, localities, and water suppliers who implement those standards. The Department of Public Health administers the regulations contained in the SDWA in the State of California.

United States Environmental Protection Agency

The 1986 amendments to the Safe Drinking Water Act and the 1987 amendments to the Clean Water Act established the Environmental Protection Agency (EPA) as the primary authority for water programs. The EPA is the federal agency responsible for providing clean and safe surface water, groundwater, and drinking water, and protecting and restoring aquatic ecosystems. The planning area is in EPA Region 9 (Pacific Southwest), which includes Arizona, California, Hawaii, Nevada, Pacific Islands, and Tribal Nations.

Federal Water Pollution Control Act of 1972 (Clean Water Act)

The Clean Water Act (CWA) establishes the basic structure for regulating discharges of pollutants into "waters of the United States." The Act specifies a variety of regulatory and non-regulatory tools to sharply reduce direct pollutant discharges into waterways, finance municipal wastewater treatment facilities, and manage polluted runoff. Some of these tools include Total Maximum Daily Loads (TMDLs), water quality certification, and regulations on discharge of dredge or fill material. For more details, see Section 3.9: Hydrology and Water Quality.

National Pollutant Discharge Elimination System

The Clean Water Act was amended in 1987 to include urban and stormwater runoff, which required many cities to obtain a National Pollution Discharge Elimination System (NPDES) permit for stormwater conveyance system discharges. Section 402(p) of the Clean Water Act prohibits discharges of pollutants contained in stormwater runoff, except in compliance with a NPDES permit.

State Regulations

California Department of Public Health

The Drinking Water Program, which regulates public water supply systems, is a major component of the State Department of Public Health Division of Drinking Water and Environmental Management. Regulatory responsibilities include the enforcement of the federal and State Safe Drinking Water Acts, the regulatory oversight of public water systems, issuance of water treatment permits, and certification of drinking water treatment and distribution operators. State regulations for potable water are contained primarily within the Food and Agricultural Code, the Government Code, the Health and Safety Code, the Public Resources Code, and the Water Code. Regulations are from Title 17 and Title 22 of the California Code of Regulations.

The regulations governing recycled water are found in a combination of sources including the Health and Safety Code, Water Code, and Titles 22 and 17 of the California Code of Regulations. Issues related to treatment and distribution of recycled water are generally under the influence of the SWRCB.

California Porter–Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act established the State Water Resources Control Board (SWRCB) and nine regional water quality control boards address water quality and rights regulation. The five-member SWRCB protects water quality by setting statewide policy, coordinating and supporting the Regional Water Quality Control Board (RWQCB) efforts, and reviewing petitions that contest RWQCB actions. The SWRCB is also solely responsible for allocating surface water rights. The Bell Canyon Reservoir operates under Permits 9157 and 14810 with the SWRCB. The SWRCB's D-1222 Adopter in May 1965 is also applicable.

Each RWQCB makes critical water quality decisions for its region, including setting standards, issuing waste discharge requirements, determining compliance with those requirements, and taking appropriate enforcement actions. The Planning Area lies within the jurisdiction of the San Francisco Regional Water Quality Control Board.

The Act authorizes the SWRCB to enact state policies regarding water quality in accordance with CWA 303. In addition, the Act authorizes the SWRCB to issue waste discharge requirements (WDRs) for projects that would discharge to State waters. SWRCB Order No. 2006-0003 provides a consistent statewide approach to reducing sanitary sewer overflows (SSOs) by requiring public sewer system operators to take all feasible steps to control the volume of waste discharged into the system, to prevent sanitary sewer waste from entering the storm sewer system, and to develop a sewer system management plan.

The wastewater treatment plant is regulated through the San Francisco Regional Water Quality Control Board (RWQCB) and State laws. On November 1, 2010, the California Regional Water Quality Control Board Order No. R2-2010-0105 served to reissue NPDES Permit No. CA0038016 and regulated the City's Wastewater Treatment Plant. This permit expired October 31, 2015. A new regulatory permit was issued by the San Francisco RWQCB in 2016 (ORDER No. R2-2016-0003 and NPDES No. CA0038016) setting higher treatment standards for the WWTP and was accompanied by a cease-and-desist-order, requiring the plant to meet upgrade requirements by 2021 (Permit No. R2-2016-0004). The 2016 Cease and Desist Order (CDO) No. R2-2016-0004

addressed chronic permit exceedances and established tasks and a time schedule for the City to comply with the 2016 Permit's new biochemical oxygen demand (BOD) and total suspended solids (TSS) effluent limits. The state recently issued a $290,177 settlement penalty due to untreated wastewater contaminating groundwater and nearby wells, caused by an unlined holding pond.

As required by the NPDES permit, the City must meet the 2016 permit's new BOD and TSS effluent limits over the next five years. The CDO requires the City to incorporate filtration or another process into the treatment system. An upgrade to an advanced secondary treatment system may be required. The City's 2015 Wastewater Facilities Evaluation Update provided three recommendations to improve plant performance: 1) construct solids management systems to manage solids accumulation within design recommendations; 2) automate disinfection and dechlorination during river discharges; and 3) construct a rock filtration system and disinfection facility to improve removal of TSS from algae growth in ponds. If implemented, the Order identifies the rock filtration system as the best recommendation to facilitate compliance with the 2016 Permit's effluent limits (CDO No R2-2016-0003). The CDO allows the City to continue discharging effluent under the old discharge limitations as long as they are complying with the task schedule (St. Helena, 2016).

The City's most recent regulatory permit (No. R2-2016-0003) issued by the San Francisco RWQCB references the City's 2015 Wastewater Facilities Evaluation Update which indicates the service area population is only growing slightly and that per capita wastewater flows are declining due to conservation measures. The report also indicated that 2030 average dry weather flows will be 0.50 mgd, the current capacity, however the City should plan to increase capacity to 0.65 mgd by 2030 to account for uncertainty (St. Helena, 2016; Permit No. R2-2016-0003).

The Porter-Cologne Water Quality Control Act further requires that the SWRCB or the RWQCBs adopt water quality control plans (basin plans) for the protection of water quality. Basin plans also provide the technical basis for determining waste discharge requirements, taking enforcement actions, and evaluating clean water grant proposals. For more details, see Chapter 3.9: Hydrology and Water Quality.

California Department of Water Resources

The California DWR is responsible for the operation and maintenance of the California SWP. DWR is also responsible for overseeing the statewide process of developing and updating the California Water Plan (Bulletin 160 series); protecting and restoring the Sacramento–San Joaquin Delta; regulating dams, providing flood protection, and assisting in emergency management; educating the public about the importance of water and its proper use; and providing technical assistance to service local water needs.

Senate Bills 610 and 221

Enacted in 2002, SB 610, which was codified in the State Water Code beginning with section 10910, requires the preparation of a water supply assessment (WSA) for projects within cities and counties that propose to construct 500 or more residential units or the equivalent. SB 610 stipulates that when environmental review of certain large development projects is required, the water agency that is to serve the development must complete a WSA to evaluate water supplies that are or will be available during normal, single-dry, and multiple-dry years during a 20-year

projection to meet existing and planned future demands, including the demand associated with a proposed project.

Enacted in 2001, SB 221, which was codified in the State Water Code beginning with section 10910, requires that the legislative body of a city or county, which is empowered to approve, disapprove, or conditionally approve a subdivision map, must condition such approval upon proof of sufficient water supply. The term "sufficient water supply" is defined in SB 221 as the total water supplies available during normal, single-dry, and multiple-dry years within a 20-year projection that would meet the projected demand associated with the proposed subdivision. The definition of sufficient water supply also includes the requirement that sufficient water encompass not only the proposed subdivision, but also existing and planned future uses, including agricultural and industrial uses.

The Water Conservation Act of 2009 (SB X7-7)

California legislation enacted in 2009 as SB 7 of the 7th Special Legislative Session (SB X7-7) instituted a new set of urban water conservation requirements known as "20 Percent By 2020." These requirements stipulate that urban water agencies reduce per-capita water use within their service areas by 20 percent relative to their use over the previous 10 to 15 years.

California Green Building Standards Code

In January 2010, the California Building Standards Commission adopted the statewide mandatory Green Building Standards Code (CALGreen Code) that requires the installation of water-efficient indoor infrastructure for all new projects beginning after January 1, 2011. CALGreen Code was incorporated as Part 11 into Title 24 of the California Code of Regulations. The CALGreen Code applies to the planning, design, operation, construction, use, and occupancy of every newly constructed building or structure. All development projects must satisfy the indoor water use infrastructure standards necessary to meet the CALGreen Code. The CALGreen Code requires residential and nonresidential water efficiency and conservation measures for new buildings and structures that will reduce the overall potable water use inside the building by 20 percent. The 20 percent water savings can be achieved in one of the following ways: (1) installation of plumbing fixtures and fittings that meet the 20 percent reduced flow rate specified in the CALGreen Code, or (2) by demonstrating a 20 percent reduction in water use from the building "water use baseline." The CALGreen Code also requires diversion of at least 65 percent of the construction waste generated during most new construction projects. Agencies currently enforcing building codes are responsible for enforcement of the CAL Green Code.

State Updated Model Landscape Ordinance (Assembly Bill 1881 (2006))

The State's updated Model Water Efficient Landscape Ordinance requires cities and counties to adopt landscape water conservation ordinances by July 15, 2015.

California Urban Water Management Planning Act

The California Legislature enacted the Urban Water Management Planning Act of 1983 (California Water Code Sections 10610 through 10656) to support conservation and efficient use of urban water supplies at the local level. The act requires that every urban water supplier that provides water to 3,000 or more customers, or over 3,000 AF of water annually, to make every

effort to ensure the appropriate level of reliability in its water service to meet the needs of its customers during normal, dry, and multiple-dry years. The act requires that total projected water use be compared to water supply sources over the next 20 years in five-year increments, that planning occur for single- and multiple-dry water years, and that plans include a water recycling analysis that incorporates a description of the wastewater collection and treatment system within the agency's service area along with current and potential recycled water uses.

Applicable urban water suppliers within California are required by the Water Code to prepare and adopt a UWMP and update it every five years. A UWMP is required in order for a water supplier to be eligible for the DWR-administered state grants, loans, and drought assistance. A UWMP provides information on water use, water resources, recycled water, water quality, reliability planning, demand management measures, best management practices (BMPs), and water shortage contingency planning for a specified service area or territory.

California Assembly Bill 1739 (201)/ California Senate Bills 1168 & 1319 (2014)

These three bills are collectively known as the Sustainable Groundwater Management Act (SGMA). In response to the 2014 SGMA, Napa County prepared a Basin Analysis Report (Luhdorff & Scalmanini, 2016) analyzing subbasin conditions and demonstrating that the basin has operated within its sustainable yield over a period of at least 10 years, and to support the ongoing management of the subbasin's resources. For more details, see Chapter 3.9: Hydrology and Water Quality.

California Emergency Graywater Regulations

In 2009, as part of the Governor's declared State of Emergency, Chapter 16A "Nonpotable Water Reuse Systems" was incorporated into the 2007 California Plumbing Code. Chapter 16A establishes minimum requirements for the installation of graywater systems in residential occupancies regulated by the California Department of Housing and Community Development, providing guidance and flexibility designed to encourage the use of graywater. The standards allow small graywater systems to be installed in homes without a construction permit, substantially reducing the barriers to installing small residential graywater systems in California. The purpose of the regulations is to conserve water by facilitating greater reuse of laundry, shower, sink, and similar sources of discharge for irrigation and/or indoor use; to reduce the number of noncompliant graywater systems by making legal compliance easily achievable; to provide guidance for avoiding potentially unhealthful conditions; and to provide an alternative way to relieve stress on private sewage disposal systems.

California's Department of Resources Recycling and Recovery

California Department of Resources Recycling and Recovery (CalRecycle) is the State's leading authority on recycling, waste reduction, and product reuse. CalRecycle plays an important role in the stewardship of California's vast resources and promotes innovation in technology to encourage economic and environmental sustainability. CalRecycle brings together the State's recycling and waste management programs and continues a tradition of environmental stewardship. Mandated responsibilities of CalRecycle are to reduce waste, promote the management of all materials to their highest and best use, and protect public health and safety and the environment.

California Integrated Waste Management Act (AB 939)

AB 939, California's Integrated Waste Management Act of 1989, mandates that 50 percent of solid waste be diverted by the year 2000 through source reduction, recycling, and composting. AB 939 also establishes a goal for all California counties to provide at least 15 years of ongoing landfill capacity. This requires each region to prepare a source reduction and recycling element to be submitted to CalRecycle, which administers programs formerly managed by the state's Integrated Waste Management Board and Division of Recycling. The City of St. Helena participates in the Upper Valley Waste Management Agency to achieve compliance with AB 939.

California Solid Waste Reuse and Recycling Access Act of 1991 (AB 1327)

AB 1327 was established in 1991, which required CalRecycle to develop a model ordinance for the adoption of recyclable materials in development projects. Local agencies were then required to adopt the model, or an ordinance of their own, governing adequate areas for collection and loading of recyclable materials in development projects.

Disposal Measurement System Act of 2008 (SB 1016)

SB 1016 maintains the 50 percent diversion rate requirement established by AB 939, while establishing revised calculations for those entitles who did not meet the 50 percent diversion rate. SB 1016 also established a per capita disposal measurement system to make the process of goal measurement, as established by AB 939, simpler, timelier, and more accurate. The new disposal-based indicator—the per capita disposal rate—uses only two factors: a jurisdiction's population (or in some cases employment) and its disposal as reported by disposal facilities.

Mandatory Commercial Recycling (AB 341)

Effective July 1, 2012, AB 341 requires that commercial enterprises that generate four cubic yards or more of solid waste weekly participate in recycling programs. This requirement also includes multifamily housing complexes of five units or more, regardless of the amount of solid waste generated each week.

Mandatory Commercial Organics Recycling (AB 1826)

AB 1826 requires that commercial enterprises that generate certain amounts of organic and solid waste weekly participate in composting programs. The law includes escalating thresholds to ease businesses into commercial organic recycling.

State Climate Change Scoping Plan

In accordance with the California Global Solutions Act of 2006 (AB 32), the California Air Resources Board prepared the 2008 Climate Change Scoping Plan (first updated in 2014 and a second update is pending for 2017), which includes a series of recommendations regarding recycling and waste. Key recommendations include reducing methane emissions at landfills; increasing waste diversion, composting, and other beneficial uses of organic materials; and mandating commercial recycling (Cal Air Board, 2008 & 2017).

Local Regulations

Existing St. Helena General Plan

The existing St. Helena General Plan, adopted in 1993, outlines policies, standards, and programs that together provide a comprehensive, long-term plan for physical development within the city. Individual development projects proposed within the city must demonstrate general consistency with the goals and policies outlined within the General Plan, which articulates and implements the city's long-term vision, including provisions for utilities and service systems.

The Proposed Plan analyzed in this EIR is the St. Helena 2040 General Plan Update (Proposed Plan), which is an update of the existing General Plan. If the Proposed Plan is adopted, it will replace the existing General Plan, and future developments within the city will be subject to policies outlined in the updated document.

Napa County Stormwater Pollution Prevention Program

The cities of Napa and St. Helena, the Town of Yountville, and the County of Napa formed the Napa County Stormwater Pollution Prevention Program (NCSPPP). These jurisdictions, including the City of St Helena, are regulated under Phase II General MS4 Permit, Order No. 2013-0001-DWQ and NPDES General Permit No. S000004 (California, 2013).

Together, the NCSPPP works to implement BMPs, measurable goals and timetables for implementation in five program areas – Public Education, Public Participation, Illicit Discharge Detection and Elimination, Construction Site Storm Water Runoff Control, and Post Construction Storm Water Management. Although the County of Napa and each of the cities and towns implement their own individual stormwater pollution prevention programs, the NCSPPP allows for coordination and consistency of approaches among the individual participants and documents their efforts in annual reports that are submitted to the Regional Water Quality Control Board. St. Helena has adopted the Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual for Design Guidance for Stormwater Treatment and Control for Projects.

St. Helena Water Conservation and Emergency Shortage Ordinances

The City of St. Helena has ordinances addressing water supply availability and water shortage contingencies. These include Ordinance 2015-4, which enables the City to comply with the California emergency drought regulations, and Chapter 13.12.050 of the Municipal Code, which requires new development to "completely offset its water requirement…" by identifying residential or non-residential properties eligible for retrofitting with water efficient hardware and verifying that the required number of retrofits have been completed prior to the issuance of a certificate of occupancy. Chapter 13.04.220 of the Municipal Code also addresses water shortage emergency conditions.

St. Helena Water Neutral Policy for Development

The St. Helena Water Neutral Policy, established in 2011, requires that applicants must be water-neutral (from the City-delivered water system) through any combination of on-site water conservation measures, offsite retrofitting, and well water, and that water neutrality shall be

demonstrated in a quantitative water analysis of the project. The analysis must consist of the calculation of the baseline existing demand, the proposed water demand, a comparison of the two and the proposed retrofits to achieve a zero water use increase from the proposed development. If onsite retrofits cannot achieve net zero increase, the developer shall identify offsite retrofits or pay an in-lieu fee. Developer responsibilities are detailed in Section 13.12 of the City Municipal Code.

St. Helena Municipal Code

St. Helena Municipal Code: Revenue and Finance

In accordance with Municipal Code Section 3.32, the City of St. Helena collects water, wastewater, and storm drainage impact fees from all new development to ensure adequate water, wastewater, and stormwater facilities and services.

St. Helena Municipal Code: Health and Safety

Chapter 8.04 specifies locations, care of, and disposal for solid waste collection. It requires containment of rubbish to prevent scattering and use of the City-mandated contractor to collect all refuse. Chapter 8.20.010 prohibits littering within the City and requires use of containers to collect refuse.

St. Helena Municipal Code: Public Services

Municipal Code Chapter 13.04 establishes City of St. Helena requirements for water service connections, water main extensions, water rates, procedures during water shortages, protection of reservoirs from pollution, and other water-related requirements. Residents are prohibited from using potable water to wash driveways or sidewalks, overly irrigating landscapes causing run-off to other areas, and watering landscapes within 48 hours of a rain event.

Chapter 13.10 codifies the City's water management plan, and provides a means to allocate water to new development.

Chapter 13.12 establishes water use efficiency guidelines, including water conservation measures required in new development. Any new water connection from new development must offset new demand by an equal amount of water by supplying water-efficient retrofits or an in-lieu retrofit fee to existing facilities as part of the City's Water Neutral Policy for Development.

Chapter 13.16 establishes regulations for drilling wells, including permits and fines for violations.

Chapter 13.20 establishes requirements for sewer main connections, sewer charges, and other wastewater-related requirements, including requiring connection to the city sewer under the following conditions:

- Approval by the City of any use permit or variance applied for by or with the consent of the owner of the parcel on which the building or structure is located;
- Approval by the City for recordation of any final parcel map, subdivision map or lot line adjustment affecting any portion of the parcel upon which said building or structure is located, in which case the prorated charge under Section 13.20.050 of this chapter shall be

paid for the entire parcel as constituted prior to recordation of any such parcel or subdivision map or documents affecting the lot adjustment;

- Issuance of a building permit or permits for any parcel on which the building or improvements are located for improvements totaling more than twenty thousand dollars ($20,000.00) in value within any continuous sixty (60) month period or for improvements which comprise replacement, relocation, or substantial reconstruction of an existing discrete sewage disposal system serving the parcel.

Chapter 13.24 sets uniform requirements for discharges into the wastewater collection and treatment system and enables the agency to comply with the administrative provisions of the Clean Water Grant Regulations, the water quality requirements set by the regional water quality control board and the applicable effluent limitations, national standards of performance, toxic and pretreatment effluent standards, and any other discharge criteria which are required or authorized by state or federal law.

Chapter 13.32, the City of St. Helena stormwater and runoff pollution control ordinance, sets discharge prohibitions and requires reduction of pollutants in stormwater and compliance with the City's NPDES permit.

Impacts and Mitigation Measures

SIGNIFICANCE CRITERIA

For the purposes of this EIR, a significant adverse impact related to hazards and hazardous materials would occur if the Proposed Plan would:

Criterion 1: **Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board;**

Criterion 2: **Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects;**

Criterion 3: **Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects;**

Criterion 4: **Have insufficient water supplies available to serve the project from existing entitlements and resources such that new or expanded entitlements needed;**

Criterion 5: **Result in a determination by the wastewater treatment provider which serves or may serve the project that it has inadequate capacity to serve the project's projected demand in addition to the provider's existing commitments;**

Criterion 6: **Be served by a landfill with insufficient permitted capacity to accommodate the project's solid waste disposal needs; or**

Criterion 7: Not comply with federal, State, and local statutes and regulations related to solid waste.

METHODOLOGY AND ASSUMPTIONS

The analysis for this section addresses impacts associated with public utilities and City service systems due to projected growth from implementation of the Proposed Plan. Potential impacts on utilities and service systems are analyzed within the context of existing plans, policies, and conditions of approval, as well as the policies included in the Proposed Plan.

The water and wastewater facility analysis in this section is based on a technical memorandum and a final City of St. Helena Water Supply Plan prepared by West Yost Associates, Consulting Engineers, for the City of St. Helena (West Yost Associates, 2007 and 2010). These documents are available for review at the City of St. Helena Planning Department, 1480 Main Street, St. Helena. In addition, a *Municipal Service Review and Sphere of Influence Update for the City of St. Helena* is in the process of being prepared, and this analysis is consistent with the findings of that draft document. Impacts that would be substantially reduced or eliminated by compliance with these policies or requirements are determined to be less than significant.

Subsequent CEQA review at the project level may be required to determine whether significant environmental effects would result from the construction of water distribution lines, wastewater collection system components, storm drainage conveyance pipes, and any onsite storage or pumping facilities on development sites, or other utilities improvements. No specific projects are proposed at this time, so these site-specific impacts are not analyzed. Once specific projects are proposed, project-level environmental review will occur when proposed development plans are prepared.

The Planning Area for the Proposed Plan includes three study areas in unincorporated Napa County immediately adjacent to the city limits where the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities (see Chapter 2: Project Description for additional details). Existing conditions related to utilities and service systems in the whole of the Planning Area are documented above; however, as the City does not have jurisdiction outside of the city limits and sphere of influence (SOI), Proposed Plan policies and actions would not apply in the study areas. Therefore, implementation of the Proposed Plan would not result in direct impacts related to utilities and service systems in the study areas except for the potential impacts from the implementation of policies and actions related to the delivery of municipal services discussed below. Cumulative impacts related to utilities and service systems are discussed in Chapter 5: CEQA Required Conclusions.

RELEVANT PROPOSED PLAN POLICIES

Land Use and Growth Management Element

- ***LU1.1*** Require new development to occur within well-defined boundaries and be consistent with the ability to provide urban services. New development should mitigate infrastructure impacts by using sustainable, best management practices in green building and stormwater management and paying its share of development impact fees, while minimizing impacts on sewer, water, energy, and natural resources.

- ***LU1.2*** Allow urban development to occur only within the Urban Limit Line. Consider an exception for on-site employee housing on Agricultural lands. Urban services, such as sewer, water and storm drainage will only be extended to development within the Urban Limit Line.

  The Urban Limit Line may only expand when the amount of developable land within the Urban Limit Line is insufficient to implement the General Plan policies or when logical to include developed lands receiving urban services from the City. Expansion outside the Urban Limit Line should first be considered in Urban Reserve Areas. Expansion into other areas outside the Urban Limit Line should be considered only when the proposed land use is found to further the goals and long-term objectives of the City and does not result in adverse impacts to adjacent uses in either the urban or rural areas.

Public Facilities and Services Element

- ***PF1.1*** Require that the approval of new development be contingent upon the ability of the City to provide water without exceeding the safe annual yield of its water supply system.
- ***PF1.3*** Prohibit water service to new customers outside the city limits unless a potential threat to health and safety can be demonstrated.
- ***PF1.4*** Proactively reduce the City's commitment to provide water to uses outside the city limits.
- ***PF1.A*** Continue to implement the City's water conservation ordinances and programs that act to reduce per capita water consumption. In addition, consider incentives to property owners to install rainwater collection barrels, and continue to require water efficient irrigation systems and drought tolerant landscaping.
- ***PF1.B*** Implement the following water system improvements:
  - Replace obsolete, undersized water mains to provide more efficient circulation, higher pressures and lower pipe losses during heavy demand periods.
  - Continue service of water mains to reduce unaccounted-for water losses.
- ***PF1.C*** Continue to aggressively look for new water supply sources adequate to serve St. Helena's population into the future. New sources may include adoption of new technologies, such as effective water recycling.
- ***PF1.G*** If feasible, adopt a Water Conservation Program that includes the following actions:
  - Utilize a Water Conservation staff member or consultant, as needed;
  - Update the new construction offset program;
  - Establish an Irrigation Advisory Service and promote "Smart Irrigation Controllers";
  - Adopt new requirements for "ultra-efficient" plumbing fixtures for new development and rebates for existing users;
  - Reduce average dry weather flow; and
  - Evaluate incentives for replacement of turf; and rainwater catchment, etc.

- ***PF1.H*** Ensure that water rates are designed to promote conservation, as well as to ensure that needed capital improvements are made in a timely manner.
- ***PF1.J*** Develop and adopt regulations to ensure that total potable water usage is not greater than 1950 acre-feet per year unless the project includes housing affordable to lower income households and a determination is made pursuant to Government Code 65589.7 that a "sufficient water supply" is available to serve that project and none of the exceptions set forth in 66589.7 (c) apply; or, b) new sources of water are made available to the City. Residential projects that contain affordable housing shall receive priority allocation of water.
- ***PF1.K*** Aggressively promote adoption of "best practices" for reducing water usage in the existing housing stock.
- ***PF1.L*** Require that all new residential housing projects incorporate "best practices" for minimizing water usage.
- ***PF1.M*** Limit any future non-residential development to projects that incorporate "best practices" for water conservation.
- ***PF1.N*** Institute an ongoing process of mandatory audits of all existing non-residential water users to promote adoption of "best practices" for water conservation.
- ***PF1.O*** Provide the full-time capability in the City to implement and oversee water conservation policies and to pay for this capability out of water revenues rather than the General Fund.
- ***PF2.1*** Ensure adequate sewage treatment capacity at the City treatment plant to meet the needs of population growth, taking into account the City's Growth Management System, the Regional Housing Needs Allocation and the needs of non-residential users.
- ***PF2.B*** Continue wastewater treatment system upgrades to reduce the number and scale of implementation constraints on the recycled water program. This can ensure that the system is ready for investment when funding for implementation becomes available.
- ***PF2.C*** Urban services such as sewer, water and storm drainage will only be extended to development within the Urban Limit Line. Exceptions will be permitted when undue hardship can be demonstrated, and when proposed improvements are not found to induce growth.
- ***PF3.A.*** Require developers to provide adequate drainage improvements and detention to mitigate storm runoff from the site to the nearest major waterway. Drainage improvements can include measures such as creating settling basins, bio-swales and the use of pervious materials for driveways and parking areas. Key waterways include York Creek, Sulphur Creek and the Napa River.
- ***PF3.B.*** Continue to require that new developments contribute on a fair share basis to the extension or upsizing of storm drainage to accommodate it through the construction of infrastructure and/or the payment of Impact Fees.
- ***PF3.E.*** At the time of development review, require that post-project runoff be limited to pre-project peak flow rates for the five-year and ten-year storms as a condition of approval. (Also see Climate Change Element, Topic Area 4)

- ***PF4.1*** Increase recycling and composting as part of a coordinated waste reduction and management program.
- ***PF4.A*** Develop and adopt a Waste Management Master Plan to enhance existing waste management services and systems. Assess the system's capacity to serve current and future residents, recommend improvements and identify funding mechanisms and implementation partners. The plan should include landfill space plans and a food waste composting program that incorporates approaches for on-site food waste composting for residences and businesses. Update the plan regularly to address changing needs and priorities.
- ***PF4.B*** Install recycling receptacles downtown and in all public parks and major streets. Ensure that the design and appearance of the receptacles fosters high-quality community design, aesthetics, and character.

Community Design Element

- ***CD1.B*** Adopt a Green Building and Landscaping Ordinance that establishes green building and landscaping site design standards customized to meet the unique climatic context of the community. Landscaping standards should limit impervious paving and identify standards and incentives that encourage the use of locally-propagated native, low-water, drought-tolerant planting and integrated pest management practices.

Open Space and Conservation Element

- ***OS3.D*** Maintain the City's water management program, a program for implementing water conservation efforts for households, businesses, industries, public infrastructure, and agricultural activities. This program should include the following measures:
  - Identify building, plumbing and landscaping standards and technologies that conserve water, especially during water shortages;
  - Implement standards that require low-flow appliances and fixtures in all new developments; and
  - Encourage and model the use of drought tolerant and native vegetation in landscaping.

Climate Change Element

- ***CC3.1*** Enhance recycling, composting and source reduction services for residential and commercial uses to support Napa County's countywide waste reduction goal to achieve overall waste diversion of 75 percent to 90 percent by 2020.
- ***CC3.A*** Establish programs and create incentives to achieve a 75 to 90 percent citywide construction and demolition debris waste diversion level by 2020.
- ***CC3.B*** Establish programs and create incentives to achieve a 75 percent organic (food and green) waste diversion level by 2020.
- ***CC3.C*** Establish citywide collection services for segregated food waste from commercial sources.

- ***CC3.D*** Encourage home composting of organic waste.
- ***CC3.E*** Create and support other programs, such as the Napa County Green Business Program and the green restaurant program, that help achieve the 75 to 90 percent overall waste diversion goal.
- ***CC3.F*** Adopt environmentally-preferable purchasing measures and explore joint-purchasing agreements with partner agencies and businesses.
- ***CC4.H*** Adopt landscape ordinances that promote drought resistant plants, and limit or restrict lawns and other high-water-demand plants unless irrigated with reclaimed or grey water systems.
- ***CC6.1*** Install renewable energy systems at City facilities.
- ***CC6.H*** Establish a comprehensive, user-friendly recycling program that involves all City departments and facilities. Recover 70 to 85 percent of all waste generated in City operations.

IMPACT ANALYSIS

Implementation of the Proposed Plan would result in the following impacts with respect to utilities and services.

Impact 3.14-1: Potential development that could be allowed under the Proposed Plan would not exceed wastewater treatment requirements of the San Francisco Regional Water Quality Control Board. *(Less than Significant)*

A significant impact would occur if development under the Proposed Plan were to exceed the wastewater treatment requirements established in the regulatory permit issued by the San Francisco RWQCB in 2016 (ORDER No. R2-2016-0003 and NPDES No. CA0038016). A significant impact would also occur if the projected demand for wastewater treatment caused by buildout of the Proposed Plan were to exceed projected wastewater treatment capacity.

The Planning Area lies within the jurisdiction of the San Francisco RWQCB. As discussed in the Regulatory Setting section above, the SWRCB WDR mandates reducing SSOs by requiring public sewer system operators to take all feasible steps to control the volume of waste discharged into the system, to prevent sanitary sewer waste from entering the storm sewer system, and to develop a sewer system management plan. The regulatory permit issued by the RWQCB was accompanied by a cease-and-desist-order (CDO) requiring the plant to meet upgrade requirements by 2021 (Order No. R2-2016-0004), due to the fact that the City was known to be out of compliance with the current wastewater treatment standards, necessitating the measures specified in the CDO.

The 2016 permit specified weekly average biochemical oxygen demand (BOD) effluent limits of 25 mg/L; monthly average BOD effluent limits of 15 mg/L; weekly average total suspended solids (TSS) effluent limits of 20 mg/L; and monthly average TSS effluent limits of 15 mg/L. The accompanying CDO addressed chronic permit exceedances, set interim BOD and TSS effluent limitations of 45 mg/L weekly average and 30 mg/L monthly average, and established tasks and a time schedule for the City to comply with the 2016 Permit's new BOD and TSS effluent limits. As required by the NPDES permit, the City must meet the 2016 permit's new BOD and TSS effluent

limits by February 28, 2021. The CDO requires the City to incorporate filtration or another process into the treatment system, and may require an upgrade to an advanced secondary treatment system. The CDO allows the City to continue discharging effluent under the old discharge limitations, as long as they are complying with the task schedule (St. Helena, 2016).

Following the issuance of the 2016 permit and accompanying CDO, the City of St. Helena completed the Wastewater Treatment and Reclamation Plant Improvements Draft Feasibility Study to analyze various options to meet the NPDES permit effluent limits. The City is actively working to finalize alternatives and meet the compliance schedule, and must begin implementation by March 1, 2019 (RWQCB, 2016).

The St. Helena Wastewaster Treatment and Reclamation Plant (WTRP) has permitted capacity to treat 0.5 mgd average dry weather flow (ADWF) and 2.8 mgd peak wet weather flow (PWWF), as shown in Table 3.14-5. Additionally, per the City's 2016 regulatory permit issued by the RWQCB, the City plans to increase wastewater treatment plant permitted capacity to 0.65 mgd by 2030 (City of St. Helena, 2018), as the existing treatment facilities at the City of St. Helena WWTRP have sufficient capacity to treat ADWF flows up to and beyond 0.65 mgd when operated under design conditions (Bennett Engineering Services, 2015). The Proposed Plan, at buildout, is expected to generate about 0.53 mgd ADWF and about 1.12 mgd wet weather flow.[2] (As of 2016, ADWF and AWWF for St. Helena were 0.48 mgd and 1.02 mgd, respectively (GHD, 2016).) Therefore, the WTRP is expected to have sufficient capacity to accommodate the increased wastewater production that would result from implementation of the Proposed Plan.

Given the City's commitment to meet the RWQCB's wastewater treatment requirements and the existing capacity of the WTRP to handle the projected increased wastewater resulting from the Proposed Plan, the risk of St. Helena exceeding the RWQCB's wastewater treatment requirements is less than significant.

Mitigation Measures

None required.

Impact 3.14-2: Potential development that could be allowed under the Proposed Plan could require construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. (Less than Significant)

A significant impact would occur if development under the proposed Plan were to require construction of new water or wastewater treatment facilities or require the expansion of new facilities.

[2] ADWF is calculated using a demand factor of 80 gallons per capita per day (West Yost, 2007). AWWF is calculated using a demand factor of 300 gallons per day per residential unit and 30 gallons per day per employee (Napa County, 2007).

As discussed in Physical Setting above, the City of St. Helena obtains its water from three sources: Bell Canyon Reservoir, local groundwater wells, and surface water purchases from the City of Napa. Bell Canyon Reservoir water is treated at the Louis Stralla Treatment Plant, which typically operates at 3.5 million gallons per day (mgd) but has a capacity of 4.3 mgd. The City's groundwater is treated at the Stonebridge Well Complex, with typical production of 0.27 to 0.34 mgd. Napa's water is treated at three different treatment plants: the Barker Slough water is treated at the Edward I Barwick Jamieson Canyon Water Treatment Plan, which has a capacity of 20 mgd; Lake Hennessy water is treated at the Hennessey Water Treatment Plant, which has a capacity of 20 mgd; and Lake Milliken water is treated at the Milliken Water Treatment Plant, which has a capacity of 4.0 mgd (Napa County, 2013) and (City of St. Helena, 2016). Each of these treatment plants is currently operating within its permitted capacity.

Due to the City of St. Helena's Water Neutral Policy for Development, there would be no expected increase in water demand under the Proposed Plan. Under the policy, developers are required to offset all new water demands with water conservation retrofits or in-lieu payments for the City to undertake such retrofits. Therefore, the risk that development under the Proposed Plan would require new water treatment facilities is less than significant.

As discussed in Impact 3.14-1 above, the St. Helena Wastewaster Treatment and Reclamation Plant (WTRP) has permitted capacity to treat 0.5 mgd average dry weather flow (ADWF) and 2.8 mgd peak wet weather flow (PWWF), as shown in Table 3.14-5. Additionally, per the City's 2016 regulatory permit issued by the RWQCB, the City plans to increase wastewater treatment plant permitted capacity to 0.65 mgd by 2030 (City of St. Helena, 2018). The existing treatment facilities at the City of St. Helena WWTRP have sufficient capacity to treat ADWF flows up to and beyond 0.65 mgd when operated under design conditions; the upgrade the permitted capacity, they require restoration of existing primary treatment units, including the removal of solids and sludge buildup (Bennett Engineering Services, 2015). The Proposed Plan, at buildout, is expected to generate about 0.53 mgd ADWF and about 1.12 mgd wet weather flow. Therefore, with the previously-planned WTRP restoration and permitted capacity increase, the WTRP is expected to have sufficient capacity to accommodate the increased wastewater production that would result from implementation of the Proposed Plan.

Further, Proposed Plan policies require that the City continue wastewater treatment system upgrades to reduce the number and scale of implementation constraints on the recycled water program, which the City plans to implement in the future, and that the City continue to provide adequate wastewater service capacity (PF2.B and PF2.1).

Considering the existing capacity of water and wastewater facilities, the planned restoration of the treatment facilities at the WTRP, projected demand, and existing regulations, the risk that development under the Proposed Plan would require new wastewater treatment facilities would be less than significant.

Mitigation Measures

None required.

Impact 3.14-3 Potential development that could be allowed under the Proposed Plan would not require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. (Less than Significant)

A significant impact would occur if development under the Proposed Plan would require or result in new storm water drainage facilities or the expansion of existing facilities that cause substantial environmental impacts either through construction or operation. Stormwater requirements for construction and new development for the cities of Napa and St. Helena, the Town of Yountville, and the County of Napa, which together formed the Napa County Stormwater Pollution Prevention Program (NCSPPP), are regulated under the SWRCB's Phase II General MS4 Permit, Order No. 2013-0001-DWQ and NPDES General Permit No. S000004 (California, 2013).

The City of St. Helena owns and operates a conveyance system of pipes and drains that discharge storm water to Sulphur Springs Creek, York Creek, and the Napa River. Storm drainage infrastructure includes the City maintained storm drain line, privately maintained storm drain lines, and a Caltrans storm drain line. The City Public Works Department maintains drain inlets and drain manholes. There are some existing localized deficiencies in the current storm drainage system, including that during heavy rains, the City storm drain outfall to Sulphur Creek can back up and cause flooding. The City's Stormwater Master Plan is over ten years old and requires updating (City of St. Helena, 2018), however, the St. Helena Municipal Code requires stormwater impact fees of all new development. This would help to ensure that development under the Proposed Plan would not exacerbate existing stormwater system deficiencies.

Further, while development under the Proposed Plan would mostly be redevelopment of previously developed sites, it would result in some pervious surfaces being converted to impervious surfaces. Buildout of the Proposed Plan is expected to generate an increase in impervious surfaces with the development of up to 300 new housing units and up to 900 new jobs in manufacturing, agriculture, retail, and the service industries, which would likely add new impervious sidewalks, pathways, parking areas and similar improvements. However, the Planning Area is subject to numerous measures aimed to reduce the load on storm water drainage facilities and minimize the need for new stormwater facilities. The California Model Water Efficient Landscape Ordinance and County Ordinance helps to prevent water waste for existing landscapes. The NCSPPP works to implement BMPs, measurable goals, and timetables for implementation of construction site stormwater runoff control and post-construction stormwater management. Any new development resulting from the Proposed Plan would be required to comply with the BASMAA Manual's design guidance for stormwater treatment, as required by Napa County's Phase II Small MS4 General Permit. These stormwater treatment guidelines would require new development within the Planning Area to detain storm runoff with bioretention facilities, minimize surface flow velocities, and make use of all applicable low impact design (LID) techniques to reduce stormwater flows. New development, during both construction and operations phases, would be required to comply with the City of St. Helena's Stormwater Management Standards, which require the preparation of a stormwater pollution prevention plan to slow stormwater during rain events. In addition, new inputs to the stormwater drainage system must comply with Title 16 of the Municipal Code, which requires retention ponds, drainage swales, and check dams as needed to reduce the off-site peak storm flow that projects contribute to the historic flow.

Further, policies and actions within the Proposed Plan would require new development to provide adequate drainage improvements and development setbacks and to incorporate stormwater BMPs, which would reduce peak flow rates and stormwater runoff volumes from smaller, more frequently occurring storms (CD1.5, LU1.1, OS1.1, OS1.A, OS1.B, PF3.1, PF3.4, PF3.A, PF3.B, and PF3.E). Projects would be required to show that post-project runoff be limited to pre-project peak flow rates for the five-year and ten-year storms as a condition of approval (PF3.E). Extending stormwater drainage system utilities to the Urban Limit Line and updating the City's Stormwater Master Plan would ensure that the storm drain system has adequate capacity to convey storm flows without flooding, accounting for existing and future land uses and development (LU1.2, PF2.C, and PF3.D). The Proposed Plan would also promote preservation of open space and existing vegetation and require development setbacks, use of drought-tolerant and native plants, and proper use of pesticides and herbicides and seek to limit the use of impervious paving (CD4.2, CD4.A, CD1.B, CD4.A, OS1.1, OS1.B, OS1.H, OS1.L, OS3.D, and OS3.E). Open space conservation reduces impervious area, which may reduce stormwater runoff. Use of native plants would reduce irrigation requirements, which would reduce the volume of dry weather nuisance flows into the stormwater drainage system and/or receiving waters.

Additionally, any additional drainage facilities needed for stormwater flows not fully absorbed by these policies would be required to comply with all applicable environmental regulations, including project-level environmental review and NPDES permit regulations.

Compliance with existing regulations and implementation of Proposed Plan policies and with the existing federal, State, and local regulations identified above would reduce increases in stormwater velocity and volume to the maximum extent practicable, and compliance with SWRCB regulations would ensure that any new stormwater facilities that were built would not be environmentally harmful. Therefore, the impact of the Proposed Plan as related to the construction of new stormwater facilities would be less than significant.

Mitigation Measures

None required.

Impact 3.14-4 Potential development that could be allowed under the Proposed Plan would have sufficient water supplies available to serve the project from existing entitlements and resources and would not require new or expanded entitlements. (Less than Significant)

A significant impact would occur if existing water entitlements and resources were not able to serve development allowed under the Proposed Plan.

As discussed above in Impact 3.14-2, the City's Water Neutral Policy for Development ensures that future water demand does not exceed the current demand, for which the City has sufficient entitlements and resources. New development must offset any new water demand with water conservation retrofits or in-lieu payments for the City to conduct retrofits of existing facilities or homes.

In addition, the Proposed Plan contains myriad policies to reduce water demand, including promoting rainwater collection systems and water-efficient landscaping, adopting a Water Conservation Plan, promoting best practices for water conservation in new and existing housing, designing water rates to promote conservation, instituting audits and ensuring available staff time to implement water conservation policies, maintaining water pipes to reduce losses, and requiring low-water, drought-tolerant planting, (PF1.A, PF1.B, PF1.G, PF1.h, PF1.J, PF1.k, PF1.L, PF1.M, PF1.N, PF1.O, CD1.B, and CC4.H). The Proposed Plan also requires that new development be contingent on availability of water, prohibits water service to new customers outside city limits and requires the City to reduce its commitments to provide water to customers outside city limits, and requires the City to aggressively seek new water sources PF1.1, PF1.3, PF1.4, and PF1.C).

Taken together, Proposed Plan policies and the City's existing Water Neutral Policy for New Development would reduce any impacts to water demand from new development to less than significant levels.

Mitigation Measures

None required.

Impact 3.14-5: Potential development that could be allowed under the Proposed Plan would not result in a determination by the wastewater treatment provider that it has inadequate capacity to serve the projected demand in addition to the provider's existing commitments. (Less than Significant)

As discussed in Impacts 3.14-1 and 3.14-2 above, the St. Helena Wastewaster Treatment and Reclamation Plant (WTRP) has permitted capacity to treat 0.5 mgd average dry weather flow (ADWF) and 2.8 mgd peak wet weather flow (PWWF), as shown in Table 3.14-5. Additionally, per the City's 2016 regulatory permit issued by the RWQCB, the City plans to increase wastewater treatment plant permitted capacity to 0.65 mgd by 2030 (City of St. Helena, 2018). The existing treatment facilities at the City of St. Helena WTRP have sufficient capacity to treat ADWF flows up to and beyond 0.65 mgd when operated under design conditions; the upgrade the permitted capacity, they require restoration of existing primary treatment units, including the removal of solids and sludge buildup (Bennett Engineering Services, 2015). The Proposed Plan, at buildout, is expected to generate about 0.53 mgd ADWF and about 1.12 mgd wet weather flow. And as the WTRP serves only areas covered by the Proposed Plan, it has no other existing commitments that would preempt service to new development. Therefore, with the previously-planned WTRP restoration and permitted capacity increase, the WTRP is expected to have sufficient capacity to accommodate the increased wastewater production that would result from implementation of the Proposed Plan. The impact would therefore be less than significant.

Mitigation Measures

None required.

Impact 3.14-6: Potential development that could be allowed under the Proposed Plan would be served by a landfill with sufficient capacity to accommodate the project's solid waste disposal needs. (Less than Significant)

Development allowed by the proposed Plan would increase the amount of solid waste generated by future residential, commercial, industrial, and other land uses, but this increase would not exceed the capacity of the Clover Flat Landfill or require construction of new landfill facilities. The landfill is permitted to receive 600 tons per day, or 219,000 tons per year, but currently only receives less than a quarter of that (50,000 tons per year). The approximately 13 percent projected increase in population and approximately 17 percent projected increase in jobs over the planning horizon, would therefore not result in solid waste generation that exceeds capacity at the Clover Flat Landfill (Abreu, 2015 and Abreu, 2018). Further, the Proposed Plan contains numerous policies aimed at reduction and diversion from landfills of solid waste, including establishing city-wide composting and a Waste Management Master Plan (PF4.1, PF4.A, PF4.B, CC3.1, CC3.A, CC3.B and CC3.F).

Additionally, all new development resulting from implementation of the Proposed Plan would be required to comply with the CALGreen Code, as discussed in Regulatory Setting above, requiring diversion of at least 65 percent of construction waste from landfills.

Given Clover Flat Landfill's significant remaining capacity, existing waste reduction regulations, and the comparatively small increase in residents and employees envisioned by the Proposed Plan, the collection, transfer, recycling, and disposal needs of the projected population increase under the Proposed Plan would not result in adverse impacts on landfill facilities. Therefore, impacts would be less than significant.

Mitigation Measures

None required.

Impact 3.14-7: Potential development that could be allowed under the Proposed Plan would comply with federal, state, and local statutes or regulations related to solid waste. (Less than Significant)

A significant impact would occur if development under the Proposed Plan would violate any federal, State, or local statutes or regulations related to solid waste. As described under the Physical Setting section, waste collection services in the Planning Area are provided by the Upper Valley Disposal & Recycling Service (UVDS). UVDS collects and transports solid waste, including trash, recyclables, green waste, and restaurant food composting materials. Hazardous waste is handled by Napa County, which operates Napa-Vallejo Household Hazardous Waste Collection Facility in American Canyon.

Federal, State, and local statutes and regulations related to solid waste include AB 939, AB 1327, SB 1016, AB 341, and AB 1836, as well as Title 8 of the City of St. Helena Municipal Code. St. Helena has met and exceeded its waste reduction targets over the past decade. In 2016, while the resident target disposal rate was set at 7.5 pounds per day (PPD) and the employee target disposal

rate was set at 10.9 PPD, the Upper Valley Waste Management Agency, in which the City of St. Helena participates, achieved resident and employee disposal rates of 4.6 PPD and 5.0 PPD, respectively. These low disposal rates were achieved through 44 different diversion programs, including city-wide recycling (CalRecycle, 2016).

The Proposed Plan contains numerous policies and implementing actions promoting recycling, composting, and other methods of managing and reducing waste, including developing a Waste Management Master Plan, requiring installation of recycling receptacles in public areas, establishing incentives to increase recycling and composting, and establishing a city-wide composting program (PF4.1, PF4.A, PF4.B, CC3.1, CC6.1, CC3.A, CC3.B, CC3.C, CC3.D, CC3.E, CC3.F, and CC6.H). These provisions would help ensure that the city continues to achieve compliance with AB 939, AB 341, AB 1826 and related waste reduction targets. The Proposed Plan does not contain any policies that would conflict with any of the requirements for adequate waste receptacles, contracts, or schedules in the local ordinances or goals of the State regulations. Further, any development of future land uses under the Proposed Plan would be required to comply with federal, State, and local statutes and regulations related to solid waste. Therefore, the impact would be less than significant.

Mitigation Measures

None required.

This page intentionally left blank.

3.15 Impacts Not Potentially Significant

Some of the detailed analysis of the environmental issues normally required by CEQA is excluded from this EIR because only those environmental issues that were potentially impacted by the Proposed Plan are analyzed. CEQA requires that an EIR provide a statement indicating why environmental issues normally requiring analysis by CEQA were determined to be not significant and therefore not discussed in detail. Forestry Resources and Mineral Resources are the only issue areas not addressed in detail in the setting and impacts sections.

Forestry Resources

For the purposes of this EIR, a significant adverse impact would occur if implementation of the Proposed Plan would:

Criterion 1: **Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g));**

Criterion 2: **Result in the loss of forest land or conversion of forest land to non-forest use; or**

Criterion 3: **Involve other changes in the existing environment which, due to their location or nature, could result in conversion of forest land to non-forest use.**

Forest land is defined as land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits (Public Resources Code Section 12220[g]). Timberland is defined as land, other than land owned by the federal government and land designated by the State Board of Forestry and Fire Protection as experimental forest land, which is available for, and capable of, growing a crop of trees of a commercial species used to produce lumber and other forest products, including Christmas trees (Public Resources Code Section 4526). Timberland Production Zone designates an area which has been zoned pursuant to Section 51112 or 51113 and is devoted to and used for growing and harvesting timber, or for growing and harvesting timber and compatible uses (Government Code section 51104[g]).

While portions of the Planning Area support tree cover—including land along the Napa River, Sulphur Creek, and York Creek, and in Study Area 3 north of the city—these lands are interspersed

with development and are not managed for forest resources or used for commercial timber production. While these areas are relevant to the Planning Area's biological resources, and are evaluated in terms of special-status species, sensitive habitats, and related regulations and plans in Section 3.4: Biological Resources, they do not represent forestry resources that would be analyzed under this topic. Additionally, there are no areas designated as Timberland Production Zone in the Planning Area. Therefore, the Proposed Plan would have no impact on forest resources and the topic is not analyzed further.

Mineral Resources

For the purposes of this EIR, a significant adverse impact would occur if implementation of the Proposed Plan would:

Criterion 1: **Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state; or**

Criterion 2: **Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan.**

The Planning Area does not have known mineral resources of regional or statewide value, or locally-important mineral resource recovery sites that are delineated on a land use plan. The California Geological Survey does not identify any mineral resource zones in the Planning Area (Stinson, Manson, & Plappert, 1987), nor does it identify any active or permitted mining or land designated as significant for aggregate resources in the Planning Area (Miller & Busch, 2013). Therefore, the Proposed Plan would have no impact on mineral resources. The topic is not analyzed further.

4 Alternatives Analysis

The Proposed Plan is described and analyzed in Chapters 3.0 through 3.15 of this EIR with an emphasis on potentially significant impacts and recommended mitigation measures to avoid those impacts. The California Environmental Quality Act (CEQA) Guidelines require the description and comparative analysis of a range of alternatives to the Proposed Plan that could feasibly attain the objectives of the Proposed Plan, while avoiding or substantially lessening potential impacts. CEQA Guidelines also require that the environmentally superior alternative be designated. If the alternative with the least environmental impact is the No Project Alternative, then the EIR must also designate the next most environmentally superior alternative.

The following discussion is intended to inform the public and decision makers of the feasible alternatives that would avoid or substantially lessen significant effects of the Proposed Plan, and to compare such alternatives to the Proposed Plan. Section 15126.6 of the CEQA Guidelines states that:

> *An EIR shall describe a range of reasonable alternatives to the project, or the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decision making and public participation.*

The following discussion includes an evaluation of two alternatives to the Proposed Plan. CEQA Guidelines Section 15126.6(e) requires consideration of a "No Project Alternative" in every EIR. In the case of the Proposed Plan, the No Project Alternative is a scenario in which the Proposed Plan is not adopted and implementation of the existing General Plan continues through 2040. Consistent with CEQA Guidelines Section 15126.6(a), the other alternative selected for consideration in this analysis is a Transportation Network Enhancement Alternative, which would feasibly attain the objectives of the Plan, as listed in Chapter 2, Project Description, but would avoid or substantially lessen any of the significant effects of the Plan. Specifically, the Transportation Network Enhancement Alternative would reduce significant and unavoidable impacts related to vehicle congestion on State Route 29 (SR-29) in St. Helena.

4.1 Description of Alternatives

CEQA Section 15126.6(f) states that alternatives in an EIR should be governed by a "rule of reason" and requires the EIR to set forth alternatives necessary to permit a reasoned choice, that would avoid or substantially lessen any significant effects, and that could feasibly attain most of the project objectives. As such, the alternatives analyzed are as follows:

NO PROJECT ALTERNATIVE

Consistent with Section 15126.6(e)(2) of the CEQA Guidelines, the No Project Alternative represents what would be reasonably expected to occur in the foreseeable future if the Proposed Plan were not adopted and the City's current General Plan was left unchanged and in use. This alternative would retain all current land use designations and definitions from the current General Plan as amended to date, and future development in the Planning Area would continue to be subject to existing policies, regulations, development standards, and land use designations of the existing St. Helena General Plan. Specifically, there would be no new Mixed Use land use designation, the Medium Density Residential density range would remain 5.1 to 12.0 units per acre, and the High Density Residential density range would remain 12.1 to 20.0 units per acre. All Proposed Plan change areas as identified in the Proposed Plan would retain their existing 1993 General Plan designations. Policies concerning topics such as transportation, economic development, parks, open space, the environment, health, and housing would also remain unchanged, and there would be no alterations to the Urban Limit Line.

Overall, the No Project Alternative is projected to result in approximately 460 new residents, 200 housing units, and 780 new jobs in St. Helena by 2040. Growth in the Study Areas would be the same as under the Proposed Plan. The No Project Alternative is depicted in Figure 4.1-1.

TRANSPORTATION NETWORK ENHANCEMENT ALTERNATIVE

California SR-29/SR-128 is the principal arterial in St. Helena, carrying regional traffic through Napa Valley and also serving as the community's Main Street. Today, this roadway experiences significant peak hour and peak period congestion, which is projected to worsen with cumulative growth in the region through 2040. Under this alternative, the City would undertake improvements to the transportation network to facilitate access through the community for local residents traveling by all modes of transportation. Specifically, Oak Avenue would be extended south from its current terminus at Mitchell Lane to Grayson Avenue in order to relieve vehicle congestion and queuing on SR-29 and to improve bicycle and pedestrian access to St. Helena Elementary, Robert Louis Stevenson Middle School, and St. Helena High School.

The new roadway would be constructed as a two-lane Downtown/Mixed Use Street with bicycle lanes and sidewalks, consistent with the City's Engineering Standards, and a bridge would be constructed over Sulphur Creek. The roadway would be designed to provide a high-quality bicycle and pedestrian connection to Downtown St. Helena, with a full Class I path along the west side of the street. Traffic calming measures, such as speed lumps, bulb outs, and/or chicanes would be constructed to limit travel speeds between intersections and optimize safety for all roadway users. Connection to the Vine Trail would also be provided.

Under this alternative, citywide capital improvements to expand the existing bicycle network would still be constructed, as under the Proposed Plan to provide safe, convenient access to destinations throughout the community and to encourage the use of bicycles as a non-automotive means of transportation. Additionally, the proposed Mixed Use land use designation would still be applied to encourage a mix of uses at infill locations in central St. Helena and provide for housing opportunities in close proximity to services and retail. Other policies and actions would be as under the Proposed Plan. Overall, as with the Proposed Plan, the Transportation Network Enhancement Alternative would result in approximately 750 new residents, 335 housing units, and 935 new jobs in St. Helena by 2040. The Transit Network Enhancement Alternative is depicted in Figure 4.1-2.

Table 4.2-1: Comparison of Key Characteristics, presents a summary of the residential capacity and reasonably anticipated non-residential development on opportunity sites in the Transportation Network Enhancement Alternative.

Table 4.2-1: Comparison of Key Characteristics

	City of St. Helena			*Study Areas*			*Planning Area Total*		
	Population	*Housing*	*Jobs*	*Population*	*Housing*	*Jobs*	*Population*	*Housing*	*Jobs*
Existing (2018)	5,900	2,700	5,400	600	200	500	6,400	2,900	5,900
Proposed Plan (2040)	6,600	3,100	6,400	700	200	600	7,300	3,300	7,000
Transportation Network Enhancement Alternative (2040)	6,600	3,100	6,400	700	200	600	7,300	3,300	7,000
No Project Alternative (2040)	6,260	2,900	6,180	700	200	1,100	6,960	3,100	7,280

4.2 Comparative Impact Analysis of Alternatives

This section provides a qualitative analysis of the potential environmental impacts of each alternative relative to existing conditions, and compares their performances with that of the Proposed Plan. The discussions are arranged by resource topic and address the same significance criteria used to evaluate the Proposed Plan in Chapter 3 of this EIR.

AESTHETICS

There are important viewsheds within the Planning Area, such as those of historic resources, vineyards, and hillsides, that contribute to the aesthetic quality of St. Helena. The No Project Alternative would maintain all land use designations from the 1993 General Plan, and the Transportation Network Enhancement Alternative would include the land use designations in the Proposed Project, including proposed designations in the 13 change areas. Development under both alternatives would allow for development in areas in the ULL currently used for agriculture, which could affect the rural visual character in the central portion of the city. As with the Proposed Plan, both alternatives would be subject to the St. Helena design review process, and both alternatives would include policies to preserve scenic resources and visual character. Thus, the alternatives would be expected to have a less than significant impact related to scenic vistas. The No Project Alternative may have the least impact as it proposes fewer changes to existing densities in the central portion of the city. The Transportation Network Enhancement Alternative would have a similar impact as the Proposed Plan.

As discussed in Section 3.1: Aesthetics, there are no State scenic highways in the Planning Area, although SR-29 is eligible for the designation. As with the Proposed Project, neither alternative would have a significant impact on resources within a State scenic highway.

Plan or proposed policies, impacts would be less than significant for both alternatives. The No Project Alternative may have the least impact as it proposes fewer changes to existing densities in the central portion of the city. The Transportation Network Enhancement Alternative may be expected to have a greater impact than the No Project Alternative or the Proposed Plan, as it would propose additional development in the form of the Oak Avenue roadway extension.

Each of the alternatives would accommodate new development that could generate additional light and glare in the Planning Area. If future development under the Transportation Network Enhancement Alternative included features such as lighted signs or streetlights, it could generate more light and glare than the No Project Alternative or the Proposed Plan in areas where new roads and commercial buildings will be developed. As with the Proposed Plan, the Transportation Network Enhancement Alternative would include policies and implementing actions such as creating a Dark Sky ordinance to further limit the negative effects of light pollution on wildlife and aesthetics, as well as ensuring that future lighting is be shielded and directed downwards to minimize glare. Additionally, the City's Municipal Code includes prohibition of lighting that would negatively impact residential development and roadways. The City's design review process would further reduce light and glare for new construction or redevelopment projects through a discretionary process whereby projects must show compatibility with surrounding areas. Thus, while the Transportation Network Enhancement Alternative would, with the same policies as the Proposed Plan, have a less than significant impact regarding light and glare, it could have a greater

impact than the Proposed Plan given the addition of new lighted signs and streetlights. . As the No Project Alternative would allow for similar intensities of development as the Proposed Plan, but would not include the proposed Dark Sky ordinance, it could have a greater impact regarding light and glare than the Proposed Plan and the Transportation Network Enhancement Alternative.

AGRICULTURAL RESOURCES

The Proposed Plan would result in a significant and unavoidable impact related to the potential conversion of approximately 118.5 acres of Farmland land within the City limit and SOI to urban uses. As with the Proposed Plan, the No Project Alternative also includes urban land use designations in areas of Important Farmland, which would allow for new development that would result in farmland conversion. While the No Project Alternative would introduce Agricultural Resource and Agricultural, Watershed, and Open Space land use designations in north and southeast portions of the Planning Area, it would also result in the possible conversion of Farmland to urban uses within the Urban Limit Line. Similar to the Proposed Plan, this alternative would result in a significant and unavoidable impact, given that agricultural land is a finite and irreplaceable resource that is not directly mitigable, aside from preventing development altogether. However, as the No Project Alternative would not involve the same minor adjustments to the ULL as the Proposed Plan, this alternative would result in the conversion of less Farmland within the City limit and SOI to urban uses than under the Proposed Plan.

Under the Transportation Network Enhancement Alternative, the same land use designations and policy framework as under the Proposed Plan would apply and as such, impacts related to the conversion of Farmland would also be significant and unavoidable. However, the Transportation Network Enhancement Alternative would also involve extending Oak Avenue south through additional parcels of Prime Farmland and Farmland of Statewide Importance, as shown on Figure 3.2-2, and would thus result in greater impacts related to the conversion of Farmland to urban uses than the Proposed Plan.

As with the Proposed Plan, neither the No Project Alternative nor the Transportation Network Enhancement Alternative would conflict with Napa County's zoning for agricultural uses. Both alternatives and the Proposed Plan would designate all areas within the city that are subject to Williamson Act contracts as Agriculture. As such, both alternatives would result in less than significant impacts related to conflicts with existing agricultural zoning and Williamson Act contracts.

Similarly, as with the Proposed Plan, neither the No Project Alternative nor the Transportation Network Enhancement Alternative would include land use designations or policies and actions applicable to the unincorporated Study Areas and would thus not directly convert adjacent unincorporated agricultural lands to non-agricultural uses. However, intensification of urban development and conversion of farmland within the city could indirectly increase development pressures in these areas given their access to the city's jobs, services, and other amenities. As with the Proposed Plan, existing regulations including the County General Plan and measures J and P would reduce the risk of Farmland conversion to non-agricultural uses. Associated impacts from the No Project Alternative and the Transportation Network Enhancement Alternative would therefore be less than significant.

AIR QUALITY

Air quality impacts are evaluated on a cumulative basis due to the regional characteristics of air quality and air pollution problems. Impacts under the Transportation Network Enhancement Alternative would be similar to those under the Proposed Plan as the two share policies that would protect or improve air quality. Due to these, the Transportation Network Enhancement Alternative would be expected to result in similar less than significant impacts regarding implementation of the Bay Area Air Quality Management District (BAAQMD) air quality plans and objectionable odors, as well as similar significant and unavoidable impacts related to the violation of air quality standards and the cumulatively considerable increase of criteria pollutants.

Along with the Proposed Plan, both alternatives would have less than significant impacts with mitigation regarding the exposure of sensitive receptors to substantial pollutant concentrations. Under the Proposed Plan, and therefore the Transportation Network Enhancement Alternative, construction activities would be dispersed intermittently over a 22-year period and would not expose nearby sensitive receptors to a continuous source of pollution. However, without specific details on the locations of building footprints or their construction schedules, a quantitative evaluation of potential health risk impacts is not possible. Therefore, mitigation measures that would mitigate air quality impacts from construction as they affect the community are recommended in order to reduce impacts on sensitive receptors to less than significant levels. Implementation of Mitigation Measure AQ-1 in the Proposed Project would be required to reduce the impact of the No Project Alternative to a less than significant level, as development on commercial and industrial facilities could expose nearby receptors to substantial air pollutant concentrations.

Although future development under the Proposed Plan and the Transportation Network Enhancement Alternative would be required to comply with applicable air quality plans, there is no guarantee emissions would be mitigated below BAAQMD thresholds. Thus, there would be a significant and unavoidable impact with regards to violating air quality standards. The No Project Alternative, however, would have a less than significant impact as the increase in emissions would be expected to be below BAAQMD thresholds; the No Project Alternative would result in a marginal (5 percent) increase in VMT over existing conditions compared to a 25 percent increase under the Proposed Plan, and therefore would not contribute to air quality standards for traffic-related air pollutants such as ROG, $PM_{2.5}$, and O_3.

The No Project Alternative would not include the air quality policies of the Proposed Plan, though this alternative would retain many of the current General Plan policies that could reduce air quality impacts. Given that population projections under the No Project Alternative would be consistent with ABAG's projections for the City of St. Helena and VMT would increase by only 5 percent, air pollution generated by an increased population and traffic under this alternative would be consistent with future estimates of regional air quality plans. Therefore, the No Project Alternative would have a less than significant impact on the obstruction of air quality plan implementation. While population projections under the Transportation Network Enhancement Alternative and Proposed Plan would exceed ABAG's projections for St. Helena, per capita emissions under both plans in 2040 would be lower than forecasted under regional air quality plans such as the Clean Air Plan, as these plans do not assume the sustainability policies and transit-oriented development patterns that would be implemented under each. Therefore, the Transportation Network

Enhancement Alternative would have a less than significant impact on the obstruction of air quality plan implementation.

Review of development under both the No Project Alternative and the Transportation Network Enhancement Alternative using BAAQMD's odor screening distances during future CEQA review and compliance with BAAQMD Regulation 7 and California Green Building Code would discourage siting sensitive receptors in proximity to odor sources, thus ensuring that odor impacts are minimized and are less than significant. Additionally, the Transportation Network Enhancement Alternative would include Proposed Plan policies and implementing actions that discourage the siting of residential uses and sensitive receptors in close proximity to sources of odors.

Both the Proposed Plan and the Transportation Network Enhancement Alternative would result in a cumulatively considerable net increase of criteria pollutants. Current nonattainment status for O_3, $PM_{2.5}$, and PM_{10} pollutants and projected ROG and PM_{10} emissions at buildout in combination with past, present, and reasonably foreseeable projects elsewhere within the Air Basin indicate that the Proposed Plan would result in a significant and unavoidable cumulative impact as ROG is a precursor of O_3 and $PM_{2.5}$ and increased emissions of PM_{10} over time would have a cumulatively considerable effect on attainment status. The No Project Alternative, similarly, would involve extensive site preparation activities, earthmoving activities, or truck travel over unpaved roads, causing exceedance of the State Ambient Air Quality Standard for PM_{10}, which already are already regularly exceeded. However, with implementation of Mitigation Measure AQ-1 strategies regarding dust abatement, the impact would be reduced to a less than significant level.

BIOLOGICAL RESOURCES

The Transportation Network Enhancement Alternative would include the same policies as the Proposed Plan for the protection of special-status species, sensitive habitats, wetlands, and wildlife corridors; for cooperating with other agencies to protect biological resources; and for supporting any relevant Habitat Conservation Plans (HCPs). Implementation of the Transportation Network Enhancement Alternative would result in a roadway extension crossing Sulphur Creek, which could impact special-status species, sensitive habitats, and wildlife corridors along the creek bed. However, this alternative requires a bridge crossing the creek and would not directly impact the wildlife corridor connecting the west portion of Sulphur Creek to the Napa River. Development of this bridge could have a direct or indirect impact if it resulted in the degradation or removal of habitat for special-status species. However, multiple policies and implementing actions retained from the Open Space and Conservation chapter of the Proposed Plan would require protection of these habitats. Therefore, impacts from implementation of the Transportation Network Enhancement Alternative on special-status species, sensitive habitats (including riparian habitats), wetlands, wildlife corridors, and compatibility with the Pacific Gas & Electric (PG&E) Habitat Conservation Plan (HCP) would all be similar to those of the Proposed Plan and thus less than significant. The City of St. Helena Municipal Code Chapter 12.24 provides policies ensuring tree preservation, but the Napa County General Plan does not currently have a local ordinance protecting biological resources. As there are currently no policies or ordinances protecting biological resources in the County, there would be a less than significant impact from the Transportation Network Enhancement Alternative, similar to the Proposed Plan.

The No Project Alternative includes some policies to protect biological resources, but not the full range included in the Proposed Plan and Transportation Network Enhancement Alternative. In particular, it would not include the proposed Policy OS1.3, which protects contiguous corridors of riparian vegetation along the Napa River and its tributaries to ensure that sensitive species and habitats, and wildlife corridors are not impacted by future development, or policy OS4.1 addressing the protections of tree resources in both developed and undeveloped areas. The No Project Alternative also would not include all of the Proposed Plan's implementation actions, which would require new development to minimize impact to biological resources through actions including but not limited to work plans for restoring sensitive habitat degraded by agriculture, biological assessments at special-status species habitat, management plans to restore sensitive habitat, and avoiding construction during nesting season through scheduling or a pre-construction survey to achieve policy goals. The No Project Alternative would include policies from the 1993 General Plan related to maintaining and enhancing biodiversity, protecting special-status species and their habitats, conserving habitats for native species, and protecting connectivity for wildlife movement. Therefore, the No Project Alternative would include policies protecting biological resources but would not be as comprehensive and protective as the Proposed Plan and Transportation Network Enhancement Alternative.

As both alternatives include policies to ensure the protection of riparian habitat and to ensure that future development mitigates impacts to wildlife species, there would be a less than significant impact to special-status species and sensitive habitats. The No Project Alternative would not include policies designed to protect wetlands, thus could result in a significant and unavoidable impact. The Transportation Network Enhancement Alternative, however, includes policies that propose avoiding potential impacts on jurisdictional wetlands, as well as protecting habitats around the city's waterways. Therefore, impacts related to wetlands under the Transportation Network Enhancement Alternative would be considered less than significant.

The No Project Alternative includes policies from the 1993 General Plan that would protect wildlife corridors in the Planning Area (6.2.1, 6.2.2, 6.2.4, and 6.2.5), thus related impacts would be less than significant. However, because the Proposed Plan and Transportation Network Enhancement Alternative would go farther in protecting and restoring riparian habitats along the City's rivers and creeks, they would likely have less of an impact than the No Project Alternative. As with the Proposed Plan, the Transportation Network Enhancement Alternative would have a less than significant impact regarding policies and ordinances protecting biological resources, and no impact regarding HCPs. However, because the No Project Alternative would not specifically state that the City should support HCP implementation, it could be considered to have a slightly greater impact than the Transportation Network Enhancement Alternative.

CULTURAL, HISTORIC, AND TRIBAL RESOURCES

The land use plan, buildout projections, and policy framework for the Proposed Plan and the Transportation Network Enhancement Alternative are similar, with the exception of the extension of Oak Avenue to Grayson Avenue under the Transportation Network Enhancement Alternative. Construction of this road could impact cultural, historic, and tribal resources in the Planning Area. As with the Proposed Plan, implementation of policy HR1.5 would require an assessment and subsequent studies of the potential presence of archaeological, tribal cultural and paleontological resources, incorporating study recommendations as project conditions of approval. Therefore, like

the Proposed Plan, the Transportation Network Enhancement Alternative would have less than significant impacts on archaeological, tribal cultural, and paleontological resources, and the proposed change is not located in a historic district. The No Project Alternative includes policies to preserve historic sites and cultural resources, but it does not include policies pertaining to paleontological resources, nor does the No Project Alternative include a goal or policies specifically protecting Native American heritage or tribal cultural resources. Further, the No Project Alternative would not promote a compact, urban development pattern to the same extent as the Proposed Plan or the Transportation Network Enhancement Alternative. Therefore, while the No Project Alternative's impacts on historical and cultural resources would be less than significant—similar to the Proposed Plan, it could not guarantee that impacts on paleontological and tribal cultural resources could be reduced below a level of significance. Therefore, the No Project Alternative would be considered to have potentially significant impacts on paleontological and tribal cultural resources. State regulations would be sufficient to reduce the potential impacts to human remains from both alternatives to less than significant, similar to the Proposed Plan.

ENERGY, GREENHOUSE GASES, AND CLIMATE CHANGE

Greenhouse gases (GHGs) are gases that trap heat in the atmosphere and consist of, but are not limited to, carbon dioxide (CO_2), methane (CH_4), and nitrous oxide (N_2O). These three gases are the most common GHGs that result from human activity. The global warming potential of GHGs is expressed in terms of CO_2 equivalents (CO_2e) and is typically quantified in metric tons (MT) or millions of metric tons (MMT).

Implementation of the Proposed Plan, Transportation Network Enhancement Alternative, and No Project Alternative would all generate direct and indirect GHG emissions. Sources of direct emissions would include mobile vehicle trips, natural gas combustion, and landscaping activities. Indirect emissions would be generated by electricity consumption, waste and wastewater generation, and water use. Using BAAQMD's CEQA Guidelines, the efficiency metric for general plans has been applied for the BAAQMD jurisdictional region, resulting in an emissions target of 2.3 $MTCO_2e$ per service population by 2040. As the Transportation Network Enhancement Alternative and Proposed Plan would generate significant direct and indirect GHG emissions, proposed policies would help reduce the significance. VMT would increase by 5 percent over existing conditions under the No Project Alternative, compared to a 25 percent increase with the Proposed Plan, and therefore, a similar increase with the Transportation Network Enhancement Alternative. Policies CC1.1, CR3.3, and CR3.6 would provide an improved pedestrian network, which would encourage people to walk more and drive less, causing a reduction in VMT. Policy 1.3 seeks to further transit improvement efforts by enhancing bus and para-transit services, providing shuttle services, and partnering with Napa County to increase transit service and ridership, all of which could reduce VMT. To reduce the Proposed Plan and the Transportation Network Enhancement Alternative's GHG emissions in 2040, Mitigation Measure GHG-1 is recommended, which includes strategies derived to reduce GHG emissions to a level consistent with BAAQMD's efficiency threshold. However, given that additional State and federal actions would be necessary to achieve the 2050 target, and given that, at this time, there are no post-2030 State or federal measures in place that would assist the City in achieving the efficiency target in 2040, even with implementation of Mitigation Measure GHG-1, impacts related to GHG emissions would be considered significant and unavoidable.

Currently, the City of St. Helena does not have a Climate Action Plan that addresses community GHG emissions reductions. The Proposed Plan and Transportation Network Alternative would propose the adoption and implementation of a Climate Action Plan with specific and quantifiable goals to reduce emissions, as well as indicators to track progress; however, the No Project Alternative has no such policy. Thus, impacts related to GHG emissions for the No Project Alternative are considered even more significant than the Transportation Network Enhancement Alternative and unavoidable.

Even accounting for State and federal standards and for policies within the Proposed Plan, and therefore the Transportation Network Alternative, that can be quantified, the resulting 2040 per capita emissions would still be greater than the BAAQMD efficiency target and the CARB Scoping Plan target. This means that, absent additional measures at the State level, development under the Proposed Plan would conflict with CARB's 2017 Scoping Plan, AB 32, EO S-03-05, or BAAQMD's CEQA Guidelines, as the City does not have direct control over certain aspects of transportation emissions. Given that, at this time, there are no post-2030 State or federal measures that would assist the City in achieving the efficiency target in 2040 for either alternative, even with implementation of Mitigation Measure GHG-1, the potential exists for the Proposed Plan to conflict with applicable plans, policies, or regulations adopted for the purpose of reducing the emissions of GHGs. Therefore, the impact for conflicting with a plan, policy, or regulation remains significant and unavoidable for both alternatives and the Proposed Plan.

The Transportation Network Enhancement Alternative has the same land use development pattern and buildout projections as the Proposed Plan with the exception of one road extension within the City's ULL. Any differences in potential impacts would result from the construction of the roadway extension and new development along the road. It is assumed that the types of land uses envisioned under the Proposed Plan and both alternatives would involve construction activities typical of most land use developments within the Planning Area and in the San Francisco Bay Area Air Basin (SFBAAB). Because construction emissions from both mobile and stationary sources are considered to be relatively short-term emissions that would cease once construction of a project is complete, they would represent a relatively short demand on local and regional fuel supplies that would be easily accommodated. Therefore, construction activities associated with both alternatives and the Proposed Plan would not result in a wasteful, inefficient, and unnecessary usage of direct or indirect energy. The impact would be less than significant.

Through implementation of Proposed Plan policies, the Proposed Plan and the Transportation Network Enhancement Alternative would support the CARB passenger vehicle GHG emissions reduction targets through measures that would reduce VMT in the Planning Area. Additionally, all future development under both alternatives and the Proposed Plan would be required to comply with the latest CBC requirements, including CBC Energy Efficiency Standards, as well as all federal, State, and local rules and regulations pertaining to energy consumption and conservation. Therefore, the impact for both alternatives, as well as the Proposed Plan, would be less than significant with regards to conflicts with energy conservation regulations.

GEOLOGY, SOILS, AND SEISMICITY

As discussed in Section 3.7: Geology, Soils, and Seismicity, the potential for violent seismic ground shaking in the Planning Area is low. There are no designated Alquist-Priolo Earthquake Fault Zones within the Planning Area that could create a significant impact through violent groundshaking or fault rupture. However, there are a few smaller active local faults near the Planning Area, including the Rodgers Creek, Maacama, Hunting Creek, or West Napa faults, that could contribute to groundshaking and seismically-induced landslides. Any potential risk from seismic hazards would be related to fault rupture and groundshaking, liquefaction, or—in the Planning Area's few sloped areas—landslides. As with the Proposed Plan, development under both the Transportation Network Enhancement Alternative and the No Project Alternative would be subject to the requirements of the California Building Code (CBC), which would minimize potential impacts related to groundshaking and landslides due to stringent building standards. The No Project Alternative only states that a soils and geologic report be submitted for developments in hillside areas, whereas the Transportation Network Enhancement Alternative would ensure a report in any area with potential geologic hazards. Compared to the Transportation Network Enhancement Alternative, the No Project Alternative could have a greater overall impact on exposure to geologic hazards as it does not include the additional precaution regarding geologic hazard reports. However, both alternatives would include policies and implementing actions that would prohibit development in areas of geologic concern until mitigating measures are taken, reducing impacts due to fault rupture to a less than significant level.

As with the Proposed Plan, new development under the Transportation Network Enhancement or No Project Alternative would likely include earthwork activities that could expose soils to the effects of erosion or topsoil loss. In general, development under either alternative would be subject to the same regulations—such as the National Pollutant Discharge Elimination System (NPDES) permit and local storm water runoff and pollution control requirements. Both alternatives would include the same policy regarding a soils and geologic report before development, as well as a policy requiring prompt revegetation of drought-tolerant plant species on development areas where excess water might induce erosion, which would similarly reduce any potential impacts to less than significant.

As with the Proposed Plan, new development under the Transportation Network Enhancement or No Project Alternatives would be constructed on several soil types with expansive properties. In general, development under both alternatives would be subject to the requirements of the CBC, which regulates analysis of expansive soils and grading activities. Additionally, both alternatives would include the same policy requiring a soils and geologic report before development, which would reduce any potential impacts of unstable soil foundations, landslide, lateral spreading, subsidence, liquefaction, or collapse on new structures to less than significant.

Both alternatives would be subject to the same regulations for development in areas with soil that is incapable of supporting septic tanks—such as the Napa County Health and Human Services Department standards and requirements. However, the majority of existing development within St. Helena does not rely on septic systems. The existing General Plan provides a policy to ensure that all new units must connect to the City wastewater system and would limit system growth areas within the St. Helena Urban Limit Line, reducing related impacts to less than significant.

HAZARDS AND HAZARDOUS MATERIALS

As with the Proposed Plan, existing federal and State regulations regarding the management of hazardous materials would apply to all future development and land use activities in the Planning Area under both the No Project Alternative and Transportation Network Enhancement Alternative. Compliance with these regulations would ensure that both alternatives would have a less than significant impact related to the routine transport, use, disposal, and potential upset of hazardous materials. Additionally, as with the Proposed Plan, the Transportation Network Enhancement Alternative would also incorporate policies and actions to reduce risks associated with hazardous materials; therefore, this alternative would also have a less than significant and slightly reduced impact related to the routine transport, use, disposal, and potential upset of hazardous materials as compared with the No Project. While the No Project Alternative would retain policies and implementing actions from the 1993 General Plan that protect residents from the health and safety impacts related to the use, storage, and manufacture of hazardous materials, the Proposed Plan and Transportation Network Enhancement Alternative include policies that are more specific and action-oriented.

Similarly, existing regulations and programs would help to reduce potential impacts of development on Cortese List sites under both the No Project Alternative and the Transportation Network Enhancement Alternative. Additionally, the Transportation Network Enhancement Alternative includes Proposed Plan policies and actions requiring soil investigations and hazardous materials management. The No Project Alternative would include similar policies to reduce potential impacts. As with the Proposed Plan, impacts under both alternatives would be less than significant.

Both alternatives would allow for the development of land uses within a quarter-mile of existing schools that could be reasonably expected to handle hazardous materials or generate hazardous emissions. For example, under either alternative, industrial uses would be allowed within a quarter-mile of existing schools. Three schools (St. Helena High School, St. Helena Primary School, and St. Helena Catholic School) are in close proximity to existing industrial land uses. Neither the Transportation Network Enhancement Alternative nor the No Project Alternative would expand the industrial land use designations, and therefore neither would increase school exposure to hazardous materials. As each alternative must follow the State law and existing regulations regarding hazardous materials near schools, future schools constructed within either Planning Area could not be located near hazardous material sites. Both alternatives would have less than significant impacts.

Neither the Transportation Network Enhancement Alternative nor the No Project Alternative would result in an airport safety hazard for people residing or working within the Planning Area. As no public airports, public use airports, or private airstrips are located within 2 miles of the Planning Area, neither alternative would have an impact, similar to the Proposed Plan.

Neither the Transportation Network Enhancement Alternative nor the No Project Alternative would physically interfere with an adopted emergency response or evacuation plan. Both alternatives would include policies promoting emergency preparedness and as well as facilitating emergency access throughout the Planning Area. Therefore, both alternatives would have a less than significant impact regarding emergency response or evacuation plans. The Transportation

Network Enhancement Alternative could improve emergency access in the Planning Area by adding a parallel route through part of the city, therefore having a lower impact than the Proposed Plan, No Project Alternative, or even existing conditions. Given that the No Project Alternative would also not include the full range of policies included in the Proposed Plan and Transportation Network Enhancement Alternative, it could potentially have a greater impact.

As discussed in Chapter 3.8, some areas in the western uplands of the city and Study Area 1 have been classified as having "high" fire threat, including a portion of General Plan Potential Change Area 9. However, both of the alternatives and the Proposed Plan include similar policies requiring all development to adhere to safety standards provided in the St. Helena Municipal Code, the CBC, and California Fire Code. They also promote close coordination with emergency services to ensure the safety of new development and to increase fire safety awareness. Therefore, impacts related to the exposure of people or structures to wildland fire under both alternatives would be less than significant, similar to the Proposed Plan.

HYDROLOGY AND WATER QUALITY

The Transportation Network Enhancement Alternative has the same land use development pattern and projected buildout as the Proposed Plan with the exception of the extension of Oak Avenue within the City's ULL. Therefore, any differences in potential impacts would result from construction of the extension and the extension itself.

The City is subject to the RWQCB Monitoring and Reporting Program, the NPDES permit, and the Industrial General Permit, all of which ensures a pretreatment program for effluent discharged into the Napa River. Policies included in the Proposed Plan and Transportation Network Enhancement Alternative, such as LU1.1, CD1.5, and OS3.1, would require full implementation of stormwater BMPs to reduce pollutants in stormwater runoff to the maximum extent practicable, which would ensure that federal, State, and local water quality standards and waste discharge requirements are met. With compliance with existing federal, State, and local water quality regulations, including the NPDES program, as well as policies included in each alternative, impacts related to water quality and water quality standards would be less than significant. While the No Project Alternative does not include policies that address pollutants in stormwater runoff, the federal, State, and local water quality regulations discussed above would apply to this alternative, reducing the overall impact on water quality and water quality standards to a level that is less than significant.

The California Sustainable Groundwater Management Act (SGMA) of 2014 requires local authorities to achieve sustainable management of groundwater basins. Napa County has prepared a Basin Analysis Report demonstrating that the groundwater basin has been operating within a sustainable yield for the past 10 years, thus complying with the SGMA. Existing General Plan policies 2.6.3, 2.6.63, 9.2.1, 9.2.3, and 9.2.4, and Proposed Plan/Transportation Network Enhancement Alternative policies CD1.5, CD3.1, CD3.B, and LU1.1 would ensure safe yield guidelines for groundwater draws, though the No Project Alternative would not include policies that focus on green building and minimizing surface water runoff in new development. Overall, compliance with existing federal, State, and local programs and policies would ensure that impacts related to substantial decreases in groundwater supply or substantial interference with

groundwater recharge from implementation of either alternative or the Proposed Plan would be less than significant.

Implementation of the Proposed Plan and Transportation Network Enhancement Alternative would primarily involve redevelopment of previously developed sites with residential, commercial, and public uses compatible with existing development in the area. As such, the Proposed Plan or would not substantially alter the existing drainage pattern of the planning area, creating a less than significant impact. The Transportation Network Enhancement Alternative would result in the extension of Oak Avenue and could alter drainage patterns through the construction of a bridge across Sulphur Creek. Construction of this extension and the extension itself could also impact surface water runoff as it would create a new impervious surface in the Planning Area. Implementation of policies OS3.1 and OS3.2 and implementing actions OS1.A, OS1.B OS1.H, OS1.N, and OS3.A could reduce the impact of construction of this extension and the extension itself on drainage and runoff to a less than significant level. Additionally, this area represents a very small portion of the drainage area. The No Project Alternative would alter existing drainage patterns, but the impacts would be less than significant because newly developed areas would represent a very small proportion of the total Napa River drainage area.

Any new development resulting from the Proposed Plan or either alternative would be required to comply with the Bay Area Stormwater Management Agencies Association (BASMAA) Manual's design guidance for stormwater treatment, as required by Napa County's Phase II Small MS4 General Permit. These stormwater treatment guidelines would require new development within the Planning Area to detain storm runoff with bioretention facilities, minimize surface flow velocities, and make use of all applicable LID techniques. New development, during both construction and operations phases, would be required to comply with the City of St. Helena's Stormwater Management Standards, which require the preparation of a SWPPP and implementation of BMPs to mitigate risks of polluted runoff. Compliance with existing State and local programs and policies would ensure that impacts related to an excess amount of runoff water or polluted runoff from implementation of either alternative or the Proposed Plan would be less than significant.

Development within the floodway, including construction of housing, would constitute a significant risk, as FEMA designates these as channels which should flood regularly and provide unimpeded conveyance for floodwaters during a typical large storm event. Under the Transportation Network Enhancement Alternative, development within the floodway-designated portions of Change Areas 4 and 5 and Housing Opportunity Sites 6 or 7 would result in a significant impact. Mitigation Measure HYDRO-1would result in the modification of floodway boundaries such that the proposed development would no longer be within the floodway pursuant to FEMA regulations. However, the extension of Oak Avenue would be within the floodway and could constitute a significant and unavoidable risk. Design of the extension and the bridge crossing Sulphur Creek that would reduce the impact of flooding on the Oak Avenue extension and nearby development would be required to reduce this impact to a level that is less than significant.

As for the No Project Alternative, development on certain areas west of the Napa River would be subject to flooding during a 100-year storm event. The Municipal Code provides rigorous flood zone regulations, requiring that any new construction or substantial improvement of a residential structure within FEMA's 100-year flood hazard area shall have the lowest floor elevated to at least

eighteen inches above the base flood elevation (Section 15.52.150). These requirements provide mitigation for risks to life and property in 100-year flood hazard zones, including housing. Additionally, existing General Plan policies such as 8.6.1, 8.6.6, and 8.6.8 each would ensure that development is built in such a way that reduces impacts from flooding to a less than significant level. However, the No Project Alternative lacks the rigorous Proposed Plan policies and implementing actions related to floodplain management and development standards that would protect against flooding, making any impact related to flooding under this alternative much more severe than the Transportation Network Enhancement Alternative or the Proposed Plan.

The only levee that could impact the Planning Area is located just upstream of the confluence of Sulphur Creek and the Napa River. The levee is newly constructed to reduce flood risk to that area of St. Helena. It is inspected and maintained by the Napa County Flood Control and Water Conservation District, and due to its new construction, the risk of failure and flooding is less than significant for both alternatives, as well as the Proposed Plan.

A seiche, a standing wave in an enclosed or partially enclosed body of water, could occur in one of the nearby reservoirs in Napa County, but the closest of these, Bell Canyon Reservoir and Lake Hennessy, are each over two miles away from the Planning Area, and each has restricted development along its shoreline due to use as municipal water supply. Therefore, the risk of a seiche affecting the Planning Area is less than significant. Most of the Planning Area is not susceptible to landslides. Development under either alternative could not result in inundation by tsunamis, mudflows, or seiches, similar to the Proposed Plan.

LAND USE, POPULATION, AND HOUSING

Neither the No Project Alternative or the Transportation Network Enhancement Alternative would involve the construction of a linear feature, such as an interstate highway or railroad tracks, or removal of a means of access, such as a bridge, that would physically divide an existing community. The Transportation Network Enhancement Alternative would involve construction of multi-modal roadway improvements to provide better local connections. Therefore, the No Project Alternative and the Transportation Network Enhancement Alternative would result in less than significant impacts, as with the Proposed Plan. As under the Proposed Plan, there would be no impact related to conflicts with an applicable habitat conservation plan or natural community conservation plan, as there are no such plans that apply in St. Helena.

Growth under the Transportation Network Enhancement Alternative is projected to result in 700 new residents and 1,000 new jobs in St. Helena by 2040, which represents a 12 percent increase in population and 19 percent increase in employment over 2018 conditions. As with the Proposed Project, this level of growth is generally consistent with ABAG projections and the policies that would encourage infill development under this alternative would be consistent with the objectives of Plan Bay Area 2040. As such, this alternative would result in a less than significant impact related to substantial, unplanned population growth, as with the Proposed Project. As with the Proposed Plan, this alternative includes action LU2.A which calls for an update to the zoning ordinance and map for consistency with the General Plan. Therefore, impacts related to conflicts with adopted plans and policies would also be less than significant under this alternative, as with the Proposed Plan.

The No Project Alternative would result in a 6 percent population increase and a 14 percent increase in jobs of 2018 conditions, which is consistent with ABAG growth projections for St. Helena in 2040; however, this alternative would not include Proposed Plan policies that encourage infill development and compact development. Further, as the land use designations would not be updated under this alternative, inconsistencies with the zoning ordinance would need to be reconciled. Therefore, while the No Project Alternative would result in less than significant impacts related to substantial, unplanned population growth and conflicts with adopted plans and policies, this alternative would result in greater impacts than the Proposed Plan.

Under the Transportation Network Enhancement Alternative, the multi-modal roadway improvements could potentially result in the removal of residential or commercial structures, depending on the alignment of the roadway extension. However, as the 2015-2023 City of St. Helena Housing Element and existing City and County policies related to affordable housing and homelessness would remain in force under both the No Project Alternative and the Transportation Network Enhancement Alternative, impacts related to the displacement of substantial numbers of people and housing units under these alternatives would be less than significant, as with the Proposed Plan.

NOISE

The Transportation Network Enhancement Alternative would not generate noise levels above the existing standards, with the exception of construction-related noise related to the extension of Oak Avenue. While construction of this extension would generate noise levels in excess of existing standards, this would be a temporary impact and Proposed Plan policy PS2.F would require construction operations to use noise suppression devices and techniques and limit noisy construction activities that can be heard at the property line to the least noise-sensitive times in accordance with the Noise Ordinance. Compliance with the City's Noise Ordinance would be required for any future construction in the city. Thus, no conflicts with the General Plan or Noise Ordinance standards would be anticipated. Assuming compliance with construction-related noise level standards found in the City's General Plan and Municipal Code, the No Project Alternative would also have a less than significant impact given that the level of development is much lower compared to the Proposed Project and Transportation Network Enhancement Alternative.

Implementation of policies PS2.2, PS2.3, and PS2.4 and implementing actions PS2.C, PS2.E, PS2.F, and PS2.G under the Proposed Plan and Transportation Network Enhancement Alternative would reduce potential noise-related impacts on sensitive receptors. Similarly, the No Project Alternative would follow existing policies that discourage noise sensitive land uses from locating in areas with high noise levels (Policy 8.3.2) and limit intrusive and intermittent noise for residential receptors (Policy 8.3.9). These existing and proposed policies reduce impacts of exceeding noise standards to a less than significant level for both alternatives and the Proposed Plan.

Traffic activities under the Transportation Network Enhancement Alternative would be similar to that under the Proposed Plan, with the exception of the extension of Oak Avenue. Therefore, traffic activities would be expected to be similar to the proposed Plan, which would increase VMT by 25 percent. While implementation of the Transportation Network Enhancement Alternative would include policies aimed at reducing VMT and result in the paving of the Oak Avenue extension, this alternative could introduce a significant impact regarding traffic-related vibration in an area that

is currently designated as Agricultural and contains the Sulphur Creek. Mitigation Measure NOI-1 would be required to assess the potential vibration impact of construction of this extension and the extension itself in order to reduce this impact to a level that is less than significant. The No Project Alternative would increase VMT only 5 percent above existing conditions and therefore would not result in a substantial increase in traffic-related vibration.

Although existing train operations, such as the Napa Valley Wine Train, generate vibration levels, the alternatives would not change vibration levels generated from trains. Groundborne vibration from construction, however, may be significant for both alternatives, as well as the Proposed Plan. A significant impact would occur if such projects generate groundborne vibration or noise at levels that could result in damage to structures or prolonged exposure to continuous audible or feelable vibrations that could be considered annoying to people in buildings.

The City's Noise Ordinance would help reduce construction vibration at future and existing sensitive land uses by limiting the times at which construction could take place to certain time periods when it would not be a major disturbance to neighbors. However, even with the Noise Ordinance, it may not be feasible in all cases to mitigate construction vibration from individual projects to a less-than-significant level. As discussed, Mitigation Measure NOI-1 would require a vibration study where vibration impacts have the potential to cause structural damage or distinctly perceptible human response, including a site-specific engineering assessment of potential vibration impacts to structures and sensitive receptors from construction activities and specify a mitigation plan to minimize the impacts using all reasonable and feasible means available. Implementation of this Mitigation Measure would be required to reduce construction-generated vibration to a less than significant level for both alternatives and the Proposed Plan.

The No Project Alternative would not substantially increase traffic levels and is not anticipated to increase traffic noise levels, therefore having a less than significant impact. The Transportation Network Enhancement Alternative would be expected to generate a similar level of traffic activity as the Proposed Plan, and therefore a similar increase in VMT (25 percent) and traffic-related noise. Under the Proposed Plan, adherence to policies regarding noise levels and VMT reduction and the existing Napa County General Plan would reduce the potential traffic-related noise level impacts to a level that is less than significant. While this is also expected under the Transportation Network Enhancement Alternative, this alternative would introduce an extension of Oak Avenue into area currently designated as Agricultural. Implementation of this alternative would result in a permanent increase in ambient noise from traffic in the planning area. Neither of the alternatives nor the Proposed Plan would have an effect on railway traffic in the Planning Area. Therefore, there would be no impact on ambient noise from rail.

Potential impacts related to temporary or periodic increases in ambient noise levels would primarily be related to construction activities, which would likely be similar among the alternatives and the Proposed Plan. However, construction of the extension of Oak Avenue under the Transportation Network Enhancement Alternative would create a larger impact on construction-related noise than the Proposed Plan or No Project Alternative. As construction activities would be required to comply with the City's Noise Ordinance and Napa County Noise Regulations, substantial temporary increase in ambient noise levels from construction noise would be considered less than significant.

The Planning Area is not located within two miles of a public airport or public use airport. The nearest public use airport is located four miles northeast of the Planning Area, and the nearest private airstrip is located seven miles northeast of the Planning Area. Therefore, there would be no impact regarding the exposure of people excessive noise levels related to the location of the Planning Area within two miles of a public airport, public use airport, or private airstrip.

PUBLIC SERVICES AND RECREATION

The Proposed Plan would result in less than significant impacts with respect to public services, parks, and recreational facilities. The Police and Fire Departments determined that while the Proposed Project would result in increased calls for police, fire, and emergency medical services, growth in residents and employees under the Proposed Plan would not be substantial enough to require the construction of new or the expansion of existing facilities. Buildout of the Transportation Network Enhancement Alternative would result in the same number of new residents and employees in the city in 2040 as under the Proposed Plan and construction of the multi-modal roadway improvements envisioned under that alternative would be done in compliance with City Engineering Standards and other applicable regulations and would serve to reduce vehicle congestion on SR-29. As such, the Transportation Network Enhancement Alternative would result in a less than significant impact to police and fires service in 2040, as under the Proposed Plan. The No Project Alternative would result in 340 fewer residents and 220 fewer jobs in 2040 than under the Proposed Plan and as such would generate fewer calls for service. Therefore, impacts to police and fire service would be reduced under this alternative and less than significant.

Both the No Project Alternative and the Transportation Network Enhancement Alternative would increase the resident population in 2040; however, the increased population would not require the construction of new or the expansion of existing school, library or community facilities. Impacts would be similar to the Proposed Plan and less than significant. Similarly, the increased population under the No Project Alternative and the Transportation Network Enhancement Alternative would not increase the use of neighborhood parks or regional recreational facilities such that new or expanded facilities would be required.

Proposed Plan policies PR1.B and PR4.C call for the development of a parks master plan and creation of new parks, including the creation of an approximately 21-acre park at the Lower Reservoir to achieve the established ratio of parkland per thousand residents. Proposed Plan policies and actions, including those pertaining to park planning and development in riparian areas, would ensure that the construction of new parks would minimize potential impacts to the extent practicable. These same policies and actions would apply under the Transportation Network Enhancement Alternative and therefore this alternative would have a less than significant impact, as under the Proposed Plan. Under the No Project Alternative, Proposed Plan policies and actions would not apply, however, similar policies including policy 10.3.11 which calls for the development of passive recreational opportunities at the Lower Reservoir site and policy 10.3.10 which calls for a centrally-located park on the east side of town as well as policies related to protection of riparian areas would apply. Therefore impacts would be similar to the Proposed Project and less than significant.

TRANSPORTATION

The Proposed Plan would result in significant impacts at six intersections on Main Street (SR-29) as well as at the intersection of Pope Street and Silverado Trail in 2040. The No Project Alternative would result in fewer new residents and new jobs in St. Helena in 2040 than under the Proposed Plan, and as such would result in reduced impacts at the affected intersections as compared to the Proposed Plan. VMT would increase by 5 percent over existing conditions under the No Project Alternative, compared to a 25 percent increase with the Proposed Plan. Given the marginal projected increase in traffic, implementation of this alternative would have a less than significant impact on intersections in the planning area beyond existing conditions.

The Transportation Network Enhancement Alternative would propose the same land use designations as the Proposed Plan and would result in the same number of new residents and new jobs in 2014 as under the Proposed Plan. However, this alternative would involve the extension of Oak Avenue and the construction of bicycle and pedestrian improvements to create a high-quality bicycle and pedestrian connection to Downtown St. Helena and facilitate local access. This alternative would result in less VMT than the Proposed Plan, which increases total VMT by 25 percent over existing conditions. As shown on Table 4.2-2, the Transportation Network Enhancement Alternative would result in four fewer intersection impacts than under the Proposed Plan. Notably, a less than significant impact is identified for the Main Street/Pope Street-Mitchell Drive intersection under the Transportation Network Enhancement Alternative. It is also projected that peak hour queuing conditions along Main Street south of the Downtown area would be equivalent to existing conditions, and thus impacts to upstream intersections related to queue spillback from the Downtown area would also be less than significant – an improvement over the Proposed Plan. Nevertheless, this alternative would result in significant impacts at three intersections. Given that mitigation measures that could reduce impacts to a less than significant level would require actions from Caltrans that are beyond the City's control to implement, impacts would remain significant and unavoidable as under the Proposed Plan.

Impacts related to conflicts with the Vision 2040 Moving Napa Forward Transportation Plan or the operation of public transit, bicycle, or pedestrian facilities in St. Helena would be less than significant under the No Project Alternative; however, given the wider range of multi-modal and Complete Streets policies and actions in the Proposed Project, the No Project Alternative could have slightly more severe effects than the Proposed Plan. The Transportation Network Enhancement Alternative would also result in less than significant impacts related to Vision 2040 Plan conflicts and multi-modal mobility; however, the bicycle and pedestrian connections that would be created under the Transportation Network Enhancement Alternative would represent a improvement over the Proposed Plan.

As with the Proposed Plan, impacts related to emergency access and roadway hazards under the No Project Alternative and the Transportation Network Enhancement Alternative would be less than significant, given that existing City regulations, including the provisions of the Municipal Code and the City's Engineering Standards, would apply. Similarly, impacts related to air traffic patterns would also be less than significant as neither the No Project Alternative nor the Transportation Network Enhancement Alternative would have the potential to result in a change in air traffic patterns at any nearby public or private airport or airstrip, including the Angwin-Parrett Field airport.

Notes:
a. Signal = Signalized intersection; AWSC = All-Way Stop-Controlled intersection; SSSC = Side-Street Stop-Controlled intersection
b. Side-Street Stop-Controlled intersection delay is presented as: Whole-intersection Average Delay (Worst Approach or Worst Movement Delay). Whole-intersection average delay presented for all other intersections.
c. LOS designations per 2010 Highway Capacity Manual. Similar to the delay values, LOS for Side-Street Stop-Controlled intersections is presented as: Whole-intersection Average LOS (Worst Approach or Worst Movement LOS). Whole-intersection average LOS presented for all other intersections.
d. Locations screened out of the weekend peak hour intersection analysis based on intersection total entering volumes. The weekday analysis provides an estimate of weekend conditions.
e. Location impact less-than-significant as intersection does not satisfy peak hour volume signal warrant. As outlined in the Significance Criteria section, unsignalized intersection volumes must satisfy the CA-MUTCD peak hour volume signal warrant in order to identify an intersection as a significant impact.

Table 4.2-2: Intersection Levels of Service: Existing and Future Conditions with Oak Avenue Extension

Intersection	*Control*	*Weekday AM Peak Hour*				*Weekday PM Peak Hour*				*Weekend Midday Peak Hour*			
		Existing Conditions		*General Plan Buildout Conditions*		*Existing Conditions*		*General Plan Buildout Conditions*		*Existing Conditions*		*General Plan Buildout Conditions*	
	Type[a]	*Delay (sec)*[b]	*LOS*[c]	*Delay (sec)*[b]	*LOS*[c]	*Delay (sec)*[b]	*LOS*[c]	*Delay (sec)*[b]	*LOS*[c]	*Delay (sec)*[b]	*LOS*[c]	*Delay (sec)*[b]	*LOS*[c]

f. Location impact less-than-significant as General Plan Buildout Conditions delay (143.3 seconds) is lower than Existing Conditions delay (151.1 seconds).

g. The Pratt Avenue Napa River Bridge is closed due to storm damage from the winter of 2016-17. Funding to correct the damage is in place, and Pratt Avenue is anticipated to be open by 2040.

h. Intersection is side-street stop-controlled under Existing Conditions and all-way stop-controlled under General Plan Buildout Conditions.

Bold represents unacceptable operations. Based on the City's existing LOS standards, unacceptable operations are defined as LOS D, E or F, except at signalized intersection on Main Street where LOS D is acceptable.
Shaded values represent a significant impact.

UTILITIES

As shown in Table 4.2-1: Comparison of Key Characteristics, the Transportation Network Enhancement Alternative and the Proposed Plan are projected to have the same population, residential units, and employment rates at buildout. The No Project Alternative has similar but slightly lower projections.

The City of St. Helena is subject to the Regional Water Quality Control Board's (RWQCB's) wastewater treatment requirements and has committed to complying with the RWQCB's regulatory permit. As the St. Helena Wastewater Treatment and Reclamation Plant (WTRP) was demonstrated in Section 3.14: Utilities and Service Systems to have adequate capacity to manage projected increases in wastewater from development under the Proposed Plan, and as development under the Transportation Network Enhancement and No Project alternatives is projected to be similar to or lower than the Proposed Project, it is assumed that there would be adequate capacity to serve the alternatives as well. Thus, as with the Proposed Plan, with the City's commitment to meeting the RWQCB's wastewater treatment requirements and adequate capacity of the WTRP to accommodate development under the alternatives, the risk of St. Helena exceeding the RWQCB's wastewater treatment requirements is less than significant for the alternatives. The Transportation Network Enhancement Alternative would have a similar impact as the Proposed Plan given their similar buildout projections, and the No Project Alternative may have less of an impact, given its lower buildout projections.

As discussed above, the WTRP would have adequate capacity to serve either alternative at buildout; thus, no new wastewater treatment facilities would be required for either alternative. Additionally, as with the Proposed Plan, neither alternative would be expected to require new or expanded water treatment facilities. Due to the City of St. Helena's Water Neutral Policy for Development, there would be no expected increase in water demand under either alternative. Under the policy, developers are required to offset all new water demands with water conservation retrofits or in-lieu payments for the City to undertake such retrofits. Thus, both alternatives would have a less than significant impact related to new water or wastewater treatment facilities, similar to the Proposed Plan. The No Project Alternative may have less of an impact due to its lower projected population and employment at buildout.

As with the Proposed Plan, future development under the alternatives would result in some pervious surfaces being converted to impervious surfaces. Similarly, any new development resulting from the Proposed Plan would be required to comply with the BASMAA Manual's design guidance for stormwater treatment, which would require new development within the Planning Area to make use of all applicable low impact design (LID) techniques to reduce stormwater flows. New development would be required to comply with the City of St. Helena's Stormwater Management Standards, which require the preparation of a stormwater pollution prevention plan and implementation of BMPs to mitigate risks of polluted runoff and to slow stormwater during rain events. In addition, new inputs to the stormwater drainage system in St. Helena must comply with Title 16 of the Municipal Code, which requires retention ponds, drainage swales, and check dams as needed to reduce the off-site peak storm flow. Compliance with the existing federal, State,

and local regulations would reduce impacts related to increases in stormwater velocity and volume to the maximum extent practicable, and compliance with SWRCB regulations would ensure that any new stormwater facilities that were built would not be environmentally harmful. The developed footprint of the No Project Alternative at buildout would be similar to that of the Proposed Plan, but would be slightly less extensive. Therefore, the impact of the No Project Alternative relates to stormwater facilities would be less than significant and potentially less significant than the Proposed Plan. The built area of the Transportation Network Enhancement Alternative would be similar to the Proposed Plan, but would also include an extension of Oak Avenue, which would represent additional pervious surface. Adherence to existing regulations and proposed policies to reduce stormwater volumes would serve to reduce impacts of the Transportation Network Enhancement Alternative to less than significant, but it may have a greater impact than both the No Project Alternative and the Proposed Project.

As previously discussed, the City's Water Neutral Policy for Development ensures that future water demand does not exceed the current demand, for which the City has sufficient entitlements and resources. Both alternatives also include water conservation policies to reduce future water demand. As projected population and employment under the alternatives would be the same or lower than the Proposed Plan, impacts related to water supply would be less than significant for both alternatives. The No Project Alternative may have a slightly lower impact than the Transportation Network Alternative and the Proposed Project due to its lower population and employment projections at buildout.

As discussed in Section 3.14: Utilities and Service Systems, development allowed by the Proposed Plan would increase the amount of solid waste generated by future residential, commercial, industrial and other land uses, but the increase would not exceed the capacity of the Clover Flat Landfill or require construction of new landfill facilities. As population and employment projections for the alternatives are similar to those for the Proposed Plan, impacts for the alternatives related to solid waste capacity would similarly be less than significant. As the No Project Alternative would have slightly fewer housing units and jobs, it may have slightly less of an impact than the Transportation Network Enhancement Alternative or the Proposed Plan.

Federal, State, and local statutes and regulations related to solid waste include AB 939, AB 1327, SB 1016, AB 341, and AB 1836, as well as Title 8 of the City of St. Helena Municipal Code. As with the Proposed Plan, the Transportation Network Enhancement Alternative would contain numerous policies and implementing actions promoting recycling, composting, and other methods of managing and reducing waste, including developing a Waste Management Master Plan, requiring installation of recycling receptacles in public areas, establishing incentives to increase recycling and composting, and establishing a city-wide composting program (PF4.1, PF4.A, and PF4.B), which would serve to reduce potential impacts related to solid waste regulations. There would not be any policies under the Transportation Network Enhancement Alternative that would conflict with requirements for adequate waste receptacles, contracts, or schedules in the local ordinances or goals of the State regulations. Further, any development of future land uses under either alternative or the Proposed Plan would be required to comply with federal, State, and local statutes and regulations related to solid waste. Therefore, the impact for the Transportation Network Enhancement Alternative would be less than significant, similar to the Proposed Plan. While the No Project Alternative includes an existing General Plan policy to support the implementation of the City's Source Reduction and Recycling Element, it would not

have the same range of policies promoting waste reduction and diversion as the Transportation Network Enhancement Alternative and the Proposed Plan. Impacts from the No Project Alternative regarding solid waste regulations would still be less than significant, as future development under the alternative would be required to comply with any relevant regulations, but the impact could potentially be greater than the Transportation Network Enhancement Alternative and the Proposed Plan due to the difference in plan policies.

4.3 Environmentally Superior Alternative

CEQA Guidelines (Section 15126.6) require the identification of an environmentally superior alternative among the alternatives analyzed. Table 4-4.1: Summary of Impacts for Alternatives, summarizes the alternatives' overall environmental impacts for each topic presented in Section 4.3. For the Proposed Plan, six impacts were expected to be significant and unavoidable, three impacts were expected to be less than significant with mitigation, 65 impacts were expected to be less than significant, and three were found to be no impact. For the Transportation Network Enhancement Alternative, seven impacts were expected to be significant and unavoidable, five impacts were expected to be less than significant with mitigation, 62 impacts were expected to be less than significant, and three were found to be no impact. For the No Project Alternative, 11 impacts were expected to be significant and unavoidable, two impacts were expected to be less than significant, 61 impacts were expected to be less than significant, and two were found to be no impact.

While the proposed land use diagrams of the two alternatives and the Proposed Plan are similar, the policies included in the No Project Alternative in many cases do not address the broad range of environmental topics covered by the Transportation Network Enhancement Alternative and Proposed Plan, and are not up to date with current laws and practices concerning environmental impacts. Therefore, of the two alternatives analyzed, the Transportation Network Enhancement Alternative is the environmentally superior alternative. However, while the Transportation Network Enhancement Alternative could relieve impacts related to vehicle congestion and improve access to transportation, making it the environmentally superior of the two alternatives, the extension of Oak Street under this alternative would result in several new potentially significant environmental impacts related to noise, air pollutant and GHG emissions, and hydrology not present with the Proposed Plan.

Overall, the Proposed Project was found to have fewer potentially significant and unavoidable impacts than either the Transportation Network Enhancement Alternative and the No Project Alternative.

5 CEQA Required Conclusions

This section presents a summary of the impacts of the Proposed Plan in several subject areas specifically required by CEQA, including growth-inducing impacts, cumulative impacts, significant and unavoidable impacts, significant irreversible environmental changes, and impacts found not to be significant. These findings are based, in part, on the analysis provided in Chapter 3: Environmental Settings and Impacts.

5.1 Growth-Inducing Impacts

CEQA Guidelines require that an EIR "discuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly" (CEQA Guidelines Section 15126.2(d)). This analysis must also consider the removal of obstacles to population growth, such as improvements in the regional transportation system.

Growth-inducing impacts, such as those associated with job increases that might affect housing and retail demand in other jurisdictions over an extended time period, are difficult to assess with precision, since future economic and population trends may be influenced by unforeseeable events such as business development cycles and natural disasters. Moreover, long-term changes in economic and population growth are often regional in scope; they are not influenced solely by changes or policies related to a single city or development project. Business trends are influenced by economic conditions throughout the state and country, as well as around the world.

Another consideration is that the creation of growth-inducing potential does not automatically lead to growth. Growth occurs through capital investment in new economic opportunities by the private or public sector. These investment patterns reflect, in turn, the desires of investors to mobilize and allocate their resources to development in particular localities and regions. These factors, combined with the regulatory authority of local governments, mediate the growth-inducing potential or pressure created by a proposed plan. Despite these limitations on the analysis, it is still possible to qualitatively assess the general potential growth-inducing impacts of the Proposed Plan.

The Proposed Plan allows for new residential and non-residential development that could result in an increase in population, housing, and jobs, compared to existing conditions, which is also described in Chapter 3.10: Land Use, Population, and Housing.

POPULATION

The Planning Area will accommodate a population of approximately 7,300 people at buildout,[1] as seen in Table 5.1-1. This represents a total increase of about 12 percent over the 2018 estimated existing population, an average of about 0.6 percent annually. The projected growth rate is slightly higher than St. Helena's historic growth rate of 0.16 percent annually from 2000 to 2018, but is consistent with the projections by the Association of Bay Area Governments (ABAG), which predicts a population growth rate of about 0.67 percent per year for Napa County.

This projected population growth is in accordance with the Residential Growth Management System (GMS), which limits the number of building permits available for residential growth each year. That limit, as of June 2018, is nine residential units per year, with exceptions given for affordable housing, second units, and in other circumstances as detailed in the City's Growth Management Ordinance. The City, as part of its periodic review of the GMS, considers the current adopted Regional Housing Needs Allocation (RHNA) number as determined by the Association of Bay Area Governments (ABAG) for a given cycle when establishing limits. The Proposed Plan would not alter the GMS. As discussed in Chapter 3.10: Land Use, Population, and Housing, as affordable units are exempted from this cap and in view of new State housing legislation aimed at stimulating affordable housing production and policies in the Proposed Plan, it is assumed that 15 new housing units will be constructed each year through 2040.

As also discussed in Section 3.10: Land Use, Population, and Housing, the Proposed Plan would also ensure that St. Helena's growth is controlled and in accordance with other City policies. Policies and Implementing Actions included in the Proposed Plan would limit the rate of residential development (Policy LU1.7), provide for development of affordable housing (Implementing Actions LU1.A and LU1.C, Policies HE1.1 and HE1.2), encourage infill development (LU1.1, LU1.4, LU1.6), and seek to achieve a balance of jobs and housing (Implementing Action LU3.C, Policy ES1.4, Policy CC1.2, Policy HE1.4, and Implementing Actions HE1.A, HE1.B, HE1.C, HE1.E, and HE2.Q), thus helping to reduce the environmental impacts of population growth and the development needed to accommodate it to a less than significant level.

[1] Buildout is assumed to take place in 2040, but may actually occur sooner or later, given the unpredictability of the economy.

Table 5.1-1: Projected Residential Population at Buildout (2040)

	City of St. Helena		*Planning Area*[3]	
	Housing Units[2]	*Population*[2]	*Housing Units*[2]	*Population*[1,2]
Existing (2018)	2,700	5,900	2,900	6,400
Additional Proposed	300	700	400	900
Total at Buildout	3,100	6,600	3,300	7,300

Notes:

Estimated based on St. Helena accounting for 4.3 percent of the County population.

PUBLIC FACILITIES AND SERVICES

Most public facilities within St. Helena have sufficient existing capacity – the Proposed Plan will not trigger the creation of any substantial new public facilities. The City's water supply is a mix of Bell Canyon Reservoir surface water, local pumped groundwater, and purchases from the City of Napa. There is some anticipated growth capacity in the purchases from Napa, but policies in the Proposed Plan require approval of new development to be contingent on the ability of the City to provide water. As water supplies will be accrued gradually as needed, this will not induce new growth. The City's wastewater treatment plant has also spare capacity, and can accommodate the full projected growth at Buildout. St. Helena collects development impact fees on both water and wastewater services to ensure that new development doesn't overly tax existing facilities. Additionally, St. Helena's solid waste landfill has significant remaining capacity. The Proposed Plan would not require a significant increase in public facilities such as to induce other growth.

Public services for the Planning Area, including police, fire protection, schools, libraries, and parks and recreation, are currently provided by the St. Helena Police Department, the City of St. Helena Fire Department, the St. Helena Unified School District, St. Helena Public Library and the City of St. Helena Recreation Department, respectively. Development under the Proposed Plan would be in compliance with all applicable codes for fire safety and emergency access. The Proposed Plan's increase in population is modest over time, and not expected to significantly increase demand for new fire or police services beyond what would be provided by required development fees toward the provision of these community services. As of 2018, the St. Helena Unified School District had capacity for additional students in its schools, and anticipated having adequate capacity in the future. The District also assesses development impact fees for residential and commercial projects to ensure funding for any additional future growth necessary. There is not currently enough park space to meet the standard of 5.0 acres per 1,000 residents, but the Proposed Plan includes policies to meet that standard through development impact fees or required park land dedications. Therefore, the Proposed Plan would not tax the existing services facilities, create an unfair burden on existing users, or require the construction of new public facilities that would induce significant growth.

INCREASE IN REGIONAL HOUSING DEMAND

As the employment base in the San Francisco Bay Area continues to increase, more people may be drawn to live in St. Helena even as they work in other nearby cities. As a result, housing demand

may continue to increase within the Planning Area. The Bay Area Government Regional Housing Needs Allocation Plan attempts to balance regional housing demand across Bay Area cities, and all municipalities are required to provide a "fair share" of housing. The 2015-2023 Regional Housing Need Plan requires St. Helena to provide 31 new housing units by the end of 2023, and allocates a total of 1,482 new housing units to Napa County overall (ABAG, 2013).

The development of non-residential uses could support job growth in the Planning Area. The buildout of the Proposed Plan estimates an increase of 1,100 jobs in the Planning Area between 2018 and 2040, representing a 0.9 percent average annual growth rate in jobs. This growth rate is somewhat lower than the 1.4 percent average annual jobs growth rate in Napa County overall from 2000 to 2015 (California Employment Development Department, 2016).

As the employment base in the Planning Area increases due to the Proposed Plan land uses and policies that foster employment, more people may be drawn to the Planning Area to work, live, or both. As a result, housing demand may increase in both the Planning Area and other adjacent areas that are within commuting distance. The Proposed Plan is projected to result in the development of approximately 200 single-family housing units and about 200 multi-family housing units, for an increase of about 400 new dwelling units in the Planning Area by the year 2040, resulting in a total of 3,300 units in the Planning Area when added to the existing housing stock. To ensure that housing is available to meet the needs of future residents under the Proposed Plan, the City would continue to use its Growth Management Ordinance to assess its supply of housing and provide policies and programs to ensure that the community continues to meet its fair share of regional housing needs.

JOBS/HOUSING RATIO

A desirable city-wide jobs-to-housing ratio is often defined as a ratio greater than 1.0 but less than 2.0. Because most households have more than one wage earner, ratios below 1.0 suggest that residents are required to commute to jobs outside of their area of residence, and ratios greater than 2.0 suggest that employers are not able to house their workers within the jurisdictions, requiring workers to commute into the area. Theoretically, a balanced jobs-to-housing ratio would reduce the need for people to commute in or out of town for work. In reality, the match of education, skills, and interests is not always accommodated within the boundaries of one community, and regional interdependencies almost always result in at least some inter-city commuting. The City cannot dictate the residential location of future employees in the Planning Area.

Based on the estimated buildout of the Proposed Plan, the jobs-to-housing balance in the Planning Area in 2040 will shift slightly from 2.03 in 2018 to 2.12 in 2040, as shown in Table 5.1-2: Jobs-to-Housing Unit Ratio. Within the City of St. Helena, the jobs-to-housing ratio is projected to stay almost exactly the same, moving from 2.00 in 2018 to 2.06 in 2040. Further, the Proposed Plan includes policies to maintain a desirable jobs-to-housing ratio, including by taking inventory of all non-residential uses and aligning this inventory with efforts to balance jobs and housing; supporting sustainable tourism as a source of jobs while avoiding mass-market tourism; encouraging the construction of workforce housing; and encouraging jobs/housing match (LU3.B, ES2.1, ES1.4, ES1.F, and CR1.8). Therefore, the estimated jobs-to-housing ratio in St. Helena in 2040 would not be expected to induce new residential growth.

Table 5.1-2: Jobs-to-Housing Unit Ratio (2018 & 2040)

	City of St. Helena		*Planning Area*[2]	
	2018	*2040*	*2018*	*2040*
Jobs[1,2]	5,400	6,400	5,900	7,000
Housing Units[1]	2,700	3,100	2,900	3,300
Jobs to Housing Unit Ratio	2.00	2.06	2.03	2.12

5.2 Cumulative Impacts

CEQA requires that an EIR examine cumulative impacts. As discussed in CEQA Guidelines Section 15130(a)(1), a cumulative impact "consists of an impact which is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts." Furthermore, the analysis of cumulative impacts need not provide the level of detail required of the analysis of impacts from the project itself, but shall "reflect the severity of the impacts and their likelihood of occurrence." (CEQA Guidelines Section 15130(b)).

In order to assess cumulative impacts, an EIR must analyze either a list of past, present, and probable future projects or a summary of projections contained in an adopted general plan or related planning document. Because it is a long-range, programmatic plan for an entire city and surrounding area, the Proposed Plan represents the cumulative development scenario for the reasonably foreseeable future in the Planning Area, and this analysis uses the summary projections of the Proposed Plan. This future scenario incorporates the likely effects of surrounding regional growth. The cumulative analysis also assumes potential development of the Urban Reserve Areas identified in the Proposed Plan (see Figure 2.3-2).

CUMULATIVE ANALYSIS PROVIDED IN CHAPTER 3

Several analyses presented in Chapter 3: Environmental Settings and Impacts represent cumulative analyses of issues through the Proposed Plan horizon year of 2040 because they combine the anticipated effects of the Proposed Plan with anticipated effects of regional growth and development. By their nature, the air quality transportation, noise, energy, greenhouse gas emissions, and climate change analyses presented in Chapter 3 represent a cumulative analysis, because the effects specific to the Proposed Plan cannot reasonably be differentiated from the broader effects of regional growth and development. Thus, analyses for these topics reflect not just growth in the Planning Area, but growth elsewhere in the region as well. The cumulative conclusions are summarized there, and where applicable, significant unavoidable impacts are listed in Section 5.3 Significant and Unavoidable Impacts. Other cumulative impacts are identified below.

OTHER CUMULATIVE IMPACTS

For some issue areas evaluated as direct impacts in Chapter 3, concurrent implementation of the Proposed Plan, along with regional growth and development, may result in cumulative impacts:

- **Cumulative Effects on Land Use and Population:** Projects that could have the effect of physically dividing an established community – such as a major new road, highway, or similar infrastructure – tend to have a singular rather than cumulative impact. Similarly, impacts from plans and projects in the region that could conflict with existing plans, including habitat conservation plans, are not cumulative in nature. However, potential impacts related to population and housing can be cumulative in nature. Population growth, by itself, is not an environmental impact; however, the direct and indirect effects, such as housing and infrastructure needs that are related to population growth, can lead to physical environmental effects. The Association of Bay Area Governments (ABAG) projects that Napa County will experience total population growth of 23,700 people between 2015 and 2040. The 900 new residents anticipated in the Planning Area as a result of buildout of the Proposed Plan represent only about 4 percent of Napa County's projected population growth. Therefore, the Proposed Plan's contribution to this potentially significant cumulative impact is less than cumulatively considerable.
- **Cumulative Effects on Aesthetics:** Reasonably foreseeable growth within the Napa Valley could have cumulative effects on the region's aesthetic character. The Planning Area, and much of Napa Valley, are aesthetically characterized by historic downtowns, tree-lined streets, agricultural uses, and prominent natural features, such as the Napa River and surrounding hillsides. The City of St. Helena's design review process, in combination with the Proposed Plan's policies, would maintain the high-quality visual character of existing and future buildings, would limit impacts to agricultural lands, and would primarily contain growth within the Urban Limit Line, ensuring that aesthetic character is maintained. Therefore, the Proposed Plan's contribution to this potential cumulative impact is less than cumulatively considerable.
- **Cumulative Increases in Hazardous Materials**: Projected population and employment growth in the Planning Area would increase the number of people potentially exposed to impacts from hazardous material transportation, the increased use of hazardous household, commercial, and industrial materials, as well as a cumulative increase in exposure to risk associated with the accidental release of hazardous materials into the environment. However, compliance with local, State, and federal regulations pertaining to the production, use, and transportation of hazardous materials would apply to development throughout the region; therefore, the Proposed Plan's contribution to this potential cumulative impact is less than cumulatively considerable.
- **Cumulative Effects on Agricultural and Forestry Resources**: The Proposed Plan would likely lead to development of up to 118 acres of Important Farmland, as described in Chapter 3.2: Agricultural Resources. This conversion from agricultural land use to urban land use constitutes a significant and unavoidable impact. Further, if the City of St. Helena becomes fully developed within the Urban Limit Line, Urban Reserve Areas, some of which are currently designated Prime Farmland, Farmland of Statewide Importance, and Farmland of Local Importance, could be considered for development. Napa County as a whole has strong agricultural preservation land use policies, and its 2013 Napa County

General Plan promotes urban-centered growth and protections for agricultural lands (Napa County, 2013). The Proposed Plan's emphasis on infill development fits with Napa County's policies, concentrating growth in the urban core and disincentivizing growth in surrounding farmlands. However, development pressures will likely result in the conversion of more farmland, and implementation of the Proposed Plan would result in contributing farmland conversion and indirect affects to agricultural uses. Between 1990 and 2010, over 4,200 acres of greenfield development occurred in Napa County, at an average rate of about 200 acres per year, suggesting continued conversion of farmlands into the future. Therefore, the Proposed Plan's contribution to this significant impact is cumulatively considerable.

- **Cumulative Effects on Public Services and Recreation:** Public services are generally provided by local governments and/or special districts for areas within their jurisdiction and are not provided on a regional basis. Fire and police protection services are provided by local governments or fire protection districts for areas within their jurisdiction, although mutual aid agreements between agencies do help spread resources. Public schools are provided by school districts to areas within their jurisdictions. While districts may have cross jurisdictional boundaries, school services are still provided at the local, rather than regional, level. Several agencies provide park and recreation services in the region, including counties, cities, and special districts. Each of these areas has their own parkland ratios and standards and is responsible for providing parkland to meet the local demand. An increase in regional population may increase demand for parks and recreation facilities and services; however, these local jurisdictions have authority over land use, set and implement level of service standards, and determine the siting and timing of public service projects. The impacts on public services and facilities are not cumulative in nature, and are therefore not cumulatively considerable.
- **Cumulative Effects on Cultural, Historic, and Tribal Resources:** There are known historical resources within the Planning Area, as well as the potential for unknown archaeological resources that could be affected by development under the Proposed Plan, and, when considered with other regional growth and development, could have a cumulative impact on these resources. However, all development projects in the region would be required to conform to the Secretary of the Interior's Standards for the Treatment of Historic Properties. Public Resources Code Section 21083.2 and CEQA Guidelines Section 15064.5(f), which would apply to projects throughout the region, recognize that historical or unique archaeological resources may be accidentally discovered during project construction and guidelines recommend that if a potential resource has been discovered, that an immediate evaluation by a qualified archaeologist be included in mitigation measures. Further, the California Health and Safety Code Section 7050.5 includes specific provisions for the protection of human remains in the event of discovery, and Section 7052 makes the willful mutilation, disinterment, or removal of human remains a felony. The Health and Safety Code is applicable to any project throughout the region where ground disturbance would occur. Given these protections in place for cultural, historic, and tribal resources, the Proposed Plan's impact on this potentially significant cumulative impact I not cumulatively considerable.

- **Cumulative Effects on Hydrology and Water Quality:** New development in the region has the potential to generate impacts related to the violation of water quality standards, erosion and sedimentation, construction-related water quality impacts, and flood hazards. The Proposed Plan, in combination with regional growth and development, could impact local water quality through increased non-point source pollution resulting from greater use intensity, increased use of routine household cleaners and landscape chemicals, and more vehicle miles traveled. State and regional regulations described in Section 3.8: Hydrology and Water Quality, would reduce the rate of runoff and filter out pollutants. Construction activities are required to comply with the State Water Resources Control Board statewide NPDES stormwater permit program, the Porter-Cologne Act's requirements for site-specific waste discharge, as well as local agency public works construction standards. In addition, policies in the Proposed Plan and existing City regulations would ensure protection of water quality, improve stormwater management, and reduce stormwater pollution. Increased impervious surface area as a result of the Proposed Plan would be mitigated by multiple policies requiring infiltration space. Therefore, the Proposed Plan's contribution to this potentially significant cumulative impact is less than cumulatively considerable.

  The Proposed Plan, in combination with other planned and reasonably foreseeable regional population growth, could strain regional surface water systems, especially if water becomes more scarce in California as a result of climate change. As discussed in Chapter 3.14: Utilities and Service Systems, St. Helena plans to obtain additional water from the City of Napa. In conjunction with future growth in Napa County, which may also rely on the City of Napa's water resources, strains on the water supply may become unsustainable. Surface waters may not be abundant enough to meet demand in times of drought, and local aquifers are currently being pumped near safe yield capacity. However, the City of St. Helena's 2011 Water Neutral Policy for Development requires all new development to be water-neutral, through a combination of on-site water conservation measures, off-site retrofitting and well water as allowed. Therefore, the Proposed Plan's contribution to this potentially significant cumulative impact is less than cumulatively considerable.

- **Cumulative Effects on Utilities**: Cumulatively effects on potable water treatment and distribution, wastewater collection and treatment, and stormwater systems are each discussed below:

  - **Potable Water Treatment and Distribution:** The cumulative effects on water supply and groundwater are discussed above in the Hydrology and Water Quality section; this evaluation focuses on impacts on the water treatment and distribution systems.

    The City of St. Helena's Bell Canyon Reservoir- and groundwater-sourced drinking water is treated and delivered by the City and is isolated from other systems, so impacts are not cumulative in nature. But because the City of St. Helena obtains a portion of its water from the City of Napa, which treats it before delivery, reasonably foreseeable regional growth could strain existing treatment and delivery systems. However, due to the City of St. Helena's 2011 Water Neutral Policy for Development that requires all new development to be water-neutral, there would be no foreseeable growth in the Planning Area's required water treatment or delivery from Napa. Therefore, the Proposed Plan's contribution to this potentially significant cumulative impact is less than cumulatively considerable.

- **Wastewater Treatment and Distribution:** The City of St. Helena handles its own wastewater treatment and distribution through its Wastewaster Treatment and Reclamation Plant, which is isolated from other regional wastewater treatment plants. Thus, the impacts on the sewer system facilities are not cumulative in nature and are less than cumulatively considerable.
- **Stormwater Systems:** The cumulative effects on stormwater runoff volume, infiltration, and pollution are described above in the Hydrology and Water Quality section; this evaluation focuses on impacts to the stormwater system.

  Because the City of St. Helena provides stormwater and flood management within its borders, and owns and operates the stormwater drainage system, these systems are largely isolated from the rest of the region. Thus, the impacts on stormwater facilities are not cumulative in nature, and are less than cumulatively considerable.
- **Solid Waste:** The cumulative Clover Flat Landfill is the solid waste disposal site for Upper Valley Disposal & Recycling, which provides services to most of northern Napa Valley. Growth throughout this region could contribute to a significant cumulative impact on the landfill's capacity. Although the estimated solid waste generation from the Proposed Plan only accounts for a small amount of the total capacity of the Clover Flat Landfill, the solid waste from the Planning Area contributes to the cumulative impact on the landfill. Therefore, the Proposed Plan's contribution to this potentially significant cumulative impact is cumulatively considerable.

- **Cumulative Impacts on Geology, Soils, and Seismic Risk:** Potential cumulative impacts related to geology, soils, and seismicity do not extend far beyond a General Plan's boundaries, since geological impacts are confined to discrete spatial locations and do not generally combine to create an extensive cumulative impact condition. The exception to this would occur where a large geologic feature (e.g., fault zone, massive landslide) might affect an extensive area, or where the development effects from a project could affect the geology of an off-site location. These circumstances would not occur as a result of implementation of the Proposed Plan. The cumulative increases in population and development that would result from implementation of the full buildout would increase the number of residents and employees exposed to the region's known seismic hazards; however, conformance with the California Building Code would preserve building integrity during a seismic event, and other regulatory measures would reduce geohazards impacts to a less-than-significant level. As a result, cumulative impacts would be minimized and would be less than significant.
- **Cumulative Impacts on Biological Resources:** The overall cumulative effect of development is dependent on the degree to which significant vegetation and wildlife resources are protected or site- specific impacts are mitigated as part of individual developments. This includes preservation of areas of sensitive natural communities such as valley oak woodland, riparian woodland, and native grasslands, protection of essential habitat for special-status plant and animal species, and avoidance of wetlands. Further environmental review of specific development proposals in St. Helena and implementation of resulting mitigation measures and Plan policies will generally serve to ensure that important biological and wetland resources are identified, protected, and

properly managed, and should serve to prevent any significant adverse development-related impacts.

Cumulative impacts on nesting raptors and other special status species caused by the Proposed Plan in conjunction with other regional projects could be significant but would be mitigated by Proposed Plan policies. Policies to protect special status species include provisions to plan for and protect habitats; promote sustainable agricultural practices to support wildlife habitat; and limit public access to sensitive habitat areas (OS1.1, OS1.2, OS1.3, OS1.4, OS1.7, OS1.A, OS1.B, OS1.C, OS1.D, OS1.E, OS1.F, OS1.G, OS1.H, OS1.I, OS1.J, OS1.K, OS1.L, OS1.M, OS1.OOS1.Q, and OS2.5). The same would apply to cumulative impacts related to loss of wetlands and other waters.

Cumulative development contributes to an incremental reduction in the amount and connectivity of existing natural communities and wildlife habitat. However, most of the anticipated development associated with implementation of the Proposed Plan would occur in locations that are already urbanized or have been extensively altered by past agricultural uses, and therefore have only limited wildlife habitat values. Potential impacts on wetlands and other sensitive biological resources would be addressed through avoidance and adequate mitigation, and any future tree loss would be at least partially addressed through replacement plantings. Conformance with policies and implementation actions in the 2040 General Plan Update would serve to address any significant impacts on biological resources, and the project's contribution to potential cumulative impacts would be considered less than significant.

These types of impacts are not limited to the Planning Area but are characteristic of any area that is experiencing population and employment growth.

5.3 Significant and Unavoidable Impacts

Significant unavoidable impacts are those that cannot be mitigated to a level that is less than significant. According to CEQA Guidelines 15126.2(b), an EIR must discuss any significant environmental impacts that cannot be avoided under full implementation of the proposed program. Chapter 3 identifies the following significant unavoidable impacts when comparing implementation of the Proposed Plan to existing conditions:

AGRICULTURAL RESOURCES

Implementation of the Proposed Plan would allow for the conversion of Prime Farmland, Farmland of Statewide Importance, Unique Farmland, and Farmland of Local Importance to non-agricultural uses. Under the Proposed Plan, urban development could occur on 118 acres of these farmlands designated by the Farmland Mapping and Monitoring Program (FMMP). Urban development could further result in indirect impacts that exert pressure on agricultural lands to convert to non-agricultural use. Conversion of agricultural land to urban use is not directly mitigable, as agricultural land is a finite and irreplaceable resource. Beyond limiting the amount of total growth permitted, there are no feasible mitigation measures for agricultural land conversion that would also fulfill the objectives of and implement the Proposed Plan. The impact would remain significant and unavoidable.

AIR QUALITY

Development under the Proposed Plan could violate air quality standards or contribute substantially to an existing or projected air quality violation. Any development under the Proposed Plan that would exceed Bay Area Air Quality Management District (BAAQMD) regional significance thresholds would contribute to the nonattainment designation of the Air Basin, which constitutes an air quality violation. The Air Basin is currently designated a nonattainment area for California and national O3, California PM2.5, and California PM10 AAQS.

Construction activities associated with the Proposed Plan would cause short-term emissions of criteria air pollutants, including the temporary generation of ozone precursors (ROG, NOX), CO, and particulate matter emissions that could result in short-term impacts on ambient air quality in the Planning Area. While policies in the Proposed Plan would enforce air quality standards during construction, with respect to ROG, NOx and PM exhaust emissions, there could be foreseeable conditions under the Proposed Plan where the amount of construction activity for an individual development project, or a combination of these projects, could result in the generation of these pollutant emissions that exceed their respective BAAQMD significance thresholds (54 pounds/day for ROG and NOx, 82 pounds per day for exhaust PM10, and 54 pounds/day for exhaust PM2.5). Emissions of these pollutants may not be reduced to levels below BAAQMD's thresholds when multiple construction projects are concurrently ongoing in St. Helena. Therefore, the Proposed Plan would cumulatively contribute to the nonattainment designations of the Air Basin during construction, and impacts would be significant and unavoidable.

In addition to the short-term construction emissions, buildout of the Proposed Plan would generate long-term air emissions, and has the potential to result in air quality impacts from mobile, area, and energy sources. Future development under the Proposed Plan would be required to comply with applicable air quality plans, State Implementation Plan (SIP), California Air Resources Board (CARB) motor vehicle standards, BAAQMD regulations for stationary sources and architectural coatings, Title 24 energy efficiency standards, and the Proposed Plan policies; however, there is no guarantee that emissions would be mitigated below BAAQMD thresholds. Current nonattainment status and projected ROG and PM10 emissions at buildout in combination with past, present, and reasonably foreseeable projects elsewhere within the Air Basin demonstrate that the Proposed Plan, even with implementation of applicable regulations and Proposed Plan's principles and actions that would reduce impacts associated with long-term operational criteria pollutant emissions, would result in a significant and unavoidable cumulative impact with respect to air quality and attainment of such standards.

Therefore, development under the Proposed Plan could result in a cumulatively considerable net increase of criteria pollutants for which the General Plan region is nonattainment under an applicable federal or State ambient air quality standard, and could violate air quality standards or contribute substantially to an existing or projected air quality violation. Even with the mitigation measures in the Proposed Plan, the impacts would be significant and unavoidable.

ENERGY, GREENHOUSE GASES, AND CLIMATE CHANGE

Through implementation of the Proposed Plan policies aimed at reducing greenhouse gas (GHG) emissions, the Proposed Plan would serve to implement numerous strategies and mitigation measures aimed at reducing these emissions. However, even accounting for State and federal

standards and for policies within the Proposed Plan that can be quantified, the resulting 2040 per capita emissions are still greater than the BAAQMD efficiency target and the CARB Scoping Plan target. This means that, absent additional measures at the State level, development under the Proposed Plan would conflict with CARB's 2017 Scoping Plan, AB 32, EO S-03-05, or BAAQMD's CEQA Guidelines, as the City does not have direct control over certain aspects of transportation emissions, such vehicle fuel efficiency standards or regional traffic. Further action is necessary at the State and federal levels to achieve the deep cuts to emissions sources outside the City's jurisdictional control needed to meet the GHG emissions reductions targets laid out by the State. Given that, at this time, there are no post-2030 State or federal measures that would assist the City in achieving the efficiency target in 2040, the potential exists for the Proposed Plan to conflict with applicable plans, policies, or regulations adopted for the purpose of reducing the emissions of GHGs. Therefore, the impact remains significant and unavoidable.

TRANSPORTATION AND TRAFFIC

Implementation of the Proposed Plan would contribute to population and job growth, resulting in projected higher amounts of traffic generation and congestion in the City of St. Helena. More specifically, it would cause a significant impact by causing several local intersections to perform below level of service (LOS) standards established by the City of St. Helena or Napa County, as applicable, causing a conflict with these established measures of effectiveness of the circulation system.

27 intersections were studied as part of the analysis under the General Plan Buildout. Analysis performed assuming no Oak Avenue Extension found significant impacts at seven intersections, including Main Street/Pratt Avenue, Main Street/Elmhurst Avenue, Main Street/Pope Street-Mitchell Drive, Main Street/Grayson Avenue, Main Street/Sulphur Springs Avenue, and Silverado Trail/Pope Street. Analysis performed assuming completion of the Oak Avenue Extension found significant LOS impacts are three intersections, including Main Street/Pratt Avenue, Main Street/Elmhurst Avenue, and Silverado Trail/Pope Street. The Proposed Plan includes multiple policies and implementing actions that would seek to minimize this congestion on the transportation network through a series of efforts to reduce single occupancy vehicle trips, improve circulation throughout St. Helena, and promote walking, bicycling and transit trips as viable transportation options. It also contains multiple implementing actions that identify mechanisms for funding actions designed to alleviate transportation impacts resulting from new development under the Proposed Plan. Nevertheless, even with Proposed Plan policies and implementing actions, impacts at the above stated intersections would be significant.

Further, as Main Street is a State highway (SR-29), mitigation measures along Main Street are subject to Caltrans approval, and thus the construction of the mitigation measures cannot be guaranteed by the City. Additionally, the mitigation measures along Main Street and Silverado Trail may be considered infeasible due to lack of funds to design and construct adequate improvements to accommodate future traffic volumes or due to lack of sufficient right-of-way to construct needed improvements. Since the City cannot guarantee that the needed improvements will be implemented, the impact is deemed significant and unavoidable.

5.4 Significant Irreversible Environmental Change

CEQA Guidelines require an EIR to consider whether "uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely" CEQA Guidelines Section 15126.2(c)). "Nonrenewable resource" refers to the physical features of the natural environment, such as land or waterways. Irreversible changes and irretrievable commitments of non-renewable resources associated with the Proposed Plan include the following issues.

ENERGY SOURCES

New development under the Proposed Plan would result in increased energy use in the form of new buildings and transportation. Both residential and nonresidential developments use electricity, natural gas, and petroleum products for power, lighting, heating, and other indoor and outdoor services, while cars use either electricity or oil and gas. Use of these types of energy for new development would result in the overall increased use of nonrenewable energy resources. This could represent an irreversible environmental change. However, the State of California continues to set aggressive vehicle efficiency and renewable energy targets, including sourcing all electricity from zero-carbon sources by 2045. As regulations become more stringent over time, the energy impacts of the Proposed Plan may decrease.

CONSTRUCTION-RELATED IMPACTS

Irreversible environmental changes could also occur during the course of constructing development projects allowed under the Proposed Plan. New construction would result in the consumption of building materials, such as lumber, sand, and gravel for construction. Depletion of non-renewable resources that supply building materials would represent an irreversible environmental change.

AIR QUALITY

Increases in vehicle trips and traffic resulting from implementation of the Proposed Plan would potentially contribute to long-term degradation of air quality and atmospheric conditions in the region, other parts of California, and in the Western United States. However, technological improvements in automobiles, including the growth of the electric vehicle market share, may lower the rate of air quality degradation in the coming decades.

LOSS OF IMPORTANT FARMLAND

While the Proposed Plan prioritizes development in downtown infill areas, it redesignates 118 acres of current farmlands as urban land uses. Further, some new development may take place in Urban Reserve Areas, designated as Agriculture, once the areas within the Urban Limit Line are fully developed. Thus, if implemented, the Proposed Plan would lead to the development of land currently designated as Prime Farmland, Farmland of Statewide Importance, or Unique Farmland, as classified by the California Farmland Mapping and Monitoring Program. These designations identify high quality agricultural resources, and the loss of these resources due to conversion of designated land to non-agricultural uses may be considered an irreversible environmental change.

5.5 Impacts Found Not to Be Significant

CEQA requires that an EIR provide a brief statement indicating why various possible significant impacts were determined to be not significant. Chapter 3 of this EIR discusses all potential impacts, regardless of their magnitude. A similar level of analysis is provided for impacts found to be less than significant as impacts found to be significant and unavoidable. Significance of an impact is assessed in relation to the significance criteria provided in each section in Chapter 3. A summary of all impacts is provided in the Executive Summary of this EIR.

NOTICE OF PREPARATION

Program Environmental Impact Report
City of St. Helena General Plan Update

Date	April 2, 2018
To	Reviewing Agencies, Interested Parties, and Organizations
Subject	Notice of Preparation of a Draft Environmental Impact Report for the City of St. Helena General Plan Update and Scheduling of a Scoping Meeting on April 17, 2018

The City of St. Helena (City) is preparing an update to its General Plan and has determined that an Environmental Impact Report (EIR) will be necessary to evaluate environmental impacts of this Project, pursuant to the California Environmental Quality Act (CEQA). In compliance with CEQA, the City will be the Lead Agency and will prepare the EIR. Attached are the Project description, location maps, and preliminary identification of the potential environmental issues to be explored.

The City is requesting comments and guidance on the scope and content of the EIR from responsible and trustee agencies, interested public agencies, organizations, and the general public (CEQA Guidelines §15082). If your agency is a responsible agency as defined by Section 15381 of the CEQA Guidelines, your agency may use the environmental documents prepared by the City when considering permits or approvals for action regarding the Project.

Public Scoping Period: April 2 to May 1, 2018

Responses and Comments: The City requests your careful review and consideration of this notice, and it invites any and all input and comments from interested agencies, persons, and organizations regarding the preparation of the EIR. Comments and responses to this notice must be submitted in writing to the Lead Agency Contact by 5:00 p.m. on May 1, 2018. If applicable, please indicate a contact person for your agency or organization.

Public Scoping Meeting: A scoping meeting will be conducted as part of the regularly scheduled Planning Commission meeting at 6:00 p.m. on **April 17, 2018** in the Vintage Hall Board Room on the St. Helena High School Campus (465 Main Street) to collect comments from agencies and the public on the scope and content of the EIR.

Lead Agency Contact: If you have questions regarding this NOP or the scoping meeting, please contact Noah Housh.

Noah Housh, Director
City of St Helena Planning and Community Improvement Department
1480 Main Street
St. Helena, CA 94574
E-mail: NHoush@cityofsthelena.org
Phone: (707) 968-2659

1 Project Contact Information

Project Title	St. Helena General Plan Update
Lead Agency Name	City of St. Helena
Contact Person	Noah Housh, Director Planning and Community Development
Address	City of St Helena 1480 Main Street St. Helena, CA 94574
Phone	(707) 968-2659
Email	NHoush@cityofsthelena.org
Project Sponsor Name and Address (same as Lead Agency)	City of St. Helena 1480 Main Street St. Helena, CA 94574

2 Project Location

Regional Context

St. Helena sits at the heart of the upper Napa Valley in Napa County, located approximately 65 miles north of San Francisco and 77 miles west of Sacramento. State Route (SR) 29 connects St. Helena to other communities in the Valley, including Calistoga to the north and Yountville, Napa, and American Canyon to the south. The regional context is shown in Figure 1.

Planning Area

The Planning Area is the land area addressed by the General Plan. Shown in Figure 1, the Planning Area for the General Plan update encompasses approximately 3,594 acres including the City of St. Helena, its Sphere of Influence (SOI), and three adjacent unincorporated study areas. Although St. Helena does not have jurisdiction in areas outside of its city limits, the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities, to the three adjacent study areas. As such, what happens in those areas bears a relation to the City's planning and must be considered in the General Plan, per California Government Code Section 65300.

The three study areas include:

- **Study Area 1.** Located south of Chalk Lane immediately adjacent to the southeastern City limit, this area of approximately 100 acres comprises the spray fields currently used to dispose of treated effluent from the City's Wastewater Treatment Plant.

- **Study Area 2.** Comprising parcels with existing commercial and residential development fronting SR 29, this 185-acre area extends south from Chalk Lane to Zinfandel Lane. The City currently provides water utility service to many properties in this area, with the remaining structures relying on wells and individual septic systems of various ages and capacities.
- **Study Area 3.** This 165-acre area is located along the Napa River and includes residential development, the Meadowood Napa Valley resort, and City-owned utility infrastructure, including water tanks. The City provides water service to Meadowood and some of the residential development in the area.

The intent of including the three study areas within the Planning Area of the General Plan update is to document sensitive environmental resources and regulatory or capacity constraints associated with those areas.

3 Project Description

The Environmental Impact Report (EIR) will cover the St. Helena General Plan Update, referred to as the Proposed Plan. The following section provides background information on the Proposed Plan.

ST. HELENA GENERAL PLAN UPDATE

Background

The General Plan is a long-term policy document that establishes direction to guide future land use decisions, a framework to ensure the character and quality of development desired by the community, and the processes by which development and land use changes will take place. The State of California requires that every city and county adopt a general plan to guide decisions related to the conservation of natural resources, the physical form and character of future development, and public welfare and safety. The General Plan establishes the basis for the City's Zoning Ordinance, which serves as the legal regulatory code for land use and development within the City's jurisdiction. The policies set forth in the General Plan are not legally enforceable mandates, but rather provide the foundation for the design and application of important policy tools, such as the City's Urban Limit Line, design guidelines, and specific ordinances to protect St. Helena's ecological and biological resources.

The General Plan is used by City staff to review development proposals to ensure that subsequent projects align with the community's vision. The Planning Commission and City Council use the General Plan to guide decision-making that would impact the city's physical environment. The General Plan empowers the City, public agencies that work with the City, and private developers to invest in and design for a future that will enhance the character of the community and sustain and improve the quality of life, in accordance with the values and goals defined in the General Plan.

Project History

The City's current General Plan was adopted in 1993. In 2007, the City began the process of comprehensively updating the General Plan to more accurately reflect current conditions and the community's goals. From 2007 to 2010, the City worked to develop a complete draft update of the General Plan with the assistance of a General Plan Update Steering Committee (GPUSC) composed of St. Helena residents, and a team of consultants.

The initial development of the Proposed Plan involved four phases. The first phase took place between April 2007 and February 2008 and involved both a thorough analysis of existing conditions and a community visioning process. The existing conditions analysis resulted in a series of working papers that described current conditions and key policy issues for the topics of community vision, community character, circulation, economics, infrastructure, climate change, the natural environment, sustainability, and regional context. The community visioning process consisted of a telephone survey, workshops, an open house, and a public forum, dedicated to exploring the major issues and opportunities faced by St. Helena, and the desires of its community moving forward. This process resulted in a clear articulation of the community's desire to build a sustainable future, reflected in a community vision included in the Proposed Plan.

The second phase started in October 2008 and focused on policy and physical framework development. During this phase, the City worked actively with the GPUSC and the community to develop the General Plan goals, policies and implementing actions. The City launched its General Plan Update website and began publication of regular e-newsletters to keep community members informed of the process. The GPUSC met regularly during this stage, and hosted the first community workshop, a "land use and design charrette" aimed to explore key land use issues and opportunities. The City worked to refine existing land use maps, review background policy and technical documents, and analyze the existing General Plan Physical Framework and Land Use Element. The outcomes of this effort included identification of potential change areas in the city, identification of the likely impacts of this change, and the development of potential land use changes in the city.

In April 2009, the City began the third phase, developing the draft General Plan document. A series of eight GPUSC meetings were held to review drafts of the General Plan elements. Two community workshops were held to discuss community design and circulation in fall 2009. Additional community meetings were held to review the public review draft of the General Plan update in early 2010.

Beginning in the summer of 2010, the fourth phase of plan development focused on preparing draft General Plan documents for review by the Planning Commission and the City Council. As part of the planning process, the City prepared a Draft EIR to identify potential impacts of implementing the proposed General Plan Update 2030. The Draft EIR was released in August 2010, and a Final EIR including response to comments received was prepared in October 2010. Subsequently, the Planning Commission reviewed the draft General Plan and EIR in October of 2010, and recommended approval to the City Council; however, during City Council review, concerns were raised in relation to water supply and the Council decided to postpone action on the draft General Plan in order to address these concerns. A "Safe Yield Committee" was formed to develop a Water Management Program, which was adopted by City Council in November 2012. Since that time the

City Council and Planning Commission have continued to review the draft General Plan in an ongoing process involving a series of public hearings and study sessions, and have made subsequent recommendations for additional revisions to the draft document.

Current Effort

With incorporation of the Planning Commission's refinements to the 2010 Plan described above, the General Plan update is substantially complete; however, some additional refinements are necessary to ensure consistency and compliance with State law. In January 2018, the City began the effort to make these additional refinements and finalize the Proposed Plan. Revisions to the draft General Plan update will include the following:

- An updated horizon year of 2040;
- Additional policies to address State general plan requirements that have been adopted since the 2010 draft of the General Plan was completed;
- Text revisions associated with new State requirements; and
- Documentation of sensitive environmental resources and regulatory or capacity constraints in the three additional study areas outside but adjacent to the city limits in order to inform decision-makers and community members about associated issues and opportunities.

Proposed Plan Vision

The proposed community vision developed through the community engagement process early in the planning process remains valid today, and has been carried through to the current draft of the General Plan update:

With an eye toward the future while building on the assets of today, the community of St. Helena envisions that, in the year 2035, the town will be a well-integrated place, linked by effective community institutions, safe neighborhoods and streets, and superior schools, parks and public facilities.

The following concepts support this vision and provide guiding principles for fostering a physically, socially, economically and environmentally sustainable community:

- **Our Sustainable Community.** St. Helena will preserve its history while managing change. Its traditions of diversity, citizen involvement and responsive government will help the city plan for a sustainable future.
  - More people who work in town will be able to afford to live here, in a wide range of innovative, well-designed housing, available for residents of all ages and income levels.
  - St. Helena's historic and agricultural character will be honored and protected.
  - Expanded arts and cultural activities will continue to enrich community life.
  - High-quality schools and education for all ages will continue to be a focus of the community.

  - St. Helena's character will be strengthened through innovative design that maintains the scale and character of its existing neighborhoods.
  - Public spaces and civic facilities will be available for community gatherings, meeting the social and recreational needs of all ages and interests.
- **Our Stable Economy.** St. Helena's economy will meet the basic needs of residents, balance the benefits and effects of visitors and provide better economic opportunities.
  - Central St. Helena will remain the social, cultural and economic heart of town.
  - More of residents' daily needs will be met in the city by local businesses.
  - Vehicular, bicycle, and pedestrian circulation improvements will provide transportation choices, reducing automobile traffic and improving the quality of our city.
  - A combination of better regional connections and alternative modes of travel will improve circulation and traffic conditions, reducing congestion on Main Street.
- **Our Environmental Stewardship.** Environmental conservation, green choices and emissions reductions will be integrated into all areas of community decision making.
  - Through a combination of conservation and infrastructure improvements, water, and wastewater treatment will be available to meet community needs.
  - Green buildings and infrastructure, renewable energy installations and waste reduction will increase energy efficiency.
  - The riparian corridors of the Napa River, Sulphur Creek, and York Creek will be restored as critical assets.
  - Additional and improved parks, protected hillsides, agriculture, trees, locally grown food, and community gardens will contribute to our sustainable community.

Proposed Plan Contents

General Plan Elements

The Proposed Plan will include the following chapters, or elements, meeting the requirements for general plans under California Government Code §65302 for elements that a general plan must contain. Each element will contain related goals, policies, and implementing actions, as well as supporting background information.

- **Land Use and Growth Management.** This element presents a framework for decisions about allowable land use and desirable development patterns, aiming to manage growth effectively while encouraging innovative approaches, quality design, and infill strategies. It is anticipated that key policy goals for this element will include:
  - Managing growth and maintaining community character; and
  - Promoting high-quality and sustainable development.
- **Economic Sustainability.** This element recognizes the important role that economic sustainability plays in developing a sustainable economy that is responsive to short- and

long-term community concerns and objectives. It is anticipated that key policy goals for this element will include:

  - Meeting residents' needs for housing, employment, goods. and services;
  - Creating and implement an Economic Sustainability Strategy;
  - Balancing the benefits and effects of visitors; and
  - Generating revenue.

- **Public Facilities and Services.** This element sets forth policy guidance for the provision of services, amenities, and infrastructure. The focus is on policies related to water, wastewater, storm drainage and flooding, solid waste, schools and libraries, fire and police. It is anticipated that key policy goals for this element will include:
  - Ensuring high-quality public services and facilities; and
  - Promoting sustainable standards and practices.
- **Circulation.** This element establishes the policies needed to foster a comprehensive and multi-modal transportation network. The element addresses the principal components of the circulation system, as well as issues relating to parking, transit, and pedestrian and bicycle routes in order to ensure the City can meet current and future transportation needs with a balanced, multi-modal transportation system.
- **Historic Resources.** This element presents a framework for governing future decisions about rehabilitating, retrofitting, and adaptively reusing the City's historic buildings. It is anticipated that key policy goals for this element will include:
  - Maintaining St. Helena's sense of place and visual character;
  - Preserving and protecting St. Helena's historic resources; and
  - Celebrating St. Helena's distinct history and heritage.
- **Community Design.** This element presents a policy framework that corresponds directly with other General Plan elements in determining the form, quality, and character of St. Helena's built environment. It is anticipated that key policy goals for this element will include:
  - Respecting St. Helena's historic character and unique sense of place;
  - Promoting a high-quality and sustainable built environment and public realm;
  - Encouraging community design throughout the city that helps to build community, encourage human interaction, and support non-automobile transportation;
  - Strengthening the city's neighborhoods so that they retain desirable characteristics, while allowing for smart change and evolution.
- **Open Space and Conservation.** This element guides future decisions about sustaining a healthy network of open spaces and protecting natural resources for future generations. It is anticipated that key policy goals for this element will include:
  - Preserving, enhancing, and restoring natural resources;
  - Ensuring stewardship of water resources; and

  - Expanding sustainable agricultural practices.

- **Public Health, Safety, and Noise.** This element presents a framework for minimizing risks posed by environmental and human-caused hazards that may impact St. Helena's health and welfare. This element aims to ensure that residents, workers and visitors are protected from negative exposure to flooding, fires, hazardous materials, air pollution, and geologic and seismic hazards. It is anticipated that key policy goals for this element will include:
  - Maintaining high levels of health and safety; and
  - Effectively coordinating responses to emergencies and natural disasters.
- **Climate Change.** This element is the City's policy framework for responding to and planning for climate change, addressing the City's energy conservation concerns, renewable energy production and use, and transportation-related concerns. It is anticipated that key policy goals for this element will include:
  - Increasing citywide transportation-related energy efficiency;
  - Reducing energy demand through improved building and design;
  - Reducing consumption and diverting waste;
  - Ensuring the sustainable management of agriculture, natural resources, and urban forests;
  - Increasing community engagement and advocacy; and
  - Improving the efficiency of local government operations.
- **Parks and Recreation.** This element presents a framework for developing and maintaining a comprehensive system of quality parks, pedestrian and bicycle trails, and recreational facilities and programs. It is anticipated that key policy goals for this element will include:
  - Providing high-quality parks and recreational services; and
  - Developing a system of interconnected bicycle and pedestrian trails.
- **Arts, Culture, and Entertainment.** This element aims to preserve and protect St. Helena's unique identity, heritage, and cultural resources; celebrate its vibrant community; and expand opportunities for arts enrichment. It is anticipated that key policy goals for this element will include:
  - Celebrating arts, culture, and entertainment;
  - Strengthening and expanding arts, culture, and entertainment; and
  - Honoring culture and heritage.

The Housing Element, while a required element of the City's General Plan, is not included in the Proposed Project being considered in this EIR. Per the requirements of the California Department of Housing and Community Development, St. Helena's Housing Element was last updated and adopted in May 2015 (covering the period from 2015-2023) and underwent environmental review at that time.

Key Components of the Proposed Plan

The Proposed Plan will be released for public review in parallel with the Draft EIR. As described above, the content builds on the 2010 Draft General Plan and will incorporate recommended refinements from a series of public hearings held in 2016 and recently in 2018. Key components of the Proposed Plan will include:

- A new Mixed Use General Plan Land Use designation, intended to encourage a mix of uses at infill locations in central St. Helena and provide for housing opportunities in close proximity to services and retail, thus reducing both development pressures along the Urban Limit Line and greenhouse gas emissions.
- Capital improvements to expand the existing bicycle network in order to provide safe and convenient bicycle access to parks, open spaces, commercial areas, residential neighborhoods, and community facilities. The expanded network is intended to encourage the use of bicycles as a non-automotive means of transportation to help alleviate congestion and parking concerns, reduce overall vehicle miles traveled in the city, and promote health.
- Updates and additions to ensure consistency with the latest State guidelines.

4 Environmental Impact Report

The EIR will analyze the potential environmental consequences of adopting the Draft General Plan. It will discuss how goals, policies, and implementing actions of the Draft General Plan may affect the environment, identify significant impacts, and recommend measures to mitigate those impacts. It will also evaluate the cumulative impacts and potential growth-inducing impacts of the Draft General Plan. The EIR will consider the environmental impacts of feasible alternatives that could attain most of the basic Project objectives while avoiding or reducing any of the Project's significant adverse environmental effects, including the "No Project Alternative" (continued implementation of the 1993 General Plan). Additionally, the EIR will identify an environmentally superior alternative.

The environmental assessment will utilize the most current guidelines for CEQA and for each issue area. The EIR will contain comprehensive environmental analysis and mitigation measures in order to facilitate CEQA streamlining and tiering opportunities for future projects consistent with the General Plan Update, whether in accordance with provisions of SB 375 or other tiering and exemption provisions in CEQA. Community members can provide input at several points in the EIR process: in response to this Notice of Preparation (where comments are solicited on the scope and content of the EIR); in response to the Draft EIR itself when that document is released for public review (when comments are solicited on the analysis and conclusions of the EIR); and at public hearings before the Planning Commission and City Council for certification of the EIR.

5 Potential Environmental Impacts to Be Considered

The EIR will evaluate potentially significant environmental impacts associated with the adoption and implementation of the Proposed Plan. Consistent with the State CEQA Guidelines (Appendix G), the following environmental resource categories will be analyzed in relation to the Project:

- Aesthetics
- Agricultural and Forestry Resources
- Air Quality
- Biological Resources
- Energy, Greenhouse Gas Emissions, & Climate Change
- Geology, Soils, and Seismicity
- Hazards and Hazardous Materials
- Cultural and Tribal Resources
- Hydrology and Water Quality
- Land Use, Population, and Housing
- Mineral Resources
- Noise
- Parks, Public Services & Recreation
- Public Utilities
- Transportation

All of the resource categories listed above will be considered in the EIR; however, given the local context of St. Helena, the following issues will be central to the environmental analysis:

- Agricultural resources, due to the agricultural characteristics and presence of prime and important farmland in and around the Planning Area;
- Biological resources, due to the presence of open space areas that could support habitats and wildlife corridors;
- Hydrology and water quality, due to the presence of waterways such as the Napa River, Sulphur Creek, and York Creek;
- Traffic, due to the reliance on SR 29 as a main thoroughfare and regional connection; and
- Public utilities, due to the importance of stable and secure water supply over the course of the planning process.

Additionally, CEQA allows environmental effects for which there is no likelihood of a significant impact to be "scoped out." Given the lack of mineral resource recovery sites and known deposits within the Planning Area, effects related to mineral resources have been determined not to be significant. Full documentation of the factual basis for this determination will be included in the EIR. Unless specific comments are received during the NOP public comment period that indicate a potential for the Project to result in significant impacts, these less than significant effects will be addressed briefly in the EIR and "scoped out."

6 Public Meetings

The City of St Helena will conduct a scoping meeting on the Project in accordance with CEQA Section 21083.9. The scoping meeting is an opportunity for public agencies and interested members of the general public to learn more about environmental review for the Project and to comment on the environmental issues to be addressed in the EIR.

St. Helena General Plan Update – Notice of Preparation (NOP) for a Draft Environmental Impact Report (DEIR)

Dear Mr. Housh:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the St. Helena General Plan Update. In tandem with the Metropolitan Transportation Commission's (MTC) Sustainable Communities Strategy (SCS), Caltrans' mission signals a modernization of our approach to evaluate and mitigate impacts to the State Transportation Network (STN). Caltrans' *Strategic Management Plan 2015-2020* aims to reduce Vehicle Miles Traveled (VMT) by tripling bicycle and doubling both pedestrian and transit travel by 2020. Our comments are based on the April 2, 2018 NOP.

Project Understanding
The General Plan is a long-term policy document that establishes direction to guide future land use decisions, a framework to ensure the character and quality of development desired by the community, and the process by which development and land use changes will take place. The City's current General Plan was adopted in 1993. In 2007 the City began the process of comprehensively updating the General Plan. This update includes the Land Use and Circulation Elements. State Route (SR) 29 is Main Street in St. Helena; it is the sole State Highway in the City, and provides regional access to the rest of the Napa Valley.

Smart Growth
Caltrans applauds many of the goals stated in the various elements of the general plan to be updated, including promoting high-quality and sustainable development, capital improvements to expand the existing bicycle network, and a focus on promoting mixed use and infill

development.

As this project has identified multiple goals which coincide with those of the MTC's SCS, Caltrans suggests that to meet local and regional housing goals, the Lead Agency consider establishing a Priority Development Area (PDA) within the City where appropriate. St. Helena does not feature high-frequency peak bus operations, nor does it have a requisite rail st The Lead Agency should work with the Napa Valley Transportation Authority and other relevant stakeholders to improve transit service in St. Helena, and improve regional access to population and employment, and transit centers including the Soscol Gateway Transit Center in Napa.

Transportation Impact Analysis
The Transportation Impact Analysis for the General Plan Update, and associated projects should be conducted using current data and methodology. Furthermore, Caltrans is switching to VMT as its metric for transportation impacts. We suggest that the lead agency also adopt VMT, and establish VMT thresholds for the proposed General Plan Update and its associated projects.

Analysis of alternatives should discuss buildout of potential transit improvement projects proposed for the horizon period of this General Plan Update. This should address future rapid-bus service in Napa Valley or expanded rail service along the Wine Train corridor.

Multimodal Planning
The *Caltrans District 4 Bike Plan (Bike Plan)* identifies a low tier project to install bike boxes at the intersection of SR 29 and Pope Street. The *Bike Plan* identifies SR 29 in St. Helena as a higher (three on a zero to four scale) Level of Traffic Stress (LTS) segment. Reducing LTS is an important factor in meeting Caltrans *Strategic Management Plan* goals and reducing local and regional VMT. The EIR should identify further how cumulative impacts affecting cyclists and pedestrians will be analyzed and mitigated.

To address congestion, air quality, and road safety, the Circulation Element should include language describing the City's strategies for decreasing VMT by improving and expanding visitor and commuter transit service and active transportation facilities. This should include identifying gaps in the pedestrian and bicycle network, and unmet transit need.

The plan's primary and secondary effects on pedestrians, bicyclists, disabled travelers and transit users should be evaluated, including countermeasures and trade-offs resulting from mitigating VMT increases. Access for pedestrians and bicyclists to transit facilities must be maintained. These smart growth approaches are consistent with MTC's Regional Transportation Plan/Sustainable Community Strategies and would help meet Caltrans Strategic Management targets.

Vehicle Trip Reduction
From Caltrans' *Smart Mobility 2010: A Call to Action for the New Decade*, the City of St. Helena is identified as **Place Type 5a: Rural Towns** where location efficiency factors, such as community design, are moderate to high and regional accessibility is low. As a hub for Napa

Valley's wine production/tourism industry, strategies should be adopted to promote active transportation, and the use of multi-passenger vehicles for visitors, residents, and employees.

The General Plan update should identify community design components and land use policies that will facilitate access to local and regional activity centers, and reduce VMT. These strategies can include zoning amendments to reduce lot size and promote infill development, as well as requirements that streets associated with new developments be built in a fashion to connect with and expand a walkable grid network, rather than cul-de-sacs. This would provide well-connected low-stress local streets that would promote walking and cycling, and reduce VMT on the STN for local trips.

The tourism industry is a major VMT generator for the City of St. Helena, the General Plan Update should include an analysis of strategies to reduce local and regional VMT, which identify funding, potential demand, and implementation strategies including:

- Free shuttles serving hotels, wineries, and other regional destinations;
- Expanded service using the Napa Valley Wine Train facilities;
- Development of a Transportation Management Association consisting of local hotels, wineries, and other major employers;
- Improved regional transit access for residents and employees.

The plan should include a robust Transportation Demand Management (TDM) Program to reduce VMT and greenhouse gas emissions. Such measures are critical to facilitating efficient circulation. The measures listed below will promote smart mobility and reduce regional VMT.

- Project design to encourage walking, bicycling and transit access;
- Transit and trip planning resources such as a commute information kiosk;
- Real-time transit information system;
- Transit subsidies on an ongoing basis;
- Ten percent vehicle parking reductions;
- Charging stations and designated parking spaces for electric vehicles;
- Carpool and clean-fuel parking spaces;
- Designated parking spaces for a car share program;
- Unbundled parking;
- Showers, changing rooms and clothing lockers for employees that commute via active transportation;
- Emergency Ride Home program;
- Employee transportation coordinator;
- Secured bicycle storage facilities;
- Fix-it bicycle repair station(s);
- Bicycle route mapping resources;
- Participation/Formation in/of a Transportation Management Association (TMA) in partnership with other developments in the area; and
- Aggressive trip reduction targets with Lead Agency monitoring and enforcement.

Transportation Demand Management programs should be documented with annual monitoring reports by an onsite TDM coordinator to demonstrate effectiveness. If the project does not achieve the VMT reduction goals, the reports should also include next steps to take in order to achieve those targets. Also, reducing parking supply can encourage active forms of transportation, reduce regional VMT, and lessen future transportation impacts on State facilities. These smart growth approaches are consistent with the MTC's Regional Transportation Plan/SCS goals and would meet Caltrans Strategic Management Plan sustainability goals.

For additional TDM options, please refer to the Federal Highway Administration's *Integrating Demand Management into the Transportation Planning Process: A Desk Reference* (Chapter 8). The reference is available online at: http://www.ops.fhwa.dot.gov/publications/fhwahop12035/fhwahop12035.pdf.

The Lead Agency should identify project-generated travel demand and estimate the costs of transit and active transportation improvements necessitated by the projected growth; viable funding sources such as development and/or transportation impact fees should also be identified. We encourage a sufficient allocation of fair share contributions toward multimodal and regional transit improvements to fully mitigate cumulative impacts to regional transportation. We also strongly support measures to increase sustainable mode shares, thereby reducing VMT.

The City should also ensure that a capital improvement plan identifying the cost of needed improvements, funding sources, and a scheduled plan for implementation is prepared along with the environmental document.

Lead Agency

As the Lead Agency, the City of St. Helena is responsible for all project mitigation, including any needed improvements to the STN. The project's fair share contribution, financing, scheduling, implementation responsibilities and lead agency monitoring should be fully discussed for all proposed mitigation measures.

Encroachment Permit

Please be advised that any work or traffic control that encroaches onto the state ROW requires an encroachment permit that is issued by the Department. To apply, a completed encroachment permit application, environmental documentation, and five (5) sets of plans clearly indicating state ROW must be submitted to: Office of Permits, California DOT, District 4, P.O. Box 23660, Oakland, CA 94623-0660. Traffic-related mitigation measures should be incorporated into the construction plans during the encroachment permit process. See the website link below for more information: http://www.dot.ca.gov/hq/traffops/developserv/permits/.

Thank you again for including Caltrans in the environmental review process. Should you have any questions regarding this letter, please contact Jake Freedman at 510-286-5518 or jake.freedman@dot.ca.gov.

Sincerely,

PATRICIA MAURICE
District Branch Chief
Local Development - Intergovernmental Review

Subject: Public Comment: Notice of Preparation of a Draft Environmental Impact Report for the City

Dear Noah,

The following is my public comment regarding the Planning Department Notice of Preparation of a Draft Environmental Impact Report for the City of St. Helena General Plan Update.

RE: Industrial Zone on Southeast side of St. Helena (map attached)

Comment:
The Industrial Zone located on the southeast side of St. Helena is an outdated land use that poses health, safety, and environmental risks in addition to causing an economic drain on the city's tax base under this current zoning. This land needs to be re-evaluated by the city for its best and most economic use as part of St. Helena's 2040 General Plan.

History:
The designation of this land as an industrial zone was viable when zoning laws were established over 60 years ago. As far back as 100 years ago, this land, which was initially remote from St. Helena's residential and civic activity, was used primarily to mine gravel from Sulphur Creek. Several mining operators including the current established concrete batching business of Harold Smith and Son, mined Sulphur Creek up until the late 1990's. Arguably much of this gravel mining and excavation activity conducted before the establishment of mining regulations and environmental agencies, has resulted in the silt and mineral buildup in eastern reach of Sulphur Creek today. Unquestionably riparian corridors along the creek and fish species have been adversely affected by these years of mining. As recently as 1999, Harold Smith and Son ceased their mining operations after being cited for violations from the CA Regional Water Quality Board (attached).
In the 1960's Harold Smith and Son sold a portion of their land north of their current operations for the development of housing south of Spring Street encompassed Birch St., Olive, Hudson, and Valley View. Many of these residential homes were built and approved by the city with a zero-lot line where backyards directly abut the heavy industrial operations from Harold Smith and Son. This has been a source of neighborhood friction between these incompatible zones for decades that continues today.
Further, as St. Helena has expanded, this once rural industrial zone is now surrounded by more residences, a new Primary School, an expanded High School, activities in Crane Park, increased vehicle traffic, bicycle lanes, pedestrians, and children. Clearly, given the close proximity of industrial noises, operations, and heavy vehicles, this poses a public health and safety issue.

Additionally, as the attached map indicates, this Industrial Zone lies in a 100-year flood plain, which limits potential development and land use. Pictures from the recent storms in 2017 shows just how close the level of Sulphur Creek came to breaching the mountains of aggregate, dirt and rocks piled on the banks of HSS property.

Present:
In addition to Harold Smith and Son, this Industrial Zone expanded to include the operations of A&J Vineyard Supply, and Marvin's Garage Auto repair to the north. East of HSS is the city corporation yard and other low- impact commercial businesses along Charter Oak.
Since Harold Smith incorporated in this location prior to the establishment of zoning laws, their business operates under a restrictive non-conforming use further requiring a special use permit for concrete batching.
Per St. Helena Municipal Code (attached): "The following uses require approval of a use permit as regulated by Chapter 17.168:
All uses or expansion of existing uses proposed for industrial property that is located adjacent to property zoned for residential use. "Adjacent to" shall be defined to include properties with a common property line or properties directly across a street. "Property zoned for residential use" shall be defined as that property zoned LR low density, MR medium density, or HR high density residential;
Asphalt batch, cement and concrete plants;"

Our City Code places clear and restrictive language when it comes to operators in non-conforming zones (Attached Chapter 17.140 NONCONFORMING USES, BUILDINGS, STRUCTURES, LOTS AND SIGNS); particularly as it relates to business expansion, changes in operations, abandonment, noise, and public nuisance. I have observed and documented many violations of these permitted use ordinances from Harold Smith and Son that the city has failed to enforce.

More importantly, the restricted use ordinances associated with businesses operating under a non-conforming use permit, limits the ability of those businesses from expanding their operations. Case in point; Harold Smith and Son frequently has to request after hours special use permits to satisfy their business growth at the expense of their residential neighbors. Another example is new heavy impact rock crushing equipment results in noise levels exceeding allowable decibels limits for their use permit. Again, causing neighbors to pay the price for HSS business growth. Finally increased multi-ton traffic from mixer and dump trucks traveling back and forth on residential streets poses a very real safety risk. Perhaps equally as detrimental to public safety is the dozens of trips made each week in and out of the tiny yard of A&J Vineyard Supply by 40 to 45-foot tractor trailer trucks traversing neighborhoods each and every week. The result is an untenable situation for all involved.

In short, this Industrial Zone has outlived its intended purpose to the point where it is causing health, safety, environmental and economic issues for residents, and it is restricting the ability of the operators in the zone to expand their businesses. This is a high friction area in St. Helena that needs to be addressed.

I don’t think anyone would say that continuing to operate a heavy industrial zone next to expanding residences, schools, parks, cyclists, and pedestrians is a good idea. Indeed, it runs counter to many of the goals and vision elements of the 2040 General Plan.

The city owes it to their citizens and these businesses to find a solution that allows these industrial operators to expand in an appropriate relocation and it needs to protect the health safety and economic welfare of the public.

Thank you.

STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
SAN FRANCISCO BAY REGION

CLEANUP AND ABATEMENT ORDER NO. 99-016
HAROLD VAROZZA
JERYL AND LERYL SMITH
800 CRANE ROAD, ST. HELENA, NAPA COUNTY, CALIFORNIA

The California Regional Water Quality Control Board, San Francisco Bay Region (the Board), finds that:

I . Harold Varozza, d.b.a. Harold Smith and Sons, owns and operates a concrete batch plant and gravel quarry. According to the County Tax Assessor, the land where the batch plant is located is owned by Jeryl and Leryl Smith (Assessors PN 009-392-035); whose mailing address is 1853 Fir Hill Drive, St. Helena, CA 94574. Harold Varozza and the Messrs. Smith are jointly referred to as "dischargers". The batch plant is located at 800 North Crane Road, St. Helena, Napa County.

2. On February 3, 1999, Board staff conducted a joint inspection with the California Department of Fish and Game (DFG) of the above property. Staff inspected the batch plant yard, a gravel washing area located directly across Sulphur Creek and a waste piles on the southern bank of Sulphur Creek. Staff observed several conditions that were in violation of the Porter-Cologne Water Quality Control Act (Water Code) and the federal Clean Water Act.

3. This Order addresses concrete waste, wastewater and wash water originating at the batch plant that exhibits elevated pH levels, excessive alkalinity and excessive fine sediments which have been illegally discharged to Sulphur Creek, a water of the State and the United States.

4. Primary deficiencies involve: a) illegal discharge. of waste and polluted stormwater from the sump associated with the batch plant loading and concrete truck washout areas; b) illegal discharge of gravel and concrete truck wash water from the sedimentation pond associated with the gravel washing plant area; and
c) discharge of concrete waste to the banks of Sulphur Creek (waste piles).

5. **Batch** @ Arn Staff observed stormwater runoff containing concrete sediment material in the drain pipes from the batch plant sump draining to Sulphur Creek. Staff observed this during inspections on both February 3 and February 17, 1999. There are several potential sources of concrete-containing waste water in the batch plant area:.

a) The batch plant tower is a si@ficaxit source of concrete dust which settles **in** the immediate vicinity. The puddles in the batch plant parking area had a pH above 12.

b) The batch plant parking area and wash rack drains to Sulphur Creek via a "sump". Staff observed that at the batch plant, waste water and polluted stormwater in this area generally drains to a "sump" which subsequently drains directly to the creek via two 12-inch culverts.

c) The wastewater "sump" is composed of concrete aggregate and gravel and excavated into bank gravels; hence it is highly permeable. As such it has the potential to pollute shallow groundwater which in turn will drain to the creek.

6. **Gravel Washing Sediment** @ The dischargers also extract gravel from Sulphur Creek on a seasonal basis. Gravel is sorted and washed at a facility located on the south of the batch plant on the other side of the creek. A sedimentation pond, which is part of the gravel washing operation, is located on the south bank of the creek. . On February 3, and February 17, 1999, Board staff observed a hose next to the pond that DFG staff stated had been used to pump the pond into the creek. The sedimentation pond drains to the creek. Staff observed that concrete waste was washed from trucks into the sedimentation pond, thereby comingling concrete slurry with fine sediments. DFG staff stated that a hose for draining the sump was visable during their inspection.

7. **Waste** @ Concrete waste of a high pH was discharged on the west bank of the creek where the waste was found as a semi-solid, caked fine sediment or as an aggregate where the liquid associated with this waste had **a** high pH. This waste has a high potential to runoff to the creek during even slight rainfall events. Some fine-grained concrete waste was observed in bed of the creek, below the waste pile.

8. DFG notified one of the dischargers (Harold Smith and Sons) by letter (February 9,1999) of Fish and Game Code violations. The violations pertain to illegal discharge of a pollutant [Fish and Game Code Section 5650(a)].

9. The San Francisco Bay Basin Water Quality Control Plan (the Basin Plan) defines the existing and potential beneficial uses for San Francisco Bay and contiguous surface waters. Sulphur Creek is a tributary to the Napa River. The existing and potential beneficial uses of the Napa River include: cold freshwater habitat; fish migration; rare and endangered species; contact and non contact water recreation; fish spawning; warm freshwater habitat and wildlife habitat.

10. The inspections and conditions described in Findings 2 through 8 indicate that concrete batch plant operations at the batch plant discharge to waters of the State and the United States. Such discharges occur even through the dischargers have not filed to be covered under the State Board's General Permit for Ston-n Water Discharges Associated with Industrial Activity (General Permit), and in violation of the terms of the General Permit.

12. Based on the above findings, the Board finds that the dischargers have caused or permitted waste to be discharged or deposited where it can be and has been discharged into waters of the State and created and threatened to continue to create a condition of pollution. This Order, therefore, contains tasks for investigating and mitigating existing and potential future impacts to the creek and other waters of the State, as described in the aforementioned findings.

13. This Order is an action to enforce the California Water Code and as such is exempt from the California Environmental Quality Act, pursuant to Section 15321(a)(2) of Title 14, California Code of Regulations.

14. Pursuant to Section 13304 of the California Water Code, the dischargers are hereby notified that the Board is entitled to, and may seek reimbursement for, all reasonable costs actually incurred by the Board to investigate unauthorized discharge of waste and to oversee cleanup of such waste, abatement of the effect thereof, or other remedial action, required by this Order.

IT IS HEREBY ORDERED, pursuant to Section 13304, of Division 7 of the California Water Code, that the dischargers shall cleanup the waste discharged, abate the effect of the discharge, and take other remedial actions as follows:

A. Prohibition

The discharge of waste or hazardous materials that will degrade, or threaten to degrade, water quality or adversely affect, or threaten to affect beneficial uses of the waters is prohibited.

B. Provisions

I *Task 1:* By August 1. 1222, the dischargers shall submit a Notice of Intent (NOI) to be covered under the NOI General Permit (attached). The NOI shall be sent via certified mail to the State Water Resources Control Board, P.O. Box 1977, Sacramento, CA 95812-1977, Attention: Storm Water Permitting Unit, and shall be accompanied by the one time application fee of $2000 made payable to the State Water Resources Control Board. A copy of the NOI shall be submitted to this Board.

Task 2: By August 1. 1 M, the dischargers shall submit a report, acceptable to the Executive Officer, containing a description, with a map, of mitigative control measures designed to bring the batch plant into compliance with the State's minimum discharge standards. Such mitigative control measures shall include management practices to divert clean storm water runoff, and to collect and contain storm water contacting concrete product and waste. The report shall include an implementation time schedule. However, implementation of the mitigative control measures shall be completed no later than September 1, 1999.

Task 3: By August 1. 1999, the dischargers shall submit a report to this Board confirzning that all sources of concrete wastes, wastewaters and concretecontaining liquids to waters of the State at all facilities and areas of the batch plant that pose a threat of such discharge have been removed, relocated, and or contained within impervious impoundments. Such removal, relocation and or containment shall at a minimum address:

a) Potential or existing reactive concrete-containing wastes and waste associated with the following known problem areas: 1) the piles of concrete waste located upstream of South Crane Road on the banks of Sulphur Creek including down gradient areas within the bed of the Creek;
2) the batch plant area including the wastewater sump; 3) the

sedimentation pond adjacent to the gravel washing plant; 4) the area adjacent to the outlet of the drainage pipes that drain the batch plant area into Sulphur Creek; and 5) any other areas that have the potential to contribute wastes to the creek.

b) All other facilities and areas that are actual **or** potential sources of concrete waste, concrete wastewater and wash water, **or** sediment pollution.

Task 4: By **September 15, 1999,** the dischargers shall implement a monitoring program which will be used to demonstrate the effectiveness of coffective actions in preventing concrete waste, wastewater, storm water contacting concrete product or waste, or any other deleterious substance from being discharged to waters of the State. The water quality monitoring parameters, sampling locations and sampling frequency are described below. The results of the monitoring program shall be submitted to the Board's Executive Officer on **a** monthly basis. The monthly monitoring reports shall be postmarked within 45 days of the sampling month (e.g., sampling results for September shall be submitted by October 15).

Monitoriniz Parameters

At a minimum, water samples from Sulphur Creek and the drainage channel that passes alongside the wastewater sump shall be analyzed for the following water quality parameters: pH (by titration), Total Alkalinity, Carbonate, Bicarbonate and Hydroxide Alkalinity, Temperature, and Total Suspended Solids.

Monitoring Stations

At a minimum, water quality samples shall be collected at each of the following locations:

1) From the storm water drain pipe(s) for the batch plant- At the point where there is **a** discharge to the creek or to the City stormdrain if so installed.

2) From Sulphur Creek upgradient of the waste disposal area at the west end of the dirt access road.

3) From Sulphur Creek immediately downgradient of its confluence with the storm water drain pipe.

Monitoring FreQ.uency

a) Samples shall be collected at the above stated locations during every storm event that produces greater than 0.5 inches of rain as measured by the National Weather Service at St. Helena, or when surface water is present in puddles and draining from the batch plant area. During periods of "tended runoff, samples shall be taken at least once every two weeks.

5

Harold Smith and Sons, St. Helena
Cleanup and Abatement

b) A pH mete r and continuous (strip) recorder shall be installed at the point of sump discharge. The recorder shall be housed in a locked box and records shall be submitted monthly to Board and DFG staff.

Water quality sampling shall continue throughout the year as long as there is water in Sulphur Creek. Once the 1999/2000 wet season is over, if water is not present in the creek and the dischargers have demonstrated the effectiveness of corrective actions implemented, the dischargers may propose to the Board's Executive Officer for consideration of a less rigorous monitoring program.

2. If the dischargers are delayed, interrupted or prevented from meeting one or more of the completion dates specified in this Order, the dischargers shall promptly notify the Regional Board Executive Officer in writing with recommended revised completion dates for consideration for revisions to this Order.

3. As described in Finding 13 above, upon receipt of a billing statement for costs incurred pursuant to Section 13304 of the California Water Code, the dischargers shall reimburse the Board.

Pursuant to California Water Code Sections 13304 and 13350, if a dischargers fails to comply with the provisions of this Order, the Board may schedule a hearing to consider assessing civil monetary penalties and to consider requesting the Attorney General to take appropriate enforcement action against the dischargers, including injunctive and civil monetary remedies. However, this Order does not preclude the Board from taking appropriate enforcement action for past violations of the California Water Code.

Chapter 17.60
INDUSTRIAL (I) DISTRICT

Sections:

17.60.010 Purpose.

17.60.020 Permitted uses.

17.60.030 Conditional uses.

17.60.040 Design review required.

17.60.050 Accessory uses, buildings and structures.

17.60.060 Prohibited uses.

17.60.070 Development standards.

17.60.080 Other uses, standards and requirements.

17.60.010 Purpose.

The industrial district (I) designation provides for industrial parks, warehouses, light manufacturing, auto and farm-related equipment sales and repairs, viticulture and winery support services and similar and compatible uses. (Prior code § 27.100)

17.60.020 Permitted uses.

The following uses are permitted within the district, except that new uses or expansion of existing uses proposed for industrial property that is located adjacent to property zoned for residential use shall require a use permit, as defined in Section 17.60.030.

Building material display rooms;

Carpentry, cabinet and sign shops;

Catering establishments including retail sales of items prepared on the premises;

Commercial laundries, rug cleaners;

Contractors' offices and yards;

Crop services;

Dry cleaners;

Farm equipment sales and repair;

Feed, grain and farm supplies, including the bulk sale of pesticides, herbicides and fertilizers;

Laboratories and related facilities for research, experimentation, testing and product development when conducted entirely within an enclosed building and does not involve the use of hazardous substances;

Landscape services;

Machinery repair shops;

Mini-storage facilities;

Printing and copy services;

Rental businesses, including equipment, vehicles and party services;

Reupholstery and furniture repair;

Saddle and equestrian store and repair;

Security services;

Sign shop;

Small equipment repair, including, but not limited to: chain saws, lawn mowers, outboard motors, hedge trimmers and power generators;

Small recycling centers (not more than five hundred (500) square feet) including mobile recycling units, nonprofit drop-off facilities and reverse vending machines;

Technology information services;

Warehouse and wholesale businesses, excluding retail sales;

Welding supply shop;

Well drilling shops;

Wood yards;

Other similar uses found consistent with the general plan and the I district pursuant to Chapter 17.08. (Ord. 07-1 § 2 (part): Ord. 00-7 § 2; prior code § 27.101)

17.60.030 Conditional uses.

The following uses require approval of a use permit as regulated by Chapter 17.168:

All uses or expansion of existing uses proposed for industrial property that is located adjacent to property zoned for residential use. “Adjacent to” shall be defined to include properties with a common property line or properties directly across a street. “Property zoned for residential use” shall be defined as that property zoned LR low density, MR medium density, or HR high density residential;

Ambulance services, including cooking and sleeping facilities for employees on duty only;

Art, dancing, photographic and music studios and schools, including retail sales as an accessory use;

Asphalt batch, cement and concrete plants;

Audio/video recording studio;

Dwelling unit in conjunction with an approved industrial use subject to the following:

1. Approval of a dwelling unit shall be conditioned to recognize the industrial nature of the area and to provide for the safety of any children who may reside in the unit,

2. The floor area of the dwelling unit shall not exceed eight hundred fifty (850) square feet,

3. One off-street parking space shall be provided,

4. The dwelling unit shall be the primary residence of the occupant, or of the caretaker or security person;

Fuel yards other than wood;

Health club and fitness centers;

Kennels;

Laboratories and related facilities for research, experimentation, testing and product development when conducted entirely within an enclosed building and involving the use of a hazardous substance;

Livestock services;

Lumber and building materials yards;

Machine, welding, sheet metal, electric motor, pump and heavy equipment repair shops;

Manufacturing, packaging and processing when conducted entirely within an enclosed building;

Mining and quarrying of nonmetallic minerals subject to the provisions of the Surface Mining and Reclamation Act of 1975 (Section 2710 et seq. of the Public Resources Code);

Mortuary and funeral homes;

Recycling centers, including large recycling centers (five hundred (500) square feet or more);

Towing services;

Truck, bus, taxi, van and limousine terminals and service centers, including truck, trailer, and recreation vehicle rental and storage;

Veterinarian hospitals and clinics;

Wineries, excluding retail sales and tasting;

Other similar uses found consistent with the general plan and the I district pursuant to Chapter 17.08. (Ord. 07-1 § 2 (part): Ord. 03-4 § 17: Ord. 00-7 § 3; prior code § 27.102)

17.60.040 Design review required.

Pursuant to Chapter 17.164 all signs, new structures or buildings, or exterior revisions of any existing structures or buildings for both permitted and conditional uses shall require design review. (Prior code § 27.103)

17.60.050 Accessory uses, buildings and structures.

The following are the accessory uses, buildings and structures permitted in the I district:

A. Signs subject to the provisions of Chapter 17.148;

B. On-site storage facilities accessory to the primary use subject to design review approval by the planning commission. On-site storage shall not be located within required parking areas. Design review will include, but not be limited to, location, length of time for the storage facility, and size of the storage facility;

C. Other uses and structures which are customarily incidental and clearly subordinate to permitted and conditional use pursuant to Chapter 17.08. (Ord. 07-1 § 2 (part): prior code § 27.104)

17.60.060 Prohibited uses.

The following uses are specifically prohibited in the I district:

A. Activities which emit dangerous radioactivity at any point;

B. Uses constituting or resulting in public or private nuisance because of emission of any smoke, dust, gas, odor, fumes, noise, vibration, radioactive or fissionable material or refuse material;

C. Incineration or reduction of garbage, offal or dead animals;

D. Refining of petroleum;

E. Rendering of animal fats and oils;

F. Smelting of metallic ores;

G. Stockyards or slaughterhouses. (Prior code § 27.105)

17.60.070 Development standards.

The following requirements shall be observed in the I district, except as otherwise provided in this title:

A. Minimum lot size: twenty thousand (20,000) square feet.

B. Minimum lot width: one hundred (100) feet.

C. Setbacks.

1. Twenty (20) foot minimum setback from any street or public right-of-way.

2. Ten (10) foot to thirty-five (35) foot setback from a railroad right-of-way, to be determined in the use permit.

3. Minimum three-foot unobstructed clearance between building and property boundaries.

D. Building Height. Building height maximum is forty-five (45) feet, except as noted below:

1. Height of buildings adjacent to residential or agricultural districts may only be as tall as their setbacks from those residential or agricultural districts.

E. Floor Area Ratio Maximum.

1. Fifty one-hundredths (0.50) for uses including less than ninety percent (90%) warehousing.

2. Sixty one-hundredths (0.60) for uses including no less than ninety percent (90%) warehousing.

F. Fencing.

1. No fence in the front setback shall exceed three feet in height; all other fencing shall not exceed eight feet in height.

2. Opaque, eight-foot tall, landscaped fence or wall required where I district development adjoins non-I district, which fence or wall need not be on the property boundary.

3. Opaque, eight-foot tall, soundproofed, landscaped wall required where I district abuts residential district.

G. Minimum of ten percent (10%) of site shall be landscaped pursuant to standards in Section 17.52.090(E) (SC district standards) and the following:

1. A minimum fifteen (15) foot landscaped buffer with street trees (generally spaced at one tree per thirty (30) feet of frontage) shall be provided adjacent to public streets.

2. Trees shall be credited for the estimated area of crown development at five years, provided:

a. Landscape plans are prepared by a licensed landscape architect or licensed landscape contractor, whose charge is to provide visual buffers between properties, screen industrial development from nonindustrial property and provide useful shade.

b. Trees are at least fifteen (15) gallon size at time of planting, and the design otherwise conforms to the standards in Section 17.52.090(E).

c. Ground cover under trees is installed and maintained in accordance with approved plans.

d. Installation and first year maintenance is performed by a licensed landscape contractor.

3. Water-conserving designs and irrigation systems shall be used.

H. Parking shall be regulated by Chapter 17.124, except that:

1. Office buildings and office floor areas shall provide one parking space per three hundred (300) square feet of office area.

2. General industrial uses shall provide at least one parking space per six hundred fifty (650) square feet of industrial area.

3. Except for wine warehouses, warehouses and warehousing space shall provide at least one parking space per one thousand (1,000) square feet of warehousing space. Wine warehouses shall provide parking spaces as set forth in Section 17.124.030(G).

4. Parking spaces may be paved with all-weather dust-free pervious materials, but travelways must be of concrete or asphalt.

5. Off-street parking may not be in front yard, but may be anywhere else provided it is not in conflict with subsection C or G of this section.

I. No loading/unloading may be conducted in a public right-of-way. There shall be at least one off-street loading space per use. Additional loading dock and truck standing requirements shall be based on proposed uses; these requirements shall be specified in each use permit. These requirements shall ensure that trucks will not block traffic or obstruct on-street parking spaces. Upon adoption of a finding by the planning commission that a business is unreasonably blocking traffic or obstructing on-street parking spaces, the planning commission may review and amend that business's use permit as needed to permit the street to function as it should.

J. Exterior lighting shall be directed or shielded so as to prevent glare onto any residential property or public roadway.

K. Trash bin shall not be visible from public right-of-way.

L. Materials storage shall be screened from public view.

M. Activities that create significant noise shall be designed and located to minimize noise effects on adjacent property.

N. Activities that generate odor, fumes, vibration, glare, dust, water or air pollution, fire or explosive hazard and visual impact shall be subject to use permit conditions that ensure that public health, safety and welfare is not compromised.

O. A rapid entry Knox Box system shall be installed.

P. Installation of approved interior fire sprinkler system.

Q. One-hour minimum fire resistant construction on all exterior walls within ten (10) feet of property boundary. Fire resistant construction of interior walls shall be determined by type of occupancy.

R. A business plan shall be filed annually with the county of Napa hazardous material section of the department of environmental management and a copy of approval shall be submitted to the city planning director. No hazardous or flammable materials shall be stored outside of the building without a proper storage container.

S. Signs shall be regulated by Chapter 17.148.

T. Low flow (water restricting) plumbing devices shall be installed.

U. Off-street parking and loading shall be provided in compliance with Chapter 17.124. Requirements pertaining to minimum height, setbacks, parking, loading, pollution, landscaping and other pertinent factors shall be as determined by the use permit granted. (Ord. 01-8 § 3 (part); prior code § 27.106)

17.60.080 Other uses, standards and requirements.

A. Wastewater Generation.

Each and every use allowed in the CB district shall be restricted such that all said uses on any single lot of record, as defined by Section 13.24.090(C) do not in the aggregate generate wastewater in excess of the following standards:

1. Six hundred (600) gallons per day, without a use permit which regulates wastewater generation;

2. Two thousand five hundred (2,500) gallons per day, upon grant of a use permit regulating wastewater generation; provided the city council approves a use permit with conditions ensuring that all reasonable water conservation measures are implemented, and finds that approval is in the best interest of the city; or

3. For all uses lawfully in effect on any lot of record on December 8, 1981, which generated in aggregate more than six hundred (600) gallons of wastewater per day, such uses may be altered, reconstructed or changed; provided, that the resultant uses on any such lot of record do not in the aggregate generate wastewater exceeding the aggregate wastewater gallonage per day for all uses existing on the lot of record on December 8, 1981.

B. Right to Farm Provision. Property owners within the district shall recognize that there exists a right to farm properties within the district and in the vicinity of the district. There is a good faith expectation that no complaints will occur regarding legal normal agricultural activities on properties in the district or in the vicinity of the district. Such activities may include day or night disbursement of chemicals, and creation of dust, noise, or fumes. (Prior code § 27.107)

Chapter 17.60
INDUSTRIAL (I) DISTRICT

Sections:

17.60.010 Purpose.

17.60.020 Permitted uses.

17.60.030 Conditional uses.

17.60.040 Design review required.

17.60.050 Accessory uses, buildings and structures.

17.60.060 Prohibited uses.

17.60.070 Development standards.

17.60.080 Other uses, standards and requirements.

17.60.010 Purpose.

The industrial district (I) designation provides for industrial parks, warehouses, light manufacturing, auto and farm-related equipment sales and repairs, viticulture and winery support services and similar and compatible uses. (Prior code § 27.100)

17.60.020 Permitted uses.

The following uses are permitted within the district, except that new uses or expansion of existing uses proposed for industrial property that is located adjacent to property zoned for residential use shall require a use permit, as defined in Section 17.60.030.

Building material display rooms;

Carpentry, cabinet and sign shops;

Catering establishments including retail sales of items prepared on the premises;

Commercial laundries, rug cleaners;

Contractors' offices and yards;

Crop services;

Dry cleaners;

Farm equipment sales and repair;

Feed, grain and farm supplies, including the bulk sale of pesticides, herbicides and fertilizers;

Laboratories and related facilities for research, experimentation, testing and product development when conducted entirely within an enclosed building and does not involve the use of hazardous substances;

Landscape services;

Machinery repair shops;

Mini-storage facilities;

Printing and copy services;

Rental businesses, including equipment, vehicles and party services;

Reupholstery and furniture repair;

Saddle and equestrian store and repair;

Security services;

Sign shop;

Small equipment repair, including, but not limited to: chain saws, lawn mowers, outboard motors, hedge trimmers and power generators;

Small recycling centers (not more than five hundred (500) square feet) including mobile recycling units, nonprofit drop-off facilities and reverse vending machines;

Technology information services;

Warehouse and wholesale businesses, excluding retail sales;

Welding supply shop;

Well drilling shops;

Wood yards;

Other similar uses found consistent with the general plan and the I district pursuant to Chapter 17.08. (Ord. 07-1 § 2 (part): Ord. 00-7 § 2; prior code § 27.101)

17.60.030 Conditional uses.

The following uses require approval of a use permit as regulated by Chapter 17.168:

All uses or expansion of existing uses proposed for industrial property that is located adjacent to property zoned for residential use. "Adjacent to" shall be defined to include properties with a common property line or properties

directly across a street. “Property zoned for residential use” shall be defined as that property zoned LR low density, MR medium density, or HR high density residential;

Ambulance services, including cooking and sleeping facilities for employees on duty only;

Art, dancing, photographic and music studios and schools, including retail sales as an accessory use;

Asphalt batch, cement and concrete plants;

Audio/video recording studio;

Dwelling unit in conjunction with an approved industrial use subject to the following:

1. Approval of a dwelling unit shall be conditioned to recognize the industrial nature of the area and to provide for the safety of any children who may reside in the unit,

2. The floor area of the dwelling unit shall not exceed eight hundred fifty (850) square feet,

3. One off-street parking space shall be provided,

4. The dwelling unit shall be the primary residence of the occupant, or of the caretaker or security person;

Fuel yards other than wood;

Health club and fitness centers;

Kennels;

Laboratories and related facilities for research, experimentation, testing and product development when conducted entirely within an enclosed building and involving the use of a hazardous substance;

Livestock services;

Lumber and building materials yards;

Machine, welding, sheet metal, electric motor, pump and heavy equipment repair shops;

Manufacturing, packaging and processing when conducted entirely within an enclosed building;

Mining and quarrying of nonmetallic minerals subject to the provisions of the Surface Mining and Reclamation Act of 1975 (Section 2710 et seq. of the Public Resources Code);

Mortuary and funeral homes;

Recycling centers, including large recycling centers (five hundred (500) square feet or more);

Towing services;

Truck, bus, taxi, van and limousine terminals and service centers, including truck, trailer, and recreation vehicle rental and storage;

Veterinarian hospitals and clinics;

Wineries, excluding retail sales and tasting;

Other similar uses found consistent with the general plan and the I district pursuant to Chapter 17.08. (Ord. 07-1 § 2 (part): Ord. 03-4 § 17: Ord. 00-7 § 3; prior code § 27.102)

17.60.040 Design review required.

Pursuant to Chapter 17.164 all signs, new structures or buildings, or exterior revisions of any existing structures or buildings for both permitted and conditional uses shall require design review. (Prior code § 27.103)

17.60.050 Accessory uses, buildings and structures.

The following are the accessory uses, buildings and structures permitted in the I district:

A. Signs subject to the provisions of Chapter 17.148;

B. On-site storage facilities accessory to the primary use subject to design review approval by the planning commission. On-site storage shall not be located within required parking areas. Design review will include, but not be limited to, location, length of time for the storage facility, and size of the storage facility;

C. Other uses and structures which are customarily incidental and clearly subordinate to permitted and conditional use pursuant to Chapter 17.08. (Ord. 07-1 § 2 (part): prior code § 27.104)

17.60.060 Prohibited uses.

The following uses are specifically prohibited in the I district:

A. Activities which emit dangerous radioactivity at any point;

B. Uses constituting or resulting in public or private nuisance because of emission of any smoke, dust, gas, odor, fumes, noise, vibration, radioactive or fissionable material or refuse material;

C. Incineration or reduction of garbage, offal or dead animals;

D. Refining of petroleum;

E. Rendering of animal fats and oils;

F. Smelting of metallic ores;

G. Stockyards or slaughterhouses. (Prior code § 27.105)

17.60.070 Development standards.

The following requirements shall be observed in the I district, except as otherwise provided in this title:

A. Minimum lot size: twenty thousand (20,000) square feet.

B. Minimum lot width: one hundred (100) feet.

C. Setbacks.

1. Twenty (20) foot minimum setback from any street or public right-of-way.

2. Ten (10) foot to thirty-five (35) foot setback from a railroad right-of-way, to be determined in the use permit.

3. Minimum three-foot unobstructed clearance between building and property boundaries.

D. Building Height. Building height maximum is forty-five (45) feet, except as noted below:

1. Height of buildings adjacent to residential or agricultural districts may only be as tall as their setbacks from those residential or agricultural districts.

E. Floor Area Ratio Maximum.

1. Fifty one-hundredths (0.50) for uses including less than ninety percent (90%) warehousing.

2. Sixty one-hundredths (0.60) for uses including no less than ninety percent (90%) warehousing.

F. Fencing.

1. No fence in the front setback shall exceed three feet in height; all other fencing shall not exceed eight feet in height.

2. Opaque, eight-foot tall, landscaped fence or wall required where I district development adjoins non-I district, which fence or wall need not be on the property boundary.

3. Opaque, eight-foot tall, soundproofed, landscaped wall required where I district abuts residential district.

G. Minimum of ten percent (10%) of site shall be landscaped pursuant to standards in Section 17.52.090(E) (SC district standards) and the following:

1. A minimum fifteen (15) foot landscaped buffer with street trees (generally spaced at one tree per thirty (30) feet of frontage) shall be provided adjacent to public streets.

2. Trees shall be credited for the estimated area of crown development at five years, provided:

a. Landscape plans are prepared by a licensed landscape architect or licensed landscape contractor, whose charge is to provide visual buffers between properties, screen industrial development from nonindustrial property and provide useful shade.

b. Trees are at least fifteen (15) gallon size at time of planting, and the design otherwise conforms to the standards in Section 17.52.090(E).

c. Ground cover under trees is installed and maintained in accordance with approved plans.

d. Installation and first year maintenance is performed by a licensed landscape contractor.

3. Water-conserving designs and irrigation systems shall be used.

H. Parking shall be regulated by Chapter 17.124, except that:

1. Office buildings and office floor areas shall provide one parking space per three hundred (300) square feet of office area.

2. General industrial uses shall provide at least one parking space per six hundred fifty (650) square feet of industrial area.

3. Except for wine warehouses, warehouses and warehousing space shall provide at least one parking space per one thousand (1,000) square feet of warehousing space. Wine warehouses shall provide parking spaces as set forth in Section 17.124.030(G).

4. Parking spaces may be paved with all-weather dust-free pervious materials, but travelways must be of concrete or asphalt.

5. Off-street parking may not be in front yard, but may be anywhere else provided it is not in conflict with subsection C or G of this section.

I. No loading/unloading may be conducted in a public right-of-way. There shall be at least one off-street loading space per use. Additional loading dock and truck standing requirements shall be based on proposed uses; these requirements shall be specified in each use permit. These requirements shall ensure that trucks will not block traffic or obstruct on-street parking spaces. Upon adoption of a finding by the planning commission that a business is unreasonably blocking traffic or obstructing on-street parking spaces, the planning commission may review and amend that business's use permit as needed to permit the street to function as it should.

J. Exterior lighting shall be directed or shielded so as to prevent glare onto any residential property or public roadway.

K. Trash bin shall not be visible from public right-of-way.

L. Materials storage shall be screened from public view.

M. Activities that create significant noise shall be designed and located to minimize noise effects on adjacent property.

N. Activities that generate odor, fumes, vibration, glare, dust, water or air pollution, fire or explosive hazard and visual impact shall be subject to use permit conditions that ensure that public health, safety and welfare is not compromised.

O. A rapid entry Knox Box system shall be installed.

P. Installation of approved interior fire sprinkler system.

Q. One-hour minimum fire resistant construction on all exterior walls within ten (10) feet of property boundary. Fire resistant construction of interior walls shall be determined by type of occupancy.

R. A business plan shall be filed annually with the county of Napa hazardous material section of the department of environmental management and a copy of approval shall be submitted to the city planning director. No hazardous or flammable materials shall be stored outside of the building without a proper storage container.

S. Signs shall be regulated by Chapter 17.148.

T. Low flow (water restricting) plumbing devices shall be installed.

U. Off-street parking and loading shall be provided in compliance with Chapter 17.124. Requirements pertaining to minimum height, setbacks, parking, loading, pollution, landscaping and other pertinent factors shall be as determined by the use permit granted. (Ord. 01-8 § 3 (part); prior code § 27.106)

17.60.080 Other uses, standards and requirements.

A. Wastewater Generation.

Each and every use allowed in the CB district shall be restricted such that all said uses on any single lot of record, as defined by Section 13.24.090(C) do not in the aggregate generate wastewater in excess of the following standards:

1. Six hundred (600) gallons per day, without a use permit which regulates wastewater generation;

2. Two thousand five hundred (2,500) gallons per day, upon grant of a use permit regulating wastewater generation; provided the city council approves a use permit with conditions ensuring that all reasonable water conservation measures are implemented, and finds that approval is in the best interest of the city; or

3. For all uses lawfully in effect on any lot of record on December 8, 1981, which generated in aggregate more than six hundred (600) gallons of wastewater per day, such uses may be altered, reconstructed or changed; provided, that the resultant uses on any such lot of record do not in the aggregate generate wastewater exceeding the aggregate wastewater gallonage per day for all uses existing on the lot of record on December 8, 1981.

B. Right to Farm Provision. Property owners within the district shall recognize that there exists a right to farm properties within the district and in the vicinity of the district. There is a good faith expectation that no complaints will occur regarding legal normal agricultural activities on properties in the district or in the vicinity of the district. Such activities may include day or night disbursement of chemicals, and creation of dust, noise, or fumes. (Prior code § 27.107)

Chapter 17.60
INDUSTRIAL (I) DISTRICT

Sections:

17.60.010 Purpose.
17.60.020 Permitted uses.
17.60.030 Conditional uses.
17.60.040 Design review required.
17.60.050 Accessory uses, buildings and structures.
17.60.060 Prohibited uses.
17.60.070 Development standards.
17.60.080 Other uses, standards and requirements.

17.60.010 Purpose.

The *industrial* district (I) designation provides for *industrial* parks, warehouses, light manufacturing, auto and farm-related equipment sales and repairs, viticulture and winery support services and similar and compatible uses. (Prior code § 27.100)

17.60.020 Permitted uses.

The following uses are permitted within the district, except that new uses or expansion of existing uses proposed for *industrial* property that is located adjacent to property zoned for residential use shall require a use permit, as defined in Section 17.60.030.

Building material display rooms;

Carpentry, cabinet and sign shops;

Catering establishments including retail sales of items prepared on the premises;

Commercial laundries, rug cleaners;

Contractors’ offices and yards;

Crop services;

Dry cleaners;

Farm equipment sales and repair;

Feed, grain and farm supplies, including the bulk sale of pesticides, herbicides and fertilizers;

Laboratories and related facilities for research, experimentation, testing and product development when conducted entirely within an enclosed building and does not involve the use of hazardous substances;

Landscape services;

Machinery repair shops;

Mini-storage facilities;

Printing and copy services;

Rental businesses, including equipment, vehicles and party services;

Reupholstery and furniture repair;

Saddle and equestrian store and repair;

Security services;

Sign shop;

Small equipment repair, including, but not limited to: chain saws, lawn mowers, outboard motors, hedge trimmers and power generators;

Small recycling centers (not more than five hundred (500) square feet) including mobile recycling units, nonprofit drop-off facilities and reverse vending machines;

Technology information services;

Warehouse and wholesale businesses, excluding retail sales;

Welding supply shop;

Well drilling shops;

Wood yards;

Other similar uses found consistent with the general plan and the I district pursuant to Chapter 17.08. (Ord. 07-1 § 2 (part): Ord. 00-7 § 2; prior code § 27.101)

17.60.030 Conditional uses.
The following uses require approval of a use permit as regulated by Chapter 17.168:

All uses or expansion of existing uses proposed for *industrial* property that is located adjacent to property zoned for residential use. “Adjacent to” shall be defined to include properties with a common property line or properties directly across a street. “Property zoned for residential use” shall be defined as that property zoned LR low density, MR medium density, or HR high density residential;

Ambulance services, including cooking and sleeping facilities for employees on duty only;

Art, dancing, photographic and music studios and schools, including retail sales as an accessory use;

Asphalt batch, cement and concrete plants;

Audio/video recording studio;

Dwelling unit in conjunction with an approved *industrial* use subject to the following:

1. Approval of a dwelling unit shall be conditioned to recognize the *industrial* nature of the area and to provide for the safety of any children who may reside in the unit,

2. The floor area of the dwelling unit shall not exceed eight hundred fifty (850) square feet,

3. One off-street parking space shall be provided,

4. The dwelling unit shall be the primary residence of the occupant, or of the caretaker or security person;

Fuel yards other than wood;

Health club and fitness centers;

Kennels;

Laboratories and related facilities for research, experimentation, testing and product development when conducted entirely within an enclosed building and involving the use of a hazardous substance;

Livestock services;

Lumber and building materials yards;

Machine, welding, sheet metal, electric motor, pump and heavy equipment repair shops;

Manufacturing, packaging and processing when conducted entirely within an enclosed building;

Mining and quarrying of nonmetallic minerals subject to the provisions of the Surface Mining and Reclamation Act of 1975 (Section 2710 et seq. of the Public Resources Code);

Mortuary and funeral homes;

Recycling centers, including large recycling centers (five hundred (500) square feet or more);

Towing services;

Truck, bus, taxi, van and limousine terminals and service centers, including truck, trailer, and recreation vehicle rental and storage;

Veterinarian hospitals and clinics;

Wineries, excluding retail sales and tasting;

Other similar uses found consistent with the general plan and the I district pursuant to Chapter 17.08. (Ord. 07-1 § 2 (part): Ord. 03-4 § 17: Ord. 00-7 § 3; prior code § 27.102)

17.60.040 Design review required.
Pursuant to Chapter 17.164 all signs, new structures or buildings, or exterior revisions of any existing structures or buildings for both permitted and conditional uses shall require design review. (Prior code § 27.103)

17.60.050 Accessory uses, buildings and structures.
The following are the accessory uses, buildings and structures permitted in the I district:

A. Signs subject to the provisions of Chapter 17.148;

B. On-site storage facilities accessory to the primary use subject to design review approval by the planning commission. On-site storage shall not be located within required parking areas. Design review will include, but not be limited to, location, length of time for the storage facility, and size of the storage facility;

C. Other uses and structures which are customarily incidental and clearly subordinate to permitted and conditional use pursuant to Chapter 17.08. (Ord. 07-1 § 2 (part): prior code § 27.104)

17.60.060 Prohibited uses.
The following uses are specifically prohibited in the I district:

A. Activities which emit dangerous radioactivity at any point;

B. Uses constituting or resulting in public or private nuisance because of emission of any smoke, dust, gas, odor, fumes, noise, vibration, radioactive or fissionable material or refuse material;

C. Incineration or reduction of garbage, offal or dead animals;

D. Refining of petroleum;

E. Rendering of animal fats and oils;

F. Smelting of metallic ores;

G. Stockyards or slaughterhouses. (Prior code § 27.105)

17.60.070 Development standards.

The following requirements shall be observed in the I district, except as otherwise provided in this title:

A. Minimum lot size: twenty thousand (20,000) square feet.

B. Minimum lot width: one hundred (100) feet.

C. Setbacks.

1. Twenty (20) foot minimum setback from any street or public right-of-way.

2. Ten (10) foot to thirty-five (35) foot setback from a railroad right-of-way, to be determined in the use permit.

3. Minimum three-foot unobstructed clearance between building and property boundaries.

D. Building Height. Building height maximum is forty-five (45) feet, except as noted below:

1. Height of buildings adjacent to residential or agricultural districts may only be as tall as their setbacks from those residential or agricultural districts.

E. Floor Area Ratio Maximum.

1. Fifty one-hundredths (0.50) for uses including less than ninety percent (90%) warehousing.

2. Sixty one-hundredths (0.60) for uses including no less than ninety percent (90%) warehousing.

F. Fencing.

1. No fence in the front setback shall exceed three feet in height; all other fencing shall not exceed eight feet in height.

2. Opaque, eight-foot tall, landscaped fence or wall required where I district development adjoins non-I district, which fence or wall need not be on the property boundary.

3. Opaque, eight-foot tall, soundproofed, landscaped wall required where I district abuts residential district.

G. Minimum of ten percent (10%) of site shall be landscaped pursuant to standards in Section 17.52.090(E) (SC district standards) and the following:

1. A minimum fifteen (15) foot landscaped buffer with street trees (generally spaced at one tree per thirty (30) feet of frontage) shall be provided adjacent to public streets.

2. Trees shall be credited for the estimated area of crown development at five years, provided:

a. Landscape plans are prepared by a licensed landscape architect or licensed landscape contractor, whose charge is to provide visual buffers between properties, screen *industrial* development from nonindustrial property and provide useful shade.

b. Trees are at least fifteen (15) gallon size at time of planting, and the design otherwise conforms to the standards in Section 17.52.090(E).

c. Ground cover under trees is installed and maintained in accordance with approved plans.

d. Installation and first year maintenance is performed by a licensed landscape contractor.

3. Water-conserving designs and irrigation systems shall be used.

H. Parking shall be regulated by Chapter 17.124, except that:

1. Office buildings and office floor areas shall provide one parking space per three hundred (300) square feet of office area.

2. General *industrial* uses shall provide at least one parking space per six hundred fifty (650) square feet of *industrial* area.

3. Except for wine warehouses, warehouses and warehousing space shall provide at least one parking space per one thousand (1,000) square feet of warehousing space. Wine warehouses shall provide parking spaces as set forth in Section 17.124.030(G).

4. Parking spaces may be paved with all-weather dust-free pervious materials, but travelways must be of concrete or asphalt.

5. Off-street parking may not be in front yard, but may be anywhere else provided it is not in conflict with subsection C or G of this section.

I. No loading/unloading may be conducted in a public right-of-way. There shall be at least one off-street loading space per use. Additional loading dock and truck standing requirements shall be based on proposed uses; these requirements shall be specified in each use permit. These requirements shall ensure that trucks will not block traffic or obstruct on-street parking spaces. Upon adoption of a finding by the planning commission that a business is unreasonably blocking traffic or obstructing on-street parking spaces, the planning commission may review and amend that business's use permit as needed to permit the street to function as it should.

J. Exterior lighting shall be directed or shielded so as to prevent glare onto any residential property or public roadway.

K. Trash bin shall not be visible from public right-of-way.

L. Materials storage shall be screened from public view.

M. Activities that create significant noise shall be designed and located to minimize noise effects on adjacent property.

N. Activities that generate odor, fumes, vibration, glare, dust, water or air pollution, fire or explosive hazard and visual impact shall be subject to use permit conditions that ensure that public health, safety and welfare is not compromised.

O. A rapid entry Knox Box system shall be installed.

P. Installation of approved interior fire sprinkler system.

Q. One-hour minimum fire resistant construction on all exterior walls within ten (10) feet of property boundary. Fire resistant construction of interior walls shall be determined by type of occupancy.

R. A business plan shall be filed annually with the county of Napa hazardous material section of the department of environmental management and a copy of approval shall be submitted to the city planning director. No hazardous or flammable materials shall be stored outside of the building without a proper storage container.

S. Signs shall be regulated by Chapter 17.148.

T. Low flow (water restricting) plumbing devices shall be installed.

U. Off-street parking and loading shall be provided in compliance with Chapter 17.124. Requirements pertaining to minimum height, setbacks, parking, loading, pollution, landscaping and other pertinent factors shall be as determined by the use permit granted. (Ord. 01-8 § 3 (part); prior code § 27.106)

17.60.080 Other uses, standards and requirements.

A. Wastewater Generation.

Each and every use allowed in the CB district shall be restricted such that all said uses on any single lot of record, as defined by Section 13.24.090(C) do not in the aggregate generate wastewater in excess of the following standards:

1. Six hundred (600) gallons per day, without a use permit which regulates wastewater generation;

2. Two thousand five hundred (2,500) gallons per day, upon grant of a use permit regulating wastewater generation; provided the city council approves a use permit with conditions ensuring that all reasonable water conservation measures are implemented, and finds that approval is in the best interest of the city; or

3. For all uses lawfully in effect on any lot of record on December 8, 1981, which generated in aggregate more than six hundred (600) gallons of wastewater per day, such uses may be altered, reconstructed or changed; provided, that the resultant uses on any such lot of record do not in the aggregate generate wastewater exceeding the aggregate wastewater gallonage per day for all uses existing on the lot of record on December 8, 1981.

B. Right to Farm Provision. Property owners within the district shall recognize that there exists a right to farm properties within the district and in the vicinity of the district. There is a good faith expectation that no complaints will occur regarding legal normal agricultural activities on properties in the district or in the vicinity of the district. Such activities may include day or night disbursement of chemicals, and creation of dust, noise, or fumes. (Prior code § 27.107)

Chapter 17.140
NONCONFORMING USES, BUILDINGS, STRUCTURES, LOTS AND SIGNS

Sections:

17.140.010 Purpose.
17.140.020 Nonconforming uses.
17.140.030 Nonconforming buildings or structures.
17.140.040 Nonconforming lots.
17.140.050 Illegal nonconforming uses or structures as public nuisance.
17.140.060 Signs.

17.140.010 Purpose.

Legally established existing uses, structures, lots and signs which do not conform to the regulations of the zoning district in which they are located are nonconforming. Nonconforming uses, structures, lots and signs shall be subject to these specific regulations in addition to general regulations contained in the zoning ordinance in order to permit the continued operation of such uses, structures, lots and signs while providing for their gradual elimination and/or compliance with the policies of the general plan and zoning ordinance. (Prior code § 27.300)

17.140.020 Nonconforming uses.

A nonconforming use is a legally established use of land which is not permitted in the zoning district in which it is located, or a use which is permitted by use permit but for which no use permit has been obtained, because the use was established prior to the application of the existing district due to rezoning, annexation or change in the regulations of the zoning ordinance. Legally established nonconforming uses shall be governed by the following regulations:

A. Nonconforming uses may be continued indefinitely, subject to the provisions of this chapter.

B. No nonconforming use shall be permitted to expand its operation or enlarge its floor area.

C. A legally established residential use which exceeds the density permitted by the zoning district and/or general plan land use designation in which it is located is a nonconforming use, and the density may not be increased, except as may be permitted as a density bonus pursuant to Chapter 17.144. However, buildings or structures on the lot on which such nonconforming residential use is located may be expanded, enlarged or reconstructed upon the approval of a use permit by the planning commission pursuant to Chapter 17.168.

D. A nonconforming use may not be changed to another nonconforming use of the same or greater intensity. A nonconforming use may be changed to another nonconforming use of the lesser intensity than the previous nonconforming use upon the approval of a use permit by the planning commission pursuant to the provisions of Chapter 17.168. The planning commission must make the following findings to approve such a use permit:

1. The proposed nonconforming use is of lesser intensity than the previous nonconforming use (e.g., fewer employees, reduced *storage* capacity, reduced demand on public facilities, reduced traffic impacts, less energy consumption or fewer hours of operation); and

2. The proposed nonconforming use will not be detrimental to any existing or potential permitted use in the area in which the nonconforming use is located.

These findings shall be in addition to those required for the approval of use permits contained in Chapter 17.168. If a nonconforming use is replaced by a use of lesser intensity, the occupancy thereafter may not revert to a use of greater intensity. In granting a use permit to allow a nonconforming use to be replaced with another nonconforming use of lesser intensity, the planning commission shall establish an amortization schedule for the nonconforming use, by setting a date after which the nonconforming use must be discontinued or replaced with a conforming use.

E. No nonconforming use may be resumed, reestablished, reopened or replaced by any other nonconforming use after it has been abandoned except as provided in subsections F through J of this section. Any subsequent use of the land shall be in conformity with the provisions of the zoning ordinance. Abandonment shall mean any giving up, closing, surrender, interruption, termination or discontinuance of the nonconforming use for a period of sixty (60) continuous days, regardless of intent to surrender the nonconforming use. Harold Smith “abandoned” their mining operations (which included rock crushing operations) of sulphur creek in late 1990’s. They have never filed for the required use permit to resume rock crushing after abandonment of previous permit.

F. When a nonconforming use which has been operating in conformance with a previously approved use permit is abandoned, the same use which previously existed may be resumed, reestablished, or reopened within a six month time period from the date of abandonment in accordance with the following criteria:

1. Written notice of the date of reestablishment shall be given to the planning director prior to reestablishment of the use.

2. A city business license shall be obtained.

3. All permits/approvals from any agency regulating the nonconforming use shall be obtained.

4. A fictitious business name shall be filed with Napa County if required by state regulations.

5. All required information shall be filed with the State Board of Equalization.

6. If a building permit is requested to remodel the existing building, the use permit remains vested, provided the building permit has been issued, construction consistent with the building permit has commenced, and construction is actively pursued toward completion prior to the six-month time period defining abandonment.

When it has been determined that the use has been resumed, reestablished, or reopened consistent with this criteria, the use is deemed vested.

G. When a nonconforming use which requires a use permit within the zoning district and which has not been granted a use permit is abandoned the use may not be reestablished except upon approval of a use permit as provided in Chapter 17.168, or submittal of a complete use permit application within the sixty (60) day period specified by subsection E of this section. If the operation of this type of nonconforming use is substantially changed, the new use must either be a permitted use in the district or a use permit must first be approved by the planning commission to allow the change in the operation of the same type of business previously established. Change in the operation of the business shall include, but not be limited to expansion of floor area, substantial modification of the type of business, change in type of merchandise which results in a different type of business, change in hours of operation which results in a different type of business (i.e., restaurant use to nightclub use) or changes to the business which will result in increased traffic, water use, or wastewater generation impacts.

H. When a nonconforming use which is no longer permitted in the district and which has not been granted a use permit is abandoned the use may not be reestablished except upon approval of a use permit as provided in subsection J of this section. If the operation of a legally established nonconforming use is substantially changed, the new use must either be a permitted use in the district or the planning commission must first review the change in operation to determine that the change in operation does not increase the degree of nonconformity. If the planning commission determines that the change in operation substantially increases the degree of nonconformity the change in use is not authorized. Change in the operation of the business shall include, but not be limited to expansion of floor area, substantial modification of the type of business, change in type of merchandise (one type of business to another type of business), change in hours of operation which results in a different type of business (i.e., restaurant use to nightclub use) or changes to the business which will result in increased traffic, water use, or wastewater generation impacts.

I. Notwithstanding the provisions in subsections E through H and J of this section the period of time in which a legally established nonconforming use may be reestablished may be extended for one year upon

approval of the planning director for uses which have been closed because of seismic retrofit construction authorized by a city building permit.

J. Notwithstanding the provisions in subsections E through I of this section, a nonconforming use of a building or structure which has been abandoned and the use is no longer permitted in the district may be reestablished after abandonment upon the approval of a use permit by the planning commission pursuant to the provisions of Chapter 17.168. The planning commission must make the following findings to approve such a use permit:

1. The building or structure was specifically designed or modified for a nonconforming use;

2. The structural alterations necessary to bring the building or structure into conformance with the standards of the zoning ordinance are estimated by the chief building inspector to cost more than fifty (50) percent of the current market value of building or structure; and

3. The proposed reestablishment of a nonconforming use will not be detrimental to any existing or potential permitted use in the area in which the nonconforming use is located. Prohibited Use in I district: B. Uses constituting or resulting in public or private nuisance because of emission of any smoke, dust, gas, odor, fumes, noise, vibration, radioactive or fissionable material or refuse material;

These findings shall be in addition to those required for the approval of use permits contained in Chapter 17.168. (Prior code § 27.301)

17.140.030 Nonconforming buildings or structures.

A nonconforming building, structure or other physical feature is a legally established building, structure or other physical feature which does not meet the standards of the zoning district in which it is located. It can also be a building, structure or other physical feature for which a use permit, variance or other similar permit is required but for which no such permit has been obtained because the building, structure or other physical feature was established prior to the application of the existing zoning district due to rezoning, annexation or change in the regulations of the zoning ordinance. Legally established nonconforming buildings, structures and physical features shall be governed by the following regulations:

A. Nonconforming buildings, structures or other physical features may be continued indefinitely subject to the provisions of this chapter.

B. A nonconforming building, structure or other physical feature shall not be reconstructed, except as provided for in subsection D of this section, expanded, or enlarged unless the new work will be in conformance with the regulations and standards of the zoning district in which it is located and the provisions of the zoning ordinance.

C. A nonconforming building, structure or physical feature may be remodeled, rehabilitated, or structurally altered if the new work does not increase the degree of nonconformity.

D. A nonconforming building, structure or physical feature damaged or destroyed by any means except demolition or intentional removal, may be reconstructed to its original condition if the chief building inspector determines that the cost of reconstruction does not exceed fifty percent (50%) of its market value as determined by the county assessor on the last equalized assessment roll at the time of its destruction or damage. Where the chief building inspector determines that the costs of reconstruction exceed fifty percent (50%) of its market value as determined by the county assessor on the last equalized assessment roll at the time of its destruction or damage, a nonconforming building, structure or physical feature may be reconstructed to its original or other nonconforming condition only upon the approval of a use permit by the planning commission pursuant to the provisions of Chapter 17.168 applied for within one year of damage or destruction. The planning commission may require as a condition of approval that the building is thereafter devoted to a conforming use. The planning commission must make the following findings to approve such a use permit:

The proposed reconstruction of a nonconforming building, structure or physical feature will not be detrimental to any existing or potential permitted use, building or structure in the area in which the nonconforming use is located.

This finding shall be in addition to those required for the approval of use permits contained in Chapter 17.168. (Prior code § 27.302)

17.140.040 Nonconforming lots.

A nonconforming lot is a legally established lot which does not conform to the regulations regarding area, width, frontage or other such standard for the zoning district in which it is located because of rezoning, annexation or change in the regulations of the zoning ordinance, subdivision ordinance or Subdivision Map Act. Legally created nonconforming lots shall be governed by the following regulations:

A. A nonconforming lot shall not be changed in any way that would increase the degree of nonconformity unless there is a corresponding decrease in the degree of nonconformity of an adjoining lot and no new lot(s) or additional density permitted will result.

B. Any conforming use or conforming building, structure or other physical feature may be established on any nonconforming lot provided the use, building, structure or other physical feature conforms to the standards and regulations of the zoning district in which it is located and the provisions of this title.

C. A nonconforming lot to be used for residential purposes shall be subject to the density requirements of the zoning district and general plan designation in which it is located. However, one single-family dwelling and customary accessory buildings may be permitted on any nonconforming lot in any zoning district in which a single-family dwelling is permitted, provided the single-family dwelling and accessory buildings shall conform to the design standards and regulations of the zoning district in which they are located and the provisions of this title. (Prior code § 27.303)

17.140.050 Illegal nonconforming uses or structures as public nuisance.

Any building or structure set up, erected, built or moved and any use of property contrary to the provisions of this title shall be and the same is hereby declared to be unlawful and a public nuisance. Action shall be immediately commenced for abatement, removal and enjoinment in the manner provided by law; other steps shall be taken to apply to such court or courts as may have jurisdiction to grant such relief as will abate and remove such building or structure and restrain and enjoin any person from setting up, erecting, building or moving any such building or using any property contrary to the provisions of this title. The remedies provided for herein shall be cumulative and not exclusive. (Prior code § 27.304) Rock piles and crushing activity

17.140.060 Signs.

The following provisions shall apply to all advertising billboards, identification signs, on-site commercial or *industrial* advertising signs, public or quasi-public directional signs, shopping center identification signs, shopping center directory signs, temporary real estate signs and temporary portable advertising signs in public parks, schools and playgrounds:

A. A lawful sign or advertising billboard existing at the time of the passage of this title, although such a sign does not conform to the provisions hereof, may be continued; provided, however, that nonconforming signs may not be continued for longer than five years after the effective date of this title, or seven years from date of erection, whichever is longer. If any nonconforming sign is abandoned, is destroyed to the extent of more than one-half of the value thereof as determined by the city building inspector, or its use is discontinued for a period of six months or more, such sign shall be removed by the owner of the property on which the sign is located.

B. No lawful sign or advertising billboard existing at the time of the passage of this title shall be enlarged, altered, reconstructed or replaced unless the enlarged, altered, reconstructed sign or replacement sign conforms to all the provisions of this title; provided, however, reasonable repair and maintenance shall be permitted.

C. The foregoing provisions shall also apply to nonconforming signs in districts hereafter changed or established and any time limit for the suspension of a nonconforming sign shall date from the date of the enactment of this title or any amendment of district boundaries which may make the signs nonconforming.

D. It shall be the duty of the owner of any nonconforming sign and the duty of the owner of any premises upon which a nonconforming sign is located, to remove the same pursuant to the provisions of this title or to bring same into conformance with the provisions of this title. If such owners fail to perform such duty, the city council shall direct the city building inspector to notify such owners in writing, registered mail, postage prepaid, to their last known addresses, to cause such removal or conformance within thirty (30) days after mailing of such notice. The owners shall have the right, upon owner's request, to a public hearing at any city council meeting following giving of the notice and prior to the expiration of the thirty (30) day period on the issue of whether or not the owner is obligated hereunder to perform such duty. If such owners fail to perform such duty within the thirty (30) day period, the city council, in addition

DYETT & BHATIA
Urban and Regional Planners

MEMORANDUM

To:	Noah Housh, Planning and Community Improvement Director, City of St. Helena
From:	Katharine Pan, Associate / Emily Alvarez, Planner
Re:	City of St Helena General Plan Update EIR – Summary of Scoping Comments
Date:	May 10, 2018

This memo summarizes comments received in response to the Notice of Preparation (NOP) for the St Helena General Plan Update Environmental Impact Report (EIR). The NOP was released on April 1, 2018, kicking off a 30-day scoping period which ran until May 1, 2018. During that time, the City received two written comments, including one from the California Department of Transportation (Caltrans) and one from a community member. Additionally, oral comments were heard at a public scoping meeting before the Planning Commission on April 17, 2018. The comments are summarized below, with agency comments reported separately from community comments. Comments are organized thematically.

SUMMARY OF COMMUNITY COMMENTS

Traffic Congestion

- Significant queuing occurs at intersections along Highway 29, some of which currently function at Level of Service (LOS) F during peak times. Analysis of service along this route should take into account the fact that traffic is not moving through intersections at peak times due to congestion, which may result in inaccurate LOS measurements. The traffic analysis methodology should consider this. The traffic model used for the analysis should be carefully reviewed to ensure accuracy.
- As Highway 29 is a State Route, some of the traffic on Highway 29 is through-traffic. The EIR should consider the effects of visitor traffic on local circulation.
- Certain roadway segments have, historically, been problematic - for example, the Adams Street corridor, particularly at the intersections of Main Street and Railroad Avenue. The 1992 EIR for Safeway traffic mitigation measures included a right turn lane at Main and Adams streets that was not implemented. If available, the Safeway EIR should be referenced to the extent it provides insight into feasible measures to address potential impacts.
- Traffic congestion also has a negative impact on safety, including the impact on pedestrians, bicyclists, and the ability for emergency response vehicles to quickly access all parts of the community. These impacts related to congestion should be considered.

Roadway Safety

- Traffic impacts should be analyzed in a holistic fashion. Potential impacts to pedestrians and cyclists in addition to vehicle impacts.

755 Sansome St, Suite 400 | T 415 956 4300
San Francisco, CA 94111 | F 415 956 7315
www.dyettandbhatia.com

- Crossing at the intersection of Adams Street and Railroad Avenue is also challenging for pedestrians, especially at the PM peak. The EIR should analyze roadway safety at critical intersections like this one.

Cumulative Traffic Impacts

- During the undergrounding of utilities at the southern approach of Highway 29, the California Public Utilities Commission (CPUC) included requirements for additional traffic signals. If the General Plan update affects the Wine Train, it could once again trigger additional signalization per the CPUC. The potential traffic congestion as the result of new signals should be analyzed as part of the cumulative analysis.
- One commenter at the scoping meeting noted that the Wine Train currently functions solely as a tourist service, but that there have been discussions on expanding to passenger service and asked how this would be addressed in the EIR. Staff responded that if this were to happen, according to CEQA Guidelines, an EIR would be required, with the CPUC acting as the lead agency for the project.

Emergency Evacuation and Response

- Currently, the only crossing in St. Helena over the Napa River exists at the Pope Street Bridge. During peak times, it may not be passable by emergency services due to traffic congestion. The EIR should consider associated impacts related to emergency evacuation and response.
- Napa River flooding can block roadways and inhibit access to the hospital. The EIR should consider associated impacts related to emergency evacuation and response.
- One commenter noted that because sections of town are only accessible via Highway 29, there is concern over emergency access. The Fire Department has established a satellite station to improve its access to these neighborhoods, but the commenter asked how emergency access will be analyzed in the EIR. The consultant clarified that the EIR will examine the emergency access to these neighborhoods given existing policies and procedures and determine if additional measures are needed to adequately provide emergency response given the growth projected at build-out.

Flooding

- During heavy rains, the City storm drain outfall to Sulphur Creek can back up and cause flooding up to Tainter Street. The EIR should consider any existing deficiencies of the storm drain system in the analysis of flooding impacts.
- The EIR should assess any safety issues related to the Flood Control Project based on documentation from the Federal Emergency Management Agency (FEMA) and the U.S. Army Corps of Engineers.

Land Use/Neighborhood Compatibility

- The EIR should analyze potential impacts resulting from increased housing density that could result from buildout of the General Plan, including neighborhood impacts related to noise, traffic, air quality and other issues.

- The potential impacts of new development and business expansion in the industrial zone located on the southeast side of St. Helena should be examined in the EIR, including potential impacts on biological resources (nearby riparian areas), air quality, noise, truck traffic, roadway safety, water quality, and hazards. Additionally, the General Plan could consider redesignating this land for uses more compatible with surrounding residences.

SUMMARY OF AGENCY COMMENTS - CALTRANS LETTER OF APRIL 30, 2018

Transportation Impact Analysis

- Caltrans advises that the transportation impact analysis be conducted using current data and methodology. As Caltrans is switching to VMT to evaluate transportation impacts, the letter suggests that the City adopt VMT thresholds.
- The letter states that the alternatives analysis should discuss buildout of potential transit improvement projects that would reduce VMT associated with visitor trips to St Helena, including future rapid-bus service in Napa Valley or expanded rail service along the Wine Train corridor.

Multimodal Planning

- Caltrans District 4 Bike Plan identifies improvements at the intersection of Pope Street and Highway 29 intended to improve bicycle safety and circulation. Additionally, the Bike Plan includes a Level of Traffic Stress (LTS) standard that indicates a high LTS along Highway 29. As such, Caltrans requests that the EIR analyze cumulative impacts affecting cyclists and pedestrians considering the Bike Plan's methodology and augmenting as necessary.
- The EIR should consider primary and secondary effects on pedestrians, bicyclists, disabled travelers, and transit users, including countermeasures and trade-offs resulting from mitigating VMT increases. Such Smart Growth approaches are consistent with MTC's Regional Transportation Plan/Sustainable Community Strategies.

General Recommendations

- Comments from Caltrans also addressed the content of the General Plan, including recommendations regarding the establishment of several policy approaches to reducing VMT. These suggestions include establishing a Priority Development Area (PDA) within the city, expanding transit and active transportation, and reducing VMT from tourism through a Transportation Demand Management (TDM) program.
- Additionally, Caltrans requested that the City estimate project-generated travel demand, estimate the cost of transit and active transportation improvements needed to support this demand, and identify potential funding sources for the needed improvements.

Appendix C: Tribal Correspondence

This page intentionally left blank.

Note that for the purposes of this EIR, the numbering of the unincorporated study areas has changed from the original numbering in the project description provided in the tribal consultation letters. As described in Chapter 2.0: Project Description and shown in Figure 2.1-1, the study areas are numbered from north to south throughout the EIR. All other details regarding the study areas are unchanged.

This page intentionally left blank.

RE: City of St. Helena General Plan Update, St. Helena & Sonoma, Napa County

Dear Mr. Housh

A record search of the Native American Heritage Commission (NAHC) *Sacred Lands File* (SLF) was completed for the area of potential project effect (APE) for the above referenced project. **Sacred sites were identified in the project area provided**. Please contact the tribes on the attached contact list directly for more information about potential sacred sites and tribal cultural resources within your APE.

The absence of site information in the *Sacred Lands File* does not indicate the absence of Native American cultural resources in any APE. Other sources of cultural resources information should be contacted regarding known and recorded sites. Please contact all of the people on the attached list. The list should provide a starting place to locate areas of potential adverse impact within the APE. I suggest you contact all of those listed, if they cannot supply information, they might recommend others with specific knowledge. **By contacting all those on the list, your organization will be better able to respond to claims of failure to consult under applicable laws.** If a response has not been received within two weeks of notification, the NAHC requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact me at my email address: sharaya.souza@nahc.ca.gov.

Sincerely,

Sharaya Souza

Re: SB18 Tribal Consultation for the City of St. Helena General Plan Update, City of St. Helena, Napa County, CA.

Dear Mr. Gabaldon,

The City of St. Helena, CA is currently in the process of updating its General Plan. The Planning Area for the General Plan update encompasses approximately 3,594 acres including the City of St. Helena, its Sphere of Influence (SOI), and three adjacent unincorporated study areas. The City is located approximately 65 miles north of San Francisco and 77 miles west of Sacramento (a vicinity map is attached for reference).

Pursuant to SB 18, the City hereby requests that you advise us within 90 days of receipt of this letter should you have any interest in consulting on the subject action.

Please feel free to contact me at (707) 968-2659 or nhoush@cityofsthelena.org should you have any questions about the City's request.

Regards,

Noah Housh,
Planning and Community Improvement Director

RE: Preparation of a Draft Environmental Impact Report for the City of St. Helena General Plan Update

Mr. Gabaldon,

This letter provides notice, pursuant to Public Resources Code §21080.3.1(d), that the City of St. Helena is in the process of updating the City of St. Helena General Plan, which is subject to the California Environmental Quality Act (CEQA) and Assembly Bill 52. The City of St. Helena recognizes the importance of preserving tribal cultural resources and respectfully invites you to consult on and participate in the review process for this project.

Project Location: The Planning Area for the General Plan update encompasses approximately 3,594 acres including the City of St. Helena, its Sphere of Influence (SOI), and three adjacent unincorporated study areas, denoted as Study Areas 1, 2, and 3 on attached map.

Project Description: The General Plan update effort began in 2007, but was postponed in an effort to address outstanding concerns and comments. In 2018, the City began an effort to finalize the Draft EIR and incorporate the following refinements:

- *An updated horizon year of 2040;*
- *Additional policies to address State general plan requirements that have been adopted since the 2010 draft of the General Plan was completed;*
- *Text revisions associated with new State requirements; and*
- *Documentation of sensitive environmental resources and regulatory or capacity constraints in the three additional study areas outside but adjacent to the city limits in order to inform decision-makers and community members about associated issues and opportunities.*

Upon receipt of this notice, Mishewal-Wappo Tribe of Alexander Valley has thirty (30) days to request consultation pursuant to Public Resources Code §21083.3.1, 21083.3.2, and 21083.3. If Mishewal-Wappo Tribe of Alexander Valley provides the City of St. Helena with confidential information subject to Public Resources Code §21082.3(c), Government Code §6254.10, or

Government Code Section §6254(r), we request that it be explicitly labeled and packaged to prevent inadvertent public disclosure.

If you have any questions and/or would like to request consultation, please contact me at 707-968-2659 or nhoush@sthelena.org.

The City of St. Helena recognizes the importance of preserving tribal cultural resources and respectfully invites you to consult on and participate in the review process for this project.

Project Location: The Planning Area for the General Plan update encompasses approximately 3,594 acres including the City of St. Helena, its Sphere of Influence (SOI), and three adjacent unincorporated study areas, denoted as Study Areas 1, 2, and 3 on attached map.

Project Description: The General Plan update effort began in 2007, but was postponed in an effort to address outstanding concerns and comments. In 2018, the City began an effort to finalize the Draft EIR and incorporate the following refinements:

- *An updated horizon year of 2040;*
- *Additional policies to address State general plan requirements that have been adopted since the 2010 draft of the General Plan was completed;*
- *Text revisions associated with new State requirements; and*
- *Documentation of sensitive environmental resources and regulatory or capacity constraints in the three additional study areas outside but adjacent to the city limits in order to inform decision-makers and community members about associated issues and opportunities.*

Upon receipt of this notice, The Federated Indians of Graton Rancheria has thirty (30) days to request consultation pursuant to Public Resources Code §21083.3.1, 21083.3.2, and 21083.3. If The Federated Indians of Graton Rancheria provides the City of St. Helena with confidential information subject to Public Resources Code §21082.3(c), Government Code §6254.10, or

Government Code Section §6254(r), we request that it be explicitly labeled and packaged to prevent inadvertent public disclosure.

If you have any questions and/or would like to request consultation, please contact me at 707-968-2659 or nhoush@sthelena.org.

Subject: SB 18 Tribal Consultation for the City of St. Helena General Plan Update, City of St. Helena, Napa County

Dear Noah Housh,

The Federated Indians of Graton Rancheria, a federally recognized Tribe and sovereign government has received your correspondence requesting information on a project located at SB 18 Tribal Consultation for the City of St. Helena General Plan Update, City of St. Helena, Napa County. The Tribe has reviewed the location of the project and we have determined it is not in our traditional ancestral territory, therefore have no comments on this project, at this time. We appreciate the opportunity to review the project proposal. If you have any additional questions regarding this letter please feel free to email my office at thpo@gratonrancheria.com or call the office at (707) 566-2288.

Sincerely,
Buffy McQuillen

Appendix D: Buildout Methodology

This page intentionally left blank.

Note that for the purposes of this EIR, the numbering of the unincorporated study areas has changed from the original numbering in the Buildout Projections Memorandum. As described in Chapter 2.0: Project Description and shown in Figure 2.1-1, the study areas are numbered from north to south throughout the EIR. All other details regarding the study areas are unchanged.

This page intentionally left blank.

Urban and Regional Planners

MEMORANDUM

To: Noah Housh, Planning and Community Improvement Director, City of St. Helena
From: Andrew Hill, Associate Principal and Katharine Pan, Associate
Re: City of St Helena General Plan Update EIR Buildout Projections
Date: June 20, 2018

Dear Noah:

This memo describes the process for developing buildout projections for the St. Helena General Plan Update, including baseline year (2018) land use assumptions and the projected change in population, housing units and jobs that can reasonably be expected under the General Plan through 2040. The buildout projections, included as Attachment A to this memo, will be used to evaluate the potential environmental impacts of General Plan 2040 implementation, including impacts associated with air quality, GHG emissions, traffic, utilities, and public services.

To facilitate the traffic modeling, the land use assumptions have been compiled by Traffic Analysis Zones (TAZs) that correspond to those in the regional traffic model. A map of TAZs in St. Helena is included as Attachment B to this memo. Data from State, regional and local agencies was used to validate and calibrate the buildout projections, as described below. Overall, it is projected that implementation of General Plan 2040 will result in 746 new residents, 332 new homes, and 932 new jobs within the City limits and the Sphere of Influence (SOI) between 2018 and 2040. Accounting for growth in the three unincorporated Study Areas which are not subject to St. Helena policies or regulations, it is projected there will be 7,288 residents, 3,286 homes, and 7,011 jobs in the Planning Area in 2040.

Baseline Year Land Use Assumptions

To establish existing population, housing units and jobs in the Planning Area, which includes the City of St. Helena and the three adjacent unincorporated Study Areas, we started with the land use assumptions from the regional traffic model and adjusted with reference to data from the California Department of Finance (DoF), the Association of Bay Area Governments (ABAG), and the Napa County Assessor. Fehr & Peers provided population, housing and employment assumptions from the traffic model organized by TAZ for the years 2010 and 2040 and broken out into the employment categories required for the traffic model.

Population and Housing

To update the 2010 population and housing assumptions from the model, we used 2018 data parcel from the Napa County Assessor to determine the number of housing units in St. Helena today. Citywide totals were compared with DoF estimates from 2018 to verify accuracy. Steps taken:

- Assessor data identifies 1,888 single-family residential parcels in the city (not including vacant residential parcels). Assumed one single-family unit per APN for these parcels.

755 Sansome St, Suite 400 | T 415 956 4300
San Francisco, CA 94111 | F 415 956 7315
www.dyettandbhatia.com

- City staff identified 208 existing homes in the Vineyard Valley mobile home park on Pop Street, all in TAZ 199. These were also counted as single-family units.
- Assessor data identifies 74 multi-family residential parcels in the planning area (not including vacant residential parcels). To establish the number of units on each of these parcels, we consulted three sources: the Napa County Assessor Parcel Data eService online database; Zillow's online real estate data; and Google Earth. Number of multi-family units was established for each parcel.
- Accessory dwelling units (ADUs) constructed prior to 2010 are not included in the Assessor data, as ADUs were not reported to the County prior to this date. Based on conversation with City staff, we assumed 50 ADUs built prior to 2010. These were distributed by TAZ throughout St. Helena proportional to the number of parcels identified with existing single-family land use.
- The total of single-family, ADU, mobile home, and multi-family units in the city in 2018 was determined to be 2,735 compared with 2,874 estimated by DoF in 2018 for a difference of 139 units.
- A vacancy rate of 14 percent was applied the total number of units in order to determine the number of households in St Helena, based on DoF data from 2018.
- Household population was then calculated using an average household size of 2.44 for the City of St. Helena from DoF data (2018).
- Total population was adjusted to account for group quarters per TAZ, matching the assumptions of the traffic model.
- Similarly, Assessor data was used to estimate the number of existing housing units within the three study areas.
- An average household size of 2.69 was applied for units in the study areas, based on 2010 U.S. Census data for unincorporated Napa County.
- Total population was adjusted to account for group quarters per TAZ, matching the assumptions of the traffic model.
- Parcel data from the County Assessor was spatially joined to a map of TAZs in ArcGIS and the number of single-family and multi-family units within each TAZ was tabulated.

Employment

To update the 2010 employment assumptions from the model so that they represent a best estimate of employment levels in the city in 2018, we calibrated with reference to County Assessor data and the ABAG Projections 2013 dataset, which represents the best available data on citywide employment levels. Steps taken:

- Citywide 2018 employment was interpolated from the job numbers for 2015 and 2020 in the ABAG data set. Linear interpolation was performed for each of the 6 categories in the ABAG dataset to establish a citywide total of 5,725 jobs in 2018.
- The employment categories in the ABAG dataset generally align with those in the model, but some consolidation was necessary to align the ABAG job categories with those in the

model. Specifically, the following categories from the ABAG data do not exist in the model and were consolidated into the general Service category required for traffic modeling: Financial and Professional Service Jobs; Health, Education and Recreational Service Jobs.

- The increment of new jobs in each of the model categories was then calculated by comparing the 2010 employment totals from the model with the 2018 interpolated jobs numbers. The resulting increment is as shown in Table 1:

Table 1: New Jobs since 2010

Model Employment Category	*2010 Model Assumptions*	*2018 Estimates*	*New Jobs Since 2010*
Agriculture	885	890	5
Manufacturing	1187	1220	33
Retail	818	845	27
Service	2090	2090	0
Other	659	700	41
Total	5639	5745	106

Source: Dyett & Bhatia, 2018.

- To determine the TAZs in which to locate the new jobs, we used Assessor data to identify the relative concentration of jobs in the employment categories from the model in the city in 2018 and distributed the new jobs into TAZs accordingly:
  - 5 agricultural jobs in TAZ 199, where the Krug Winery is located.
  - 15 manufacturing jobs in TAZ 201, 15 in TAZ 200 and 3 in TAZ 199, based on the concentration of industrial and warehouse uses.
  - 18 retail jobs in TAZ 202 where the concentration of commercial uses in the city is highest, and 3 in each of TAZs 199, 200 and 201 which also have commercial uses.
  - 33 other jobs (which include public service jobs) in TAZ 202 where City offices and civic organizations are concentrated and 8 other jobs in TAZ 199.
- To estimate existing employment in the three study areas, we used building square footage information from the Assessor parcel data, where available, and supplemented with spatial calculations from aerial maps in GIS. Then we applied employment density factors from a US Green Building Council occupancy study (2004 to 2008) to estimate the number of jobs.
- For TAZ 172, which includes all of Study Area 1 and the bulk of Study Area 2 (except for approximately 22 acres immediately north of Zinfandel Lane on both sides of Hwy 29), we assumed jobs in the following categories, based on building square footages and employment densities as shown in Table 2:

Table 2: TAZ 172 Employment Categories

Land Use	*Employment Density*	*Total Building Square Feet*	*Jobs*	*Model Job Category*
Commercial	550	67,237	122	RETAIL
Hotel/Lodging	1500	8,000	5	RETAIL

Industrial	461	27,000	59	MANUFACTURING
Office	250	26,239	105	SERVICE
Winery	920	90,579	98	AGRICULTURE
Grand Total		219,055	390	

Source: Dyett & Bhatia, 2018

- For the portion of TAZ 167 in Study Area 2, which includes the Napa Farmhouse Inn, we assumed 7 retail jobs associated with the property, consistent with job categorization from the traffic model. This is based on a building square footage of 7,145 derived from Assessor parcel data and the employment density factor above for Hotel/Lodging.
- Study Area 3 is in TAZ 176, which contains several commercial properties; however, only the Meadowood Golf Club Resort with 133,228 square feet of building space and Hunter II Wines with 6,309 square feet of building space are within Study Area 3. As such, we assumed 90 retail jobs and 7 agriculture jobs in TAZ 176 based on building square footage from Assessor parcel data and the employment density factors above.

Future Year 2040 Projections

To project residential and non-residential development likely to occur under the General Plan Update through 2040, we considered the potential for growth on a variety of sites within the City limit, including: sites on the City's pipeline projects list; Housing Element opportunity sites, the Change Areas identified in the draft General Plan; and vacant sites designated as residential by the draft General Plan. Additionally, we projected growth likely to occur in the Study Areas, which are subject to Napa County land use and zoning regulations. The specific assumptions and methods used are described below.

Overall, there is more capacity for market rate housing development within the City limits than would be allowed under the City's Growth Management System over the planning horizon. The Growth Management System caps the number of market rate housing units that can be built in a given year at 9, although affordable units are exempted from this cap. Reviewing the trend in development applications received by the City in recent years and in consideration of the regional housing market forecast, we have assumed development of 9 market rate units per year, each year over the life of the Plan. Additionally, while the City has seen construction of 4 affordable units per year on average in recent years, in view of new State housing legislation aimed at stimulating affordable housing production and policies in the draft General Plan Update, we have assumed production of 6 affordable units per year, each year over the life of the Plan. As such, we have assumed an annual rate of 15 housing units through 2040 and used this as a control total. For employment projections, Association of Bay Area Governments (ABAG) job projections for the City of St. Helena through 2040 were used as control totals.

These 2040 buildout projections represent a best estimate based on past trends and foreseeable regulations, although there is no guarantee that development will occur at this rate. Additionally, buildout projections have been developed with the intent of estimating the maximum amount of growth likely to occur under the General Plan Update in order to provide a conservative estimate for the purpose of the environmental analysis.

Pipeline Projects

Pipeline projects include those projects that are currently under review or reviewed but not yet constructed. The list of pipeline projects considered in the projections was based on the list of Planning Projects on the City's website as of May 30, 2018 and a supplemental list provided by staff, and includes those listed in Table 3. Where possible, information on resulting dwelling units and jobs was obtained through project application materials or information from City staff. Where project-specific information was not available, job numbers were estimated based on square feet per employee assumptions from the U.S. Green Building Council (USGBC) (https://www.usgbc.org/credits/new-construction-existing-buildings-commercial-interiors-core-and-shell-schools-new-constr-3).

Table 3: Pipeline Projects

Project	*Dwelling Units*	*Non-Residential Development*	*Jobs*	*Notes*
St. Helena Montessori School	0	10,000 sqft	16 service	Used USGBC assumption of 1,300 sqft/employee for Educational (daycare)
St. Helena Estates	51 single-family	N/A	N/A	From written statement
1760 Dean York Lane	1	N/A	N/A	Construction of single-family home and ADU result in a net increase of 1 unit
Vineland Station Hotel	0	123,000 sqft	49 retail; 33 service	No employee counts provided in application materials. Used USGBC assumption of 1,500 sqft/employee for hotel.
Fulton Office Building	0	11,000 sqft	44 service	Employee estimate taken from water use assessment
Salvestrin Winery	0	1,500 sqft	2 manufacturing	Employee estimate taken from written statement
500 Mills Lane	1 single-family	N/A	N/A	Proposed one-story home
Redmon Winery	0	9,000 sqft	12 manufacturing	Assumed 750 sqft/employee based on the ratio from Salvestrin ratio
2525 Madrona Avenue	1 single-family	N/A	N/A	From water use assessment

OK Tire	0	4,700 sqft	8 retail	Used USGBC assumption of 600 sqft/employee for Retail or Service

Future Development within City Limits

Future development projected in the city considers potential development on the Housing Element housing inventory opportunity sites, in the draft General Plan Change Areas, and on vacant sites designated as residential in the draft General Plan. These projections are based on the assumptions shown in Table 4 and Table 5, which were developed as follows.

- **Residential Assumptions.** Review of year-built information from the Assessor's Roll showed that the average density of residential development since 2010 has been 2.0 du/ac for areas currently designated Low Density Residential, 7.0 for areas currently designated Medium Density Residential, and 9.0 for areas designated High Density Residential. As the draft General Plan would increase allowable densities in each designation, assumed densities for future development in these categories are slightly higher.

Table 4: Residential Assumptions

Land Use Designation	*Min. du/ac*	*Max du/ac*	*Assumed du/ac*	*Percent Residential*
Low Density Residential	1.0	5.0	3.0	100%
Medium Density Residential	5.1	16.0	10.0	100%
High Density Residential	16.1	28.0	22.0	100%
Public & Quasi-Public	N/A	N/A	10.0	100%
Mixed Use	N/A	20.0	20.0	40%

Source: City of St. Helena, 2016; Dyett & Bhatia, 2018.

- **Non-Residential Assumptions.** Review of the Assessor's Roll showed that non-residential development in the areas currently designated Central Business for which square footage information is available has an average FAR of 0.5. As there is currently no mixed-use development in the Planning Area, the assumed FAR for the Mixed Use designation is the half of the maximum. We assumed a 50-percent split between retail and service uses.

Table 5: Non-Residential Assumptions

Land Use Designation	*Max. FAR*	*Assumed FAR*	*Percent Non-Residential*	*Percent Retail*	*Percent Service*
Central Business	2.0	0.5	100%	50%	50%
Mixed-Use	1.0	0.5	60%	50%	50%

Source: City of St. Helena, 2016; Dyett & Bhatia, 2018.

The projections were made as follows.

- **Housing Element.**
  - The Housing Element identifies 11 key housing opportunity sites. Staff anticipated that opportunity sites 1, 3, 6, 9, 10, and 11 were the most likely to develop over the planning horizon, as well as an additional site at 1343 Spring Street. As opportunity site 1 is a pipeline project listed above, it has already been accounted for and was not included in this Housing Element analysis. The projections focus on the remaining opportunity sites only. It is important to note that these sites may not actually develop over the planning horizon while other sites do. The intent behind this method was to project a reasonable number of new units with a reasonable distribution across the TAZs.
  - If a parcel was located in sites 3, 6, 9, 10, 11, or the 1343 Spring Street site, we multiplied the acreage by the assumed du/ac of the appropriate draft General Plan designation, and the percentage of the site assumed to be residential. It was assumed that only one of the two parcels on Site 6. This method found 112 dwelling units for the six sites, which were counted as multi-family units based on multiple units yielded on each site.
- **Change Areas.**
  - The draft General Plan identifies 13 Change Areas. Staff anticipated that Change Areas 1, 4, 5, 6, 10, and 11 were the most likely to develop over the planning horizon. As a portion of Change Area 6 is a pipeline project listed above, it has already been accounted for and was not included in this Change Area analysis. The projections focus on the remaining Change Areas only. It is important to note that these sites may not actually develop over the planning horizon while other sites do. The intent behind this method was to project a reasonable number of new units and jobs with a reasonable distribution across the TAZs.
  - For residential development, if a parcel was located in Change Areas 1,4,5,6,10, or 11, we multiplied the acreage by the assumed du/ac of the appropriate draft General Plan designation, and the percentage of the site assumed to be residential. This

method found 33 units for the six areas, which were counted as multi-family units based on the Mixed Use designation of the areas.

  - For non-residential development, if a parcel was located in Change Areas 1, 4, 5, 6, 10, or 11, we multiplied the square footage of the site by the assumed floor area ratio (FAR) and percentage of the site assumed to be non-residential to project the square footage of non-residential development. We then used the assumed percentage of retail or service land uses to project retail and service square footage and divided those amounts by assumed square footage per employee in each of those sectors. For retail, we assumed 550 square feet per employee and for service, we assumed 600 square feet per employee, based on the USGBC's ratios for Retail (general) and Retail or service, respectively. This method found 220 retail jobs and 201 service jobs in the Change Areas.

- **Vacant Residential Sites.**
  - If a parcel had a residential draft General Plan designation, its existing land use was identified as vacant, and it was not already identified as a pipeline project, Housing Element opportunity site, or Change Area, then it was considered. For these 19 parcels, the acreage was multiplied by the assumed du/ac of the appropriate draft General Plan designation, and the percentage of the site assumed to be residential. If the parcel yielded two units or fewer, they were counted as single-family (allowing for ADUs). This method found 21 single-family (including ADUs) units.
- **Accessory Dwelling Units.**
  - Based on Housing Element progress reports provided by the City for 2011 through 2018, we found that there has been an average of two ADUs permitted each year during that time. In order to capture future ADU development in established residential areas, we assumed that the trend would continue, yielding 44 new ADUs over the planning horizon. As eight ADUs from new development were accounted for under the analysis of vacant residential sites, we sought to distribute the remaining 36 ADUs across existing residential neighborhoods. We found the proportion of Low Density Residential and Medium Density Residential draft General Plan designations in each TAZ with existing residential parcels, and distributed the 36 ADUs accordingly.

The analysis yielded a total of 163 single-family units (including ADUs) and 169 multi-family units. With the City of St. Helena Growth Management System, up to 198 (nine units a year over 22 years) of these units could be developed as market-rate units, and 134 of these units would be affordable units or ADUs or otherwise excepted. Number of households was estimated assuming a 14 percent vacancy rate of total units. Household population was estimated using 2.45 persons per household as projected for 2040 by ABAG. Total population was adjusted to account for group quarters per TAZ, matching the assumptions of the traffic model for 2040.

Projected employment in the city would total 276 retail jobs, 328 service jobs, and 53 manufacturing jobs. For Other and Agricultural employment, which would generally be unaffected by proposed land use changes, we used the 2040 model assumptions. The resulting total of 6,378 jobs in the city in 2040 is roughly 150 greater than the 6,230 jobs projected by ABAG for 2040 in 2013. This

difference between projections may be explained by the increased development opportunity represented by the increase in available Central Business-designated land as well as the transition of some Service Commercial-designated sites to the higher density Mixed Use designation, which would not have been considered at the time of ABAG's 2013 projections.

Future Development in Study Areas

For residential development in the Study Areas, we referred to Napa County's Growth Management System, which limits the number of new housing units permitted in the county per year to accommodate an annual population growth rate of not more than 1 percent. Using the 2018 baseline population for the Study Area TAZs, a 1 percent increase in population growth per year would allow for 135 new persons by 2040. Using an average household size of 2.69 from the 2010 Census, this would allow for 50 new units in the Study Areas by 2040, all assumed to be single-family.

For non-residential development, we assumed that the draft General Plan would not have an effect on development in the TAZs over the planning horizon and relied on overall trends predicted by the traffic model. We used the 2018 baseline estimates for employment in portions of each TAZ within the Planning Area and 2010 model assumptions for employment in each TAZ overall to calculate the percentage of total TAZ employment represented by the portions in the Planning Area. We then applied these percentages to the 2040 model assumptions for total employment in each TAZ to estimate projected increases.

General Light Industry	1,326.32	1000sqft	30.45	1,326,320.00	0
General Office Building	644.09	1000sqft	14.79	644,090.00	0
Government Office Building	231.71	1000sqft	5.32	231,710.00	0
Mobile Home Park	208.00	Dwelling Unit	26.20	249,600.00	595
Strip Mall	536.13	1000sqft	12.31	536,130.00	0
Single Family Housing	2,101.00	Dwelling Unit	682.14	3,781,800.00	6009

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.6	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2040
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	164	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Intensity factor includes MCE reading renewable energy goal of 80%

Land Use -

Construction Phase - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Grading - No construction

Trips and VMT - No construction

Architectural Coating - No construction

Vehicle Trips - Scaled trip rate to match VMT resulting from implementation of the Proposed Project.

Woodstoves - No woodstoves

Energy Use -

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Apartments Low Rise	758.00	Dwelling Unit	47.38	758,000.00	2168
General Light Industry	1,326.32	1000sqft	30.45	1,326,320.00	0
General Office Building	644.09	1000sqft	14.79	644,090.00	0
Government Office Building	231.71	1000sqft	5.32	231,710.00	0
Mobile Home Park	208.00	Dwelling Unit	26.20	249,600.00	595
Strip Mall	536.13	1000sqft	12.31	536,130.00	0
Single Family Housing	2,101.00	Dwelling Unit	682.14	3,781,800.00	6009

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.6	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2040
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	164	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Intensity factor includes MCE reading renewable energy goal of 80%

Land Use -

Construction Phase - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Grading - No construction

Trips and VMT - No construction

Architectural Coating - No construction

Vehicle Trips - Scaled trip rate to match VMT resulting from implementation of the Proposed Project.

Woodstoves - No woodstoves

Energy Use -

9.0 Operational Offroad

Equipment Type	Number	Hours/Day	Days/Year	Horse Power	Load Factor	Fuel Type

10.0 Stationary Equipment

Fire Pumps and Emergency Generators

Equipment Type	Number	Hours/Day	Hours/Year	Horse Power	Load Factor	Fuel Type

Boilers

Equipment Type	Number	Heat Input/Day	Heat Input/Year	Boiler Rating	Fuel Type

User Defined Equipment

Equipment Type	Number

11.0 Vegetation

StHelenaGPPlanningArea

Napa County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Apartments Low Rise	589.00	Dwelling Unit	36.81	589,000.00	1685
General Light Industry	1,312.16	1000sqft	30.12	1,312,160.00	0
General Office Building	579.42	1000sqft	13.30	579,420.00	0
Government Office Building	191.40	1000sqft	4.39	191,400.00	0
Mobile Home Park	208.00	Dwelling Unit	26.20	249,600.00	595
Strip Mall	509.82	1000sqft	11.70	509,816.00	0
Single Family Housing	2,106.00	Dwelling Unit	683.77	3,790,800.00	6023

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.6	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2018
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	320	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2015 (latest year for which verified data available) MCE pounds of CO2/MWh.

Land Use -

Construction Phase - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Grading - No construction

Trips and VMT - No construction

Architectural Coating - No construction

Vehicle Trips - Scaled trip rate to match exising VMT from traffic data.

Woodstoves - No woodstoves.

Energy Use -

Single Family Housing	2,101.00	Dwelling Unit	682.14	3,781,800.00	6009

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.6	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2040
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	164	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Intensity factor includes MCE reading renewable energy goal of 80%

Land Use -

Construction Phase - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Grading - No construction

Trips and VMT - No construction

Architectural Coating - No construction

Vehicle Trips - Scaled trip rate to match VMT resulting from implementation of the Proposed Project.

Woodstoves - No woodstoves

Energy Use -

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Apartments Low Rise	758.00	Dwelling Unit	47.38	758,000.00	2168
General Light Industry	1,444.32	1000sqft	33.16	1,444,320.00	0
General Office Building	680.63	1000sqft	15.63	680,630.00	0
Government Office Building	231.71	1000sqft	5.32	231,710.00	0
Mobile Home Park	208.00	Dwelling Unit	26.20	249,600.00	595
Strip Mall	684.41	1000sqft	15.71	684,411.00	0
Single Family Housing	2,101.00	Dwelling Unit	682.14	3,781,800.00	6009

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.6	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2040
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	164	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Intensity factor includes MCE reading renewable energy goal of 80%

Land Use -

Construction Phase - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Off-road Equipment - No construction

Grading - No construction

Trips and VMT - No construction

Architectural Coating - No construction

Vehicle Trips - Scaled trip rate to match VMT resulting from implementation of the Proposed Project.

Woodstoves - No woodstoves

Energy Use -

Appendix G: Greenhouse Gas Inventory Methodology

This page intentionally left blank.

Estimating Emissions by Sector for 2018 and 2040

The following methodology was utilized to compile the baseline (2018) and buildout (2040) greenhouse gas (GHG) inventories for the City of St. Helena General Plan Update EIR. The methodology is organized by emissions sector and year.

RESIDENTIAL

Electricity

Baseline (2018)

Baseline residential emissions were calculated using the kilowatt hours (kWh) of electricity consumed by residential customers in the City's 2010 GHG inventory. While additional homes have been constructed between 2010 and 2018, the increase in electricity-consumption from new residential units is assumed to be balanced out by energy efficiency improvements and solar installations since 2010.

Since the 2010 GHG inventory, St. Helena, along with Napa County, joined Marin Clean Energy (MCE), a community choice aggregation (CCA) program. According to MCE's 2018 Integrated Resource Plan, there is an approximately 89 percent participation rate in St. Helena. This means that approximately 11 percent of St. Helena residents still purchase electricity through PG&E. Emissions from PG&E electricity were calculated using the renewable energy percentage of the power mix and the CO2e emissions factor from 2016 (the most recent year available). Emissions from MCE electricity were calculated using MCE's renewable energy percentage and emissions factor from 2015 (the most recent year available). To estimate emissions from residential electricity usage, the kWh from 2010 were weighted with 89 percent of the emissions from MCE and 11 percent from PG&E, to reflect the approximate portion of the population being served by each utility provider.

Buildout (2040)

Electricity consumption in kWh was projected based on the number of residential units expected in buildout of the Proposed Plan, and adjusted for Title 24 energy efficiency improvements.

Residential electricity emissions for 2040 buildout were projected using 50 percent renewable energy as set out in the State's Renewable Portfolio Standard (RPS) for PG&E and 80 percent renewable energy for MCE, as set out in the 2018 Integrated Resource Plan. These renewable energy percentages were multiplied by the average CO2e emissions factor for each utility. The same participation rate of 89 percent was assumed for MCE customers.

Natural Gas

Baseline (2018)

Natural gas usage was estimated using the therms consumed in the 2010 GHG inventory. Emissions were estimated using Appendix C of ICLEI's U.S. Community Protocol emissions factors.

Buildout (2040)

Natural gas usage for 2040 was projected by scaling the 2010 usage with the number of residential units added under the Proposed Plan. This usage was adjusted for efficiency improvements expected under Title 24. Emissions from natural gas consumption were calculated using Appendix C of ICLEI's U.S. Community Protocol emissions factors.

Other Fuels

Baseline (2018)

The City of St. Helena 2010 inventory includes "other fuels" which include biomass burned for electricity consumption. The same emissions from 2010 were assumed for 2018 as no updated information was available.

Buildout (2040)

The increase in emissions for other fuels was calculated by scaling the baseline emissions for the projected increased in residential units under the Proposed Plan.

COMMERCIAL/INDUSTRIAL

Commercial and industrial emissions were aggregated in the 2010 GHG inventory due to the 15/15 rule. For privacy reasons, emissions are aggregated under the 15/15 rule when there are fewer than 15 customers in one sector or one customer makes up greater than 15 percent of the usage in a sector. Since commercial and industrial emissions were aggregated for 2010, they were also aggregated for the 2018 baseline and 2040 buildout inventories.

It should be noted that the St. Helena Community 2010 GHG inventory included electricity usage from water and wastewater in the commercial/industrial sector. Based on the electricity usage for water and wastewater provided in St. Helena's Municipal 2010 GHG inventory, the kWh for water and wastewater were subtracted from commercial/industrial and included as their own sector for the 2018 baseline and 2040 buildout inventories.

Electricity

Baseline (2018)

Baseline commercial/industrial electricity usage was estimated using the kWh consumed in the 2010 inventory, minus the water and wastewater consumption as described above. Emissions were calculated using PG&E's and MCE's renewable energy and emissions factors. The same MCE participation rate of 89 percent was assumed for commercial/industrial as residential to create a weighted number for total GHG emissions from commercial/industrial electricity usage.

Buildout (2040)

The commercial/industrial electricity emissions methodology was similar to that for residential. The baseline usage was scaled for 2040 based on the addition 1,000 square feet of nonresidential development projected in the Proposed Plan and adjusted for Title 24 energy efficiency improvements. The usage was then multiplied by emissions factors using projected PG&E and MCE renewable energy percentages and emissions factors.

Natural Gas

Baseline (2018)

Baseline natural gas emissions were calculated by multiplying the therms consumed in the 2010 GHG inventory by Appendix C of ICLEI's U.S. Community Protocol emissions factors.

Buildout (2040)

Natural gas usage for 2040 was calculated by scaling the baseline therms consumed for the additional 1,000 square feet of commercial/industrial development expected under the Proposed Plan and adjusted for Title 24 efficiency improvements. Emissions were then calculated using Appendix C of ICLEI's U.S. Community Protocol emissions factors.

Other Fuels

Baseline (2018)

The City of St. Helena 2010 inventory includes "other fuels" which include biomass burned for electricity consumption. The same emissions from 2010 were assumed for 2018 as no updated information was available.

Buildout (2040)

The increase in emissions for other fuels was calculated by scaling the baseline emissions for the projected increase in 1,000 square feet of commercial/industrial buildings under the Proposed Plan.

TRANSPORTATION

Baseline (2018)

Baseline transportation emissions were calculated using the daily vehicle miles traveled (VMT) provided by Fehr & Peers using the shared accounting method. The shared accounting method includes all trips that both begin and end within the City of St. Helena plus 50 percent of the trips that begin or end within the city. VMT was scaled from daily to yearly and emissions were calculated using the California Air Resources Board (CARB) Emissions Factor (EMFAC) model for the year 2018 in Napa County. This process was used to calculate CO2 emissions from diesel and gasoline vehicles. The EMFAC model was also utilized to scale VMT for fuel type (diesel, gasoline, and electric). It was assumed that electric vehicles produce no GHG emissions from operation, though would consume electricity from charging that would be captured under residential and/or commercial/industrial electricity usage.

Emissions for methane (CH4) and nitrous oxide (N2O) were estimated for diesel and gasoline vehicles utilizing the model and vehicle type from the EMFAC model, VMT data, and Control Technology Assignments for On-Road Vehicles and Motorcycles from the Environmental Protection Agency (EPA). CH4 and N2O emissions were then converted to CO2e.

Buildout (2040)

Transportation emissions for 2040 were calculated utilizing the same methodology as 2018, except using the 2040 VMT provided by Fehr & Peers and the 2040 EMFAC model.

SOLID WASTE

Baseline (2018)

CalRecycle's 2014 Waste Characterization Study for St. Helena was used to gather residential and commercial tonnages of solid waste, as well as the percent of the waste stream made up by biodegradable materials that produce CH4 as they decompose. Emissions were then calculated using the EPA's Waste Reduction Model (WARM) Version 14.

Buildout (2040)

Solid waste emissions were projected for 2040 by scaling the baseline emissions for growth in residential units for residential solid waste and for 1,000 square feet of commercial/industrial buildings for commercial solid waste predicted under the Proposed Plan. Factored into the emissions for 2040 was also the assumption that the State's goal of achieving 75 percent diversion of solid waste would be achieved.

WATER TRANSPORT, DISTRIBUTION, AND TREATMENT

Emissions from water transport, distribution, and treatment are a result of electricity needed to circulate and treat water.

Baseline (2018)

The electricity consumed to transport, distribute, and treat water was assumed to be equivalent to that provided in the City of St. Helena's 2010 Municipal GHG inventory. To convert the kWh of electricity to emissions, the renewable energy and emissions factors of MCE were used. Since the City is an MCE customer, PG&E's energy mix was not applied.

Buildout (2040)

Water consumption was assumed to be capped at 1,950 acre-feet (AF) per year according to the City's water supply plans and Proposed Plan Policy PF1.J. While water demand may be higher than 1,950 AF per year in 2040 based on population growth under the Proposed Plan, this has been determined the safe-yield amount for the city. Additional water consumed by St. Helena would have to be imported from other sources. Electricity needed to transport, distribute, and treat 1,950 AF per year of water was scaled from the baseline kWh. Emissions were then calculated using the projected 2040 emissions factor and renewable energy percentages from MCE.

WASTEWATER

Electricity

Baseline (2018)

St. Helena's 2010 Municipal GHG inventory provides the gallons of wastewater treated in the City. Given limited population growth between 2010 and 2018, it was assumed that the same volume of wastewater was treated under the baseline scenario. Electricity from treating this wastewater was calculated using the default values from the California Energy Commission's (CEC) Estimates of Water-Related Energy Use in California. Emissions from the consumption of energy were calculated using MCE's renewable energy and emissions factors.

Buildout (2040)

Wastewater volume was projected for 2040 by assuming the same growth rate for wastewater as potable water. Electricity consumption and emissions were then calculated using the same methodology as baseline emissions.

Septic Tanks

Baseline (2018)

The number of septic tanks in the City of St. Helena were estimated using the Napa County Assessor's Parcel Data, which has a code for parcels served by the city's sewage system and those that are not. It was assumed that each parcel not connected to the city sewer system that has a building on it has one septic tank. The population served by septic systems was then estimated by multiplying the number of septic tanks by the average household population with the city. Emissions from septic tanks was then estimated using standard factors within Appendix F of ICLEI's U.S. Community Protocol.

Building (2040)

The number of septic tanks in 2040 was estimated by scaling the baseline number for population growth under the Proposed Plan. Emissions were then calculated using the same methodology as baseline emissions.

Effluent

Baseline (2018)

Effluent emissions were estimated using the 2018 population for the City of St. Helena and standard factors in Appendix F of ICLEI's U.S. Community Protocol.

Buildout (2040)

Effluent emissions for buildout were projected using the 2040 population under the Proposed Plan and the same methodology as baseline emissions.

OFF-ROAD EQUIPMENT

Baseline (2018)

Baseline off-road equipment emissions were calculated using CARB's 2018 off-road emissions model for Napa County and scaling for St. Helena using the percentage of Napa County's 2018 population within the City of St. Helena.

Buildout (2040)

Off-road emissions for 2040 were calculated CARB's 2040 off-road emissions model for Napa County and scaling for St. Helena using the percentage of Napa County's projected 2040 population within the City of St. Helena.

PUBLIC LIGHTING

Baseline (2018)

Electricity consumption in kWh from public lighting, which includes street lights and park lighting, was included in the City of St. Helena's 2010 municipal inventory. Assuming the same consumption as 2010, baseline emissions were calculated using MCE's renewable energy and emissions factors.

Buildout (2040)

Electricity consumption for public lighting in 2040 was scaled for the projected increase in population under the Proposed Plan. Emissions were then calculated using the projected renewable energy percentages and emissions factors for MCE.

AGRICULTURE

Agricultural emissions from fertilizer and off-road equipment were provided in the St. Helena 2010 Community GHG Inventory. Since the baseline inventory includes off-road equipment as its own sector, only emissions from fertilizer were in included in the agriculture sector.

Baseline (2018)

For baseline agricultural emissions, it was assumed that the acres of agricultural uses in St. Helena remained constant between 2010 and 2018, and therefore the emissions remained the same as well.

Buildout (2040)

To project 2040 emissions from agriculture, first the emissions from fertilizer application provided in the 2010 inventory was divided by the number of acres to get emissions per acre. The emissions per acre were then multiplied by the number of acres of designated as agriculture in the Proposed Plan.

Estimating Emissions for 2030

Where possible, emissions were also projected for the year 2030 to assess consistency with Executive Order B-30-15, which set an interim State GHG emissions reduction target of 40 percent below 1990 levels by 2030. If 2030 data was available (i.e. population, housing units), GHG emissions for 2030 was estimated utilizing the same methodology as the buildout year of 2040. If 2030 data was not available (i.e. land use, service population), emissions were estimated by assuming a linear increase in emissions between 2018 and 2040.

INTRODUCTION

The City of St. Helena is undergoing a General Plan update led by M.I.G. Fehr & Peers is providing support for the Transportation Element of the Plan. This report provides an overview of existing transportation conditions, issues and opportunities in St. Helena. The description of motor vehicle conditions includes an analysis of traffic operations, interregional travel patterns, truck traffic, traffic calming and parking policies. An overview of public transit service, bicycle and pedestrian circulation is also provided.

Transportation System

St. Helena is centrally located within the Napa Valley, 65 miles north of San Francisco. The city is approximately five square miles with a population of approximately 6,000 in 2007. St. Helena serves many roles within Napa County. Functioning as a rural agricultural center at its inception, the city has become an important business and banking center for the surrounding area, particularly the local wine industry. The city's central location in the Napa Valley attracts winery tourists and outdoor recreation visitors. A main goal of the City is to maintain a small-town atmosphere and to provide quality services to its residents.

State Route 29 (SR-29) serves as the main north-south highway through the Napa Valley and serves as St. Helena's Main Street. While the city's limits extend to the Silverado Trail to the northeast, most of the city has developed to the southwest of SR-29/Main Street. Older residential neighborhoods surrounding the downtown area are on a grid street network, while areas towards the outer edges of the city have a more rural character. Figure 1 illustrates the city street system, city limits and surrounding area.

The existing transportation infrastructure and compact development pattern enables St. Helena to remain a relatively walkable city in a predominantly rural area while providing direct access to regional destinations throughout the Napa Valley. However, key constraints include congestion along SR-29/Main Street, resulting traffic impacts on surrounding residential neighborhoods, and regional land use patterns that are not conducive to efficient mass transit service. The St. Helena VINE Shuttle provides intra-city service during weekday business hours, and VINE Transit provides two regional bus routes to St. Helena. No commuter rail service exists in St. Helena, although the Napa Valley Wine Train is a tourist rail service that brings passengers from the city of Napa through St. Helena without opportunities for disembarking.

St. Helena is a walkable city, particularly within the historic downtown area. A mix of land uses, short block lengths, good sidewalk connectivity and streetscape enhancements provide for an excellent walking environment. Although the City does not have a developed bicycle network, the area is a popular destination for recreational cyclists. Future improvements to the walking and bicycling environment will help to reduce single-occupancy trips by facilitating more non-motorized travel.

Key Highlights

Increasingly, the City of St. Helena and Napa County have expressed the goal of mitigating traffic congestion in the region by encouraging the development of a multimodal transportation network supported by land use decisions that encourage alternatives to single occupancy vehicle trips. To this end, the key strategies for sustainable transportation identified in this report include the following:

- The development of a **Transportation Demand Management** Program
- **Improved Transportation Measures**, such as multimodal Level of Service standards
- The adoption of a **Parking Management Program**
- Inclusion of a **Climate Action Plan** within the General Plan update
- Consideration of **Neighborhood Electric Vehicles** for use on the local street network

In addition, opportunities to enhance transit, bicycle and pedestrian facilities are identified, as well as ways to meet transportation needs related to changing demographics, travel patterns and tourism.

Regional Travel Patterns

Journey-to-Work Data

The 1990 and 2000 U.S. Census provides Journey to Work data that indicates the mode of travel to and from work for St. Helena residents. As shown by Table 1, in 2000 approximately 69 percent of St. Helena's residents drove alone to work (slightly lower than the countywide average of 73 percent), while 13 percent carpooled to work (also slightly lower than the countywide average of 15 percent).

Carpooling significantly increased in St. Helena between 1990 and 2000, from 7.5 percent to 13.1 percent. Meanwhile, bicycling decreased from 1.3 percent to 0.3 percent over the same period. In addition, St. Helena has a significantly higher walking rate as compared to the County.

TABLE 1
JOURNEY TO WORK BY MODE OF TRAVEL

	St. Helena		Napa County	
Mode	**1990**	**2000**	**1990**	**2000**
Drove alone	74.8%	69.2%	75.2%	72.7%
Carpooled	7.5%	13.1%	12.8%	14.8%
Transit	0.0%	1.3%	1%	1.4%
Bicycle	1.3%	0.3%	1.2%	0.2%
Motorcycle	1.6%	0.0%	0.3%	0.8%
Walked	8.4%	7.2%	5.1%	4.1%
Other means	0.4%	0.9%	0.7%	0.8%
Worked at home	5.7%	8.0%	3.7%	5.1%

Census 1990, 2000

Commute Origin and Destination Patterns

Origin and destination data from the 2000 Census provides information on where St. Helena residents are commuting to, and where people working in St. Helena are commuting from. As shown in Table 2, approximately half of St. Helena's employed residents work within the City, and close to half travel to other destinations within Napa County. Very few St. Helena residents commute to destinations outside of Napa County.

As shown in Table 3, 23 percent of St. Helena's workforce live within the City, and 28 percent commute from the City of Napa. Another 22 percent commute from other places in Napa County, with only a small percentage of workers commuting from outside the county.

According to this data, many more workers are commuting into St. Helena than are living within the City, suggesting a high jobs/housing balance. Jobs/housing balance is a measure of the equilibrium between employment and residential units in a specific area. A balanced ratio between jobs and housing can reduce travel times and traffic congestion in a given area.

TABLE 2
DESTINATIONS FOR WORKERS LIVING IN ST. HELENA

Origin	Destination	Number of Total Workers	Percentage of Total Workers
St. Helena	St. Helena	1,170	43%

EXISTING TRANSPORTATION SYSTEM

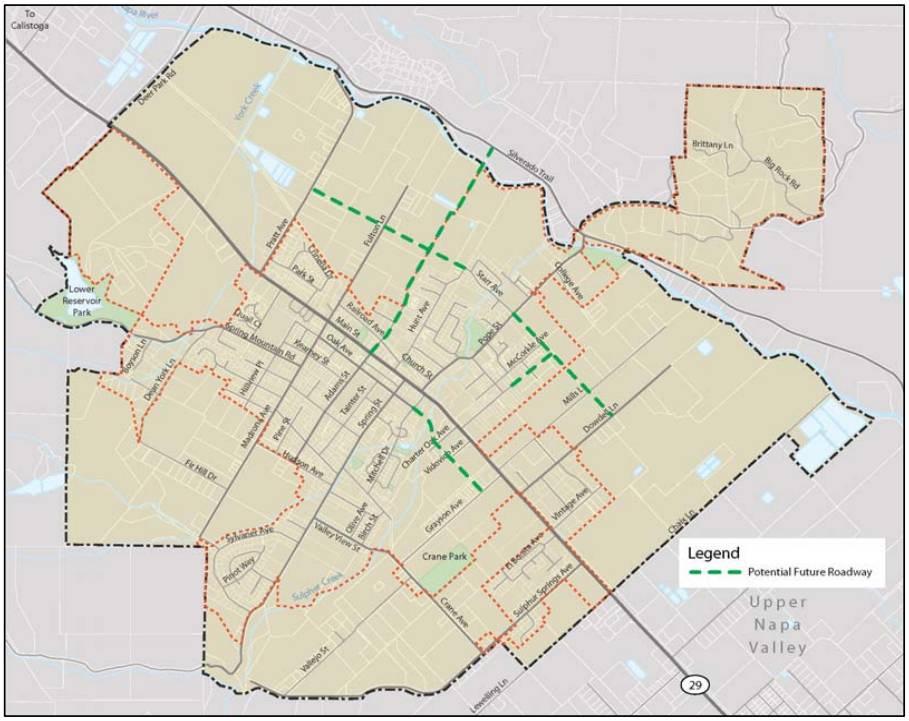
Existing Goals & Policies

St. Helena General Plan, 1993

At the time the previous General Plan was adopted in 1993, a key concern was congestion along SR-29/Main Street and improving north-south and east-west connections through St. Helena. The Plan also articulated the need for future roadways to provide access to potential new development. The 1993 General Plan contained key goals, objectives and policies for the city.

The following key transportation goals and objectives were included in the Circulation/Transportation Element of the 1993 General Plan:

- Designating a system of collector and local streets as a basis for managing traffic in the city
- Adding new streets to the existing system and preserving rights-of-way for future collector streets to improve access and connectivity throughout St. Helena as the city develops. An extension of Oak Street from Mitchell Street to Grayson Street is recommended in the 1993 General Plan, however subsequent studies have found this proposal infeasible.
- Establishing a Vehicle Level-of-Service policy based on Napa County's standard



Potential Future Roadways as proposed in the 1993 General Plan

SR-29 Specific Plan

The *SR-29 Specific Plan* (2007) developed by Kimley Horn & Associates provides direction for future development and associated traffic along SR-29 within St. Helena. Circulation objectives within the Circulation Element of the Plan include the following:

- Accommodating traffic on SR-29 for future planned development
- Providing circulation to the City's local street network
- Installation of a new traffic signal at the intersection of SR-29/Mills Lane and Grayson Avenue, the realignment of Mills Lane and extension of Oak Avenue
- Provisions for bicycle, pedestrian and auto vehicle parking facilities along SR-29

Napa County Transportation Planning Agency (NCTPA) Strategic Transportation Plan

The NCTPA was formed in 1998 to serve as the regional short- and long-term transportation planning body for Napa County, and also serves as the County's Congestion Management Agency. The *Strategic Transportation Plan* formed the basis for decision making related to highways, streets and roads, transit, paratransit and bicycle funding. The plan set forth a vision, mission, and eleven goals for the NCTPA to guide the prioritization of transportation improvements within the county. NCTPA goals are aimed at securing and the equitable distribution of funds, as well as the promotion a multimodal transportation system by enhancing transit, paratransit, and bicycling.

Napa Transportation Future Study

The Napa County Transportation & Planning Agency compiled the *Napa's Transportation Future* (2008) plan to study the relationship between countywide transportation investments and local land use practices. The Plan sets forth five goals focused on sustainable transportation that focus on reducing traffic congestion and improving quality of life in Napa County. The goals include:

- Reducing/restraining growth of automobile vehicle miles traveled (VMT)
- Spreading the load from peak times to non-peak times
- Improving the quality and safety of the street and road infrastructure
- Shifting travel from single occupancy vehicles to other modes
- Reducing overall energy use and greenhouse gas emissions

Twenty supply and demand strategies are identified to achieve these goals. Supply strategies include maintenance and expansion of road infrastructure, introducing roundabout configurations at high-frequency intersections, and improving pedestrian, bicycle, transit and carpool facilities. Significant focus is placed on transit strategies such as Bus Rapid Transit and passenger rail systems. Demand strategies focus on reducing the need for single-occupancy trips by promoting mixed land uses, partnering with the wine and tourism industry to promote car-free services, working with employers to encourage alternatives to commuting, and addressing transportation needs of the growing senior population.

Existing Street Network

The city of St. Helena lies on a north-west/south-east axis with SR-29/Main Street providing the backbone and the main route for intercity and regional travel. For simplicity, all streets parallel to SR-29 will be referred to as north-south routes while streets perpendicular to SR-29 will be referred to as east-west routes. The street network to the west of SR-29 is a grid pattern of residential blocks connected to SR-29 by a series of east-west collectors. To the east of SR-29 the grid network is discontinuous due to the lack of parallel facilities to SR-29 to connect the east-west roadways. The existing street network is displayed in Figure 2.

Streets typically referred to as arterials are two- to four-through-lane roadways designed primarily for either high speed / high capacity long-distance travel between major centers of activity or medium speed / medium capacity roads for intra community travel. The geometry of arterials reflects the higher speed / higher capacity nature with wider lanes and shoulders.

State Route 29 (SR-29) is a two- to four-lane rural highway that stretches through Napa County from Vallejo at Napa County's southern border to Lake County in the north. Within the City of St. Helena, SR-29 has two travel lanes and is known as Main Street. Main Street has parallel parking on both sides of the street and a center turn lane between Dowdell Lane and Madrona Street-Fulton Lane. Main Street provides the primary route for travel within St. Helena and to further destinations around the region. Since SR-29 is a major north-south thoroughfare for Napa County, heavy through traffic is typical along Main Street and vehicles often cut through St. Helena neighborhoods by using alternate parallel routes such as Oak Avenue and Valley View / Crane Street. Future improvements include the "Napa 29 Rehabilitation and Channelization" project which will construct a continuous center lane from Mee Lane to Sulphur Creek, signalization of select intersections along Main Street, and the creation of parallel access routes to provide better north-south connectivity.

Streets typically referred to as collectors are two- to four-lane roadways designed primarily for travel within the county's urbanized areas. These streets are relatively lower speed and lower volume roadways that provide for circulation between neighborhoods and link locally important activity centers. Their main function is not to move high volumes of traffic but instead to provide access for short trips and distribution to the arterial network.

North-South Streets:

Silverado Trail is a major north-south road that runs parallel to SR-29 and extends between Soscol Avenue (in the City of Napa) to the south and Lake County Highway (in the City of Calistoga) to the north. Within the St. Helena area it can be considered a Rural Collector as it provides north-south connections in a rural setting to the east of the St. Helena city limits. East-west access into St. Helena is provided at Pratt Avenue, Pope Street and Deer Park Road just north of the city limits. The roadway has two travel lanes for its entirety with turn lanes at select locations. Class II bike lanes run the length of Silverado Trail providing the major north-south bicycle route through the county. The posted speed limit varies from 35 to 55 mph.

Oak Avenue is a two-lane intra city collector that runs parallel to SR-29 to the west. The road is lined with business and residential uses along its length and allows parallel parking on both sides. Stop signs line Oak Avenue to calm and deter regional traffic from attempting to circumvent congested conditions on Main Street.

Valley View Street/Crane Street is a two-lane, north-south collector that that begins as a rural roadway at Sulphur Springs Avenue and transitions into a suburban residential collector north of Vallejo Street. This roadway is the outer most north-south connector in the grid system to the west of Main Street.

East-West Streets:

Pratt Avenue is a two-lane collector that connects Main Street to Silverado Trail on the north side of the city. Pratt Avenue provides access to both residential and winery uses, but lacks any north-south connections outside of Main Street. Despite its function as a major connection to Silverado Trail and as a bypass to congested conditions on Main Street, traffic is limited due to the poor sight distance and turning radius on the narrow Pratt Avenue Bridge that crosses the Napa River.

Pope Street is a two-lane collector that runs parallel to Pratt Avenue and connects Main Street and downtown St. Helena to Silverado Trail. Pope Street also provides access to suburban residential neighborhoods on the east side of Main Street. As with Pratt Avenue, poor sight distance and turning radii on the narrow Pope Street Bridge crossing the Napa River limit traffic to Silverado Trail. The *Silverado Trail Safety Study* was prepared by TJKM (2003) to improve these conditions and the recommendations include a realignment of Pope Street west of the bridge and a yield sign for the eastbound traffic. The study also emphasizes an extension of Adams Street to Silverado Trail as a long-range solution to reducing congestion. Realignment of the eastbound approach is currently under construction.

Madrona Street/Fulton Lane is a two-lane, east-west collector. To the west of Main Street, Madrona Street provides access to residential neighborhoods and to Spring Mountain Road, a regional connection to the City of Santa Rosa in Sonoma County. To the east of Main Street, Madrona becomes Fulton Lane which provides "dead end" access to commercial and residential areas. Fulton Lane lacks connections to other roadways east of Railroad Avenue.

Adams Street and Spring Street are both downtown collectors that provide access to the residential neighborhoods on the west side of the city. To the east of Main Street, Adams Street provides dead-end access to commercial and agricultural uses, although an extension to Silverado Trail has been proposed to relieve congestion on Pratt Avenue and Pope Street.

Dowdell Lane is a two-lane collector to the east of Main Street that provides access to a variety of agricultural and industrial uses located in the southeastern quadrant of the city. Dowdell Lane has connections to Mills Lane and Vintage Avenue but lacks north-south connectivity to the rest of the city except through Main Street. Dowdell Lane, as well as Mills Lane and Vintage Avenue, are side-street controlled stops, and typically develop long queues due to heavy traffic along SR-29. Improvements to alleviate these conditions include a center turn lane on Main Street south of Dowdell Lane and possible traffic signals at one or more of these intersections.

Sulphur Springs Avenue is two-lane collector on the southern edge of the City and provides access to a variety of commercial and rural residential uses. At its intersection with Main Street, two heavy traffic generators include an automobile sales lot and a destination resort. As the southern most connection to parallel north-south routes to Main Street, Sulphur Springs Avenue represents a possible bypass of SR-29 through the city.

Local streets are low speed and low volume roadways that provide direct access to abutting land uses. Driveways to individual units, on-street parking and pedestrian access are allowed. A majority of St. Helena's network not listed above consists of urban or rural local streets.

ST. HELENA STREET NETWORK

H-14

FIGURE 2

Public Transit

Public transit services are available in all of the cities and in much of the unincorporated areas of Napa County. The primary transit service in Napa County is provided by the VINE, a fixed-route bus service providing service to the Cities of Calistoga, St. Helena, Napa, American Canyon, the Town of Yountville and other parts of Unincorporated Napa County. St. Helena is served by Route 10, Route 11, and the St. Helena Shuttle. The bus routes through St. Helena are shown in Figure 3 and function as follows:

- **Route 10** – A major intercity route in Napa County, Route 10 provides service between Calistoga and Vallejo approximately once an hour from 5am to 9:45pm on weekdays, once every hour and a half to two hours on Saturdays from 6am to 8:45pm, and four times a day on Sundays between 8:20am and 7:15pm. Within St. Helena, Route 10 runs along Main Street and makes stops at Pratt Avenue, City Hall, Mitchell Drive, Mills Lane, and Dowdell Lane. Route 10 provides transit connections at the Vallejo Ferry Terminal to the greater San Francisco Bay Area region.

- **Route 11** – This route provides express service between Napa and Santa Rosa. Within St. Helena, Route 11 stops twice daily at City Hall on Monday, Tuesday, Wednesday, and Saturday on its way to Santa Rosa and once a day on its way to the Pearl Street Transit Center in the City of Napa. Route 11 provides transfer services to Santa Rosa CityBus, Sonoma County Transit, Golden Gate Transit, and Lake Transit.

- **St. Helena VINE Shuttle** – The VINE shuttle Provides a fixed route service within the city of St. Helena and to the St. Helena Hospital in Deer Park, just north of the city. The VINE shuttle is also available for door-to-door service within St. Helena when a reservation is made on the same day of travel. The VINE Shuttle operates on weekdays between the hours of 7:45am and 5pm and provides ten trips. Service is not available on weekends between 12pm and 1pm.

A study of the existing transit service within Napa County was performed by the Napa County Transportation Planning Agency (*Napa Short Range Transit Plan, 2008 – 2017)*. The study found that Route 10 has the highest ridership in the VINE system with over 270,000 passenger boardings in the 2006/07 fiscal year, or approximately 40% of the total fixed–route system ridership. Route 10 does not have the highest passenger productivity however, with only 12.4 passengers per hour compared to 25.1 passengers per hour for Route 4 which is a commuter route in the city of Napa. This discrepancy is due to the fact that Route 10 serves long distance trips as a major intercity route and has the longest service hours in the system. The plan also notes that Route 10 consistently runs late due to congested conditions along SR-29. Route 11 has the lowest amount of passenger trips in the system with 2,750 passengers in 2006/07. The study did not contain any ridership data for the St. Helena VINE shuttle.

Rail Service

No commuter or freight rail service exists in the City. The Napa Valley Wine Train is a privately owned tourist rail service that brings passengers from the City of Napa through the City of St. Helena although passengers are not allowed to embark or disembark from St. Helena. The *Napa / Solano Passenger / Freight Rail Study* (R.L. Banks & Associates, Inc., 2003) investigated the viability of expanded rail service. The study projected start-up costs of $100 million to $140 million for stand-alone passenger service.

TRANSIT ROUTES MAP

H-16

FIGURE 3

Pedestrian Network

Everyone becomes a pedestrian at some point in his or her journey, and the walking environment is one of the most basic public spaces where people interact in the urban landscape. The relative pleasure of walking in a neighborhood is a good yardstick for determining everything from design guidelines to land uses.

The *1993 General Plan* sets forth the following goal for walking within Guiding Policy 5.8.1:

> *It is a goal of the City that it continue to remain at a size where the majority of development is within a 10-minute walk of the downtown. Sidewalks or walkways will reinforce the pedestrian orientation of the City.*

According to 2000 Journey-to-Work Census data St. Helena residents are walking at a substantially higher rate than the countywide average; this is one indication the City is meeting its goal of developing a walkable community.

Downtown District

Downtown St. Helena was originally developed with a grid of streets that includes a comprehensive network of sidewalks in most parts of the City. The central business district surrounding Main Street is the city's core pedestrian district. The St. Helena Downtown Renaissance Group is a local merchants' association working to improve pedestrian, bicycle and bus transit access within the downtown area. This group has promoted concepts for a pedestrian plaza on Hunt Avenue between Main Street and the railroad tracks. One challenge that must be addressed in this plan is that Hunt Avenue provides the only truck access for the Safeway supermarket located at Hunt Avenue and Edwards Street. The City is eligible for a T-Fund grant from Caltrans that may be applied towards pedestrian-oriented street improvements in the downtown area.

Neighborhood Access

Older neighborhoods surrounding the downtown core generally have well maintained sidewalks that provide pedestrian access between residential areas and schools, community centers and other walkable destinations. Additionally, recent traffic calming efforts along Sulphur Springs Avenue, Crane/Valley View and Spring Street have been made to improve the walking environment by reducing vehicular speeds. Neighborhoods towards the periphery have fewer pedestrian amenities and sometimes lack sidewalks. Areas such as the Dean York neighborhood have a rural character where sidewalks may not be appropriate, whereas traditional suburban developments such as the Sylvaner neighborhood were designed primarily for vehicular access and have poor pedestrian access. Looking forward, the City may consider a policy to provide Americans with Disabilities Act (ADA) accessible connections on all streets.

Open Space Access

Several open spaces and parks located within St. Helena and in the surrounding area lack well-defined and accessible connections for pedestrians and bicyclists. Lower Reservoir Park, located on the west side of the city, is a valuable recreational resource but lacks pedestrian access. Future opportunities for a multi-use trail may be considered. Similarly, opportunities to provide pedestrian and bicycle access to the Napa River are being pursued by local wineries and will create recreational and commuting opportunities for both visitors and local residents.

Bicycle Network

The size, topography, and climate of St. Helena make it an ideal city for bicycling. Bicycles are a convenient means of transportation for short trips within cities, especially those less than three miles in length. According to the U.S. Department of Transportation, one-quarter of all trips in this country are under one mile; about 40 percent of all trips are two miles or shorter. The use of bicycles for short trips within the city would reduce the amount of similar trips by automobiles, which would subsequently improve air quality because car engines produce more pollutants when they are cold. A study for the State of California estimated that 90 percent of emissions in a seven-mile auto trip are generated in the first mile. Studies estimate that for every one percent of auto trips replaced by cycling, air pollution from cars drops by two to four percent. Key constraints to bicycling in St. Helena include the lack of bikeway and support facilities (such as bicycle parking).

Types of Bikeway Facilities

Bikeway planning and design in California typically relies on the guidelines and design standards established by Caltrans as documented in "Chapter 1000: Bikeway Planning and Design" of the *Highway Design Manual* (5th Edition, California Department of Transportation, January 2001). Chapter 1000 follows standards developed by the American Association of State Highway and Transportation Officials (AASHTO) and the Federal Highway Administration (FHWA), and identifies specific design standards for various conditions and bikeway-to-roadway relationships. Caltrans standards provide for three distinct types of bikeway facilities, as generally described below, and shown in Figure 4:

- ***Class I Bikeway (Bike Path)*** Class I bikeways are completely separated from motor vehicle traffic, as in the case of an off-street path along a river or railroad corridor. A sidewalk bicycle path would not be considered a Class I facility unless properly designed and separated from the roadway by an appropriate buffer. Pedestrians are allowed on Class I paths.

- **Class II Bikeway (Bike Lane)** provides a restricted right-of-way and is designated for the use of bicycles with a striped lane on a street or highway. Bicycle lanes are generally at least five feet wide. Vehicle parking and vehicle/pedestrian cross-flow are permitted. Class II lanes are preferred to Class I paths on roadways with multiple intersections and/or driveways, for the reasons described above.

- ***Class III Bikeway (Bike Route)*** provides for a right-of-way designated by signs or pavement markings for shared use with pedestrians or motor vehicles. A Shared-Use Arrow (or "Sharrow") can be marked in the outside lane on a Class III route to show the suggested path of travel for bicyclists. This is often done when the route has on-street parking, in order to encourage cyclists to ride a safe distance away from the parked vehicles' "door zone." The Sharrow can also be used at intersections with multiple turn lanes to show bicyclists the recommended lane for through travel. The Sharrow also shows drivers that cyclists should be expected on the street and given sufficient room. A sign stating "Bicycle Allowed Full Use of Lane" is often included. The Sharrow graphic on page 16 shows specifications for this marking.

Existing Bicycle Facilities

The existing bicycle network is illustrated in Figure 5. All City bicycle routes are Class III Bikeways, with the exception of one segment of Class II bike lane along Starr Avenue. These bicycle routes are consistent with the City of St. Helena 1993 General Plan, which states that bicyclists shall be discouraged from using Main Street for safety purposes and shall be encouraged to use other parallel streets. There are no Class I bike facilities within the City. However, plans for the Vine Trail would provide a multi-use path along the Napa River connecting St. Helena to regional destinations in the valley.

Bike lanes could potentially be accommodated on many streets in St. Helena, but in some cases they would require narrowing of existing travel lanes and/or the removal of on-street parking. The City's traffic calming efforts have already experimented with narrowed roadways in some areas. On streets with constrained right-of-way, Class III routes may be enhanced with Sharrows, way-finding signage and traffic calming strategies.

The City currently has an adopted Bicycle Master Plan though it has not been recently updated. Proposed bicycle facilities within the *2003 NCTPA Countywide Bicycle* Plan are described in Figure 4.

Collision Data

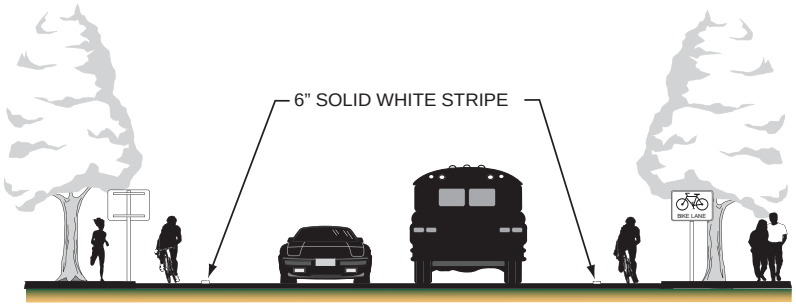
Bicyclist crash data from the 2003 NCTPA Countywide Bicycle Plan indicate that the majority of collisions occur along SR-29/Main Street. All crashes occurred at intersections, and may be the result of turning conflicts between bicyclists and motorists. This higher frequency may also indicate heavier bicyclist volumes along this route. As part of the General Plan Update, the City may consider developing a citywide bicycle network that will enhance the safety and comfort for cyclists of varying abilities. Particular attention should be given to safety enhancements along SR-29.

Bicycle Support Facilities

As part of the General Plan update, the City may wish to consider policies aimed at encouraging or requiring the provision of bicycle parking, particularly if new development occurs.

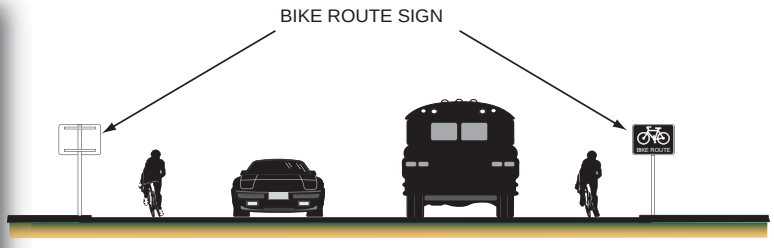
CLASS I BIKEWAY (Bike Path)

Provides a completely separated right-of-way for the exclusive use of bicycles and pedestrians with crossflow minimized.



CLASS II BIKEWAY (Bike Lane)

Provides a striped lane for one-way bike travel on a street or highway.



CLASS III BIKEWAY (Bike Route)

Provides for shared use with pedestrian or motor vehicle traffic.

FIGURE 5

Motor Vehicles and Parking

Transportation engineers and planners commonly use a rating system called Level-of-Service (LOS) to measure and describe the operational status of intersections or roadway segments on a local street network. LOS is a semi-quantitative description of an intersection or roadway's operation, ranging from LOS A (indicating free flow traffic conditions with little or no delay) to LOS F (representing oversaturated conditions with traffic flows exceeding design capacity, resulting in long queues and delays). One goal in the 1993 St. Helena General Plan is to define a set of LOS standards to conform to the Napa County Standards. The LOS guidelines for St. Helena are listed in Appendix A.

Existing Roadway Conditions

There are several approaches for defining the LOS for a roadway segment. A daily LOS is a generalized approach, where the volume-to-capacity ratio is calculated from a theoretical daily roadway capacity based on the number of lanes and capacity class. The capacity class represents the type of facility such as highway, arterial, or collector. This approach is used where the road features are generally uniform over an extended distance. The daily LOS may not account for peak hour delays that occur resulting from extended queuing at closely spaced intersections or at high-demand movements.

To estimate daily roadway LOS, Average Daily Trip (ADT) counts were conducted by Omni-Means in August 2007 at a selection of key roadway segments. These counts were supplemented with traffic counts from sources less than two years old, including Caltrans count data and recent traffic studies. Table 4 shows existing ADT on several key roadway segments in St. Helena. LOS definitions and guidelines for roadways are listed in Appendix A, Table 7.

TABLE 4
EXISTING ROADWAY CONDITIONS SUMMARY

Study Roadway Segments	Roadway Classification	ADT	LOS[1]
Main Street north of Pratt Avenue	Minor Arterial Street	**18,600**	**F**
Main Street north of Adams Street	Minor Arterial Street	**17,000**	**F**
Silverado Trail north of Howell Mountain Road[3]	Collector Street	10,900	C
Oak Avenue south of Adams Street	Collector Street	4,800	A
Pope Street west of Silverado Trail	Collector Street	6,000	B
Valley View south of Charter Oak Avenue	Collector Street	3,500	A
Sulphur Springs Avenue west of Main Street	Collector Street	2,200	A

Notes:
1. See Table 5 in Appendix A for ADT LOS definitions and standards.
2. **Bold** represents unacceptable operations.
3. Silverado Trail functions as a minor arterial even though it is classified as a rural collector.

Source: Fehr & Peers, 2008.

Most streets in St. Helena operate acceptably with little congestion except for Main Street which operates at oversaturated conditions at both study locations. With 17,000 and 18,600 vehicles per day at the two study locations, Main Street has significantly more traffic than the acceptable LOS D as defined in Appendix A.

Other methods of quantifying the LOS of a roadway segment include using the AM and PM peak hour volumes for collector or local roadways and average vehicle speeds for arterial roadway segments. Both these methods produce similar LOS results as shown in Table 4, confirming acceptable operations throughout the city except for Main Street. Results of these analysis methods are shown in Appendix B, Tables 10 and 11 for city streets and Main Street, respectively. LOS standards are defined for these methods are shown in Appendix A.

Existing Intersection Conditions

Roadway traffic volumes provide a limited sense of how traffic operates and where major areas of congestion typically occur. Intersection analysis is generally a useful tool to develop a better understanding of key traffic issues and conflicts. To better understand the current traffic issues facing St. Helena, 20 study intersections were chosen and analyzed. These intersections were selected based on the desire to gain a comprehensive understanding of the operations of traffic during the morning and evening peak hours. Intersections are typically analyzed based on the average delay in seconds that vehicles have to wait at an intersection before proceeding through. Table 9 in Appendix A shows the LOS guidelines for intersection control. Table 5 shows the existing delay and LOS of the select intersections. These values were calculated based on traffic counts conducted by Omni-Means in August 2007.[1] The volumes from these counts are shown in Figure 6 located in Appendix B.

As shown in Table 5, seven intersections have a peak hour LOS of E or worse. All of the intersections are unsignalized and are located on Main Street, with the exception of the Silverado Trail / Pope Street intersection. The operations at these intersections are due to excessive delays and long queues for the side-street stop-controlled traffic. This is attributed to heavy through movements along Main Street and Silverado Trail and the lack of "gaps" available for vehicles to proceed through the intersection.

Improvements are underway at some of these intersections as a part of work currently being done on Main Street and at the Silverado Trail / Pope Street intersection. On Main Street, the construction of the center turn lane and the signalization of several intersections is expected to improve several of the intersections. For example, the signalization of the intersections at Main Street / Grayson Avenue / Mills Lane and Main Street / Vintage Avenue will lesson congestion and queues at those and other intersections. Work currently under way at the intersection of Pope Street / Silverado Trail is expected to improve conditions at that intersection. This work includes realignment of the western approach to the Pope Street Bridge to improve sight distance and turning radii and addition of a yield sign for east-bound traffic approaching the bridge.

[1] Traffic counts are not typically taken during the summer as schools are not in session which can disproportionately affect the counts. However, in the case of St. Helena, traffic is typically much higher during the summer months due to Wine Country tourism and Omni-Means presumably took counts during August for conservative measure.

TABLE 5
EXISTING INTERSECTION LEVEL OF SERVICE

Intersection	Control Type[1]	AM Peak Hour		PM Peak Hour

Notes:

Signal = Signalized intersection; AWS = All-Way Stop-Controlled intersection; SSS = Side-Street Stop-Controlled intersection

Bold represents failing intersections according to the LOS standards set forth in Table 9, Appendix A.

1. Signalized and AWS intersection level of service based on average control delay per vehicle, according to the HCM- Special Report 209 (Transportation Research Board, 2000). Side-street stop-controlled intersection level of service based on worst approach control delay, according to the HCM-Special Report 209 (Transportation Research Board, 2000).
2. Any delay greater than 50 seconds at a stop controlled intersection represents a failing intersection with oversaturated conditions.
3. See Table 9 in Appendix A for ADT LOS definitions and standards.

Source: City of St. Helena General Plan Transportation Element Update, Omni-Means, 2007

Interregional Travel Patterns

Because SR-29 is the main route for vehicles traveling from Lake County or Northern Sonoma County to the City of Napa and destinations to the south, inter-county travel through St. Helena is significant. A study titled *Origin and Destination Study: Mendocino, Lake, Napa, and Sonoma Counties* by the Mendocino Council of Governments (MCOG, December 2006) investigated the interregional trips between Napa County and Lake and Sonoma Counties. This study found that a significant amount of trips between the three counties is due to imbalances in housing, retail, and jobs. Although through trips make up a significant portion of the countywide trips, most vehicles along SR-29 have origins or destinations within Napa County. While intra-city circulation may be improved with the policies and objectives recommended by the Transportation Element, other region-wide housing, employment, and public transit policies may need to be enacted to limit further growth in interregional travel. The issues involved with containing interregional travel are discussed later in this report in the *Current Studies and Planned Improvement* section covering *Napa's Transportation Future of 2008*.

Truck Traffic

A study by Caltrans titled *2005 Annual Average Daily Truck Traffic on the California State Highway System* (Traffic and Vehicle Data Systems, November 2006) estimated that truck traffic composes 6.7% of the traffic on SR-29 at the intersection of Adams Street. The two major generators of truck traffic along State Route 29 are through-traffic between the City of Napa and northern Napa County and the cement plant owned by Harold Smith & Sons located on Crane Avenue. Harold Smith & Sons generates truck traffic on the local street network; typically trucks use Allyn Avenue and Adams Street to connect to SR-29.

Traffic Calming

According to the Institute of Transportation Engineers, traffic calming involves changes in street alignment, installation of barriers, and other physical measures to reduce traffic speeds and/or cut-through volumes, in the interest of street safety, livability, and other public purposes.

Traffic diverting from SR-29 onto St. Helena's local street network has raised safety concerns among local residents. In particular, residents have complained of excessive speeding along Sulphur Springs Avenue-S. Crane/Valley View and Spring Street as motorists attempt to bypass congestion on SR-29.

In 2006, Omni-Means and Dan Burden of Glatting Jackson performed a traffic calming study of this area. Daily traffic counts, license plate "origin-destination" surveys, radar speed surveys and collision analysis were performed along Sulphur Springs Avenue, South Crane/Valley View and Spring Street. Public workshops also gathered input from local residents concerned with speeding and cut-through traffic on these streets. Multiple traffic calming measures were considered to reduce these impacts.

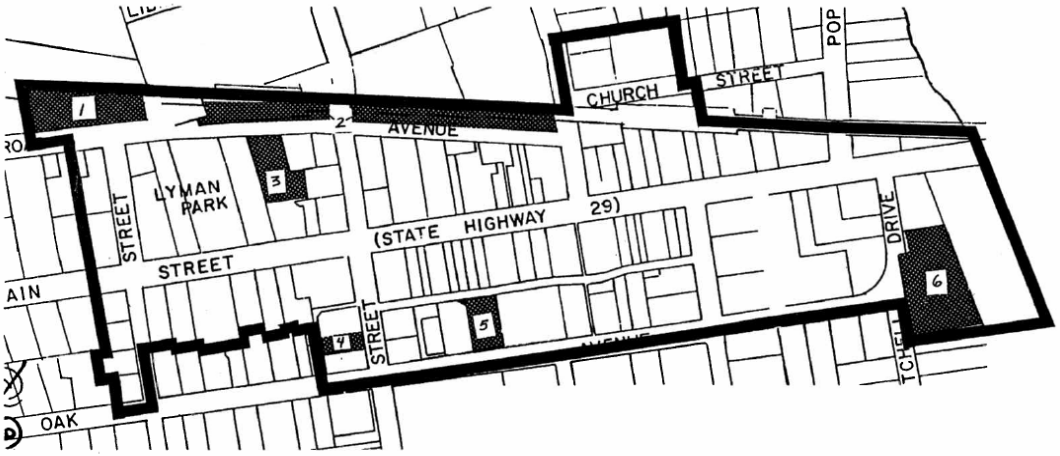
Due to budget constraints and that fact that all three streets are designated as primary emergency vehicle response routes, very basic countermeasures were proposed and installed. These recommendations included removal of the street centerline and striping eight-inch white edge lines to create a 20' roadway. The traffic calming improvements have been met with mixed response from local residents who are not familiar with such strategies or may not understand their purpose. In addition, roadway shoulders have been painted brick red in some areas. This roadway treatment has also had mixed reviews from the community, as some residents feel that it does not reflect the rural feel of the road, or dislike the color.

The City may wish to revisit traffic calming strategies and develop a comprehensive policy to guide future measures. This could include a selection of an appropriate "toolbox" of traffic calming measures and guidelines for their installation.

Parking Policies

Parking is a concern in Downtown St. Helena. In general, there are few restrictions on on-street parking downtown or the city at-large. Along Main Street, parallel on-street parking is free to encourage commercial activity and to provide a buffer between pedestrians and the roadway.

The 1993 General Plan identified a Parking Impact Area (shown below) as the portion of the city most affected by parking supply and demand issues. General Plan policies require any new development that would produce new demand for parking within the Impact Area must either supply additional parking within the development proposal or contribute an in-lieu fee to the City's off-street parking program.



Parking Impact Area

1. "City Depot Property"
(APN 9-193-03) Owned by the City of St. Helena
Approximately 95 potential parking spaces.

2. "Napa Valley Wine Train Property"
(portion of APN 9-210-01) Owned Napa Valley Wine Train
Approximately 20 potential parking spaces.
(51 parking spaces are already developed).

3. "Donaldson Property"
(portion of APN 9-211-05) Owned by Richard & Gladys Donaldson
Approximately 35 potential parking spaces.

4. "Harris Property"
(APN 9-223-22) Owned by Rennick and Marilyn Harris
Approximately 30 potential parking spaces.

5. "Alliguie Property"
(APN 9-240-15) Owned by Armand Alliguie
Approximately 30 potential parking spaces.

6. "PG&E Property"
(APN 9-263-05) Owned by Pacific Gas and Electric
Approximately 75 potential parking spaces.

St. Helena
General Plan Update

Downtown Parking Improvement Plan Candidate Parcels

Additionally, the 1993 General Plan set forth a policy for the City to develop and maintain an off-street parking program. Consideration for a new downtown parking structure has been made. While the most likely site for a proposed lot is owned by the Pacific Gas & Electric Company (PG&E), this land is contaminated and requires significant environmental mitigation.

In the future, the City may wish to consider a parking management program for the central business district.

CURRENT STUDIES AND PLANNED IMPROVEMENTS

This section describes the planned improvements to St. Helena's internal circulation system and that of the county as a whole. Citywide projects or studies include reducing traffic congestion on SR-29 and improving the overall circulation and access. Relevant countywide issues such as the relationship of transportation investments and local land use and transit and bicycle access improvements will play an important role in the future circulation of St. Helena.

Traffic Congestion Reduction along SR-29

The City approved intersection control at the Main Street intersections with Dowdell Lane and Grayson/Mills Lane as a part of the *Highway 29 Corridor Specific Plan* (TJKM, 2002). Although the preliminary plans were to install coordinated traffic signals at each of the intersections, a study was conducted in 2006 by Omni-Means (*St. Helena Roundabout Feasibility Study*) to determine the feasibility of installing a roundabout at the intersections. Although the roundabouts were determined to be able to handle the anticipated traffic levels, the footprints for the projects were too large for the area due to the adjacent railroad and other right-of-way constraints. As a result, the signalization of Grayson Avenue, Vintage Avenue, and Sulphur Springs Avenue were recommended under the *SR-29 Access Study* (Kimley-Horn, 2007).

The Caltrans "Napa 29 Rehabilitation and Channelization" project proposes to construct wider shoulders and a nearly continuous center turn lane on SR-29 from Mee Lane to Sulphur Creek. This project will include road widening and will need easements from the Wine Train and allowances from Caltrans to move some of the above ground utilities. The project would also construct bicycle crossing improvements at the Whitehall Lane railroad crossing.

Circulation and Access Improvements

Several studies have been undertaken to improve the circulation and access within St. Helena. Two important issues the studies addressed include improving intra-city north-south access parallel to Main Street and connections between Main Street and Silverado Trail.

The *State Route 29 Specific Plan* (TJKM, 2002) addresses the issue of north-south access with an evaluation of an Oak Avenue extension from Mitchell Drive to Grayson Avenue. Results found that the extension would not substantially improve traffic conditions on SR-29. In addition, public perception of this project was that it would create undesirable effects including worsened traffic and noise. For these reasons, this strategy was eliminated. Another proposal is to create a new north-south connection on Starr Avenue from Dowdell Lane to Pratt Avenue. The project is expected to improve circulation on the east side of Main Street and reduce the number of local trips on Main Street.

Access to Silverado Trail, an important parallel route to SR-29 through Napa County, is restricted due to poor sight distance and turning radii over the historic narrow bridges crossing the Napa River at both Pope Street and Pratt Avenue. The *Silverado Trail Safety Study* prepared by TJKM (2003) proposed two projects to improve the east-west access to Silverado Trail. The short term solutions currently under construction are the realignment of the western approach to the Pope Street Bridge to improve sight distance and turning radii and the placement of a yield sign for eastbound traffic to assign right-of-way to westbound vehicles crossing the bridge. The yield sign will reduce delays in the Pope Street / Silverado Trail intersection due to turning vehicles from Silverado Trail unable or unwilling to enter the bridge due to eastbound traffic. The proposed long term solution to improve parallel access is to extend Adams Street across the Napa River to Silverado Trail which will provide an alternative crossing of the Napa River and reduce traffic on Pope Street.

Napa Transportation Future Study

As discussed in the section on Existing Goals and Policies, *Napa's Transportation Future* (2008) presents the relationship between countywide transportation investments and local land use practices.

The Plan presents five scenarios based on the Napa/Solano Traffic Forecasting Model that analyze the effects of the different strategies under varying future conditions. These scenarios include baseline conditions, the implementation of strategies without land use changes, implementation with land use changes, slower growth, and an increase in auto operating costs. The report found that the only scenario to significantly lower vehicle miles traveled (and the corresponding factors including lower greenhouse gases and vehicle hours of travel) was the slower growth scenario. However, when regional traffic is taken into account, the most congested roadways were not significantly affected under any of the five scenarios. This is due to a heavy amount of inter-county travel, both travel to and from Napa County as well as through the county.

For St. Helena, this means that countywide strategies to limit congestion will likely not have much of an impact on reducing congestion on SR-29. Even though the percentage of inter-county trips is lower on SR-29 than other major county highways, a combination of local and regional strategies will need to be undertaken to manage the transportation impacts of future growth.

NCTPA 2003 Countywide Bicycle Plan

The NCTPA 2003 Countywide Bicycle Plan identifies six improvements in the City of St. Helena. One improvement is ranked 11th in priority out of about 100 countywide projects; the rest of the improvement priorities range from about 40th to 55th. The total countywide cost of the Bicycle Plan projects is $50.4 million; the St. Helena projects comprise $1.3 million of that cost. The projects are listed in Table 6 below. Improvements are illustrated in Figure 7.

The 1993 St. Helena General Plan discourages bicycling along SR-29/Main Street for safety concerns, however this corridor continues to be a popular cycling route and the Countywide Plan includes provisions for signage. Two Class I trail projects, the Sulphur Creek Multi-use Path and Napa River Multi-use Path (also known as the Vine Trail), are recommended in the countywide plan and are in keeping with the *1993 General Plan* Guiding Policy 5.8.2 to create a system of bicycle routes along open space corridors. To boost bicycle tourism in the Napa Valley, local vintners and grape growers are interested in partial funding of the proposed Vine Trail project. This project would provide bicycle and pedestrian access along the Napa River to wineries throughout the valley.

TABLE 6
2003 NCTPA PROPOSED BICYCLE FACILITIES WITHIN ST. HELENA

Route	*Rank*	*Cost*	*Description*
1g	11	$1,200	Install signage on Main Street from Sulphur Creek to Pratt Avenue designating the route as a Class III (signage only) bicycle route.
26a, 26b	41, 42	$200,000	Widen Pope Street from SR-29 to the creek and from the creek to Silverado Trail to provide 4' minimum Class II (pavement striping) bike lanes.
26g	54	$358,000	Construct the Sulphur Creek Path, a Class I separated bike path, from Valley View Street to Starr Avenue.
26h	55	$325,000	Construct the Napa River Path, a Class I separated bike path, from Pratt Avenue to Del Campo Court.
26i	56	$423,000	Construct the Napa River Path, a Class I separated bike path, from Pope Street to the City Limit.

Transit Plans

The Napa County Transportation and Planning Agency (NCTPA) compiled a *Short Range Transit Plan FY 2008-2017* (SRTP) for Napa County in 2008. The NCTPA operates the transit services in the Napa Valley, which includes the VINE bus system. The objective of the SRTP is to evaluate the current systems performance, project demographic changes, identify funding issues, and create a reasonable projection of the conditions over the next ten years. The SRTP sets out several goals and objectives to improve the transit system in Napa County. These include:

- Improving VINE service productivity as ridership has been on the decline for several years
- Improving marketing in the community to encourage ridership
- Managing on-time performance more effectively
- Minimizing operating costs
- Reevaluating the farebox recovery ratio

Several recommendations that relate to service within St. Helena are made to address these goals and objectives:

- Discontinuing Route 11 as it has consistently underperformed since the beginning of service and only averages 1.3 passengers per revenue hour. Route 11 is the least productive line in the system and discontinuing the route would save 2,100 service hours that could be used to expand service on routes with more ridership potential.

- Addressing on-time performance for Route 10. Route 10 is consistently late and the schedule should be readjusted to reflect the heavily congested conditions on SR-29 between St. Helena and the Napa. By adding more time to the schedule and adding recovery time at the Napa Pearl Transit center, Route 10 will be a more dependable service with better on-time performance.

- Adding an Express Route 10 to serve commuters from the Napa Valley to the ferry building in Vallejo. This plan has backing from the NCPTA committee and has already received a grant to begin planning the route. Additional studies will be undertaken to explore the possibility of increasing the frequencies of Route 10 from Napa to Vallejo as well as adding more weekend service.

- Improving marketing in the community through printed materials, specials events, and exceptional customer service. A strong emphasis is made on making an outreach to the Latino community as they represent a large segment of the system's ridership.

ISSUES AND OPPORTUNITIES

As part of the General Plan update, the City of St. Helena may wish to revisit the key goals, objectives and policies contained in the 1993 General Plan. The following are some of the key planning issues and implications with regard to transportation:

Strategies for Sustainable Transportation

Transportation Demand Management (TDM)

Regional policies anticipate a continued emphasis on encouraging greater reliance on carpooling and transit use. As part of the General Plan update, the City may wish to adopt specific goals and policies related to vehicle trips and mode split. Development review standards could be revised to encourage travel by alternative modes, such as through reduced parking requirements and the provision of preferred parking for carpools and vanpools; orientation of building entrances to facilitate pedestrian and transit access; and the provision of bicycle parking and shower or locker facilities.

Improved Transportation Performance Measurements

As part of the General Plan update, the City of St. Helena may wish to adopt specific performance measurement standards, such as level of service (LOS) standards that would be used to evaluate future development applications and determine appropriate improvements. Ideally, the performance standards would take into account other travel modes (pedestrian, bicycle, transit) where LOS is measured as a function of overall accessibility and convenience for all modes. Performance standards could vary for specific street and location types.

Parking Management Program

The City of St. Helena may consider adoption of a Parking Management Program as part of the 2030 Update to the General Plan. This program would guide the City in determining the location and amount of both publicly and privately owned parking in a comprehensive manner. Strategies could include:

- Establishing parking maximums and/or minimums
- Pricing schemes for market-based fees for parking
- Ensuring that parking standards conform to the City's urban form and community character
- Strategies for optimizing shared parking uses
- Design guidelines for parking facilities to accommodate pedestrians and bicyclists

Climate Action Plan

The City of St. Helena may wish to include integrated transportation and land use strategies that deliver sustainability of climate, energy and public health within the update to the General Plan. The City can adopt planning strategies and effectiveness measures to address recent climate legislation and to minimize development impacts on climate change. For example, some local agencies are starting to adopt ordinances or resolutions to achieve greenhouse gas reductions, although "climate action plans" or energy plans are more common. Transportation strategies that may be considered as part of a climate action plan include developing targets for reducing per-capital miles traveled, supporting transit oriented development, and integrating transportation and land use decisions.

Neighborhood Electric Vehicle Circulation

Some communities seeking to reduce carbon emissions are using a Neighborhood Electric Vehicle system. Downtown, historic districts and other important areas of St. Helena can be designated as NEV (35 mph maximum speed) zones. While a separate network is most appropriate for NEV use on high-speed streets, the City of St. Helena may consider NEV use on local streets that have low vehicular speeds and traffic volumes.

A neighborhood electric vehicle used by the Anaheim Police Department. Photo courtesy of Richard Masoner.

Transit Opportunities

Transit Supportive Land Use

Dispersed land use patterns and long intervals between buses means that transit usage in the region is still minimal in comparison to the use of private automobiles. Less than two percent of St. Helena residents commuted to work on transit in 2000, while 69 percent drove alone in a private car and 13 percent carpooled.

Transit System Enhancements

As part of the General Plan update, the City may wish to adopt specific performance targets for transit usage, as well as policies related to potential bus priorities on City streets and bus stop improvements (such as benches and shelters to provide shade and the provision of additional information at bus stops to aid riders). Additionally, land use policies adopted as part of the General Plan update could place an emphasis on focusing development near existing transit facilities.

Non-motorized Opportunities

Bicycle Network

A bikeway network has not yet been developed in St. Helena and bicycle support facilities, such as bicycle parking, are lacking in many areas. The mode share of cycling could be increased through construction of such facilities at activity centers throughout the city; key activity centers that could be conducive to increased rates of bicycling include the downtown area, bus stops, schools and parks. Additionally, access to open space and regional destinations throughout the Napa Valley may be improved through a system of off-street multi-use paths. The General Plan update creates an opportunity for the City to develop specific policies and objectives related to enhancing the role of bicycling as a form of transportation.

Pedestrian Network

As part of the General Plan update, the City could consider designating certain corridors or activity nodes within the City as “pedestrian zones,” in which pedestrian improvements would be given a high priority. Additionally, many of St. Helena’s sidewalks do not meet current ADA standards. The City could consider adopting specific policies for ADA compliance and develop a transition plan for upgrading pedestrian rights-of-way to be ADA-compliant. The City could also consider adopting specific goals and policies related to crosswalk installation as part of a larger aim to promote pedestrian safety.

Street Design / "Complete Streets" Strategies

State Street, Santa Barbara
Image credit: University of Connecticut

Complete Streets

As part of the General Plan update, the City may wish to refine and expand upon key goals related to streetscape improvements, including an identification of priority corridors for street beautification projects, which could also benefit pedestrian circulation. A set of streetscape guidelines may also be established.

Increased Street Connectivity

The City of St. Helena 1993 General Plan contains a circulation map of the City with proposed alignments to connect the existing grid system and provide access to future development. The City should review and update the 1993 General Plan street system, and encourage its completion consistent with future development patterns. The Update to the General Plan should include appropriate access and connections for all modes between neighborhoods and the downtown area, and adequate circulation to new developments, such as the Mercy and Magnolia Oaks Housing Projects. North-south travel on the east side of the City remains an issue and should be addressed within this review.

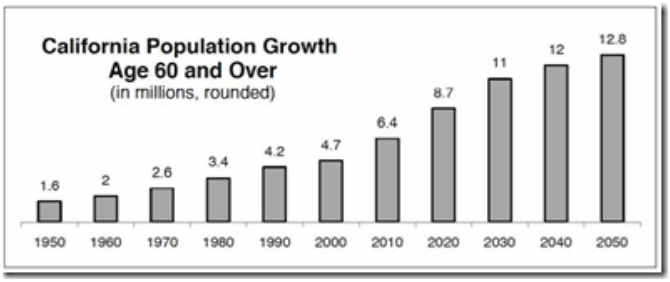
Traffic Calming

Minimizing the negative impacts of motor vehicle traffic on residential streets has been a major priority for St. Helena, and the City has pursued multiple traffic calming strategies in recent years. However, some recent traffic calming efforts have been contentious, as the toolbox of treatments was limited and motorists were unfamiliar with their purpose. A more comprehensive approach may be needed, and development of specific policies to guide the consideration and installation of traffic calming measures could be included in the General Plan update.

Changing Demographics and Travel Patterns

Seniors

California is experiencing a significant demographic shift towards an aging population and St. Helena is no exception. With the aging of the Baby Boom Generation, California's senior population is projected to increase by 85 percent or 11 million seniors between 2000 and 2020. While more than one in five older Americans does not drive, alternatives to driving are limited, especially in the rural communities or suburban settings where residents are increasingly "aging in place."



Source: California Department of Aging

The City may wish to pursue strategies that support mobility for seniors and people with mobility impairments, such as Complete Streets policies, senior-specific pedestrian improvements and neighborhood electric vehicles.

Tourism and Travel

A significant portion of Napa County's traffic congestion is generated from tourists traveling throughout the region. Specific strategies to reduce the number of vehicle trips generated by tourists while still encouraging travel may be developed. Strategies may include the following:

- "Park Once" program for tourists, which encourages walking and/or use of a shuttle service through the strategic placement and pricing of parking.
- Marketing car-free vacation options – for example, the Santa Barbara County Air Pollution Control District has a website and resources with information and promotions on vacationing in Santa Barbara without a car: www.santabarbaracarfree.org.
- Develop local and regional bicycling infrastructure to promote bike touring through St. Helena and the Napa Valley. The Route verte, a 4,000 km network of bikeways in Quebec, is a major tourism attractor for bicycling in Canada.

APPENDIX A: EXISTING LEVEL OF SERVICE STANDARDS

Transportation engineers and planners commonly use a rating system called level of service (LOS) to measure and describe the operational status of intersections on a local roadway network. LOS is a semi-quantitative description of an intersection's operation, ranging from LOS A (indicating free flow traffic conditions with little or no delay) to LOS F (representing oversaturated conditions with traffic flows exceeding design capacity, resulting in long queues and delays).

Roadway Analysis Method

Level-of-Service at roadway segments can be qualified using several methodologies. A daily LOS is a generalized approach, where the volume-to-capacity ratio is calculated from a theoretical daily roadway capacity based on the number of lanes and "capacity class" (e.g. highway, arterial, and collector). This approach is used where the road features are generally uniform over an extended distance (e.g. standard roadway curvature and grade, lane widths and intersection spacing). The daily LOS may not account for peak hour delays that occur resulting from extended queuing at closely spaced intersections or at high-demand turn movements.

Table 7 displays the definitions of the LOS thresholds based on the Highway Capacity Manual (TRB, 2000) and research conducted by Fehr & Peers.

TABLE 7
LOS DEFINITIONS FOR ROADWAY SEGMENTS

Roadway Classification	Number of Lanes	ADT Level-of-Service Capacity Threshold				
		A	B	C	D	E
Minor Arterial	2	9,000	10,700	12,000	13,500	15,000
Collector Street	2	5,250	6,125	7,000	7,875	8,750
Local Street	2	-	-	3,000	4,000	5,000

Source: Fehr & Peers 2009, based on the "Highway Capacity Manual", Transportation Research Board, 2000 and internal Fehr & Peers research.

The California Department of Transportation (Caltrans) is responsible for the maintenance and operation of state routes and highways including SR-29. Caltrans usually strives to maintain service levels on State facilities at the transition between LOS C and LOS D. Anything below LOS D can be considered unacceptable conditions. Other evaluation measures such as safety, vehicle-miles-traveled, and accessibility can be considered as well, particularly in downtown environments.

Table 8 displays the definitions of the LOS thresholds based average travel speed on arterials according to the Highway Capacity Manual (TRB, 2000).

TABLE 8
ROADWAY SEGMENTS LOS CRITERIA, HCM ARTERIAL OPERATIONS THRESHOLD

Urban Street Class	I	II	III	IV
	High-Speed Principal Arterial	Suburban Principal Arterial	Intermediate Minor Arterial	Urban Minor Arterial
Range of Free Flow Speed (FFS)	45-55 mph	35-45 mph	30-35 mph	25-35 mph
Typical FFS	50 mph	40 mph	35 mph	30 mph
LOS	Average Travel Speed (mph)			
A	>42 mph	>35 mph	>30 mph	>25 mph
B	35 – 42 mph	29 – 35 mph	25 – 30 mph	21 – 25 mph
C	28 – 34 mph	23 – 28 mph	19 – 24 mph	15 – 20 mph
D	22 – 27 mph	18 – 22 mph	15 – 18 mph	12 – 14 mph
E	16 – 21 mph	13 – 17 mph	11 – 14 mph	9 – 11 mph
F	< 16 mph	< 13 mph	< 11 mph	< 9 mph

Source: Highway Capacity Manual (TRB, 2000), Exhibit 15-2. Urban Street LOS by Class

The Main Street corridor reflects Urban Street Class IV because it has a high-density of driveways, significant amounts of on-street parking and roadside development, and significant pedestrian traffic (HCM-2000, Exhibit 10-4).

Intersection Analysis Method

Signalized Intersections

Signalized intersection traffic conditions and resulting LOS derive from the Highway Capacity Manual (HCM) – Special Report 209 (Chapter 16) method. This operations analysis uses various intersection characteristics (such as traffic volumes, lane geometry, and signal phasing) to estimate the average control delay per vehicle. Control delay is the portion of the total delay attributed to signal operations and includes initial deceleration, queue move up time, stopped delay, and acceleration delay. Using this method, transportation engineers and planners base the LOS for a signalized intersection on the control delay per vehicle measured in seconds. Table 9 shows the relationship between delay and LOS for signalized intersections.

Unsignalized Intersections

Unsignalized Intersection (all-way stop-controlled and side-street stop-controlled) evaluations employ the HCM – Special Report 209 (Chapter 17) method. The average control delay per vehicle (measured in seconds) for each stop-controlled movement defines the operations for these intersections. Control delay incorporates delay associated with deceleration, acceleration, stopping, and moving up in the queue. For side-street stop-controlled intersections, the delay reported in this study represents the worst-case minor approach. For all-way stop-controlled intersections, the average control delay represents the whole intersection. Table 9 summarizes the relationship between delay and LOS for unsignalized intersections.

TABLE 9
INTERSECTION LEVEL OF SERVICE CRITERIA

Level of Service	Driver's Perception and Traffic Operation Description	Signalized Intersection Control Delay per Vehicle (Seconds)	Unsignalized Intersection Control Delay per Vehicle (Seconds)
A	LOS A is characterized by light congestion. Motorists are generally able to maintain desired speeds on two and four lane roads and make lane changes on four lane roads. Motorists are still able to pass through traffic.	≤ 10.0	≤ 10.0
B	LOS B is characterized by light congestion. Motorists are generally able to maintain desired speeds on two and four lane roads and make lane changes on four lane roads. Motorists are still able to pass through traffic.	>10.0 and ≤ 20.0	>10.0 and ≤ 15.0
C	LOS C represents moderate traffic congestion. Average vehicle speeds continue to be near the motorist's desired speed for two and four lane roads. Lane change maneuvers on four lane roads increase to maintain desired speed. Turning traffic and slow vehicles begin to have an adverse impact on traffic flows. Occasionally, motorists do not clear the intersection on the first green phase.	>20.0 and ≤ 35.0	>15.0 and ≤ 25.0
D	LOS D is characterized by congestion with average vehicle speeds decreasing below the motorist's desired level for two and four lane roads. Lane change maneuvers on four lane roads are difficult to make and adversely affect traffic flow like turning traffic and slow vehicles. Multiple cars must wait through more than one green phase at a traffic signal. Stop-controlled approach motorists experience queuing due to a reduction in available gaps.	>35.0 and ≤ 55.0	>25.0 and ≤ 35.0
E	LOS E is the lowest grade possible without stop-and-go operations. Driving speeds are substantially reduced and brief periods of stop-and-go conditions can occur on two and four lane roads and lane changes are minimal. At signalized intersections, long vehicle queues can form waiting to be served by the signal's green phase. Insufficient gaps on the major streets cause extensive queuing on the stop-controlled approaches.	>55.0 and ≤ 80.0	>35.0 and ≤ 50.0
F	LOS F represents stop-and-go conditions for two and four lane roads. Traffic flow is constrained and lane changes minimal. Drivers at signalized intersections may wait several green phases prior to being served. Motorists on stop-controlled approaches experience insufficient gaps of suitable size to cross safely through a major traffic stream.	>80.0	>50.0

Source: *Highway Capacity Manual – Special Report 209* (Transportation Research Board, 2000).

LOS intersection standards were established under the City of St. Helena's General Plan of 1993 as follows:

- All signalized intersections in St. Helena should maintain LOS C except along Main Street, where LOS D is permitted. Exceptions to this policy are that lower service levels shall be permitted at any location where the existing LOS does not meet this standard and in which case the LOS cannot be worsened any further.

- All unsignalized intersections must maintain LOS C. If the LOS degrades below LOS C, an evaluation of the need for traffic signalization shall be undertaken according to standard Caltrans signal warrants as described below. If signals are not initially warranted, the location shall continue to be monitored for signal warrants on a regular basis.

Signal warrants consists of reviewing traffic levels, proximity of the intersection to other signals and to schools, accident frequency, and other factors against a set of warrants identified in the Traffic Manual (Caltrans 1995) and the Manual on Uniform Traffic Control Devices (FHWA 2003) to identify whether installing a traffic signal would be appropriate. The California MUTCD indicates that the installation of a traffic signal should be considered if one or more of the signal warrants are met. This study will utilize the peak hour volume- based Warrant 3 as one representative type of traffic signal warrant analysis.

APPENDIX B: EXISTING TRAFFIC CONDITIONS

Existing Roadway Conditions

Table 10 displays the LOS for a selection of roadway segments throughout St. Helena. The daily LOS is classified according to standards set forth in Table 5 of Appendix A.

TABLE 10
EXISTING ROADWAY SEGMENT LEVEL OF SERVICE, CITY STREETS

Roadway Segment	Location	Classification	Traffic Count Period			Daily LOS
			AM Peak Hour	PM Peak Hour	Daily	
Pratt Avenue	e/o Main	Collector Street	177	172	1,830	C
Grayson Avenue	w/o Main	Local Street	338	257	2,277	C
Valleyview Street	n/o Grayson	Collector Street	459	465	3,511	A
Charter Oak Avenue	w/o Main	Local Street	71	57	537	C
Pope Street	w/o Silverado Trail	Collector Street	468	607	5,999	C
Pope Street	e/o Main	Collector Street	459	572	5,943	C
Spring Street	w/o Main	Collector Street	230	246	2,808	A
Hunt Avenue	e/o Main	Local Street	87	53	889	C
Oak Avenue	s/o Adams	Collector Street	435	588	4,807	B
Silverado Trail	s/o Meadowood	Collector Street	951	1,094	10,911	C[1]
Madrona Avenue	w/o Main	Collector Street	343	412	3,899	A
Sulphur Springs Avenue	w/o Main	Local Street	193	225	2,175	C

Notes:
1. Silverado Trail functions as a minor arterial even though it is classified as a rural collector.
Source: St. Helena General Plan Transportation Update, Background Report, Omni-Means (2007)

Table 11 displays the LOS for various Main Street roadway segments based on the average speed of traffic during the AM and PM peak hours. The LOS values are classified according to standards set forth in Table 6 of Appendix A.

Intersection Summary	
HCM 2010 Ctrl Delay	41.3
HCM 2010 LOS	D

Notes

User approved volume balancing among the lanes for turning movement.
* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary	
HCM 2010 Ctrl Delay	32.7
HCM 2010 LOS	C

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary	
HCM 2010 Ctrl Delay	43.1
HCM 2010 LOS	D

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

table of contents

1 Introduction

1.1 Overview 1-2
1.2 Regional Context 1-5
1.3 Background and Setting 1-7
1.4 The Planning Area 1-8
1.5 Overall Vision 1-13
1.6 Role of the Plan 1-16
1.7 Plan Development Process 1-17
1.8 Overview of the General Plan 1-22
1.9 Related Planning Documents and Reference Materials 1-28

2 Land Use and Growth Management

2.1 Purpose of the Element 2-2
2.2 Community Development Framework 2-3
2.3 Key Findings 2-26
2.4 Goals 2-28
2.5 Policies and Implementing Actions 2-29

3 Economic Sustainability

3.1 Purpose of the Element 3-2
3.2 Economic Sustainability in St. Helena 3-3
3.3 Key Findings 3-4
3.4 Goals 3-7
3.5 Policies and Implementing Actions 3-10

4 Public Facilities and Services

4.1 Purpose of the Element 4-2
4.2 Public Facilities and Services in St. Helena 4-3
4.3 Key Findings 4-18
4.4 Goals 4-22
4.5 Policies and Implementing Actions 4-23

5 Circulation

5.1 Purpose of the Element 5-2
5.2 Circulation and Mobility Framework for St. Helena 5-4
5.3 Key Findings 5-6
5.4 St. Helena's Circulation and Mobility Future 5-13
5.5 Goals 5-31
5.6 Policies and Implementing Actions 5-33

6 Historic Resources

6.1 Purpose of the Element 6-2
6.2 Historic Resources in St. Helena 6-3
6.3 Key Findings 6-10
6.4 Goals 6-12
6.5 Policies and Implementing Actions 6-14

7 Community Design

7.1 Purpose of the Element 7-2
7.2 Rural Community Character in St. Helena 7-3
7.3 Key Findings 7-9
7.4 Goals 7-13
7.5 Policies and Implementing Actions 7-15

8 Open Space and Conservation

8.1 Purpose of the Element 8-2
8.2 Open Space and Conservation in St. Helena 8-3
8.3 Key Findings 8-16
8.4 Goals 8-20
8.5 Policies and Implementing Actions 8-21

9 Public Health, Safety, and Noise

9.1 Purpose of the Element 9-2
9.2 Public Health, Safety and Noise in St. Helena 9-3
9.3 Key Findings 9-23
9.4 Goals 9-28
9.5 Policies and Implementing Actions 9-29

10 Climate Change

10.1 Purpose of the Element 10-2
10.2 Combating Climate Change in St. Helena 10-3
10.3 Key Findings 10-8
10.4 Goals 10-11
10.5 Policies and Implementing Actions 10-13

11 Housing

The 2015 - 2023 Housing Element is a separate stand alone document, which consists of:

- Housing Element Update 2015-2023: Goals, Policies, and Eight-Year Action Plan
- Housing Element Update 2015-2023: Housing Needs Assessment

A copy is available on the City's website.

12 Parks and Recreation

12.1 Purpose of the Element 12-2
12.2 Parks and Recreation Framework for St. Helena 12-3
12.3 Key Findings 12-12
12.4 Goals 12-14
12.5 Policies and Implementing Actions 12-15

13 Arts, Culture and Entertainment

13 arts, culture and entertainment

1.1 Overview

The last comprehensive update of the City of St. Helena's General Plan was completed in 1993, followed by adoption of a new zoning ordinance and map in 1994, to ensure consistency with the General Plan. The defining, unifying goal of all of the elements of the 1993 General Plan was:

"To protect the rural, small town quality and agricultural character of St. Helena. It is the General Plan's intent that the preservation of this small-town character be the unifying philosophy that overlays all other stated goals and policies."

This goal remains a primary focus of the 2040 General Plan update. However, since the adoption of the 1993 Plan, new trends and topics have emerged as important elements of how people approach planning for their communities in the 21st century. Sustainability has become a fundamental principle for all scales of planning and development. The emergence of heritage tourism as an economic development strategy has led to the further integration of local business enhancement and the preservation of valuable cultural, historic, and natural resources. As an increasing focus is placed on how to decrease automobile use and vehicle miles traveled, strengthening pedestrian and bicycle connections has become critical to local mobility and access, and also an integral strategy for addressing climate change.

1 introduction

Additionally, the City of St. Helena has undergone significant changes since the General Plan was last updated in 1993. Napa Valley's growing popularity as a tourist destination, coupled with increasing development pressures resulting from growth throughout the greater San Francisco Bay Area and Sacramento Valley regions, has led to a strengthening of ongoing efforts to protect St. Helena's agricultural lands and small-town character. In addition, improvements to existing public facilities and infrastructure and the creation of new parks have helped to improve quality of life and enhance property values in the city and its surrounding areas.Topics such as local mobility, public health, economic development, and environmental sustainability are also important as residents plan for the future of this beautiful and truly unique town.

The St. Helena General Plan is a powerful policy and implementation tool designed to reflect these changes, respond to the community's vision and desire for its future, and address changes anticipated to take place in the years to come.This introductory chapter to the St. Helena General Plan outlines the context, background, and role of the Plan, including an overview of the document's elements.

1 introduction

Specific sections of the Introduction to the St. Helena General Plan include:

- **1.2 Regional Context**. Provides an overview of St. Helena's role and location in the region (p. 1-5).
- **1.3 Background and Setting**. Describes the City's history and current setting (p. 1-7).
- **1.4 Overall Vision**. Defines St. Helena's vision for the year 2040 (p. 1-12).
- **1.5 Role of the Plan**. Describes how the General Plan is used to set goals, policies, and implementing actions (p. 1-15).
- **1.6 Plan Development Process**. Provides an overview of how the General Plan was developed (p. 1-16).
- **1.7 Overview of the General Plan**. Provides an overview of the 13 elements of the General Plan and how each element is organized (p. 1-21).
- **1.8 Related Planning Documents and Reference Materials**. Lists the related planning documents and reference materials for the General Plan (p. 1-27).

The Napa Valley is known for its diverse soils, microclimates, and success as a center for agriculture and the wine-making industry.

1.2 Regional Context

St. Helena is centrally located in Napa County and sits at the heart of the upper Napa Valley, a region known for its diverse soils, microclimates, and success as a center for agriculture and the wine-making industry. Located approximately 65 miles north of San Francisco and 77 miles west of Sacramento, the city is proximal to Northern California's major urban centers. State Route 29 connects St. Helena to other communities in the Valley, including Calistoga to the north and Yountville, Napa, and American Canyon to the south (see Figure 1.1). The City serves as a commercial and business center for the surrounding towns and unincorporated areas, including Calistoga, Angwin, Deer Park, Rutherford, and the unincorporated area south of St. Helena.

The Coast Range north of the San Francisco and San Pablo bays consists of a series of mountains of moderate relief separated by northwest trending valleys. Nestled between the Mayacamas Mountains to the west and the Howell Mountains to the east, the Napa Valley is one of the major valleys of this region. St. Helena enjoys views of Mount St. Helena, a peak of the Mayacamas located in Robert Louis Stevenson State Park, as well as many other hills and mountainsides.

The Napa Valley rests at the convergence of three California ecoregions: the north coast, the central valley, and the central coast. This unique location supports a diversity of biological resources and a particularly rich heritage of flora and fauna. According to the Land Trust of Napa County, Napa is one of the 25 most biologically diverse counties in the country. The Napa River runs from its origin in the northwest corner of the Valley through the eastern portion of St. Helena. The river begins as fresh water drainage on the southeast slope of Mount St. Helena and flows south to form a tidal estuary downstream of the City of Napa, where it discharges into the San Pablo Bay.

Regional Context

1.3 Background and Setting

Human settlement in the Napa Valley dates back thousands of years, when the Yukian people, originally established between the Russian River and Ukiah to the north, spread further south into present day Lake, Mendocino, and Napa counties. The Wappos, Pomos, and Patwins eventually encroached on the Yukian borders, becoming the largest group of Native Americans in the Napa Valley area.

The first Spanish missionaries arrived in the Valley in the 1830s. At the time of European settlement, the Central Wappo had settled permanently around present-day St. Helena. By 1831, between 10,000 and 12,000 Native Americans lived in the area, including approximately 7,000 Wappo. A hundred years later, only a tenth of this population remained.

In 1856, the area experienced its first development boom. The northern extension of the railroad eventually transformed the community into a commercial shipping center for the region. Growth was fueled largely by immigration from China and Europe, particularly Northern Italy and Switzerland, during the last half of the 19th century and the first half of the 20th century. Agriculture and the mining of mercury, or "cinnabar," were key drivers of the economy during this period. Viticulture in St. Helena is known to have begun around 1875. The City was incorporated in 1876.

The town's second period of intense construction took place during the end of the 19th century, with much of this growth concentrated along what is still known today as Main Street. Given its location in the heart of the wine-making region, St. Helena's economy suffered during the Prohibition Era (1920-1933) and grew at a very slow place during subsequent decades. Eventually, wine tourism brought increased attention to St. Helena, resulting in residential and commercial construction and a growth in visitor-serving uses such as hotels, restaurants, and boutique retail establishments.

Many buildings in downtown St. Helena were constructed at the end of the 19th century.

St. Helena's vision includes guiding principles related to a sustainable community, a stable economy and environmental stewardship.

Today, St. Helena is a town of approximately 5,900 residents bisected by State Route 29 (also known as Main Street) and surrounded by agricultural uses. The community stands out in the Valley for its unique, historic character and its ability to attract visitors while also supporting the needs of its resident population. Major economic drivers in St. Helena include agriculture, wine-making, tourism, and education. Several wineries are located within St. Helena, providing jobs and economic benefits associated with tourism. Educational institutions located in the city, such as the Culinary Institute of America and the Napa Valley College Upper Valley Campus, provide jobs and educational opportunities for the area.

1.4 The Planning Area

The State of California encourages cities to look beyond their borders when preparing a General Plan, as issues are not necessarily confined to political boundaries. As shown in Figure 1.2, the Planning Area for the St. Helena General Plan includes the City limit, the Sphere of Influence and three study areas located adjacent to the City limits in unincorporated Napa County. In total, the Planning Area encompasses 3,594 acres of land.

City of St. Helena

1 introduction

Honoring the historic and agricultural character is a key principle for the City's General Plan Vision.

The Sphere of influence (SOI) represents the probable physical boundaries and service area of a local agency, determined by the Napa County Local Agency Formation Commission (LAFCO) with input from the City. LAFCO establishes SOIs throughout the county that promote the orderly expansion of cities and special districts to avoid the premature conversion of agricultural and open-space lands and to ensure effective, efficient and economic provision of essential public services, including public sewer and water, fire protection and emergency response, and police protection. A city's sphere of influence should reflect existing and planned service capacities. LAFCO reviews and updates SOIs as necessary every five years. Additionally, where warranted by special conditions and circumstances, the City may propose a limited change to the established SOI, referred to as an amendment, for consideration by LAFCO. The City may prezone unincorporated territory adjoining the City for the purpose of determining the zoning that will apply to such property in the event of subsequent annexation to the City.

St. Helena's Sphere of Influence and City limits are coterminous, encompassing a land area of 3,024 acres. The development pattern within this area includes an abundance of agricultural lands, business and industrial uses serving agricultural, single and multi-family residential neighborhoods, and a downtown that serves as the commercial center for the city and surrounding communities. Existing land use (2018), as provided by the County Assessor's parcel data, is provided in Figure 1.3. The existing land uses largely correspond to the existing and proposed General Plan land use designations, which reflects the fact that St. Helena is a largely built-out city.

Although St. Helena does not have jurisdiction in areas outside of its City limits, the City currently provides limited municipal services, including utility service, public safety services, and recreation opportunities, to the three adjacent study areas. As such, what happens in those areas bears a relation to the City's planning and must be considered in the General Plan, per California Government Code Section 65300.

Figure 1.3

Existing Land Uses

- Religious/Institutional Facilities
- Parks and Recreation
- Open Space
- Agriculture
- Winery
- Cemetery
- Utilities
- Vacant
- Railroad ROW
- Urban Limit Line
- Study Areas
- City of St. Helena

The principle of environmental stewardship includes conservation, wastewater treatment, green building and emissions reductions, among other considerations.

The three study areas include:

- Study Area 1. This 165-acre area is located along the Napa River and includes residential development, the Meadowood Napa Valley resort, and City-owned utility infrastructure, including water tanks. The City provides water service to Meadowood and some of the residential development in the area.
- Study Area 2. Located south of Chaix Lane immediately adjacent to the southeastern City limit, this area of approximately 100 acres comprises the spray fields currently used to dispose of treated effluent from the City's Wastewater Treatment Plant.
- Study Area 3. Comprising parcels with existing commercial and residential development fronting State Route 29, this 185-acre area extends south from Chalk Lane to Zinfandel Lane. The City currently provides water utility service to many properties in this area, with the remaining structures relying on wells and individual septic systems of various ages and capacities.

The intent of including the three study areas within the Planning Area of the General Plan update is to document sensitive environmental resources and regulatory or capacity constraints associated with those areas in the General Plan Environmental Impact Report (EIR) in order to inform decision-makers and community members about associated issues and opportunities. The three study areas are shown in maps included in the Plan for informational purposes.

1.5 Overall Vision

With an eye toward the future, while building on the assets of today, the community of St. Helena envisions that, in the year 2040, the town will be a well-integrated place linked by effective community institutions, safe neighborhoods and streets, and superior schools, parks, and public facilities. In addition, planning for thoughtful, well-managed development, while maintaining its small-town, rural character is of vital importance to St. Helena's residents.

St. Helena's broader vision is based on a common understanding of what it means to live and grow as a sustainable community, making decisions that allow the community to meet the social and economic needs of today, while allowing future generations to meet their own needs.

The following points support the vision and provide guiding principles for St. Helena in 2040, as described previously in this chapter, for fostering a physically, socially, economically, and environmentally sustainable community.

Creating a sustainable community and stable economy requires meeting basic needs and providing opportunities for current and future residents.

1 introduction

The Plan Development process included several community workshops and other public participation and outreach opportunities.

OUR SUSTAINABLE COMMUNITY

St. Helena will preserve its history while managing change. Its traditions of diversity, citizen involvement, and responsive government will help the City plan for a sustainable future.

- More people who work in town will be able to afford to live in St. Helena in a wide range of innovative, well-designed housing, available for residents of all ages and income levels.
- St. Helena's historic and agricultural character will be honored and protected.
- Expanded arts and cultural activities will continue to enrich community life.
- High-quality schools and education for all ages will continue to be a focus of the community.
- St. Helena's character will be strengthened through innovative design that maintains the scale and character of its existing neighborhoods.
- Public spaces and civic facilities will be available for community gatherings, meeting the social and recreational needs of all ages and interests.

OUR STABLE ECONOMY

St. Helena's economy will meet the basic needs of residents, while balancing the benefits and impacts of visitors and provide better economic opportunities.

- Central St. Helena will remain the social, cultural, and economic heart of town.
- More of residents' daily needs will be met in the city by local businesses.
- Vehicular, bicycle, and pedestrian circulation improvements will provide transportation choices, reduce automobile traffic, and improve the quality of life in St. Helena.
- A combination of better regional connections and alternative modes of travel will improve circulation and traffic conditions, reducing congestion on Main Street.

Phase I of the General Plan process included an existing conditions analysis.

OUR ENVIRONMENTAL STEWARDSHIP

Environmental conservation, green choices, and greenhouse gas emissions reductions will be integrated into all areas of community decision making.

- Through a combination of conservation and infrastructure improvements, water and wastewater treatment will meet the community's needs.
- Green buildings and infrastructure and renewable energy installations will reduce energy consumption and improve energy efficiency.
- The riparian corridors of the Napa River, Sulphur Creek, and York Creek will be restored as critical assets.
- Additional and improved parks, protected hillsides, agriculture, trees, locally-grown food, and community gardens will contribute to St. Helena's sustainable community.

1.6 Role of the Plan

The St. Helena General Plan is the primary policy document for the City of St. Helena as it moves toward the year 2040. It sets forth the City's policies to guide future land use decisions and provides the needed framework to preserve the character and quality of development that the community desires. The General Plan also helps to establish the processes by which the City's evolution and changes to existing land uses will take place. The State of California requires that every city and county adopt a general plan to guide decisions related to the conservation of natural resources, the physical form and character of future development, and public welfare and safety. Local ordinances and other plans must be consistent with general plan policies. The St. Helena General Plan establishes the basis for St. Helena's Zoning Ordinance, which serves as the legal regulatory code for land use and development within the City's jurisdiction. An EIR outlining the impacts and associated mitigations of proposed land use, circulation, and other changes is required by State law to accompany the General Plan and be certified concurrently.

The General Plan is used in many ways. City planning staff refers to the General Plan when reviewing development proposals, to ensure that projects align with the community's vision. Where public decisions impact the physical environment, the Planning Commission and City Council use the document to guide decision-making. Importantly, the General Plan empowers the City, public agencies that work with the City, and private developers to invest in and design for a future that will enhance the character of the community and sustain and improve the quality of life, in accordance with the values and goals defined in the Plan.

The goals, policies, and implementing actions set forth in this General Plan create no mandatory duty on the City's part, except as may be explicitly required in the future by the State of California as a condition of approval of any mandatory element of the General Plan in order to satisfy State law. Rather, the goals, policies, and actions provide the foundation for the design and application of current and future policy tools, such as the City's Urban Limit Line,

design guidelines and form-based codes, and specific ordinances to protect St. Helena's wealth of resources. The City Council and staff will ultimately decide whether, as well as when and how, to carry out any goal, policy, or implementing action.

1.7 Plan Development Process

The St. Helena General Plan was developed in four stages:

- Phase I: Community Visioning and Existing Conditions Analysis;
- Phase II: Policy and Physical Framework Development;
- Phase III: General Plan Development; and
- Phase IV: General Plan Completion, subsequent update of documents, and Adoption.

The City Council and Planning Commission provided overall direction, with the assistance of the General Plan Update Steering Committee (GPUSC), and a multidisciplinary consultant team. The GPUSC, composed of St. Helena residents and elected and appointed officials, played an important advisory role throughout the Plan development process, and met regularly to review materials, share ideas and provide feedback.

Phase I. Community Visioning and Existing Conditions Analysis

Phase I of the Plan development began in April 2007 and continued through February 2008. During this phase the GPUSC, supported by City staff and the consultant team, conducted a thorough analysis of existing conditions in St. Helena. These efforts resulted in a series of working papers that collectively provided a comprehensive analysis of existing conditions and key policy issues. Topics included the community vision, community character, circulation, economics, infrastructure, climate change, the natural environment, sustainability, and the regional context. These papers established a starting point for community and City discussion of key issues and opportunities. They also contributed to the body of analysis that served as the technical basis for development of the General Plan.

The Community visioning process, also led by the GPUSC, involved community residents, business owners, and agency and organization representatives. Community engagement activities included a telephone survey, a series of workshops, and an open house and public forum. Each of these tools was dedicated to exploring the major issues and opportunities faced by St. Helena, and the desires of the community moving forward. This process resulted in a clear articulation of the community's desire to build a sustainable future, reflected in its overall vision presented above.

Phase II. Policy and Physical Framework Development

Phase II of the General Plan Update process was initiated in October 2008. During this phase, the City, the GPUSC, and the community worked actively to develop the General Plan goals, policies, and implementing actions. The City launched its General Plan Update website and began publication of regular e-newsletters to keep community members informed of the process. The GPUSC met regularly during this stage and hosted a "land use and design charrette" aimed at exploring key land use issues and opportunities.

The City and General Plan consultants worked closely during this phase to refine existing land use maps, review background policy and technical documents, and analyze the existing General Plan Physical Framework and Land Use Element. The outcomes of this effort included identification of potential land use change areas in the city and identification of the likely impacts of these changes.

Two separate but parallel processes began during Phase II: development of the 2009-2014 General Plan Housing Element and the Adams Street Property Visioning Project. The 2009-2014 Housing Element update process was led by a separate subcommittee, working under a shorter timeline than the process for updating the rest of the General Plan. The 2009-2014 Housing Element for St. Helena was completed in June 2009 and certified as complete by the Department of Housing and Community Development on October 15, 2009. The Adams Street Property Visioning Project began in October 2008 and was completed in March 2009. The Adams Street Plan outlined the community vision for Adams Street and included an accompanying site plan and graphics.

Phase III. General Plan Development

In April 2009, the City began the process to develop the draft General Plan document. A series of eight GPUSC meetings was held to review drafts of the General Plan Elements. Two community workshops were held in fall 2009 to discuss community design and circulation. Additional community meetings were held in early 2010 to review the public draft Plan.

Phase IV. General Plan Completion and Adoption

Beginning in the summer of 2010 the fourth phase of plan development focused on preparing a Draft General Plan for review by the Planning Commission and the City Council. Following joint consideration with the City Council, the Planning Commission reviewed the General Plan, and recommended its approval to the City Council in October of 2010. The City Council considered the Planning Commission recommendations on October 26, 2010 and at a continued City Council meeting on November 9, 2010. At the November meeting, issues were raised primarily relating to water supply. After approving a number of changes, the City Council made a decision to recirculate the EIR. This led to a complete re-examination of the City's water supply and the establishment of the Safe Yield Committee.

The water evaluation also prompted the creation of a Water Management Program that the City Council adopted on November 13, 2012. Staff and the General Plan EIR consultant concluded that implementation of the Water Management Program would effectively mitigate potential impacts of growth from the Plan on the water supply. The City Council subsequently renewed its review of the General Plan.

As part of this renewed review process, the City Council held a number of publicly-noticed General Plan Workshops. These Workshops were held between the Fall of 2012 and the Summer of 2014. As part of this Workshop process, the City Council made a number of revisions to the text of the General Plan. By June 2014 this thorough, element by element, review of the General Plan by the City Council was complete. As required by State law, the Planning Commission in September 2014 began its review of the various changes made to the General Plan by City Council as part of the Council 2012 to 2014 Workshop process. The Commission completed this review of the Council General Plan changes in December 2014. A concluding General Plan workshop was held by the City Council on September 8, 2015 prior to resuming formal public hearings on the General Plan and associated General Plan EIR. During the 2014 to 2015 General Plan Workshop process, the City completed its

required 2015 to 2023 update of the City Housing Element. After a number of hearings at the Planning Commission and City Council level, the City Council approved the Housing Element Update in May 2015. The Housing Element received State HCD approval in late May 2015. It is important to note that the recently approved 2015-2023 Housing Element is not being changed or modified as part of this 2016 General Plan update process.

Between April and August of 2016, the Planning Commission held six study sessions to review the 2016 draft of the General Plan Update. At the July 19, 2016, a compilation of the comments and direction concerning the General Plan taken from the preceding Commission Study Sessions was discussed at-length.

Following incorporation of the Planning Commission's refinements to the 2010 draft described above, the General Plan Update was substantially complete, although some additional changes were necessary to ensure consistency and compliance with State law. In January 2018, the City began the effort to make these additional refinements and finalize the General Plan Update. Additional modifications include:

- An updated horizon year of 2040;
- Additional policies and actions to incorporate climate adaptation and resiliency strategies, including measures address wildfire hazards, flooding and infrastructure in at-risk areas, pursuant to Senate Bill 379 and other applicable laws.
- Additional policies and actions to address relevant environmental justice issues, based on an analysis of data from the California Communities Environmental Health Screening Tool, pursuant to Senate Bill 1000 and other applicable laws.
- Updates to data, maps and text to ensure the use of the latest, publicly available information.

The City Council and Planning Commission held joint study sessions on February 20 and August 14, 2018 to review and discuss these further targeted updates to the 2010 draft.

1.8 Overview of the General Plan

The St. Helena General Plan consists of 13 chapters: 12 elements and the Introduction. It should be noted that since the Housing Element is updated on a separate eight-year cycle, and was last updated in 2015, it is not included within this General Plan update, though it is referenced as Chapter 11 within the Plan. Each of the elements contained within the General Plan is critical to establishing the policy direction necessary to achieve the community's vision of sustainability in land use and related activities over the next 20 years. State statutes require that local general plans include the following seven elements, at a minimum: Land Use, Housing, Circulation, Open Space, Noise, Safety, and Conservation. California general plan guidelines encourage jurisdictions to reorganize or combine elements as appropriate to improve clarity and eliminate redundancy in the document. In addition, jurisdictions may incorporate additional elements as needed to achieve the community's vision and overarching goals. In order to respond to the community's special needs and desires, the St. Helena General Plan reorganizes some required plan components and incorporates several optional elements.

As stated in Section 1.6 of the General Plan, except as may be set forth in the Housing Element, the goals, policies, and implementing actions set forth in the General Plan create no mandatory duty on the City's part.

Table 1.1 lists all elements of the St. Helena General Plan and illustrates which elements are required by State law and which are optional. As previously noted, the Housing Element, while part of the General Plan, is published as a "stand alone" element, and is not physically incorporated into this General Plan document.

TABLE 1.1. Elements of the St. Helena General Plan

General Plan Element	Required	Optional
Land Use and Growth Management	●	
Economic Sustainability		●
Public Facilities and Services		●
Circulation	●	
Historic Resources		●
Community Design		●
Open Space and Conservation	●	
Public Health, Safety and Noise	●

Housing	●	
Parks and Recreation		●
Arts and Culture		●

ELEMENT ORGANIZATION

Each element of the St. Helena General Plan begins with a brief introduction and background on the specific subject matter. Graphs, tables, and maps are used to highlight key information and plan direction. In addition, each element contains a "Concepts, Trends and Ideas" sections describing recent innovations and concepts relevant to planning the future of St. Helena.

At the heart of each element of the St. Helena General Plan is a series of goals, policies, and implementing actions. Goals are statements that describe the broad, long-term aspirations of the City and community. Each goal in the Plan consists of a brief directive, which is followed by a narrative that provides further description of the preferred direction that the goal establishes. Policies provide the needed specificity or guidance for the City as it makes decisions. Policy statements encourage certain actions and lay the foundation for the City to establish regulations, programs, and incentives, where needed, to achieve each goal. Implementing actions identify the specific steps required to implement policies and advance the goals.

OVERVIEW OF THE GENERAL PLAN ELEMENTS

Chapter Two: Land Use and Growth Management

The Land Use and Growth Management Element presents a framework for governing future decisions about allowable, context-appropriate land use and desired development patterns. The framework aims to manage growth effectively while encouraging the use of innovative approaches, quality design, and infill strategies as the community evolves. Policies and actions in this Element draw from and build upon St. Helena's distinct history and character, walkable and strong neighborhoods, and active downtown.

Chapter Three: Economic Sustainability

The Economic Sustainability Element is included in the General Plan in recognition of the important role that economic sustainability plays towards achieving St. Helena's overall community vision of "meeting present needs without com-

promising the ability of future generations to meet their needs." The guiding principles established in this Element provide the policy direction needed to develop a sustainable economy that is responsive to short-term and longer-term community concerns and objectives.

Chapter Four: Public Facilities and Services

The Public Facilities and Services Element sets forth policy guidance for the City's provision of services, amenities, and infrastructure. This includes community service facilities, public utilities, and the required physical infrastructure for service and utility delivery. Policies related to public facilities and services follow from the key topics identified in this Element including: water, wastewater, storm drainage and flooding, solid waste, schools, libraries, fire, and police.

Chapter Five: Circulation

The Circulation Element establishes the policies needed to foster a comprehensive and multimodal transportation network that is well integrated with the City's land use and growth management goals, policies, and actions. The Element identifies the principal components of the circulation system, as well as issues relating to parking, transit, and pedestrian and bicycle routes. Standards and guiding principles for the implementation of transportation facilities and infrastructure are also included.

Chapter Six: Historic Resources

The Historic Resources Element presents a framework for governing future decisions about protecting, rehabilitating, retrofitting, and adaptively reusing the City's historic buildings. The intent of this Element is to establish the policies required to manage St. Helena's historic assets in order to maintain the City's sense of place and ensure that these assets can be enjoyed by current and future residents and visitors.

Chapter Seven: Community Design

The Community Design Element presents a framework of policies and implementing actions that correspond directly with other General Plan elements in determining the form, quality, and character of St. Helena's built environment. By respecting established neighborhoods and historic assets, this Element provides guidance to build upon St. Helena's distinct history, while promoting new approaches to enhance future public and private development.

Chapter Eight: Open Space and Conservation

The Open Space and Conservation Element guides future decisions about how St. Helena will sustain a healthy network of open spaces and protect natural resources for today's residents, as well as future generations. Element goals, policies, and implementing actions are designed to protect, maintain, and enhance St. Helena's biological, ecological, and agricultural resources, while balancing current community resource needs with conservation endeavors to benefit the common good.

Chapter Nine: Public Health, Safety and Noise

The Public Health, Safety, and Noise Element presents a framework for minimizing risks posed by environmental and human-caused hazards that may impact St. Helena's health and welfare. This Element aims to ensure that St. Helena's residents, workers, and visitors are protected from negative exposure to flooding, fires, hazardous materials, air pollution, and geologic and seismic hazards.

Chapter Ten: Climate Change

The Climate Change Element is the City's policy framework for responding to and planning for climate change. Goals, policies, and implementing actions presented in this Element address energy conservation, renewable energy production, and transportation. The policies and actions included in this Element align with the Napa Countywide Community Climate Action Framework and chart

a course for responsible growth and sustainable business development that meets St. Helena's specific needs.

Chapter Eleven: Housing

The Housing Element, which was adopted by the City and certified by the State in May 2015, establishes a comprehensive plan to address housing needs in St. Helena over the eight-year planning period between July 1, 2015 and June 30, 2023. This Element sets the community goals and policies surrounding the development, rehabilitation, and preservation of housing units to meet the needs of St. Helena's current and future residents. Every jurisdiction in the State of California is required to submit a Housing Element to the State HCD for review and certification. The adopted 2015 to 2023 Housing Element is not being modified as part of this General Plan update process. As previously noted, the Housing Element document is not physically included within this updated General Plan. The Housing Element is referenced in the General Plan as Chapter 11.

Chapter Twelve: Parks and Recreation

The Parks and Recreation Element presents a framework for developing and maintaining a comprehensive system of quality parks, pedestrian and bicycle trails, recreational facilities, and programs. It aims to ensure that management of parks and recreational programming supports community members' health, entertainment, and high quality of life. Key to these efforts is creating and maintaining a network of bicycle and pedestrian trails that establishes connections between residential neighborhoods, parks, schools, and goods and services.

Chapter Thirteen: Arts, Culture and Entertainment

The Arts, Culture, and Entertainment Element aims to preserve and protect St. Helena's unique identity, heritage, and cultural resources; celebrate its vibrant community; and expand opportunities for arts enrichment. By providing policy support for City leadership, active community participation, and strategic partnerships, this Element seeks to integrate arts, culture, and entertainment into the community's everyday life.

1.9 Related Planning Documents and Reference Materials

The following documents are included in an appendix to the General Plan.

- Historic Resources List

A copy of the General Plan Appendix is available separately on the City's Web site, and a hard copy of the Appendix is available at City Hall. A copy of the General Plan Program EIR is also available on the City's website.

CONCEPTS, TRENDS AND IDEAS

Community Engagement and Plan Development

General Plan Update Steering Committee

The General Plan Update Steering Committee (GPUSC) played an invaluable role in ensuring that the updated General Plan reflects the community's desires and is responsive to the needs of its residents. Composed of City residents and appointed and elected officials, and supported by key City staff, the GPUSC began meeting in March 2007 to inform the update of the General Plan. Regular GPUSC meetings took place almost monthly throughout the Plan development process through 2010.

Community Workshops

The City hosted a number of community workshops to provide the opportunity for community members to share ideas, voice concerns, and give feedback on Plan goals, policies, and objectives. The vision statement, which serves as the foundation for the General Plan was developed by the community during Phase I of the update process.

Workshops in 2009 and 2010 focused on the development of land use, community design, and transportation concepts for the Plan and review of draft Plan components. Additional General Plan workshops, held in 2014 and 2015, focused on changes to the General Plan since the first full draft of the General Plan was completed in 2010.

The community has been involved throughout the plan development process through community workshops, telephone interviews, and online engagment.

Telephone Survey

Between June 25 and July 6, 2007, General Plan consultants conducted telephone interviews with 330 heads of households in St. Helena. Households were contacted via random-digit-dialing based upon St. Helena's zip code, and potential respondents were screened to ensure that they were full-time residents of the City. The primary concern noted by respondents was to ensure that the City of St. Helena continues to support and address the needs of its residents. In addition, most respondents noted that they would also like St. Helena to maintain its small-town, rural character.

General Plan Website

The St. Helena General Plan website established an important online presence for the General Plan Update, serving as the portal for community and General Plan Update team members to access project-related information and materials. Individuals frequently used the online comment feature to submit their ideas, questions, and concerns to the project team. While the City no longer maintains a website devoted solely to the General Plan Update process, a copy of the General Plan is available on the City's main website.

chapter two

land use and growth management

2 land use and growth management

The Land Use and Growth Management Element provides an outline for governing future land use decisions and development patterns.

1 introduction
2 land use and growth management
3 economic sustainability
4 public facilities and services
5 circulation
6 historic resources
7 community design
8 open space and conservation
9 public health, safety and noise
10 climate change
11 housing
12 parks and recreation
13 arts, culture and entertainment

2.1 Purpose of the Element

The Land Use and Growth Management Element presents a framework for governing future decisions about allowable, context-appropriate land use and desirable development patterns to maintain the small-town character of St. Helena. This framework aims to effectively manage growth by drawing from and building upon the community's distinct history, walkable and strong neighborhoods, and active downtown. The Land Use and Growth Management Element sets the stage for maintaining an economically, socially, and environmentally sustainable St. Helena.

The Land Use and Growth Management Element includes the following sections.

- **2.2 Community Development Framework**. Describes the framework for community development, including the growth management system and land use designations (p. 2-3).
- **2.3 Key Findings.** Identifies key findings based on an existing conditions analysis and extensive community outreach (p. 2-26).
- **2.4 Goals**. Defines overarching goals to guide policies and implementing actions (p. 2-28).

- **2.5 Policies and Implementing Actions**. Identifies policies and implementing actions to manage growth and maintain community character (p. 2-29).

2.2 Community Development Framework

Famous for its scenic Napa Valley location, fine wineries, and historic Main Street, St. Helena seeks to protect its small-town, agricultural character through a coordinated approach to growth management and land use planning. The City has developed an Urban Limit Line to control and limit development in order to ensure that prized agricultural and open space lands remain for future generations. In addition, it has crafted a land use designation system that works in tandem with its growth management goals, while allowing for targeted development in key areas and maintaining the character of its existing neighborhoods and central commercial areas. Following are detailed descriptions of the City's land use designations, growth management system, and development capacity.

The increasing pressures to grow caused serious concern in the community during the 1970s and resulted in the creation of a Growth Management System in the late 1970s. Public workshops and a phone survey conducted for the 1993 General Plan Update indicated that the principal land use concern was the rate of growth in the city. The community was generally concerned that there would be a loss of charm and beauty, increased traffic conditions, and an inadequate water supply. For the 2040 General Plan Update, a phone survey, Town Hall meetings, and mail-in survey were conducted and found that the same issues still resonate in the community and addressing concerns regarding traffic congestion, inadequate water supply, and preservation of small-town character remain priorities in St. Helena. Therefore, the City should follow the long-standing philosophy that growth in St. Helena needs to be carefully managed to ensure that each of these decades-long public concerns are adequately addressed in future land use determinations.

2 land use and growth management

St. Helena seeks to protect its small-town, agricultural character through a coordinated approach to growth management and land use planning.

LAND USE DESIGNATIONS

Land in St. Helena is classified according to four broad land use categories:

- Residential Areas;
- Commercial and Mixed-use Areas;
- Business and Industrial Areas; and
- Community and Natural Resource Areas.

Within each of these categories, specific land use designations identify uses and the density and intensity of development allowed in each designation. Table 2.1 and Figure 2.1 outline the City's land use designations. For quick comparison and reference, Figure 2.2 includes a menu of St. Helena's land use designations, permitted building intensities and densities, and examples of potential building types for each land use designation.

TABLE 2.1: General Plan Land Use Acreage

Land Use Designation	Acres	Percent of Total
Residential		
Low Density Residential	97	3%
Medium Density Residential	409	13%
High Density Residential	83	3%
Subtotal	**589**	**19%**
Commercial and Mixed-Use		
Mixed-Use	19	1%
Central Business	28	1%
Service Commercial	61	2%
Subtotal	**108**	**4%**
Business and Industrial		
Office	15	0.5%
Industrial	60	2%
Subtotal	**75**	**2.5%**
Community and Natural Resource		
Open Space	72	2%
Park	57	2%
Public and Quasi-Public	156	5%
Woodlands and Watershed	451	14%
Agriculture	1,451	46%
Subtotal	**2,187**	**69%**
Total	**3,148**	**100%**

Note: Acreage totals do not include public roadways.

Urban and Regional Planners

FIGURE 2.2: General Plan Land Use Menu

Land Use Category	Density/ Intensity	Examples
Low Density Residential (LDR): Single-family detached homes, secondary residential units and limited agricultural uses.	1.0 to 5.0 dwelling units per acre	
Medium Density Residential (MDR): Single-family detached and attached homes, and secondary residential units.	5.1 to 16.0 dwelling units per acre	
Higher Density Residential (HDR): Single-family and multi-family housing, including apartments, townhouses and group homes.	16.1 to 28.0 dwelling units per acre	Mixed-Use (MU): Medium density residential mixed with retail, office, restaurant or other local-serving uses.	Up to 20 dwelling units per acre	
Central Business (CB): Retail and commercial businesses that serve residents and visitors, including restaurants, lodging, retail, office, etc.	Maximum FAR 2.0	
Service Commercial (SC): Retail and service uses that are local-serving and may be auto-oriented, including offices, restaurants, service stations, etc.	Maximum FAR 0.50	

Notes: Dwelling units per acre (du/ac) describes residential building density. Floor area ratio (FAR) denotes building intensity for non-residential uses.

Land Use Category	Density/ Intensity	Examples
Business and Professional Office (BPO): Administration and professional office uses, including medical, financial, etc.	Maximum FAR 0.50	
Industrial (I): Industrial parks, warehouses, light manufacturing, auto and farm-related uses.	Maximum FAR 0.50	
Woodland and Watershed (WW): Very low density residential that ensures protection of wildlife, vegetation, open space and watershed resources.	Minimum parcel size 5 acres	
Agriculture (AG): Agricultural and winery uses with restricted single-family residential.	Minimum parcel size 5 to 40 acres	
Public/Quasi-Public (PQP): Government-owned facilities, schools, churches, cemeteries, etc.	Maximum FAR 0.50	Parks and Recreation (PR): Parks with public recreation uses.	N/A	
Open Space (OS): Natural open spaces devoted to natural resource preservation and management, outdoor recreation, public health and safety.	N/A	

There are a variety of residential densities including single family, multi-family and secondary dwelling units.

Residential Areas

St. Helena has a variety of residential areas that include single family, multifamily, and secondary residential housing options. These neighborhoods support a range of lifestyles at a broad spectrum of household income levels. Higher density infill development can expand housing options citywide, but the impact to neighborhoods with regard to traffic, parking, and public safety - where difficult fire access, roads with parking on both sides, and sidewalks without street separation can result in accidents - should be carefully considered. The creation of mixed-use areas with retail in the heart of the city can also increase housing options. Residential land use designations should encourage the development of accessible and diverse neighborhoods, where appropriate. Figure 2.3 highlights residential areas.

- **Low Density Residential (LDR)**. The LDR land use designation includes single-family detached homes, accessory dwelling units (sometimes referred to as "second units"), limited agricultural uses, and similar and compatible uses. This designation permits residential densities between 1.0 and 5.0 dwelling units per acre. The LDR designation applies to limited areas of the city with large, residentially-subdivided parcels, particularly those near the city's perimeter.
- **Medium Density Residential (MDR).** The MDR land use designation includes single-family attached and detached homes, and compatible uses. This designation permits residential densities between 5.1 and 16.0 dwelling units per acre. Retained from the 1993 General Plan, the MDR designation is the City's predominant residential designation and it is intended to maintain a development pattern in St. Helena's higher density areas that is consistent with historic development patterns.
- **Higher Density Residential (HDR).** The HDR land use designation can accommodate single-family and multi-family residential housing, apartments, and group quarters. This designation permits residential densities between 16.1 and 28.0 dwelling units per acre.

GENERAL PLAN UPDATE
City of St. Helena

DYETT & BHATIA
Urban and Regional Planners

Commercial uses include restaurants, cafes, retail and offices.

Commercial and Mixed-Use Areas

St. Helena has a number of commercial areas that provide retail and commercial services. Businesses serve tourists, city residents, and residents of the unincorporated agricultural areas who have traditionally traveled to St. Helena to shop for goods and services. In the city's historic Central Business District, a small amount of higher-density, mixed-use development that is context appropriate can expand housing options while also supporting additional retail and commercial services. Figure 2.4 highlights commercial and mixed-use areas.

- **Mixed-Use (MU)**. The MU land use designation allows medium- to high-density residential mixed with retail, office, restaurant, or other commercial uses. The maximum allowable residential density in MU areas is 20 dwelling units per acre. The intent of this land use designation is to protect the Urban Limit Line by encouraging a mix of uses at infill locations and reduce greenhouse gas emissions by locating housing opportunities within close proximity to commercial and retail.
- **Central Business (CB).** The CB land use designation includes retail and commercial uses that serve local residents and the surrounding area. Typical CB uses include offices, restaurants, specialty retail and lodging, with particular emphasis on pedestrian-oriented retail and service uses on the ground floor level and offices located on upper floors. Residential uses can be considered for upper floor areas but are subject to discretionary use permit review and approval. The maximum allowable FAR in CB-designated areas is 2.0. The CB district extends from Sulphur Creek along Main Street to midway between Adams Street and Pine Street, west to Oak Avenue and along the north side of Adams Street east of Main Street.
- **Service Commercial (SC).** The SC land use designation includes service and retail uses that have larger space needs than are available in the Central Business District. Potential SC uses include offices, restaurants, service stations, and lodging, with a maximum allowable FAR of 0.50. The SC designation includes areas fronting State Route 29/Main Street south of Sulphur Creek.

GENERAL PLAN UPDATE
City of St. Helena

DYETT & BHATIA
Urban and Regional Planners

Industrial areas provide important locations for light manufacturing and agriculture-related uses.

Business and Industrial Areas

St. Helena has limited areas designated for business and industrial uses. These uses are important to the community's economic health, serving St. Helena residents as well as residents and businesses in the surrounding unincorporated areas. Figure 2.5 highlights business and industrial areas.

- **Business and Professional Office (BPO).** The BPO designation allows for professional and administrative office uses, including medical, financial, and similar uses. Residential uses in this designation can be considered for upper floor areas, subject to discretionary use permit review and approval. The maximum allowable FAR is 0.50. BPO areas are located throughout the city and provide a compatible, transitional use between commercial and residential areas.
- **Industrial (I).** The Industrial land use designation includes industrial parks, warehouses, light manufacturing, and auto and farm-related uses. The maximum allowable FAR is 0.50. Industrial areas are located south of Mills Lane and east of State Route 29; along Sulphur Creek between State Route 29 and Valleyview Street; and east of State Route 29, south of Mills Lane. An Urban Reserve Area is designated to the east of the existing industrial area south of Dowdell Lane for future expansion of this area.

Figure 2.5

- City of St. Helena

Agriculture designations make up more than 48% of the land within the City.

Community and Natural Resource Areas

St. Helena has a wide range of agriculture, parks, open spaces, and civic uses that serve a diverse range of community needs. Natural areas, such as the creeks and hills, offer opportunities for preservation and conservation. Public facilities provide opportunities for social and community development. Land use planning should aim to improve these amenities and enhance accessibility for all city residents. Figure 2.6 highlights community and natural resource areas.

- **Woodland and Watershed (WW).** The WW designation includes very low density residential that ensures the protection of wildlife, vegetation, open space, and watershed resources. This designation applies to steep hillsides at the city's westernmost and easternmost boundaries, with the intent to accommodate low-density, estate type development in locations that are less suitable for agricultural use. The minimum allowable parcel size is five acres.
- **Agriculture (AG).** The AG land use designation includes agricultural and winery uses with restricted single family residential and public/quasi-public uses. This designation applies to large areas of the valley floor that surround the city's urban core. With the exception of hillside areas designated WW, all lands outside the Urban Limit Line are designated AG regardless of their size or actual use. Minimum parcel sizes for new parcels in AG areas range from 20 to 40 acres. However, wineries in AG land may utilize a small portion of onsite land for provision of affordable employee housing thus alleviating some of the low and moderate housing needs in the city, while simultaneously reducing commute traffic.
- **Public/Quasi-Public (PQP)**. The PQP land use designation provides for government-owned facilities, public and private schools, and quasi-public uses such as churches, community/public serving endeavors, and cemeteries. The maximum FAR for the PQP designation is 0.50. The PQP designation occurs throughout the city, and includes the City library, all of the public schools, some of the private schools, all churches, cemeteries, and the City-owned wastewater treatment plant.

GENERAL PLAN UPDATE
City of St. Helena

DYETT & BHATIA
Urban and Regional Planners

- **Parks and Recreation (PR)**. The PR land use designation includes public parks with recreation uses. It applies to all existing public parks and proposed park sites.
- **Open Space (OS)**. The OS designation includes open spaces that are devoted to natural resource preservation and management, passive outdoor recreation, multi-use trails, public health, and safety. All OS areas are associated with stream corridors that pass through or are adjacent to the city, including the Napa River, Sulphur Creek, and York Creek. Roads are part of Open Space, but are not contributors to natural resource, public health, recreation, etc. as stated above.

The Urban Limit Line marks the limit of where development is permitted.

GROWTH MANAGEMENT

St. Helena aims to contain development and preserve agricultural lands in and adjacent to the city. Tools for accomplishing this include the Urban Limit Line, designated Urban Reserve Areas, and the Residential Growth Management System. Figure 2.7 illustrates St. Helena's Urban Limit Line and Urban Reserve Areas.

Urban Limit Line

The Urban Limit Line is a parcel-specific boundary that marks the limit of where urban development is permitted within the incorporated area of St. Helena. The intent of the Urban Limit Line is to discourage urban sprawl by containing urban development within designated areas during the planning period (see Figure 2.7).

Land outside the Urban Limit Line, but inside the incorporated area, is designated for agricultural uses. Given the long-term nature of the General Plan and the potential for unforeseen circumstances, the Plan anticipates the potential need to expand the urban area by identifying Urban Reserve Areas.

Urban Reserve Areas

Urban Reserve Areas can be considered for urban development after urban sections within the Urban Limit Line are developed and if additional land is needed

Figure 2.7

Urban Limit Line and Urban Reserve Areas

Railroad
Parks and Open Space
Water Features

for urban uses. The Urban Reserve Areas, which are contiguous with the existing urban area, have been carefully located to encourage thoughtful, measured growth and to ensure that further urban development will maintain the compact development pattern desired by the community.

Urban Reserve Areas are all designated Agricultural (AG) and are expected to remain in agricultural use or undeveloped for the foreseeable future. Zoning in the Urban Reserve Areas will be the same as in other areas designated for agriculture. Zoning changes of any specific Urban Reserve Areas will be determined by the City Council at the time of incorporation within the Urban Limit Line. Such changes will depend upon many factors, including: compatibility with existing or proposed surrounding uses; availability of services; demand for the proposed uses; the availability of other suitable areas; and the agricultural resource value of the land.

Locational suitability and timing will be considered when considering changes to the Urban Limit Line and incorporation of Urban Reserve Areas. Requests for expansion of the Urban Limit Line will be considered in logical groupings that reflect the best long-term interests of the City, and will not be considered on a parcel-by-parcel basis, or in a manner that would permit non-contiguous development.

Residential Growth Management System (GMS)

The Residential Growth Management System limits (GMS) the number of building permits available for residential growth each year. That limit, as of the time of the General Plan update in 2018 is nine (9) residential units/year, with exceptions given for affordable housing, accessory dwelling units, and in other circumstances as spelled out in the City's implementing Growth Management Ordinance. The City, as part of its periodic review of the GMS, should consider the assigned Regional Housing Need Allocation (RHNA) number for a given Housing Element cycle when establishing limits. This will help to ensure consistency with the larger Bay Area's growth direction which encourages development in Priority Development Areas (PDAs) near transit and job centers. The regional growth strategy indicates that development outside the PDAs encourages sprawl, and contributes to traffic congestion and environmental impacts such as reduced air quality and loss of open space and Agricultural lands. No PDAs have been established in St. Helena.

A growth strategy principle is to maintain high-quality design and community character.

GENERAL PLAN STRATEGY

The General Plan strategy presents an outline for the evolution of the city. This strategy is grounded in a set of planning principles and identifies key General Plan Change Areas and land use capacity in those areas. Each of these topics is described in more detail below.

Growth Strategy Principles

The principles for guiding future growth in St. Helena are based upon the city's unique development pattern, vision for a sustainable future and its growth management. The following planning principles apply to the land use development strategy:

- Protect agricultural lands located outside the Urban Limit Line.
- Preserve agriculture, green, and open space within the Urban Limit Line to ensure the city maintains a rural and small-town character with sufficient "fingers of green", particularly in light of St. Helena's longstanding significant inadequacy of park land. (See Parks and Recreation Element).
- Focus new residential and commercial growth inward on appropriate infill sites.
- Maintain community character by requiring high-quality design and by avoiding "big box" development patterns and styles for commercial, industrial, and residential growth.
- Ensure that growth is sustainable for the long term and does not strain natural resources, services, or quality of life.

General Plan Change Areas

During the General Plan Update process 13 sites were identified for land use change, including sites for Mixed-Use, which is a new land use designation. These sites are located within the Urban Limit Line (with some minor shifts) and include parcels with commercial, mixed-use, and residential designations. Figure 2.8 shows the land use change areas that correspond to the list below.

1. **Adams Street and Library Lane (5.66 acres):** The proposed development program for the Adams Street property involves designating the entire site, with the exception of the library, as Central Business District. The library site will remain Public/Quasi Public. A modification of the Urban Limit Line is also proposed, which will increase the developable area by 0.83 acres and orient development along Adams Street.
2. **Main Street, Spring Street and Oak Avenue (2.61 acres):** M=Mixed-Use is proposed for this area to allow a mix of commercial, office, and residential development.
3. **Mitchell Drive and Oak Avenue-Northwest (2.04 acres):** High Density Residential is proposed for this area to allow for higher density development within walking distance to downtown.
4. **Mitchell Drive and Oak Avenue-Southeast Side (1.58 acres):** Mixed-Use is proposed for this area to allow a mix of commercial, office, and residential development.
5. **Main Street and Charter Oak Avenue (12.12 acres):** Mixed-Use is proposed for the eastern portion of the parcel and Industrial for the western portion of the property.
6. **Main Street and Vidovich Avenue (14.44 acres):** This parcel has a Mixed-Use General Plan land use designation, and the Vineland Station Hotel Project, a mixed-use project, has been approved for the location.

The Adams Street change area includes 5.66 acres adjacent to the City Library.

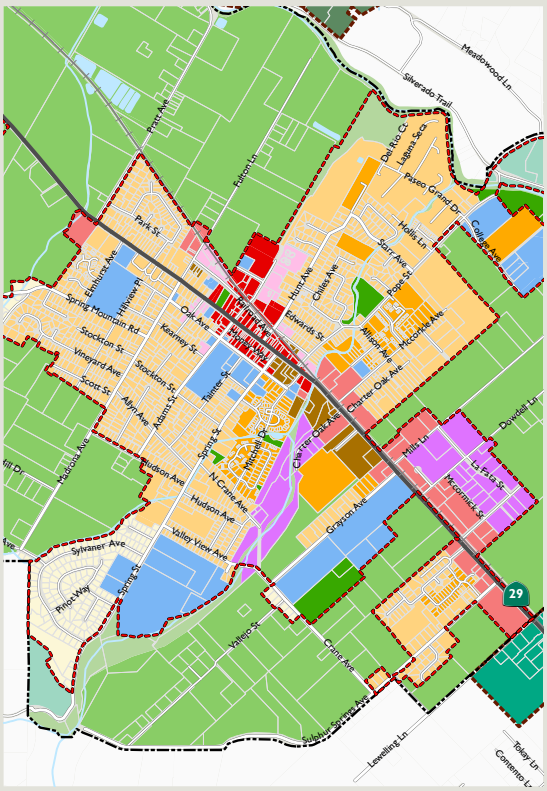
City of St. Helena

DYETT & BHATIA
Urban and Regional Planners

7. **Spring Street and St. James Drive (4.65 acres):** Medium Density Residential is proposed for this area to accurately reflect existing densities.
8. **Grayson Avenue (7.01 Acres):** Medium Density Residential is proposed on these parcels to allow more flexibility in density for this area.
9. **West end of Spring Street (14.31 acres):** This area includes a modification to the Urban Limit Line and an identical shift expanding the Low Density Residential area by 1.49 acres. This change is made to better reflect the flat portion of this parcel.
10. **Church Street Parking Lot Parcels (0.39 acres):** Redesignate the four mid-block parcels adjacent to the railroad from Medium Density Residential to Mixed-Use or allow the parcels to be developed as a parking lot.
11. **Flood Control Project Site (15.7 acres):** Redesignate this parcel (the flood control project site) from Medium Density Residential to Open Space.
12. **Railroad Avenue (4 parcels):** Adjust the General Plan designation for parcels 1547 to 1569 on Railroad Avenue from Medium Density Residential to Mixed-Use.
13. **City Hall Site:** The Central Business District (CBD) designation is proposed for the property where City Hall is currently located.

CONCEPTS, TRENDS AND IDEAS

The Relationship between Land Use and Zoning



The General Plan Land Use and Growth Management Element establishes a broad vision and framework for land use in St. Helena. It sets forth policies and implementing actions that are intended to guide local decision-makers over the life of the Plan. In contrast, the Zoning Ordinance details specific standards and design guidelines to regulate development. The functions of these two planning tools are described in further detail below.

St. Helena's Land Use and Growth Management Element

- Defines and locates land uses throughout the City.
- Specifies acceptable building heights and densities per land use type.
- Describes the intent and direction of St. Helena's growth.
- Includes overarching, citywide development principles, goals and policies to achieve a high quality built environment.

St. Helena's Zoning Ordinance

- Regulates density (number of residential dwelling units per acre) and intensity (floor area ratio) of development.
- Specifies standards for site design, including open space, building orientation, massing, setbacks and relationship to the street and adjacent properties, parking requirements, and elevation.
- Provides incentives for affordable housing.
- Establishes allowed and prohibited uses.

Land Use Capacity

Several factors contribute to managing and guiding new growth in St. Helena. The General Plan Land Use and Zoning maps describe where different land uses are permitted and the intensity of development that may be allowed. The Land Use Change Areas map (Figure 2.8) and Housing Opportunity Site map (see Housing Element Figure 1.0) present locations where new development is likely to occur in the next 20 years. The Growth Management System limits the allowed number of new residential permits to a maximum of nine (9) new residential units per year. That represents a total of 72 units over the eight-year term of the Housing Element, which exceeds the City's 2015 to 2023 RHNA allotment of 31 total residential units. Established by the State of California in 1969, RHNA requirements directly influence how St. Helena considers population growth. The State Housing and Community Development Department (HCD) works with the various regional Councils of Governments (COGs) throughout the state to identify and allocate the supply of housing necessary to meet the existing and projected growth in population and households in California (also see the Housing Element).

St. Helena functions as a service center for surrounding towns and unincorporated areas.

2.3 Key Findings

There are several challenges and opportunities facing St. Helena related to land use and growth management. The following key findings are based upon comprehensive existing conditions analysis and community input.

- Regional growth forecasts prepared by the Association of Bay Area Governments (ABAG) in 2013 anticipate that St. Helena will add 400 new residents between 2015 and 2040. The City should be aware of long-term population projections when developing General Plan land use policies.
- The City's Residential Growth Management System limits residential growth in order to protect agricultural land and ensure that the City can provide adequate public services, natural resources, and infrastructure necessary to meet increased need.
- St. Helena experiences high commercial rents and, except for the 2008 and 2009 recession, relatively high demand for additional commercial and office space in the city. The demand for office space is again increasing, and commercial rents are increasing as a result.
- There are a number of light industrial and commercial areas with a potential for development or redevelopment, particularly in the vicinity of State Route 29 south of Sulphur Creek.
- In February 2005, the City adopted the Highway 29 Specific Plan, which outlines circulation changes, roadways extensions, traffic signal installations, and streetscape improvements along the State Route 29 corridor west of the Sulphur Creek Bridge.

- Despite its relatively small population, St. Helena functions as a service center, and provides public services for surrounding towns and unincorporated areas, including Meadowood, Madrone Knoll, Calistoga, Angwin, Deer Park, Rutherford, and the unincorporated area south of St. Helena. Through efficient land use planning, the City can ensure that St. Helena continues to serve this function while meeting the needs of its residents.
- Land use changes and development in the unincorporated areas adjacent to the city limits can have a significant impact on St. Helena. Close coordination with Napa County is essential for managing adverse impacts on St. Helena and coordinating City planning efforts accordingly.
- St. Helena has been successful in preserving agricultural lands within the city limits. The California Department of Conservation and Farmland Mapping and Monitoring Program identifies only one significant incidence of land converted from farmland to an urbanized use, which was the conversion of eight acres of farmland into an expansion of Crane Park. County-wide, most agricultural land conversions have been from rangeland or lower-value uses, such as orchards, to vineyards for wine production.

2.4 Goals

The goals of the Land Use and Growth Management Element are:

Manage Growth and Maintain Community Character.

St. Helena is committed to preserving its existing community character, maintaining agricultural lands, managing growth and the impacts of tourism, and ensuring that adequate infrastructure and facilities are provided.

Promote High-Quality and Sustainable Development.

St. Helena is dedicated to a high standard of quality, economic viability and ecological sustainability with respect to the design, planning, and construction of new and renovated public and private facilities.

2.5 Policies and Implementing Actions

A range of policies and implementing actions are outlined below and organized into the following topic areas:

1. Growth Management;
2. Residential Neighborhoods;
3. Commercial Districts;
4. Industrial Districts;
5. Agricultural Uses; and
6. Public Facilities.

The following policies and actions mandate, encourage, or allow certain initiatives to be pursued throughout the duration of the General Plan. Together, they serve as strategic directions for City staff and partners, highlighting where time and resources should be focused.

topic area
1 GROWTH MANAGEMENT

Policies

LU1.1 Require new development to occur within well-defined boundaries and be consistent with the ability to provide urban services. New development should mitigate infrastructure impacts by using sustainable, best management practices in green building and stormwater management and paying its share of development impact fees, while minimizing impacts on sewer, water, energy, and natural resources.

LU1.2 Allow urban development to occur only within the Urban Limit Line. Consider an exception for on-site employee housing on Agricultural lands. Urban services, such as sewer, water, and storm drainage, will only be extended to development within the Urban Limit Line.

The Urban Limit Line may only expand when the amount of developable land within the Urban Limit Line is insufficient to implement the General Plan policies or when logical to include developed lands receiving urban services from the City. Expansion outside the Urban Limit Line should first be considered in Urban Reserve Areas. Expansion into other areas outside the Urban Limit Line should be considered only when the proposed land use is found to further the goals and long-term objectives of the City and does not result in adverse impacts to adjacent uses in either the urban or rural areas.

topic area
1 GROWTH MANAGEMENT

LU1.3 Support agricultural and low-intensity uses beyond the Urban Limit Line.

LU1.4 In order to minimize and postpone the need for expansion of the Urban Limit Line, encourage infill development within currently developed areas.

LU1.5 Require new development to provide adequate infrastructure and urban services, including compliance with the policies and implementing actions affecting new development as set forth in the Public Facilities and Services Element.

LU1.6 Support the redevelopment of vacant and underutilized sites within the downtown area with mixed-use development opportunities. Encouraging infill development with a mix of uses will support a pedestrian-oriented, vibrant retail and commercial district that is centrally located and easily accessible to residents and neighborhoods.

LU1.7 Continue to limit the approval of market rate residential development to the maximum allowed under the Growth Management System. Regulated affordable units and second units are exempt from this limitation.

Infill development is encouraged in order to postpone the need for expansion of the Urban Limit Line.

topic area
1 GROWTH MANAGEMENT

Implementing Actions

LU1.A Continue to allow the construction of second units – also known as accessory dwelling units – and consider allowing the division of single-family homes into two or more units under appropriate circumstances, in order to increase residential density and housing availability without requiring an extension of the Urban Limit Line.

LU1.B Rezone appropriate sites with land use designations such as Central Business, Service Commercial, and Mixed-Use, in accordance with the General Plan Land Use Map. Include provisions to allow for compatible uses on the same site, either in one structure or adjacent structures. The mix of uses can be vertical or horizontal and can include attached residential development in keeping with the integrity of historic structures and historic districts.

LU1.C Continue to update the City's housing inventory to track the status of residential growth by unit type and affordability level.

topic area
1 GROWTH MANAGEMENT

LU1.D Review the City's housing needs every five to eight years in conjunction with updates to the Housing Element to reassess housing priorities for the future years.

LU1.E Restrict the use of housing units as short-term rentals, except for those allowed by the Short-Term Rental Ordinance.

LU1.F Evaluate the effectiveness of the Growth Management System and consider the need for revisions in light of the City's Housing Strategy. As part of this effort, study options for incorporating a mechanism to assess the relative benefits a proposed residential project brings to the community, such as through a community benefits program.

LU1.G Work with property owners and the Napa County Local Agency Formation Commission to study the benefits of annexing lands adjacent to the City of St. Helena, where the City owns and operates critical municipal infrastructure, including utility infrastructure, and/or provides municipal services, or where the provision of municipal services to replace wells and aging sceptic systems would improve public health.

LU1.H In the event that unincorporated areas are annexed to the City, advocate for favorable tax-sharing agreements that ensure that the City receives the revenues necessary to support the municipal services and infrastructure required in those areas.

The City's housing inventory should be regularly updated.

topic area
2 RESIDENTIAL NEIGHBORHOODS

Policies

LU2.1 Promote a mix of housing types and price ranges that are consistent with the Housing Element RHNA categories of housing affordability.

LU2.2 Encourage new residential development that is consistent in design, size, color, and floor area ratio (FAR) with the older residences in the neighborhood.

LU2.3 Protect residential neighborhood views of surrounding vineyards and mountains.

LU2.4 Encourage the subdivision and/or development of larger parcels as Planned Unit Developments to ensure a more comprehensive and creative approach to planning the development as a single unit. This does not prohibit use of Planned Unit Developments on parcels less than three acres.

LU2.5 Encourage the development of higher density housing in areas near the center of the city and close to recreation and services, such as transit, retail, and public facilities.

LU2.6 Allow residential density at the higher end of the permitted range for single family development within Medium and High Density Residential Land Use designations as long as the development character of the single family area is maintained, including lot widths, orientation to street, building heights, onsite parking, traffic, and noise, among other considerations.

LU2.7 Ensure safe, walkable, and bikeable residential neighborhoods and vibrant, livable streets.

LU2.8 Ensure walkable and accessible neighborhoods through mixed-use development.

A mix of housing types and price ranges allows choice for residents.

topic area
2 RESIDENTIAL NEIGHBORHOODS

Implementing Actions

LU2.A Update the zoning ordinance and map to be compatible with the General Plan land use map and designations.

LU2.B Develop and implement residential design guidelines and/or form-based codes, for single family and multiple family uses, to provide oversight and guidance for new buildings and renovations. Guidelines should ensure that new residential development is consistent with the design, size, and footprint of older residences in the neighborhood. Consider the impact of new development on surrounding residences.

(Also see the following elements: Community Design, Topic Area 3; and Economic Sustainability, Topic Area 3).

LU2.C Implement view shed protection review for residential development as part of an updated design review process.

LU2.D Continue to require residential developers to contribute to the provision of community facilities and services (e.g. parks, recreation facilities and programs, education facilities, traffic and transportation facilities, and services), consistent with State law requiring a nexus between project impacts and required mitigation.

LU2.E Update zoning standards to encourage the following criteria:

- A variety of lot widths and sizes, such as that found in the older areas of town;
- Garages at the rear of lots rather than on the street; or creative garage designs that incorporate the "garage door" frontage appearance to blend into the home;
- Lot coverage and floor area ratio (FAR) that is consistent with the scale of historic and older areas;
- Planting of street trees and planting strips along sidewalks; and
- Setbacks, building massing, and configuration consistent with older parts of neighborhoods.

topic area
3 COMMERCIAL DISTRICTS

Policies

LU3.1 Strengthen the downtown as the City's social and cultural core, and as the primary center of retail services. Facilitate a healthy mix of retail and commercial uses, residential development, entertainment, and lodging.

LU3.2 Enhance the pedestrian-oriented character of commercial areas and provide for convenient pedestrian and bicycle connections to encourage walking and reduce vehicle trips within the commercial area.

LU3.3 Support the redevelopment of auto-oriented commercial areas into pedestrian-friendly commercial uses.

LU3.4 Protect historic resources in the commercial areas and encourage appropriate rehabilitation and adaptive reuse.

LU3.5 Ensure that new retail and commercial development is compatible with and complementary to St. Helena's small-town image. In addition, within the City's Central Business District, new retail and commercial development should be of a scale and type that complements the historic character.

Downtown is the City's social and cultural core.

topic area
3 COMMERCIAL DISTRICTS

LU3.6 Continue to work with the County of Napa to review land use and design changes for projects in the unincorporated areas at the City's gateways.

LU3.7 Provide sufficient auto and bicycle parking in order to serve local businesses in the commercial districts. Ensure that all parking areas are well-designed and that auto parking spaces are hidden from pedestrian view, whenever possible.

LU3.8 Provide sufficient opportunities for offices that support the regional, agricultural-based economy and the local needs of the community.

LU3.9 In Mixed-Use, Service Commercial, and Central Business districts encourage residential and office uses in upper-story locations or locations along the periphery of the retail district. This will facilitate active and pedestrian-oriented commercial areas.

LU3.10 Encourage office development within Mixed-Use, Service Commercial, and Central Business districts to complement the pedestrian orientation of surrounding development.

LU3.11 Ensure that new commercial development does not obstruct view corridors to the mountains.

topic area
3 COMMERCIAL DISTRICTS

Implementing Actions

LU3.A Identify sites in the Central Business and Service Commercial districts for mixed-use development that are close to services and facilitate walking, bicycling, and transit use.

LU3.B Establish an inventory of all non-residential uses in the city and a program for monitoring future non-residential development. Combine this inventory with efforts to balance jobs and housing.

LU3.C Encourage retail services which do not require a consumer base larger than the population of St. Helena and its vicinity. For the purposes of the General Plan, "vicinity" is defined as the surrounding agricultural area for which St. Helena has historically provided goods and services, including Calistoga, Angwin, Deer Park, Meadowood, Madrone Knoll, Rutherford, and the unincorporated area south of St. Helena.

LU3.D Develop and implement commercial design guidelines and/or form-based codes to provide oversight and guidance for new buildings and renovations. Guidelines should ensure that new commercial development is consistent with the City's character, particularly in historic districts.

(Also see the Community Design Element, Topic Area 2)

topic area
3 COMMERCIAL DISTRICTS

LU3.E Prohibit retail commercial zoning on Main Street north of Pine Street.

LU3.F Limit the floor area and size of buildings in the Central Business and Service Commercial districts to ensure that new buildings are in scale with typical older buildings in the district.

LU3.G Pursue acquisition of 1301 Mitchell Lane to provide additional public parking facilities, or other City prioritized uses, in the Central Business District.

Sites within the Central Business and Service Commercial districts may be future locations for mixed-use development.

topic area
4 INDUSTRIAL DISTRICTS

Policies

LU4.1 Support and maintain a transitional zone around industrial areas to protect the health and safety of residential neighborhoods.

LU4.2 Support the development of industries that are consistent with viticulture and winery support services and similar, compatible uses. Support the role of the City as an agriculturally-based service center for the surrounding area, including Calistoga, Angwin, Deer Park, Meadowood, Madrone Knoll, Rutherford, and the unincorporated area south of St. Helena.

LU4.3 Ensure that industrial projects are designed and sited to provide a positive image of the community. Landscaping and setbacks should be used to enhance industrial buildings.

LU4.4 Ensure access to and from industrial areas that allows for safe and efficient circulation of goods and people.

topic area
4 INDUSTRIAL DISTRICTS

Implementing Actions

LU4.A Update the zoning ordinance and map to be compatible with the General Plan land use map and designations.

LU4.B Develop and implement industrial design guidelines and/or form-based codes, to provide oversight and guidance for new buildings and renovations. Guidelines should ensure that new industrial development is consistent with the City's character.

LU4.C Evaluate the compatibility of the Industrial Area and existing heavy equipment use between Highway 29 and Crane Avenue and determine if re-zoning or other action is necessary to ensure safety and liability, hazard, and noise reduction in surrounding neighborhoods, schools, and parks.

Industrial uses that support surrounding agricultural uses are encouraged.

topic area
5 AGRICULTURAL USES

Policies

LU5.1 Discourage conversion of existing farmland to non-agricultural uses.

LU5.2 Encourage the County to continue to promote agricultural uses and to limit further development in unincorporated areas surrounding the city.

LU5.3 Strictly limit development on properties existing at the time of the adoption of this General Plan that are designated as agricultural land.

LU5.4 Support community-based agricultural uses within the city, including community gardens, orchards, and parks.

LU5.5 Encourage the use of sustainable agricultural practices.

LU5.6 Permit wineries and other agricultural-related industries to locate in the city if their location does not adversely impact surroundings, uses, or city services (water, traffic, etc.) or the quality and character of the community.

The Urban Limit Line strictly limits development in order to protect agricultural uses.

topic area
5 AGRICULTURAL USES

Implementing Actions

LU5.A Update the zoning ordinance and map to be compatible with the General Plan land use map and designations.

LU5.B Continue to enforce the City's "right to farm" ordinance that protects the right of agricultural operations in agriculturally-designated areas to continue their operations, even though such practices may generate complaints from nearby established urban uses. Explore the feasibility of a notification system (such as flags, web-based information, etc.) for agricultural spraying so nearby residences can prepare accordingly.

LU5.C Explore the feasibility and desirability of implementing permanent agricultural protection for lands within the Urban Limit Line in the form of agricultural preserves.

LU5.D Identify sites for community gardens, orchards, and parks. Establish a program to maintain public areas within and surrounding community gardens and to administer the assignment of garden spaces and collection of use fees.

LU5.E Encourage local farmers to employ sustainable agricultural practices wherever possible. Support agricultural activities that incorporate best management practices related to sustainable agriculture, including participation in local programs such as the Napa Valley Vintners - Napa Green Program and the California Certified Organic Farmers certification program.

LU5.F Where proposed residential, commercial, or industrial development abuts lands devoted to agricultural use, require the non-agricultural uses to incorporate buffer areas to mitigate potential land use conflicts as a condition of approval for subdivisions or use permits. The type and width of buffer areas shall be determined by the City based on the character, intensity, and sensitivity of the abutting land uses. Prepare and adopt guidelines and regulations to

topic area
5 AGRICULTURAL USES

assist in the determination of the appropriate type and scope of agricultural buffer areas needed in circumstances that warrant the creation of such buffer areas.

LU5.G Evaluate all discretionary land use applications, rezonings, and/or General Plan amendments, including those outside the Urban Limit Line, to determine their potential for impacts on Prime Farmland, Unique Farmland, or Farmland of Statewide Importance mapped by the State Farmland Mapping and Monitoring Program and avoid converting these farmlands where feasible. Where conversion of farmlands mapped by the state cannot be avoided, require long-term preservation of at least one acre of existing farmland of equal or higher quality for each acre of state-designated farmland that would be rezoned or redesignated to non-agricultural uses. This protection may consist of establishment of farmland easements or other similar mechanism, and the farmland to be preserved shall be located within the city and preserved prior to approval of the proposed discretionary land use application rezoning, or General Plan amendment.

LU5.H Prepare and adopt guidelines and regulations to assist in the determination of the appropriate type and scope of agricultural buffer areas needed in circumstances that warrant the creation of such buffer areas.

LU5.I Establish a Farmland Mitigation Program for future development that requires the permanent protection of farmland at a 1:1 ratio of the amount of farmland converted. The program should include provisions for the acquisition of agricultural conservation easements and payment of in-lieu fees as potential methods of farmland mitigation, where eligible agricultural mitigation lands must be located within the State of California and be of comparable or better soil quality than the land being converted, and in-lieu fees are to be used for the acquisition of a conservation easement, including costs associated with the transaction and long-term maintenance.

Farmland protection may consist of establishment of farmland easements.

topic area
6 PUBLIC FACILITIES

Policies

LU6.1 Provide a wide-range of high-quality public facilities, including parks, multi-use trails, schools, fire and police services, water and wastewater systems, and community centers.

Implementing Actions

LU6.A Update the zoning ordinance and map to be compatible with the General Plan Land Use maps and designation and public facilities and services element.

LU6.B Pursue sites for future public facilities, including parks, consistent with projected growth.

LU6.C Explore the feasibility and desirability of moving public facilities to the Adams Street property.

LU6.D Install community amenities, such as public restrooms, drinking fountains, benches, and trash and recycling containers in commercial districts. Ensure that community amenities are designed and installed to complement surrounding businesses and support the pedestrian-orientation of the street.

chapter three

economic sustainability

3 economic sustainability

St. Helena's Central Business District is located along Main Street with shops, cafes, restaurants and offices.

1 introduction
2 land use and growth management
3 economic sustainability
4 public facilities and services
5 circulation
6 historic resources
7 community design
8 open space and conservation
9 public health, safety and noise
10 climate change
11 housing
12 parks and recreation
13 arts, culture and entertainment

3.1 Purpose of the Element

The Economic Sustainability Element is not a State-mandated General Plan element. This Element is included in the General Plan in recognition of the important role that economic sustainability plays towards achieving the overall community vision of meeting present needs without compromising the ability of future generations to meet their needs. By building on and protecting St. Helena's authentic small-town character, the Economic Sustainability Element establishes a path to enhancing the local quality of life while also valuing the role of visitors in the local economy. Policies and implementing actions in this Element should be considered in conjunction with policies in the other elements, particularly the Land Use and Growth Management, Circulation, and Public Facilities and Services elements.

The Economic Sustainability Element includes the following sections.

- **3.2 Economic Sustainability in St. Helena.** Defines and frames key economic sustainability issues (p. 3-3).
- **3.3 Key Findings.** Identifies key findings based on existing conditions analysis and extensive community outreach (p. 3-4).

- **3.4 Goals.** Defines overarching goals to guide policies and implementing actions (p. 3-7).
- **3.5 Policies and Implementing Actions**. Identifies policies and implementing actions to strengthen and enhance the local economy (p. 3-10).

3.2 Economic Sustainability in St. Helena

A sustainable approach to St. Helena's economy is intended to preserve the city's authentic, small-town character and quality of life, and leverage tourism to sustain its vibrant economy. The City strives to balance the impact of tourism with the desires of residents and business-owners, while recognizing the economic benefits that visitors bring, and the potential for tourism to contribute to the diversity of the community's social and cultural life. Creating a long-term, proactive approach to define and achieve local economic priorities will help the City remain economically viable in the future while giving consideration to infrastructure, water, and housing.

Developing a reputation for transparency in governance, characterized in part by predictable, streamlined processes that include built-in checks and balances and, to the extent possible, reduced uncertainty associated with required discretionary actions, will also help further economic development and sustainability in St. Helena. By improving its reputation as a service-oriented City government, St. Helena will improve its ability to attract and retain businesses that are compatible with the city's goals.

3.3 Key Findings

There are several challenges and opportunities facing St. Helena related to economic sustainability. The following key findings are based upon a comprehensive existing conditions analysis and community input, as well as the 2007 Local Economy and Economic Development Background Report.

- St. Helena has historically exhibited slow population, household, and housing growth.
- St. Helena's authentic small-town character, historic resources, and agricultural heritage are assets that enhance economic opportunities for local businesses. Protecting, promoting, and enhancing these resources is a critical for St. Helena's economic sustainability.
- Housing affordability is an important issue in St. Helena and housing availability is a key constraint to further local economic development. Increasing the supply of housing – and particularly of workforce housing – is critical to St. Helena's long-term economic sustainability.
- Revenue generation for the City is a key factor of economic sustainability and having retail on the ground floor of commercially-zoned parcels will help advance this objective.
- Commercial space is in limited supply in St. Helena and correspondingly high commercial rents impact the ability of businesses supplying everyday goods and services to locate or stay in St. Helena. Non-retail uses occupying ground-floor retail spaces, such as real estate offices, further drive up demand and rents for commercial space in St. Helena. Limiting the non-retail use of ground-floor spaces in key commercial areas may provide a more supportive environment for commercial uses that meet residents' everyday shopping needs. However, this must be weighed against the potential for vacancies to adversely affect the vibrancy of other businesses in the area.
- Consultations with the business community in St. Helena revealed that local businesses require the support of both local residents and visitors in order to thrive. Therefore, a balanced economic development approach that seeks to meet the needs of local residents while also recognizing that a substantial portion of the local employment base and the City's revenue base is depen-

The community supports maintaining locally owned and operated businesses, such as Steve's Hardware and Houseware.

dent upon the flow of tourism dollars to St. Helena will help the City establish a stronger Central Business District.

- Outreach efforts have indicated broad support in the community for maintaining the City's existing prohibition of formula restaurants, outlet and chain stores, and large-scale retail businesses to ensure that St. Helena's businesses continue to complement its distinctive small-town character.
- Local business leaders have expressed concerns regarding traffic issues in St. Helena and the availability of proximate parking for their employees. Local business leaders are also concerned about the City's water supply and policies. Addressing these challenges will be essential if the City is to achieve its long-term economic sustainability goals.
- The wine industry is the key driver of the economy of the entire Napa Valley. Continuing to support the wine industry is essential to maintaining the economic health of the community and the Napa Valley. Furthermore, diversifying St. Helena's economy to create new, compatible commercial activities and employment opportunities beyond the wine industry can greatly strengthen the economic vitality of the City.

- Tourism by the wine industry supports local businesses, the incomes of many local households, the wineries and agricultural operations of the Napa Valley and local government revenues. The Napa Valley's draw as a tourism destination will impact St. Helena regardless of local policies.
- Sustainable tourism practices that have a low impact on the environment and local culture, while helping to generate future employment for local people will allow St. Helena to enjoy the economic benefits of tourism while maintaining the city's authentic, small-town qualities.
- Economic development opportunities for St. Helena lie in low-impact, high-end tourism, as well as economic diversification in other sectors for which the city has competitive advantages, such as the arts, healthcare, and financial services sectors.
- St. Helena serves as a commercial and business center for the surrounding towns and unincorporated areas, including Calistoga, Angwin, Deer Park, Meadowood, Madrone Knoll, Rutherford, and the unincorporated area south of St. Helena. However, the collective population base of St. Helena and surrounding unincorporated communities is still not sufficient to support some types of commercial retail and services. Residents will continue to travel to larger communities, like the City of Napa or beyond, to shop for certain types of goods and to obtain certain services.

3.4 Goals

The goals of the Economic Sustainability Element are:

Meet Residents' Needs.

St. Helena is dedicated to meeting the basic needs of residents of the city and surrounding service areas, including Calistoga, Angwin, Meadowood, Madrone Knoll, Deer Park, Rutherford, and the unincorporated area south of St. Helena. The City recognizes that residents will continue to travel to larger cities in the region for certain goods and services. Through its adopted local policies and actions, St. Helena will strive to increase the proportion of residents' employment, housing, entertainment, and basic shopping and services needs that can be satisfied locally.

Create and Implement an Economic Sustainability Strategy.

It is imperative that St. Helena create and implement an Economic Sustainability Strategy that will serve as a "roadmap" to achieve the city's goal of economic sustainability. This strategy should include a framework within which the effects of policies and actions can accurately be measured and tracked, as well as forecasted into the future. Specifically, the City should create a short- and long-term economic model that aids in estimating the impacts, benefits, and costs that local policies and actions, as well as outside micro and macroeconomic forces, may have on the local economic environment. This model should also consider and incorporate long-term enhancements to local quality of life and the environment as well as metrics for measuring such elements.

Tourism generated by the wine industry supports local businesses throughout St. Helena.

CONCEPTS, TRENDS AND IDEAS

Sustainable Economic Development

Smaller cities, like St. Helena, often employ local economic development strategies to increase their economic capacity and prosperity. Local economic development approaches reach beyond traditional business attraction and retention and growth models to include longer-term enhancements to the local economy and prosperity into the future. Typical measures can include strategies to minimize retail leakage, support local artisans and small business owners, and enhance workforce development programs in key sectors of the local economy. In addition, local economic development models emphasize strengthening ties between the private, public and non-profit sectors to ensure a collaborative approach to creating better conditions for economic growth and investment.

A sustainable economic development strategy builds upon traditional and local economic development models to include long-term enhancements to local quality of life measures and the environment. In this way, economic sustainability extends the scope of economic growth models beyond the goal of achieving annual fiscal gains. Implementation approaches and measures vary according to the needs of the local economy, but may incorporate additional emphasis on local arts and cultural expression, educational improvement, public health and environmental sustainability.

Local economic development (LED) strategies include supporting local businesses and niche markets, such as culinary businesses and wineries.

St. Helena is dedicated to enhancing local-serving businesses that meet residents' needs.

Balance the Benefits and Effects of Visitors.

St. Helena will promote sustainable tourism practices that allow the City to enjoy the economic benefits of visitors to the region while maintaining the authentic small-town quality of life.

Generate Revenue.

St. Helena will promote economic development initiatives that generate diversified revenues to support local services and move towards greater self-sufficiency. Increased revenue generation for St. Helena is key to achieving other goals for the community, as without additional financial resources the City's abilities to pursue and achieve such goals is limited.

3.5 Policies and Implementing Actions

A range of policies and implementing actions are outlined below and organized into the following topic areas:

1. Economic Diversification;
2. Sustainable Tourism; and
3. City Government

The following policies and actions mandate, encourage, or allow certain initiatives to be pursued throughout the duration of the General Plan. Together, they serve as strategic directions for City staff and partners, highlighting where time and resources should be focused.

topic area
1 ECONOMIC DIVERSIFICATION

Policies

ES1.1 Maintain central St. Helena as the social, cultural, and economic heart of the City by supporting infill and redevelopment of vacant and underutilized parcels in the central St. Helena area.

ES1.2 Identify and expand economic sectors in which the City has competitive advantages, and capitalize on these strengths in order to diversify local economic activities and strengthen St. Helena's role as an agriculturally-based service center for the surrounding area.

ES1.3 Ensure the long-term infrastructure needs and priorities of the community are met as part of an economic approach to economic vitality and sustainability.

(Also see the Public Facilities and Services Element for policies and implementing actions related to infrastructure)

ES1.4 Encourage the creation of workforce housing to support the local employment base in keeping with small town smart growth.

(Also see the Housing Element, Topic Area 1)

ES1.5 Encourage commercial uses that provide basic, everyday shopping and services for residents.

ES1.6 Support local arts, cultural activities, and entertainment that can contribute to the local economy.

(Also see the Arts, Culture, and Entertainment Element)

Central St. Helena is the social, cultural and economic heart of the City.

topic area
1 ECONOMIC DIVERSIFICATION

Implementing Actions

ES1.A Develop, adopt, and implement an Economic Sustainability Strategy that addresses economic diversification and sustainability, as well as local fiscal and infrastructure priorities. This strategy will include the development of the necessary tools to implement the strategy.

ES1.B Update the Municipal Code to (a) encourage to the extent feasible businesses that are complementary to St. Helena's small-town character and that provide a range of goods to local residents; (b) define and permit non-chain, discount type stores while maintaining the existing provisions in the Municipal Code that prohibit formula restaurants, outlet, and chain discount-type stores, and retail businesses over 10,000 square feet in size; and (c) limit certain non-retail uses, such as real estate offices, from occupying ground-floor retail space in Central St. Helena.

(Also see the Arts, Culture, and Entertainment Element, Topic Area 4).

ES1.C Develop a strategy to increase funding and resources to support arts and history as part of the City's overall economic development program. Additional policies and implementing actions regarding support for the arts may be found in the Arts, Culture, and Entertainment Element.

ES1.D Consider the establishment of a Business Improvement District.

ES1.E Provide development incentives for new visitor-serving businesses to develop affordable workforce housing either through construction of housing or payment of an appropriate in lieu fee to develop housing elsewhere in the city. Such incentives shall include consideration of visitor-serving uses in Medium Density Residential or Higher Density Residential where a project provides affordable housing or an appropriate payment of an in lieu fee.

Events, such as concerts in the park, support the economy while strengthening the local social fabric.

topic area
2 SUSTAINABLE TOURISM

Policies

ES2.1 Support the development of responsible, visitor-serving components to the City's economy as a valuable source of jobs, tax revenues, and cultural amenities. Promote policies that facilitate and encourage this type of sustainable economic development.

ES2.2 Encourage visitor-serving uses oriented toward an upscale market, consistent with the Valley's reputation as a producer of world-class wines. Discourage the introduction of uses that are dependent upon a mass tourist market.

ES2.3 Ensure a diverse mix of uses that avoids an over-representation of any particular use. Remove the cap on the number of hotel and motel rooms and restaurant seats but continue to limit vacation rentals.

ES2.4 Encourage green transportation options to circulate people throughout the community. Promote sustainable modes of travel and reduce the number and length of vehicle trips generated by visitors to the community.

ES2.5 Encourage socially and environmentally responsible businesses that make positive contributions to the community and operate in an environmentally-sound manner.

ES2.6 Expand lodging in the downtown area to encourage walking, biking, and alternative transportation modes in order to reduce the need for automobile trips.

(Also see the Circulation Element, Topic Area 4 for policies and implementing actions related to non-motorized transportation).

ES2.7 Do not legislate or restrict the number of restaurant seats, but continue to prohibit formula restaurants.

Visitor-serving businesses bolster the City's economy and bring jobs, tax revenues and cultural amenities.

topic area
2 SUSTAINABLE TOURISM

Implementing Actions

ES2.A Continue to prohibit formula restaurants, chain discount stores, and time-share lodging projects (excluding Fractional Ownership Lodging). Consider destination membership clubs and other potential lodging options that contribute to the Transient Occupancy Tax (TOT) revenue stream subject to a conditional use permit.

ES2.B Study and recommend guidelines for permitting lodging uses in a range of land use designations, and ensure that the requested uses will not result in significant adverse impacts to the community while recognizing that the hotel taxes provide a valuable source of revenue for the City. Remove the cap on the number of hotel and motel rooms.

ES2.C Provide and maintain public restrooms in the Central Business District.

topic area
3 CITY GOVERNMENT

Policies

ES3.1 Establish and maintain an Economic Sustainability Strategy as well as related and necessary tools including, but not limited to, a short- and long-term economic, quality of life, and environmental forecasting model.

ES3.2 Establish and strengthen the reputation of St. Helena's City Government as customer service-oriented and as being business friendly.

ES3.3 Ensure clarity, transparency, and efficiency in local regulations, permitting processes, and fee structures.

ES3.4 Encourage partnerships between the City and private and nonprofit organizations to promote economic sustainability in St. Helena.

ES3.5 Support cultural diversity through economic sustainability initiatives.

topic area
3 CITY GOVERNMENT

Implementing Actions

ES3.A Continue Planning Department technical assistance for new projects.

ES3.B Develop a revised design review and/or form-based code process for commercial and industrial uses that establish objective design guidelines and restrictions.

(Also see the following elements: Community Design, Topic Areas: 2 and Land Use and Growth Management, Topic Area 3)

ES3.C Explore hiring or retaining economic development planning expertise to assist in creating and maintaining an Economic Sustainability Strategy and associated and necessary tools. Partner with the local business community to ensure that the program effectively meets participants' needs.

ES3.D Facilitate and fast track projects generating significant City revenue that will not adversely impact the City's resources and are consistent with the General Plan, Municipal Code, and CEQA.

ES3.E Encourage partnerships between the City and private and/or nonprofit organizations to enhance the City's economic sustainability.

ES3.F Consider leveraging City resources as feasible to enhance the City's economic sustainability.

Partnerships between the City and private and nonprofit organizations can promote economic sustainability.

chapter four

public facilities and services

4 public facilities and services

Public services that support St. Helena residents include water, sewer, storm drainage, solid waste collection, schools and libraries.

1 introduction
2 land use and growth management
3 economic sustainability
4 public facilities and services
5 circulation
6 historic resources
7 community design
8 open space and conservation
9 public health, safety and noise
10 climate change
11 housing
12 parks and recreation
13 arts, culture and entertainment

4.1 Purpose of the Element

The Public Facilities and Services Element presents a framework for the City to provide services, amenities, and infrastructure for today's residents and businesses, as well as future generations. The policies and implementing actions aim to improve community services facilities, physical infrastructure, and a range of public utilities and services to best meet St. Helena's needs.

The Public Facilities and Services Element includes the following sections.

- **4.2 Public Facilities and Services in St. Helena**. Summarizes public facilities and services provided by the City of St. Helena (p. 4-3).
- **4.3 Key Findings**. Identifies key findings based on an existing conditions analysis (p. 4-18).
- **4.4 Goals**. Defines overarching goals to guide policies and implementing actions (p. 4-22).
- **4.5 Policies and Implementing Actions**. Identifies policies and implementing actions to provide services and maintain the City's physical infrastructure (p. 4-23).

4.2 Public Facilities and Services in St. Helena

From water supply and flood management to K-12 education, the City of St. Helena and its partners manage an array of public facilities and provide numerous services to support City residents and businesses, as well as neighboring communities. This network of facilities, services, and infrastructure is essential to support the City's quality of life and its ability to accommodate any potential future growth. As California explores solutions to its water supply shortages, the reduced capacity of its landfills, and limited resources to provide quality education and community services for all residents, St. Helena and local jurisdictions throughout the state are faced with many challenges. This section summarizes the key issues in public facilities and services for St. Helena.

WATER

Water Supply

The City has three sources of potable water: Bell Canyon Reservoir, water purchased from the City of Napa, and groundwater. The City extracts potable water from two groundwater wells at its Stonebridge Well Complex located near the Napa River, south of Pope Street. The City also has two sources of non-potable water: Lower Reservoir on York Creek and a groundwater well just north of the access to the Pope Street Bridge. The non-potable water is used almost exclusively for irrigation. The City also owns a capped well on its Adams Street property. This well is a potential future source of groundwater and potentially, if treated, of potable water.

Bell Canyon Reservoir is the City's primary source of potable water, and the City has the right to divert and store 3,800 acre-feet (AF) at Bell Canyon, although the available physical storage is significantly less than that amount. Bell Canyon is an on-stream reservoir with a physical storage capacity of approximately 1,800 AF. This amount of water is physically available only when all hydrologic and hydraulic conditions are optimal for surface water diversions. In some years, lower amounts will be available due to low rainfall or rainfall occurring

Bell Canyon Reservoir is the City's primary water supply source.

more episodically than continuously. Further, the amount that operationally can be withdrawn from storage in any year is less than the amount in true storage due to the need to carry significant storage over from one year to the next to augment total supply in dry years. At the same time, planned infrastructure improvements at Bell Canyon, including electronic equipment and related improvements that permit accurate monitoring of inflows and outflows in real time, could enhance the annual yield from the reservoir.

Water from Bell Canyon Reservoir is treated at the Louis Stralla Treatment Plant, located near the reservoir. The plant has a treatment capacity of 4.3 million gallons per day (mgd). The plant typically operates at 3.5 mgd, less than peak demand.

Lower Reservoir is an off-stream reservoir with a physical capacity of between 200 and 225 AF. The City has a pre-1913 claim to store up to 160 AF in this reservoir. However, the City has no facility to treat water from Lower Reservoir. About 50 AF per year from the reservoir has been used for irrigation by Spring Mountain Winery and by RLS Middle School. The City has also supplied Lower Reservoir water to local contractors for construction purposes.

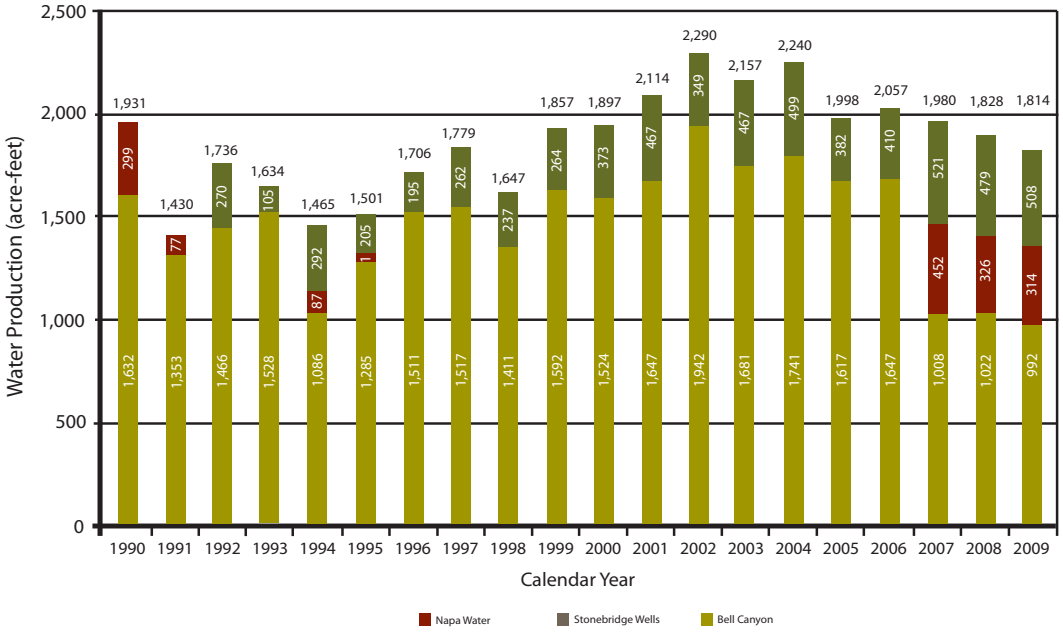
The City treats water produced at its two groundwater wells at the Stonebridge Well Complex (Stonebridge Wells Nos. 1 & 2) at a small treatment plant near the wells. These wells are located near the Napa River, south of Pope Street. The City typically operates both wells at the same time. A third well, also near the Napa River but just north of Pope Street, provides untreated water that is used for irrigation in nearby areas, including Jacob Meily Park. The City routinely monitors the elevation of the aquifer in the area of the City wells. The spring and fall elevation levels have declined since Stonebridge Well No. 1 went into production in 1992. While the decline is disconcerting, the City is not able to assess the long-term significance without further study.

The City also purchases significant water quantities from the City of Napa, having entered into a long-term water supply agreement for that purpose in September 2006. The delivery terms were materially revised in April 2009 (Amendment No. 1) and in November 2011 (Amendment No. 2). The initial term of the contract expires on December 31, 2035. Under the revised delivery terms, through the year 2035, Napa is required to deliver 600 AF of water per year to the City of St. Helena and the City is required to take and pay for 600 AF each year. The City has the option to purchase additional water from Napa (above the 600 AF) if Napa has the water to sell.

Water purchased from the City of Napa is much more expensive than water produced by the City from Bell Canyon or the City Wells. In 2012, the annual cost of 600 AF was approximately $1.2 million. The price escalates at the rate of 3 percent per year (subject to some potential adjustment). At the same time, the reliability of Napa water (as Napa must deliver 600 AF in all years) provides much needed assurance that the City will receive significant water in drought years when relying mainly on water from Bell Canyon could be problematic and groundwater production would not otherwise be sufficient to avoid a serious or even extreme water shortage.

As can be observed in Figure 4.1, the annual yield from Bell Canyon in recent years is significantly less than in prior years. Primarily because more water has flowed through to the Napa River to support fish. Most recently, Napa water has become an increasing percentage of St. Helena's total supply, as increased deliveries under the Napa contract are impacting the total mix. The City is also seeking to reduce its withdrawal of groundwater in non-drought years, in order to give the aquifers in the area of the Stonebridge Well Complex an opportunity to recharge.

FIGURE 4.1: St. Helena Historical Annual Water Production



Distribution System

The existing distribution area covers a large area inside and outside of the city limits. The network extends from Lodi Lane, two miles north of the city, to Niebaum Lane, in the unincorporated community of Rutherford, three miles south of the city.

In 2015 the City provided water to service to approximately 2,312 connections. Of those, 348 connections are located outside the City's jurisdictional boundary. Figure 4.2 shows the distribution of customers on the City's water system. All 18 industrial customers are, with one exception, wineries. "Other" water consumers include institutional users, such as churches and schools. Customers outside city limits include residential, commercial, and industrial customers.

Like all water suppliers, the City has had some "unaccounted-for water loss." Unaccounted-for water loss is the difference between the metered quantity of water produced or purchased by the City and the metered quantity of water sold to all City customers. Unaccounted-for water is therefore not available for sale ("unavailable water").

Unavailable water is attributed to unmetered water lost due to leaks, unauthorized use, firefighting (including flushing of hydrants), system maintenance, and inaccurate meters. As the City has completed replacement of customer meters, and has also undertaken significant meter improvements at the Louis Stralla Treatment Plant, the City believes that most unavailable water is occurring under the streets in its aging distribution system. This is a difficult, expensive, and long-term issue to resolve. The City recognizes that it must maintain unaccounted-for water loss at an acceptable level in its municipal systems.

Water Demand

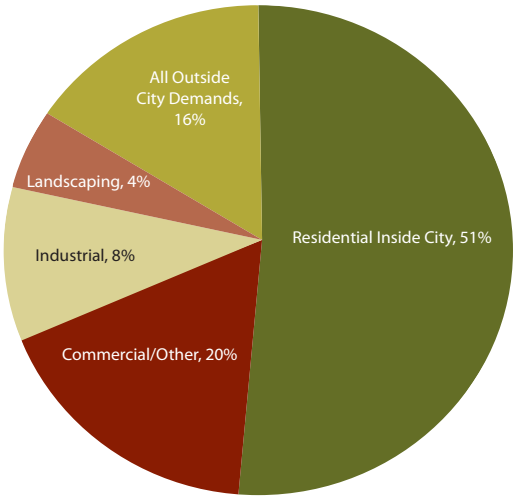
Total existing metered potable water demand averaged about 1,900 acre-feet per year between 2000 and 2015 and has declined in recent years due to improved water use efficiency and short-term demand reductions. Meaningful savings have been observed in residential water consumption (which is also the largest category of user, as seen on Figure 4.2). General commercial and

industrial (winery) usage, when added together, have also significantly declined in recent years, including in low rainfall years. For land uses outside the city limits, metered potable water demand averaged 142 acre-feet per year based on average water demand for 2002-2008.

The Safe Annual Yield of the Water System

Experience has showed that the City has inadequate water to supply customer demand without imposition of water emergency restrictions in recent years, which has led to the establishment of a "Safe Annual Yield" of the Water System. Often "safe yield" is thought of as that supply that can be reliably delivered under worst-case (drought) conditions. However, it was also apparent that under such an approach, the demand on the City's water system, even at the reduced levels of recent years, exceeded the "safe annual yield," if so defined. Such an inflexible approach was viewed as too restrictive for planning purposes.

FIGURE 4.2: Metered Potable Water Demands 2002-2008, Percent Distribution



In consequence, the City undertook to establish its own definition of "safe annual yield," as follows: "The safe annual yield of the St. Helena water supply system is that quantity of water which can be reliably delivered on an annual basis through most rainfall years, including a Dry Year (rainfall at 22" to 25.9"), without undue hardship on water customers through water shortage restrictions." The City defined "undue hardship" as "three or more consecutive months of Phase II water restrictions or Phase III water restrictions." The water restriction phases are those as stated in a water emergency ordinance adopted by the City in the fall of 2011. It is recognized that the annual safe yield, as so defined, could place significant hardship on water customers in a Critically Dry Year (rainfall at 21.9" or less) or in periods of two or more consecutive Dry Years.

The calculation of safe yield is made according to the above definition using an estimate of water available from the City's three sources under current operating conditions and under the rainfall conditions included in the definition. It is assumed that groundwater withdrawals will not exceed 450 AF in normal years (ideally withdrawals should be significantly less than 450 AF). It assumes that the City will purchase 600 AF each year from the City of Napa, in accordance with its contractual commitment, as described above. It takes into account the storage and bypass requirements that the City must follow at Bell Canyon. On the demand side, the estimated demand equals total water actually supplied (including unavailable water) averaged over the past five years. A five-year average seeks to even out anomalies that can impact yearly demand, especially due to wide variations in rainfall that can occur from year-to-year. The City recognizes that it might need to adjust the inputs into the safe yield calculation based on new information. For example, the annual safe yield would increase if the City were to acquire a significant new source of water supply. The annual safe yield could decrease if the City finds that it cannot sustainably withdraw water from the City production wells at current levels.

Based on water supplies available in 2013, the City estimated that the safe annual yield of its water system is 1,950 AF. With average five-year demand (which must include unavailable water) less than the annual safe yield in 2013, the City calculated that its water surplus was 80 AF. Citywide demand has shown a declining trend since 2002, mainly due to the decline in residential water demand.

York Creek is approximately 7.2 miles long and its watershed collects runoff.

Water Shortage Emergencies

In 2011, the City adopted a Water Shortage Emergency Ordinance, which incorporated the definition of annual safe yield, and requires a yearly calculation of the annual safe yield. If the City's water balance pursuant to the safe yield calculation is in deficit, then the City must comply with Phase I water restrictions. Most importantly, this requires that any new water demand, such as from a new project, must be completely offset by a reduction in current water demand, to the satisfaction of the Director of Public Works. Phases II and III involve the imposition of mandatory water restrictions on customers. If Phase II appears imminent, the City Council must appoint a Water Board which, if Phase II is implemented, will work with the Director of Public Works to ensure compliance by all sectors (residential, commercial, and industrial) with Phase II restrictions. Phase III restrictions are severe.

Water Supplies

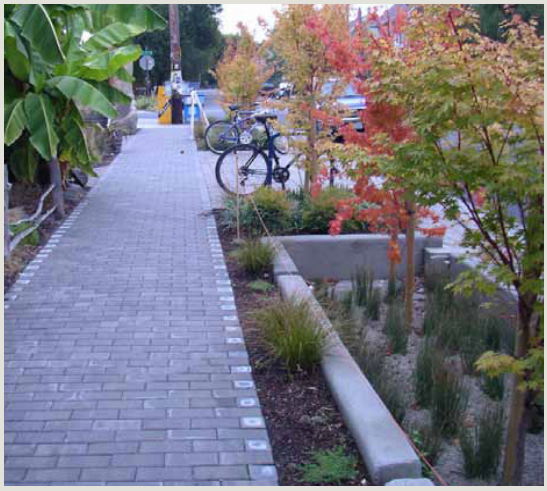
The City needs to obtain new water supplies and/or achieve more water savings, even under current conditions in order to reliably meet the current and future water demand. At the same time, the City recognizes that any new water supply, even if forthcoming, is likely to be expensive, potentially increasing the unit cost of potable water. Thus, the main emphasis going forward will be on conservation, seeking to reduce demand by all classes of users.

Water Recycling Potential

The City recognizes the imperative to recycle water and the value of putting recycled water to beneficial use. The demand for recycled water is likely to be highest during the driest months when flows into the City's sewage treatment plant are at their lowest. This means that, under current conditions, recycled water could not be a meaningful factor in augmenting supply for non-potable use without the addition of substantial storage capacity. It would be necessary to provide recycled storage, pumping, and distribution facilities that includes, at minimum, 400 AF of storage. The City does not own land at a location suitable for such storage capacity, and at this time the cost of purchasing land and constructing such storage, a large capital cost, would not be fiscally justifiable to the water system's rate payers.

CONCEPTS, TRENDS AND IDEAS

Green Infrastructure



By imitating natural hydrologic processes, "green infrastructure" helps to manage stormwater and improve overall watershed health.

Interconnected networks of natural environments, open spaces and landscaped areas provide essential services and livable qualities for our communities. By mimicking natural hydrologic processes in these areas, "green infrastructure" is an integrated set of strategies and improvements that can help to manage stormwater and improve overall watershed health, reducing the need for costly enhancements to built infrastructure. Green infrastructure approaches include vegetated swales, green roofs, rain gardens, daylit creeks, preserved and undeveloped spaces, permeable paving, and the incorporation of other features into community and street design. These improvements can substantially help to manage stormwater runoff, improve water infiltration, reduce flows and improve water quality.

By incorporating green infrastructure into the City's existing built and natural landscapes, St. Helena can simultaneously improve the efficiency of stormwater management, reduce flood risks, enhance the City's design character and protect natural communities and wildlife. Importantly, green infrastructure can also significantly reduce demand on the City's stormwater drainage system, minimizing the need to construct expensive pipe systems.

SEWER

Collection System

The City provides sewer service to approximately 1,726 connections, of which 75 percent are residential. All sewer connections are located within city boundaries, with no out-of-agency boundary sewer services provided. About 300 dwelling units and three wineries are on individual disposal systems, most of them too remote to reach the City's sewer system. With the exception of the original town site, which has four-inch sewer lines, most of the City is served by pipes adequately-sized for dry weather flows. During the winter rainy season, surface and ground water infiltration increases flows by eight times. In several areas of the city, the sewer system suffers from defects which prevent free flow of sewage, resulting in backwater in the system. One lift station exists at the Crinella development in the northeast quadrant east of Main Street. The remaining system operates by gravity.

Treatment Plant

The wastewater treatment plant (WWTP), including its integrated pond system, is located in the southeast corner of the city, near the Napa River. There are a series of ponds that treat the effluent to a secondary level, and the treated effluent is then sprayed onto a field owned by the City just south of the ponds. While the City's permit allowed for discharge into the Napa River under very limited conditions, the City seeks to minimize discharges directly into the river.

In the past, wastewater discharges to the Napa River have exceeded the established limits for biochemical oxygen demand (BOD) and total suspended solids. Constructed in the 1960's, the WWTP is required to meet new wastewater treatment standards set forth by the Regional Water Quality Control Board (RWQCB), which mandate additional treatment of wastewater in order to meet stricter environmental requirements. Under a Cease and Desist Order from the RWQCB, the City is required to phase in the improvements to the wastewater treatment plant by 2021. As part of the project, the city will evaluate the options for improving the facility in order to meet the new requirements.

Working with City Council and sewer service ratepayers in St. Helena, the City will determine a strategy to meet the new requirements, develop the required design and engineering documents, and construct the needed improvements.

Storm Drainage

The City is divided into two major subwatersheds, York Creek and Sulphur Creek. Both watersheds drain into the Napa River watershed. The following section provides an overview of the two major components of the City's drainage system.

For additional discussion of flood potential in St. Helena and for policies to reduce flood incidence and minimize flood impacts, see the Public Health, Safety, and Noise Element.

York Creek Subwatershed

The approximately 7.2-mile-long York Creek has a 4.4-square-mile subwatershed that includes the Upper and Lower York Creek reservoirs. Runoff north of Pratt Avenue is conveyed to York Creek through a number of culverts and ditches, then into the Napa River north of the Pratt Avenue Bridge. Built at approximate Stream Mile 2.5, the Upper York Creek Dam (UYCD) stretches 140 feet across the channel and stands 50 feet high. The UYCD was built in 1900 to supply water to the City. Operations were halted in the 1980s due to acquisition of other water sources and ongoing issues with sedimentation. Water is no longer stored at UYCD, and the City is actively working on a project to remove the dam and restore the creek in this area.

(See Open Space and Conservation Element).

The City has five public schools including the St. Helena Elementary School.

Sulphur Creek Subwatershed

The Sulphur Creek subwatershed area is 9.3 square miles. Sulphur Creek's one major tributary, Heath Canyon Creek, joins the main stem of Sulphur Creek immediately before it exits Sulphur Canyon and begins to flow across the Valley. Heath Canyon and Sulphur Creek have a combined channel length of approximately 12.7 miles. The lower 1.5 miles of Sulphur Creek flow through the City of St. Helena. Sulphur Creek then flows into the city from the west along Sulphur Springs Road, and then runs east to its confluence with the Napa River, near the Pope Street Bridge. The lower reach of Sulphur Creek is referred to as the historic gravel mining reach due to the historic gravel mining activities that occurred and the resulting, extensive gravel deposition in the area. The main stem of Sulphur Creek has seven major road crossings comprised of bridges and box culverts. Most of these major crossings are large enough to handle flood flow, but many smaller crossings and culverts on the tributaries have been identified as undersized. Channel modifications, including both on- and off-stream reservoirs, also alter flow patterns in the Sulphur Creek watershed.

Existing on- and off-stream reservoirs intercept and retain storm flows, acting to reduce the peak of the hydrograph and flooding. However, several of these reservoirs have inadequate overflow mitigation (i.e. spillways) and have the potential to cause severe erosion.

Solid Waste

The Upper Valley Disposal Service provides solid waste services to all residents and businesses in the City of St. Helena. The Upper Valley Disposal Service provides an extensive recycling program and a variety of waste reduction programs. A single stream recycling program accommodates a wide array of wastes including plastic, glass, steel, tin, aluminum, and most types of paper and cardboard. The Agency also conducts public education to teach residents and businesses about composting and its recycling and electronic waste disposal programs.

Solid waste is disposed of in the Clover Flat Landfill, located on the Silverado Trail north of St. Helena. The landfill has a permitted capacity of 4.90 million cubic yards. As of 2018, the landfill has a remaining capacity of approximately 2.62 million cubic yards. The landfill has 10 years remaining on its existing franchise agreement with Napa County, but has an estimated capacity to last approximately 30 years and is expected to close in 2047.

SCHOOLS AND PUBLIC LIBRARY

The St. Helena Unified School District maintains four schools: a primary school, an elementary school, a middle school, and a high school that serve approximately 1,200 students in grades K–12. According to the District's 2010 Facilities Master Plan, St. Helena's public schools have a maximum capacity of approximately 1,770 K-12 students. Coupled with a decreasing trend in enrollment in recent years, the District anticipates adequate capacity to accommodate projected enrollment in the near-term. There are also four private schools in the city, as well as a public preschool (Little Backpacks Preschool) and a public college (Napa Valley College).

The George and Elsie Wood Public Library is the City's single public library. The library is home to approximately 96,000 books, videos, albums, newspapers,

magazines, and other media. The library also contains the Napa Valley Wine Library collection, which consists of 3,500 titles regarding viticulture, enology, and other wine-related literature. The Robert Louis Stevenson Museum is also located on the Library site. In addition to public funds, the library is sustained by the active fundraising efforts of the Friends of the St. Helena Library, a "library foundation" group that has subsidized programming enhancements and a major library expansion. Continued City support can ensure that the library remains an innovative, cultural center serving all St. Helenans.

FIRE PROTECTION SERVICES

The City of St. Helena Fire Department provides fire protection services within the City limits and certain surrounding unincorporated areas, pursuant to a mutual aid agreement between the City and the County of Napa. This agreement dictates, depending on the needs of the incident, that all fire departments in the county will respond to a call for services as requested or required. Napa County Station 26 (St. Helena) and Napa County Station 12 (Yountville) provide automatic aid on all residential and commercial structure fires in the City of St. Helena. Services provided by the Fire Department include fire suppression, fire prevention, education, emergency medical and rescue services, and response to incidents involving hazardous materials.

The Fire Department is based at 1480 Main Street in St. Helena. As a part time department, firefighters respond to the station when they receive a page, leaving the station unoccupied throughout the day. The firefighters are trained to provide emergency medical services at various levels. The Fire Department responds simultaneously with the ambulance dispatch, and generally arrives on scene concurrently with the ambulance company. The department has set a goal for a maximum response time of 8 minutes within the St. Helena city limits. The majority of calls received by the Fire Department are for emergency medical services.

POLICE SERVICES

The Police Department is based at 1480 Main Street in St. Helena. The St. Helena Police Department provides police services within the city limits. The Police Department maintains 24-hour security patrol throughout the community. In addition to calls within the City of St. Helena, the Police Department responds to incidents in surrounding unincorporated areas based on separate mutual aid agreements with California Highway Patrol, the Calistoga Police Department, and the County of Napa.

The Police Department goal is to maintain a staffing ratio of two police officers for every 1,000 residents. The Police Department's goal is to maintain an average response time of three minutes or less. In recent years, the number of calls for service has increased, resulting in an increase in response time.

Clover Flat Landfill supports recycling and has a capacity of 5.1 million cubic yards.

4.3 Key Findings

There are several challenges and opportunities facing St. Helena related to public facilities and services. The following key findings are based upon comprehensive existing conditions analysis and community input.

Water

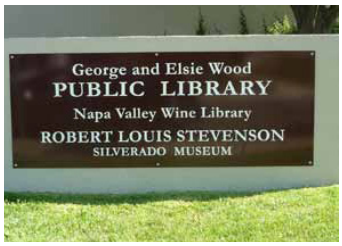
- It is imperative that the City continue to search for new sources of water, noting that groundwater is not considered a "new" source of water. However, until such sources are identified and acquired, the City must plan on its current sources of water as its only sources into the indefinite future.
- The City owns and operates two reservoirs, six storage tanks, pumps, four pump stations, and a network of distribution pipelines. Infrastructure is located within the City limit, SOI and the study areas. In 2015, St. Helena provided water service to approximately 2,312 connections, of which 348 were located outside the City's jurisdictional boundary.
- The installation of new electronic monitoring equipment and associated infrastructure improvements at Bell Canyon to better monitor Bell Canyon inflows, outflows, and water levels more accurately and in real time would be

valuable to the City's water utility. Such real time measurement might lead to increased yields from Bell Canyon, as it will enable the City more accurately to manage the reservoir, including fulfillment of its obligation to flow water through to the Napa River, as required by its permits.

- To date, the City has not implemented its recycled water program due to logistical and financial constraints. Key issues include inadequacies in the City's distribution system that limit options to return water to users and insufficient demand to use greywater for irrigation purposes, particularly among wineries. Removing logistical and financial constraints can help the City keep the program moving forward until additional funding becomes available to fully upgrade the treatment plant and distribution system.
- Residential, commercial, and industrial customers have made great strides in recent years in reducing their water usage. It appears that residential consumption is St. Helena is consistent with other Napa communities after taking into account housing mix and lot sizes.
- Future climate change could alter regional rainfall and significantly impact the City's water resources. The City should maintain awareness of evolving climate science assessments as they pertain to the Napa Valley and take those considerations into account in its ongoing water management planning.

Wastewater

- The City of St. Helena Wastewater Treatment Plant is operates under permits from the California Regional Water Quality Control Board. The most recent new permit was issued on January 12, 2016. The permitted capacity is the average dry weather flow which shall not exceed 0.65 million gallons a day. The actual average dry weather discharge rate shall be determined for compliance over three consecutive dry weather months each year. Under the new permit and related order, the City is required to meet more stringent discharge limitations. This may require significant improvements to the wastewater treatment facility.
- Portions of the Wastewater Treatment Plant are located within the 100-year floodplain, which can cause stormwater flows to infiltrate the City's wastewater collection system during the rainy season. Reducing inflow and infiltration into the wastewater collection and treatment system can reduce the frequency of overloads and increase the effectiveness of the City's facilities.



The George and Elsie Wood Public Library contains approximately 96,000 books, videos, albums, newspapers, magazines and other media

In 1986 and 1995, floodwater overtopped the Napa River bank and caused significant damage to neighborhoods in the City of St Helena, prompting the City to take action which led to the development of the Comprehensive Flood Mitigation Project (Project). The final Project plan, approved in 2006, provides flood risk reduction for a 100-year flood event along with riparian environmental benefits. The Project's main components include a floodplain terrace, a new levee and floodwall, a storm water detention basin, pump station, and a site adaptive management plan. After completing design and permitting between 2006 and 2008, construction began in 2009. Construction of the Project was completed in April 2011, after which the City submitted an application to FEMA for accreditation of the new flood mitigation features. FEMA's approval was received in June 2012 through a Letter of Map Revision reflecting the areas brought under flood mitigation by the project. The Project removed over 200 residential units from the floodplain.

- New development often results in an increase in impervious surface areas and a decrease in natural vegetation, which in turn can result in increased stormwater runoff. Stormwater runoff can cause nonpoint source pollution in streams and rivers.
- St. Helena's Stormwater Master Plan is approximately 10 years old and some of the collection lines detailed in the plan have not yet been constructed. Currently, the City addresses stormwater runoff concerns on a case-by-case basis. Updating the City's Stormwater Master Plan can help streamline the permitting and approval process and renew recommendations to reflect changes since the adoption of the last plan.
- The City maintains a network of more than 22 miles of pipe and trunk lines that collect sewage from homes and businesses, and currently provides sewer service to approximately 1,726 connections, of which 75 percent are residential. All sewer connections are located within city boundaries, with no out-of-agency boundary sewer services provided.

Schools, Library, Fire, and Police

- In recent years nearly a third of St. Helena Unified School District students were classified as English Learners, with nearly all of these students listed as Spanish-speakers. Strengthening existing relationships with the school district can help the City effectively target services to Spanish speaking communities and has been effectively accomplished by the St. Helena library.

The York Creek and Sulphur Creek watersheds drain into the Napa River.

- Strengthening existing relationships with the school district can help the City effectively target services to lower-income families, such as those whose students receive free or reduced-price meals.
- Collaboration with the St. Helena Unified School District presents an opportunity to enhance after-school programming and social service delivery, as well as enable schools to function as neighborhood centers for a variety of intergenerational and community events.
- St. Helena's library consistently ranks as one of the top public libraries in the state and offers a wide variety of services for residents of all ages. In addition to its regular collection, the library houses the papers of the St. Helena Historical Society and the Napa Valley Wine Library Association and the Robert Louis Stevenson Museum. Per capita, the St. Helena Public Library enjoys the highest circulation and percentage of cardholders in the state.
- The St. Helena Fire and Police departments, as part of a mutual aid agreement between the City and Napa County, provides emergency response services to residents and businesses adjacent unincorporated Napa County communities outside of the City limits. Therefore, growth in these communities, as well as maintenance of infrastructure, impacts staffing and equipment needs, as well as response times for the City of St. Helena.

4.4 Goals

The goals of the Public Facilities and Services Element are:

Ensure High-Quality Public Services and Facilities.

St. Helena is committed to investing in and maintaining a high standard of quality for facilities and infrastructure to serve a diverse range of community needs.

Promote Sustainable Standards and Practices.

St. Helena is dedicated to upgrading existing community facilities and infrastructure where possible and setting standards for new improvements that support long-term ecological sustainability and environmental mitigation.

4.5 Policies and Implementing Actions

A range of policies and implementing actions are outlined below and organized into the following topic areas:

1. Water;
2. Sewer;
3. Storm Drainage/Flooding;
4. Solid Waste; and
5. Schools, Libraries, Fire, and Police.

The following policies and actions mandate, encourage, or allow certain initiatives to be pursued throughout the duration of the General Plan. Together, they serve as strategic directions for City staff and partners, highlighting where time and resources should be focused.

.

topic area
1 WATER

Policies

PF1.1 Require that the approval of new development be contingent upon the ability of the City to provide water without exceeding the safe annual yield of its water supply system.

PF1.2 Adopt and implement equitable water conservation measures for both residential and non-residential users so that the City can supply water within the safe yield of its water system.

PF1.3 Prohibit water service to new customers outside the city limits unless a potential threat to health and safety can be demonstrated.

PF1.4 Proactively reduce the City's commitment to provide water to uses outside the city limits.

PF1.5 Continue to implement and update as necessary the City's Water Management Plan Ordinance and the City's Ordinance containing the Water Use Efficiency Guidelines, along with other existing water conservation ordinances and measures.

PF1.6 Aggressively promote adoption of "best practices" for reducing water usage in the existing housing stock through the City existing Ordinances and Water Conservation Plans.

Implementing Actions

PF1.A Continue to implement the City's water conservation ordinances and programs that act to reduce per capita water consumption. In addition, consider incentives to property owners to install rainwater collection barrels and continue to require water efficient irrigation systems and drought tolerant landscaping.

PF1.B Implement the following water system improvements:

- Replace obsolete, undersized water mains to provide more efficient circulation, higher pressures, and lower pipe losses during heavy demand periods.

- Continue service of water mains to reduce unaccounted-for water losses.

PF1.C Continue to aggressively look for new water supply sources adequate to serve St. Helena's population into the future. New sources may include adoption of new technologies, such as effective water recycling.

PF1.D The City of St. Helena should not draw or sell any groundwater beyond that currently allowed until a safe yield of the groundwater system has been identified through a study of the North Main Basin Aquifer by a qualified hydro geologist.

PF1.E Permit no new development relying on groundwater unless and until it is determined that the incremental production of ground water to support the development will not adversely impact the water production capability of the aquifer supporting the City wells.

PF1.F Track the drilling of new private wells in and around St. Helena and, if so recommended by the qualified hydrologist hired by the City's water system, request that the County impose a moratorium on new well drilling if needed to protect the production capability of the City wells.

PF1.G If feasible, adopt a Water Conservation Program that includes the following actions:

- Utilize a Water Conservation staff member or consultant, as needed;
- Update the new construction offset program;
- Establish an Irrigation Advisory Service and promote "Smart Irrigation Controllers";
- Adopt new requirements for "ultra-efficient" plumbing fixtures for new development and rebates for existing users;
- Reduce average dry weather flow; and
- Evaluate incentives for replacement of turf and rainwater catchment, etc.

topic area
1 WATER

PF1.H Ensure that water rates are designed to promote conservation, as well as to ensure that needed capital improvements are made in a timely manner.

PF1.I Evaluate and adjust as needed "water shortage emergency" phases, recognizing the complexity of the supply system and making use of modeling of historical and future performance.

PF1.J Develop and adopt regulations to ensure that total potable water usage is not greater than 1,950 acre-feet per year unless the project includes housing affordable to lower income households and a determination is made pursuant to Government Code 65589.7 that a "sufficient water supply" is available to serve that project and none of the exceptions set forth in 66589.7 (c) apply; or, new sources of water are made available to the City. Residential projects that contain affordable housing shall receive priority allocation of water.

PF1.K Aggressively promote adoption of "best practices" for reducing water usage in the existing housing stock.

PF1.L Require that all new residential housing projects incorporate "best practices" for minimizing water usage.

PF1.M Limit any future non-residential development to projects that incorporate "best practices" for water conservation.

topic area
1 WATER

PF1.N Institute an ongoing process of mandatory audits of all existing non-residential water users to promote adoption of "best practices" for water conservation.

PF1.O Provide the full-time capability in the City to implement and oversee water conservation policies and to pay for this capability out of water revenues rather than the General Fund.

PF1.P Collaborate with Napa County (GRAC study) by participating to establish in the ongoing monitoring program to assess the long-term viability and recharge capability of the North Main Basin aquifer that supplies the City's wells.

PF1.Q The City of St. Helena at the earliest opportunity shall work with the City of Napa to extend that Napa water supply contract beyond the expiration of its term at the end of 2035.

PF1.R Maintain awareness of long-term risks to the City water supply, including potential climate change impacts, impacts on groundwater resources, uncertainties about the Napa water contract renewal in 2035, and Napa water delivery reliability due to impacts on the State Water Project from drought, singlepipe delivery system risks, large storms, or earthquakes. Allocate any surplus water resources among new uses and unallocated reserves to maintain a balance between short-term needs and long-term risk mitigation.

PF1.S Provide for capital needs of water and wastewater systems.

Storm drainage improvements can include measures such as creating settling basins, bio-swales and the use of pervious materials for driveways and parking areas.

topic area
2 SEWER

Policies

PF2.1 Ensure adequate sewage treatment capacity at the City treatment plant to meet the needs of population growth, taking into account the City's Growth Management System, the Regional Housing Needs Allocation, and the needs of non-residential users.

PF2.2 Require the extension of the City sewer to areas that are dependent upon septic systems prior to approval of future growth in these areas.

PF2.3 Reduce pumping costs and increase plant capacity by mitigating sewer system infiltration problems and explore alternate energy sources.

PF2.4 Increase sewer collection system efficiency by ensuring proper maintenance of sewer pipes.

Implementing Actions

PF2.A Require all new units on parcels less than two acres, except those in the Woodlands and Watershed District, to connect to the City sewer. All existing units within 200 feet of an existing sewer shall connect to the City sewer whenever feasible. Many of the residential units cannot expand without abandoning on-site septic systems and connecting to the sewer which may, in some cases, require an extension of the sewer.

PF2.B Continue wastewater treatment system upgrades to reduce the number and scale of implementation constraints on the recycled water program. This can ensure that the system is ready for investment when funding for implementation becomes available.

PF2.C Urban services such as sewer, water, and storm drainage will only be extended to development within the Urban Limit Line. Exceptions will be permitted when undue hardship can be demonstrated and when proposed improvements are not found to induce growth.

PF2.D Reduce sewer system inflow and infiltration through repair and replacement of sewer pipes and protection from inflow sources.

PF2.E Reduce pumping costs and increase plant capacity by mitigating sewer system infiltration problems and exploring alternate energy to operate the wastewater treatment plant to reduce operational costs.

A Safe Routes to School Program will improve walking and bicycling access to schools and after-school programs.

topic area
3 STORM DRAINAGE/FLOODING

Policies

PF3.1 Ensure that new developments provide adequate drainage improvements and detention to mitigate flooding from increased stormwater runoff attributable to the development.

PF3.2 Ensure that encroachments into the 100-year floodplain do not result in any increase in flood levels during the occurrence of the base flood discharge.

PF3.3 Improve York Creek channel capacity in flood-prone areas through removal of channel-obstructing gravel bars and vegetation.

PF3.4 Consider efforts to prevent risk to structures and property along Sulphur Creek.

Implementing Actions

PF3.A Require developers to provide adequate drainage improvements and detention to mitigate storm runoff from the site to the nearest major waterway. Drainage improvements can include measures such as creating settling basins, bio-swales, and the use of pervious materials for driveways and parking areas. Key waterways include York Creek, Sulphur Creek and the Napa River.

PF3.B Continue to require that new developments contribute on a fair share basis to the extension or upsizing of storm drainage to accommodate it through the construction of infrastructure and/or the payment of Impact Fees.

topic area
3 STORM DRAINAGE/FLOODING

PF3.C Consistent with Municipal Code Section 16.32.170, continue to prohibit the creation of new residential lots that will be subject to periodic inundation from floodwaters. New development proposals on existing lots of record must identify flood hazard areas and mitigate all impacts to base flood levels and potential flood damage from grading, filling, and construction through proper drainage, construction, and location of utilities, in accordance with FEMA requirements.

PF3.D Update the City's Stormwater Master Plan to include changes and upgrades since the last plan and to help streamline the approval process.

PF3.E At the time of development review, require that post-project runoff be limited to pre-project peak flow rates for the five-year and ten-year storms as a condition of approval.

(Also see Climate Change Element, Topic Area 4)

PF3.F Implement the requirements of FEMA relating to construction in Special Flood Hazards Areas as illustrated on Flood Insurance Rate Maps.

PF3.G Continue to require that new development and redevelopment projects implement Post Construction Runoff Management measures, including low impact development practices, to reduce stormwater peak flow rates and volumes from smaller, more frequently occurring storm events.

topic area
4 SOLID WASTE

Policies

PF4.1 Increase recycling and composting as part of a coordinated waste reduction and management program.

Implementing Actions

PF4.A Develop and adopt a Waste Management Master Plan to enhance existing waste management services and systems. Assess the system's capacity to serve current and future residents, recommend improvements and identify funding mechanisms and implementation partners. The plan should include landfill space plans and a food waste composting program that incorporates approaches for on-site food waste composting for residences and businesses. Update the plan regularly to address changing needs and priorities.

PF4.B Install and maintain recycling receptacles downtown and in all public parks and major streets. Ensure that the design and appearance of the receptacles fosters high-quality community design, aesthetics, and character.

topic area
5 SCHOOLS, LIBRARIES, POLICE, AND FIRE

Policies

PF5.1 Support and cooperate with the St. Helena Unified School District in maintaining high-quality education as a community priority.

PF5.2 Promote the efficient use of school facilities for before- and after-hour programs that benefit both school-age children and the community at large.

PF5.3 Ensure that children have access to safe routes to school, especially by bicycle and walking.

PF5.4 Require that the approval of residential, commercial, or industrial development be contingent upon the mitigation of the impact of such development on the St. Helena Unified School District's ability to serve school-age children.

PF5.5 Encourage continued support for the St. Helena public library and the library foundation to ensure that it maintains high-quality services for all St. Helenans.

PF5.6 Partner with the St. Helena School District and other community stakeholders to develop a "Youth and Families Master Plan" that will allow more effective collaboration, communication, and coordination in providing services support and opportunities for St Helena's youth.

PF5.7 Set a goal of a maximum fire department response time of 8 minutes within the St. Helena city limits.

PF5.8 Set a staffing ratio of 2 police officers per 1,000 population and for priority one calls, an average police department response time of 3 minutes or less.

topic area
5 SCHOOLS, LIBRARIES, POLICE, AND FIRE

Implementing Actions

PF5.A Assist the School District in collecting school facility development fees generated by new development. Partner with the District to identify, establish, and implement additional measures to ensure that the highest quality of education is provided.

PF5.B Partner with the Napa County Office of Education, the Napa Valley Transportation Authority, the St. Helena Unified School District, and private schools in St. Helena to develop and implement local safe routes to school strategies to improve walking and bicycling access to schools and after-school programs; promote bicycling and walking to benefit students' health; decrease automobile traffic near schools; and support local efforts to improve the environment. Align safe routes to school strategies with the City's bicycle and pedestrian trail systems.

PF5.C Develop a City-sponsored internship program for St. Helena Unified School District students in order to provide high-quality job skills training and support the School District's educational goals.

chapter five

circulation

5 circulation

A multimodal transportation network includes bicycles, pedestrians, transit, and automobiles.

5.1 Purpose of the Element

The Circulation Element provides the framework for a comprehensive and multimodal transportation network that supports and integrates with the other elements of the General Plan, especially the Land Use and Growth Management Element. The Circulation Element identifies the principal components of the City's circulation system, as well as issues related to parking, public transit, and pedestrian and bicycle infrastructure. Standards and guiding principles for the implementation of transportation improvements are also included.

In increasing numbers, citizens of all ages in St. Helena are interested alternatives to the automobile, including walking, biking, and moving throughout the community in golf carts and other electric non-automobile vehicles. Given the relatively flat topography of most of St. Helena, the city provides ideal conditions for such alternative modes of transportation. A shift from traditional automobile-based transportation to alternative modes of transportation within St. Helena will bring numerous benefits to the community, including but not limited to:

- Decreased automobile traffic throughout the city due to an increased number of citizens choosing to walk, or bike, or use alternative modes of travel within the city;
- Health benefits for residents of St. Helena as a result of increased use of active transportation, including walking and biking;

- Decreased air pollution due to less automobile operation throughout the city; and
- Reduced wear and tear on streets within St. Helena.

In January 2012, the City of St Helena completed and approved a citywide bicycle and multimodal plan which is integrated with the Napa County bicycle network and the Napa Vine Trail. The approved plan will provide safe and convenient bicycle, pedestrian, and multi-modal access to schools, parks, open spaces, commercial areas, residential neighborhoods, and community facilities. With this plan and vision in place, the foundation to create a safer and healthier pedestrian and bicycle environment has been established. The City is focused and committed to turning this plan into reality.

The Circulation Element includes the following sections:

- **5.2 Circulation and Mobility Framework for St. Helena**. Describes a framework for circulation and mobility (p. 5-4).
- **5.3 Key Findings.** Identifies key findings based on an existing conditions analysis (p.5-6).
- **5.4 St. Helena's Circulation and Mobility Future**. Describes St. Helena's transportation future, including the proposed street typology system and network, pedestrian and bicycle network, transportation performance measures, and transportation demand management (TDM) program (p. 5-13).
- **5.5 Goals**. Defines goals that focus the direction of changes to St. Helena's transportation infrastructure and mobility and circulation-related policies and programs (p. 5-29).
- **5.6 Policies and Implementing Actions**. Identifies policies and implementing actions to develop an efficient, multimodal transportation network that minimizes impacts to the environment and neighborhoods (p. 5-31).

Regional planning initiatives such as the Napa Countywide Pedestrian Plan and the Napa County Travel Behavior Study provide context for the circulation and mobility framework in St. Helena

5.2 Circulation and Mobility Framework for St. Helena

Transportation planning in California is undergoing a broad transformation. A changing demographic, the growing movement to combat climate change, and an increasing focus on the public health benefits of biking and walking all highlight the need to provide greater choice in local and regional travel. Multimodal transportation and the integration of land use and transportation planning, while always important, are central components of this paradigm shift which has occurred within St. Helena, as well as statewide. These concepts are widely accepted as essential to creating successful circulation and mobility improvements. As municipalities and agencies plan for change, individuals seek to minimize travel costs and learn more every day about how decreasing their reliance on the automobile can reduce their carbon footprint and improve their physical health and well-being.

As part of this paradigm-shift, mobility no longer focuses only on private automobile and public transit use. Increasingly, it is defined by how community members can use alternative modes of transportation efficiently. The size, topography, and climate of St. Helena make it an ideal city for both walking and biking. According to data from the 2012-2016 American Community Survey 5-Year Estimates for the City of St. Helena , approximately 6 percent of St. Helena residents walk to work. This is a higher rate than the countywide average of 4 percent and reflects the City's continuing efforts to create and preserve safe walking environments and a pedestrian-friendly community. At the same time, less than 2 percent of St. Helena residents travel to work by bike and less than 1 percent commute by public transit. This reality underscores the importance of continued efforts to build a comprehensive circulation network in support of multiple travel modes (see Table 5.1). Circulation, as defined in this element, promotes human-scale mobility through a network of pathways and infrastructure that does not rely solely on the expansion of automobile roadways.

Past transportation planning methods have relied heavily on a traditional street classification and performance measurement system that focuses solely on the capacity of streets to accommodate automobile traffic volume, improve

traffic speed, and reduce delay time. This narrow approach fails to consider overall mobility, the existing and desired land use character of the community or conditions for non-automobile users. To better reflect and promote the paradigm shift towards non-automobile-based transportation within St. Helena, the traditional approach to transportation planning must be expanded to address "complete streets". Efforts to improve the City's network of streets, sidewalks, and services must meet important circulation and mobility goals and also contribute to broader efforts to create safe and attractive environments for human interaction.

In support of these concepts, the General Plan recognizes the need to establish new street typologies and performance standards, while tailoring improvements and mitigation to support multiple modes of travel and enhance surrounding land uses. The Circulation Element sets forth goals, policies, and implementing actions that bolster this place-based approach and will guide decisions about improvements to the public right-of-way to best meet the community's vision and to maximize the safety of St. Helena's residents and visitors.

TABLE 5.1: Journey to Work by Mode of Travel

Mode	St. Helena		Napa County	
	2000	2016	2000	2016
Drove alone	69.2%	77.8%	72.7%	75.8%
Carpooled	13.1%	3.8%	14.8%	11.6%
Transit	1.3%	1.0%	1.4%	1.5%
Bicycle	0.3%	2.6%	0.2%	0.7%
Motorcycle	0.0%	0.0%	0.8%	0.1%
Walked	7.2%	6.2%	4.1%	4.0%
Other means	0.9%	0.0%	0.8%	0.5%
Worked at home	8.0%	8.6%	5.1%	5.8%

Source: U.S. Census Bureau; Census 2000, American Community Survey 2016 Estimates

Many neighborhoods are within walking distance of schools and the downtown.

5.3 Key Findings

There are several challenges and opportunities facing St. Helena related to circulation. The following key findings are based upon comprehensive existing conditions analysis and community input.

- St. Helena's street network has largely been developed on a grid. However, some sections of the network, particularly on the east side of State Route 29, are not connected. The lack of a complete traffic circulation system funnels the majority of local trips onto several streets, particularly when State Route 29 is heavily congested. The 1993 General Plan included plans for multiple street extensions on local roadways to accommodate future development. While a handful of projects have been implemented, most have not. Given the shift towards non-automobile-based transportation, these extensions are an opportunity to create bicycle and pedestrian connections (as well as emergency vehicular access where appropriate and beneficial) to improve non-automobile circulation throughout the city. Additionally, development of a comprehensive traffic calming program with a focus on non-automotive circulation improvements will preserve and enhance the livability of neighborhoods and address resident concerns about traffic safety, such as speeding on residential streets.
- According to U.S Census data, the mode share for bicycle and pedestrian commute trips from St. Helena decreased between 1990 and 2000 (by 1.0 percent and 1.2 percent respectively). This trend has continued to present day for pedestrians but has changed for cyclists. Based on the 2012-2016 American Community Survey 5-Year Estimates, the percentage of St. Helena residents who walk to work decreased from 8.4 percent in 2012 to 6.2 percent in 2016, while over the same time period, the numbers of those biking to work in St. Helena increased from 0.6 percent to 2.5 percent since adopting the bicycle master plan. Developing a comprehensive, safe and accessible pedestrian and bicycle network will promote non-motorized trips and reduce single-occupancy vehicle trips, as well as reflect trends in how St. Helena residents move around the city and larger Napa Valley region.
- St. Helena's senior population is expected to increase substantially by 2040. Planning for and developing a pedestrian network that accommodates the city's most vulnerable users, such as seniors, children, and individuals of

TABLE 5.2: Destinations for Weekday Trips of Residents Living in St. Helena

Origin	Destination	Number of Total Trips	Percentage of Total Trips
St. Helena	St. Helena	6,450	41%
St. Helena	Napa	1,896	12%
St. Helena	Calistoga	655	4%
St. Helena	Yountville	98	1%
St. Helena	American Canyon	125	1%
St. Helena	Remainder of Napa County	5,564	36%
St. Helena	Outside Napa County	801	5%
	Total	**2,703**	100%

Source: Napa County Travel Behavioral Study, Fehr and Peers, 2014

limited mobility, will ensure that St. Helena's streets are safe and accessible for all, in consideration of the Americans with Disabilities Act (ADA) requirements. St. Helena's senior population will increase substantially by 2030. A pedestrian network that accommodates the City's most vulnerable users, such as seniors, children and individuals of limited mobility, will ensure that St. Helena's streets are safe and accessible for all. Relevant planning initiatives include the 2010 ADA Transition Plan and the 2016 Napa Countywide Pedestrian Plan.

- Many families live within walking or biking distance of St. Helena's schools, which presents an opportunity to decrease automobile use. Safe Routes to School is a national program that improves safety and encourages students to walk and bicycle to school. Such programs work to reduce traffic congestion and improve the health of both children and the environment, and funding is available for implementation from State and federal sources.

- Several open spaces and parks located within St. Helena and in the surrounding area, including agricultural areas and the Napa Valley Vine Trail, lack well-defined and accessible connections for both pedestrians and bicyclists. Funding sources for the rehabilitation of existing sidewalks to ensure the safety of residents and visitors is also needed. Future opportunities for the development of multi-use paths with an emphasis on access, wayfinding, signage, and parking locations at trailheads will be a priority. Similarly, collaboration with other jurisdictions to expand opportunities to provide pedestrian and bicycle access throughout the Napa Valley requires focus, as these improvements have the potential to create alternative recreational and commuting opportunities for both visitors and local residents.
- In the past, St. Helena has relied solely on traditional Level of Service (LOS) standards for measuring transportation impacts from new development, which account for auto vehicle delay at intersections and along roadway segments. This approach, while effective in measuring and regulating vehicular transportation impacts, does not place any emphasis on enhancing

TABLE 5.3: Origin of Workers Traveling to St. Helena for Work

Origin	Destination	Number of Total Workers	Percentage of Total Workers
Napa	St. Helena	1,793	11%
St. Helena	St. Helena	6,450	39%
Calistoga	St. Helena	444	3%
Yountville	St. Helena	246	3%
Remainder of Napa County	St. Helena	6,841	41%
Living Elsewhere in California	St. Helena	841	5%
	Total	**16,615**	100%

The St. Helena Vine provides local service throughout the City.

the use of alternate modes of transportation, such as the transit, walking, and bicycling by enhancing access to those modes of transportation. This General Plan includes policies and implementation measures that rely on the use of LOS, while supporting all modes of travel when measuring and mitigating transportation impacts.

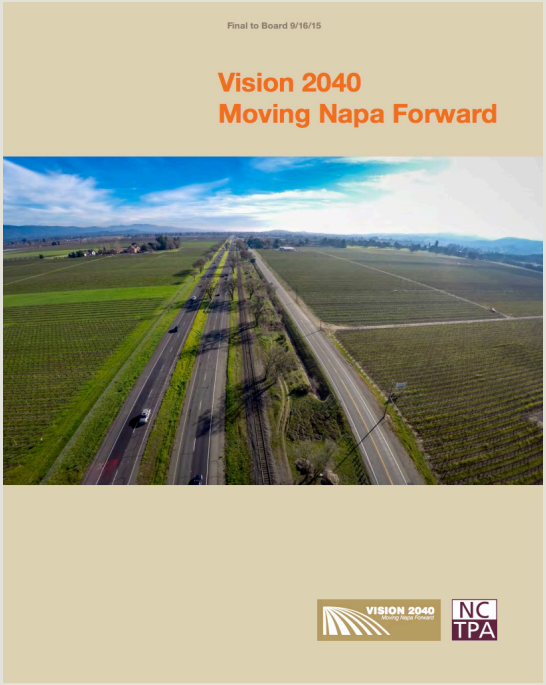
- With a statewide emphasis on shifting travel from single-occupancy vehicles to carpooling, transit use, and increasing bicycle and pedestrian trips to reduce greenhouse gas emissions and Vehicle Miles Traveled (VMT), new performance measures that recognize the priorities of a range of roadway users will be needed.
- According to U.S. Census data, more workers are commuting into St. Helena than are living within the city. This suggests a mismatch between the type of employment and residential units in St. Helena. A balanced ratio between jobs and housing can help reduce travel times and traffic congestion, as well as VMT.
- The primary transit option in the Napa Valley is the Vine bus service. Development and land use patterns in the Napa Valley have resulted in low rates of transit ridership. According to the 2012-2016 American Community Survey 5-Year Estimates, 0.9 percent of St. Helena residents commute by

transit as compared to 5.2 percent statewide. Additional funding and support for increasing bus service will enhance long-term strategies for a sustainable transportation system.

- A significant portion of Napa County's traffic congestion results from tourists traveling throughout the region. There is increasing support for tourism that places less reliance on the automobile, such as the development of new resort/hotel facilities that are located and designed so that guests can conveniently walk or bike to nearby dining, shops, and other local amenities, or that rely on shuttle transportation provided by the resort/hotel. The development of the Vine Trail, a regional walking and biking trail system will connect St. Helena to the rest of the Napa Valley, and will also help increase reliance on pedestrian and bicycle transportation modes, thereby helping to manage congestion in the area.
- Regional trips to and from St. Helena typically begin or end within Napa County. The majority of these trips originate and/or terminate in the City of Napa, Deer Park, Calistoga, Yountville, and Angwin. Developing viable transportation alternatives to single-occupancy vehicle trips for these regional trips will help to reduce VMT.
- Because State Route 29 is the main route for vehicles traveling from Lake County or Northern Sonoma County to the City of Napa and destinations to the south, inter-county travel contributes to significant congestion along St. Helena's Main Street. During peak travel times, less than half of all vehicles on State Route 29 are traveling to or from destinations within St. Helena. While policies and implementing actions in the General Plan seek to improve circulation within the city, additional housing, employment, and public transit policies at the regional level will be required to reduce VMT throughout the Napa Valley, and in turn, St. Helena.
- Although there is rail service for tourists on the Wine Train, no commuter rail service exists at this time. According to the Napa Valley Transportation Authority (NVTA) 2003 Napa/Solano Passenger/Freight Rail Study, commuter rail and light rail service in the area is not viable due to high costs, a small service population and lack of adequate rail infrastructure to support higher speeds.

CONCEPTS, TRENDS, AND IDEAS

Regional Coordination



Vision 2040: Moving Napa Forward outlines a comprehensive vision for the County's transportation system in 2040.

The Napa Valley Transportation Authority (NVTA) is a key partner and resource in regional transportation planning, programming and funding administration for Napa County. The NVTA is a Joint Powers Agency (JPA) comprised of the City of Calistoga, City of St. Helena, Town of Yountville, City of Napa, City of American Canyon, and Napa County. Originally known as the Napa County Transportation and Planning Agency (NCTPA), the agency's Board of Directors approved a resolution to re-brand as NVTA in February 2016 to clarify the agency's role in the community. The NVTA's Board of Directors includes the mayors and one councilmember of each of the jurisdictions in the County, and the Chairman of the Board and one Supervisor of Napa County, and one non-voting representative from the Paratransit Coordinating Council. The NVTA operates the countywide transportation program, including countywide transit service, paratransit, community shuttles, and the Vine Transit.

In 2015, the NVTA issued The Napa Countywide Transportation Plan - Vision 2040: Moving Napa Forward, a report that identifies the transportation issues facing Napa County and outlines a comprehensive vision for the County's transportation system in 2040. This report includes a series of goals designed to attain this vision and addresses how strategic transportation planning may enable the County to resolve key issues that might arise in the future due to projected population and employment growth. The Circulation Element includes a number of policies and implementation actions that support NVTA recommendations, such as transportation demand management.

An interconnected multimodal system will include bicycle and pedestrian paths.

- The Napa Valley Wine Train, which operates on the former Southern Pacific Rail line, is a tourist-oriented, recreational ride carrying riders on a round trip between Napa and St. Helena. Due to an agreement with the California Public Utilities Commission (CPUC), the train does not currently stop to board or disembark passengers at any location other than the point of origination in the City of Napa and partnering wineries and vineyards included in select packages that include winery tours. Opportunities exist to reduce reliance on the automobile for access, given that if passengers are able to board and disembark in St Helena, this would decrease automobile traffic demand along the Wine Train Corridor. Additionally, hotel/hospitality facilities and other tourism-oriented amenities located in close proximity to the Wine Train right-of-way would be consistent with the City's goal of reducing the tourism industry's reliance on the automobile.

Bicycle and pedestrian paths can be located adjacent to creeks.

5.4 St. Helena's Circulation and Mobility Future

St. Helena's transportation infrastructure and compact development pattern create a relatively walkable community, despite being located in a predominantly rural area. It also provides direct access to regional destinations throughout the Napa Valley. However, key constraints to efficient and sustainable circulation in St. Helena include congestion along State Route 29 and regional land use patterns that are not conducive to efficient transit service, walking or biking.

The City of St. Helena and Napa County share the goal of reducing traffic congestion in the region by encouraging the development of a multimodal transportation network, supported by land use decisions that encourage alternatives to single-occupancy vehicle trips. The Circulation Element identifies the key components of a sustainable transportation system, including the following:

- Street Typology System and Network;
- Pedestrian and Bicycle Network;
- Transportation Performance Measures; and
- Transportation Demand Management Program.

Residential streets provide access to neighborhoods.

STREET TYPOLOGY SYSTEM AND NETWORK

Street Typology System

The General Plan street network and street typology system is shown on Figure 5.1. The St. Helena General Plan Circulation Element introduces a new street typology system, replacing the previous street classifications, which established one set of design and operation standards based on a rigid, hierarchical classification of roadways. New street typologies consider the street context and alternate travel modes to help ensure that street standards consider a roadway's relation to its surrounding land uses, appropriate travel speeds, and the need to accommodate multiple travel modes.

The streets of a given neighborhood or district have characteristics that generally follow the land use character of that area and the role that streets play in the greater street network of the surrounding community. For example, a residential street that serves as a collector will have different characteristics and design features from a residential street that provides local access. Similarly, a downtown/mixed-use street and an industrial collector street serve different

functions. A downtown/mixed-use street emphasizes accommodating several transportation modes, while an industrial collector emphasizes accommodating heavy trucks and automobiles. Consequently, the design features and overall user experience may differ greatly.

The following street typologies are part of the City's new street typology system. Application of these standards should be considered for any new development, street repaving, or redevelopment project.

- **Open Space/Rural Street** – Provides access to open space, vineyard and agricultural areas, and rural residential uses. Sidewalks and curbs are not typically present on rural street types, though bicycle boulevards and low speed limits may be present on some open space or rural streets.
- **Industrial Collector Street** – Supports truck access to manufacturing and industrial land uses. While sidewalks are present on all streets, bicycle, and transit facilities are not typically present for this street typology.
- **Residential Street** – Provides access to neighborhoods. This street type supports local trips, with an emphasis on pedestrian and bicycle amenities and slow driving speeds.
- **Downtown/Mixed-Use Street** – Supports all travel modes. It includes specific design features that promote livable streets and multimodal access such as wide sidewalks, traffic calming features, and bicycle boulevards.
- **Regional Connector Street (Main Street)** – Supports all modes, but is primarily designed to provide citywide and regional access for cars, transit and trucks trips. As Main Street/State Route 29 is the key commercial center for St. Helena, specific design features that foster livable streets and multimodal access may be applied, including wide sidewalks with regular street crossings, high-quality pedestrian amenities, and enhanced bus transit facilities. At the edge of the downtown area, Main Street/State Route 29 transitions into a more suburban and rural environment. These sections have higher vehicle speeds and less walking and bicycling activity than the center of downtown.

Figure 5.1
Street Network

TABLE 5.4: Street Typologies

Street Typology	Vehicle Traffic Levels	Pedestrian Facilities	Bicycle Facilities (designated network)	Desired Vehicle Speeds/ Traffic Calming	Truck Route	Transportation Performance Measure
Open Space/ Rural Street	Low / moderate	Sidewalks not typically included	Bicycle route or boulevard	25-35 mph/ Yes	Accommodated	Citywide ATG1, bicycle connectivity, pedestrian connectivity
Industrial Collector Street	Low	Sidewalks	Typically none	25 mph/ No	Accommodated	Citywide ATG, bicycle connectivity, pedestrian connectivity
Residential Street	Low / moderate	Sidewalks (with landscape buffer or street trees where appropriate), crosswalks where appropriate	Bicycle boulevard or lane	15-25 mph/ Yes	Accommodated on designated routes	Citywide ATG, bicycle connectivity, pedestrian connectivity
Downtown/ Mixed-Use Street	Low to moderate	Wide sidewalks (with landscape buffer or street trees where appropriate), regular crosswalks	Bicycle boulevard or lane	25 mph/ Yes	Accommodated on designated routes	Citywide ATG, Bicycle connectivity, pedestrian connectivity
Regional Connector Street (Main Street)	High	Wide sidewalks (with landscape buffer or street trees where appropriate) and regular crosswalks in downtown area. Outside of downtown: regular crosswalks and sidewalks included where demand warrants	Bicycle route, lane or adjacent trail	25 -35 mph/ context-based	Accommodated	Peak hour vehicle travel time, citywide ATG

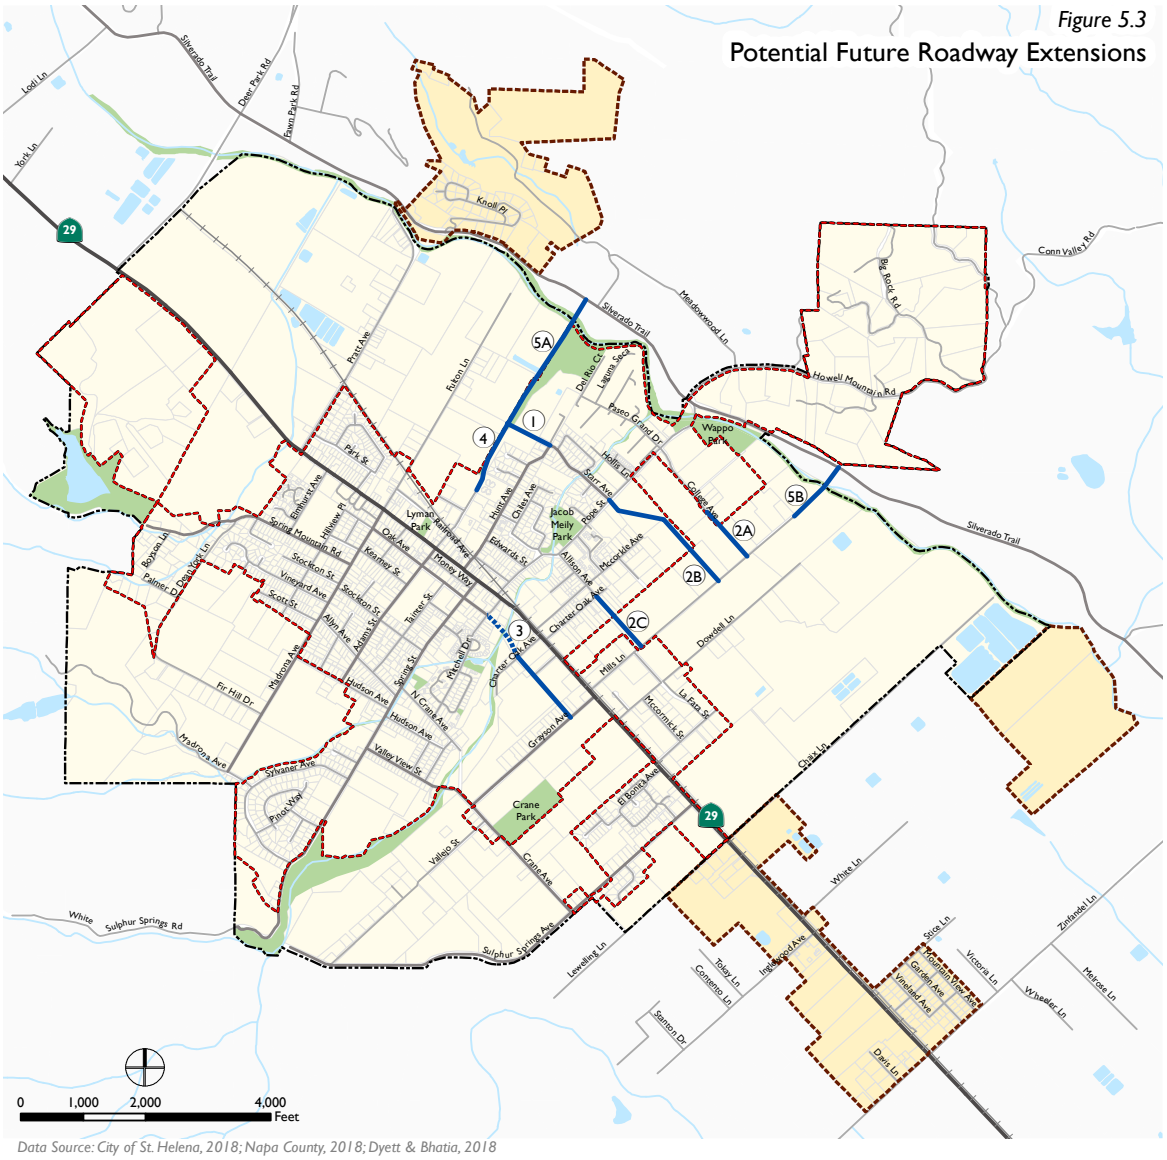
Potential Future Roadway Extensions



Data Source: City of St. Helena, 2018; Napa County, 2018; Dyett & Bhatia, 2018

- Potential Future Roadway
- Potential Future Bicycle/ Pedestrian Path (with access controls)
- Parks and Open Space
- Urban Limit Line
- Study Areas
- City of St. Helena

(1) Starr Avenue extension north to Adams Street

(2A) (2B) (2C) College Avenue, Starr Avenue or Allison Avenue extension to Mills Lane

(3) Oak Avenue from Charter Oak Avenue to Grayson Avenue with limited access from Mitchell Drive to Charter Oak Avenue

(4) Adams Street from its current eastern terminus to Starr Avenue

(5A) (5B) Extension to Silverado Trail, by extending Adams Street or Mills Lane.

DYETT & BHATIA
Urban and Regional Planners

Circulation Study Alternatives

In order to manage congestion and provide new connections within the city, as part of the General Plan update, several new streets are identified as potential options to explore in the future. In most cases, the potential connections provide options for residents to travel from one part of town to another without having to travel on State Route 29, which is frequently congested due to high regional traffic demand. The potential street extensions provide for various levels of access to accommodate different modes of travel. As shown in Figure 5.3, they include the following:

1.0. Starr Avenue extension north to Adams Street;

2A/2B/2C. Starr Avenue, College Avenue, or Allison Avenue extension to Mills Lane;

3.0. Oak Avenue extension south from Charter Oak Avenue to Grayson Avenue, with limited access (bike, pedestrian, and scooters) from Mitchell Drive to Charter Oak Avenue; with the intention to construct at the earliest opportunity a walking and bicycle path to facilitate pedestrian and bicycle access to the High School (and thereby minimize such traffic on Highway 29);

4.0. Adams Street extension from its current eastern terminus to Starr Avenue; and

5A/5B. Alternative extensions to the Silverado Trail, by studying potential extensions of Adams Street or Mills Lane.

General Plan implementing action CR1.B provides guidance for any future roadway extensions. The City envisions that each of the "Future Roadway Extensions", as identified in Figure 5.3, would at a minimum consist of a bicycle/pedestrian path, equivalent to a "Class 1 Bike Path", and would also be designed to accommodate emergency vehicles. Any proposed improvement of the road extensions identified in Figure 5.3 intended to accommodate vehicular automobile and truck traffic would trigger a requirement for a "Special Study", subject to City Council

Sidewalks in the Central Business District have several pedestrian amenities such as benches, trees, and street lights.

approval, to assess the net benefit of the proposed vehicular improvement, including, among other issues, the cost of constructing the vehicular extension and any impacts of the vehicular extension on roads and neighborhoods in the area. Any development project proposed on property located within the future alignment of the "Future Roadway Extensions" as depicted in Figure 5.3, would, as part of their review and entitlement process, be responsible for preparing a "Special Study" as described in this Chapter to determine whether the subject extension will consist of the minimum bike/pedestrian path improvement, or if the extension will be constructed to also accommodate vehicular auto and truck traffic. In either case, the subject development project would construct and fund its "fair share" cost of the "Future Roadway Extension".

To reduce the attractiveness of the new streets as cut-through routes, vehicle turn restrictions may be implemented at particular locations. In some locations, new bridges may also be needed to replace bridges at the end of their design life, or as part of new street connections.

St. Helena has several Class III bicycle routes.

PEDESTRIAN AND BICYCLE NETWORK

Pedestrian Circulation

The Central Business District surrounding Main Street is where the greatest number of pedestrians will be served in St. Helena. Downtown was originally developed with a grid of streets that includes a comprehensive network of sidewalks. Older neighborhoods surrounding the downtown core generally have well-maintained sidewalks that provide pedestrian access between residential areas and schools, community centers, and other walkable destinations.

Neighborhoods near the city's periphery have fewer pedestrian amenities, and many lack sidewalks. Some of these neighborhoods have a rural character where sidewalks may not be appropriate, whereas other post-World War II suburban developments were designed primarily for vehicular access and would benefit from improved pedestrian access

An inventory of existing sidewalks, marked crosswalks, curb ramps and trails was completed for St. Helena as part of the 2016 Napa Countywide Pedestrian Plan (See Figure 5.4). The Countywide Plan, which includes a pedestrian plan for St. Helena, identified pedestrian improvements for key areas of the city in order to improve pedestrian circulation in the vicinity of schools, businesses, and transit facilities, as well as to bolster connections to multi-use pathways.

Bicycle Circulation

St. Helena has an extensive network of Class III bicycle routes, which are routes marked for shared use with motor vehicles. However, bike lanes and multi-use paths that provide dedicated space for bicyclists have not yet been developed in St. Helena, and bicycle support facilities, such as bicycle parking, are lacking in many areas. Additionally, both pedestrian and bicycle access to open space and regional destinations throughout the Napa Valley could be improved through a system of off-street multi-use paths.

Reducing local vehicle trips into downtown St. Helena by shifting those trips to biking or walking would help alleviate congestion and parking concerns and promote increased health. Implementation of a citywide bikeway network that

includes the construction of bicycle facilities at activity centers throughout the city could greatly increase the mode share of bicycling. Key activity centers that could be conducive to increased rates of bicycling include the downtown area, bus stops, schools, parks, hotels, and local wineries. Development of the Vine Trail and a shared use path along Sulphur Creek would provide greater recreational, tourist, and commuting choices by bicycle.

Bicycle Classifications

The City's bikeways include three classifications: bike paths, lanes, and routes. These classifications are described below.

Class I Bikeway (Bike Path) paths provide a separate right-of-way and are designated for the exclusive use of people riding bicycles and walking with minimal cross-flow of vehicle traffic. Class I Bikeways can also offer opportunities not provided by the road system by serving as both recreational areas and/or desirable commuter routes.

Class II Bike Lanes provide designated street space for bicyclists, typically adjacent to the outer vehicle travel lanes. Bike lanes include special lane markings, pavement legends, and signage. Bike lanes may be enhanced with painted buffers between vehicle lanes and/or parking, and green paint at conflict zones (such as driveways or intersections).

Class III Bike Routes provide enhanced mixed-traffic conditions for bicyclists through signage, striping, and/or traffic calming treatments, and to provide continuity to a bikeway network. Bike routes are typically designated along gaps between bike trails or bike lanes, or along low-volume, low-speed streets. Bicycle boulevards provide further enhancements to bike routes to encourage slow speeds and discourage non-local vehicle traffic via traffic diverters, chicanes, traffic circles, and/or speed tables. Bicycle boulevards can also feature special wayfinding signage to nearby destinations or other bikeways.

Class IV Bikeway (Separated Bikeway) Separated Bikeways, also referred to as cycle tracks or protected bikeways, are bikeways for the exclusive use of bicycles which are physically separated from vehicle traffic. Guidelines for Separated

DYETT & BHATIA
Urban and Regional Planners

A Class I bike trail connects Pope Street to Wappo Park

Bikeways were recently adopted by Caltrans in 2015. Types of separation may include, but are not limited to, grade separation, flexible posts, physical barriers, or on-street parking.

Approved Bicycle Network

St. Helena's bicycle network aims to maximize connectivity throughout the city (Figure 5.5). The St. Helena Bicycle Plan, prepared in collaboration with the Napa Valley Transportation Authority, outlines existing and planned bicycle routes intended to provide safe and convenient bicycle access to parks, open spaces, commercial areas, residential neighborhoods, and community facilities. Once completed, the network will play a key role in bolstering the City's efforts to increase the use of bicycles as non-auto modes of transit, and to reduce overall vehicle miles traveled in the city.

Proposed Class I bicycle pathways cross the city, connecting parks and open spaces with multimodal trails that are completely separate from auto traffic. These shared-use pathways provide key cross-city connections and include the proposed Napa Valley Vine Trail and a shared-use path along Sulphur Creek and

the Napa River. Additional Class I pathways connect the Lower Reservoir Park to Spring Mountain Road and Crane Park to Grayson Avenue. Shared-use paths should accommodate all pedestrians, including persons that use an assistive mobility device for a disability or medical condition.

Class II bicycle pathways that provide a designated lane for bicycle travel are proposed along many of St. Helena's streets. Key east-west routes include: Madrona Avenue between Main Street and Sylvaner Avenue; Spring Street between Oak Avenue and Sulphur Creek; Pope Street between Main Street and Silverado Trail; and Grayson Avenue and Sulphur Springs Avenue, between Main Street and Crane Avenue. Key north-south routes are located on Spring Mountain Road, Valley View Street, Crane Avenue, and State Route 29 between Deer Park Road and Pratt Avenue.

The network includes a series of Class III pathways designated for shared-use of vehicles and bicycles. Some of these pathways have an additional designation for use as Bicycle Boulevards. Key Class III pathways include Chaix Lane, Pratt Avenue, and State Route 29 between Pratt and Grayson avenues. Bicycle Boulevards are primarily located in the residential neighborhoods directly east

and west of Main Street. Key Bicycle Boulevards include Mitchell Drive, Adams Street, and Oak Avenue.

Bicycle Parking and Support Facilities

Every bicycle trip has two main components: the route selected by the bicyclist and the "end-of-trip" facilities at the destinations. The availability of both safe bicycle routes and secure and convenient facilities is critical to promoting greater bike usage in St. Helena. Bicycle facilities can include short- and long-term bicycle parking, showers, lockers, and good lighting.

Providing short- and long-term bicycle parking at key destinations, such as downtown St. Helena, parks, schools, community facilities, transit stops, and shopping areas, is an essential part of the development of a complete bicycle network. Bicycle parking that is highly visible, accessible, and easy to use can help encourage cycling as a mode of transportation in the community. Similarly, conveniently located facilities such as showers, bicycle repair stations, and air for inflating tires can encourage cycling, as can locating these facilities in well-lit areas and indoors or covered where possible.

TRANSPORTATION PERFORMANCE MEASURES

A key action to address the future of transportation and mobility in St. Helena will involve developing new transportation performance measures, in addition to more traditional level of service standards, to ensure a balanced perspective on transportation including all of the community's values and interests. As such, the City is committed to augmenting the traditional automobile Level of Service (LOS) threshold with measures that capture transportation system performance from the perspective of all users and incorporate the environmental consequences of transportation decisions.

A new approach designed to achieve the following objectives will be needed:

- Develop an alternative way of evaluating new land use development impacts for automobiles, pedestrians, bicycles, and transit.

- Develop a quantifiable way of measuring the transportation-related GHG impacts and benefits of new land use development and transportation infrastructure improvements.

The purpose of augmenting current transportation performance measures is to develop a meaningful nexus between transportation-related development impacts and appropriate actions to address these impacts. Additional performance measures would improve multimodal circulation and manage traffic congestion in St. Helena. The reasons for adopting new standards include:

- Mitigation measures based solely on traditional LOS can sometimes result in widening roads and intersections in a way that conflicts with community character or other values established in this General Plan. Additionally, such measures in isolation can encourage additional vehicle trips and have a negative impact on other travel modes.
- Thresholds for traditional LOS standards are not necessarily linked to the City's vitality and quality of life and can make smart growth projects, such as mixed-use infill development in downtown St. Helena, more difficult.

Several targets, including operating standards for vehicular travel times on Main Street, standards for new auto trips generated by new development, as well as targets for increasing pedestrian and bicycle trips are set forth in the goals, policies, and implementing actions of this Element. Implementing action CR1.D calls for additional performance measures to improve multi-modal circulation and better address congestion in St. Helena.

TRANSPORTATION DEMAND MANAGEMENT PROGRAM

Transportation Demand Management (TDM) strategies aim to reduce the amount of motor vehicle traffic and manage parking to make travel behaviors more sustainable. TDM policies and programs also encourage the use of modes other than single-occupancy vehicles for travel. Strategies may include carpooling and car-sharing, transit subsidies or reimbursements, paid parking, and the provision of bicycle support facilities at workplaces.

The General Plan supports the establishment of a citywide TDM program to help reduce peak period motor vehicle traffic and manage vehicle parking within St. Helena. NVTA's Strategic Transportation Plan identifies a number of TDM strategies that are applicable to reducing motor vehicle traffic congestion in St. Helena. Funding for a citywide TDM program should be provided through traffic mitigation fees and in-lieu parking fees. In addition, the City should encourage existing employers to participate in the TDM program.

5.5 Goals

Meet Current and Future Transportation Needs.

Meet the current and future mobility needs of residents, businesses and tourists with a balanced, multimodal transportation system, with transportation performance measures that aim to reduce greenhouse gas emissions, manage vehicle congestion along the citywide street network, and increase non-automobile and emergency connections throughout St. Helena. The City plans and manages the transportation network to achieve the following objectives:

a) Ensure that Traffic Service Level "C" or better be maintained at all signalized and unsignalized intersections in St. Helena, except along Main St/Hwy 29 where Service Level "D" shall be permitted. Exceptions to this goal may be permitted in situations where the preexisting 2015 Traffic Service Level do not meet these "C" and "D" standards. In such situations, the projected Traffic Service Level resulting from a proposed project, shall not be "significantly lower" than the 2015 Traffic Service levels as documented in the 2018 General Plan Update Program EIR. The City Council has the discretion to determine what constitutes a "significantly lower" Traffic Service Level.

Examples of measures of "significantly lower levels of service" include 1) should state deterioration from an acceptable LOS to an unacceptable LOS in accordance with NVTA's Countywide Transportation Plan; 2) a significant increase in the volume to capacity ratio for a signalized intersection; or 3) a significant increase in delay at an unsignalized intersection.

b) Provide a complete bicycle and pedestrian network between residential areas, downtown, recreational open space areas, and other major activity centers identified by the City.

c) Reduce transportation-based GHG emissions communitywide and from City-controlled sources.

d) Increase the share of trips made by transit, bicycling, and walking (as measured by the American Community Survey).

e) Reduce current peak hour vehicle travel times on Main Street.

f) Create an Interconnected Multimodal Circulation System with a safe and integrated bicycle and pedestrian system throughout St. Helena for people of all ages and abilities.

g) Increase the City's share of walking, bicycling, transit, and carpooling trips, in accordance with NVTA's 2035 goals.

h) Provide a safe, efficient, and well-maintained circulation system that supports safe and efficient travel for all modes and users.

i) Ensure a Sustainable Transportation Network. Reduce congestion and greenhouse gas emissions and increase the mode share for all non-single-occupancy trips. To achieve this goal, the City supports the use of transportation demand management (TDM) strategies that promote sustainable transportation practices through encouragement, education, and incentives.

5.6 Policies and Implementing Actions

A range of policies and implementing actions are outlined below and organized into the following topic areas:

1. Balanced and Multimodal System;
2. Safe, Accessible, and Comprehensive Bicycle and Pedestrian Network;
3. Sustainable Mobility Practices;
4. Safe and Well-Maintained Circulation System;
5. Parking; and
6. Improvements and Phasing.

The following policies and actions mandate, encourage, or allow certain initiatives to be pursued throughout the duration of the General Plan. Together, they provide strategic directions for City staff and partners, highlighting where time and resources should be focused.

topic area
1 BALANCED AND MULTIMODAL SYSTEM

Policies

CR1.1 Promote a connected street and bicycle and pedestrian network within the city to provide better internal automobile, bicycle, and pedestrian connections for residents.

CR1.2 Provide complete streets that balance the diverse needs of users of the public right-of-way, in accordance with the California Complete Streets Act of 2008.

CR1.3 Pursue appropriate funding for the development of a balanced transportation system.

CR1.4 Develop and use, in addition to intersection level of service standards, performance measures that consider all road users to determine transportation impacts of new development.

CR1.5 Avoid mitigation measures that negatively impact the walking and bicycling environment and encourage driving.

Promoting complete streets will balance the diverse needs of pedestrians, bicycles, automobiles, and transit.

CR1.6 Continue to support NVTA in the provision of convenient transit, including regional and local service. Support more frequent and reliable transit service between communities to reduce the number of people traveling to or from St. Helena to work by private vehicle. Promote and encourage use of the St. Helena Vine Shuttle.

topic area
1 BALANCED AND MULTIMODAL SYSTEM

CR1.7 Explore the use of the rail corridor to reduce traffic, including working with the owners of the Wine Train to consider the possibility of developing hospitality and other tourist-oriented uses that are primarily accessed by passengers riding on the Wine Train Corridor.

CR1.8 Reduce transportation-based GHG emissions from City-controlled sources by employing the following strategies:

- Complete the City's bicycle and pedestrian network, which will increase transportation choices in the city and reduce the demand for vehicle travel
- Implement "smart growth" and sustainable planning principles as defined in the Land Use Element;
- Maximize the overall efficiency of the transportation system, including managing the transportation network through a citywide transportation system management program;Encourage/provide incentives for employee car pools.
- Implement "smart growth" and sustainable planning principles as defined in the Land Use and Growth Management Element;
- Encourage jobs/housing match, as defined in the Housing Element; and
- Encourage/provide incentives for employee car pools.

CR1.9 Promote a walking and bicycling environment that is comfortable and convenient. Ensure that all St. Helena streets have no more than a single through-automobile lane in each direction, plus a single left-hand turning lane where appropriate, even if this requirement increases vehicle travel times. Allow exceptions if an extra lane would reduce the possibility of collisions.

CR1.10 Strive to maintain a ten minute or less travel time during peak periods along State Route 29, from the northern and southern city boundaries.

topic area
1 BALANCED AND MULTIMODAL SYSTEM

CR1.11 Establish a multimodal transportation impact fee program as part of the City's existing transportation impact fee, to finance and implement project mitigations that help achieve the City's traffic reduction goals. As part of the multimodal transportation impact fee program, require new development to analyze travel demand and finance and construct all required off-site circulation improvements, including proposed road extensions, necessary to mitigate project impacts and to reduce the severity of cumulative transportation impacts to all modes of travel.

Implementing Actions

CR1.A Use the street typologies as defined in the Circulation Element as a basis for improving and managing streets. Improve vehicle, pedestrian and bicycle facilities on streets based on this system.

CR1.B Evaluate the following new connections to promote increased bicycle, pedestrian, and non-automobile-based transportation, consistent with the requirement for the preparation of a "Special Study" as described in the Circulation Element. Where feasible, preserve existing rights-of-way.

- Starr Avenue extension north to Adams Street
- Consider three options for a connection to Mills Lane: a) Starr Avenue extension to Mills Lane; b) College Avenue extension to Mills Lane; or c) Allison Avenue extension to Mills Lane
- Adams Street from its current eastern terminus to Starr Avenue
- Consider two options to connect downtown St. Helena to Silverado Trail: a) Adams Street extension to Silverado Trail; b) Mills Lane extension to Silverado Trail

CR1.C Identify streets that should become "more complete," through consideration of transit priorities, sidewalk gap closures, new bikeways, and vehicle traffic calming measures.

topic area
1 BALANCED AND MULTIMODAL SYSTEM

CR1.D Adopt and implement transportation performance measures that promote an efficient transportation system from the perspective of all users. These performance measures shall supplement the City's traditional automobile Level of Service (LOS) thresholds with the goal of improving multimodal circulation and managing traffic congestion in St. Helena.

CR1.E Support efforts to secure additional funding for regional transit service to St. Helena for residents, workers and visitors as a viable alternative to travel by private automobile. Focus on improving the bus service for use by commuters.

CR1.F Subject all rail corridor uses to use permit review; locate passenger facilities within zoning districts which minimize impacts to established and proposed land uses.

CR1.G Study the potential for integrating Wine Train activities with car-free tourism strategies to provide an alternative for tourists to visit St. Helena without a car.

CR1.H Measure total automobile trips generated by new developments on a per project basis, to reduce vehicle trips. Maintain a citywide trip generation analysis methodology that evaluates the effects of land use and built environment changes on travel choices and behavior.

CR1.I Evaluate changes to vehicle travel times along State Route 29 on a per-development or per-project basis. Establish significance criteria for determining if an increase in travel time or decrease in Intersection Level of Service, resulting from new development is significant.

CR1.J As new land use development and redevelopment occurs, require the provision of links to existing streets, street right-of-way dedications, and improvements to the local roadway network (including pedestrian, transit,

bicycle, and other non-motorized vehicle improvements), consistent with adopted Engineering Standards, public safety standards, and the St. Helena Bicycle Plan. Additionally, in the case of subdivisions, require the provision of sidewalks on all local streets within the development.

CR1.K Adopt and implement a citywide, Multimodal Transportation Mitigation Fee program to provide funding on a fair share bases for transportation improvements that reduce citywide automobile trips and contribute to the provision of a continuous path of travel for walking and bicycling from the development site to the center of downtown and other key destinations. Such transportation improvements include completing the bicycle and pedestrian network, implementing transportation demand and systems management strategies, and improving traffic signal coordination on State Route 29. Ensure that fees take into consideration the contribution of new development to changes in net new automobile trips and change in travel time along State Route 29.

CR1.L Continue to work with Caltrans to ensure regional coordination and manage congestion on State Route 29.

topic area
2 COMPREHENSIVE PEDESTRIAN AND BICYCLE NETWORK

Policies

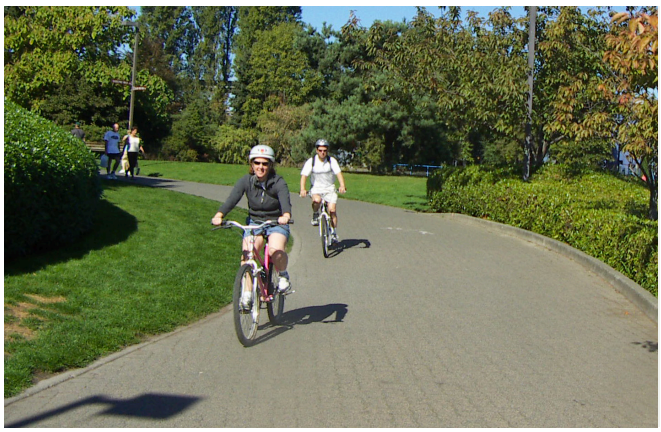
CR2.1 Create a comprehensive bicycle and pedestrian network that enhances neighborhood connectivity. Develop the system as shown in Figure 5.4 to expand and improve the pedestrian and bikeway system.

CR2.2 Promote walking and bicycling as safe and convenient modes of transportation.

CR2.3 Ensure secure, accessible, and convenient bicycle parking facilities throughout St. Helena, including downtown, commercial areas, schools, and parks.

CR2.4 Preserve and enhance pedestrian connectivity and safety throughout St. Helena.

CR2.5 Improve the pedestrian experience through streetscape enhancements, focusing improvements where there is the greatest need, and by orienting development toward the street.



Walking and bicycling should be promoted as safe and convenient modes of transportation.

CR2.6 Encourage walking and bicycling trips to St. Helena schools.

topic area
2 COMPREHENSIVE PEDESTRIAN AND BICYCLE NETWORK

Implementing Actions

CR2.A Implement a citywide bicycle and pedestrian master plan to improve bicycle and pedestrian safety, and to encourage community members to walk and bike more often. Build on St. Helena's existing partnership with the Napa Valley Transportation Authority (NVTA) to ensure that the City's master plan is consistent with countywide transportation planning efforts.

(Also see the following elements: Open Space and Conservation, Topic Area 2; and Parks and Recreation, Topic Area 6)

CR2.B Develop guidelines for the design, construction and maintenance of bicycle and pedestrian paths in St. Helena. Coordinate the guidelines with Napa County or regional trail connections.

CR2.C DRequire any new development and modifications to existing projects to provide bicycle and pedestrian improvements and amenities, consistent with adopted Engineering Standards and the St. Helena Bicycle Plan.

CR2.D Identify and pursue funding opportunities for bicycle projects on the local, state and federal levels. Update the existing and proposed bicycle system every five years, as required by Caltrans to qualify for Bicycle Transportation Account funding.

CR2.E Allocate funds and/or identify funding sources for pedestrian and streetscape improvements.

CR2.F Improve street crossings and gaps in the sidewalk system through development review and capital improvement projects.

CR2.G Adopt a crosswalk installation policy to promote pedestrian safety and accessibility.

topic area
2 COMPREHENSIVE PEDESTRIAN AND BICYCLE NETWORK

CR2.H Review pedestrian-vehicle collision data on an annual basis and identify areas for pedestrian safety improvements.

CR2.I Pursue state and federal grant opportunities to fund a Safe Routes to School program and other bike/pedestrian programs.

CR2.J Consider the feasibility of a citywide bike sharing program for municipal and/or public use.

CR2.K Require safe and accessible bicycle and pedestrian access for all newly-developed public facilities and sites.

CR2.L Enhance the pedestrian environment within the commercial area, and support the development of walking paths, multi-use trails, and bicycle trails throughout St. Helena with the goal of connecting to a countywide system. Encourage the use of group transit options in order to decrease tourist-generated traffic congestion. Encourage the use of pedi-buses by the school district to guide children safely and in a more healthful and sustainable manner to school.

topic area
3 SUSTAINABLE MOBILITY PRACTICES

Policies

CR3.1 Provide incentives and encourage existing major employers to develop and implement transportation demand management (TDM) programs to increase the number of people who bike, walk, and take transit to work and reduce peak-period trip generation. Coordinate as appropriate with NVTA to implement strategies including the following:

- Transit subsidies or reimbursement to residents and employees (often referred to as "commuter check" or "EcoPass");
- Car-share, car-pooling, and neighborhood electric vehicle programs to reduce the need to have a car or second car;
- Integrated bicycle parking and support facilities, primarily to reduce trips within the city;
- Modified parking codes to manage the supply of parking that generates frequent turn-over and serves multiple users; and
- Marketing and information programs to encourage alternative transportation modes.

Supporting TDM programs such as transit and car-sharing can reduce peak-period traffic.

CR3.2 Support the implementation of NVTA goals to reduce/restrain growth of automobile vehicle miles traveled (VMT).

CR3.3 Shift travel from single-occupancy vehicles to other modes so that by 2040, 45 percent of work trips by St. Helena residents and workers are by carpool, transit, walking or bicycling (see Table 5.5 at the end of this section for 2040 commute mode split targets).

topic area
3 SUSTAINABLE MOBILITY PRACTICES

CR3.4 Work with the wine and hospitality industries to manage congestion and create and promote car-free tourism services, coordinating as appropriate with NVTA on TDM strategies.

(Also see the Environmental Sustainability Element, Topic Area 2)

CR3.5 Work with the school district to increase the use of carpooling and the bus system to reduce drive-alone trips to St. Helena schools.

CR3.6 Support development of the bikeway and pedestrian networks to provide a convenient opportunity for at least 20 percent of commuters to get to work by walking or bicycling.

CR3.7 Support compact, mixed-use development as outlined in the Land Use and Growth Management and Housing elements.

TABLE 5.5: Commute Mode Split Targets for 2040

Mode	Commute Trips by Workers To and From St Helena	
	2016	2040 Goal
Drove alone	77.8%	N/A
Carpooled	3.8%	At least 20%
Transit	1.0%	At least 5%
Bicycle	2.6%	At least 10%
Walked	6.2%	At least 10%
Other means (including work at home)	8.6%	N/A
Source: American Community Survey 2016 Estimates		

topic area
3 SUSTAINABLE MOBILITY PRACTICES

Implementing Actions

CR3.A Study the feasibility of a citywide TDM program and review the effectiveness of the existing Traffic Impact Mitigation Fee.

CR3.B If deemed feasible, as part of the municipal code, require TDM measures for all new non-residential development.

CR3.C Regularly monitor progress toward increasing the number of residents and workers walking, biking, and using public transit.

CR3.D Work with the wine and hospitality industries, including the Wine Train, to manage congestion and create and promote car-free tourism services.

topic area
4 SAFE AND WELL-MAINTAINED CIRCULATION SYSTEM

Policies

CR4.1 Ensure adequate maintenance of transportation facilities such as streets, sidewalks, and multi-use paths. Emphasize safety considerations, impacts on non-automobile modes of travel, and overall impact on long-term resource needs as maintenance priorities.

CR4.2 Ensure safety on residential neighborhood streets to promote walking and bicycling and preserve neighborhood livability.

CR4.3 Continue efforts to calm traffic and minimize traffic volumes and speeds in residential areas.

CR4.4 Strive to bring all pedestrian facilities into compliance with Americans with Disabilities Act (ADA) specifications.

CR4.5 Improve traffic safety and encourage walking and bicycling trips to St. Helena schools through a Safe Routes to School program.

topic area
4 SAFE AND WELL-MAINTAINED CIRCULATION SYSTEM

Implementing Actions

CR4.A Review and update the Capital Improvement Program on a regular basis to identify and prioritize circulation facility improvements. Ensure that improvements support the goals, policies, and implementing actions identified in the General Plan.

CR4.B Develop strategies to calm traffic on streets that experience speeding or cut-through traffic, such as Starr Avenue. Include a range of solutions including enforcement, engineering, and education efforts to calm vehicle traffic.

CR4.C Establish a transition plan that identifies prioritization and funding mechanisms for improving street conditions to meet ADA specifications. Transition plans are an important part of meeting ADA standards.

Street trees, sidewalks and signage are strategies to calm traffic on streets.

CR4.D Pursue Safe Routes to School grants to improve safety and encourage bicycling and walking trips to St. Helena schools.

CR4.E To reduce the effect of regional traffic on local streets, monitor traffic volumes and speeds on potential regional cut-through routes, including Oak Avenue and Valley View Street and other problematic streets like Spring, Pope, Starr, etc. Due to the forecast potential for traffic volumes to increase on Oak Avenue and Valley View Street, the City shall consider installing traffic calming or traffic diverting devices to discourage regional cut-through

traffic with the goal of ensuring that, over the duration of the General Plan, traffic volumes on these streets do not increase significantly.

CR4.F To ensure the multimodal Transportation Mitigation Fee (TMF) program serves as acceptable mitigation for the increase in traffic volumes resulting from build out of the General Plan, the City shall explore TMF programs within 6 months of adoption of the General Plan Update. As part of this effort, the City shall conduct a fee study to ascertain whether the fees designated under the existing fee program should be revised. As part of the fee study development, the City should consult with other local agencies, including Caltrans and the California Public Utilities Commission (CPUC), to identify potential improvements to Main Street beyond those currently under construction, and to at-grade railroad crossings that could be incorporated into the TMF program.

CR4.G The City shall consider the use of signal preemption for emergency response or evacuation in locations where Police and Fire Departments response times are not met.

CR4.H Connect Vallejo Street to Sulphur Springs with a fully paved street connection meeting the City's established Street Standards.

topic area
5 PARKING

Policies

CR5.1 Ensure an adequate balance of parking demand and supply. Closely manage and track parking supply within the downtown area by developing a parking management program and implementing a "park-once" strategy.

CR5.2 Maintain on-street parking and/or parklet on Main Street in the Central Business District for the convenience of shoppers and to provide a physical and psychological buffer between Main Street traffic and pedestrians.

Implementing Actions

CR5.A Develop a "park-once" strategy for visitors to improve air quality, reduce congestion, promote alternatives to driving alone, and educate and involve businesses and residents. Work with employers to encourage employees to park on the fringes of downtown, thereby leaving convenient parking spaces open for shoppers.

CR5.B Develop and maintain an off-street parking program for the City's existing Parking Impact Area and consider modifying the boundaries of that area. The program will identify and prioritize locations where additional off-street parking can be provided. When sufficient funds have accumulated for the acquisition of a site and construction of parking on that site, commence with implementation of providing parking on that site.

topic area
6 IMPROVEMENTS AND PHASING

Policies

CR.6.1 Prioritize and implement improvements to the circulation system with an emphasis on bicycle and pedestrian improvements and expanded transit service.

CR6.2 Require concurrent infrastructure development for any new development projects that have impacts on the circulation system, including streets, paths, trails, sidewalks, and public transit.

CR6.3 Consider requiring dedications and mitigations in addition to traffic mitigation fees for any development that occurs adjacent to proposed street corridors in order to reinforce circulation system continuity. Traffic mitigation fees are necessary to mitigate existing traffic congestion and congestion caused by new development. Consider revising fee schedules to fund needed vehicular, bike, and pedestrian improvements in order to appropriately mitigate impacts. The fee schedule must be based on an established "nexus" between new development and the planned improvements.

On-street parking on Main Street is convenient for shoppers.

Implementing Policies

CR6.A Evaluate and prioritize all new paths and trails (identified in Section E: St. Helena's Circulation and Mobility Future) when adequate funding is secured and concurrent with any new, adjacent developments.

CR6.B Keep up to date the existing St. Helena Traffic Mitigation Fee program to provide funding for all new road connections and trails included in the Circulation Element, in order to ensure new connections and trails are constructed in a timely manner.

CR6.C Develop a plan for all non-motorized vehicles, including bicycles, pedestrians, and scooters. To create a meaningful alternative to automobile

usage for short trips, multi-use paths should connect home-to-work or home-to-local shopping locations. Link neighborhoods and commercial areas on a path system and encourage active modes of transportation.

chapter six

historic resources

6 historic resources

St. Helena is a community rich in historic resources including the Culinary Institue of America's Greystone Campus.

1 introduction
2 land use and growth management
3 economic sustainability
4 public facilities and services
5 circulation
6 historic resources
7 community design
8 open space and conservation
9 public health, safety and noise
10 climate change
11 housing
12 parks and recreation
13 arts, culture and entertainment

6.1 Purpose of the Element

The Historic Resources Element is not a State-mandated element; however, it presents a framework for governing future decisions about rehabilitating, retrofitting and adaptively reusing St. Helena's historic buildings. The Historic Resources Element aims to effectively manage the community's historic assets including, but not limited to, buildings, bridges, and other structures in order to maintain St. Helena's unique sense of place and ensure that these assets can be enjoyed by current and future residents and visitors.

The Historic Resources Element includes the following sections.

- **6.2 Historic Resources in St. Helena**. Identifies key issues related to the preservation of historic resources in St. Helena (p. 6-3).
- **6.3 Key Findings**. Identifies key findings based on an existing conditions analysis (p. 6-10).
- **6.4 Goals**. Defines overarching goals to guide policies and implementing actions (p. 6-12).
- **6.5 Policies and Implementing Actions**. Identifies policies and implementing actions to preserve the City's cultural and historic resources (p. 6-14).

6.2 Historic Resources in St. Helena

Napa Valley has a long history of settlement dating back to around 2000 B.C., when Native Americans first inhabited the Napa Valley. Native Americans inhabited the area for thousands of years, and at the time of first contact with European settlers of the area, the Wappo had established a village near present day St. Helena called Annakatanoma. Until the 19th century, approximately 7,000 Wappo resided in the Napa Valley and surrounding hills, including Mount St. Helena.

St. Helena was first settled by members by the Native American Yukian group who occupied much of Northern California, including present day Napa County. When Spanish soldiers arrived in the area, they called the Yukians guapo, meaning courageous, a term that later became "Wappo."

Since its early days in the mid-19th century, St. Helena has been an agricultural and commercial center serving the surrounding towns and farming areas of the upper Napa Valley. The community initially served as a transfer point for agricultural goods and natural resources destined for markets in Napa and San Francisco. The City's more recent cultural roots stem from its role as an immigration destination for European settlers; however, the histories of both Native American and European peoples are important to the identity of St. Helena.

The influences of these early residents are exemplified in the City's historic structures, in particular stone and brick masonry structures, as well as European-styled, timber-constructed barns, bridges, wineries, and social halls located throughout the city. Additionally, St. Helena has typically been a destination for immigrants seeking labor opportunities in mining and the surrounding agricultural fields. In early years, Chinese laborers ventured to St. Helena from San Francisco and the mining areas of the Sierra foothills. More recently, workers from Mexico and Central America have settled in the area, bringing with them vibrant cultural traditions reflected in the holiday celebrations, arts, and culinary experiences of the area. Protecting and preserving the city's historic and cultural resources is essential to ensuring that St. Helena maintains its unique character while adapting to social and political changes and potential growth demands in the coming decades.

BENEFITS OF HISTORIC PRESERVATION

In 1998, downtown St. Helena was designated as a Nationally Registered Historic District, and the city boasts a number of landmark buildings that have been listed on the National and California State Historic Registers. Creative, forward-thinking planning can help the City leverage these historic resources to maximize their impact on local economic growth and maintain the high quality of life and character for which the city is known. Effective historic preservation policies can have many positive impacts, including cultural, social, and economic benefits. In addition, further integrating historic preservation into land use and urban design plans can contribute greatly to the city's long-term vitality.

In general, the social benefits attributable to historic preservation are cultural, educational, or environmental in nature. Collectively they contribute to the city's overall livability and quality of life. Cultural benefits include the celebration of diverse communities and the fostering of a sense of civic belonging and pride. For example, St. Helena is home to several historic wineries that contribute to the city's agriculture-based identity. Historic wineries include Beringer, Charles Krug, and Spottswoode. Additionally, educational benefits can take many forms, and often lay the foundation for collaboration between local educational, non-profit, and civic institutions. These collaborations may result in bringing local history to life for residents and visitors, enriching the overall experience of the city. Lastly, preserving and rehabilitating historic structures and surroundings can have positive environmental benefits on St. Helena by capitalizing on the investment of time, energy, and resources that have already gone into the construction and maintenance of the buildings. Rehabilitating historic buildings reuses existing materials and can help divert waste construction resources from entering local landfills. Establishing and implementing effective historic preservation policies will help ensure that St. Helena maximizes the breadth and impact of positive cultural, education, and environmental benefits into the future.

The community of St Helena supports the preservation and restoration of historic resources such as the Logan House.

Economically, historic preservation provides a wide array of direct and indirect benefits to cities and can be a key driver of local economic development strategies. Direct benefits are mostly attributable to State and/or federally-registered buildings that qualify for tax credits and deductions to subsidize rehabilitation and construction costs. One indirect economic benefit, particularly applicable to St. Helena, includes creating a strong sense of place that is attractive to tourists seeking cultural destinations and experiences, and that can draw significant revenue from outside sources to support and circulate locally.

St. Helena's unique historic resources and Napa Valley location provide it with a strong position to capitalize on the economic benefits of well-planned and well-implemented historic preservation measures.

ST. HELENA'S INVENTORY OF HISTORIC RESOURCES

Numerous historical buildings and structures have been recorded within city limits as listed in Appendix A and shown in Figures 6.1 and 6.2. Historic resources are generally concentrated in the central part of the city, although there are historic resources on winery properties and adjacent to the Napa River. The most common historical property types consist of residences and commercial buildings, although other historic resources in St. Helena include barns, warehouses, wineries, churches, schools, bridges, a culvert, street lights, a motel, tankhouses, stonework, roads, a railroad depot, and government buildings. The majority of these properties were recorded as part of the 1977-1978 Napa County Historic Resources Inventory conducted by Napa Landmarks, Inc. and an historical architectural survey conducted by Page & Turnbull, Inc. in 2006.

TABLE 6.1. Historic Resources

Source / Location	Number of Resources[1]
1978 Survey	
Charter Oak District	49
Main Street District	57
Spring Street District	90
2006 Survey	30
National Register of Historic Places	15
National Register of Historic District	St. Helena Historic Commercial District (District includes 36 contributing and 13 non-contributing buildings)

1. Overlap exists among Historic Resource lists.
Source: City of St. Helena, Historic Resources Inventory (1978, 2006)

There are several well-preserved buildings along Main Street, including the Oddfellows building.

Eleven historical resources within the City limit are listed in the National Register of Historic Places and California Register of Historical Resources. Two of these historical resources—the Beringer Winery Historic District and the Main Street Commercial Historic District—include multiple buildings and structures, which are indicated by a National Register Status Code of "1D" in Table A-1 of Appendix A. The Main Street Commercial Historic District includes the 34 buildings considered to be contributors to the district's historic character or significance, along with 13 non-contributor buildings. Non-contributors are those buildings that, due to date of construction, alterations, or other factors, do not contribute to the historic character of the district. Numerous other historical buildings in St. Helena appear eligible for listing in the National and California registers, as indicated by a National Register Status Code "3S," which would qualify such properties as historical resources for purposes of CEQA.

GENERAL PLAN UPDATE
City of St. Helena

DYETT & BHATIA
Urban and Regional Planners

6.3 Key Findings

There are several opportunities related to historic resources in St. Helena. The following key findings are based upon comprehensive existing conditions analysis and community input:

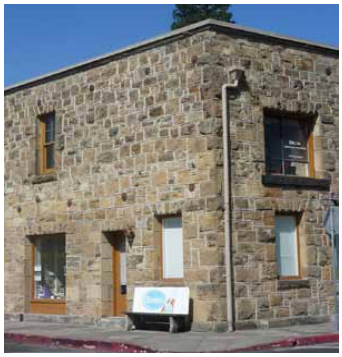
- St. Helena has a wealth of historic resources that contribute to and define its unique sense of place. Implementing measures to preserve and protect these resources can benefit the community for generations to come.
- St. Helena boasts a number of well-preserved buildings along Main Street that help communicate the City's character to those entering or passing through town, particularly from the north. Key landmark buildings include the Starr, Galleron, Ritchie, Oddfellows, and Pritchard buildings. Preserving these structures and ensuring that new development complements their landmark status can help St. Helena maintain its unique character
- The City has adopted a Historic Preservation Overlay District that establishes zoning regulations for historic resources located within the District. Currently, the Historic Preservation Overlay District applies to very few historic properties.
- Although there are more than 200 historically significant resources in the City, most are not included in the Historic Preservation Overlay District. Those properties not recognized may be vulnerable to alterations and demolition.
- St. Helena does not currently have a historic preservation ordinance. However, the design review process that is set up for all new construction, additions and alterations of both residential and non-residential buildings in St. Helena has special findings for consideration of historic buildings. This allows the City to require CEQA analysis of impacts on historic buildings pursuant to CEQA Guidelines section 15300.2, which states that a categorical exemption shall not be used for a project which may cause a substantial

adverse change in the significance of a historical resource. Special findings must be made to address the demolition of historic structures (section 17.164.050). These findings are:

- o That the building poses a threat to health, safety and general welfare if it is not demolished;
- o That restoration of the building is not feasible or practicable using current building codes, including but not limited to the Historic Building Code provisions of the Uniform Building Code of the State of California; and
- o That no public or other funding is available for financing renovation or purchase of the building.

- In 1999, the City implemented one of the first mandatory seismic retrofit ordinances of unreinforced masonry buildings (URM) within the state (Municipal Code section 15.40). Thirty-two URMs were identified. Seismic retrofit of all 32 buildings has either been completed or is in the construction phase of completion.
- The City of St. Helena Building Department utilizes the State's historic building code to encourage and assist in the preservation and renovation of historic structures.
- St. Helena's neighborhoods have unique characteristics that reflect the evolution of the City over time. Creating neighborhood-specific historic preservation design guidelines can ensure that structural alterations to existing homes reflect the neighborhood's past, while accommodating modern residential needs.

There are more than 200 historically significant resources in St. Helena.



Preserving St. Helena's historic resources will help maintain the City's unique sense of place.

6.4 Goals

The goals of the Historic Resources Element are:

Maintain St. Helena's Sense of Place and Visual Character.
St. Helena is dedicated to ensuring that new development complements existing buildings and supports the City's unique historic, agricultural character and setting.

Preserve and Protect St. Helena's Historic Resources.
St. Helena is committed to preserving and protecting its historic resources and ensuring that they remain for future generations.

Celebrate St. Helena's Distinct History and Heritage.
St. Helena is dedicated to celebrating its rich historic buildings and ensuring that they can be enjoyed by residents and visitors.

CONCEPTS, TRENDS AND IDEAS

Adaptive Reuse

Long Meadow Ranch and the Napa Valley Vintners Building are examples of adaptive reuse in St. Helena.

Adaptive reuse refers to the process of adapting older structures for use in different ways than originally intended. In this way, the existing architectural details and cultural and historic significance of older buildings can be maintained, while the use and function of the building changes to meet current and future needs. Examples of adaptive reuse include rehabilitating unused schools for use as offices or research facilities, and retrofitting former industrial buildings into residential units. Adaptive reuse can bolster planning efforts to reduce the occurrence of sprawl and preserve agricultural lands by focusing new development in already-developed areas of the City.

The Long Meadow Ranch Winery and Farmstead, located at the intersection of Charter Oak and Main streets, is an example of adaptive reuse in St. Helena. Reuse of the property, including the 130-year old gothic revival, two-story home, is currently underway. The project includes a nursery, restaurant, open air produce market and wine tasting room. In addition, the Napa Valley Vintners Association office building is another example of adaptive reuse

The Sciaroni Winery and Distillery dates from the 1880s.

6.5 Policies and Implementing Actions

A range of policies and implementing actions are outlined below and organized into the following topic areas:

1. Protected Historic Resources; and
2. Historic Resources Awareness.

The following policies and actions mandate, encourage, or allow certain initiatives to be pursued throughout the duration of the General Plan. Together, they serve as strategic directions for City staff and partners, highlighting where time and resources should be focused.

topic area
1 PROTECTED HISTORIC RESOURCES

Policies

HR1.1 Preserve the City's historic and cultural resources, so that they may contribute to the special character and quality of the City and support its economic base.

HR1.2 Protect the historic resources that exist in the downtown commercial area.

HR1.3 Encourage the adaptive reuse, rehabilitation, and retrofit of historic buildings in which the original use is no longer feasible.

HR1.4 Promote the application of sustainable building practices to the preservation of historic resources.

St. Helena's historic and cultural resources contribute to its special character and quality of life.

topic area
1 PROTECTED HISTORIC RESOURCES

HR1.5 For development and redevelopment proposals in archaeologically and paleontologically sensitive areas of St. Helena or where tribal cultural resources are known to exist, require an assessment of the potential presence of archaeological, paleontological and tribal cultural resources, including a site survey and a records search of the California Historical Resources Information System at the Northwest Information Center (NWIC). As warranted by the results of the assessment, require additional studies to identify and address project-specific impacts on archaeological and paleontological resources. The City shall incorporate the study recommendations as project conditions of approval to ensure that impacts on archaeological and/or paleontological resources are mitigated to the extent possible. Studies shall be prepared according to National Register Bulletin 24: Guidelines for Local Surveys: A Basis for Preservation Planning and the Secretary of the Interior's Standards and Guidelines for Archaeology and Historic Preservation.

HR1.6 For development or redevelopment on a site that contains any structures over 45 years old, require a records search of the California Historical Resources Information System at the Northwest Information Center (NWIC) to determine the presence of historic resources. As warranted by the results of the records search, the City shall require evaluation of structures over 45 years old to determine their historical significance. Studies shall be prepared according to National Register Bulletin 24: Guidelines for Local Surveys: A Basis for Preservation Planning and the Secretary of the Interior's Standards and Guidelines for Archaeology and Historic Preservation.

topic area
1 PROTECTED HISTORIC RESOURCES

Implementing Actions

HR1.A Adopt a historic preservation ordinance to implement the policies recommended in the Historic Resources Element.

HR1.B Adopt design review guidelines and/or form-based codes, standards and criteria for the alteration or rehabilitation of historic properties. The adoption of design review guidelines and/or form-based codes can assist City staff, the Planning Commission, and City Council when reviewing permit requests and provide long-term regulatory consistency.

HR1.C Adopt design review guidelines and/or form-based codes that require new development in or adjacent to historic areas or buildings to be compatible in design and character with existing historic buildings.

HR1.D Develop an incentive program to encourage property owners to participate in historic preservation efforts. Potential program measures can include alternate building codes for historic structures and financial incentives, where necessary.

HR1.E Consolidate and update the existing inventories of historic buildings and houses and develop criteria to add to the list.

HR1.F Develop sustainable development and green building guidelines for rehabilitation, retrofitting, and adaptive reuse of historic resources. Identify incentives to encourage property owners to utilize these guidelines.

(Also see the Community Design Element, Topic Area 1)

topic area
1 PROTECTED HISTORIC RESOURCES

HR1.G Continue to develop and implement downtown design guidelines and/or standards to protect historic buildings and guide façade changes.

HR1.H Regularly update the Historic Resources Inventory to ensure that is includes a current list of historic structures in the city.

HR1.I Incorporate the preservation of historic resources into a citywide urban design plan.

HR1.J The City shall retain a qualified architectural historian, preservation architect, or preservation planner to assist with development of any neighborhood or citywide design standards, guidelines, or form-based codes that will be implemented in or adjacent to historic areas, e.g., the Downtown Commercial District, or adjacent to historic buildings.

HR1.K Require that rehabilitation or restoration of historical resources be done according to the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for the Preservation, Rehabilitation, Restoration, Restoration, and Reconstruction of Historic Buildings.

topic area
2 HISTORIC RESOURCES AWARENESS

Policies

HR2.1 Strengthen public awareness of and support for the preservation and protection of the City's historic resources, while improving community access to information about local Native American history.

HR2.2 In cooperation with Native American Research and Historical Preservation Society, improve community access to information about Native American life.

Implementing Actions

HR2.A Expand community awareness about the value of historic preservation in order to build support among property owners and developers for the preservation and adaptive reuse of historic and cultural resources.

HR2.B In cooperation with the St. Helena Historical Society, develop a public education and awareness program to keep the community abreast of historic resource issues through a variety of programs, such as self-guided walking tours, home and garden tours, speakers' series, and other public events. Through this program the Historical Society could work with owners of historic structures to install plaques outside structures to increase public awareness and community pride.

HR2.C Improve community access to information about available historic preservation funding sources and related resources. Provide information about sensitive ways to incorporate sustainable materials and design practices into historic rehabilitation projects.

HR2.D Conduct a survey of historic resources to determine different architectural types in the City and develop design guidelines specific to style and period.

chapter seven

community design

7 community design

The Community Design Element contains policies and actions that guide the quality and character of St. Helena's built environment.

1 introduction
2 land use and growth management
3 economic sustainability
4 public facilities and services
5 circulation
6 historic resources
7 community design
8 open space and conservation
9 public health, safety and noise
10 climate change
11 housing
12 parks and recreation
13 arts, culture and entertainment

7.1 Purpose of the Element

The Community Design Element presents a framework of policies and implementing actions that integrates directly with other General Plan elements in determining the quality and character of St. Helena's built environment. In particular, this Element relates to the Land Use and Growth Management Element by setting forth a vision for the form, character, and appearance of the community. It also correlates directly with the implementation of policies and actions included in the Circulation, Open Space and Conservation, Parks and Recreation, and Historic Resources elements. By respecting established neighborhoods and historic assets, this Element provides guidance to preserve St. Helena's distinct history and rural small-town character, while promoting new approaches to enhance future public and private development.

The Community Design Element includes the following sections.

- **7.2 Rural Community Character in St. Helena**. Identifies rural community character, architectural details and neighborhoods (p. 7-3).
- **7.3 Key Findings**. Identifies key findings based on an existing conditions analysis and extensive community outreach (p. 7-9).
- **7.4 Goals** Defines overarching goals to guide policies and implementing actions (p. 7-13).

- **7.5 Policies and Implementing Actions**. Identifies policies and implementing actions to ensure high-quality, sustainable and community-oriented design and construction and protect community character (p. 7-15).

7.2 Rural Community Character in St. Helena

Community character can be defined in a number of ways but is often reflected in the physical form of the built environment and its relationship to the natural environment. A community's street pattern; the relationship of its buildings to streets; the location and design of its public spaces; and the architectural styles and landscape elements that characterize buildings, residences and open spaces are often collectively referred to as "community design."

Community design is a visual representation of the character of a place, which evolves over time based on the lifestyle preferences of its residents and the public and private decisions that shape the human landscape. Community design in St. Helena clearly embodies and celebrates the rural character of the city. It can be best understood by exploring its architectural typologies and details, the identity and character of its many neighborhoods, and its rich agricultural heritage.

Downtown's historic character provides a sense of place for the City.

AGRICULTURE, OPEN SPACE, PARKS, AND RECREATION

The rural feel and abundant open spaces in and around St. Helena are very important design elements that contribute to the overall character of the community. Parks, greenways, vineyards, and other spaces surround the city and are interspersed throughout its neighborhoods, providing space for recreation and passive activities, natural areas, plazas, flood conveyance, and agriculture. This

7 community design

Agricultural uses in and around the City contribute to its character.

network of open space provides a distinct connection to the City's agricultural heritage.

Agriculture and viticulture have influenced the nature of the surrounding landscape perhaps more than any other land use or economic activity. As a result, existing expanses of vineyards and agricultural lands — including "fingers" of green that reach into the urban environment — play a central role in maintaining the rural experience and a distinctly historic sense of place for City residents and visitors.

The City's Urban Limit Line is an instrumental policy tool for maintaining clear definition of the rural/urban edge and preserving the City's adjacent open spaces. Green spaces and vineyards within the Urban Limit Line also contribute to the rural environment, ensuring St. Helena's agrarian heritage remains elemental to the character of the City, both inside and surrounding the city. Parks and other open spaces also contribute to this effect.

GATEWAYS, EDGES, AND VIEWS

Gateways, edges, and views throughout St. Helena create a sense of the city's rural character. Public views of the surrounding hillsides, Mount St. Helena,

vineyards, and older agricultural buildings provide valuable visual connections that strengthen the community's identity. Views are especially significant where agriculture is located along street edges.

Similarly, entries into the city provide important gateways that help establish

St. Helena's sense of place. These gateways not only announce entry into the city, but also lend significance to the area. The northern gateway to the city from State Route 29, referred to as the "Tunnel of Elms," is attractive, with large, landmark trees lining the road. Historic winery structures and residences add character to this important city gateway. The southern entry is less pronounced, with service commercial uses, parking, and limited landscaping adjacent to the highway.

St. Helena's residential neighborhoods are often characterized by multiple architectural typologies along a single street.

ARCHITECTURE AND URBAN DESIGN

The concentration of well-preserved buildings in downtown St. Helena is important in establishing the City's historic character. Many of the historic masonry and wooden structures built from stone, brick, and timber and located along Main Street between Spring and Adams streets, were constructed during the city's second major period of growth in the late 19th and early 20th centuries. European settlement of the Napa Valley during this period was fueled by the arrival of Italian and Swiss immigrants, many of whom were trained stonemasons and quarrymen. These early settlers skillfully carved Napa County's colorful volcanic rocks and used local timber to build barns, houses, fences and bridges. The architectural details of these structures, such as brick dentils, medallion insets, and window fenestration, lend character to the community just as do the materials from which they were constructed.

The character of St. Helena's residential neighborhoods is defined by a range of Pre-Prohibition-era housing styles. Multiple architectural typologies can be found along a single street, which contributes to neighborhood character. Common residential architectural typologies include American Queen Anne, American Craftsman, California Bungalow, and vernacular farm houses. Later

styles found in St. Helena include ranch-style homes and a variety of neo-eclectic architectural styles based on a combination of traditional shapes and details from different periods. Overlapping themes among both historic and modern homes include large, open-air porches supported by various interpretations of the basic column, and deeply overhanging eaves supported by exposed rafters or ornamental brackets.

Similar to many western cities, St. Helena's historic street pattern and layout is characterized by a traditional grid pattern, with variances that result from the intersection of railroad lines, creeks and regional roadways. As St. Helena grew during the latter part of the 20th Century, a modified street pattern developed with wide curvilinear streets, cul-de-sacs, and fewer bicycle and pedestrian connections. Future development presents an opportunity to enhance street, bicycle, and pedestrian connectivity, in part by using the city's historic grid street pattern.

RESIDENTIAL NEIGHBORHOODS

The community is composed of twenty-four residential neighborhoods surrounding St. Helena's historic downtown, as mapped by the General Plan Update Steering Committee (GPUSC) and shown on Figure 7.1. Each of these neighborhoods are distinct in identity, characterized by design elements such as their street patterns, architectural typologies, landscaping, and other attributes that support St. Helena's sense of place.

St. Helena's residential neighborhoods include single family units on large, rural lots; single family units on typical neighborhood lots; and attached medium-density units, including townhouses, condominiums, and apartments. Various residential architectural styles can be found throughout the city neighborhoods that include favorable design components, such as front porches, abundant landscaping, and façade articulation. Streets within residential neighborhoods are generally tree-lined, equipped with sidewalks, and narrow enough to be comfortable for pedestrians and bicycles. However, some streets, such as Starr Avenue, would benefit from a median, planting berm, dedicated bike paths,

Residential neighborhoods possess unique identities and different types of architecture dating from various decades.

or other traffic calming strategies. Decorative fences are often used to establish the boundary between public and private spaces at the street level. These fences, more common in older neighborhoods, also create visual interest for pedestrians. Landscaping in the city's residential neighborhoods is also colorful and highly textured, which helps to further enhance the pedestrian experience.

Street patterns, an important component of the urban form that influence not only circulation and community access but also community layout and character, vary between neighborhoods in St. Helena. Neighborhood streets such as those in the Hillview and Westside Annex neighborhoods exhibit a traditional grid pattern, while the Big Rock, Fir Hill, and Vallejo neighborhoods have rural and semi-rural street patterns.

Figure 7.1
Neighborhoods

- Neighborhoods
- Urban Limit Line
- Study Areas
- City of St. Helena
- Railroads
- Parks and Open Space
- Water Features

COMMERCIAL AND INDUSTRIAL AREAS

Commercial and industrial areas are located along Main Street and adjacent streets. The Central Business District (CBD), centered on Main Street, serves as the city's downtown and provides a variety of uses for residents and visitors. The CBD is characterized by historic buildings, an active pedestrian environment, street trees, and other key defining streetscape elements, such as historic streetlights and special sidewalk treatments. Other commercial and industrial areas are located along Adams Street, Main Street south of Sulphur Creek, and the areas surrounding Dowdell Lane and Vintage Avenue. In these service areas commercial, office, and industrial land uses are less intense and often include on-site parking. Streets are typically two-lane and have minimal streetscape amenities.

Commercial and industrial buildings should be distinct with varying roof lines and articulated facades.

7.3 Key Findings

There are several challenges and opportunities facing St. Helena related to community design. The following key findings are based upon comprehensive existing conditions analysis and community input.

- St. Helena's built environment is characterized by a compact and historic downtown, tree-lined neighborhoods, breathtaking agricultural landscapes, and a distinctive, early 20th century small-town character. By effectively guiding the built form of any potential new construction, the City can ensure that St. Helena preserves its unique qualities.
- St. Helena incorporates approximately 3,000 acres of land, of which 1,500 acres are located within the boundaries of the Urban Limit Line (ULL). The ULL helps define the city's character by focusing evolution and change in the central core. Careful, context-sensitive development of areas within the ULL can help the city retain its historic and agricultural character while accommodating well thought out growth in coming decades in order to protect the agricultural uses and rural quality of both the city and surrounding areas.

- St. Helena's historic downtown is cherished by residents and draws visitors from around the world. The city's Main Street features a variety of shopping and dining venues. Encouraging new commercial and mixed-use projects that complement the area's existing sense of place can enhance Main Street's character while creating uses to serve residents, visitors and businesses.
- St. Helena boasts a number of well-preserved older buildings along Main Street that help communicate the city's character to those entering or passing through town, particularly from the north. Key landmark buildings include the Starr, Galleron, Ritchie, Oddfellows, and Pritchard buildings. Preserving these structures and ensuring that new development complements their landmark status can help St. Helena maintain its unique character.
- Design Review is an important tool the City can use to continue to promote, ensure, and encourage new homes or remodels that reflect the scale, proportion, and/or building materials that characterize the surrounding neighborhood. Following design guidelines and/or form-based codes for remodels and new construction can ensure that remodeled or new residences complement existing neighborhoods and contribute positively to St. Helena's sense of place.
- Residential neighborhoods throughout the city possess unique identities and include types of architecture dating from various decades of the 20th Century and present day. Establishing a flexible set of design guidelines and/or form-based codes for specific areas can ensure that new development and remodels complement the distinct character of St. Helena's existing neighborhoods, while allowing for design innovation to accommodate modern needs and tastes.
- St. Helena's local character is strongly rooted in its agricultural heritage and location in the world-famous Napa Valley winemaking region. By highlighting the importance of key viewsheds and agricultural lands to the community's overall design, the City can maintain a strong visual connection to the essential role of agriculture in St. Helena's past and future.

CONCEPTS, TRENDS AND IDEAS

Adams Street Property Visioning Project

TOP *The site plan for the Adams Street Property includes key community objectives identified during the vision and land use alternatives processes.*

BOTTOM *The Adams Street property was identified as a good location for a farmer's market.*

In conjunction with the City of St. Helena's General Plan Update planning process, the City initiated the Adams Street Property Visioning project in October of 2008. The process included several stakeholder interview sessions, consultation with the General Plan Update Steering Committee, and two community workshops. The Adams Street property is a catalytic site with the potential to meet a range of the community's needs, including open space, housing and retail.

Building on the community vision and informed by economic feasibility analysis, the Adams Street Property Visioning exercise provided overall vision and specific design direction, establishing a framework for guiding future public and private developments on the site, as well as public improvements, such as community open spaces and streetscape enhancements.

Design characteristics outlined in the project exemplify many of the Community Design Element's policies and implementing actions, including new community gathering spaces, preserving important views, green buildings and infrastructure, and an emphasis on bicycle and pedestrian connections.

Detailed site master planning will occur when a specific development proposal comes forth for the Adams Street property.

7 community design

St. Helena's downtown demonstrates its historic character and unique sense of place.

- High-quality and sustainable design is an important component of the overall community design for St. Helena. Incorporating sustainable design practices into site layout, building design, landscaping, and public infrastructure is key to supporting projects that use less energy and water and have a smaller environmental impact. In addition, high-quality design contributes significantly to overall community design. Supporting sound construction practices and the use of high-quality materials will ensure long-lasting, well-built structures.
- St. Helena's Main Street is State Route 29, a major north-south thoroughfare that runs through the Napa Valley. Residents consistently cite heavy traffic as one of the most pressing concerns facing the City and highlight a need to ensure that community design efforts reduce auto-related travel in favor of alternate transportation modes. Creating a community design framework that enhances St. Helena's human scale can ensure that the city remains a comfortable, safe, and convenient environment for pedestrians, bicyclists and transit riders.

7.4 Goals

The goals of the Community Design Element are:

Respect St. Helena's Historic Character and Unique Sense of Place.
St. Helena is committed to enhancing and maintaining its existing community and agricultural character.

Promote a High-Quality and Sustainable Built Environment and Public Realm.
St. Helena is dedicated to maintaining an urban design framework that strengthens the physical form of the City by establishing a high standard of quality, context-sensitivity and ecological sustainability for the design, planning and construction of new and renovated structures, gateways, streets, public infrastructure, and public spaces.

Encourage Community Design throughout the City that Helps to Build Community.

Encourage Human Interaction and Support Non-Automobile Transportation.
St. Helena is committed to promoting community design that is human-scaled, comfortable, safe, and convenient for pedestrian, bicyclist, and transit use.

Strengthen the City's Neighborhoods to Retain Desirable Characteristics While Allowing for Smart Change and Evolution.

St. Helena recognizes the unique characteristics of individual neighborhoods and the potential for appropriate change within the context of a well-planned city. The City is committed to solving specific neighborhood problems and implementing neighborhood priorities to value enhance livability.

Green building and landscaping, such as green roofs and green stormwater infrastructure, should be incorporated into new development.

7.5 Policies and Implementing Actions

A range of policies and implementing actions are outlined below and organized into the following topic areas:

1. High-Quality and Sustainable Design;
2. Commercial and Industrial Areas;
3. Residential Neighborhoods;
4. Open Space;
5. Gateways, Edges, and Views; and
6. Street Pattern and Layout.

The following policies and actions mandate, encourage, or allow certain initiatives to be pursued throughout the duration of the General Plan. Together, they serve as strategic directions for City staff and partners, highlighting where time and resources should be focused. As the city changes and evolves, the following policies and actions will help guide new public infrastructure and private development in achieving sustainable, high-quality design.

Buildings should utilize native landscaping, passive heating and cooling, and green roofs.

topic area
1 HIGH-QUALITY AND SUSTAINABLE DESIGN

Policies

CD1.1 Ensure high-quality design and construction through a robust design review process.

CD1.2 Ensure the construction of sustainable buildings and landscaping in all public and private development projects.

CD1.3 Require construction and development practices that reduce energy demand through conservation and efficiency, such as the use of green building materials, site design to maximize passive heating and cooling and energy generation, on-site water reuse, water efficient landscaping, and use of low-flow appliances, among others.

(Also see the Climate Change Element, Topic Area 2)

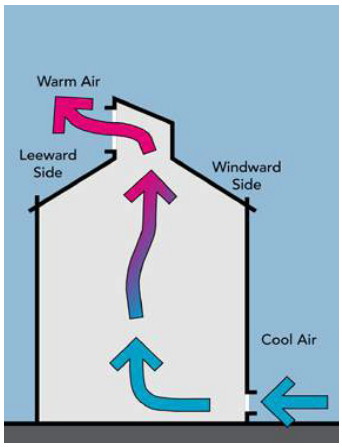
CD1.4 Strengthen water conservation measures for development or construction that result in significant reductions in local water use and the protection of local water resources.

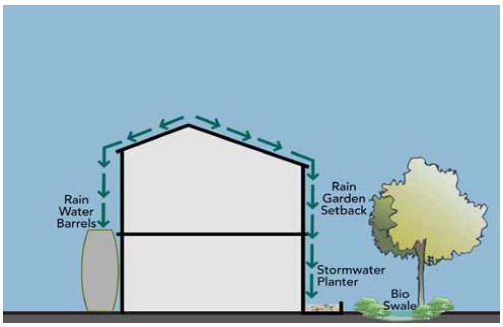
CD1.5 Require stormwater management techniques that minimize surface water runoff in public and private developments. Utilize low impact development techniques such as bioswales and other best management practices to manage stormwater.

(Also see the Open Space and Conservation Element, Topic Area 3)

CD1.6 Encourage the adaptive reuse, rehabilitation, and retrofitting of historic buildings in which the original use is no longer feasible.

(Also see the Historic Resources Element, Topic Area 1)





Buildings should strengthen conservation measures and maximize passive heating and cooling.

CD1.7 Promote the application of sustainable building practices to the preservation of historic resources.

(Also see the Historic Resources Element, Topic Area 1)

CD1.8 Require, to the extent feasible, that all new development include underground utilities to minimize their negative visual impact. In addition, funding sources to underground electrical lines shall be sought so the undergrounding of existing overheard lines can occur over time.

Implementing Actions

CD1.A Continue to implement the existing design review process for new development and remodels throughout the city. Create additional tools, including design guidelines and/or form-based codes, to inform decision-making and ensure high-quality, sustainable design that is compatible with and enhances community character. Consider formation of historic design review committee and/or policies.

CD1.B Adopt a Green Building and Landscaping Ordinance that establishes green building and landscaping site design standards customized to meet the unique climatic context of the community. Landscaping standards should limit impervious paving and identify standards and incentives that encourage the use of locally-propagated native, low-water, drought-tolerant planting, and integrated pest management practices.

CD1.C Partner with third party agencies, such as PG&E, to encourage the inclusion of energy-efficient systems in remodels and retrofits of existing buildings and residences.

CD1.D Consider offering incentives for improving energy-efficiency in existing buildings.

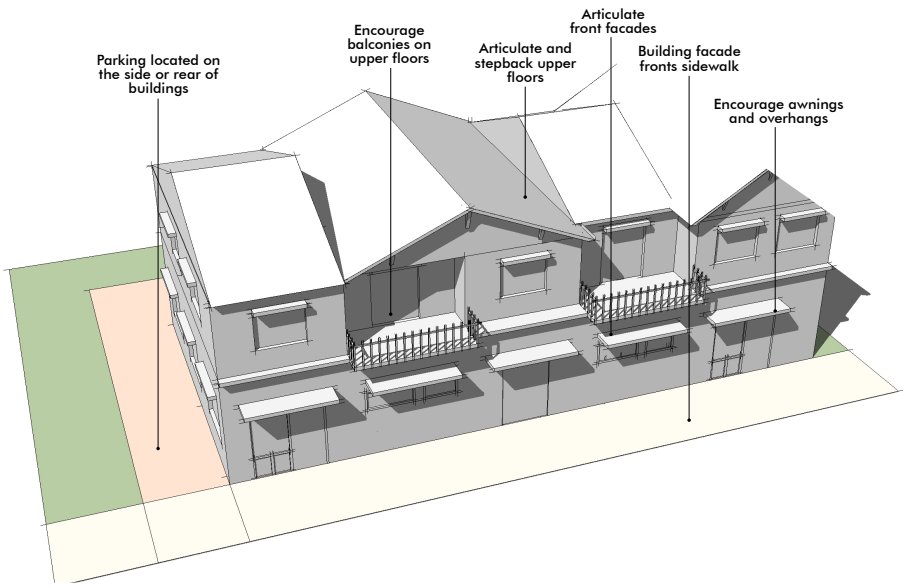
topic area
2 COMMERCIAL AND INDUSTRIAL AREAS

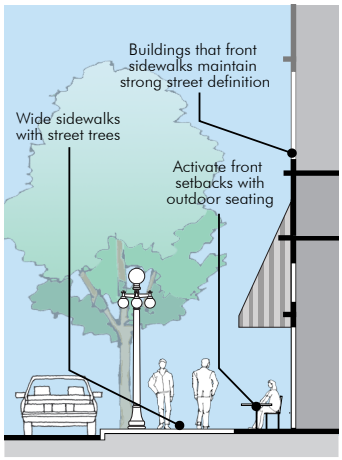
Policies

CD2.1 Maintain the character and identity of the downtown by emphasizing strong street definition, creating active front setbacks with outdoor seating, locating parking on the side and behind buildings, and maximizing entrances and transparency on building façades.

CD2.2 Within industrial and commercial areas outside downtown, maintain transitional zones as needed to protect public health and safety but allow flexible front setbacks while encouraging transparent and accessible front façades and parking on the sides and backs of buildings.

CD2.3 Encourage distinction within and between buildings by varying roof lines and articulating building facades.



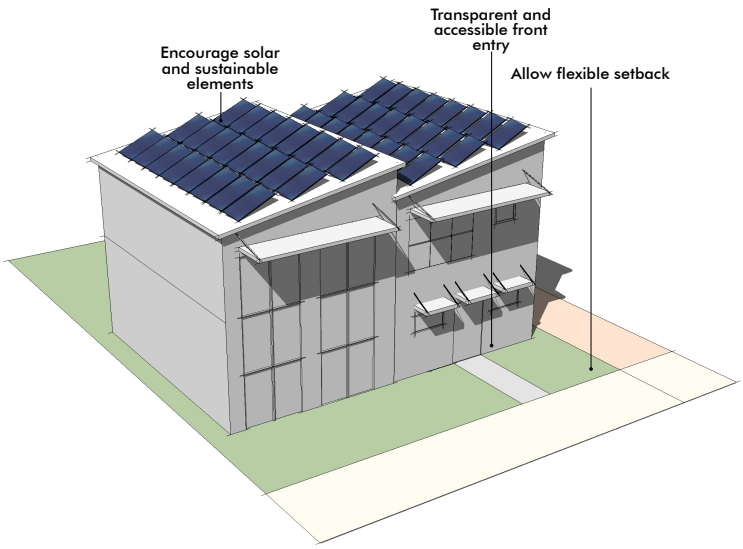


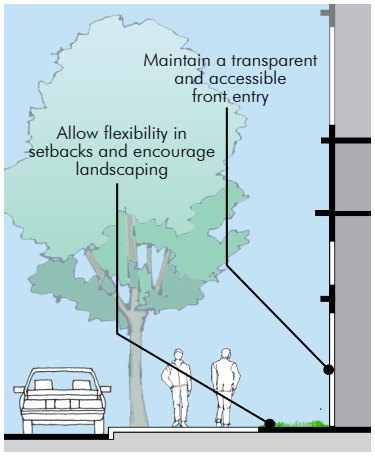
Central Business and Mixed-Use districts should emphasize strong street definition and active front setbacks with outdoor seating .

topic area
2 COMMERCIAL AND INDUSTRIAL AREAS

CD2.4 Ensure active and complete streets within commercial districts by providing sidewalk amenities, such as landscape buffers, berms, street trees, street furniture, outdoor dining, public art, signage, and wayfinding.

CD2.5 Encourage property owners to improve façades and landscaping surrounding existing buildings through the implementation of beautification programs.





Industrial uses should allow flexible front setbacks while encouraging transparent and accessible front façades.

topic area
2 COMMERCIAL AND INDUSTRIAL AREAS

Implementing Actions

CD2.A Develop and implement design guidelines and/or form-based codes, to provide oversight and guidance for new buildings and renovations.

(Also see the following elements: Land Use and Growth Management, Topic Area 3; and Economic Sustainability, Topic Area 3)

CD2.B Require street tree plantings along the commercial streets east of Main Street to reflect Main Street's existing planting pattern, in order to provide visual continuity and to create a pleasant pedestrian environment.

CD2.C Install attractive and well-designed community amenities such as public restrooms, drinking fountains, benches, bicycle racks, and trash and recycling containers in commercial districts. Ensure that community amenities are designed and installed to complement surrounding businesses and support the pedestrian-orientation of the street.

CD2.D Require businesses and structures to be of a scale commensurate with existing older buildings in the CB and SC land use areas.

CD2.E Adopt and implement façade and landscape beautification programs to provide assistance to owners of existing commercial and industrial properties.

CD2.F Explore the need for additional programs, such as commercial façade improvement programs and traffic calming incentive programs.

(See also the Circulation Element for policies and implementing actions related to traffic calming).

topic area
3 RESIDENTIAL NEIGHBORHOODS

Policies

CD3.1 Limit building envelope sizes and require adequate side and rear setbacks to preserve the character of existing residential areas and to avoid overbuilt lots. Require future development to conform to the pattern and density of the neighboring areas. In order to complement existing town character and protect against incursion into vineyard agricultural areas.

CD3.2 Ensure that new residential designs contribute positively to existing neighborhoods by complementing character and incorporating design features, such as front porches, façade articulation and stepbacks.

New development and remodeling should conform to the pattern and character of neighboring homes.

CD3.3 Encourage the use of landscaping and tree plantings as buffers between sidewalks and residential uses. Discourage the removal of existing trees and adopt more comprehensive tree preservation standards.

(See also the Open Space and Conservation Element for policies and implementing actions related to tree preservation).

CD3.4 Ensure safe bicycle and pedestrian-friendly character on all residential streets. Consider retrofitting existing wide residential streets, such as Starr Avenue, with landscaped medians, wide sidewalks, and adjacent Class I pedestrian and bicycle trails.

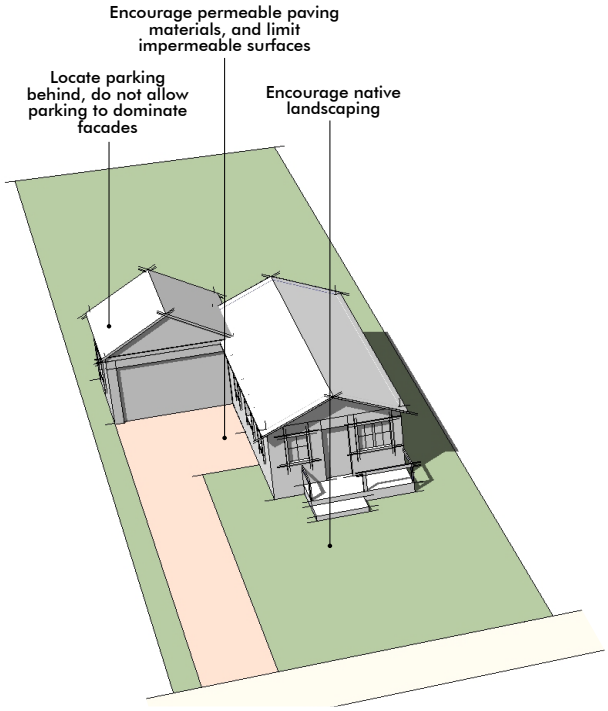
topic area
3 RESIDENTIAL NEIGHBORHOODS

Implementing Actions

CD3.A Develop and implement residential design guidelines and/or form-based codes, to provide oversight and guidance for new buildings and renovations.

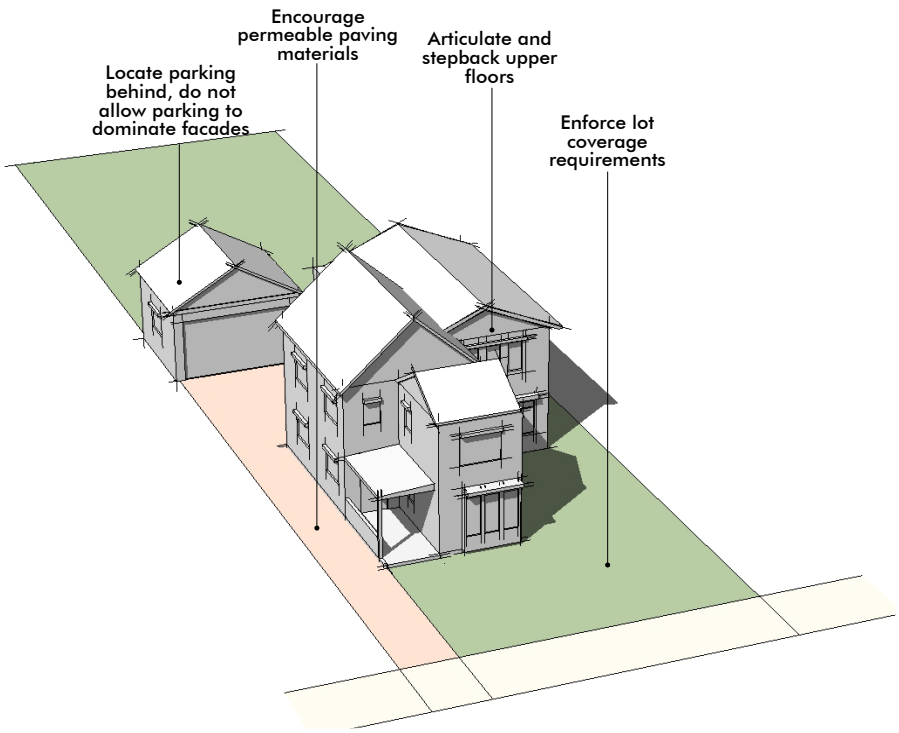
(Also see the Land Use and Growth Management Element, Topic Area 2)

CD3.B Review the existing ordinance language limiting lot coverage/floor area ratio according to parcel size in residential areas in order to preserve neighborhood character, reduce adverse view and shade impacts on existing homes, improve groundwater infiltration, and avoid overbuilt conditions. At the same time, care needs to be taken that any ordinance revision does not impair the ability to build second units on existing lots where appropriate.

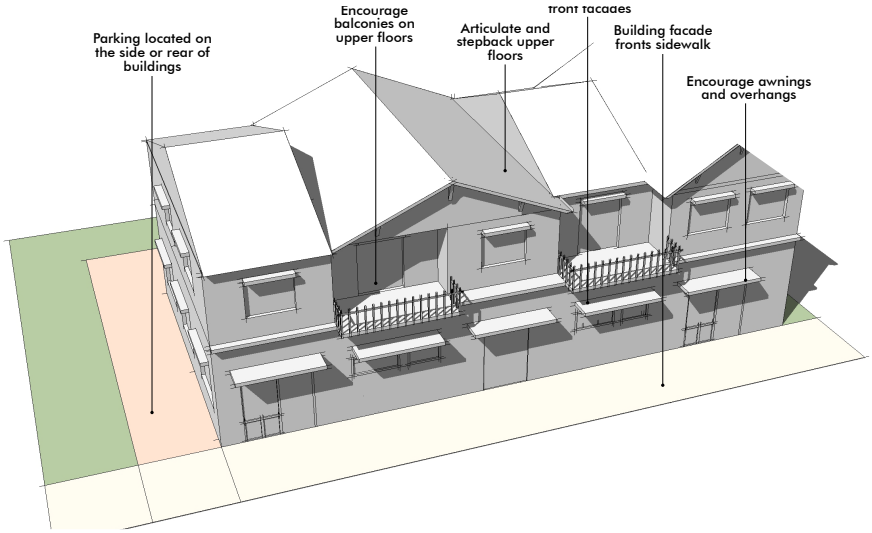


Low density residential.

topic area
3 RESIDENTIAL NEIGHBORHOODS



Medium density residential.



Higher density residential.

topic area
3 RESIDENTIAL NEIGHBORHOODS

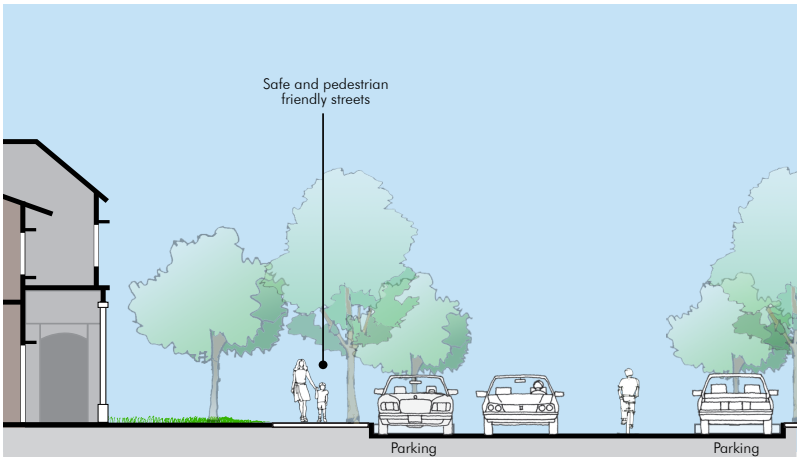
CD3.C Encourage the design and location of parking to minimize its appearance on front façades, locating it to the side or rear of the building, where feasible.

CD3.D Encourage property owners to install landscaping and tree plantings in front setbacks as a buffer between the sidewalk and residential uses.

CD3.E Require new development to include landscaping and street trees.

CD3.F Establish residential street guidelines that ensure a safe environment for families and children. Encourage traffic calming, street trees, wide sidewalks, and Class I or II bike lanes.

CD3.G Explore a reduction in parking requirements for residential uses that implement transportation demand management strategies, consistent with the parking management strategy articulated in the Circulation Element.



Encourage landscaping and street trees to create bicycle and pedestrian-friendly streets.

topic area
4 OPEN SPACE

Policies

CD4.1 Encourage the development of public spaces for formal and informal gatherings, such as plazas, seating and small performance areas.

CD4.2 Integrate open space, including parks, community gardens, natural areas, and agriculture into the community to strengthen the connection to St. Helena's agricultural heritage and provide a sense of openness.

CD4.3 Support agricultural and low-intensity uses beyond the Urban Limit Line.

(Also see the Land Use and Growth Management Element, Topic Area 1)

CD4.4 Integrate bicycle and pedestrian trails adjacent to open spaces to enhance connectivity throughout the city and the region.

(Also see the Parks and Recreation Element, Topic Area 6)

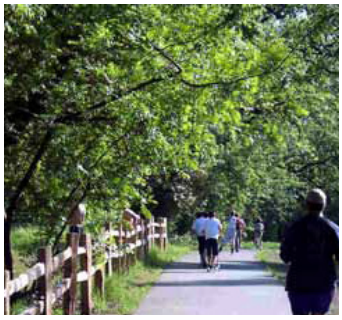
Plazas and community gardens are both examples of open space.

topic area
4 OPEN SPACE

Implementing Actions

CD4.A Require private development to incorporate appropriate public open space into site designs.

(See also the Parks and Recreation and Open Space and Conservation elements provide additional goals, policies and actions related to open space).



Bicycle and pedestrian trails can be located adjacent to open spaces.

topic area
5 GATEWAYS, EDGES AND VIEWS

Policies

CD5.1 Preserve the visual and physical connection to agriculture by protecting views from streets, parks, and open spaces to vineyards, agriculture, and hillsides. Where new streets are extended adjacent to agriculture, encourage hillside, and vineyard views by maintaining agricultural activities at the road edge. Existing east and west entries should be maintained in their current appearance, protecting and improving views of vineyards and the surrounding hillsides wherever possible.

CD5.2 Use public streets or pathways to form the edge of developed areas, allowing views of open space from streets.

CD5.3 Ensure that key gateways into the City receive special, character-defining treatments and landscaping. Consider establishing landmark trees along the roads that serve as gateways to the City. New commercial development on Main Street south of the Sulphur Creek bridge should be carefully designed to provide an appropriate gateway in to the downtown area

CD5.4 Preserve and enhance the City's nighttime environment and quiet rural sounds of the night for residents and wildlife by limiting the negative effects of artificial lighting.

Visual and physical connections to agriculture and open space provide views and act as edges.

topic area
5 GATEWAYS, EDGES AND VIEWS

Implementing Actions

CD5.A Working with CALTRANS, design and install a landscaping treatment for the northbound (State Route 29 from Chaix Lane north to Sulphur Creek) and westbound (from Silverado Trail west along Pope, and any future roadway segment from the Trail to downtown) gateways into the city. Consider a tunnel of trees similar to those located at the northern gateway.

CD5.B Adopt a dark sky ordinance to preserve the City's rural character by limiting the negative effects of light pollution on wildlife and community aesthetics. Develop lighting design guidelines for new development that mitigate light pollution while ensuring adequate nighttime security.

CD5.C New development shall not result in significant light, glare, and noise that could affect residents, visitors, and wildlife. Lighting shall be shielded to reduce glare and shall be cast downwards. Outdoor lighting shall occur primarily for the purpose of security and safety. Upcast lighting shall be discouraged to minimize impacts on wildlife and to retain the agricultural ambience of St. Helena. All lighting shall conform to the Lighting Zone 2 requirements of Title 24 of the California Building Code.

CD5.D The City shall encourage the undergrounding of any new electrical lines required to serve new development. In addition, funding sources to underground existing electrical lines shall be sought so that undergrounding of existing overhead electrical lines can occur over time.

CD5.E The City shall investigate the possibility of designating all or a portion of State Route 29 that passes through the City of St. Helena as a scenic highway under the State's scenic highway program.

A tunnel of trees provides a verdant gateway into the City.

topic area
6 STREET PATTERN AND LAYOUT

Policies

CD6.1 Ensure a connected circulation system that maximizes pedestrian and bicycle connectivity.

CD6.2 Promote the inclusion of bicycle and pedestrian trails and bicycle lanes throughout the City, as well as connections to regional trail systems, such as the Napa Valley Vine Trail.

(Also see the Parks and Recreation and Circulation elements for additional policies and implementing actions relating to bicycle and pedestrian trails and amenities.)

CD6.3 Require streetscape design that maximizes bicycle and pedestrian usage by providing safe and appropriately lit streets.

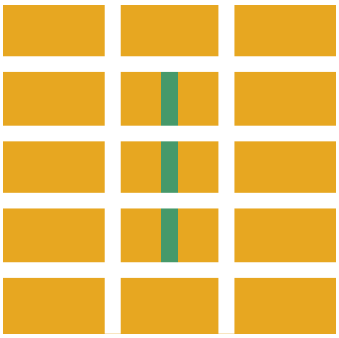
Streetscape design that promotes safety and connectivity for bicyclists and pedestrians.

topic area
6 STREET PATTERN AND LAYOUT

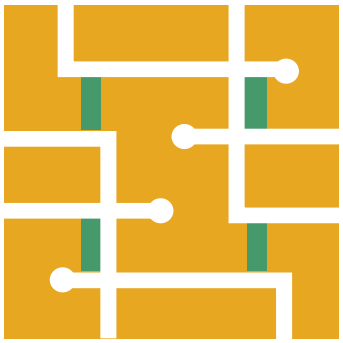
Implementing Actions

CD6.A Facilitate the safe and efficient flow of pedestrian, bicycle and vehicular traffic. Enhance and frame views of the hills and surrounding agricultural lands; and incorporate appropriate traffic calming features to support and complement the neighborhood environment.

(See also the Circulation Element for goals, policies and actions related to street connectivity).



Acceptable: Traditional connected street pattern.



Acceptable: Connected bicycle and pedestrian street pattern.

Not Preferred: Disconnected street pattern.

chapter eight

open space and conservation

8 open space and conservation

Open Space is a critical component of St. Helena's character.

13 arts, culture and entertainment

8.1 Purpose of the Element

The Open Space and Conservation Element presents a framework for governing future decisions about how St. Helena will sustain open space and natural resources for today's residents, as well as future generations. It aims to protect, maintain, and enhance St. Helena's natural resources and open spaces, while balancing community needs with conservation to benefit the common good.

The Open Space and Conservation Element includes the following sections.

- **8.2 Open Space and Natural Resources in St. Helena**. Identifies key open space and conservation areas and resources in St. Helena (p. 8-3).
- **8.3 Key Findings**. Identify key findings based on an existing conditions analysis and extensive community outreach (p. 8-16).
- **8.4 Goals**. Defines overarching goals to guide policies and implementing actions (p. 8-20).
- **8.5 Policies and Implementing Actions**. Identifies policies and implementing actions to protect the City's natural areas and resources and expand and maintain a comprehensive open space and parks system (p. 8-21).

As a complement to the City's Open Space and Conservation Element, the Parks and Recreation Element includes detailed descriptions of existing parks and recreational facilities, as well as policies and implementing actions related to their programming and improvement.

The Sulphur Creek corridor is a primary open space resource for St. Helena.

8.2 Open Space and Natural Resources in St. Helena

St. Helena enjoys a rural setting that includes a wealth of natural resources, providing the foundation for an open space system that can fulfill multiple functions, supporting the community's health, safety, recreation, and natural environment.. Within its city limits, there is a mix of agricultural uses, urban development, and wooded hillsides along with a diverse array of vegetation communities, including aquatic, grassland, chaparral, oak woodland, riparian woodland, coniferous forest, agricultural croplands, and developed lands (Figure 8.1). The most significant stands of native vegetation, in terms of size and variety, occur on the heavily forested hillsides on the east and west sides of town. Some of the most important wildlife resources within the city are found along the Napa River and its two tributaries, York Creek and Sulphur Creek. Although agricultural and urban development have encroached on these riparian corridors as St. Helena has grown, the corridors still provide habitat for stands of large trees and a variety of plant, animal, and aquatic species.

Other	Non-native Woodland	8.40
Total		**3,144.25**

*Notes: *denotes sensitive natural community*
Sources: Napa County 2005, EDAW 2007.

St. Helena's diverse natural communities host a number of sensitive ecological and biological resources, including numerous special-status species, defined as plants and animals that are legally protected under the federal Endangered Species Act (ESA), California Endangered Species Act (CESA), or other regulations, and species that are considered sufficiently rare by the scientific community to qualify for such listing. In total, there are seven special status plant species and seven special-status animal species known or assumed to be present within a 1-mile radius of St. Helena. Additionally, York Creek, Sulphur Creek, and the Napa River provide critical habitat for steelhead. Figure 8.2 shows critical habitat and special status plant and animal species occurring within a 1-mile radius of St. Helena. Table 8.2 lists critical habitat and special status plant and animal species occurring within a 1-mile radius of St. Helena, showing federal and State listing status.

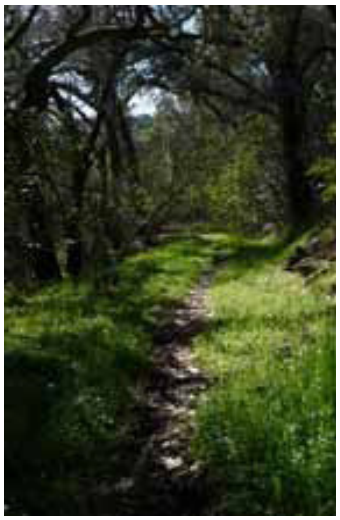
Riparian corridors along Sulphur Creek, York Creek and the Napa River support a wide range of wildlife species.

CONSERVATION OF NATURAL RESOURCES

Conservation of natural resources includes protections not only for the plants, trees, animals, fish, birds, and microorganisms present in the urban and natural environment around us, but also for the water, soil, habitats, and ecosystems that make up the ecological community in which we live. The richer the diversity of life around us, the greater the opportunity for healthy living, economic development, and adaptive responses to new challenges such as climate change.

Preserving and enhancing wildlife migration corridors in and around St. Helena is a critical consideration for natural resource conservation in the community, and it is directly related to the viability of local species. Open space areas and riparian corridors represent important opportunities for wildlife migration, including the movement of animals, birds, and fish. Key issues to address in conserving and protecting migration corridors include the loss of vegetative coverage; barriers such as fencing and linear transportation infrastructure; increased noise; and the presence of domestic animals.

8 open space and conservation



Developing a multi-modal trail network linking open space areas with the rest of the community would provide the community with many benefits.

OPEN SPACE FOR OUTDOOR RECREATION

St. Helena seeks to make full use of its open space resources to support public recreation while protecting the integrity of its natural habitats. The City envisions developing a comprehensive, integrated open space system that includes parks, trails and open spaces to serve the needs of residents and visitors. In particular, it also seeks to improve circulation and create opportunities for residents to walk and bicycle safely throughout the City by locating multi-modal trails along river, stream and other water corridors. These corridors are important open space amenities that can provide additional opportunities for public access and recreation.

Developing a multi-modal trail network along stream corridors can enable the City to increase the amount of open space acreage available to residents for outdoor recreation use. It can also provide opportunities to draw attention to the important role that the Napa River and its tributaries play in maintaining a high quality of life in the City. However, ensuring that these are designed and developed to protect critical riparian habitats and species is essential for the City to meet its long-term conservation goals.

The Open Space and Conservation Element contains goals, policies and implementing actions that seek to balance the City's commitment to protecting its natural resources with its desire to expand residents' access to open space amenities. As a complement to the City's open space and conservation policy framework, the Parks and Recreation Element includes detailed descriptions of existing parks and recreational facilities, as well as policies and implementing actions related to their enhancement moving forward.

HEALTHY HUMAN ENVIRONMENT

There are additional opportunities to both utilize and protect open space resources in St. Helena's developed commercial and residential areas. Street trees and urban forests increase habitat for local and migratory birds, contribute to improved air quality, and provide shade. Expanding efforts to maintain and increase street trees can support the City's broader conservation goals.

Water conservation and habitat protection concerns result from soil contamination generated by industrial, agricultural, commercial, residential, or other uses that produce or utilize hazardous substances. Incorrect handling or disposal of these substances can compromise St. Helena's water quality, particularly when stormwater runoff occurs on contaminated sites. By promoting the clean-up of contaminated sites, ensuring new projects have environmentally responsible stormwater runoff systems and development practices, and strengthening outreach efforts to educate the public about proper use and disposal of hazardous materials, the City can bolster its citywide conservation efforts and meet its long-term goals.

Shade, habitat and improved air quality are all benefits provided by a healthy urban forest.

8 open space and conservation

Protecting and enhancing St. Helena's open space resources is a key component of the City's General Plan Vision.

8.3 Key Findings

There are several challenges and opportunities facing St. Helena related to open space and conservation. The following key findings are based upon a comprehensive existing conditions analysis and community input.

- St. Helena enjoys a wealth of open space resources, ranging from wooded hillsides and cultivated agricultural areas to stream corridors.
- The Napa River and its tributaries are key components of the City's open space network. The corridors surrounding these waterways provide important wildlife habitat and play an integral role in the City's natural flood protection. The Napa River is considered an impaired water body under the Clean Water Act and the federal EPA has set Total Maximum Daily Load (TMDL) thresholds for pathogens and sediment to serve as the starting point or planning tool for restoring water quality. The San Francisco Bay Area Regional Water Quality Control Board has established corrective actions to address pollutant levels in the Napa River in its San Francisco Bay Basin Water Quality Control Plan. Preserving and protecting the Napa River, its tributaries and surrounding corridors is essential to maintaining these resources as healthy ecosystems, critical habitats and valuable open spaces.
- The City is undertaking the Upper York Creek Dam Removal and Ecosystem Restoration (UYCDR) project to improve habitat quality and connectivity for Central California Coast Steelhead and other aquatic species. Constructed in 1900, the dam is now out of service and is preventing access to upstream spawning and rearing habitat and limiting the natural sediment flow to Lower York Creek and the Napa River. The project involves cutting a 23-foot wide notch in the earthen dam to restore unimpeded creek flow and reduce the potential for future downstream habitat degradation and fish kills by preventing potentially detrimental sediment releases during summer low-flow conditions. The UYCDR is very important to the region and its completion has been a long-standing goal for ecosystem restoration and assistance for the threatened Central California Coast steelhead.

CONCEPTS, TRENDS AND IDEAS

Integrated Watershed Management

An integrated management strategy should be utilized to protect and enhance St. Helena's water resources.

An integrated approach to aquatic restoration and management is a complex and multi-faceted process that comprehensively addresses the health of a watershed. The goal of this approach is to incorporate the specific issues of a local jurisdiction within a framework of broader environmental planning priorities. An integrated approach relies on partnerships between cities, counties, state and federal agencies, and local environmental groups to achieve mutual restoration and management goals.

Key watershed restoration and management strategies for St. Helena can include the creation and implementation of plans and projects to enhance watershed functions that affect the animal, plant and human communities within the area's watershed. Planning efforts and projects should be designed to address issues that affect the overall health and quality of St. Helena's watershed, such as: water supply; water quality; water recycling; drainage and flood control; stormwater runoff; ecosystem preservation and habitat protection; point and non-point pollution sources; and recreation and public access.

The City's Comprehensive Flood Control and River Restoration Project, completed in 2011, is an example of the City's efforts to provide integrated watershed management practices. This multi-benefit project provided 100-year flood protection for an area of St. Helena that has been subject to periodic historical flooding, provided river restoration, and open space areas for the City. This project is discussed in the public health, safety and noise element.

8 open space and conservation

The recreation needs of the community can be met by developing a system of integrated parks and open space areas.

- St. Helena is located over the Napa Valley Groundwater Subbasin and receives approximately 23 percent of its water supply from groundwater. The subbasin is part of the Napa-Sonoma Valley Groundwater Basin and groundwater in the water-bearing aquifers ranges from approximately 50 to 300 feet below ground surface. The subbasin is recharged by rain, irrigation water, and percolation from some streams and tributary channels. Outflow from the subbasin occurs through pumping, discharge to surface water, springs, and evapotranspiration.
- A total of 46 percent of the City's incorporated area is designated as Agriculture, with most acreage actively cultivated with vineyards. In addition, 14 percent is designated as Woodlands and Watersheds, which contains some agricultural uses, mostly vineyards, on hillsides near the city limits. Preserving agricultural uses and protecting agricultural lands from urban encroachment are important steps to maintaining these highly productive and valuable open space resources.

- The community has expressed a strong interest in creating a system of integrated parks and open space areas that serve the recreation needs of residents and visitors.
- Trees are an important part of St. Helena's natural character. Trees cool streets and public spaces, help control erosion, improve air quality and add to the aesthetics of the community. Preserving the City's tree resources, while planting new trees will enhance the high quality of life enjoyed by residents.

Both agriculture and natural resource areas provide St. Helena with open space amenities.

The open space areas of St. Helena include built elements like the historic Pope Street Bridge.

8.4 Goals

The goals of the Open Space and Conservation Element are:

Preserve, Enhance, and Restore Natural Resources.
St. Helena is committed to preserving, enhancing and restoring its abundance of natural habitat, wildlife, and open space resources.

Ensure Stewardship of Water Resources.
St. Helena is dedicated to promoting water conservation and ensuring its natural supply of water is properly managed and securely maintained, improving water quality.

Expand Sustainable Agricultural Practices.
St. Helena is committed to continuing and enhancing its agricultural traditions by promoting and reinforcing sustainable agricultural practices.

Create access opportunities to enjoy natural resources responsibly.

8.5 Policies and Implementing Actions

A range of policies and implementing actions are outlined below and organized into the following topic areas:

1. Natural Habitat and Biodiversity;
2. Open Space;
3. Water Resource Protection and Conservation; and
4. A Healthy Living Environment

The following policies and actions mandate, encourage, or allow certain initiatives to be pursued throughout the duration of the General Plan. Together, they serve as strategic directions for City staff and partners, highlighting where time and resources should be focused.

Sulphur and York creeks along with the Napa River support the majority of St. Helena's riparian vegetation.

topic area
1 NATURAL HABITAT AND BIODIVERSITY

Policies

OS1.1 Preserve and enhance St. Helena's riparian corridors for their value in providing wildlife habitat, biodiversity, natural drainage, and visual amenity.

OS1.2 Prohibit development, alteration, and/or removal of native vegetation from riparian areas. Disallow invasive species that degrade habitat quality.

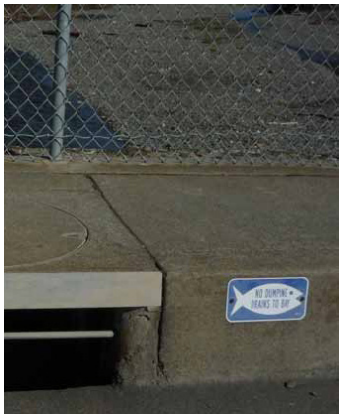
OS1.3 Protect and enhance contiguous corridors of riparian vegetation along the Napa River and its tributaries in order to support regional wildlife movement and enhance aquatic habitat.

OS1.4 Protect natural habitats that have the potential to support rare, endangered, or special-status wildlife and plant species. Control invasive species that degrade habitat quality.

OS1.5 Restrict development of hillside areas in order to protect wildlife, vegetation, viewsheds, and open space characteristics.

OS1.6 Manage invasive species that degrade habitat quality, especially along the Napa River and its tributaries.

OS1.7 Promote, encourage, and require sustainable agricultural practices that are sensitive to natural habitat and do not harm wildlife.



Signage programs can raise awareness about fragile natural systems.

topic area
1 NATURAL HABITAT AND BIODIVERSITY

Implementing Actions

OS1.A Develop and adopt an ordinance for the protection, restoration, and enhancement of creek corridors. The ordinance should consider the following:

- Establish setbacks for all new development projects to protect stream function and riparian habitat, while allowing for limited recreational uses and access to the stream corridor for maintenance and flood control;
- Limit use of herbicides and insecticides associated with aquatic toxicity in areas near and adjacent to creeks, and ensure best environmental management practices for all developments and industries;
- Provide access for creek maintenance and public use through easements and cooperative agreements with landowners;
- Establish sufficient buffer width adjacent to waterways to allow for wildlife habitats, trails, and greenbelts;
- Adhere to Living River Principles that allow the river to meander, maintain its natural floodplain and retain natural channel features to support continuous fish migration and the health of riparian corridors;
- Encourage the use of bioswales, off-stream detention ponds, and other green best practices for stormwater management;
- Implement an Integrated Pest Management ordinance that includes provisions to minimize the reliance on pesticides that threaten water quality and to require the use of integrated pest management in municipal operations; and
- Incorporate relevant actions and performance standards in TMDL implementation strategies for the Napa River to control discharges of pathogens and sediment.

OS1.B Restrict development on open space-designated parcels along Sulphur Creek west of the Crane Avenue Bridge. All development must be outside the stream corridor and structures must be set back from the creek's edge, consistent with California Department of Fish and Game standards. This does not preclude potential walking or multi-use trail development.

OS1.C Coordinate with the California Department of Fish and Game, the Living Rivers Council, the Regional Water Quality Control Board and other federal, State, and local regional agencies with regulatory authority for water quality,

CONCEPTS, TRENDS AND IDEAS

Living River Principles

The gift of a relationship to water is a historic public good and a natural right that was compromised during the last century. The recovery of water quality, natural riverbanks, public access, and recreational uses of our regional rivers and streams is good for the economy and our communities. It is an investment in the future.

1. All citizens should be able to have a direct relationship to water.

2. All rivers and streams should meet the water quality standard for swimming.

3. Rivers and streams should support an increasing diversity of plant and wildlife.

4. Each community should monitor and care for water quality in rivers and streams.

5. Upstream community water problems should not impact downstream communities.

6. Water problems should be solved at the source, addressing cause, not effect.

7. Public rights to waterways and wetlands should not be compromised by private interests.

8. Wetlands and streams should be treated as economic and ecological assets.

9. Wetlands and streams should not be lost, and should be restored where possible.

10. Public access to and from the water, and along the water's edge, should be restored.

11. Riverbanks should be preserved or restored to their natural form wherever possible.

12. Pre-industrial connections between water and communities should be restored.

13. Redevelopment should accommodate public access to water and riverbanks.

14. Redevelopment should restore community, culture, ecology and economy.

protected plant and animal species, and streams and wetlands to restore and maintain creek corridors.

OS1.D Coordinate with the County, the California Department of Fish and Game, and other regional agencies to augment water flow in the Napa River and its tributaries in order to enhance year-round fish habitat and minimize stagnation and pollution.

OS1.E Create a work plan for restoring sensitive habitat that has been degraded by agriculture or other past practices. Where applicable, encourage agricultural enterprises to participate in restoration efforts and in efforts to prevent further degradation.

OS1.F Create a set of guidelines for the protection of special-status species and sensitive natural communities. Guidelines can include appropriate survey methods consistent with the California Department of Fish and Game, the U.S. Fish and Wildlife Service, NOAA Fisheries, and CEQA requirements.

OS1.G Require a biological assessment of any proposed project site where species or the habitat is defined as sensitive or special-status by the California Department of Fish and Game, NOAA Fisheries, or the U.S. Fish and Wildlife Service might be present, including the installation of new wind turbines for alternate energy. Avoid potential impacts of sensitive resources as part of new development to the maximum extent feasible. Where complete avoid-

topic area
1 NATURAL HABITAT AND BIODIVERSITY

ance is not possible, the project applicant must secure any required authorizations from jurisdictional agencies and provide adequate replacement mitigation to ensure there is no net loss in habitat acreage or values.

OS1.H Require all proposed projects adjacent to a creek corridor or located in the city's hillside areas to submit a management plan for protecting natural habitats, including provisions to:

- Employ supplemental planting and maintenance of grasses, shrubs, and trees of similar quality and quantity to provide adequate vegetation cover to keep the watersheds on steep slopes and along streams in good condition, and to provide shelter and food for wildlife
- Provide protection for wildlife habitat.

OS1.I Require new development to be sited to maximize the protection of native tree species, riparian vegetation, important concentrations of natural plants, and sensitive wildlife habitat.

OS1.J Discourage and minimize the installation of deer fencing to maintain wildlife corridors and support regional wildlife movement.

OS1.K Require environmental review of new agricultural uses, including, but not limited to, farming, horticulture, floriculture and viticulture, animal husbandry, and livestock farming. The environmental review shall ensure that no sensitive biological resources would be adversely affected. Viticulture review must include the replanting of existing vineyards in accordance with County regulations.

topic area
1 NATURAL HABITAT AND BIODIVERSITY

OS1.L Discourage removal of trees for agricultural or other development in hillside areas. Ensure Woodlands and Watershed restrictions are followed.

OS1.M Encourage agricultural activities that incorporate best sustainable agricultural management practices, including participation in local programs such as the Napa Valley Vintners - Napa Green Program and the California Certified Organic Farmers certification program.

OS1.N Conduct a study to determine if the build-up of gravel in Sulphur Creek will result in a high risk of flooding. Limit development in Flood Hazard Areas using FEMA's 100-year flood zone regulations at a minimum, and inform property owners of existing developments so they are aware of flood risks and available State and Federal insurance opportunities. Ensure that implementation measures contribute positively to the preservation of the creek and its corridor.

OS1.O As part of new development, avoid disturbance to and loss of bird nests in active use by scheduling vegetation removal and new construction during the non-nesting season (September through January) or by conducting a preconstruction survey by a qualified biologist if vegetation removal and construction is initiated during the nesting season (February through August). Surveys for nesting birds will be conducted no earlier than 14 days prior to tree removal and/or breaking ground. In the event that nesting birds are found, the project applicant will consult with CDFG and obtain approval for nest-protection buffers prior to tree removal and/or ground-breeding activities. Nest protection buffers will remain in effect until the young have fledged.

OS1.P Avoid potential impacts on jurisdictional wetlands and other waters as part of new development to the maximum extent feasible. Where complete avoidance is not possible, the project applicant must secure any required authorizations from jurisdictional agencies and provide adequate replacement mitigation to ensure there is not less in habitat acreage or values.

The City of St. Helena should continue to develop relationships with State and Federal agencies to identify, fund and implement projects that increase the awreness of natural systems.

topic area
2 OPEN SPACE

OS1.Q Carry out the removal of the Upper Dam on York Creek sufficient to allow the passage of fish, especially Central California steelhead, a threatened species, and complete the restoration of historical fish habitat above the dam.

Policies

OS2.1 Maintain agriculture as the mainstay of the local economy by preserving agricultural lands as an invaluable and irreplaceable open space resource.

(Also see the Land Use and Growth Management Element for additional policies and implementing actions relating to agriculture.)

OS2.2 Preserve open space for mineral resources. Ensure compliance with State requirements in the preservation of known locations of mineral resources.

OS2.3 Preserve open space for recreational uses, including a bicycle and pedestrian trail system along creek corridors when compatible with riparian vegetation and wildlife habitat. Where possible, integrate stream corridors with trails and other recreational open space, provided that the vegetation, habitat value, and water quality is not significantly impacted.

OS2.4 Ensure convenient public access between developed areas and stream corridors by providing access at frequent intervals.

OS2.5 Limit public access to habitat areas when public access will significantly impact the sensitivity of the habitat area.

Bioswales are a great example of a low impact design element.

OS2.6 Support floodplain management strategies that ensure adequate open space for flood management consistent with Living River Principles, FEMA, and State requirements at a minimum.

(Also see the Public Health, Safety, and Noise Element for additional policies and implementing actions relating to flood management.)

Implementing Actions

OS2.A Update the bicycle and pedestrian master plans every five years to establish alignments for proposed trails, design standards, amenities, and phasing. Determine and pursue the appropriate funding mechanisms for initial improvements and the long-term maintenance of the trail system, such as a landscape assessment district, real estate transfer tax, transient-occupancy tax, or bond measure.

(Also see the following elements: Circulation, Topic Area 2 and Parks and Recreation, Topic Area 6)

OS2.B Adopt a land dedication ordinance that requires developers to provide land and improvements, such as trails and re-vegetation, along both sides of water corridors as a condition of subdivision approval for areas adjacent or in the vicinity of St. Helena waterways. The width of dedicated corridors should be established in consultation with the California Department of Fish and Game.

OS 2.C Pursue easements to open space areas that do not have adequate access for maintenance and management purposes.

topic area
3 WATER QUALITY AND CONSERVATION

OS2.D Provide for open space opportunities by including passive and active public recreation areas within projects as they develop.

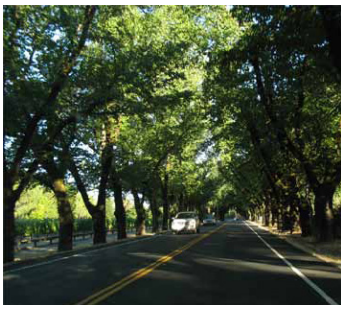
OS2.E Explore the possibility of public use or agricultural option of the waste-water treatment plant spray field in the form of trails and passive open space or other agricultural option.

topic area
3 WATER QUALITY AND CONSERVATION

Policies

OS3.1 Promote stormwater management techniques that minimize surface water runoff in public and private developments. Utilize low impact development techniques to best manage stormwater through conservation, on-site filtration and water recycling, and ensure compliance with the National Pollution Discharge Elimination System (NPDES) permit.

OS3.2 Reduce stormwater runoff in developed areas to protect water quality in creeks. Incorporate sustainable low impact design features in the design of infrastructure.



St. Helena should strive to protect and enhance its natural resources.

Implementing Actions

OS3.A Manage stormwater runoff in compliance with the City's Stormwater and Runoff Pollution Control Ordinance, Stormwater Management Standards for Construction and Post-Construction, and the Development Manual Stormwater Standards, to ensure compliance with the City's NPDES permit. Implement a surface water quality monitoring program to evaluate the effectiveness of stormwater management program activities in reducing the discharge of pollutants to receiving waters to the maximum extent practicable.

OS3.B Prevent water pollution from point and non-point sources, including runoff from agriculture, through implementation of City-adopted best management practices in applicable permits, Total Maximum Daily Load (TMDL), and the Plan for California's Nonpoint Source Pollution Control Program. Continue to adopt new and more effective and efficient best practices and programs.

OS3.C Minimize stormwater runoff and pollution by encouraging low impact design features, such as pervious parking surfaces, bioswales, and filter strips in new development projects. The City should be a model for incorporating low-impact design elements as it implements streetscape and landscape improvements. In addition, the City should retrofit the existing public landscape with natural vegetative coverings or drainage systems that promote infiltration into

the ground that can help detain stormwater and reduce pollution attributable to runoff.

(Also see the Community Design Element, Topic Area 1)

OS3.D Maintain the City's water management program, a program for implementing water conservation efforts for households, businesses, industries, public infrastructure, and agricultural activities. This program should include the following measures:

- Identify building, plumbing, and landscaping standards and technologies that conserve water, especially; during water shortages;
- Implement standards that require low-flow appliances and fixtures in all new developments; and
- Encourage and model the use of drought tolerant and native vegetation in landscaping.

OS3.E Promote the installation of drought tolerant and native plants in landscaping throughout the city. Potential measures include:

- An education program that details water conservation measures for use in local landscaping;
- Working with local nurseries to encourage education, demonstration, and sales of drought tolerant and native plants and water-wise irrigation systems. *(Also see the Public Facilities and Services Element for additional policies and implementing actions relating to water conservation);*
- Require City parks and properties to be landscaped with drought tolerant native plants that allow for high shade capacity wherever possible and use water-wise irrigation systems as a model for residents and businesses.

(Also see the Public Facilities and Services Element for additional policies and implementing actions relating to water conservation).

OS3.F Provide appropriate permitting documents for project applicants requiring coverage under the Statewide National Pollutant Discharge Elimination System (NPDES) General Construction and Industrial Permits.

Policies

OS4.1 Protect and enhance tree resources in developed and undeveloped areas. Efforts should include: adequate maintenance of street trees, requiring replacement trees where existing significant trees cannot be saved, and requiring street trees as a condition of new development.

OS4.2 Encourage the clean-up of contaminated sites to protect the environment and public well-being.

OS4.3 Promote best management practices that encourage protection of soil, groundwater, and surface water resources from industrial, agricultural, and other uses that produce or dispose of hazardous or toxic substances.

Implementing Actions

OS4.A Establish an urban forestry program to ensure a coordinated and comprehensive approach to maintaining and increasing the City's trees. Key program aspects will include the following:

- A tree planting program to ensure that new trees are planted regularly;
- A tree maintenance program to ensure that existing trees are healthy and pruned;
- A tree inventory to create a comprehensive listing of the City's trees and tree-related needs;
- A Tree Committee to oversee the implementation of the urban forestry program and approval of tree removals;

- A landmark tree list that identifies trees that require additional protection from damage and/or removal; and
- Appropriate Heritage tree deed restrictions.

OS4.B Until implementation of the City-sponsored urban forestry program occurs, continue to use the Master Street Tree List as a guideline for all street tree plantings.

OS4.C Develop and adopt a Tree Ordinance for the purpose of protecting trees and identifying replacement trees. In coordination with an urban forestry program, existing, significant trees should be integrated into future development. In cases where existing trees cannot be saved, require the planting of replacement trees consistent with guidelines included in the Master Tree List.

OS4.D Explore the concept of establishing a City nursery program to enhance native species for preparation and planting throughout the city.

OS4.E Explore a citywide education opportunity for residents, businesses, industries, and agricultural uses to obtain information on pollution prevention, disposal of hazardous waste and chemicals, liability, and clean-up.

OS4.F Coordinate with County, State and federal agencies, as necessary, to identify the location and extent of contaminated sites in St. Helena.

chapter nine

public health, safety, and noise

9 public health, safety, and noise

The Public Health, Safety and Noise element identifies goals, policies, and implementing actions to minimize risks to life and property associated with natural hazards.

1 introduction
2 land use and growth management
3 economic sustainability
4 public facilities and services
5 circulation
6 historic resources
7 community design
8 open space and conservation
9 public health, safety, and noise
10 climate change
11 housing
12 parks and recreation
13 arts, culture, and entertainment

9.1 Purpose of the Element

The Public Health, Safety, and Noise Element presents a framework for minimizing risks posed by environmental and human-caused hazards that may impact St. Helena residents' health and welfare. The Public Health, Safety, and Noise Element aims to protect St. Helena residents, workers, and visitors from negative exposure to flooding, fires, hazardous materials, air pollution, and geologic and seismic hazards.

The Public Health, Safety, and Noise Element includes the following sections.

- **9.2 Public Health, Safety, and Noise in St. Helena.** Summarizes key issues related to the public health and safety of St. Helena residents, workers, and visitors (p. 9-3).
- **9.3 Key Findings.** Identifies key findings based on an existing conditions analysis (p. 9-23).
- **9.4 Goals.** Defines overarching goals to guide policies and implementing actions (p. 9-28).
- **9.5 Policies and Implementing Actions.** Identifies policies and implementing actions to minimize hazards and risks to life and property (p. 9-29).

9.2 Public Health, Safety, and Noise in St. Helena

St. Helena is surrounded by natural beauty, hillsides, vineyards, and waterways. While these natural features are great assets for the community, they can present risks due to flood, fire, geologic, and seismic hazards. In addition, human-caused risks, such as hazardous materials, air pollution, and unhealthy noise levels can also pose risks to community health and safety. Effective planning to prepare for and mitigate the adverse effects of these natural and human-caused risks can help ensure that St. Helena maintains a high level of safety for its residents, workers, and visitors. Following is a discussion of the various risks facing St. Helena and ways for the City to anticipate and manage potential impacts.

Low-lying portions of Napa Valley are prone to flooding.

FLOODING

The Napa River and some of its tributaries are prone to flooding, which poses a risk for people and structures in adjacent parts of the Napa Valley. The Napa River flows are largely influenced by precipitation. The peak flows generally occur in January and February. Some of the worst flooding in the immediate area of St. Helena has occurred in December and April, especially in and around the Vineyard Valley Mobile Home Park, which is near the confluence of Sulphur Creek and the Napa River. The area experienced significant flooding in 1986, 1995, 1997, and 2005 with extensive property loss.

Flood hazards also exist in the York Creek and Sulphur Creek Watersheds in St. Helena. During the 2005 New Year's Eve storm event, flooding from York Creek significantly impacted residential and industrial properties, including buildings located on the properties of Beringer Winery and the Culinary Institute. The Beringer water treatment plant flooded and ponds overflowed into the creek. In addition, the creek flooded vineyards on both sides of its corridor, downstream of State Route 29 to the Napa River.

Flood hazards in the Sulphur Creek watershed are due primarily to channel bed aggradation in the lower reach where gravel mining was historically conducted. Sulphur Creek continues to supply and deposit substantial amounts of sediment

in this reach. Consequently, the increased volume of sediment currently stored in the channel decreases the volume available for floodwater, potentially causing an increased flood hazard locally and within the City of St. Helena. Further study needs to be done of the Sulphur Creek area in order to prevent future flooding and to protect habitat for steelhead and salmon.

Recently, the City collaborated with the Napa County Board of Supervisors and the Napa County Flood Control District to study the Napa River's hydraulics between Deer Park Road and Pope Street. The resulting study identified the need for an extension of the 100-year floodplain beyond the areas previously identified by the Federal Emergency Management Agency (FEMA). Figure 9.1 identifies areas that fall within the City's 100-year (one percent) and 500-year (0.2 percent) floodplain; as identified by the Federal Emergency Management Agency (FEMA) in 2018. Figure 9.2 includes areas in and around St. Helena that would be inundated in the case of dam failure.

COMPREHENSIVE FLOOD CONTROL AND RIVER RESTORATION

In 2011, the City completed a Comprehensive Flood Control and River Restoration Project north of the Pope Street bridge and on the west side of the Napa River. The purpose of this project was to protect residential property in the floodplain from the 100-year storm events and restoring the Napa River and its surrounding habitat. The project is designed to reduce flood risk to protect approximately 470 homes, including the Vineyard Valley Mobile Home Park and the Hunt's Grove Apartment Complex, that were located in a FEMA-designated flood zone prior to completion of the project. The project site was about 36 acres. The project planning began in 2000, with actual construction starting in May 2009. Phase I of the project consisted of construction of a levee, along with a storm drain bypass and other related infrastructure improvements. Phase II, the final phase of the project, included construction of a floodwall that is roughly eight feet high where it is anchored to the levee. The floodwall gradually reduces in height as it continues south along the Napa River to the confluence of the river and Sulphur Creek. It then turns to the west and continues along Sulphur Creek, terminating at

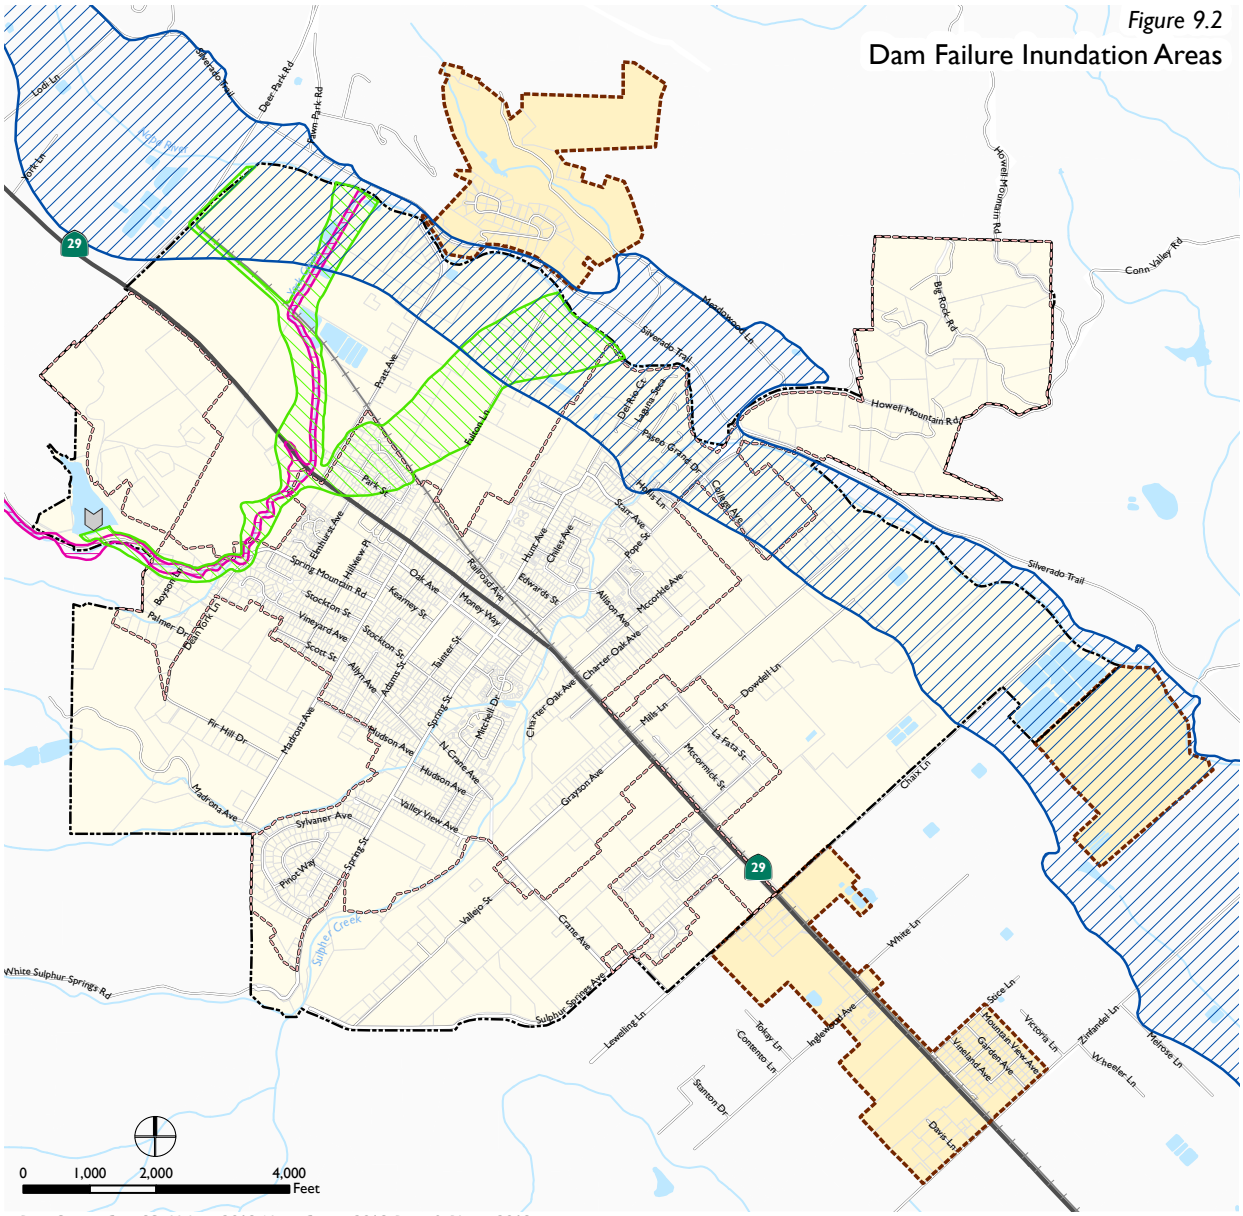
Dam Failure Inundation Areas



Data Source: City of St. Helena, 2018; Napa County, 2018; Dyett & Bhatia, 2018

Paseo Grand Avenue. The wall is about three and a half feet high at its terminus. The total project cost was about $32 million, with the cost of construction at about $9.1 million.

To balance the removal of land from the floodplain, the area known as "lower terrace B" was cut down significantly and widened to accommodate the large flood flows. In Phase II, this terrace was cut down to the level of the Napa River and is designed to carry significant amounts of flood water, should it become necessary.

The second half of this $9.1 million project is the continuation of the flood wall around Vineyard Valley and habitat restoration in the "upper terrace B." The habitat restoration was a critical element of the overall plan and included the installation 40,000 plantings and anchoring fallen trees into the terrace. This project also included maintenance conducted according to a maintenance plan, irrigation, and development of a pedestrian interpretive trail.

St. Helena has developed an Operations and Maintenance Manual for the Comprehensive Flood Control and River Restoration Project, which describes the extent of the project and outlines operation and maintenance activities that the City and Napa County Flood Control District will work together to manage. The manual describes project features, routine monitoring and maintenance activities, pump station operation, emergency operations, surveillance, personnel training, utility coordination and design.

In August 2014, a 6.0 earthquake struck the Napa Valley, with the epicenter of the quake approximately 6 miles southwest of the City of Napa. While damage from the quake was substantial in Napa, particularly in Napa's downtown area, St. Helena experienced very little to no measurable damage.

GEOLOGIC AND SEISMIC HAZARDS

Although St. Helena is located in a seismically active region, there are no known active faults located in the city *(see Figure 9.3)*. Faults are commonly considered to be active or likely to have another earthquake sometime in the future, if they have moved one or more times in the past 10,000 years. The California Geological Survey, the primary source of geologic information used for decision-making by California's government agencies, designates Alquist-Priolo Earthquake Fault Zones around the surface traces of active faults in the state and provides maps

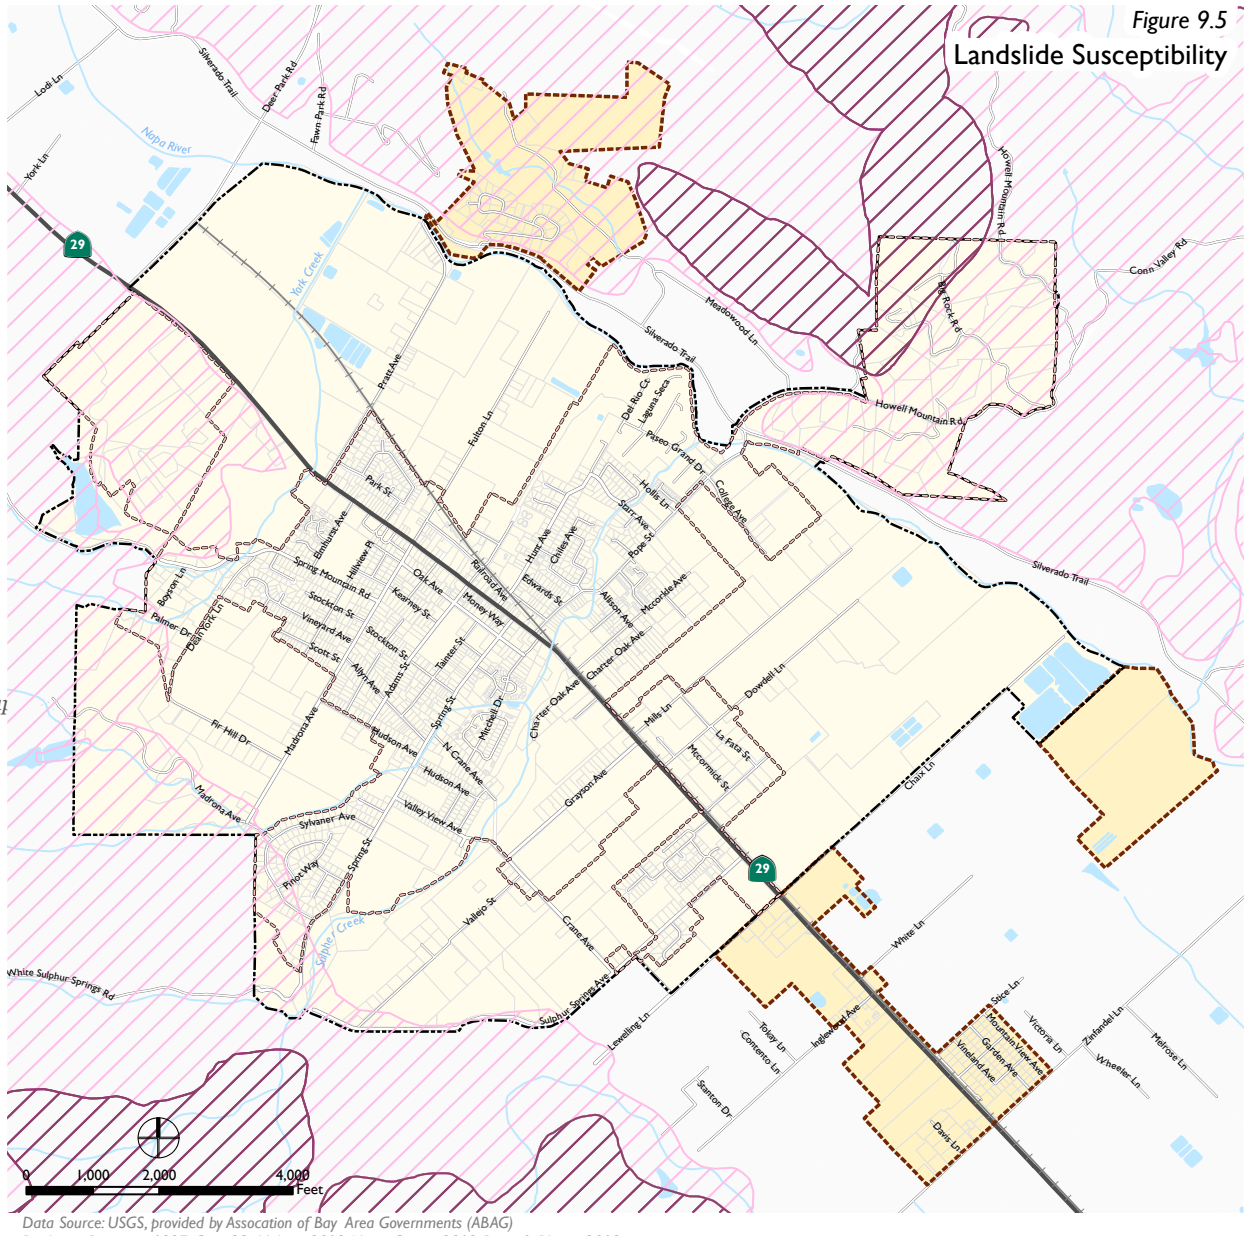
Landslide Susceptibility



Data Source: USGS, provided by Association of Bay Area Governments (ABAG) Resilience Program; 1997, City of St. Helena, 2018; Napa County, 2018; Dyett & Bhatia, 2018

Existing Landslide Distribution
- Mostly Landslide
- Few Landslides

- Railroads
- Water Features
- Urban Limit Line
- Study Areas
- City of St. Helena

Mostly Landslides - Consists of mapped landslides, intervening areas typically narrower than 1500 feet, and narrow borders around landslides; defined by drawing envelopes around groups of mapped landslides.

Few Landslides - contains few, if any, large mapped landslides, but locally contains scattered small landslides and questionably identified larger landslides; defined by drawing envelopes around areas free of mapped landslides.

for use in planning and controlling new or renewed construction so as to minimize associated risks. According to the most recent maps the nearest active faults to St. Helena are the West Napa Fault, located 14 miles to the south, and the Rodgers Creek Fault, located 13 miles to the west. Additionally, a number of unnamed, relatively small, older faults are located at the base of the Sonoma and Vaca mountains along the margins of the Napa Valley; however, based on available information, displacement of these faults occurred more than 10,000 years ago and as such these faults are not considered active.

Overall, the fault rupture hazard for the city is considered to be low, and the primary geologic hazards of concern are those that could result from excessive shaking effects stemming from earthquakes elsewhere in the region. For instance, a large earthquake event in the area could result in liquefaction in the city's low-lying areas *(see Figure 9.4*), and landslides and debris flow in areas with sloped, hilly terrain (*see Figure 9.5*). Development in the city's upland areas has often required the removal of trees and vegetation, leaving some hillsides susceptible to erosion and landslides during heavy rains. Actions available to the City to protect areas of the community at greatest risk and minimize the risks of injury and property damage include restricting development in the hillside areas and requiring prompt re-vegetation on slopes prone to instability. The use of best management practices during construction can also limit erosion and the risk of landslides. Employing earthquake engineering strategies in the design of buildings and structures, such as installation of earthquake drains or use of low mobility grouting and dynamic compaction during construction, can limit risks associated with liquefaction.

Air pollution from auto exhaust and dust, can pose health hazards among sensitive populations.

AIR POLLUTION AND HAZARDOUS MATERIALS

Mitigating the public health and safety risks caused by air pollution and hazardous materials will inevitably require changing human behavior. Air pollution resulting from auto exhaust, tobacco smoke, and fugitive dust creates unhealthy air conditions for residents and can pose a particular threat to sensitive populations, such as children and older adults. Implementing measures to reduce auto trips, tobacco smoke exposure, and construction-related fugitive dust can help St. Helena reduce residents' contact with air pollution. Compact development patterns, facilities to encourage walking and biking, and incentives to reduce automobile trips are just a handful of ways that St. Helena can help improve local air quality.

The Bay Area Air Quality Management District (BAAQMD) is the public agency responsible for regulating stationary sources of air pollution in Napa County and the San Francisco Bay Area. BAAQMD monitors air quality in the nine-county Bay Area and reports annually on pollutant concentrations for comparison to State and federal health-based ambient air quality standards. Data indicates that in the Bay Area, as throughout the state, the transportation sector and mobile sources of emissions are the most significant sources of air pollution. Senate Bill (SB) 375, approved by the Governor on September 30, 2008, seeks to reduce greenhouse

gas emissions—and, consequently, other pollutants—from mobile sources by integrating land use and transportation planning at the regional level. *(For a more detailed discussion of SB 375 and related opportunities see the Climate Change Element.)*

Hazardous materials used by local businesses are often transported on the City's roadways and found present in smaller quantities in private homes in the form of solvents, cleaning fluids, and other substances. Implementing policies to improve the safe use, transport, and disposal of these materials can be instrumental in avoiding environmental contamination and human health impacts.

NOISE

Noise is a sound which is unhealthy or unwanted. It can be a human-caused public health hazard which includes excessive, intrusive, or objectionable noises that disrupt daily life. Noise has been tied to physiological effects ranging from hearing loss, high blood pressure, and sleep disturbance, to communication interference and general interruption and annoyance of normal daily activities. Definitions of acoustical terms used in this discussion are listed in Table 9.1.

Land uses have different levels of compatibility relative to noise, and the State of

for the development of land as a function of a range of noise exposure values (see Table 9.2). Table 9-3 identifies interior noise standards.

The ambient noise environment throughout much of St. Helena is extremely quiet in comparison to typical urbanized settings, especially in the evenings and at nighttime. With the exception of Main Street (State Route 29) and major collector roadways, the noise environment can be characterized as being that of a quiet rural setting. Residential areas are generally shielded from traffic noise on highways, arterials, and collectors and register very low background sound levels.

Sleep disturbance and the annoyance of sound not only depend on the absolute sound level of a noise source but are related to the magnitude of the noise above that of background sound levels. This means that in particularly quiet rural environments, the control of extraneous, intrusive, and annoying noise sources is

TABLE 9.1: Definition of Acoustical Terms

Term	Definition
Decibel, dB	A unit describing the amplitude of sound. Equal to 10 times the logarithm to the base 10 of the ratio of two like quantities.
Sound Pressure Level (SPL)	10 times the logarithm to the base 10 of the ratio between the square of the sound to the square of the reference sound pressure of 20 µPascals. Sound pressure level is the quantity that is directly measured by a sound level meter and expressed in dB.
Frequency, Hz	The number of complete pressure fluctuations per second above and below atmospheric pressure is expressed in Hertz (Hz). Normal human hearing is between 20 Hz and 20,000 Hz.
A-Weighted Sound Level, dBA	The SPL in decibels as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes low frequency components of sound in a manner similar to the frequency response of the human ear and correlates well with subjective response to sound.
Noise	Unwanted or unhealthful sound.
Equivalent Noise Level, LAeq	The average A-weighted sound level during the measurement period. The A-weighted equivalent continuous sound level.
LAmax, LAmin	The maximum and minimum A-weighted sound level during the measurement period with the sound meter using fast-time-weighting.
LA01, LA10, LA50, LA90	The A-weighted sound levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level, Ldn	The average A-weighted sound level during a 24-hour day, obtained after the addition of 10 decibels to levels measured at night between 10:00 pm and 7:00 am.
Total Sound	The composite of sound from all sources near and far.
Ambient Sound	The sound level measured in the absence of an intrusive or extraneous noise.
Intrusive Noise	That noise from a source of specific origin which intrudes above the existing background sound level. The degree of intrusiveness of a sound depends upon its amplitude, duration, frequency, time of occurrence, and tonal or informational content as in contrast to the prevailing background sound level which exists in the absence of the intrusive noise.
Background Sound Level	The LA90 of the ambient sound. It represents the ever present lower sound level due to distant sources which are individually indistinguishable, and in the absence of the Intrusive or Extraneous Noise.
Extraneous Noise	Specific or distinguishable intermittent sound from nearby sources such as mechanical devices, leaf blowers, pumps, horns, sirens, barking, shouting, birds, wind and other similar individual sources, which don't normally exist on a continuous or regular basis.
Intermittent Noise	A noncontinuous sound consisting of a number of clearly distinguishable sound events of varying frequency and/or intensity.

TABLE 9.2: Noise Land Use Compatibility Guidelines

Land Use Category	Completely Compatible[1]	Tentatively Compatible[2]	Normally Incompatible[3]	Completely Incompatible[4]
Residential	< 55 dBA	55-60 dBA	60-75 dBA	> 75 dBA
Commercial/ Office	< 65 dBA	65-75 dBA	75-80 dBA	> 80 dBA
Industrial/ Agricultural	< 70 dBA	70-80 dBA	80-85 dBA	> 85 dBA
School, libraries, churches, hospitals	< 65 dBA	65-70 dBA	70-80 dBA	> 80 dBA
Playground, neighborhood park	< 67 dBA	67-70 dBA	70-75 dBA	> 75 dBA

a Expressed as Ldn or CNEL.
1. Completely Compatible – Specified land use is satisfactory, based on the assumption that any buildings involved are or normal conventional construction.
2. Tentatively Compatible – New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features are included in the design. Conventional construction, but with closed windows and fresh air supply systems of air conditioning will normally suffice.
3. Normally Incompatible – New construction and development should generally be discourage. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must b made and needed noise insulation features included in the design.
4. Clearly Incompatible – New construction or development should generally not be undertaken.

TABLE 9.3: Maximum Interior Noise Level Criteria of Intermittent Noise for Public Use Facilities

Land Use	Maximum Intermittent Noise Level LAmax	Basis for Criterion
Concert Hall	25	Intrusion of noise may spoil artistic effect
Theater	30	Intrusion of noise may spoil artistic effect
School Auditorium	35	Minimize intrusion into artistic performance
School Classroom	55	Speech communication-20 ft.-raised voice
School Laboratory	60	Speech communication-6 ft.-normal voice
Church/Sanctuaries	45	Speech communication-50 ft.-raised voice
Library	55	Speech communication-3 ft.-normal voice

9 public health, safety, and noise

Human-caused public health hazards include excessive, intrusive or objectionable ambient noises that disrupt daily life.

important to maintaining the public health and a quality living sound environment expected by the community.

Vehicular traffic on Highway 29 and collector streets is the primary source of noise in the community. Other non-stationary sources which are intermittent and generally inconsequential to the noise environment include flyover commercial aircraft at high altitudes, and small general aviation and helicopter flyovers. The Wine Train travels to St. Helena each day and emits a loud horn at crossings, along with the low frequency rumble of the diesel engines. Typical stationary noise sources in St. Helena include agricultural and industrial activities. Agricultural activities result in noise from wind machines, tractors, and sulphur blowers which are employed in the spring in the early hours of the morning. The St. Helena Fire Department has sirens at two locations which sound on average two to three times per day, with approximately half of them occurring during nighttime hours. Noise contours as of 2018 are seen in Figure 9.6.

Noise concerns in St. Helena are principally linked to land use compatibility. Concerns relate to adverse noise effects from new commercial development on surrounding noise-sensitive uses such as residences and schools, and also to adverse noise effects from agricultural activities within the city limit. Right-to-farm provisions necessitate accommodating agricultural uses while also seeking to minimize conflicts. To address these concerns and to promote a compatible noise environment throughout the city, Table 9.4 establishes limits on intrusive noise and regulates the amount of noise a specific sound source can emit relative to the typically low residential background sound levels. This standard is specific to residential areas within St. Helena. Additionally, by generally promoting good neighbor practices and facilitating open communication between agricultural, commercial, and residential uses the City can help to foster a healthy noise environment. Noise contours projected for 2040 as a result of the General Plan are shown in Figure 9.7.

TABLE 9.4: Standard and Adjustments for Determining Noise Impact of Intrusive Noise for Residential Receptors

STANDARD

The LAeq of an intrusive noise shall not exceed the following values:

- 7 am – 7 pm (daytime) 45 dBA
- 7 pm – 10 pm (evening) 40 dBA
- 10 pm – 7 am (nighttime) 35 dBA

Or shall not exceed LA90 + 5 dBA whichever is greater. The background sound level LA90 must be measured for a minimum of 10 minutes in the absence of the intrusive noise at the appropriate time of noise impact.

The maximum noise level LAmax of any intrusive noise shall not exceed the LAeq limits by more than 10 dBA.

The limits for intrusive noise are to be corrected as indicated below.

These noise limits apply to the nearest residential property line or at the nearest affected location on the receiver's property.

CORRECTIONS FOR INTRUSIVE NOISE		
Type of Correction	Circumstances of Correction	Correction[a]
Seasonal	Summer or year round operation	0 dBA
	December through March only	+ 5 dBA
Tone or Impulse	No tonal or impulse character	0 dBA
Characteristics	Tonal character[b] present in noise	- 5 dBA
	Impulsive[c], repetitious or modulating[d] signal	- 5 dBA[e]

Notes:
a Correction to be applied to the Standard's limits for intrusive noise.
b Tonality exists when the 1/3 octave noise level of the tone is 5 dB greater than the average level of the two adjacent 1/3 octave frequency bands.
c Transient sound having a peak level of short duration typically less than 100 msec.
d Either in amplitude, frequency or duration including compressor "hammering" noise.
e In addition to correction for tonality.

St. Helena's fire and police departments respond to structural fires, wildfires and other disasters.

FIRE

Key human-caused public health and safety hazards affecting St. Helena include structural fires, wildfires, and other disasters that require advanced planning. Overall, in the urbanized portion of St. Helena within the city limit, the risk of wildfire is moderate to low; however, areas of the city in the hilly terrain along the western perimeter of the city and east of the Napa River are classified as having high or very high fire threat by the California Department of Forestry and Fire Protection (CAL FIRE) *(see Figure 9.8)*.

Figure 9.8

Wild Fire Threat

- Extreme Threat
- Very High Threat
- High Threat
- Moderate Threat
- Little or No Threat

- Urban Limit Line
- Study Areas
- City of St. Helena

Fires occurring in the heavily-wooded hillside areas can be difficult for firefighters to address due to traffic congestion on City streets, particularly when emergency vehicles must travel on or across State Route 29. Furthermore, traffic congestion can pose important challenges to St. Helena's collaboration with neighboring municipalities and agencies seeking to establish and implement regionally coordinated disaster planning for police, fire, and emergency medical services. The City can work with local, regional, and state agencies to address key traffic-related concerns on State Route 29 and County roads to ensure that adequate levels of fire protection are maintained, particularly on hillsides and in fire-prone areas, and to support regional collaboration for disaster preparedness. This ability to coordinate fire response is especially critical in the current drought conditions facing the region and the State.

9.3 Key Findings

There are several challenges and opportunities facing St. Helena related to public health, safety, and noise. The following key findings are based upon comprehensive existing conditions analysis and community input.

Flooding

- Flooding in Napa County generally occurs within the low-lying Napa Valley floor. Between 1961 and 1997, flooding resulted in approximately $540 million in property damages. St. Helena experienced major flood events in 1986, 1995, and 2005 that caused an estimated combined total of $95.6 million in damages in the city. Most flooding occurred in the vicinity of Vineyard Valley from Fulton Lane to Pope Street.
- The flood history of York Creek suggests that the creek bed is not of adequate size to convey larger storm events. During the 2005 New Year's Eve storm event, flooding from York Creek significantly impacted residential and industrial properties. The Beringer water treatment plant flooded and ponds overflowed into the creek. In addition, the creek flooded vineyards on both sides of its corridor, downstream of State Route 29 to the Napa River.
- Until 2002, an aggregate mining operation, now discontinued, removed approximately 40,000 to 50,000 cubic yards of material from Sulphur Creek annually. Further study is needed to determine how aggregate buildup at Sulphur Creek may affect flooding issues in the area.
- Completed in June 2011, the City of St. Helena Comprehensive Flood Control and Environmental Restoration Project provides a minimum 100-year level of flood protection within the project and surrounding area of St. Helena. Design of the project was done on the basis of a Napa River Flood Model Study from Zinfandel Lane to Lodi Lane completed jointly by the City of St. Helena and the Napa County Flood Control and Water Conservation District with Measure A funding. The individual elements of the project include floodplain terracing, shoreline restoration, a new levee, floodwall and bank stabilization, and storm-water management features including a detention basin and pumping facility. The project protects hundreds of homes and is projected to save millions of dollars in flood insurance claims.

CONCEPTS, TRENDS AND IDEAS

Hazard Mitigation Planning

FEMA oversees hazard mitigation plans.

Hazard mitigation is defined by the Federal Emergency Management Agency (FEMA) as "sustained action taken to reduce or eliminate long-term risk to people and their property from hazards." The goal of hazard mitigation is to ensure long-term resilience against natural and human-caused hazards.

Mitigation Plans form the foundation for a community's long-term strategy to reduce disaster losses and break the cycle of disaster damage, reconstruction and repeated damage.

As a condition for receiving certain types of non-emergency disaster assistance, State, Tribal, and local governments are required to develop a hazard mitigation plan. Napa County, in cooperation with the cities of St. Helena, Napa, American Canyon, Yountville, and special districts, prepared a Local Hazard Mitigation Plan (LHMP) in 2007. The Napa County LHMP sets forth goals, mitigation strategies and mitigation action items for flooding, earthquakes, wildland fire interfaces and terrorism and technological hazards. Working together, local communities and jurisdictions in Napa County can reduce the long-term risks associated with natural and human-caused hazards. The Public Health, Safety and Noise Element is St. Helena's primary policy tool for ensuring local action and St. Helena's involvement in implementing regional hazard mitigation strategies.

- Portions of St. Helena's residential, commercial and winery industrial areas are located within or near the 100-year floodplain. Requiring infrastructure and drainage plans to minimize risk in these areas, in compliance with State and federal requirements, at a minimum, can promote the safety of residents and businesses. Moreover, restricting new development within the FEMA-designated floodplain and prohibiting development in the floodway can minimize additional flood hazards and the need for further mitigation measures.

Between 1961 and 1997, flooding resulted in approximately $540 million in property damages.

Seismic and Geologic Activity

- St. Helena is located in a seismically-active region, with seismic activity primarily related to movements in the San Andreas Fault Zone (SAFZ). Although there are a number of active faults in the region, there are no known active faults in St. Helena.
- Local earthquake hazard mapping suggests that a magnitude 7.9 or greater earthquake on the San Andreas Fault, or a 6.5 magnitude event on the West Napa Fault, could result in strong shaking in the city. As a result, St. Helena's susceptibility to liquefaction ranges from low in the upland areas west of downtown, to very high along the Napa River. United States Geological Survey (USGS) maps indicate that slope stability and landslide issues exist in St. Helena's upland areas, and a major earthquake event could result in significant debris flow. As noted previously, the recent August 2014 earthquake had a magnitude of 6.0, which resulted in no measurable soil liquefaction within the City of St. Helena.
- By limiting the type and scale of new development in hillside areas, or areas subject to liquefaction, the City can limit the potential for property damage and loss of life as a result of major seismic activity. In addition, complying with the Universal Building Code (UBC) and adopting other standards for building safety along with emergency response disaster planning will help minimize the impacts of seismic and geologic disasters.

Air Pollution and Hazardous Materials

- The greatest source of greenhouse gas emissions in the City of St. Helena is the Transportation sector, which comprises 59 percent of total emissions according to a 2018 inventory compiled for the General Plan update. The transportation sector is also the largest generator of air pollution emissions

Restricting new development within the floodplain and prohibiting development in the floodway can minimize additional flood hazards and the need for further mitigation measures.

in the County, with mobile sources – automobiles and trucks – providing the greatest level of emissions. A 2007 Bay Area Air Quality Management District (BAAQMD) GHG inventory indicated that approximately 56 percent of GHG emissions in Napa County resulted from mobile source emissions. Mobile emissions are a significant source of other pollutants, as well, including carbon monoxide and particulate matter.

- The development of a Climate Change Element for the St. Helena General Plan is an important step forward in contributing to the effort to improve regional and local air quality. Napa County's Communitywide Climate Action Plan and the Climate Change Element provide a strategic policy framework to reduce greenhouse gas emissions and reduce air pollution derived from its multiple sources.
- CalEnviroScreen have shown that people living in agricultural areas of California have higher amounts of pesticides in their bodies than other people, which can result in adverse health outcomes. Based on data compiled by the Office of Environmental Health Hazard Assessment (OEHHA), census tracts in St. Helena are in the top quartile in terms of pounds of pesticide per square mile in the state for the years 2012-2014. The Napa County Agricultural Commissioner is responsible for ensuring the safe use of pesticides in all settings in the county. The County runs a Pesticide Use Enforcement program to educate pesticide users of their legal responsibilities and conduct inspections and investigations to ensure the safety of workers, the public, and the environment. Compliance and enforcement activities are complemented with extensive training and outreach to help growers and employees ensure safe handling and use of pesticides.

Noise

- The primary source of noise in the community stems from motor vehicle traffic and commercial activity, particularly in areas near major roads, such as State Route 29. Mitigating traffic noise can be difficult, particularly the noise generated along State Route 29 throughout the day and night. However, the City can adopt noise standards to address more infrequent noise sources, such as those related to off-hours delivery, and commercial loading and unloading.
- While there are few industrial noise sources in St. Helena, passing trains and aircraft generate intrusive noise periodically in the community.
- Agricultural operations generate noise on a seasonal basis; however, local right-to-farm policies limit the City's power to regulate noise impacts. Encouraging the regular communication of planned agricultural activities to surrounding residents can help address potential conflicts relating to noise compatibility. In addition, adopting noise compatibility standards for sensitive land uses can help to minimize the impacts of intrusive noise sources.

Fire and Emergency Response

- St. Helena's paid per call fire department, supported by two permanent staff members (hired in Summer 2018), provides fire protection services for wildland and structural fires within the city limits and in unincorporated areas of Napa County. Although service levels within the city are generally adequate, the heavily-wooded and frequently dry hillside areas could create significant challenges for firefighters.
- By limiting the type and scale of new development in hillside areas, and requiring sufficient road widths and turning radii to accommodate emergency response vehicles, the City can limit the potential for property damage and loss of life due to fires.
- Traffic congestion can adversely impact emergency response time in St. Helena, particularly when emergency vehicles must cross State Route 29. The City can work with emergency response providers to create solutions that address traffic-related emergency response challenges.

Emergency response is an important part of protecting residents and businesses.

9.4 Goals

The goals of the Public Health, Safety and Noise Element are:

Maintain High Levels of Public Health and Safety.
St. Helena is committed to maintaining high standards of public health and safety through anticipation of and preparation for potential natural and human-caused hazards.

Effectively Coordinate Responses to Emergencies and Natural Disasters.
St. Helena is dedicated to protecting residents, businesses, and the environment through efficient local emergency response efforts, public education, and effective coordination with regional, State, and federal agencies.

Policies and actions are set to protect the community against flood hazards.

9.5 Policies and Implementing Actions

A range of policies and implementing actions are outlined below and organized into the following topic areas:

1. Air Quality;
2. Noise;
3. Seismic and Geologic Hazards;
4. Fire and Hazardous Materials;
5. Flood Hazards; and
6. Disaster Planning.

The following policies and actions mandate, encourage, or allow certain initiatives to be pursued throughout the duration of the General Plan. Together, they serve as strategic directions for City staff and partners, highlighting where time and resources should be focused.

topic area
1 AIR QUALITY

Policies

PS1.1 Achieve and maintain clean, healthy air for the residents of St. Helena to preserve environmental quality and community health.

PS1.2 Support regional efforts to achieve and maintain state ambient concentration standards to protect public health, reduce adverse industrial plant effects, and enhance the visual environment. In particular, provide local support for implementation of policies and measures set forth in the Napa County Congestion Management Program.

PS1.3 Encourage effective regulation of those sources of air pollution, both inside and outside of St. Helena, which affect air quality, by implementing as many of the recommendations of the Napa County Congestion Management Plan as is feasible.

PS1.4 Promote an optimized land use development pattern that minimizes cumulative air quality impacts from proposed developments.

topic area
1 AIR QUALITY

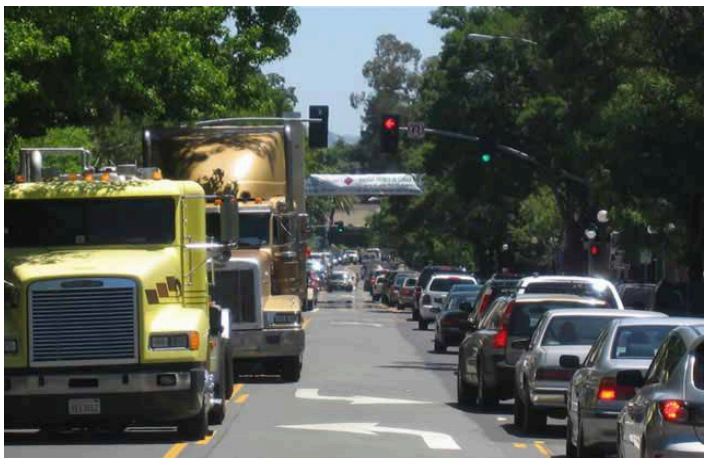
Implementing Actions

PS1.A Minimize local adverse air quality impacts related to construction by requiring dust abatement procedures for local projects.

PS1.B Mandate the use of EPA-approved wood stoves or fireplace inserts, rather than fireplaces, as a means of reducing emissions into the air.

PS1.C Review project proposals for their potential to generate hazardous air pollutants.

PS1.D Develop guidelines for locating new sensitive uses, including residences, schools, and childcare facilities, away from air pollutant sources. The guidelines can include measures to mitigate air emissions from existing sources, as well as to design buildings to prevent exposure.



Air quality can be improved by implementing the Napa County Congestion Management Plan.

PS1.E Encourage and support regional efforts to use alternative modes of transportation.

PS1.F Consider a citywide network to help commuters arrange carpools, including online coordination capabilities and designated areas for parking and pick-up.

PS1.G Adopt the thresholds of significance contained in the Bay Area Air Quality Management District's (BAAQMD) Guidelines for Assessing the Impacts of Projects and Plans for determining the significance of project impacts under the California Environmental Quality Act.

topic area
1 AIR QUALITY

PS1.H Continue to implement an ordinance to restrict exposure to environmental tobacco smoke in new and existing multi-unit dwellings, public events, and outdoor areas, such as parks and playgrounds.

PS1.I Adopt a voluntary, employer-based transportation demand management (TDM) program for St. Helena businesses in compliance with the BAAQMD's 2017 Clean Air Plan (CAP). Components of a TDM program should include measures to reduce the use of single-occupancy vehicles for work-related commuting, such as carpool/vanpool matching services and employer-sponsored transit passes.

PS1.J The potential for sources of odors that includes restaurants, auto body shops, or waste treatment facilities shall be considered when evaluating proposed residential projects and projects with sensitive recipients.

topic area
2 NOISE

Policies

PS2.1 Preserve the current low levels of noise in St. Helena to maintain the City's rural atmosphere.

PS2.2 Maintain a citywide environment that balances various City objectives while minimizing the impact of highway, railroad, and industrial noise. The City should manage both indoor and outdoor noise levels to protect health and safety. A combination of noise standards and existing noise levels should be used to determine impacts and mitigation measures.

PS2.3 Minimize potential noise impact conflicts between land uses by regulating incompatible land uses. Encourage noise-generating uses to reduce their impacts while promoting land use patterns that avoid conflicts. Employ compatibility guidelines, interior noise level criteria, the City's noise standards, and noise contour maps to determine the compatibility of land uses.

PS2.4 Require a reduction and/or control of the use of machinery, mechanical systems and other noise-making equipment and sources in and near residential areas where the noise impacts would be considered intrusive to adjacent residential property, unless consistent with the right-to-farm.

Implementing Actions

PS2.A Consider the environmental impact of transportation-related noise and other noise sources in the review of any new projects and approval of subdivision plans and requests for changes in the zoning ordinance.

PS2.B Enforce the Land Use Compatibility Standards presented in the State of California's General Plan guidelines when siting new uses. These standards identify the acceptability of a project based on levels of noise exposure.

PS2.C Adopt and enforce Title 24 Standards for all types of new residential construction, including single family dwellings, duplexes, apartments, and dormitories.

- An interior maximum noise level of LAdn-45 dBA in all habitable rooms for all dwelling units;
- A maximum allowable interior noise level for bedrooms of an hourly LAeq-35 dBA;
- A maximum noise level of LAdn-60 dBA for residential exterior activity areas;
- If interior noise standards are met by requiring windows to be closed, cooling and outside air exchange must also be provided in the building's design.

PS2.D Require an acoustical study, prepared by a qualified acoustical consultant for:

- All proposed projects that are likely to be exposed to noise levels greater than the standards;
- All proposed projects that would generate noise where impacts on other uses would be greater than the standards;
- Any project exposed to outdoor noise at or above a day-night average sound level (Ldn) of 60 or for any noise source that could create such outdoor noise levels for adjacent uses; and
- Any project exposed to or that creates noise which may exceed the adopted City standards.

Noise can be mitigated by minimizing conflicts between land uses by regulating incompatible land uses.

topic area
2 NOISE

PS2.E Require new developments to implement noise mitigation measures when built in close proximity to noise sources, such as State Route 29 and the railroad tracks. These developments should consider the exterior and interior noise environment.

PS2.F Require construction operations to use noise suppression devices and techniques and limit noisy construction activities that can be heard at the property line to the least noise-sensitive times, as per the City's noise ordinance.

PS2.G Include appropriate noise attenuation techniques in the design of all new arterial streets. Such techniques could include the use of site planning, building orientation, buffer distances, quiet pavement surfaces, and the use of correctly-engineered acoustical barriers and berms where necessary. Adopt the noise standard for intrusive noise at residences given in Table 9.4.

PS2.H Amend the City's noise ordinance to regulate intrusive noise sources, such as the use of machinery and equipment, landscaping and property maintenance devices, animals, and idling buses or trucks in or near uses sensitive to noise.

PS2.I Incorporate right-to-farm legal provisions relative to noise in all newly-created deeds where agricultural activities may pose noise impacts in the future. Require similar language in deeds for properties similarly impacted by the Harold Smith & Son gravel plant operations.

topic area
3 SEISMIC AND GEOLOGIC HAZARDS

Policies

PS3.1 Minimize risk of injury, loss of life and property damage from seismically-induced and other known geologic hazards.

PS3.2 Restrict the intensity of development and the level of landform alteration in the hillside areas in order to minimize the potential for slope failure.

PS3.3 The required soils and geologic reports for new development shall include geotechnical analysis for construction in areas with potential geological hazards and/or for purposes of environmental analysis. The analysis shall investigate all potential geo-hazard issues for the site where there is substantial evidence of a potential risk.

PS3.4 Geologic reports for new development shall describe hazards and include mitigation measures to reduce risks to acceptable levels. Where appropriate, an engineer's or geologist's certification shall be required stating that risks have been mitigated to an acceptable level.

topic area
3 SEISMIC AND GEOLOGIC HAZARDS

Implementing Actions

PS3.A Require a soils and geologic report to be submitted for new construction prior to the issuance of grading and building permits and the submission of final maps.

PS3.B Prohibit any development—including any land alteration, grading for roads, and structural development—in areas of slope instability or other geologic concerns until mitigating measures are taken to limit potential damage to levels of acceptable risk.

PS3.C Require prompt re-vegetation of development areas on slopes prone to instability. Use native and drought-tolerant plant species for landscaping on slopes where excess watering might induce landslides and/or erosion.

PS3.D The City shall rely upon the most current and comprehensive geological hazard mapping available in the evaluation of potential seismic hazards associated with proposed new development.

PS3.E All development and construction proposals shall be reviewed by the City to ensure conformance to applicable building standards. Recommendations of the geotechnical analysis shall be implemented.

Earthquakes can cause damage to property and cause loss of life and injury.

topic area
4 FIRE AND HAZARDOUS MATERIALS

Policies

PS4.1 Use the Zoning Code to define a transitional zone around industrial areas to protect the health and safety of residential neighborhoods.

PS4.2 Limit development in areas of High and Very High wildfire hazard as defined and mapped by the California Department of Forestry and Fire Prevention (CalFire) in order to prevent the loss of lives, injuries, and property damage due to wildfires.

PS4.3 Protect St. Helena residents from health and safety impacts related to the use, storage, manufacture, and transport of hazardous materials.

PS4.4 Discourage new uses that rely extensively on the use of hazardous materials.

PS4.5 Facilitate communication and education about fire safety, non-point source pollution, household hazardous waste disposal, and recycling opportunities.

PS4.6 Ensure that all streets and roads are adequate in terms of width, turning radius, and grade in order to facilitate access by City firefighting apparatus, and to provide alternative emergency routes of ingress and egress.

The transitional zone around industrial areas protects the health and safety of residential neighborhoods.

topic area
4 FIRE AND HAZARDOUS MATERIALS

Implementing Actions

PS4.A Designate areas in St. Helena that are prone to fire hazards and make this information available to the community.

PS4.B Continue to require implementation of best practices in fire resistance for all new and remodeled structures in fire-prone areas, including fire fuel removal, creation of defensible space for firefighters, construction with fire-resistant building materials, and installation of automatic sprinkler systems. Study the need to designate a Wildland-Urban Interface Fire Area within St. Helena to provide protection in additional areas.

PS4.C Require all structures in high wildfire hazard areas to maintain a clearance of flammable vegetation away from structures and to use fire-resistant ground covers. The minimum clearance distance should be 30 feet.

PS4.D Require all new development to meet the minimum fire flow rates specified by the City's Fire Code.

PS4.E Require all new development plans to be approved by the Fire Department prior to the issuance of building permits, grading permits, or final map approval.

PS4.F Develop a program to inform and educate the community about potential risks, resources, and roles and responsibilities for addressing fire safety in St. Helena. Inform residents of homes adjacent to public lands of their responsibility to provide fire breaks adjacent to their homes.

PS4.G Review all new development proposals for their potential to introduce the production, use, storage, and/or transport of hazardous materials, and require reasonable controls on such materials.

PS4.H Develop a Hazardous Materials Response Plan that includes guidelines, protocols, and strategies to respond to a local hazardous materials spill.

topic area

4 FIRE AND HAZARDOUS MATERIALS

PS4.I Continue to require compliance with federal, State, and local regulations for the safe production, transport, handling, use, and disposal of hazardous materials that may cause air, water, or soil contamination. Require buffers for operations which handle substantial amounts of hazardous materials. When siting new facilities or expanding existing facilities, require buffer zones between hazardous materials facilities and residential uses, parkland, trails, and open space facilities.

PS4.J Develop and launch a citywide education campaign to encourage the use of green products in order to reduce non-point source pollution. Target efforts towards the reduction of household chemical use and hazardous waste disposal.

PS4.K Require environmental assessments during the planning for development in areas previously used for agricultural, commercial, or industrial uses. Remediation of identified contamination that may result in health risks to construction workers and future owners and users shall be required prior to approval of construction, demolition, and grading permits for development.

PS4.L Work with the Napa County Agricultural Commissioner and other responsible agencies to identify and enforce mechanisms to control residual pesticides and pesticide runoff to prevent significant risk to water quality, vegetation, wildlife, and humans.

PS4.F Develop a program to inform and educate the community about potential risks, resources, and roles and responsibilities for addressing fire safety in St. Helena. Inform residents of homes adjacent to public lands of their responsibility to provide fire breaks adjacent to their homes.

PS4.G Review all new development proposals for their potential to introduce the production, use, storage and/or transport of hazardous materials, and require reasonable controls on such materials.

topic area
4 FIRE AND HAZARDOUS MATERIALS

PS4.H Develop a Hazardous Materials Response Plan that includes guidelines, protocols, and strategies to respond to a local hazardous materials spill.

PS4.I Strengthen regulations for the safe production, transport, handling, use and disposal of hazardous materials that may cause air, water, or soil contamination. Require buffers for operations which handle substantial amounts of hazardous materials. When siting new facilities or expanding existing facilities, require buffer zones between hazardous materials facilities and residential uses, parkland, trails, and open space facilities.

PS4.J Develop and launch a citywide education campaign to encourage the use of green products in order to reduce non-point source pollution. Target efforts towards the reduction of household chemical use and hazardous waste disposal.

topic area
5 FLOOD HAZARDS

Policies

PS5.1 Minimize the risk to people, property and the environment caused by flooding hazards. Site new development to minimize potential damage from a 100-year flood. Continue to require that any new development is constructed FEMA standards. Prohibit the siting of uses within Flood Hazard Areas inconsistent with FEMA standards that could result in health and safety hazards, including those due to the release of chemicals or other substances as a result of inundation or erosion. Ensure that any new flood protection projects comply with federal and State standards.

PS5.2 Ensure that new development or existing lots of record within the 100-year floodplain are properly graded, sited, and constructed to mitigate flood effects and do not cause increases or expansion of the flood area that increase flood risk.

PS5.3 Within the 100-year floodplain, encourage open space uses, such as parks or natural areas.

PS5.4 Ensure that construction of flood barriers does not adversely affect natural floodplains, stream channels and natural barriers that help accommodate or channel flood waters.

PS5.5 Prohibit new development within areas designated as Floodway in the current FEMA Flood Insurance Study (FIS) and Flood Insurance Rate Map (FIRM). (*Also see the Public Facilities and Services Element, Topic Area 3*)

PS5.6 Coordinate with the Napa County Flood Control and Water Conservation District and other responsible agencies to maintain protocols and funding for the regular inspection and maintenance of flood control facilities in the city, including levees, floodwalls, floodplain terracing, stormwater detention ponds, and pumping facilities.

topic area
5 FLOOD HAZARDS

PS5.7 Require that development within Special Flood Hazard Areas prepare and implement infrastructure and drainage plans compliant with State and federal requirements in order to minimize risk in these areas.

PS5.8 Locate new essential public facilities outside of Special Flood Hazard Areas, including hospitals and health care facilities, emergency shelters, fire stations, emergency command centers, and emergency communications facilities. *(Also see the Public Facilities and Services Element, Topic Area 3)*

Implementing Actions

PS5.A Coordinate with the Napa County Flood Control District to ensure that stream channels are routinely cleared of vegetation and debris which could impede stormwater flows, while protecting riparian habitat.

Coordination with the County Flood Control District will ensure that stream channels are routinely cleared of vegetation and debris.

PS5.B Require developers with land adjacent to the Napa River to construct or contribute a fair share toward the construction of necessary flood control improvements.

PS5.C Strengthen and enforce regulations that prohibit the dumping of litter, fill, and waste materials into creeks and waterways. Educate the public about flooding and health hazards associated with these activities.

PS5.D Require that sewer and water lines in areas subject to flooding are sited to avoid contamination and flooding when pipelines break.

topic area
5 FLOOD HAZARDS

PS5.E Prohibit the introduction of urban development in FEMA-designated Floodway zones.

PS5.F Review Municipal Code Chapter 15.52, Flood Damage Prevention, to ensure that regulations reflect best practices. Periodically update the City's flood hazard regulations in accordance with FEMA/NFIP regulations.

PS5.G Implement the requirements of FEMA relating to construction in Special Flood Hazards Areas as illustrated on Flood Insurance Rate Maps.

PS5.H Implement low impact development practices for new development and redevelopment projects to reduce stormwater peak flow rates and volumes from smaller, more frequently occurring storm events.

topic area
6 DISASTER PLANNING

Policies

PS6.1 Ensure that City emergency procedures are adequate in the event of potential natural or man-made disasters and that applicable operations and maintenance manuals are followed.

Implementing Actions

PS6.A Maintain and periodically update the City's Emergency Response Plan.

PS6.B Conduct periodic emergency response exercises to test the effectiveness of City emergency response procedures.

PS6.C Continue to collaborate with regional agencies and neighboring jurisdictions to develop and implement a regional emergency coordination plan and agreement for police, fire, and emergency medical services.

10.1 Purpose of the Element

The Climate Change Element presents a framework to help the City respond to and plan for climate change. It aims to effectively address energy and water conservation, renewable energy production, transportation, sustainable business development, and the responsible evolution of the City to reduce climate change impacts in St. Helena. The policies and actions included in this element seek to chart a course that meets St. Helena's specific needs, aligning with the Napa Countywide Community Climate Action Plan Framework, which St. Helena participated in developing. The Climate Change Element includes the following sections:

The Climate Change Element:

- **10.2 Combating Climate Change in St. Helena.** Describes key climate change issues in St. Helena (p. 10-3).
- **10.3 Key Findings.** Identifies key findings based on an existing conditions analysis and extensive community outreach (p. 10-8).
- **10.4 Goals.** Defines overarching goals to guide policies and implementing actions (p. 10-11).

- **10.5 Policies and Implementing Actions.** Identifies policies and implementing actions to accomplish St. Helena's climate change objectives (p. 10-13).

10.2 Combating Climate Change in St. Helena

Climate change refers to a change in the average global climate that may be measured by wind patterns, storms, precipitation, and temperature. The term climate change is often used interchangeably with the term global warming. Global warming refers to an average increase in the temperature of the atmosphere near the Earth's surface, which can contribute to changes in global climate patterns. However, rising temperatures are just one aspect of climate change.

Greenhouse gases (GHGs) are gases that trap heat in the atmosphere and regulate the earth's temperature. This effect, known as the Greenhouse Effect, is responsible for maintaining a habitable climate. GHGs are released into the earth's atmosphere through a variety of natural processes and human activities. The current period of global warming is widely attributed to a buildup of GHG emissions from human-made sources that have proliferated and accelerated since the age of industrialization. Many scientists project that global temperatures will likely continue to increase in the future, raising broad concern about the effects of temperature change on the Earth's climate. Potential risks include rising sea levels, changing precipitation patterns, expanding desertification, and increasing GHG emissions.

Although debate continues about how the United States should engage in the global climate change discussion, many state and local governments have adopted policies to address climate change concerns. By adopting this Climate Change Element, St. Helena can take steps to forward the global climate change agenda at the local level. Moreover, as climactic conditions shift in the coming decades – potentially requiring policy responses unknown today – St. Helena will be in a position to adapt to and accommodate new federal, State, and regional planning requirements as they arise.

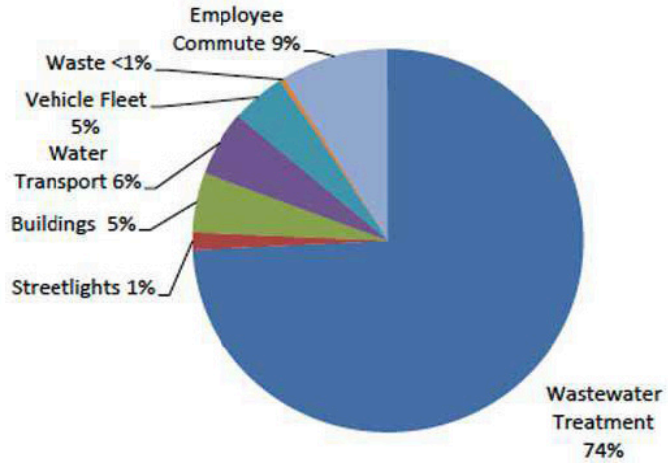
Canopies of urban street trees create shade and help enhance quality of life while mitigating the impact of the built environment on natural systems.

10 climate change

Innovative systems can capture and reuse rainwater and make use of rooftop spaces for agriculture or plantings.

St. Helena joined the International Council for Local Environmental Initiatives (ICLEI) in 2008. In coordination with ICLEI and the Climate Protection Campaign, the City developed the 2009 City of St. Helena Greenhouse Gas Emissions Reduction Action Plan Analysis Final Report. In 2012, the City completed a GHG emissions inventory of City-controlled operations and activities. Available data indicate that in 2010, the City of St. Helena municipal operations emitted 3,506 metric tons of equivalent carbon dioxide (CO_2e). Municipal GHG emissions varied by end-use sector, with water and wastewater operations and employee commutes generating the largest proportions of total emissions. The remainder of the City's GHG emissions included City buildings, vehicle fleet, streetlights, water transport facilities, and government-generated solid waste disposal.

Figure 10.1 Government Operations Emissions by Sector, 2010



In addition to the 2005 and 2010 municipal inventories, ICLEI developed 2005 and 2010 community GHG inventories for the City of St. Helena. A community inventory accounts for emissions from all emissions sources, not just from those sources under direct municipal control. According to ICLEI's modeling, St. Helena produced 43,831 metric tons of CO_2e in 2005 and 44,008 metric tons of CO_2e in 2010. In 2005, the largest sources of emissions were the

commercial/industrial sector (38 percent), residential (25 percent), and on-road transportation (22 percent). In 2010, commercial/industrial emissions remained the largest contributor of GHGs in St. Helena (35 percent), followed by on-road transportation (29 percent), and residential (25 percent) (ICLEI, 2012). Emissions were reduced in all sectors except the transportation sector, which increased 36 percent.

For the General Plan Update, an updated community GHG emissions inventory was compiled for the City of St. Helena using best available data and modeled for a baseline year of 2018. The inventory found that St. Helena's baseline emissions totaled 76,012 MTCO2e. As shown in Table 10.1: 2018 GHG Emissions Summary by Sector (MTCO2e), the transportation sector was responsible for the largest source of emissions, generating 44,531 MTCO2e (59 percent). Electricity and natural gas use from the commercial/industrial sector was the second largest source of emissions, generating approximately 12,773 MTCO2e (17 percent). Electricity and natural gas consumption within the residential sector was the third largest source of emissions, generating 9,890 MTCO2e (13 percent).

In 2012, the City adopted a GHG reduction target of 20 percent below 2005 levels by the year 2020. This target is consistent with the State's goal to reduce California emissions to 1990 levels by the year 2020. In recent years, the State has also set a reduction goal of reducing GHG emissions to 80 percent below 1990 levels by 2050 (Executive Order S-3-05) and an interim target of 40 percent below 1990 levels by 2030 (Executive

TABLE 10.1: Greenhouse Gas (GHG) Emissions in St. Helena

Sector	2005 Emissions (MTCO2e)	2010 Emissions (MTCO2e)	Change (MTCO2e)	Percent Change
Commercial/Industrial	16,588	15,444	-1,144	-7%
Transportation	9,520	12,907	3,387	36%
Residential	11,169	10,946	-223	-2%
Off-road Vehicles and Equipment	2,248	2,191	-57	-3%
Agriculture	1,622	1,468	-155	-10%
Waste	2,684	1,053	1,631	-61%
TOTAL	43,831	44,008	177	0.4%

Source: City of St. Helena. DRAFT Napa County Carbon Footprint Results. 2009

CONCEPTS, TRENDS, AND IDEAS

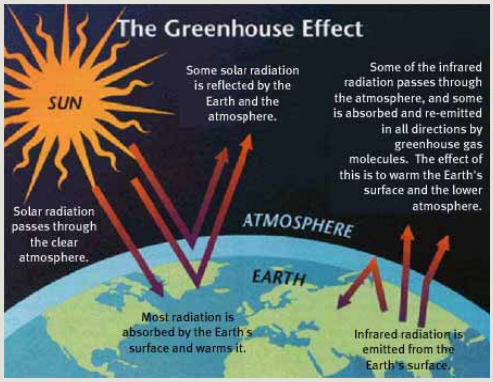
Planning Regionally as a Solution to Climate Change

The single-largest source of greenhouse gases in California is emissions from passenger vehicles. This means that in order to reduce greenhouse gas emissions and reduce our contribution to climate change, California must revisit existing policies and the way communities are designed in order to reduce the number of vehicle miles traveled by the State's residents, therefore reducing vehicle emissions.

In 2006, the Governor signed The Global Warming Solutions Act into law to do just that. Often referred to as Assembly Bill 32 (AB 32), the Global Warming Solutions Act requires the State of California to reduce greenhouse gas emissions (GHG) to 1990 levels no later than 2020. In recent years, the State has also set a reduction goal of reducing GHG emissions to 80 percent below 1990 levels by 2050 (Executive Order S-3-05) and an interim target of 40 percent below 1990 levels by 2030 (Executive Order B-30-15). Additionally, the California Air Resources Board (CARB) Scoping Plan, adopted in 2017, establishes per capita GHG emissions targets of 4.0 metric tons of CO2e per capita by 2030 and 2.0 metric tons of CO2e per capita by 2050. These per capita targets are consistent with statewide reduction goals.

SB 375 takes AB 32 to the next step by requiring California's regional land use and transportation authorities to work with local agencies to achieve more compact growth patterns, thereby reducing the quantity of greenhouse gases emitted by passenger vehicles.

Although many Californians can picture the long-term dire consequences of climate change, there are also many near-term dangers to the state's wetlands as changing weather patterns affect wildlife habitats and life cycles.



The greenhouse effect has been studied for many years, but California is the first state in the nation to take specific action to combat the effects of greenhouse gas emissions.

SB 375 has five key features:

1. It mandates that regional planning agencies establish regional targets for reducing greenhouse gas emissions tied to land use, and therefore driving patterns.

2. It requires that regional planning agencies create a plan to meet those targets.

3. SB 375 requires that regional transportation funding decisions be consistent with this new plan.

4. It integrates regional transportation planning and housing allocation efforts for the first time.

5. It establishes new California Environmental Quality Act (CEQA) exemptions and streamlining for development projects that conform to the new regional plans.

The Sustainable Communities Strategy

SB 375 requires the California Air Resources Board (CARB) to establish GHG emission reduction targets related to transportation for each Metropolitan Transportation Organization (MTC) region by September 30, 2010. The Metropolitan Transportation Commission (MTC) is the designated MPO for Napa County and the greater Bay Area region.

Under SB 375, each MPO must then add a new element to its long-range Regional Transportation Plan (RTP) called a "Sustainable Communities Strategy," or SCS. The SCS seeks to achieve the targeted reductions in greenhouse gas emissions if there is a feasible way to do so, planning for compact growth and matching transportation improvements.

Order B-30-15). Additionally, the California Air Resources Board (CARB) Scoping Plan, adopted in 2017, establishes per capita GHG emissions targets of 4.0 metric tons of CO2e per capita by 2030 and 2.0 metric tons of CO2e per capita by 2050. These per capita targets are consistent with statewide reduction goals.

Through Assembly Bill 32 and other legislation, the State is implementing measures that will reduce emissions by improving fuel efficiency in vehicles, reducing the carbon intensity of transportation fuels, increasing the use of renewable power, and other actions. However, local action is also needed to complement actions at the State level and ensure St. Helena meets its reduction target.

Targeting climate change policies to reduce vehicle miles traveled on local roads is essential to achieving the City's long-term GHG reduction goals. Moreover, strengthening policies to improve commercial and residential building efficiency, conserve energy, and eliminate organic waste from landfills can reduce community emissions. Within government operations, improving building efficiency, utilizing renewable energy, and replacing vehicles with more fuel-efficient models can significantly reduce GHG emissions.

In 2009, St. Helena joined with other Napa County jurisdictions to prepare the Napa Countywide Community Climate Action Framework. The Framework, adopted by the Napa Valley Transportation Authority (NVTA) in 2010, provides a consensus-based context for further planning efforts by the individual cities and towns. It outlines a suite of actions that, when translated into locally specific programs and projects countywide, will help meet climate protection targets. Many of the implementing actions contained in this Climate Change Element are based on the actions identified in the Framework.

10.3 Key Findings

There are several challenges and opportunities facing St. Helena related to climate change. The following key findings are based upon comprehensive existing conditions analysis and community input.

Green jobs programs can help to build local capacity for solar installations and other energy saving strategies for homeowners.

- St. Helena is currently implementing a program to reduce GHG emissions from City facilities based on findings in the City of St. Helena Greenhouse Gas Emissions Reduction Action Plan Analysis (Final Report April 22, 2009).
- The City of St. Helena municipal operations emitted 3,506 metric tons of CO2e during the year 2010. Water and wastewater operations and employee commutes generated the largest proportions of total emissions 74 percent and 9 percent, respectively). Water transport facilities accounted for 6 percent of emissions, followed by City buildings (5 percent street lights (1 percent) and government-generated waste (less than 1 percent). By implementing measures for future action relating to building and equipment energy efficiency, fuel efficiency, alternative fuel options, and alternative energy generation, the City can make strides to meet its GHG reduction goals and be a model for other businesses and institutions seeking to reduce long-term emissions levels.
- The City participated in the development of the Napa Countywide Community Climate Action Framework, which contains 53 consensus-based actions intended to guide the participating jurisdictions in meeting GHG reduction goals. The collaborative process was managed by the Napa County Transportation and Planning Agency. A 2006 Bay Area Air Quality Management District (BAAQMD) report indicated that approximately 55 percent of GHG emissions in Napa County resulted from mobile source emissions. Effective

10 climate change

Innovative landscaping like rain gardens can beautify impermeable surfaces like parking lots while addresswater runoff concerns.

land use planning that reduces vehicle miles traveled and promotes alternate modes of transportation is essential to mitigating climate change. By focusing on improving bicycle and pedestrian connections across the City and reducing commute and truck trips, St. Helena can address auto-related emissions levels at both the local and regional levels.

- St. Helena's estimated 2018 baseline community-wide GHG emissions totaled 76,012 metric tons CO2e, and emissions were 13.0 MTCO2e per capita for the residential population and 6.7 MTCO2e per service population. Transportation emissions make up a significant portion of St. Helena's emissions (59 percent), with commercial/industrial energy use in second place (17 percent), and residential energy use in third (13 percent). Commercial/industrial and residential emissions have decreased since 2010. Transportation emissions appear to have significantly increased since 2010, however, this is due to a change in the methodology in accounting for VMT within the GHG inventory to be consistent with best practices and protocols.
- Over half of community-wide emissions in St. Helena result from on-road vehicles. Effective land use planning that reduces VMT and promotes alternate modes of transportation is essential to mitigating climate change. By focusing on improving bicycle and pedestrian connections across the city and reducing commute and truck trips, St. Helena can address auto-related emissions levels at both the local and regional levels.
- Like other communities throughout California, St. Helena is vulnerable to water shortages in the event of prolonged period of drought that could be exacerbated by climate change. Fully integrating water resource conservation policies and implementation measures into the City's Climate Change Element is essential to ensuring that St. Helena will have adequate water supplies to meet its future needs.
- A significant portion of St. Helena's economy relies on industry sectors that may be adversely affected by climate change, most importantly agriculture and tourism. By considering the water supply in future climate change scenarios and supporting measures to recycle and reuse water as much as possible in the near future, the City can begin to strengthen the viability of its industries, markets, and employment into the future.

Creating walkable streets and shopping districts can help to reduce dependence on automobiles as residents and visitors walk and bicycle more.

10.4 Goals

The goals of the Climate Change Element are:

Increase Citywide Transportation-Related Energy Efficiency.

The City seeks to reduce demand for fossil fuels by decreasing VMT, improving transit options and the fuel efficiency of vehicles, supporting the use of renewable energy-powered vehicles, and creating a bicycle and pedestrian-friendly environment.

Reduce Energy Demand Through Improved Building and Design.

St. Helena is dedicated to reducing energy demand by promoting development and construction that improve resource conservation and efficiency, and to improving the energy supply by switching from fossil fuels to renewables.

Reduce Consumption and Divert Waste.

The City is committed to achieving waste diversion of 75 percent to 90 percent by year 2020.

Ensure the Sustainable Management of Agriculture, Natural Resources, and Urban Forests.

St. Helena is dedicated to protecting and increasing the amount of vegetation and biomass in local soils, reducing emissions from agricultural sources, encouraging responsible and sustainable agricultural and landscaping practices, and significantly reducing water use to protect local water resources.

Increase Community Engagement and Advocacy.
The City seeks to increase participation in GHG reduction efforts through marketing programs and community outreach. In addition, they are committed to engaging and advocating for collaborative policy and legislative solutions at the local, regional, state, federal, and global levels.

Improve the Efficiency of Local Government Operations.
St. Helena is dedicated to reducing fossil fuel consumption by local government operations, improving the energy efficiency and reduction of carbon emissions of City and County facilities and operations, and reducing solid waste attributable to City and County operations and facilities.

10.5 Policies and Implementing Actions

A range of policies and implementing actions are outlined below and organized into the following topic areas:

1. Transportation and Mobility;
2. Buildings and Energy;
3. Consumption and Solid Waste;
4. Agriculture, Natural Resources, and Urban Forests;
5. Community Engagement; and
6. Local Government Operations.

The following policies and actions mandate, encourage, or allow certain initiatives to be pursued throughout the duration of the General Plan. Together they serve as strategic directions for City staff and partners, highlighting where time and resources should be focused. They reflect St. Helena's commitment to coordinating its climate change measures with countywide efforts to address climate change.

topic area
1 TRANSPORTATION AND MOBILITY

Policies

CC1.1 Promote a "walkable" and "bikeable" city.

CC1.2 Support transportation planning efforts to optimize fuel efficiency and reduce vehicle miles travelled on local roads.

CC1.3 Seek initiatives that provide efficient modes of transportation for visitors and residents.

TOP *California's rail system provides regional transit connections throughout the state.*

BOTTOM *Innovative solutions for parking lots can create self-sustaining spaces with less impact on the natural environment.*

Implementing Actions

CC1.A Adopt and implement pedestrian and bicycle networks within St. Helena that may connect to a countywide multi-use trail that extends from Calistoga to American Canyon.

CC1.B If feasible maintain and enhance existing express bus, local bus, and para-transit services. Provide shuttle service between the three upvalley towns. Support the establishment of a northbound express bus during peak commute hours. Ensure that these services provide opportunities to connect with existing and proposed countywide service improvements, including the transit center in Downtown Napa.

CC1.C Expand Park and Ride areas and other support facilities to encourage public transportation use and car and van pooling.

CC1.D Evaluate truck and freight rail routes through the city. Based on these findings, develop policies and strategies to improve circulation and neighborhood compatibility issues.

CC1.E Adopt and implement transportation plans in accordance with the Napa Valley Transportation Authority's (NVTA) Strategic Transportation Plan to increase transit service and ridership in St. Helena and connections with County transit services.

CC1.F Establish programs to reduce vehicle miles traveled by supporting local hiring, food production, farmers' markets, and community-based "buy local" campaigns. For General Plan purposes, "local" includes St. Helena and its residents, as well as the residents and areas of the surrounding towns and unincorporated County that have traditionally been served by St. Helena's commercial and retail services.

CC1.G Evaluate parking standards to help reduce vehicle miles traveled and reduce vehicle idling.

CC1.H Increase walkability and bikeability to encourage a reduction in local auto trips. Strengthen outreach to increase awareness of pedestrian and bicycle amenities throughout the city.

CC1.I Require discretionary development projects to assess and mitigate the impacts of vehicle miles traveled using transportation demand management programs, including providing transit amenities.

CC1.J Initiate programs that encourage car-free tourism through incentives, outreach, awareness, and creating a bicycle and pedestrian-friendly environment.

CC1.K Adopt and implement programs to assist businesses and organizations switch from fossil fuel-powered fleet vehicles to vehicles powered by clean, renewable energy sources.

CC1.L Develop parks and open spaces in support of efforts to create walkable, bikeable mixed-use neighborhoods, especially to complement higher-density development and connect lower-density areas.

CC1.M Design and operate the public street system to optimize fuel efficiency. Consider fuel efficiency in the design of street extensions, connections, and right-of-way controls at intersections, and monitor and adjust traffic signals.

topic area
2 BUILDINGS AND ENERGY

Policies

CC2.1 Encourage measures to reduce energy demand through conservation and efficiency.

CC2.2 Support local efforts to improve the energy supply by switching from fossil fuels to renewables.

Transit agencies in some parts of the state are building their fleets with buses that use natural gas and other alternative fuel sources.

Implementing Actions

CC2.A Partner with the County of Napa to implement an AB811 program that makes funding available to residential and commercial property owners seeking to improve their properties to conserve energy and water, and to generate solar energy.

CC2.B Pursue state and federal funding programs designed to reduce energy demand through conservation and efficiency.

CC2.C Implement Title 24 energy conservation standards for new buildings, and other State building code standards for high performance "green" buildings. Utilize established green building standards, such as Leadership in Energy and Environmental Design (LEED) and Build it Green.

CC2.D Continue to reduce energy use by promoting domestic water conservation and requiring water-efficient landscape improvements associated with new construction.

CC2.E Reduce greenhouse gas emissions from buildings and energy use. Require or request that new development projects analyze greenhouse gas emissions due to energy use and incorporate energy and safe yield water conservation measures into projects.

topic area
2 BUILDINGS AND ENERGY

CC2.F In support of countywide energy generation efforts, increase local renewable energy generation. Adopt production standards for the City based on quantifiable measures that increase per capita generation levels.

CC2.G Remove regulatory impediments and economic disincentives associated with the generation and use of energy from renewable sources, such as wind, geothermal, and solar energy.

CC2.H Establish programs that encourage owners to retrofit existing structures to incorporate energy-efficient and "green" building standards.

(Also see the Community Design Element, Topic Area: 1)

New building technologies make it possible to reduce energy consumption and generate new energy using solar, wind, and water sources.

topic area
3 CONSUMPTION AND SOLID WASTE

Policies

CC3.1 Enhance recycling, composting, and source reduction services for residential and commercial uses to support Napa County's countywide waste reduction goal to achieve overall waste diversion of 75 percent to 90 percent by 2020.

(Also see the Public Facilities and Services Element, Topic Area: 4)

Implementing Actions

CC3.A Establish programs and create incentives to achieve a 75 to 90 percent citywide construction and demolition debris waste diversion level in support of Statewide goals.

CC3.B Establish programs and create incentives to achieve a 75 percent organic (food and green) waste diversion level in support of statewide goals.

CC3.C Establish citywide collection services for segregated food waste from commercial sources.

CC3.D Encourage home composting of organic waste.

CC3.E Create and support other programs, such as the Napa County Green Business Program and the green restaurant program, that help achieve the 75 to 90 percent overall waste diversion goal.

CC3.F Adopt environmentally-preferable purchasing measures and explore joint-purchasing agreements with partner agencies and businesses.

topic area
4 AGRICULTURE, NATURAL RESOURCES, AND URBAN FORESTS

Policies

CC4.1 Support efforts to protect and increase the amount of vegetation and biomass in soil and reduce emissions from agricultural sources.

CC4.2 Encourage responsible and sustainable agricultural and landscaping practices.

CC4.3 Strengthen water conservation measures that result in significant reductions in local water use and the protection of local water resources.

(Also see the Community Design Element, Topic Area: 1)

CC4.4 Support efforts to expand and improve the City's managed urban forest in order to reduce greenhouse gas emissions and improve overall air quality.

(Also see the Open Space and Conservation Element for additional policies and implementing actions relating to urban forests.)

CC4.5 Promote community gardens to reduce emissions generated in food transportation.

Wind turbines offer new opportunities for climate-friendly energy generation.

Implementing Actions

CC4.A Establish programs to support and encourage local agriculture, food production, and school and community gardens.

CC4.B Promote edible landscaping where possible.

CC4.C Establish programs and plans that create and enhance urban forests and greenways.

topic area
4 AGRICULTURE, NATURAL RESOURCES, AND URBAN FORESTS

CC4.D Assess the impact of land use changes, new vineyards, and urban development on carbon sequestration.

CC4.E Support efforts by local growers and restaurants to produce and use locally-grown food and remove associated regulatory hurdles.

CC4.F Revise ordinances to further protect habitat and mitigate the conversion of oak woodlands, natural resources, riparian habitat, and other important natural communities by permanently protecting similar habitats.

CC4.G Support and promote the Napa Green Certified Winery Program and the Napa Green Certified Land Program.

CC4.H Adopt landscape ordinances that promote drought resistant plants, and limit or restrict lawns and other high-water-demand plants unless irrigated with reclaimed or grey water systems.

CC4.I Develop and adopt energy-saving and environmentally-sound domestic water conservation plans.

CC4.J Establish an urban forestry program to ensure a coordinated and comprehensive approach to maintaining and increasing the City's trees especially native varietals when possible.

TOP *Local gardens help reduce the footprint of fruits and vegetables.*

BOTTOM *A boatload of trash illustrates how much waste enters natural ecosystems.*

topic area
5 COMMUNITY ENGAGEMENT

Policies

CC5.1 Support local efforts to market programs and conduct community outreach through schools, non-profit groups, community organizations, and the business community to increase participation in greenhouse gas (GHG) reduction efforts.

CC5.2 Engage and advocate for collaborative programs, policies, and legislative solutions at the regional, state, federal, and global levels to reduce global GHG emissions.

CC5.3 Expand local awareness about gardening, composting, and agriculture.

Incentives programs can help to encourage everything from green roofs to composting and recycling to reuse of materials.

Implementing Actions

CC5.A Partner with the St. Helena Unified School District, private schools, community-based non-profit organizations, and others to undertake public outreach and education efforts that broaden community involvement in reducing greenhouse gas emissions.

CC5.B Market and encourage participation in incentive programs that improve energy efficiency.

CC5.C Foster and build public-private partnerships that help achieve greater energy efficiency and reduce greenhouse gas emissions.

CC5.D Promote programs designed to advance sustainable business practices in St. Helena. Use the Napa County Green Business Program as a model for a City-based effort.

CC5.E Participate in and help develop effective regional, state, and federal solutions to reduce emissions.

topic area
5 COMMUNITY ENGAGEMENT

CC5.F Engage and assist local agencies and utility companies toward achieving greenhouse gas reduction targets.

CC5.G Enable long-term solutions by investing in and supporting science and engineering education.

CC5.H Support the United States' participation in international greenhouse gas reduction efforts.

CC5.I Establish an outreach program to raise public awareness about gardening, composting, and agriculture. Utilize public access television, the City's website, public notices, and workshops to engage a broad and diverse range of residents.

Farmers markets and community gardens provide residents with direct connections to the food supply.

topic area
6 LOCAL GOVERNMENT OPERATIONS

Policies

CC6.1 Ensure that the City leads by example in managing its local government operations while implementing the following policy directions:

- Encourage the reduction of fossil fuel consumption by local government operations.
- Improve energy efficiency, implement alternative and renewable energy solutions, and reduce greenhouse gas emissions in City and county facilities and operations.
- Reducing solid waste from City and County operations and facilities.

Community programs can help engage both adults and children in learning about their environments and about the impact of greenhouse gas emissions on the climate.

Implementing Actions

CC6.A Transition City fleets to vehicles powered by clean, renewable energy sources.

CC6.B Install electric vehicle charging stations with funding from state and federal sources.

CC6.C Encourage alternatives to agency employees' use of single-occupancy vehicles by providing bicycle racks, preferential parking permits for carpools and vanpools, commuter information, and other incentives.

CC6.D Conduct audits and regularly monitor the effectiveness of City and County energy efficiency implementation measures and adapt them to meet targets.

topic area
6 LOCAL GOVERNMENT OPERATIONS

CC6.E Convert street lighting, water pumping, water treatment, and other energy-intensive operations to more efficient technologies.

CC6.F Ensure that new municipal or substantially-renovated municipal facilities incorporate cost-effective strategies for reducing greenhouse gas emissions, conserving energy and water, and utilizing sustainable construction practices.

CC6.G Consider carbon emissions from the production, transportation, use, and disposal of goods as a criterion for City purchasing decisions.

CC6.H Establish a comprehensive, user-friendly recycling program that involves all City departments and facilities. Recover 70 to 85 percent of all waste generated in City operations.

CC6.I Install renewable energy systems at City facilities.

CC6.J Review and update the implementation actions recommended by the City's Climate Protection Task Force (CPTF) on an annual basis.

Collaboration between governmental entities, residents and community groups ensures that actions have significant impacts.

housing

The 2015 - 2035 Housing Element is a separate stand alone document.
A copy is available on the City's website.

chapter twelve

parks and recreation

12 parks and recreation

A comprehensive network of parks and open spaces brings many benefits to the St. Helena community.

1 introduction
2 land use and growth management
3 economic sustainability
4 public facilities and services
5 circulation
6 historic resources
7 community design
8 open space and conservation
9 public health, safety and noise
10 climate change
11 housing
12 parks and recreation
13 arts, culture and entertainment

12.1 Purpose of the Element

The Parks and Recreation Element presents a framework for developing and maintaining a comprehensive system of quality parks, pedestrian and bicycle trails, recreational facilities and programs. It aims to effectively guide the City's parks and recreation programming and to support community members' health, entertainment and high quality of life. Key to these efforts is increasing the overall acreage of useable, publicly accessible park space in St. Helena, and creating and maintaining a network of bicycle and pedestrian trails that establishes connections from residential neighborhoods to parks, schools, and goods and services.

The Parks and Recreation Element includes the following sections.

- **12.2 Parks and Recreation Framework for St. Helena**. Summarizes key issues related to parks and recreation in St. Helena (p. 12-3).
- **12.3 Key Findings**. Identifies key findings based on an existing conditions analysis and extensive community outreach (p. 12-12).
- **12.4 Goals**. Defines overarching goals to guide policies and implementing actions (p. 12-14).

- **12.5 Policies and Implementing Actions**. Identifies policies and implementing actions to expand and maintain a comprehensive parks and recreation system (p. 12-15).

To supplement the policies and implementing actions included here, additional policies and actions associated with the provision of trails, the urban/agricultural interface, and the maintenance of open space for recreation can be found in the Open Space and Conservation Element.

The historic gazebo at Lyman Park is a favorite site for parties and events.

12.2 Parks and Recreation Framework for St. Helena

The St. Helena community has expressed the desire for a comprehensive and integrated system of parks and recreational facilities to meet residents' diverse recreational needs. The system can include parks, open spaces, and community facilities linked together along natural creek corridors and pedestrian-friendly streets. In addition, these parks and recreational resources can develop concurrently with pedestrian and bicycle improvements that link neighborhoods and connect the community to key destinations throughout the city. Figure 12.1 is a map that illustrates the array of parks and recreation facilities that currently exist in St. Helena. Together, these assets present opportunities to build the desired network of parks, open spaces, and recreational amenities for current and future residents.

12 parks and recreation

A comprehensive parks and recreation system includes parks, open spaces, and community facilities linked together.

NETWORK OF PARKS AND RECREATION AMENITIES

For St. Helena, a comprehensive parks and recreation system includes parks of various sizes, community gardens, community orchards, community and recreational facilities, accessible open space, a variety of natural features, and connectors such as paths, trails, and green streets. By enhancing these amenities and the connections that link all the components together, St. Helena can create a valuable resource system that helps to fulfill the desired characteristics that residents have identified for their community. These include equitable access to open space and community facilities, a strong connection to agriculture, environmental sustainability, and community livability.

PARK CLASSIFICATION SYSTEM

This General Plan establishes a parks classification system for St. Helena composed of three general park types: parklets/mini parks, neighborhood parks, and community parks (see Table 12.1).

- **Mini Parks / Parklets** – small, limited use sites generally less than 1 acre in size. They vary from small greens with open grass areas, children's playgrounds, or small picnic spaces, to small squares and plazas.
- **Neighborhood Parks** – mid-sized parks intended to serve nearby residents living within a ½-mile radius. They are primarily designed for informal, unsupervised recreational activities and typically feature facilities such as children's playgrounds, picnic areas, pathways, open grass areas for passive use, outdoor basketball courts, and non-lighted, multi-use ball fields. Neighborhood parks generally range from 4 to 10 acres in size.
- **Community Parks** – larger facilities intended to serve residents living within a 1- to 2-mile radius. They are generally more than 10 acres in size and designed with a sports field or similar facility that provides active and structured recreation opportunities as the central focus, although they can also provide opportunities for passive recreation. Community parks attract people from a wider geographic area than neighborhood or mini parks and require ancillary facilities such as parking, lighted sports fields, and restrooms. A community park can also function as a neighborhood park for nearby residential areas.

While the General Plan provides over-arching guidance for parks and recreational facilities in the community, a comprehensive parks master planning process will provide an opportunity to further delineate St. Helena's park types and performance standards, identify long-term goals for the community, describe current and future needs and community preferences, and prioritize parks and recreational facilities improvement needs.

TABLE 12.1: St. Helena Parks by Park Category

Category	Park	Acres	Site Characteristics
Mini	Baldwin Park	0.76	Mowed grass; picnic tables; handicapped accessible from Voorhees Circle.
	Lewis Station	0.13	"Pocket Park" with picnic tables, benches, and restroom.
	Lyman Park	0.89	Picnic tables; grassy areas; children's play area; gazebo for events; one restroom.
	Mary Fryer Park	0.84	Picnic tables; play equipment designed for pre-school-aged children.
	Mennen Park	0.17	Nut and fruit trees, barbeque amenities, walking paths, grassy areas
	St. Helena Skate Park	0.41	Skatepark
	Stephen C. McCullagh Park	0.14	Sandbox, climbing rock and rope structures, benches, play area
	Stonebridge Park	0.75	Located on the Napa River; grassy areas with limited parking.
Neighborhood	Jacob Meily Park	5.42	Play field; heritage orchard, picnic area, children's playground, and restroom.
	Wappo Park	6.65	Trail and picnic facilities.
Community	Crane Park	11.27	Six lighted tennis courts; six lighted bocce courts; two Little League baseball fields; horseshoe pits; children's playground; two restrooms; picnic areas; Farmer's Market; and skate park.

CONCEPTS, TRENDS AND IDEAS

The Many Benefits of Parks and Recreation

In recent decades, cities and counties have paid greater attention to the many benefits of parks. Cities have adapted their marketing strategies to focus less on the defining physical features of parks and more on how parks benefit the entire community. The Benefits Movement was introduced by the National Recreation and Park Association in the mid-1990s; this movement has been defined as "an ongoing process by leisure service providers to identify desirable individual, economic, community and environmental benefits derived from recreational experiences, including the assignment of resources to address and promote these benefits and their outcomes."

Personal and Community Benefits

Evidence indicates that people tend to exercise more when they have access to parks and open spaces, thereby increasing health and reducing the risk of many physical, life-threatening conditions. Studies also show that providing access to parks and the outdoors creates benefits for psychological health. Physical activity is commonly known to relieve symptoms of depression and anxiety.

Parks provide spaces for outdoor play for children and in turn support their physical, behavioral and cognitive development. By providing engaging recreational opportunities for St. Helena's children and youth, parks and recreation systems can promote healthy and active play.

Children's play environments support physical, behavioral and cognitive development and promote healthy and active play.

Top: The St. Helena's Farmers Market attracts residents and vistors in support of local and regional agriculture and commerce.

Bottom: Parks designed to showcase natural amenities can bring life to a neighborhood and provide important environmental benefits.

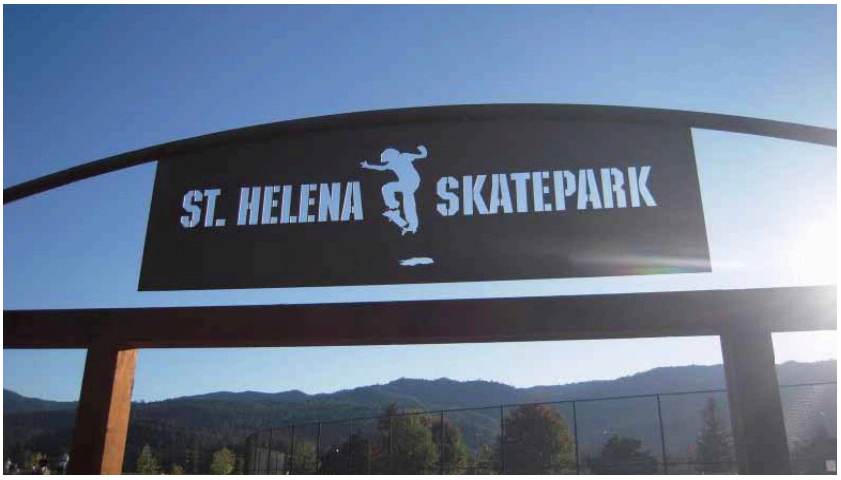
Economic Benefits

A healthy parks and recreation system is very important to local economic development. The availability of accessible open space is an issue that is central to quality of life, as access to open space is an important factor that people consider when choosing where to live or establish their business. Recreational amenities, including parks and green spaces, can help increase the value of nearby properties. Therefore, parks bring economic benefits to individual property owners and businesses and strengthen the local tax base, generating more revenue for public services and facilities, including new parks and open spaces.

Environmental Benefits

Open space and park lands can provide multiple environmental benefits for local communities. Parks help preserve ecologically and historically significant natural resources, in part through the preservation of wildlife habitat. Parks can also help to protect significant historic features of the natural landscape and play an essential role in protecting water and air quality. For example, green spaces help filter and reduce storm water run-off from more developed areas. Parks with healthy tree canopies help capture carbon dioxide and other polluting gases. By working to build an interconnected network of green corridors and open spaces, parks planners can help repair and restore ecosystems rather than detract from them.

12 parks and recreation



The St. Helena Skatepark, located in Crane Park, is a popular spot for teens.

RECREATION FACILITIES AND PROGRAMS

The City of St. Helena offers an array of recreational programs and services to residents. Programs include youth sports and summer enrichment programs, a middle school teen program, and recreational opportunities for adults and seniors. Local community centers, schools, parks, and recreation facilities, shown on Figure 12.2, host many of these programs. Key recreational facilities include a newly-constructed skate park, teen center, bocce courts, athletic fields, a dog park, a community garden, a public vineyard, and a community swimming pool.

As the city evolves, it will be important to ensure that these programs and services continue to respond to the changing demographics, interests, and needs of residents. By conducting regular citywide needs assessments in conjunction with the creation of a parks and recreation master plan, the City can update, revise, and develop new programs to accommodate the evolving needs of the community.

In addition, conducting regular needs assessments will provide opportunities to evaluate the location of parks and recreation facilities in the city to ensure that residents have safe, walkable, and equitable access to key recreational facilities, and that these facilities continue to provide a high level of service.

GENERAL PLAN UPDATE
City of St. Helena

DYETT & BHATIA
Urban and Regional Planners

Residents enjoy a sunny day of bocce ball at Crane Park.

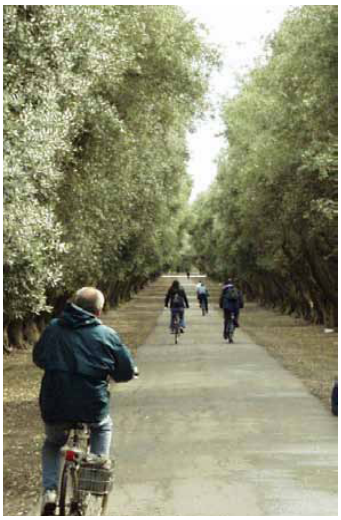
12.3 Key Findings

There are several challenges and opportunities facing St. Helena related to parks and recreation. The following key findings are based upon comprehensive existing conditions analysis and community input.

- Since the 1993 General Plan Update, the City has developed a number of new parks: Meily Park, centrally located on Pope Street on the east side of State Route 29; the Constantini property was added to Crane Park, creating the space for additional parking and improved vehicular access; and Wappo Park, which includes a dog park, was completed in 2012.
- With approximately 27 acres of parkland and a population of 5,900 in 2018, St. Helena's current ratio is 4.7 acres of parkland per 1,000 residents; however, the General Plan identifies additional acreage for future parks to meet the target of 5.0 acres per 1,000 established in this Plan. Notably, the Lower Reservoir, owned by the City, and open space areas along Sulphur Creek present opportunities to add significant acreage to the park system, and help achieve local and national park standards.
- State legislation known as the "Quimby Act" allows cities to set a standard of up to 5 acres of parkland per 1,000 population for purposes of formulating a park impact fee for new development. By requiring new development to dedicate parkland pursuant to the Quimby Act, the City can help ensure

that adequate parkland is available to meet the needs of the community as development is approved.

- Community members have strongly voiced the need for additional active recreation facilities to meet community needs, advocating in particular for increased and improved soccer facilities. Working with local schools and other groups in the community to identify new park sites where soccer facilities may be located to address the need.
- St. Helena offers a variety of recreational programs; including adult and youth sports leagues and camps, bocce, belly dancing, dog obedience, and summer programs for students at a range of grade levels. Recent efforts to raise funds for a skate park were successful and the park was opened in the fall of 2009. Expanding offerings to include programs in the creative and performing arts for residents of all ages and abilities can augment the City's current programs and encourage even greater participation.



St. Helena envisions a complete network of bicycle and pedestrian trails that connect residents and visitors to the places they want to go.

"Pocket parks" such as Lewis Station are fundamental to a comprehensive and interconnected parks system, especially in communities with limited opportunities to develop large, multi-acre parks.

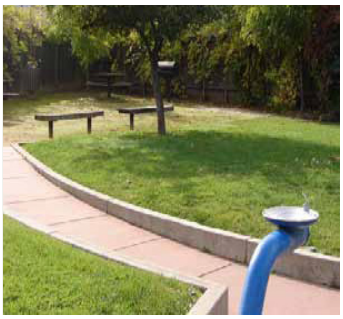
12.4 Goals

Provide High-Quality Parks and Recreation Services. St. Helena is dedicated to providing high-quality park facilities and recreation programs that meet the needs of residents of all ages and abilities, while efficiently managing fiscal resources and accommodating community priorities.

Achieve at a minimum the City's standard of 5.0 acres of parkland per 1,000 population, which is the maximum park ratio that can be used in establishing a park impact fee under the State legislation known at the Quimby Act. Despite the limitations imposed on the City by the Quimby Act, it is the City's ultimate goal to attempt to achieve the nationally recommended standard of 10.5 acres of park land per 1,000 residents.

Develop a System of Interconnected Bicycle and Pedestrian Trails. The City is committed to providing residents and visitors with opportunities to walk or bicycle throughout the city and the Napa Valley region, while promoting city-wide efforts to encourage participation in active, healthy alternate modes of transportation.

12.5 Policies and Implementing Actions



A range of policies and implementing actions are outlined below and organized into the following topic areas:

1. A Comprehensive and Interconnected System of Parks;
2. Equitable Park Distribution and Access;
3. Urban/Agricultural and Parks Interface;
4. Park Facilities and Recreation Programs;
5. Community Participation and Partnerships; and
6. Bicycle and Pedestrian Amenities.

The following policies and actions mandate, encourage, or allow certain initiatives to be pursued throughout the duration of the General Plan. Together, they serve as strategic directions for City staff and partners, highlighting where time and resources should be focused.

Funding and maintenance of existing parks and development of new parks are both necessary to ensure safe and convienent access to outdoor recreation.

topic area
1 A COMPREHENSIVE & INTERCONNECTED SYSTEM OF PARKS

Policies

PR1.1 Retain the park standard from the 1993 General Plan of 5.0 acres of parkland per 1,000 residents, while striving for the nationally recommended standard of 10.5 acres per 1,000 residents.

PR1.2 Enhance the community's quality of life and ensure a widely accessible environment through the provision of a citywide system of parks and open spaces. Identify and develop linkages, corridors, and other connections to provide an aesthetically pleasing and functional network of parks, open space areas, and bike paths throughout the city.

PR1.3 Identify park land opportunity sites to ensure that the City can meet and possibly exceed its parkland standard of 5.0 acres per 1,000 residents. Locate new parks to ensure that City park facilities are equitably distributed throughout all areas of the city and residents of all ages can access them safely and conveniently.

PR1.4 Require park land dedications or civic improvement fees on all new residential, commercial, and industrial developments to meet the standard of 5.0 acres of parks per 1,000 residents.

PR1.5 Ensure adequate funding to acquire new park lands as they become available.

PR1.6 Develop new parks only after existing parks have received adequate funding and maintenance.

The interconnection and accessibility of parks and facilities should be central goals of a Parks and Recreation Master Plan.

topic area
1 A COMPREHENSIVE & INTERCONNECTED SYSTEM OF PARKS

Implementing Actions

PR1.A Develop a comprehensive, long-range Parks and Recreation Master Plan to aid the City in creating an integrated system of parks. The plan should be updated periodically to address changing recreation interests, trends, needs, and priorities. The Parks and Recreation Master Plan should:

- Identify long-term goals for the Parks and Recreation Department and the community;
- Describe current and future needs, interests, and community preferences for improving new parks and community facilities, and expanding or initiating new programs and services;
- Present a long-range plan for physical park and community facility improvements;
- Define performance standards (such as park function, size, and service area radii) and further develop park design guidelines and criteria;
- Prioritize projects;
- Identify the proportion of Civic Improvement Fees that will be contributed to the development and maintenance of parks and recreational facilities; and
- Outline funding mechanisms and strategies for managing the City's commitments, so that new requests and initiative are considered in light of existing commitments

Subsequent actions in this Element may be included in the Parks and Recreation Master Plan.

topic area
1 A COMPREHENSIVE & INTERCONNECTED SYSTEM OF PARKS

PR1.B Create opportunities to develop additional parks at the following locations:

- The City-owned land along the Napa River and Pratt Avenue for passive recreational uses;
- Land adjacent to York and Sulphur Creeks, as well as the Napa River levee;
- The water treatment plant site;
- The City-owned Lower Reservoir area for a water-oriented community park and recreational facility; and
- Ensure that new parks are developed to include bicycle and pedestrian trails.

PR1.C Identify a variety of funding sources for new parks and park improvements, including park land dedication, in-lieu fees, and regional, state, and federal grant programs, public/private partnerships, public/public partnerships with the St. Helena Unified School District, Conservation easements for public use, as well as other City funding sources.

PR1.D Strive to acquire additional park land to meet or exceed the minimum standard of 5 acres of parkland per 1,000 residents and, ultimately, to achieve the target of 10.5 acres per thousand residents.

PR1.E Develop a comprehensive network of bicycle and pedestrian trails that links the City's parks and enhances bicycle and pedestrian connectivity throughout the city and the region.

PR1.F Mandate City park land dedication requirements for new infill projects. Include specific park acreage and use requirements according to the type, scale, and population and increase of new development. Consider in-lieu fees for small infill projects.

topic area
2 EQUITABLE PARK DISTRIBUTION AND ACCESS

Policies

PR2.1 Distribute parks and recreational facilities throughout the city to ensure that all residents have convenient access to parks and recreational programs and facilities.

PR2.2 Construct new parks and recreation facilities to accommodate community needs.

PR2.3 Ensure that parks and recreation programs have safe and convenient access.

Focus on creating a parks and recreation system that is accessible to all residents.

topic area
2 EQUITABLE PARK DISTRIBUTION AND ACCESS

Implementing Actions

PR2.A Prioritize the construction of new parks and recreation facilities to ensure that they are distributed equitably to all areas of the city. Park and recreation facility development studies should include the potential impacts of development on surrounding natural resources and agricultural areas.

PR2.B Encourage the inclusion of pocket parks that include amenities, such as picnic tables, restrooms, shade and recreation spaces near retail, commercial, and industrial areas.

PR2.C Locate parks and recreation facilities in areas that are easily accessible by public transportation, as well as cars, bicycles, and pedestrians.

PR2.D Where possible, ensure that recreation programs and access to facilities are provided at costs affordable to all St. Helena residents.

PR2.E Develop and implement a list of planned parks and recreation facilities.

PR2.F Identify community locations that are not within a 10-minute walk of a park or recreation facility. Develop parks in the identified areas to ensure an equitable distribution of parks citywide.

PR2.G Encourage the development of parklets throughout the city.

PR2.H Encourage the development of linear parks throughout the city.

Active recreation is an important part of community life for many St. Helena residents.

topic area
3 URBAN/AGRICULTURAL AND PARKS INTERFACE

Policies

PR3.1 Ensure that the design and development of parks and recreation facilities preserves viewsheds and creates a buffer between urban and agricultural uses, where necessary.

PR3.2 Protect sensitive habitat, agricultural land, and open space when planning and maintaining City park lands.

PR3.3 Support local wildlife conservation efforts by incorporating habitat elements in urban/agricultural interface areas and ensuring the protection of migration corridors.

Protecting sensitive agricultural land and preserving viewsheds are important elements of park and facility design and development.

topic area
3 URBAN/AGRICULTURAL AND PARKS INTERFACE

Implementing Actions

PR3.A Develop design guidelines for recreational facilities that preserve viewsheds and maintain a transition buffer between urban and agricultural uses. Include specific design criteria regarding recreational trails and picnic areas adjacent to agricultural uses.

PR3.B Identify locations where new recreational programs and facilities may be constructed.

PR3.C Design and locate new parks to minimize noise and activity impacts on nearby agricultural and residential uses. This includes requiring context-sensitive site designs that minimize negative impacts on surrounding uses, such as pathway and picnic area locations, ball field usage and park lighting.

PR3.D Provide habitat elements in urban/agricultural interface areas. Habitat elements may include roosting trees and nesting boxes for birds, bats, and other wildlife, as appropriate.

topic area
4 PARK FACILITIES AND RECREATION PROGRAMS

Policies

PR4.1 Develop systematic and comprehensive plans to guide the development and operation of City parks and recreational programs.

PR4.2 Balance preservation, education, recreation, and public health and safety in park and open space planning.

PR4.3 Provide park areas for residents of all ages to meet a variety of recreational and social needs, including: seniors; formal, active uses; passive uses that allow for interaction with natural landscapes; and interpretive programs that highlight geomorphology, ecology, cultural resources, agricultural heritage, and historic preservation.

PR4.4 Ensure that all parks and recreational facilities are attractive, safe, and well-maintained with adequate lighting.

PR4.5 Prioritize park acquisitions and improvements that expand and enhance St. Helena's active recreation facilities and programs to accommodate diverse community needs and interests.

The St. Helena Recreational Facility provides opportunities for residents to create and give back to the community, to make healthy choices, to learn, and to grow.

topic area
4 PARK FACILITIES AND RECREATION PROGRAMS

Implementing Actions

PR4.A If feasible, revise and update the City's recreation program in order to enhance existing programs and/or develop new programs.

PR4.B Promote design guidelines for the development of parks and recreation facilities. Design parks and recreation facilities that are attractive, safe, and easy to maintain. This action may be included in a Parks and Recreation Master Plan.

PR4.C Identify locations to accommodate active recreational uses to meet city-wide needs. Potential locations include:

- Bicycle and pedestrian trails, interpretive areas, trail heads, and comfort stations along York and Sulphur creeks and the Napa River; and
- A community park at the City-owned Lower Reservoir area

PR4.D Support opportunities to involve children and youth in a participatory planning process for the planning, design, construction, and maintenance of City parks.

PR4.E Design children's play areas to include shade and wind protection.

PR4.F Provide multi-purpose event spaces for events in the park system, where possible.

PR4.G Install art designed by local artists in parks, where possible.

PR4.H Encourage the development of soccer fields, multi-sport facilities and open access to a community pool.

PR4.I Identify key improvements to existing parks, such as parking, picnic facilities, restrooms, tot lots with play structures, and multi-modal access points. This action may be included in a Parks and Recreation Master Plan.

Jacob Meily Park's playground and turf area accommodate active recreational uses for children and adults alike.

topic area
5 COMMUNITY PARTICIPATION AND PARTNERSHIPS

Policies

PR5.1 Encourage partnerships with local organizations and the private sector to provide, develop and maintain parks, recreation facilities, and programs.

PR5.2 Ensure that a broad cross-section of St. Helena stakeholders participates in the planning, design, and maintenance of parks and recreational amenities.

PR5.3 Encourage volunteerism, mutual responsibility and community spirit to set the tone that St. Helena's public parks and open spaces belong to everyone.

Community volunteerism and stewardship are essential to creating safe, clean and accessible parks and recreational facilities for St. Helena residents.

topic area
5 COMMUNITY PARTICIPATION AND PARTNERSHIPS

Implementing Actions

PR5.A Emphasize joint planning and cooperation with all public agencies as the preferred approach to meeting St. Helena's parks, facilities and program needs.

PR5.B Mandate City parkland dedication requirements for new infill projects. Include specific park acreage and use requirements according to the type, scale and population and increase of new development. Consider in-lieu fees for small infill projects.

PR5.C Provide local organizations, the St. Helena Unified School District and the private sector with opportunities and support for creating and implementing solutions to meet the City's parks and recreation facilities' needs.

PR5.D Cooperate with local groups in designing and constructing recreation facilities. Where possible, coordinate recreation and child care programs and facilities with school district programs.

PR5.E Negotiate joint-use agreements for recreation facilities with the St. Helena Unified School District.

PR5.F Involve the private sector in providing and maintaining parks and recreation facilities through formal agreements with the City and in sponsoring increased volunteerism.

topic area
5 COMMUNITY PARTICIPATION AND PARTNERSHIPS

PR5.G Investigate the feasibility of creating a non-profit foundation to seek and receive funds for the support of parks and recreation programs. Look to St. Helena's successful library foundation as a local model.

PR5.H Foster neighborhood park planning committees, including neighborhood residents, business owners, and representatives from local groups to help plan, design, and maintain parks and recreational facilities.

PR5.I Work with community members and representatives of local sports organizations to define facilities needs as community needs change with time.

PR5.J Develop a public outreach program to involve community members in park maintenance and upkeep, and in mitigating vandalism. Create park signage to encourage responsible use of parks, and partner with the police force to support enforcement efforts.

topic area
6 BICYCLE AND PEDESTRIAN AMENITIES

Policies

PR6.1 Promote walking and bicycling as safe and convenient modes of transportation.

PR6.2 Develop a comprehensive network of bicycle and pedestrian trails to enhance bicycle and pedestrian connectivity throughout the city and the region. *(Also see the Community Design Element, Topic Area 4)*

PR6.3 Promote the inclusion of bicycle and pedestrian trails, and bicycle lanes throughout the city, as well as connections to regional trail systems, such as the Napa Valley Vine Trail.

PR6.4 Carefully evaluate whether new bicycle and pedestrian trails can be developed and enjoyed without significant environmental risk to nearby sensitive habitat, including fish habitat.

PR6.5 Ensure that new bicycle and pedestrian trails near actively farmed agricultural areas are developed in a manner that minimizes risk of injury to pedestrians and cyclists from active farming operations.

Bicycle amenities in parks encourage community members to bike more often.

topic area
6 BICYCLE AND PEDESTRIAN AMENITIES

Implementing Actions

PR6.A Develop and adopt a citywide bicycle and pedestrian master plan to improve bicycle and pedestrian safety, and to encourage community members to walk and bike more often. Build on St. Helena's existing partnership with the Napa Valley Transportation Authority (NVTA) to ensure that the City's master plan is consistent with countywide transportation planning efforts. *(Also see the following elements: Circulation, Topic Area 2; Open Space and Conservation, Topic Area 2)*

PR6.B Develop guidelines for the design, construction, and maintenance of bicycle and pedestrian trails in St. Helena. Include guidelines for installing context-sensitive and solar lighting, and mitigating noise impacts from the trails. Include guidelines for wayfinding and interpretive exhibits that use signs, art, and other visual clues to enhance users' experiences. Highlight the rich history of the City and provide education and information for users. Coordinate the guidelines with Napa County or regional trail connections.

PR6.C Develop and adopt an ordinance that requires new development and redevelopment projects to provide bicycle and pedestrian improvements and amenities.

PR6.D Endeavor to secure easements or title to land along Sulphur Creek, York Creek, and the Napa River.

PR6.E Coordinate with countywide efforts to establish regional trail systems through the city limits.

PR6.F Develop a maintenance and operations plan for the City's trail network. Provide a high level of service to users by preventing deterioration, encroachment of vegetation, vandalism and crime. Consider including an Adopt-a-Trail program and invite local businesses to participate in trail maintenance. Include a funding program to support the plan.

chapter thirteen

arts, culture and entertainment

13 arts, culture and entertainment

Visual arts and music represent the two largest segments of the arts and culture sector in Napa County.

1 introduction
2 land use and growth management
3 economic sustainability
4 public facilities and services
5 circulation
6 historic resources
7 community design
8 open space and conservation
9 public health, safety and noise
10 climate change
11 housing
12 parks and recreation
13 arts, culture and entertainment

13.1 Purpose of the Element

The Arts, Culture, and Entertainment Element is not a State-required General Plan Element; however, it presents St. Helena's approach to reinforcing the City's unique identity and character through integrating arts, culture, and entertainment into the community's everyday life. The intent of this Element is to preserve and protect the community's heritage and cultural resources, celebrate its vibrant social fabric, and expand opportunities for arts enrichment. By supporting City leadership, active community participation, and strategic partnerships, this Element creates the foundation for ensuring that the arts flourish, while reinforcing St. Helena's unique character and identity.

The Arts, Culture and Entertainment Element includes the following sections.

- **13.2 Arts, Culture, and Entertainment in Napa County St. Helena**. Describes key community arts, culture, and entertainment issues (p. 13-3).
- **13.3 Key Findings**. Identifies key findings based on an existing conditions analysis (p. 13-8).
- **13.4 Goals**. Defines overarching goals to guide policies and recommendations (p. 13-11).

- **13.5 Policies and Implementing Actions**. Identifies policies and implementing actions to stimulate arts, culture and entertainment programming and contribute to the City's livability (p. 13-12).

Arts provide opportunities for intergenerational collaboration and can serve as important outlets of expression for youth.

13.2 Arts, Culture, and Entertainment in Napa County and St. Helena

Napa County has a rich arts, culture, and entertainment sector that includes independent artists, theater companies, and arts organizations. Regional arts and cultural resources are rooted in a long-standing and celebrated history of craftspeople and artisans throughout the Napa Valley. St. Helena shares an important part of this history and is closely connected with regional organizations, including the Arts Council Napa Valley and the Napa County Arts Commission.

The City of St. Helena has the greatest number of arts resources per capita in the Napa Valley and is home to the county's largest community of arts practitioners, particularly in the fine, visual, performing, literary and culinary arts. In addition, the city is a culturally diverse community that has drawn residents from around the world since its earliest days. St. Helena strives to continue to be a place where artistic expression and cultural diversity can flourish, and where an array of multi-faceted and ever-evolving art forms are created, performed, taught and exhibited.

Artistic and cultural festivals, performances and exhibitions are significant both socially and economically, for visitors and residents alike. They provide opportunities to celebrate the community's rich history and creative talent. In turn, residents stand to benefit from the exposure to new ideas that may result from participation in such events and activities. Ensuring that City arts, culture and entertainment policies support a wide array of media can broaden the overall impact of the arts on St. Helena's cultural growth and local economic development efforts.

13 arts, culture and entertainment

COMMUNITY EDUCATION AND ENGAGEMENT THROUGH ARTS, CULTURE, AND ENTERTAINMENT

The arts can play a central role in strengthening community pride, engaging community members in social and cultural activities and events and increasing community awareness about the histories and legacies of the Valley's natural landscape and its people. The arts also bring people together to celebrate, learn about, and preserve contributions to the City's contemporary culture, economy, and urban form. Opportunities abound in St. Helena to facilitate this type of interaction and exchange. Similarly, by partnering with the St. Helena Historical Society and local Native American groups, St. Helena can encourage the development of a series of historical tours, interpretive walks, and special events to celebrate the City's earliest history and people.

The arts also provide opportunities for intergenerational partnerships and collaboration and can serve as important outlets of expression and creativity for youth. Arts community representatives have expressed the need to reconnect young people to the arts. According to an Arts Council Napa Valley survey conducted in 2007, of the vast majority of Valley artists are over the age of 35. In effect, the future of the arts community depends on engendering arts appreciation and participation in local youth. Local artists seek to strengthen art programming in local schools and build partnerships between schools and local arts organizations. The City can provide additional support for school and after school-based arts programming through expanded Recreation Department arts offerings and increase funding to local arts organizations who offer arts programs to youth.[1]

1 *Arts Council Napa Valley. A Community Cultural Plan for Napa County. 2007.*

In 2008, more than 450 people attended the first St. Helena Dia de los Muertos celebration, a jointly-hosted event sponsored by local arts and family organizations. The event not only featured arts and crafts but also highlighted the heritage of the City's vibrant Latino community.

The performing arts are important for St. Helena both socially and economically.

In 2017, Napa Valley's arts and culture community came together at St. Helena's Lyman Park for "Arts in the Streets," with participation from the Robert Louis Stevenson Museum, Napa Valley Cooking School, the Napa Valley Writer's Conference, and Nimbus Arts, a community-owned nonprofit organization that aims increase the Napa Valley Community's access to arts.

Since 1981, St. Helena's Napa Valley College – Upper Valley Campus has hosted the annual Napa Valley Writers' Conference, an internationally-recognized literary gathering and educational event that attracts world-class poets and authors. Strengthening public awareness about the conference and supporting linkages between local schools and arts organizations can maximize the educational, cultural and economic development impacts of this important event to the City.

TOURISM AND LOCAL IDENTITY

The Napa Valley is known as a world-class food, wine, and lifestyle destination, and tourism is a strong economic driver of the local economy. The Valley's arts sector also has a role to play in local economic development, as national data indicate that cultural tourists tend to spend more and stay longer than other tourists.[2] By encouraging public arts funding, installations and events, including the earmarking of public funds, the City can capitalize on the potential of the arts to generate cultural tourism and contribute to economic development efforts that support local artists and businesses.

Public art can also play a significant role in enhancing community design, creating visual interest in a neighborhood, and also showcasing regional or local talent. Creating an Art in Public Places Program can help advance the goal of the City to establish the arts as an integral part of St. Helena's identity. This program can also expand St. Helena's national attention to more sectors outside of the well-established food and wine industry, demonstrate the City's commitment to leadership in public arts, pay homage to St. Helena's rich history, and provide a mechanism for meaningfully involving citizens in the design of the City's public spaces.

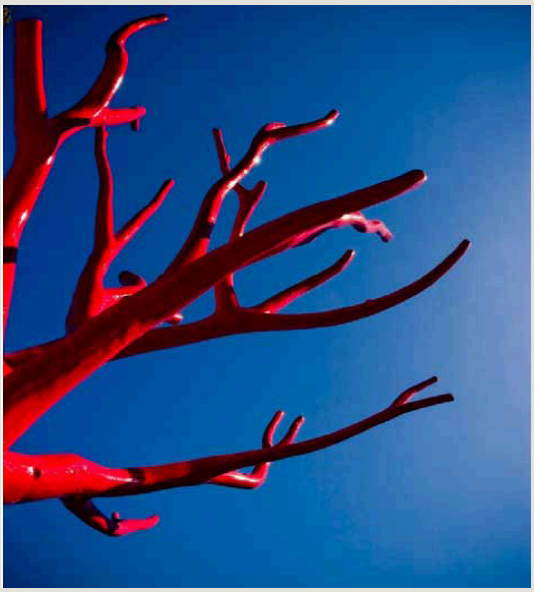
CONCEPTS, TRENDS AND IDEAS

The Benefits of Art in Public Places



Top: Public art can add color to an urban setting and create a visual point of interest for passersby.

Bottom: The Cultural Citizen Tree in San Jose's St. James Park is a 14-foot high mixed-media sculpture that symbolizes growth and change.

"Art in public places" refers to publicly accessible artwork that is integrated into the design of public or private property. Public art may draw from a city's unique identity and character through integrating arts, culture and entertainment into the community's everyday life. Also, public art can commemorate and interpret historical contributions, reflect unique identity and help to define a city's gateways, focal points and public or private uses.

Art installations and programs can support economic development and redevelopment goals by enhancing community livability and identity and by contributing to a stimulating cultural environment for both residents and visitors. St. Helena is dedicated to strengthening the arts and cultural sector, beautifying the environment, and ensuring that the arts flourish and reinforce St. Helena's unique character and identity through ongoing financial support for local visual, performing, cultural, literary and culinary arts.

13 arts, culture and entertainment

Creating an Art in Public Places Program can help advance the City's goal of establishing the arts as integral to St. Helena's identity.

13.3 Key Findings

There are several challenges and opportunities facing St. Helena related to arts, culture and entertainment. The following key findings are based on a comprehensive existing conditions analysis, stakeholder interviews and community input.

- The nonprofit arts and culture industry contributes significantly to the national economy by generating approximately $166.2 billion in total economic activity nationwide each year. In addition, the arts support 5.7 million jobs, generate $29.6 billion in tax revenue and contribute $104.2 billion to household incomes. By strengthening its arts sector, St. Helena can establish the arts as a key driver in the local economy.
- Visual arts and music represent the two largest segments of the arts and culture sector in Napa County, complemented by theater, dance, film, media, literary and cultural programming, creating a varied and diverse arts landscape across the county. In addition, St. Helena hosts world-renowned culinary arts resources that contribute greatly to the local economy and cultural community.
- St. Helena has the greatest number of artists and arts organizations per capita in the Napa Valley. Although the City's population is only five percent of the Valley's total population, St. Helena's artists and arts organizations account for 18 percent of the Valley's total.

In a 2007 Arts Council Napa Valley survey, 78 percent of Napa County's artists reported that they worked in their homes and supplemented their art income with alternate employment. Twelve percent of Napa County artists described themselves as full-time, professional artists. Many reported that they chose to live in Napa County for its charm and beauty, but find the high costs of living, studio, and rehearsal spaces challenging and limiting to their artistic pursuits. The City can help strengthen its arts community with actions to ensure there are places available for artists to live and create, including identifying locations for affordable studio, rehearsal and performance spaces, and reducing regulatory barriers that limit artists' abilities to live, create, exhibit, and sell their works from their homes.[3]

- St. Helena's arts and culture sector is strongly affected by the strength and vitality of the arts sector in the Napa region. Artists and arts organizations across the Napa Valley compete for attendance, local support and resources.
- In the 2007 Arts Council Napa Valley survey, arts community representatives highlighted a need for increased marketing and communications focused on the area's arts offerings. Representatives also cited the need for artists to have places to gather and communicate about upcoming events and partnership opportunities. By encouraging arts gatherings, events and public art installations, the City can assist local artists in marketing their work and collaborating to share information about upcoming events, facilitating interaction between artists and the local business community.
- Members of the arts community expressed a need for additional community arts, performance and exhibition spaces to meet the needs of emerging artists. They cited a need for venues in which to screen films, videos, and multimedia exhibits, and performing arts venues that can accommodate smaller dance or theatre companies. As part of a countywide effort to strengthen the local arts and cultural communities, St. Helena can undertake an arts facility inventory to identify possible locations for a cultural arts center designed to meet current unmet needs.

3 *Warshawski, Morrie. Executive Summary: Town Hall Meetings. Prepared on behalf of the Arts Council Napa Valley. 2007*

13 arts, culture and entertainment

City policies that support an array of media can broaden the overall impact of the arts on St. Helena's local economic development efforts.

- Actions available to the City to increase its support for the arts, culture and entertainment sector include creating a public funding mechanism to support public art and art events, reducing regulatory barriers such as licenses and permits that can be prohibitively expensive for emerging artists and refining zoning regulations that pertain to live/work studio spaces and artists' ability to sell work from their homes and studios.
- Currently, the City lacks a designated body to organize, oversee, and guide arts and cultural programming in St. Helena. Establishing a St. Helena Arts Committee to direct funding, work with the City to streamline permitting and approvals, , and liaise with the Napa County Commission for Arts and Culture and other regional efforts can strengthen collaboration and coordination within the local arts and culture sector. Such a committee would also ensure that arts and culture become a critical part of St. Helena's high quality of life and unique sense of place. In addition, including representatives of a wide range of arts media and cultural groups, as well as age, on the Arts Committee can ensure that St. Helena pursues an equitable and balanced arts program.groups on the Arts Committee can ensure that St. Helena pursues an equitable and balanced arts program.

13.4 Goals

The goals of the Arts, Culture and Entertainment Element are:

Celebrate Arts, Culture, and Entertainment.

St. Helena is committed to celebrating the contribution of its visual, performing, culinary and entertainment artists who help define the City's unique identity and the high quality of life.

Strengthen and Expand Arts, Culture, and Entertainment.

St. Helena is dedicated to strengthening its arts, culture, and entertainment sector, improving the economic health of the City, beautifying the environment, and incorporating the arts into daily life through ongoing financial support for local visual, performing, cultural, literary, and culinary arts.

Honor Culture and Heritage.

St. Helena seeks to venerate the past and present contributions of its residents and their diverse cultural and historic contributions to the City.

This stained glass greenhouse incorporates art into daily life in the Napa Valley.

Local concerts in the park provide opportunites for the community to gather, dance, and enjoy live music.

13.5 Policies and Implementing Actions

A range of policies and implementing actions are outlined below and organized into the following topic areas:

1. Community Enhancement and Economic Development;
2. Inclusive Programs;
3. Awareness, Education and Outreach; and
4. Civic Leadership

The following policies and actions mandate, encourage, or allow certain initiatives to be pursued throughout the duration of the General Plan. Together, they serve as strategic directions for City staff and partners, highlighting where time and resources should be focused.

topic area
1 COMMUNITY ENHANCEMENT & ECONOMIC DEVELOPMENT

Policies

AC1.1 Ensure widespread opportunities for arts exposure by integrating them physically and socially into community life in order to establish the arts as an integral part of St. Helena's identity.

AC1.2 Promote arts and culture as key components of St. Helena's historic, current and future identity.

AC1.3 Support collaboration between local business organizations to incorporate public art into the City's economic development strategies.

AC1.4 Increase the contribution of arts, culture, and entertainment to cultural tourism and local economic development efforts through partnerships with regional arts organizations.

Parades and festivals help to integrate celebration of art, history and culture into community life.

Implementing Actions

AC1.A Develop a program to expand major festivals and events that celebrate arts, culture, and history while contributing revenue to the City. Potential events include:

- Endeavors that feature the youth in arts, such as communitywide student recognition concerts and a youth arts festival;
- Theater-in-the-park performances;
- Dance;
- Outdoor film screenings;
- Art shows and art walks;
- Poetry readings;
- Holiday and cultural parades;
- Culinary and harvest celebrations;
- Open studios;
- Music festivals; and
- Art-based competitions.

AC1.B Develop and implement a marketing/public relations campaign that highlights artists and events in St. Helena. Possible City actions can include posting arts announcements on the City's website, installing a kiosk downtown that distributes local arts information to the community, and hosting events where artists and arts organizations can gather to share information with local business owners. Pursue opportunities to increase revenue due to cultural tourism. Partner with regional arts organizations to maximize the effectiveness of marketing and cultural tourism efforts.

AC1.C Adopt an Art in Public Places program and ordinance to ensure that public art projects occur efficiently and in a way that meets citywide objectives.

Local museums and sculpture gardens serve as an attraction for cultural tourists.

AC1.D Identify existing locations that can be used as studio, rehearsal, exhibition, and performance spaces. Support efforts to make these spaces affordable to local artists.

AC1.E Provide public performance spaces for musicians, dancers and other performing artists.

AC1.F Identify locations, where public or private, sponsored arts, cultural, and entertainment events can be held and activities can occur. Locations may include the St. Helena library, new development on Adams Street, and the Cameo Theatre.

AC1.G Provide zoning and developer incentives to encourage and reward the creation and retention of affordable spaces for artists to create and present work.

AC1.H Encourage development of public-private partnerships with culinary institutions to support local emerging chefs, bakers, specialty food makers, and other local emerging culinary artists.

AC1.I In cooperation with the St. Helena Historical Society, develop a public education and awareness program to promote the City's historical and cultural resources. Program components can involve self-guided walking tours, plaque identification programs, home and garden tours, speakers' series and other public events.

(For additional policies and implementing actions regarding historic and cultural education and outreach, see the Historic Resources Element.)

topic area
2 INCLUSIVE PROGRAMS

Policies

AC2.1 Encourage emerging art forms, artists, and diverse cultural traditions.

AC2.2 Promote affordable, relevant, and accessible cultural offerings for all St. Helena residents.

Implementing Actions

AC2.A Identify artists and outlets for diverse cultural offerings.

AC2.B Identify and direct funding to support artists who represent the diversity of the St. Helena community.

AC2.C Encourage the participation of all arts organizations in citywide marketing and promotional opportunities.

AC2.D Encourage performing arts organizations to make empty seats available at low or no-cost to St. Helena residents who cannot otherwise afford to attend performances.

St. Helena supports diverse cultural traditions and emerging artists and forms of art.

topic area
2 INCLUSIVE PROGRAMS

Visual arts are an important part of St. Helena's identity.

AC2.E Conduct outreach about local arts opportunities and events to non-English speaking groups, particularly the Spanish-speaking community.

AC2.F Consider a series of City-sponsored events that enable artists and cultural organizations to gather and exhibit works.

AC2.G Develop an incentives program to grow the capacity of local artists and arts organizations. Encourage affordable, strategically located studio workspaces, performance, and exhibit spaces in underutilized buildings; encourage professional exhibitions or demonstrations and sales; and provide tools and resources to secure support for their work.

AC2.H Make City property available for the public display of art.

topic area
3 AWARENESS, EDUCATION AND OUTREACH

Policies

AC3.1 Support community-based arts organizations that make significant contributions to the St. Helena community.

AC3.2 Nurture creativity and artistic talent through a rich offering of well balanced and equitably-distributed arts and cultural education programs and services.

AC3.3 Increase local awareness of the arts sector.

AC3.4 Support expanded arts programming in schools and strengthen youth arts opportunities provided by arts organizations.

Community-based arts make important contributions to the St. Helena economy and quality of life.

Implementing Actions

Encourage the creation of a St. Helena Arts Committee to embrace these concepts:

AC3.A Consider attracting world-class artists and research what is being done with successful art-based communities in other destinations in order to enhance the community and revenue.

AC3.B Engage local and regional media in generating interest and excitement about the importance of arts to the St. Helena community.

topic area
3 AWARENESS, EDUCATION AND OUTREACH

AC3.C Conduct and publish results of an arts in education survey of programming available through local schools and organizations. Using this research as a foundation, create an Arts Education Master Plan for St. Helena.

AC3.D Actively pursue joint-use agreements with the Napa County Office of Education, St. Helena Unified School District, faith organizations, public agencies, private entities, or nonprofit organizations that own or operate facilities within the city to maximize the use of facilities in the community for arts and entertainment purposes.

AC3.E Develop an effective outreach program for all City programs and services in order to ensure the successful delivery of information about arts program availability to the general public. Ensure that all materials are made available in Spanish and other languages spoken in the community.

AC3.F Encourage "artists-in-residence" programs in schools and arts organizations in order to expand opportunities for youth to experience the arts.

AC3.G Partner with the Arts Council Napa Valley and other arts organizations to support a centralized information bank and resources for schools, artists, and arts organizations for arts programming.

AC3.H Provide funding and support for artists and teachers to develop best practices.

topic area
4 CIVIC LEADERSHIP

Policies

AC4.1 Support improved coordination and communication between arts organizations.

AC4.2 Support the arts in partnership with the City and business communities.

AC4.3 Build a coalition of informed arts advocates who can generate support for key arts issues within the city.

AC4.4 Create public funding sources for the arts.

AC4.5 Partner with Napa County and regional arts endeavors to ensure that the City's support for arts, culture, and entertainment integrate others in the area.

AC4.6 Create locations for public displays of art and facilitate their use on public property.

AC4.7 Create a permitting process that facilitates art installation on public property.

Implementing Actions

AC4.A Encourage the creation of a St. Helena Arts Committee to oversee art installations, proposals, funding strategies, education, and public relations efforts. The Arts Committee can facilitate connections between artists and the business community and oversee City-sponsored efforts.

AC4.B Consider how to create a sustainable public funding system, such as a percentage allocation of development fees and/or transient occupancy taxes (TOT), to support the City's efforts to promote arts, culture, and entertainment. Conduct a survey to identify additional models of public support for artists and arts organizations and consider a plan to implement appropriate policies.

(Also see the Economic Sustainability Element, Topic Area 1)

AC4.C Consider a local arts funding strategy to increase private funding and resources that support artists and local art institutions and organizations in the city. Identify key donors to participate in public-private partnerships to support arts and culture citywide.

AC4.D Encourage incentives and rewards for partnerships and cooperation through funding policies and resource development.

AC4.E Provide opportunities for arts leaders to build partnerships and develop joint projects, including revenue-generating events.

AC4.F Explore opportunities to build partnerships with other municipalities and the County to support regional arts and culture promotion efforts.

AC4.G Create a simple, user-friendly permitting process for artists to display their works.

Partnerships between artists and the business community are critical to developing sustained support for arts, culture and entertainment in St. Helena.

VIA EMAIL: NHOUSH@CITYOFSTHELENA.ORG
Mr. Noah Housh, Director
City of St. Helena
Planning and Community Department
1480 Main Street
St. Helena, CA 94574

Dear Mr. Housh:

DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE ST. HELENA GENERAL PLAN UPDATE 2040, SCH# 2010042001

The Department of Conservation's (Department) Division of Land Resource Protection (Division) has reviewed the Draft Environmental Impact Report for the St. Helena General Plan Update (Project). The Division monitors farmland conversion on a statewide basis and administers the California Land Conservation (Williamson) Act and other agricultural land conservation programs. We offer the following comments and recommendations with respect to the proposed project's potential impacts on agricultural land and resources.

Project Description

The proposed project consists of an update of the City's General Plan. The General Plan is a long-term policy document that establishes direction to guide future land use decisions, a framework to ensure the character and quality of development desired by the community, and the processes by which development and land use changes will take place. The General Plan is used by City staff to review development proposals to ensure that subsequent projects align with the community's vision. The Planning Commission and City Council use the General Plan to guide decision-making that would impact the city's physical environment.

Department Comments

A1-2

Although direct conversion of agricultural land is often an unavoidable impact under CEQA analysis, mitigation measures must be considered. In some cases, the argument is made that mitigation cannot reduce impacts to below the level of significance because agricultural land will still be converted by the project, and therefore, mitigation is not required. However, reduction to a level below significance is not a criterion for mitigation under CEQA. Rather, the criterion is feasible mitigation that lessens a project's impacts.

All mitigation measures that are potentially feasible should be considered. A measure brought to the attention of the Lead Agency should not be left out unless it is infeasible based on its elements. The Department suggests that the City consider the adoption of an agricultural land mitigation program that will effectively mitigate the conversion of agricultural land.

Agricultural conservation easements are an available mitigation tool that the City should consider. The Department highlights easements as a mitigation tool because of their acceptance and use by lead agencies as an appropriate mitigation measure under CEQA and because they follow an established rationale similar to that of wildlife habitat mitigation. A1-2

Programs that establish agricultural conservation easements and in-lieu fees for mitigation banking are most effective at conserving comparable quality agricultural land when the easement requirements or fees are determined concurrent with project approval. Should significant time elapse between initial approval and the applicant's receipt of a building or grading permit, conflict may arise over the agricultural quality or value of the land being converted.

Mitigation via agricultural conservation easements can be implemented by at least two alternative approaches: the outright purchase of easements or the donation of mitigation fees to a local, regional, or statewide organization or agency whose purpose includes the acquisition and stewardship of agricultural conservation easements. The conversion of agricultural land should be deemed an impact of at least regional significance. Hence, the search for replacement lands should not be limited strictly to lands within the project's surrounding area.

A source that has proven helpful for regional and statewide agricultural mitigation banks is the California Council of Land Trusts. They provide helpful insight into farmland mitigation policies and implementation strategies, including a guidebook with model policies and a model local ordinance. The guidebook can be found at:

http://www.calandtrusts.org/resources/conserving-californias-harvest/

Another source is the Division's California Farmland Conservancy Program (CFCP), which has participated in bringing about conservation easements throughout the State of California involving many California land trusts. Any other feasible mitigation measures should also be considered.

Conclusion

Thank you for giving us the opportunity to comment on the Draft Environmental Impact Report for the St. Helena General Plan Update. Please provide this Department with notices of any future hearing dates as well as any staff reports pertaining to this project. If you have any questions regarding our comments, please contact Farl Grundy, Environmental Planner at (916) 324-7347 or via email at Farl.Grundy@conservation.ca.gov. A1-3

Sincerely,

Monique Wilber
Conservation Program Support Supervisor

Subject: St Helena Gen Plan DEIR

Good afternoon Noah,

Just want to give you a heads up that LAFCO will submit a comment letter on the City's DEIR by the 1/2/19 deadline. I've authorized Ascent Environmental to prepare the letter and they will call you sometime next week to discuss our respective interests. A2-A-1

LAFCO's core interest is ensuring we can rely on the City's EIR to satisfy our CEQA requirements for any potential sphere expansions involving the three study areas. The letter will also mention that the Cortese-Knox-Hertzberg Act includes a unique definition of "prime agricultural land" (Gov Code Section 56064) that differs from FMMP's "prime farmland", so we will request the DEIR at minimum identify prime ag lands within the study areas. A2-A-2 Finally, we will also request LAFCO be identified as a responsible agency where appropriate, assuming sphere expansions will indeed be pursued. A2-A-3

Please note I'll be out of the office the next two weeks for vacation, but I'll be checking emails. Feel free to email me with any questions, comments, concerns, or otherwise and I'll do my best to reply ASAP. You can also flesh out any issues with Ascent, as I'm heavily deferring to their professional expertise. A2-A-4

Best wishes for a happy holiday season,

DELIVERED BY E-MAIL

Mr. Noah Housh
City of St. Helena
1480 Main Street
St. Helena, California 94574
NHoush@cityofsthelena.org

SUBJECT: Comments on the City of St. Helena General Plan Update and Draft Environmental Impact Report

Mr. Housh:

On October 23, 2018, the City of St. Helena released the St. Helena General Plan Update 2040 and accompanying Draft Environmental Impact Report (EIR) for public review and comment. Ascent Environmental reviewed both documents for overall adequacy of analysis and sufficiency of evidence, as well as adherence to CEQA requirements for preparation of an EIR. The following comments are provided for consideration.

Napa County Local Agency Formation Commission (Napa LAFCO or Commission) appreciates the opportunity to comment on the St. Helena General Plan Update 2040 (project) and accompanying Draft Environmental Impact Report (EIR). Napa LAFCO will use both final documents in fulfilling its regulatory and planning responsibilities under the authority of the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000. These duties include, but are not limited to, regulating governmental boundary changes through annexations or detachments, approving or disapproving city incorporations, and forming, consolidating, or dissolving special districts. Under the California Environmental Quality Act (CEQA), LAFCO is a Responsible Agency for this project and it is in this role that Napa LAFCO is commenting on this EIR.

Comments on Noticing Procedures

The Notice of Preparation (NOP) for the St. Helena General Plan Update 2040 EIR was released for public review on April 2, 2018, and the Notice of Availability (NOA) was released on October 23, 2018. Napa LAFCO does not have a record of receiving the NOP or NOA for the project, as a Responsible Agency we request to be notified on all future proceedings related to this project and other projects where Napa LAFCO may have discretionary authority.

Margie Mohler, Chair
Councilmember, Town of Yountville

Brad Wagenknecht, Vice Chair
County of Napa Supervisor, 1st District

Gregory Rodeno, Commissioner
Representative of the General Public

Scott Sedgley, Commissioner
Councilmember, City of Napa

Diane Dillon, Commissioner
County of Napa Supervisor, 3rd District

Erik Lawrence, Alternate Commissioner
Representative of the General Public

Kenneth Leary, Alternate Commissioner
Councilmember, City of American Canyon

Ryan Gregory, Alternate Commissioner
County of Napa Supervisor, 2nd District

Brendon Freeman
Executive Officer

The 71-day public review period for the Draft EIR began on October 23, 2018 and ends on January 2, 2019. Although this extends beyond the mandated 45-day public review period, the 71-day public review period includes State holidays observed by members of the public and public agencies, including Napa LAFCO. This does not allow ample time to adequately review the 620-page Draft EIR and appendices. The public review period should be extended past the January 2, 2019 deadline to allow enough time to review the content of the Draft EIR and foster meaningful public discourse.

Comments on Chapter 2, Project Description

Planning Area

A2-B-2

The Planning Area for the St. Helena General Plan Update and Draft EIR encompasses approximately 3,594 acres including land within the City of St. Helena, the City's Sphere of Influence (SOI), and three adjacent unincorporated study areas outside of the City's SOI. Collectively, the three unincorporated study areas encompass approximately 450 acres. The location, size, and land use designations for each study area are described below:

- Study Area 1: The 165-acre area is located along the Napa River and includes residential development, the Meadowood Napa Valley resort, and St. Helena-owned utility infrastructure, including water tanks. Consistent with the Napa County General Plan, the land within Study Area 1 is designated Agriculture, Watershed, and Open Space.
- Study Area 2: The 100-acre area is located south of Chaix Lane near the southeastern boundary of the City and includes spray fields currently used to dispose of treated effluent from the City of St. Helena's Wastewater Treatment Plant. Consistent with the Napa County General Plan, the northern portion of Study Area 2 is designated Agriculture, Watershed, and Open Space. The southern portion of Study Area 2 is designated Agricultural Resource.
- Study Area 3: The 185-acre area is located south of Chaix Lane near the southwestern boundary of the City and includes parcels with existing commercial and residential development along State Route 29. Consistent with the Napa County General Plan, the land within Study Area 3 is designated Agricultural Resource.

Napa LAFCO established St. Helena's SOI in 1974 and the last jurisdictional change occurred in 1997. Currently, the City's SOI and City limits are coterminous with the exception of Lower Bell Reservoir, which is within the City's jurisdictional boundary and outside the City's SOI. Napa LAFCO data identifies the City's jurisdictional boundary as 3,046 acres in size. The St. Helena General Plan Update identifies on page 1-10 that the jurisdictional boundary comprises 3,024 acres. Please verify the acreage included within the legal jurisdictional boundary for the City limits and City's SOI.

The three study areas included within the City's Planning Area are under the jurisdiction of Napa County and have not been approved for inclusion in the City's SOI. The inclusion of the study areas expands the City's Planning Area beyond that proposed in the 1993 General Plan and extends beyond the City's jurisdictional authority. Approval of any SOI amendment is subject to the Napa LAFCO's discretionary review and approval authority

and will be reviewed in accordance with the policies and regulations of the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000 and Napa LAFCO's General Policy Determinations.

A2-B-3

The St. Helena General Plan Update Land Use Diagram designates the land within the three study areas as either Agricultural Resource or Agriculture, Watershed, and Open Space, which is consistent with the Napa County General Plan. However, inclusion of these areas in the Planning Area conflicts with the following Napa LAFCO policies related to SOIs:

- General Policy Determinations Section III (C)(4) Avoidance of Inclusion of Agricultural and Open-Space Lands: Land specifically designated as agricultural or open-space lands shall not be approved for inclusion within any city's sphere of influence for purposes of urban development unless exceptions are warranted based on the criteria outlined in Section B(3) and (4).
- General Policy Determinations Section III (C)(5) Preference for Infill: The Commission will consider the amount of vacant land within the established sphere of influence of a city when considering amendments and updates. The Commission encourages sphere of influence proposals that promote the infill of existing vacant or underdeveloped land thereby maximizing the efficient use of existing city services and infrastructure as well as discouraging urban sprawl. Conversely, the Commission discourages sphere of influence proposals involving vacant or underdeveloped land that requires the extension of urban facilities, utilities, and services where infill is more appropriate.
- General Policy Determinations Section III (C)(8)(b) The Commission shall encourage cities to first develop existing vacant and underdeveloped infill lands located within their jurisdictions and spheres of influence to maximize the efficient use of available services and infrastructure and discourage the premature conversion of agricultural and open-space lands to urban uses. The Commission shall encourage the development of vacant or underdeveloped infill lands located within cities' jurisdictions before the annexation of lands requiring the extension of urban facilities, utilities, and services.

Pursuant to the aforementioned policies, Napa LAFCO is unlikely to approve inclusion of land specifically designated as agricultural or open-space lands in St. Helena's jurisdictional boundary. In addition, pursuant to Measure J, adopted by Napa County voters in 1990, and Measure P, adopted by Napa County voters in 2008, Napa County lands designated for agricultural use shall not be included within a city's jurisdictional boundary for purposes of urban development. Chapter 2 should be updated to explain the reasoning for including unincorporated agricultural lands within the City's Planning Area.

Buildout Under the Proposed Plan

A2-B-4

Table 2.3-3 on page 2-21 of the Draft EIR includes potential residential development within the Planning Area through the year 2040. Under the "St. Helena" subheading, total residential development at buildout is estimated to be 3,100 units. However, the Existing total (2,700 units) and Future Development total (300 units) add up to 3,000 units. Under the "Study Areas" subheading, total residential development at buildout is estimated to be

A2-B-4

200 units. However, the Existing total (200 units) and Future Development total (100 units) add up to 300 units. The table should be updated to clarify the amount of residential development proposed.

Table 2.3-4 on page 2-21 of the Draft EIR includes projected population within the Planning Area by 2040. Under the "Study Areas" subheading, the total population is estimated to be 700 residents. However, the Existing total (600 residents) and Future Development total (200 residents) add up to 800 residents. Under the "Planning Area Total" subheading, the Existing total is estimated to be 6,400 residents. However, the St. Helena total (5,900 residents) and Study Areas total (600 residents) add up to 6,500 residents. The table should be updated to clarify the projected population estimates.

Table 2.3-5 on page 2-22 of the Draft EIR includes projected number of future jobs within the Planning Area through the year 2040. Under the "St. Helena" subheading, the total jobs at buildout is estimated to be 5,900. However, the Existing total (5,400 jobs) and Future Development total (900 jobs) add up to 6,300 jobs. Under the "Study Areas" subheading, the total jobs at buildout is estimated to be 1,100. However, the Existing total (500 jobs) and Future Development total (100 jobs) add up to 600 jobs. Under the "Planning Area Total" subheading, the total jobs at buildout is estimated to be 7,000. However, the Existing total (6,400 jobs) and Future Development (900 jobs) add up to 7,300 jobs. The table should be updated to clarify the projected number of jobs.

A2-B-5

Comments on Chapter 3.2, Agricultural Resources

Physical Setting

Figure 3.2-1 on page 3.2-3 of the Draft EIR identifies existing Agricultural Land Uses within the Planning Area. Land within the three study areas are shaded a light peach color. This color designation is not included in the figure legend. The figure legend should be updated to include all color designations.

A2-B-6

Chapter 3.2, "Agricultural Resources," of the Draft EIR, relies on the California Department of Conservation's Farmland Mapping and Monitoring Program (FMMP) to identify important farmland within the Planning Area. Although FMMP is a great resource of information related to statewide important farmland resources, LAFCOs are directed by the State Legislature in Government Code Section 56001 to protect and conserve prime agricultural resources:

> "The Legislature finds and declares that it is the policy of the state to encourage orderly growth and development which are essential to the social, fiscal, and economic well-being of the state.
>
> The Legislature recognizes that the logical formation and determination of local agency boundaries is an important factor in promoting orderly development and in balancing that development with sometimes competing state interests of discouraging urban sprawl, preserving open-space and prime agricultural lands, and efficiently extending government services. …"

Prime Agricultural lands are defined according to Government Code Section 56064 as follows: A2-B-6

> "Prime agricultural land" means an area of land, whether a single parcel or contiguous parcels, that has not been developed for a use other than an agricultural use and that meets any of the following qualifications:
>
> (a) Land that qualifies, if irrigated, for rating as class I or class II in the USDA Natural Resources Conservation Service land use capability classification, whether or not land is actually irrigated, provided that irrigation is feasible.
>
> (b) Land that qualifies for rating 80 through 100 Storie Index Rating.
>
> (c) Land that supports livestock used for the production of food and fiber and that has an annual carrying capacity equivalent to at least one animal unit per acre as defined by the United States Department of Agriculture in the National Range and Pasture Handbook, Revision 1, December 2003.
>
> (d) Land planted with fruit or nut-bearing trees, vines, bushes, or crops that have a nonbearing period of less than five years and that will return during the commercial bearing period on an annual basis from the production of unprocessed agricultural plant production not less than four hundred dollars ($400) per acre.
>
> (e) Land that has returned from the production of unprocessed agricultural plant products an annual gross value of not less than four hundred dollars ($400) per acre for three of the previous five calendar years.

Based on direction of the State Legislature through the Cortese-Knox Hertzberg Local Government Reorganization Act of 2000, Napa LAFCO evaluates the importance of farmland based on the methodology outlined in Government Code Section 56064. As shown in Figure 1, the Planning Area contains land designated as Grade 1 – Excellent. In addition, as shown on Figure 2, the Planning Area contains soils designated as USDA, Natural Resources Conservation Service Class I and Class II. Chapter 3.2 of the EIR should be updated to include an evaluation of the land within the City limits or SOI expansion areas that meets the definition of prime agricultural land as described in Government Code Section 56064. This analysis will provide members of the public, Napa LAFCO, and other decision makings bodies with a comprehensive description of existing important agricultural lands within the Planning Area and potential impacts that may result from the adoption and implementation of the St. Helena General Plan Update 2040. This type of analysis would provide Napa LAFCO the appropriate information for their potential consideration of any future SOI amendment requests.

Comments on Chapter 3.10, Land Use, Population, and Housing A2-B-7

Impact discussion 3.10-3 on page 3.10-27 of the Draft EIR, concludes that the project would not conflict with applicable land use plans, policies, or regulations from other agencies with jurisdiction in the Planning Area. As discussed above, pursuant to the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000, Napa LAFCO is responsible for the administration of the orderly formation and development of local

governmental agencies and services, preservation of agricultural and open-space resources, and discouraging urban sprawl. Therefore, the impact discussion should be revised to provide a consistency analysis with Napa LAFCO policies related to SOIs and the adopted 2008 Municipal Service Review for the City of St. Helena.

Comments on Chapter 4, Alternatives Analysis

A2-B-8

Description of Alternatives

According to the second paragraph under subheading, "No Project Alternative," on page 4-2 of the Draft EIR, the No Project Alternative would result in approximately 460 new residents, 200 housing units, and 780 new jobs in St. Helena by 2040. However, according to Table 4.2-1 on page 4-3 of the Draft EIR, the No Project Alternative would result in approximately 560 new residents and 1,380 new jobs. This section should be updated to clarify growth projections under the No Project Alternative.

According to the third paragraph under subheading, "Transportation Network Enhancement Alternative," on page 4-3 of the Draft EIR, the Transportation Network Enhancement Alternative would result in approximately 750 new residents, 335 new housing units, and 935 new jobs in St. Helena by 2040. However, according to Table 4.2-1 on page 4-3 of the Draft EIR the Transportation Network Enhancement Alternative would result in approximately 900 new residents, 400 new housing units, and 1,100 new jobs. This section should be updated to clarify growth projections under the Transportation Network Enhancement Alternative.

Comparative Impact Analysis of Alternatives

A2-B-9

State CEQA Guidelines Section 15126.6(a) states that:

*"*An EIR shall describe a range of reasonable alternatives to the project, or the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives…"

Chapter 4, "Alternatives Analysis," of the Draft EIR identifies one alternative, the Transportation Network Enhancement Alternative, other than the mandated No Project Alternative. This does not constitute a reasonable range of alternatives to the project as directed by the State CEQA Guidelines. In the spirit of full disclosure and consistent with CEQA Guidelines Section 15126.6 (c), Chapter 4 should be updated to explain why no other feasible alternatives were considered or proposed as part of the alternatives analysis.

A2-B-10

According to the last paragraph on page 4-2 of the Draft EIR, the Transportation Network Enhancement Alternative would reduce significant and unavoidable impacts related to vehicle congestion on State Route 29 in St. Helena. However, as described on page 4-21 of the EIR, the mitigation measures would require actions from the California Department of Transportation which is not subject to the City's control; therefore, the impact would remain significant and unavoidable. In addition, the alternative would result in new significant impacts at three intersections. Chapter 4 should be updated to clarify that the

project alternative would not reduce significant and unavoidable impacts with respect to transportation, rather it would result in environmental tradeoffs.

A2-B-11

According to page 4-29 of the Draft EIR, the Transportation Network Enhancement Alternative is the environmentally superior alternative. However, as shown on Table 4.4-1, the Transportation Network Enhancement Alternative would worsen impacts with respect to flood hazards and permanent ambient noise. In addition, when compared to the project all other impacts remained the same. Contradictory to State CEQA Guidelines Section 15126.6(a), the alternative does not avoid or substantially lessen any of the significant effects of the project but rather worsens impacts. Chapter 4 should be updated to include an analysis of alternatives that avoid or substantially lessen project impacts. This analysis will provide the decision-making bodies, Napa LAFCO, and members of the public with sufficient information for consideration prior to the adoption and certification of the St. Helena General Plan Update and Draft EIR.

RE: **City of St. Helena 2040 General Plan Update**
Draft Environmental Impact Report
Request for Extension of Comment Period

Dear Noah;

Thank you for providing Napa County an opportunity to comment on the draft St. Helena 2040 General Plan Update (Update). Napa County has several significant concerns with the most recent version of the Update, and requesting that the comment period on your Draft Environmental Impact Report (DEIR) be extended to provide time to engage in collaborative discussion seeking alignment of City and County objectives. A 120-day extension is requested. We request that a determination for an extension be made prior to 5:00 p.m. on December 21, 2018.

To the best of my knowledge, Napa County has never commented on any general plan environmental document prepared by the cities and town of Napa County, and instead we have addressed issues through dialogue focused on finding mutually-agreeable solutions. We are requesting that dialogue commence on several aspects of the proposed Update including, but not limited to, the Study Areas located outside of the existing city limits, housing, circulation, emergency services, water and wastewater facilities, and possibly climate action planning.

A3-A-2

As you may be aware, the County is in the midst of preparing a Strategic Plan. Throughout our community engagement process, we have consistently heard that the cities, town and County should be working together, working as partners to benefit our entire community. This necessary partnership step has not yet occurred with your Update. For example, the three very selective Study Areas located outside of the city limits and your Urban Limit Line have been included in the most recent draft of the Update without discussion between our agencies. Although the Update states that these areas are being studied for "informational purposes only" (Update, page 1-12), it is evident that the selective Study Area boundaries, and draft Policies LU1.G and LU1.H indicate the City's intent is to pursue annexation of these areas. The County has no issue with the City conducting meaningful analysis of unincorporated

A3-A-2

lands surrounding the community to inform the public and decision makers, but that is not what is occurring with these the Study Areas.

The boundaries of the Study Areas do not align with any of the reasons given for studying these select areas. The Draft Update implies that these areas must be studied because the City provides utilities and emergency services. Those statement are inaccurate. City water service boundaries, and fire mutual aid boundaries extend far beyond the Study Areas (see attached maps). Police and fire services are for mutual aid. The City is not the sole emergency service provider as is implied. Numerous properties within the Study Area boundaries do not receive City water service, including all of Study Area 2 which is the City-owned sewage treatment plant spray fields. The City provides no sewer service to any of these areas. The only obvious determining factor for the boundaries of Study Areas 1 and 3 is that they align quite strategically with several long-established major revenue generating developments. Smart land use planning principles dictate that the City should focus on expansion of urban growth areas within the city limits before considering expansion of the city limits.

A3-A-3

The latest draft of the Circulation Element calls for a number of new traffic lights, most notably on Silverado Trail. Adding traffic lights without expanding internal road network is not a solution to existing or future traffic conditions. This idea will likely result in greater congestion as well as have a negative ripple effect on County and State roadways. The City's high home values do not allow significant opportunities for lower wage service workers to reside in the community, and results significant commute traffic through unincorporated areas. New development called for in the Update will increase vehicle load within unincorporated areas that has not been satisfactorily addressed in the DEIR. Our agencies need to find a common vision on circulation before the DEIR is certified.

A3-A-4

A3-A-5

A3-A-6

The County would like to explore partnering on efficiencies in City services. We have very successful long running partnerships with the City of American Canyon providing law enforcement services and with the Town of Yountville providing both law and fire services that may merit consideration by St. Helena. As you know, staffing is the single greatest demand placed on local agency budgets, and the degree in which an agency can control those costs reduces pressure on the need to grow revenues. This salary/revenue relationship places a great deal of stress on the City's overarching goal to maintain St. Helena's small town character.

Partnering on affordable housing appears to be of mutual benefit to our agencies. The Update's time horizon is 2040, but housing allocations are only planned through 2023 (in accordance with State mandated housing cycles). It is likely that both St. Helena's and the County's Regional Housing Needs Allocation (RNHA) will be considerably larger in the next housing cycle starting 2023. The City has very limited ability to generate housing trust fund revenue through development impact fees. The County has limited areas where new housing can be placed outside of preserved agricultural lands, and the City has vast tracks of underdeveloped property within the city limits. Those areas should develop before any consideration of city limit expansion is undertaken. Some of those areas may be suitable for housing. A shared vision addressing affordable housing needs through the horizon year of your Update appears to be of critical importance to both of our agencies.

A3-A-7

We understand that the City may be anxious to complete the Update. We believe our request for extension of the DEIR comment period allowing time to partner on inter-jurisdictional issues is the most expedient and cost efficient path to successfully completing the Update. We look forward to meeting with you at your earliest convenience once extension of your DEIR comment period has occurred.

Sincerely,

David Morrison

RE: **City of St. Helena 2040 General Plan Update**
Draft Environmental Impact Report

Dear Mr. Housh;

Napa County is in receipt of your December 21, 2018 email denying my request to extend the comment period on the Draft Environmental Impact Report (DEIR) for the City of St. Helena (City) 2040 General Plan Update (Update). The time to review the DEIR has been constrained by the holidays; however, I have strong reservations about several aspects of the Update and DEIR. I believe that it would be best to address these issues through direct dialogue, but given the denial of the extension request, I am compelled to include my concerns as comment on the adequacy of the DEIR. Furthermore, the County of Napa has recently completed an unprecedented community outreach effort to develop a three-year strategic plan. In our nearly 40 community meetings, collaboration between the County and the cities and town was a reoccurring theme in many of the conversations. The County sees St. Helena's General Plan as an opportunity to collaborate and we request further engagement and collaboration on the issues outlined in this letter.

Both the Update and DEIR have serious issues that should preclude their adoption and certification until matters have been resolved to our mutual satisfaction. Napa County's comments are provided in detail below. However, in general, our primary concerns can be summarized as follows:

1. There is inconsistency between many of the stated policies in the draft documents and in the methodology used to define the study areas, particularly as it relates to lands designated as agriculture. The documents place an emphasis on preserving agricultural lands within the city limits and state a policy of protecting agricultural lands immediately outside the city limits. At the same time, the documents pursue studying annexation of lands in the unincorporated area that are protected by Measure J and Measure P. The stated policies and intention of the study areas clearly contradict each other, as any annexation would remove the agricultural protections provided under

A3-B-2

Measure J and Measure P. Further, if the City intends on pursuing future development, it would make greater sense to develop in areas currently within the City limits rather than pursuing lands in the unincorporated area and threatening agricultural protections put in place by the voters of Napa County. A3-B-2

2. Both the General Plan and the DEIR project significant job growth in the tourism and hospitality industries. While the number of jobs projected differ significantly between the two documents, regardless, the need for housing that is affordable to the existing and projected workforce is not adequately addressed. Failure to address existing and future housing needs in the City exacerbates the challenges the greater Napa County community faces in providing housing opportunities. A3-B-3

3. The Transportation Element does not address existing traffic congestion or consider further impacts on traffic created by an imbalance between job growth and housing. While the City of St. Helena has the option to adopt Statements of Overriding Consideration and accept that traffic congestion will increase as a result of an adopted General Plan the General Plan should clearly state this as a goal(s) and the DEIR should fully disclose the environmental impacts. A3-B-4

General Comments A3-B-5

1. As noted in my December 19, 2018, request, three Study Areas located outside of the city limits were included in the most recent draft Update. The stated purpose for including these areas was for "informational purposes only" so that the City could conduct meaningful analysis to inform both decision makers and the public. However, as noted in the letter, meaningful analysis in the DEIR does not correlate with the boundaries of the Study Areas. Instead, the DEIR more broadly looks at virtually all unincorporated areas surrounding the City and then applies a mistaken rationale that out-of-agency City services provided to these selective areas makes them eligible for annexation, which is not the case. For example, Study Area 2, which is a City owned spray field, generates no demand for library services, whereas the unincorporated community of Angwin located several miles from the City generates demand for City library services, but is not included within a Study Area. This inconsistent treatment of unincorporated areas purportedly relating to the selective Study Areas is a reoccurring inconsistency over most areas of analysis within the DEIR. This is confusing to the reader at a minimum, and may lead to incorrect assumptions regarding the extent to which study areas qualify for annexation.

2. Proposed Policies LU1.G and LU1.H seek annexation of unincorporated property. The DEIR does not address the potential environmental impacts associated with these policies, which will result in the urbanization of unincorporated farmland. Similarly, Policy LU1.G calls for the extension of sewer service to unincorporated areas. The DEIR does not evaluate this growth-inducing proposal. A3-B-6

3. Both the Update and DEIR identify that the State has ordered upgrading of the City's sewage treatment facilities, but the DEIR does not address how the City plans to overcome this critical A3-B-7

service-deficiency. The City cannot plan for sewer line extensions and the associated impacts of growth without knowing whether the sewage treatment facility can or will be allowed to operate in the future at the level needed to provide additional services. These are significant unmitigated public utility impacts. A3-B-7

4. Policy language in the Update is inconsistent in terms of how the City intends to interact with the County. For example, Policy LU5.2 encourages the County to promote agriculture and limit development on nearby unincorporated lands. As always, the County is eager to engage with the cities and town on this crucial topic. In contrast, Policies LU1.G and LU1.H acknowledge the need to collaborate with property owners and LAFCO in pursuing annexation, but leaves the County out of the stakeholder list despite the fact that annexation cannot occur without both the City and County agreeing to a tax-sharing agreement. The proposed expansion of the City Limits is further vexing by the inability to meet current municipal obligations as noted in number 5 below. A3-B-8

5. The DEIR should also evaluate an alternative that reduces the current extent of incorporated land. The City can clearly meet its projected needs for future growth within the existing city limits, even with the City designating 46 percent of the incorporated area as agriculture and not intended for urban development. The inclusion of farmland within the city limits but outside of the Urban Limit Line adopted by the City is problematic. In essence, the City is obligating itself to provide urban services to 1,451 acres of agriculture, including water, sewage, police, fire, and public administration. This significantly affects the ability of the City to meet their municipal obligations in a sustainable manner. A reduced development alterative that moves rural land out of the City's growth boundary would still meet all of the DEIR project objectives and would result in fewer significant and unavoidable environmental impacts than the proposed project, resulting in the environmentally superior alternative. A3-B-9

Study Areas A3-B-10

6. The growth assumption methodology presented in the DEIR is confusing and needs clarification. Tables ES-1, ES-2 and ES-3 make little sense, even with the disclaimer footnote noting that figures are rounded to their nearest hundred. First, it is inappropriate to round figures to their nearest hundred in a setting such as St. Helena because the levels of growth in many cases do not reach 100. For example, the City's Regional Housing Needs Allocation is 31 units. Rounding that to the nearest 100 equates to zero. As this confusion relates to the Study Areas, the DEIR appears to have based some of the impact analysis on unrealistic growth assumptions. Table ES-1 suggests 100 new dwelling units in the Study Areas, when in actuality there does not appear to be enough vacant land to accommodate anywhere near this number within the three Study Areas combined. As these lands are protected by the County's Agricultural Preserve and Measures J and P, it is unclear how this projected level of growth can be obtained within the Study Areas, absent City incorporation and rezoning (land within the cities and town are not subject to Measures J and P).

   Likewise, the DEIR projects 1,100 new jobs within the Study Areas under existing City and County zoning/general plan, but only 600 forecasted if the Update is adopted. There is no logical

reason for this, and it appears simply to be a means justify adoption of the Update by comparing it to inaccurate assumptions regarding the status quo. The analysis makes it appear as if the proposed policies in the Update would result in much more intense development than would occur under the County. Proposed City policies call for the annexation of these areas (LU1.G/H), extension of sewer service outside of city limits, an increase in hotel rooms (ES2.6), encouragement of more restaurant seats (ES2.7), and additional water connections, which are all things that are not possible under County regulations. As presented, this information can lead to inaccurate conclusions, which could prevent sound policy decisions. A3-B-10

Finally, the inclusion of the Study Areas ignores the obvious existing availability of developable land currently labeled as Agriculture already located within existing city limits. A3-B-11

Transportation and Traffic A3-B-12

7. CR1.1 in the Update states a desire to promote connected streets; however, the Transportation Element does not include any new congestion relieving additional roadway segments/connections. The element defers to a later unspecified date, any segment improvements that could relieve local congestion.
8. With virtually no planned residential growth in the Update, the goal in CR3.3 of shifting work trips from predominantly single-occupancy vehicles to 45% carpool, transit, walking is unrealistic. The Economic Sustainability policies emphasize job growth in the lower paying sectors such as hotels, restaurants and retail, which will require more commuting at shifts throughout the day and evening. Without significantly increasing the number of people per household (the City is currently 9% lower than the countywide average), even more housing will be needed to house future workers, increasing the likelihood that they will commute from out of the plan area. There will be few homes available from which employees will be able to walk to work. Transit and carpooling are unlikely to meet nearly half of the demands of a service economy workforce. This is not a realistic basis for establishing long-term policy. A3-B-13
9. The discussion of Intersection Traffic Operations on page 3.13-42 of the DEIR includes a recognition of potential impacts to roadways within Napa County; however, the DEIR only evaluated one intersection. The analysis ignores the potential effects of future development in St. Helena on the need for improvements on County roads such as Deer Park Road, Pratt Avenue, or Zinfandel Lane. The DEIR did not comprehensively evaluate the impacts to all County roads within the potential area of impact, especially considering the likelihood of additional commuting referenced in Paragraph 8 above. A3-B-14
10. Any proposed traffic controls on major roadways within St. Helena (esp. State Hwy 29 and Silverado Trail and the crossroads) will cause backups/delays in unincorporated areas. This impact is not recognized or evaluated. A3-B-15
11. As stated in Impact 3.13-4 of the DEIR, the City is relying on development to connect significant circulation gaps in the street network; however, the needed gap closures are within areas that the Update does not designate or plan for future growth. The discussion regarding this Impact goes on to say the DEIR relies on the following to improve traffic congestion and make the roadways A3-B-16

safer: (1) City's support of the concept of complete streets; (2) Napa County's efforts to improvement countywide trails; and (3) Caltrans' work to reduce congestion on State Hwy 29. There is no defined capital improvement plan to ensure completion of the street network. Instead, mitigation relies on the contributions of other agencies, the benefits of which are speculative regarding traffic congestion within the City. This is not a feasible approach to addressing traffic management and is inadequate for the purposes of the DEIR. A full and appropriate traffic analysis should be prepared that considers the potential impacts of leaving the street network in place with no foreseeable future gap closures. A3-B-16

Water

12. It appears that the City water system is at capacity. The DEIR only considers conservation measures as a suggestion, not a requirement, and no new long-term sources or significant reductions are proposed. This seems to be a shortsighted approach and possibly a significant environmental impact when measured against the additional future demands created by the proposed annexation areas, as well as projected hotel and restaurant growth. A3-B-17

13. The documents seem to dismiss the creation and use of recycled water as infeasible but the conclusions lack any credible sources as to why recycled water is infeasible. Since the City owns and operates a wastewater treatment facility, it seems plausible and preferable to find ways to utilize this resource for irrigating the significant agricultural properties within the City limits, as well as other facilities such as playfields, parks, municipal landscaping, etc. A3-B-18

Sewage

14. The City is currently under order to upgrade the municipal wastewater treatment plant. Neither the Update nor the DEIR recognizes this critical issue. This is a significant constraint to the No Project alternative, as well as any future growth proposals. The City should revised the DEIR and the Update to address how wastewater treatment will be improved and funded, before any decision are made regarding new growth and annexation. A3-B-19

Housing

15. The Update calls for significant job growth in services that generally pay lower wages: hotels, restaurants, and retail. However, the Housing Element only plans for 31 residential units through 2023, far short of the General Plan horizon of 2040. This modest housing growth does not serve the current needs of the community and does not meet the future needs given the planned job growth, which is noted as a significant housing/jobs imbalance in the Transportation and Traffic Element (p3.13-2). This unresolved and ongoing imbalance has important implications for many other Impacts evaluated in the DEIR, and calls into question the adequacy of the entire document. A3-B-20

Alternative Analysis

As discussed in Paragraphs 12 and 14 above, the City has serious obstacles in continuing to provide adequate water and wastewater treatment. The DEIR acknowledges a jobs/housing balance without offering any solution and traffic congestion without requiring any relief. The Update is determined to have Significant and Unavoidable Impacts in the areas of farmland loss, air quality, climate change, and traffic Level of Service. The DEIR even concludes that another alternative, not the Update, is Environmentally Superior. Yet despite these concerns, the DEIR A3-B-21

nevertheless recommends the Update as the Preferred Alternative. This gives the appearance that the DEIR analysis does not provide an objective and impartial analysis, but is instead a means to justify the proposed Update. A3-B-21

Our shared community faces broad and fundamental issues that challenge the quality of life in both urban and rural areas. Finding solutions to address traffic, housing, water, and sustainability require regional approaches that involve governments working together. My goal in providing these comments is to establish a more complete analysis of pending policy and create an opening for the City and County to discuss meaningfully how we can achieve our mutual goals. Conflict is an unnecessary expense that does not benefit either participant and prevents the exploration of productive ideas. I look forward to starting our discussion. A3-B-22

If you have any questions regarding this letter, please contact me at (707) 253-4805 or at david.morrison@countyofnapa.org. Thank you for the opportunity to provide comments on the DEIR.

Respectfully,

David Morrison MCR

David Morrison, Director

Comment Letter A4-1

NAPA VALLEY TRANSPORTATION AUTHORITY

A4-1

MEMO

Date: **December 26, 2018**

To: **Noah Housh, Planning Director**
City of St. Helena

From: **Napa Valley Transportation Authority**

Re: **St. Helena General Plan Update 2040**

Upon the review of the St. Helena General Plan Update 2040, the Napa Valley Transportation Authority would like to submit the following comments:

A4-2

General Comment – Please replace all "NCTPA" references to "NVTA" and use the updated logo and Vine brand and color scheme. Also, "VINE" is now "Vine".

P. 5-3
- Should mention the Countywide Bike Plan update now in progress

P. 5-4
- ACS reference, but no reference to the Napa Countywide Pedestrian Plan or Napa County Travel Behavior Study. The St. Helena Pedestrian Plan was adopted by the City Council on May 9, 2017 www.nvta.ca.gov/countywide-pedestrian-master-plan.

P. 5-7
- 2016 Pedestrian Plan should be included along with 2010 ADA Transition Plan.

P. 5-9
- Old Vine Go photo-need to update photos for Vine Transit in plan. NVTA will provide new Vine photos.

P. 5-10
- First bullet - revise sentence regarding Vine Trail-"will" connect St. Helena, not "connects"

P. 5-11
- Please reference the current Countywide Transportation Plan – Vision 2040 – Moving Napa Forward www.nvta.ca.gov/countywide-plan-vision-2040.
- No reference to other plans such as the Countywide Bike Plan, Ped Plan, Travel Behavior Study or Plan Bay Area etc.

P. 5-23

625 BURNELL STREET | NAPA CA 94559 | 707-259-8631 | NVTA.CA.GOV | VINETRANSIT.COM

A4-2

- Where did the reference regarding bike lane and shared parking come from? CVC does not allow parking in bike lanes.
- Class III-"vehicle barriers"-Class III facilities do not include barriers-Class IV includes separation.
- Add Class IV – separated bike lanes with description

P. 5-25

- When was this map completed? There are differences from some recommendations in the current Bike Plan Update that were reviewed by City Staff.
- Should reference Bike Plan Update currently underway.

P. 5-30

- c - These are identified in the countywide Bike and Ped Plans
- e - ACS is mentioned-should include Countywide Transportation Plan, Bike Plan and Ped Plan
- h – should state, "…in accordance with NVTA's Countywide Transportation Plan"

P. 5-32 through P. 5-43

CR1. A

- Include transit facilities

CR1.K

- Include transit improvements
- TDM strategies should coordinate with NVTA

CR2.1

- Figure 5.4 reference – These exist – there is no reference to the Pedestrian Plan or proposed facilities in Bike Plan update which have created these networks. Change to, "Update comprehensive bicycle and pedestrian networks identified in the Countywide Bike and Pedestrian plans that enhance neighborhood connectivity."

CR2.6

- No reference to the Safe Routes to School (SRTS) program which serves St. Helena schools.

P. 5-38 through P. 5-42

CR2.D

- Caltrans Bicycle Transportation Account has been replaced by the Active Transportation Program-there are new requirements under this program-see requirements in adopted 2016 Pedestrian Plan-update reference.

CR3.1

- TDM-no discussion of SB 1339 compliance/requirements or of NVTA's TDM programs.

CR3.4

- TDM Programs-include coordination with NVTA

CR 3.5

- Should mention SRTS program

CR4.5

- "a" SRTS program – should be "the" SRTS program

To: Noah Housh
Subject: RE: Meeting

December 19, 2018

Hi Noah, thanks for the note.

Quick Background: I worked with Greg Desmond starting in around 2009 up through Victor Carniglia in mid-2016 on the Noise Element and the EIR. We made it a better document beyond the "boiler plate" stuff the sound consultants provide on a short budget. Everything I did and input provided was done "through channels" through Greg, to the GP consultants and then to the sound consultants. This work included a five month noise study I did on background noise levels in St. Helena, what are commonly called "ambient" noise levels, information the consultant failed to provide, or understand. All this work was done, not through the public comment process, but as a *pro bono* technical consultant to the City. B1-1

The EIR: I had done a review for Carniglia in July 2016 of the EIR pointing out a major flaw. It has been corrected in the current IER, so I have no comments to make on that. Other than, really, 90% of the EIR is total "boiler plate" and can be found verbatim in any other noise EIR the consultant has done. B1-2

The Noise Element: I do have comments on this, as I fear the current form has reverted back to the original, before the work we did between 2009 and 2016. B1-3

Let's meet the week of January 14th. We'll need some time, but this is about giving our City a quality document, right? About any time is fine with me, so let me know. B1-4

In the meantime, have a great time off. I will too. ☺

Yours,

Jerry

To: Noah Housh
Subject: General Plan

B2-1

Noah,
I noted with interest in the newspaper that the recent public hearing on the EIR was "poorly attended". One of the reasons suggested for the crowd of 4 persons in attendance was that "their comments just don't matter". That sure strikes home to me.

When we bought our first home here on Tainter Street in 1986, I discovered that we needed to plan our trips to buy building materials at Central Valley Supply to avoid the back-up on 29 on our return. Often, we would loop around Sulphur Springs, Crane and Valley View Streets which I'm sure the neighbors appreciated.

After we moved, I had a new alternate plan; driving south on 29, across Zinfandel, and back up the Trail.

One day, in total frustration, I stopped into the Planning Department to ask the OBVIOUS QUESTION. Why isn't there an alternate to and through Saint Helena that provides access to the businesses south of town. I suggested perhaps an extension of Starr or some other street, or extending Dowdell or Vintage Streets to the Trail. I was told "that is in the Plan". That made sense to me. After all, it would allow businesses like Central Valley, Harold Smith and all the rest to provide better service to the community. Added to that, emergency vehicles could have better access North and South.

That was over thirty years ago.

Now, I know the wheels of government turn slowly so I would stop by the Department every five or ten years to check on that issue. At first I was told it was "difficult to cross farm property", even though I did that to drive my tractor to Lampson for service and repairs. Later, other reasons were given culminating in the latest nonsensical response; "But, we are planning to put more stop lights in on highway 29 and the Trail". WHAT??? So we now have the added inconvenience of providing signal light turn-in spacing for those entering the 29 backup. Consider, reducing the traffic congestion on highway 29 would increase SAFETY. Stop lights don't decrease vehicle counts.

But now, I get it. My comments just don't matter. That's why I don't stop by anymore.

For what's worth,
Glenn Cook

Comment Letter B3

B3-1

In 1997, I was selected by Friends of the Napa River to sit on the Committee appointed by St. Helena's City Council to decide the best way to spend our portion of Measure A funds which were to be used to minimize the risk of flooding on Napa River and Sulphur Creek inside City Limits, with the **requirement** that any alterations would be carried out within a "Living River" context, assuring that any changes would enhance the river's environmental health while benefiting us.

While most municipalities along the river (especially the City of Napa) made an honest effort to abide by the "Living River" requirement, the St. Helena Committee that took on this task was corrupt through and through, and no one other than I gave even a pretense of paying attention to "Living River" principles. It was an appalling experience for me. The fix was in from the beginning, and among the proposals that were floated was a cynical rerouting of Napa River above Pope Street bridge that would leave the riparian woodland intact for the moment, but was deliberately designed to erode and destroy both banks and all the riparian trees and habitat over a period of a few years. I made enough of a stink about that cynical plan that it was eventually dropped from consideration, but sadly nothing better was put forward.

In an attempt to get the Committee to understand what the implications of their proposals would be for people living downstream and the survival of Pope Street Bridge, I personally funded through Friends of the Napa River a brief study by the highly regarded hydrology experts Philip Williams and Associates, which we gave to the St. Helena Measure A Committee so they could begin to understand the downstream impacts above Pope Street Bridge and to the bridge itself if they did one or another of their plans. Williams' mapping of flow patterns revealed great downstream risks involving the plan they settled on: the building of a long, riverside levee that cut off a huge, undeveloped, low-lying area that accommodated flood water every time there was a major rain event and took pressure off the area just above the bridge. As I recall, I spent $20,000 on the Phil Williams study that gave the Committee basic prognostications that would help them understand the implications of what they were proposing; but to my knowledge, that study was completely ignored by every member of the Committee and the highly paid consultants as well. That's when I washed my hands of the crooked Committee and its phony "Living River" process and quit in disgust.

If anyone had genuinely cared, I was prepared to further fund Philip Williams to assure a legitimate "Living River" solution was developed, as **required** by Measure A, which, as you may recall, passed with more than the necessary two thirds majority of the county's vote! This "super majority" made the "Living River" provision a **mandatory** aspect of whatever alterations were carried out using Measure A funds, as opposed to a simple majority vote that could be given little more than lip service.

St. Helena's actual alteration: the huge, lengthy levee which destroyed many acres of our priceless existing floodplain, was in complete violation of both common sense and the "Living River" mandate. It was done for no reason but to destroy an existing, critically important and legally protected floodplain in order to turn all that low land into a huge housing development in the most unsuitable possible location. Now, during flood events, the changed river flow below the levee is destroying the once-stable bank just above Pope Street Bridge. A beautiful, historic mansion- I think it is 2240 Pope Street- is already being put at serious risk of toppling into Napa River as the high bank there is rapidly collapsing. This massive erosion, which will soon destroy the great old estate that existed safely there for more than a century, is a direct result of the changed flow dynamics caused by the levee's elimination of the flood plain that existed just above it. **I believe the City is directly liable for the upcoming destruction of that property!** The destructive, illegal levee, along with Hunter's proposed development that is bound to flood, has got to go **NOW!** This is all the product of a corrupt enterprise between a past Council, City staff and Hunter.

Re: Pope Street Bridge Park

Dear Mr. Mennen:

This was in fact done! PM 12-24-18

Jerry Cormack and I have both tried to return your calls but there was no answer nor answering machine at the number that we were given (963-~~2688~~). 2668-

The Pope Street Park Master Plan that you saw in our offices is a conceptual plan that was prepared from the recommendations of the Parks and Recreation Commission. The plan is currently being reviewed by staff and two members of the City Council. There are a number of concerns with the plan and alternatives will be reviewed.

I have not heard of any plans to rip-rap the riverbank next to the park. There are some existing areas of bank stabilization north of the bridge that are in need of repair. The proposed proximity of the ball field to the river is a concern to us also. Whatever park project occurs must be in compliance with the standards of the Department of Fish & Game who will establish the minimum distance that the improvements must be from the top of bank.

I (we) thought to believe the destruction of the Napa Riverbank was/is "in compliance" with the regulations for a Threatened/Endangered steelhead salmon spawning river in California PM 12-24-18

We are planning to have preliminary meetings about the park with concerned groups and citizens. We would like to have some alternatives for them to look at as they express their concerns. These meetings will be followed by public hearings before the Planning Commission and the City Council for approval of a Use Permit for the park. No meetings have been scheduled yet, but we will notify you when they are.

Please call me at 963-2741 if you have any other questions.

Yours truly,

Carol Poole
Assistant City Planner

I was on this committee. My input and concerns were ignored. PM 12-24-18

Re: ***Fulton Lane Residents v. City of St. Helena***

Dear Peter:

To keep you apprised on how this case is developing, we have been fortunate to obtain two engineers who we have consulted with who have reviewed the construction drawings for the flood mitigation project in question. Fortunately, both engineers have identified errors in calculations and errors in assumptions that the City engineers relied upon. That is enough for us to initiate a lawsuit. Also, fortunately there is a ten year statute of limitations on any defective design cases. Since this is clearly a defective design, we don't have to worry about some of the limitations' issues that we were dealing with on some of the other causes of action.

We hope to have a lawsuit filed no later than mid next week with the assistance of our new engineers. I will keep you apprised as matters develop. Since you are part of the citizen's group involved in this action, we continue to have a confidential relationship and your identity will be treated as such.

Thank you again for all your assistance in this matter. I would like to possibly meet with you and Sampson early next week to give you a final once over before we file the action. Please call with any questions.

Very truly yours,

THE LAW OFFICES OF JAMES R. ROSE

JAMES R. ROSE

The Completion of the Fulton Lane Project which is the subject of this lawsuit is the result of the flawed calculations and errors in assumptions that the City engineers relied upon!!!

The delay in the completion of the landowners' property on the west side of the River just above the Pope Street bridge

Dear Peter,

I wanted to let you know that I received the materials you delivered to City Hall on January 28, 2016 related to the Flood Control Project.

I know this was and continues to be a controversial project for the citizens of St. Helena. My goal in hiring a forensic accountant is to review the revenues and expenditures related to all the projects in an effort to ensure all the funds are accounted for and were properly spent in accordance with contractual obligations. Although the scope of the review does not include engineering, environmental or other aspects of the projects, I will add your documents to the file and make them assessable to the forensic accountant.

Sincerely,

Jennifer Phillips
City Manager

March 15, 2002

Mike Praul, City Engineer
City of St. Helena
1480 main Street
St. Helena CA 94574

Dear Mr. Praul:

I was one of those selected to participate in the proposed design of a flood control project to be carried out using "Measure A" money that would reduce the impact of flooding on the community of St. Helena. As a bit of history, Measure A was passed by the voters of Napa County as a method of achieving flood control in ways that would be considerate of the biological integrity of the Napa River, as opposed to a flood control design proposed by the Army Corps of Engineers, which was rejected by the citizens of Napa County because it was destructive to river values.

A county wide community group which named itself "Friends of the Napa River" pulled together and began an extraordinary effort to rethink the way in which flood control could be designed so that the Napa River would benefit from sophisticated flood control methods that would help the river regain some of its former behavior in the days before we hedged it in and destroyed its ability to spread out into a flood plain during heavy rain events. This would be done in ways sensitive to the ecological values of napa River. This Measure A funding came to pass by a two thirds vote of the county because of the incredible work Friends of the Napa River did to educate county citizens of the way in which flood control could be handled in ways that would improve the beauty and functionality of napa river, which as you know has been declarted an impaired waterway by Congress, due to the many damaging alterations we have wreaked upon the river in the past hundred years.

I was selected to as a participant in the St. Helena process to represent the vision of Friends of Napa River, to assure the local plan would incorporate the standards for flood control that were integral to any project that would be put forward. After all, a river-friendly design was the whole impetus for Friends of the Napa River to do the extraordinary work that made measure A come to pass.

Regrettably, I found myself marginalized as the planning process went on, and I can recall at least one specific incident where i was told the concept of retaining a tree-lined riparian corridor along the river bank would be an impossible, and then later I learned this devestating concept was built into the design with the justification that, since i had not objected to it, Friends of the River must think it was okay. Toward the end, i was not even notified of upcoming meetings of the St. Helena flood design group, much less invited to participate in the role of a "Friends of the Napa River" advisor. I only learned after the fact that a meeting had taken place, when someone questioned me about why I was no longer attending.

Finally, after the committee agreed upon a proposed design without even an opportunity for "Friends of the Napa River" to have me participating in the proposal that went forward to the city, you were kind enough to give me a copy of the plan. I sent that copy to "Friends of the Napa River," who made the attached comments and sent thaem back to you on February 22, 2002. I am writing this letter just so that I can have some input into the process now, having been excluded in a manner I believe is illegal, and thus depriving "Friends of the Napa River" to have any legitimate input, or even an opportunity to review, the proposal before it was submitted to the St. Helena City Council. Since I

Wed, Feb 10, 1904 3:37 AM

B3-2

as selected as an official member of the committee, specifically to represent the interests of the "living river" concept that drove the passage of measure A in the first place, this whole process strikes me as bogus.

And not surprisingly, the fundamental design vision of all the possible proposals for flood reduction in St. Helena is antithetical to any kind of living river vision. In each of the possible projects, the riparian corridor along the river is utterly sacrificed, destroying any number of critical aspects of the living river vision. there are many mature and even landmark-sized, "heritage" trees within St. Helena city limits along the Napa River which, I am only now told, will be deliberately left in a narrow, eroding ridge between the current rivercourse and a new floodplain beyond the existing riparian corridor. I am informed that it is understood and expected that the entire riparian stand along both banks of the Napa River within St. Helena city limits will be destroyed over a short period of time as the river cuts into the banks and causes all those trees to come crashing down, leaving nothing of their shade protection for the river all along the banks of the river. In their place will be a great, vacant swath of little or no biological value, at a terrible price to the river. This is a mockery of the real measure A, which was to enhance the river's values as a part of flood control, not destroy them.

Also, a multitude of other benefits, beyond the loss of all their beauty to all of us citizens, will be lost. Many of those trees are mature oaks, whose wildlife value cannot be overestimated. they are the lynchy-pin of biological integrity along the river, and most of them already have been lost to human development. To deliberately destroy these last precious corridors of mature oaks and complex vegetation is intolerable and unacceptable. It is in direct defiance of the driving concept of Measure A. It makes our plan a farce. Just for your improved understanding of the value of oaks, I am including a copy of an excellent book on the complexity and value of oak trees entitled "The Life of an Oak." It was produced by the California Oak Foundation, with major funding from, among others, the Mennen Environmental Foundation. Perhaps you and others will gain some perspective on what you are attempting to throw away.

Measure A was not passed so that a few interest groups in Napa County could benefit at the expense of tremendous tax costs to the rest of us and the sacrifice of the Napa River. It was not put forward so that local politicians could make a lot of hay on its back by corraling a clot of special interest votes and make self-serving claims on campaign literature when they ran for larger office. Measure A had far loftier goals of spending our tax money to benefit both people and the Napa River, and that is the Initiative we as a county passed. St. Helena's Measure A oversight committee has unconscionably distorted the very heart of the "lving river" intent of the measure whose county tax money they (we?) were expected to spend in an appropriate way.

The Mennen Environmental Foundation has purchased acreage on Sulphur Creek to restore in a manner that will benefit flood control and biological values. Our expert evaluators have proposed solutions that are diametrically opposed to the proposal being forwarded to the City of St. Helena by the oversight committee. I absolutely wash my hands of the disgraceful and shameful set of proposals that "my" committee has certified for your consideration and acceptance. I am appalled. I am certain Friends of the Napa River would not touch these proposals with a ten foot pole. They are a joke- a slap in the face to everyone who put his/her heart and soul into bringing Measure A to fruition.

Sincerely,

Peter Mennen

TO: City Council

FROM: Myke Praul, City Engineer MP

RE: Clarification of Council Direction on Comprehensive Flood Study Environmental Impact Report

Cc: City Manager

BACKGROUND:

The environmental consultant for the Comprehensive Flood Study, CDM, has initiated the public input process to facilitate preparation of the draft environment impact report. At the Council meeting initiating this process, the Council directed staff to analyze three plans; the no action plan, the Minimum Plan and the Enhanced Minimum Plan. In response to a question by a member of the public, the Council also directed staff to analyze a plan that combined the extension of Adams Street with the Minimum Plan. Staff now presents the results of that analysis and requests clarification of the Council's prior direction.

FOR 2018 EIR PM 12-24-18

DISCUSSION/ANALYSIS:

As the Council recalls, the Enhanced Minimum Plan (EMP) was a compromise alternative between the Maximum Plan (MaP) and the Minimum Plan (MiP). The MaP reduced the 100-year water surface elevation (WSE) 3.1 feet at the Hunt's Grove Apartments but required the relocation of 60 homes within the Vineyard Valley Mobile Home Park (Park). It included a fill area to the north of the Park on which the relocated homes would be placed. The MiP reduced the WSE 1.6 feet at the same location with the elimination of 17 spaces and loss of approximately 7 to 8 existing homes. The existing floodwall would have to be raised approximately 3.5 feet or a new levee constructed to the north of the wall at the same elevation. The EMP was developed as a compromise to the two distinctly different plans. It would reduce the WSE 2.4 feet and includes the relocation of 29 homes to the vineyard area north of the Park which would be flood proofed by the roadway embankment of an extension of Adams Street. The Council asked what is the feasibility of combining the Adams Street extension with the MiP.

MBK has computed the hydraulic benefits of a plan that would include the Adams Street extension but with the river terracing of the same area as the MiP, or the loss of 17 spaces within the Park. The resulting reduction of the 100-year WSE is about the same as the MiP, which is one foot less than the EMP. The elevation of the roadway embankment would need to be the same height as the levee north of the floodwall or about 3.5 feet above the elevation of the existing wall, a foot higher than the EMP.

Staff and the consultants believe that the environmental impacts of this revised alternative would be somewhere between the EMP and the MiP. While it would require a larger footprint than the

MiP, the structural elements would be very similar with impacts to the Park residents also being very similar as the MiP.

B3-2

IMPACT:

Further analysis of this hybrid alternative will take additional time and funding. At the last Council meeting, representatives from the VVMHP Homeowners Association presented a petition in support of the EMP, which was signed by approximately 90% of the residents of the Park. The revised alternative would still eliminate some homes in the Park where the EMP would not.

FISCAL IMPACT:

Staff will return to Council at the meeting of March 26, 2002 to discuss the current financial status of the study and bring recommendations to extend the consultant agreements with the funding requests necessary to complete the study. Confirming the above direction will reduce the amount of analysis required for the EIR.

ALTERNATIVES:

1. Confirm prior direction to staff and the consultants to analyze the No Action, Minimum and Enhanced Minimum Plans through the EIR process.

2. Direct staff and the consultants to include a fourth alternative for further environmental analysis that combines the Minimum Plan with the Adams street extension.

RECOMMENDED COUNCIL ACTION:

Staff recommends that the Council confirm the prior direction to staff and consultants to analyze the No Action, Minimum and Enhanced Minimum Plan through the environmental review process.

ST. HELENA CITY COUNCIL
CARNEGIE BUILDING COUNCIL CHAMBERS
1360 OAK AVENUE, ST. HELENA
MARCH 12, 2002
6:45 P.M. CLOSED SESSION
7:00 P.M. REGULAR SESSION

Prior to the meeting the public may review available information at City Hall or at the George and Elsie Wood Public Library.

A person who is dissatisfied with a decision of the City Council may have the right to a review of the decision by a Court. The City of St. Helena has adopted California Code of Civil Procedures Section 1094.6, which generally limits to ninety (90) days the time within which a decision of the City Council may be judicially challenged. If a person challenges a decision in Court, he or she may be limited to raising only those issues that were raised at the Public Hearing described in this notice, or in written correspondence delivered to the City Council at, or prior to, the Public Hearing.

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact City Hall, (707) 967-2792. Notification 48 hours prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting (28 CFR35.102-35.104 ADA Title II). However, City staff will attempt to assist at any time with accessibility. The City Clerk has equipment to assist those with a hearing impairment.

The City Council will convene in Open Session at the stated time, but will then adjourn to any Closed Sessions(s) listed on the agenda. The Council will reconvene in Public Session at 7:00 p.m. at that time, if appropriate, any actions taken during the preceding Closed Session will be announced. If necessary, the Council may reconvene in Closed Session to continue discussion of listed items following the completion of other business.

2. **APPROVAL OF MINUTES** – January 29, 2002 and February 26, 2002

3. **REPORTS BY STAFF AND CITY COUNCIL:** Reports by staff and/or Councilmembers on items of general interest or action taken during Closed Session. Brief questions for clarification may be posed and answered, and Councilmembers may request that items be placed on a future agenda. Except under certain circumstances, the Brown Act prohibits any other discussion or action by the City Council.

4. **PUBLIC FORUM:** An opportunity for the public to directly address the Council on items of interest to the public not on the agenda. Any person addressing the Council is subject to the requirement of providing his or her name and address, and limiting comments to five minutes. Because of restrictions imposed by the Brown Act, the Council may not engage in substantive discussion, nor take action on matters not described on the agenda.

5. **PRESENTATIONS AND PUBLIC RECOGNITIONS**

   - Presentation by Jill Pahl, Upper Valley Agency Waste Management, Re: Solid Waste Rate Adjustments

II. CONSENT ITEMS: Members of the Council or the public may ask that any items be considered individually for purposes of considering alternative action, for extended discussion, or for public comment. Unless that is done, one motion may be used to adopt all recommended actions.

6. Planning Commission Actions of March 5, 2002 *Recommended Action:* Approve

7. Accounts Payable and Payroll *Recommended Action:* Approve

8. Resolution Approving Hanging of a Banner Across Main Street Promoting the Calistoga Education Foundation Spring Benefit Auction
   Recommended Action: Adopt

9. Park and Recreation Minutes of February 25, 2002
   Recommended Action: Note & File

10. Report from City Manager Re: City's Emergency Managers Attending Integrated Emergency Management Course (IEMC) *Recommended Action:* Note and File

11. Resolution Establishing a Voluntary Contribution Check-off Program by Supporting "Action for Better Cities" (ABC) *Recommended Action:* Adopt

12. Resolution Accepting Offsite Improvements by Robert & Katherine States Burke Trust at 2995 Spring Street and Authorization to File Notice of Completion
Recommended Action: Adopt

13. Resolution Authorizing a Professional Services Agreement with Oswald Engineer Associates for Design, Environmental Review and Permitting of the Recycled Water Project
Recommended Action: Adopt

14. Resolution Approving a Budget Appropriation for the Purchase of a Street Sweeper
Recommended Action: Adopt

III. PUBLIC HEARINGS (Since Public Hearings do not begin before 8:00 p.m., Scheduled Matters listed below may be considered before that time.)

15. City Council Appeal of Planning Commission Approval of Request of the Wine Service Co-op for a Tentative Parcel Map to Divide an Existing 7.8 Acre Parcel Located at 1150 Dowdell Lane, on the East and West Side of Fountain Avenue between Dowdell Lane and Mills Lane, into Two Parcels of 5.9 Acres and 1.9 Acres with an Offer of Dedication for Land for the Future Extension of Fountain Street and Realignment of Mills Lane (APN 009-660-003) (Exempt from CEQA) (Planning Director)

16. Request of Julian Inman, Representing Jack and Diana Varozza, to Rezone Property from A-20: Twenty Acre Agriculture to A-20: HP: Twenty Acre Agriculture with a Historic Preservation Overlay. The Application also Includes a Request for a Use Permit and Design Review to Refurbish a Historic Winery Building and to Operate a 20,000 Gallon Small Winery at 514 Pratt Avenue (Planning Director)

17. City Council Preliminary Review of Proposed General Plan Amendment Pursuant to Chapter 26 of the St. Helena Municipal Code as Initiated by Kevin Twohey to Process an Application to Change the Land Use Designation for the Property Located at 738 Main Street from Office to Service Commercial to Allow the Operation of Whiting Nursery on the Project Site (Planning Director)

IV. SCHEDULED MATTERS (Since Public Hearings do not begin before 8:00 p.m., Scheduled Matters listed below may be considered before that time.)

18. Request for Direction Re: Environmental Review of Comprehensive Flood Study (Public Works Director)

19. City Council Discussion of Modifications to Bed and Breakfasts Ordinance (Planning Director)

20. City Council Discussion of Moratorium on Small Winery Applications (Planning Director)

21. Request for Reconsideration of Council Action of February 26, 2002 Regarding Request of Peter Story for a Use Permit and Design Review at 100 Pratt Avenue (Councilmember Bowers)

V. ADJOURNMENT

The next Regular City Council meeting is scheduled for March 26, 2002 at 7:00 p.m. in the Carnegie Building. This agenda was posted at City Hall, 1480 Main Street, St. Helena, California, at 3:00 p.m., Friday, March 8, 2002.

Re: **Napa River Near St. Helena Technical Report for Hydraulic Analysis Results Prepared by: MBK as of November 27. 2001**

Dear Mr. Praul:

Friends of the Napa River would like to comment on the Technical Report by MBK in response to Scoping for an EIR pursuant to CEQA requirements. We appreciate the opportunity to provide early information through the public process to a Measure A project that must comply with the ***'Living River Guidelines'*** approved by the voters of Napa County.

The Technical Report lists three different plans to the St. Helena Flood Control project:
A. The "Non-Structural Plan" (NSP)
B. The "Minimum Plan" (MP)
C. The "Enhanced Minimum Plan" (EMP)
D. The "Maximum Plan" (MxP)

Friends of the Napa River have serious concerns and many questions with the plans B, C and D. We find the "Non-Structural Plan" the least intrusive and most in line with the 'Living River Guide Lines.'

To better understand the implications of the other plans, we would like the following questions answered and documents provided for public review:

1. The massive excavations of plans MP and MxP will create islands in the Napa River riparian corridor. Questions:
    a. Is this compliant with the 'Living River Guidelines'?
    b. How many native Valley Oak trees will be lost?
    c. How much riparian vegetation will be removed from the banks and the bed of the Napa River? What is the re-vegetation plan? What is the maintenance cost?
    d. How much erosion will occur in tons/year?
    e. What will this do to anadromous spawning gravel down stream?
    f. How will this change the bank and channel of the Napa River?

B3-2

FONR Comments to St. Helena Flood Control Project, page 2 of 2

g. What are the upstream and downstream erosion effects?
h. How will the loss of riparian vegetation and riparian function effect temperature in the Napa River?
i. How high will the temperatures get in the Napa River during the hot summer months due to loss of riparian vegetation?
j. When is it expected that the riparian cover is recovered / rebuild?

2. The initial excavations in plans MP and MxP seem to be enormous. Questions:
   a. What is the number of cubic yards (or tons) of excavation material?
   b. What is the destination of the spoil/other material resulting from excavation?
   c. Will the City of St. Helena be creating new housing locations with the excavated material and cane Measure A money be used for this?
   d. Would such new housing locations be growth inducing?

3. There will be cut down areas in the riparian zone (called flood terraces). Questions:
   a. How much aggradation will occur in the new excavated area?
   b. How many tons per year of sediment excavation/maintenance will need to be done?
   c. Where will the maintenance spoils/sediment be disposed?
   d. How will new riparian vegetation be protected in this area?
   e. What are the maintenance costs associated with this?

4. Could you provide the public with a map that shows the existing flood plain and the existing floodway?

5. What will the increased stream velocity be in the Pope Street Area?

6. In MP and MxP, steep bank formation will be creating a step-function. Questions:
   a. What is the associated erosion factor to this change in banks of the Napa River?
   b. What are the costs of maintenance of these banks and where will the money come from when Measure A money sunsets?
   c. Is this compliant with Measure A 'Living River Guidelines'?

7. What is the upstream flooding impact of the proposed Adams street extension and causeway?

8. Please detail the effects any of the plans would have on Sulphur Creek.

Sincerely

Bernhard Krevet

March 15, 2002

Mike Praul, City Engineer
City of St. Helena
1480 main Street
St. Helena CA 94574

Dear Mr. Praul:

I was one of those selected to participate in the proposed design of a flood control project to be carried out using "Measure A" money that would reduce the impact of flooding on the community of St. Helena. As a bit of history, Measure A was passed by the voters of Napa County as a method of achieving flood control in ways that would be considerate of the biological integrity of the Napa River, as opposed to a flood control design proposed by the Army Corps of Engineers, which was rejected by the citizens of Napa County because it was destructive to river values.

A county-wide community group which named itself "Friends of the Napa River" pulled together and began an extraordinary effort to rethink the way in which flood control could be designed so that the Napa River would benefit from sophisticated flood control methods that would help the river regain some of its former behavior in the days before we hedged it in and destroyed its ability to spread out into a flood plain during heavy rain events. This would be done in ways sensitive to the ecological values of Napa River. This Measure A funding came to pass by a two thirds vote of the county because of the incredible work Friends of the Napa River did to educate county citizens of the way in which flood control could be handled in ways that would improve the beauty and functionality of Napa River, which as you know has been declarted an impaired waterway by Congress, due to the many damaging alterations we have wreaked upon the river in the past hundred years.

I was selected to as a participant in the St. Helena process to represent the vision of Friends of Napa River, to assure the local plan would incorporate the "Living River" standards for flood control that were integral to any project that would be put forward. After all, a river-friendly design was the whole impetus for Friends of the Napa River to do the extraordinary work that made measure A come to pass.

Regrettably, I found myself marginalized as the planning process went on, and I can recall at least one specific incident where I was told the concept of retaining a tree-lined riparian corridor along the river bank would be an impossible, and then later I learned this devestating concept was built into the design with the justification that, since I had not objected to it, Friends of the River must think it was okay. Toward the end, i was not even notified of upcoming meetings of the St. Helena flood design group, much less invited to participate in the role of a "Friends of the Napa River" advisor. I only learned after the fact that a recent meeting had taken place, when someone questioned me about why I was no longer attending.

Finally, after the committee agreed upon a proposed design without even an opportunity for "Friends of the Napa River" to have me participating in the proposal that went forward to the city, you were kind enough to give me a copy of the plan. I sent that copy to "Friends of the Napa River," who made the attached comments and sent thaem back to you on February 22, 2002. I am writing this letter just so that I can have some input into the process now, having been excluded in a manner I believe is illegal, and thus depriving "Friends of the Napa River" to have any legitimate input, or even an

3-15-02

Fri, Jan 8, 1904 9:10 AM

B3-2

opportunity to review, the proposal before it was submitted to the St. Helena City Council. Since I was selected as an official member of the committee, specifically to represent the interests of the "Living River" concept that drove the passage of measure A in the first place, this whole process strikes me as bogus.

And not surprisingly, the fundamental design vision of all the possible proposals for flood reduction in St. Helena is antithetical to any kind of "Living River" vision. In each of the possible projects, the riparian corridor along the river is utterly sacrificed, destroying any number of critical aspects of the living river vision. There are many mature and even landmark-sized, "heritage" trees within St. Helena city limits along the Napa River which, I am only now told, will be deliberately left in a narrow, eroding ridge between the current rivercourse and a new floodplain beyond the existing riparian corridor. I am informed that it is understood and expected that the entire riparian stand along both banks of the Napa River within St. Helena city limits will be destroyed over a short period of time as the river cuts into the banks and causes all those trees to come crashing down, leaving nothing of their shade protection for the river all along both banks of the river. In their place will be a great, vacant swath of little or no biological value, at a terrible price to the river. This is a mockery of the real measure A, which was to enhance the river's values as a part of flood control, not destroy them.

Also, a multitude of other benefits, beyond the loss of all their beauty to all of us citizens, will be lost. Many of those trees are mature oaks, whose wildlife value cannot be overestimated. they are the lynch-pin of biological integrity along the river, and most of them beyond the river bank already have been lost to human development. To deliberately destroy these last precious corridors of mature oaks and complex vegetation is intolerable and unacceptable. It is in direct defiance of the driving concept of Measure A. It makes our plan a farce. Just for your improved understanding of the value of oaks, I am including a copy of an excellent book on the complexity and value of oak trees entitled "The Life of an Oak." It was produced by the California Oak Foundation, with major funding from, among others, the Mennen Environmental Foundation. Perhaps you and others will gain some perspective on what you are attempting to throw away.

Measure A was not passed so that a few interest groups in Napa County could benefit at the expense of tremendous tax costs to the rest of us and the sacrifice of the Napa River. It was not put forward so that local politicians could make a lot of hay on its back by corraling a clot of special interest votes and make self-serving claims on campaign literature when they ran for larger office. Measure A had far loftier goals of spending our tax money to benefit both people and the Napa River, and that is the Initiative we as a county passed. St. Helena's Measure A oversight committee has unconscionably distorted the very heart of the "lving river" intent of the measure whose county tax money they (we?) were expected to spend in an appropriate way.

The Mennen Environmental Foundation has purchased acreage on Sulphur Creek to restore in a manner that will benefit flood control and biological values. Our expert evaluators have proposed solutions that are diametrically opposed to the proposal being forwarded to the City of St. Helena by the oversight committee. I absolutely wash my hands of the disgraceful and shameful set of proposals that "my" committee has certified for your consideration and acceptance. I am appalled. I am certain Friends of the Napa River would not touch these proposals with a ten foot pole. They are a joke- a slap in the face to everyone who put his/her heart and soul into bringing Measure A to fruition.

Sincerely,

P.M. Peter Mennen

RE: Napa River Bridge Alternatives

Dear Commissioners:

Friends of the Napa River, as you know, is concerned that community action today safeguard the long-term health of the Napa River. Specifically, we are concerned that the placement of the new Pope Street bridge to cross the Napa River will have significant impacts on river stability and of great concern to St. Helena's dense build-out along the river, have an impact on flooding. We acknowledge the need for a new bridge and perhaps the impacts will only be positive, but it is better to ask the questions now rather than later.

The Alternative A is of particular concern as the abutment for the West side of the bridge is in the floodway of the Napa River, possibly backing the water up in an area where there are many variables to consider, not the least of which is residential. The abutment on the West side sits on Stonebridge Park, a park that carries flood waters at times. Placing a cement dam there would force water elsewhere. The bridge would have to be longer with a causeway to allow the passage for that water in an area that seems ill suited for it.

Alternative A has other problems associated with the troubled area it would be placed into: that is the confluence of Sulphur Creek and the Napa River, and upstream from the historic Pope Street Bridge that is a constriction in the river. It is not yet known what the cumulative effect of the increased flow and velocity of the stormwater runoff from the new developments along Sulphur Creek is going to be during heavy rains.

We have briefly consulted an hydraulic engineer who has done a complete computer analysis of the Napa River at that very point and would be able to plug in the variables to make sure Alternative A would not have the problems it does appear to have and to compare them with the other alternatives. He suggested that bridges have backflow problems that have to be considered carefully. We have learned in our education about river systems that you can not tell how things are until the numbers are run. On page 19 of your report you suggest the hydraulic scour evaluation would be conducted during the final design phase of the project. Suppose at that time the numbers don't come out well for Alternative A? Why not do the modeling now so the citizens can see what the options are and rest assured there will be no additional flooding or scouring problems with any of the alternatives? This would allow them to support a more informed decision.

We are enclosing the name and address of the engineer who has the computer model of this stretch of the river.

Respectfully submitted,

Dear Pete –
Please call me

Re: Draft Environmental Impact Report Chapter 3.7-1 and 3.8-1

Dear Noah,

My commendations on excellent maps in the sections above. However, some of the information is not current, such as the USGS Fact Sheet relied on from 2000 has been replaced by the USGS Fact Sheet from December 2014. These areas should be re-written to reflect current statistics and realities. A copy of the 2014 Fact Sheet with predictions is enclosed.

If the drafters of the EIR would like to consult further on seismic and fault issues related to West Napa Fault, the two authorities are Belle Philibosian, Research Geologist of the Earthquake Science Center who is actively involved in pit studies of the West Napa Fault from St. Helena to beyond Calistoga. Belle can be reached at 650-329-4784 or by cell phone at 626-344-9159. Belle's e-mail address is bphilibosian@usgs.gov. The State Geological expert studying the West Napa Fault who has also traced with USGS its presence running through St. Helena and Calistoga to a length of 45 miles is Professor Michael Oskin, Chairman of the Department of Geology, U.C. Davis. Dr. Oskin also served the USGS and provided a map attached from December 2014 that shows seismic activity running the length of the valley on the "west" side of Hwy. 29. In other words, the fault does not stop at the south border of St. Helena and there are several published sources I've provided verifying this. There are also visible fault damaged areas from the 2014 Napa earthquake.

A website that should be viewed by the preparers of the draft EIR is easily found using google. Enter "Hayward Fault Shake Map" where three "break points" are given showing magnification of damage from a 7.0 quake along that fault. If the fault breaks in Fremont or Oakland, St. Helena is in for a greater than 8.0 quake. So please take this seriously, since the probabilities are so high of one or more events of 6.7 or greater (72%) than noted in the

B4-A-1

B4-A-2

B4-A-3

current draft EIR with its outdated materials. Again, I've attached information about this.

B4-A-3

The characterization made that St. Helena has less problems, otherwise there would be an Alquist-Priolo Map is inaccurate. The State Geological Survey is years behind and under-funded, thus the State's Gegological Survey group selects studies based on population densities. This can be verified by Richard who handles maps for California Geological Survey in Menlo Park. Since Yountville, St. Helena and Calistoga are smaller and more rural than Napa, the CGS focus was American Canyon and Napa, and there were no funds and less priority for the State to complete maps for the upper part of the valley due to smaller populations compared to many other areas of the state waiting in line for updated Alquist-Priolo Maps. As CGS told the press ("San Francisco Chronicle"), we have a 300 year backlog given the meager funding provided for development of Alquist-Priolo Maps."

B4-A-4

I don't believe the stark probabilities of a problem from a break in the West Napa Fault should be hidden from view. Burying one's head in the sand leaves people victims of their own city personnel's biases that are not founded on reality.

B4-A-5

The drafters of the EIR should also include in their references the State Guidelines for Seismically Active Area from 2008: "Special Publication 117A" and update their descriptions and systems as well, based on this Publication. I am sorry to see the EIR writers are so far removed from updating their records, relying on 2000 data for the most part from both the USGS and State GS. I provided you with a copy of this Publication for use by residents. Perhaps you can share it with the EIR preparers so they can update this chapter.

B4-A-6

I attach further information for your review once again. Please see that the preparers of the Draft EIR received all of the information provided with this letter. With the exception of the fault map, which isn't current, all other maps are an astounding improvement from those of years past, as are the descriptions of seismic hazards far superior. Since Napa County (not just the Bay Area) is described as Seismically Active, I believe a description should include this reality.

B4-A-7

Also of concern with respect to Hazards in Chapter 3.8 is a risk of CONFLAGRATION, which is a firestorm, or in the alternative, a seismic event that can trigger multiple fires and gas hazards. As a policy, the City should consider adding a section with some sound policies articulated, such as banning ornamental fire features within the City's Fire Emergency Response area. The 60 plus fire pits on balconies at Las Alcobas are under the control of guests, and it could take management some time to become aware of a problem in order to shut off a gas main. Other fire features of concern are ornamental fire walls like the one at Hall Winery on the second floor in their tasting room.

B4-A-8

B4-A-9

Thank you for this opportunity to comment.

Sincerely,

Lois Ann Battuello

Lois Ann Battuello

Enclosures - USGS updates and seismic facts from historic reports

CC: Paul Dohring, Council
Mary Koberstein, Council

B4-A-10

https://earthquake.usgs.gov/learn/topics/shakingsimulations/hayward/M7.0.php

Earthquake "Shake" Map for breaks on the Hayward Fault - 3 scenarios of shaking intensities for a 7.0 M quake - San Pablo Bay (almost no affect on Napa County), Oakland (serious affect on Napa County), and Fremont (extreme shaking and most serious affect on Napa County).

In the foregoing scenarios, note that the location furthest away, Fremont, would produce the most damage in Napa County. This is similar to the effect of the quake in 2017 in Mexico city, where the origin was 65 miles from Mexico City but the shaking and magnitude of the quake increased and was most severe in Mexico City.

Another way to get to Hayward Fault info: Use Google.com, type in Hayward Fault Shake Map and there's as USGS link on the index that is generated.

B4-A-10

AN ANALYSIS OF BAY AREA EARTHQUAKES AND USGS FORECASTS

The USGS has been accurate in its 30-year forecasts, as there has been at least one 6.0 M quake or greater within their set timeframe since 1959. Prior to that, there was only one quake just under 6.0 M from 1906 forward. This information is from the "List of Earthquakes in California" (Google the term and look for the Wiki link) and historic USGS forecasts (Google "Earthquake Outlook for San Francisco Bay Region 2014-2043).

Each time there is a 6.0 or greater quake, a new 30-year forecast has been made by USGS. Here are the differences since Napa's 8/24/14 earthquake:

(1) Probabilities have moved from 72% to 98% for a quake of 6.0 M or greater for the first time. Before: Probabilities were 72% or 70%

(2) USGS in 2014 increased the probabilities to include one "or more" events as shown in their Earthquake Outlook for the first time

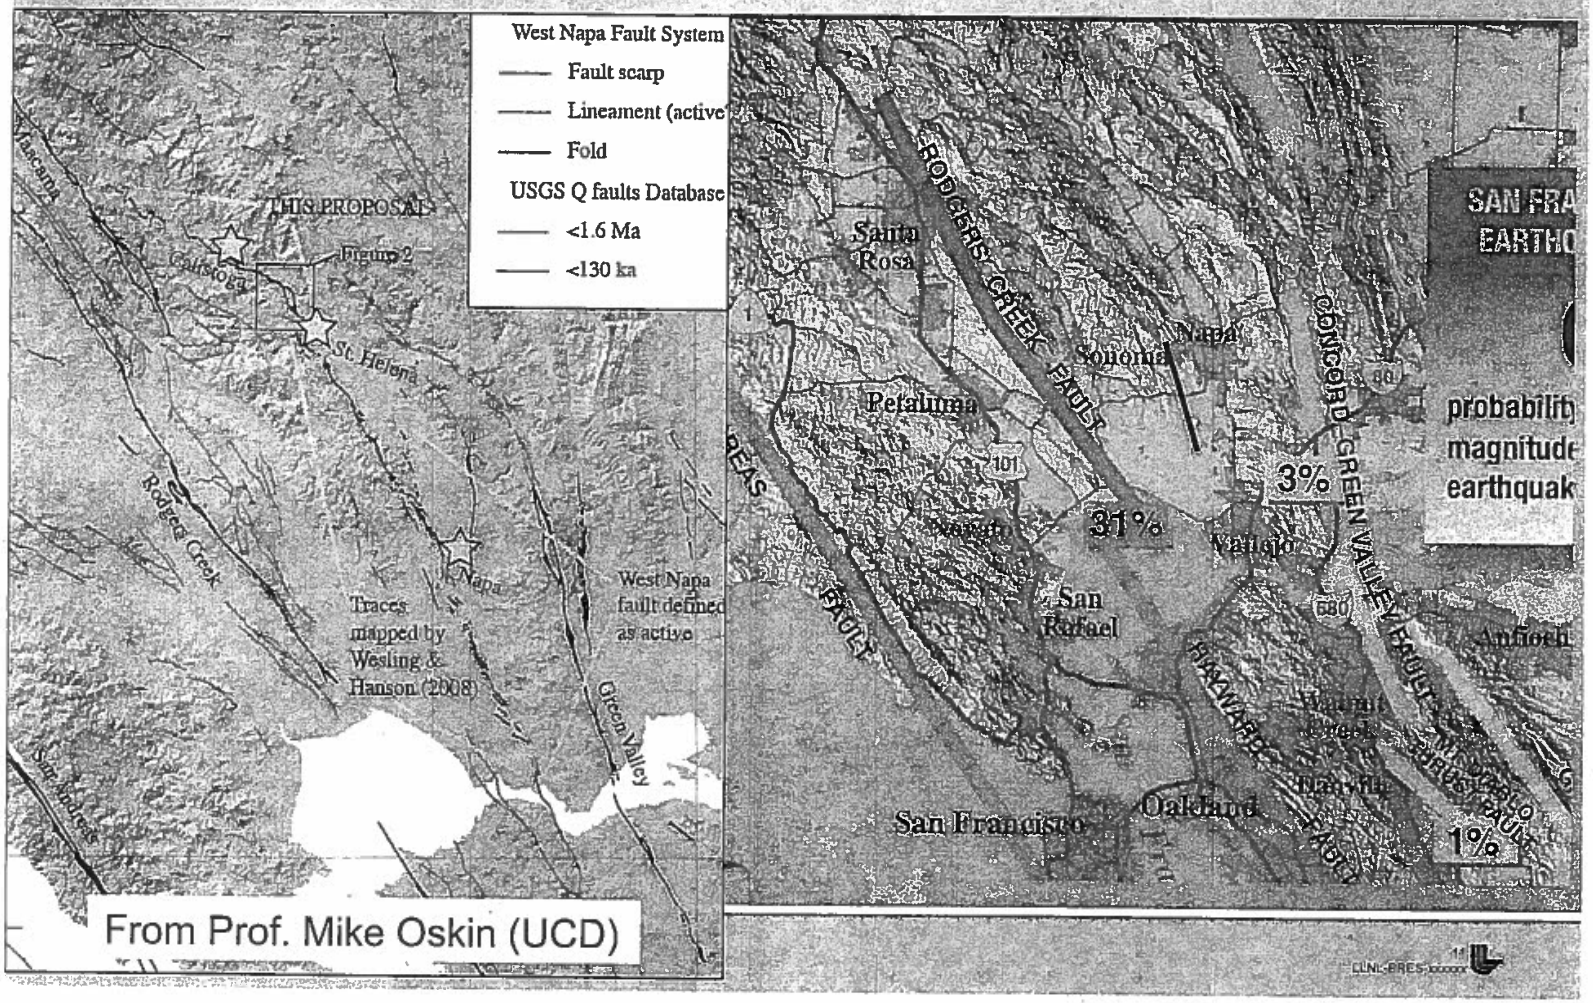
(3) USGS now adds the 72% probability of a 6.7 M or greater. This is the first time there has been a forecast probability for a 6.7 M or greater event.

All of this is new data since the Napa Earthquake of 8/24/14. The West Napa Fault erupted for the first time in 11,000 years to 45 miles in length.

We are more seismically active, as faults are building pressure, and are occurring within shorter time-frames. Hence the probability is 98%.

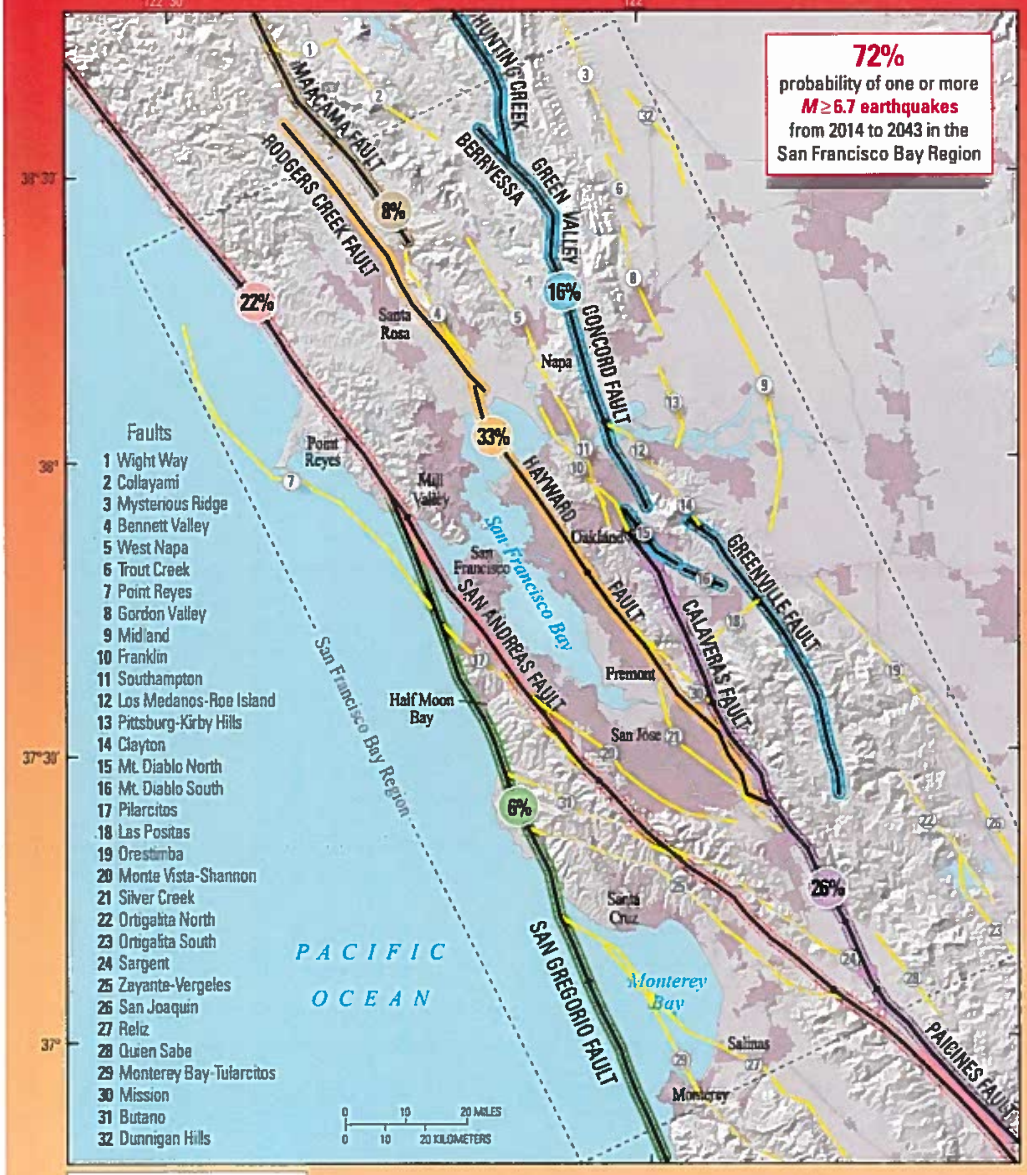
Since 1868, there have been four major earthquakes in San Francisco and the North/East Bay Area that have been felt in Napa: 1868 Hayward; 1906 San Francisco; 1989 Loma Prieta; 2014 West Napa. Three of the four occurred at night when people were in their beds between 1:20 a.m. and 5:19 a.m. Loma Prieta broke at approximately 5:00 p.m. Three of the four occurred just before or just after the Fall Equinox (Sept.). Only the San Francisco Earthquake of 1906 occurred just weeks after the Spring Equinox (Mar.) on April 18, 1906.

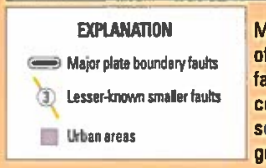
The West Napa Fault was identified as active, capable of M 6 event



USGS
science for a changing world

Earthquake Outlook for the San Francisco Bay Region 2014–2043

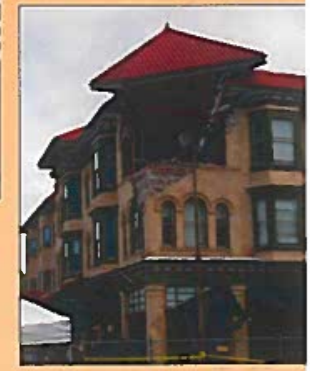




Map of known active faults in the San Francisco Bay region. The 72 percent probability of a magnitude 6.7 or greater earthquake includes the well-known major plate-boundary faults, lesser-known faults, and unknown faults. The percentage shown within each colored circle is the probability that a magnitude 6.7 or greater earthquake will occur somewhere on that fault system by the year 2043. The probability that a magnitude 6.7 or greater earthquake will involve one of the lesser-known faults is 13 percent.

Using information from recent earthquakes, improved mapping of active faults, and a new model for estimating earthquake probabilities, the 2014 Working Group on California Earthquake Probabilities updated the 30-year earthquake forecast for California. They concluded that there is a 72 percent probability (or likelihood) of at least one earthquake of magnitude 6.7 or greater striking somewhere in the San Francisco Bay region before 2043. Earthquakes this large are capable of causing widespread damage; therefore, communities in the region should take simple steps to help reduce injuries, damage, and disruption, as well as accelerate recovery from these earthquakes.

Building damaged in 2014 South Napa earthquake. Photograph by Erol Kalkan, U.S. Geological Survey.



U.S. Department of the Interior
U.S. Geological Survey

Fact Sheet 2015–3020
Revised August 2016 (ver. 1.1)

Likelihood of at least one earthquake greater than a given magnitude in the San Francisco Bay region between 2014 and 2043.

Magnitude (*M*)	30-year likelihood of at least one earthquake in the San Francisco Bay region
$M \geq 6.0$	98 percent
$M \geq 6.7$	72 percent
$M \geq 7.0$	51 percent
$M \geq 7.5$	20 percent

Timeline of magnitude 5.5 and greater earthquakes in the San Francisco Bay region 1850–2014. In the 50 years prior to 1906, there were 13 earthquakes with a magnitude between 6 and 7, but only 6 earthquakes of similar magnitude in the 110 years since 1906. The rate of large earthquakes is expected to increase from this low level as tectonic plate movements continue to increase the stress on the faults in the region.

Earthquake Preparedness Helps

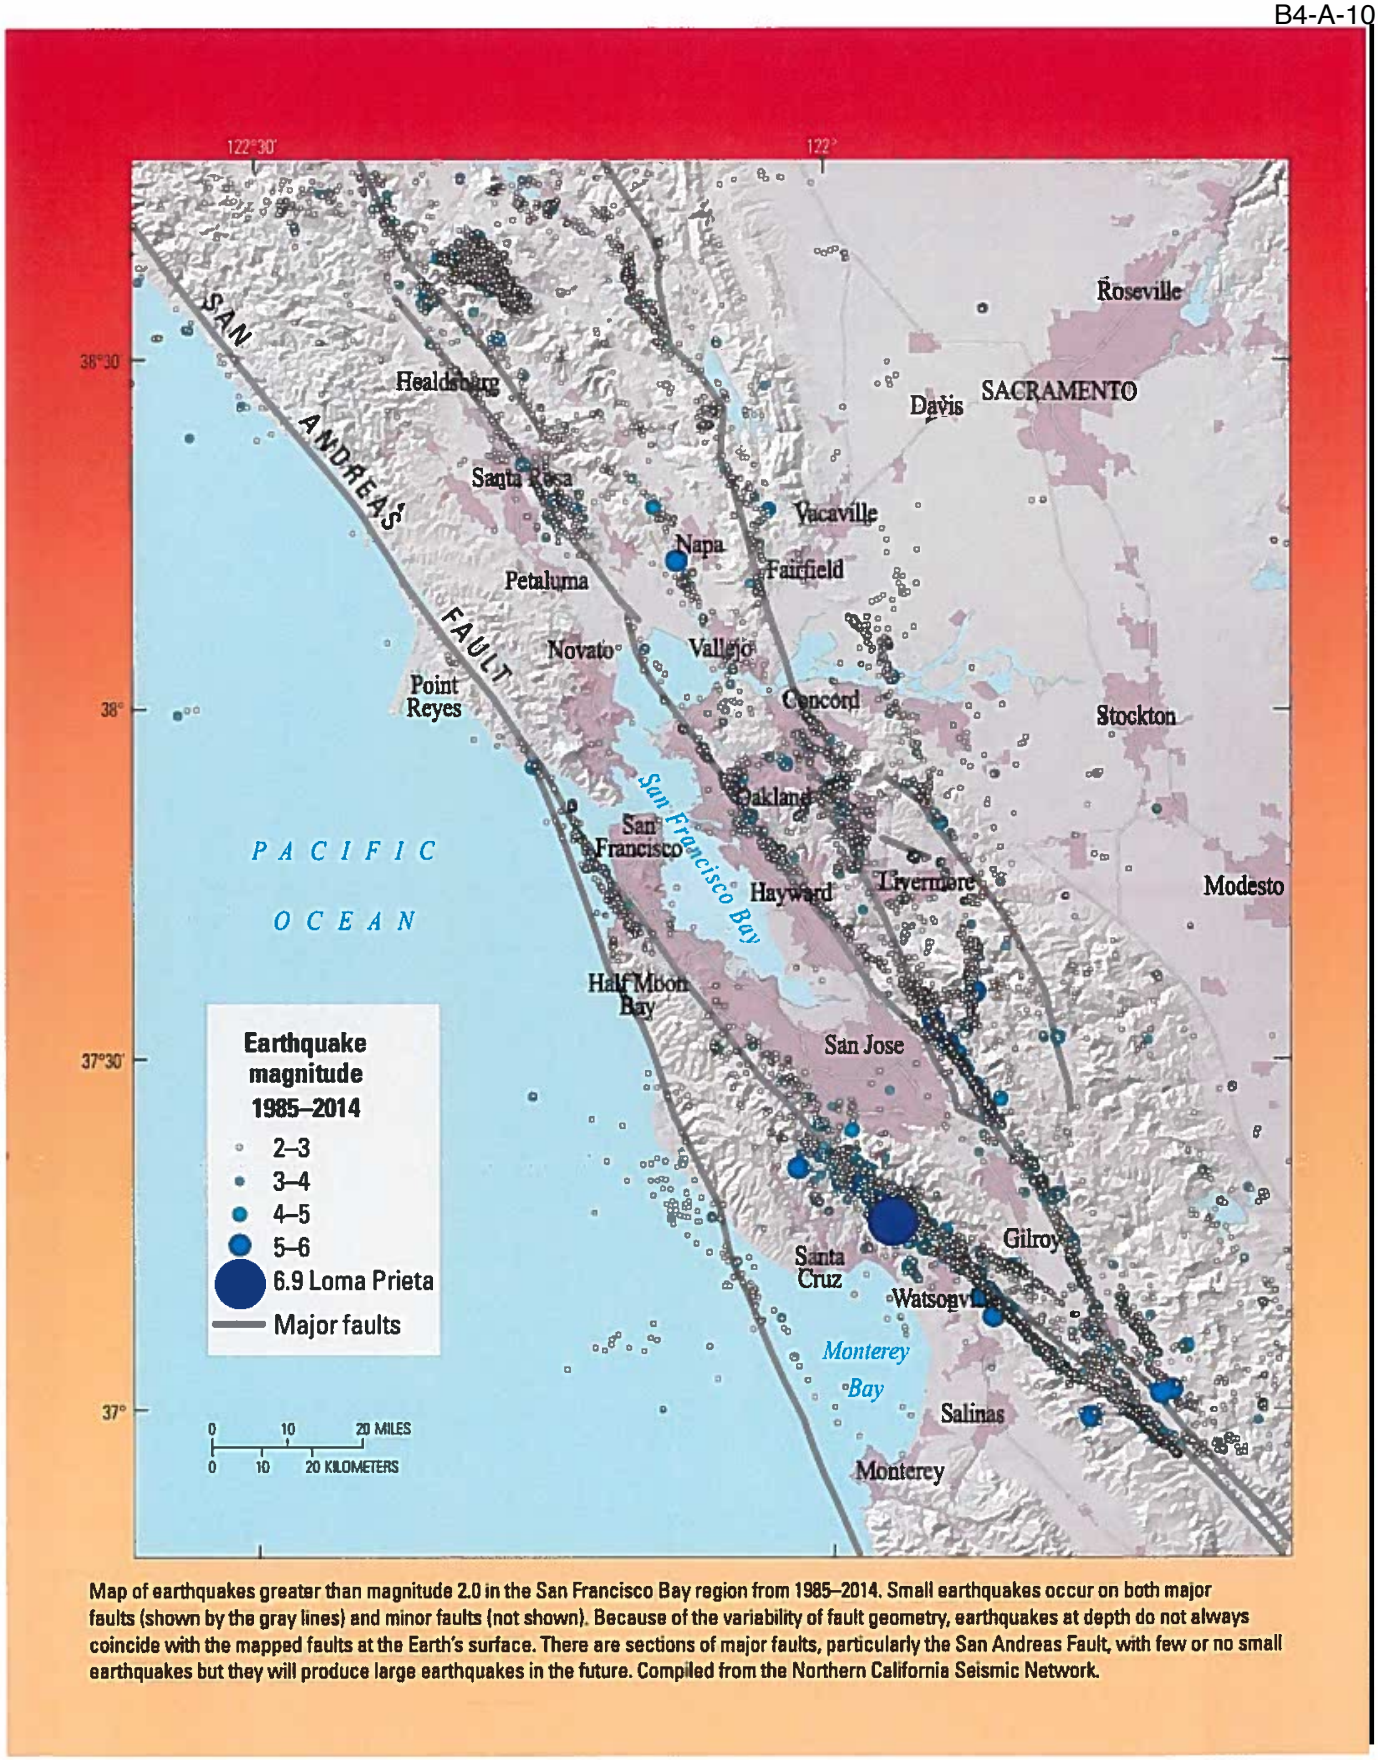
Early Sunday morning on August 24, 2014, the residents of Napa, California, were jolted awake by a strong, magnitude 6.0 earthquake. Within 30 minutes, the staff of Becoming Independent, a non-profit organization that helps adults with intellectual disabilities lead independent lives, called the people they serve in the affected area. The staff quickly visited all of the clients that needed help with cleanup and making their homes safe, a task made easier because both groups were trained in disaster preparedness and the clients had emergency kits with needed supplies on hand. The South Napa earthquake shifted houses off their foundations, damaged chimneys, started fires, and broke water mains throughout the city, causing hundreds of millions of dollars in economic losses. Many historic masonry buildings in downtown Napa were damaged. The earthquake was the largest in the San Francisco Bay region since the 1989 magnitude 6.9 Loma Prieta earthquake and a clear reminder of the seismic vulnerability of the region. The staff and clients of Becoming Independent showed that understanding and preparing for these events can improve how we live with future earthquakes.

Why Does the San Francisco Bay Region Have Earthquakes?

The same geologic process that is responsible for the San Francisco Bay region's beautiful coastlines, bays, hills, and valleys is also the primary driving force for earthquakes along faults in the region. The Bay region is located within the active boundary between the Pacific and the North American tectonic plates, where the Pacific plate slowly and continually slides northwest past the North American plate. The San Andreas Fault, on which two magnitude 7.8–7.9 earthquakes have occurred in historical time, including the 1906 San Francisco earthquake, is the fastest slipping fault along the plate boundary. Other major plate boundary faults in the San Francisco Bay region include the Hayward, Rodgers Creek, Calaveras, Maacama, San Gregorio, Concord, Green Valley, and Greenville Faults.

How Do Scientists Calculate Earthquake Probability?

Scientists rely upon a variety of techniques to help understand the rate and magnitude of past earthquakes in order to estimate the likelihood of future earthquakes. The Global Positioning System (GPS) and other land surveying and geologic techniques have allowed scientists to make more accurate measurements of how the current plate motions—totaling 1.6 inches per year across the San Francisco Bay region—distribute stress onto these individual faults. Balancing plate motions with the slip during large earthquakes and slow creep on faults allows scientists to calculate average rates of earthquake occurrence over periods of hundreds to thousands of years. (Continued on page 4)



Map of earthquakes greater than magnitude 2.0 in the San Francisco Bay region from 1985–2014. Small earthquakes occur on both major faults (shown by the gray lines) and minor faults (not shown). Because of the variability of fault geometry, earthquakes at depth do not always coincide with the mapped faults at the Earth's surface. There are sections of major faults, particularly the San Andreas Fault, with few or no small earthquakes but they will produce large earthquakes in the future. Compiled from the Northern California Seismic Network.

(Continued from page 2). A trench excavated across the Hayward Fault in Fremont revealed evidence of 12 large earthquakes over the past 1,900 years. The time interval between these earthquakes ranged from about 100 to 210 years. Historical records indicate that the most recent large earthquake on this fault occurred in 1868. However, detailed information about other past earthquakes in the San Francisco Bay region is difficult to obtain because seismograph records only go back to about 1900, historical accounts are sparse before 1850, and there are limited locations where faults can be trenched to identify and date prehistoric earthquakes.

Calculating accurate earthquake probabilities for short periods, such as 30 years, is also challenging. Although the 30-year time interval is convenient for humans, it is much less than the average time between large earthquakes on these faults, which can range from hundreds to thousands of years. The rate of large earthquakes in the San Francisco Bay region was high in the late 1800s but dropped abruptly after the 1906 San Francisco earthquake on the San Andreas Fault. Scientists believe that the post-1906 earthquake rate decreased because the large amount of slip along the San Andreas Fault in 1906 temporarily reduced the stress on many of the faults in the region. However, the ongoing motion of the tectonic plates began rebuilding stresses after the 1906 event, and earthquakes larger than magnitude 5.5 resumed during the second half of the 20th century. Future large, damaging earthquakes in the San Francisco Bay region, similar in size to the 1989 Loma Prieta and 1906 San Francisco earthquakes, may or may not be accompanied by the level of earthquake activity observed in the late 1800s.

The 2014 Uniform California Earthquake Rupture Forecast version 3 (http://pubs.usgs.gov/fs/2015/3009/) provides an updated estimate of the likelihood of large earthquakes in California over a 30-year time window from 2014 to 2043. The forecast accounts for how fast stress is accumulating on each fault due to plate motions and the time since its most recent large earthquake(s). In updating the probability calculations, scientists used a more complete set of faults for the San Francisco Bay region than those used in the previous (2008) calculations, adding 32 smaller faults to the 5 major fault systems. The new study has also incorporated more options for how multiple faults might rupture together in large earthquakes.

Probabilities of Earthquakes in the San Francisco Bay Region

Smaller earthquakes occur more frequently than larger earthquakes. The probability that an earthquake of magnitude 6.0 or larger will occur before 2043 is 98 percent. The probability of at least one earthquake of magnitude 6.7 or larger in the San Francisco Bay region is 72 percent, and for at least one earthquake of magnitude 7.0 or larger it is 51 percent. These probabilities include earthquakes on the major faults, lesser-known faults, and unknown faults.

The probability of a large earthquake occurring on an individual fault in the San Francisco region is lower than the probability of an earthquake occurring anywhere in the region. The faults in the region with the highest estimated probability of generating damaging earthquakes between 2014 and 2043 are the Hayward, Rodgers Creek, Calaveras, and San Andreas Faults. In this 30-year period, the probability of an earthquake of magnitude 6.7 or larger occurring is 22 percent along the San Andreas Fault and 33 percent for the Hayward or Rodgers Creek Faults. Individual sections of these faults have lower probabilities for large earthquakes to occur (continued on page 6);

Seven Steps to Earthquake Safety

PREPARE

Before the next big earthquake we recommend these four steps that will make you, your family, or your workplace better prepared to survive and recover quickly:

Step 1: Secure your space by identifying hazards and securing moveable items.

Step 2: Plan to be safe by creating a disaster plan and deciding how you will communicate in an emergency.

Step 3: Organize disaster supplies in convenient locations.

Step 4: Minimize financial hardship by organizing important documents, strengthening your property, and considering insurance.

SURVIVE

During the next big earthquake, and immediately after, is when your level of preparedness will make a difference in how you and others survive and can respond to emergencies:

Step 5: Drop, Cover, and Hold On when the earth shakes.

Step 6: Improve safety after earthquakes by evacuating if necessary, helping the injured, and preventing further injuries or damage.

RECOVER

After the immediate threat of the earthquake has passed, your level of preparedness will determine your quality of life in the weeks and months that follow:

Step 7: Reconnect and Restore. Restore daily life by reconnecting with others, repairing damage, and rebuilding community.

(continued from page 5) however, an earthquake of magnitude 6.7 or larger will cause strong shaking over a broad area. Therefore, it is important to estimate the probability of a large earthquake occurring anywhere in the San Francisco Bay region.

What is the Likelihood That an Earthquake Will Affect You?

Earthquake probabilities are only one component in the evaluation of earthquake hazards. Higher magnitude earthquakes have broader areas of intense shaking and cause more damage than lower magnitude earthquakes. In a magnitude 6.0 earthquake, strong shaking and damage are confined to a localized area, as illustrated by the 2014 South Napa earthquake. In comparison, the 1989 magnitude 6.9 Loma Prieta earthquake caused damage over a region nearly 100 miles long. Local soil and geologic conditions, bedrock type, quality of building construction, and susceptibility to flooding (caused by dam or levee failure) can also affect the amount of damage at a particular site. This was dramatically demonstrated by the 1989 Loma Prieta earthquake, which devastated vulnerable parts of Oakland and San Francisco, more than 50 miles from the fault rupture.

How Can You Protect Yourself and Your Family?

Taking simple steps before and during earthquakes can help protect you and your family, as well as speed your recovery from an earthquake.

Before the next earthquake:

- Assess your home and work space, identify hazards, and secure moveable items.
- Create an emergency plan and organize disaster supplies to sustain you and your family for 72 hours or longer.
- Practice "Drop, Cover, and Hold On" to protect yourself when the ground begins to shake. Learn and practice what to do at home, work, or in school.
- Stay prepared by repeating these steps on a regular basis. For example, reassess your preparedness every year and participate in the annual Great California ShakeOut drill on the third Thursday in October.

Lack of adequate shear walls on the garage level exacerbated damage to this building at the corner of Beach and Divisadero in the Marina District, San Francisco, during the October 1989 Loma Prieta earthquake.

Re: Draft Environmental Impact Report Chapter 3.7-1 and 3.8-1

Dear Noah,

B4-B-1

My commendations on excellent maps in the sections above. However, some of the information is not current, such as the USGS Fact Sheet relied on from 2000 has been replaced by the USGS Fact Sheet from December 2014. These areas should be re-written to reflect current statistics and realities. A copy of the 2014 Fact Sheet with predictions is enclosed.

B4-B-2

If the drafters of the EIR would like to consult further on seismic and fault issues related to West Napa Fault, the two authorities are Belle Philibosian, Research Geologist of the Earthquake Science Center who is actively involved in pit studies of the West Napa Fault from St. Helena to beyond Calistoga. Belle can be reached at 650-329-4784 or by cell phone at 626-344-9159. Belle's e-mail address is bphilibosian@usgs.gov. The State Geological expert studying the West Napa Fault who has also traced with USGS its presence running through St. Helena and Calistoga to a length of 45 miles is Professor Michael Oskin, Chairman of the Department of Geology, U.C. Davis. Dr. Oskin also served the USGS and provided a map attached from December 2014 that shows seismic activity running the length of the valley on the "west" side of Hwy. 29. In other words, the fault does not stop at the south border of St. Helena and there are several published sources I've provided verifying this. There are also visible fault damaged areas from the 2014 Napa earthquake. It appears on the USGS Map attached reaching the base of Mt. St. Helena.

B4-B-3

A website that should be viewed by the preparers of the draft EIR is easily found using google. Enter "Hayward Fault Shake Map" where three "break points" are given showing magnification of damage from a 7.0 quake along that fault. If the fault breaks in Fremont or Oakland, St. Helena is in for a greater than 8.0 quake. So please take this seriously, since the probabilities

current draft EIR with its outdated materials. Again, I've attached information about this.

B4-B-3

The characterization made that St. Helena has less problems, otherwise there would be an Alquist-Priolo Map is inaccurate. The State Geological Survey is years behind and under-funded, thus the State's Gegological Survey group selects studies based on population densities. This can be verified by Richard who handles maps for California Geological Survey in Menlo Park. Since Yountville, St. Helena and Calistoga are smaller and more rural than Napa, the CGS focus was American Canyon and Napa, and there were no funds and less priority for the State to complete maps for the upper part of the valley due to smaller populations compared to many other areas of the state waiting in line for updated Alquist-Priolo Maps. As CGS told the press ("San Francisco Chronicle"), we have a 300 year backlog given the meager funding provided for development of Alquist-Priolo Maps."

B4-B-4

I don't believe the stark probabilities of a problem from a break in the West Napa Fault should be hidden from view. Burying one's head in the sand leaves people victims of their own city personnel's biases that are not founded on reality.

B4-B-5

The drafters of the EIR should also include in their references the State Guidelines for Seismically Active Area from 2008: "Special Publication 117A" and update their descriptions and systems as well, based on this Publication. I am sorry to see the EIR writers are so far removed from updating their records, relying on 2000 data for the most part from both the USGS and State GS. I provided you with a copy of this Publication for use by residents. Perhaps you can share it with the EIR preparers so they can update this chapter.

B4- B-6

I attach further information for your review once again. Please see that the preparers of the Draft EIR received all of the information provided with this letter. With the exception of the fault map, which isn't current, all other maps are an astounding improvement from those of years past, as are the descriptions of seismic hazards far superior. Since Napa County (not just the Bay Area) is described as Seismically Active, I believe a description should include this reality.

B4-B-7

Also of concern with respect to Hazards in Chapter 3.8 is a risk of CONFLAGRATION, which is a firestorm, or in the alternative, a seismic event that can trigger multiple fires and gas hazards. As a policy, the City should consider adding a section with some sound policies articulated, such as banning ornamental fire features within the City's Fire Emergency Response area. The 60 plus fire pits on balconies at Las Alcobas are under the control of guests, and it could take management some time to become aware of a problem in order to shut off a gas main. Other fire features of concern are ornamental fire walls like the one at Hall Winery on the second floor in their tasting room.

B4-B-8

B4-B-9

Thank you for this opportunity to comment.

Sincerely,

Lois Ann Battuello

https://earthquake.usgs.gov/learn/topics/shakingsimulations/hayward/M7.0.php

Earthquake "Shake" Map for breaks on the Hayward Fault - 3 scenarios of shaking intensities for a 7.0 M quake - San Pablo Bay (almost no affect on Napa County), Oakland (serious affect on Napa County), and Fremont (extreme shaking and most serious affect on Napa County).

In the foregoing scenarios, note that the location furthest away, Fremont, would produce the most damage in Napa County. This is similar to the effect of the quake in 2017 in Mexico city, where the origin was 65 miles from Mexico City but the shaking and magnitude of the quake increased and was most severe in Mexico City.

Another way to get to Hayward Fault info: Use Google.com, type in Hayward Fault Shake Map and there's as USGS link on the index that is generated.

AN ANALYSIS OF BAY AREA EARTHQUAKES AND USGS FORECASTS

The USGS has been accurate in its 30-year forecasts, as there has been at least one 6.0 M quake or greater within their set timeframe since 1959. Prior to that, there was only one quake just under 6.0 M from 1906 forward. This information is from the "List of Earthquakes in California" (Google the term and look for the Wiki link) and historic USGS forecasts (Google "Earthquake Outlook for San Francisco Bay Region 2014-2043).

Each time there is a 6.0 or greater quake, a new 30-year forecast has been made by USGS. Here are the differences since Napa's 8/24/14 earthquake:

(1) Probabilities have moved from 72% to 98% for a quake of 6.0 M or greater for the first time. Before: Probabilities were 72% or 70%

(2) USGS in 2014 increased the probabilities to include one "or more" events as shown in their Earthquake Outlook for the first time

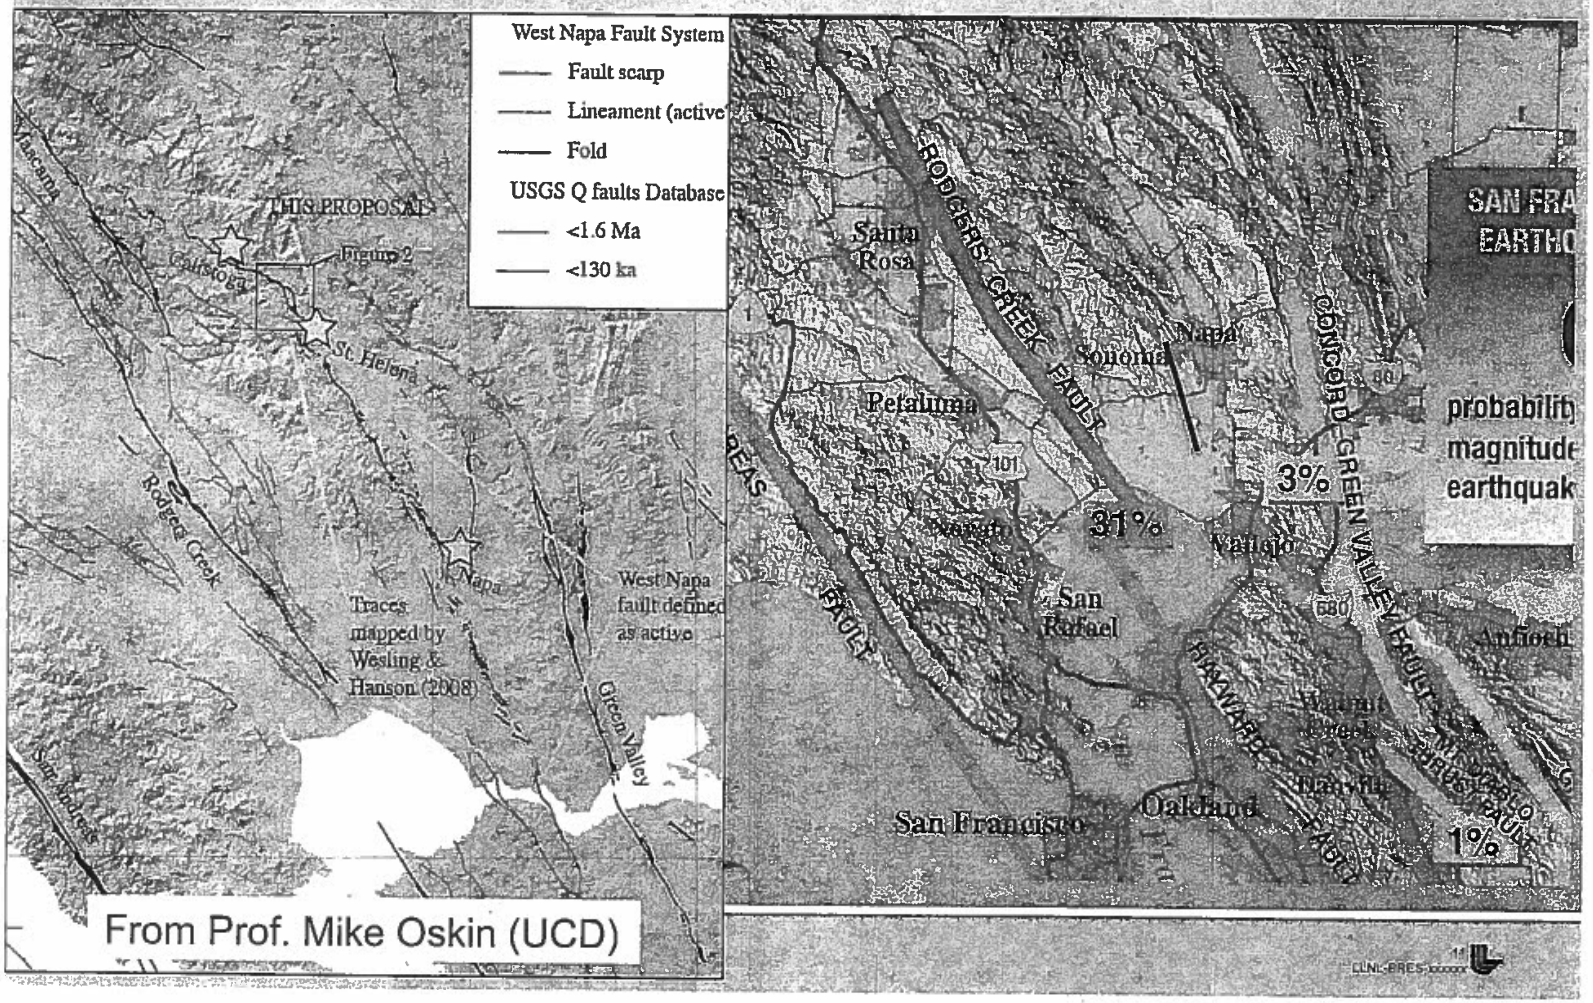
(3) USGS now adds the 72% probability of a 6.7 M or greater. This is the first time there has been a forecast probability for a 6.7 M or greater event.

All of this is new data since the Napa Earthquake of 8/24/14. The West Napa Fault erupted for the first time in 11,000 years to 45 miles in length.

We are more seismically active, as faults are building pressure, and are occurring within shorter time-frames. Hence the probability is 98%.

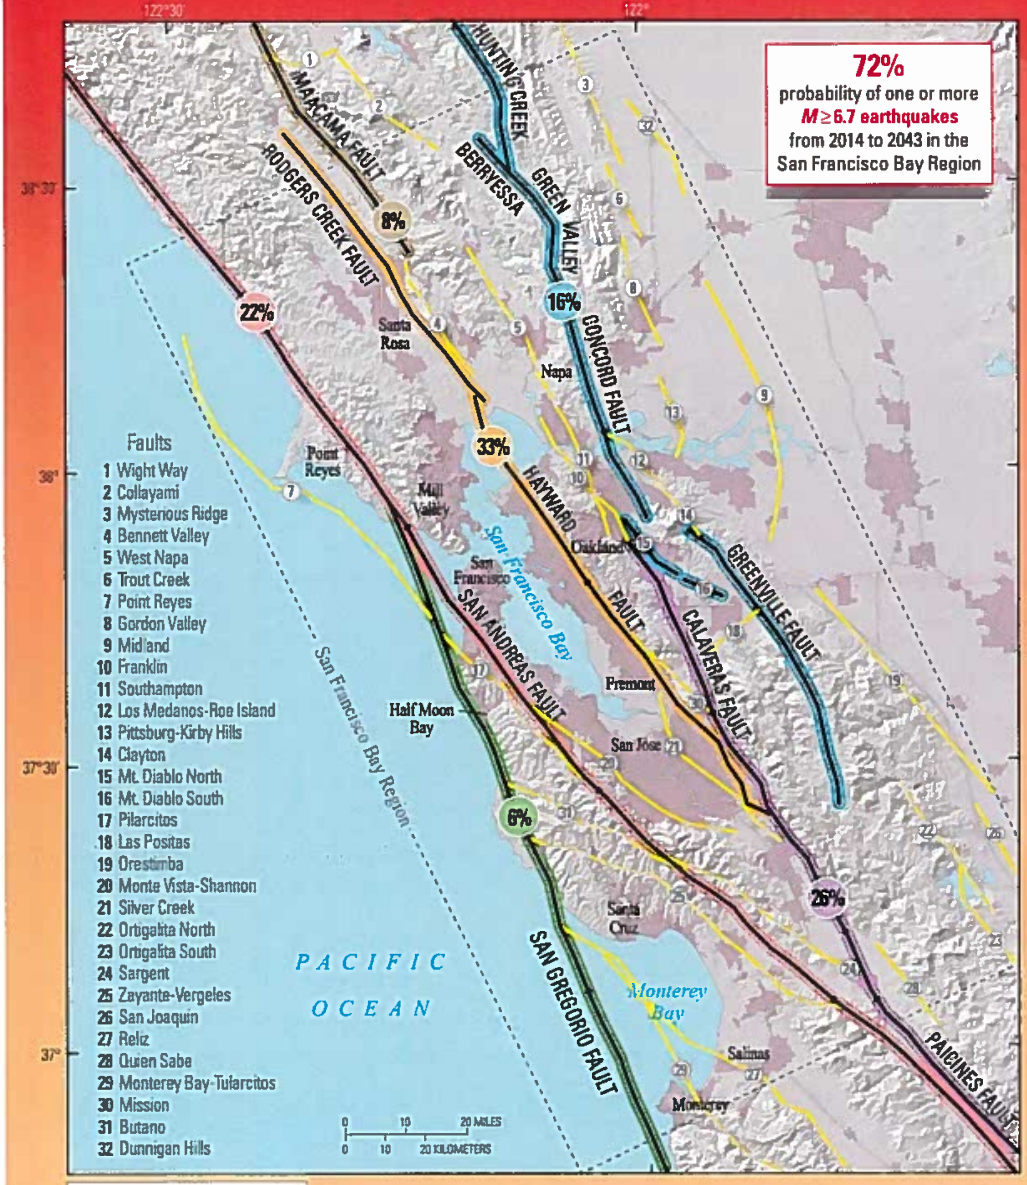
Since 1868, there have been four major earthquakes in San Francisco and the North/East Bay Area that have been felt in Napa: 1868 Hayward; 1906 San Francisco; 1989 Loma Prieta; 2014 West Napa. Three of the four occurred at night when people were in their beds between 1:20 a.m. and 5:19 a.m. Loma Prieta broke at approximately 5:00 p.m. Three of the four occurred just before or just after the Fall Equinox (Sept.). Only the San Francisco Earthquake of 1906 occurred just weeks after the Spring Equinox (Mar.) on April 18, 1906.

The West Napa Fault was identified as active, capable of M 6 event



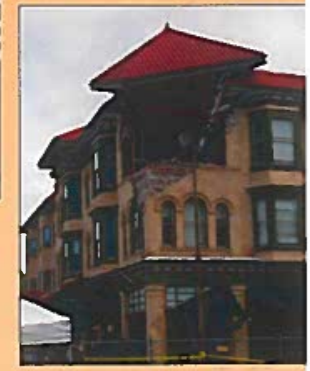
USGS
science for a changing world

Earthquake Outlook for the San Francisco Bay Region 2014–2043



Map of known active faults in the San Francisco Bay region. The 72 percent probability of a magnitude 6.7 or greater earthquake includes the well-known major plate-boundary faults, lesser-known faults, and unknown faults. The percentage shown within each colored circle is the probability that a magnitude 6.7 or greater earthquake will occur somewhere on that fault system by the year 2043. The probability that a magnitude 6.7 or greater earthquake will involve one of the lesser-known faults is 13 percent.

Using information from recent earthquakes, improved mapping of active faults, and a new model for estimating earthquake probabilities, the 2014 Working Group on California Earthquake Probabilities updated the 30-year earthquake forecast for California. They concluded that there is a 72 percent probability (or likelihood) of at least one earthquake of magnitude 6.7 or greater striking somewhere in the San Francisco Bay region before 2043. Earthquakes this large are capable of causing widespread damage; therefore, communities in the region should take simple steps to help reduce injuries, damage, and disruption, as well as accelerate recovery from these earthquakes.



Building damaged in 2014 South Napa earthquake. Photograph by Erol Kalkan, U.S. Geological Survey.

U.S. Department of the Interior

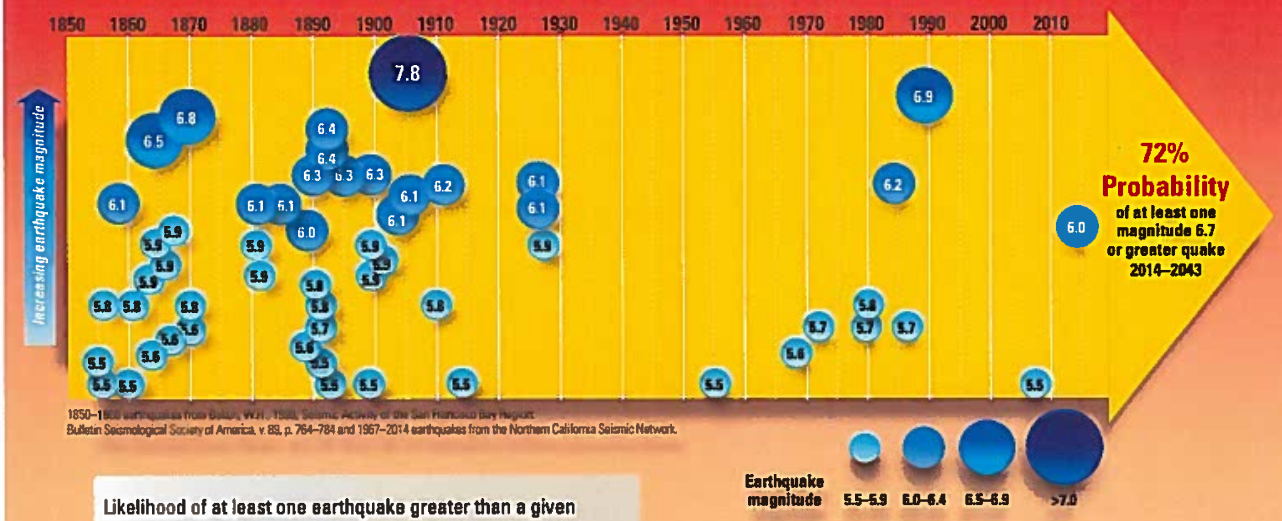
Fact Sheet 2015–3020
Revised August 2016 (ver. 1.1)

San Francisco Bay Region Earthquake Timeline



1850–1[illegible] earthquakes from Bolen, W.H., 1[illegible], Seismic Activity of the San Francisco Bay Region: Bulletin Seismological Society of America, v. 89, p. 764–784 and 1967–2014 earthquakes from the Northern California Seismic Network.

Likelihood of at least one earthquake greater than a given magnitude in the San Francisco Bay region between 2014 and 2043.

Magnitude (*M*)	30-year likelihood of at least one earthquake in the San Francisco Bay region
$M \geq 6.0$	98 percent
$M \geq 6.7$	72 percent
$M \geq 7.0$	51 percent
$M \geq 7.5$	20 percent

Timeline of magnitude 5.5 and greater earthquakes in the San Francisco Bay region 1850–2014. In the 50 years prior to 1906, there were 13 earthquakes with a magnitude between 6 and 7, but only 6 earthquakes of similar magnitude in the 110 years since 1906. The rate of large earthquakes is expected to increase from this low level as tectonic plate movements continue to increase the stress on the faults in the region.

Earthquake Preparedness Helps

Early Sunday morning on August 24, 2014, the residents of Napa, California, were jolted awake by a strong, magnitude 6.0 earthquake. Within 30 minutes, the staff of Becoming Independent, a non-profit organization that helps adults with intellectual disabilities lead independent lives, called the people they serve in the affected area. The staff quickly visited all of the clients that needed help with cleanup and making their homes safe, a task made easier because both groups were trained in disaster preparedness and the clients had emergency kits with needed supplies on hand. The South Napa earthquake shifted houses off their foundations, damaged chimneys, started fires, and broke water mains throughout the city, causing hundreds of millions of dollars in economic losses. Many historic masonry buildings in downtown Napa were damaged. The earthquake was the largest in the San Francisco Bay region since the 1989 magnitude 6.9 Loma Prieta earthquake and a clear reminder of the seismic vulnerability of the region. The staff and clients of Becoming Independent showed that understanding and preparing for these events can improve how we live with future earthquakes.

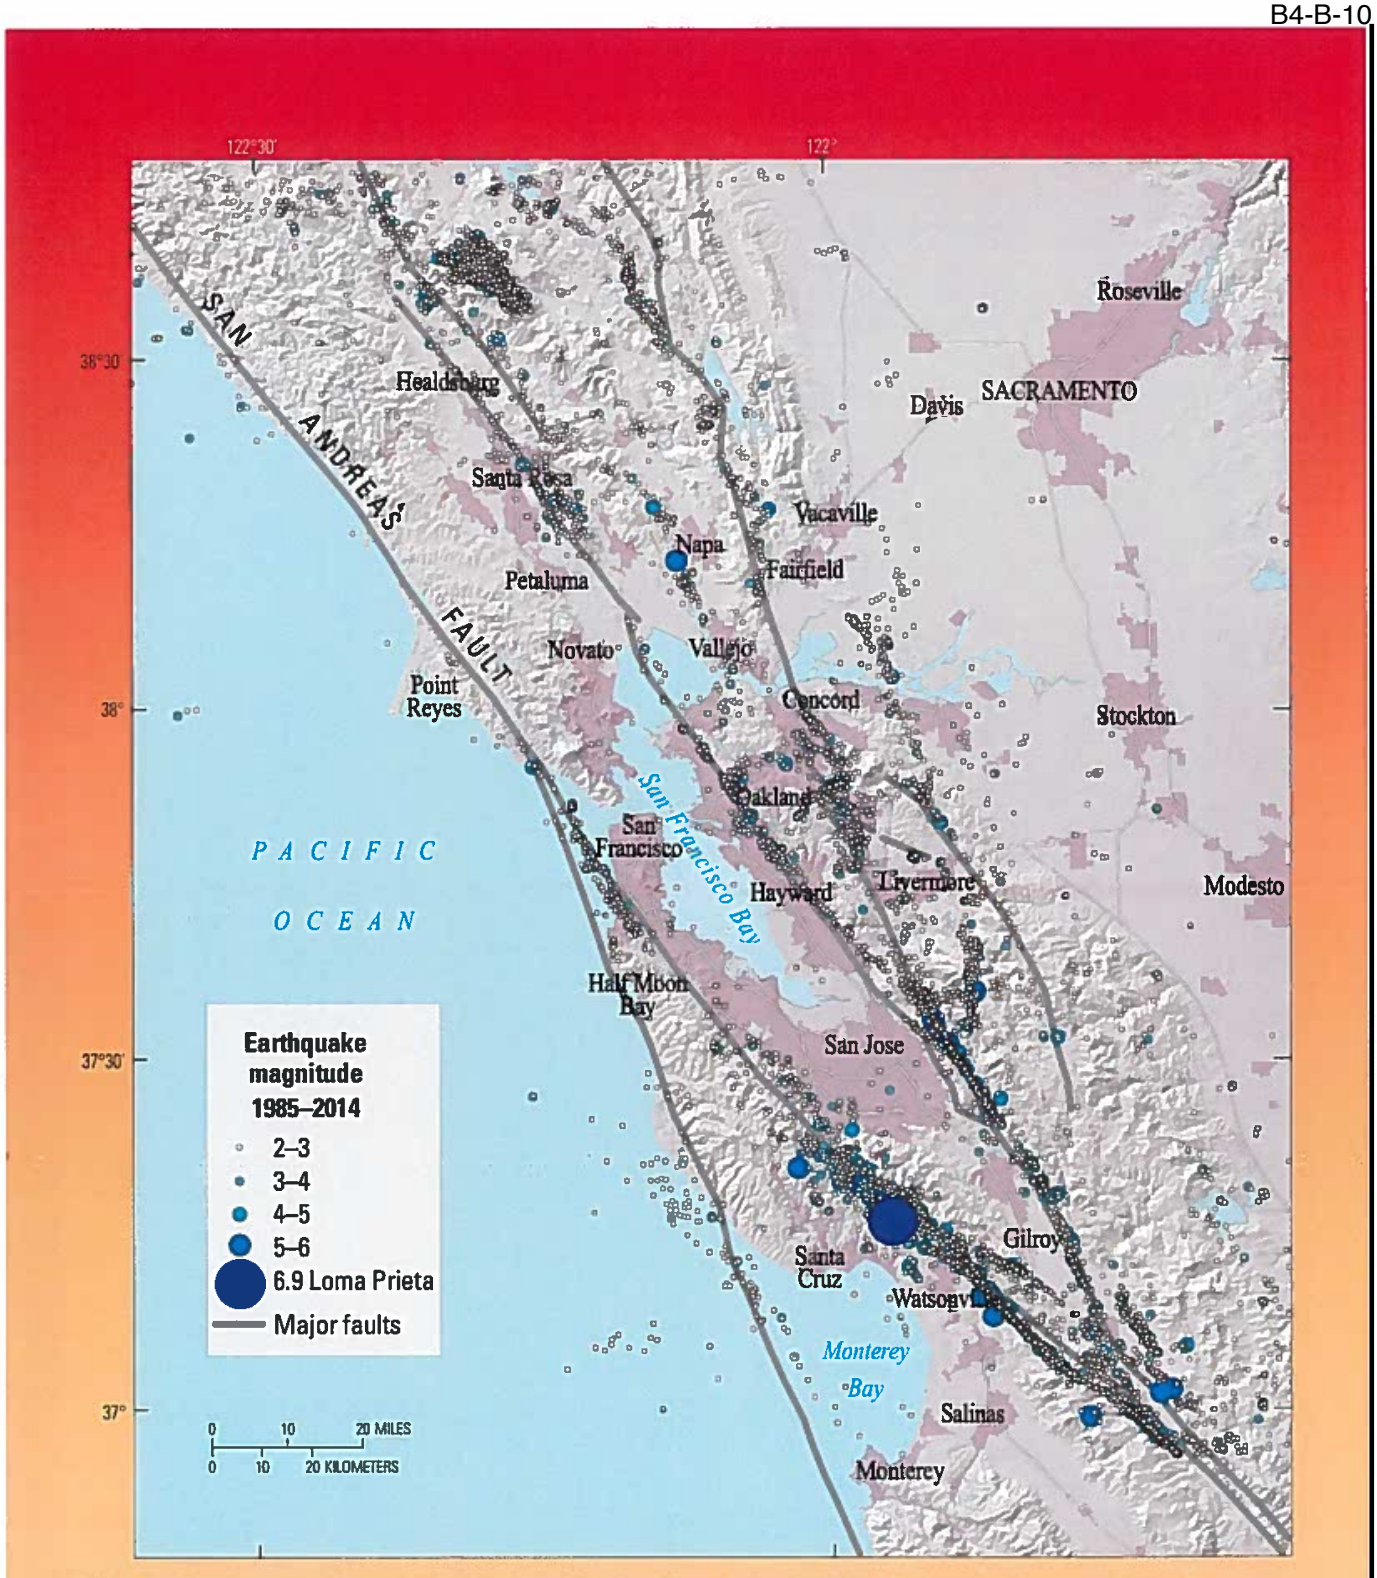
Why Does the San Francisco Bay Region Have Earthquakes?

The same geologic process that is responsible for the San Francisco Bay region's beautiful coastlines, bays, hills, and valleys is also the primary driving force for earthquakes along faults in the region. The Bay region is located within the active boundary between the Pacific and the North American tectonic plates, where the Pacific plate slowly and continually slides northwest past the North American plate. The San Andreas Fault, on which two magnitude 7.8–7.9 earthquakes have occurred in historical time, including the 1906 San Francisco earthquake, is the fastest slipping fault along the plate boundary. Other major plate boundary faults in the San Francisco Bay region include the Hayward, Rodgers Creek, Calaveras, Maacama, San Gregorio, Concord, Green Valley, and Greenville Faults.

How Do Scientists Calculate Earthquake Probability?

Scientists rely upon a variety of techniques to help understand the rate and magnitude of past earthquakes in order to estimate the likelihood of future earthquakes. The Global Positioning System (GPS) and other land surveying and geologic techniques have allowed scientists to make more accurate measurements of how the current plate motions—totaling 1.6 inches per year across the San Francisco Bay region—distribute stress onto these individual faults. Balancing plate motions with the slip during large earthquakes and slow creep on faults allows scientists to calculate average rates of earthquake occurrence over periods of hundreds to thousands of years. (Continued on page 4)

B4-B-10



Map of earthquakes greater than magnitude 2.0 in the San Francisco Bay region from 1985–2014. Small earthquakes occur on both major faults (shown by the gray lines) and minor faults (not shown). Because of the variability of fault geometry, earthquakes at depth do not always coincide with the mapped faults at the Earth's surface. There are sections of major faults, particularly the San Andreas Fault, with few or no small earthquakes but they will produce large earthquakes in the future. Compiled from the Northern California Seismic Network.

(Continued from page 2). A trench excavated across the Hayward Fault in Fremont revealed evidence of 12 large earthquakes over the past 1,900 years. The time interval between these earthquakes ranged from about 100 to 210 years. Historical records indicate that the most recent large earthquake on this fault occurred in 1868. However, detailed information about other past earthquakes in the San Francisco Bay region is difficult to obtain because seismograph records only go back to about 1900, historical accounts are sparse before 1850, and there are limited locations where faults can be trenched to identify and date prehistoric earthquakes.

Calculating accurate earthquake probabilities for short periods, such as 30 years, is also challenging. Although the 30-year time interval is convenient for humans, it is much less than the average time between large earthquakes on these faults, which can range from hundreds to thousands of years. The rate of large earthquakes in the San Francisco Bay region was high in the late 1800s but dropped abruptly after the 1906 San Francisco earthquake on the San Andreas Fault. Scientists believe that the post-1906 earthquake rate decreased because the large amount of slip along the San Andreas Fault in 1906 temporarily reduced the stress on many of the faults in the region. However, the ongoing motion of the tectonic plates began rebuilding stresses after the 1906 event, and earthquakes larger than magnitude 5.5 resumed during the second half of the 20th century. Future large, damaging earthquakes in the San Francisco Bay region, similar in size to the 1989 Loma Prieta and 1906 San Francisco earthquakes, may or may not be accompanied by the level of earthquake activity observed in the late 1800s.

The 2014 Uniform California Earthquake Rupture Forecast version 3 (http://pubs.usgs.gov/fs/2015/3009/) provides an updated estimate of the likelihood of large earthquakes in California over a 30-year time window from 2014 to 2043. The forecast accounts for how fast stress is accumulating on each fault due to plate motions and the time since its most recent large earthquake(s). In updating the probability calculations, scientists used a more complete set of faults for the San Francisco Bay region than those used in the previous (2008) calculations, adding 32 smaller faults to the 5 major fault systems. The new study has also incorporated more options for how multiple faults might rupture together in large earthquakes.

Probabilities of Earthquakes in the San Francisco Bay Region

Smaller earthquakes occur more frequently than larger earthquakes. The probability that an earthquake of magnitude 6.0 or larger will occur before 2043 is 98 percent. The probability of at least one earthquake of magnitude 6.7 or larger in the San Francisco Bay region is 72 percent, and for at least one earthquake of magnitude 7.0 or larger it is 51 percent. These probabilities include earthquakes on the major faults, lesser-known faults, and unknown faults.

The probability of a large earthquake occurring on an individual fault in the San Francisco region is lower than the probability of an earthquake occurring anywhere in the region. The faults in the region with the highest estimated probability of generating damaging earthquakes between 2014 and 2043 are the Hayward, Rodgers Creek, Calaveras, and San Andreas Faults. In this 30-year period, the probability of an earthquake of magnitude 6.7 or larger occurring is 22 percent along the San Andreas Fault and 33 percent for the Hayward or Rodgers Creek Faults. Individual sections of these faults have lower probabilities for large earthquakes to occur (continued on page 6);

Seven Steps to Earthquake Safety

PREPARE

Before the next big earthquake we recommend these four steps that will make you, your family, or your workplace better prepared to survive and recover quickly:

Step 1: Secure your space by identifying hazards and securing moveable items.

Step 2: Plan to be safe by creating a disaster plan and deciding how you will communicate in an emergency.

Step 3: Organize disaster supplies in convenient locations.

Step 4: Minimize financial hardship by organizing important documents, strengthening your property, and considering insurance.

SURVIVE

During the next big earthquake, and immediately after, is when your level of preparedness will make a difference in how you and others survive and can respond to emergencies:

Step 5: Drop, Cover, and Hold On when the earth shakes.

Step 6: Improve safety after earthquakes by evacuating if necessary, helping the injured, and preventing further injuries or damage.

RECOVER

After the immediate threat of the earthquake has passed, your level of preparedness will determine your quality of life in the weeks and months that follow:

Step 7: Reconnect and Restore. Restore daily life by reconnecting with others, repairing damage, and rebuilding community.

(continued from page 5) however, an earthquake of magnitude 6.7 or larger will cause strong shaking over a broad area. Therefore, it is important to estimate the probability of a large earthquake occurring anywhere in the San Francisco Bay region.

What is the Likelihood That an Earthquake Will Affect You?

Earthquake probabilities are only one component in the evaluation of earthquake hazards. Higher magnitude earthquakes have broader areas of intense shaking and cause more damage than lower magnitude earthquakes. In a magnitude 6.0 earthquake, strong shaking and damage are confined to a localized area, as illustrated by the 2014 South Napa earthquake. In comparison, the 1989 magnitude 6.9 Loma Prieta earthquake caused damage over a region nearly 100 miles long. Local soil and geologic conditions, bedrock type, quality of building construction, and susceptibility to flooding (caused by dam or levee failure) can also affect the amount of damage at a particular site. This was dramatically demonstrated by the 1989 Loma Prieta earthquake, which devastated vulnerable parts of Oakland and San Francisco, more than 50 miles from the fault rupture.

How Can You Protect Yourself and Your Family?

Taking simple steps before and during earthquakes can help protect you and your family, as well as speed your recovery from an earthquake.

Before the next earthquake:

- Assess your home and work space, identify hazards, and secure moveable items.
- Create an emergency plan and organize disaster supplies to sustain you and your family for 72 hours or longer.
- Practice "Drop, Cover, and Hold On" to protect yourself when the ground begins to shake. Learn and practice what to do at home, work, or in school.
- Stay prepared by repeating these steps on a regular basis. For example, reassess your preparedness every year and participate in the annual Great California ShakeOut drill on the third Thursday in October.

Lack of adequate shear walls on the garage level exacerbated damage to this building at the corner of Beach and Divisadero in the Marina District, San Francisco, during the October 1989 Loma Prieta earthquake.

Comment Letter B5

DEC. 29, 2018

RECEIVED
PLANNING DEPARTMENT
DEC 31 2018
CITY OF ST HELENA

TIM KLEIN
1110 PEPPERTREE CIRCLE
ST. HELENA, CA. 94574
(707) 963-8100

TO WHOM IT MAY CONCERN:

AS A LONG TIME RESIDENT OF ST. HELENA, I AM VERY CONCERNED ABOUT THE QUALITY OF LIFE HERE. IN THIS LETTER I WILL ONLY DISCUSS THE CURRENT NEED FOR THE CONTROL OF TRAFFIC FLOW, ESPECIALLY DURING RUSH HOURS, WEEKENDS, AND HOLIDAYS. IN THE LONG TERM THERE WILL BE A NEED FOR ADDITIONAL CONNECTOR STREETS TO MITIGATE "IN-TOWN" TRAFFIC CONGESTION. B5-1

FOR NOW, I FEEL THAT A "HIGH AND WIDE" ADAMS STREET BRIDGE, CROSSING THE NAPA RIVER AND ALIGNING WITH THE CURRENT MEADOWOOD ACCESS STREET ON THE EAST SIDE OF THE SILVERADO TRAIL, COULD BE THE CORE OF THE UPDATED SYSTEM. B5-2

THIS BRIDGE SHOULD BE A "500 YEAR" FLOOD LEVEL HEIGHT SINCE THE LONG TERM CLIMATE CAN BE UNPREDICTABLE, AND I REMEMBER HOW ISOLATED PEOPLE WERE DURING PAST FLOODING PERIODS.

ADDITIONALLY, THE NEW BRIDGE SHOULD BE AT

B5-2

LEAST THREE "WIDE" LANES WITH A PROTECTED BIKE AND PEDESTRIAN PATHWAY. THE TRAFFIC LANES SHOULD BE WIDE ENOUGH TO COMFORTABLY ACCOMODATE TRACTOR-TRAILER RIGS (18 WHEELER), LARGE BOX TRUCKS, LONG MOTOR HOMES, AND STRETCH "LIMOS" WITHOUT THE NEED TO CROSS INTO ADJOINING LANES WHILE MANEUVERING ONTO THE BRIDGE, OR ENTERING THE HIGHWAY FROM THE BRIDGE.

AFTER THE ADAMS STREET BRIDGE IS COMPLETED, I THINK THE EAST POPE STREET BRIDGE SHOULD BE CHANGED TO ONE WAY ONLY, EASTBOUND, WITH A PROTECTED BIKE AND PEDESTRIAN PATHWAY. TRACTOR-TRAILER RIGS AND BUSSES SHOULD BE DIRECTED TO THE ADAMS ST. BRIDGE. ENFORCEMENT COULD INCLUDE CAMERAS, ETC., ESPECIALLY DURING PEAK TRAFFIC PERIODS, WITH FOLLOW-UP BY POLICE.

LATER, STARR STREET SHOULD CONNECT NOT ONLY ADAMS AND POPE STREETS, BUT IT SHOULD CONTINUE NORTH TO DEER PARK AND SOUTH TO DOWDELL LANE

B5-3

SINCERELY—

Tim Kelly

To: Noah Housh <NHoush@cityofsthelena.org>
Cc: Aaron Hecock <ahecock@cityofsthelena.org>
Subject: Comments GP EIR

B6-1

Good Afternoon, Noah.

I am writing to you from this address with comments on the GP EIR that are more editorial in nature than those that I expressed at the PC meeting. Most of these herein are more of a 'fix it' nature - wrong word, wrong name (in one case, wrong city), wrong place or poorly worded. A few are a bit larger than that but the most important ones were made from the dais in the hearing and with the endorsement (apparently) of my colleagues.

B6-2

These are lesser comments that I would have made if droning on for a couple of hours was either possible or desirable. However, in my opinion, such errors contribute to lowering the perceived veracity of any document and the GP EIR is a document one wishes to have very high perceived veracity. My colleagues have not seen or discussed these, they are my own.

The document needs a good editor. This is only a weak contribution to a start as I am not trained or talented in that area.

The comments were written in .odt but a .doc file - which may have made some automatic formatting changes - is also attached.

As always, questions or comments are invited -

John

B6-3

ES-1, third paragraph,third sentence. Consider adding federal environmental review as a possibility (albeit rare). Also consider not capitalizing “State” throughout the document, especially since federal is not capitalized anywhere in the document.

B6-4

B6-5

ES-1, Proposed Plan, first paragraph,last sentence. Consider changing “fully replace” since, as correctly noted further along in the document, the housing element will not be replaced.

B6-6

ES-4, Tables ES-1 and 2. Consider eliminating rounding to the nearest 100. Not only does this result in some intuitively confusing totals, but rounding to the nearest 100 with such small numbers leads to very large uncertainties on a percentage basis. In addition, in other locations in the document, exact

numbers are depicted. Even the State Department of Finance now uses exact numbers in their E-1 population estimates. B6-6

ES-5, Transportation Network Enhancement Alternative, second paragraph, third sentence. Please do not capitalize “downtown” as it is not a proper noun. Excess capitalization seemingly appears often in the document; please consider removing all such cases (“CALTRANS”, “Planning Area” or “Tribal Cultural” for examples). B6-7

ES-9, Transportation and Traffic, second paragraph. Please write out “Twenty-seven” (or any number if it begins a sentence). B6-8

ES-10, Identification of Environmentally Superior Alternative, first paragraph. Consider writing numbers consistently in the text. In this paragraph, some numbers are written (“six” and “seven”) while another one word number (“11”) is not. Generally either all numbers are written with numerals (except when beginning a sentence), no numbers are written with numerals or only numbers that can not be written with one or two words are shown as numerals. B6-9

1-2, Intended Uses of the EIR, last sentence. Please consider changing the name “Napa Valley Transit Authority” to the correct name. B6-10

2-14, Urban Limit Line,third sentence. Please consider changing the end of the sentence to read, for the sake of clarity, “as described in Table 2.3-2.” B6-11

2-21, Tables. Please see comment ES-4. B6-12

2-22, Table 2.3-5. Consider correcting the Study Areas column. B6-13

3.1-3, Open Space and Agriculture, second sentence. Is it 65 percent, 75 percent or 65 to 75 percent? Please clarify. B6-14

3.1-4, Light and Glare, last sentence. This reads as a flat conclusion but does not appear to be buttressed by data. Please consider either adding information or softening the sentence (for example, “...appear to be typical for an urbanized setting”). B6-15

3.1-10, CD5.E and 3.1-11, Impact 3.1-2 last sentence. It looks a bit odd calling for the city to consider having SR 29 designated a scenic highway (CD5.E) and at the same time writing that the new GP will not impact any scenic highway as the city has none. Consider deleting, “...lack of any designated state scenic highways with in the City and...”, or making it clear that even if SR 29 is designated as a scenic highway, the polices in the plan will ensure that there are no impacts to scenic resources. B6-16

3.1-12, second paragraph, second line from the end. Please consider replacing “main” with “all” as CD1.8 does not appear to limit itself to any particular roadway type. B6-17

3.2-2, Agricultural Context, second sentence. Consider replacing the value given for agricultural production in Napa county with a figure considerably larger than the $737,298 shown. B6-18

3.2-2, Farmland Characteristics. Consider rewording the second sentence, Agricultural uses as shown on Figure 3.2-1 are spread throughout the city, not simply adjacent to the ULL. B6-19

3.2-8, Napa County Measures J and P, second sentence. Consider replacing “Ma”with “Map”. B6-20

3.2-12, Methodology and Assumptions, second paragraph. Please consider replacing, “The Planning B6-21

Area for the Proposed Plan...” with the simpler, just as accurate and easier to read, “The planning area ...”. Consider a universal search and replace, as the wordy phrase is used multiple times. B6-21

3.3-3, Carbon Monoxide, fourth sentence. Please consider rewording – perhaps “not photochemically reactive” or “not an ozone precursor”. It is a reactive compound, burning easily and binding to hemoglobin much more readily than oxygen. B6-22

3.3-5, Table 3.3-1, Notes 4 and 5. For Note 4, please consider updating the expected designation date. For Note 5, please consider removing it from the Federal Standards Classification column for lead and adding it to the State Standards Classification column for both lead and vinyl chloride. B6-23

3.3-6, second paragraph, second sentence. Please consider rewording. The sentence appears to read that the air basin exceeded the state one-hour standard five times and the federal one-hour standard two times when Table 3.3-1 shows no federal one-hour standard. If the sentence is attempting to read that the the state one-hour standard was exceeded five times and the federal eight-hour standard was exceeded two times, please write that. B6-24

3.3-8, Federal Clean Air Act, first paragraph,second sentence. Consider changing “CAA” reference to the California Clean Air Act to CCAA. Further, consider moving the entire sentence on the CCAA to the following section covering that law. B6-25

3.3-14, Bay Area Air Quality Management District, second paragraph, first sentence. What is, “The air quality study area..”? If it is the planning area, please so state; if it is some other area, please describe how it is related to the planning area. B6-26

3.3-24, CR1.7. Consider altering the sentence to read “...with the owners ...” or perhaps “... with the new owners ...” - although not so new anymore. B6-27

3.3-30, Applicable Control Measures, first paragraph. Please capitalize “Buildings”(#4). B6-28

3.3-31, Table 3.3-6, TR8. Please consider rewording as St. Helena is not the only rural community in the Bay Area and opportunities for ridesharing services and incentives are well more than “somewhat” limited. Would suggest the deletion of “relatively” and “somewhat” and the addition of “most” between “to other”. B6-29

3.3-37, Table 3.3-7, Note 2. Please consider deleting “...such as the Proposed Plan,” as unnecessarily repetitive. B6-30
3.3-38, Table 3.3-8, Note 2. Please see above. Also consider “general plan” rather than”specific plan”.

3.3-42,AQ-1, fifth bullet. “Laying building pads ...”- is this intended to read “Pour”? In addition many structures in St. Helena have live, not poured floors. Is there a suggestion for those structures as well? B6-31

3.3-42,AQ-1, seventh bullet. Is the check by the certified mechanic (and certified by who for what?) supposed to take place each day, month, project? B6-32

3.3-42,AQ-1, eighth bullet. Consider adding “for example” just after the parenthetical statement begins.

3.3-42,AQ-1, what should be the tenth bullet. Consider placing a bullet before “Where warranted” and removing the underline. Also consider tabing in the next two paragraphs and beginning them with “Power” and “Ensure”, respectively.

3.3-47, second paragraph, first sentence. Consider “21-year”. B6-33

3.3-48, second paragraph, second sentence. Please consider ending the sentence with “approval” or perhaps “action by the city”. B6-34

3.3-48, Gasoline Stations. Wasn't Flyers near the corner of 29 and Inglewood in area 3? It is now an open and operating Mobil station. B6-35

3.3-50 Table 3.3-9. Consider including the address of Nella Oil and capitalizing “Main” in the address for St. Helena Petroleum. B6-36

3.4-1, Habitat Types, first sentence. Consider the wooded hillside and the interspersed housing on and near Howell Mountain Road on the east side of the city and alter the sentence accordingly. B6-37

3.4-4, Orchard-Vineyard, fifth sentence. It is probably an exaggeration to claim that “...under the vines are usually sprayed with a herbicide ...”, as there are many organic and semi-organic growers in the region. Consider “sometimes” or even “often”. B6-38

3.5-2, third and fifth paragraphs. Please consider removing all of the quotation marks. B6-39

3.5-4, third paragraph, first sentence. Calistoga will probably be surprised to find it is not in the Napa valley. Is this supposed to read “... extended from St. Helena to Calistoga ...”? B6-40

3.5, Figure 3.5-2. The figure includes 1380 Main Street. Wasn't that the old gas station that has been removed? B6-41

3.6-7, second paragraph,first sentence. Please consider writing out ozone. In addition “higher O3 days” means more days exceeding state and/or federal standards, higher concentrations or both? B6-42

3.6-8, Energy Star Program, second to the last sentence. Please consider deleting “though a Rater” as unneeded. If it is desirable to retain the phrase, consider “as determined by an approved rater”. B6-43

3.6-17,Executive Order S-1-07. Please consider writing out “LCFS” the first time it is used in the paragraph. B6-44

3.6-17, Plan Bay Area, first and third paragraphs. Consider writing out PDA in the first paragraph, rather than the third. B6-45

3.6-17, BAAQMD, first sentence. As is noted correctly elsewhere in the document, the BAAQMD covers most, but not all of the nine Bay Area counties. Please consider adding “most” to the sentence. B6-46

3.6-26, LU1.A. Consider rewording. State statute allows the division of single family homes into two units (one main unit and an ADU) by right. B6-47

3.6-31, PS1.I. Consider updating the reference to the BAAQMD's 2000 CAP to the 2017 CAP.

3.6.31, CC1.B. Consider updating by deleting the reference to a new transit center. NVTA has a new transit center just off Soscol Avenue in Napa.

3.6-33, CC3.A and CC3.B. Please consider shifting the deadline for these two new programs; while a 2020 target was fine in 2010, it is too short for a GP that will not be adopted until halfway through the

first quarter of 2019. B6-47

3.6-33 and -34, CC4.4 and CC4.J. The first calls for expanding the city's urban forestry program, while the second calls for the establishment of such a program. Shouldn't the policy call for the creation of the program as well as the implementing action if such a program does not exist? And if the program does exist, then the implementing action needs correction. Consider determining which is correct and then crafting the policy and implementing action accordingly.

3.6-36, Impact 3.6-1. Please consider including per year with the emissions target. Note that sometimes it is included in the chapter and sometimes it is not - leading to some possible confusion. B6-48

3.6-39, Transportation Improvements. The Wine Train is not - according to court determination - a transportation service; please do not reference it as such, imply that it is a transportation service or claim it is useable as a transportation service. There is no “Napa Valley Transit Authority”; please correctly reference the agency. Napa County does not provide transit services; thus partnering with the County of Napa will not be successful. NVTA operates all of the public transit based in the Napa communities. B6-49

3.6-44, Plan Bay Area. Please consider rewording. Some sections of the document credit MTC with the RTP/SCS, others credit both MTC and ABAG and this seemingly credits ABAG alone. Consider determining which is correct and remaining consistent. B6-50

3.7-17. Two sections on this page cover the Disaster Mitigation Act. Please consider combining the sections. B6-51

3.7-17, State Multi-Hazard Mitigation Plan, first sentence. Please consider adding “... which allows the state...” after “State of California”. B6-52

3.8-1, bullet points, second to the last sentence. The Pratt Street bridge may well be partially in the city and partially in the county – the county maintains the bridge. Please check and modify the sentence accordingly. B6-53

3.8-2, first paragraph,last sentence. Please consider deleting “... to a limited extent ...” as methane is a hazardous material and is used extensively in residential areas. B6-54

3.8-2, Hazardous Materials Transport, fourth sentence. Please consider deleting “...occasionally runs freight service ...” as it is non-existent in the St. Helena block and has been for years. B6-55

3.8-4,last paragraph, last full sentence. Consider rewording. The next five years would be out to 2023 or 24, not 2020. B6-56

3.8-5, Table 3.8-1. The Noble site at 1132Main Street is listed twice and it is not clear if this is due to an error or two different locations on the same property. The PG&E property is also listed twice, as is the property at 607 Highway 29, under SWRCB and DTSC locations. Are these double listings actually separate sites or the same sites as carried by different agencies? If they are the same sites, the total number of sites as depicted in the paragraph directly above the Table is not correct. The Table does not seem to identify the Mobile station near Inglewood and SR 29 as an SWRCB permitted site but does note it as a LUST site. Please clarify. B6-57

3.8-16, California Health and Safety Code, second sentence. Please consider changing the reference to B6-58

Napa County from Alameda County. B6-58

3.8-27, Impact 3.8-3, first paragraph,next to the last sentence. The St. Helena Catholic School has closed and it is not expected to reopen. B6-59

3.9, Figure 3.9-3. Please consider changing the percentage chance shown in the key for 500-year events to 0.2%. B6-60

3.10-3, Table 3.10-1. Please change “Row” to “ROW” after “Transportation/Road”. B6-61

Figure 3.10-1. Valley View Avenue appears to be incorrectly labeled as Crane Avenue. The incorrect label also appears on other maps (see, for example, Figure 3.11-1), but not all, in the document. B6-62

3.10-14, California Public Utilities Commission, last sentence. According to adjudicated determination, the city has significantly more than “some” authority to regulate particular activities of the excursion rail service – for selected actions, the decision is solely the city's. Please consider deleting “some”. B6-63

3.10-20, LU1.4. Please consider making “LU1.6” the beginning of a new bullet section. B6-64

3.10-21, LU1.E. Please consider making “LU2.1” the beginning of a new bullet section.

,

3.10-21, LU5.2. Please consider ending the sentence with one period.

3.11-7 & 8, Table 3.11-3. Please consider clarifying either though a note or an addition to the title that the nose levels were calculated based partly on traffic counts. It is also curious that Note 2 states that the truck volumes were set at two percent for all roadways. However, the truck volumes for Main Street are available from Caltrans and are significantly higher than two percent. Why was the more accurate Caltrans figures not utilized? Further, Note 3 states that the speeds were assigned based on road type while the posted speeds are readily available. B6-65

3.11-19, PS2.D. Is Ldn the same as DNL? If so, please consider being consistent in the use of terms. If not, please include in the definition of terms, Table 3.11-1. B6-66

3.11-20, PS2.H. Please consider deleting “vehicles and motorcycles” as it would likely be illegal to “regulate” them in such a way as to restrict access to residential (or nearly any) publicly owned street which may be adjacent to sensitive receptors, as defined. B6-67

3.1-23,Table 3.11-11. Please see comment for Table 3.11-3. B6-68

3.11-29, first paragraph. This paragraph claims that the proposed plan sets thresholds in CNEL while on page 3.11-19, where the relevant polices of the proposed plan are depicted, the term used, particularly in PS2.C, is LAdn. Are these terms identical? LAdn does not seem to appear in the Definition of Terms, Table 3.11-1. Please consider the consistent use of terms, particularly for the lay reader. B6-69

3.12-2, Table 3.12-1, Please consider deleting “Other:” as it only applies to the fire marshal. B6-70

3.12-6, Libraries, first paragraph. The data in the paragraph is putatively from the 2015-16 fiscal year, but the year reported in the citation is 2015. Please clarify. B6-71

3.12-7, Table 3.12-3, Community. There are eight bocce courts in Crane Park. B6-7 2

3.12-9,Figure 3.12-2. Please consider identifying Lewis Station. B6-73

3.12-11, first paragraph, second to the last sentence. Why is the city of St. Helena cited when the section references state code dealing with school districts? B6-74

3.12-12, Napa County General Plan Recreation and Open Space Element. Why is there no reference to the Napa County Regional Park and Open Space District and that agency's adopted parks master plan in any section? B6-75

3.12-16, Fire Service. The data in the paragraph for response times and calls is from 2017, but the citation is 2015. Please clarify B6-76

3.12-16, Police Service. Please consider using information from the recent SHAPE study on the adequacy of the existing station. B6-77

3.12-19, second paragraph, first sentence. Please reword. There are two state parks, not regional parks, in Napa county just outside St. Helena. Both are operated under contract to the state by the Park and Open Space District. B6-78

3.13-2, last paragraph. While it is true that the most of the jobs available in St. Helena do not pay sufficiently to afford a home in the community thus exacerbating the in in-commute as the paragraph correctly claims, it is also likely that the high housing costs also, but to a lesser degree, exacerbate the out-commute for those who seek and need a higher-paying job to live in the community than is generally offered locally. Thus the high housing costs contribute not only to a higher in-commute but a higher out-commute as well. B6-79

3.13-3, SR 29, first and third sentences. Please consider rewording. SR 29 in Napa county is not solely a two to four lane rural highway. It also has a freeway segment, an expressway segment and some other types of roadways. In addition, consider rewording the third sentence as the turn lane is not continuous between Dowdell and Madrona – it is missing or has a double-double yellow in two locations. B6-80

3.13-3, SR 29, second paragraph. Please consider providing evidence that X-X trips are presently diverting in significant numbers to local roadways in the city. Without such evidence, an old chestnut is reenforced that can lead to unhelpful projects and programs. It may become a problem in the future, but currently the traffic on those streets appears to be almost purely local. B6-81

The Silverado Trail is a special case, in that it works as nearly a couplet with SR 29 and given the very small length of the Trail that is within the city – the trips on the Trail for the City are nearly all X-X, X-I or I-X with no or nearly no I-I trips possible.

3.13-3, SR 29, last paragraph. Please reword. The channelization project actually goes back three decades to a time when maintenance projects were listed in the STIP and were debited to the county minimums. The project was split into two pieces and the first segment was completed in the 90's (Yountville to Mee Lane). When the STIP and SHOPP were split, the second half did not migrate to the SHOPP until the Napa communities traded the STIP funds to the Trancas/29 interchange to fill a shortfall and requested moving the Mee Lane to Charter Oak segment to the SHOPP. It may well have B6-82

been the oldest STIP/SHOPP programmed project in the state by the time it was actually constructed. B6-82

3.13-4,Figure 3.13-1. The figure includes and rates several private roads. Is that intentional? In addition, please consider the rating of Madrona west of Hudson. It has few houses but sizable vineyards face the street. The city may also have an agreement with one of the adjacent owners on the character of the street, which is intended to be rural, not residential. B6-83 B6-84

3.14-6, Madrona Street/Fulton Lane, last sentence. Please consider removing the quotes around dead end. B6-85

3.13-16, second paragraph, second sentence. Please consider another example that is a public and not private road. B6-86

3.13-17, Rail Service. The Wine Train is not a passenger service, please consider another term for its ridership. B6-87

3.17-20, Environmental Assessment Review and Comment, last sentence. Please consider replacing "Rohnert Park" with "St. Helena". B6-88

3.17-21, first paragraph,last sentence. Please consider deleting as it has noting to do with the STIP and Caltrans duties and powers were described in an earlier section. B6-89

3.17-22, Metropolitan Transportation Commission. Please consider rewording. MTC does not allocate funds under the control of transportation sales tax authorities, which is a very large portion of the funds expended on transportation projects in the Bay Area. The RTP is not an allocation document and in and of itself releases no funds. It does allow projects to proceed to programming and allocation in other documents and programs. B6-90

3.13-17, NVTA. Please consider rewording to be very clear which agency is discussed - and why the other is not. There are two NVTAs in the Napa communities. One is a transportation sales tax authority and the second is a joint powers agency that provides transportation planning, transportation programing, transit operations and the occasional transportation project for the Napa communities. They are independent entities with separate boards. It appears the section is concerned with the joint powers agency, not the transportation sales tax authority. In addition, the Napa communities do not have a CMA, having opted out of the requirement two decades ago. B6-91 B6-92

3.13-24, Significance Criteria, Criterion 5 & 6. Please consider moving the "or" on 6 to 5 and ending 6 with a period. B6-93

5-2, Population, first paragraph, third sentence. Please consider rewording. The stated historical growth rate of 0.16 percent per year is much smaller than the 0.60 percent rate projected. Although the 0.44 difference does not sound like much, it is an increase of 275 percent over the historical rate. That large of a change probably does not qualify as "slightly". What does ABAG predict for St. Helena, not Napa county? B6-94

5-3, Table 5.1-1. Please consider adding a vertical line between the figures for St. Helena and those for the planning area, centering St. Helena and Planning Area over their relative sections of the chart, using exact figures, not rounding to the nearest one hundred, deleting the superscript two for Housing Units and Population under St. Helena and under Planning Area (should these be ones?) and deleting the superscript three for Planning Area. B6-95

5.3, Public Facilities and Services, second to the last sentence. Please consider rewording as it implies B6-96

the city owns a solid waste facility. B6-96

5.5, Table 5.1-2. Please consider adding a vertical line between the figures for St. Helena and those for the planning area, using exact figures, not rounding to the nearest one hundred, deleting the superscript two for Jobs (which presently means it applies to all figures on the Jobs row) and explaining how one reasonably presents a ratio with two significant figures when the figures from which the ratio is defined are rounded to the nearest one hundred. B6-97

5.5, Cumulative Analysis, second sentence. Please add a comma after “air quality”. B6-98

5.7, Cumulative Effect on Cultural, Historic and Tribal Resources, last sentence. Please replace “I” with “is”. B6-99

5.9, Wastewater Treatment and Distribution, first sentence. Please consider deleting “other” as it implies that the St. Helena treatment facility is regional in nature. B6-100

Subject: FYI - bad reference in appendix to draft EIR

Noah,

B7-A-2

FYI, on pages A-4 and A-5 of the appendix to the draft EIR there are two references to Chalk Lane. The correct name is Chaix Lane.

Subject: comments to the 2040 General Plan and Draft Environmental Impact Report

Noah,

We hope your day is going well.

We have the following comments with regards to the draft EIR and General Plan.

B7-C-2

Guiding Principles and Objectives

First and foremost, the "guiding principles" of the 2040 General Plan beginning on page 1-14 and summarized in the draft EIR as "objectives," do not specifically speak to neighborhood livability. Protecting and improving the livability of our neighborhoods should be a top priority and be listed as an important guiding principle and objective of our 2040 General Plan.

Housing and housing impacts

Tables ES-1 and ES-2 of the draft EIR provide build out information. ES-1 provides that 300 additional housing units with an increased population of 700 at 2040 build out. ES-2 suggests 900 additional jobs at build out. This draft GP doesn't adequately balance anticipated future housing and job growth with infrastructure changes. Additional housing units and jobs will only exasperate the (current) sub-par housing and traffic situation. It is understood that the housing element is currently in the process of update. The GP needs to address the housing issue, and its impacts, head on and not leave it for later. Draft EIR areas of controversy note that traffic impacts from future development will exasperate the existing traffic issues. As such, circulation, local traffic, and neighborhood traffic impacts need strengthened directives within the appropriate GP elements. Planned improvements in the GP need to ensure successful results of better circulation: increased biking, walking, safe routes to school, and additional outside opportunities.

Circulation

The draft GP Circulation Section provides for "potential future road extensions." The road extensions (better described as connections as they are connecting the town together) are described as "Study Alternatives." These road connections (including a fully implemented Oak Street connection) have been reviewed and discussed since 1993. In-town traffic and circulation was bad then and has become nearly unbearable. The connections do not need to be "studied" any longer. The GP language should be stronger and note an immediate need to implement our connectivity. Additionally, the noted "special studies" should only be limited to the bike and walking infrastructure associated with the road

B7-C-2

extensions. Any infrastructure improvements should be subject to standard review with no special limitation or additional requirements.

Alternatives to the Proposed Plan in the draft EIR includes transportation network enhancement alternatives, including a full Oak street connection from Grayson to Mitchell. This alternative is absolutely correct, as per the 1993 General Plan. The circulation element needs to be updated and include this full street connection. St Helena needs to improve in-town circulation for it citizens coming in to and out of town. The Oak Street connection from Grayson to Mitchell is not about relieving traffic from SR-29, it is about in-town circulation and, most importantly, reducing local Vehicle Miles Traveled (VMT). If we have any hope of improving our local air quality and addressing our climate impacts we must reduce VMTs within our city limits. Improved circulation and adopting all the street connections included in the previous General Plan, including the Oak Street extension, will help us in these efforts.

Traffic safety and noise in residential neighborhoods

Various elements of the Plan should specifically provide how the City plans to control and mitigate the impacts of traffic noise and safety on neighborhoods. Residents have the right to the peaceful enjoyment of their properties. Plan elements need to ensure that neighborhoods and homes are not degraded by unsafe traffic, noise, air quality, development, and inappropriate zoning or uses contiguous to the streets we live on and where our kids play or go to school. Traffic issues within certain neighborhoods were acknowledged in the 1993 plan and subsequent analysis in 2006 and 2009. The GP needs to be more specific in directing how our in-town and through-town traffic issues will be mitigated to ensure safety and health. Getting folks out of their cars is a high priority of the Draft GP. We cannot accomplish this priority with high traffic streets and speeding cars. The GP needs to adopt stronger more specific guidance on neighborhood traffic issues.

The draft GP Circulation Section is practically silent as to one of the most pressing problems in St Helena now, and likely to grow in the future, and that is, traffic volumes and speeds in residential areas. The Circulation Section states "continue efforts to calm traffic, and minimize traffic volumes and speeds in residential areas". The GP does not, but should, address what types of measures could be utilized for traffic calming, what the policies are, and how those policies will be implemented to improve neighborhoods and pedestrian and bicyclist health and safety. The Nov, 2009 Fehr and Peers Transportation Report (included in the Appendices) identified excessive speeding and suggested "traffic calming measures which involve changes in street alignment, installation of barriers, and other physical measures to reduce traffic speeds and/or cut through volumes, in the interest of street safety, livability and other public purposes". The GP should identify specific types of traffic calming strategies for the most impacted cut-though residential neighborhoods; since this issue is predicted to only get worse in the future, metrics which would measure successful implementation could be useful.

Air Quality Issues/Measurements

The draft EIR addresses Air Quality and Energy, Greenhouse Gases, and Climate Change. As the draft EIR notes, both our current status and GP build out violate BAAQMD standards. This is obviously not acceptable. The 2040 GP as drafted is a health risk to current and future residents. The GP needs to address and mitigate these health risks before the Plan is adopted. Potential solutions that should be noted in the GP include limiting pesticide and herbicide use, reducing cultivation to significantly reduce airborne particulate matter, requiring alternative energy for all new construction or significant building improvements and remodeling, requiring all residences, businesses, government facilities to adopt 100%

MCE clean green, reducing cut through traffic and adding new EV charging stations. In the meantime, an air quality monitoring station should be initiated at the SH Primary School. This school is for 4-7 year olds and is adjacent to one of the (now) busiest residential streets in St Helena. This street has become the cut through street for residents and workforce alike, and the children at the school are outside on their playground adjacent to S Crane several times a day. The City needs to mitigate the impacts to these small children. B7-C-2

SHUSD Mitigation Measures Identified in Negative Declaration

The GP should include a plan to require the SHUSD to implement the required traffic mitigation measures associated with the Primary School construction and the Negative Declaration Report the SHUSD issued at that time. The City and SHUSD have allowed the required mitigation measure for the additional school traffic to go unmet. Implementation of the required mitigation measure will help the City achieve its 2040 GP goals of in the areas of Air Quality, Climate Change, Traffic, Safety, Health, and Livability.

Please confirm receipt of this email. B7-C-3

Thank you in advance for your efforts on this very important and long over due project.

Mark and Pam Smithers

Comment Letter B8

B8-1

Please consider these written public comments concerning both the General Plan Update and the corresponding Draft Environmental Impact Report. My comments are limited to the statutory requirement that a General Plan Update (GPU) include a map, diagram or other method of showing the inundation areas in the event of the failure of the St Helena levee and/or flood wall.

I have made comments on this subject numerous times during previous comment periods related to General Plan Updates and their corresponding Draft Environmental Impact Reports (DEIRs). The first time this issue was raised was during the public comment period ending in July 2016. The most recent oral comments made prior to the release of the 2040 GPU were at the Joint Meeting of the Planning Commission and the City Council to review the General Plan on August 14, 2018.

B8-2

When the 2040 GPU was released on October 23, 2018, I was out of the country. Upon my return to St Helena I notified Noah Housh by email on 11-20-18 that the updated General Plan Safety Element still did not include the areas of inundation in the event of a levee and/or flood wall failure. The statutory requirement for this appears at Government Code §65302(g)(2)(A)(viii). This requirement is also confirmed in the recently updated version of the Governor's Office of Planning and Research's General Plan Guidelines at page 143.

At the Planning Commission meeting on December 4, 2018, which was agendized for the purpose of taking public comment on the DEIR, I again made oral public comments on the lack of the required levee and flood wall failure areas of inundation. There was some discussion as to whether or not the levee protection map would suffice to satisfy this requirement. I pointed out that the map of the levee protection zones are separately required under Government Code §65302(g)(2)(A)(vii). One of the reasons there is a separate requirement for areas of inundation in the event of a levee or flood wall failure is because the force of the water and the damage it can cause are significantly greater in the even of a levee or flood wall failure than what would happen during a flooding event. The inundation map is not just the converse of the levee protection areas and wouldn't take into account what would happen in the event of a flood wall failure, which is also a requirement of Government Code §65302(g)(2)(A)(viii).

B8-3

The legislature would not have specifically required areas of inundation in the event of a levee and/or flood wall failure if there wasn't a need to have that information. But even if it was not such a requirement, the City should be interested in including that information for both safety and financial reasons.

Not only does the City need the information, but every resident impacted by a potential levee or flood wall failure deserves to know what the potential danger is for them. Especially important is the fact that many of those who would be imperiled by a levee or a flood wall failure are some of the most vulnerable in our community. Vineyard Valley, Hunt's Grove, Meadow Creek Circle and a lot of other areas of the eastern part of the City would be significantly impacted and they all deserve to know what the possibilities are. B8-3

During some of the rain storms in recent years, one of the City's main across-city access points between Highway 29 and the Silverado Trail was destroyed. The Pratt Avenue bridge has remained closed since that time. If there was a flood wall and/or levee failure it likely would cause severe damage to another important access to the Silverado Trail. The Pope Street Bridge is immediately adjacent to the flood wall and is located very close to the levee. A failure of either the levee or the flood wall could jeopardize the viability of and cause severe damage to the Pope Street Bridge, which would be a significant safety problem for the City and all of its residents and visitors.

To further complicate this situation our levee and flood wall are both located in an area of very high and high liquefaction. That information already appears is in the 2040 GPU. Liquefaction is a major and well-known cause of levee failures.

Not only should the General Plan Update include the areas of inundation resulting from a levee and/or flood wall failure, but the Draft Environmental Report should include the potential safety and environmental damage, which could be created when considering the intersection of the levee and flood wall failure inundation map, the liquefaction map (already in the 2040 GPU) and the earthquake map (also included in the 2040 GPU.) For example, this issue should be discussed in the Circulation Element when considering the potential impact of the loss or restriction of the use of the Pope Street Bridge if there is a levee or flood wall failure. There are other areas of the Draft Environmental Impact Report and General Plan Update where these issues should also be discussed. B8-4

Since the land immediately behind the levee is designated medium density residential, the areas of inundation in the Draft Environmental Impact Report must also consider the safety and environmental impacts of any housing being built and asphalt laid behind the levee. It is logical to conclude there would be significantly more damage to the environment if the flood plain behind the levee is built up with housing and asphalt, than the damage that B8-5

what would happen during a levee failure on the current unobstructed flood plain behind the levee. Since this would not be a hypothetical situation since there is a current project planned for that approximate 17 acre site, it must be included in the proposed General Plan Update and Draft Environmental Impact Report. B8-5

Thank you for your consideration. B8-6

To: Cindy Tzafopoulos <ctzafopoulos@cityofsthelena.org>
Subject: The supposed deadline today for public comments to the General Plan update Environemntal Report and no notice to the public

To: St. Helena City Council via City Clerk January 3, 2019
RE: General Plan 2040 - public comment deadline and notification to the public

Dear Mayor Ellsworth and City Council,
A number of us local residents have been hearing spotty information about a deadline today for us to provide public comments to the Environmental Report for the 2040 General Plan. We are notifying you that many people we know in town cannot find the deadline posted anywhere on the city website. And, we cannot even find anything about submitting comments (examples: how to do it, who to send it to, is there a format to follow, when it's due…). So, is this true?
Some of us may not be computer experts, but quite a few of us searched the city website and see NO notice asking for public comments or a deadline. HOW CAN THE PUBLIC KNOW WE CAN GIVE COMMENTS AND HAVE A DEADLINE WHEN THE CITY AND GP WEBSITE DOES NOT EVEN POST IT? The General Plan will be around for a very long time and will define our city and our childrens city and our grandcildrens city for years and years. You can look on the website for yourselves. We saw nothing. (See below where we printed the image of the Main city website AND the GP website page as it is TODAY). Then, since you are a NEW COUNCIL please start off on the right foot and work hard to make sure you are being transparent and really wanting public input by at least putting it somewhere noticeable on the website.
PLEASE PUT THIS LETTER INTO THE DRAFT EIR AS A COMMENT BECAUSE WE HAVE NOT HAD THE CHANCE TO SEND IN ANYTHING BECAUSE WE DIDN'T KNOW ABOUT IT. We want to make sure it goes on the record that we feel we were not notified.

Thank you very much Council.
Jim and Pat Reynolds, and friends, and neighbors, in St. Helena

Comment Letter B10

B10-1

PLANNING COMMISSION MEETING EIR COMMENTS SUMMARY

On December 4, 2018, the St. Helena Planning Commission held a regular Planning Commission meeting to receive comments on the Draft EIR for the General Plan Update. The meeting took place at 6:00 pm at 465 Main Street in St. Helena. The agenda, minutes, and video recording for the meeting can be viewed on the City's website at https://sthelena.civicweb.net/Portal/MeetingInformation.aspx?Id=368. Comments received at the meeting are summarized below.

Public Comments

Vicki Bradshaw, Resident

California Government Code Section 65302(g)(1)(A)(VIII) requires cities with a housing element update after 2009 (St. Helena's Housing Element was updated in 2015) with floodwalls and/or levees to show "areas subject to inundation in the event of the failure of the project or non-project levee or floodwall" in the safety element of the general plan, and the Office of Planning and Research recently issued updated general plan guidelines reconfirming the statutory requirement for inclusion of a levee/floodwall failure map.

The Proposed Plan does not currently include a levee/floodwall inundation map, but the map is important to have for safety and financial reasons. Vineyard Valley, Hunt's Grove, Meadowcreek Circle, and other areas in East St. Helena would be directly affected by a levee or floodwall failure and residents have a right to know what potential safety problems they may have. The levee/floodwall is located in areas mapped as having high and very high liquefaction hazard, and liquefaction is a well-known cause of levee and floodwall failure. In the July 25, 2016 public comments to the earlier Draft EIR for the General Plan Update at that time, there was a USGS satellite map of Napa and St. Helena that showed significant ground moving in the area of the levee at the time of the 2014 Napa earthquake, suggesting that had there been rain, there could have been liquefaction in that area with the potential to damage the levee/floodwall.

B10-2

A levee/floodwall failure inundation map is important for financial reasons, as many residents gave up flood insurance when the levee was built, and they have the right to know the potential financial damage they might experience in the event of a levee failure. St. Helena took $12 million in loans and grants from the State to build the Flood Control Project. As a result, the California Legislature passed and the Governor signed AB 1898, codified in California Water Code Section 12748.3, which states that,

> "…The State may provide funds in accordance with section 12585.7 to the City of St. Helena or to local agencies in the County of Napa for the project for flood control on the Napa River in the County of Napa. (c) A county or local agency may receive the funds only if it enters into an agreement with the Department [of Water Resources] pursuant to which the city or the local agency agrees to indemnify and hold and save harmless the State, its officers, agents, and employees, for any and all liability for damages that may result from the project. (d) For the purposes of this section, liability for damages includes, but is not limited to liability for damages relating to the construction or operation of the project or the failure of the project to operate as intended."

The City has indemnified the State in the event of a levee or floodwall failure so the financial responsibility would be entirely the City's, and residents have a right to know the potential damages there could be in the event of a levee/floodwall failure and the resulting potential financial liability of the City. B10-3

Inclusion of the required inundation map in the Proposed Plan should also involve a change to the EIR to discuss safety problems and potential environmental damage considering the intersection of the levee/floodwall failure inundation map, the liquefaction map, and the earthquake map. The EIR should also include comments as to the safety and environmental impacts in the event of a levee failure if housing and asphalt is built behind the levee, as the area would be designated Medium Density Residential, and the currently unobstructed floodplain would be negatively impacted. When the map is included, it should be considered a substantive change and trigger a new public comment period as it would be unfair to insert a map after the close of the comment period and not allow the public to comment on the source and adequacy of the map and EIR analysis.

The Government Code section also requires that cities show levee protection areas, which is different from areas subject to inundation. There is also a requirement that if a dam is present, there should be a dam failure inundation map, which has been included in this EIR. If there are levees with areas subject to inundation, a separate chart or description is required because if a levee fails, the water can be much more forceful and can create more damage than just normal flooding. B10-4

Planning Commission Comments B10-5

John Ponte, Planning Commissioner

- Regarding Mitigation Measure MM-AQ-2, is there a State law or Air District requirement that the submittal be to the Bay Area Air Quality Management District (BAAQMD)? He was concerned that everyone building a new home would have to make the submittal, and if so, he would prefer that the submittal be made locally to the City rather than involving BAAQMD and creating additional requirements and expenses for an applicant.
- Regarding Mitigation Measure MM-AQ-3, he sought to confirm that the number of these point sources would be very low. B10-6
- Regarding Mitigation Measure MM-AQ-6, is this mitigation measure statutory? Under this measure, every building project in the city would have to do a health risk assessment because everyone is within 1,000 of a residence, school, or other sensitive receptors. This could cost lots of money if all projects have to go through this. B10-7
- Regarding MM-GHG-1, why are we writing a Climate Action Plan that might not reach the target that the State has set, which it has not yet set? How would this mitigate the impact, and how would you assess the success of the mitigation since the State has not set targets, goals, or a way of reaching those targets and goals? Ninety percent of control measures would be at the State or regional level anyway, and the City would have a hard time meeting the targets based on what's under its control. B10-8
- Regarding Impact 3.13-2, the Napa Valley Transit Authority (NVTA) is not a congestion management agency (CMA). The County opted out of having a CMA and has no B10-9

congestion management plan (CMP). Since there is no CMP, this impact should be written similar to the airport section. B10-9

- Regarding transportation mitigation measures on page 3.13-44, the mitigation measure call for two new signals. As part of the analysis, the team looked into what happens to the string of signals as a whole with the two added signals. The only problem is that there is at least one intersection where the delay is so high it is reported as >120 seconds, which means that that is the edge of analysis for the software. Beyond 120 seconds could mean 121 seconds or 1,001 seconds. Does this analysis account for delays above 120 seconds? If it is in reality much longer, the mitigation measure can cause a cascading set of failures. For example, at Grayson/Main, the analysis finds that even though the individual intersection looks like it will pass, the delay at Pope/Main is so long that it causes problems at Grayson/Main. If the delay at Pope/Main exceeds the limits of calculations and could cause a cascade of failures. Also, at Main/Sulphur and Main/Pratt, would the mitigation measure make things worse? B10-10
- Regarding MM-TR-3, this reads as though at least one set of extensions must be implemented. In approving the environmental document, are these extensions also being approved? B10-11
- Regarding MM-TR-5, the signalization of Silverado/Pope may not be feasible without replacing the operationally deficient bridge, as the bridge approach is narrow and inadequate. B10-12
- Regarding Impact 3.13-5, there seems to be a disconnect between the conclusion for Impact 3.13-1, which finds a significant and unavoidable impact for level of service, and this conclusion, which is less than significant for emergency access. How are the same set of operationally deficient roads ok for emergency access? If there is a need for a satellite fire station under current conditions, then in 2040, with no through streets on either the west or east side of 29 and worse traffic, how would emergency access for fire, police, and other emergency services not be affected? The analysis indicates congestion and LOS F on 29 and parts of town cannot be reached without 29, so those sections of town could have a problem. This impact may be significant and unavoidable, and mitigation should be the same as MM-TR-3. B10-13

David Knudsen, Planning Commissioner

- Figure 3.13-1: Roadway Classification has an error in the depiction of Vallejo near Sulphur Spring. It should match Figure 3.13-2. B10-14

Lester Hardy, Planning Commissioner

- Regarding Impact 3.13-5, how can there be adequate emergency access if emergency vehicles have to go to Deer Park to access parts of the city? B10-15

Bobbi Monette

- How does the analysis account for significant impacts that could be caused by implementation of the mitigation measures? B10-16

Subject:	Church Street city proposal
Date:	Tuesday, March 12, 2019 12:26:08 PM

Dear Noah;

I received the notification of proposed plans for rezoning. Many owners on Church street are deeply upset.

Why is the city proposing parking on a residential street? Many of us are spending lots of money on improving our homes on Church street and plan to retire in St. Helena.

It would be a detriment to our town to have tourists from the wine train viewing parking instead of historic homes. Church street is their first introduction to downtown Main Street. The city should be supporting beautification efforts on Church street not asphalt, increased traffic, and unhealthy emissions.

Carly Simon Quote " they paved paradise and put up a parking lot"

I can't imagine more parking needed in this area. There is parking behind all the businesses all the way up Railroad not to mention the huge parking space in the Safeway lot and up and down Hunt.

We appreciate any clarity around this proposal. It seems unfair as this zoning plan has been in discussion for a decade and Church street has never been a topic of discussion to my knowledge.

I along with many neighbors will be attending the March 19th City meeting.

Subject: Re: Church Street city proposal

Noah- thank you for taking my call this afternoon. As I expressed to you, I'm deeply concerned with the potential outcome of this zoning proposal. I purchased my home at 1152 Church St as a Retirement home and have invested heavily.

While I am fully supportive of beautification/upgrading efforts for the City, including Church St, I do not consider a parking lot in line with that effort. I will also review the Disclosures that accompanied my purchase agreement.

As discussed, I will review the Agenda & Meeting materials thoroughly and connect with you this week. I will reach out to my neighbor Jacqueline to discuss/coordinate.

Thanks, Tina

RE: Proposed Land Use Change - Church Street; Request for Amendment

Dear Mr. Housh and St. Helena Planning Commission;

Please consider this official notification from the property owners on Church Street designated below of our objection to the land use and zoning change set forth in the St. Helena 2040 General Plan Update ("General Plan") – Land Use Change Areas, Figure 2.8, Site No. 10 ***Church Street Parking Lot Parcels (.039 acres): Redesignate the four mid-block parcels adjacent to the railroad from Medium Density Residential to Mixed-Use or allow the parcels to be developed as a parking lot.*** We request that the "parking lot" language be stricken from the proposed land use description, and that an Amendment to the General Plan as it relates to Site No. 10 (Church Street) be considered and approved for the opportunity to discuss potential implications and collaborate with concerned property owners.

This proposed change came as a shock and has raised many questions and concerns regarding the potential impact to our property values, neighborhood and community. While the owners of the "four mid-block parcels" noted above received official notice of this change via letter on March 6, 2019, owners on the opposite side of Church Street were not notified. And, for some recent buyers on Church Street there was no disclosure of any proposed zoning change in the real estate transactions providing the opportunity to consider any consequences.

As residential property owners, many who plan to retire in St. Helena, we support the spirit and objectives of the General Plan which include downtown revitalization while preserving the small-town character of St. Helena. We embrace the wine train that accompanies tourism, where Church Street is their first introduction to St. Helena. And, we appreciate the importance of land use and growth management. However, we do not believe that a parking lot is in line with these objectives and feel that such would significantly diminish our property interests and rights of enjoyment. Also, there is a lack of clarity on the permissiveness with the "Mixed Use" zoning designation which naturally raises questions and causes concern. As residents on Church Street we already endure heavy traffic, often at high speeds, and parking issues with local business employees using up residential parking. We strongly advocate preserving this historic street as a quaint neighborhood and not increasing Mixed Use which is only likely to compound current issues.

We appreciate the need for future city planning and hope that we can be involved in any future meetings concerning Church Street and the beatification of this special town. As neighbors on Church Street we stand united as a family.

CITY OF ST. HELENA PLANNING COMMISSION

FILE COPY

RESOLUTION PC2019-012

RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ST. HELENA RECOMMENDING TO THE CITY COUNCIL APPROVAL OF THE ST. HELENA 2040 GENERAL PLAN UPDATE AND ASSOCIATED FINAL ENVIRONMENTAL IMPACT REPORT CITYWIDE AND INCLUSIVE OF THE THREE IDENTIFIED STUDY AREAS BEYOND THE CITY BOUNDARY

Recitals

1. State law requires the City of St. Helena to adopt and maintain a general plan and contains certain mandatory elements, describes the City's long-term goals and develops policies and programs to achieve those goals; and

2. The City of St. Helena last completed a comprehensive update of its General Plan, which was approved by the City Council in 1993; and

3. The General Plan update formally began in April 2007, with the "Community Visioning and Existing Analysis" process undertaken by the General Plan Update Steering Committee (GPUSC). This effort involved extensive community input leading to the preparation of first full draft of the General Plan in the summer of 2010. Concurrently, environmental analysis was also taking place, leading to the completion of the General Plan Update Draft EIR in August 2010; and

4. The General Plan Update Draft EIR was subsequently circulated for review, comments were received, and a Final EIR (FEIR) was prepared in October 2010. The Planning Commission completed its review and recommended City Council approval of the document in October 2010, and

5. During the City Council review in late 2010, a number of issues surfaced, most notably concerning water supply. Ultimately, the City Council decided to postpone action on the General Plan in order to appropriately address the issue of water supply. A "Safe Yield Committee" was formed and a Water Management Program was developed. The Water Management Program was adopted by Council in November 2012, and thereafter incorporated into the draft General Plan, and

6. The City Council continued with a detailed review of the draft General Plan during numerous hearings held from late 2013 through June of 2014; and

7. Between April and August of 2016, the Planning Commission held six study sessions to review the 2016 draft of the St Helena 2035 General Plan Update (April 19, 2016, May 17, 2016, June 7, 2016, June 21, 2016, and July 19, 2016, and August 2, 2016); and

8. On July 19, 2016, the Commission directed staff to incorporate various changes/edits and further directed that staff present this revised summary to the Commission at the August 2, 2016, Commission meeting, which occurred; and

9. On January 9, 2018, the City Council approved a contract with Dyett and Bhatia to finalize the St Helena 2040 General Plan Update and draft a new EIR for the document. In approving this contract, concerns over finalizing the scope of the General Plan Update and EIR analysis were expressed by the City Council; and

10. On February 20, 2018, the Planning Commission and City Council met at a Joint Meeting to finalize the scope of both the 2040 General Plan Update and the resulting environmental analysis (EIR) required to analyze the project under the California Environmental Quality Act (CEQA). The final scope of the General Plan Update was determined at this meeting, including input on the planned Study Areas located outside of the City boundary and co-terminus Sphere of Influence (SOI); and

11. On April 1, 2018, the City issued a Notice of Preparation (NOP) informing community members, Responsible Agencies and all other parties interested in the City's 2040 General Plan Update that an EIR analysis was going to commence. This NOP requested input from all interested parties regarding the Scope of the EIR analysis, with comments being requested between April 1, 2018 - May 1, 2018; and

12. The City held an EIR Scoping meeting at 6:00 pm on April 17, 2018, in the Vintage Hall Board Room, 265 Main St, St. Helena CA, to allow interested individuals to provide their input and feedback to directly; and

13. On August 14, 2018, the Planning Commission and City Council met at a Joint Meeting to provide final direction and input on the scope of both the 2040 General Plan Update and the resulting environmental analysis (EIR) required to analyze the project under the California Environmental Quality Act (CEQA); and

14. In accordance with Government Code Section 65302, a comprehensive update to the City's General Plan was prepared, which addresses the mandatory elements required by state law, in addition to optional elements for Economic Sustainability; Public Facilities and Services; Historic Resources; Community Design; Climate Change; Parks and Recreation; and Art and Culture; and

15. The 2040 General Plan Update includes goals and policies regarding each of the General Plan elements; and

16. On October 23, 2018, the City of St. Helena published the Public Review draft of the 2040 General Plan update; and

17. On October 23, 2018, the City of St. Helena published draft EIR analyzing the environmental impacts of the draft 2040 General Plan Update for public review and comment, proving a 72-day review comment. This period ended on January 2,

2019, and work began on the draft Final EIR, including the Response to Comments; and

18. Per Government Code 65300, the General Plan and EIR applies to the entire Planning Area identified by the General Plan which includes all of the incorporated City (approximately 3,024 acres) in addition to the three Study Areas (approximately 570 acres) identified therein; and

19. The St. Helena 2040 General Plan Update is a Citywide document that is an integrated and internally consistent statement of the official land use policy for the City of St. Helena; and

20. The City's Housing Element is a mandatory general plan element and was previously prepared for the 2015-2023 planning period and was certified by the California Department of Housing and Community Development (HCD) in 2015 and this document is found to be consistent with the policies and goals of the 2040 General Plan Update; and

21. The City of St. Helena sent the draft 2040 General Plan to affected entities and agencies in compliance with state law (CEQA Guidelines Section 15082) and contacted California Native American tribes that are on the contact list maintained by the Native American Heritage Commission to invite those tribes to consult on the proposed draft 2040 General Plan Update; and

22. On March 8, 2019, a public notice of hearing before the Planning Commission was published in the St. Helena Star/Napa Valley Register; and

23. On March 6, 2019, a mailed notice was sent to all parties who's property or property within the agency's jurisdiction, is affected by the proposed 2040 General Plan Update; and

24. A staff report dated March 19, 2019, and incorporated herein by reference analyzed the projects consistency with all required element of the St. Helena Municipal Code, and

25. On March 19, 2019, the Planning Commission of the City of St. Helena, State of California, considered the project, staff report, and all testimony, written and spoken, at a duly noticed public hearing.

26. Now, therefore let it be found that, the Planning Commission hereby resolves as follows:

Resolution

A. An Environmental Impact Report (EIR) was prepared to analyze and disclose any and all potential environmental impacts associated with the proposed project, meeting and satisfying all the requirements of CEQA and the State CEQA

Guidelines which is sufficiently detailed so that all of the significant environmental effects of the Project have been adequately evaluated; and

B. The findings made in this Resolution are based upon the information and evidence set forth in the Final EIR and upon other substantial evidence that has been presented at the hearings and in the record of the proceedings. The documents, staff reports, technical studies, appendices, plans, specifications, and other materials that constitute the record of the proceedings on which this Resolution is based are on file for public examination during normal business hours at the Planning Division located at City of St. Helena City Hall, 1480 Main St, St. Helena CA; and

C. The Planning Commission finds that agencies and interested members of the public have been afforded ample notice and opportunity to comment on the EIR and the Project; and

D. Section 15091 of the State CEQA Guidelines requires that the City, before approving the Project, make one or more of the following written findings for each significant effect identified in the Final EIR accompanied by a brief explanation of the rationale for each finding: (1) Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the Final EIR; or, (2) Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency; or, (3) Specific economic, legal, social, technological, or other considerations, make infeasible certain mitigation measures or project alternatives identified in the Final EIR and these findings are provided in the attached Exhibit A and incorporated hereto by reference; and

E. Section 15093 of the State CEQA Guidelines requires that if the Project will cause significant unavoidable adverse impacts, the City must adopt a Statement of Overriding Considerations prior to approving the project. A Statement of Overriding Considerations states that any significant adverse project effects are acceptable if expected project benefits outweigh unavoidable adverse environmental impacts; and

F. Environmental impacts identified in the Final EIR as significant but which the City finds can be mitigated to a level of less than significant, through the imposition of feasible mitigation measures identified in the Final EIR and set forth herein, are described in Section of the DEIR, incorporated herein by this reference; and

G. Environmental impacts identified in the Final EIR as significant but which the City finds cannot be fully mitigated to a level of less than significant, despite the imposition of all feasible mitigation measures identified in the Final EIR and set forth herein, are described in Section of the DEIR, and incorporated herein by this reference; and

H. Alternatives to the 2040 General Plan Update that might eliminate or reduce significant environmental impacts are described in Section C of the DEIR, incorporated herein by this reference; and

I. A discussion of the project benefits and a Statement of Overriding Considerations for the environmental impacts that cannot be fully mitigated to a less than significant level are set forth in Exhibit C, attached hereto and incorporated herein by this reference; and

J. Public Resources Code Section 21081 .6 requires the City to prepare and adopt a mitigation monitoring and reporting program for any project for which mitigation measures have been imposed to assure compliance with the adopted mitigation measures. The Mitigation Monitoring and Reporting Program is summarized in Table D of the DEIR, attached hereto as Exhibit B and incorporated herein by reference; and

K. Prior to making its recommendation to the City Council action, the Planning Commission reviewed, considered and has exercised its independent judgment on the Final EIR and all of the information and data in the administrative record, and all oral and written testimony presented to it during meetings and hearings and finds that the Final EIR is adequate and was prepared in full compliance with CEQA. No comments or any additional information submitted to the City have produced any substantial new information requiring recirculation or additional environmental review of the Project under CEQA.

L. NOW, THEREFORE, BE IT RESOLVED that the Planning Commission recommends to the City Council that they:

1. Certify the Final EIR and adopt the CEQA findings of fact and statement of overriding considerations for the St. Helena 2040 General Plan Transportation Network Enhancement Alternative attached hereto as Exhibit A; and

2. Adopt the Mitigation Monitoring and Reporting Program for the St. Helena 2040 General Plan Update attached here to as Exhibit B; and

3. Approve and adopt the St Helena 2040 General Plan Update, modifying the document to:

   A. Modify General Plan Policy LU1.A to remove the reference to Accessory Dwelling Units and to state "...allow the division of single family homes into duplex and triplex units as by-right in the Medium and High Density Residential Zoning Districts" to make the policy more clear.

   B. To maintain and ensure that the Significance Criteria for Noise related Impacts be a 5 dB threshold of significance.

   C. Reference the County-wide Pedestrian Plan, without referencing a specific date or version, to assist with keeping the 2040 General Plan document up-to-date as additional County-wide plans are conducted over the life of the General Plan.

   D. Remove the Mixed Use re-designation and parking lot references identified in Change Area 10, in favor of keeping the parcels Medium Density Residential.

E. Implement the policy changes identified in the Environmentally Superior Transportation Network Enhancement Alternative.

I HEREBY CERTIFY that the foregoing action to recommend adoption of the St. Helena 2040 General Plan Update and associated Final EIR was duly and regularly approved by the Planning Commission of the City of St. Helena at a regular meeting of said Planning Commission held on April 16, 2019, by the following roll call vote:

AYES: Commissioners Ponte, Monnette, Hardy, Hale and Anderson

ATTENTION: Members of the St. Helena City Council
SUBJECT: A Technical Review of the Noise Element of 2040 GP Section 9

Dear Councilmembers:

History of Involvement with the Noise Element – I have worked through Planning Directors Greg Desmond and Victor Carneglia and the GP consultants on the technical aspects of the Noise Element since 2008. They agreed with me that the original study and Noise Element did not adequately describe our city's unique noise environment. Over the last decade, I've easily spent a few hundred hours on a *pro bono* basis on this project, as over the years issues have been dropped, rewritten, added, lost, etc. to the extent that it's still not technically correct.

Technical Background – I have been a consulting scientist and engineer in the field of architectural acoustics and environmental noise since 1967. I am a Fellow of the Acoustical Society of America (ASA) and the British Inst. of Acoustics (IOA), a Member on the Institute of Noise Control Engineering, and Member of the ASA Technical Committee on Architectural Acoustics among other affiliations.

Current Situation with the Noise Element – I have met with Noah Housh to discuss the correction items which are attached to this letter, but I am not sure they will be incorporated. They are all technical and/or informational and do not involved issues of policy. They are required to make the GP document technically correct and more useful to the public. These are:

- Table 9.1 – A previous corrected version was dropped and some words lost from the text. The attached Table shows the words which were lost and must be added.
- Table 9.4 – Six words should be removed, and three words added as indicated.
- Addition to the text regarding "Significance Criteria" - This section is from the current 1993 GP and should be added to the body of the text in the new General Plan. It explains the subjective significance of a change in the objective value of a decibel. Please see the 1-25-19 letter of explanation. This is important.
- Corrections to the Draft GP of October 2018 – Please refer to the three pages which contain changes and additions to make the document more informative and accurate to our current conditions relative to when the document was first written.

Thanks for your consideration, and please ask questions,

Jerald R. Hyde, FASA, FIOA

9.1 Words dropped from correct version

Table 9.3 Definitions of Acoustical Terms

Term	Definition
Decibel, dB	A unit describing the amplitude of sound. Equal to 10 times the logarithm to the base 10 of the ratio of two like quantities.
Sound Pressure Level (SPL)	10 times the logarithm to the base 10 of the ratio between the square of the sound pressure to the square of the reference sound pressure of 20 µPascals. Sound pressure level is the quantity that is directly measured by a sound level meter and expressed in decibels (dB).
Frequency, Hz	The number of complete pressure fluctuations per second above and below atmospheric pressure expressed in Hertz (Hz). Normal human hearing is between approximately 20 Hz and 20,000 Hz.
A-Weighted Sound Level, dBA (L_A)	The SPL in decibels as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes low frequency components of sound in a manner similar to the frequency response of the human ear and correlates well with subjective response to sound.
Noise	Unwanted or unhealthful sound.
Equivalent Noise Level, L_{Aeq}	The average A-weighted sound level during the measurement period. The A-weighted equivalent continuous sound level.
L_{Amax}, L_{Amin}	The maximum and minimum A-weighted sound level during the measurement period with the sound meter using fast-time-weighting.
L_{A01}, L_{A10}, L_{A50}, L_{A90}	The A-weighted sound levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level, L_{dn}	The average A-weighted sound level during a 24-hour day, obtained after the addition of 10 decibels to levels measured at night between 10:00 pm and 7:00 am.
Total Sound	The composite of sound from all sources near and far.
Ambient Sound	The sound level measured in the absence of an intrusive and/or extraneous noise.
Intrusive Noise	That noise from a source of specific origin which intrudes above or within the existing background sound level. The degree of intrusiveness of a sound depends upon its amplitude, duration, frequency, time of occurrence, and tonal or informational content as in contrast to the prevailing background sound level which exists in the absence of the intrusive noise.
Background Sound Level	The L_{A90} of the ambient sound. It represents the ever present lower sound level due to distant sources which are individually indistinguishable, and in the absence of the Intrusive or Extraneous Noise.
Extraneous Noise	Specific or distinguishable intermittent sound from nearby sources such as mechanical devices, leaf blowers, pumps, vehicles, horns, sirens, barking, talking, shouting, birds, crickets, wind and other similar individual sources which don't normally exist on a continuous basis.
Intermittent Noise	A noncontinuous sound consisting of a number of clearly distinguishable sound events of varying frequency and/or intensity.

TABLE 9.4: Standard and Adjustments for Determining Noise Impact of Intrusive Noise for Residential Receptors

STANDARD

The LAeq of an intrusive noise shall not exceed the following values:

- 7 am – 7 pm (daytime) 45 dBA
- 7 pm – 10 pm (evening) 40 dBA
- 10 pm – 7 am (nighttime) 35 dBA

remove

Or shall not exceed LA90 + 5 dBA whichever is greater. The background sound level LA90 must be measured for a minimum of 10 minutes in the absence of the intrusive noise at the appropriate time of noise impact.

remove

and extraneous noise

The maximum noise level LAmax of any intrusive noise shall not exceed the LAeq limits by more than 10 dBA.

The limits for intrusive noise are to be corrected as indicated below.

These noise limits apply to the nearest residential property line or at the nearest affected location on the receiver's property.

CORRECTIONS FOR INTRUSIVE NOISE

Type of Correction	Circumstances of Correction	Correction[a]
Seasonal	Summer or year round operation	0 dBA
	December through March only	+ 5 dBA
Tone or Impulse	No tonal or impulse character	0 dBA
Characteristics	Tonal character[b] present in noise	- 5 dBA
	Impulsive[c], repetitious or modulating[d] signal	- 5 dBA[e]

Notes:
a Correction to be applied to the Standard's limits for intrusive noise.
b Tonality exists when the 1/3 octave noise level of the tone is 5 dB greater than the average level of the two adjacent 1/3 octave frequency bands.
c Transient sound having a peak level of short duration typically less than 100 msec.
d Either in amplitude, frequency or duration including compressor "hammering" noise.
e In addition to correction for tonality.

Note: "extraneous noise" is defined in Table 9.1.

PDF page 284

Add to text of 2040 G.P.

The future noise environment in St. Helena is projected to experience little change from 1991 conditions. The increases in traffic would generally result in increases in noise levels of less than one or two dBA. Highway 29 (Main Street) will continue to be the main source of traffic noise in the community. Train operations may increase from 30 train passby events per week to 84 train events per week which will generate a noticeable increase in train noise along the rail right-of-way. New traffic noise sources, however, will affect noise levels in areas which receive little traffic noise presently, such as along (future) Starr Avenue and east Adams Street (when extended to Silverado Trail) and other newly designated collector streets. Noise levels from these street extensions may not be compatible with designated land uses. Table 8-1 shows the distances to various Ldn contours along major roadways in 2010.

Significance Criteria

Typically, a change in noise levels of less than 3 dBA is not discernible to the general population. Increases in average noise levels of from 3 to 5 dBA are clearly discernible to most people. An increase in the noise environment of 5 dBA or greater is considered to be subjectively significant and to constitute noise impact by the noise source in question.

Noise Compatible Land Use Planning

The objective of the noise and land use compatibility guidelines is to identify acceptable community noise environments. The compatibility guidelines should be used in conjunction with noise exposure assessments and noise contour maps to identify projects or activities which may require special treatment to minimize noise exposure. Table 8-3 presents noise compatibility guidelines for the City of St. Helena relative to the long term average noise level descriptor of CNEL or Ldn.

Standards and Adjustments for Intrusive and Intermittent Noise

Non-Residential Receptors. Maximum interior noise level criteria for intermittent noise sources relative to non-residential receptors are to be as given in Table 8-4.

Residential Receptors. Some noise sources which are not continuous are considered to be intrusive by nature of either their intermittent behavior, or their intrusion above existing ambient noise levels. These sources are particularly problematic in otherwise quiet rural communities. These noise sources are not accurately assessed through the long term averaging of the CNEL or Ldn descriptors. They require analysis, on the basis of the time period in which the noise is generated, relative to the local ambient conditions in the absence of the intermittent noise source during the same time period.

Standards for intrusive and intermittent noise shall be applied as stated in Table 8-5.

SUBJECT: Improvements to Noise Section of General Plan 2040

Dear Noah,

Again, thank you for meeting with me to discuss the improvements I've recommended to the Noise section of the General Plan (Noise Element).

Of the several comments I handed off to you, there is one which I believe is the most important to incorporate, and I want to emphasize that again here.

It's the issue of what a decibel or "dB" means to the average person reading the Noise Element. While decibels are an objective factor relative to an international standard, the change in decibels comes down to how the change of so many dB is perceived subjectively. The effects are relative, not absolute.

I have recommended that the three sentences from Page 8-6 of the 1993 General Plan (under the heading "Significance Criteria") be simply added to the text of the current Noise Element. As a planning document, this description of what a change in decibels means to the person exposed to noise is important so that it has meaning to the reader. It also enhances the Noise Element as being a planning tool.

You could drop the heading to the paragraph, or devise another; one suggestion might be: "Decibel Threshold of Perception."

What should be added to the Noise Element (from the 1993 GP), therefore is this: *"Typically, a change in noise levels of less than 3 dBA is not discernible to the general population. Increases in average noise levels of from 3 to 5 dBA are clearly discernible to most people. An increase in the noise environment of 5 dBA or greater is considered to be subjectively significant and to constitute noise impact by the noise source in question."*

With this statement, you can now see why noise contours are given in 5 dBA increments. Understanding this is part of understanding the bigger picture about environmental noise and noise impact.

Jerry H.

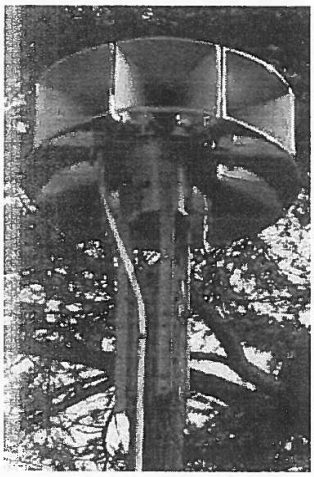
Note: No reference in text to Table 9.3.



Human-caused public health hazards include excessive, intrusive or objectionable ambient noises that disrupt daily life.

important to maintaining the public health and a quality living sound environment expected by the community.

Vehicular traffic on Highway 29 and collector streets is the primary source of noise in the community. Other non-stationary sources which are intermittent and generally inconsequential to the noise environment include flyover commercial aircraft at high altitudes, and small general aviation and helicopter flyovers. The Wine Train has an average of two trips to St. Helena per day and emits a loud horn at crossings, along with the low frequency rumble of the diesel engines. Typical stationary noise sources in St. Helena include agricultural and industrial activities. Agricultural activities result in noise from wind machines, tractors, and sulphur blowers which are employed in the spring in the early hours of the morning. The St. Helena Fire Department has sirens at two locations which sound on average two to three times per day, with approximately half of them occurring during nighttime hours. Noise contours as of 2018 are seen in Figure 9.6.

Noise concerns in St. Helena are principally linked to land use compatibility. Concerns relate to adverse noise effects from new commercial development on surrounding noise-sensitive uses such as residences and schools, and also to adverse noise effects from agricultural activities within the city limit. Right-to-farm provisions necessitate accommodating agricultural uses while also seeking to minimize conflicts. To address these concerns and to promote a compatible noise environment throughout the city, Table 9.4 establishes limits on intrusive noise and regulates the amount of noise a specific sound source can emit relative to the typically low residential background sound levels. This standard is specific to residential areas within St. Helena. Additionally, by generally promoting good neighbor practices and facilitating open communication between agricultural, commercial, and residential uses the City can help to foster a healthy noise environment. Noise contours projected for 2040 as a result of the General Plan are shown in Figure 9.7.

(1) Also includes garbage collection & street sweepers.
(2) Now, more trips than this
(3) The frequency is now less

Noise

- The primary source of noise in the community stems from motor vehicle traffic and commercial activity, particularly in areas near major roads, such as State Route 29. Mitigating traffic noise can be difficult, particularly the noise generated along State Route 29 throughout the day. However, the City can adopt noise standards to address more infrequent noise sources, such as those related to off-hours delivery, commercial loading and unloading, and leaf blowing devices.

and night.

already done.

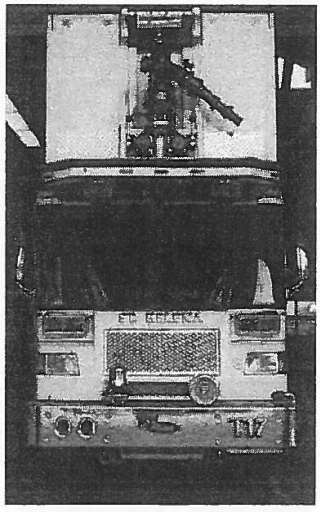
- While there are few industrial noise sources in St. Helena, passing trains and aircraft generate intrusive noise periodically in the community.

Harold Smith & Sons ?

- Agricultural operations generate noise on a seasonal basis; however, local right-to-farm policies limit the City's power to regulate noise impacts. Encouraging the regular communication of planned agricultural activities to surrounding residents can help address potential conflicts relating to noise compatibility. In addition, adopting noise compatibility standards for sensitive land uses can help to minimize the impacts of intrusive noise sources.

Fire and Emergency Response

- St. Helena's paid per call fire department, supported by two permanent staff members (hired in Summer 2018), provides fire protection services for wildland and structural fires within the city limits and in unincorporated areas of Napa County. Although service levels within the city are generally adequate, the heavily-wooded and frequently dry hillside areas could create significant challenges for firefighters.
- By limiting the type and scale of new development in hillside areas, and requiring sufficient road widths and turning radii to accommodate emergency response vehicles, the City can limit the potential for property damage and loss of life due to fires.
- Traffic congestion can adversely impact emergency response time in St. Helena, particularly when emergency vehicles must cross State Route 29. The City can work with emergency response providers to create solutions that address traffic-related emergency response challenges.



Emergency response is an important part of protecting residents and businesses.

topic area
2 NOISE

PS2.E Require new developments to implement noise mitigation measures when built in close proximity to noise sources, such as State Route 29 and the railroad tracks. These developments should consider the exterior and interior noise environment.

PS2.F Require construction operations to use noise suppression devices and techniques and limit noisy construction activities that can be heard at the property line to the least noise-sensitive times, as per the City's noise ordinance.

PS2.G Include appropriate noise attenuation techniques in the design of all new arterial streets. Such techniques could include the use of site planning, building orientation, buffer distances, quiet pavement surfaces, and the use of correctly-engineered acoustical barriers and berms where necessary. Adopt the noise standard for intrusive noise at residences given in Table 9.4.

remove, already done.

PS2.H Amend the City's noise ordinance to regulate intrusive noise sources, such as the use of machinery and equipment, leaf blowers, and other landscaping and property maintenance devices, animals, vehicles, and motorcycles, and idling buses or trucks in or near uses sensitive to noise, including residential areas.

PS2.I Incorporate right-to-farm legal provisions relative to noise in all newly-created deeds where agricultural activities may pose noise impacts in the future. Require similar language in deeds for properties similarly impacted by the Harold Smith & Son gravel plant operations.

St. Helena General Plan Update Punchlist

Global Edits

- Page numbers in PDF (not on the doc itself, but the list of pages in Acrobat) show up as Roman numerals for the entire document

Chapter 1: Introduction

- No change

Chapter 2: Land Use

- P. 2-24 second last bullet. Edit: "Specifies standards for... and elevation,"
- LU5.I Establish a Farmland Mitigation Program for future development that requires the permanent protection of farmland at a 1:1 ratio of the amount of farmland converted. The program should include provisions for the acquisition of agricultural conservation easements and payment of in-lieu fees as potential methods of farmland mitigation, where eligible agricultural mitigation lands must be located within the State of California and be of comparable or better soil quality than the land being converted, and in-lieu fees are to be used for the acquisition of a conservation easement, including costs associated with the transaction and long-term maintenance.
- LU6.A Update the zoning ordinance and map to be compatible with the General Plan Land Use maps , designations and public facilities and services element.

Chapter 3: Economic Sustainability

- No change

Chapter 4: Public Facilities and Services

- P.4-11 Regional Water Quality Control Board (RWQCB)
- P. 4-19 Portions of the Wastewater Treatment Plant are located within the 100-year floodplain, which can cause stormwater flows to ~~can~~ infiltrate the City's wastewater collection system during the rainy season. Reducing inflow and infiltration into the wastewater collection and treatment system can reduce the frequency of overloads and increase the effectiveness of the City's facilities.
- PF2.D Reduce sewer system inflow and infiltration through repair and replacement of sewer pipes and protection from ~~removal of~~ inflow sources.

Chapter 5: Circulation

- P. 5-4 add italicized text in the margin: *Regional planning initiatives such as the Napa Countywide Pedestrian Plan and the Napa County Travel Behavior Study provide context for the circulation and mobility framework in St. Helena.*
- P. 5-7 Edit: A pedestrian network that accommodates the City's most vulnerable users, such as seniors, children and individuals of limited mobility, will ensure that St. Helena's streets are safe and accessible for all. ~~As of January 2010, the City is creating a transition plan to study Americans with Disabilities Act (ADA) accessibility throughout the City.~~

Relevant planning initiatives include the 2010 ADA Transition Plan and the 2016 Napa Countywide Pedestrian Plan.

- Last bullet, page 5-9: The primary transit option in the Napa Valley is the ~~VINE~~ Vine bus service. Development and land use patterns in the Napa Valley have resulted in low …
- P.5-9 Replace Old Vine Go photo-with something from here: . Shared/Active Jobs/556 St Helena General Plan and EIR/Photos/From NVTA
- P.5-10 First bullet - revise sentence regarding Vine Trail -"will" connect St. Helena, not "connects"
- P.5-11 Update NCPTA text as follows:
  The Napa Valley Transportation Agency (NVTA) ~~Napa County Transportation and Planning Agency (NCTPA)~~ is a key partner and resource in regional transportation planning, programming and funding administration for Napa County. The NVTA ~~NCTPA~~ is a Joint Powers Agency (JPA) comprised of the City of Calistoga, City of St. Helena, Town of Yountville, City of Napa, City of American Canyon, and Napa County. Originally known as the Napa County Transportation and Planning Agency (NCTPA), the agency's Board of Directors approved a resolution to re-brand as NVTA in February 2016 to clarify the agency's role in the community. The NVTA ~~NCTPA's~~ Board of Directors includes the mayors and one councilmember of each of the jurisdictions in the County~~;~~, ~~and~~ the Chairman of the Board and one Supervisor of Napa County, and one non-voting representative from the Paratransit Coordinating Council. The NVTA ~~NCTPA~~ operates the countywide transportation program, including countywide transit service, paratransit, community shuttles, and ~~the St. Helena~~ Vine Transit.

  In 2015 ~~2009~~, the NVTA ~~NCTPA~~ issued The Napa Countywide Transportation Plan - Vision 2040: Moving Napa Forward ~~Napa's Transportation Future~~, a report that identifies the transportation issues facing Napa County and outlines a comprehensive vision for the County's transportation system in 2040 ~~2035~~. This report includes a series of goals designed to attain this vision and addresses how strategic transportation planning may enable the County to resolve key issues that might arise in the future due to projected population and employment growth. The Circulation Element includes a number of policies and implementation actions that support NVTA ~~NCTPA~~ recommendations, such as transportation demand management.
- P.5-11 Replace cover image with cover of Vision 2040: Moving Napa Forward: http://www.nvta.ca.gov/countywide-plan-vision-2040
- P. 5-22 as a new 3rd paragraph under Pedestrian Circulation, add:
  An inventory of existing sidewalks, marked crosswalks, curb ramps and trails was completed for St. Helena as part of the 2016 Napa Countywide Pedestrian Plan (See Figure 5-4). The Countywide Plan, which includes a pedestrian plan for St. Helena, identified pedestrian improvements for key areas of the city in order to improve pedestrian circulation in the vicinity of schools, businesses, and transit facilities, as well as to bolster connections to multi-use pathways.
- P.5-23
  - Replace text with:

    Class I Bikeway (Bike Path) paths provide a separate right-of-way and are designated forthe exclusive use of people riding bicycles and walking with minimal cross-flow of

vehicle traffic. Class I Bikeways can also offer opportunities not provided by the road system by serving as both recreational areas and/or desirable commuter routes.
• Class II Bike Lanes provide designated street space for bicyclists, typically adjacent to the outer vehicle travel lanes. Bike lanes include special lane markings, pavement legends, and signage. Bike lanes may be enhanced with painted buffers between vehicle lanes and/or parking, and green paint at conflict zones (such as driveways or intersections).
• Class III Bike Routes provide enhanced mixed-traffic conditions for bicyclists through signage, striping, and/or traffic calming treatments, and to provide continuity to a bikeway network. Bike routes are typically designated along gaps between bike trails or bike lanes, or along low-volume, low-speed streets. Bicycle boulevards provide further enhancements to bike routes to encourage slow speeds and discourage non-local vehicle traffic via traffic diverters, chicanes, traffic circles, and/or speed tables. Bicycle boulevards can also feature special wayfinding signage to nearby destinations or other bikeways.
• Class IV Bikeway (Separated Bikeway) Separated Bikeways, also referred to as cycle tracks or protected bikeways, are bikeways for the exclusive use of bicycles which are physically separated from vehicle traffic. Guidelines for Separated Bikeways were recently adopted by Caltrans in 2015. Types of separation may include, but are not limited to, grade separation, flexible posts, physical barriers, or on-street parking.

- P. 5-25
  St. Helena's bicycle network ~~includes bikeways in all three bicycle path~~ aims to maximize connectivity throughout the city (see Figure 5.5). The St. Helena Bicycle Plan, prepared in collaboration with the Napa Valley Transportation Authority ~~County & Planning Agency~~, outlines existing and planned bicycle routes intended to provide safe and convenient bicycle access to parks, open spaces, commercial areas, residential neighborhoods, and community facilities.
- P.5-30
  ~~b)~~ Examples of measures of "significantly lower levels of service" (renumber subsequent items)
    - i – should state, "…in accordance with NVTA's Countywide Transportation Plan"
- Page 5-30, Circulation, item c) Provide a complete bicycle and pedestrian network between residential areas, downtown, recreational open space areas, and other major activity centers identified by the City.
- CR1.7 Explore the use of the rail corridor to reduce traffic, including working with the ~~new~~ owners of the Wine Train to consider the possibility of developing hospitality and other tourist-oriented uses that are primarily accessed by passengers riding on the Wine Train Corridor.
- CR1.8 Reduce transportation-based GHG emissions from City-controlled sources by employing the following strategies:
    - Complete the City's bicycle and pedestrian network, which will increase transportation choices in the city and reduce the demand for vehicle travel;

    - Implement "smart growth" and sustainable planning principles as defined in the Land Use Element
- CR2.L: Enhance the pedestrian environment within the commercial area, and support the development of walking paths, multi-use trails, and bicycle trails throughout St. Helena with the goal of connecting to a countywide system.
- CR2.D Identify and pursue funding opportunities for bicycle projects on the local, state and federal levels. Update the existing and proposed bicycle system every five years, as required by Caltrans to qualify for funding.
- CR3.1 Provide incentives and encourage existing major employers to develop and implement transportation demand management (TDM) programs to increase the number of people who bike, walk, and take transit to work and reduce peak period trip generation. Coordinate as appropriate with NVTA to implement strategies including the following:
- CR3.4 Work with the wine and hospitality industries to manage congestion and create and promote car-free tourism services, coordinating as appropriate with NVTA on TDM strategies.
- Figure 5-4 Confirm and update Vine Trail route as needed
- Review information in "Concepts, Trends, and Ideas: Regional Coordination" on page 5-11 to see if there is newer data and to reflect the name change to "Napa Valley Transportation Authority"

Chapter 6: Historic Resources

- Figure 6.2 on page 6-9 is has the bottom cut off
- Fix Historic Resources list appendix → appears to have extra page at the end

Chapter 7: Community Design

- P. 7-3 providing space for recreation and passive activities, natural areas, plazas, flood conveyance, and agriculture.

Chapter 8: Open Space and Conservation

- OS1.B, page 3.4-26, and 3.9-27 (GP page 8-23) Restrict development on open space-designated parcels along Sulphur Creek west of the Crane Avenue Bridge. All development must be outside the stream corridor and structures must be set back from the creek's edge, consistent with California Department of Fish and Game standards. This does not preclude potential walking or multi-use trail development.
- P. 8-17 Add new paragraph at end: The City's Comprehensive Flood Control and River Restoration Project, completed in 2011, is an example of the City's efforts to provide integrated watershed management practices. This multi-benefit project provided 100-year flood protection for an area of St. Helena that has been subject to periodic historical flooding, provided river restoration, and open space areas for the City. This project is discussed in the public health, safety and noise element.

Chapter 9: Public Health, Safety, and Noise

- P. 9-4 First words of last paragraph "In 2011,"
- P. 9-7 after second full paragraph, add: St. Helena has developed an Operations and Maintenance Manual for the Comprehensive Flood Control and River Restoration Project, which describes the extent of the project and outlines operation and maintenance

activities that the City and Napa County Flood Control District will work together to manage. The manual describes project features, routine monitoring and maintenance activities, pump station operation, emergency operations, surveillance, personnel training, utility coordination and design.

- P. 9-23: Completed in June 2011, the City of St. Helena Comprehensive Flood Control and Environmental Restoration Project provides a minimum 100-year level of flood protection within the project and surrounding area of St. Helena. ~~200-year flood protection along the Napa River between Pope Street and the northern alignment of Adams Street~~. Design of the project was done on the basis of a Napa River Flood Model Study from Zinfandel Lane to Lodi Lane completed jointly by the City of St. Helena and the Napa County Flood Control and Water Conservation District with Measure A funding. The individual elements of the project include floodplain terracing, shoreline restoration, a new levee, floodwall and bank stabilization, and stormwater management features including a detention basin and pumping facility. The project protects hundreds of homes and is projected to save millions of dollars in flood insurance claims.
- P. 9-25: Moreover, restricting new development within the floodplain and prohibiting development in the FEMA-designated floodway can minimize additional flood hazards and the need for further mitigation measures.
- P. 9-13 - Replace 2nd full paragraph under NOISE (which is cut off) with: Land uses have different levels of compatibility relative to noise, and the State of California mandates that general plans include noise level compatibility standards for the development of land as a function of a range of noise exposure values (see Table 9.2). Table 9-3 identifies interior noise standards.
- Page 9-14, Table 9-2
    - Frequency, Hz: The number of complete pressure fluctuations per second above and below atmospheric pressure expressed in Hertz (Hz). Normal human hearing is between 20 Hz and 20,000 Hz.

- P. 9-16: "Wine train has than 2 trips/day to St. Helena (closer to 4) – change sentence to "The Wine Train travels ~~has an average of two trips~~ to St. Helena ~~per~~ each day and emits a loud horn at crossings, along with the low frequency rumble of the diesel engines."
- P. 9-27: "Mitigating traffic noise can be difficult, particularly the noise generated along State Route 29 throughout the day and night. However, the City can adopt noise standards to address more infrequent noise sources, such as those related to off-hours delivery~~,~~ and commercial loading and unloading~~, and leaf blowing devices.~~"
- PS1.I. Update the reference to the BAAQMD's 2000 CAP to the 2017 CAP.
- PS2.H. Amend the City's noise ordinance to regulate intrusive noise sources, such as the use of machinery and equipment, ~~leaf blowers, and other~~ landscaping and property maintenance devices, animals, ~~vehicles, and motorcycles,~~ and idling buses or trucks in or near uses sensitive to noise.
- PS5.1 Minimize the risk to people, property and the environment caused by flooding hazards. Site new development to minimize potential damage from a 100-year flood. Continue to require that any new development is constructed FEMA standards. Prohibit the siting of uses within Flood Hazard Areas inconsistent with FEMA standards that could result in health and safety hazards, including those due to the release of chemicals or other substances as a result of inundation or erosion. Ensure that any new flood

protection projects comply with federal and State ~~Department of Water Resources (DWR)~~ standards.

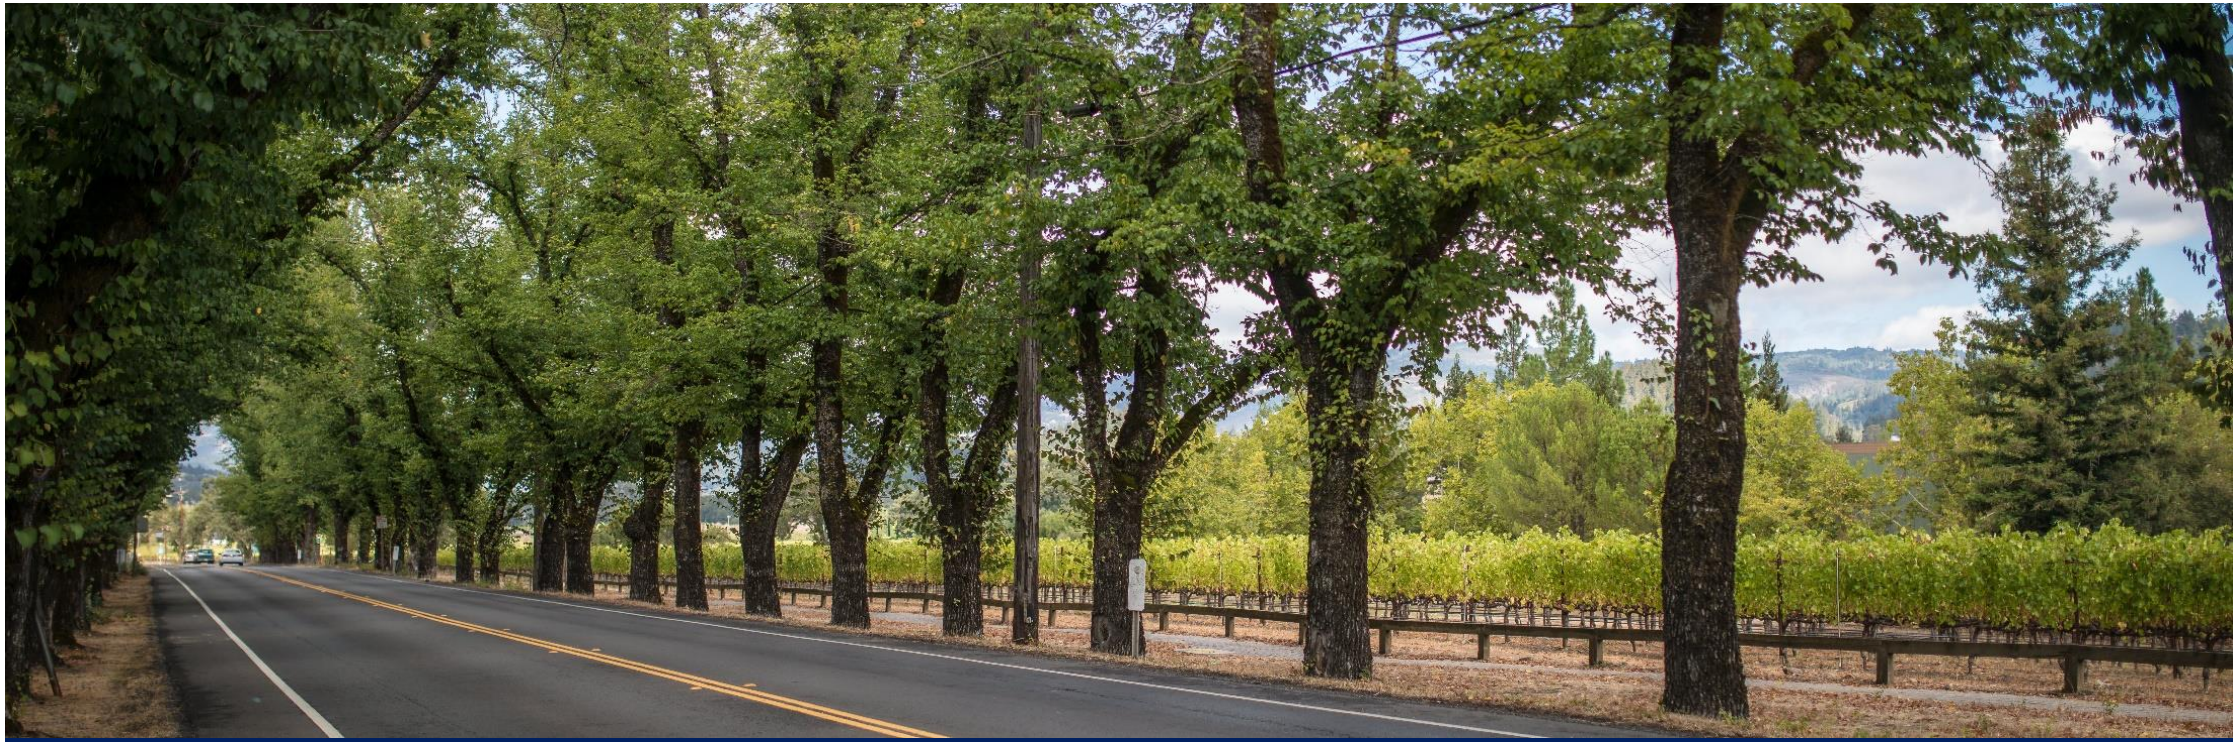
- PS5.A Coordinate with the Napa County Flood Control District to ensure that stream channels are routinely cleared of vegetation and debris which could impede stormwater flows, while protecting riparian habitat.
- PS5.E Prohibit the introduction of urban development in FEMA-designated Floodways.
- PS6.1 Ensure that City emergency procedures are adequate in the event of potential natural or man-made disasters and that applicable operations and maintenance manuals are followed.

Chapter 10: Climate Change

- CC1.B If feasible maintain and enhance existing express bus, local bus, and para-transit services. Provide shuttle service between the three upvalley towns. Support the establishment of a northbound express bus during peak commute hours. Ensure that these services provide opportunities to connect with existing and proposed countywide service improvements, ~~such as a centralized~~ including the transit center in Downtown Napa.
- CC3.A Establish programs and create incentives to achieve a 75 to 90 percent citywide construction and demolition debris waste diversion level in support of Statewide goals.
- CC3.B Establish programs and create incentives to achieve a 75 percent organic (food and green) waste diversion level in support of Statewide goals.
- CC4.4 Support efforts to expand and improve the City's managed urban forest ~~program~~ in order to reduce greenhouse gas emissions and improve overall air quality.

Chapter 12: Parks and Recreation

- Page 12-4, For St. Helena, a comprehensive parks and recreation system includes parks of various sizes, community gardens, community orchards, community and recreational facilities, accessible open spaces, a variety of natural features, and connectors such as paths, trails, and green streets.
- Page 12-8, Evidence indicates that people tend to exercise more when they have to access to parks and open spaces, thereby increasing health and reducing the risk of many physical, life-threatening conditions.



City of St. Helena General Plan Update 2040

City Council Meeting

May 14, 2019

Tonight's Presentation

1. Overview of General Plan Update 2040 Process and Content
2. Overview of EIR Process
3. EIR Findings
   - Summary of impacts
   - Alternatives analyzed
4. Public Comments on GP 2040 and EIR

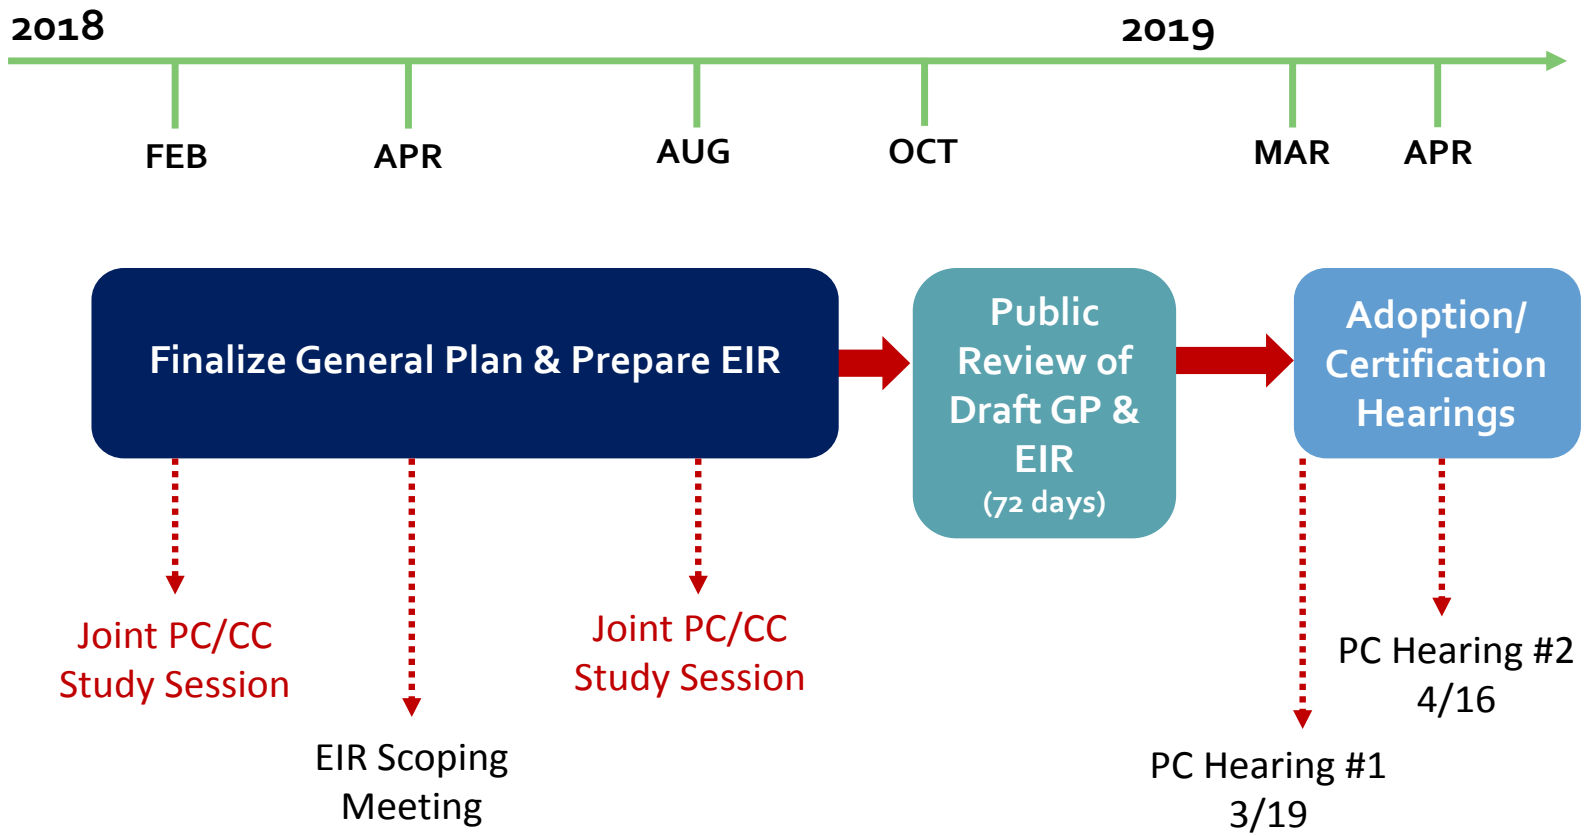
DYETT & BHATIA
Urban and Regional Planners

1. Overview of GP 2040 Process and Content

Overview of GP 2040 Process

2007 → 2016

- City initiated General Plan Update in 2007
- Public Review Draft GP & EIR published in 2010
- Council review and revision of plan 2010-2016

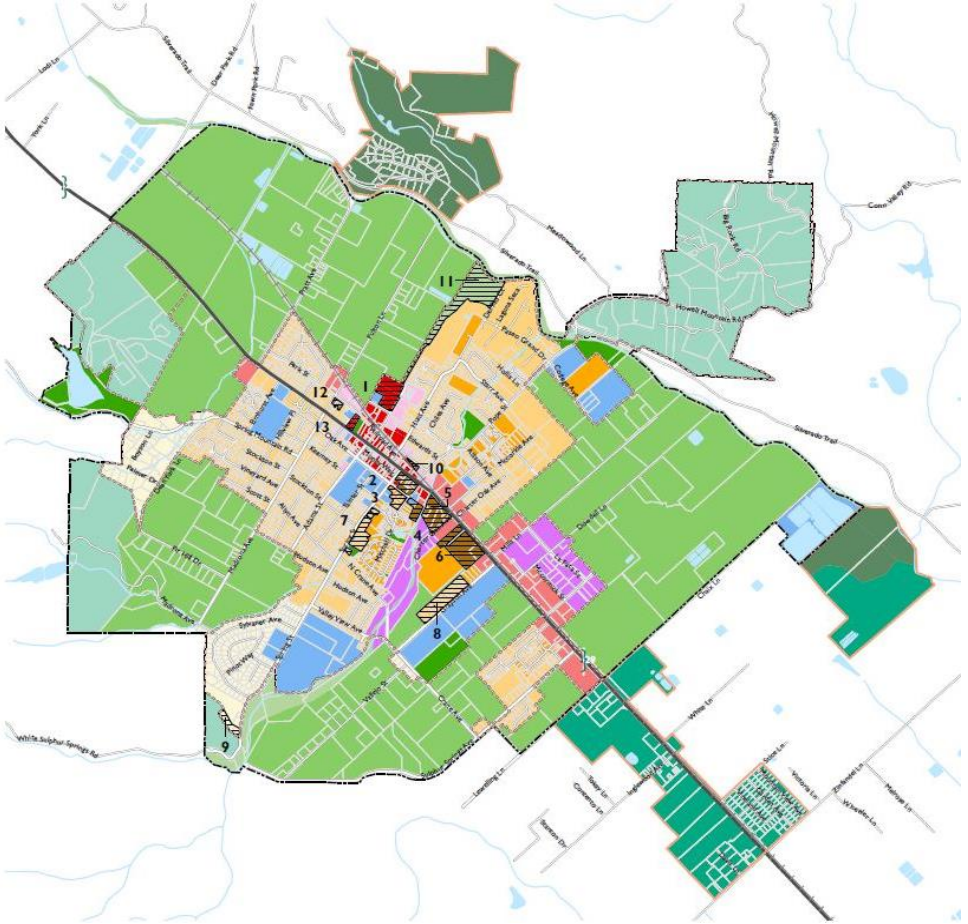


DYETT & BHATIA
Urban and Regional Planners

Overview of GP 2040 Content

The GP 2040 includes:

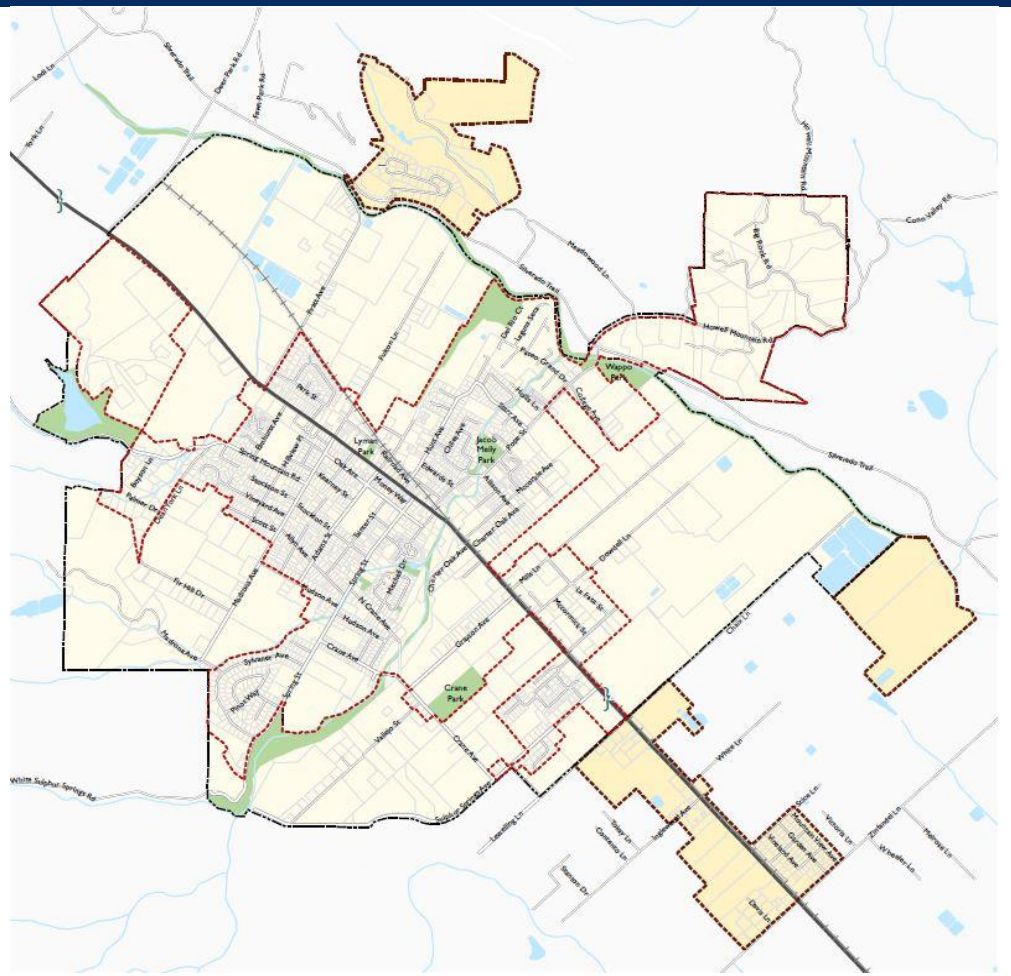
1. New Mixed Use designation
2. Capital improvements for non-motorized transportation
3. Updates to address new state requirements



DYETT & BHATIA
Urban and Regional Planners

Overview of GP 2040 Content

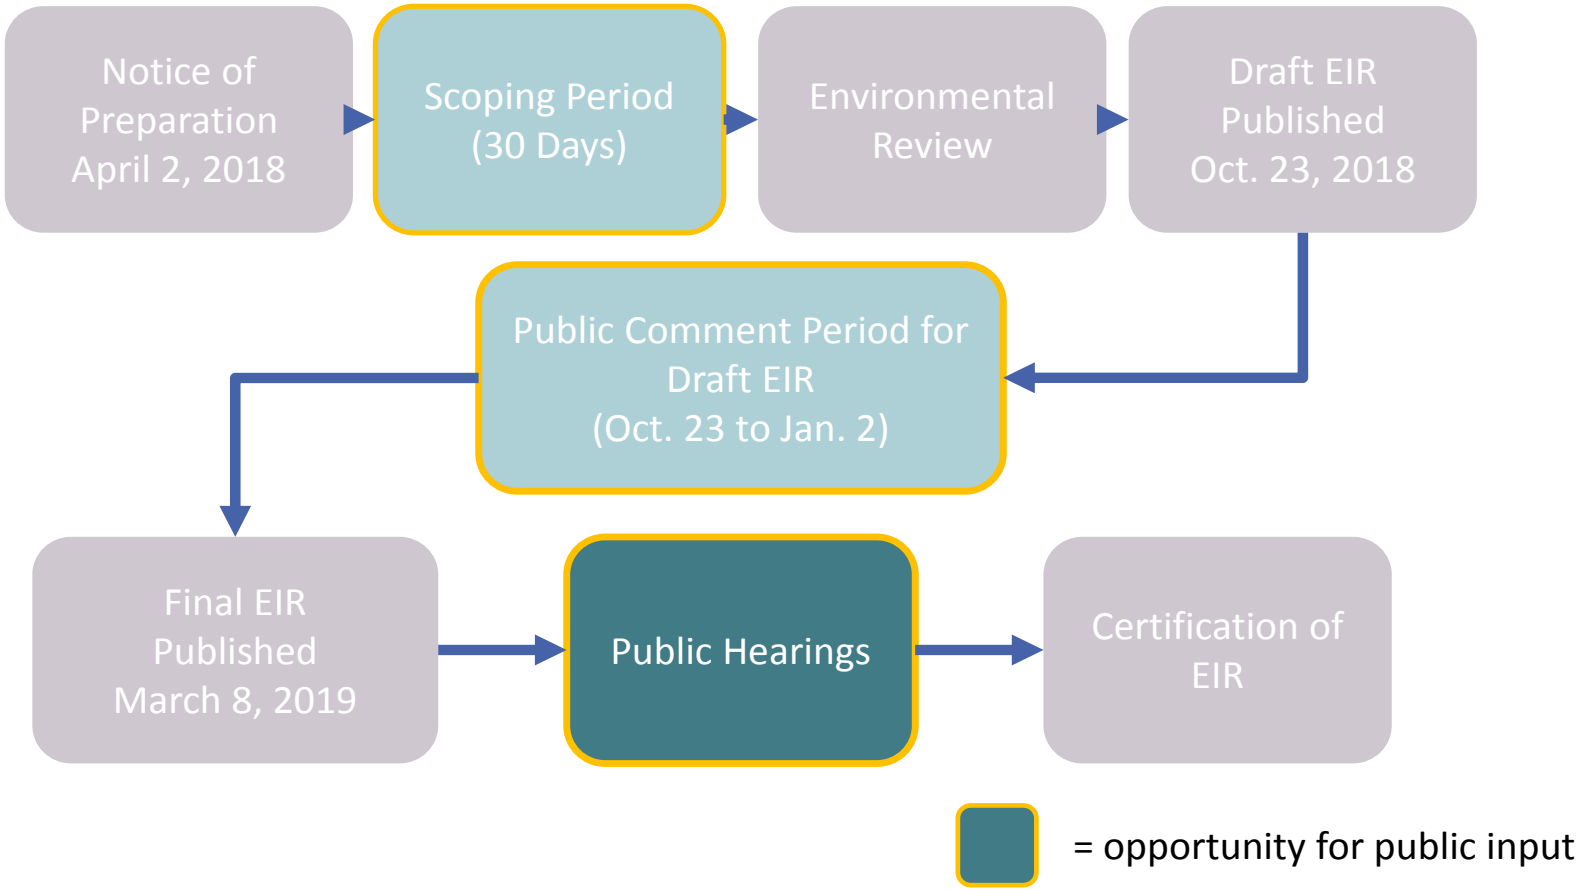
- The GP 2040 Planning Area includes three Study Areas located just beyond the City of St. Helena boundary and Sphere of Influence
- Study Areas are included for the purpose of environmental analysis



DYETT & BHATIA
Urban and Regional Planners

3. Overview of EIR Process

Overview of EIR Process



Overview of EIR Process

CEQA Required Environmental Review Topics

- Aesthetics
- Agriculture
- Air Quality
- Biological Resources
- Cultural, Tribal, and Historic Resources
- Energy, Climate Change, and Greenhouse Gas Emissions
- Forestry
- Geology and Seismicity
- Hazards and Hazardous Materials
- Hydrology, Drainage, and Water Quality
- Land Use, Population, and Housing
- Mineral Resources
- Noise and Vibration
- Public Services and Recreation
- Traffic and Transportation
- Utilities and Service Systems

CEQA-Required Conclusions

- Significant environmental effects and mitigation measures to reduce or avoid them
- Significant irreversible environmental changes
- Growth-inducing impacts
- Cumulative impacts
- Alternatives

DYETT & BHATIA
Urban and Regional Planners

4. EIR Findings

EIR Findings

Summary of Findings

- The majority of impacts under the GP 2040 would be less than significant
- **Three** significant impacts would be reduced to **less than significant with mitigation**
  - Air Quality
  - Hydrology
  - Noise
- **Six** impacts would be **significant and unavoidable**
  - Agriculture
  - Air Quality
  - Energy, Greenhouse Gases, and Climate Change
  - Traffic and Transportation

DYETT & BHATIA
Urban and Regional Planners

EIR Findings

Alternatives

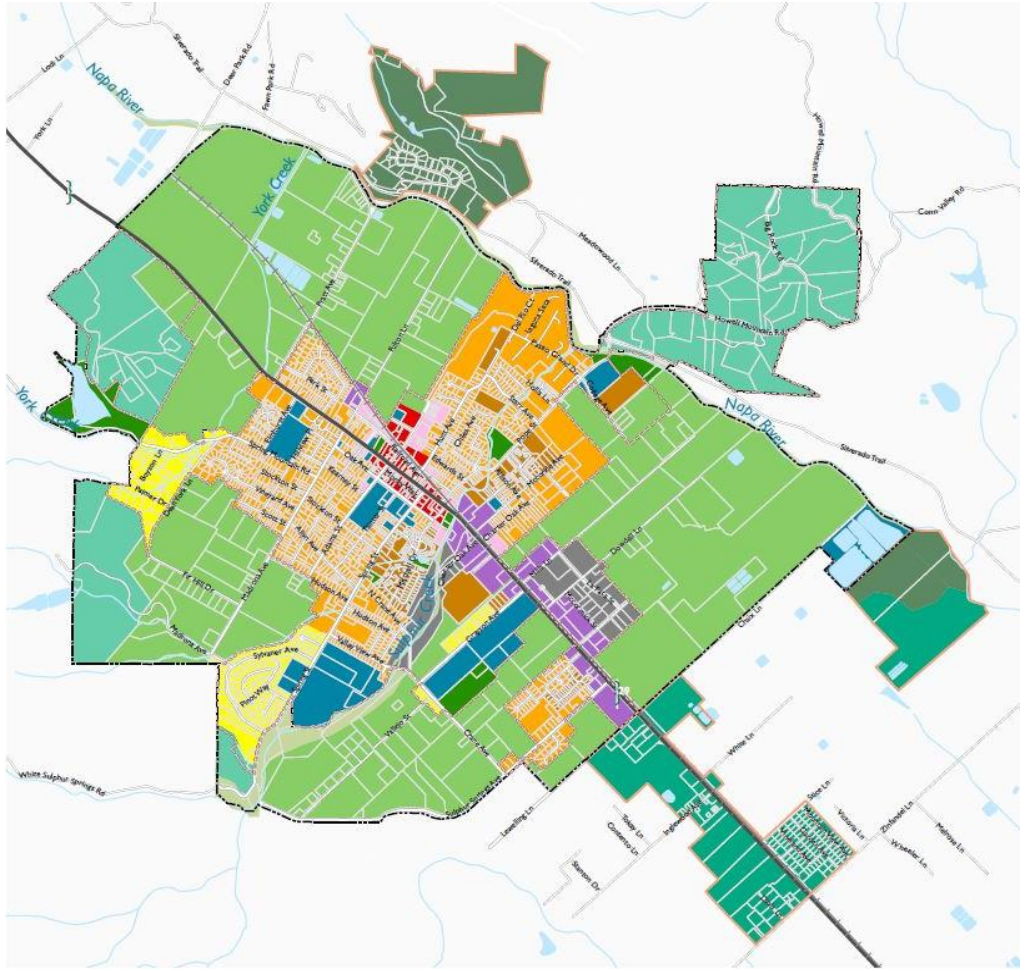
CEQA requires that an EIR analyze a range of alternatives to the proposed project that "include those that could feasibly accomplish most of the basic purposes of the project and could avoid or substantially lessen one or more of the significant impacts" (CEQA Guidelines Section 15126.6 (d)(2)). This EIR analyzes:

- The **No Project Alternative**, which would assume the continuation of the current General Plan, including the policy framework and all land use designations.
- A **Transportation Network Enhancement (TNE) Alternative**, which modifies the GPU transportation network to extend Oak Avenue south from Mitchell Lane to Grayson Avenue.

EIR Findings

No Project Alternative

- The No Project Alternative lacks protective GP 2040 policies and would increase significant impacts.
- Less than significant impacts with mitigation on air quality and noise
- Significant and unavoidable impacts on agricultural resources, greenhouse gases and climate change, and transportation
- Reduced impacts on hydrology and traffic due to reduced development and VMT
- New significant and unavoidable impacts on biological, tribal cultural, and paleontological resources due to lack of protective policies

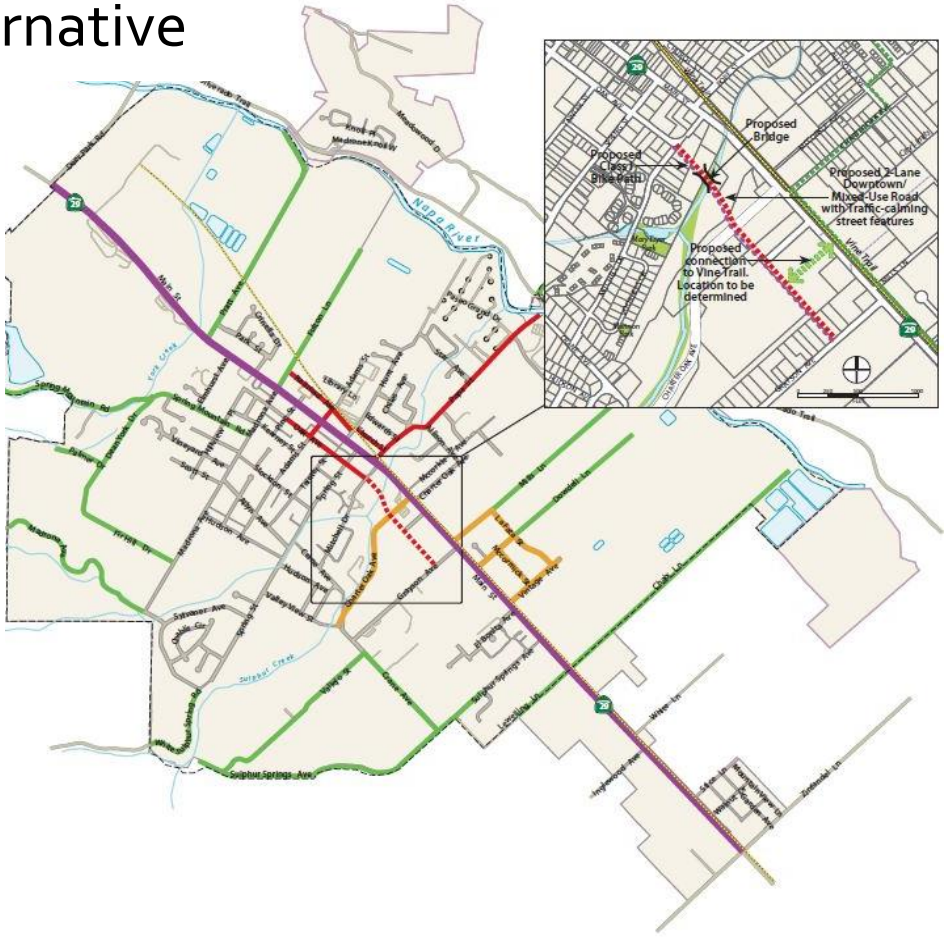


DYETT & BHATIA
Urban and Regional Planners

EIR Findings

Transportation Network Enhancement Alternative

- The TNE Alternative would have the same policy framework and land use as the GP 2040, but would include an extension of Oak Avenue.
- Less than significant impacts with mitigation on air quality, hydrology, and noise
- Significant and unavoidable impacts on agricultural resources, air quality, greenhouse gases and climate change, and transportation
- New less than significant impact with mitigation on hydrology due to new development in flood zones
- New significant and unavoidable impact on permanent ambient noise levels due to extension of Oak Avenue through agricultural land



DYETT & BHATIA
Urban and Regional Planners

EIR Findings

Transportation Network Enhancement Alternative

- Extension of Oak Avenue would:
  - Create a new Downtown/Mixed Use street with connection to the Vine Trail
  - Improve bicycle and pedestrian access to local schools and Downtown St. Helena
  - Relieve anticipated increases in vehicle congestion and queuing on SR-29
- The TNE Alternative would reduce multiple transportation impacts of GP 2040 :
  - Less VMT than the GP 2040 (which would increase VMT by 25% over existing conditions)
  - Eliminate significant impact at Main Street/Pope Street-Mitchell Drive intersection
  - Result in peak hour queuing conditions along Main Street south of Downtown area equivalent to existing conditions, and therefore a reduced impacts to upstream intersections. (GP 2040 would increase peak hour queuing conditions in this area)

DYETT & BHATIA
Urban and Regional Planners

5. Public Comments on GP 2040 and EIR

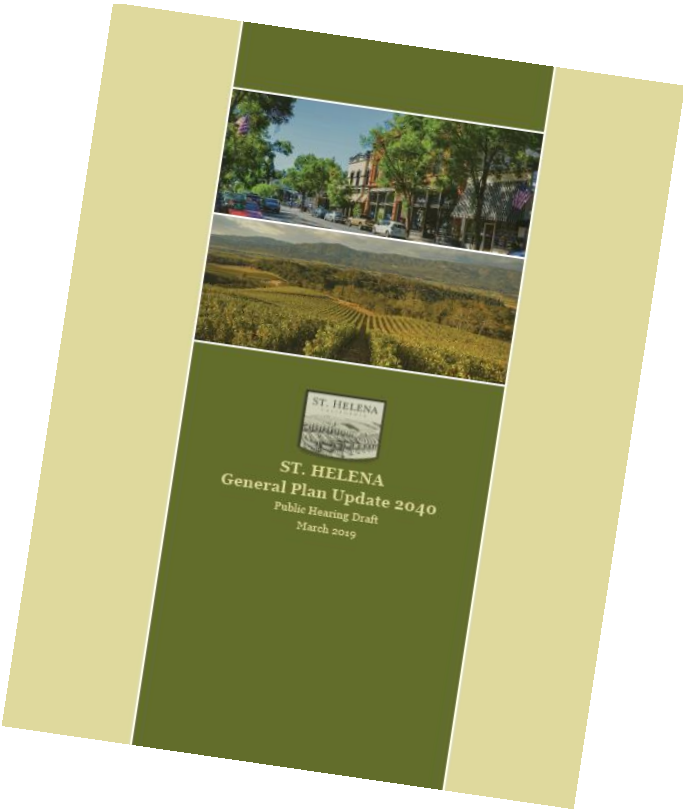
Public Comments on GP 2040 and EIR

- Over 350 individual comments on the GP 2040 and EIR were received. Generally, comments provided recommendations for minor edits to improve the clarity of information in the document, and did not recommend changes to the content or policy framework.
- Some of the public and agency comments on the GP 2040 and EIR relate to the legal requirements for a general plan or require further direction from the City Council. The FEIR includes a detailed response to these comments, which address:
  - Levee/Floodwall Failure
  - Farmland Mitigation
  - Land Use Element Action LU1.A
  - Noise Evaluation Criteria
  - Implementation of Pedestrian Improvements

DYETT & BHATIA
Urban and Regional Planners

Hearing Draft General Plan

- Hearing Draft General Plan circulated in March 2019 ahead of Planning Commission hearing
- Incorporated changes listed on the punch list to address public comments on the Draft Plan from October 2018
- Planning Commission reviewed and discussed over 2 hearings (March 19 and April 16)



DYETT & BHATIA
Urban and Regional Planners

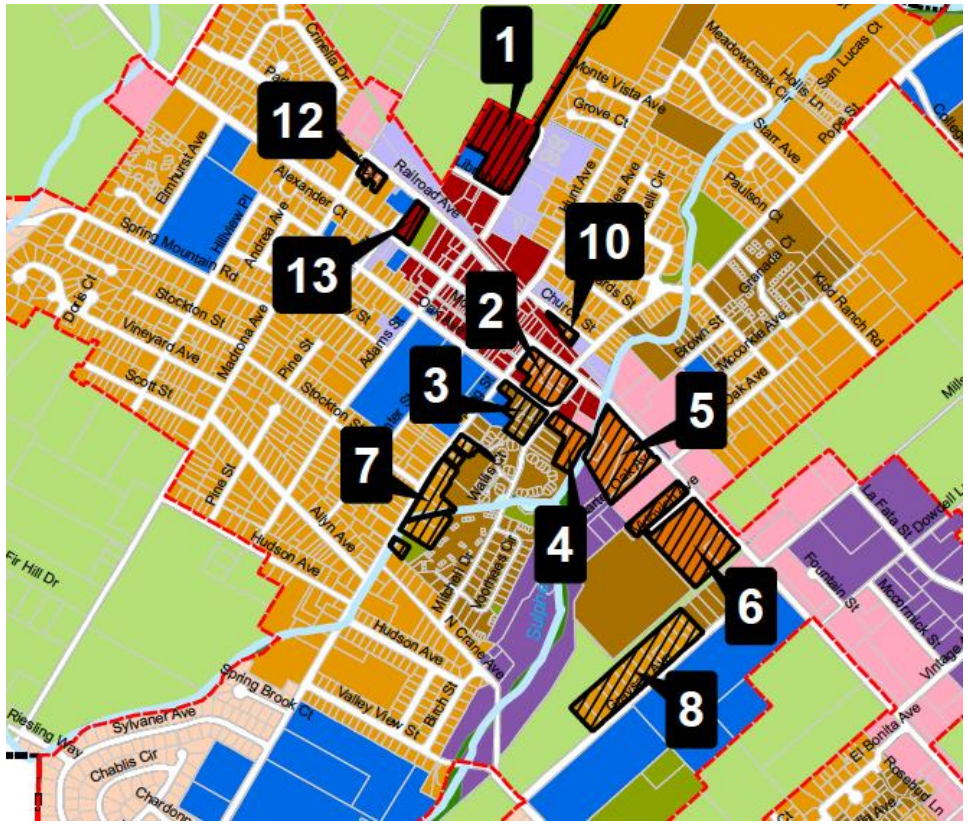
Planning Commission Review/Recommendations

- Modify language to General Plan Policy LU1.A to clarify intent and for consistency with new State housing law
- Restore noise impact evaluation criteria from 1993 General Plan (increase of 5dB or greater in ambient noise constitutes an impact)
- Reference the County-wide Pedestrian Plan
- Eliminate Change Area 10 (do *not* proceed with redesignation to Mixed Use or pursue a parking lot on that location)
- Certify the EIR on the basis of the Transportation Network Enhancement Alternative and incorporate the Oak Avenue extension into the Final General Plan

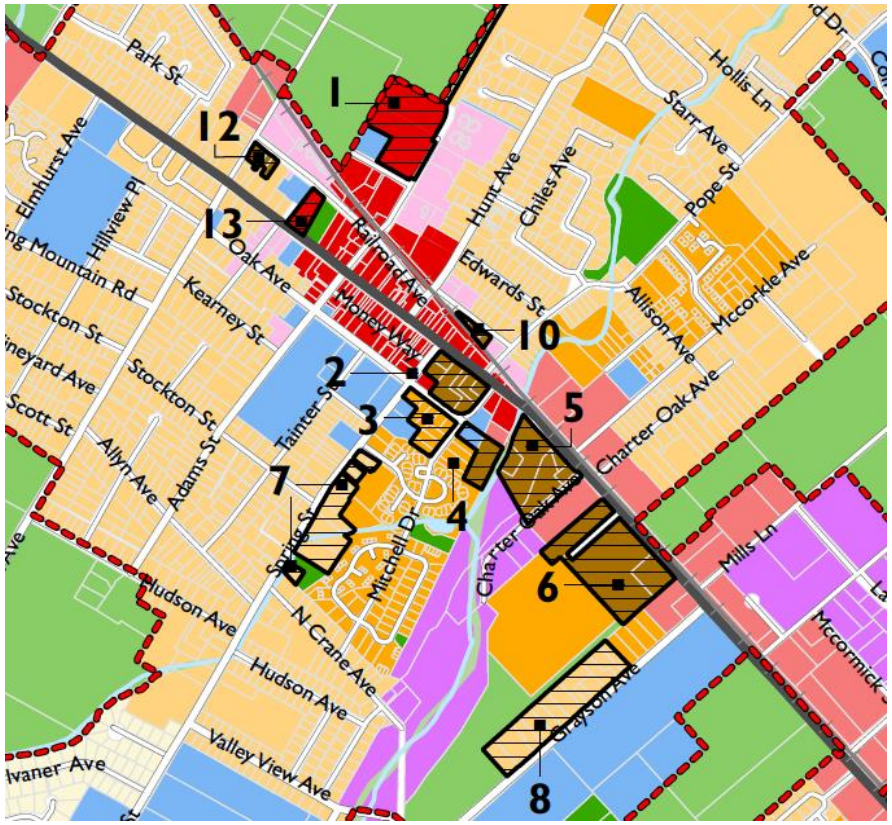
DYETT & BHATIA
Urban and Regional Planners

PG&E Site (Change Area #4) - Land Use Designation

2016 Draft General Plan



2018 Draft General Plan



DYETT & BHATIA
Urban and Regional Planners

Questions?

EIR Findings

Significant Impacts Reduced to Less than Significant with Mitigation (LTSM)

- Air Quality
  - **3.3-4:** Expose sensitive receptors to substantial pollutant concentrations

    Mitigation: require certain proposed projects to meet CARB setback requirements and/or prepare a Health Risk Assessment to identify and mitigate potential impacts from diesel and stationary sources of particulate matter
- Hydrology and Water Quality
  - **3.9-6:** Place housing within a 100-year flood hazard area

    Mitigation: require proposed projects within FEMA-designated floodways to obtain and submit to the city a Letter of Map Revision (LOMR) from FEMA
- Noise
  - **3.11-2:** Expose people to or generate excessive groundborne vibration or groundborne noise levels

    Mitigation: where vibration impacts may cause structural damage or distinctly perceptible human response, require a vibration study, prepared by a qualified vibration consultant

DYETT & BHATIA
Urban and Regional Planners

EIR Findings

Significant and Unavoidable (SU) Impacts

- Agriculture
  - **3.2-1:** Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (SU)
    Mitigation: no mitigation feasible
- Air Quality
  - **3.2-2:** Violate air quality standards, contribute to air quality violation, or result in cumulatively considerable net increase in criteria pollutants (SU)
    Mitigation: require proposed projects to implement BMPs to reduce fugitive dust emissions and use low-VOC content architectural coatings; require potential point sources to ensure compliance with BAAQMD regulations
  - **3.2-3:** Result in cumulatively considerable net increase in criteria pollutants for which the General Plan region is nonattainment (SU)
    Mitigation: see mitigation for 3.2-2

DYETT & BHATIA
Urban and Regional Planners

EIR Findings

Significant and Unavoidable (SU) Impacts

- Energy, Greenhouse Gases, and Climate Change
  - **3.6-1:** Generate GHG emissions that may have a significant impact on the environment
    Mitigation: City shall adopt and implement a Climate Action Plan to address GHG reduction goals in line with statewide targets
  - **3.6-2:** Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions
    Mitigation: see mitigation for 3.6-1
- Traffic and Transportation
  - **3.12-1:** Conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness (vehicular traffic)
    Mitigation: require actions such as installation of traffic signals, intersection re-striping, roadway realignment, and construction of proposed improvements to address impacts at 7 intersections in the planning area

DYETT & BHATIA
Urban and Regional Planners

Public Comments on GP 2040 and EIR

Levee/Floodwall Failure

- One commenter requested a map of areas at risk in the event of levee/floodwall failure be included in the GP 2040 and provided several comments regarding associated risks.
- The requirement for inclusion of such a map does not apply to St. Helena, and maps included in the GP 2040 fulfill the Safety Element requirements.
- A map showing an area potentially affected by levee or floodwall failure is included in the FEIR for informational purposes. This area depicted is substantially similar to the FEMA FIRM area shown in GP 2040 Figure 9.1.

DYETT & BHATIA
Urban and Regional Planners

Public Comments on GP 2040 and EIR

Farmland Mitigation

- The Division of Land Resource Protection of the California Department of Conservation requested additional mitigation to address the significant impact of loss of prime farmland in St. Helena due to development.
- A new action (LU5.I) regarding the establishment of a farmland mitigation program has been incorporated to the GP 2040 Land Use Element to offset impacts on prime farmland.
- Numerous policies in GP 2040 address the potential loss of prime farmland. LU5.I has been added to fulfill the CEQA requirement that lead agencies consider all feasible measures that address significant impacts.
- Even with implementation of LU5.I and relevant GP 2040 policies, the impact would remain significant and unavoidable as agricultural land is a finite and irreplaceable resource.

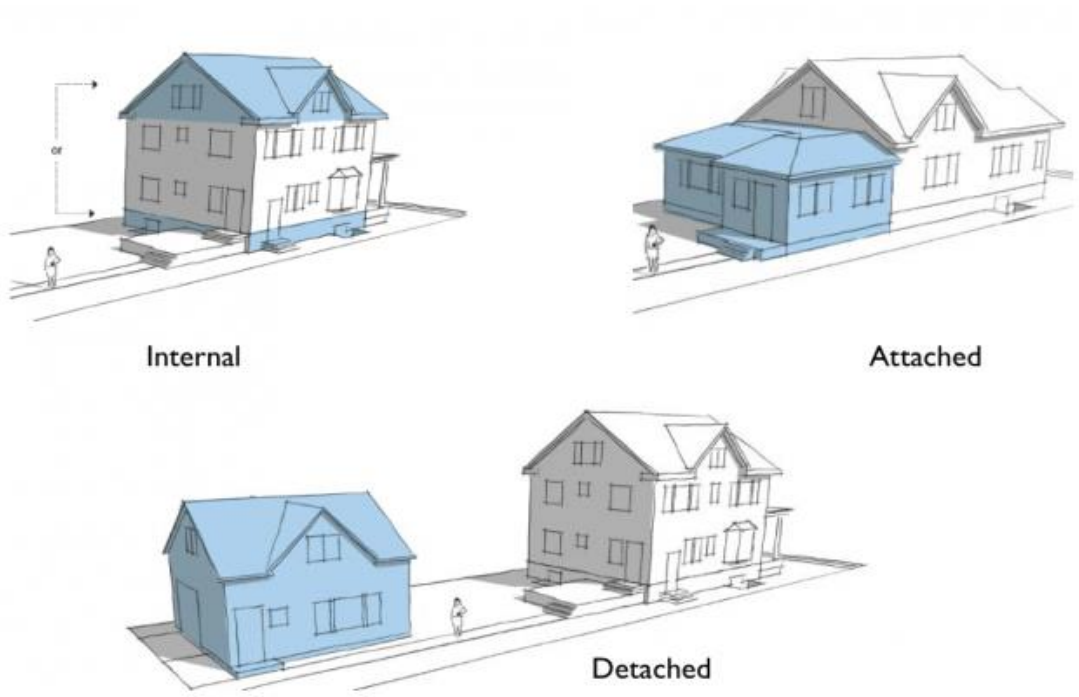
DYETT & BHATIA
Urban and Regional Planners

Public Comments on GP 2040 and EIR

Land Use Element Action LU1.A

- A commenter highlighted potential conflict with recent State law regarding Accessory Dwelling Units (ADUs).

> LU1.A Continue to allow the construction of second units – also known as accessory dwelling units – ***and consider allowing the division of single-family homes into two or more units under appropriate circumstances***, in order to increase residential density and housing availability without requiring an extension of the Urban Limit Line.



DYETT & BHATIA
Urban and Regional Planners

Public Comments on GP 2040 and EIR

Noise Evaluation Criteria

- 1993 General Plan contained this Significance Criteria:

  "Typically, a change in noise levels of less than 3 dBA is not discernable to the general population. Increases in average noise levels from 3 to 5 dBA are clearly discernable to most people. An increase in the noise environment of 5 dBA or greater is considered to be subjectively significant and to constitute noise impact by the noise source in question."

- Typical threshold that was used in the EIR analysis
- EIR found buildout of the Proposed General Plan is not anticipated to increase noise levels greater than 3dBA CNEL over existing conditions

DYETT & BHATIA
Urban and Regional Planners

Public Comments on GP 2040 and EIR

Implementation of Pedestrian Improvements

- The Napa Valley Transportation Authority (NVTA) requested inclusion of an action to implement the improvements identified for St. Helena in the 2016 Napa Countywide Pedestrian Plan.
- The following action could be added to the GP 2040:
  Coordinate with NVTA, Napa County, and property and business owners and seek funding to implement the improvements identified for St. Helena in the 2016 Napa Countywide Pedestrian Plan.

DYETT & BHATIA
Urban and Regional Planners

My 14, 2019

Mayor Ellsworth and Members of the City Council of St. Helena:

It has been my privilege and honor to have served both on the City Council that adopted the 1993 General Plan and the Planning Commission that reviewed the 2040 General Plan Update now before you. As you know, the 2040 Update has had a long and somewhat problematic history, with the result that in recent years the general sentiment has been that it is time to adopt the plan, with whatever flaws it might have, and move on to address those flaws through the general plan amendment process. Though initially I found it difficult to embrace the notion that the Planning Commission should ignore flaws in favor of expediency, over the past year I have seen the wisdom of that approach. Accordingly, I have repeatedly informed the public and my fellow Planning Commissioners that we should do our best to follow that direction – which we have – while committing ourselves to address our concerns at a later date. Accordingly, the 2040 Update before you now is the plan we recommend for your adoption, with few recommendations for changes of any kind. At the same time, it is our hope and expectation that you will see fit to schedule a joint meeting with the Planning Commission later this year to discuss priorities and recommendations for amendments to correct any deficiencies and improve the policy guidance provided by this essential document.

I can only thank the City Council and the City of St. Helena it represents for the opportunity to be of service.

Lester Hardy
Chair, St. Helena Planning Commission

February 2, 2019

Hi Noah:

As per our meeting last week, here are my EIR comments, in three buckets.

1. General accuracy, consistency, and small enhancements of the documents, and

2. Properly reflecting EIS Objective 10 on page ES-3 regarding Open Space: *Provide a high-quality network of parks, open spaces, and trails that enhances quality of life and connectivity in the community,*

I've also included comments on:

3. Additional GP changes reflecting EIS Objective 10, although I know those may not be visited at this moment.

Thanks for your work, the staff's work, and the consultants' work on all of this!

David Knudsen

1. Accuracy, consistency, and enhancements

- EIR (and GP), various locations:

  The creek which seasonally flows out of Sulphur Springs Canyon is referred to either as *Sulphur Springs Creek* and *Sulphur Creek* in the text and on maps in the EIR and General Plan documents.

  Both the '75 plan and the '93 plan call it Sulphur Springs Creek. However, USGS topo maps over the years, generally the gold standard for U.S. place names, call the creek Sulphur Creek. Also citizens throughout town call it Sulphur Creek. Investigate with the St. Helena Historical Society and pick one?

- Page 3.4-23, *St. Helena Municipal Code* section

  A Tree Committee is mentioned, but unfortunately it was disbanded several years ago. Should the EIR reference replacement policies and processes?

- Pages 3.7-13 and 14, *Landslide* section

  The landslide at Silverado Trail at Pratt Avenue could be mentioned both in the narrative and added to the map, particularly as the temporary fix and closure of the Pratt Avenue Bridge has reduced direct and emergency access to and from the city and has also made Silverado Trail much narrower, more dangerous and difficult to use both for drivers and for bicyclists.

- Page 3.8, *Hazards and Hazardous Materials* section

  Two items: first, there is a major gas transmission line running down Oak Street in the city. Given the San Bruno pipeline explosion, it could be discussed and included in the map of hazards.

  Secondly, a discussion or map of electrical transmission lines throughout the city, given their potential as fire-starting risks in extreme wind or weather situations, could be of use. For example, to mitigate these types of risks, PG&E has been cutting back vegetation from transmission line routes in areas near St. Helena.

- Page 3.9-3, *Flood Zones* map

  500-Year Flood Zone is a .2% annual chance (not 2%).

- Page 3.12.4. Figure 3.12.1, *Educational Institutions and Public Facilities* map

  Does not include Holy Cross Catholic Cemetery adjacent to the public cemetery

- Page 3.12.7, Table 3.12.3, *Existing Parks* table

  There are 8, not 6, lighted bocce courts.

  For school resources, include the St. Helena Aquatic Complex and 5 reduced-space tennis courts at the high school, and playgrounds and paved ball courts at the elementary, primary, and middle schools, and a soccer/football field at the middle school.

- Page 3.13-23, *Local Plans* section

  Include Napa Countywide Pedestrian Plan, August 2016, commissioned by NVTA, which was approved by the City Council. It has a specific section on St. Helena.

2. EIR Open Space comments/suggestions:

Comments are intended to: greater embed 'open space' ideas into the EIR, as per the EIR Objective 10; to ensure open space is not simply limited to stream corridors; to emphasize 'accessibility' in terms of citizen use to open space, and to differentiate between walking, multi-modal and bicycle trails—each of which could have a role in circulation, parks and recreation, and quality of life.

These are not comprehensive, but give a sense of what small adds could do to enhance the documents. In addition, a global replacement of 'parks and recreation' with 'parks, open space, and recreation' might also be a useful addition.

2a. EIR non-Element edits:

- Page 2-1, final sentence, suggested:

  The Proposed Plan is intended to make significant revisions to the adopted 1993 General Plan, with an emphasis on new policies related to land use, economic sustainability, water conservation, circulation, preservation of agricultural land **and open space**, *climate change, and multi-modal transportation options.*

- Page 2-8, to *Open Space and Conservation* first dash, suggested:

  Preserving, enhancing, and restoring natural resources **including open spaces and view corridors**

Report to the City Council
Council Meeting of May 14, 2019

Agenda Section: **New Business**

Subject: Consideration and discussion of a City of St. Helena will-serve policy for water services and possible adoption of resolution suspending issuance of will-serve letters pending development of new will-serve and water neutrality policy

CEQA Determination: **Not a CEQA project**

Prepared By: Erica Ahmann Smithies, Public Works Director and City Engineer

Reviewed By: Mark T. Prestwich, City Manager

Approved By: Mark T. Prestwich, City Manager

BACKGROUND

City Council has recently discussed the practice of "will-serve" letters for providing ongoing water service outside the City limits and creating a specific policy for the Public Works Director and City Council to oversee.

DISCUSSION

The current and past practice of the Public Works Director issuing water will-serve letters outside the City limits has been driven by County land owners needing to provide a will-serve letter to meet the County of Napa's Planning, Building and Environmental Services Department's application process. County land owners proposing to drill a well, remodel a residence, propose a new use permit, and/or redevelop commercial properties that are currently in the City of St. Helena water service area are required to supply a will-serve letter (approval or denial) in order to move their County application forward and ultimately receive a permit.

Current practice under the City's Municipal Code allows the City Council to review a will-serve letter when a stakeholder (typically the property owner or project proponent) appeals a determination by the Public Works Director about a will-serve letter to the City Council (St. Helena Municipal Code (SHMC) section 13.04.180 (A).) This practice does not allow the City Council to review such requests earlier in the process.

Public Works staff have not been able to locate a specific written "will-serve" policy other than past practice through existing will-serve letter history and/or what is currently outlined in the City of St. Helena Municipal Code for providing services. The current practice is that applicants already served by City water are required to adhere to the City's Water Neutral Policy (Attachment 1) prior to a will-serve letter being issued. In addition to the will-serve letter, the applicant may be required to enter into a water use agreement if their project is considered "new development" as defined in SHMC section 13.12. If the applicant does not have an existing water service (SHMC section 13.04.050 (H)), they will receive a denial letter outright unless they are specifically looking for an Outside Fire Services Agreement, which is reviewed by Public Works and the City Attorney before being recommended to City Council for approval.

In order to assist the Council in creating a policy and improve transparency, staff researched what other agencies' policies and found that the City of American Canyon has a straight forward process with a similar water neutral policy called *Zero Water Footprint* (Attachment 2). The American Canyon website provides guidelines, an application (Attachment 3), and steps to meet the City's requirements prior to issuance: https://www.cityofamericancanyon.org/city-departments/public-works/engineering/development-engineering/water-supply-will-serve. In addition to American Canyon, the City of Modesto has a similar will-serve policy and application provided in Attachment 4. The information provided in both agency policies clearly outline the steps required to receive City approval. Staff is also recommending the integration of water use agreement requirements with the policy and with Council direction and one or two Council members to assist, staff is prepared to draft a similar policy to bring back for City Council discussion and approval in June. The goal would be to have a clear will-serve policy that would serve both City and County residents.

Council may also want to consider and provide direction for how the City should respond to “repeat” or “renewed” requests or applications for will-serve letters where the staff, or the City Council on appeal, has already provided a determination. Many municipal codes do not allow such repeat or renewed applications or requests for some specified period of time, for example one year.

Furthermore, the City Council may desire to consider whether to provide staff direction via adoption of a Resolution to defer any final decision on any new or renewed request for a will-serve letter pending the City Council's adoption of a written will-serve policy and revisions to the City's water neutrality requirements.

Staff is recommending the City Council provide direction to staff and consider appointing a Council liaison(s) to assist with development of a policy, should the Council desire to develop a written policy.

FISCAL IMPACT
None at this time

RECOMMENDED ACTION

Discussion and provide direction to staff; consider appointing a Council liaison(s) to assist with development of a policy.

St. Helena Water Neutral Policy for Development

City Codes Relating to Water Use

The 1993 General Plan provides at policy 9.2.1 that "new development" shall be contingent upon the ability of the City to provide water without exceeding safe yield.

Pursuant to the City Council meeting of March 22, 2011, the City Council adopted the definition of “Safe Yield” as proposed by the Safe Water Yield Committee as follows:

“The safe annual yield of the St. Helena water supply system is that quantify of water which can be reliably delivered on an annual basis through most rainfall years, including a Dry year (rainfall at 22” to 25.9”) without undue hardship on water customers through water shortage restrictions. It is recognized that the safe annual yield, as so defined, could place significant hardship on water customers in a Critically Dry Year (rainfall at 21.9” or less) or in periods of two or more consecutive Dry Years.”

The City’s Safe Water Yield Committee recently reported that the St. Helena potable water supply system, under current conditions, **is not currently in balance** under the definition of safe yield as adopted by the City Council.

Per the City Council meeting of March 22, 2011, item 17, the CC adopted the definition of Safe Yield as proposed by the Safe Yield Committee, and it is now City policy. This policy will therefore be applied to new development.

“New development” means any of the following construction projects that have not received a certificate of occupancy from the city or county building department prior to September 13, 1994, or that was issued a building permit and did not construct a foundation prior to September 13, 1994:

1. Any freestanding building that contains water-using fixtures;
2. Any floor area additions to existing nonresidential structures;
3. Any residential additions or remodeling that increases the number of independent living units.

Water Demand Analysis

The applicant must be water-neutral (from the City-delivered water system) through any combination of on-site water conservation measures and/or off-site retrofitting and/or well water. Water neutrality shall be demonstrated in a quantitative water analysis of the project.

The analysis must consist of the calculation of the baseline existing demand, the proposed water demand, a comparison of the two and the proposed retrofits to achieve a zero water use increase from the proposed development. Flows are calculated in gallons per day (gpd) with two (2) occupants per bedroom. Offices, dens, tv rooms, etc. are considered bedrooms with or without a closet.

If onsite retrofits cannot achieve net zero increase, the developer shall identify offsite retrofits. The City does not maintain a list of offsite retrofit needs. Per City Municipal Code 13.12.050, the developer shall be responsible for identifying residential or nonresidential properties eligible for retrofitting and verify to the department of public works that the required number of retrofits have been completed prior to the issuance of a certificate of occupancy.

Existing

Use of the flows from the Napa County Alternative Sewer Treatment System Standards to calculate existing water use is acceptable to the City Public Works Department. The commercial standards are attached; for residential projects, use of 150 gpd/bedroom is accepted. For onsite irrigation with City water, calculation of actual usage is obtained by ascertaining the number of drippers/sprinklers and the time watered and using 75% of the total value, assuming no irrigation in the winter months.

Proposed

Proposed water conservation efforts shall be compared to those existing flows quantitatively. Those standards can be found at websites for the LEED standards, Energy Star standards and major cities like San Francisco's water conservation guides. Water conservation devices proposed in the water analysis will be required by conditions of approval, must be included on the building plans and inspected/verified at certificate of occupancy.

Acceptable theoretical demand for residential flows/uses:

Toilet	3 flushes/day/occupant
Faucet	0.25 min/3 times/day/occupant
Shower	8 min/shower/day/occupant
Kitchen faucet	4 min/day/occupant
Clothes washer	0.37 load/day/occupant
Dishwasher	0.1 load/day/occupant

Typical calculation:

Fixture	Flow Rate gal/min or gal/flush		Flow Duration (min., flush, load, etc.)		Daily Uses per Occupant		Number of Occupants		Gallons per Day
Showerheads	2	x	8	x	1	x	10	=	160
Sink Faucets	1.5	x	0.25	x	3	x	10	=	11
Kitchen Faucet	1.5	x	4	x	1	x	10	=	60
Toilet	1.3	x	1	x	3	x	10	=	39
Clothes Washer	19.7	x	1	x	0.37	x	10	=	73
Dish Washer	6.3	x	1	x	0.1	x	10	=	6
									349

Great strides have been achieved by applicants through the use of low flow toilets, waterless urinals, sensor driven faucets, smart yard sensors, low flow dishwashers and washing machines. Retrofitting off-site is acceptable, though the City does not maintain a list of facilities.

Retrofit fees are not being accepted by the Public Works Director in lieu of actual retrofit applications.

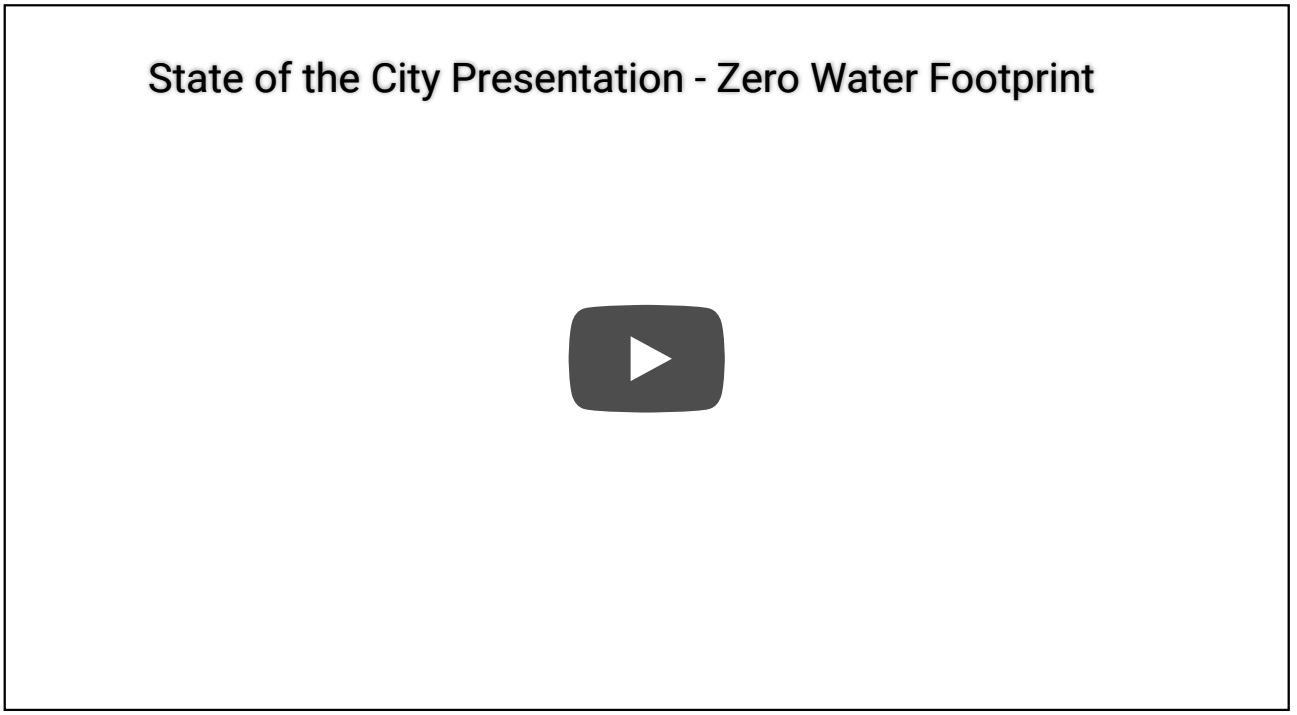
Zero Water Footprint

INTRODUCTION

Water is a finite resource. The City of American Canyon is committed to conserving water as we believe it is our duty to use this precious resource responsibly so that it is here for us to use far into the future.



ZERO WATER FOOTPRINT POLICY

As a part of ongoing water conservation efforts in the commercial sector, the City of American Canyon adopted a Zero Water Footprint policy. Also known as ZWF, the primary goal of this policy is that there is no loss in reliability or increase in water rates for existing water service customers due to new demand for water within the City's water service area.

In order to meet our ZWF standards, Developers must ensure that all new developments offset the amount of increased potable water that will be consumed by their project on a one-to-one basis. As part of the process, Developers are first required to minimize their demand for new potable water by using water efficient fixtures, consuming recycled water for non-potable uses when available, dual

plumbing buildings, installing water wise landscaping and irrigation, and other appropriate measures. Once the Developer, working with the City, has refined their plan to minimize potable water needs, the City works with them to evaluate the water footprint of the project and the proposed offset to determine if the project has achieved a ZWF.

There are several ways to meet our ZWF requirements. Depending on the size and scope of the project, a variety of methods may be used. During the development process, the City and Developer work in partnership with each other to identify the most appropriate ZWF methods for offsetting the increase in potable water consumption. These methods might include:

- Contributing to the City's existing conservation programs, including our popular Cash-for-Grass turf conversion program, toilet retrofits, and similar community-wide programs.
- Eliminating an existing public use of potable water by converting it to recycled water, such as city park and landscaping irrigation.
- Constructing or funding city capital projects that directly result in reduced demand for potable water or increased capacity to produce recycled water, including but not limited to replacing leaking main lines, replacing inefficient water meters, and treatment improvements at the water reclamation facility.
- Contributing toward the expansion of the City's reclaimed water system by extending the purple pipeline to locations not currently served by recycled water.
- Acquiring water supply from another source.

Methodology for Determining Zero Water Footprint and Developing Water Supply Reports

NAPA JUNCTION PHASE III

Napa Junction Phase III is a wonderful example of a successful ZWF project. The Canyon Ridge Apartments located on the site are dual-plumbed. This means that every residential unit flushes with reclaimed water. Landscaping throughout the site features drought-resistant plants and reclaimed water irrigation. The irrigation system contains rain sensors that automatically pause irrigation if the system detects rain.

The Developer also extended the reclaimed water pipe (also known as purple pipe) from Green Island Road to the Napa Junction Phase III project site, then through to Main Street Park. This action allowed the City to provide reclaimed water to all the

current landscaping contained in and around WalMart, surrounding businesses, the frontage road along Highway 29, and Main Street Park.

All of these actions combined mean that the Developer has provided the ability to discontinue use of valuable potable water in these locations. In turn, that potable water is secured for use in their residential and retail units without a significant impact to current City water supply.

CONCLUSION

We believe that through our Zero Water Footprint policy, we can effectively manage our supply of fresh water as a sustainable resource, while also protecting our water environment as we work towards meeting future City growth and demand.

Average Day Demand (ADD) shall be total demand for one year divided by three hundred sixty-five days/year.
Maximum Day Demand (MDD) shall be the largest single day's demand in a normal year.

Comments:

Cost of Water Supply Report/Will-Serve Letters – The cost to process a Will-Serve application shall be fully borne by the applicant and will be based on the actual cost of staff time. If the City elects to use consultant services, the applicant shall pay the consultant's rate plus 15% for administrative overhead. An initial deposit of $2,000 shall be included at the time of application submission.

Indemnification Agreement by Applicant

The applicant shall defend, indemnify, and hold harmless the City of American Canyon ("City"), its elected officials, officers, employees, attorneys, representatives, boards, commissions, volunteers and agents from and against all claims, actions, including actions to arbitrate or mediate, damages, losses, judgments, liabilities, expenses and other costs, or proceedings against the City, its elected officials, officers, employees, attorneys, representatives, boards, commissions, volunteers, or agents to attack, modify, set aside, void, or annul an approval, conditional approval, permit, entitlement, environmental document, environmental clearance, mitigation plan, or any other document or any of the proceedings, acts, or determinations taken, done, or made prior to granting of such approval, conditional approval, permit, entitlement, environmental clearance, environmental document, mitigation plan, or other document, by the City, including, without limitation, an action against an advisory agency, appeal board, or legislative body within the applicable limitation period.

The obligation to defend, indemnify and hold the City harmless shall include the payment of all legal costs and attorney's fees (including a third party award of attorney's fees), arising out of, resulting from, or in connection with the City's act or acts leading up to and including approval of any environmental document or mitigation plan granting approvals to the applicant, incurred on behalf of, or by, the City, its elected officials, officers, employees, representatives, attorneys, boards, commissions, volunteers and agents in connection with the defense of any claim, action, or proceeding challenging the entire or a portion of an approval, conditional approval, permit, entitlement or any other document of any related claim.

The obligation to defend, indemnify, and hold the City harmless shall include, but not be limited to, the cost of preparation of any administrative record by the City, staff time, copying costs, court costs, or attorney's fees arising out of a suit or challenge contesting the adequacy of a permit, approval, conditional approval, entitlement, environmental document, mitigation plan, environmental clearance, Water Supply Report, Will-Serve Letter or any other document or approval related to the applicant's project.

The City will promptly notify the applicant of any claim, action, or proceeding and will cooperate fully in the defense. If the City fails to promptly notify the applicant of any claim, action, or proceeding, or the City fails to cooperate fully in the defense, the applicant shall not be responsible to defend, indemnify, or hold harmless the City.

In the event a legal challenge to a City permit, approval, conditional approval, environmental document, environmental clearance, mitigation plan, entitlement or any other document, proceeding, determination, or action related to the applicant's project is successful, and an award of attorneys' fees is granted against the City, the applicant shall be responsible to timely pay the full amount of such an award.

As an authorized representative of the applicant, I hereby consent by my signature below, that I understand the following:
The service of processing an application for a new or increased water demand through the City of American Canyon is of primary benefit to the applicant. The cost of processing an application is charged according to the hours spent by staff in reviewing and analyzing the project including checking plans, writing reports, conducting water audits, and verifying water demand estimates. The applicant receiving the benefit from the service shall pay the cost of these services. Total cost varies according to the size of the project and the complexity of the issues involved. At the City's sole discretion, a consultant may process the application. Pursuant to City Council Resolution 2008-79 for development applications, the applicant will pay all costs for consultant services inclusive of any applicable "in-house" administrative costs. Project specific expenditures such as City Attorney services, postage for mailing public notices, advertising, etc. have been excluded from the hourly rates. These project specific expenditures will be billed "at cost" on a project by project basis to the applicant.

The deposit creates an open account to which processing time is charged. Processing charges will automatically be drawn against the deposit funds until the minimum balance is remaining. All service charges will be invoiced to the applicant on a monthly basis. Accompanying the invoice will be a statement, which will include a description of services rendered during the billing period. Payment is due within 15 days of the invoice. **If payment is not received within 7 working days after the invoice due date, all development activities will be suspended until payment is received.**

At the conclusion of the Will-Serve process, after full payment of all invoices is received, any remaining deposit amounts will be refunded to the applicant.

City of Modesto
"Will-Serve Letter" Request

The "Will-Serve" Letter is prepared by the Land Development Engineering Division of the Community & Economic Development Department. A "Will-Serve" Letter is issued upon the City's completion of an analysis determining that all conditions of approval are met.

"Conditions of Approval"

WATER: Request for service to property located outside the city limits of Modesto and inside the ultimate water service area. *(City Policy #5.001)*

1. The requested proposed property connection must be within current City water service area.
2. The City will need to determine whether it is reasonable to extend water service based on the quantity of water used, type of water used and the overall impact on the water system.
3. If the property is outside the current City water service area, the applicant will need Local Agency Formation Commission (LAFCO) (fees may apply) approval prior to issuance of a will-serve letter.
4. The City water system, in proximity to the proposed service area, must have the capacity to provide the amount of water required for the proposed connection.
5. If a water main exists adjacent to the property, and if said main is of sufficient size to provide the required service to the property, the water main is considered available.
6. If a water main does not exist adjacent to the property or if the existing water main is not sufficient size to serve the property, the City Engineer may approve a water main extension to the proposed property. Specific Council approval is required of any proposed water main extension where the cost exceeds $20,000. The size and design of said water main extension shall be as approved by staff and shall be installed by the owner, as required by the Modesto Municipal Code and the City of Modesto Standard Specifications.
7. The property owner must agree to pay all City connection fees prior to connecting to the water system.
8. The property owner must agree to pay all monthly water service charges.
9. The property owner must agree to annex when requesting to do so by the City of Modesto.

Any request for water connection to property located outside the City limits, which does not comply with the above conditions, may be specifically reviewed by the City Council.

SEWER: Request for service to property located outside the Modesto Municipal Sewer District and inside the ultimate sewer service area. *(City Policy #5.002)*

1. The requested proposed property connection must be must be within the current sewer service area.
2. The City sewer system in proximity to the proposed service area must have the capacity to receive the amount and type of discharge from the proposed connection. In addition, the type and quantity of discharge must be in compliance with existing City, State and Federal codes.
3. If the property is located outside City limits, the applicant will need Local Agency Formation Commission (LAFCO) (fees may apply) approval prior to issuance of a will-serve letter.
4. A sewer lateral must exist adjacent to the proposed property and must be of a size that is sufficient for the proposed use and is available for direct connection. A sewer main is considered if one of the following is true:
    a. The pipe diameter is 10" or less.
    b. A manhole exists adjacent to the property, which would allow a house sewer line connection at no more than a 45-degree angle from either property line.
5. The property owner must agree to pay all City connection fees prior to connecting to the sewer.
6. The property owner must agree to pay all monthly sewer service charges.
7. The property owner must agree to annex when requested by the City of Modesto.

Any request for sewer connection to property located outside the current Sewer District boundaries that does not comply with the above conditions may be specifically reviewed by the City Council.

APPLICANT COPY

To Request a "Will-Serve" Letter

Instructions for completing the attached WILL SERVE LETTER REQUEST FORM:

1. Owner Name/Phone number of owner
2. Mailing address of owner
3. Applicant Name /Phone number of applicant
2. Mailing address of applicant
3. City / State / Zip Code
4. Property address for which you are applying for the Will-Serve Letter
5. Assessor's Parcel Number (APN) of property you are applying for
6. Type of service you are requesting:
   a. Water Only b. Sewer Only c. Water & Sewer
7. Type of Construction: Existing or Proposed
   a. New Building b. Building Addition c. Building replacement/correction
8. Type of structure and expected demand (house, church, multi-purpose room, number of bathrooms)
9. Attachments as required:
   a. Fire Flow Test Results (for water requests only)
      i. Call Modesto Fire Marshal at (209) 571-5553 to determine if fire flow test can be performed (except Salida properties)
      ii. Salida properties call Salida Fire Department at (209) 545-0365
   b. Map showing site location and project layout if available.
   c. Copy of the Grant Deed showing ownership and the legal description of the property.
10. Public agency you are working with other than City of Modesto.
11. Signature of applicant acknowledging receipt of "Conditions of Approval"

CITY OF ST. HELENA

RESOLUTION NO. 2019-____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ST. HELENA (1) DIRECTING THE DEVELOPMENT OF A DRAFT POLICY, FOR CONSIDERATION BY THE FULL CITY COUNCIL, FOR ISSUANCE OF WILL-SERVE LETTERS FOR WATER USERS OUTSIDE THE CITY LIMITS; (2) AUTHORIZING THE DESIGNATION OF A CITY COUNCIL LIAISON OR SUBCOMMITTEE TO ASSIST IN THE DEVELOPMENT OF SUCH DRAFT POLICY; AND (3) DIRECTING STAFF TO SUSPEND OR DEFER THE ISSUANCE OF WILL-SERVE LETTERS FOR CITY WATER OUTSIDE THE CITY LIMITS PENDING THE DEVELOPMENT AND COUNCIL CONSIDERATION OF SUCH DRAFT POLICY.

RECITALS

A. The City Council plays a vital role in the stewardship of the City's scarce water resources and in the management of the City's water utility enterprise. The City Council also exercises a legislative function in managing the City's water rate setting process and in setting water rates. The City Council wishes to ensure that the City has a considered, sound policy in place for the issuance of will-serve letters and water use agreements for water users requesting City water service outside the City limits.

B. Public Works Staff advises the City Council that the current and past practice of the Public Works Director issuing water will-serve letters outside the City limits has been driven by land owners and developers in unincorporated Napa County asserting a need for a will-serve letter to meet the County of Napa's Planning, Building and Environmental Services Department's application process. The County requires land owners and developers who propose to drill a well, remodel a residence, propose a new use permit, and/or otherwise develop or redevelop properties that are currently in an area for which the City of St. Helena has provided water service to provide a will-serve letter (approval or denial) in order to move their application forward and ultimately receive a permit from the County of Napa.

C. Current practice under the City's Municipal Code allows the City Council to review a will-serve letter when a stakeholder (typically the property owner or project proponent) appeals a determination by the Public Works Director about a will-serve letter to the City Council. (St. Helena Municipal Code section 13.04.180 (A).) This practice does not allow the City Council to review such requests earlier in the process. The City Council wishes to examine the soundness of that approach, and the process for issuing will-serve letters generally.

D. Public Works Staff further advises the City Council that they have not been able to locate a specific written "will-serve" policy other than past practice through existing serve

letter history and/or what is currently outlined in the City of St. Helena Municipal Code for providing services.

RESOLUTION

The City Council of the City of St. Helena hereby resolves as follows:

1. The City Council directs City staff to develop a draft policy, resolution and/or ordinance, for consideration and approval by the Council, addressing the consideration and approval of will-serve letters and water use agreements for water service outside the City limits.
2. The City Council is authorized to designate a two-member liaison or subcommittee to work with staff in developing such a draft policy, resolution and/or ordinance for presentation to and consideration by the full City Council.
3. The Council directs staff to suspend or defer issuance of will-serve letters pending the development and consideration of such a policy.

Approved at a Regular Meeting of the St. Helena City Council on May 14, 2019, by the following vote:

Mayor Ellsworth: _____

Vice Mayor Dohring: _____

Councilmember Chouteau: _____

Councilmember Knudsen: _____

Councilmember Koberstein: _____
