- City Engineer John Ferons also stated on February 4, 2011, that he would provide information regarding the drainage report prepared for the City Flood Control Project that includes analysis of the Hunter property as fully developed consistent with the current St. Helena General Plan. You need that report from the City to confirm the analysis done for the sizing of the detention basin.
- Likewise, you have requested a copy of that existing drainage report for the City Flood Control Project, as that report would have included 10-, 50- and 100-year storm events detention requirements. You need a copy of that report to confirm the analysis done for the sizing of the detention basin.

The only other previous request for a completion item that you met in a different way than requested concerns note 3 on Sheet TM-1. Instead of changing the text of that note, you provided the requested information about current one-hundred year floodplain on the appropriate TM sheets.

If you have any questions, please contact me prior to April 1, 2011. As of that date, Greg Desmond, currently Senior Planner, will be the City of St. Helena's Acting Planning Director.

Sincerely,

Anne Cronin Moore AICP

NOTE: Additional property owners and/or applicants (name, address, phone number, and signature) shall be attached to the application. In the case of a partnership, all general and limited partners shall be identified. In the case of a corporation, all shareholders owning 10% or more of the stock and all officers and directors shall be identified.

**If you would like project correspondence and notice of meetings to be sent to parties other than the applicant, please list their names, address and telephone numbers on a separate sheet.**

---

I, BEN VANZUTPHEN, hereby file this application for a development project and agree to pay any and all processing fees imposed by the St. Helena Municipal Code and City Council Resolutions (as they may be amended from time to time).

**Staff time is billed at an hourly rate and the initial deposit may not be sufficient for processing your application. If expended staff time exceeds the initial deposit, you will be notified that additional funds are required. Applications with a negative balance at the time of the public hearing will be continued until the balance is paid in full.**

**In the event the property owner is different from the applicant, the property owner must sign to indicate her/his/its consent to the filing and agreement to be liable with the applicant for payment of the processing fees.**

Failure to pay all accumulated fees by the time of public hearing will result in a continuance or denial of the project.

A finance charge of 12% per annum shall accrue on any balance unpaid after 30 days.

In the event the City is required to take legal action to enforce any of the terms and conditions of this application, Applicant and Property Owner agree to pay to City reasonable attorney fees and costs incurred in such action.

We, the owner and the applicant, will defend, indemnify and hold the City, its agents, officers, and employees harmless from any claim, action or proceeding to attack, set aside, void or annul an approval of the City concerning the project, as long as the City promptly notifies the applicant of any such claim, action or proceedings and the City cooperates fully in the defense. We have also reviewed the requirement to disclose the complete list of partners and/or shareholders.

# HUNTER SUBDIVISION
# PROJECT DESCRIPTION

## GENERAL INFORMATION

The subject property is a 16.9-acre parcel (APN 009-030-057) located north of Hunt Avenue and east of Adams Street. The site is bounded by single-family homes to the west and southwest, a mobile-home park to the southeast, the flood control project to the east and a City-owned parcel (for access to the flood control project) to the north. There is existing vineyard over a portion or the property with the remaining land being vacant and recently disturbed/graded as part of the flood control project.

The owner, Mr. Dennis Hunter, seeks approval to subdivide the parcel into 51 single-family residential lots, 11 of those with affordable granny units, and a parcel designated for a future 25-unit workforce/affordable housing development. The parcel currently has a *Medium Density Residential* Zoning and General Plan designation allowing for a density range of 5.1 to 16.0 du/acre and maximum yield of 270 du. The proposed 87 units (51 lots + 11 granny units + 25 future multi-family units) results in a density of 5.1 du/acre thereby meeting the minimum requirement.

In terms of development standards, the resulting lots meet or exceed all the shape, size and setback requirements of the MR zoning district. Houses are not being proposed at this time or as part of this application. The affordable units will be deed restricted for a minimum of 30 years (per SB 1818). This project is a housing development entitled to a density bonus and multiple incentives aud concessions under the provisions of Government Code §65915.

As indicated above, there are a few remainder parcels being proposed as part of this subdivision. Parcel A is 3.13 net acres and will be set aside for a future 25-unit multi-family development. There is also a small sliver of land along the north PL that is Parcel B.

The project will be served by new public streets including the interconnection of Starr Avenue to Adams Street. These streets are classified as collectors and have been designed to the 60-foot right-of-way standard. All others streets are designed to the minor residential standard (56'). Adams Street is shown on the City-owned parcel with a small portion lying on the subject property.

In terms of utilities, there is an existing sanitary sewer in Hunt Avenue and new water and storm drain lines that run through the property, all of which are accessible for connection by the new project. There are also existing dry utilities nearby in Hunt Avenue and in Adams Street for service of gas, electric, cable and phone to the project. There is an existing well near the southeastern end of the property that is proposed to be maintained in place and used for irrigation of the project's landscape areas. It is a high-producing well that it also capable of supplying additional water to the project should it be found necessary.

# HUNTER SUBDIVISION
# PROJECT DESCRIPTION

The grading design for the project, as shown on the Tentative Map, is based on the Soil Stockpile Grading Plan dated January 2009 prepared by Mead & Hunt for the flood control project. The grades have been set to utilize the pad that is being constructed and to achieve an earthwork balance in an effort to avoid future offhaul of material. The fill slope along the south and southeast property lines being constructed will be replaced by a retaining wall and drainage swale, also as shown on the Tentative Map. The grading and drainage design has been coordinated with the flood control project based on feedback from and a field meeting with Jon Lander.

It is anticipated that site improvements for the project will be complete within one and one-half years after the approval of the project's entitlements.

## HISTORY OF PRIOR KNOWN DEVELOPMENT ACTIVITY

The architectural firm Dahlin Group was retained in May of 2005 to prepare a Master Plan for the site. Following several meetings with City Staff, at Staff's suggestion, the design work was halted to allow for the completion of the General Plan Update program. On May 23, 2006 the Civil Engineering firm Riechers Spence & Associates (RSA) was retained to start Tentative Map work but again at the suggestion of City Staff the work was halted to permit the completion of the General Plan Update program.

In June of 2007 the City first contacted Mr. Hunter with a request for right of entry to the property to explore Indian remains identified in their Cultural Resources Study. The City explained that their flood control project was a life-safety project for the senior residents of the mobile home park. Mr. Hunter signed the right of entry (without charge) on October 11, 2007.

?1, soils ?.

During the summer of 2006 the City again contacted Mr. Hunter to see if he would consider allowing the spoils from the flood control project to be placed on his property. This action would reduce the cost of the flood control project to the City. Mr. Hunter agreed subject to the fill being placed in a compacted form, suitable for development. It was the City's estimate that 37,000 cubic yards of fill would be available. A grading plan was prepared by Civil Design and submitted to the City and a Soils Report for the site was prepared by Miller Pacific Engineering Group.

In the spring of 2008 the City again approached Mr. Hunter to see if he was interested in a possible trade in lieu of the purchase of his property for the flood control project. A number of meetings were held and a lot line adjustment agreed upon. Land was appraised and a price was established. The Agreement of Purchase and Sale was signed in December of 2008.

In the fall of 2007 the City again approached Mr. Hunter asking if he would support placing an Assessment District on property benefiting from the flood control project. Additional money was required to complete the City's project. Mr. Richard McDonnell

assessment district

HUNTER SUBDIVISION
PROJECT DESCRIPTION

of Vineyard Valley Mobile Home Park, on Marcy 21, 2008 protested the Assessment District which constituted a majority protest and killed the Assessment District. Mr. Hunter agreed to the Assessment District which would place a lien of $586,084.96 on his property.

All of the meetings with the City to this point, including meetings held with Councilman Eric Sklar in attendance, envisioned development of the Hunter parcel. The values of property arrived at for the land trade/sale with the City was based on developable land prices. And, the placement of City fill on the Hunter property was to be done consistent with the future urban development of the parcel. Furthermore, to accommodate development and as part of the land swap, the City's Flood Control Project:

- Removed grape vines along the north side of the property for the extension of Adams Street and through the middle of the site where Starr Avenue was to be extended.
- Moved the water main from the center of the property to the location of the future Starr Avenue right-of-way.
- Up-sized the retention pond and pumps to serve the developed Hunter parcel.
- Created an easement and moved the sewer line.
- Created an easement to facilitate the extension of Starr Avenue.

In September of 2009 architect Mark Scheurer was retained as designer of the project and Mark met with City Staff. In December of 2009 the design work was again put on hold to allow for the completion of the General Plan Update program. The Civil Engineering firm RSA then rejoined the development team.

At the present time the right-of-way for Adams Street has been graded and rocked, the right-of-way for Starr Avenue has been cleared and the water utility installed. The easterly half of the Hunter property has been used as a construction staging area by the City and is devoid of any vegetation. And the stockpile is currently being placed and compacted on the eastern portion of the site (per the stockpile Plan referenced above). The ground water well on the site previously used for irrigation of the grape vines is presently used by the City (free of charge) to start the landscape required by their flood control project.

RE: Hunter Subdivision-
Tentative Subdivision Map Submittal

To Whom It May Concern:

On behalf of our client, Dennis Hunter, and applicant, Ben and Kelly vanZutphen, we are submitting the following items to initiate concurrent processing of both a Conceptual Map review and a Tentative Subdivision Map application for a subdivision on Mr. Hunter's property. Per the City's checklist, the following items are included in this package:

- (20) 24x36 copies of the Conceptual Map
- Completed application form, with property owner and applicant signatures
- Written Statement, signed and dated
- (13) 24x36, (13) 11x17 & (1) 8-1/2x11 copies of the Tentative Subdivision Map, including:
  a. Cross Sections
  b. Grading Plan/Contour Map
- (13) 24x36, (13) 11x17 & (1) 8-1/2x11 copies of the Landscape Plan, including,
  a. Fence/Wall details
- Site Photos
- A mailing list of all owners of property within a 300' radius of the subject property
- Current Preliminary Title Report
- Napa County Solid Waste Disposal Info Form
- Processing Fee Initial Deposit of $1,500

Additional items to accompany the Subdivision Map (not already included above) are:

- Listed Item #8- A cost estimate for all off-site improvements

rsacivil.com
1541 Third Street Napa, CA 94559
P. 707.252.3301 F. 707.252.4966

RSA ~ CELEBRATING 30 YEARS OF CIVIL ENGINEERING

Lastly, for your easy reference, the following technical and environmental studies are attached which were performed as part of the flood control project:

- Geotechnical Report
- Army Corps 404 Permit
- Archeological Report

Note that, as described in the written statement, homes or structures are not proposed as part of this application. Mr. Hunter seeks approval of the subdivision only at this time. So, the floor plans and presentation plans/exhibits listed in the checklist are not included in this package.

Please call if you have any questions in regards to this submittal, and we'll connect you with the applicant and/or the property owner.

Sincerely,

Francis Adrias, PE
Project Manager

*NOTES:*

1. This estimate of probable construction costs is prepared as a guide only and is subject to possible change. It has been prepared to a standard of accuracy, which, to the best of our knowledge and judgment, is sufficient to satisfy our understanding of this estimate.

2. This estimate does not include the following:

   a. Comcast, Pac-Bell, AT&T and PG&E (dry utilities) costs.
   b. Relocation of power poles.
   c. Landscaping/hardscape costs.
   d. City of St. Helena fees.
   e. Detention facilities or maintenance costs.
   f. Cost associated with environmental mitigations.
   g. Fence relocations.
   h. Phased construction or out-of-regular-sequence construction.
   i. Land costs, acquisition of right of way, easements, and/or rights of entry.
   j. Costs associated with high groundwater or inclement weather conditions.
   k. Costs associated with limitation on construction access.
   l. Demolition of existing structures or facilities.

3. Costs presented herein represent an opinion based on historical information and previous bid prices on current projects. No provision has been made for inflation.

# EXHIBIT 8

# STAFF REPORT

**DATE:** April 11, 2012

**TO:** Mayor and City Council

**FROM:** City Staff

**RE:** Water Supply and Demand Conditions Update

**Summary**

Discussion of City water supply and demand conditions related to certification of the General Plan Update EIR and adoption of the General Plan Update document.

**Background**

The General Plan Update process has been underway since late 2008. The process was initiated through a public workshop in early 2009 followed by monthly General Plan Update Steering Committee meetings throughout 2009 and 2010. In early 2010, there was another public workshop followed by two Town Hall meetings and a communitywide survey. Public hearings for the adoption of the General Plan Update document and Certification of the General Plan Update EIR were initiated in August of 2010.

*November 9, 2010 City Council Meeting*

On November 9, 2010, the City Council held a public hearing on the General Plan Update EIR and declared that Mitigation Measure Utilities 1-a (page 4.R-20) which outlines a conservation program intended to result in a reduction in annual water demand of 495 AF is not feasible and that even with the remaining mitigation measures (Mitigation Measures 1-b, 1-c, 1-d), the impact of the increased demand for water from new development would be significant and unavoidable. Because the City Council determined that these specific measures would not mitigate this impact, additional and/or revised mitigation measures were required. Staff was directed to work with the Infrastructure Committee and consultants to develop appropriate measures. At that meeting the City Council approved the General Plan Update document and directed staff to re-circulate the EIR once it had resolved the water-related issues. The minutes from the November 9, 2010, City Council meeting are attached.

*Safe Yield Committee*

At their meeting on December 14, 2010 the City Council appointed the Safe Yield Committee to ascertain the annual safe yield of the City's water system. The goal of the committee was to determine, at the present time, if potable water usage was below, above or equal to the safe yield of the potable water system. The meaning of safe yield was defined by the Planning Commission and approved by the City Council during the review/approval process of the General Plan Update during the fall of 2010. The definition is as follows:

*The safe annual yield of the St. Helena water supply system is that quantity of water which can be reliably delivered on an annual basis through most rainfall years, including a Dry Year (rainfall at 22" to 25.9") without undue hardship on water customers through water shortage restrictions. It is recognized that the safe annual yield, as so defined, could place significant*

*hardship on water customers in a Critically Dry Year (rainfall at 21.9" or less) or in periods of two or more consecutive Dry Years."*

The Safe Yield Committee presented their recommendations to the City Council at their meeting on March 22, 2011. The Committee determined that the annual safe yield of the City's potable water supply system is currently 1,950 acre feet. To calculate annual demand, the Committee recommended using a five-year rolling average. As shown in the table below, the supply/usage balance equation yielded a deficit of 206 acre feet in FY 09-10 and 133 acre feet in FY 10-11. It is interesting to note that actual water demand in both of these years was lower than the annual safe yield of 1,950 acre feet. Because the five-year rolling average is used in the equation, it takes some time for reductions in water usage to "catch up" in the calculated surplus/deficit. As shown in the italicized projections in the table below, if water demand remains at the FY 10-11 level, water emergency restrictions could potentially be lifted in July 2012. Furthermore, a surplus of 107 acre feet could be realized at the end of FY 12-13.

| Fiscal Year | Water Use *(acre feet)* | Unaccounted for Water (UAF)[1] *(acre feet)* | Annual Total Water Use *(acre feet)* | 5-Year Rolling Average Total Water Use[2] *(acre feet)* | Surplus/ (Deficit) *(acre feet)* |
|---|---|---|---|---|---|
| 2005 - 2006 | 1,853 | 327 | 2,180 | | |
| 2006 - 2007 | 2,026 | 358 | 2,384 | | |
| 2007 - 2008 | 1,894 | 334 | 2,228 | | |
| 2008 - 2009 | 1,807 | 319 | 2,126 | | |
| 2009 - 2010 | 1,581 | 279 | 1,860 | 2,156 | (206) |
| 2010 - 2011 | 1,573 | 206 | 1,779 | 2,083 | (133) |
| *2011 -2012 est.* | *1,573* | *206* | *1,779* | *1,915* | *35* |
| *2012-2013 est.* | *1,573* | *206* | *1,779* | *1,843* | *107* |

[1]Unaccounted for water is estimated at 15% of total water use for FY 05-06 through FY 09-10 years 2006 to 2010. UAF water for FY 10-11 is the actual usage.

[2]The five-year rolling average for FY 09-10 is computed by averaging water use and adding 15% UAF water use (water use 5-year average ÷ .85). The five year rolling average for FY 11-12 and FY 12-13 projections use 12% UAF water use in the calculation (water use 5-year average ÷ .88).

***Update on Water-Related Activities in 2011***

In its final report dated March 27, 2011, the Safe Yield Committee recommended the City develop a new system for triggering water emergencies, and on October 25, 2011 the Council adopted a new Water Shortage Emergencies Ordinance, amending Chapter 13.04 Water Service Systems, Article 2, Water Shortage Emergencies. The new ordinance incorporated the definition of Safe Annual Yield and added a new definition for Supply/Usage Balance, as follows:

*"Supply/Usage Balance" is the difference between the Safe Annual Yield and total current usage. Total current usage is average usage as determined by taking total metered potable water supply entering the water system's distribution system over the last five fiscal years, divided by five. The city shall calculate that the Supply/Usage Balance as soon after the end of each fiscal year as is practicable, as well as at any time that there is a material change in potable water supply. The Balance is positive when the Safe Annual Yield exceeds total current usage. The Balance is negative, or in Deficit, when the Safe Annual Yield is less than total current usage.*

The ordinance establishes three water shortage emergency phases with increasing water use restrictions. Phase I water regulations are triggered when the supply/usage balance is in deficit, as is currently the case. Under Phase I regulations, water customers are prohibited from expanding or installing new water-using appliances, plumbing, or improvements, such as landscaping and pools, unless the installation will result in no increase in water use. Replacement fixtures and appliances must be water-efficient. In addition, new water connections for new development may only be approved if the projected water demand for the project can be offset by a corresponding reduction in the existing water demand on the City water system.

***City of Napa Water Agreement.*** On November 8, 2011, the city adopted and amended its water supply agreement with the City of Napa to provide 600 acre-feet per year (afy) under all hydrologic conditions through the end of 2035. This is a significant change from the previous three tier system. The net effect is to provide more water in a critically dry year, the same amount of water in a dry year, and less water in wet, normal and below normal years.

***Water Rate Increase.*** On July 1, 2011, new water rates went into effect which increased rates by an average of 56%. The new rates have a higher tiered rate structure than the previous water rates and should encourage increased water conservation. The impact of the new water rates on water demand is not yet known, as the most recently reported supply/usage balance covers the period before the new water rates went into effect.

**Discussion**

Building on the information developed by the Safe Yield Committee, the City requested West Yost Associates to prepare a report that would supplement and update the information contained in the 2010 Water Supply Plan (West Yost Associates, October 2010). The West Yost technical memorandum, dated April 5, 2012, is attached to this staff report.

The technical memorandum shows that, without water conservation measures, the metered water demand is projected to increase from 1,875 afy (2,080 afy including unaccounted for water) to 2,116 afy (2,350 afy including unaccounted for water) by the year 2030 under the likely build-out scenario, an increase of approximately 270 afy in total projected water use (Table 1-1). Staff notes that the 2010 metered water use and total water use estimates incorporated in the report are significantly higher than the actual water use figures for 2010, but approximate the five-year rolling average.

The technical memorandum describes the existing revised potable water supply under different hydrologic conditions, and compares water demand projections to water supply, given the new water shortage emergency regulations. Table 3-3 shows that total potable water supply is not capable of providing reliable supplies under all hydrologic conditions for the likely build-out scenario, except during a critically dry year, due to a combination of the impact of the Phase III water shortage emergency restrictions and increased groundwater pumping. The technical memorandum assumes the City's current groundwater use practice of using groundwater for up to 20 percent of the water supply in most years, and 30 percent in dry and critically dry years.

Beginning on page 13 of the technical memorandum, West Yost explores several strategies to mitigate the water supply deficit between the potable water supply and projected water demand

under the likely build-out scenario. One strategy is to increase groundwater pumping; according to West Yost, it appears that the City could increase groundwater pumping by at least several hundred acre-feet per year – enough to reduce or eliminate the water supply deficit – and not exceed the perennial yield of the groundwater basin. West Yost cites a 2050 Napa Valley Water Resources Study that indicates that groundwater levels in the Napa Valley Groundwater Basin, including the St. Helena area, have been stable over 55 years and that there is no indication that the perennial yield has been exceeded. Furthermore, the perennial yield of the basin has been estimated as being anywhere from 21,000 afy to almost 30,000 afy, with a volume in storage of over 200,000 acre-feet. Although only a portion of the total basin recharge and storage would be attributable to the immediate area around St. Helena, the City's long-term pumping average of 450 afy is not a significant draw on the groundwater basin, amounting to approximately 2% of the annual basin recharge. Water Strategy 1, discussed below, would increase pumping to 650 afy, or approximately 3% of the annual basin recharge.

The technical memorandum reviews the Water Use Efficiency Recommendations discussed in the 2010 Water Supply Plan, and concludes that these options still apply. The recommendations and corresponding potential water savings listed below would be refined once a water conservation plan is fully developed and implemented.

- Hire a full-time Water Conservation Coordinator (necessary to achieve reductions listed below)
- Modify rate structure to increase high tier rates (unspecified)
- Update the new construction offset program, 227 afy
- Fully develop the meter leak detection and monitoring program, 90 afy
- Establish an Irrigation Advisory Service, 60 afy
- Promote "Smart Irrigation Controllers," 77 afy
- Adopt requirements for "ultra-efficient" plumbing fixtures for new development and rebates to existing users, 15 afy
- Provide incentives for replacement of turf, 13 afy
- Provide incentives for roof water catchment, 13 afy

These measures total 425 afy, although additional water use reductions are likely to occur from the higher water rates already imposed and potential restructuring of high-tier water rates to discourage water waste. In regard to the meter leak detection and monitoring program, staff notes that while the City's recent customer water meter upgrade has contributed to the drop in unaccounted for water from approximately 15% to 12% (an estimated 72 acre-feet in FY 10-11), more work could be done. In particular, the City could conduct a comprehensive leak survey and repair and upgrade leaking water pipes in the municipal system.

In section 4.1, the technical memorandum describes five water supply strategies the City Council could adopt to ensure sufficient and reliable water supplies to meet needs of the likely build-out scenario. These strategies provide several points on a continuum between low water conservation action plans combined with more groundwater use than the current practice, to high water conservation action plans combined with lower groundwater use than the current practice. These strategies, described in detail on pages 15 and 16 of the technical memorandum, are:

Strategy 1: Minimize water conservation, resulting in an average long-term groundwater pumping of 650 afy, and no long-term water conservation measures under the likely build-out scenario.

Strategy 2: Hold groundwater to the historical average of 450 afy, resulting in a need for long-term water conservation of 277 afy under the likely buildout scenario (13% of projected demand).

Strategy 3: Hold supply to 2008 levels, resulting in a long-term average groundwater pumping of 481 afy and long-term water conservation measures of 243 afy under the likely building scenario (12% of projected demand).

Strategy 4: Maximize water conservation, resulting in average groundwater pumping of 251 afy and long-term water conservation measures of 495 afy under the likely build-out scenario (24% of projected demand).

Strategy 5: Hold water supply to 1,950 afy and keep the long-term average groundwater pumping to 450 afy, as recommended by the Safe Yield Committee. This results in the need for long-term water conservation measures of 360 afy under the likely buildout scenario (17% of projected demand).

The potential for a water surplus as early as FY 2012-13, and increasing in FY 2013-14, came to light subsequent to West Yost articulation of the 5 Strategies above. West Yost should opine on whether such a water surplus could further reduce the need for groundwater pumping or conservation outlined in the above 5 strategies.

**Next Steps**

The City Council may select one of the five water strategies described above in order to move forward with the process of certifying the General Plan Update EIR. The Water Use Efficiency Recommendations described above are sufficient to balance water supply and demand for all strategies under the likely build-out scenario except Strategy 4, and in fact, exceed the water conservation amount required under these measures. Strategies 1, 2, 3 and 5 require water conservation measures that would reduce projected demand from 12% to 17%. As described in the attached memo on State Water Regulations, the Water Conservation Act of 2009 requires the state to reduce urban per capita water use by 20% by the year 2020. While the St. Helena Water Enterprise has less than 3,000 connections and is not required to comply with the reporting requirements of SBX 7-7, the City is required to comply with state regulations designed to meet this water reduction goal, including the State Water Efficient Landscape Ordinance and the 2010 CALGreen Building Code, which requires a reduction of indoor water use by at least 20% for all new construction projects. Local water conservation efforts, in concert with these state regulations, could help to bring projected water supply and demand in balance.

Strategies 1 and 3 require an increase in long-term average groundwater pumping to 650 afy and 481 afy, respectively. This would represent an increase of 200 afy and 31 afy above the historical long-term average of 450 afy. In order to determine the feasibility of increasing

groundwater production, the City could solicit proposals from qualified groundwater hydrogeologists to conduct a comprehensive groundwater assessment that augments the findings from the studies cited in the technical memorandum. The study would provide a better understanding of the long-term yield characteristics of the St. Helena groundwater basin analysis, and could include: an assessment of historical groundwater level, quality, and production data; volumetric assessments of the basin to quantify groundwater availability; and development of a groundwater budget in consideration of present and future water demand and anticipated yields of municipal water supply wells.

While choosing its preferred water supply strategy, the City Council should bear in mind that, due to the recent amendments to the Water Shortage Emergencies Ordinance, new development requiring additional water supplies must prove, through a water demand analysis report, that the proposed development will not create additional water demand. It is envisioned that this practice will be followed until water supply and demand are brought into balance. The rolling five-year average used to calculate "current" water demand in the supply/usage equation ensures that conservation efforts and restructured water rates must translate into real and long-lasting reductions in water demand before new development will be approved.

**Recommended Council Action**

The City Council should select one of the five strategies analyzed in the West Yost Technical Memorandum dated April 5, 2012, and direct staff to prepare the document(s) necessary for the City Council to certify the General Plan Update EIR. The City's EIR consultant has determined that recirculation of the EIR will not be required if the City Council selects one of the five water strategies.

**Alternatives**

If the Council chooses not to adopt one of the five water supply strategies analyzed in the West Yost technical memorandum, there will be insufficient water to serve new development under the likely build-out scenario of the draft General Plan Update. The City would then have the following options to consider:

*Option One*: Reduce all general plan growth to zero. This would require a rewrite of the General Plan Update and EIR and would potentially be in conflict with the City's adopted housing element.

*Option Two*: Modify the General Plan Update likely build-out scenario to a lower level of growth that can be accommodated with some increase in water supply, achieved through water conservation, increased groundwater pumping, and/or regulations requiring new development to offset existing water usage in the community. This would also require a rewrite of the General Plan Update and EIR, but, depending on the decision the Council makes in regard to the above factors, may be less extensive than Option One.

*Option Three*: Shorten the term of the General Plan Update, in concert with some mix of water conservation and increased groundwater pumping. Reducing the General Plan horizon to the year 2020, for example, would reduce projected water demand by 120 afy. The water

conservation measures and/or increased groundwater pumping requirements described in Water Strategies 1-5 would therefore be reduced by 120 afy.

**Fiscal Impact**
Staff and consultant time to prepare documents to certify the General Plan Update EIR and adopt the General Plan Update. A rewrite of the General Plan Update and EIR could be costly and take a significant amount of time. Staff would need to develop cost estimates with its consultants in consideration of Council's action and the scope of changes that are required.

**MEMORANDUM**

Date: February 21, 2012
TO: Gary Broad, City Manager
FROM: Christine O'Rourke, Consultant
SUBJECT: State Water Regulations

The purpose of this memorandum is to provide a summary of state water regulations that are designed to improve water efficiency and conservation.

**State Water Efficient Landscape Ordinance (AB 1881)**
In 2009, the state adopted a new model water efficient landscape ordinance and required all agencies to either adopt it or develop an ordinance that was as efficient as the state's ordinance. The state ordinance went into effect on January 1, 2010. The ordinance applies to: 1) new construction and rehabilitated landscapes for public agencies, commercial development projects, and developer-installed residential projects of 2,500 square feet or greater that require a building or landscape permit, plan check or design review; and 2) new construction landscapes installed by a home-owner or home-owner's contractor that are 5,000 square feet or greater and require a building or landscape permit, plan check, or design review.

The state model ordinance is designed to reduce landscape water use to the lowest practical amount and set an upper water budget that may not be exceeded. Ordinance requirements include the following elements:

- Water-use calculated based on the maximum applied water allowance. Any plants may be used as long as the water budget is not exceeded.
- Smart controllers that use evapotranspiration or soil moisture data.
- Dedicated meters for projects with 5,000 square feet or more of landscape area (except single family homes).
- Rain shut-off sensors.
- No overhead spray for narrow planting areas less than 8' wide.
- 24-inch setback from hard surfaces for overhead spray heads.
- No turf allowed on slopes exceeding 25% unless the toe area is permeable.
- 2" of mulch in most planting areas.

The state reports that several local agencies have adopted ordinances more stringent than the model ordinance. Some of the local provisions include:

- The ordinance applies to all new construction and rehabilitated irrigated landscape areas equal to or greater than 1,000 square feet.
- The ordinance applies to all new landscapes regardless of size or occupancy type.
- The ordinance limits the allowable turf area to 25% of the irrigated area, unless the project applicant chooses to develop a water budget.

- The ordinance requires at least 80% of the plants in non-turf areas to be native plants, low-water using plants, or no-water using plants, unless the project applicant chooses to develop a water budget.
- The ordinance requires dedicated irrigation meters at all accounts with landscaping that exceeds 5,000 square feet.

**2010 CALGreen Building Code**

In 2010, the state adopted the CALGreen Building Code which went into effect on January 1, 2011. The code requires a reduction of indoor water use by at least 20%, and provides both prescriptive and performance methods to meet the requirement.

For indoor water use, projects may either show a 20% reduction in water use using the worksheets provided in the code or install the following high-efficiency fixtures:

- Showerheads with a maximum water rate flow rate of 2.0 gallons per minute at a pressure of 80 psi.
- Lavatory faucets with a maximum flow rate of 1.5 gallons per minute at 60 psi.
- Kitchen faucets with a maximum flow rate of 1.8 gallons per minute at 60 psi.
- Toilets that use a maximum of 1.28 gallons per flush.
- Urinals that use a maximum of 0.5 gallons per flush.

In addition, the code requires that irrigation controllers must be weather or soil-based controllers capable of delaying an irrigation cycle during wet weather.

Some local agencies have adopted additional requirements. The Marin Municipal Water District, for example, requires high-efficiency clothes washers and pool covers for all new outdoor swimming pools, as well as high-efficiency fixtures for commercial applications.

**Water Conservation Act (SBX 7-7)**

Senate Bill X 7-7 requires the state to achieve a 20% reduction in urban per capita water use by the year 2020. The Act requires urban water agencies with 3,000 service connections or sales of 3,000 acre feet to calculate baseline per capita water use and develop water use targets for 2020.
A retail water supplier should also provide a general description in their Urban Water Management Plan of how the supplier intends to reduce per capita water use to meet its urban water use target. An example of the Conservation Measures Description for an Urban Water Management Plan is attached as Appendix A to this memorandum.

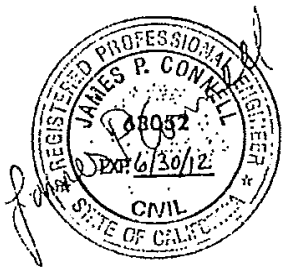
Agencies that are not in compliance with the Act by July 1, 2016, are not eligible for state water grants and loans. Failure to meet the 2020 targets will be a violation of the law subject to administrative or judicial proceedings. The City is not currently required to comply with this law, but it may be required to do so in the future.

# Appendix A

## *Marin Municipal Water District 2010 Urban Water Management Plan*
## *Conservation Measure Descriptions*

**Table 3-15**
**Conservation Measure Descriptions**

| Customer Sector | Name of Measure | Description |
|---|---|---|
| SF,MF | Residential Water Surveys - Indoor | This is the indoor component of indoor and outdoor water surveys for existing single-family and multi-family residential customers. Normally those with high water use are targeted and provided customized report to homeowner. |
| SF, MF | Residential Water Surveys - Outdoor | This is the outdoor component of indoor and outdoor water surveys for existing single-family and multi-family residential customers. Normally those with high water use are targeted and provided customized report to homeowner. |
| SYSTEM | UFW Reduction | The District will increase efforts to find and repair leaks in the distribution system and take other actions (such as meter replacement) to reduce water losses. A ten year program to reduce unaccounted for water by 3.0 percent is proposed for this measure. |
| IRR | Water Budgets | 90% - 100% of all irrigators of landscapes with separate irrigation accounts would receive a monthly or bi-monthly irrigation water use budget. |
| COM, INS | Large Landscape Conservation Audits | All public and private irrigators of landscapes larger than one acre would be eligible for free landscape water audits upon request. |
| SF | Clothes Washer Rebate | Homeowners would be eligible to receive a rebate on a new water efficient clothes washer. |
| SF, New SF | Public Information Program | Public education would be used to raise awareness of other conservation measures available to customers. Programs could include poster contests, speakers to community groups, radio and television time, and printed educational material such as bill inserts, etc. |
| COM, INS | Commercial Water Audits | High water use accounts would be offered a free water audit that would evaluate ways for the business to save water and money. |
| SF | Single Family Residential ULF Toilet Rebate | Homeowners would be required to replace an existing high volume toilet with a 1.6 gallon per flush efficient toilet when name account changes. |
| RMF | Multi-Family Residential ULF Toilet Rebate | Homeowners would be required to replace an existing high volume toilet with a 1.6 gallon per flush efficient toilet when name account changes. |
| SF | Single Family Toilet Ordinance | A single family toilet ordinance to replace existing toilets. |
| MF | Multifamily Toilet Ordinance | A multifamily toilet ordinance to replace existing toilets. |
| Existing Customers SF | Rain-Sensor (shut off device) Retrofit on Irrigation Controllers | Agency pays for the $40 rain sensor, homeowner pays for the optional installation ($35). |
| Existing Customers: SF & MF | High Efficiency Toilet (HET) | Provide a $250 rebate or voucher for the installation of a high efficiency toilet (HET). HET are defined as any toilet to flush 20% less than an ultra-low flow toilet (ULFT) and include dual flush technology. Rebate amounts would reflect the incremental purchase cost. |
| Existing Customers: SF & Condo | Homeowner Landscaping and Irrigation Classes | Sponsor classes at stores where irrigation equipment is sold or other suitable venues on selection and installation of efficient plant material and irrigation equipment (drip irrigation, smart controllers, low volume sprinklers, etc.). |
| Existing Customers MF | Coin-Op Washing Machine Rebate | Provide a $400 rebate for efficient coin-op washing machines to existing apartment complexes over a certain size with a common laundry room. |



| Table 3-15<br>Conservation Measure Descriptions | | |
|---|---|---|
| Customer Sector | Name of Measure | Description |
| Existing Customers SF, Condo, MF, CII, IRR | Financial Incentives/ Rebates for Irrigation Upgrades including Smart Irrigation Controllers | For SF, Condo, MF, CII, and IRR customers with landscape, provide for rebates towards the purchase and installation of selected types of irrigation equipment upgrade including low volume sprinkler heads, check valves, smart irrigation controllers. Rebate is $450 for residential accounts and up to $650 for mixed use accounts and up to $3,500 for dedicated irrigation accounts. Provide up to $450 for SF, and up to $3,500. Assume average rebate claimed equates to $1,500 for non-Residential accounts. |
| Existing Customers: CII | Hotel Retrofit (w/ financial assistance) - CII Existing | Following a free water audit, offer the hotel a rebate for equipment identified that would save water. Provide a rebate schedule for certain efficient equipment such as air-cooled ice machines, steamers, washers, cooling towers, and spray rinse valves. |
| Existing Customers: CII | CII Rebates - Replace inefficient water using equipment | Provide a rebate for a standard list of water efficient equipment. Included would be x-ray machines, icemakers, air-cooled ice machines, steamers, washers, spray valves, efficient dishwashers, replace once through cooling, add conductivity meters on cooling. |
| Existing Customers: CII | 0.5 gal/flush urinals in existing buildings | Provide a $350 rebate for existing buildings to encourage installation of 0.5 gal/flush urinals rather than the current standard of 1.0 gal/flush models. |
| SF, Condo, MF, COM, INS | Install AMS and Leak Detection Customer Notification | Install advanced metering systems (AMS) and leak detection meters. A call or email will be placed to customers if there is a leak. Will be as automated as possible by a computer program, use 1 full time staff person. Cost will be approximately $100,000 per year. |
| New Customers: SF, Condo, RMF, COM, INS | Rain-sensor shut off device on irrigation controllers | Require-sensor or rain shut off devices with all new automatic irrigation system installations on new homes and buildings. |
| New Customers: SF, Condo, RMF, COM, INS | Smart Irrigation Controller | Require developers to provide the latest state of the art SMART irrigation controllers. These SMART controllers have on-site temperature sensors or rely on a signal from a central weather station that modifies irrigation times at least weekly. |
| New Customers: SF, Condo, RMF, COM, INS | High Efficiency Toilet (HET) | Require developers to install a high efficiency toilet (HET). HET are defined as any toilet to flush 20% less than an ULFT and include dual flush technology. |
| New Customers: SF, Condo, RMF, COM, INS | Dishwasher New Efficient | Require developers to install an efficient dishwasher (meeting certain water efficiency standards, such as gallons/load). |
| New Customers: SF, Condo, RMF, COM, INS | Clothes washing machines requirement for new residential | Building departments would be responsible to ensure that an efficient washer was installed before new home or building occupancy. |
| New Customers: SF, Condo, RMF, COM, INS | Hot Water on Demand | Require developers to equip new homes or buildings with a hot water on demand system or tankless hot water heaters, such as those made by Metland Systems and others. These systems use a pump placed under the sink to recycle water sitting in the hot water pipes. |

**Table 3-15**
**Conservation Measure Descriptions**

| Customer Sector | Name of Measure | Description |
|---|---|---|
| New Customers: SF, Condo, RMF, COM, INS | High efficiency faucets and showerheads | Require developers to install lavatory faucets that flow at no more than 1.5 gallons per minute (gpm), kitchen faucets at 2.2 gpm, showerheads at 2.0 gpm. |
| New Customers: SF, Condo, RMF, COM, INS | Landscape and irrigation requirements | Enforce a regulation that specifies that homes or buildings be landscaped according to Xeriscape principals, with appropriate irrigation systems. (Combines with Smart Controller listed above). Goal is overall 25% in irrigation water use (measure 2 and 9 combined). |
| New Customers: MF | Multi Family Submetering | Require all new multi-family units to provide submeters on individual units. To help reduce financial impacts on tenants, regulators would be adopted that specify acceptable methods of metering and billing. |
| New Customers: CII | Offer new accounts reduced connection fees for installing efficient process equipment for selected businesses (restaurants, laundry mat, food/groceries and hospital) | Offer reduced water and sewer connection fees to new facilities to install water efficient equipment in new facilities that goes above and beyond the building code requirements. Model program after Santa Rosa's BAT program. |
| New Customers: CII | 0.5 gal/flush urinals in new buildings | Require that new buildings be fitted with 0.5 gal/flush urinals rather than the current standard of 1.0 gal/flush models. |

NOTE: RSF = Residential Single Family, RMF = Residential Multi-Family, NRSF = New Residential Single Family, COM = Business, INS = Institutional, IND = Industrial

**TECHNICAL MEMORANDUM**

DATE: April 5, 2012 Project No.: 705-04-10-04.003

TO: John Ferons, Public Works Director, City of St. Helena

FROM: Jim Connell, R.C.E. #63052

REVIEWED BY: Gerry Nakano, R.C.E. #29524

SUBJECT: 2010 Water Supply Plan—Impacts of Recent Water Supply Changes

The purpose of this technical memorandum (TM) is to document the recent changes to the City of St. Helena's (City's) potable water demand and potable water supply in support of the City's General Plan Environmental Impact Report. This TM supplements and modifies the information contained in the 2010 Water Supply Plan (West Yost Associates, October 2010). Since the 2010 Water Supply Plan was developed, the City has undertaken three tasks that affect water supply and demand planning. The three tasks are:

Task 1. Re-negotiated the Napa water agreement

Task 2. Amended the Water Shortage Emergency portion of the City Code

Task 3. Set a planning policy re-defining the safe yield from the City's water supply sources

The first two tasks affect the City's water supply and demand balance and the third task impacts the availability of City supplies to serve demands, which would affect growth in the City. This TM will explore the impact that these three tasks have on water supply planning. To be clear, this TM addresses water demand and supply for the public City facilities only and does not address private groundwater wells, or private surface water supplies.

In addition, the City adopted new water rates in 2011. The new water rates have a higher tiered rate structure than the previous water rates and should help encourage water conservation, which would then reduce potable water demand.

To facilitate cross-referencing with the 2010 Water Supply Plan, this TM describes the updates in the same order as the 2010 Water Supply Plan:

- Water Demand
- Water Supplies
- Comparison of Supply and Demand

- Water Supply Strategies
- Conclusions and Recommendations

### 1.1 WATER DEMAND

The purpose of this section is to describe the City's estimated and projected potable water demand through two buildout scenarios presented in the draft General Plan Update.

The following topics were discussed in the 2010 Water Supply Plan:

- Recent Historical Water Demands
- Unaccounted For Water
- Land Use and Population Growth
- Per Capita Water Use
- Projected Water Demand
- Impact of City Water Shortage Emergency Phases
- State Senate Billx 7-7 Water Conservation (demand reduction through mandatory conservation)
- Projected Maximum Day Demand

Most of the topics are not affected by the new water shortage emergency code amendments (Task 2), and are only briefly re-iterated herein.

#### 1.1.1 Recent Historical Water Demands

The recent historical metered water demands and unit water demands are discussed in Section 1.1.1 of the 2010 Water Supply Plan and not re-iterated here. This section was not affected by the City's recent work efforts.

#### 1.1.2 Unaccounted For Water

The estimate of historical unaccounted for (UAF) water is discussed in Section 1.1.2 of the 2010 Water Supply Plan and not re-iterated here, except to indicate that historical UAF has been 14 percent to 15 percent of the total water produced, but has recently dropped to 12 percent, according to the City's Public Works Director. This recent reduction in UAF water may be due to the City's recent customer water meter upgrade program, which replaced the customer potable water meters with new meters and registers. Low level leaks are often only partially measured by water meters. The new registers include a feature that will indicate if water use does not stop for a given period of time. This feature has allowed water customers to identify and remove leaks on their side of the water meter, which has the duel effect of reducing potable water demand for that portion of the leak that was accounted for in the meter reading and reduces unaccounted for water for that portion of the leak that did not cause the meter to register. UAF water is any non-metered or non-accounted for water demand, and represents both loss of water supply and lost revenue. This water is lost mainly because of unauthorized or un-measured consumption, meter inaccuracies, and system leaks.

The City intends to reduce the UAF water to less than 10 percent of the total water supplied, a value that is close to average for a typical, well operated water system. A UAF value of 10 percent of total water supplied is the factor used in these demand projections.

### 1.1.3 Land Use and Population Growth

The land use and population growth estimates are presented in Section 1.1.3 of the 2010 Water Supply Plan and not re-iterated here. As in 2010, the City is contemplating two buildout scenarios: the "***Likely Buildout Scenario***" and the "***Full Buildout Scenario***". This section was not affected by the City's recent work efforts.

### 1.1.4 Per Capita Water Use

Recent potable water production, estimated population, and per capita water use are documented in Section 1.1.4 of the 2010 Water Supply Plan. This section was not affected by the City's recent work efforts.

### 1.1.5 Projected Water Demand

The projected water demand under the ***Likely Buildout Scenario*** and the ***Full Buildout Scenario*** is discussed in Section 1.1.5 of the 2010 Water Supply Plan and briefly re-iterated below, although this section was not affected by the City's recent work efforts.

#### 1.1.5.1 Likely Buildout Scenario

The updated projected metered and total water demands for the ***Likely Buildout Scenario*** at several planning milestones are shown in Table 1-1 (Table 1-7 from the 2010 Water Supply Plan) As shown in Table 1-1, without water conservation measures, the metered water demand is projected to increase from 1,875 acre-feet per year (afy) to 2,116 afy by buildout, an increase of approximately 252 afy. This increase in metered water demand would require a total water supply of 2,350 afy by 2030 once a UAF water demand of 10 percent of total water supplied is added. Because the current UAF is greater than 10 percent, it is recommended that the City develop and execute a program of UAF reduction. Such programs usually include making sure all potable water system uses, whether revenue or non-revenue uses, are accounted for. Next, the City would identify and prioritize the areas of the distribution system that have the highest risk and highest likelihood of leaks (areas with a history of leakage, or older pipes in areas with high water pressure). Once likely areas are prioritized, the City would undertake a leak detection program (usually based on taking sound readings) to identify leaks in pipelines, which would then be repaired.

**Table 1-1. Total Projected Water Use at Milestone Years – Likely Buildout Scenario, acre-feet per year (Table 1-7 from the 2010 Water Supply Plan)**

| Land Use | 2008[a] | 2010[b] | 2020[b] | 2030[b] |
|---|---|---|---|---|
| Residential | 973 | 987 | 1,059 | 1,131 |
| Commercial, Retail, Institutional | 357 | 364 | 402 | 440 |
| Industrial | 149 | 149 | 149 | 149 |
| Landscaping | 83 | 83 | 83 | 83 |
| Outside City Limits | 313 | 313 | 313 | 313 |
| **Total and Projected Metered Water Demand** | **1,875** | **1,897** | **2,007** | **2,116** |
| Unaccounted For Water (10 percent) | 208 | 211 | 223 | 235 |
| **Total Projected Water Use** | **2,080** | **2,110** | **2,230** | **2,350** |

[a] Based on average Unit Water Demands in Table 1-1 of the 2010 Water Supply Plan and actual 2008 land use.
[b] Based on average Unit Water Demands in Table 1-1 of the 2010 Water Supply Plan and projected 2010, 2020, and 2030 land use for Likely Buildout Scenario.

1.1.5.2 Full Buildout Scenario

The updated projected metered and total water demands for the ***Full Buildout Scenario*** at several planning milestones are shown in Table 1-2 (Table 1-9 from the 2010 Water Supply Plan). As shown in Table 1-2, without water conservation measures, the metered water demand is projected to increase from 1,875 afy to 2,340 afy by buildout, an increase of approximately 465 afy. This increase in metered water demand would require a total water supply of 2,600 afy by 2030 once the UAF water demand is added.

**Table 1-2. Total Projected Water Use at Milestone Years – Full Buildout Scenario, acre-feet per year (Table 1-9 from the 2010 Water Supply Plan)**

| Land Use | 2008[a] | 2010[b] | 2020[b] | 2030[b] |
|---|---|---|---|---|
| Residential | 973 | 1,006 | 1,172 | 1,338 |
| Commercial, Retail, Institutional | 357 | 366 | 412 | 458 |
| Industrial | 149 | 149 | 149 | 149 |
| Landscaping | 83 | 83 | 83 | 83 |
| Outside City Limits | 313 | 313 | 313 | 313 |
| **Total Projected Metered Water Demand** | **1,875** | **1,917** | **2,129** | **2,341** |
| Unaccounted For Water (10 percent) | 208 | 213 | 237 | 260 |
| **Total Projected Water Use (rounded)** | **2,080** | **2,130** | **2,370** | **2,600** |

[a] Based on Unit Water Demands in Table 1-1 and actual 2008 land use.
[b] Based on Unit Water Demands in Table 1-1 and projected 2010, 2020, and 2030 land use for Full Buildout Scenario.

### 1.1.6 Impact of City Water Shortage Emergency Phases

The City has recently adopted amendments to its Water Shortage Emergency (WSE) code. The amendments create three WSE phases instead of the previous five phases. The intent of the amendments is to create WSE Phases that are less likely to be triggered and are more restrictive when triggered. The amended regulations are encoded in City Code Title 13.04, Article 2 Water Shortage Emergencies.

The City now has a worksheet to assist the Public Works Director in determining if water supplies are sufficient to meet demands, or if a Water Shortage Phase should be triggered.

In 2010, West Yost Associates (West Yost) reviewed the then current five Water Shortage Emergency Phases of Action and Triggers, and estimated the impact that each Water Shortage Phase would have on reducing total water demands. For this supplement to the Water Supply Study, West Yost repeated the analysis with the amended City Code and the three Water Shortage Emergency Phases of Action and Triggers.

The estimated impact of the City's current Water Shortage Emergency demand reduction measures on the total potable water demand at buildout of the ***Likely Buildout Scenario*** is shown in Table 1-3 (modified from Table 1-10 in the 2010 Water Supply Plan).

**Table 1-3. Projected Effect of City Existing Water Shortage Emergency Phases, Year 2030 Likely Buildout Scenario (Modified from Table 1-10 from the 2010 Water Supply Plan)**

| Water Shortage Emergency Phase[a] | Estimated Demand Reduction, Percent | Estimated Percent of Normal Demand | Projected Demand in 2030, acre-feet per year[b] |
|---|---|---|---|
| No Shortage | 0 | 100 | 2,350 |
| I | 10 | 90 | 2,115 |
| II | 25 | 75 | 1,763 |
| III | 37 | 63 | 1,481 |

[a] Based on current City Code Title 13.04, Article 2 Water Shortage Emergencies.
[b] Based on Likely Buildout Scenario.

The estimated impact of the City's current Water Shortage Emergency demand reduction measures on the total potable water demand at buildout of the ***Full Buildout Scenario*** is shown in Table 1-4 (modified from Table 1-11 in the 2010 Water Supply Plan).

**Table 1-4. Projected Effect of City Existing Water Shortage Emergency Phases, Year 2030 Full Buildout Scenario (Modified from Table 1-11 from the 2010 Water Supply Plan)**

| Water Shortage Emergency Phase[a] | Estimated Demand Reduction, Percent | Estimated Percent of Normal Demand | Projected Demand in 2030, acre-feet per year[b] |
|---|---|---|---|
| No Shortage | 0 | 100 | 2,600 |
| I | 10 | 90 | 2,340 |
| II | 25 | 75 | 1,950 |
| III | 37 | 63 | 1,638 |

[a] Based on current City Code Title 13.04, Article 2 Water Shortage Emergencies.
[b] Based on Full Buildout Scenario.

### 1.1.7 State Senate Billx 7-7 Water Conservation

The estimation of the impacts that Senate Billx 7-7 (SBx 7-7) would have on the City's water demand if it were required to comply are described in Section 1.1.7 of the 2010 Water Supply Plan. To re-iterate, the City is not required to comply with SBx 7-7 because it serves fewer than 3,000 customers and produces less than 3,000 acre-feet of water each year. However, reducing the per capita water demand would have the impact of increasing the sustainability of the water supply and is often considered a demonstration of good stewardship of natural resources.

SBx 7-7 provides four alternative methods to calculate the target per capita water demand (defined as the total water supply divided by the total service area population). The four methods are discussed in the 2010 Water Supply Study. If the City were required to base its potable water conservation targets on the requirements of SBx 7-7, West Yost would recommend the use of Method 1. With a projected service area population of 7,219 persons in 2020 and 7,654 persons in 2030 for the ***Likely Buildout Scenario***, and a per capita water demand of 227 gallons per capita per day (gpcd) (80 percent of historical average of 284 gpcd), the projected total annual potable water use would be reduced from 2,230 afy to 1,841 afy by 2020 and from 2,350 afy to **1,946 afy by 2030**, assuming buildout under the ***Likely Buildout Scenario***. Under the ***Full Buildout Scenario***, complying with Method 1 would reduce the projected total annual potable water use from 2,360 afy to 2,014 afy by 2020 and from 2,600 afy to 2,263 afy by 2030, because of greater projected population.

If the City were to hold development at the current level, and if it were subject to SBx 7-7, water demands would have to be reduced to approximately 1,715 afy (target per capita water demand of 227 gpcd x estimated service area population of 6,471 persons). The use of Lower Reservoir would count toward the 1,715 afy of total supply, but any use of recycled water would not, and serves to lower the per capita water demand.

### 1.1.8 Projected Maximum Day Demand

The City's historical and projected maximum day demand is discussed in Section 1.1.8 of the 2010 Water Supply Plan. The changes discussed in this TM do not affect the findings of the 2010 Water Supply Plan for this topic.

## 2.1 WATER SUPPLY

The purpose of this section is to describe the City's historical and projected potable water supply through buildout of the draft General Plan in 2030. This section addresses projected water supplies and current contractual agreements. Impacts of proposed policies, including limiting water demand to within the definition of safe yield, are discussed in Section 4 of this TM.

The current sources of potable water include Bell Canyon Reservoir, Napa Contract Water, and groundwater. The agreement with the City of Napa to provide potable water has recently been amended so that the City is guaranteed to receive 600 afy under all hydrologic conditions. Only the water supply components that are affected by the new Napa Water Agreement, which extends to 2035 and can be renewed based on renewal of the State Water Project contracts, are discussed herein.

Lower Reservoir has also been used as a source of non-potable water for landscape irrigation, and recycled water is a potential future source of non-potable water for landscape irrigation.

### 2.1.2 Bell Canyon Reservoir

Bell Creek (or Howell Creek in some records), as impounded in Bell Canyon Reservoir, has been the City's major water supply source for several decades. The historical and projected yield from Bell Canyon Reservoir is discussed in Section 2.1.2 of the 2010 Water Supply Plan and summarized below. This supply has not been affected by the City's recent work efforts.

The estimated Sustainable Yield is summarized in Table 2-1 (Table 2-3 from the 2010 Water Supply Plan).

**Table 2-1. Estimated Sustainable Yield of Bell Canyon Reservoir (Table 2-3 of 2010 Water Supply Plan)**

| Condition | Minimum Rainfall, inches | Estimated Sustainable Yield[a], acre-feet per year | Notes |
|---|---|---|---|
| Wet Years | 38.5 | 1,100 | Corresponds to 40 percent Exceedence |
| Normal Year | 32.7 | 1,000 | Corresponds to 60 percent Exceedence |
| Below Normal Year | 26.0 | 800 | Corresponds to 82 percent Exceedence |
| Dry Year | 22.0 | 600 | Corresponds to 90 percent Exceedence |
| Critical Dry Year | 10.4 | 500 | Corresponds to 100 percent Exceedence |

[a] Based on Sustainable Yield Reservoir Model described in Appendix B of the 2010 Water Supply Plan, rounded to the nearest 100 acre-feet.

The estimated Sustainable Yields, summarized in Table 2-1, include consideration of required bypass flows and the effects of evaporation, and therefore represents the supply available to the City.

### 2.1.3 City of Napa Water Agreement

The City has entered into and recently amended a water supply agreement with the City of Napa to supplement dry year weather supplies. The agreement took effect in 2006 and extends through the State Water Project contract duration at the end of 2035. This contract can be renewed pending renewal of the Napa Flood Control and Water Conservation District's State Water Project contract. This most recent (third) amendment to the water supply agreement was effective in late 2011 and has one tier of water availability, providing 600 afy under all hydrologic conditions, and available year-round. This is a significantly changed condition from the three-tiered (400, afy, 600 afy, and 800 afy) original agreement as modified by the first two amendments.

### 2.1.4 Groundwater

According to the Master Water Plan, the City's two groundwater supply wells, known as Stonebridge Wells 1 and 2, have a combined capacity of 650 gallons per minute, which could provide 1,050 afy of potable water per year if both wells could be operated continuously (24 hours per day, for 365 days). Operating any facility at 100 percent capacity on a continuous basis is not recommended. The City will need additional groundwater production capacity to meet water delivery requirements in dry years. This supply has not been affected by the City's recent work efforts.

City practice currently restricts the production from these wells to no more than 20 percent of the total demand, except in Phase II or Phase III water shortage emergencies. The groundwater wells have historically been operated to provide approximately 20 percent of the total potable water produced. The City also maintains wells for non-potable park and landseape irrigation, but their use is restricted to small areas, and is not included in this analysis. Also not included in this analysis is the pumpage from any private groundwater wells whether located inside or outside of City limits.

### 2.1.5 Lower Reservoir

The City currently uses Lower Reservoir to supply non-potable water to Robert Louis Stevenson Middle School for irrigation of a portion of the playing fields, and to Spring Mountain Winery to serve a portion of their non-potable water demands. According to the Master Water Plan, non-potable water deliveries have ranged from 14 to 19 acre-feet per year from 1996 through 2002. Recently (Fiseal Year 2002-2007) annual metered water use for the two Lower Reservoir water customers has been approximately 50 afy (total for the two customers). This supply has not been affected by the City's recent work efforts.

### 2.1.6 Recycled Water

In the future, it is the City's intent to be able to serve portions of its non-potable water demands, currently served through the potable water system, with highly treated wastewater (Title 22 tertiary, unrestricted reuse). This highly treated wastewater will become available as funding allows for construction of the necessary treatment/process facilities at the wastewater treatment plant and the associated transmission/distribution piping network.

The use of recycled water to offset potable demands is not included in the SBx 7-7 calculation of per capita water use; therefore, any volume of existing potable water use that the City can convert to recycled water use would further reduce the City's per capita potable water use. This supply has not been affected by the City's recent work efforts (amending the water supply agreement with Napa, re-structuring the water shortage emergency phases, and defining the safe yield of the water supply). The use of recycled water continues to not be included in the water supply planning assumptions at this time.

### 2.1.7 Current Water Supply Balance for Planning Purposes

The existing revised (to include the new Napa Water Agreement) potable water supply for planning purposes is shown in Table 2-2. The current groundwater use practice is to use groundwater up to 20 percent of the total potable water supply in most years, and 30 percent of the total water supply in Dry and Critically Dry Years (WSE Phase II and Phase III).

**Table 2-2. Estimated Current Potable Water Supply[a], acre-feet per year (modified from Table 2-5 of the 2010 Water Supply Study)**

| Water Supply[b] | Wet Year (40 percent exceedence) No Water Shortage Emergency | Normal Year (60 percent exceedence) No Water Shortage Emergency | Below Normal Year (82 percent exceedence) Phase I WSE | Dry Year (90 percent exceedence) Phase II WSE | Critical Dry Year (100 percent exceedence) Phase III WSE |
|---|---|---|---|---|---|
| Bell Canyon Reservoir | 1,100 | 1,000 | 800 | 600 | 500 |
| Napa Water Agreement | 600 | 600 | 600 | 600 | 600 |
| Groundwater[a] | 425 | 400 | 350 | 514 | 471 |
| Total Potable Water Supply | 2,125 | 2,000 | 1,750 | 1,714 | 1,571 |

[a] Assumes groundwater will be 20 percent of total supply in most years and 30 percent of total supply in Dry and Critical Dry Years.

It is interesting to note that the amended Napa Water Agreement results in a lower total water supply during Wet, Normal, and Below Normal Years and a greater water supply during Critical Dry Years than calculated in Table 2-5 of the 2010 Water Supply Plan because of changes to the Napa Water Agreement. Water supply during Dry Years does not change.

A comparison of available water supply and projected demand is discussed in Section 3.

### 2.1.8 Maximum Day Production Capacity

The maximum day production capacity is discussed in Section 2.1.8 of the Water Supply Plan. This capacity has not been affected by the City's recent work efforts.

## 3.1 COMPARISON OF SUPPLY AND DEMAND

The purpose of this section is to compare the potable water demand projected in Section 1 to the potable water supply described in Section 2, and to identify several possible measures that could be initiated to better match demand to available supply.

Specific water supply strategies that incorporate the measures described in this section to balance water demand and water supply are described in Section 4.

For purposes of this analysis, West Yost assumed a correlation between each City water shortage emergency phase and hydrologic condition. The assumed correlation is shown in Table 3-1.

**Table 3-1. Assumed Correlation Between Hydrologic Condition and Water Shortage Emergency Phase (modified from Table 3-1 of the 2010 Water Supply Study)**

| Hydrologic Condition | Water Shortage Emergency Phase |
|---|---|
| Wet Years | No Shortage |
| Normal Year | No Shortage |
| Below Normal Year | I |
| Dry Year | II |
| Critical Dry Year | III |

A comparison of projected total potable water demand without water conservation to the Normal Year water supply, based on the current groundwater use practice and the ***Likely Buildout Scenario*** is shown in Table 3-2 for several milestone years.

**Table 3-2. Comparison of Normal Year Potable Water Demand and Supply at Milestone Years – Likely Buildout Scenario, acre-feet per year (modified from Table 3-2 of the 2010 Water Supply Study)**

| Land Use | 2008 | 2010 | 2020 | 2030 |
|---|---|---|---|---|
| Total Projected Water Use[a] | 2,080 | 2,110 | 2,230 | 2,350 |
| Total Projected Normal Year Water Supply[b] | 2,000 | 2,000 | 2,000 | 2,000 |
| Water Supply Surplus (Deficit) | (80) | (110) | (230) | (350) |

(a) See Table 1-1.
(b) See Table 2-2.

The supply and demand comparison at buildout of the draft General Plan (2030) ***Likely Buildout Scenario*** is shown in Table 3-3 for several hydrologic conditions.

**Table 3-3. Comparison of Potable Water Demand and Supply under Several Hydrologic Conditions – Buildout of Likely Buildout Scenario, acre-feet per year (modified from Table 3-3 of the 2010 Water Supply Study)**

| Water Supply[a] | Wet Year (40 percent exceedence) No Water Shortage Emergency | Normal Year (60 percent exceedence) No Water Shortage Emergency | Below Normal Year (82 percent exceedence) Phase I WSE | Dry Year (90 percent exceedence) Phase II WSE | Critical Dry Year (100 percent exceedence) Phase III WSE |
|---|---|---|---|---|---|
| Total Potable Water Demand[a] | 2,350 | 2,350 | 2,115 | 1,763 | 1 481 |
| Total Potable Water Supply[b] | 2,125 | 2,000 | 1,750 | 1,714 | 1,571 |
| Water Supply Surplus (Deficit) | (250) | (350) | (365) | (49) | 90 |

[a] See Table 1-3.
[b] See Table 2-2.

As can be seen in Table 3-3, the Total Potable Water Supply, as documented in Table 2-2, is NOT capable of providing reliable supplies under all hydrologic conditions, except the Critical Dry Year, due to a combination of increased groundwater pumping and Phase III WSE demand management measures. As demands continue to rise through buildout of the ***Likely Buildout Scenario***, additional supplies, or additional conservation (or more aggressive demand management measures) will be required to eliminate the identified supply deficiency through buildout of the ***Likely Buildout Scenario***.

A comparison of projected total potable water demand without water conservation to the Normal Year water supply, based on the current groundwater use practice and the ***Full Buildout Scenario***, is shown in Table 3-4 for several milestone years.

**Table 3-4. Comparison of Normal Year Potable Water Demand and Supply at Milestone Years – Full Buildout Scenario, acre-feet per year (modified from Table 3-4 of the 2010 Water Supply Study)**

| Land Use | 2008 | 2010 | 2020 | 2030 |
|---|---|---|---|---|
| Total Projected Water Use[a] | 2,080 | 2,130 | 2,370 | 2,600 |
| Total Projected Normal Year Water Supply[b] | 2,000 | 2,000 | 2,000 | 2,000 |
| Water Supply Surplus (Deficit)[c] | (80) | (130) | (370) | (600) |

[a] Table 1-2.
[b] Table 2-2.

The supply and demand comparison at buildout of the draft General Plan ***Full Buildout Scenario*** is shown in Table 3-5 for several hydrologic conditions, using the same correlation between water shortage emergency phase and hydrologic condition shown in Table 3-1.

**Table 3-5. Comparison of Potable Water Demand and Supply under Several Hydrologic Conditions – Buildout of Full Buildout Scenario, acre-feet per year (modified from Table 3-5 of the 2010 Water Supply Study)**

| Water Supply | Wet Year (40 percent exceedence) No Water Shortage Emergency | Normal Year (60 percent exceedence) No Water Shortage Emergency | Below Normal Year (82 percent exceedence) Phase I WSE | Dry Year (90 percent exceedence) Phase II WSE | Critical Dry Year (100 percent exceedence) Phase III WSE |
|---|---|---|---|---|---|
| Total Potable Water Demand[a] | 2,600 | 2,600 | 2,340 | 1,950 | 1,638 |
| Total Potable Water Supply[b] | 2,125 | 2,000 | 1,750 | 1,714 | 1,571 |
| Water Supply Surplus (Deficit) | (476) | (600) | (590) | | (67) |

[a] See Table 1-10.
[b] See Table 2-5.

As shown in Table 3-4 and Table 3-5, the City's current groundwater use practice of only providing 20 percent to 30 percent of the total potable water supply, coupled with the City's other water supply sources, cannot provide a reliable water supply for the ***Full Buildout Scenario.***

The deficit between the potable water supply and the potable water demand can be mitigated by some combination of the following three measures:

- Increasing surface water supply;
- Reducing potable water demand; and
- Increasing groundwater supply.

The potential for each mitigation measure is briefly described below.

### 3.1.1 Increasing Surface Water Supply

Possible methods to increase the City's surface water supply are discussed in Section 3.1.1 of the 2010 Water Supply Plan.

For purposes of this study, increasing the City's surface water supply is not included in the projected water supply, as the previously described options still apply, and continue to remain unviable due to a combination of the cost of increasing the capacity of Bell Canyon Reservoir coupled with concerns over the possible regulatory increase in downstream reservoir bypass flows/releases which could lead to a net decrease in supply availability from Bell Canyon; and, the uncertainty over whether increasing the contract water supply from Napa is possible.

### 3.1.2 Reducing Potable Water Demand

Possible methods to decrease the City's potable water demand are discussed in Section 3.1.2 of the 2010 Water Supply Plan, and these options all still apply. The Water Use Efficiency Recommendations discussed in the 2010 Water Supply Plan are listed below:

- Hire a full-time Water Conservation Coordinator;
- Modify rate structure to increase high tier rates;
- Update the new construction offset program;
- Fully develop the meter leak detection and monitoring program (this work has been completed as of this writing);
- Establish an Irrigation Advisory Service and Promote "Smart Irrigation Controllers;"
- Adopt requirements for "ultra-efficient" plumbing fixtures for new development and rebates to existing users;
- Provide Incentives for replacement of turf (New); and
- Provide Incentives for roof water catchment (New).

The City has increased its water rates, including the higher tiers (second bullet). The next step would be to establish water budgets for all potable water customers. This step is data and staff intensive to initiate, but has been shown to reduce potable water demands while maintaining water enterprise revenues. The water budget rate structure should not be attempted prior to filling the Water Conservation Coordinator position.

### 3.1.3 Increasing Groundwater Supply

Based upon currently available groundwater data, and historical groundwater level trends, it appears that the City could increase groundwater pumping by at least several hundred afy per year and not exceed the perennial yield of the basin. Increased use of groundwater would provide the water supply the City requires to decrease or eliminate its water supply deficiency. In 2005, West Yost provided an assessment of the groundwater under the City area and identified possible new well locations. The assessment concluded that the City's current seasonal groundwater pumping is "well within" the perennial yield of the overall groundwater basin; however, a perennial yield estimate was not developed. Additionally, the 2050 Napa Valley Water Resources Study compiled groundwater resource data from various sources, all of which indicate that, in the main Napa Valley Groundwater Basin, including the St. Helena area, groundwater levels have been stable over the period of record (1950 to 2005) and there is no indication that the perennial yield has been exceeded. The perennial yield (i.e annual basin recharge) of the main groundwater basin was estimated by several qualified hydrogeologists as being anywhere from 21,000 afy to almost 30,000 afy, with a volume in storage of over 200,000 acre-feet. Although only a portion of the total basin recharge and storage would be attributable to the immediate area around St. Helena, the City's long-term pumping average of 450 afy is not a significant draw on the groundwater basin.

The recent (February 2011) Napa County Comprehensive Groundwater Management Program re-iterates that groundwater levels in the main Napa Valley Groundwater Basin and in the St. Helena area have been stable over the period of record. The monitoring wells with the longest periods of record (roughly 1950 to 2010) are located north and south of the City limits.

City policies to further curtail groundwater use will further exacerbate the water supply deficit, unless paired with either an aggressive reduction in the potable water demand or increasing the available surface water supply.

The water supply strategies discussed in Section 4 provide specific opportunities for the City to evaluate the various water supply deficit reduction strategies, and balance demands and supplies under different hydrologic conditions.

### 3.1.4 Potable Water Production Capacity

The total potable water production capacity is discussed in Section 3.1.4 of the 2010 Water Supply Plan, and this discussion does not need to be updated.

## 4.1 WATER SUPPLY STRATEGIES

The purpose of this section is to describe water supply strategies that the City could adopt to ensure sufficient and reliable water supplies to meet current and future water demand needs. This section first describes the five water supply concept strategies, and then applies the strategies to the ***Likely Buildout Scenario*** and the ***Full Buildout Scenario***. The summary tables indicate the amount of groundwater that would need to be pumped under each strategy for the Normal Year hydrologic condition, as well as the long-term water conservation and short-term water conservation action plans that would be required to balance supply and demand. This section is updated from Section 4.1 of the 2010 Water Supply Plan to include the revised water supply and Water Shortage Emergency Phases (which includes and codifies the City's definition of "safe yield"), per the City's Safe Yield Committee's estimation of 1,950 afy as the "safe yield" of the current water supply. The 1993 General Plan and the Draft 2010 General Plan Update both limit development of new water demand to within the "safe yield" of the water supply. In 1993, the "safe yield" was calculated based on the actual historical average supply from Bell Canyon Reservoir, plus an estimated volume to be withdrawn from the new Stonebridge groundwater well. In 2010 and 2011, the City's Safe Yield Committee defined "safe yield" as the Dry Year water supply, and estimated that supply to be 1,950 afy. The City's definition of Safe Yield is less stringent than the 2010 Water Supply Plan's definition of Safe Yield, which is the Critical Dry Year water supply. The City's definition of Safe Yield is similar to the 2010 Water Supply Plan's definition of "Sustainable Yield". In general, the 2010 Water Supply Plan defines the Sustainable Yield as the long-term sustainable yield considering carryover storage under various hydrologic conditions. The City has selected the Dry Year hydrologic condition (90 percent exceedence) as the Safe Yield of the water supply.

### 4.1.1 Water Supply Strategy Concepts

The water supply strategies discussed in the 2010 Water Supply Plan and updated below present several points on a continuum between low water conservation action plans combined with more groundwater use than current practice, and high water conservation action plans combined with lower groundwater use than current practice. In addition, in response to the Safe Yield Committee's recommendation that development be restricted when the City's total water demand exceeds 1,950 afy, an additional point on the continuum limiting water demands to 1,950 afy is discussed.

The City can either select the amount of water conservation it will require the public to implement and determine the resulting groundwater use necessary to meet demands, or choose the level of desired groundwater pumping and determine the resulting required water conservation. Additional strategies that incorporate increased or decreased surface water supplies are not being considered at this time. Four concept-level water supply strategies are suggested for discussion purposes, plus the new definition of Safe Yield of 1,950 afy is included as a fifth strategy. Two of the strategies are "bookend" strategies that minimize (Strategy 1) or maximize (Strategy 4) water conservation efforts, but without changing the "look and feel" of the St. Helena landscape. These strategies have been analyzed for both the ***Likely Buildout Scenario*** and the ***Full Buildout Scenario***. Additional groundwater use or much more aggressive water conservation programs would be required under the ***Full Buildout Scenario***.

**Strategy 1: Minimize Water Conservation (results in an average long-term groundwater pumping of 650 afy):**

The first strategy would be to continue current City conservation activities and not initiate any new long-term water conservation programs. Therefore, to meet demands, the annual groundwater quantity pumped would have to be increased to eliminate Normal Year supply deficits for each analyzed buildout scenario. This strategy would require a total potable water supply of 2,350 afy in Normal Years for the ***Likely Buildout Scenario*** and 2,600 afy in Normal Years for the ***Full Buildout Scenario*** (see Tables 4-2 and 4-5 respectively).

**Strategy 2: Hold Groundwater to Historical Average of 450 afy:**

A second strategy would be to hold average groundwater use to the current (10 year average) groundwater use of 450 afy. This strategy would require a total potable water supply of 2,043 afy in Normal Years for the ***Likely Buildout Scenario*** and 2,005 afy in Normal Years for the ***Full Buildout Scenario*** (see Tables 4-2 and 4-5 respectively). Water conservation would be required under either buildout scenario, but less conservation would be required for the ***Likely Buildout Scenario*** than for the ***Full Buildout Scenario***.

**Strategy 3: Hold Supply to 2008 Levels (results in a long-term average groundwater pumping of 481 afy):**

A third strategy would be to initiate sufficient water conservation programs to keep the total potable water supply/demand to current (2008) levels (and keep each supply component at 2008 levels). This strategy would require a total potable water supply of 2,080 afy in Normal Years for both buildout scenarios. Water conservation would be required under either buildout scenario, but less conservation would be required for the ***Likely Buildout Scenario*** than for the ***Full Buildout Scenario*** (see Tables 4-2 and 4-5 respectively).

**Strategy 4: Maximize Water Conservation (results in a long-term average groundwater pumping of 251 afy):**

A fourth strategy would be to initiate sufficient water conservation programs to reduce the total potable water demand to the projected Normal Year surface water supply of 1,800 afy (based on the 2010 Normal Year water supply without using groundwater), thereby minimizing groundwater use. Although included in the summary tables, this strategy is not considered achievable for the ***Full Buildout Scenario,*** because it would require severe changes to the City landscape due to the extensive conservation and demand management programs that would have to be adopted and implemented to reduce demands to the available supplies without the use of groundwater (see Tables 4-2 and 4-5 respectively).

**Strategy 5: Hold Water Supply to 1,950 afy, and keep the long-term average groundwater pumping to 450 afy:**

A fifth strategy combines the concepts of some of the above strategies by limiting the total water supply to a set amount, similar to Strategy 3 and Strategy 4, except the volume is 1,950 afy instead of 2,080 afy (Strategy 3) or 1,800 afy (Strategy 4). Strategy 5 also requires the long-term groundwater pumping to not exceed the long-term historical average of 450 afy (as in Strategy 2). Although included in the summary tables, this strategy is not considered achievable for the ***Full Buildout Scenario,*** because it would require severe changes to the City landscape due to the extensive conservation and demand management programs that would have to be adopted and implemented to reduce demands to the available supplies without the use of groundwater (see Tables 4-2 and 4-5 respectively).

To develop a weighted average use of each water supply source under each of the water supply strategies over a variety of hydrologic conditions, West Yost applied the estimated frequency of occurrence of each hydrologic condition, discussed in Section 2 and shown in Table 4-1 (Table 4-1 from 2010 Water Supply Plan), to the five water supply strategies discussed above.

**Table 4-1. Historical Frequency of Hydrologic Conditions (Table 4-1 in 2010 Water Supply Plan)**

| Hydrologic Condition | Exceedence, percent[a] | Frequency of Occurrence, percent[b] |
|---|---|---|
| Wet Year | 40 | 40 |
| Normal Year | 60 | 20 |
| Below Normal Year | 82 | 22 |
| Dry Year | 90 | 8 |
| Critical Dry Year | 100 | 10 |
| | Total | 100 |

[a] Percent of the years that would have more precipitation than the hydrologic condition.
[b] To calculate a weighted average of annual groundwater use, any year drier than a "Dry Year", for example, is assumed to be a "Critically Dry Year" for planning purposes.

The impact of the City's Water Shortage Emergency Phases was also taken into consideration when estimating the weighted average use of each water supply source. As shown in Section 1 (Table 1-3 and Table 1-4), under the strictest Water Shortage Emergency Phases, the projected short-term water conservation measures are estimated to reduce potable water demand to less than 1,489 afy and 1,638 afy under the ***Likely Buildout Scenario*** and ***Full Buildout Scenario***, respectively.

### 4.1.2 Likely Buildout Scenario

The required water supply, long-term water conservation measures, and short-term demand reduction measures necessary to eliminate projected water supply deficits at buildout of the ***Likely Buildout Scenario*** are discussed in Section 4.1.2 of the 2010 Water Supply Study and updated below. **Each scenario assumes complete removal of the projected water supply deficit that was identified in Section 3.**

The Normal Year water supply and required long-term water conservation for 2030 for the five water supply strategies under the ***Likely Buildout Scenario*** are summarized in Table 4-2.

**Table 4-2. Possible Normal Year Water Supply Strategies, Year 2030 Likely Buildout Scenarios, acre-feet per year[a] (Modified from Table 4-2 of 2010 Water Supply Plan)**

| Water Supply | Strategy 1A: Minimize Required Water Conservation (Likely) | Strategy 2A: Hold Groundwater Use to Historical Average | Strategy 3A: Hold Supply to 2008 Levels | Strategy 4A: Maximize Required Water Conservation | Strategy 5A: Hold Supply to 1,950 afy |
|---|---|---|---|---|---|
| Bell Canyon Reservoir | 1,000 | 1,000 | 1,000 | 1,000 | 1,000 |
| Napa Water Agreement | 600 | 600 | 600 | 600 | 600 |
| Groundwater | 550 | 443 | 480 | 200 | 350 |
| **Total Potable Water Supply/Demand** | **2,350** | **2,043** | **2,080** | **1,800** | **1,950** |
| Required Long-Term Water Conservation[b] | — | 277 | 243 | 495 | 360 |

[a] See Section 4.1.1 for a discussion of each strategy.
[b] Required reduction in Metered Potable Water Demand, reduction in total water demand would include UAF water.

As the City initiates more stringent long-term water conservation measures, the ability to reduce water demand under short-term drought conditions is lessened considerably, a phenomenon known as "demand hardening." Applying the impact of the Water Shortage Emergency Phases shown in Table 1-3 to the five water supply strategies shown in Table 4-2 yields the projected required total potable water supply for the five water supply strategies under several hydrologic conditions shown in Table 4-3.

**Table 4-3. Projected Required Potable Water Supply for Five Water Supply Strategies under Various Hydrologic Conditions, Year 2030 Likely Buildout Scenario, acre-feet per year[a] (Modified from Table 4-3 of 2010 Water Supply Plan)**

| Water Supply Strategy | Wet Year (40 percent exceedence) No Water Shortage Emergency | Normal Year (60 percent exceedence) No Water Shortage Emergency | Below Normal Year (82 percent exceedence) Phase I WSE | Dry Year (90 percent exceedence) Phase II WSE | Critical Dry Year (100 percent exceedence) Phase III WSE |
|---|---|---|---|---|---|
| Strategy 1A: Minimize Required Water Conservation (Likely)[b] | 2,350 | 2,350 | 2,115 | 1,763 | 1,481 |
| Strategy 2A: Hold Groundwater Use to Historical Average[c] | 2,043 | 2,043 | 2,043 | 1,763 | 1,481 |
| Strategy 3A: Hold Supply to 2010 Levels[c] | 2,080 | 2,080 | 2,080 | 1,763 | 1,481 |
| Strategy 4A: Maximize Required Water Conservation[c] | 1,800 | 1,800 | 1,800 | 1,763 | 1,481 |
| Strategy 5A: Hold Water Supply to 1,950 AFY[d] | 1,950 | 1,950 | 1,950 | 1,950 | 1,950 |

[a] Values shown are the Normal Year water demands subjected to the City's codified water shortage emergency phase cut backs.
[b] See Table 1-10.
[c] Values are the lesser of Normal Year values in Table 4-2 or the Minimize Required Water Conservation (Likely) values in this table.
[d] As shown in Table 4-4, short-term demand reduction measures (aka Water Shortage Emergency Phases) are not necessary under this scenario.

The values from Table 4-3 were multiplied by the estimated Frequency of Occurrence in Table 4-1 , to develop weighted average water supply for each water supply/demand Strategy. The resulting estimated weighted average use of each water supply source, the required long-term water conservation, and the required short-term water conservation for the five water supply strategies is shown in Table 4-4.

**Table 4-4. Weighted Average Water Supply for Five Water Supply Strategies over Several Hydrologic Conditions, Year 2030 Likely Buildout Scenario, acre-feet per year[a] (Modified from Table 4-4 of 2010 Water Supply Plan)**

| Water Supply | Strategy 1A: Minimize Required Water Conservation | Strategy 2A: Hold Groundwater Use to Historical Average | Strategy 3A: Hold Supply to 2008 Levels | Strategy 4A: Maximize Required Water Conservation | Strategy 5A: Hold Supply to 1,950 afy |
|---|---|---|---|---|---|
| Bell Canyon Reservoir | 914 | 914 | 914 | 914 | 900 |
| Napa Water Agreement | 600 | 600 | 600 | 600 | 600 |
| Groundwater Use | 650 | 450 | 481 | 251 | 450 |
| **Total Weighted Average Water Supply** | **2,164** | **1,964** | **1,995** | **1,765** | **1,950** |
| Long-Term Water Conservation[b] | — | 277 | 243 | 495 | 360 |
| Short-Term Demand Reduction Measures[c] | 167 | 71 | 77 | 31 | —[d] |

[a] Assumes frequency of occurrence of hydrologic conditions shown in Table 3-8.
[b] Table 4-2.
[c] Weighted average reduction in total metered potable water demand based on a comparison of supply and demand for each hydrologic condition, and each water supply/demand strategy.
[d] No short-term demand management measures (aka Water Shortage Emergency Phases) are required; however, groundwater pumping during a Critically Dry Year would be 850 acre-feet.

The projected water supply under Strategy 5A, which is the City's preferred policy based on the "Safe Yield" definition of 1,950 afy, is shown in Table 4-4A for several hydrological conditions.

**Table 4-4A. Calculation of Weighted Average Water Supply for Water Supply Strategy 5A over Several Hydrologic Conditions, Year 2030 Likely Buildout Scenario, acre-feet per year[a]**

| Water Supply | Bell Canyon Reservoir | Napa Water Agreement | Groundwater Use | Total Water Supply | Percent of Weighted Average |
|---|---|---|---|---|---|
| Wet Year (40 percent exceedence) | 1,065 | 600 | 285 | 1,950 | 40 |
| Normal Year (60 percent exceedence) | 1,000 | 600 | 350 | 1,950 | 20 |
| Below Normal Year (82 percent exceedence) | 800 | 600 | 550 | 1,950 | 22 |
| Dry Year (90 percent exceedence) | 600 | 600 | 750 | 1,950 | 8 |
| Critical Dry Year (100 percent exceedence) | 500 | 600 | 850 | 1,950 | 10 |
| Long-term Weighted Average | 900 | 600 | 450 | 1,950 | 100 |

[a] Assumes frequency of occurrence of hydrologic conditions shown in Table 3-8.

The recent historical average groundwater use has been approximately 450 afy (2000-2009). One of the five water supply strategies discussed above (Strategy 4A) would result in a net reduction in groundwater use over the long-term, and two (Strategy 2A and Strategy 5A) are targeted to result in the same long-term average groundwater use. Strategy 5A is intended to reduce the need for Water Shortage Emergencies; however, Strategy 5A would result in long-term average groundwater use of over 23 percent of the total water supplied (450/1,950), which is in excess of the current City policy of limiting groundwater supply to 20 percent of the total supply except during a Phase II or greater Water Shortage Emergency.

### 4.1.3 Full Buildout Scenario

The required water supply, long-term water conservation measures, and short-term demand reduction measures necessary to eliminate projected water supply deficits at buildout of the ***Full Buildout Scenario*** are discussed below. **Each scenario assumes complete removal of the projected water supply deficit that was identified in Section 3.**

The Normal Year water supply and required long-term water conservation for 2030 for the five water supply strategies under the ***Full Buildout Scenario*** are summarized in Table 4-5.

**Table 4-5. Possible Normal Year Water Supply Strategies, Year 2030 Full Buildout Scenario, acre-feet per year[a] (Modified from Table 4-5 of 2010 Water Supply Plan)**

| Water Supply | Strategy 1B: Minimize Required Water Conservation (Full) | Strategy 2B: Hold Groundwater Use to Historical Average | Strategy 3B: Hold Supply to 2008 Levels | Strategy 4B: Maximize Required Water Conservation | Strategy 5B: Hold Water Supply to 1,950 afy |
|---|---|---|---|---|---|
| Bell Canyon Reservoir | 1,000 | 1,000 | 1,000 | 1,000 | 1,000 |
| Napa Water Agreement | 600 | 600 | 600 | 600 | 600 |
| Groundwater | 1,000 | 405 | 480 | 200 | 350 |
| **Total Potable Water Supply/Demand** | **2,600** | 2,005 | **2,080** | **1,800** | **1,950** |
| Required Long-Term Water Conservation[b] | — | 537[c] | 468 | 720[c] | 585[c] |

[a] See Section 4.1.1 for a discussion of each strategy.
[b] Required reduction in Metered Potable Water Demand, reduction in total water demand would include unaccounted for water.
[c] This level of long-term water conservation is not considered to be achievable without mandating harsh changes to the City landscaping and other water use policies.

As the City initiates more stringent long-term water conservation measures, the ability to reduce water demand under short-term drought conditions is lessened considerably, a phenomenon known as "demand hardening". Applying the impact of the Water Shortage Emergency Phases shown in Table 1-4 to the five water supply strategies shown in Table 4-5 yields the projected total potable water demand for the five water supply strategies under several hydrologic conditions shown in Table 4-6.

**Table 4-6. Projected Potable Water Supply for Five Water Supply Strategies under Various Hydrologic Conditions, Year 2030 Full Buildout Scenario, acre-feet[a]**
**(Modified from Table 4-6 of 2010 Water Supply Plan)**

| Water Supply Strategy | Wet Year (40 percent exceedence) No Water Shortage Emergency | Normal Year (60 percent exceedence) No Water Shortage Emergency | Below Normal Year (82 percent exceedence) Phase I WSE | Dry Year (90 percent exceedence) Phase II WSE | Critical Dry Year (100 percent exceedence) Phase III WSE |
|---|---|---|---|---|---|
| Minimize Required Water Conservation (Full)[b] | 2,600 | 2,600 | 2,340 | 1,950 | 1,638 |
| Hold Groundwater Use to Historical Average[c] | 2,005 | 2,005 | 2,005 | 1,950 | 1,638 |
| Hold Supply to 2008 Levels[c] | 2,080 | 2,080 | 2,080 | 1,950 | 1,638 |
| Maximize Required Water Conservation[c] | 1,800 | 1,800 | 1,800 | 1,800 | 1,638 |
| Hold Supply to 1,950 AFY[c] | 1,950 | 1,950 | 1,950 | 1,950 | 1,950 |

[a] Values shown are the Normal Year water demands subjected to the City's codified water shortage emergency phase cut backs.
[b] See Table 1-4.
[c] Values are the lesser of Normal Year values in Table 4-5 or the Minimize Required Water Conservation (Full) values in this table.

The values from Table 4-6 were multiplied by the estimated Frequency of Occurrence in Table 4-1 to develop weighted average water supply for each water supply/demand Strategy. The resulting estimated weighted average use of each water supply source, the required long-term water conservation, and the required short-term water conservation for the five water supply strategies is shown in Table 4-7.

**Table 4-7. Weighted Average Water Supply for Five Water Supply Strategies over Several Hydrologic Conditions, Year 2030 Full Buildout Scenario, acre-feet per year[a] (Modified from Table 4-7 of 2010 Water Supply Plan)**

| Water Supply | Strategy 1B: Minimize Required Water Conservation (Full) | Strategy 2B: Hold Groundwater Use to Historical Average | Strategy 3B: Hold Supply to 2008 Levels | Strategy 4B: Maximize Required Water Conservation | Strategy 5B: Hold Supply to 1,950 afy |
|---|---|---|---|---|---|
| Bell Canyon Reservoir | 914 | 914 | 914 | 914 | 900 |
| Napa Water Agreement | 600 | 600 | 600 | 600 | 600 |
| Groundwater Use | 881 | 450 | 511 | 270 | 450 |
| **Total Weighted Average Water Supply** | **2,395** | **1,964** | **2,025** | **1,784** | **1,950** |
| Long-Term Water Conservation[b] | — | 535[c] | 468 | 720[c] | 585[c] |
| Short-Term Demand Reduction Measures[d] | 185 | 37 | 49 | 15 | —(d) |

[a] Assumes frequency of occurrence of hydrologic conditions shown in Table 3-8.
[b] Table 4-2.
[c] This level of long-term water conservation is not considered to be achievable without mandating extremely harsh changes to the City landscaping.
[d] Weighted average reduction in total metered potable water demand based on a comparison of supply and demand for each hydrologic condition, and each water supply/demand strategy.
[e] No short-term demand management measures (aka Water Shortage Emergency Phases) are required; however, groundwater pumping during a Critically Dry Year would be 850 acre-feet.

The recent historical average groundwater use has been approximately 450 afy (2000-2009). One of the five water supply strategies discussed above (Strategy 4B) would result in a net reduction in groundwater use over the long-term, and two (Strategy 2B and Strategy 5B) are targeted to result in the same long-term average groundwater use.

As with the ***Likely Buildout Scenario***, Strategy 5B in the ***Full Buildout Scenario*** results in a lower groundwater use than in recent history, assuming full use of Bell Canyon Reservoir.

Recommended short term actions are described in Section 5.

## 5.1 CONCLUSIONS AND RECOMMENDATIONS

The comparison of the projected water demand to the projected water supply, described above, indicates that the City is currently facing water supply shortages under the current operations unless the water demand and water supply are brought into balance. The City policy makers will have to decide what combination of water conservation, acquiring additional surface water from the City of Napa (if possible), expansion of Bell Canyon Reservoir (very expensive), and groundwater use City customers are willing to accept, achieve, and finance to balance existing and future supplies and demands. Under the ***Likely Buildout Scenario***, required water conservation ranges from zero (Strategy 1A) to 495 afy (Strategy 4A). Water conservation of approximately 277 afy under Strategy 2A and 360 afy under Strategy 5A would be required to prevent an increase in groundwater use over the historical average use of 450 afy. The City's current definition of "safe yield" targets Strategy 5A (limiting groundwater pumpage to the long-term historical maximum and limiting total water demand to 1,950 afy) for water supply planning purposes. These conservation measures were previously identified in 2007 and documented in the 2010 Water Supply Study.

All strategies assume the City can pump sufficient groundwater during dry years and fully draw down Bell Canyon Reservoir when required operationally to serve the reduced demands, consistent with the City's Water Shortage Emergency Phases. To accomplish this, the City must increase its seasonal groundwater peaking capacity.

The top recommended actions that the City must approve in the short-term if conservation is to be used to reduce demands and to prevent an increase in groundwater use are:

- Hire a Water Conservation Coordinator;
- Modify and adopt a water rate structure that will ensure adequate program funding while encouraging water conservation by accounting for reduced water consumption in the base water rate and providing incentives to reduce water use; and/or
- Increase groundwater production reliability and peaking capacity.

The City's desire to keep total water supply to within the current definition of "safe yield" of 1,950 afy is reflected in Strategy 5A and Strategy 5B, discussed above. Strategy 5A limits long-term average groundwater pumping to the historical average of 450 afy and requires 360 afy of water conservation.

The long-term water conservation of 360 afy required to keep total supply less than 1,950 afy under the ***Likely Buildout Scenario*** is less than the value of 495 afy, which was identified in 2007 and in 2010 as the likely maximum achievable water conservation without changing the look and feel of St. Helena.

The long-term water conservation of 585 afy required to keep total supply less than 1,950 afy under the ***Full Buildout Scenario*** is greater than the value of 495 afy, which was identified in 2007 and in 2010 as the likely maximum achievable water conservation without changing the look and feel of St. Helena. Therefore, the City would either have to adopt a water conservation program that alters the look and feel of St. Helena, identified as not acceptable by City Council in 2007, or pump groundwater in excess of the long-term average of 450 afy, which was also identified as unacceptable by City Council.

The long-term groundwater pumping and required water conservation of the ten water supply strategies are shown in Table 4-8.

As indicated above, the City would find it extremely difficult to implement any long-term water conservation programs without a full time water conservation coordinator on staff, and an appropriate water rate structure. The City's recently adopted water rate structure (effective July 2011), with steeper tiered rates, will likely encourage some water conservation. Whether the water conservation accomplished will be persist or will be sufficient to achieve the ***Likely Buildout Scenario*** remains to be seen. A water budget-based rate structure will likely be needed to achieve the water conservation goals identified above. Such a rate structure requires the assignment of water budgets for every water customer, a task that almost certainly requires a Water Conservation Coordinator.

The City should explore any opportunity to increase the production capacity (and volume, if possible) of the supplemental water supplies available from the City of Napa, and increase its groundwater pumping capacity to provide increased seasonal reliability.

Table 4-8. Weighted Average Water Supply for Ten Water Supply Strategies over Several Hydrologic Conditions, Year 2030, acre-feet per year (From Tables 4-4 and 4-7 of this TM)

| Water Supply | Total Weighted Average Water Supply | Weighted Average Groundwater Pumpage | Required Long-Term Water Conservation(b) | Notes |
|---|---|---|---|---|
| **Likely Buildout Scenario (Total Projected Demand of 2,350 acre-feet per year)** | | | | |
| Strategy 1A: Minimize Required Water Conservation (Likely) | 2,164 | 650 | — | Requires groundwater pumping in excess of long-term average<br>Does not require water conservation |
| Strategy 2A: Hold Groundwater Use to Historical Average | 1 964 | 450 | 277 | Same groundwater pumping as historical average.<br>Water conservation of 13 percent of projected demand. |
| Strategy 3A: Hold Supply to 2008 Levels | 1 995 | 481 | 243 | Slightly more groundwater pumping than historical average.<br>Water conservation of 12 percent of projected demand. |
| Strategy 4A: Maximize Required Water Conservation | 1 765 | 251 | 495 | Groundwater pumping would be less than long-term average.<br>Water conservation at perceived maximum (23 percent of projected demand) without affecting look and feel of City. |
| Strategy 5A: Hold Supply to 1,950 afy | 1 950 | 450 | 360 | Same groundwater pumping as historical average.<br>Water conservation of 17 percent of projected demand. |
| **Full Buildout Scenario (Total Projected Demand of 2,600 acre-feet per year)** | | | | |
| Strategy 1B: Minimize Required Water Conservation (Full) | 2,395 | 881 | — | Requires groundwater pumping in excess of long-term average.<br>Does not require water conservation. |
| Strategy 2B: Hold Groundwater Use to Historical Average | 1,964 | 450 | 535 | Same groundwater pumping as historical average.<br>Water conservation of 23 percent of projected demand (not considered achievable without affecting look and feel of City). |
| Strategy 3B: Hold Supply to 2008 Levels | 2,025 | 511 | 468 | Slightly more groundwater pumping than historical average.<br>Water conservation of 20 percent of projected demand. |
| Strategy 4B: Maximize Required Water Conservation | 1,784 | 270 | 720 | Groundwater pumping would be less than long-term average.<br>Water conservation of 31 percent of projected demand (not considered achievable without affecting look and feel of City). |
| Strategy 5B: Hold Supply to 1,950 afy | 1 950 | 450 | 585 | Same groundwater pumping as historical average.<br>Water conservation of 25 percent of projected demand (not considered achievable without affecting look and feel of City). |

# Protecting Water Quality *from* URBAN RUNOFF

## Clean Water Is Everybody's Business

In urban and suburban areas, much of the land surface is covered by buildings and pavement, which do not allow rain and snowmelt to soak into the ground. Instead, most developed areas rely on storm drains to carry large amounts of runoff from roofs and paved areas to nearby waterways. The stormwater runoff carries pollutants such as oil, dirt, chemicals, and lawn fertilizers directly to streams and rivers, where they seriously harm water quality. To protect surface water quality and groundwater resources, development should be designed and built to minimize increases in runoff.

The most recent National Water Quality Inventory reports that runoff from urbanized areas is the leading source of water quality impairments to surveyed estuaries and the third-largest source of impairments to surveyed lakes.

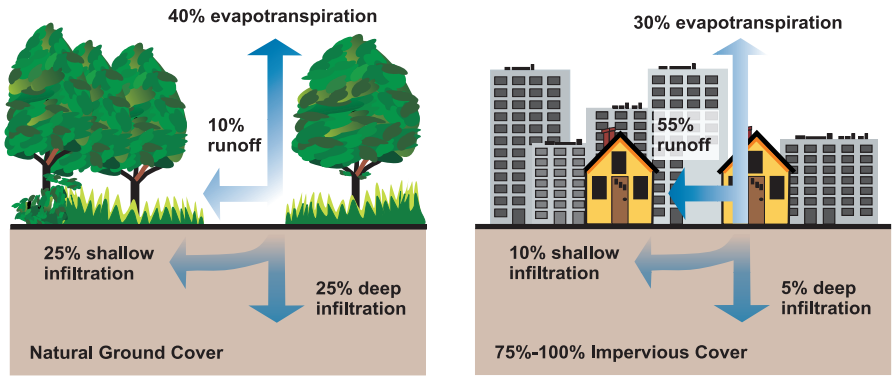
***Did you know that because of impervious surfaces like pavement and rooftops, a typical city block generates more than 5 times more runoff than a woodland area of the same size?***

## How Urbanized Areas Affect Water Quality

### Increased Runoff

The porous and varied terrain of natural landscapes like forests, wetlands, and grasslands traps rainwater and snowmelt and allows them to filter slowly into the ground. In contrast, impervious (nonporous) surfaces like roads, parking lots, and rooftops prevent rain and snowmelt from infiltrating, or soaking, into the ground. Most of the rainfall and snowmelt remains above the surface, where it runs off rapidly in unnaturally large amounts.

Storm sewer systems concentrate runoff into smooth, straight conduits. This runoff gathers speed and erosional power as it travels underground. When this runoff leaves the storm drains and empties into a stream, its excessive volume and power blast out streambanks, damaging streamside vegetation and wiping out aquatic habitat. These increased storm flows carry sediment loads from construction sites and other denuded surfaces and eroded streambanks. They often carry higher water temperatures from streets, roof tops, and parking lots, which are harmful to the health and reproduction of aquatic life.



The loss of infiltration from urbanization may also cause profound groundwater changes. Although urbanization leads to great increases in flooding during and immediately after wet weather, in many instances it results in lower stream flows during dry weather. Many native fish and other aquatic life cannot survive when these conditions prevail.

### Increased Pollutant Loads

Urbanization increases the variety and amount of pollutants carried into streams, rivers, and lakes. The pollutants include:

- Sediment
- Oil, grease, and toxic chemicals from motor vehicles
- Pesticides and nutrients from lawns and gardens
- Viruses, bacteria, and nutrients from pet waste and failing septic systems
- Road salts
- Heavy metals from roof shingles, motor vehicles, and other sources
- Thermal pollution from dark impervious surfaces such as streets and rooftops

These pollutants can harm fish and wildlife populations, kill native vegetation, foul drinking water supplies, and make recreational areas unsafe and unpleasant.

*Relationship between impervious cover and surface runoff. Impervious cover in a watershed results in increased surface runoff. As little as 10 percent impervious cover in a watershed can result in stream degradation.*

## Managing Urban Runoff

### What Homeowners Can Do

To decrease polluted runoff from paved surfaces, households can develop alternatives to areas traditionally covered by impervious surfaces. Porous pavement materials are available for driveways and sidewalks, and native vegetation and mulch can replace high maintenance grass lawns. Homeowners can use fertilizers sparingly and sweep driveways, sidewalks, and roads instead of using a hose. Instead of disposing of yard waste, they can use the materials to start a compost pile. And homeowners can learn to use Integrated Pest Management (IPM) to reduce dependence on harmful pesticides.

In addition, households can prevent polluted runoff by picking up after pets and using, storing, and disposing of chemicals properly. Drivers should check their cars for leaks and recycle their motor oil and antifreeze when these fluids are changed. Drivers can also avoid impacts from car wash runoff (e.g., detergents, grime, etc.) by using car wash facilities that do not generate runoff. Households served by septic systems should have them professionally inspected and pumped every 3 to 5 years. They should also practice water conservation measures to extend the life of their septic systems.

### Controlling Impacts from New Development

Developers and city planners should attempt to control the volume of runoff from new development by using low impact development, structural controls, and pollution prevention strategies. Low impact development includes measures that conserve natural areas (particularly sensitive hydrologic areas like riparian buffers and infiltrable soils); reduce development impacts; and reduce site runoff rates by maximizing surface roughness, infiltration opportunities, and flow paths.

### Controlling Impacts from Existing Development

Controlling runoff from existing urban areas is often more costly than controlling runoff from new developments. Economic efficiencies are often realized through approaches that target "hot spots" of runoff pollution or have multiple benefits, such as high-efficiency street sweeping (which addresses aesthetics, road safety, and water quality). Urban planners and others responsible for managing urban and suburban areas can first identify and implement pollution prevention strategies and examine source control opportunities. They should seek out priority pollutant reduction opportunities, then protect natural areas that help control runoff, and finally begin ecological restoration and retrofit activities to clean up degraded water bodies. Local governments are encouraged to take lead roles in public education efforts through public signage, storm drain marking, pollution prevention outreach campaigns, and partnerships with citizen groups and businesses. Citizens can help prioritize the clean-up strategies, volunteer to become involved in restoration efforts, and mark storm drains with approved "don't dump" messages.

Response to Response to Comments: Prepared by John Milliken

Inadequate Analysis and Flawed Findings in FEIR Section I: Hydrology and Water Quality

The less than significant finding (LTS) in the FEIR concerning water quality and potential harm to the habitat of the endangered species in the adjacent Napa River is completely without merit. The EIR insufficiently identifies and fails to provide a level of analysis of the significant impacts of polluted runoff, increased storm water volumes, and diminished re-charging of the underlying aquifer (affecting summer stream flows) that will be caused by the project. Not only are the significance of these impacts ignored, corresponding mitigations to lessen their effects are not proposed either.

The credibility of the entire EIR process is in question if you agree with the presumption that an 87 unit development, located in a flood plain, with acres and acres of impervious surfaces (roads, driveways, parking lots, walkways, roofs, patios, utility pads, etc.), will not have any significant impact on water quality, groundwater recharging, or the amount of runoff generated by the project. The likelihood of significant impacts to water quality and harm to protected species is even more pronounced if the cumulative effects over many years are considered. Not identifying cumulative impacts to hydrology and water quality is another serious failure in this FEIR.

Instead of identifying significant impacts and proposing mitigations, the FEIR spontaneously claims that, *"it was abundantly clear that potential impacts to aquatic resources that could potentially result from water quality or runoff flow caused by the project would be insignificant and, therefore, not a significant impact to aquatic resources on, adjacent to, or downstream of the project, including to fish, fish habitat, or fish movement."* This claim was made in spite of a 6 page report to the contrary prepared by a fisheries biologist expert, Jeff Hagar, who was commenting on the inadequacies of the DEIR. Instead of heeding Mr. Hagar's meticulously researched and documented analysis, the FEIR took a pass on his findings and deflected them all away by claiming that the project will have to apply for an EPA NPEDS (National Pollutant Discharge Elimination System) permit and this will mitigate everything. Interestingly, Table III-1, Required Discretionary and Ministerial Permits and Approvals, from the DEIR does not even list a NPEDS permit.

A General NPED Construction Permit's scope applies only to storm water runoff during a project's construction phase and is an important protection for water quality. However, there are no impacts identified in the FEIR concerning Hydrology and Water Quality post construction singularly or cumulatively. And if there are no impacts identified, there are certainly no mitigations offered either. As it turns out, this is a common theme of both the DEIR and FEIR. The analysis of the DEIR was pre-occupied with the environmental impacts of the construction phase of the project and tended to ignore/neglect the post construction and cumulative impacts of the project, another example of improper CEQA mandated analysis.

So what types of mitigations could have been proposed by a proper analysis? Quite a few, if you had just perused the EPA's brochure on the impacts of Urban Development Guidelines. Somehow this readily available information was ignored or not even considered in both the DEIR and FEIR. Which leads one to ponder the competence of the firm that was hired to prepare both of these reports.

Nonpoint source (NPS) pollution, unlike pollution from industrial and sewage treatment plants, comes from many diffuse sources. NPS pollution is caused by rainfall or snowmelt moving over and through the

ground. As the runoff moves, it picks up and carries away natural and human-made pollutants, finally depositing them into lakes, rivers, wetlands, coastal waters and ground waters.

Urbanization increases the variety and amount of pollutants carried into our nation's waters. In urban and suburban areas, much of the land surface is covered by buildings, pavement and compacted landscapes. These surfaces do not allow rain and snow melt to soak into the ground which greatly increases the volume and velocity of stormwater runoff. In addition to these habitat-destroying impacts, pollutants from urban runoff include:

- Sediment
- Oil, grease and toxic chemicals from motor vehicles
- Pesticides and nutrients from lawns and gardens
- Viruses, bacteria and nutrients from pet waste and failing septic systems
- Road salts
- Heavy metals from roof shingles, motor vehicles and other sources
- Thermal pollution from impervious surfaces such as streets and rooftops

These pollutants can harm fish and wildlife populations, kill native vegetation, foul drinking water, and make recreational areas unsafe and unpleasant

Controlling Impacts from New Development

Developers and city planners should attempt to control the volume of runoff from new development by using low impact development, structural controls, and pollution prevention strategies. Low impact development includes measures that conserve natural areas (particularly sensitive hydrologic areas like riparian buffers and infiltrable soils); reduce development impacts; and reduce site runoff rates by maximizing surface roughness, infiltration opportunities, and flow paths.

As stated in the DEIR, permit approval is not a substitute for thorough and complete environmental review. From the DEIR:

*E. DISCRETIONARY ACTIONS*

*It is anticipated that this EIR will provide environmental review for all discretionary approvals and actions necessary for the proposed project. A number of permits and approvals would be required before the development of the project could proceed. As Lead Agency for the proposed project, the City of St. Helena would be responsible for the majority of approvals required for development. A list of required permits and approvals that may be required by the City and other agencies includes, without limitation, those provided in Table III-1.*

The FEIR does NOT provide environmental review for the discretionary approval and actions necessary for a NPEDS permit.

Given that the project site is located on the floodway of a river that has been designated as impaired for endangered fish species, a thorough EIR analysis, that strictly follows CEQA guidelines, is even more of an imperative. It would surely be a mistake to rely on solely NPEDS permitting standards in such an environmentally sensitive area. The project site is so close to the impaired river that options for improving water quality are extremely limited. Quite simply, polluted high sediment runoff from the acres and acres of impervious surfaces will enter the gravity operated storm water basin and then exit directly into the impaired river. Although it is predicted that storm water handling facilities will have the capacity to handle storm water flows from the project, there is no denying that the level of water pollutants and quantity of runoff into the river from the project will be far greater than pre-project levels. The DEIR refers to studies of sediment TMDL being developed with the goal of reducing sediment discharges into sensitive fish spawning areas. However, these studies are ongoing and TMDLs have not yet been established. Until they are, the FEIR should not assume that the issuing of a NPEDS permit will reduce project water quality to less than significant. This is best summed up by the fisheries biologist, Jeff Hagar:

> The City needs to analyze the contribution of this project to cumulative effects of ongoing development and past habitat degradation. The effects of this project on habitat conditions in the Napa River occur within the context of efforts by multiple entities to reverse these trends and adverse effects on protected steelhead should be mitigated to less than significant levels.

This comment brings up another shortcoming of the FEIR, there are no comments in regard to the DEIR from other government and private stakeholders working to restore endangered fish habitat just south of the project. Should not there have been comments solicited from California Coastal Conservancy, U.S. Army Corps of Engineers, Napa County Resource Conservation District, California Fish and Game, California Water Quality Control Board, and a group of 23 private property owners with property that borders the Rutherford Reach, the 4.5 mile stretch of the Napa River between St. Helena and Oakville? Were these entities ever contacted and asked to comment on the DEIR and allowed to express concerns about the projects impacts on their environmental restoration efforts just to the south?

As the lead agency responsible for producing an EIR that will adequately inform government decision makers as well as the public, the City of St. Helena should instruct the EIR consulting firm to re-evaluate the preparation of the Hunter Development EIR and recirculate a document that meets the standards established by CEQA. The deficiencies of the FEIR concerning Hydrology and Water Quality documented above are just one of the many areas of this FEIR that provide inadequate and incomplete analysis of the project's impacts on environmental quality.

**Subject:** Hunter EIR comments

Hi Cindy – please add these questions to the EIR

Hope all is well. Weird weather, right? From 80 degrees to rain storms and 45 degrees. What season is this?

Cheers,
Ann

Question #1
How will this project affect the St Helena city groundwater wells at the Stonebridge locations? The project plan states it will provide all the landscaping water for 87 houses' lawns, flowers, bushes, gardens, carwashes, and other watering uses. The number could be 20-40 units higher if the project includes regulated affordable housing. Since the well is located next to the Napa River upstream from the City of St Helena wells that supply our community with water, what mapping will be conducted to determine if the aquifers are connected? If they are connected, then drawing large amounts of water from the same groundwater source needs to be assessed so it does not deplete the City wells supply. Who will conduct the mapping? How many groundwater data points will be included in any mapping exercise? Will it be a sufficient number to adequately determine that the Hunter well is on an aquifer that is separated from the city aquifer? This question must be answered accurately, because the city relies on the groundwater

from these 2 wells as a critical source of water in times of drought when Bell Canyon is depleted. (Example – the drought resulting in exposure of large portions of the bottom of the Bell Canyon reservoir.

Question #2:
The project area is in a low lying wet area on the historic floodplain for this part of the Napa River. It has flooded numerous times over the last 20-30 years. Even in non-flood years, large portions have remained wet during the summers, to the point that vine growth and production was hampered due to the wet soils. Presently, this area is covered with standing water during and after rains with water depths often 10-12 inches deep. The project will add millions of gallons (25 acre feet) of landscaping water annually to an area that has never been irrigated. Will the addition of paved surfaces, construction pads, streets and structures cause compaction of the soils/subsoils in the area? Will this cause subsidence or instability of structures in and around the project area over time? Will subsidence cause new unknown flooding issues?

Question #3:
There is an existing subsoil study on the project area that shows what is considered to be the profile of a historic pond, which is typical in areas proximal to meandering rivers. Since the area is a known liquefaction zone in an earthquake prone location, and soils of this type can be unstable, how will this affect the safety of the homes and the structural integrity of the levee in an earthquake or major flood?

**Subject:** Scoping comments on Hunter EIR
**Date:** Thursday, April 12, 2018 1:37:08 PM

I'd like to submit the following comments for the Scoping of the Hunter EIR

**Groundwater usage on the site**

The estimates of historical groundwater usage on the site need to be redone. The previous EIR made some highly questionable assumptions about historical groundwater usage, leading to an estimate of pre-flood-project groundwater demand on the site of 22 AF. There are two errors in the consultant's methodology rendering this estimate much too high.

1. The consultant assumed that all of the vineyards on the site were historically irrigated. There is little need to irrigate this wet vineyard and there is no evidence that there has ever been an irrigation system on the site, so the assumption that the well was used to irrigate the entire site is unfounded. There are no remnants of piping or any other irrigation components currently. And, vintners adjacent to the site who have lived here for decades do not recall there ever being such a system. The property is adjacent to the river and is one of the wettest vineyard locations in the valley. There is little need to irrigate there. Adjacent vineyards which are updip and drier are all dry farmed. If the assumption is to be made that irrigation once existed for the entire vineyard, it is incumbent upon the consultants to prove that such a system existed.
2. The consultant assumed vineyard irrigation rates from the Oakville area, a much drier area farther from the Napa River. Even if this area was ever irrigated, Oakville irrigation rates are too high. Again, this is a wet vineyard which would need water only rarely in the driest of years, if at all.

Therefore, historical groundwater pumping on the site was likely localized, sporadic and minimal. The actual usage would be a small fraction of the 22 AF. What are the new estimates of historical production? What data are used to justify those estimates?

**Impacts on the Napa River, including fish**

The existing groundwater well on the site is only hundreds of feet from the Napa River. If the aquifer being accessed is at all connected to the river, then the well is drawing down from the Napa River, impacting river flows and fish habitat. What is the connection to the Napa River? How much is the impact on river flow from pumping on the site at different rates? A groundwater hydrology study should be undertaken to determine the connection to the river.

**Impacts on City Groundwater Supply Wells**

The existing groundwater well on the site is updip of City water supply wells and the proposed levels of use could impact City wells. Is it the same aquifer? How would pumping on the site affect groundwater levels in the City wells, at different rates? A groundwater hydrology study should be undertaken to determine if there is a connection to the City's groundwater supply wells and the potential for drawdown of those wells.

**Subject:** Hunter EIR Scoping Comments
**Date:** Thursday, April 12, 2018 9:20:20 AM

Cindy-

Below are my comments regarding the scope of the Hunter EIR.

1. The EIR for the Hunter Project cannot be done until it is conclusively determined whether or not the Hunter Project qualifies for the 40% affordable housing benefits, including priority in water and sewer connections, use of prior year surplus units from the Growth Management System (GMS), etc. The reason for this is that the environmental impact is completely different if the benefits are applied to the project than if they are not applied. An example is that if the project qualifies under the inclusive housing and affordable housing ordinances, then the entire project can be completed in 2 years, according to the developer. If the project does not qualify, then the Hunter Project could take up to 10 years to complete, assuming very few, if any other houses are built in St. Helena during that timeframe because the project would be limited to the annual 9 units allowed under the GMS. It isn't hard to see that the environmental impacts are quite different under these two scenarios.

Before the EIR begins, it has to be determined if the Project qualifies for such benefits or not. This decision cannot run on parallel tracks with the EIR and then come together at the end, as Noah Housh suggested at the neighborhood scoping meeting last month. For the EIR to be accurate, the EIR consultants must know what scenario applies before the EIR begins. And, in cases like this, it does matter to CEQA if the housing is market rate or affordable because the priority benefits derived from hitting a 40% affordable housing rate under City ordinances changes that environmental analysis. In this case, it is not the affordability of the housing that affects the CEQA analysis, but the priority benefits given by the City and/or the state that changes the impact on the environment from building this project.

The prior Hunter Project EIR inappropriately assumed (without confirming) that the Hunter Project would qualify for the priority benefits stemming from the project complying with the inclusive housing and affordable housing ordinances at the 40% rate. That assumption cannot be part of the current EIR process because it likely will make the EIR inaccurate.

If the developer does not want to show to the satisfaction of the City Council that their current proposal completely meets all of the City's inclusive and affordable housing requirements to qualify for the 40% priority benefits, then the EIR should be done without giving any credit for any of those benefits before the EIR is started. At the very least this would change the environmental analysis from a two-year project to a potential ten-year project with ongoing environmental impacts.

If the EIR assumes the project will qualify for the 40% rate and if it is later determined that the current project cannot meet the inclusive housing and affordable housing ordinance requirements without resubmitting a tentative map, then the City would be in the position of looking at yet another Hunter EIR exercise. It would make more sense to make that determination now.

2. The Hunter Project EIR has to take into consideration the cumulative impacts of the 17-acre

Hunter Project, along with the 24-acres of Key Opportunity Sites (sites 1, 2, and 6 on page 134 of the Housing Element Needs Assessment), which begins about 3 blocks from the Hunter Project and extends south across Pope Street. These cumulative sites will significantly impact surrounding streets and the Pope Street bridge. Such cumulative effects will undoubtedly impact the environment and have to be taken into consideration in the Hunter Project EIR.

3. The Hunter Project EIR needs to consider the environmental impacts resulting from a potential levee failure. CA Government Code §65302(g)(2)(A)(vii-viii) requires that St. Helena include a levee failure map in its General Plan Update to show areas that would be inundated in the event of a levee failure. It will be important to have such an inundation map to show the environmental difference between the situations where the land behind the levee is undeveloped, as it is now, and the situation where the land behind the levee is covered over with asphalt and houses, which is a situation where there would be significantly less permeable land for flood waters to be absorbed. The environmental differences between these two situations would likely be significant.

Of additional environmental interest is that fact that the area closest to the Napa River where the levee is located is considered a high liquefaction susceptibility area (Figure 4.K-2 in the General Plan Update) and liquefaction is a well-known and significant cause of levee failure.

4. The EIR for the Hunter Project has to assume the project can be built out to the maximum density allowed resulting from any density bonuses provided under city ordinances and state law, even assuming the current project does not now show such a density bonus in the "deemed complete" tentative map. The current owner and/or developer could decide after an EIR is approved to sell the property and the new owners could apply for the density bonuses prior to seeking building permits. At that point it would be too late for the EIR to take into consideration the increased housing units, population, cars and other environmental impacts because the EIR would already have been completed and approved.

Thank you for your consideration, Vickie Bradshaw

Hi Chuck,

Thank you for taking the time to provide your input on the EIR and project.

City staff and project consultants will ensure that the review process fully vets the proposed project and meets all requirements of the law.

Further, I will be sure to keep you informed of all steps in the review process.

Thanks again,

**NOAH HOUSH**

**Subject:** RE: Hunter NOP Electronic Notification

Hello Noah,

Thanks for hosting the meeting last week. As I mentioned at the meeting, kicking off the EIR seems very premature and a waste of time and money.

1. The applicant is still formulating and the City still reviewing the affordable housing component. How can we comment on something that is incomplete, and has not been reviewed by the city?
2. As was brought up by Planning Commissioner Grace Kistner, our municipal code requires that in order to qualify for density bonuses (without which this project will never get built) the project needs 20% AFU for sale. This will almost certainly require a revised subdivision map, and likely a brand new subdivision application. It seemed to me that the developer has not thought this project out very well as is making it up as he goes along. With this understanding

an EIR at this juncture makes no sense.

3. This project is extremely unpopular by a majority of residents and a hasty ill-planned EIR process will most certainly be vigorously challenged. Why not pause and let the developer get his plans together first, it is not fair to ask the community to weigh on a moving target.

Sincerely,

**Chuck Vondra – Principal, Sr. Consultant**

***Information Only; Please Do Not Reply All***

Greetings,

At the recently held neighborhood meeting for the Hunter Residential Subdivision, you provided your email contact information indicating you would like to be notified of future project activities.

Attached please find the formal Notice of Preparation initiating the Environmental Impact Review (EIR) process for this project.

As was identified at the neighborhood meeting, a scoping meeting for the EIR is scheduled for Monday, March 12, 2018, from 6:00 – 7:30 pm at the St Helena Fire Department (1480 Main Street). This meeting will provide an opportunity for individuals to speak directly to the California Environmental Quality Act (CEQA) consultants regarding the scope of the EIR analysis.

Alternatively, if you are unable to attend this meeting, please feel free to provide your written comments to me (electronically or hard copy) any time before April 9, 2018, to ensure they are considered in the EIR analysis. My contact information is provided in the notice, and in the signature below

After the initial analysis is completed, a draft EIR will be published for a 45-day public review and

comment period, during which the public will have an additional opportunity to comment on the environmental analysis and resulting document. This is tentatively scheduled to occur in late spring or early summer, 2018.

These comments will then be used to finalize the document making modifications or expanding the analysis, as appropriate. Further, a response to each comment will be provided in the Final draft EIR for the project, which will then be taken before the Planning Commission for review and action at a public hearing tentatively proposed to be held in late summer or early fall of 2018.

Please forward this message to anyone you feel may be interested in the Hunter Residential Subdivision EIR process. Thank you for your attention to this matter.

> Dear Cindy,
>
> Please consider these comments regarding the scope of the Hunter EIR.
>
> An earlier EIR dismissed flood risk for the Hunter Property behind the levee as "less than significant" as shown below ...

LETTER C4
Ron Amoroso
June 18, 2012

C4-1 This is an introductory comment. See Response to Comment C4-2 addressing the specific comments detailed in Mr. Amoroso's letter.

C4-2 While liability issues are not a subject that CEQA addresses, the Draft EIR does go into considerable detail regarding the potential for the levee to be overtopped or fail (see Draft EIR Impact HYD-4 starting on page 242).

With the acceptance of the Flood Protection Project and the revision of the Flood Insurance Rate Map (FIRM) or Flood Hazard Boundary Map, FEMA has indicated that the project site has an acceptable level of protection from the 100-year flood event. This 100-year level of protection is the standard of significance that is specified by the CEQA Guidelines to determine if a potential flooding impact is significant or less than significant. In this case, the potential flooding impact, under CEQA, is less than significant.

That citation reports the "potential flooding impact, ***under CEQA***, is less than significant."

With due respect to all, I consider the flood risk behind the levee and its potential consequences to be substantial, and ask that the flood risk be thoroughly studied so St. Helena residents and taxpayers do not become liable for damages occurred on that property when the levee alignment violated St. Helena's own 1993 General Plan, which contained this provision ...

**Goals, Policies and Standards**

**Guiding Policies**

9.4.1 New development should provide adequate drainage improvements to handle generated storm runoff from the site to the nearest major watershed. The watersheds include York Creek, Sulphur Creek and the Napa River.

9.4.2 If a City storm drain is available, the developer should participate in the funding to the extent it benefits the development.

9.4.3 Extension of existing downstream drains which have adequate capacity should be completed at the developer's expense with future reimbursement for oversizing costs at the time of connection by others.

9.4.4 Grading and earth filling within the designated 100-year floodway should not be permitted except for public streets or bridges.

9.4.5 Encroachments into the 100-year floodway should not result in any increase in flood levels during the occurrence of the base flood discharge.

... that "grading and earth filling within the designated 100-year floodway should not be permitted."

Unfortunately the Vineyard Valley development was developed directly atop the floodway to the Napa River, as shown on these photographs ...

and from the east side of the River ...

These photos show that the floodwater trapped behind the Vineyard Valley cinder block wall did not overtop the riverbank, but instead drained naturally from the watershed northwest of Vineyard Valley, toward the historic floodway now blocked by Vineyard Valley.

Disruption of that historic natural floodway caused both floods in 1986 and 1995 that caused over $100 Million as documented by City Manager Johansson in his Project Summary report to Assemblywoman Noreen Evans and Senator Pat Wiggins ...

**Project Summary Sheet**

**Project Name**: City of St. Helena Flood Protection and Flood Corridor Restoration Project

**Tracking No**: 200784107

**Location**: City of St. Helena County; Napa, CA

**County**: Napa

**Project Sponsor**: City of St. Helena

**Point of Contact**: Bert Johansson, (707) 967-2792

**Co-applicant(s)**: None

**Assembly District**: #7 Noreen Evans **Senate District**: #2 Pat Wiggins

**Project Summary**: The City of St. Helena Flood Protection and Flood Corridor Restoration Project will protect 468 existing mobile homes, single-family dwellings, and low-income multifamily units from flood damage caused by the Napa River overflow through the incorporated City of St. Helena in Napa County. This multi-objective project will provide flood damage reduction through restoration and re-establishment of the natural floodplain along the project creek frontage; construction of set back levees and overflow basins for transitory storage; and the re-creation and restoration of a natural floodway corridor. It will create more than 8 acres of high-value riparian forest and shoreline restoration for terrestrial and fish habitat on the Napa River, which is listed by the EPA as an impaired waterway and by National Marine Fisheries Service as an important steelhead and salmon recovery tributary of the San Francisco Bay Estuary. In addition, the project will allow residents to view and access this reach of the Napa River,

which currently cannot be accessed.

The project addresses Flood Protection Corridor Program Goals by:

- Floodplain Terrace at more than 8 acres, the new terrace will stretch alongside the Napa River. This terrace will provide a wider area for passage of floodwaters and also provide riparian habitat for rare and common species.
- Shoreline Restoration Approximately 600 feet of existing bank protection riprap and wire gabion at the Vineyard Valley Mobile Home Park (VVMHP) will be removed and the shoreline restored, improving habitat for steelhead, California freshwater shrimp, and critical habitat for the California red-legged frog, as well as for common species.
- Levee A new setback levee will be constructed.
- Removal of Mobile Homes Approximately 17 mobile homes have been removed to make room for a wider floodway corridor.

Project Summary
City of St. Helena Flood Protection and Flood Corridor Restoration Project
Page 2

- Floodwall/Bank Stabilization A new setback floodwall will be constructed to surround the remaining homes within the Vineyard Valley Mobile Home Park. Up to 300 feet of bioengineered and/or structural bank stabilization would be placed near the confluence of the Napa River and Sulphur Creek to protect a portion of the VVMHP floodwall.
- Stormwater Management for Water Quality. A detention basin and pumping facility will be placed inboard of the new levee and northwest of the existing VVMHP floodwall. The two existing storm drains will be diverted into this basin and the two existing storm drain outfalls into the Napa River will be abandoned. A drainage swale will run along the outboard edge of the new levee to filter area stormwater before entering the Napa River. Water quality will be improved as unfiltered storm water passes through the detention basin and the vegetated swale in the terrace.
- Vegetation Management At the southeastern end of the project area, riparian vegetation will be managed in an area referred to as "Element C" to protect critical environmental habitat and improve flood storage capacity upstream of the Pope Street Bridge.
- Public Trail An interpretive pedestrian path will be included in the design of Terrace B to provide public access where no public access currently exists.
- Utility Relocations/Modifications Water, sanitary sewer, gas, electrical, telephone, and cable TV utilities will be disconnected and removed in the areas of home removal for a wider flood corridor in this currently constrained and incised reach of the Napa River.

**Flood Benefits**: The floods of 1986 and 1995 caused complete flooding at Vineyard Valley Mobile Home Park (VVMHP); Hunts Grove Apartments; and the City's wastewater treatment plant. Estimated damages were more than $50 million in each event. The Project will increase critical transitory storage through the dedication of parcel 31 (14) acres to permanent flood corridor, the purchase and relocation of the mobile homes along the bank of Napa River and the resulting excavation and restoration of the floodplain terrace and the construction of set back levees. This transitory storage increase allows 100-year water surface elevations to be significantly reduced by 1.5 feet from current conditions without inducing either upstream or downstream flooding.

Engineers know as basic safety practice not to obstruct floodplains, as confirmed below in St. Helena's 1993 General Plan ...

**Goals, Policies and Standards**

**Guiding Policies**

9.4.1 New development should provide adequate drainage improvements to handle generated storm runoff from the site to the nearest major watershed. The watersheds include York Creek, Sulphur Creek and the Napa River.

9.4.2 If a City storm drain is available, the developer should participate in the funding to the extent it benefits the development.

9.4.3 Extension of existing downstream drains which have adequate capacity should be completed at the developer's expense with future reimbursement for oversizing costs at the time of connection by others.

9.4.4 Grading and earth filling within the designated 100-year floodway should not be permitted except for public streets or bridges.

9.4.5 Encroachments into the 100-year floodway should not result in any increase in flood levels during the occurrence of the base flood discharge.

Unfortunately that basic practice was ignored in the levee alignment, which bisects the very floodplain that caused the 1986 and 1995 floods that caused over $100 Million as reported above by former City Manager Bert Johansson.

After the 1986 flood, in his letter of August 14, 1986, to developer McDonnell, then City Engineer Jack Meade warned Mr. McDonnell against reconstructing Vineyard Valley on its floodway blocking site ...

August 14, 1986

Vineyard Valley Mobile Homes
270 Pope Street
St. Helena, California 94574

Attention: Mr R. H. McDonnell

RE: Flood Wall

Dear Mr. McDonnell

This letter is in regards to your building permit application for a Flood Wall filed by your contractor Mr. Jinks.

It is my understanding from your design engineer, Mr. Giorgi, the purpose of this wall is to replace a fence which was washed out and damaged in the February 1986 flood. It is also my understanding the proposed Flood Wall is on the same location and extent as the washed out fence.

The City cannot guarantee or assure you that the Flood Wall will achieve its intended purpose. The review of the plans and the issuance of a building permit does not provide you with any type of warranty either directly or implied that the construction of the wall will accomplish its design purpose. Only your design engineer can provide you any type of assurances that the Flood Wall will function as intended.

You are hereby put on notice that the construction of the Flood Wall may have possible adverse effects on other property owners either upstream or downstream. The construction of the Flood Wall may create off-site flood hazards to other properties. Prior to construction, your design engineer should thoroughly study and evaluate the possible effects this Flood Wall will have on other properties.

Vineyard Valley Mobile Homes
August 14, 1986
Page 2

By acceptance of the building permit for the Flood Wall, you shall assume full responsibility for any liability occurring from the construction of the Flood Wall and hold the City of St. Helena harmless for any liability and provide full indemnification to the City of St. Helena.

Sincerely,

Jack M. Meade, P.E.
City Engineer

JMM/kaw

cc: Acting City Administrator
City Attorney
Building Inspector
Philips and Giorgi

... and in his response to that letter, Professional Engineer Gerald R. Giorgi expressly alerted the landowner that he should "count on being sued" should another flood occur and neighbors be damaged, for "whatever reason" ...

Gentlemen:

We have just received a copy of Mr. Meade's letter to you dated August 14th, 1986 regarding the proposed flood wall.

As you know and as it is understood by Mr. Meade, the new wall merely replaces the substandard barrier that failed in the 1986 flood. Mr. Meade states that "construction of the flood wall may create off-site flood hazards to other properties." We fail to understand how replacing a timber wall that was intended to act as a barrier with a masonry wall presents any new off-site flood hazards that did not already exist. The alternative of letting the river flow through your project would be amusing if not so serious. We are more concerned with the stockpiling of fill N/W of your project in what appears to be within the flood plan boundaries.

As discussed, if your project should flood again it will occur at the levee adjacent to the river. We understand that raising this levee could indeed adversely impact off-site properties and it would merely move the weak link to the Sulphur Creek boundary.

We understand your urgency in proceeding with construction as the risk of losing millions of dollars in homes and potential loss of life is real. However, should another flood occur and neighbors are damaged, for whatever reason, you can count on being sued. Again we recommend you consult with an expert in hydrology to confirm what we all believe to be true. It would be a very cheap form of insurance. Please call if you require assistance in this matter.

Very Truly Yours,

Gerald R. Giorgi, P.E.

CRG/js

cc: Charles F. Philips
Jack H. Meade, P.E.

1541 THIRD ST. NAPA, CALIFORNIA 94559 (707) 252-6588

It is unfortunate the General Plan guidelines the professional engineers recommendations were ignored, but when Measure A was passed in 1998, residents of Vineyard Valley, fearing the future flood warned by engineer Giorgi, fought assertively to have their flood protection upgraded to avoid the next damaging flood. Vineyard Valley residents were comforted by the inclusion of this Measure A set-aside to fund flood protection for St. Helena ...

In December 2008, residents sought to preserve the floodplain by suggesting this upgrade to

the extant cinder block wall erected after Vineyard Valley's flood in 1986 to flood standard, along Vineyard Valley's north property line ...

Unfortunately the residents were ignored and the levee alignment now cordons off a major component of the natural floodplain, with obvious flood risk increases by obstructing the floodplain.

The residents proposed the remaining floodplain be preserved as a public riverbank park, but advocates of the ill-designed levee across the floodplain won the argument and Vineyard Valley flood protection was approved across the very floodplain that had flooded Vineyard Valley so badly in 1986 and 1995.

When Vineyard Valley residents asked why the levee had to obstruct the floodplain instead of upgrading the cinder block wall along their north property line, and they were told upgraded floodwall around Vineyard Valley and Hunter's Grove "would not work."

As an engineer myself, I can only conclude the levee alignment was built across the floodplain to protect developer Hunter's property at public expense, and the sacrifice of a large portion of the historic floodplain.

UC Davis Engineering Professor Nicholas Pinter wrote after completing a site inspection that he found our levee a "field of dreams levee" as he wrote in this report. City management may want to inquire of Professor Pinter as to his opinion of the wisdom of permitting housing development behind the levee. I personally trust Professor Pinter significantly than I trust the engineers who dangerously aligned our levee right through the middle of our floodplain.

Thank you for your consideration.

Wendell Laidley

st. Helena

**To:** Cindy Tzafopoulos
**Cc:** Noah Housh; Mark Prestwich
**Subject:** Hunter Project-ERI Scoping Input
**Date:** Thursday, April 12, 2018 4:11:07 PM

To the City Clerk, St. Helena, et al,

This note is a submission in response to the request for input on the Hunter Property Development EIR scoping exercise.

As you may be aware my home is located somewhat at ground zero of this proposed development and the results of the EIR impacts me very directly and those of my immediate neighbors and the greater St. Helena community dramatically. The EIR, which seems to be evolving with considerable thought, does seem to be predicated on some larger issues that are being relegated to past decisions that do not appear to be as well thought out and that is concerning to me, substantially.

I am relatively new to the community and while attempting to discover what has been a very long process in developing this property there are more questions raised than answered. I would consider myself pro-development but with the caveat that any development is very well thought out, vetted intensely, and evolved with the best practices for the whole community/City in its considerations and approvals. I am pro-development, and not a developer. But I know instinctively when something is not of the potential standard that the community needs and deserves. The very few illustrations of this development that I have seen are of the poorest creative quality that I could imagine and certainly do not seem to fit any, even minimal, urban plan for our City although I have made some efforts to discover what that may actually entail. As I stated in one of the public meetings I am somewhat baffled by the rush to move a poorly defined project forward without much more discovery.

These comments are somewhat outside the bounds of the Scoping Request but the Discovery process is directly related to that Request. I have heard of my neighbors concerns, and they are ground zero concerns, and whole community concerns of mine as well in relation to traffic, water, resources, noise, costs, liability, and impact on every aspect of the future of this City that I am quickly coming to value and appreciate deeply.

Somewhat disconcerting is the revelation that a previous EIR contained information which is to be transported into the new EIR without review. I am particularly concerned with the whole process of developing the levee and its viability particularly relative to the news of so many levees and similar structures in Houston, New Orleans and elsewhere failing when they were supposed to be certified ‘100 year flood’ capable. If this levee fails who is responsible for the destruction that will devastate so many in this community? Who pays for those types of catastrophes? I would ask that this issue not be swept under the proverbial rug and be added,

in-depth, to the scope of the EIR work.

My thanks for your work and the commitment from every one of our councilors, City Staff and Executive and Counsel, the Mayor and all of those tasked with this EIR work and they all contribute to our future which is bright indeed.

David G. Wilkinson

This Hunter Subdivision SHOULD NOT BE BUILT!! Below are reasons why:

① Disrupting the newly completed flood control project. Landscaping, water drainage run off, sewer expansion (affecting directly where I live) and grading elevations DIRECTLY affect this the current flood control project. (one does not have to be a rocket scientist to see that!)

② The massive traffic that Hunter Subdivision will create. Have any of you "planners" notice the (over)

jammed roads from Pope st. bridge to Main and points beyond? There is no bypass, at Saint Helena (like Yountville), so what is next. MORE SIGNALS?? And what about parking?

(3) Resources - water and sewer facilities are tight now. So what "source" does the Hunter Subdivision draw from... well H2O & water recycle via 2-3 engineered filters? Nope - looks like a connection to our main sewer down Paseo Grande... NOT ACCEPTIBLE?

(4) Does the city "planners" and Hunter Subdivision have "plans" for a second high school and grade schools? Never heard a peep --- so degrade our local education by packing the classrooms to a unbearable population. Just how far can this go? Economic and social problems will just accelerate. City services and police and fire capabilities will be strained to the breaking point --- I've been here 27 years now - what changes?!

(5) Soil liquefaction, catch basins, flood wall and levee failure all loom as potential problems without a study - a COMPLETE study - by FEMA and EPA. So where is it??

(6) In my 73 years I have seen the changes development brings and not always positive: look at Sausalito, Honolulu, San Blas, Santa Cruz and so forth. BEFORE building a Hunter Subdivision plan the water / sewer / roads / schools / city services BEFORE building (don't forget EPA & FEMA studies).

(7) Conclusion: since we cannot vote on this upcoming mess I suppose we have to live with YOUR decision - MY decision? If flooded or other catastrophy I will SUE the hell out of you as a final project in life!

7

1. Concerned about water run-off into the river after heavy rains and water flow from the Dam into the river. Also more run-off into the park.
2. "Big" impact of sewer lines connecting to our sewer lines, causing bigger problems. Our lines are about 40 yrs. old.
3. The flood project has held for Vineyard Valley, but with 85 new homes this could fail badly. The flood walls and run-off basin may not hold and spill into our Park.
4. The need for land fill up to road level could eventually erode and could flow towards V.V. over the years.

My husband and I have been residents of St. Helena for eighteen years and have enjoyed the safety and security of living in the Vineyard Valley Senior Park. Our manufactured home faces the Napa River. Since the flood plan included the building of a wall, we were imposed upon by the transportation of dirt back and forth close to the front of our house. The large and intrusive machines and equipment were a necessary part of the construction. If the flood wall is undermined, our home could threatened.

Another important concern is the increased water

usage by the Hunter subdivision. Since we already are rationed in the dry season to use our outside brushes and trees, I can't imagine how much greater the problems will become).

Last but not least, the sewer project down Paseo Grande (our main road entering and leaving) could seriously impact our accessibility in case of emergency situations such as last summer's fire threat.

Please consider these important impacts on the lives of so many including those of our elderly people.

1. What seems most obvious, overall Environmental Impact including but not limited to: Sewer/sanitary overflow potential; long-range (surface area) potential flooding increase to Vineyard Valley; ACOE project & preserve and new development itself.

(1-B) In consideration of these threats, developer should be required to provide a minimum of $250,000 flood insurance for EACH homeowner within Vineyard Valley MHP, as well as sewage liability riders, with agreed upon minimum $ policies. Flood insurance liability coverage would also be in the event of flooding from ANY source: i.e.: Storm water drainage, other run-off/broken lines, etc. Current flood plain plan does NOT support further growth. Should be FEMA certified BEFORE any considerations.

2. Environmental Impact to traffic, roads, utility maintenance. Access/Egress/Overall traffic flow.
3. Access in Emergency/Evacuation. Pratt St. Bridge/access has not been re-opened already less evacuation routes. More housing of this magnitude (any multi-unit development) should not be considered until current evac access is updated and improved substantially - especially for any growth consideration. Some cost deferred to Developer.
4. Does any development contribute financially to a long-term contract to support expanded Emergency/fire/police services?
5. Impact/Enviro Study regarding water flow direction, to current homes/flood plain.
6. Traffic Safety Study.
7. Road and deferred (sidewalks, lights, etc.) cost of maintenance - short + long-Term.
8. Additional Bridge development: W/a study on engineering, property + safety costs included.
9. Cost of Flooding to City, Individuals (Agent: Developer carries Flood Liability Insurance for existing neighborhoods). Long-Term!
10. All these health and safety concerns are significant. And these are before even addressing the obvious concern regarding the value of the aesthetics we enjoy as a community and the daily use of this community (as a whole) of the beautiful trail and natural preserve being considered. The only real long-Term Benefactors of such a proposal is the financial gain of the developer(s). At what cost to those of us who live here; those who will have to pay in natural beauty and spiritual connection now — and financially in the future. Traffic will be intolerable. The sense of this small Hamlet's pride in our love of the natural blessings here diminished more. The potential for possible disasters increased.

So the question becomes "who are you serving if you give consideration to approving a development the community at large vigorously opposes."

My major concern is the impact on the Flood Project. The Levee in particular as well as the drainage pumps and drainage ponds that get pumped back into the river. Plus the density of the homes will provide a strain on water and sewage resources. The impact on the peacefulness and security of Vineyard Valley will be most unpleasant. Please Relocate the Hunter Project to another part of St. Helena.

I am also concerned about the Peace and Quiet of

Vineyard Valley. Along with increased traffic and the impact on our privacy.

Thank you,

Diane J Bass

I have grave concerns related to the proposed plans for the Hunter project adjacent to Vineyard Valley.
1) My major concern has to do with density: 85 units at 2-3 persons/unit = 170-255 people added to our small community of @ 5000. Each will likely have a car - are 170-255 parking spaces provided. This will lead to a lot more congestion on roads that are already congested! Please consider # units so as to have ↓ density.
2) Issues with water and sewer use going thru our community here in VV which already overflows during storms
3) Access is eluding for emergency vehicles.

4) If flooded again cities and taxpayers are on the hook.

5) potential levee failure

6) Undermining of the very expensive flood walls

7) City maintenance of the catch basins, Napa River flowing thru this area, and levee.

8) River and levee walks remain open to public

9) Trees and landscape between the properties as visitors will be impacted.

10) Elevation of these houses will be well above ground level - the impact to the existing flood plain needs to be studied.

11) Would like to see additional land devoted to affordable housing, which I regard as our community's greatest need, not more McMansions.

12) My hope is that the EIR will take these issues seriously and examine carefully for practicality and impact. I believe is that this project needs to be compressed to perhaps 1/2 the proposed units and even then. I quit my teeth as this will affect our VV community the most.

Thank you for your kind consideration of my deeply held concerns.

— Lynne James

(1) DOES ANYBODY LOOK BEYOND St. HELENA TO UNDERSTAND THE TRAFFIC WHICH IS GOING TO INCREASE W/ DEVELOPMENT OF NEW RESORTS IN CALISTOGA.

(2) SEPTIC SYSTEM TO BE CONNECTED W/ VINEYARD VALLEY? WE ALREADY HAVE SEWAGE PUMPED ON OCCASION – REALLY NOT MORE?

(3) RETRO FITTING HOMES IN St. HELENA TO ACCOMODATE NON POTABLE WELL WATER - ONLY IF DEVELOPER PAYS totally FOR THIS BRIGHT IDEA. ABSOLUTELY NO COST TO St. HELENA CITY OR RESIDENCE

(4) IF THE PROPERTY IS TO BE USED, PLEASE MAKE A PARKING LOT FOR OVER FLOW OF HUNTERS COVE RESIDENTS, LETS BE PRACTICAL INSTEAD OF GREEDY.

(5) AS I don't BELIEVE ANYONE REALLY CARES but VINEYARD

Valley is AN OVER 55 Community so PEACE AND QUIET IS ONE of the BASICS for this KIND of Community. I know the impact on those with FIXED INCOMES does not sit well much with those Looking to MAKE A SCORE, it DOES CREATE UNREST to SENIORS. PLEASE BE ADVISED on this Subject

into EIR - Hunter Project
Goldeen

City of St Helena, City Hall
Received
APR 10 2018

1480 Main St.
St Helena, CA 94574

Water/Floodings

1) In case of flooding will the city be responsible for damaged homes since there is higher risk of flooding in this area - (more likely with climate change)

2) Noise

During construction how will the project be monitored for noise levels to not go above an acceptable level? Will an acceptable level be determined before project begins? Who will monitor this and how often? What hours will no construction be allowed? Weekends?

Fire

3) With increase of new homeowners, will the Volunteer Fire Dept be able to continue or will we have to discontinue it and have fully paid fire dept? If so, what will increase of cost be to each resident in town?

Housing

4) Will the Hunter project increase ~~for~~ need for worker housing: more teachers, firefighters, City staff etc.

Air Quality

5.) Traffic/CARS

What higher levels of green house gas emissions are expected ~~by~~ for St. Helena as a result of this project being built? How many new trees will be planted to accomodate for this increase?

Will new trees be larger more mature trees? (Young sedlings take years to mature)

Will native trees be planted such as Blue Oak etc ~~to better~~ since they are drought tolerant? Also require little maintainence.

6) Safe + accessible Bicycle + Walking Paths

How many new walking/running/bicycling paths will be added so new homeowners can walk, ~~bicycle~~ bicycle or run downtown? Large trees with canopies providing shade need to near paths. With hotter summer days, shade should be a must.

Combined with expected increase of tourist visiting winery event centers year around, are there enough roads in St. Helena to handle daily residential drivers as well as tourists, buses + trucks? Will we need more

7) Stop lights + intersections ?

If so, will developer pay for necessary infrastructure improvements/additions - ?

8) Viewsheds

what viewsheds are being destroyed by Hunter project? Should new homes be limited to 1 story? Should homes be planned to NOT block views from other residents as much as possible?

9) Parks Open Space

How much open space will eastside of town be losing with Hunter Project? Are there areas near Hunter project that will be designated for new parks or Open Space?

10) River Protection

How will riparian area near Napa River be protected from pesticide or toxic runoff? (from lawns, gardens, garages etc)

11) Water Conservation

What measures will city take to implement a water conservation plan that is on-going year-round for residents + wineries? What proof or evidence does city have to show our town is capable of supplying residents + businesses enough WATER for reasonable quality of life on a daily basis for next 10-30 years?

DO WE HAVE ENOUGH WATER FOR HUNTER PROJECT? SHOW ME!

12) Parking

Will there be adequate parking for all homeowners & those living in apartments or affordable housing?

What steps will be taken to make sure there isn't massive overflow of parking into other neighborhoods?

Will parking rules, laws, be monitored on an on-going basis?

13) Staff at City Hall

Will increase of town's population require more staff at City Hall in regards to maintaining, monitoring & parking, safety, air-quality etc? If so, what cost will be passed on to residents?

Hunter EIR

4/9/17

Once this project is built what will happen to the trail? I currently use that trail to walk my dog with my kids almost every day, and I don't want to see it go. I live down the street from the trail and there isn't anything else like it within walking distance from my house.

Sam Hilger

HUNTER ENVIRONMENTAL REPORT QUESTION

THIS PROJET IS HUGE. HOW MANY NEW PEOPLE WILL BE ADDED IN SAINT HELENA?

WILL THERE BE MORE POLICE AND FIRE? I HEARD WE COULD LOSE THE VOLUNTEER FIRE DEPARTMENT GUYS BECAUSE THE CITY WOULD BE TOO BIG. IS THAT TRUE? HOW WILL TAX PAYERS GET FIRE SERVICE? WHO WILL COVER THE COST OF PAID FIREMEN?

DO THE AFFORDABLE SUBSIDIZED APARTMENTS (AND HOUSES) PAY PROPERTY TAXES? WILL MY TAXES GO UP?

WHAT ABOUT POLICE? DO TAXPAYERS HAVE TO PAY FOR MORE POLICE? DO WE NEED MORE POLICE WITH ALL THESE NEW PEOPLE?

WHY ARE WE LETTING SOMEBODY PLOW DOWN THE VINYARDS? WE ARE SUPPOSED TO BE ALL ABOUT AGRICULTURE. HOW MUCH VINYARD WILL BE PLOWED OVER? WE USED TO CARE ABOUT FARMING. WHEN THE VINYARDS ARE GONE, WE'RE JUST ANOTHER CITY LIKE NAPA AND SANTA ROSA. HOW CAN THAT BE REPLACED? WHAT'S THE PLAN FOR THAT?

TONY CASTELLI

**Subject:** Comments on the Hunter Project EIR:

Comments on the Hunter Project EIR:

A crucial component of the EIR must be the effect of adding 87 new hookups to the St. Helena water system. This must not be considered for this project alone. Approved projects and new proposals would add an estimated 650 new residents to town—all east of Main Street. Add these:

Castellucci project Pope Street: 51 homes
Castellucci 14 acre vineyard on Pope: winery, house, and apartments on the west side of College Avenue.
684 McCorkle Townhomes (Brenkle Court) 8 units approved and started
632 McCorkle Apartments 8 units approved and started
Turley Flats Apartment on Pope at Main- 8 units approved and started
Montessori Middle School 25 students
Komes Custom Crush Facility 890 Dowdell Lane, La Fata Street 120,000 gallons
Redmond Winery Conversion (Dowdell Lane) 24,000 gallons/year winery uses + commercial kitchen
Farmstead Resort 1000 Mills Lane 65 hotel units
Source: http://cityofsthelena.org/planning/project/pl18-008-567-pope-st-castellucci-winery-design-review-use-permit

It would be irresponsible to strain the St. Helena water supply further. California is getting drier. Consider these quotes from the newspaper:

The Mercury News 2-21-18:

"Amid one of California's driest winters in modern history, state water regulators on Tuesday met in Sacramento to consider making permanent the water-wasting rules that were in effect during the last drought — rules that would carry fines of up to $500 per violation."

Quotes from the St. Helena Star of 2-15-2018:

The council also approved contracts to install equipment measuring how much water the city diverts from Bell Creek, and to conduct studies that will lay the groundwork for a permanent bypass plan within the next 12 to 18 months. The interim plan approved Tuesday requires the city to bypass more water from the reservoir to the creek between Nov. 15 and April 15. The city's permit already prohibits the city from storing water that enters the reservoir between April 16 and Nov. 14. .....The new flows would only affect

the city's water supply during drought years…. Galbraith cautioned that the reservoir is "not in happy condition" amidst an unusually dry rainy season. It was at only 58.9 percent of full capacity as of Monday….. The city's 600 acre-foot Napa water contract "basically replaced the water that we used to take from Bell Canyon until we came into compliance with our state permits," Galbraith said…."That's a heck of a hit we've already taken to Bell Canyon, and I just don't see that the city can risk any further material hit to Bell Canyon without significant interruption of economic life here in St. Helena," he said.

Quotes from the St. Helena Star of 3-29-18

"In late February, with the reservoir hovering below 60 percent, city officials warned of water restrictions that could include a drought surcharge for ratepayers. Permits prohibit the city from capturing any rain that falls between April 15 and Nov. 15 in Bell Canyon reservoir. "the 2017-2018 rainfall year is still only about two-thirds of normal." "If the reservoir does run low, the city could theoretically ramp up production from its other two water sources: the Stonebridge wells near the Pope Street bridge and water pumped in from Napa. However, while St. Helena has the option of buying an additional 200 acre-feet a year from Napa on top of the usual 600 acre-feet, it's questionable whether the pipes and pumps that connect the two water systems could actually deliver that much water, Mayor Alan Galbraith said."

Parking: At noon on a weekday it is almost impossible to find a parking space, even in the large Safeway and Sunshine parking lots. This is true at other times as well. If we add 650 new residents to the east side of St. Helena residents will not be able find parking to do their grocery shopping.

Garbage: Where will all the garbage do when Clover Flat landfill is full? Fire debris has already taken 3 years off the useful life of the landfill.

Thank you for the invitation to respond to this matter.

Mariam Hansen

**Subject:** Hunter Project

Hello City Clerk's Office.

I have lived in St. Helena for over 14 years, and have concerns over the Hunter Project that I would like to voice and have addressed.
The first concern is with all the projected houses to be built. Where are the plans for the streets, and housing? If there are to be "low cost" housing to be included, my understanding is there is nothing to stop me, or anyone else from buying one, and either using it for a weekend home, or renting it out at market value, which is ridiculously high here.
I live off of Voorhees Circle where there are some state regulated housing units on part of that circle. I have no problem with those units and their regulations, since they are mandated by the state, and encourage ownership to people who would not be able to buy anything in St. Helena any other way. But since the "low cost" housing that is being proposed, has no protection, how are those units going to serve the people who would like to live and work in St. Helena that can't afford a $600,000 condo or a 1.5 million dollar 2 bedroom house?
Another concern is since the housing is supposed to go behind the levy, and if it fails, the city of St. Helena is responsible for damages, law suits, etc. If we are so hurting for money, why would we put ourselves in the middle of that storm? Levys do fail, and we have no guarantee that they won't.
I work at a place that was built 3 years ago, and we have had 3 leaks in the sewer pipes, closing the bathrooms, and flooding the parking lot. I know that it's not a levy, but it is an example of new construction that is faulty.

I also have concerns with all the new streets and sidewalks, and flooding. Drainage on a flood plain is always problematic, and with not much dirt to soak up the water, I see that as a potential problem in a heavy rainy season.
Also, the citizens of St. Helena use that beautiful walk past the library down to the river, which is one of the few open areas that we can walk with or without our dogs, legally. That walk would be sorely missed by a huge part of the population.
And then there is the additional traffic. All the people living there, if they work in St. Helena, are retired, or use it as a second home, want to shop in Napa where many people shop now, and will drive within town. They will all filter out from the same roads onto Hwy. 29. The signal will be backed up with traffic during the peak times, making turning onto Hwy. 29 even more difficult than it is now.

Thank you addressing these concerns of mine.

Sandra Barros

April 2, 2018

Dear Council Members,

It was approximately ten years ago that the Hunter Project first came to my attention through a newspaper article in the "Star". That same week my wife and I received an alarming notice from the City of Saint Helena announcing Phase II water restrictions due to drought, even though the real drought was still some years in the future.

Hunter is back again, and is just as unwanted a proposal today as it was then, because of our water constraints, and because of a host of other, widely discussed concerns.

The developer has done his darndest to slap copious low-income housing lipstick on this high-end pig, but the reality is that it promises major impacts for Saint Helena residents in exchange for minor affordable housing benefits, particularly when one considers the additional personnel that will be needed to support the projected increase in overall population caused by the huge project.

Some years ago, in the interest of protecting our disappearing agricultural communities, the Association of Bay Area Governments (ABAG) wisely reduced the burden of new housing for rural Bay Area communities. As a consequence, and thanks to new low-income housing projects like McCorkle and Turley, Saint Helena's Regional Housing Need Allocation (RHNA) is largely satisfied for some years to come.

Nevertheless, there remains an acute shortage of affordable, workforce housing. To the extent new housing is built, it should focus laser-like on workforce and low-income housing, NOT large developments offering expensive homes unaffordable to our workforce, and creating the need for even more workforce. We need more Turley's and McCorkle's, as close as possible to downtown services, transportation and schools, and maybe even on the west side of the tracks to foster integration.

Saint Helena is at the same crossroads reached by Vail and Aspen fifteen years ago. Because of wise planning, policies, and forward thinking, Aspen reportedly continues to be a real town, with real people, and with service clubs, churches and bars filled with locals. Vail chose a different path. Its workers suffer long, grinding commutes to run the town's businesses and provide its services, and the bars are largely filled with out of state visitors.

We don't need Hunter. We urgently need creative strategies to be Aspen, not Vail.

Thank you for your commitment and sacrifice for our fair city.

Henry Gundling

**Subject:** Hunter Subdivision Project

Thank you for providing opportunities for public response to the proposed Hunter project.

Regarding EIR concerns, this proposed project raises many red flags. The following are the primary ones that concern us:

1. The potential negative impact on the efficiency and safety provisions of the existing flood control construction,

which now provides excellent, proven flood protection. Are you consulting with FEMA and the Army Corps of

Engineers regarding this issue?

2. Inevitable increased auto traffic on nearby Adams, Starr, Pope and Main Streets, which are already experiencing

excesses at various times. Can the Pope Street Bridge handle the additional traffic?

3. If the project lacks adequate parking (a minimum of two spaces per household), this will create a huge on-street

parking excess like Starr has now.

4. Is there sufficient water available to support the Hunter project, knowing we have rationed water for SH residents

in the past and can anticipate doing so in the future?

Regarding the larger issue of new construction for the improvement of St. Helena, we understand the primary community benefit the Hunter project would bring is more affordable work force housing, apparently limited to the 25 units now designated low income. City revenues will not be significantly increased by Hunter project property taxes. Whereas, the Adams Street property slated for some future development has great potential for significantly increased

city revenue. So, it is imperative to know how the Hunter project will impact the Adams Street planning and development.

**Subject:** EIR and NOP for Hunter Project

Mr. Housh,
I have lived in St Helena for 38 years and my husband was born here. We are so disappointed in the drive for growth that our Planning Committee exhibits. We just came off 5 years of drought with only 1 year of decent rain and you are looking at allowing 85+ new housing units in the Hunter Project. Where are you going to get the water?
We were subject to water rationing for several years and allowed our lawns to die in order to be good citizens. So far this year, I believe Napa Valley Basin has under 20" of rainfall. I believe it is irresponsible of the Committee to approve any development of this size based on the water issue alone.
Then we have the traffic on Starr and Pope Street. Already the cars speed down Starr and at least one boy was hit by a car when he was leaving Harvest Lane on his bicycle. When 85 new homeowners are added to the equation, you should expect to have a greater problem.
Unless there is a new source of water and new streets leading out of St. Helena to Highway 29 and Silverado Trail, we believe this project should be denied.
Sincerely,
Mike and Kathleen Forni

Planning and Community Improvement Director City of St. Helena

1480 Main St., St. Helena, CA. 94574

Dear Mr. Housh,

I have a few concerns that I want to be sure are addressed in the EIR for the development of the Hunter subdivision located just north of Vineyard Valley Mobile Home Park where I live.

1. Is that property higher than Vineyard Valley and will construction of homes involve raising them 18 inches from ground level?
2. Will drains be positioned in a manner to direct run off from storms and sprinklers away from Vineyard Valley?
3. Can sewer lines be directed toward and connected to those on Adams instead of flowing through the main street of Paseo Grande in Vineyard Valley?
4. Was the retention basin located in the flood control project basin designed to accommodate the proposed construction of 87 homes? This needs to be verified in the EIR of the flood project.
5. Was the construction of 87 homes considered when the EIR for the flood project was written? This factor also needs to be found in the EIR for the flood control project.

I know that one of the basic principles when building the flood project was that it would not cause flooding upstream or downstream of Vineyard Valley. It must be a basic principle designed and engineered into the Hunter subdivision that the building of those homes will not cause flooding anywhere including Vineyard Valley, Hunts Grove and all the surrounding residential areas. I would like to see a FEMA consultant look at their plans and determine if the building of these 87 homes will affect the flood plain designation as it now stands.

Finally, I think it is much too early to even start an EIR. The Hunter company has not submitted final plans but only loosely defined plot maps. They should be required to have more completed plans before an EIR is begun.

Thank you for your consideration and for passing this on to the appropriate firm who will be writing the EIR.

**Subject:** Hunter subdivision project

Dear Mr. Noah House and all it may concern,

I am a current resident of the Vineyard Valley residential community directly adjacent to the proposed Hunter Subdivision.

Please see the "below list of concerns" that I along with my husband and many neighbors have regarding this proposal.

I would appreciate an in-depth re-evaluation of our concerns in all of these areas.

In addition to the aforementioned items...please address concerns about wildlife areas within the city limits. I have witnessed a bobcat along the river, blue herons, egrets, lots of hawks (even a pair of mating hawks in the oak trees along the back wall of Vineyard Valley).
I am seeing less and less cyotes, squirrels, birds, ducks and skunks.
It is rare to see any deer at all within the city limits and even within Napa County.
The wildlife used to be a very special part of our small town, making hiking and biking, walking a very special experience.

Please take this into consideration with any planning for any reason our very fragile wildlife corridor.

I would also propose any development for low income to be just that....low income....not a high end Subdivision with a few low income units built to get special zoning consideration.

Thank you for your consideration of these comments.

Sincerely,
Kathleen and John McCreedy,
11 Los Robles Court
Saint Helena, CA 94574
(Saint Helena resident for 17 years).

*****With the Hunter Subdivision Development just north of Vineyard Valley we are being positioned to accept a very large new neighbor. As the scoping for the environmental impact (EIR) is now in process, these next 25 days provides you a unique opportunity to ***have your voice heard.***

Public Comment is being requested right now. You can speak up on concerns that you have and help shape this project or perhaps send it back to the drawing board. We have assembled here a few concerns that we and others have, related to this 85+ units of housing being proposed. Please take a moment and express your

concerns and bring them to the office or deliver them directly to the city via email or regular mail. Here's your chance to influence beautiful St Helena and its future direction on the Hunter Subdivision Development! Please respond. (See attached response document)

Thank you

**Comments and concerns expressed in initial meetings**

- Sewer expansion/ sanitary overflow during the rain....as this new project will connect to our main sewer right down Paseo Grande (this concern confirmed with city engineering)
- Storm water drainage run off
- Emergency road access and river walk trail impact
- Tree and landscape between the properties as vistas will be diminished
- City services capacities in police and fire support
- True FEMA certified current Integration/impact with the flood plain plan in place
- Elevation of these houses will be well above ground level, the impact to the existing flood plain needs to be studied.
- Grading elevations and water flow direction could influence more run-off in our direction
- Traffic (Star Avenue and Pope Street)
- Traffic safety with increases surface street traffic
- Bridge development besides Pope Street

**Other concerns expressed at the first 2 meetings**

- If flooded again the cities and taxpayers on the hook
- Soil liquefaction
- Levee failure
- Undermining of the flood wall
- City Maintenance of the catch basins and levee
- Parking
- Vistas

**Subject: EIR Issues. Please put into the report**

Thank you for including my comments. It's late in the day, but I think it's still ok since the deadline is today from what I heard. I hope I am not too late. This seems like a terrible thing to do to Saint Helena.
I jog on the walkway that runs between the vineyards down to the Napa River. It's beautiful and I don't have to worry about cars, bikes, skateboards or running too close to pedestrians on the narrow sidewalks in town. There are tons of birds and wildlife all over the place. I see hawks, owls, doves, woodpeckers, starling swarms, in this area. What birds migrate through this big open area? Do they use this for migration, food, breeding, nesting? Where will they be pushed to, because this is an area right near a water source. This kind of remote quiet place seems like a perfect place for a bird habitat. There are plenty of food options like insects, rodents, fish, frogs and other tasty treats for these gorgeous birds. Will someone study this to make sure they are not chased away and how will they be affected. And what about the other animals that come to that area to eat and drink? Someone said they saw 2 river otters near the Pope Street bridge. What will happen when this is just a big subdivision?

I work in the wine industry like many of us in Napa Valley and Saint Helena. This will destroy agricultural land where vineyards are growing grapes for wine that is so important to our economy and is a big part of Saint Helenas history. The NY Times published a new study that shows the US is losing two acres of farmland every minute which is the fastest decline in US history. They state the loss has been where some of the country's best fruit farms are being replaced by houses. Isn't there a protection for farmland in St Helena? Most people I talk to support farming here.

Thank you.
Annmarie Whaylen

Sorry for the late entry but I hope you can still get this in.

These are questions about the project that we don't like at all.

1. My aunt lives in Vineyard Valley and loves being near the wide open space where the flooding used to occur. She sits and enjoys the breezes that from that area that cools down the mobile home park and brings her fresh air. She thinks she was told that the new houses will be many feet above the tops of the mobile homes, which would block all of the breeze and all of the view. She is also worried that it will be noisy and ruin the quiet peaceful environment that is there now. What will happen to the fresh air, cooling breeze, noise, and her love of the stars in the night when this project is built? If this project is built what will the final height of the houses be compared to the mobile homes in the park? How will they affect air flow, privacy, noise, and night lighting? How will that change those things? Is it fair to build houses so close and so high that it changes everything?
2. When the flood project was built, she dropped her expensive flood insurance because the City said the levee protected her. Bottom line then, if the levee breaks, will the flooding at her mobile home be different, like worse or better, than it is now with nothing built there?
3. If this housing causes more flooding than the amount of flooding without it there, who will pay for the damages to her property? Who will determine what caused the flooding, especially since she was told she did not have to worry about flooding anymore by the city?

Thank you,
Carlos Hernandez

| **Subject:** | HUNTER EIR |
| **Date:** | Thursday, April 12, 2018 4:48:17 PM |

Gentlemen,

I am writing on behalf of my husband, Cecil Lowry, and myself. Our address is 1175 Starr Avenue and we moved here in July, 1997. We are opposed to yet another development near our home on Starr Avenue.

The EIR should look carefully at traffic and parking. More developments mean more cars and trucks coming and going and where will they park? Already our neighborhood is impacted by overflow trucks and automobiles from the Hunts Grove residents parking up and down Starr and Meadowcreek Circle. We are additionally impacted by speeding vehicles up and down Starr at all times of the day and night, making crossing the street to visit a neighbor a hazard. The crosswalk at Starr and Meadowcreek Circle is basically ignored. Most importantly, all the traffic comes to a dead stop on Pope Street because of the Pope Street bridge. I believe the last EIR decided traffic was an unmitigable issue.

The EIR must look at the Hunter Project in terms of water consumption. Previous EIR study suggested a water neutrality by installing low flush toilets. Is this a joke? More people means more water use in common sense terms.

The proposed development will have many of the homes built behind the levee, in an area at serious risk of liquification, not to mention flooding, a disaster waiting to happen.

Thank you for listening. Sandra Lowry

Hi Cindy – please add these questions to the EIR

Hope all is well. Weird weather, right? From 80 degrees to rain storms and 45 degrees. What season is this? ☺

Cheers,
Ann

Question #1
How will this project affect the St Helena city groundwater wells at the Stonebridge locations? The project plan states it will provide all the landscaping water for 87 houses' lawns, flowers, bushes, gardens, carwashes, and other watering uses. The number could be 20-40 units higher if the project includes regulated affordable housing. Since the well is located next to the Napa River upstream from the City of St Helena wells that supply our community with water, what mapping will be conducted to determine if the aquifers are connected? If they are connected, then drawing large amounts of water from the same groundwater source needs to be assessed so it does not deplete the City wells supply. Who will conduct the mapping? How many groundwater data points will be included in any mapping exercise? Will it be a sufficient number to adequately determine that the Hunter well is on an aquifer that is separated from the city aquifer? This question must be answered accurately, because the city relies on the groundwater from these 2 wells as a critical source of water in times of drought when Bell Canyon is depleted. (Example – the drought resulting in exposure of large portions of the bottom of the Bell Canyon reservoir.

Question #2:

The project area is in a low lying wet area on the historic floodplain for this part of the Napa River. It has flooded numerous times over the last 20-30 years. Even in non-flood years, large portions have remained wet during the summers, to the point that vine growth and production was hampered due to the wet soils. Presently, this area is covered with standing water during and after rains with water depths often 10-12 inches deep. The project will add millions of gallons (25 acre feet) of landscaping water annually to an area that has never been irrigated. Will the addition of paved surfaces, construction pads, streets and structures cause compaction of the soils/subsoils in the area? Will this cause subsidence or instability of structures in and around the project area over time? Will subsidence cause new unknown flooding issues?

Question #3:
There is an existing subsoil study on the project area that shows what is considered to be the profile of a historic pond, which is typical in areas proximal to meandering rivers. Since the area is a known liquefaction zone in an earthquake prone location, and soils of this type can be unstable, how will this affect the safety of the homes and the structural integrity of the levee in an earthquake or major flood?

Dear Mr. Housh,

My husband and I were at the first meeting at the fire house where the Hunter project manager presented the project and I was also at the second meeting in early April at the fire house. Many residents of St. Helena spoke about their Hunter project concerns regarding traffic, parking, water, open space, police and fire services, etc.

I wanted to add my two cents telling you that my husband and I have the same concerns as the people who spoke. I didn't want to waste everyone's time repeating what you already heard so I am sending a note. Unfortunately, we have been gone for the past month (due to a family emergency) so I hope you get this before the next meeting.

Kind regards,

**Subject:** Comments and Issues for the Hunter Environmental Impact Report

City of St Helena - the St Helena Residents for an Equitable General Plan respectfully submit these comments gathered from our group about the scope of the Hunter Subdivision EIR.

Parks: We have too few parks for all of the people that live here already. We are way below what the parks national number should be per capita. What will the parks ratio be when this project is built to the maximum number, including the density bonus? Since there is no information on the number of bedrooms or bathrooms, how will the number of new residents be determined so we will know how many people will be added to the parks we already have?

Impact on Adjacent Vineyards: What impact could occur in the soils and crops in the adjacent vineyards if homeowners use pesticides, such as RoundUp, or fertilizers on their lawns?

Impact on River: What will the impact on the Napa River be when hundreds of people move in next to it? Runoff from lawns, noise, runoff from oil from the streets, human activity affecting river wildlife, etc.

River Trail: If this trail and open area surrounded by vineyards and open space is paved or is next to a roadway, what will be available to the public to replace this natural trail paid for by the public?

Recreational Space: There are high numbers of multi-family and high occupancy housing in the vicinity such as Hunts Grove, Woodbridge, Edwards St, Church St, Monte Vista, Brown St, McCorkle, Vineyard Valley, Stonebridge, Peppertree, Mariposa, etc. There is extremely limited open space for recreation of any kind in this area. With the exception of Meilly Park, there is no public space other than the nature trail from the terminus of Adams to the Napa River. How will this loss of critical public space (the river trail)

accessible to all of these high density developments impact their ability to access public recreational space? How will that be mitigated? What will replace it? How will lower income and multi-family residents be able to access public open space and nature?

Safety: How will the safety of pedestrians be impacted when the extension of Adams is connected to Starr, particularly at the Hunt/Starr intersection?

Thank you,

SHREGP

I am submitting the questions below for the Hunter EIR

1. The taxpayers paid for a recreational trail to be included as part of the flood project. St Helenans use that recreational trail from the end of Adams to the Napa River all of the time. If this area for walking, jogging, dogs and enjoying peace and quiet includes an Adams St extension or housing, and is no longer a peaceful environment for the public to enjoy, how will that be mitigated? What will replace it?
2. How will the lights from this project affect the night sky for everyone in the area, including the nearby hillsides?

best,
Krys Smith

**Subject:** Hunter EIR comments

City Clerk - please distribute as needed.

Here are a few comments about the Hunter EIR. The first two I sent back in December, plus I added a couple more.

1. In the Transportation section, all of the scenarios should start with Existing conditions, which means no access to the trail on Pratt. There are no plans/funds to fix that bridge at this time that I know of, so we must assume that that defines Existing. The Pope Street bridge is under additional stress from no Pratt access and the Hunter EIR should address how a new development will further stress that situation.

2. Understanding of extreme weather events has increased in the last six years since the old EIR was started. It is clear that FEMA maps that do not include climate change are inadequate. The new EIR should incorporate consideration of the all too common extreme weather events which will increase flood risk. How will climate change be incorporated and how does it change flood maps and flood risk?

3. We walk down the trail that leads to the Napa River almost every day at different times. We see birds, rabbits, hear bullfrogs and crickets, etc. This area is teeming with wildlife and probably serves as a watering hole and food source to countless wildlife species. How will the paving of this area, nighttime lighting, and addition of hundreds of cars and humans impact the wildlife that lives in the area or migrates through? Which species will be impacted and how? What research will be conducted to determine this?

4. What is the air quality for the surrounding neighborhoods during the project construction? Some of us have respiratory issues, and we want to know how long and how seriously our air quality environment will be impacted. Please be specific on the types and quantities of impact.

5. How much traffic on Starr, Hunt, Pope, and Adams will be added? How many cars will the project add specifically, and how will this be counted since there is no information on housing types?

Thanks,
J. Newsome

**Subject:** Scoping comments on Hunter EIR

I'd like to submit the following comments for the Scoping of the Hunter EIR

**Groundwater usage on the site**
The estimates of historical groundwater usage on the site need to be redone. The previous EIR made some highly questionable assumptions about historical groundwater usage, leading to an estimate of pre-flood-project groundwater demand on the site of 22 AF. There are two errors in the consultant's methodology rendering this estimate much too high.

1. The consultant assumed that all of the vineyards on the site were historically irrigated. There is little need to irrigate this wet vineyard and there is no evidence that there has ever been an irrigation system on the site, so the assumption that the well was used to irrigate the entire site is unfounded. There are no remnants of piping or any other irrigation components currently. And, vintners adjacent to the site who have lived here for decades do not recall there ever being such a system. The property is adjacent to the river and is one of the wettest vineyard locations in the valley. There is little need to irrigate there. Adjacent vineyards which are updip and drier are all dry farmed. If the assumption is to be made that irrigation once existed for the entire vineyard, it is incumbent upon the consultants to prove that such a system existed.
2. The consultant assumed vineyard irrigation rates from the Oakville area, a much drier area farther from the Napa River. Even if this area was ever irrigated, Oakville irrigation rates are too high. Again, this is a wet vineyard which would need water only rarely in the driest of years, if at all.

Therefore, historical groundwater pumping on the site was likely localized, sporadic and minimal. The actual usage would be a small fraction of the 22 AF. What are the new estimates of historical production? What data are used to justify those estimates?

**Impacts on the Napa River, including fish**
The existing groundwater well on the site is only hundreds of feet from the Napa River. If the aquifer being accessed is at all connected to the river, then the well is drawing down from the Napa River, impacting river flows and fish habitat. What is the connection to the Napa River? How much is the impact on river flow from pumping on the site at different rates? A groundwater hydrology study should be undertaken to determine the connection to the river.

**Impacts on City Groundwater Supply Wells**
The existing groundwater well on the site is updip of City water supply wells and the proposed levels of use could impact City wells. Is it the same aquifer? How would pumping on the site affect groundwater levels in the City wells, at different rates? A groundwater hydrology study should be undertaken to determine if there is a connection to the City's groundwater supply wells and the potential for drawdown of those wells.

**Subject:** Comments and Issues for the Hunter Environmental Impact Report

City of St Helena - the St Helena Residents for an Equitable General Plan respectfully submit these comments gathered from our group about the scope of the Hunter Subdivision EIR.

Parks: We have too few parks for all of the people that live here already. We are way below what the parks national number should be per capita. What will the parks ratio be when this project is built to the maximum number, including the density bonus? Since there is no information on the number of bedrooms or bathrooms, how will the number of new residents be determined so we will know how many people will be added to the parks we already have?

Impact on Adjacent Vineyards: What impact could occur in the soils and crops in the adjacent vineyards if homeowners use pesticides, such as RoundUp, or fertilizers on their lawns?

Impact on River: What will the impact on the Napa River be when hundreds of people move in next to it? Runoff from lawns, noise, runoff from oil from the streets, human activity affecting river wildlife, etc.

River Trail: If this trail and open area surrounded by vineyards and open space is paved or is next to a roadway, what will be available to the public to replace this natural trail paid for by the public?

Recreational Space: There are high numbers of multi-family and high occupancy housing in the vicinity such as Hunts Grove, Woodbridge, Edwards St, Church St, Monte Vista, Brown St, McCorkle, Vineyard Valley, Stonebridge, Peppertree, Mariposa, etc. There is extremely limited open space for recreation of any kind in this area. With the exception of Meilly Park, there is no public space other than the nature trail from the terminus of Adams to the Napa River. How will this loss of critical public space (the river trail) accessible to all of these high density developments impact their ability to access public recreational space? How will that be mitigated? What will replace it? How will lower income and multi-family residents be able to access public open space and nature?

Safety: How will the safety of pedestrians be impacted when the extension of Adams is connected to Starr, particularly at the Hunt/Starr intersection?

Thank you,

SHREGP

**Subject:** Hunter Project-ERI Scoping Input

To the City Clerk, St. Helena, et al,

This note is a submission in response to the request for input on the Hunter Property Development EIR scoping exercise.

As you may be aware my home is located somewhat at ground zero of this proposed development and the results of the EIR impacts me very directly and those of my immediate neighbors and the greater St. Helena community dramatically. The EIR, which seems to be evolving with considerable thought, does seem to be predicated on some larger issues that are being relegated to past decisions that do not appear to be as well thought out and that is concerning to me, substantially.

I am relatively new to the community and while attempting to discover what has been a very long process in developing this property there are more questions raised than answered. I would consider myself pro-development but with the caveat that any development is very well thought out, vetted intensely, and evolved with the best practices for the whole community/City in its considerations and approvals. I am pro-development, and not a developer. But I know instinctively when something is not of the potential standard that the community needs and deserves. The very few illustrations of this development that I have seen are of the poorest creative quality that I could imagine and certainly do not seem to fit any, even minimal, urban plan for our City although I have made some efforts to discover what that may actually entail. As I stated in one of the public meetings I am somewhat baffled by the rush to move a poorly defined project forward without much more discovery.

These comments are somewhat outside the bounds of the Scoping Request but the Discovery process is directly related to that Request. I have heard of my neighbors concerns, and they are ground zero concerns, and whole community concerns of mine as well in relation to traffic, water, resources, noise, costs, liability, and impact on every aspect of the future of this City that I am quickly coming to value and appreciate deeply.

Somewhat disconcerting is the revelation that a previous EIR contained information which is to be transported into the new EIR without review. I am particularly concerned with the whole process of developing the levee and its viability particularly relative to the news of so many levees and similar structures in Houston, New Orleans and elsewhere failing when they were supposed to be certified '100 year flood' capable. If this levee fails who is responsible for the destruction that will devastate so many in this community? Who pays for those types of catastrophes? I would ask that this issue not be swept under the proverbial rug and be added, in-depth, to the scope of the EIR work.

My thanks for your work and the commitment from every one of our councilors, City Staff and Executive and Counsel, the Mayor and all of those tasked with this EIR work and they all contribute to our future which is bright indeed.

Just hit reply if you would. Thanks.

Wendell

Dear Cindy,

Please consider these comments regarding the scope of the Hunter EIR.

An earlier EIR dismissed flood risk for the Hunter Property behind the levee as "less than significant" as shown below ...

LETTER C4
Ron Amoroso
June 18, 2012

C4-1 This is an introductory comment. See Response to Comment C4-2 addressing the specific comments detailed in Mr. Amoroso's letter.

C4-2 While liability issues are not a subject that CEQA addresses, the Draft EIR does go into considerable detail regarding the potential for the levee to be overtopped or fail (see Draft EIR Impact HYD-4 starting on page 242).

With the acceptance of the Flood Protection Project and the revision of the Flood Insurance Rate Map (FIRM) or Flood Hazard Boundary Map, FEMA has indicated that the project site has an acceptable level of protection from the 100-year flood event. This 100-year level of protection is the standard of significance that is specified by the CEQA Guidelines to determine if a potential flooding impact is significant or less than significant. In this case, the potential flooding impact, under CEQA, is less than significant.

That citation reports the "potential flooding impact, ***under CEQA***, is less than significant."

With due respect to all, I consider the flood risk behind the levee and its potential consequences to be substantial, and ask that the flood risk be thoroughly studied so St. Helena residents and taxpayers do not become liable for damages occurred on that property when the levee alignment violated St. Helena's own 1993 General Plan, which contained this provision ...

**Goals, Policies and Standards**

**Guiding Policies**

9.4.1 New development should provide adequate drainage improvements to handle generated storm runoff from the site to the nearest major watershed. The watersheds include York Creek, Sulphur Creek and the Napa River.

9.4.2 If a City storm drain is available, the developer should participate in the funding to the extent it benefits the development.

9.4.3 Extension of existing downstream drains which have adequate capacity should be completed at the developer's expense with future reimbursement for oversizing costs at the time of connection by others.

9.4.4 Grading and earth filling within the designated 100-year floodway should not be permitted except for public streets or bridges.

9.4.5 Encroachments into the 100-year floodway should not result in any increase in flood levels during the occurrence of the base flood discharge.

... that "grading and earth filling within the designated 100-year floodway should not be permitted."

Unfortunately the Vineyard Valley development was developed directly atop the floodway to the Napa River, as shown on these photographs ...

3

and from the east side of the River ...

These photos show that the floodwater trapped behind the Vineyard Valley cinder block wall did not overtop the riverbank, but instead drained naturally from the watershed northwest of Vineyard Valley, toward the historic floodway now blocked by Vineyard Valley.

Disruption of that historic natural floodway caused both floods in 1986 and 1995 that caused over $100 Million as documented by City Manager Johansson in his Project Summary report to Assemblywoman Noreen Evans and Senator Pat Wiggins ...

## Project Summary Sheet

**Project Name**: City of St. Helena Flood Protection and Flood Corridor Restoration Project

**Tracking No**: 200784107

**Location**: City of St. Helena County: Napa, CA

**County**: Napa

**Project Sponsor**: City of St. Helena

**Point of Contact**: Bert Johansson, (707) 967-2792

**Co-applicant(s)**: None

**Assembly District**: #7 Noreen Evans **Senate District**: #2 Pat Wiggins

**Project Summary**: The City of St. Helena Flood Protection and Flood Corridor Restoration Project will protect 468 existing mobile homes, single-family dwellings, and low-income multifamily units from flood damage caused by the Napa River overflow through the incorporated City of St. Helena in Napa County. This multi-objective project will provide flood damage reduction through restoration and re-establishment of the natural floodplain along the project creek frontage; construction of set back levees and overflow basins for transitory storage; and the re-creation and restoration of a natural floodway corridor. It will create more than 8 acres of high-value riparian forest and shoreline restoration for terrestrial and fish habitat on the Napa River, which is listed by the EPA as an impaired waterway and by National Marine Fisheries Service as an important steelhead and salmon recovery tributary of the San Francisco Bay Estuary. In addition, the project will allow residents to view and access this reach of the Napa River, which currently cannot be accessed.

The project addresses Flood Protection Corridor Program Goals by:

- Floodplain Terrace at more than 8 acres, the new terrace will stretch alongside the Napa River. This terrace will provide a wider area for passage of floodwaters and also provide riparian habitat for rare and common species.
- Shoreline Restoration Approximately 600 feet of existing bank protection riprap and wire gabion at the Vineyard Valley Mobile Home Park (VVMHP) will be removed and the shoreline restored, improving habitat for steelhead, California freshwater shrimp, and critical habitat for the California red-legged frog, as well as for common species.
- Levee A new setback levee will be constructed.
- Removal of Mobile Homes Approximately 17 mobile homes have been removed to make room for a wider floodway corridor.

- Floodwall/Bank Stabilization A new setback floodwall will be constructed to surround the remaining homes within the Vineyard Valley Mobile Home Park. Up to 300 feet of bioengineered and/or structural bank stabilization would be placed near the confluence of the Napa River and Sulphur Creek to protect a portion of the VVMHP floodwall.
- Stormwater Management for Water Quality. A detention basin and pumping facility will be placed inboard of the new levee and northwest of the existing VVMHP floodwall. The two existing storm drains will be diverted into this basin and the two existing storm drain outfalls into the Napa River will be abandoned. A drainage swale will run along the outboard edge of the new levee to filter area stormwater before entering the Napa River. Water quality will be improved as unfiltered storm water passes through the detention basin and the vegetated swale in the terrace.
- Vegetation Management At the southeastern end of the project area, riparian

Engineers know as basic safety practice not to obstruct floodplains, as confirmed below in St. Helena's 1993 General Plan ...

**Goals, Policies and Standards**

**Guiding Policies**

9.4.1 New development should provide adequate drainage improvements to handle generated storm runoff from the site to the nearest major watershed. The watersheds include York Creek, Sulphur Creek and the Napa River.

9.4.2 If a City storm drain is available, the developer should participate in the funding to the extent it benefits the development.

9.4.3 Extension of existing downstream drains which have adequate capacity should be completed at the developer's expense with future reimbursement for oversizing costs at the time of connection by others.

9.4.4 Grading and earth filling within the designated 100-year floodway should not be permitted except for public streets or bridges.

9.4.5 Encroachments into the 100-year floodway should not result in any increase in flood levels during the occurrence of the base flood discharge.

Unfortunately that basic practice was ignored in the levee alignment, which bisects the very floodplain that caused the 1986 and 1995 floods that caused over $100 Million as reported above by former City Manager Bert Johansson.

After the 1986 flood, in his letter of August 14, 1986, to developer McDonnell, then City Engineer Jack Meade warned Mr. McDonnell against reconstructing Vineyard Valley on its floodway blocking site ...

August 14, 1986

Vineyard Valley Mobile Homes
270 Pope Street
St. Helena, California 94574

Attention Mr R H McDonnell

RE: Flood Wall

Dear Mr. McDonnell

This letter is in regards to your building permit application for a Flood Wall filed by your contractor Mr. Jinks.

It is my understanding from your design engineer, Mr. Giorgi, the purpose of this wall is to replace a fence which was washed out and damaged in the February 1986 flood. It is also my understanding the proposed Flood Wall is on the same location and extent as the washed out fence.

The City cannot guarantee or assure you that the Flood Wall will achieve its intended purpose. The review of the plans and the issuance of a building permit does not provide you with any type of warranty either directly or implied that the construction of the wall will accomplish its design purpose. Only your design engineer can provide you any type of assurances that the Flood Wall will function as intended.

You are hereby put on notice that the construction of the Flood Wall may have possible adverse effects on other property owners either upstream or downstream. The construction of the Flood Wall may create off-site flood hazards to other properties. Prior to construction, your design engineer should thoroughly study and evaluate the possible effects this Flood Wall will have on other properties.

By acceptance of the building permit for the Flood Wall, you shall assume full responsibility for any liability occurring from the construction of the Flood Wall and hold the City of St. Helena harmless for any liability and provide full indemnification to the City of St. Helena.

Sincerely,

Jack M. Meade, P.E.
City Engineer

JMM/kmw

cc: Acting City Administrator
City Attorney
Building Inspector
Philips and Giorgi

... and in his response to that letter, Professional Engineer Gerald R. Giorgi expressly alerted the landowner that he should "count on being sued" should another flood occur and neighbors be damaged, for "whatever reason" ...

Gentlemen:

We have just received a copy of Mr. Meade's letter to you dated August 14th, 1996 regarding the proposed flood wall.

As you know and as it is understood by Mr. Meade, the new wall merely replaces the substandard barrier that failed in the 1986 flood. Mr. Meade states that "construction of the flood wall may create off-site flood hazards to other properties." We fail to understand how replacing a timber wall that was intended to act as a barrier with a masonry wall presents any new off-site flood hazards that did not already exist. The alternative of letting the river flow through your project would be amusing if not so serious. We are more concerned with the stockpiling of fill NW of your project in what appears to be within the flood plain boundaries.

As discussed, if your project should flood again it will occur at the levee adjacent to the river. We understand that raising this levee could indeed adversely impact off-site properties and it would merely move the weak link to the Sulphur Creek boundary.

We understand your urgency in proceeding with construction as the risk of losing millions of dollars in homes and potential loss of life is real. However, should another flood occur and neighbors are damaged, for whatever reason, you can count on being sued. Again we recommend you consult with an expert in hydrology to confirm what we all believe to be true. It would be a very cheap form of insurance. Please call if you require assistance in this matter.

Very Truly Yours,

Gerald R. Giorgi, P.E.

GRG:/jo

cc: Charles F. Philips
Jack H. Meade, P.E.

1541 THIRD ST. NAPA, CALIFORNIA 94559 (707) 252-6588

It is unfortunate the General Plan guidelines the professional engineers recommendations were ignored, but when Measure A was passed in 1998, residents of Vineyard Valley, fearing the future flood warned by engineer Giorgi, fought assertively to have their flood protection upgraded to avoid the next damaging flood. Vineyard Valley residents were comforted by the inclusion of this Measure A set-aside to fund flood protection for St. Helena ...

In December 2008, residents sought to preserve the floodplain by suggesting this upgrade to the extant cinder block wall erected after Vineyard Valley's flood in 1986 to flood standard, along Vineyard Valley's north property line ...

Unfortunately the residents were ignored and the levee alignment now cordons off a major component of the natural floodplain, with obvious flood risk increases by obstructing the floodplain.

The residents proposed the remaining floodplain be preserved as a public riverbank park, but advocates of the ill-designed levee across the floodplain won the argument and Vineyard Valley flood protection was approved across the very floodplain that had flooded Vineyard Valley so badly in 1986 and 1995.

When Vineyard Valley residents asked why the levee had to obstruct the floodplain instead of upgrading the cinder block wall along their north property line, and they were told upgraded floodwall around Vineyard Valley and Hunter's Grove "would not work."

As an engineer myself, I can only conclude the levee alignment was built across the floodplain to protect developer Hunter's property at public expense, and the sacrifice of a large portion of the historic floodplain.

UC Davis Engineering Professor Nicholas Pinter wrote after completing a site inspection that he found our levee a "field of dreams levee" as he wrote in this report. City management may want to inquire of Professor Pinter as to his opinion of the wisdom of permitting housing development behind the levee. I personally trust Professor Pinter significantly than I trust the engineers who dangerously aligned our levee right through the middle of our floodplain.

Thank you for your consideration.

Wendell Laidley

**Subject:** Hunter EIR Comment

Dear City Council,

I am writing regarding the EIR for the Hunter Project. As a resident of Saint Helena for over 10 years, and as a mother of two young children, and as someone who intends to live here permanently I have concerns regarding the Hunter Project.

First and foremost, I and my family, and many other families from all over town, use the open space and walking path that would become housing under the proposed plan. As this is the only open public space that is not privately owned in town, this is the only opportunity for the residents of this town to recreate and stay healthy and enjoy the beauty of where we live. We walk our dog on the path almost every day and we see dozens of families, of all different socioeconomic backgrounds, using the open space to enjoy some fresh air. This is a fundamental human right to have access to open space that is afforded nowadays even to farmed poultry!

Second, much of the space that would be designated for housing is either on or much too close to the wildlife and habitat preservation areas near the levy and the river. It is our duty to preserve the natural heritage of this beautiful space that we have inherited from our predecessors, whatever little of it there is left. We have to ask ourselves what is more important to us: to allow a man who took a gamble on whether this land would ever be allowed to be built on to go ahead and build, or to put our own values and needs as a community above the personal profits of one individual. Again, as someone who actively uses this open space on a nearly daily basis, I can attest to the fact that the habitat and wildlife preservation efforts in this area are working. I keep my dog out of the space and we respect and observe the animals and plants that live there. There are ducks, geese, many

small birds, rabbits, frogs, and an entire ecosystem that lives and breathes there that we need to protect for future generations to enjoy.

There are a host of other reasons including traffic, water, safety, air quality, noise, loss of property values, and even crowding in schools, that are all also huge concerns for me and my family with this project.

My questions are the following:

1) Why do we actually need to develop this land? Ever. Where does it say that this city must grow in size? As a biologist I understand very well that everything has its limits. The only things in nature that continue to grow and expand without limits are things like cancerous tumors. This city is limited on the east and west sides by natural geological formations: the hills on the west and the river and hills on the east. There is an ideal size for the city of Saint Helena that will maximize all of the values that we all appreciate and that are the reasons why we live here. And we should actively work to maintain and protect that size without allowing expansion and growth when it does not make sense, as in this case, where growth and expansion would result in the loss of irreplaceable open space that is absolutely crucial to the welfare of the citizens of this town.

2) Who stands to benefit the most from this housing development? The developer and a hundred people who will be able to buy homes to live here? And what about the rest of the 5,000+ citizens of the town? We, and the wildlife in the protected habitats living in the area, would be the losers in this. And honestly, I see no upside whatsoever.

I am firmly committed to opposing this development in every way I can in order to preserve and protect the little bit of open space left in this town. On behalf of my myself and my children, I urge you to take these important concerns into consideration.

Sincerely,
Angela Zivkovic, PhD

**Subject:** Hunter EIR Scoping Comments

Hello,
In regards to the Hunter EIR scoping, I request that the EIR examine the risk of flooding in the nearby neighborhoods. The levee was built with the understanding that if it were topped or breached, the very land that Hunter wants to build on would act as a drainage buffer to reduce the likelihood of flooding at Hunt's Grove, Starr Ave, Vineyard Valley, etc. In other words, building on the Hunter property would create flood risk for nearby neighborhoods. This will immediately increase insurance costs for those neighborhoods (which would likely result in lawsuits against the city, possibly class action) and, eventually, crippling judgments against the city if/when the levee is topped or breached.

Thanks,
John P Kelly
1178 Starr Ave

## Noah Housh

**From:** John Milliken <jmzin@comcast.net>
**Sent:** Thursday, April 12, 2018 11:14 AM
**To:** Cindy Tzafopoulos
**Cc:** Noah Housh; Mark Prestwich
**Subject:** Hunter EIR Scoping Comments
**Attachments:** C001 SENT Hunter Comment Ltr.pdf; NPS_Urban-facts_final.pdf; Response to Response.docx

**Hunter EIR Scoping Comments 4/12/18**

Please find listed below areas that should be included in the scope of the new EIR. In addition, I have attached comments from a CEQA Attorney and my own comments prepared in response to the original DEIR. Also attached is an informational report prepared by the EPA that reviews how to protect water quality from Urban Runoff. These attachments detail many of the shortcomings of the original DEIR and I would like them included for consideration for the scoping of the new EIR.

**Design, Implementation and Administration of the Affordable Units**
It will be very difficult to conduct a thorough EIR that subscribes to CEQA standards until the design, implementation, and administration of the affordable housing components are fully understood. How and who is going to build them? Will they have to built before the market rate houses? How large will they be and how many occupants will they have. How many bedrooms, bathrooms, and parking spaces will there be? Are they going to be rentals or owner occupied? Will the multi-family units need zoning variances or conditional permits? Will the 10 lots with Granny units be deed restricted or under the control of the owner? What mechanisms are in place to ensure that the 10 granny units are indeed made available as affordable and when will they be built. If the project qualifies for a density bonus by right, should the EIR anticipate this and factor in the potential impact of additional units? All of this should be explained and understood BEFORE the EIR is started so that there are no surprises that could derail this second attempt at completing an EIR for this project. It is one thing to draw boxes on a sub-division map and designate them as affordable for development concessions. It is quite another to adequately explain how this will all work within the parameters of existing regulations and requirements. And, without this information, preparing an informed EIR will be incredibly difficult.

**Design and Implementation of a controlled intersection at the Pope Street Bridge and Silverado Trail**
Well after the completion of the last DEIR, the applicant claimed they had new information and that they would submit a design and pay for this intersection (along with approval from the County) to mitigate traffic impacts. Will information on how this will be accomplished (or is even practical) be provided BEFORE the start of the new EIR?

**Plans for mitigating loss of State Designated Prime Agricultural Land**
Well after the completion of the last DEIR, the applicant claimed that they had new information for a plan for offsetting the loss of Prime Agricultural Land. Will this information be provided BEFORE the start of the new EIR?

**Impacts of Traffic Through Neighborhoods**
Beyond traffic count studies, will the new EIR take into account traffic that will utilize the Adams and Starr extensions to circumvent traffic delays on the Silverado Trail and Highway 29. The advent of apps like Waze and Google Maps will re-direct increasing amounts of traffic through neighborhoods. Residents of Hunts Grove will now have to cross a busy intersection upon exiting their development. This is a particular concern for the safety of children and pedestrians who now do not face crossing a street in order to walk to/from school or shopping.

**Loss of open space and safe access to the Napa River Walk for pedestrians and dog walkers**

Once Starr is extended to meet Adams, residents and visitors who currently use the undeveloped city owned lot to access the River walk will be faced with sharing their walk with traffic and parked cars to reach the walk. This will be a significant danger to children and dog walkers.

**Subject:** Hunter EIR comments

City Clerk - please distribute as needed.

Here are a few comments about the Hunter EIR. The first two I sent back in December, plus I added a couple more.

1. In the Transportation section, all of the scenarios should start with Existing conditions, which means no access to the trail on Pratt. There are no plans/funds to fix that bridge at this time that I know of, so we must assume that that defines Existing. The Pope Street bridge is under additional stress from no Pratt access and the Hunter EIR should address how a new development will further stress that situation.

2. Understanding of extreme weather events has increased in the last six years since the old EIR was started. It is clear that FEMA maps that do not include climate change are inadequate. The new EIR should incorporate consideration of the all too common extreme weather events which will increase flood risk. How will climate change be incorporated and how does it change flood maps and flood risk?

3. We walk down the trail that leads to the Napa River almost every day at different times. We see birds, rabbits, hear bullfrogs and crickets, etc. This area is teeming with wildlife and probably serves as a watering hole and food source to countless wildlife species. How will the paving of this area, nighttime lighting, and addition of hundreds of cars and humans impact the wildlife that lives in the area or migrates through? Which species will be impacted and how? What research will be conducted to determine this?

4. What is the air quality for the surrounding neighborhoods during the project construction? Some of us have respiratory issues, and we want to know how long and how seriously our air quality environment will be impacted. Please be specific on the types and quantities of impact.

5. How much traffic on Starr, Hunt, Pope, and Adams will be added? How many cars will the project add specifically, and how will this be counted since there is no information on housing types?

Thanks,
J. Newsome

**Subject:** Hunter EIR Scoping Comments

Cindy-

Below are my comments regarding the scope of the Hunter EIR.

1. The EIR for the Hunter Project cannot be done until it is conclusively determined whether or not the Hunter Project qualifies for the 40% affordable housing benefits, including priority in water and sewer connections, use of prior year surplus units from the Growth Management System (GMS), etc. The reason for this is that the environmental impact is completely different if the benefits are applied to the project than if they are not applied. An example is that if the project qualifies under the inclusive housing and affordable housing ordinances, then the entire project can be completed in 2 years, according to the developer. If the project does not qualify, then the Hunter Project could take up to 10 years to complete, assuming very few, if any other houses are built in St. Helena during that timeframe because the project would be limited to the annual 9 units allowed under the GMS. It isn't hard to see that the environmental impacts are quite different under these two scenarios.

Before the EIR begins, it has to be determined if the Project qualifies for such benefits or not. This decision cannot run on parallel tracks with the EIR and then come together at the end, as Noah Housh suggested at the neighborhood scoping meeting last month. For the EIR to be accurate, the EIR consultants must know what scenario applies before the EIR begins. And, in cases like this, it does matter to CEQA if the housing is market rate or affordable because the priority benefits derived from hitting a 40% affordable housing rate under City ordinances changes that environmental analysis. In this case, it is not the affordability of the housing that affects the CEQA analysis, but the priority benefits given by the City and/or the state that changes the impact on the environment from building this project.

The prior Hunter Project EIR inappropriately assumed (without confirming) that the Hunter Project would qualify for the priority benefits stemming from the project complying with the inclusive housing and affordable housing ordinances at the 40% rate. That assumption cannot be part of the current EIR process because it likely will make the EIR inaccurate.

If the developer does not want to show to the satisfaction of the City Council that their current proposal completely meets all of the City's inclusive and affordable housing requirements to qualify for the 40% priority benefits, then the EIR should be done without giving any credit for any of those benefits before the EIR is started. At the very least this would change the environmental analysis from a two-year project to a potential ten-year project with ongoing environmental impacts.

If the EIR assumes the project will qualify for the 40% rate and if it is later determined that the current project cannot meet the inclusive housing and affordable housing ordinance requirements without resubmitting a tentative map, then the City would be in the position of looking at yet another Hunter EIR exercise. It would make more sense to make that determination now.

2. The Hunter Project EIR has to take into consideration the cumulative impacts of the 17-acre Hunter Project, along with the 24-acres of Key Opportunity Sites (sites 1, 2, and 6 on page 134 of the Housing Element Needs Assessment), which begins about 3 blocks from the Hunter Project and extends south across Pope Street. These cumulative sites will significantly impact surrounding streets and the Pope Street bridge. Such cumulative effects will undoubtedly impact the environment and have to be taken into consideration in the Hunter Project EIR.

3. The Hunter Project EIR needs to consider the environmental impacts resulting from a potential levee failure. CA Government Code §65302(g)(2)(A)(vii-viii) requires that St. Helena include a levee failure map in its General Plan Update to show areas that would be inundated in the event of a levee failure. It will be important to have such an inundation map to show the environmental difference between the situations where the land behind the levee is undeveloped, as it is now, and the situation where the land behind the levee is covered over with asphalt and houses, which is a situation where there would be significantly less permeable land for flood waters to be absorbed. The environmental differences between these two situations would likely be significant.

Of additional environmental interest is that fact that the area closest to the Napa River where the levee is located is considered a high liquefaction susceptibility area (Figure 4.K-2 in the General Plan Update) and liquefaction is a well-known and significant cause of levee failure.

4. The EIR for the Hunter Project has to assume the project can be built out to the maximum density allowed resulting from any density bonuses provided under city ordinances and state law, even assuming the current project does not now show such a density bonus in the "deemed complete" tentative map. The current owner and/or developer could decide after an EIR is approved to sell the property and the new owners could apply for the density bonuses prior to seeking building permits. At that point it would be too late for the EIR to take into consideration the increased housing units, population, cars and other environmental impacts because the EIR would already have been completed and approved.

Thank you for your consideration, Vickie Bradshaw

Hunter E.I.R.

City of St Helena, City Hall
Received
APR 06 2018

~~January 30, 2018~~

To the City of St. Helena- RE: the new Hunter EIR:

1480 Main St.
St Helena, CA 94574

In 1997, I was selected by Friends of the Napa River to sit on the Committee appointed by St. Helena's City Council to decide the best way to spend our portion of Measure A funds which were to be used to minimize the risk of flooding on Napa River and Sulphur Creek inside City Limits, with the **requirement** that any alterations would be carried out within a "Living River" context, assuring that any changes would enhance the river's environmental health while benefiting us.

While most municipalities along the river (especially the City of Napa) made an honest effort to abide by the "Living River" requirement, the St. Helena Committee that took on this task was corrupt through and through, and no one other than I gave even a pretense of paying attention to "Living River" principles. It was an appalling experience for me. The fix was in from the beginning, and among the proposals that were floated was a cynical rerouting of Napa River above Pope Street bridge that would leave the riparian woodland intact for the moment, but was deliberately designed to erode and destroy both banks and all the riparian trees and habitat over a period of a few years. I made enough of a stink about that cynical plan that it was eventually dropped from consideration, but sadly nothing better was put forward.

In an attempt to get the Committee to understand what the implications of their proposals would be for people living downstream and the survival of Pope Street Bridge, I personally funded through Friends of the Napa River a brief study by the highly regarded hydrology experts Philip Williams and Associates, which we gave to the St. Helena Measure A Committee so they could begin to understand the downstream impacts above Pope Street Bridge and to the bridge itself if they did one or another of their plans. Williams' mapping of flow patterns revealed great downstream risks involving the plan they settled on: the building of a long, riverside levee that cut off a huge, undeveloped, low-lying area that accommodated flood water every time there was a major rain event and took pressure off the area just above the bridge. As I recall, I spent $20,000 on the Phil Williams study that gave the Committee basic prognostications that would help them understand the implications of what they were proposing; but to my knowledge, that study was completely ignored by every member of the Committee and the highly paid consultants as well. That's when I washed my hands of the crooked Committee and its phony "Living River" process and quit in disgust.

If anyone had genuinely cared, I was prepared to further fund Philip Williams to assure a legitimate "Living River" solution was developed, as **required** by Measure A, which, as you may recall, passed with more than the necessary two thirds majority of the county's vote! This "super majority" made the "Living River" provision a **mandatory** aspect of whatever alterations were carried out using Measure A funds, as opposed to a simple majority vote that could be given little more than lip service.

St. Helena's actual alteration: the huge, lengthy levee which destroyed many acres of our priceless existing floodplain, was in complete violation of both common sense and the "Living River" mandate. It was done for no reason but to destroy an existing, critically important and legally protected floodplain in order to turn all that low land into a huge housing development in the most unsuitable possible location. Now, during flood events, the changed river flow below the levee is destroying the once-stable bank just above Pope Street Bridge. A beautiful, historic mansion- I think it is 2240 Pope Street- is already being put at serious risk of toppling into Napa River as the high bank there is rapidly collapsing. This massive erosion, which will soon destroy the great old estate that existed safely there for more than a century, is a direct result of the changed flow dynamics caused by the levee's elimination of the flood plain that existed just above it. **I believe the City is directly liable for the upcoming destruction of that property!** The destructive, illegal levee, along with Hunter's proposed development that is bound to flood, has got to go **NOW!** This is all the product of a corrupt enterprise between a past Council, City staff and Hunter.

Mr. Peter Mennen
P.O. Box 421
Saint Helena, CA 94574

Dear Peter,

I wanted to let you know that I received the materials you delivered to City Hall on January 28, 2016 related to the Flood Control Project.

I know this was and continues to be a controversial project for the citizens of St. Helena. My goal in hiring a forensic accountant is to review the revenues and expenditures related to all the projects in an effort to ensure all the funds are accounted for and were properly spent in accordance with contractual obligations. Although the scope of the review does not include engineering, environmental or other aspects of the projects, I will add your documents to the file and make them assessable to the forensic accountant.

Sincerely,

Jennifer Phillips
City Manager

Peter Mennen
PO Box 421
St. Helena CA
94574
March 15, 2002

Mike Praul, City Engineer
City of St. Helena
1480 main Street
St. Helena CA 94574

Dear Mr. Praul:

I was one of those selected to participate in the proposed design of a flood control project to be carried out using "Measure A" money that would reduce the impact of flooding on the community of St. Helena. As a bit of history, Measure A was passed by the voters of Napa County as a method of achieving flood control in ways that would be considerate of the biological integrity of the Napa River, as opposed to a flood control design proposed by the Army Corps of Engineers, which was rejected by the citizens of Napa County because it was destructive to river values.

A county wide community group which named itself "Friends of the Napa River" pulled together and began an extraordinary effort to rethink the way in which flood control could be designed so that the Napa River would benefit from sophisticated flood control methods that would help the river regain some of its former behavior in the days before we hedged it in and destroyed its ability to spread out into a flood plain during heavy rain events. This would be done in ways sensitive to the ecological values of napa River. This Measure A funding came to pass by a two thirds vote of the county because of the incredible work Friends of the Napa River did to educate county citizens of the way in which flood control could be handled in ways that would improve the beauty and functionality of napa river, which as you know has been declarted an impaired waterway by Congress, due to the many damaging alterations we have wreaked upon the river in the past hundred years.

I was selected to as a participant in the St. Helena process to represent the vision of Friends of Napa River, to assure the local plan would incorporate the standards for flood control that were integral to any project that would be put forward. After all, a river-friendly design was the whole impetus for Friends of the Napa River to do the extraordinary work that made measure A come to pass.

Regrettably, I found myself marginalized as the planning process went on, and I can recall at least one specific incident where i was told the concept of retaining a tree-lined riparian corridor along the river bank would be an impossible, and then later I learned this devestating concept was built into the design with the justification that, since i had not objected to it, Friends of the River must think it was okay. Toward the end, i was not even notified of upcoming meetings of the St. Helena flood design group, much less invited to participate in the role of a "Friends of the Napa River" advisor. I only learned after the fact that a meeting had taken place, when someone questioned me about why I was no longer attending.

Finally, after the committee agreed upon a proposed design without even an opportunity for "Friends of the Napa River" to have me participating in the proposal that went forward to the city, you were kind enough to give me a copy of the plan. I sent that copy to "Friends of the Napa River," who made the attached comments and sent thaem back to you on February 22, 2002. I am writing this letter just so that I can have some input into the process now, having been excluded in a manner I believe is illegal, and thus depriving "Friends of the Napa River" to have any legitimate input, or even an opportunity to review, the proposal before it was submitted to the St. Helena City Council. Since I

Wed, Feb 10, 1904 3:37 AM

as selected as an official member of the committee, specifically to represent the interests of the "living river" concept that drove the passage of measure A in the first place, this whole process strikes me as bogus.

And not surprisingly, the fundamental design vision of all the possible proposals for flood reduction in St. Helena is antithetical to any kind of living river vision. In each of the possible projects, the riparian corridor along the river is utterly sacrificed, destroying any number of critical aspects of the living river vision. there are many mature and even landmark-sized, "heritage" trees within St. Helena city limits along the Napa River which, I am only now told, will be deliberately left in a narrow, eroding ridge between the current rivercourse and a new floodplain beyond the existing riparian corridor. I am informed that it is understood and expected that the entire riparian stand along both banks of the Napa River within St. Helena city limits will be destroyed over a short period of time as the river cuts into the banks and causes all those trees to come crashing down, leaving nothing of their shade protection for the river all along the banks of the river. In their place will be a great, vacant swath of little or no biological value, at a terrible price to the river. This is a mockery of the real measure A, which was to enhance the river's values as a part of flood control, not destroy them.

Also, a multitude of other benefits, beyond the loss of all their beauty to all of us citizens, will be lost. Many of those trees are mature oaks, whose wildlife value cannot be overestimated. they are the lynchy-pin of biological integrity along the river, and most of them already have been lost to human development. To deliberately destroy these last precious corridors of mature oaks and complex vegetation is intolerable and unacceptable. It is in direct defiance of the driving concept of Measure A. It makes our plan a farce. Just for your improved understanding of the value of oaks, I am including a copy of an excellent book on the complexity and value of oak trees entitled "The Life of an Oak." It was produced by the California Oak Foundation, with major funding from, among others, the Mennen Environmental Foundation. Perhaps you and others will gain some perspective on what you are attempting to throw away.

Measure A was not passed so that a few interest groups in Napa County could benefit at the expense of tremendous tax costs to the rest of us and the sacrifice of the Napa River. It was not put forward so that local politicians could make a lot of hay on its back by corraling a clot of special interest votes and make self-serving claims on campaign literature when they ran for larger office. Measure A had far loftier goals of spending our tax money to benefit both people and the Napa River, and that is the Initiative we as a county passed. St. Helena's Measure A oversight committee has unconscionably distorted the very heart of the "lving river" intent of the measure whose county tax money they (we?) were expected to spend in an appropriate way.

The Mennen Environmental Foundation has purchased acreage on Sulphur Creek to restore in a manner that will benefit flood control and biological values. Our expert evaluators have proposed solutions that are diametrically opposed to the proposal being forwarded to the City of St. Helena by the oversight committee. I absolutely wash my hands of the disgraceful and shameful set of proposals that "my" committee has certified for your consideration and acceptance. I am appalled. I am certain Friends of the Napa River would not touch these proposals with a ten foot pole. They are a joke- a slap in the face to everyone who put his/her heart and soul into bringing Measure A to fruition.

Sincerely,

Peter Mennen

# STAFF REPORT

APPROVED FOR
CITY COUNCIL AGENDA
DATE: 3/7/02
CITY MGR:

The envelope says the city mailed this on 3-8-02 Never received this material until after 3-12-02! P.M. I could not comment by 3-12-02

**DATE:** March 12, 2002

**TO:** City Council

**FROM:** Myke Praul, City Engineer MP

**RE:** Clarification of Council Direction on Comprehensive Flood Study Environmental Impact Report

**Cc:** City Manager

## BACKGROUND:

The environmental consultant for the Comprehensive Flood Study, CDM, has initiated the public input process to facilitate preparation of the draft environment impact report. At the Council meeting initiating this process, the Council directed staff to analyze three plans; the no action plan, the Minimum Plan and the Enhanced Minimum Plan. In response to a question by a member of the public, the Council also directed staff to analyze a plan that combined the extension of Adams Street with the Minimum Plan. Staff now presents the results of that analysis and requests clarification of the Council's prior direction.

## DISCUSSION/ANALYSIS:

As the Council recalls, the Enhanced Minimum Plan (EMP) was a compromise alternative between the Maximum Plan (MaP) and the Minimum Plan (MiP). The MaP reduced the 100-year water surface elevation (WSE) 3.1 feet at the Hunt's Grove Apartments but required the relocation of 60 homes within the Vineyard Valley Mobile Home Park (Park). It included a fill area to the north of the Park on which the relocated homes would be placed. The MiP reduced the WSE 1.6 feet at the same location with the elimination of 17 spaces and loss of approximately 7 to 8 existing homes. The existing floodwall would have to be raised approximately 3.5 feet or a new levee constructed to the north of the wall at the same elevation. The EMP was developed as a compromise to the two distinctly different plans. It would reduce the WSE 2.4 feet and includes the relocation of 29 homes to the vineyard area north of the Park which would be flood proofed by the roadway embankment of an extension of Adams Street. The Council asked what is the feasibility of combining the Adams Street extension with the MiP.

MBK has computed the hydraulic benefits of a plan that would include the Adams Street extension but with the river terracing of the same area as the MiP, or the loss of 17 spaces within the Park. The resulting reduction of the 100-year WSE is about the same as the MiP, which is one foot less than the EMP. The elevation of the roadway embankment would need to be the same height as the levee north of the floodwall or about 3.5 feet above the elevation of the existing wall, a foot higher than the EMP.

Staff and the consultants believe that the environmental impacts of this revised alternative would be somewhere between the EMP and the MiP. While it would require a larger footprint than the

MiP, the structural elements would be very similar with impacts to the Park residents also being very similar as the MiP.

**IMPACT:**

Further analysis of this hybrid alternative will take additional time and funding. At the last Council meeting, representatives from the VVMHP Homeowners Association presented a petition in support of the EMP, which was signed by approximately 90% of the residents of the Park. The revised alternative would still eliminate some homes in the Park where the EMP would not.

**FISCAL IMPACT:**

Staff will return to Council at the meeting of March 26, 2002 to discuss the current financial status of the study and bring recommendations to extend the consultant agreements with the funding requests necessary to complete the study. Confirming the above direction will reduce the amount of analysis required for the EIR.

**ALTERNATIVES:**

1. Confirm prior direction to staff and the consultants to analyze the No Action, Minimum and Enhanced Minimum Plans through the EIR process.

2. Direct staff and the consultants to include a fourth alternative for further environmental analysis that combines the Minimum Plan with the Adams street extension.

**RECOMMENDED COUNCIL ACTION:**

Staff recommends that the Council confirm the prior direction to staff and consultants to analyze the No Action, Minimum and Enhanced Minimum Plan through the environmental review process.

**AGENDA**
**REGULAR MEETING**
**ST. HELENA CITY COUNCIL**
**CARNEGIE BUILDING COUNCIL CHAMBERS**
**1360 OAK AVENUE, ST. HELENA**
**MARCH 12, 2002**
**6:45 P.M. CLOSED SESSION**
**7:00 P.M. REGULAR SESSION**

Prior to the meeting the public may review available information at City Hall or at the George and Elsie Wood Public Library.

A person who is dissatisfied with a decision of the City Council may have the right to a review of the decision by a Court. The City of St. Helena has adopted California Code of Civil Procedures Section 1094.6, which generally limits to ninety (90) days the time within which a decision of the City Council may be judicially challenged. If a person challenges a decision in Court, he or she may be limited to raising only those issues that were raised at the Public Hearing described in this notice, or in written correspondence delivered to the City Council at, or prior to, the Public Hearing.

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact City Hall, (707) 967-2792. Notification 48 hours prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting (28 CFR35.102-35.104 ADA Title II). However, City staff will attempt to assist at any time with accessibility. The City Clerk has equipment to assist those with a hearing impairment.

The City Council will convene in Open Session at the stated time, but will then adjourn to any Closed Sessions(s) listed on the agenda. The Council will reconvene in Public Session at 7:00 p.m. at that time, if appropriate, any actions taken during the preceding Closed Session will be announced. If necessary, the Council may reconvene in Closed Session to continue discussion of listed items following the completion of other business.
**********

**I. 6:45 P.M. CLOSED SESSION**
**7:00 P.M. OPEN SESSION**

**Conference with City Negotiator – City Manager**
**Negotiations with Unrepresented Employees (Department Heads)**
**and St. Helena Employees Association (SHEA)**
**Brown Act: 54957.6**

**PLEDGE OF ALLEGIANCE**

1. **ROLL CALL**

2. **APPROVAL OF MINUTES** – January 29, 2002 and February 26, 2002

3. **REPORTS BY STAFF AND CITY COUNCIL:** Reports by staff and/or Councilmembers on items of general interest or action taken during Closed Session. Brief questions for clarification may be posed and answered, and Councilmembers may request that items be placed on a future agenda. Except under certain circumstances, the Brown Act prohibits any other discussion or action by the City Council.

4. **PUBLIC FORUM:** An opportunity for the public to directly address the Council on items of interest to the public not on the agenda. Any person addressing the Council is subject to the requirement of providing his or her name and address, and limiting comments to five minutes. Because of restrictions imposed by the Brown Act, the Council may not engage in substantive discussion, nor take action on matters not described on the agenda.

5. **PRESENTATIONS AND PUBLIC RECOGNITIONS**

   - Presentation by Jill Pahl, Upper Valley Agency Waste Management, Re: Solid Waste Rate Adjustments

**II. CONSENT ITEMS**: Members of the Council or the public may ask that any items be considered individually for purposes of considering alternative action, for extended discussion, or for public comment. Unless that is done, one motion may be used to adopt all recommended actions.

6. Planning Commission Actions of March 5, 2002 *Recommended Action:* Approve

7. Accounts Payable and Payroll *Recommended Action:* Approve

8. Resolution Approving Hanging of a Banner Across Main Street Promoting the Calistoga Education Foundation Spring Benefit Auction *Recommended Action:* Adopt

9. Park and Recreation Minutes of February 25, 2002 *Recommended Action:* Note & File

10. Report from City Manager Re: City's Emergency Managers Attending Integrated Emergency Management Course (IEMC) *Recommended Action:* Note and File

11. Resolution Establishing a Voluntary Contribution Check-off Program by Supporting "Action for Better Cities" (ABC) *Recommended Action:* Adopt

12. Resolution Accepting Offsite Improvements by Robert & Katherine States Burke Trust at 2995 Spring Street and Authorization to File Notice of Completion
*Recommended Action:* Adopt

13. Resolution Authorizing a Professional Services Agreement with Oswald Engineer Associates for Design, Environmental Review and Permitting of the Recycled Water Project
*Recommended Action:* Adopt

14. Resolution Approving a Budget Appropriation for the Purchase of a Street Sweeper
*Recommended Action:* Adopt

**III. PUBLIC HEARINGS (Since Public Hearings do not begin before 8:00 p.m., Scheduled Matters listed below may be considered before that time.)**

15. City Council Appeal of Planning Commission Approval of Request of the Wine Service Co-op for a Tentative Parcel Map to Divide an Existing 7.8 Acre Parcel Located at 1150 Dowdell Lane, on the East and West Side of Fountain Avenue between Dowdell Lane and Mills Lane, into Two Parcels of 5.9 Acres and 1.9 Acres with an Offer of Dedication for Land for the Future Extension of Fountain Street and Realignment of Mills Lane (APN 009-660-003) (Exempt from CEQA) (Planning Director)

16. Request of Julian Inman, Representing Jack and Diana Varozza, to Rezone Property from A-20: Twenty Acre Agriculture to A-20: HP: Twenty Acre Agriculture with a Historic Preservation Overlay. The Application also Includes a Request for a Use Permit and Design Review to Refurbish a Historic Winery Building and to Operate a 20,000 Gallon Small Winery at 514 Pratt Avenue (Planning Director)

17. City Council Preliminary Review of Proposed General Plan Amendment Pursuant to Chapter 26 of the St. Helena Municipal Code as Initiated by Kevin Twohey to Process an Application to Change the Land Use Designation for the Property Located at 738 Main Street from Office to Service Commercial to Allow the Operation of Whiting Nursery on the Project Site (Planning Director)

**IV. SCHEDULED MATTERS (Since Public Hearings do not begin before 8:00 p.m., Scheduled Matters listed below may be considered before that time.)**

18. Request for Direction Re: Environmental Review of Comprehensive Flood Study (Public Works Director)

19. City Council Discussion of Modifications to Bed and Breakfasts Ordinance (Planning Director)

20. City Council Discussion of Moratorium on Small Winery Applications (Planning Director)

21. Request for Reconsideration of Council Action of February 26, 2002 Regarding Request of Peter Story for a Use Permit and Design Review at 100 Pratt Avenue (Councilmember Bowers)

**V. ADJOURNMENT**

The next Regular City Council meeting is scheduled for March 26, 2002 at 7:00 p.m. in the Carnegie Building. This agenda was posted at City Hall, 1480 Main Street, St. Helena, California, at 3:00 p.m., Friday, March 8, 2002.

St. Helena, CA 94574

Re: **Napa River Near St. Helena Technical Report for Hydraulic Analysis Results Prepared by: MBK as of November 27, 2001**

Dear Mr. Praul:

Friends of the Napa River would like to comment on the Technical Report by MBK in response to Scoping for an EIR pursuant to CEQA requirements. We appreciate the opportunity to provide early information through the public process to a Measure A project that must comply with the ***'Living River Guidelines'*** approved by the voters of Napa County.

The Technical Report lists three different plans to the St. Helena Flood Control project:
A. The "Non-Structural Plan" (NSP)
B. The "Minimum Plan" (MP)
C. The "Enhanced Minimum Plan" (EMP)
D. The "Maximum Plan" (MxP)

Friends of the Napa River have serious concerns and many questions with the plans B, C and D. We find the "Non-Structural Plan" the least intrusive and most in line with the 'Living River Guide Lines.'

To better understand the implications of the other plans, we would like the following questions answered and documents provided for public review:

1. The massive excavations of plans MP and MxP will create islands in the Napa River riparian corridor. Questions:
    a. Is this compliant with the 'Living River Guidelines'?
    b. How many native Valley Oak trees will be lost?
    c. How much riparian vegetation will be removed from the banks and the bed of the Napa River? What is the re-vegetation plan? What is the maintenance cost?
    d. How much erosion will occur in tons/year?
    e. What will this do to anadromous spawning gravel down stream?
    f. How will this change the bank and channel of the Napa River?

g. What are the upstream and downstream erosion effects?
h. How will the loss of riparian vegetation and riparian function effect temperature in the Napa River?
i. How high will the temperatures get in the Napa River during the hot summer months due to loss of riparian vegetation?
j. When is it expected that the riparian cover is recovered / rebuild?

2. The initial excavations in plans MP and MxP seem to be enormous. Questions:
   a. What is the number of cubic yards (or tons) of excavation material?
   b. What is the destination of the spoil/other material resulting from excavation?
   c. Will the City of St. Helena be creating new housing locations with the excavated material and cane Measure A money be used for this?
   d. Would such new housing locations be growth inducing?

3. There will be cut down areas in the riparian zone (called flood terraces). Questions:
   a. How much aggradation will occur in the new excavated area?
   b. How many tons per year of sediment excavation/maintenance will need to be done?
   c. Where will the maintenance spoils/sediment be disposed?
   d. How will new riparian vegetation be protected in this area?
   e. What are the maintenance costs associated with this?

4. Could you provide the public with a map that shows the existing flood plain and the existing floodway?

5. What will the increased stream velocity be in the Pope Street Area?

6. In MP and MxP, steep bank formation will be creating a step-function. Questions:
   a. What is the associated erosion factor to this change in banks of the Napa River?
   b. What are the costs of maintenance of these banks and where will the money come from when Measure A money sunsets?
   c. Is this compliant with Measure A 'Living River Guidelines'?

7. What is the upstream flooding impact of the proposed Adams street extension and causeway?

8. Please detail the effects any of the plans would have on Sulphur Creek.

Sincerely

Bernhard Krevet
President, Friends of the Napa River

March 15, 2002

Mike Praul, City Engineer
City of St. Helena
1480 main Street
St. Helena CA 94574

Dear Mr. Praul:

I was one of those selected to participate in the proposed design of a flood control project to be carried out using "Measure A" money that would reduce the impact of flooding on the community of St. Helena. As a bit of history, Measure A was passed by the voters of Napa County as a method of achieving flood control in ways that would be considerate of the biological integrity of the Napa River, as opposed to a flood control design proposed by the Army Corps of Engineers, which was rejected by the citizens of Napa County because it was destructive to river values.

A county-wide community group which named itself "Friends of the Napa River" pulled together and began an extraordinary effort to rethink the way in which flood control could be designed so that the Napa River would benefit from sophisticated flood control methods that would help the river regain some of its former behavior in the days before we hedged it in and destroyed its ability to spread out into a flood plain during heavy rain events. This would be done in ways sensitive to the ecological values of Napa River. This Measure A funding came to pass by a two thirds vote of the county because of the incredible work Friends of the Napa River did to educate county citizens of the way in which flood control could be handled in ways that would improve the beauty and functionality of Napa River, which as you know has been declarted an impaired waterway by Congress, due to the many damaging alterations we have wreaked upon the river in the past hundred years.

I was selected to as a participant in the St. Helena process to represent the vision of Friends of Napa River, to assure the local plan would incorporate the "Living River" standards for flood control that were integral to any project that would be put forward. After all, a river-friendly design was the whole impetus for Friends of the Napa River to do the extraordinary work that made measure A come to pass.

Regrettably, I found myself marginalized as the planning process went on, and I can recall at least one specific incident where I was told the concept of retaining a tree-lined riparian corridor along the river bank would be an impossible, and then later I learned this devestating concept was built into the design with the justification that, since I had not objected to it, Friends of the River must think it was okay. Toward the end, i was not even notified of upcoming meetings of the St. Helena flood design group, much less invited to participate in the role of a "Friends of the Napa River" advisor. I only learned after the fact that a recent meeting had taken place, when someone questioned me about why I was no longer attending.

Finally, after the committee agreed upon a proposed design without even an opportunity for "Friends of the Napa River" to have me participating in the proposal that went forward to the city, you were kind enough to give me a copy of the plan. I sent that copy to "Friends of the Napa River," who made the attached comments and sent thaem back to you on February 22, 2002. I am writing this letter just so that I can have some input into the process now, having been excluded in a manner I believe is illegal, and thus depriving "Friends of the Napa River" to have any legitimate input, or even an

Fri, Jan 8, 1904 9:10 AM

opportunity to review, the proposal before it was submitted to the St. Helena City Council. Since I was selected as an official member of the committee, specifically to represent the interests of the "Living River" concept that drove the passage of measure A in the first place, this whole process strikes me as bogus.

And not surprisingly, the fundamental design vision of all the possible proposals for flood reduction in St. Helena is antithetical to any kind of "Living River" vision. In each of the possible projects, the riparian corridor along the river is utterly sacrificed, destroying any number of critical aspects of the living river vision. There are many mature and even landmark-sized, "heritage" trees within St. Helena city limits along the Napa River which, I am only now told, will be deliberately left in a narrow, eroding ridge between the current rivercourse and a new floodplain beyond the existing riparian corridor. I am informed that it is understood and expected that the entire riparian stand along both banks of the Napa River within St. Helena city limits will be destroyed over a short period of time as the river cuts into the banks and causes all those trees to come crashing down, leaving nothing of their shade protection for the river all along both banks of the river. In their place will be a great, vacant swath of little or no biological value, at a terrible price to the river. This is a mockery of the real measure A, which was to enhance the river's values as a part of flood control, not destroy them.

Also, a multitude of other benefits, beyond the loss of all their beauty to all of us citizens, will be lost. Many of those trees are mature oaks, whose wildlife value cannot be overestimated. they are the lynch-pin of biological integrity along the river, and most of them beyond the river bank already have been lost to human development. To deliberately destroy these last precious corridors of mature oaks and complex vegetation is intolerable and unacceptable. It is in direct defiance of the driving concept of Measure A. It makes our plan a farce. Just for your improved understanding of the value of oaks, I am including a copy of an excellent book on the complexity and value of oak trees entitled "The Life of an Oak." It was produced by the California Oak Foundation, with major funding from, among others, the Mennen Environmental Foundation. Perhaps you and others will gain some perspective on what you are attempting to throw away.

Measure A was not passed so that a few interest groups in Napa County could benefit at the expense of tremendous tax costs to the rest of us and the sacrifice of the Napa River. It was not put forward so that local politicians could make a lot of hay on its back by corraling a clot of special interest votes and make self-serving claims on campaign literature when they ran for larger office. Measure A had far loftier goals of spending our tax money to benefit both people and the Napa River, and that is the Initiative we as a county passed. St. Helena's Measure A oversight committee has unconscionably distorted the very heart of the "lving river" intent of the measure whose county tax money they (we?) were expected to spend in an appropriate way.

The Mennen Environmental Foundation has purchased acreage on Sulphur Creek to restore in a manner that will benefit flood control and biological values. Our expert evaluators have proposed solutions that are diametrically opposed to the proposal being forwarded to the City of St. Helena by the oversight committee. I absolutely wash my hands of the disgraceful and shameful set of proposals that "my" committee has certified for your consideration and acceptance. I am appalled. I am certain Friends of the Napa River would not touch these proposals with a ten foot pole. They are a joke- a slap in the face to everyone who put his/her heart and soul into bringing Measure A to fruition.

Sincerely,

Peter Mennen

CCs: Friends of the Napa River
St. Helena City Council

Note dated march 25, 2002. There is an inaccurate statement in the above letter, which I did not catch because I did not proofread the letter before running it over to the City shortly before City hall closed for the night on 3/15/02. In the above letter, I should have said I was told during a meeting of the oversight committee that it would not be appropriate to plant shrubbery in the riparian

RE: Napa River Bridge Alternatives

Dear Commissioners:

Friends of the Napa River, as you know, is concerned that community action today safeguard the long-term health of the Napa River. Specifically, we are concerned that the placement of the new Pope Street bridge to cross the Napa River will have significant impacts on river stability and of great concern to St. Helena's dense build-out along the river, have an impact on flooding. We acknowledge the need for a new bridge and perhaps the impacts will only be positive, but it is better to ask the questions now rather than later.

*The Alternative A is of particular concern as the abutment for the West side* of the bridge is in the floodway of the Napa River, possibly backing the water up in an area where there are many variables to consider, not the least of which is residential. The abutment on the West side sits on Stonebridge Park, a park that carries flood waters at times. Placing a cement dam there would force water elsewhere. The bridge would have to be longer with a causeway to allow the passage for that water in an area that seems ill suited for it.

Alternative A has other problems associated with the troubled area it would be placed into: that is the confluence of Sulphur Creek and the Napa River, and upstream from the historic Pope Street Bridge that is a constriction in the river. It is not yet known what the cumulative effect of the increased flow and velocity of the stormwater runoff from the new developments along Sulphur Creek is going to be during heavy rains.

We have briefly consulted an hydraulic engineer who has done a complete computer analysis of the Napa River at that very point and would be able to plug in the variables to make sure Alternative A would not have the problems it does appear to have and to compare them with the other alternatives. He suggested that bridges have backflow problems that have to be considered carefully. We have learned in our education about river systems that you can not tell how things are until the numbers are run. On page 19 of your report you suggest the hydraulic scour evaluation would be conducted during the final design phase of the project. Suppose at that time the numbers don't come out well for Alternative A? Why not do the modeling now so the citizens can see what the options are and rest assured there will be no additional flooding or scouring problems with any of the alternatives? This would allow them to support a more informed decision.

We are enclosing the name and address of the engineer who has the computer model of this stretch of the river.

Respectfully submitted,

Dear Peter –

## Environmental Impact Report (EIR) Process Overview

1. Notice of Preparation (NOP) released for 30-days
2. Scoping Meeting Occurs within 30-day NOP Comment Period
3. EIR Draft is written
4. Notice of Completion (NOC) and Notice of Availability (NOA) issued to begin 45-day draft EIR public review period.
5. Comments are compiled and organized for response.
6. Response to Comments drafted and any needed revisions to EIR are made.
7. Public Hearing (could be specific to EIR or include EIR and Project Action)
    7. a. EIR Certification, Project Decision, CEQA findings, Statement of Overriding Consideration Considerations
8. Notice of Determination

## Mandatory Elements of CEQA Review

| | | |
|---|---|---|
| Aesthetics | Agriculture and Forestry Resources | Air Quality |
| Biological Resources | Cultural Resources | Geology /Soils |
| Greenhouse Gas Emissions | Hazards & Hazardous Materials | Hydrology / Water Quality |
| Land Use / Planning | Mineral Resources | Noise |
| Population / Housing | Public Services | Recreation |
| Transportation/Traffic | Utilities / Service Systems | Mandatory Findings of Significance |

I DO NOT THINK IT HAS BEEN FAIR TO THE DEVELOPER TO TAKE SO MUCH TIME TO DECIDE TO ALLOW THIS PROJECT TO PROCEED. YOU CAN GO FASTER. IT MAKES THE COSTS TO THIS DEVELOPER UNFAIRLY TOO HIGH.
I URGE A SPEEDY OK.
SUPPORT THIS WORTHY PROJECT.

The City of St Helena does not discriminate on the basis of disability in the admissions or access to, or treatment of or employment in, its programs or activities. Requests for alternate formats may be made by contacting (707) 968-2659.

**HUNTER SUBDIVISION PROJECT**

**ENVIRONMENTAL IMPACT REPORT (EIR) NOTICE OF PREPARATION (NOP)**

**COMMENT FORM**

Please provide the following information if you wish to receive a Notice of Availability of the Draft EIR and to document the author of comments received. Thank you.

Name: Jan Flynn

Email: bluebird4879@gmail.com

Address: 30 Redondo Ct., St. Helena

Organization:

☑ I would like to receive future environmental notices via email. bluebird4879@gmail.com

Please provide us with your written comments on the NOP by **April 9, 2018.** Comments on the NOP may be sent to:

Noah Housh, Planning and Community Improvement Director
City of St. Helena, Planning & Community Improvement Department
1480 Main Street
St. Helena, CA 94574
Email: NHoush@cityofsthelena.org

You may attach additional pages to this form and/or you may submit your written comments separately. Written comments on the scope of the EIR will be acknowledged in the Draft EIR and will be considered in preparation of the document.

Major concerns for EIR consideration:
- Noise
* - loss of vital recreation resource ("river walk")
- Water — flood water & runoff
- sewers
- impact on schools & public services
* - traffic - esp. impact on Pope St. Bridge

***NOTES***

## Calculation of the Land Evaluation (LE) Score

### Part 1. Land Capability Classification (LCC) Score:

(1) Determine the total acreage of the project.
(2) Determine the soil types within the project area and enter them in **Column A** of the **Land Evaluation Worksheet** provided on page 2-A.
(3) Calculate the total acres of each soil type and enter the amounts in **Column B**.
(4) Divide the acres of each soil type (**Column B**) by the total acreage to determine the proportion of each soil type present. Enter the proportion of each soil type in **Column C**.
(5) Determine the LCC for each soil type from the applicable Soil Survey and enter it in **Column D**.
(6) From the LCC Scoring Table below, determine the point rating corresponding to the LCC for each soil type and enter it in **Column E**.

LCC Scoring Table

| LCC Class | I | IIe | IIs,w | IIIe | IIIs,w | IVe | IVs,w | V | VI | VII | VIII |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Points | 100 | 90 | 80 | 70 | 60 | 50 | 40 | 30 | 20 | 10 | 0 |

(7) Multiply the proportion of each soil type (**Column C**) by the point score (**Column E**) and enter the resulting scores in **Column F**.
(8) Sum the LCC scores in **Column F**.
(9) Enter the LCC score in box <1> of the **Final LESA Score Sheet** on page 10-A.

### Part 2. Storie Index Score:

(1) Determine the Storie Index rating for each soil type and enter it in **Column G**.
(2) Multiply the proportion of each soil type (**Column C**) by the Storie Index rating (**Column G**) and enter the scores in **Column H**.
(3) Sum the Storie Index scores in **Column H** to gain the Storie Index Score.
(4) Enter the Storie Index Score in box <2> of the **Final LESA Score Sheet** on page 10-A.

## Land Evaluation Worksheet

### Land Capability Classification (LCC) and Storie Index Scores

| A | B | C | D | E | F | G | H |
|---|---|---|---|---|---|---|---|
| Soil Map Unit | Project Acres | Proportion of Project Area | LCC | LCC Rating | LCC Score | Storie Index | Storie Index Score |
| 104 | 3.596 | 0.22 | IIw-2 | 80 | 17.84 | 63 | 13.86 |
| 105 | 8.588 | 0.53 | IIw-2 | 80 | 42.56 | 58 | 30.74 |
| 118 | 3.394 | 0.21 | IIw-2 | 80 | 16.8 | 70 | 14.7 |
| 124 | 0.566 | 0.04 | IVs-4 | 40 | 1.4 | 46 | 1.84 |
| | | | | | | | |
| | | | | | | | |
| ***Totals*** | 16.14 | (Must Sum to 1.0) | | ***LCC Total Score*** | 78.6 | ***Storie Index Total Score*** | 61.14 |

## Site Assessment Worksheet 1.

### Project Size Score

| | I | J | K |

***Highest Project Size Score*** 30

Updated 2011

***NOTES***

## Calculation of the Site Assessment (SA) Score

### Part 1. Project Size Score:.

(1) Using **Site Assessment Worksheet 1** provided on page 2-A, enter the acreage of each soil type from **Column B** in the **Column - I, J or K** - that corresponds to the LCC for that soil. (Note: While the Project Size Score is a component of the Site Assessment calculations, the score sheet is an extension of data collected in the Land Evaluation Worksheet, and is therefore displayed beside it).
(2) Sum **Column I** to determine the total amount of class I and II soils on the project site.
(3) Sum **Column J** to determine the total amount of class III soils on the project site.
(4) Sum **Column K** to determine the total amount of class IV and lower soils on the project site.
(5) Compare the total score for each LCC group in the Project Size Scoring Table below and determine which group receives the highest score.

Project Size Scoring Table

| **Class I or II** | | **Class III** | | **Class IV or Lower** | |
|---|---|---|---|---|---|
| Acreage | Points | Acreage | Points | Acreage | Points |
| >80 | 100 | >160 | 100 | >320 | 100 |
| 60-79 | 90 | 120-159 | 90 | 240-319 | 80 |
| 40-59 | 80 | 80-119 | 80 | 160-239 | 60 |
| 20-39 | 50 | 60-79 | 70 | 100-159 | 40 |
| 10-19 | 30 | 40-59 | 60 | 40-99 | 20 |
| 10< | 0 | 20-39 | 30 | 40< | 0 |
| | | 10-19 | 10 | | |
| | | 10< | 0 | | |

(6) Enter the **Project Size Score** (the highest score from the three LCC categories) in box <3> of the **Final LESA Score Sheet** on page 10-A.

***NOTES***

## Part 2. Water Resource Availability Score:

(1) Determine the type(s) of irrigation present on the project site, including a determination of whether there is dryland agricultural activity as well.

(2) Divide the site into portions according to the type or types of irrigation or dryland cropping that is available in each portion. Enter this information in **Column B** of **Site Assessment Worksheet 2. - Water Resources Availability**.

(3) Determine the proportion of the total site represented for each portion identified, and enter this information in **Column C**.

(4) Using the Water Resources Availability Scoring Table, identify the option that is most applicable for each portion, based upon the feasibility of irrigation in drought and non-drought years, and whether physical or economic restrictions are likely to exist. Enter the applicable Water Resource Availability Score into **Column D**.

(5) Multiply the Water Resource Availability Score for each portion by the proportion of the project area it represents to determine the weighted score for each portion in **Column E**.

(6) Sum the scores for all portions to determine the project's total Water Resources Availability Score

(7) Enter the Water Resource Availability Score in box <4> of the **Final LESA Score Sheet** on page 10-A.

**Site Assessment Worksheet 2. - Water Resources Availability**

| A | B | C | D | E |
|---|---|---|---|---|
| Project Portion | Water Source | Proportion of Project Area | Water Availability Score | Weighted Availability Score (C x D) |
| 1 | On-site well | 0.4 | 100 | 40 |
| 2 | Not irrigated | 0.6 | 20 | 12 |
| 3 | | | | |
| 4 | | | | |
| 5 | | | | |
| 6 | | | | |
| | | (Must Sum to 1.0) | ***Total Water Resource Score*** | 52 |

Updated 2011

***NOTES***

## Part 3. Surrounding Agricultural Land Use Score:

(1) Calculate the project's Zone of Influence (ZOI) as follows:
(a) a rectangle is drawn around the project such that the rectangle is the smallest that can completely encompass the project area.
(b) a second rectangle is then drawn which extends one quarter mile on all sides beyond the first rectangle.
(c) The ZOI includes all parcels that are contained within or are intersected by the second rectangle, less the area of the project itself.
(2) Sum the area of all parcels to determine the total acreage of the ZOI.
(3) Determine which parcels are in agricultural use and sum the areas of these parcels
(4) Divide the area in agriculture found in step (3) by the total area of the ZOI found in step (2) to determine the percent of the ZOI that is in agricultural use.
(5) Determine the Surrounding Agricultural Land Score utilizing the Surrounding Agricultural Land Scoring Table below.

**Surrounding Agricultural Land Scoring Table**

| Percent of ZOI in Agriculture | Surrounding Agricultural Land Score |
|---|---|
| 90-100 | 100 |
| 80-89 | 90 |
| 75-79 | 80 |
| 70-74 | 70 |
| 65-69 | 60 |
| 60-64 | 50 |
| 55-59 | 40 |
| 50-54 | 30 |
| 45-49 | 20 |
| 40-44 | 10 |
| <40 | 0 |

(5) Enter the Surrounding Agricultural Land Score in box <5> of the **Final LESA Score Sheet** on page 10-A.

**Site Assessment Worksheet 3.**
**Surrounding Agricultural Land and Surrounding Protected Resource Land**

| A | B | C | D | E | F | G |
|---|---|---|---|---|---|---|
| **Zone of Influence** | | | | | | |
| Total Acres | Acres in Agriculture | Acres of Protected Resource Land | Percent in Agriculture (A/B) | Percent Protected Resource Land (A/C) | Surrounding Agricultural Land Score (From Table) | Surrounding Protected Resource Land Score (From Table) |
| 418.5 | 178.34 | 86.96 | 42.96 | 20.78 | 10 | 0 |

Updated 2011

***NOTES***

## Part 4. Protected Resource Lands Score:

The Protected Resource Lands scoring relies upon the same Zone of Influence information gathered in Part 3, and figures are entered in Site Assessment Worksheet 3, which combines the surrounding agricultural and protected lands calculations.

(1) Use the total area of the ZOI calculated in Part 3. for the Surrounding Agricultural Land Use score.
(2) Sum the area of those parcels within the ZOI that are protected resource lands, as defined in the California Agricultural LESA Guidelines.
(3) Divide the area that is determined to be protected in Step (2) by the total acreage of the ZOI to determine the percentage of the surrounding area that is under resource protection.
(4) Determine the Surrounding Protected Resource Land Score utilizing the Surrounding Protected Resource Land Scoring Table below.

**Surrounding Protected Resource Land Scoring Table**

| Percent of ZOI Protected | Protected Resource Land Score |
|---|---|
| 90-100 | 100 |
| 80-89 | 90 |
| 75-79 | 80 |
| 70-74 | 70 |
| 65-69 | 60 |
| 60-64 | 50 |
| 55-59 | 40 |
| 50-54 | 30 |
| 45-49 | 20 |
| 40-44 | 10 |
| <40 | 0 |

(5) Enter the Protected Resource Land score in box <6> of the **Final LESA Score Sheet** on page 10-A.

*LESA Worksheet (cont.)*

***NOTES***

## Final LESA Score Sheet

**Calculation of the Final LESA Score:**

(1) Multiply each factor score by the factor weight to determine the weighted score and enter in Weighted Factor Scores column.
(2) Sum the weighted factor scores for the LE factors to determine the total LE score for the project.
(3) Sum the weighted factor scores for the SA factors to determine the total SA score for the project.
(4) Sum the total LE and SA scores to determine the Final LESA Score for the project.

| | Factor Scores | Factor Weight | Weighted Factor Scores |
|---|---|---|---|
| **LE Factors** | | | |
| Land Capability Classification | <1> 78.6 | 0.25 | 19.7 |
| Storie Index | <2> 61.14 | 0.25 | 15.3 |
| *LE Subtotal* | | ***0.50*** | **35.0** |

# Hunter Subdivision Project - First Year
**Napa County, Annual**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Other Asphalt Surfaces | 5.50 | Acre | 5.50 | 239,580.00 | 0 |
| City Park | 0.06 | Acre | 0.06 | 2,613.60 | 0 |
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 2 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2024 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences and 4 ADUs. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2023 (March), with completion in January 2024.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

# Hunter Subdivision Project - First Year
**Napa County, Summer**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Other Asphalt Surfaces | 5.50 | Acre | 5.50 | 239,580.00 | 0 |
| City Park | 0.06 | Acre | 0.06 | 2,613.60 | 0 |
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 2 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2024 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences and 4 ADUs. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2023 (March), with completion in January 2024.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

# Hunter Subdivision Project - First Year
**Napa County, Winter**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Other Asphalt Surfaces | 5.50 | Acre | 5.50 | 239,580.00 | 0 |
| City Park | 0.06 | Acre | 0.06 | 2,613.60 | 0 |
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 2 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2024 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences and 4 ADUs. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2023 (March), with completion in January 2024.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

# Hunter Subdivision Project - Second Year
**Napa County, Annual**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 5 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2025 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences and 2 ADUs. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2024 (March), with completion in November 2024.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

# Hunter Subdivision Project - Second Year
**Napa County, Summer**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 5 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2025 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences and 2 ADUs. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2024 (March), with completion in November 2024.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

# Hunter Subdivision Project - Second Year
**Napa County, Winter**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 5 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2025 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences and 2 ADUs. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2024 (March), with completion in November 2024.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

# Hunter Subdivision Project - Third Year
**Napa County, Annual**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 5 |
| Condo/Townhouse | 25.00 | Dwelling Unit | 1.56 | 25,000.00 | 62 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2026 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences, 2 ADUs, and 25 low income units. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2025 (March), with completion in February 2026.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

| Table Name | Column Name | Default Value | New Value |
|---|---|---|---|
| tblLandUse | Population | 6.00 | 5.00 |
| tblLandUse | Population | 72.00 | 62.00 |

Date: 3/3/2021 9:58 AM

# Hunter Subdivision Project - Third Year
**Napa County, Summer**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 5 |
| Condo/Townhouse | 25.00 | Dwelling Unit | 1.56 | 25,000.00 | 62 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2026 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences, 2 ADUs, and 25 low income units. Updated population per City of St Helena avg household size per BayAreaCensus.
Construction Phase - Assumed project would begin construction Spring 2025 (March), with completion in February 2026.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

| Table Name | Column Name | Default Value | New Value |
|---|---|---|---|
| tblLandUse | Population | 6.00 | 5.00 |
| tblLandUse | Population | 72.00 | 62.00 |
| tblLandUse | Population | 26.00 | 22.00 |
| tblTripsAndVMT | VendorTripNumber | 4.00 | 11.00 |
| tblTripsAndVMT | WorkerTripNumber | 23.00 | 55.00 |
| tblTripsAndVMT | WorkerTripNumber | 5.00 | 11.00 |

## 2.0 Emissions Summary

## 3.0 Construction Detail

### Construction Phase

| Phase Number | Phase Name | Phase Type | Start Date | End Date | Num Days Week | Num Days | Phase Description |
|---|---|---|---|---|---|---|---|
| 1 | Building Construction | Building Construction | 3/17/2025 | 1/30/2026 | 5 | 230 | |
| 2 | Architectural Coating | Architectural Coating | 1/31/2026 | 2/25/2026 | 5 | 18 | |

**Acres of Grading (Site Preparation Phase): 0**

**Acres of Grading (Grading Phase): 0**

**Acres of Paving: 0**

**Residential Indoor: 87,480; Residential Outdoor: 29,160; Non-Residential Indoor: 0; Non-Residential Outdoor: 0; Striped Parking Area:**

### OffRoad Equipment

| Phase Name | Offroad Equipment Type | Amount | Usage Hours | Horse Power | Load Factor |
|---|---|---|---|---|---|
| Building Construction | Cranes | 1 | 7.00 | 231 | 0.29 |
| Building Construction | Forklifts | 3 | 8.00 | 89 | 0.20 |
| Building Construction | Generator Sets | 1 | 8.00 | 84 | 0.74 |
| Building Construction | Tractors/Loaders/Backhoes | 3 | 7.00 | 97 | 0.37 |
| Building Construction | Welders | 1 | 8.00 | 46 | 0.45 |
| Architectural Coating | Air Compressors | 1 | 6.00 | 78 | 0.48 |

### Trips and VMT

| Phase Name | Offroad Equipment Count | Worker Trip Number | Vendor Trip Number | Hauling Trip Number | Worker Trip Length | Vendor Trip Length | Hauling Trip Length | Worker Vehicle Class | Vendor Vehicle Class | Hauling Vehicle Class |
|---|---|---|---|---|---|---|---|---|---|---|
| Building Construction | 9 | 55.00 | 11.00 | 0.00 | 10.80 | 7.30 | 20.00 | LD_Mix | HDT_Mix | HHDT |
| Architectural Coating | 1 | 11.00 | 0.00 | 0.00 | 10.80 | 7.30 | 20.00 | LD_Mix | HDT_Mix | HHDT |

# Hunter Subdivision Project - Third Year
**Napa County, Winter**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 5 |
| Condo/Townhouse | 25.00 | Dwelling Unit | 1.56 | 25,000.00 | 62 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2026 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences, 2 ADUs, and 25 low income units. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2025 (March), with completion in February 2026.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

| Table Name | Column Name | Default Value | New Value |
|---|---|---|---|
| tblLandUse | Population | 6.00 | 5.00 |
| tblLandUse | Population | 72.00 | 62.00 |

# Hunter Subdivision Project - Fourth Year
**Napa County, Annual**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 5 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2027 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences and 2 ADUs. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2026 (March), with completion in November 2026.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

| Table Name | Column Name | Default Value | New Value |
|---|---|---|---|

# Hunter Subdivision Project - Fourth Year
**Napa County, Summer**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 5 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2027 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences and 2 ADUs. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2026 (March), with completion in November 2026.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

| Table Name | Column Name | Default Value | New Value |
|---|---|---|---|

# Hunter Subdivision Project - Fourth Year

**Napa County, Winter**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 5 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2027 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences and 2 ADUs. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2026 (March), with completion in November 2026.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

| Table Name | Column Name | Default Value | New Value |

# Hunter Subdivision Project - Fifth Year
**Napa County, Annual**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 5 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2028 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences and 2 ADUs. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2027 (March), with completion in November 2027.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

# Hunter Subdivision Project - Fifth Year

**Napa County, Summer**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 5 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2028 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences and 2 ADUs. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2027 (March), with completion in November 2027.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

| Table Name | Column Name | Default Value | New Value |

# Hunter Subdivision Project - Fifth Year

**Napa County, Winter**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 2.00 | Dwelling Unit | 0.13 | 2,000.00 | 5 |
| Single Family Housing | 9.00 | Dwelling Unit | 2.92 | 16,200.00 | 22 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2028 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 9 SF residences and 2 ADUs. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2027 (March), with completion in November 2027.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

| Table Name | Column Name | Default Value | New Value |

# Hunter Subdivision Project - Sixth Year
**Napa County, Annual**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 1.00 | Dwelling Unit | 0.06 | 1,000.00 | 3 |
| Single Family Housing | 6.00 | Dwelling Unit | 1.95 | 10,800.00 | 15 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2029 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 6 SF residences and 1 ADU. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2028 (March), with completion in November 2028.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

| Table Name | Column Name | Default Value | New Value |

# Hunter Subdivision Project - Sixth Year
**Napa County, Summer**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 1.00 | Dwelling Unit | 0.06 | 1,000.00 | 3 |
| Single Family Housing | 6.00 | Dwelling Unit | 1.95 | 10,800.00 | 15 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2029 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 6 SF residences and 1 ADU. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2028 (March), with completion in November 2028.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

| Table Name | Column Name | Default Value | New Value |

# Hunter Subdivision Project - Sixth Year
**Napa County, Winter**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Apartments Low Rise | 1.00 | Dwelling Unit | 0.06 | 1,000.00 | 3 |
| Single Family Housing | 6.00 | Dwelling Unit | 1.95 | 10,800.00 | 15 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2029 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 641.35 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD.

Land Use - Construction of 6 SF residences and 1 ADU. Updated population per City of St Helena avg household size per BayAreaCensus.

Construction Phase - Assumed project would begin construction Spring 2028 (March), with completion in November 2028.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Off-road Equipment - Default equipment assumed.

Trips and VMT - Assumed same trips for construction of all res dwelling units.

Grading - Assumed site would be balanced.

| Table Name | Column Name | Default Value | New Value |

# Hunter Subdivision Project
**Napa County, Annual**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| City Park | 0.06 | Acre | 0.06 | 2,613.60 | 0 |
| Apartments Low Rise | 11.00 | Dwelling Unit | 0.00 | 11,000.00 | 27 |
| Condo/Townhouse | 25.00 | Dwelling Unit | 3.40 | 25,000.00 | 62 |
| Single Family Housing | 51.00 | Dwelling Unit | 13.40 | 91,800.00 | 126 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2029 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 206 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD. Adjusted intensity factors based on PG&E 2020 Corporate Responsibility and Sustainability Report, 206 lb CO2/MWh.
Land Use - 87 units including 51 single family homes, 11 granny flats, and 25 multi family residential units. Updated population per City of St Helna avg household size from BayAreaCensus.
Vehicle Trips - Updated trip generation per traffic report (Dudek).

Woodstoves - No woodstoves or hearths.

Area Coating -

Energy Use - Adjusted T24 energy intensities to meet 2019 T24 standards. Single-family savings are 4% of electricity and 9% of gas. MF savings are 2% and 5%.

Water And Wastewater - Indoor water consumption updated per Preliminary Water Calculations Technical Memorandum (RSA).

Solid Waste - Default rates used.

Construction Off-road Equipment Mitigation - Implement fugitive dust reduction measures - water twice daily.

Mobile Land Use Mitigation - Project would implement a pedestrian network on and off-site, project site is approximately 0.4 mi from VINE transit.

Water Mitigation - 20% indoor/outdoor reduction in water assumed for CALGreen compliance.

Date: 3/3/2021 4:09 PM

# Hunter Subdivision Project
**Napa County, Summer**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| City Park | 0.06 | Acre | 0.06 | 2,613.60 | 0 |
| Apartments Low Rise | 11.00 | Dwelling Unit | 0.00 | 11,000.00 | 27 |
| Condo/Townhouse | 25.00 | Dwelling Unit | 3.40 | 25,000.00 | 62 |
| Single Family Housing | 51.00 | Dwelling Unit | 13.40 | 91,800.00 | 126 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2029 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 206 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD. Adjusted intensity factors based on PG&E 2020 Corporate Responsibility and Sustainability Report, 206 lb CO2/MWh.

Land Use - 87 units including 51 single family homes, 11 granny flats, and 25 multi family residential units. Updated population per City of St Helna avg household size from BayAreaCensus.

Vehicle Trips - Updated trip generation per traffic report (Dudek).

Woodstoves - No woodstoves or hearths.

Energy Use - Adjusted T24 energy intensities to meet 2019 T24 standards. Single-family savings are 4% of electricity and 9% of gas. MF savings are

Water And Wastewater - Indoor water consumption updated per Preliminary Water Calculations Technical Memorandum (RSA).

Solid Waste - Default rates used.

Construction Off-road Equipment Mitigation - Implement fugitive dust reduction measures - water twice daily.

Mobile Land Use Mitigation - Project would implement a pedestrian network on and off-site, project site is approximately 0.4 mi from VINE transit.

Water Mitigation - 20% indoor/outdoor reduction in water assumed for CALGreen compliance.

Date: 3/3/2021 4:18 PM

# Hunter Subdivision Project
**Napa County, Winter**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| City Park | 0.06 | Acre | 0.06 | 2,613.60 | 0 |
| Apartments Low Rise | 11.00 | Dwelling Unit | 0.00 | 11,000.00 | 27 |
| Condo/Townhouse | 25.00 | Dwelling Unit | 3.40 | 25,000.00 | 62 |
| Single Family Housing | 51.00 | Dwelling Unit | 13.40 | 91,800.00 | 126 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 3.6 | **Precipitation Freq (Days)** | 64 |
| **Climate Zone** | 4 | | | **Operational Year** | 2029 |
| **Utility Company** | Pacific Gas & Electric Company | | | | |
| **CO2 Intensity (lb/MWhr)** | 206 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics - Hunter Subdivision Project. BAAQMD. Adjusted intensity factors based on PG&E 2020 Corporate Responsibility and Sustainability Report, 206 lb CO2/MWh.

Land Use - 87 units including 51 single family homes, 11 granny flats, and 25 multi family residential units. Updated population per City of St Helna avg household size from BayAreaCensus.

Vehicle Trips - Updated trip generation per traffic report (Dudek).

Woodstoves - No woodstoves or hearths.

Energy Use - Adjusted T24 energy intensities to meet 2019 T24 standards. Single-family savings are 4% of electricity and 9% of gas. MF savings are 2% and 5%.

Water And Wastewater - Indoor water consumption updated per Preliminary Water Calculations Technical Memorandum (RSA).

Solid Waste - Default rates used.

Construction Off-road Equipment Mitigation - Implement fugitive dust reduction measures - water twice daily.

Mobile Land Use Mitigation - Project would implement a pedestrian network on and off-site, project site is approximately 0.4 mi from VINE transit.

Water Mitigation - 20% indoor/outdoor reduction in water assumed for CALGreen compliance.

# WETLAND DELINEATION
## FOR THE
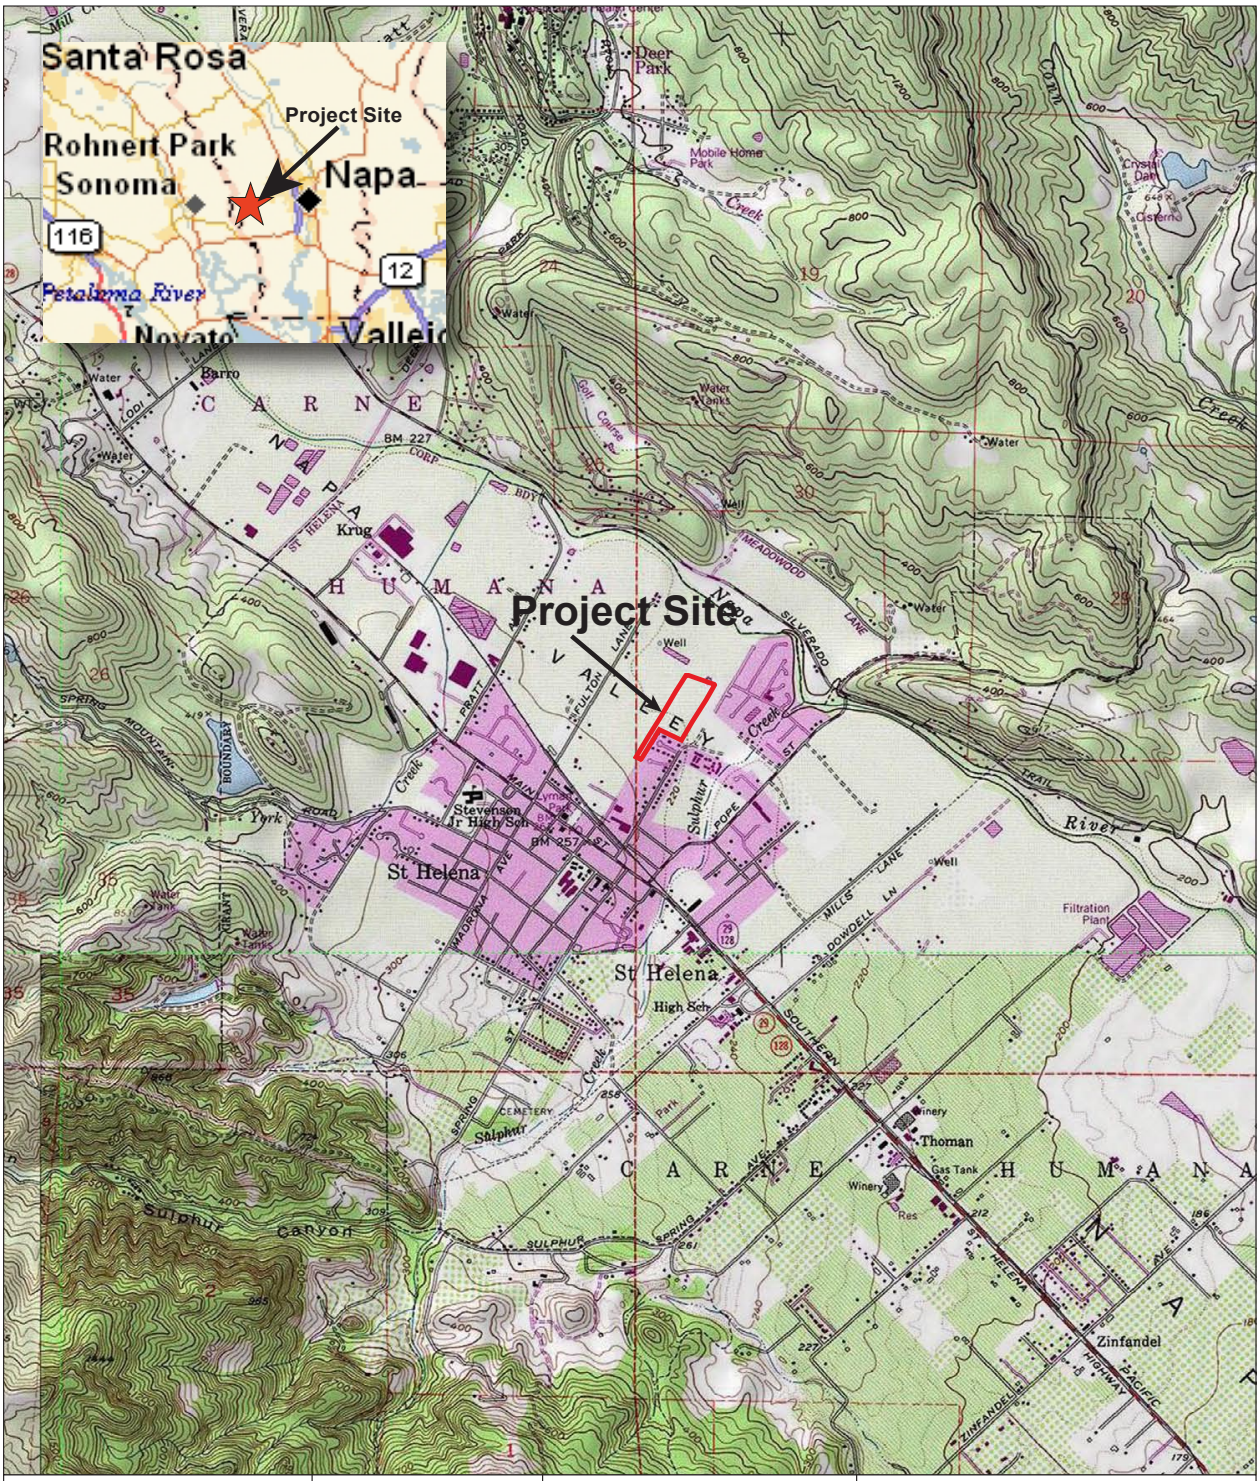
## ±16-ACRE HUNTER-ST. HELENA PROJECT

## INTRODUCTION

North Fork Associates conducted a wetland delineation for the approximately 16-acre Hunter-St. Helena project site. The project site is located west of Pope Street between State Highway 29 and the Silverado Trail in St. Helena, Napa County, California. The project site is situated within the Carne Humana land grant, Township 8 north, and Range 5 west (Figure 1). Approximate coordinates of the center of the site are 38°30'40.44" north and 122°27'50.55" west. Assessor's Parcel Number (APN) 009-030-020-000 comprises the project site.



The property sits in the Napa Valley, approximately 800 feet southwest of the Napa River, at approximately 220 feet in elevation. The site is essentially flat with a very slight slope down to the north. Active grape production occurs on the majority of the property and a dirt road runs along the western boundary. The property is surrounded by agricultural (grapes) and residential land uses (Figure 2).

Directions: From San Francisco, take Interstate 80 east towards Oakland. After approximately 31 miles, take the State Highway 37 exit towards Napa. After approximately 2 miles, take State Highway 29 towards Downtown Vallejo/Napa. Continue on State Highway 29 north for approximately 28 miles to St. Helena. Take a right on Pope Street and a left on Starr Avenue. Starr Avenue dead-ends. The project site is to the west (approximately 100 feet from the end of Starr Avenue).

**Aerial Map**

*Hunter-St. Helena*

St. Helena, Napa County, California

## METHODS

Waters of the United States were delineated on July 17, 2006 by Erin Gottschalk (Associate Biologist). The delineation was conducted according to the 1987 Corps Manual (Environmental Laboratory 1987). Several soil pits were dug, and information about vegetation, soils, and hydrology was recorded on four of them. Data sheets are located in Appendix A.

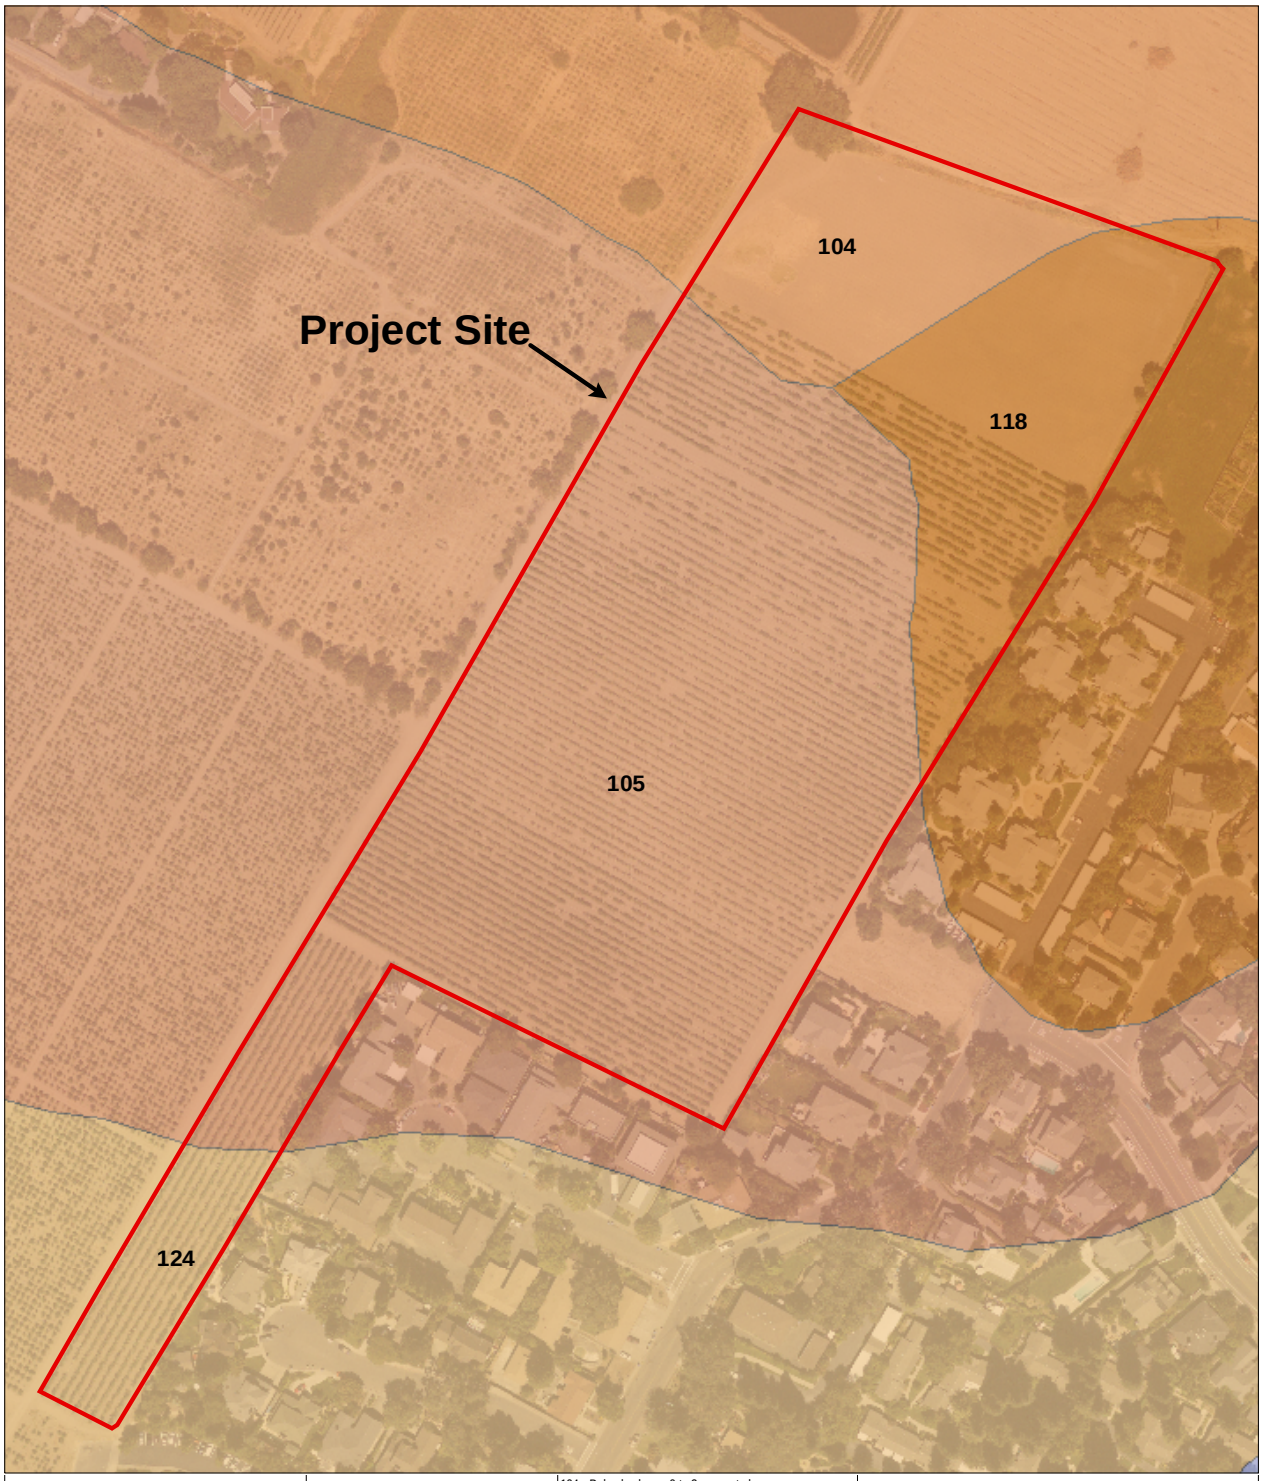
Information on soils was taken from the Napa County soil survey (USDA, NRCS 1978). In the field, a Munsell Color (2000) chart was used to determine moist soil colors.

Common plant names are used in this document. Appendix B is a list of plants observed during the delineation, along with the scientific name and wetland status of each species. Scientific names follow *The Jepson Manual* (Hickman 1993), as updated by the Jepson Interchange, an online database maintained by the University of California and the Jepson Herbaria. The wetland status for species observed was taken from Reed (1988).

A Trimble GeoXT global positioning system (GPS) was used to obtain location information about data points, wetland areas, and other pertinent features. The GPS data were corrected in the office using the nearest available base station. The GPS data was then overlaid on a 2002 aerial photograph in ArcGIS to create the wetland delineation map in Appendix C. Appendix D contains a CD ROM with the electronic files in ArcView shape format.

## RESULTS

### Climate and Weather



Roughly 35 inches of rain fall annually in St. Helena, and most falls between October and April. The late winter and early spring of 2006 produced substantially above normal rainfall; however, June and July were relatively dry with below normal rainfall. The average maximum temperature for St. Helena in July is 89.7°F. During the field survey for this wetland delineation, the temperatures rose over 100°F.

### Soils

Four soil units have been mapped on the project site (Figure 3):

- Bale clay loam, 0 to 2 percent slopes
- Bale clay loam, 2 to 5 percent slopes
- Cole silt loam, 0 to 2 percent slopes
- Cortina very gravely loam, 0 to 5 percent slopes

Bale soils are Cumulic Ultic Haploxerolls formed in stratified, gravelly, and sandy alluvium from mixed sources. They are on nearly level to gently sloping alluvial fans and terraces. Moist A-horizon chromas are between 1 and 2. Bale soils are somewhat poorly drained with moderate permeability. Some areas supporting Bale soils have a water table within four feet of the surface and are ponded for short periods in the winter. Bale clay loam, 0 to 2 percent slopes, is considered a hydric soil by the Natural Resources Conservation Service.

124 - Cortina very gravelly loam, 0 to 5 percent slopes

NOTES: Date of Photo: August 29, 2006

**Figure 3**

**Soil Map**

*Hunter-St. Helena*

St. Helena, Napa County, California

Cole soils are Pachic Argixerolls formed in alluvium from mixed sources. These soils are on river terraces, basins, flood plains, or on alluvial fans. Moist A-horizon chromas are between 1 and 3. Cole soils are somewhat poorly drained with slow permeability. Many areas supporting Cole soils have been artificially drained or have drainage altered by gullying. Cole silt loam, 0 to 2 percent slopes, is considered a hydric soil by the Natural Resources Conservation Service.

Cortina soils are Typic Xerofluvents formed in gravelly alluvium from mixed rock sources. They are very deep, somewhat excessively drained soils on alluvial fans and floodplains. Moist A-horizon chromas range between 1 and 3. Cortina soils have rapid permeability. Cortina very gravely loam, 0 to 5 percent slopes, is considered a hydric soil by the Natural Resources Conservation Service.

**Hydrology**

Hydrology within the study area is driven by precipitation and storm water and irrigation runoff. The site is essentially flat with a very slight slope down to the north. Two vegetated ditches occur along the north and northeastern property boundaries. These ditches carry storm water and irrigation runoff. The ditches likely tie in with the existing storm drainage system and/or drain into Sulphur Creek (a tributary to the Napa River) or the Napa River. The Napa River is located approximately 800 feet northeast of the property. Sulphur Creek is located approximately 900 feet southeast. The Napa River travels south through the Napa Valley and in Vallejo it empties into the San Pablo Bay.

**Vegetation**

The property supports a vineyard in active agricultural production. The dominant plant species on the property is cultivated grape. Other than the grapes, the ground supports mostly no vegetation due to the regular disking and weed removal. Sparse ruderal vegetation adapted to disturbance occurs scattered throughout the property. Species include field hedge-parsley, bindweed, spotted spurge, alkali mallow, fluellin, and prickly lettuce. Scattered hyssop loosestrife occurs under the grape vines.

The very northern portion of the property does not support rows of grapes. Currently the majority of this area supports disked fields (refer to Figure 4 for a photograph of this area); only a small area adjacent to the dirt road is not regularly disked. According to the vineyard manager, this small area is the grape loading area and is not disked in order to maintain a firm level ground for the grape bins and trucks.

Please note that the northeastern corner of the property used to support a detention feature (which was used for irrigation); however, the detention feature has since been removed as part of the onsite agricultural activities as it was no longer needed for irrigation. This area is now part of the disked field.

A large valley oak occurs in the very northwestern corner of the property. A few smaller valley oaks and red and arroyo willows occur along the eastern property boundary. The vegetation within the ditches is described in the following section.

**Waters of the United States**

One category of waters of the United States has been mapped on the project site: ditch. Table 1 is an acreage summary of the ditches on the property, and Figure 4 shows representative examples. The wetland delineation map is included in Appendix C.

Looking east from northwest corner of property.

Ditch-1

Ditch - 2

Close-up of vegetaton in Ditch-1.

**Table 1**
**Waters of the United States**

| Type | Acreage |
|---|---|
| Other Waters: | |
| Ditch | 0.10 |
| Ditch-1 | (0.08) |
| Ditch-2 | (0.02) |
| **Total Waters of the United States** | **0.10** |

***Ditch***

Ditch-1 travels along the northern site boundary, from the northwest to the northeast property corners. A portion of the ditch is located within a 30-foot long 36-inch culvert as it travels under the dirt road. Ditch-1 is seven feet wide at ordinary high water mark. This larger ditch is visible on aerial photos and apparently carries irrigation and storm water runoff from the surrounding properties and drains into Sulphur Creek or the Napa River. Vegetation within Ditch-1 includes cattail, pennyroyal, curly dock, annual beard grass, water plantain, and narrow-leaved willow.

Ditch-2 is located along the eastern property boundary. It is a smaller ditch, 1 to 3 feet wide at ordinary high water mark. Ditch-2 may be receiving the majority of its water as runoff from the irrigated soccer field located just to the east of the property. Ditch-1 connects with Ditch-2 and with a 24-inch drop-culvert and may drain into both of these features. Vegetation within Ditch-1 includes tall flatsedge, curlydock, bristly ox-tongue, pennyroyal, blackberry, bindweed, and hyssop loosestrife.

Ms. Erin Gottschalk
North Fork Associates
110 Maple Street, Suite 100
Auburn, California 95603

Dear Ms. Gottschalk:

This letter is written in response to your submittal requesting confirmation of the extent of Corps of Engineers jurisdiction at a 16-acre property known as the, "Hunter-St. Helena Project Site. The property is located west of Pope Street between State Highway 29 and the Silverado Trail in St. Helena, Napa County, California, (APN 009-030-020).

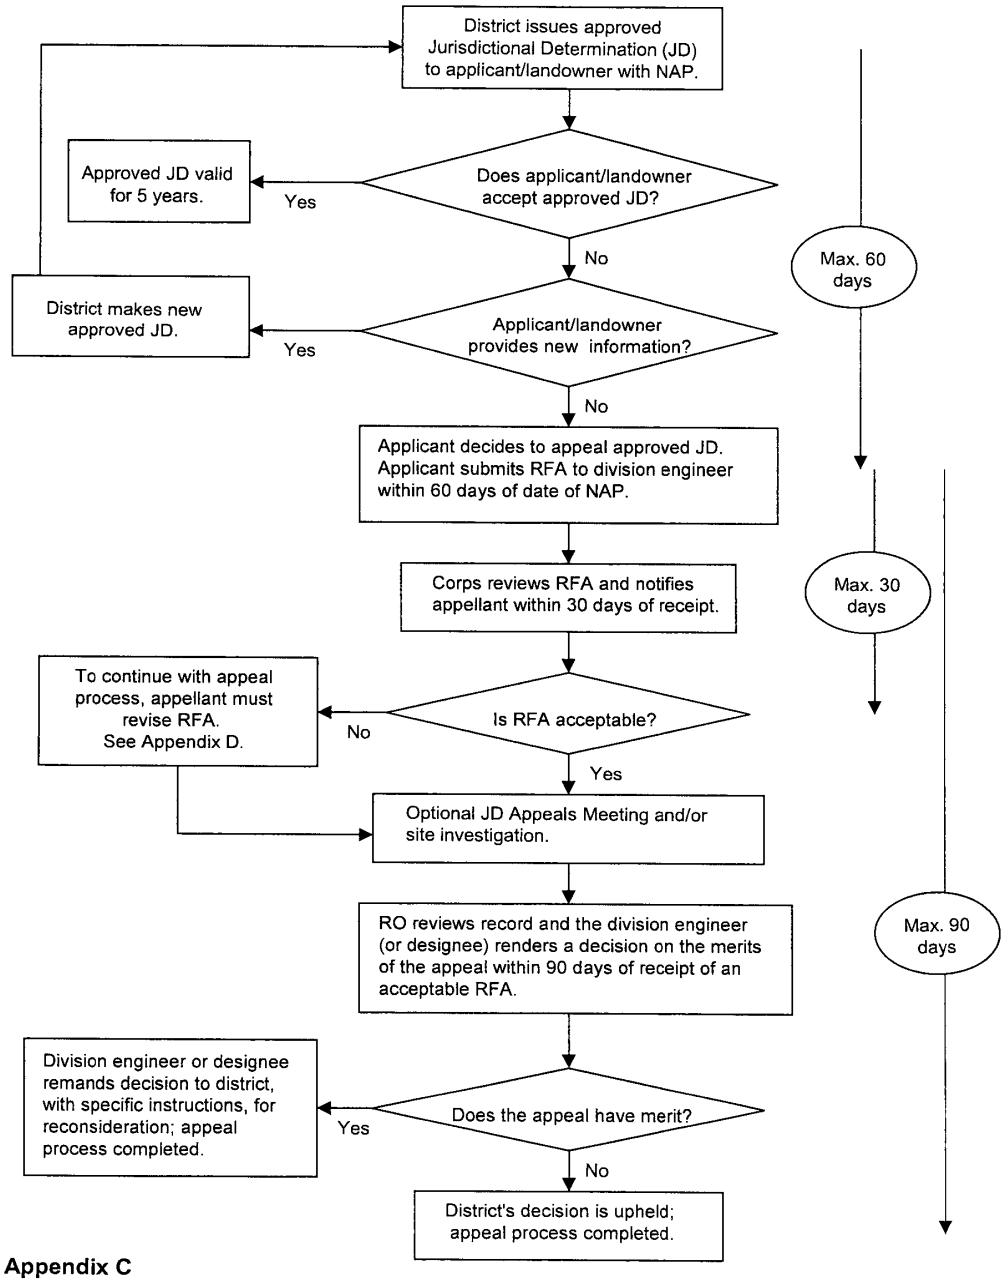
Enclosed is a map showing the extent and location of Corps of Engineers jurisdiction. We have based this jurisdictional delineation on the current conditions on the site as verified during a site visit performed by our staff on January 29, 2008. A change in those conditions may also change the extent of our jurisdiction. This jurisdictional delineation will expire in five years from the date of this letter. However, if there has been a change in circumstances that affects the extent of Corps jurisdiction, a revision may be completed before that date. Since your delineation information was received before June 5, 2007, the effective date of the official interagency guidance interpreting the Supreme Court decision, Rapanos v. United States, 126 S. Ct. 2208 (2006), the Corps did not apply this guidance to the delineation in rendering this jurisdictional determination.

All proposed discharges of dredged or fill material into waters of the United States must be authorized by the Corps of Engineers pursuant to Section 404 of the Clean Water Act (CWA) (33 U.S.C. Section 1344). Waters of the United States generally include tidal waters, lakes, ponds, rivers, streams (including intermittent streams), and wetlands..

You are advised that the Corps has established an Administrative Appeal Process, as described in 33 C.F.R. Part 331 (65 Fed. Reg. 16,486; March 28, 2000), and outlined in the enclosed flowchart and "Notification of Administrative Appeal Options, Process, and Request for Appeal" form (NAO-RFA). If you do not intend to accept the approved jurisdictional determination, you may elect to provide new information to the District Engineer for reconsideration or submit a completed NAO-RFA form to the Division Engineer to initiate the appeal process. You will relinquish all rights to appeal, unless the Corps receives new information or a completed NAO-RFA form within sixty (60) days of the date of the NAO-RFA.

Should you have any questions regarding this matter, please call David Wickens of our Regulatory Division at (415) 503-6787. Please address all correspondence to the Regulatory Division and refer to the File Number at the head of this letter. If you would like to provide comments on our permit review process, please complete the Customer Survey Form available online at http://per2.nwp.usace.army.mil/survey.html.

Sincerely,



Jane M. Hicks
Chief, Regulatory Division

## Administrative Appeal Process for Approved Jurisdictional Determinations

**Appendix C**

## NOTIFICATION OF ADMINISTRATIVE APPEAL OPTIONS AND PROCESS AND REQUEST FOR APPEAL

| Applicant: Dennis R. Hunter | File Number: 400151N | Date: July 18, 2008 |
|---|---|---|

| Attached is: | | See Section below |
|---|---|---|
| | INITIAL PROFFERED PERMIT (Standard Permit or Letter of permission) | A |
| | FINAL PROFFERED PERMIT (Standard Permit or Letter of permission) | B |
| | PERMIT DENIAL | C |
| X | APPROVED JURISDICTIONAL DETERMINATION | D |
| | PRELIMINARY JURISDICTIONAL DETERMINATION | E |

**SECTION I - The following identifies your rights and options regarding an administrative appeal of the above decision. Additional information may be found at http://usace.army.mil/inet/functions/cw/cecwo/reg or Corps Regulations at 33 CFR Part 331.**

A: INITIAL PROFFERED PERMIT: You may accept or object to the permit.

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the DISTRICT Engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- OBJECT: If you object to the initial proffered permit (Standard or LOP) because of certain terms and conditions therein, you may request that the permit be modified accordingly. You must complete Section II of this Notice and return the Notice to the DISTRICT Engineer. Your objections must be received by the DISTRICT Engineer within 60 days of the date of this Notice, or you will forfeit your right to appeal the permit in the future. Upon receipt of your Notice, the DISTRICT Engineer will evaluate your objections and may: (a) modify the permit to address all of your concerns, (b) modify the permit to address some of your objections, or (c) not modify the permit having determined that the permit should be issued as previously written. After evaluating your objections, the DISTRICT Engineer will send you a final proffered permit for your reconsideration, as indicated in Section B below.

B: FINAL PROFFERED PERMIT: You may accept or decline/appeal the permit.

- ACCEPT: If you received a Standard Permit, you may sign the permit document and return it to the DISTRICT Engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- APPEAL: If you choose to decline the final proffered permit (Standard or LOP) because of certain terms and conditions therein, you may appeal the declined permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the form to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION (not District) Engineer within 60 days of the date of this Notice.

C: PERMIT DENIAL: You may appeal the denial of a permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the Notice to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION (not District) Engineer within 60 days of the date of this Notice.

D: APPROVED JURISDICTIONAL DETERMINATION (JD): You may accept or appeal the approved JD or provide new information.

- ACCEPT: You do not need to notify the Corps to accept an approved JD. Failure to notify the Corps within 60 days of the date of this Notice means that you accept the approved JD in its entirety, and waive all rights to appeal the approved JD.
- APPEAL: If you disagree with the approved JD, you may appeal the approved JD under the Corps of Engineers Administrative Appeal Process by completing Section II of this Notice and sending the Notice to the DIVISION (not District) Engineer (address on reverse). This Notice must be received by the DIVISION Engineer within 60 days of the date of this Notice. JD appeals based on NEW information must be submitted to the DISTRICT Engineer within 60 days of the date of this Notice.

E: PRELIMINARY JURISDICTIONAL DETERMINATION (JD): You do not need to respond to the Corps regarding the preliminary JD. The preliminary JD is not appealable. If you wish, you may request an approved JD (which may be appealed), by contacting the Corps District for further instruction. Also you may provide new information for further consideration by the Corps to reevaluate the JD.

## SECTION II - REQUEST FOR APPEAL or OBJECTIONS TO AN INITIAL PROFFERED PERMIT, FINAL PROFFERED PERMIT, PERMIT DENIAL, or JURISDICTIONAL DETERMINATION

REASONS FOR APPEAL OR OBJECTIONS: (Describe your reasons for appealing the decision or your objections to an initial proffered permit in clear concise statements. You may attach additional information to this Notice to clarify where your reasons or objections are addressed in the administrative record.)

ADDITIONAL INFORMATION: The appeal is limited to a review of the administrative record; the Corps memorandum for the record of the appeal conference or meeting, and any supplemental information that the Review Officer has determined is needed to clarify the administrative record. Neither the appellant nor the Corps may add new information or analyses to the record. However, you may provide additional information to clarify the location of information that is already in the administrative record.

## POINT OF CONTACT FOR QUESTIONS OR INFORMATION:

| | |
|---|---|
| If you have questions regarding this decision and/or the appeal process you may contact:<br>Jane Hicks, Regulatory Branch Chief<br>U.S. Army Corps of Engineers, San Francisco District<br>1455 Market Street, San Francisco, CA 94103-1398<br><br>Tel.: (415)503-6771 Fax: (415) 503-6690 | If you only have questions regarding the appeal process you may also contact:<br>Douglas R. Pomeroy, Appeal Review Officer<br>U.S. Army Corps of Engineers, South Pacific Division<br>1455 Market Street, San Francisco, CA 94103-1399<br><br>Tel.: (415)503-6574 Fax: (415) 503-6647 |

RIGHT OF ENTRY: Your signature below grants the right of entry to Corps of Engineers personnel, and any government consultants, to conduct investigations of the project site during the course of the appeal process. You will be provided a 15-day notice of any site investigation, and will have the opportunity to participate in all site investigations.

Ms Carla Violet
Urban Planning Partners, Inc.
350 Frank H Ogawa Plaza
Oakland, CA 94612

RE: Hunter Subdivision Project, St. Helena, CA

Dear Ms Violet:

At your request, WRA, Inc. made a site visit to the proposed Hunter Subdivision Project (Subdivision) in St. Helena (Figure 1) on March 20, 2015 for the purpose of reviewing existing conditions of the property where the Subdivision is proposed to be constructed and also to review an additional site at the intersection of Silverado Trail and Pope Street (Intersection) where new signalization is proposed in association with the Subdivision project. WRA previously prepared biological resources review of the Subdivision project in 2012, and this letter report provides updated information to augment that report. Also included in this letter is biological resources information for the area at the Intersection site that may be impacted by improvements related to changes in traffic signalization at the Intersection site.

**A. Updated Biological Resource Assessment Information, Hunter Subdivision Site**

A site visit was conducted on March 20, 2015 by WRA staff in order to observe existing conditions of the property where the Subdivision has been proposed and compare to the conditions existing at the time the biological resources were assessed in 2012. The Subdivision property was found to be in a similar condition in 2015 as it was in 2012, with only maintenance work (e.g., mowing) conducted in the interim to control fuel loading (vegetation). There was no construction or other soil disturbances detected and it was determined the site conditions were comparable to conditions observed in 2012. The project description for the subdivision has not been changed and, therefore, potential impacts and evaluation completed in 2012 were reviewed in order to determine if results and conclusions then had changed and needed revision in 2015.

A list of special-status plant and wildlife species with potential to be present on the property or in proximity to it in the surrounding area was prepared for the 2012 biological assessment. This list was compared with current 2015 species information in data bases including the California Natural Diversity Data Base and California Native Plant Society Plant Inventory in order to determine if the status of species had changed or if species should be added to or removed from the list since 2012. The following information provides special-status species updated information:

2169-G East Francisco Blvd., San Rafael, CA 94901 (415) 454-8868 tel (415) 454-0129 fax info@wra-ca.com www.wra-ca.com

A.1. Plants

A total of 30 special-status plants were included in the 2012 list that had the potential for being in the region of the Subdivision site and had basic habitat or occurrence requirements that would allow plants to potentially be present. All of the plants were rated in 2012 as being Not Present or Unlikely to be present because specific factors needed to support many of the plants were not present on the site and also because the project site had been recently graded and disturbed; therefore, the probability that any of the special-status plants would be present was very low.

In 2015 the site conditions were observed to have not changed substantially since 2012. The site had been maintained in essentially the same condition and no new habitat types had been created or lost and no soil movement was detected. A review of the most recent list of plants potentially present (May 2015, see Attachment 1) indicates that the species having the potential to be present are essentially the same as 2012, however a few changes have been reported as shown in Figure 2. Despite these changes, re-evaluation indicates that the conclusions reached in 2012 are still valid in 2015 for the Subdivision portion of the Project (see discussion for the added Intersection site of the Project below).

A.2. Wildlife

In 2012, 28 special-status species of wildlife were identified as being potentially present in the area of the Subdivision site, including in adjacent areas and in proximity to the site such that they potentially could be impacted by development. Because wildlife have the capability of moving around, they generally are evaluated within a wider area and involving habitats that may occur in surrounding areas. A review of the recent listing of special-status species potentially present indicates that the same species still have the potential to be present and that new occurrences have been reported as shown in Figure 3. Evaluation of the species and potential impacts that could be caused by development indicates that the conclusions reached in 2012 remain the same in 2015 for the Subdivision site (see discussion for the added Intersection portion of the Project below).

A.3. Biological Communities and Habitat

The Subdivision site has been maintained in the same condition as it was in 2012 in which much of it had been graded and managed to maintain grassland habitat in prior years. The western portion, in vineyard in 2012, was still in vineyard in 2015 and other features noted in 2012, such as drainage ditches, were also still present in 2015. The Project is separated from the Napa River and the riparian habitat along the river (both considered sensitive habitats) by a water treatment pond and a habitat restoration area adjacent to the river; therefore the river and riparian habitat along the river was considered to be at far enough distance away from the development (approximately 500 feet) to not be adversely affected by the Project in the 2012 assessment, and that conclusion is still valid in 2015.

With the addition of the Intersection site, the chaparral/mixed broadleaf forest habitat on the hillside to the east would not be considered a sensitive habitat but the Napa River/riparian habitat to the west would be. Stream and/or riparian habitat is regulated by various agencies including the U.S. Army Corps of Engineers (Corps) under Section 404 of the Clean Water Act (the Napa River at areas below the ordinary high water mark) and the California Department of

Fish and Wildlife (CDFW) under 1600 Fish and Game Code (the Napa River, its banks, and riparian vegetation).

**B. Biological Resource Assessment Information, Silverado Trail/Pope Street Intersection Site**

Concerns that the Subdivision project may cause traffic congestion have been raised which may result in needing to install traffic lights and re-configure traffic lanes at the intersection of Silverado Trail and Pope Street (Intersection site), southeast of the Subdivision site (Figure 4). The addition of traffic light signals at the intersection will require modification of the roadway, including occupying wider areas of the existing roadway in order to maintain throughway lanes, add turn lanes, add bicycle lanes, add median strips and raised islands, and install traffic signal lights (Figure 4). As proposed, however, all of these improvements can be completed within the existing footprint of the existing roadway hardscape because of areas along the roadway that have been paved or used as pull over areas. Therefore, the Intersection work will not result in removal of any existing habitat and will only utilize existing roadway area hardscape more efficiently.

The location of the Intersection site is between the Napa River to the west and a hillside and ridge to the east, and these areas have different habitat types from what is present at the Subdivision site. These additional habitat types are stream/riparian habitat associated with the Napa River and chaparral/mixed broadleaf forest on the hillside and ridge. The special-status species that may use these habitats need to be added to the species list and evaluated for potential impacts. In order to make the list complete, the additional species have been combined into the 2012 list, and the full list containing the original 2012 list and newly added species is provided as one updated list in this report (Attachment 1). Although no habitat area will be removed in order to complete the Intersection improvement work, the potential for adverse impacts to sensitive habitat and/or special-status species was evaluated. Special-status species that were evaluated and ranked as having a Moderate or High potential for being present are presented below.

B.1. Special-status Species of Plants Potentially Present at Intersection Site

The stream/riparian and chaparral/mixed broadleaf forest habitats at the Intersection site have the potential for a number of plant species to be present that differ from the species at the Subdivision site. Therefore, the updated list of plant species includes the additions with a total number of plants now at 63 (see Attachment 1). Many of these additional potential species were determined to be Not Present or Unlikely to be present based on factors such as elevation range, soil type, or no known occurrences within several miles. Still, one plant was ranked as having High Potential for presence and three plants were ranked as having a Moderate Potential for presence, and these species are summarized below.

Napa false indigo (*Amorpha californica* var. *napensis*), High Potential. CNPS Rank 1B.2. – Often found in broadleafed upland forest, chaparral, cismontane woodland and in openings in forest or woodland or in chaparral. Its elevation range is below 800 m and it blooms in May through July. In addition to its habitat type being present adjacent to the Intersection site area, known occurrences have been reported within a mile of the Project.

Clara Hunt's milk-vetch (*Astragalus claranus*), Moderate Potential. Federal Endangered, State Threatened, CNPS Rank 1B.1. – This plant can be found in chaparral (openings), cismontane

woodland, valley and foothill grassland on serpentine or volcanic, rocky, clay soil. Elevation ranges of this plant are from 250 to 900 feet (75 to 275 meters), and it blooms March through May. There are occurrences of this plant reported in the area.

Narrow anthered brodiaea (*Brodiaea leptandra*), Moderate Potential. CNPS Rank 1B.2. This plant is found in broadleafed upland forest, chaparral, cismontane woodland, lower montane coniferous forest, and in valley and foothill grassland at elevation ranges from 360 to 3000 feet (110 to 915 meters). It blooms in May through July. Suitable habitat is present, however elevation range of plant is generally higher than project area. The closest known occurrence is approximately 0.75 mile to east of Intersection site.

Greene's narrow-leaved daisy (*Erigeron greenei*), Moderate Potential. CNPS Rank 1B.2. Chaparral, and especially on serpentine or volcanic soil, is the preferred habitat for this species. Its elevation range is from 260 to 3300 feet (80 to 1005 meters) and it blooms May through September. Although no serpentine soil is present, nearby occurrence is the main factor this plant warrants a Moderate rating for being present in areas adjacent to the site.

Because no exiting habitat will be removed in order to complete the Intersection improvements, no adverse impact to special-status plants is expected. No additional surveys or mitigation measures are needed or recommended.

B.2. Special-status Species of Wildlife Potentially Present at Intersection Site

A review of the special-status wildlife species indicates that the same species described for the Subdivision site have the potential to be at the Intersection site. This is because of proximity to the Subdivision site and the fact that wildlife are not stationary and have the ability to move between habitat types (e.g., from nesting habitat to foraging habitat, etc.). However, the proximity of the Intersection site to the stream/riparian habitat and the chaparral/mixed broadleaf habitat causes the rating for presence of some of the wildlife species previously given in the 2012 assessment to change to higher probability, and these are summarized below:

Silver-haired Bat (*Lasionycteris noctivagans*), WBWG Medium Priority. Moderate Potential. Primarily a forest dweller, feeding over streams, ponds, and open brushy areas. It roosts in hollow trees, snags, buildings, rock crevices, caves, and under bark. Previously rated as Unlikely to be present at the Subdivision site, the proximity of the riparian and chaparral/mixed broadleaf forest habitat to the Intersection site may provide roost habitat for this species and the rating is raised to Moderate.

Fringed Myotis (*Myotis thysanodes*), WBWG High Priority. Moderate Potential. A bat associated with a wide variety of habitats including mixed coniferous-deciduous forest and redwood/sequoia groves. Buildings, mines and large snags are important day and night roosts. Previously rated as Unlikely for presence at the Subdivision site, the riparian and chaparral mixed broadleaf forest habitat in proximity to the Intersection site causes the rating for this species to be raised to Moderate.

Purple Martin (*Progne subis*), State Species of Special Concern. High Potential. A bird that inhabits woodlands and low elevation coniferous forests. It nests in old woodpecker cavities and human-made structures, and the nest is often located in a tall isolated tree or snag. Previously considered to be Not Present at the Subdivision site, the forest habitat and recent reported occurrences in the area gives cause to raise the rating for presence to High.

Foothill Yellow-legged Frog (*Rana boylii*), State Species of Special Concern. Moderate Potential Found in or near rocky streams in a variety of habitats and prefers partly-shaded, shallow streams and riffles with a rocky substrate; requires at least some cobble-sized substrate for egg-laying. Previously rated as Not Present at the Subdivision site, the possibility that it could be present in the Napa River adjacent to the Intersection site raises the potential for occurrence to Moderate. It is not rated High because the nearest occurrence is approximately two miles west with the urban area of St. Helena in between. Therefore, there is no direct corridor that would allow migration between the Project location and the known occurrences.

Western Pond Turtle (*Actinemys marmorata*), State Species of Special Concern. Moderate Potential. A thoroughly aquatic turtle of ponds, marshes, rivers, streams, and irrigation ditches with aquatic vegetation. It requires basking sites such as partially submerged logs, vegetation mats, or open mud banks, and suitable upland habitat (sandy banks or grassy open fields) for egg-laying. Previously rated as Unlikely to be present at the Subdivision site, this species may be present in the Napa River for use as a migration corridor, and the rating for potential presence is changed to Moderate.

Steelhead, Central California Coast ESU (Oncorhynchus mykiss), Federal Threatened. High Potential. Occurs from the Russian River south to Soquel Creek and Pajaro River. Also in San Francisco and San Pablo Bay Basins. Adults migrate upstream to spawn in cool, clear, well-oxygenated streams. Juveniles remain in fresh water for 1 or more years before migrating downstream to the ocean. High rating is for the Napa River. This species is known to occur in upstream tributaries and likely migrates between those tributaries and downstream habitats, including the Pacific Ocean.

Other wildlife species evaluated but not rated as Moderate or High for potential presence are listed in Attachment 1.

The work to improve the intersection with traffic light signals, lane changes, and median strips and islands will be conducted within the existing footprint of roadway hardscape and no habitat will be removed. Although the construction work and eventual increased traffic may create activity and noise, this is not likely to cause an adverse impact to wildlife because a relatively high level of activity and noise is an existing condition at the intersection. This intersection was observed to be a busy intersection during the site visit conducted on an average afternoon in March 2015. Numerous vehicles were observed either traveling through the intersection on Silverado Trail and/or coming from or turning onto Pope Street and Howell Mountain Road; often there were vehicles backed up waiting to make turns. While additional construction work and traffic may result from the Subdivision project and may cause noise and traffic congestion at the Intersection, wildlife that is present in proximity to the intersection is already acclimated to activity, noise, and traffic as the normal condition. Any increase in activity, noise, or traffic that may be caused by the Subdivision project is not likely to affect wildlife adversely in any significant way because they are acclimated. Therefore, there are no recommendations needed to mitigate for an increase in construction activity, noise, and traffic.

B.3. Sensitive Habitat Community Evaluation

With the addition of stream/riparian and chaparral/mixed broadleaf forest habitats, only the stream/riparian habitat would be considered a sensitive habitat. No work will be conducted in the Napa River and work will only involve roadway areas that are existing hardscape that are 100 to 120 feet away from the river. No habitat or vegetation will be removed, therefore, no

impacts to sensitive habitat is expected as a result of work that will be conducted for improvements made at the Intersection site. No permits would be expected to be needed from the Corps or CDFW. Toxic liquids, such as paint, fuel, lubricants, and un-cured concrete, used during Intersection improvement work could adversely affect sensitive Napa River and riparian habitat if spilled or leaked in these habitats. However, measures to avoid or reduce the possibility of spillage or leaks will be included in a Storm Water Pollution Prevention Plan (SWPPP) that will be required to be prepared for the Project. This was addressed in the Project draft EIR in Section I. Hydrology and Water Quality, such as recommending fueling and maintenance offsite as much as possible and, if onsite, no closer than 50 feet to drain inlets, drainage courses, and receiving waters. Because the project is more than 100 feet away from the Napa River, no adverse impacts would be expected and no additional mitigation measures are recommended.

This concludes the review and evaluation of biological resources. If you have questions or require additional information, please contact us.

Sincerely,

Douglas Spicher

Encl.

DRAFT

**Attachment 1.** Special status plant and wildlife species that may occur, or are known to occur in habitats similar to those found on the Hunter Subdivision Project Area (Subdivision) and in the added Silverado Trail/Pope Street Intersection Signalization Area (Intersection). List compiled from CNDDB (CDFW 2015) and CNPS Electronic Inventory (CNPS 2015) for the St. Helena, Yountville, Kenwood, Rutherford, Chiles Valley, Calistoga, Walter Springs, Detert Reservoir and Aetna Springs USGS 7.5" quadrangles, and USFWS Species lists (USFWS 2015) for the Project area.

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| **Plants** | | | |
| Franciscan onion<br>*Allium peninsulare var. franciscanum* | Rank 1B.2 | Cismontane woodland, valley and foothill grasslands of clay, volcanic, or serpentine soils. 50-300 m. Blooms: May-June | **Not Present.** The Project Area lacks suitable serpentine soils habitat for this species. |
| Sonoma alopecurus<br>*Alopecurus aequalis var. sonomensis* | FE, Rank 1B.1 | Marshes and freshwater swamps and riparian scrub. 0-400 m. Blooms: May-June | **Not Present.** The Project Area lacks suitable freshwater habitat for this species. |
| Napa false indigo<br>*Amorpha californica* var. *napensis* | Rank 1B.2 | Broadleafed upland forest, chaparral, cismontane woodland; in openings in forest or woodland or in chaparral. < 800 m. Blooms: May-July. | **High.** Suitable habitat is present in the area of the Intersection site. Known occurrences in area of project site. |
| bent-flowered fiddleneck<br>*Amsinckia lunaris* | Rank 1B.2 | Coastal bluff scrub, cismontane woodland, valley and foothill grassland. 50-500 m. Blooms: March - June | **Not Present.** The Project Area lacks suitable habitat for this species. |
| alkali milk-vetch<br>*Astragalus tener* var. *tener* | RP, Rank 1B.2 | Low ground, alkali flats, and flooded lands in annual grassland or in playas or vernal pools. 1-170 m. Blooms: March-June | **Not Present.** The Project Area lacks suitable wetlands habitat for this species. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| Konocti manzanita<br>*Arctostaphylos manzanita ssp. elegans* | Rank 1B.3 | Chaparral, cismontane woodland, lower montane coniferous forest/volcanic. Elevation ranges from 1300 to 5300 feet (395 to 1615 meters). Blooms January-May (July). | **Not Present.** Elevation range of plant is too high for project areas and none were observed during a site visit which included the blooming period. |
| Rincon Ridge manzanita<br>*Arctostaphylos stanfordiana ssp. decumbens* | Rank 1B.1 | Chaparral (rhyolitic), cismontane woodland. Elevation ranges from 250 to 1210 feet (75 to 370 meters). Blooms February-April (May). | **Unlikely.** Suitable habitat is present at the Intersection site, however none were observed during a site visit which included the blooming period. Occurrences reported are 5 miles or greater away from project sites. |
| Clara Hunt's milk-vetch<br>*Astragalus claranus* | FE, ST, Rank 1B.1 | Chaparral (openings), cismontane woodland, valley and foothill grassland/serpentine or volcanic, rocky, clay. Elevation ranges from 250 to 900 feet (75 to 275 meters). Blooms March-May. | **Moderate to Unlikely.** The Subdivision area is not suitable habitat because of its recent disturbance. The Intersection area could be suitable habitat, however, there are no serpentine soils in this area to which the plant has a high affinity. In addition, this plant was not observed to be present during a site visit conducted during the blooming period. |
| Jepson's milk-vetch<br>*Astragalus rattanii var. jepsonianus* | Rank 1B.2 | Chaparral, cismontane woodland, valley and foothill grassland/often serpentine. Elevation ranges from 970 to 2300 feet (295 to 700 meters). Blooms March-June. | **Unlikely.** Elevation range of plant is too high for project areas and none were observed during a site visit which included the blooming period. |
| Sonoma sunshine<br>*Blennosperma bakeri* | FE, SE, Rank 1B.1 | Occurs in mesic soils of valley and foothill grasslands and vernal pools. 10 - 110 m. Blooms: March- May | **Not Present.** The Project Area lacks suitable wetlands and vernal pool habitat for this species. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| narrow-anthered brodiaea<br>*Brodiaea leptandra* | Rank 1B.2 | Broadleafed upland forest, chaparral, cismontane woodland, lower montane coniferous forest, valley and foothill grassland/volcanic. Elevation ranges from 360 to 3000 feet (110 to 915 meters). Blooms May-July. | **Moderate.** Suitable habitat is present, however elevation range of plant is generally higher than project area. Closest known occurrence is approximately 0.75 mile to east of Intersection site. |
| round-leaved filaree<br>*California macrophylla* | Rank 1B.1 | Clay soils of cismontane woodland, valley and foothill grasslands. 15-1,200 m. Blooms: March-May | **Not Present.** The Project Area lacks suitable habitat for this species. |
| small-flowered calycadenia<br>*Calycadenia micrantha* | Rank 1B.2 | Chaparral, meadows and seeps (volcanic), valley and foothill grassland/roadside, rocky, talus, scree, sometimes serpentine, sparsely vegetated areas. Elevation ranges 390 to 1500 m. Blooms June-September. | **Not Present.** Elevation of plant is higher than project sites and no seep/serpentine soils are present. |
| Rincon Ridge ceanothus<br>*Ceanothus confusus* | Rank 1B.1 | Closed-cone coniferous forest, chaparral, cismontane woodland/volcanic or serpentine. Elevation ranges from 250 to 3490 feet (75 to 1065 meters). Blooms February-June. | **Unlikely.** Habitat is present although no serpentine soils are present and no individuals were observed during a site visit conducted during the blooming period. |
| Calistoga ceanothus<br>*Ceanothus divergens* | Rank 1B.2 | Chaparral (serpentine or volcanic, rocky). Elevation ranges from 560 to 3120 feet (170 to 950 meters). Blooms February-April. | **Not Present.** Elevation of plant is higher than project area and no Ceanothus species were observed during site visits which included the blooming period of this plant. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| holly-leaved ceanothus<br>*Ceanothus purpureus* | Rank 1B.2 | Chaparral, cismontane woodland/volcanic, rocky. Elevation ranges from 390 to 2100 feet (120 to 640 meters). Blooms February-June. | **Unlikely.** Elevation range of plant is generally higher than project area and none were observed during a site visit that included the blooming period. |
| Sonoma ceanothus<br>*Ceanothus sonomensis* | Rank 1B.2 | Chaparral; on sandy, serpentine or volcanic soils. 210-800m. Blooms : February-April. | **Not Present.** The Project Area lacks suitable habitat for this species. None were observed during site visit that was within the blooming period, serpentine soils are not present, and known occurrence is nearly 5 miles away. |
| pappose tarplant<br>*Centromadia parryi ssp. parryi* | Rank 1B.2 | Chaparral, coastal prairie, meadows and seeps, marshes and swamps (coastal salt), valley and foothill grassland (vernally mesic)/often alkaline. Elevation ranges from 0 to 1380 feet (0 to 420 meters). Blooms May-November. | **Not Present.** No suitable habitat is present, particularly wetlands areas to which this plant has an affinity. |
| Point Reyes bird's-beak<br>*Chloropyron maritimum* ssp. *palustre* | Rank 1B.2 | Coastal salt marshes and swamps. 0 - 10 m. Blooms June-October. | **Not Present.** The Project Area contains no salt marsh habitat. |
| soft bird's beak<br>*Chloropyron molle* ssp. *molle* | FE, SR, Rank 1B.2 | Coastal salt marshes and swamps. 0-3 m. Blooms July- November. | **Not Present.** The Project Area contains no salt marsh habitat. |
| Sonoma spineflower<br>*Chorizanthe valida* | FE, SE, Rank 1B.1 | Coastal prairie (sandy). 10-305 m. Blooms June – August. | **Not Present.** The Project Area lacks suitable habitat for this species. |
| serpentine cryptantha<br>*Cryptantha dissita* | Rank 1B.2 | Chaparral (serpentine). Elevation ranges from 1300 to 1900 feet (395 to 580 meters). Blooms April-June. | **Not Present.** Plant has a high affinity for serpentine soil and none is present in the project areas. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| Baker's larkspur<br>*Delphinium bakeri* | FE, SE, Rank 1B.1 | Broadleafed upland forest, coastal scrub, valley and foothill grassland. Occurs in decomposed shale and often mesic soils. 80-305 m. Blooms: March-May | **Not Present.** No known occurrences nearby and none were observed during a site visit conducted during the blooming period. |
| golden larkspur<br>*Delphinium luteum* | FE, SR, Rank 1B.1 | Chaparral, coastal prairie, rocky coastal scrub. 0-100 m. Blooms March – May. | **Not Present.** No known occurrences nearby and none were observed during a site visit conducted during the blooming period. |
| dwarf downingia<br>*Downingia pusilla* | Rank 2 | In mesic areas within valley and foothill grassland and vernal pools. Elevation range: 0 – 500 m. Blooms: March-May | **Not Present.** The Project Area lacks suitable wetlands-vernal pool habitat for this species. |
| Greene's narrow-leaved daisy<br>*Erigeron greenei* | Rank 1B.2 | Chaparral (serpentine or volcanic). Elevation ranges from 260 to 3300 feet (80 to 1005 meters). Blooms May-September. | **Moderate.** Habitat type and elevation range is suitable for this plant at the Intersection site, however there is no serpentine soil present. A survey for this plant should be conducted to determine presence or absence. |
| fragrant fritillary<br>*Fritillaria liliacea* | Rank 1B.2 | Cismontane woodland, coastal prairie, coastal scrub, valley and foothill grassland; typically associated with clay substrate, often serpentine. 0 – 450 m. Blooms: February-April | **Not Present.** The Project Area lacks suitable habitat for this species. None were observed during a site visit conducted during the blooming period. |
| adobe-lily<br>*Fritillaria pluriflora* | Rank 1B.2 | Chaparral, cismontane woodland, valley and foothill grassland/often adobe. Elevation ranges from 200 to 2310 feet (60 to 705 meters). Blooms February-April. | **Not Present.** The Project Area lacks suitable habitat for this species. None were observed during a site visit conducted during the blooming period. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| Hall's harmonia<br>*Harmonia hallii* | Rank 1B.2 | Endemic to serpentine soils. 390 – 890 m. Blooms April – June. | **Not Present.** The Project Area lacks suitable habitat for this species because no serpentine soil is present in project areas. |
| sea-side tarplant<br>*Hemizonia congesta ssp. congesta* | Rank 1B.2 | Sometimes roadsides, valley and foothill grassland with affinity for serpentine soil. 20-560 m. Blooms: April- November | **Not Present.** The Project Area lacks suitable habitat for this species because no serpentine soil is present. |
| two-carpellate western flax<br>*Hesperolinon bicarpellatum* | Rank 1B.2 | Chaparral (serpentine). Elevation ranges from 200 to 3300 feet (60 to 1005 meters). Blooms May-July. | **No Present.** No serpentine soils are present in the project areas. |
| Marin western flax<br>*Hesperolinon congestum* | FT, CT, Rank 1B.1 | Chaparral, valley and foothill grassland (serpentine barrens, serpentine grassland). 30 – 365 m. Blooms: April –July | **Not Present.** The Project Area lacks suitable habitat for this species because no serpentine soil is present. |
| Napa western flax<br>*Hesperolinon serpentinum (bicarpellatum)* | Rank 1B.1 | A strict endemic to serpentine soils. Blooms March to July. | **Not Present.** Serpentine soils required by this plant are not present in the project areas. |
| Sharsmith's western flax<br>*Hesperolinon sharsmithiae* | Rank 1B.2 | Chaparral/serpentine. Elevation ranges from 890 to 980 feet (270 to 300 meters). Blooms May-July. | **Not Present.** The Project Area lacks suitable habitat for this species, plant elevation is higher than project sites, and no serpentine soils are present. |
| Santa Lucia dwarf rush<br>*Juncus luciensis* | Rank 1B.2 | Chaparral, great basin scrub, lower montane coniferous forest, meadows and seeps, vernal pools. Elevation ranges from 980 to 6690 feet (300 to 2040 meters). Blooms April-July. | **Not Present.** The Project Area lacks suitable wetlands habitat for this species. |
| Burke's goldfields<br>*Lasthenia burkei* | FE, SE, Rank 1B.1 | Vernal pools, swales, meadows and seeps. 0 – 700 m. Blooms: April-June | **Not Present.** The Project Area lacks suitable wetlands habitat for this species. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| Contra Costa goldfields<br>*Lasthenia conjugens* | FE, Rank 1B.1 | Cismontane woodland, alkaline playas, valley and foothill grassland, vernal pools; in mesic portions of wetlands. 0 – 550 m. Blooms: March-June | **Not Present.** The Project Area lacks suitable wetlands habitat for this species. |
| Colusa layia<br>*Layia septentrionalis* | Rank 1B.2 | Chaparral, cismontane woodland, valley and foothill grassland/sandy, serpentine. Elevation ranges from 330 to 3590 feet (100 to 1095 meters). Blooms April-May. | **Unlikely.** Habitat type is present, however recent disturbance of the Subdivision site precludes its presence, the elevation range of this plant is higher than the project areas, and none were observed during a site visit during its blooming period. |
| legenere<br>*Legenere limosa* | Rank 1B.1 | Vernal pools. Elevation range: 3 – 2885 feet. Blooms: April – June. | **Not Present.** The Project Area lacks suitable wetlands habitat for this species. |
| Jepson's leptosiphon<br>*Leptosiphon jepsonii* | List 1B | Chaparral, cismontane woodland; on open to partially shaded grassy slopes on volcanic or the periphery of serpentine substrate. 100 – 550 m. Blooms: April-May | **Unlikely.** The project area lacks suitable habitat for this species, no serpentine soil is present. |
| Sebastopol meadowfoam<br>*Limnanthes vinculans* | FE, SE, Rank 1B.1 | Vernal pools. 0 – 1,000 m. Blooms: April-June | **Not Present.** The Project Area lacks suitable wetlands habitat for this species. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| Cobb Mountain lupine<br>*Lupinus sericatus* | Rank 1B.2 | Broadleafed upland forest, chaparral, cismontane woodland, lower montane coniferous forest. Elevation ranges from 900 to 5000 feet (275 to 1525 meters). Blooms March-June. | **Not Present.** The habitat types are not suitable and elevation range of this plant is higher than the project areas. |
| marsh microseris<br>*Microseris paludosa* | Rank 1B.2 | Closed-cone coniferous forest, cismontane woodland, coastal scrub, valley and foothill grassland. 5 - 300 m. Blooms: April- June | **Not Present.** The Project Area lacks suitable habitat for this species. |
| Baker's navarretia<br>*Navarretia leucocephala* ssp. *bakeri* | Rank 1B.1 | Cismontane woodland, lower montane coniferous forest, meadows and seeps, valley and foothill grassland, and vernal pools. 5-1740m. Blooms April-July. | **Not Present.** The Project Area lacks suitable wetlands habitat for this species. |
| few-flowered navarretia<br>*Navarretia leucocephala ssp. pauciflora* | FE, ST, Rank 1B.1 | Vernal pools (volcanic ash flow). Elevation ranges from 1310 to 2810 feet (400 to 855 meters). Blooms May-June. | **Not Present.** The Project Area lacks suitable wetlands habitat for this species. |
| many-flowered navarretia<br>*Navarretia leucocephala ssp. plieantha* | FE, SE, Rank 1B.2 | Vernal pools (volcanic ash flow). Elevation ranges from 100 to 3120 feet (30 to 950 meters). Blooms May-June. | **Not Present.** The Project Area lacks suitable wetlands habitat for this species. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| small pincushion navarretia<br>*Navarretia myersii ssp. deminuta* | Rank 1B.1 | Vernal pools (clay loam). Elevation ranges from 1160 to 1160 feet (355 to 355 meters). Blooms April-May. | **Not Present.** The Project Area lacks suitable wetlands habitat for this species. |
| Marin County navarretia<br>*Navarretia rosulata* | Rank 1B.2 | Closed-cone coniferous forest, chaparral/serpentine, rocky. Elevation ranges from 660 to 2080 feet (200 to 635 meters). Blooms May-July. | **Not Present.** The Project Area lacks suitable wetlands habitat for this species. |
| Sonoma beardtongue<br>*Penstemon newberryi* var. *sonomensis* | Rank 1B.3 | Yellow pine forest, red fir forest, lodgepole forest, subalpine forest. 360 – 3560 m. Blooms April – May. | **Not Present.** The project areas lack suitable habitat for this species and plant elevation range is higher than project area. |
| Petaluma popcorn-flower<br>*Plagiobothrys mollis var. vestitus* | Rank 1A | Occurs in coastal salt marshes and swamps and mesic areas within valley and foothill grasslands. 15-305 m. Blooms: June-July | **Not Present.** This species is presumed extinct in California. |
| Calistoga popcorn-flower<br>*Plagiobothrys strictus* | FE, ST, Rank 1B.1 | Meadows and seeps, valley and foothill grassland, vernal pools/alkaline areas near thermal springs. Elevation ranges from 300 to 520 feet (90 to 160 meters). Blooms March-June. | **Not Present.** Wetland habitat is not present in the project areas |
| North Coast semaphore grass<br>*Pleuropogon hooverianus* | List 1B.1, ST | Broadleafed upland forest, meadows and seeps, North Coast coniferous forest, moist open areas. 10-671 m. Blooms April – June. | **Not Present.** The Project Area lacks suitable wetland habitat for this species. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| Napa blue grass<br>*Poa napensis* | FE, SE, Rank 1B.1 | Meadows and seeps, valley and foothill grassland/alkaline, near thermal springs. Elevation ranges from 330 to 660 feet (100 to 200 meters). Blooms May-August. | **Not Present.** The Project Area lacks suitable wetland habitat for this species. |
| Pt. Reyes checkerbloom<br>*Sidalcea calycosa ssp. rhizomata* | Rank 1B.2 | Freshwater marshes and swamps near coast. 3-75 m. Blooms April to September. | **Not Present.** The Project Area lacks suitable freshwater habitat for this species. |
| Napa checkerbloom.<br>*Sidalcea hickmanii* ssp *napensis* | Rank 1B.1 | Perennial herb in chamise chaparral, rocky volcanic soil Elevation 450-500 m. Blooms April-June. | **Unlikely.** Elevation range is higher for this plant than the project sites. Known from only two occurrences. |
| Marsh checkerbloom<br>*Sidalcea oregana* ssp. *hydrophila* | Rank 1B.2 | Riparian, meadows, usually in wetlands conditions. 400-2300 m. Blooms July-August. | **Unlikely.** Wetlands conditions are not present, plant habitat at higher elevation range than project sites, and no known occurrences within 5 miles of project sites. |
| Kenwood Marsh checkerbloom<br>*Sidalcea oregana ssp. valida* | FE, SE, Rank 1B.1 | Marshes and swamps (freshwater). Elevation ranges from 380 to 490 feet (115 to 150 meters). Blooms June-September. | **Unlikely.** Wetlands conditions are not present, plant habitat at higher elevation range than project sites, and no known occurrences within 5 miles of project sites. |
| Tamalpais jewel-flower<br>*Streptanthus batrachopus* | Rank 1B.3 | Closed-cone coniferous forest, chaparral/serpentine. Elevation ranges from 1000 to 2130 feet (305 to 650 meters). Blooms April-July. | **Not Present.** Elevation of plant is higher than project sites and no serpentine soils are present. |
| Socrates mine jewelflower<br>*Streptanthus brachiatus* ssp. *brachiatus* | Rank 1B.2 | Chaparral, close coned forest (serpentine). 740 to 980 m. Blooms May-June | **Unlikely.** Elevation range of plant is generally higher that project sites, no serpentine soils are present, and known occurrence is more than 5 miles away. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| green jewel-flower<br>*Streptanthus hesperidis* | Rank 1B.2 | Chaparral (openings), cismontane woodland/serpentine, rocky. Elevation ranges from 430 to 2490 feet (130 to 760 meters). Blooms May-July. | **Unlikely.** Elevation range of plant is generally higher that project sites, no serpentine soils are present, and known occurrence is more than 5 miles away. |
| Three Peaks jewel-flower<br>*Streptanthus morrisonii ssp. elatus* | Rank 1B.2 | Chaparral (serpentine). Elevation ranges from 300 to 2670 feet (90 to 815 meters). Blooms June-September. | **Unlikely.** Elevation range of plant is generally higher that project sites, no serpentine soils are present, and known occurrence is more than 5 miles away. |
| Early jewelflower<br>*Streptanthus vernalis* | Rank 1B.2 | Affinity for serpentine gravelly soils. 600-900 m. Blooms March – May. | **Unlikely.** Elevation range of plant is generally higher that project sites, no serpentine soils are present, and known occurrence is more than 5 miles away. |
| Napa bluecurls<br>*Trichostema ruygtii* | Rank 1B.2 | Chaparral, cismontane woodland, lower montane coniferous forest, valley and foothill grassland, vernal pools. Elevation ranges from 100 to 2230 feet (30 to 680 meters). Blooms June-October. | **Unlikely.** Subdivision habitat not suitable with recent disturbance. Plant is usually near habitat with vernal pools or saturated clay soils, therefore habitat at Intersection site also not suitable. Nearest occurrence nearly 5 miles away. |
| showy rancheria clover<br>*Trifolium amoenum* | FE, List 1B | Valley and foothill grassland, coastal bluff scrub, swales, open sunny sites, sometimes on serpentine. 0- 450 m. Blooms: April-June. | **Not Present.** The Project Area lacks suitable habitat for this species. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| saline clover<br>*Trifolium hydrophilum* | Rank 1B.2 | Marshes and swamps, valley and foothill grassland (mesic, alkaline), vernal pools. Elevation ranges from 0 to 980 feet (0 to 300 meters). Blooms April-June. | **Not Present.** The Project Area lacks suitable wetlands habitat for this species. |
| oval-leaved viburnum<br>*Viburnum ellipticum* | Rank 2B.3 | Chaparral, cismontane woodland, lower montane coniferous forest. Elevation ranges from 710 to 4590 feet (215 to 1400 meters). Blooms May-June. | **Not Present.** Elevation of plant is higher than project sites. |
| **Mammals** | | | |
| Pallid Bat<br>*Antrozous pallidus* | SSC, WBWG High Priority | Occupies a variety of habitats at low elevation including grasslands, shrublands, woodlands, and forests. Most common in open, dry habitats with rocky areas for roosting. | **Unlikely**. The Project Area lacks roost habitat for this species, though it may occasionally forage over the grassland. |
| Townsend's Big-eared Bat<br>*Corynorhinus townsendii* | SSC | Lives in a wide variety of habitats; day roosts highly associated with caves and mines. Need appropriate roosting, maternity, and hibernation sites free from human disturbance. | **Unlikely.** Project Area lacks suitable rocky roost habitat for this species, though it could pass through while foraging. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| Western Red Bat<br>*Lasiurus blossevillii* | SSC, WBWG High Priority | Typically solitary, roosting primarily in the foliage of trees or shrubs. Day roosts are commonly in edge habitats adjacent to streams or open fields, in orchards or urban areas near riparian habitat. | **Moderate Potential**. The Project Area contains suitable foliage for roosting on its perimeter and the vineyards, open areas, ponds, and Napa River in the vicinity provide suitable foraging habitat. |
| Silver-haired Bat<br>*Lasionycteris noctivagans* | WBWG Medium Priority | Primarily a forest dweller, feeding over streams, ponds, and open brushy areas. It roosts in hollow trees, snags, buildings, rock crevices, caves, and under bark. | **Moderate Potential.** Project area at Intersection site has suitable forest roost habitat for this species and it could pass through while foraging. |
| Long-eared Myotis<br>*Myotis evotis* | WBWG Medium Priority | Found in all brush, woodland and forest habitats from sea level to about 9000 feet. Prefers coniferous woodlands and forests. Nursery colonies in buildings, crevices, spaces under bark, and snags. Caves used primarily as night roosts. | **Unlikely.** Project Area lacks suitable coniferous forest roost habitat for this species, though it could pass through while foraging. |
| Fringed Myotis<br>*Myotis thysanodes* | WBWG High Priority | Associated with a wide variety of habitats including mixed coniferous-deciduous forest and redwood/sequoia groves. Buildings, mines and large snags are important day and night roosts. | **Moderate.** Project area at Intersection site has suitable forest roost habitat for this species and it could pass through while foraging. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| **Birds** | | | |
| Golden Eagle<br>*Aquila chrysaetos* | CFP, BCC | Rolling foothills mountain areas, sage-juniper flats, desert. Cliff-walled canyons or large trees in open areas provide nesting habitat. | **Unlikely.** Project Area lacks suitable nesting habitat, though this species may forage in the vicinity. |
| Bald Eagle<br>*Haliaeetus leucocephalus* | FD, SE, CFP | Frequents ocean shores, lake margins, and rivers for both nesting and wintering. Most nests are located within 1 mile of water. Nests in large, old-growth, or dominant live tree with open branchwork. Roosts communally in winter | **Unlikely.** Project Area lacks suitable nesting habitat, though this species may forage in the vicinity, along the Napa River. |
| White-tailed Kite<br>*Elanus leucurus* | CFP | Year-long resident of coastal and valley lowlands; rarely found away from agricultural areas. Nests atop oak, willow or other trees. Preys mainly on small mammals but also birds, insects, reptiles and amphibians. | **Moderate Potential.** Suitable nesting habitat is present in oak, ash and willow trees at the perimeters of the Project Area, and foraging habitat is present in vineyards and grassland. |
| Prairie Falcon<br>*Falco mexicanus* | BCC | Inhabits dry, open terrain, either level or hilly. Nesting sites typically located on cliffs. Forages far afield, even to marshlands and ocean shores. | **Unlikely.** Project Area lacks suitable nesting habitat, though the species may forage in the vicinity. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| Peregrine Falcon<br>*Falco peregrinus anatum* | FD, SE, CFP, BCC | Nests near wetlands, lakes, rivers, or other water; on cliffs, banks, dunes, mounds, buildings or bridges. Nest consists of a scrape on a depression or ledge in an open site. | **Not Present**. Suitable nesting habitat is not present in the vicinity of the Project Area. |
| Western Burrowing Owl<br>*Athene cunicularia* | SSC, BCC | Open, dry annual or perennial grasslands, deserts and scrublands characterized by low-growing vegetation. Subterranean nester, dependent upon small mammal burrows, most often dug by California ground squirrels. | **Not Present.** Burrows were not present and this species is most likely extirpated from Sonoma County. |
| Northern Spotted Owl<br>*Strix occidentalis caurina* | FT, SSC | Old-growth forests or mixed stands of old-growth and mature trees. Prefers high, multistory canopy dominated by big trees, trees with cavities or broken tops, woody debris and space under canopy. | **Not Present.** Suitable forest habitat is not present in the Project Area. |
| Black Swift<br>*Cypseloides niger* | SSC, BCC | Breeds in small colonies on cliffs behind or adjacent to waterfalls in deep canyons and sea-bluffs above surf; forages widely. | **Unlikely**. Project Area lacks suitable nesting habitat. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| Purple Martin<br>*Progne subis* | SSC | Inhabits woodlands and low elevation coniferous forests. Nests in old woodpecker cavities and human-made structures. Nest is often located in tall, isolated tree or snag. | **High Potential**. The Project Area has suitable woodland habitat for this species. Known occurrence approximately 0.5 mile east of Intersection site. |
| Yellow Warbler<br>*Dendroica petechia brewsteri* | SSC | Occurs primarily in riparian zones. Prefers willows, cottonwoods, aspens, sycamores and alders for nesting and foraging. | **Unlikely.** The Project area at the intersection has suitable riparian woodland habitat for this species, but there are no known occurrences within 5 miles. |
| Tricolored Blackbird<br>*Agelaius tricolor* | BCC, SSC | Highly colonial species, most numerous in Central Valley and vicinity. Largely endemic to California. Requires open water, protected nesting substrate, and foraging area with insect prey close to the colony. | **Not Present**. Project Area lacks suitable habitat to support a nesting colony. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| **Reptiles and Amphibians** | | | |
| Foothill Yellow-legged Frog<br>*Rana boylii* | SSC | Found in or near rocky streams in a variety of habitats. Prefers partly-shaded, shallow streams and riffles with a rocky substrate; requires at least some cobble-sized substrate for egg-laying. Needs at least 15 weeks to attain metamorphosis. Feeds on both aquatic and terrestrial invertebrates. | **Moderate Potential.** Suitable habitat may be present at the Intersection site along the Napa River and there are known occurrences within 5 miles. |
| California Red-legged Frog<br>*Rana draytonii* | FT, SSC | Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation. Requires 10- 20 weeks of water for larval development. May disperse through upland habitats after rains to access aestivation habitat. | **Unlikely.** This species could potentially be present along the Napa River or in retention ponds adjoining the Project Area. However, the graded and disced fields of the Project Area would provide poor aestivation habitat for this species. There have been no known occurrences within 5 miles. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| Western Pond Turtle<br>*Actinemys marmorata* | SSC | A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches with aquatic vegetation. Require basking sites such as partially submerged logs, vegetation mats, or open mud banks, and suitable upland habitat (sandy banks or grassy open fields) for egg-laying. | **Moderate Potential.** This species may be present in the Napa River as a migration corridor or in ponds adjoining the project areas. However, the graded and disced fields of the Subdivision project area would provide poor upland nesting habitat for this species. There are known occurrences within 5 miles. |
| **Fishes** | | | |
| Delta Smelt<br>*Hypomesus transpacificus* | FT | Lives in the Sacramento-San Joaquin estuary in areas where salt and freshwater systems meet. Occurs seasonally in Suisun Bay, Carquinez Strait and San Pablo Bay. Seldom found at salinities > 10 ppt; most often at salinities < 2 ppt. | **Not Present**. Suitable habitat is not present for this species and upper Napa River is out of its range. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| Steelhead, Central California Coast ESU *Oncorhynchus mykiss* | FT | Occurs from the Russian River south to Soquel Creek and Pajaro River. Also in San Francisco and San Pablo Bay Basins. Adults migrate upstream to spawn in cool, clear, well-oxygenated streams. Juveniles remain in fresh water for 1 or more years before migrating downstream to the ocean. | **High Potential**. High rating is for the Napa River. This species is known to occur in upstream tributaries and likely migrate between those tributaries and downstream habitats, including the Pacific Ocean. |
| Steelhead, Central Valley ESU *Oncorhynchus mykiss* | FT | Occurs in the Sacramento and San Joaquin Rivers and their tributaries, excluding San Francisco and San Pablo bays. Preferred spawning habitat is in perennial streams with cool to cold water temperatures, high dissolved oxygen levels and fast flowing water. Abundant riffle areas for spawning and deeper pools with sufficient riparian cover for rearing are necessary for successful breeding. | **Not Present**. The Project Area is outside the range of this species. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| Chinook, California Coastal *Oncorhynchus tshawytscha* | FT | California Coastal Chinook Salmon ESU includes all naturally spawned populations of Chinook salmon from rivers and streams south of the Klamath River (exclusive) to the Russian River (inclusive). Adult numbers depend on pool depth and volume, amount of cover, and proximity to gravel. Water temps >27 degrees C lethal to adults. | **Not Present**. The Project Area is outside the range of this species. |
| Chinook, Central Valley spring run *Oncorhynchus tshawytscha* | FT | Occurs in the Feather River and the Sacramento River and its tributaries, including Butte, Mill, Deer, Antelope and Beegum Creeks. Adults enter the Sacramento River from late March through September. Adults migrate upstream to spawn in cool, clear, well-oxygenated streams from mid-August through early October. Juveniles migrate soon after emergence as young-of-the-year, or remain in freshwater and migrate as yearlings. | **Not Present**. The Project Area is outside the range of this species. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| Chinook, Central Valley Fall/Late Fall-run ESU<br>*Oncorhynchus tshawytscha* | FC, SSC | Populations spawn in the Sacramento and San Joaquin Rivers and their tributaries. Adults migrate upstream to spawn in cool clear, well-oxygenated streams. Juveniles remain in freshwater 1 or more years before migrating downstream to the ocean. | **Unlikely**. The Project Area is outside the range of this species. |
| **Invertebrates** | | | |
| Valley elderberry longhorn beetle<br>*Desmocerus californicus dimorphus* | FT | Occurs only in the central valley of California, in association with blue elderberry (*Sambucus mexicana*). Prefers to lay eggs in elderberry 2 to 8 inches in diameter. | **Not Present**. The Napa River riparian habitat could provide suitable habitat if the host plant, elderberry, was present, however elderberry is not present and there is no known occurrence within 5 miles. |

| SPECIES | STATUS | HABITAT REQUIREMENTS | POTENTIAL FOR OCCURRENCE |
|---|---|---|---|
| California freshwater shrimp<br>*Syncaris pacifica* | FE, SE | Endemic to Marin, Napa, and Sonoma counties. Found in low elevation, low-gradient streams where riparian cover is moderate to heavy, in shallow pools away from main stream flow.. | **Unlikely.** Suitable stream habitat may be present in the Napa River near the Intersection site, however the nearest known occurrence is more than 5 miles away. |

*STATUS CODES*

## MANAGEMENT SUMMARY

The proposed Hunter Subdivision Project (Project) is located within the northeast portion of the City of St. Helena, Napa County, California. The Project is situated at the northeastern terminus of Adams Street, northeast of State Route 29 (SR 29), and south of the Napa River. The Project intersects Public Land Survey System (PLSS) Section 30 of Township 8 North, Range 5 West; and falls on the Saint Helena 7.5-minute USGS topographic quadrangle. The area of potential effect (APE) is represented by the boundaries of the 17-acre Project site, Assessor's Parcel Number (APN) 009-030-057 (APE or Project site). The vertical APE, as represented by the maximum depth of disturbance, is assumed to be 6 feet in depth for utility trenching.

Ben and Kelly Vanzutphen (Project applicant) are proposing to subdivide the Project site into 51 lots to accommodate single-family residences, a 3.4-acre parcel that would accommodate 25 attached residential units, and a 0.06-acre parcel that would not be developed. The City of St Helena (City) is the lead agency responsible for compliance with the California Environmental Quality Act (CEQA). It is yet undetermined if the Project will require federal agency review, however the present study has been prepared to accommodate compliance with the review for Section 106 of the National Historic Preservation Act (NHPA)if required.

Cultural resources Inventory efforts for this project have included a Northwestern Information Center (NWIC) records search of the project APE and a half-mile surrounding radius, intensive-level pedestrian survey, Extended Phase I (XPI) subsurface probing, Phase II evaluation, and a ground penetrating radar (GPR) investigation. Review of reports on file with the NWIC did indicate that three prehistoric sites intersect the APE: CA-NAP-406, CA-NAP-843, and CA-NAP-1008. CA-NAP-406 has been determined eligible for listing in the California Register of Historical Resources (CRHR) and National Register of Historic Properties (NRHP). CA-NAP-843 and CA-NAP-1008 have been determined not to be CRHR/NRHP-eligible. A Native American Heritage Commission (NAHC) Sacred Lands File (SLF) search did not indicate the presence of any resources in or near the Project APE. Subsequent Native American notification for the Project was completed by the City pursuant to Assembly Bill (AB) 52. One tribe, the Yocha Dehe Wintun Nation, has responded to this outreach with a request for a copy of the present report. A complete record of this consultation is on file with the City.

As noted above, prehistoric sites CA-NAP-843 and CA-NAP-1008 fall within the APE. These were evaluated through investigations completed for the St. Helena Flood Control Project. Previous investigations appear to have been included the full boundaries of these resources, within the present Project APE. Impacts to CA-NAP-843 and CA-NAP-1008 would not represent a significant effect to historical resources under CEQA and would represent to effect to historic properties under the NHPA.

CA-NAP-406 has been determined to be eligible for CRHR (Criterion 4) and NRHP (Criterion D) listing. However, previous investigations evaluating this resource were restricted to portions of this resource located immediately west of (largely outside) the present Project APE. The XPI and Phase II excavations were conducted to assess the level of previous disturbance to soils within the APE and determine the presence/absence of cultural deposits associated with CA-NAP-406 that could be encountered by the Project. Based on the results of archaeological excavations and a GPR investigation no intact deposits or features associated with CA-NAP-406 appear to extend to within the APE. While cultural material was identified, largely consisting of obsidian debitage concentrated within 60 cm of the surface, this was solely yielded from disturbed and redeposited soil. The exact depth, area, and severity of previous disturbances remains somewhat unclear. Google Earth imagery from October 2009 provides some insight into the use of the Project APE during the St. Helena Flood Protection Project. This shows the area north of the proposed Starr Avenue extension to be graded and used for staging. It appears likely that cultural deposits associated with CA-NAP-406 were redistributed throughout this area. This fill was observable to depths of approximately 100 cm below the surface during Dudek's subsurface excavation and GPR investigation. Disturbed and redeposited archaeological material within the APE is not CRHR/NRHP eligible. As such, effects to known cultural resources resulting from the Project as presently designed would be less than significant, No Historic Properties Affected.

There is the potential to encounter unanticipated significant cultural resources during Project construction activities, most notably where intact remnant deposits associated with CA-NAP-406 could be present. Based on the results of the XPI, Phase II, and GPR investigations, such deposits have the highest potential to be present beneath redeposited and disturbed fill areas located north of the planned Starr Avenue expansion. Portions of the APE to the south, presently occupied by vineyards, have a higher potential to contain intact cultural deposits at shallower depths. It should be further noted that numerous human burials have been identified in nearby areas, although not within the Project APE. Based on the identified sensitivity for encountering unanticipated significant cultural resources and human remains, archaeological monitoring during construction is recommended.

# 1 INTRODUCTION

## 1.1 Location

The proposed Hunter Subdivision Project (Project) is located within the northeast portion of the City of St. Helena, Napa County, California (Figure 1). The Project is situated at the northeastern terminus of Adams Street, northeast of State Route 29 (SR 29), and south of the Napa River. The Project area intersects Public Land Survey System (PLSS) Section 30 of Township 8 North, Range 5 West; and falls on the Saint Helena 7.5-minute USGS topographic quadrangle.

The site is generally rectangular with a "panhandle" extension that connects to Adams Street southwest of the panhandle. Adjacent land uses include single-family and multi-family residential development to the south, including the Vineyard Valley Mobile Home Park. Office uses are located immediately adjacent to the Project site's most southwestern edge at the terminus of Adams Street. Undeveloped land currently under cultivation with grape vines occupies the southern and central portion of the Project site. A canal and gravel maintenance road borders the site along the west/northwest.

## 1.2 Project Description

The City of St Helena (City) is the lead agency responsible for compliance with the California Environmental Quality Act (CEQA). It is yet undetermined if the Project will require federal agency review, however the present study has been prepared with to accommodate agency review for Section 106 of the National Historic Preservation Act (NHPA)if required.

Ben and Kelly Vanzutphen (Project applicant) are proposing to subdivide the Project site into 51 lots to accommodate single-family residences, a 3.4-acre parcel that would accommodate 25 attached residential units, and a 0.06-acre parcel that would not be developed. The 25 attached units would be income restricted, with 5 units affordable to very low income families, and 20 to moderate income families. The 51 single-family lots could be developed with single-family market-rate housing units (one dwelling per lot). An accessory dwelling unit (ADU or "granny units") would be allowed on a single-family lot, per the City's zoning ordinance (Section 17.116.030). The applicant has proposed ADUs on 11 of the single-family lots.

The single-family lots would range in size between 7,000 and 12,000 square feet, with most of the lots in the 7,000 to 8,000 square foot range. A number of irregular shaped lots would be located along the eastern edge of the project site and along the cul-de-sac. Each lot would have a minimum depth of 75 feet, and minimum width of 70 feet. The building pads shown within each lot would have a minimum 20-foot front and rear setback, and a 10-foot setback on the sides. Under the MR zoning the maximum height for principal dwellings is limited to a maximum of 30 feet (allowing

for a 2-story home) and for any accessory structure would be limited to a maximum height of 15 feet.

West of Starr Avenue the 3.4-acre parcel (Lot 52), would consist of attached housing (duplex or triplex) including 30,000 to 45,000 total square feet of building area that would include two-story, two-bedroom units each with a single-car garage and an on-site parking space plus 37 covered guest parking spaces. Access would be provided from Adams Street, just west of its intersection with Starr Avenue.

The area of potential effects (APE) is represented by the boundaries of the 17 acre Project site, which includes Assessor's Parcel Number (APN) 009-030-057. Figure 2 depicts the Project APE, as well as Extended Phase I (XPI) and Phase II testing locations. The vertical APE, as represented by the maximum depth of disturbance, generally varies throughout the Project site. Excavation for ground preparation is anticipated to be as deep as 1.5 feet below the existing grade. Utility trenching may require disturbances up to 6 feet in depth. Fill or otherwise redistributed soils are present across the Project site, northeast of the proposed Starr Avenue. South of this area are vineyards situated on the native ground surface.

## 1.3 Report Structure and Key Personnel

This report is divided into seven chapters. Following this introduction, Chapter 2 reviews the natural environment and the cultural context. Chapter 3 summarizes the results of the Northwest Information Center (NWIC) and Native American Heritage Commission (NAHC) search results. Chapter 4 provides research methods and a discussion of Inventory, XPI, Phase II, and GPR methods. Chapter 5 provides the results of pedestrian survey, XPI exploratory testing, Phase II excavations, and GPR study. Chapter 6 includes a summary of cultural resources information associated with the Project, potential regulatory compliance issues associated with impacts to cultural resources, and provides recommendations for additional actions to be taken in order to support preparation of a defensible EIR. References are provided for in Chapter 7. Several appendices are attached to this report. Appendix A includes confidential NWIC records search results; Appendix B includes the State historic Preservation Office (SHPO) concurrence letter for the St Helena Flood Control Project; Appendix C contains NAHC Sacred Lands File (SLF) search results; and Appendix D contains resulting data from the GPR study.

Adam Giacinto, MA, RPA, acted as principal investigator, oversaw field efforts, and authored the technical report. William Burns, MSc, RPA assisted with preparation of this report and completed survey, Extended Phase I testing, and Phase II testing. Ross Owen, MA, RPA, assisted with preparation of this report and Phase II testing. Nicholas Hanten, MA, assisted with preparation of this report and Phase II testing. Brad Comeau, MSc, RPA, conducted the GPR study and reviewed

the results. All archaeologists preparing this report meet the Secretary of the Interior Standards for archaeology and have extensive working within local, state, and federal regulatory contexts.

## 1.4 Regulatory Context

The current cultural resources investigation was completed to satisfy both CEQA and Section 106 of NHPA.

### 1.4.1 National Historic Preservation Act (NHPA)

The National Register of Historic Places (NRHP) is the United States' official list of districts, sites, buildings, structures, and objects worthy of preservation. Overseen by the National Park Service (NPS), under the U.S. Department of the Interior, the NRHP was authorized under the NHPA, as amended. Its listings encompass all National Historic Landmarks, as well as historic areas administered by NPS.

NRHP guidelines for the evaluation of historic significance were developed to be flexible and to recognize the accomplishments of all who have made significant contributions to the nation's history and heritage. Its criteria are designed to guide state and local governments, federal agencies, and others in evaluating potential entries in the NRHP. For a property to be listed in or determined eligible for listing, it must be demonstrated to possess integrity and to meet at least one of the following criteria:

The quality of significance in American history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and:

A. That are associated with events that have made a significant contribution to the broad patterns of our history; or

B. That are associated with the lives of persons significant in our past; or

C. That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or

D. That have yielded, or may be likely to yield, information important in prehistory or history.

Integrity is defined in NRHP guidance, *How to Apply the National Register Criteria,* as "the ability of a property to convey its significance. To be listed in the NRHP, a property must not only be shown to be significant under the NRHP criteria, but it also must have integrity" (NPS 1990: 44). NRHP guidance further asserts that properties be completed at least 50 years ago to be considered for eligibility. Properties completed fewer than 50 years before evaluation must be proven to be "exceptionally important" (criteria consideration G) to be considered for listing.

A historic property is defined as "any prehistoric or historic district, site, building, structure, or object included in, or eligible for inclusion in, the NRHP maintained by the Secretary of the Interior. This term includes artifacts, records, and remains that are related to and located within such properties. The term includes properties of traditional religious and cultural importance to an Indian tribe or Native Hawaiian organization and that meet the NRHP criteria" (36 CFR Sections 800.16(i)(1)).

Effects on historic properties under Section 106 of the NHPA are defined in the assessment of adverse effects in 36 CFR Sections 800.5(a)(1):

> An adverse effect is found when an undertaking may alter, directly or indirectly, any of the characteristics of a historic property that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association. Consideration shall be given to all qualifying characteristics of a historic property, including those that may have been identified subsequent to the original evaluation of the property's eligibility for the National Register. Adverse effects may include reasonably foreseeable effects caused by the undertaking that may occur later in time, be farther removed in distance or be cumulative.

Adverse effects on historic properties are clearly defined and include, but are not limited to:

(i) Physical destruction of or damage to all or part of the property;

(ii) Alteration of a property, including restoration, rehabilitation, repair, maintenance, stabilization, hazardous material remediation and provision of handicapped access, that is not consistent with the Secretary's Standards for the Treatment of Historic Properties (36 CFR Part 68) and applicable guidelines;

(iii) Removal of the property from its historic location;

(iv) Change of the character of the property's use or of physical features within the property's setting that contributes to its historic significance;

(v) Introduction of visual, atmospheric or audible elements that diminish the integrity of the property's significant historic features;

(vi) Neglect of a property which causes its deterioration, except where such neglect and deterioration are recognized qualities of a property of religious and cultural significance to an Indian tribe or Native Hawaiian organization; and

(vii) Transfer, lease, or sale of property out of Federal ownership or control without adequate and legally enforceable restrictions or conditions to ensure long-term preservation of the property's historic significance (36 CFR 800.5 (2)).

If compliance with Section 106 is required, the criteria of adverse effect are applied to historic properties, if any exist in the Project Area of Potential Effect (APE), pursuant to 36 CFR Sections 800.5(a)(1). If no historic properties are identified in the APE, a finding of "no historic properties affected" will be made for the proposed Project. If there are historic properties in the APE, application of the criteria of adverse effect will result in Project-related findings of either "no adverse effect" or of "adverse effect," as described above. A finding of no adverse effect may be appropriate when the undertaking's effects do not meet the thresholds in criteria of adverse effect 36 CFR Sections 800.5(a)(1), in certain cases when the undertaking is modified to avoid or lessen effects, or if conditions were imposed to ensure review of rehabilitation plans for conformance with the *Secretary of the Interior's Standards for the Treatment of Historic Properties* (codified in 36 CFR Part 68).

If adverse effects findings were expected to result from the proposed Project, mitigation would be required, as feasible, and resolution of those adverse effects by consultation may occur to avoid, minimize, or mitigate adverse effects on historic properties pursuant to 36 CFR Part 800.6(a).

### 1.4.2 California Register of Historic Resources (CRHR) and CEQA

In California, the term "historical resource" includes but is not limited to "any object, building, structure, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California." (PRC section 5020.1(j).) In 1992, the California legislature established the CRHR "to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change." (PRC section 5024.1(a). The criteria for listing resources on the CRHR were expressly developed to be in accordance with previously established criteria developed for listing in the National Register of Historic Places (NRHP), enumerated below. According to PRC Section 5024.1(c)(1–4), a resource is considered historically significant if it (i) retains "substantial integrity," and (ii) meets at least one of the following criteria:

- Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
- Is associated with the lives of persons important in our past.

- Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
- Has yielded, or may be likely to yield, information important in prehistory or history.

In order to understand the historic importance of a resource, sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource. A resource less than fifty years old may be considered for listing in the CRHR if it can be demonstrated that sufficient time has passed to understand its historical importance (see Cal. Code Regs., tit. 14, section 4852(d)(2)).

The CRHR protects cultural resources by requiring evaluations of the significance of prehistoric and historic resources. The criteria for the CRHR are nearly identical to those for the NRHP and properties listed or formally designated as eligible for listing in the NRHP are automatically listed in the CRHR, as are the state landmarks and points of interest. The CRHR also includes properties designated under local ordinances or identified through local historical resource surveys.

### *California Environmental Quality Act*

As described further below, the following CEQA statutes and CEQA Guidelines are of relevance to the analysis of archaeological, historic, and tribal cultural resources:

- PRC section 21083.2(g) defines "unique archaeological resource."
- PRC section 21084.1 and CEQA Guidelines section 15064.5(a) defines "historical resources." In addition, CEQA Guidelines section 15064.5(b) defines the phrase "substantial adverse change in the significance of an historical resource;" it also defines the circumstances when a project would materially impair the significance of an historical resource.

- PRC section 21074(a) defines "tribal cultural resources."

- PRC section 5097.98 and CEQA Guidelines section 15064.5(e): Set forth standards and steps to be employed following the accidental discovery of human remains in any location other than a dedicated ceremony.

PRC sections 21083.2(b)-(c) and CEQA Guidelines section 15126.4: Provide information regarding the mitigation framework for archaeological and historic resources, including examples of preservation-in-place mitigation measures; preservation-in-place is the preferred manner of mitigating impacts to significant archaeological sites because it maintains the relationship between

artifacts and the archaeological context, and may also help avoid conflict with religious or cultural values of groups associated with the archaeological site(s).

More specifically, under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource." (PRC section 21084.1; CEQA Guidelines section 15064.5(b). If a site is either listed or eligible for listing in the CRHR, or if it is included in a local register of historic resources, or identified as significant in a historical resources survey (meeting the requirements of PRC section 5024.1(q)), it is a "historical resource" and is presumed to be historically or culturally significant for purposes of CEQA (PRC section 21084.1; CEQA Guidelines section 15064.5(a)). The lead agency is not precluded from determining that a resource is a historical resource even if it does not fall within this presumption (PRC section 21084.1; CEQA Guidelines section 15064.5(a)).

A "substantial adverse change in the significance of an historical resource" reflecting a significant effect under CEQA means "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired" (CEQA Guidelines section 15064.5(b)(1); PR Code section 5020.1(q)0. In turn, the significance of an historical resource is materially impaired when a project:

- Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or
- Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the PRC or its identification in an historical resources survey meeting the requirements of section 5024.1(g) of the PRC, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or
- Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a lead agency for purposes of CEQA.

(CEQA Guidelines section 15064.5(b)(2).) Pursuant to these sections, the CEQA inquiry begins with evaluating whether a project site contains any "historical resources," then evaluates whether that project will cause a substantial adverse change in the significance of a historical resource such that the resource's historical significance is materially impaired.

If it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all of these resources to be

preserved in place or left in an undisturbed state. To the extent that they cannot be left undisturbed, mitigation measures are required (Section 21083.2[a], [b], and [c]).

Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
- Has a special and particular quality such as being the oldest of its type or the best available example of its type.
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

Impacts to non-unique archaeological resources are generally not considered a significant environmental impact (PRC section 21083.2(a); CEQA Guidelines section 15064.5(c)(4).) However, if a non-unique archaeological resource qualifies as tribal cultural resource (PRC 21074(c); 21083.2(h)), further consideration of significant impacts is required.

CEQA Guidelines section 15064.5 assigns special importance to human remains and specifies procedures to be used when Native American remains are discovered. As described below, these procedures are detailed in PRC section 5097.98.

### *California Health and Safety Code*

California law protects Native American burials, skeletal remains, and associated grave goods, regardless of their antiquity, and provides for the sensitive treatment and disposition of those remains. Health and Safety Code section 7050.5 requires that if human remains are discovered in any place other than a dedicated cemetery, no further disturbance or excavation of the site or nearby area reasonably suspected to contain human remains shall occur until the County coroner has examined the remains (section 7050.5b). PRC Section 5097.98 also outlines the process to be followed in the event that remains are discovered. If the coroner determines or has reason to believe the remains are those of a Native American, the coroner must contact the California Native American Heritage Commission (NAHC) within 24 hours (section 7050.5c). The NAHC will notify the Most Likely Descendant. With the permission of the landowner, the Most Likely Descendant may inspect the site of discovery. The inspection must be completed within 48 hours of notification of the Most Likely Descendant by the NAHC. The Most Likely Descendant may recommend means of treating or disposing of, with appropriate dignity, the human remains and items associated with Native Americans.

# 2 PROJECT CONTEXT

## 2.1 Environmental Context

The Project site is located on undeveloped open agricultural land within the Napa Valley, immediately south of the Napa River, and within the City of St. Helena. The Pacific Ocean is located 30 miles west, San Pablo Bay is 25 miles to the south, and Lake Berryessa is 12 miles northeast. A canal constructed for the St. Helena Flood Protection Project in 2010 bounds the site to the west and north, a residential community is present to the east. Elevation throughout the Study Area ranges from approximately 210 feet above mean sea level (AMSL) in the northern portion of the site to 245 feet AMSL in the southern portion. Local vegetation consists primarily of low-laying meadow environment plants and grasses, with some scattered oak woodland and riparian community trees and shrubs along the drainages. The central portion of the Project site is planted with grape vines. The gradual slope throughout most of this area (less than 5 degrees) and proximity of Napa River and smaller drainages, would have historically resulted in the regular seasonal inundation of much of this area. The high level of surrounding topographic variability lends to the biodiversity of the area, this has traditionally provided for a broad range of flora and fauna that could be utilized by local Wappo populations.

Geologic maps of the project area indicate it is underlain primarily by Quaternary Alluvium consisting of Holocene-era alluvial soils deposited through stream action and erosion of the surrounding hillslopes and Franciscan Complex metamorphic deposits (Jennings et al. 1977, updated 2010). Napa Glass Mountain, the primary source of obsidian in Napa Valley, is upriver from the Project site. Soils within the Project site are mapped as Bale Clay Loam with 0 to 5% slopes. These soils are formed through alluvial action on a Holocene alluvial fan, with soils comprised of sit and clay with moderate gravel and send components (S-45641; SSURGO 2019).

## 2.2 Cultural Context

### 2.2.1 Prehistoric Context

Numerous chronological sequences have been developed to aid in understanding cultural changes in the region. Building on early studies and focusing on data synthesis, Fredrickson (1974, 1994) developed a prehistoric chronology for human history in this region that used sociopolitical complexity, trade networks, population, and the introduction and variation of artifact types to differentiate between cultural groups. Three periods are presented in Fredrickson's prehistoric sequence: Paleoindian, Archaic (consisting of Lower, Middle, and Upper), and Emergent. Following four decades, Fredrickson's synthesis is still widely used today as the dominant framework for northwest California researchers.

**Paleoindian Period (ca. 10,000–6,000 BC)**

Fredrickson's Paleoindian period marked the initial human migration into California with most known sites found on the edge of former lakeshores and waterways. Groups were small and highly mobile, occupying broad geographic areas. The vast array of research conducted on Paleoindian sites relies heavily on data collected from the Great Basin or Southern California region. Although Paleoindian sites exist in northwest California, a lack of well-defined Paleoindian assemblages associated with these sites prohibits the full understanding of the adaptive system of these early peoples. In northwest California, the Borax Lake site (LAK-36) near Clear Lake basin is the best illustration of the Paleoindian period, with fluted projectile points and chipped stone crescents. A site near Clear Lake (LAK-510) and another at Cache Creek (LAK-1581) have early dates associated with obsidian hydration, but they lack diagnostic items with strong associations to well-dated strata. Evidence of milling technology and associations with faunal remains is unknown (Hildebrandt 2007).

**Archaic Period (6000 BC–AD 1000)**

Fredrickson's Archaic period was characterized by three subdivisions based on developmental trends in subsistence strategies, settlement, technology, and social organization (Chartkoff 1998). The subdivisions defined a Lower (6000–3500 BC), Middle (3500–500 BC), and Upper (500 BC–AD 1000) Archaic sequence. A more diverse range of resources for groups to exploit proliferated during the Archaic period's substantial climate change to warmer and drier conditions. The diversification of the food base required more complex geographic mobility and expansion into surrounding environments, and the settlement strategies increased correspondingly. Archaic period social organization consisted of small-scale, semi-nomadic, socially egalitarian societies shifting from a foraging to a collecting way of life (Chartkoff 1998). Archaic cultures retained the use of large projectile points, but acorn and seed processing technology, consisting of the milling slab and handstone, was developed; this was eventually replaced by the bowl mortar and pestle. Trade systems and sustained exchanges between groups grew from the new diffuse economies. Shell beads gained significance as trade items.

**Emergent Period (AD 1000–1800)**

In the Emergent period (Fredrickson 1974, 1994), which lasted from the end of the Upper Archaic (ca. AD 1000) until European contact, there was an increase in the use of plant food resources in addition to an increase in terrestrial and fish game. There was a concurrent increase in the diversity and complexity of material culture during the Emergent period, as demonstrated by more classes of artifacts. The recovery of a greater number of small, finely chipped projectile points, often stemless with convex or concave bases, suggests an increased usage of the bow and arrow rather

than the atlatl (spear throwing technology) and dart for hunting. Other items included the increased presence of smaller bone and Olivella beads, perforated stones, a variety of bone tools, and personal ornaments made from shell, bone, and stone. Many Emergent sites contain are highly formal and unnecessarily decorative. These items include the flanged pipe, the Olivella callus cup bead, and the banjo effigy ornament (Bennyhoff 1994). Mortuary customs were elaborate and include interment with abundant grave goods and cremation replacing the loosely flexed burial (Milliken et al. 2007).

Bartoy and Holson provided a detailed site-specific summary of this period in their investigation completed for the St. Helena Flood Control Project, portions of which have been borrowed directly here (2007). The variant of this pattern within the Napa Valley is referred to as the St. Helena Aspect. The intent of this terminology is to differentiate the Napa Valley from the Clear Lake Aspect manifestation. The local St. Helena Aspect expression of the Augustine Pattern is best exemplified at CA-NAP-129 (Bartoy and Holson 2007), located less than a mile upstream of the current project. The St. Helena Aspect is distinguished by the use of small, serrated projectile points with either parallel or corner-notched stems. Corner-notched points without serrations became more common towards the Historic Period. Well-shaped mortars and pestles are prevalent. Larger shouldered bifaces, bipoints, and leaf-shaped points are absent. Bone awls are common and probably indicate increased production of basketry. Associated with basketry, the hopper mortar became more prevalent. Tubular tobacco pipes are also quite common. There is also an increase in beads and ornaments made from shell, stone, and bone. This coincides with an increase in trade items from greater distances (Bartoy and Holson 2007).

During this period, there was an increase in population size accompanied by the advent of larger, more permanent villages (Wallace 1955). Larger populations and higher population densities are characteristic. Many of the larger settlements were permanent villages in which people resided year-round. The populations of these villages may have also increased seasonally (Milliken et al. 2007).

**Ethnography**

The history of the Native American communities prior to the mid-1700s has largely been reconstructed through later mission-period and early ethnographic accounts. The first records of the Native American inhabitants of the San Diego region come predominantly from European merchants, missionaries, military personnel, and explorers. These brief, and generally peripheral, accounts were prepared with the intent of furthering respective colonial and economic aims and were combined with observations of the landscape. They were not intended to be unbiased accounts regarding the cultural structures and community practices of the newly encountered cultural groups. The principal intent of these researchers was to record the pre-contact, culturally specific practices, ideologies, and languages that had survived the destabilizing effects of

missionization and colonialism. This research, often understood as "salvage ethnography," was driven by the understanding that traditional knowledge was being lost due to the impacts of modernization and cultural assimilation. Alfred Kroeber applied his "memory culture" approach (Lightfoot 2005:32) by recording languages and oral histories.

It is important to note that even though there were many informants for these early ethnographies who were able to provide information from personal experiences about native life before the Europeans, a significantly large proportion of these informants were born after 1850 (Heizer and Nissen 1973); therefore, the documentation of pre-contact, aboriginal culture was being increasingly supplied by individuals born in California after considerable contact with Europeans. As Robert F. Heizer (1978) stated, this is an important issue to note when examining these ethnographies, since considerable culture change had undoubtedly occurred by 1850 among the Native American survivors of California.

Based on ethnographic information, it is believed that at least 88 different languages were spoken from Baja California Sur to the southern Oregon state border at the time of Spanish contact (Johnson and Lorenz 2006). The distribution of recorded Native American languages has been dispersed as a geographic mosaic across California through six primary language families (Golla 2007).

Victor Golla has contended that one can interpret the amount of variability within specific language groups as being associated with the relative "time depth" of the speaking populations (Golla 2007:80). A large amount of variation within the language of a group represents a greater time depth then a group's language with less internal diversity. One method that he has employed is by drawing comparisons with historically documented changes in Germanic and Romantic language groups. Golla (2007:71) has observed that the "absolute chronology of the internal diversification within a language family" can be correlated with archaeological dates. This type of interpretation is modeled on concepts of genetic drift and gene flows that are associated with migration and population isolation in the biological sciences.

The study area was traditionally occupied by the Wappo, with language origins associated with the Yukian language group. The name "Wappo" is said to be taken from the Spanish word "guapo" meaning handsome or brave, which was given to the group during Mission times by the Franciscans (Kroeber 1925). The Wappo language is the only Southern Yukian language and differs greatly from Northern Yukian with less than 20% of the basic vocabulary shared (Golla 2011). Isolated from other Yukian-speaking peoples, this group was bound on all sides by other native groups: the Lake Miwok to the north, the Patwin (Wintun) to the south and east, the Pomo to the north and west, and the Coast Miwok to the southwest (Heizer and Whipple 1971). The split between Northern Yukian and Wappo is somewhat unclear, likely ranging between 1,000 and

3,000 years ago (Kroeber 1925; Golla 2007). This split was likely related to the intrusion of Pomo-speaking communities during this period, which is evidenced through structural linguistic changes found within Wappo. These Wappo-speaking communities are indicated to have moved into the Napa region relatively, 500-1,500 years ago, based on the relatively limited presence of Miwok within the Wappo lexicon.

The territory occupied by the Wappo included Alexander Valley, most of Napa Valley, and the northern portion of Sonoma Valley. There are numerous regional subgroups including the Mishewal people of the Alexander and Knights Valley whose territory also included a small segment of the Russian River; the Mayacama people of the upper Napa Valley whose major village of *maya?kma* was located near present-day Calistoga; and the Caymus people whose territory was centered around a village located at Yountville. The *Guilicos* Wappo community were situated over the mountains to the west at the head of Sonoma Creek. Yet another Wappo group was located on the south shore of Clear Lake known as Lile'ek (Golla 2011).

Wappo settlements were organized in permanent villages throughout the valleys, typically found along major watercourses, such as rivers and creeks (Sawyer 1978). Districts of smaller settlements or tribelets were generally arranged around a larger community site (Kroeber 1925). The chiefs of these smaller tribelets resided in the larger villages but were responsible for maintaining close relationships with their tribelet as well as neighboring tribes. Subsistence for the Wappo was largely dependent upon the acorn (a staple food item), as well as other native plants, and hunting of a variety of animals, including deer, bear, elk, and rabbits.

Material cultural for the Wappo included tools made of stone, sticks, and shells. Basket making, likely influenced by the Pomo, was also an important aspect of the group's material culture and was of particularly high quality and aesthetic. The last description of a traditional village (Driver 1936) describes oval-shaped houses made of grass thatch placed over bent poles (Sawyer 1978). A lack of geographical restrictions in combination with their central location between the Pomo to the west and the Patwin to the east gave the Wappo the opportunity to act as middlemen in trading of items, such as shells for use as beads or ornaments (Heizer and Elsasser 1980). The Wappo would both bury and cremate the remains of the dead. Death rituals were complex and could involve burning personal possessions and relatives cutting their hair, rubbing clay on their heads, scoring of their flesh, and participating in intense ritual dances (Sawyer 1978).

### 2.2.2 The Historic Period

**Spanish Period (1769–1822)**

The first Spanish expedition to enter the San Francisco Bay Area occurred under Gaspar de Portola in 1769. Portola's chronicler, Fray Juan Crespi, detailed the journey of the group as it ventured up the coast. The first Spanish overland expedition into the San Francisco Bay region was led by Juan Bautista de Anza. The expedition reached San Francisco in 1776, where its members founded Mission Dolores and the Presidio. Spanish 'missionization' of Alta California was initiated in San Diego (1769). A total of 21 missions were constructed by the Dominican and Franciscan orders between 1769 and 1823. Missions in the region included San Francisco de Asís (1776), Santa Clara de Asís (1776), San José de Guadalupe (1797 in Alameda County), San Rafael Arcángel (1817 in Marin County), and San Francisco Solano (1823 in Sonoma County; Grunsky 1989).

**Mexican Period (1822–1848)**

Spanish-Mexican settlers arrived in the Napa Valley in 1823. In 1836, the first land grant within the Napa Valley area was awarded to George Yount at Caymus (Bartoy et al. 2005) Local Native Americans assisted Yount in constructing his two-story Kentucky-style log house. Within the next ten years, the Napa Valley was divided and parceled into numerous ranchos. In 1836, Nicolás Higuera, a soldier who served at the San Francisco Presidio, received several land grants from the Mexican government within Napa Valley, including an area called the Rancho Entre Napa, which included property that is now part of the present-day City of Napa.

Mexico's separation from the Spanish empire in 1821 and the secularization of the California missions in the 1830s caused further disruptions to Native American populations. Following the establishment of the Mexican republic, the government seized many of the lands belonging to Native Americans, providing them as parts of larger Land Grants to affluent Mexican citizens and rancheros. The 1833 Secularization Act passed by the Mexican Congress ordered half of all mission lands to be transferred to Native Americans, and the other half to remain in trust and managed by an appointed administrator. These orders were never implemented due to several factors that conspired to prevent Native Americans from regaining their patrimony.

Under the command of General Vallejo, Mexican soldiers had a series of conflicts with Wappo Native American tribes and allied Pomo tribes. Known as the Satiyomi Campaigns, the Wappo fought successfully against Vallejo and his Patwin allies in AD 1834, AD 1836, and AD 1842 (Bartoy et al. 2005). Largely as a result of these conflicts, Vallejo signed two treaties with the Wappo in AD 1836.

**American Period (Post 1848)**

California was officially ceded to the United States in 1848, which led to the continued appropriation of Native American Lands by ranchers, prospectors, and an increasing number of settlers. The United States Government did little to dissuade these trespasses. From 1850, with the passage of California's Indian Act, until legislative reforms in the late 1880s, state laws promoted conditions that amounted to indentured servitude for much of the Native American population throughout California. On February 8, 1850, Napa became one of California's original 27 counties, with the City of Napa as the seat of the county. In AD 1852, the first mineral springs resort in California was established at White Sulphur Springs, approximately four miles to the west of St. Helena (Bartoy et al. 2005). These bolstered the local economy, supporting the presence of multiple hotels and other businesses. A tremendous influx of individuals occurred in this area as a result of the California Gold Rush, which initiated in 1848. Since AD 1850, the economic growth of Napa County has been largely based on agriculture, ranching, timber, and mineral resources.

By 1868, the railroad had been extended to St. Helena, and with easier transportation came more residents and a thriving community. St. Helena, officially founded in 1876, was originally part of Dr. Edward Turner Bale's Rancho Carne Humana (Napa County Historical Society 2019). Bale died in 1849, leaving his wife, Maria Ygnacia Soberanes, a member of the prominent Vallejo family. Maria built Bale's grist and lumber mill into a profitable enterprise, and later sold 126 acres in St. Helena to Henry Still and Charles Walters. She also provided land to numerous individuals as an incentive to open local businesses.

A portion of downtown St. Helena was designated a National Register Historic District in 1998. Based on records maintained by the Napa County Historical Society, it contains 35 historic buildings mostly along Main Street but also extending onto Railroad Avenue and Money Way (2019).

INTENTIONALLY LEFT BLANK

# 3. BACKGROUND

## 3.1 NWIC Records Search

A records search of the APE and the surrounding half-mile was completed by NWIC staff on October 22, 2018 (Confidential Appendix A). This search included their collection of mapped prehistoric, historical and built-environment resources, Department of Parks and Recreation (DPR) Site Records, technical reports, archival resources, and ethnographic references. Additional consulted sources included the National Register of Historic Places (NRHP), California Inventory of Historical Resources/CRHR and listed OHP Archaeological Determinations of Eligibility, California Points of Historical Interest, California Historical Landmarks, and Caltrans Bridge Survey information.

**Previously Conducted Studies:**

NWIC records indicate that fifty-nine (59) previous cultural resources technical investigations have been conducted within a half-mile of the APE. Of these, seven have included a portion of the current APE (Table 1). Approximately 90% of the APE has been included in previous investigations.

***S-043810 (2005) thru S-043810d (2013)***

Archaeological investigations conducted by Pacific Legacy in support of the St. Helena Flood Protection Project occurred between 2004 and 2013. This project overlapped the western and northern portions of the present Project APE. As a result of the survey and Extended Phase I exploratory work, eight archaeological resources were identified (all in the general vicinity of the present Project APE): CA-NAP-399, CA-NAP-406, CA-NAP-413, CA-NAP-843, CA-NAP-863, CA-NAP-1007 (formerly HMS Vineyards Site), CA-NAP-1008 (formerly Miller Vineyard Site), and CA-NAP-1009/H (formerly HMS Historic Stone Wall). Based on the results of the Phase I Inventory and Phase II Evaluation efforts, the U.S. Army Corps of Engineers (USACOE) and State Water Resources Control Board (SWRCB) determined that five of the identified archaeological sites (CA-NAP-413, CA-NAP-843, CA-NAP-1007, CA-NAP-1008, and Cal-NAP-1009H) lacked sufficient data potential and integrity to meet the criteria for NRHP eligibility. It was determined that three sites (CA-NAP-399, CA-NAP-406 and CA-NAP-863) were eligible for listing in the NRHP listing under Criterion D. Avoidance of the sites was considered, and it was determined that the objectives of the proposed undertaking were important and could not be met without destroying or damaging the identified Historic Properties. The State Historic Preservation Office (SHPO) concurred with these findings in 2006 (Appendix B). A Historic Properties Treatment Plan (HPTP) was prepared outlining a program for Phase III Data Recovery and analysis that addressed the research potential of cultural deposits situated within the St. Helena Flood Control Project APE. As part of this process, a Memorandum of Agreement (MOA) was prepared between SHPO, USACE, and SWRCB in 2007. With the expectation that human remains would be encountered during investigations and later monitoring activities, the Mishewal Wappo Tribe of Alexander Valley and the City of St. Helena developed a burial agreement for the treatment of human remains in 2007 (Bartoy and Holson 2007: 87). Phase III Data Recovery was completed of the entirety of CA-NAP-399 and CA-NAP-863, as well as an approximate 500 x 100 ft section of CA-NAP-406 (the extent of their APE). Site CA-NAP-406 was indicated in report maps to continue eastward into what represents the present Project APE (Bartoy et al. 2005: 90). The eastern limits of this site were not determined as part of this work, nor was subsurface evaluation or data recovery completed of this area within the present Project APE.

**Previously Identified Cultural Resources:**

Thirty (30) cultural resources have been recorded within the records search area. Three of the above mentioned resources intersect the Project APE: CA-NAP-406, CA-NAP-843, and CA-NAP-1008 (Table 2; Confidential Appendix A). Work for the St. Helena Flood Protection Project resulted in a substantial level of previous archaeological investigation along the western and northern portions of the APE. This work has demonstrated the area to contain significant and highly sensitive archaeological resources. Specifically, 163 human burials were recovered from one site (CA-NAP-399); the largest number of burials recovered from a single site in Napa Valley to date (Schneider et al. 2013: 44). Human remains were not documented within archaeological resources intersecting the present Project APE.

**Table 2. Cultural resources within a one half-mile radius of the APE**

| Primary | Trinomial | Age | Resource Name | Description |
|---|---|---|---|---|
| *Resources within the Project APE* | | | | |
| P-28-000307 | CA-NAP-000406 | Prehistoric | B-83-MC | LITHIC SCATTER; HABITATION DEBRIS |
| P-28-000701 | CA-NAP-000843 | Prehistoric | SR-1 | LITHIC SCATTER |
| P-28-001267 | CA-NAP-001008 | Prehistoric | Miller Vineyard Site | LITHIC SCATTER |
| *Resources within ½ Mile of the Project APE* | | | | |
| P-28-000009 | CA-NAP-000863 | Prehistoric | Adams Street Site | LITHIC SCATTER; BURIAL; HEARTH; HABITATION DEBRIS |
| P-28-000150 | CA-NAP-000158 | Prehistoric | B-59-Z | LITHIC SCATTER; HABITATION DEBRIS |
| P-28-000151 | CA-NAP-000159 | Prehistoric | B-70-DG | LITHIC SCATTER; HABITATION DEBRIS |

| P-28-002481 | None | Historic | St. Helena Historic Commercial District | 1-3 STORY COMMERICAL BUILDING |

***P-28-000307 (CA-NAP-406)***

P-28-000307 was recorded initially during survey and subsurface testing completed by Yolande Beard in 1976 as a small site with worked obsidian, a pestle fragment and a small piece of magnesite. The resource was relocated by Stuart Guedon on June 13, 1995 at this recorded location. Guedon observed light scatter of obsidian debitage. The site was recorded as part of investigation and data recovery efforts for the St. Helena Flood Protection Project between 2004

and 2009 (Bartoy et al. 2005; Schneider et al. 2013). At the time of this study, the eastern and western extent of this site remained unconfirmed, however the resource as recorded measured 130 x 95 m. This resource was determined eligible for inclusion in the NRHP/CRHR by the USACE and SWRCB in 2005. SHPO provided concurrence with these determinations in 2006. As such, an undetermined portion of this site, continuing from the west into the APE, was assumed prior to Dudek's present investigation to be eligible for NRHP/CRHR listing.

During Pacific Legacy's 2005 evaluation, an archaeological investigation of CA-NAP-406 consisted of the placement of 17 auger bores, 22 shovel test probes (50 cm x 50 cm), two excavation units (1 m x 1 m), and one mechanically excavated trench (3 m x 0.5 m; Bartoy et al. 2005). A total of four of the auger bores were placed within excavation units and shovel test probes to ensure that the maximum depth of the cultural deposit had been reached. Testing was limited to the APE, which was defined as approximately 100 feet to the east of the then proposed Adams Street extension. The total amount of soil excavated in the 22 shovel test probes and two excavation units amounted to 4.24 cubic meters. A total of 4,244 artifacts were recovered from this site during this investigation.

Phase III data recovery at CA-NAP-406 was completed between 2007 and 2009, and involved excavation of two Control Units (CUs) measuring 1 x 1 m; four Rapid Recovery Units (RRUs) measuring 2 x 1 m; and four trenches, measuring 3 x 1 m. In total, including Phase II investigations, the recovered assemblage included 5,711 pieces of lithic debitage, 17 bifaces, one core, seven edge-modified flakes, one hammerstone, 101 charcoal fragments, seven pieces of baked clay, and 40 historical-era artifacts.

***P-28-000701 (CA-NAP-843)***

CA-NAP-843 was recorded initially during survey and subsurface testing completed by J. Abell of Archaeo-Tec on April 1, 1993. The site was recorded as a sparse obsidian lithic scatter with 3 projectile point fragments, one biface and several modified flakes, and debitage distribute across an area measuring 85 x 35 m. The recorded location of this site was located immediately southwest of the present Project APE, however Abell noted that the resource may continue into the parcel representing the present APE. All item were identified on the surface; auguring yielded no subsurface material or identified midden-like soils. The resource was relocated by Stuart Guedon on June 13, 1995 at this recorded location. Guedon observed an extremely light and diffuse scatter of obsidian debitage that did not extend into adjoining areas.

The site was re-identified during subsurface testing by Pacific Legacy for the St. Helena Flood Protection Project in 2004. While NWIC resource files map this site to the southwest, Pacific Legacy's technical report indicates that this testing occurred within the boundaries of the Project

APE (Bartoy et al. 2005: 126). Archaeological investigation consisted of the placement of 29 auger bores and 15 shovel test probes (50 cm x 50 cm). The total amount of soil excavated in the shovel test probes amounted to 1.5 cubic meters. A total of four artifacts were recovered from this site during this investigation. Testing confirmed the characterization of this site as a low density lithic scatter with no associated midden (Bartoy et al. 2005). The site was considered a sparse surface scatter with no depth to the deposit. The artifact assemblage from the site included three edge-damaged obsidian flakes and one fragment of historic glass. Given the low density of cultural materials and the lack of spatial patterning, this resource was determined not eligible for inclusion in the NRHP or the CRHR by the USACE and SWRCB. SHPO provided concurrence with these determinations in 2006.

***P-28-001267 (CA-NAP-1008)***

CA-NAP-1008 (also referred to as "Miller Vineyard Site") was identified by Pacific Legacy for the St. Helena Flood Protection Project initiating in 2004 at a location that falls within northeastern portion of the present Project APE. The site was recorded as a surface scatter and shallow deposit of flaked lithic artifacts, predominantly Napa Valley obsidian, measuring 150 x 100 m. Extended Phase I Inventory and Phase II Evaluation work completed by Pacific Legacy occurred in 2004 and 2005 (Bartoy et al. 2005). Subsurface archaeological investigation included 32 augers, 13 STPs (measuring 50 x 50 cm), two excavation units (measuring 1 x 1 m), and two mechanically excavated trenches (measuring 3 m x 0.5 m). A total of 396 artifacts were recovered from within 3.88 cubic meters of removed soil. Soil mixing to a depth of 60 cm below the surface (cmbs) was observed, presumably as a result of past discing activities associated with the surrounding vineyard. Obsidian hydration placed the sited chronologically between 2,500 years BP and 500 years BP. The site was determined not eligible for CRHR/NRHP listing by the USACE and SWRCB based on the results of extended Phase I Inventory and Phase II Evaluation work for the Flood Protection Project (Bartoy et al. 2005). SHPO provided concurrence with these determinations in 2006.

## 3.2 NAHC Correspondence

Dudek requested a NAHC search of their Sacred Lands File on September 28, 2018 for the proposed Project area. The results of this search were provided on October 10, 2018. These did not identify the presence of sacred sites within the Project area. The NAHC additionally provided contact information for Native American representatives with traditional cultural affiliations with this area. It was recommended that these individuals be contacted with requests for additional cultural resources information.

While Dudek has not contacted these individuals to date, outreach with NAHC-listed representatives was initiated for the Project was completed by the City pursuant to Assembly Bill (AB) 52. The Project is subject to compliance with AB 52 (PRC Section 21074), which requires consideration of impacts to "tribal cultural resources" as part of the CEQA process, and requires the CEQA lead agency to notify any groups (who have requested notification) of the Project who are traditionally or culturally affiliated with the geographic area of the Project. Because AB 52 is a government-to-government process, all records of correspondence related to AB 52 notification and any subsequent consultation are on file with the City. The City sent Project notification letters to the following tribes on April 23, 2018: Cortina Band of Indians, Federated Indians of Graton Rancheria (Graton Rancheria), Middletown Rancheria of Pomo Indians, and Mishewal Wappo Tribe of Alexander Valley. Letters contained a description of the Project, outlined the process and timing of AB 52, and requested that the tribes respond with a request for consultation, if desired. On May 16, 2018, Graton Rancheria responded with an email indicating that the Project is not in their traditional ancestral territory. One tribe, the Yocha Dehe Wintun Nation, responded on May 22, 2018 indicating that the project is within their aboriginal territories and requesting a copy of the present report. No additional responses to this outreach have been received by the City to date.

## 3.3 Geomorphology

The Project site is located within the Coast Ranges Geomorphic Province of California. This region is part of the San Andreas Fault system, the boundary of the North American and Pacific tectonic plates. Motion between the two plates is generally a right-lateral strike slip with the Pacific Plate moving northwestward in relation to the North American Plate. A data recovery of archaeological sites in the vicinity of the project area has resulted in substantial and detailed description of geomorphic setting, formation processes, and soil stratigraphy (Schneider et al. 2013). Segments of this report have been included to follow here directly.

The Project site is situated on the floodplain southwestern of the Napa River. Areas immediately south of the river are on a Holocene fluvial terrace. The river channel has been forced to the eastern side of the Napa Valley by alluvial fans deposited by Sulphur and York Creeks. The central portion of the Project is comprised of these alluvial fans, at the distal margin of the fan deposited by Sulphur Creek. Closer to the Sulphur Creek channel, the distal end of the fan protrudes into the terrace, likely resulting in the deposition of relatively coarse sediments (coarse sand and gravel) in that area. Areas near the river have a relatively complex stratigraphy, with one or more buried occupation surfaces present created due to their context within alluvial depositional environments. Sites farther from the Napa River channel demonstrate less stratigraphic complexity than the other sites in the project area, with no evidence of buried occupation surfaces.

Within the Project site, soils are noted to be relatively consistent throughout. Across the site appears to be a disturbed surface stratum underlain by natural alluvial soils. The depth of this disturbance varies greatly throughout the APE. Previous and current testing indicates that between approximately 0.5 m and 1.5 m below surface, a layer of gray clay intermixed with small gravels is present. This layer of clay appeared to be natural alluvial subsoil that formed the base of the terrace in this area.

# 4 RESEARCH METHODS

The Secretary of the Interior has issued Standards and Guidelines for Archeology and Historic Preservation (48 FR 44720–44726), which are used for the identification and evaluation of historic properties and to ensure that the procedures are adequate and appropriate. The identification and evaluation of historic properties are dependent upon the relationship of individual properties to other similar properties (NPS and ACHP 1998, pp. 18–20). Information associated with properties regarding their prehistory, history, architecture, and other aspects of culture must be collected and organized to define these relationships (NPS 2009), which is the intent of the current inventory.

The City had previously hired a consultant to evaluate the Project and an environmental impact report (EIR) was prepared and released for public review in 2012. The City did not take any action on the Project at that time and based on receipt of new information the draft EIR was subsequently revised, but was never released for public review (WSA 2017). In late 2017, Dudek was retained to prepare a new EIR for the Project and the prior cultural evaluation was reviewed for adequacy. Based on a review of the prior cultural work including the methods, findings, and mitigation, a number of information gaps were identified. Dudek provided the following recommendations for additional cultural resources efforts to be completed with the intent of ensuring that work supporting this EIR would be completed to adequate and appropriate standards:

- Determine the distribution of the planned Project disturbances relative to the horizontal and vertical distribution of cultural resources.
- Complete an updated records NWIC search to ensure the project has a current record archaeological work completed to date.
- Request an updated NAHC Sacred Lands File search in order to retain contact information for traditionally affiliated Native American representatives.
- Assist with facilitation of AB52 consultation, if required by the lead agency for compliance with CEQA.
- Complete a Phase I Survey to document the present conditions within the project site and any visible archaeological resources.
- Conduct Extended Phase I and Phase II excavations within areas anticipated to intersect CA-NAP-406 and an appropriate sample of surrounding areas with potential to contain cultural resources. The intent of this work will be to examine the subsurface soils to depths that will be impacted by the project.

- Complete a GPR study to document general soil strata throughout the APE and locate possible subsurface anomalies.

- Provide cultural resources recommendations to be provided based on background research and fieldwork regarding what additional steps are required in order to ensure compliance with CEQA and other regulatory conditions.

## 4.1 Research Questions

The broader Project area has been subject to a substantial level of previous archaeological investigation. These focused on the areas intersecting the St. Helena Flood Control Project, which generally bounded, and overlapped to some degree, the west and the north sides of the Project APE. The prior EIR indicated that all significant resources within the Project APE were covered with fill that had been displaced by work associated with the St. Helena Flood Control Project. With this consideration in mind, the following research questions were developed in order to guide the present cultural resources work:

- What is the recorded distribution of potentially significant cultural resources relative to the Project APE? Most pertinently, does NRHP-eligible site CA-NAP-406 or other resources have potential to extend into the Project site?

- How much of the Project site has been subject to previous investigation, and what has this investigation included?

- What Native American tribes and tribal representatives have specific traditional associations with this area and who should be contacted should sensitive material of Native American origin be identified in the future?

- Do existing subsurface soils have potential to support the presence of archaeological resources?

- Is there evidence of fill or specific disturbances within the Project APE and, if so, to what depth?

- Has existing work satisfied standard requirements for CEQA compliance and, if not, what additional work is required to meet this compliance?

## 4.2 Pedestrian Survey

Following Bureau of Land Management (BLM) precedents, which are appropriate for cultural resources projects in general, survey techniques are loosely grouped into two categories:

reconnaissance and intensive (BLM 2004; NPS 2009). The choice of survey category depends on the level of effort required for a particular project, which can vary depending on the nature of the properties or property types, the possible adverse effects on such properties, and agency requirements (NPS and ACHP 1998). The selection of field survey techniques and level of effort must be responsive to the management needs and preservation goals that direct the survey effort. For any survey, it is important to consider the full range of historic properties that may be affected, either directly or indirectly, and consider strategies that will minimize any adverse effects and maximize beneficial effects on those properties (BLM 2004; NPS 2009; NPS and ACHP 1998).

The current survey (completed November 15, 2018) can be classified as intensive since short-interval transect spacing and full documentation of cultural resources was completed. Survey staff exceeded the applicable Secretary of Interior Professional Qualifications Standards for archaeological survey. Dudek archaeologist William Burns, MA, RPA surveyed the entire APE with transects spaced no more than 15 meters apart and oriented along cardinal directions where possible. Survey direction and location was adjusted for the presence of grape vines that were present through the central and southern portions of the Project APE. Survey crew was equipped with a Trimble Geo7X Global Positioning System (GPS) receiver with sub-meter accuracy. Location-specific photographs were taken using an IPhone 7 equipped with 8 MP resolution and georeferenced PDF maps of the project area. Accuracy of this device ranged between 2 meters and 5 meters. Subsurface exposures were opportunistically sought out and inspected near rodent burros, as well as along natural and human-made erosional features.

## 4.3 Subsurface Testing

### 4.3.1 Extended Phase I Testing

Dudek developed an XPI exploratory program in order to address the research questions outlined above. The intent of XPI investigations is to build upon Phase I survey information. Three hollow stem 6-inch auger borings and five STPs, measuring 0.5 x 0.25 m, were excavated at pre-determined locations placed with the intent of providing a general understanding of the present subsurface conditions throughout the Project site. These locations were set with the goal of assessing the level of previous subsurface disturbance and presence of fill within the Project site, and the potential for soils to support the presence of cultural material and deposits associated with the three previously recorded sites in the vicinity: CA-NAP-406, CA-NAP-843, and CA-NAP-1008.

### 4.3.2 Phase II Testing

Further excavations within the APE were necessary to fully understand the extent of disturbances resulting from the previous levee project and soils changes. The intent of Phase II investigations

is to build upon Phase I survey and XPI information. Ground penetrating radar (GPR) was utilized in transects and blocks to locate subsurface anomalies. Ten hollow stem 6-inch auger borings and twenty STPs, measuring 0.5 x 0.25 m, were excavated at anomaly locations discovered though GPR as well as pre-determined locations placed with the intent of providing a general understanding of the present subsurface conditions throughout the Project site. These locations were set with the goal of assessing the level of previous subsurface disturbance and presence and depth of fill within the Project site, and the potential for soils to support the presence of cultural material and deposits associated with the three previously recorded sites in the vicinity: CA-NAP-406, CA-NAP-843, and CA-NAP-1008. Excavation units are shown relative to the October 2009 Google Earth imagery within Figure 3. Active construction activities for the prior levee project are observable within this imagery.

Excavations units, including both auger and STP samples, were excavated and recorded in 20 cm arbitrary levels from the surface and screened using 1/8 inch mesh. Accurate vertical provenience was allowed by the short intervals of the hand-excavated augurs and STPs. Augers can be excavated more rapidly, with less disturbance, and to greater depths than STPs. STPs require removal of more soil than augers. However, this unit type also provides for a larger sample when looking for buried cultural deposits and allow for direct inspection of subsurface soil profiles along their exposed side walls. All removed soil soils and units were examined for midden-like soils and other cultural characteristics based on color, texture, consistency, stickiness, plasticity, and the presence of artifacts. Depositional characteristics and indications of past disturbance and/or fill were documented. Field notes were taken on Dudek auger and STP forms. All holes were backfilled using removed soils after sampling. Topsoil or grass was placed back on the surface of all excavated areas and restored to their previous appearance as best possible. A series of overview and excavation photographs were taken to document the current surface and subsurface conditions in each area. Any artifacts identified were documented using field forms, photographed, then bagged with labels identifying their subsurface provenience. Artifacts found during XPI excavations were buried on site in the corresponding backfilled unit within 10-20 cm of the surface. Artifacts found during Phase II excavations were collected and returned to Dudek's office for analysis.

## 4.4 Ground Penetrating Radar

Dudek has in-house GPR equipment and dedicated personnel trained in its use. The Dudek GPR is a wheeled device approximately the size of a child's wagon, and can be pushed across the ground in a pre-defined survey pattern that is tracked by a GPS devise. A Sensors and Software, Ltd., Noggin 250 GPR unit was used to collect all data, using the SmartCart configuration. This allowed investigators an opportunity to observe any potential anomalies in real time as they walked the site. The GPR was set up to record data to a maximum depth of 8 meters (approximately 26 feet).

A Trimble GeoXt device with sub-meter accuracy was used to collect locational information for each line and grid. GPR is non-invasive and uses electromagnetic fields to probe subsurface contexts for objects and changes in soil or material properties. Generally summarized, an antenna sends a finite frequency non-dispersive wave through the ground. This wave is then scattered and/or reflected back as "anomalies" with interpretable characteristics. While the location of anomalies can be identified in the field, and GPR survey strategies adjusted to focus on these areas in real-time, results are post-processed through software for the final results. By walking continuous linear transects and grids, this software allows for generation of three dimensional horizontal and visual mapping of subsurface features. This is most effective with historical or modern built environment features constructed of materials such as asphalt, brick, concrete, metal, wood, and other materials that would stand out against the surrounding soil matrix.

Raw GPR data is processed analyzed using GPR Slice (v7) software to create 2-dimensional vertical radargram images and time-slice horizontal (plan view) images for the Project site. Time-slice imagery is generated through post-processing of grids within a specific area. These can be viewed vertically from the surface to provide rough 3-dimensional renderings of subsurface anomalies, if present. Radargrams are also visible for review real-time on the GPR display during linear transects. Subsurface features as represented as hyperbolas, with the slope and size of the hyperbola related to the size and shape of the object. Round, linear features, such as enclosed waterlines and pipes, can be identified as smooth hyperbolae when crossed perpendicularly and as a solid line when the GPR runs parallel to the direction of the feature. Consecutive time-slice images are stitched from

Twenty-six transects lines and two grids (Grid-01: 10 m by 10 m, Grid-02: 10 m by 7.5 m) were tested. Their locations decided on attempting to avoid areas of high disturbance, based of older aerial satellite images (Figure 4). GPR was performed in order to identify potential subsurface archaeological features and signs of the extent of disturbance in the APE.

Based on review of records search information, the results of the XPI testing, and historical aerial imagery, transects for Lines 1 through 9, Grid-01, and Grid-02 were placed in the middle of the APE. The placement of this GPR study areas were to avoid the areas of highest disturbance seen in the 2009 aerial images while targeting locations intersecting the likely extended boundary of CA-NAP-406.

GPR transect Lines 1-19 were placed intersecting and just north of the boundary of CA-NAP-406 as it has been indicated to extend to within the Project APR by previous studies (Bartoy et al. 2005: 90). Grid-01 (10 m by 10 m) was comprised of 21 parallel lines oriented north-south (0.5 m interval) and 21 parallel lines oriented east-west (0.5 m interval) and Grid-02 (10 m by 7.5 m) was comprised of 16 parallel lines oriented north-south (0.5 m interval) and 21 parallel lines oriented

east-west (0.5 m interval). Both grids and were placed near the central area of the APE, within the likely expanded site boundaries of CA-NAP-406 as indicated by previous studies. GPR transect Lines 20-25 were placed along the northern boundary of the over-excavated area located immediately north of the extant vineyards. After completing the GPR data acquisition and initial field analysis of the data, high-potential anomalies were ground-truthed through excavation of STPs to assess the GPR anomalies and surface observations.

# 5 RESULTS

This section presents the results of the records search and the field survey of the current study.

## 5.1 Survey Results

A Phase I Survey of the entire Project APE was completed November 15, 2018. The southern half of the Project APE was occupied by grape vines, allowing for approximately one-half of the ground surface to be directly visible. Low-laying grasses were present throughout the northern half of the Project APE, restricting visibility of the ground surface to less than 10% in most areas on this initial site visit (see Figures 5-6). Evidence for buried cultural deposits was opportunistically sought through inspection of natural or artificial erosion/excavation exposures and the spoils from rodent burrows. The Project APE has been subject to a number of past disturbances. The most notable of these have included present and past agricultural activities, as well as likely earth moving work in the northernmost portion of the Project APE. No artifacts were observed on the surface during survey, however visibility was highly restricted in most areas by low-laying vegetation and organic debris.

## 5.2 Extended Phase I and Phase II Results

Dudek archaeologist, William Burns performed XPI testing from November 15, 2018 to November 17, 2018. Dudek archaeologists Adam Giacinto, William Burns, Ross Owen, Nicholas Hanten, Kolin Taylor, Jessica Borges, and Brad Comeau performed Phase II testing from January 20, 2020 to January 24, 2020. Results of these excavations are provided in Table 3.

**Table 3. Extended Phase I and Phase II Testing Results**

| Unit ID | Depth (cmbs) | Results | Artifacts Recovered | Soil Description |
|---|---|---|---|---|
| AT-01 | 0-20 | Negative | None | 2.5Y 5/3 Light olive brown clay silt with gravel, compact |
| | 20-40 | Positive | 1 obsidian shatter | 2.5Y 5/3 Light olive brown clay silt with gravel, compact: 1 obsidian shatter fragment |
| | 40-60 | Negative | None | 2.5Y 6/2 Light brown gray clay silt with gravel, compact. Rock impasses at 60 cmbs |
| AT-02 | 0-20 | Negative | None | 10YR 3/2 Very dark grayish brown loamy clay with gravel, compact |

Archaeological testing did not result in the identification of intact cultural deposits. Results indicate artifact frequencies were highest in the central (near CA-NAP-406) and northern (CA-NAP-1008) portions of the Project APE. Most cultural material was recovered from shallower contexts (above 60 cmbs). Modern debris was encountered to 100 cmbs. Artifacts consisted predominantly of small obsidian tertiary flakes. These findings are generally consistent with the assemplage documented for Phase II excavations completed for the St. Helena Flood Control Project along the western side of the central portion of the Project APE (Bartoy et al. 2005). This study suggested that a gray sandy clay sterile soil sub-stratum was present approximately 1.5 m below the surface (Schneider et al. 2013: 27).

The portion of the APE north of the existing vineyards was confirmed to be covered by a layer of fill extending to at least 100 cmbs (3.28 ft). A soil shoulder of this approximate height marks the extent of this graded fill along the eastern perimeter of the APE, north of the vineyard. A ditch, as well as narrow lower terrace, is present east of this berm where native soils could be encountered at shallow depths. October 2009 Google Earth imagery (as previously included in Figure 3) does show the distribution of fill in this area. At the time of the prior levee project, the area was used for staging of equipment. It is unclear from this imagery if underlying native soils were graded, ripped, or otherwise prepped prior to the distribution of fill. A large area of likely excavation is also visible within the 2009 imagery just north of the existing vineyard. The patterning shown by the distribution of artifacts in this area is somewhat unclear. In general, artifacts are clearly associated with soils approximately 60 cmbs or shallower, below which the presence of artifacts substantially decreases. The areas nearest the recorded boundaries of CA-NAP-406, notably STP-9, did yield relatively high frequencies of artifacts to depths up to 100 cmbs. However, modern construction waste (brick) was also found within this unit at this same depth. Based on this distribution of cultural material, it seems most likely that soils and/or artifacts associated with CA-NAP-406 were spread throughout the APE at a later stage of the levee project. This likely occurred after grading and partial leveling of soils from outside of CA-NAP-406, which helps explain both why the distribution of artifacts remains relatively vertically constrained and why there is not a clear soil transition between the different levels of graded soils.

The areas of the APE within the vineyard, while previously disturbed through agricultural activities, were not capped by redistributed soils during the levee project. As such, these areas would have the highest potential for intact cultural deposits to persist. The total assemblage of artifacts recovered from all excavation units within this area included four fragments of obsidian debitage and one possibly historical-era ceramic fragment. All material was recovered from the upper 40 cmbs. It is most likely that soils within the vineyard are likely representative of the native soils underlying fill to the north, consisting of sandy loam with increased frequencies of rock at depth.

## 5.3 Ground Penetrating Radar Review

GPR data collection was performed on January 14 and 15, 2020 by Brad Comeau, Adam Giacinto, and William Burns. Twenty-six transects lines and two square grids were tested. The transect lines were organized into two groups. Lines 1 to 19 were placed close to the center of the Project site and ran E/W across the entirety of the APE. These lines had no major hits, though a few stronger anomalies were ground-truthed with STPs. The STPs were generally irrigation lines; no cultural features were encountered. Lines 20-26 were placed farther south from Line 1-19. Line 20 registered an anomaly at 118 m east along the transect, at a depth of approximately 0.5 m (Figure 7). This anomaly was investigated with STP 11, however the STP failed to locate a feature and was likely reflective of a soil change or subsurface cobble. A few other minor hits along Line 20-26 were investigated with STPs, though none revealed any features. Radargrams generated through linear transects provided an approximate cross section of stratigraphy across the entire APE, east to west. GPR data indicates a soil change between approximately 0.5 m and 1.5 m (Figure 7). This clearly aligns with soil profiles revealed through STPs and auger bores, which display a disturbed fill from the ground surface, transitions to a subsurface alluvium between 0.5 m and 1.5 m. The two grids, Grid-01 and Grid-02, contained no substantial GPR findings.

# 6 SUMMARY AND MANAGEMENT CONSIDERATIONS

## 6.1 Summary

This study has consisted of a CHRIS records search of the Project APE and a half-mile radius, NAHC Sacred Lands File search, intensive-level pedestrian survey, XPI subsurface probing, Phase II excavations, and a GPR investigation. A NAHC Sacred Lands File did not indicate the presence of any Native American cultural resources in or near the Project APE. Dudek did not contact Native American representatives as part of these efforts, however the City has notified and consulted with NAHC-listed Tribal representatives pursuant to AB 52. One tribe, the Yocha Dehe Wintun Nation, has responded to this outreach with a request for a copy of the present report. A record of consultation is on file with the City.

Records on file with the NWIC provided documentation of three previously recorded archaeological sites within the Project APE (CA-NAP-406, CA-NAP-843, and CA-NAP-1008). An additional five archaeological sites have been identified in the immediate vicinity of the Project. Two of these have been determined NRHP/CRHR eligible. CA-NAP-406 has been determined to be eligible for listing on the NRHP listing under Criterion D with SHPO concurrence. CA-NAP-843 and CA-NAP-1008 were determined with SHPO concurrence to be ineligible for NRHP/CRHR listing based on a lack of sufficient data potential and integrity.

XPI exploratory probing confirmed that soil containing archaeological material associated with CA-NAP-406, CA-NAP-843 and CA-NAP-1008 is present within the Project APE. Phase II excavations and research were able to identify a layer of disturbed fill/redistributed soils across the northern half of the APE which contained the cultural material in its upper layers (generally less than 60 cmbs but as deep as 100 cmbs). It is likely that this upper layer of fill is comprised largely of redeposited and otherwise disturbed cultural deposits associated with CA-NAP-406. Soils identified below the fill was not found to contain cultural deposits or substantial frequencies of cultural material. CA-NAP-843 and CA-NAP-1008 have been subject to previous evaluation efforts, and are not NRHP/CRHR eligible. No intact cultural deposits were identified as a result of XPI, Phase II, and GPR investigations.

## 6.2 Review of Potential Impacts

The City is the lead agency responsible for compliance with the CEQA. Compliance with Section 106 may also be required. According to CEQA (Pub. Res. Code SS5024.1, Title 14 CCR, Section 4852), a project with an effect that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect (adverse effect) on the environment and the cultural resource itself. A substantial adverse change in the significance of an historical resource would be constituted by physical demolition, destruction, relocation, or

alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired. Once a baseline understanding of resource distribution and significance is understood, the CEQA process provides that some impacts may be made to be less than significant with application of mitigation.

Effects on historic properties under Section 106 of the NHPA are defined in the assessment of adverse effects in 36 CFR Sections 800.5(a)(1). An adverse effect is found when an undertaking may alter, directly or indirectly, any of the characteristics of a historic property that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association. Consideration shall be given to all qualifying characteristics of a historic property, including those that may have been identified subsequent to the original evaluation of the property's eligibility for the National Register. Adverse effects may include reasonably foreseeable effects caused by the undertaking that may occur later in time, be farther removed in distance or be cumulative. Compliance with Section 106 requires, the criteria of adverse effect are applied to historic properties, if any exist in the Project APE. If no historic properties are identified in the APE, a finding of "no historic properties affected" will be made for the proposed Project. If there are historic properties in the APE, application of the criteria of adverse effect will result in Project-related findings of either "no adverse effect" or of "adverse effect".

CA-NAP-843 and CA-NAP-1008 fall within the APE. These have both been determined ineligible for CRHR/NRHP-listing with concurrence from SHPO. Previous investigations appear to have included the portions of these resources intersecting the present Project APE. Impacts to CA-NAP-843 and CA-NAP-1008 would not represent a significant effect, although appropriate management strategies to account for unanticipated impacts will require consideration.

CA-NAP-406 has been determined to be eligible for CRHR (Criterion 4) and NRHP (Criterion D) listing. Previous investigations evaluating this resource were restricted to portions of this resource located immediately west of the present Project APE. Prior to the presently documented investigations, the actual distribution, composition, and significance of archaeological deposits associated with this resource within the present Project APE remained undetermined. Based on the results of archaeological excavations and a GPR investigation no intact deposits or features associated with CA-NAP-406 appear to extend to within the APE. Disturbed and redeposited archaeological material within the APE is not CRHR/NRHP eligible. As such, effects to known cultural resources resulting from the Project as presently designed would be less than significant, No Historic Properties Affected.

## 6.3 Recommendations

While archaeological resources were identified within the Project APE, all observed cultural material was identified within disturbed and redeposited context. The exact depth, area, and severity of previous disturbances remains somewhat unclear. The vertical APE of the Project is as deep as 6 feet below the existing ground surface for utility trenching and 1.5 feet below the existing grade for general ground preparation. There is some potential to encounter unanticipated significant cultural resources during Project activities, most notably where intact remnant deposits associated with CA-NAP-406 could be present. Based on the results of XPI, Phase II, and GPR investigations, such deposits have the highest potential to be present deeper than two feet beneath the present grade in areas located north of the planned Starr Avenue expansion. Portions of the APE to the south, presently occupied by vineyards, have a higher potential to contain intact cultural deposits at shallower depth. In addition, it should be noted that numerous human burials have been identified in nearby areas, although not within the Project APE.

Based on identified sensitivity for encountering unanticipated significant cultural resources and human remains, archaeological monitoring is recommended. The following plan has been prepared with the intent of aiding in future cultural monitoring efforts.

**Monitoring Roles and Responsibilities**

The requirement for a Native American monitor shall be determined by the City in consultation with traditionally culturally affiliated tribes. Archaeological monitors should be present during all initial ground-disturbing activities with the potential to encounter cultural resources. Prior to the initiation ground-disturbing work, construction crews will be made aware of the potential to encounter cultural resources and the requirement for cultural monitors to be present during these activities. Archaeological monitoring may be adjusted (increase, decreased, or discontinued) at the recommendation of the qualified archaeological principal investigator meeting the Secretary of the Interior's Professional Qualification Standards, and in consultation with the City, based on inspection of exposed cultural material and the observed potential for soils to contain intact cultural deposits or otherwise significant archaeological material.

The archaeological monitor shall be provided a copy of this technical report and its pertinent appendices to inform their monitoring efforts. The archaeological shall have the authority to temporarily halt work to inspect areas as needed for potential cultural material or deposits. In the event that potentially intact archaeological deposits or features are exposed during construction activities for the proposed project, all construction work occurring within 100 feet of the find shall immediately stop until the archaeological principal investigator can evaluate the significance of the find and determine whether or not additional study is warranted. The work exclusion buffer

may be adjusted as appropriate to allow work to feasibly continue at the recommendation of the archaeological principal investigator. Should it be required, temporary flagging may be installed around this resource in order to avoid any disturbances from construction equipment. The potential for project avoidance of potentially significant cultural resources should be a primary consideration as part of this initial process. Significance of the find will be assessed as outlined by CEQA (14 CCR 15064.5(f); PRC Section 21082). If the archaeological principal investigator observes the discovery to be potentially significant under CEQA or Section 106 of the NHPA, additional efforts such as preparation of an archaeological treatment plan, testing, and/or data recovery may be warranted prior to allowing construction to proceed in this area.

In accordance with Section 7050.5 of the California Health and Safety Code, if potential human remains are found the county coroner shall be immediately notified of the discovery. The coroner will provide a determination within 48 hours of notification. No further excavation or disturbance of the identified material, or any area reasonably suspected to overlie additional remains, shall occur until a determination has been made. If the county coroner determines that the remains are, or are believed to be, Native American, they shall notify the Native American Heritage Commission (NAHC) within 24 hours. In accordance with California Public Resources Code Section 5097.98, the NAHC must immediately notify those persons it believes to be the most likely descendent (MLD) from the deceased Native American. Within 48 hours of their notification, the MLD will recommend to the lead agency their preferred treatment of the remains and associated grave goods.

**Reporting Requirements**

Daily monitoring logs will be completed by onsite archaeological monitor. Within 60 days following completion of construction, the qualified archaeological principal investigator shall provide an archaeological monitoring report to the City. This report shall include the results of the cultural monitoring program (even if negative), including a summary of any findings or evaluation/data recovery efforts, and supporting documentation that demonstrates all mitigation measures defined in the Environmental Impact Report (EIR) were appropriately met. Appendices should include archaeological monitoring logs and documentation relating to any newly identified or updated cultural resources. This report shall be submitted to the NWIC once considered final.

RE: Request for Section 106 consultation, St. Helena Comprehensive Flood Protection Project, Napa County, SRF NO. C-06-6093-110.

Dear Ms. Him,

Thank you for your letter dated 19 September 2006 regarding the above referenced undertaking. Your letter indicates your request for consultation in order to comply with Section 106 of the National Historic Preservation Act of 1966, as amended, and its implementing regulations at 36 CFR Part 800, is prompted by the use of an United States Environmental Protection Agency (USEPA) capitalization grant, administered by the State Water Resources Control Board (SWRCB) State Revolving Fund (SRF) program, to assist the City of St. Helena and the Napa County Flood Control District with financing of a comprehensive flood protection project. The SWRCB has been delegated authority to act on behalf of the USEPA in carrying out Section 106 responsibilities under the terms of the nationwide *Programmatic Agreement Among the Environmental Protection Agency, the Advisory Council on Historic Preservation, and the National Conference of State Historic Preservation Officers Concerning Compliance with the National Historic Preservation Act under EPA's State Water Pollution Control Revolving Fund Program* (1990). As the project will also involve a permit from the U.S. Army Corps of Engineers (ACOE), you have consulted with the ACOE and they have agreed that the SWRCB will act as lead agency in fulfilling collective responsibilities under Section 106.

It is my understanding that the proposed undertaking involves a number of interrelated construction components designed to provide flood protection and restore habitat. These components are illustrated on the submittal labeled Enclosure 1 and include: extensive modification of a floodplain terrace on the southern bank of a section of the Napa River (Terrace B), relocation of up to 17 mobile homes currently residing on Terrace B, restoration of approximately 600 feet of shoreline in the Terrace B area, construction of an approximately 2000 foot long levee using the soil removed from Terrace B with the excess soils disposed upon the Miller and Hunter Parcels, installation of a ditch system, construction of a detention basin and pumping facility, installation of a 30-inch storm drain, construction of a new floodwall, and undergrowth clearing for vegetation management referred to as "Element C". It is also my understanding that previously proposed components regarding work on Terrace A and at the nearby wastewater treatment plant are no longer included in the undertaking.

Your letter also describes the Area of Potential Effects (APE), Native American consultation, efforts to identify Historic Properties, requests concurrence on determinations of eligibility for eight identified archaeological sites, and concludes with a request for concurrence on an adverse effect finding for the undertaking. These determinations and findings are supported by the following enclosed documents:

Enclosure 1. APE map

Enclosure 2. *Extended Archaeological Survey Report for the St. Helena Flood Protection Project, City of St. Helena, Napa County, California.* January 2005.

Enclosure 2a *Addendum Archaeological Survey of the Hunter Parcel, St Helena, Napa County, California.* May 2006.

Enclosure 3. *Archaeological Investigation and Evaluation of Eight Sites in the Napa River Floodplain for the St. Helena Flood Protection Project, City of St. Helena, Napa County, California Draft Report.* July 2005. (Evaluation Report).

Enclosure 4. *DRAFT Memorandum of Agreement Among the California State Water Resources Control Board, the United States Army Corps of Engineers, and the California State Historic Preservation Office Regarding the Construction of the St. Helena Comprehensive Flood Protection Project (2006 Plan), Napa County, California.* (MOA)

Based on my review of the enclosed documents, I agree that the APE is adequate to encompass the various components of the proposed undertaking and those efforts to identify historic properties within the APE meet the reasonable and good faith standard. One of the identified archaeological sites, CA-NAP-1007, lies outside the currently defined APE and is therefore removed from further consideration for the present undertaking.

The SWRCB and the ACOE have determined that four of the remaining identified archaeological sites (CA-NAP-413, 843, 1008, and 1009H) lack sufficient data potential and integrity to meet the criteria for National Register eligibility. I concur that CA-NAP-843, 1008, and 1009H are *not* eligible.

As discussed in e-mail and telephone conversations, my questions regarding the potential of site CA-NAP-413 to yield important information have been resolved with the agreement that the eligibility of CA-NAP-413 will be deferred, and a final determination made in conjunction with the archaeological treatment plan prepared and implemented as a component of the resolution of adverse effects. A signature block is included at the end of this letter for you to acknowledge your agreement that the eligibility of CA-NAP-413 is yet to be determined, and that I have correctly understood the various components of the proposed undertaking. At your earliest convenience, please submit a copy of the signed letter for inclusion in our files.

The SWRCB and the ACOE have determined that three sites (CA-NAP-399, 406 and 863) are eligible for listing in the National Register under Criterion D. I concur that these sites *are* eligible based on their potential to yield information important to regional prehistory.

As avoidance of impacts has been considered, and it has been determined that the objectives of the proposed undertaking are important and cannot be met without destroying or damaging the identified Historic Properties, I concur with your adverse effect finding.

While I am able to concur on the above determinations and finding based on the submitted documentation, I request the *Draft* Evaluation Report be finalized in accordance with the Secretary of the Interiors Standards and Guidelines for Archaeology and Historic Preservation and the State of California guidance on Archaeological Resource Management Reports. The revised version should include photographs of the site areas and excavations, photographs or illustrations of recovered formal artifacts, and a more detailed presentation of the results of the

mechanical trenching program with a focus on characterization of the depositional history of the project areas landforms.

While use of the Harris (1989) single context recording system (aka Harris Matrix) was employed during site excavation, it is not fully represented in the reporting, i.e. there is no graphic depiction of a matrix displaying the stratigraphic relationships of the contexts identified at the sites. There also seems to be a lack of integration of the individual sites stratigraphy with each other and with the broader geomorphic history of the area. As geomorphology is integral to the design of the proposed flood control features, a geoarchaeological approach to interpretation of site formation processes would seem a natural fit for this project.

Additional consultation on the excavation methods, and other sampling strategies, proposed to resolve the adverse effects of the undertaking is necessary. Formal comments on the MOA, and attached Historic Properties Treatment Plan (HPTP), submitted to initiate consultation regarding resolution of adverse effects under Section 800.6 are forthcoming. In the interim it is recommended that the SWRCB initiate revisions to the HPTP by reviewing recent data and research trends in the Napa region, e.g. Carpenter and Mikkelsen 2005, Gilreath and Wohlgemuth 2004, Martin and Meyer 2005, White 2002, and Wohlgemuth 2006.

I look forward to our continued consultation of this undertaking. If you have any questions or concerns, please feel free to contact Todd Jaffke at (916) 653-8902, or by e-mail at tjaffke@parks.ca.gov.

Sincerely,

RE: Hunter Subdivision Project, Saint Helena, Napa County

Dear Mr. Giacinto:

A record search of the Native American Heritage Commission (NAHC) *Sacred Lands File* was completed for the area of potential project effect (APE) referenced above with negative results**. Please note that the absence of specific site information in the *Sacred Lands File* does not indicate the absence of Native American cultural resources in any APE.**

I suggest you contact all of those listed, if they cannot supply information, they might recommend others with specific knowledge. The list should provide a starting place to locate areas of potential adverse impact within the APE. **By contacting all those on the list, your organization will be better able to respond to claims of failure to consult.** If a response has not been received within two weeks of notification, the NAHC requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact via email: Sharaya.souza@nahc.ca.gov.

Sincerely,

Sharaya Souza

**RE: Proposed Hunter Subdivision** (Assessor's Parcel 009-030-057)
File No. PL2010-40

Mr. Wright,

This letter provides notice, pursuant to Public Resources Code §21080.3.1(d), that the City of St. Helena is in receipt of a development application subject to the California Environmental Quality Act (CEQA) and Assembly Bill 52. The City of St. Helena recognizes the importance of preserving tribal cultural resources and respectfully invites you to consult on and participate in the review process for this project.

Project Location: The project site is located in the northeast portion of the City, at the eastern terminus of Adams Street, north of Starr Avenue and west of the Napa River (Assessor's Parcel 009-030-057), see attached vicinity map.

Project Description: The proposed project includes a request to approve a Tentative Map to subdivide the existing 16.9-acre parcel into 51 single-family lots, one 3.4-acre parcel, and a 0.06-acre remainder parcel. The project design also includes onsite water, sewer and storm drain infrastructure to tie into the City's existing system and the extension of Adams Street and Starr Avenue to connect to the City's roadway system, in keeping with the City's 1993 General Plan Circulation Element

Upon receipt of this notice, the Cortina Band of Indians has thirty (30) days to request consultation pursuant to Public Resources Code §21083.3.1, 21083.3.2, and 21083.3. If the Cortina Band of Indians provides the City of St. Helena with confidential information subject to Public Resources Code §21082.3(c), Government Code §6254.10, or Government Code Section §6254(r), we request that it be explicitly labeled and packaged to prevent inadvertent public disclosure.

If you have any questions and/or would like to request consultation, please contact me at 707-968-2659 or nhoush@sthelena.org.

**Subject:** Proposed Hunter Subdivision

Dear Noah Housh,

The Federated Indians of Graton Rancheria, a federally recognized Tribe and sovereign government has received your correspondence requesting information on a project located at Proposed Hunter Subdivision. The Tribe has reviewed the location of the project and we have determined it is not in our traditional ancestral territory, therefore have no comments on this project, at this time. We appreciate the opportunity to review the project proposal. If you have any additional questions regarding this letter please feel free to email my office at thpo@gratonrancheria.com or call the office at (707) 566-2288.

Sincerely,
Buffy McQuillen

YOCHA DEHE
CULTURAL RESOURCES

May 22, 2018

City of St. Helena, Planning Dept.
Attn: Noah Housh, Director
1480 Main Street
St. Helena, CA 94574

RE: Hunter Subdivision Project File No. PL2010-40

Dear Mr. Housh:

Thank you for your project notification letter dated, April 23, 2018, regarding cultural information on or near the proposed Hunter Subdivision Project, St. Helena, Napa County. We appreciate your effort to contact us and wish to respond.

The Cultural Resources Department has reviewed the project and concluded that it is within the aboriginal territories of the Yocha Dehe Wintun Nation. Therefore, we have a cultural interest and authority in the proposed project area.

Based on the information provided, the Tribe has concerns that the project could impact known archaeological/cultural sites. Please send us the cultural resource study for this project.

Should you have any questions, please contact the following individual:

Reimann Rouse, GIS Analyst
Yocha Dehe Wintun Nation
Office: (530) 723-2805
Email: rrouse@yochadehe-nsn.gov

Please refer to identification number YD – 05212018-02 in any correspondence concerning this project.

Thank you for providing us with this notice and the opportunity to comment.

Sincerely,

Marilyn Delgado
Director of Cultural Resources

Re: Updated Geotechnical Engineering Report
Evaluation of Shallow Soil Conditions and
Recommendations for Subgrade Preparation and Grading Specifications
Future Residential Development
Lands of Hunter
Adams Street
St. Helena, California

Introduction

This updated report presents the results of our geotechnical investigation of the shallow soil conditions underlying the future Adams Street (Hunter Parcel) residential development, located on Adams Street in St. Helena, California (Site Location Map, Figure 1). In 2009 our firm conducted an investigation of the shallow soil conditions at the project site, and published a report dated August 13, 2009 summarizing the field and laboratory data collected from ten exploratory borings drilled during our earlier study in 2009, and presenting our geotechnical recommendations for site preparation and grading at the project site. Subsequent to our earlier study and report, we understand that approximately 27,000 cubic yards of engineered fill has been placed on the Hunter parcel (during summer 2010) as a part of the City of St. Helena Flood Protection Project. The purpose of our services at this time is to provide an updated summary of the shallow soil conditions underlying the project site in order that we can provide revised recommendations for proper subgrade preparation beneath future development areas. This updated report re-summarizes the information included in the earlier August 13, 2009 report, and includes a discussion of the additional 27,000 cubic yards of engineered fill placed on the Hunter Parcel as a part of the City of St. Helena Flood Protection Project during the summer of 2010.

In accordance with our agreement dated July 28, 2009, the scope of our services in 2009 included the excavation of ten shallow exploratory borings, laboratory testing of selected soil samples, and the preparation of our report dated August 13, 2009 which summarized our field observations and test results, and presented our geotechnical conclusions and recommendations with respect to future grading at the site. In order to update our report to reflect the current shallow soil conditions subsequent to the placement of engineered fill at the site during the summer of 2010, members of our staff have made recent several site visits. Field density testing was conducted by our personnel on October 21, 2010 to measure the in-situ relative compaction of the recently placed engineered fill. Finally, we have reviewed field density testing conducted by Kleinfelder between June 10 and October 8, 2010 during the placement of the fill on the Hunter Parcel.

**1333 N. McDowell Boulevard, Suite C, Petaluma, California 94954**
**Phone 707 765-6140 Fax 707 765-6222**

It is noted that when more detailed planning is available for the proposed residential development, design-level geotechnical investigations (including much deeper borings and additional soil sampling) should be undertaken for the design, permitting, and construction of the project.

Based on our understanding, the project site encompasses an area of roughly ten to fifteen acres of nearly level to gently sloping terrain. The site has been used until recently as a vineyard. A former pond, measuring roughly one hundred and thirty feet in diameter, was located near the northeastern portion of the parcel, as approximately shown on the Site Plan, Figure 2. The pond has been backfilled with undocumented, uncompacted fill. Some excavations (exploratory trenches) were made during 2009 (by others) at various locations on the site, extending to a depth of up to roughly four feet, to investigate archeological impacts at the site. It is thought that these exploratory trenches are also backfilled with undocumented, uncompacted fill.

We understand that excess clean soil generated during the construction of the adjacent St. Helena Flood Protection Project was placed as an engineered, compacted fill over a significant portion of the Hunter parcel during the summer of 2010. The planned grading on the Hunter parcel is shown on a grading plan prepared by Mead & Hunt Engineers and dated January 2009, with a latest revision of June 4, 2010. We understand that fills of up to three to four feet in thickness were placed relative to the former site grades. In general, the new fill placed during 2010 is thicker along the eastern portion of the Hunter Parcel, and thinner along the western portion of the site. Based on our understanding that roughly 27,000 cubic yards of fill was placed on the Hunter Parcel during 2010, the average depth of fill over the graded portion of the site would be approximately two feet.

We understand that at some future date, the Hunter parcel may be developed as a residential subdivision, including one, two, or three story residential structures, asphalt paved streets and concrete driveways, underground utilities, and associated improvements. No specific development plans are available at this time, however.

Subsurface Exploration and Laboratory Testing

Ten shallow exploratory borings were drilled at the site on July 21, 2009 using four inch diameter manual bucket auger drilling equipment. The borings were drilled to depths ranging between three and nine feet beneath the existing ground surface at that time. The approximate locations of the exploratory borings are shown on the attached Site Plan, Figure 2. As the borings were drilled, relatively undisturbed samples of the various soil layers encountered were obtained using a 2.5 inch diameter sampler driven into the bottom of the boring using a 35 pound hammer dropped 24 inches. The samples were sealed in the field to preserve their natural moisture content, and were transported to our laboratory for testing. Logs of the borings were prepared by our representative in the field based on cuttings emerging from the borings and observation of the collected samples. Occasional editing of the field logs was based on a closer examination of the samples in our laboratory and on the results of laboratory tests conducted on some of the samples. The logs of the borings, along with a soil classification chart, are presented in Figures A-1 through A-11.

The collected samples were subjected to laboratory testing, including unconfined compressive strength, moisture content, and dry density determinations on most of the collected samples. A bulk sample representative of the near surface soil (between a depth of roughly one to three feet below the former existing grade) was collected and used to obtain a laboratory compaction curve, based on ASTM D1557. The results of the laboratory compaction curve are shown on the attached Figure A-12.

Shallow Soil Conditions

Based on the ten exploratory borings drilled during our 2009 study, and subsequent observations at the site, the shallow soil profile beneath the Hunter Parcel currently consists of a layer of recent, compacted fill having a thickness of typically one to four feet (average depth two feet), underlain by a thin layer of older fill (scarified and recompacted native soil) composed of stiff, relatively dry, light brown clayey silt with some sand extending to a depth of between 6 inches and 18 inches beneath the bottom of the new fill layer. Beneath the stiff light brown clayey silt, soft to medium stiff dark brown, moist, clayey silt was encountered, extending typically to a depth of four to seven feet beneath the current ground surface (three feet below the former ground surface). The medium stiff dark brown clayey silt typically grades denser, lighter in color, and with a lower moisture content below a depth of four to seven feet relative to the existing site grade (three feet below the bottom of the new fill layer). The exception to this typical soil profile is found in the former pond area (exploratory boring 4). In the former pond area, soft to medium stiff mottled light brown to dark brown clayey silt (fill) was encountered, extending to a depth of approximately ten feet beneath the existing ground surface. Beneath the fill in boring 4, stiff light gray brown clayey silt with sand (undisturbed native soil) was encountered, extending to the maximum depth drilled (thirteen feet relative to the current site grades). No groundwater was encountered in any of the borings at the time of drilling. However, it is anticipated that the shallow groundwater level beneath the site will vary seasonally, and may be higher during certain times of the year.

Based on our laboratory testing, the soft to medium stiff dark brown clayey silt found at a depth of between roughly six inches and 36 inches beneath the bottom of the recent, compacted fill layer is unsuitable to leave in place beneath new engineered fills that at some time in the future will support a residential development. The dark brown clayey silt layer (between 0.5 and 3 feet) was found to typically have a moisture content of five to ten percent or more over optimum (as defined by the laboratory compaction curve, ASTM D1557), and was found to have an in-situ dry density of only approximately eighty percent of the laboratory maximum density (ASTM D1557). Engineered fills are typically compacted to at least 90 percent of the laboratory maximum density.

Based on our understanding of the grading operation undertaken during summer 2010 to place the 27,000 cubic yards of new fill at the Hunter Parcel, only shallow, six to eight inches deep scarifying and recompacting was undertaken to prepare the formerly existing ground surface prior to the placement and compaction of new fill. Therefore, the three foot thick layer of soft, weak natural soil remains beneath the recently placed and compacted fill layer.

Conclusions and Recommendations

In our opinion, based on the ten exploratory borings drilled as a part of our study, the site is underlain by a shallow layer of soft to medium stiff dark brown clayey silt that typically extends to a minimum depth of three feet beneath the bottom of the recently placed fill layer. In our opinion, this layer of soft to medium stiff clayey silt must be overexcavated, moisture conditioned to permit proper compaction, and then be replaced as compacted, engineered fill prior to the construction of new homes and other improvements on the Hunter parcel. It is not acceptable to place compacted, engineered fill (designed to support future development) on the Hunter Parcel without first overexcavating and recompacting the existing weak surface layer, due to the anticipated settlement of the weak soil layer as a result of the loads imposed by the new fill, as well as future building loads. Settlement of the weak soil layer, if left in place beneath the recently placed compacted fill, could lead to damage to new residential structures, streets, utilities, and concrete flatwork supported over the weak soil layer.

Specifically, prior to the development of the project site, we recommend that all of the recently placed (2010) fill, and the upper 2.5 feet of soil (measured from the bottom of the new fill layer) should be overexcavated and the overexcavated soil aerated or moisture conditioned, as necessary, to permit proper compaction. Based on an average thickness of the new fill layer of two feet, the average depth of the required overexcavation and recompaction of the site is 4.5 feet. The bottom of the excavated area should then be scarified to a minimum depth of eight inches, moisture conditioned to permit proper compaction, and then be recompacted to a minimum degree of compaction of 90 percent (based on ASTM D1557) to provide a smooth, uniform, and unyielding surface. Fill can then be placed in thin lifts (uncompacted thickness eight inches or less), moisture conditioned to permit proper compaction, and compacted to a minimum degree of compaction of 90 percent. Soil used as fill should be clean and free of organic or toxic contamination, and should not have rock pieces larger than six inches in diameter or more than 15 percent by weight of rock pieces larger than 2.5 inches in diameter.

In the former pond area, located roughly as shown on the attached Site Plan, Figure 2, the required depth of overexcavation will be roughly ten feet relative to the current site grades. The bottom of the overexcavated area should be scarified to a depth of eight inches, moisture conditioned to permit proper compaction, and compacted to a minimum degree of compaction of 90 percent. Fill can then be placed as described above.

It is possible that there may be areas on the site where weak soil extends to a depth greater than seven feet below the existing grade (or greater than three feet below the bottom of the recent fill layer). In general, aside from the former pond area, we believe that an overexcavation depth of 2.5 feet (measured from the bottom of the new fill layer) will be sufficient. However, if localized areas of deeper weak surface soil are encountered during the site grading operation, the soil engineer's representative may recommend deeper overexcavation in these areas.

February 22, 2011

Supplemental Services

Construction Observation & Testing

During construction, including any grading operation, our representative must be present intermittently to verify that the soil conditions are as anticipated and to observe and test the geotechnical portions of the work, including overexcavation of existing weak surface soil, scarification and recompaction at the bottom of the overexcavated areas, and placement and compaction of fills.

Design Level Geotechnical Investigation

When more detailed plans are available for the proposed residential development, a much more detailed geotechnical study should be undertaken. This study would include much deeper borings, additional soil sampling, laboratory testing, and engineering analyses, including an evaluation of liquefaction potential and settlement potential based on an evaluation of the deeper soil conditions beneath the site.

If you have any questions about our findings and conclusions, or if we can be of further assistance, please do not hesitate to call us at your convenience.

Yours very truly,
MILLER PACIFIC ENGINEERING GROUP

### SAMPLER TYPE

- MODIFIED CALIFORNIA
- STANDARD PENETRATION TEST
- THIN-WALLED / FIXED PISTON
- HAND SAMPLER
- ROCK CORE
- X DISTURBED OR BULK SAMPLE

### SAMPLER DRIVING RESISTANCE

Modified California and Standard Penetration Test samplers are driven 18 inches with a 140-pound hammer falling 30 inches per blow. Blows for the initial 6-inch drive seat the sampler. Blows for the final 12-inch drive are recorded onto the logs. Sampler refusal is defined as 50 blows during a 6-inch drive. Examples of blow records are as follows:

- 25 sampler driven 12 inches with 25 blows afte initial 6-inch drive
- 85/7" sampler driven 7 inches with 85 blows afte initial 6-inch drive
- 50/3" sampler driven 3 inches with 50 blows during initial 6-inch drive or beginning of final 12-inch drive

NOTE: Test boring and test pit logs are an interpretation of conditions encountered at the excavation location during the time of exploration. Subsurface rock, soil or water conditions may vary in different locations within the project site and with the passage of time. Boundaries between differing soil or rock descriptions are approximate and may indicate a gradual transition.

Re: Addendum to Geotechnical Engineering Report Dated February 22, 2011
Preliminary Evaluation of Liquefaction Potential and
Preliminary Recommendations for Mitigation of Liquefaction Induced Settlement (if any)
Proposed Hunter Residential Development
Lands of Hunter
Adams Street
St. Helena, California

Introduction and Scope

This report is an addendum to a geotechnical report by Miller Pacific Engineering Group dated February 22, 2011, which presented the results of a geotechnical investigation of the shallow soil conditions underlying the future Adams Street (Hunter Parcel) residential development, located on Adams Street in St. Helena, California (Site Location Map, Figure 1).

The proposed residential development is to consist of 51 single family residential lots and Lot 52, which is to be developed with 25 apartment units, as shown on the Site Plan, Figure 2. We understand that the proposed single family homes would typically consist of one or two story, wood frame structures with concrete slab-on-grade or raised wood floors. We anticipate that the apartment structures would also be one or two story wood frame structures. The proposed development would also include asphalt paved streets and concrete driveways, underground utilities, and associated improvements. No specific development plans are available at this time, however.

Regional geologic mapping indicates that the project site is underlain by an undetermined thickness of alluvial fan deposits consisting of poorly sorted sands and gravels, with interbedded silts and clays. A regional geologic map of the site and vicinity is shown on Figure 3.

The purpose of our services at this time is to provide a preliminary evaluation of liquefaction potential at the proposed development site, and provide an outline of typical mitigation measures to address the impacts of liquefaction induced ground settlement (if any) on the proposed development.

Liquefaction refers to the sudden, temporary loss of soil shear strength during strong ground shaking. Liquefaction-related phenomena include liquefaction-induced settlement, flow failure, and lateral spreading. These phenomena can occur where there are saturated, loose, granular deposits. Recent advances in liquefaction studies indicate that liquefaction can occur in granular materials with a high, 35 to 50%, fines content (soil particles that pass the #200 sieve), provided the fines exhibit a plasticity index of less than 7. The site is mapped regionally (ABAG, 2018) as having moderate susceptibility to liquefaction, as shown on Figure 4.

1333 No. McDowell Blvd., Suite C ■ Petaluma, California 94954 ■ T (707) 765-6140 F (707) 765-6222

MILLER PACIFIC ENGINEERING GROUP

October 1, 2018

To evaluate soil liquefaction, the seismic energy from an earthquake is compared with the ability of the soil to resist pore pressure generation, known as the Cyclic Resistance Ratio (CRR). The earthquake energy is termed the cyclic stress ratio (CSR) and is a function of the maximum considered earthquake peak ground acceleration (PGA) and depth. Soil resistance to liquefaction is based on its relative density, and the amount and plasticity of the fines (silts and clays). The relative density of cohesionless soil is correlated with the Cone Penetration Test (CPT) tip resistance and Standard Penetration Test (SPT) blow count data measured in the field and corrected for hammer efficiency, overburden and percent fines.

Based on the available regional liquefaction susceptibility mapping and regional geologic mapping, the project site has a moderate risk of experiencing liquefaction and liquefaction induced ground surface settlement during a future strong earthquake.

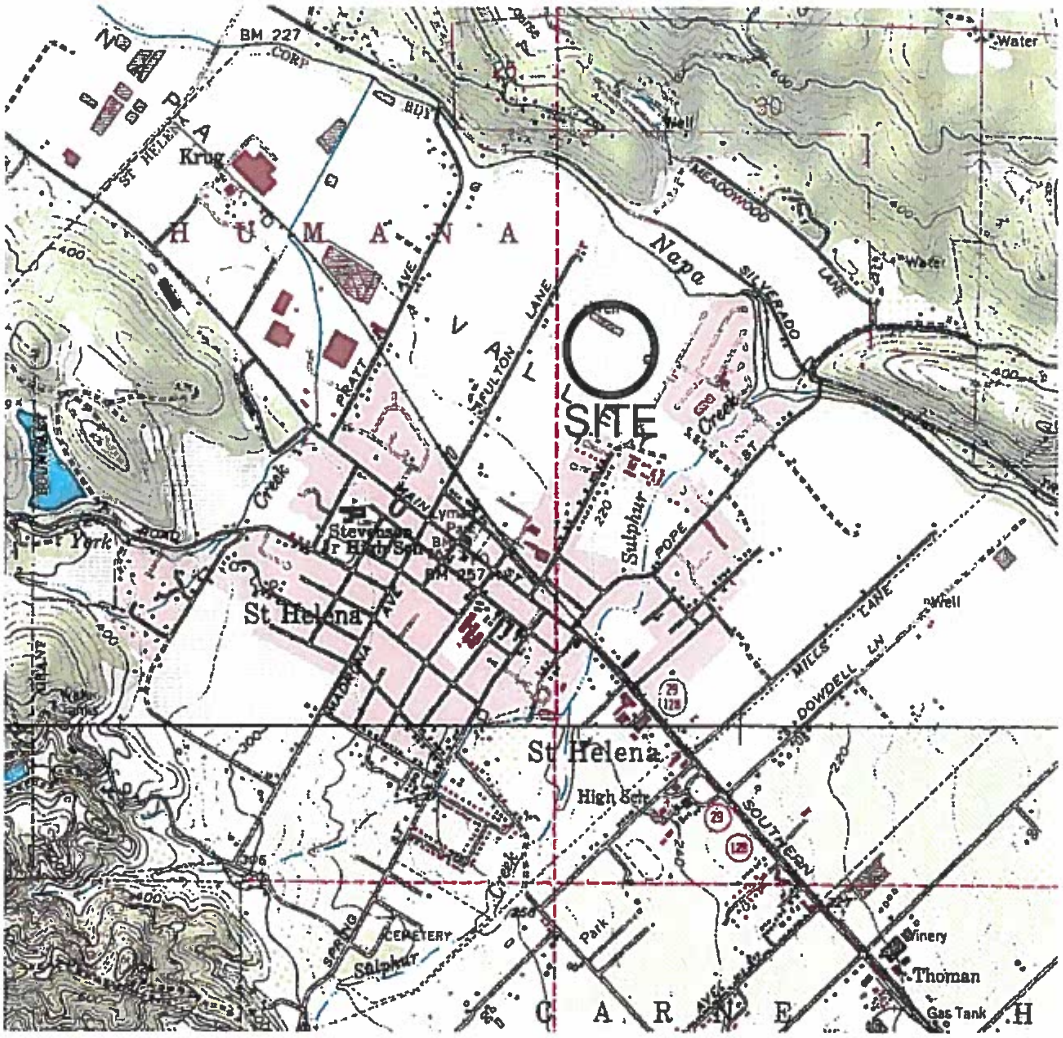
Mitigation of Liquefaction Induced Settlement

For low rise commercial structures and light weight residential structures, mitigation of the impacts of liquefaction induced settlement is typically accomplished by the design of stiff, shallow mat slab or post-tensioned slab foundations or stiff, shallow grid foundations designed to resist distortion and wracking due to differential settlement. If predicted differential settlements are significant, utility connections to structures can be designed to be flexible to allow for some differential movement.

In many cases, liquefaction that occurs in relatively thin lenses or at greater depth beneath the ground surface may not result in settlement of the ground surface, and therefore would not have a negative impact on improvements at the ground surface.

Design Level Geotechnical Investigation

When more detailed plans are available for the proposed residential development, a much more detailed geotechnical study should be undertaken. This study would include much deeper borings and/or Cone Penetration testing, additional soil sampling, laboratory testing, and engineering analyses, including a more detailed evaluation of liquefaction potential and settlement potential based on an evaluation of the deeper soil conditions beneath the site.



If you have any questions, or if we can be of further assistance, please call us at your convenience.

Yours very truly,
MILLER PACIFIC ENGINEERING GROUP

# 1.0 INTRODUCTION

The following report presents the findings of a Phase I Environmental Site Assessment (ESA) performed by EBA Engineering for the property herein identified as Napa County Assessor Parcel Number (APN) 009-030-057. The property is further identified hereinafter as the project site. This ESA was completed for Ben Van Zutphen and the City of St. Helena in conformance with ASTM Standard Practice E1527-13.

## 1.1 PURPOSE

The purpose of this environmental site investigation is to assess the possible contamination of the project site with hazardous or toxic substances or wastes. A site may contain these substances or wastes as a result of current or past site activities, unauthorized dumping or disposal, or migration of contaminants from adjacent or nearby properties.

The Client should be aware that strict interpretation of California and federal legislation and case law may hold the landowner responsible for any toxic liability including future cleanup costs and, potentially, historical assessments and remediation work on the project site. Such statement is not motivated by any condition of the project site but is a general observation of the advisability that property owners and purchasers exercise all appropriate diligence and alertness to hazardous material risks.

This report is not intended to provide the necessary level of detail to be utilized for structural demolition/remodeling or soil or groundwater remediation. For such activities, appropriate regulations should be followed to ensure adequate coverage of material handling, worker and employee safety, airborne contamination during construction, and the precise extent of any contamination for contractor directions. This report conforms to American Society of Testing and Materials (ASTM) Standards E 1527-13 for Phase I Environmental Site Assessments.

In defining a standard of good commercial and customary practice for conducting an environmental site assessment, the goal of the processes established by this practice is to identify recognized environmental conditions, historical recognized environmental conditions and controlled recognized environmental conditions. The term recognized environmental conditions (RECs) refers to the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term historic REC refers to a past release of a hazardous substance or petroleum hydrocarbons that has occurred in connection to the property and has been addressed to the satisfaction of applicable regulatory agencies without restricting use of the property or requiring controls. The term controlled REC refers to a past release of a hazardous substance or petroleum hydrocarbons that has occurred in connection to the property and has been addressed to the satisfaction of applicable regulatory agencies and allowed to remain in place subject to the implementation of required controls. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not

intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

By performing a Phase I ESA of a parcel of real estate with respect to the range of contaminants within the scope of the CERCLA (42 U.S.C. §9601) and petroleum products, a user satisfies one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability.

### 1.2 SCOPE OF WORK

This Phase I ESA was performed in general accordance with the requirements of the ASTM International Designation: E 1527-13, *Standard Practice for Environmental Site Assessment.* To determine the condition of the project site with respect to environmental liability, EBA performed the following tasks:

1) Reviewed past and current land use for indications of the manufacture, generation, use, storage, and/or disposal of hazardous substances;

2) Evaluated the potential for on-site soil and/or groundwater contamination resulting from past and present project site land use activities and, to the extent possible, adjacent off-site operations;

3) Rendered findings and professional opinions regarding the potential for environmental contamination at the project site; and

4) Recommend and perform further investigations (i.e., Phase II ESA), if deemed appropriate to evaluate whether contamination and/or environmental hazards exist at the locations identified.

### 1.3 SIGNIFICANT ASSUMPTIONS

No significant assumptions were made during the performance of this Phase I ESA.

### 1.4 LIMITATIONS, EXCEPTIONS, AND DEVIATIONS

Local, State, and Federal environmental regulations and property conditions can vary significantly over time. Consequently, the conclusions and recommendations presented as a result of this environmental site assessment apply strictly to the environmental regulations and property conditions existing at the time EBA performed this study. EBA assumes that the data obtained and the inferences made during this investigation are reasonable and representative of the property.

EBA makes no warranty, expressed or implied, except that our services have been performed in accordance with generally accepted existing environmental engineering, health and safety principles, and applicable regulations at the time and location of the study. EBA has analyzed the available information using currently applicable engineering techniques.

Please be advised that the recommendations presented herein are based solely on information made available to EBA by others, and includes professional interpretations based on limited research and data. Based on these circumstances, the decision to conduct additional investigative work to substantiate the findings and conclusions presented herein is the sole responsibility of the Client.

No Exceptions or Deviations occurred from the ASTM Standard.

### 1.5 SPECIAL TERMS AND CONDITIONS

This Phase I ESA was conducted in accordance with our executed contract. No special terms or conditions apply.

### 1.6 USER RELIANCE

This report has been prepared solely for the Client and any such unauthorized reliance on or use of this report, including any of its information or conclusions, will be at the third party's risk. For the same reasons, no warranties or representations, expressed or implied in this report, are made to any such third party.

Please note pursuant to Section 4.6 of the *ASTM Standard E 1527-13 for Phase I Environmental Site Assessments,* this report is valid for 180 days from the date noted herein.

### 1.7 REASON FOR PERFORMING PHASE I ESA

It is our understanding that this Phase I ESA was performed as part of a larger Environmental Impact Report (EIR) for the proposed development of the project site.

## 2.0 SITE DESCRIPTION

### 2.1 LOCATION AND LEGAL DESCRIPTION

The project site property consists of a 16.9 acre agricultural parcel of land located on the north side of the city of St. Helena, California. The project site does not have a physical site address and is identified as Napa County APN 009-030-057. The property is partially occupied by a vineyard, while the remaining portion remains undeveloped. Figure 1, Appendix A shows the location of the project site. Figures 2, Appendix A shows the project site boundaries, as shown on the current tax assessor's map. Figure 3, Appendix A shows various pictures of the project side and associated features. Photo plates are also included in Appendix A that show relevant site features.

Legal descriptions of the project site are included in the Preliminary Title Report and are enclosed in Appendix B.

The following presents project site specific information:

Site Location: No Address; Napa County APN 009-030-057

| | |
|---|---|
| Owner: | Dennis R. Hunter |
| Site Occupants: | Currently Unoccupied |
| Zoning: | Medium Density Residential |
| Lot Size: | 16.9 acres |
| County: | Napa |
| USGS Quadrangle: | St. Helena, California |
| Latitude and Longitude: | N 38° 30' 42.12''Latitude & W 122° 27' 52.40''Longitude<br>** Approximate center of project site |

### 2.2 SITE CHARACTERISTICS

The project site is located within the city limits of St. Helena, California in the central-northwestern portion of the Napa Valley. The project site consists of vineyards in the southwest portion of the property and undeveloped grasslands in the northeast portion of the property.

### 2.3 CURRENT USE OF THE PROPERTY

The project site is currently unoccupied and is currently partially utilized for vineyard cultivation.

### 2.4 PHYSICAL SETTING

#### 2.4.1 TOPOGRAPHY

The project site is located in the central portion of the Napa Valley within the City of St. Helena and is generally flat and level with limited topography. The site is at an elevation of approximately 220 feet above mean sea level.

#### 2.4.2 GEOLOGIC SETTING

The project site is located within the Coast Range Geomorphic Province of northern California. The Coast Range Geomorphic Province is generally characterized as a series of northwest trending elongated ridges and valleys that are a result of folding and faulting. The province includes many separate ranges, coalescing mountain masses, and several major structural valleys. The regional structure of the Coast Range is considered to be a number of independent fault blocks with different stratigraphic and structural histories.

The project site is mapped as being composed of Younger alluvial soils consisting of poorly sorted silt, sand, and gravel may overlay portions of the bedrock materials that are the result or weathering and erosion. The alluvial deposits can vary in thickness and are underlain by the Sonoma Volcanics geologic formation. The Sonoma Volcanics are Pliocene in Age and consist of a variety of volcanic rocks including basalt, rhyolite, andesite, tuff and other volcanic rocks. In some areas the volcanics are interlayered with tuff and volcanic sedimentary deposits.

Based on the surface topography and near site investigations, groundwater in the area of the project site is anticipated to flow northeast towards the Napa River. Groundwater in the area of the project site has been recorded to vary from approximately one to 17 feet below

ground surface. Depths of groundwater are expected to be influenced by topography and may vary seasonally.

#### 2.4.3 SURFACE WATER BODIES/FLOODPLAINS

The Napa River is located northeast of the project site. A review of the Federal Emergency Management Agency Flood Insurance Rate Map [Map No. 06055C0264E] indicates the project site is located within an area of reduced flood hazard due to the presence of a flood control levee.

#### 2.4.4 HYDROGEOLOGY

Based on the surface topography and subsurface investigations conducted in the surrounding area, groundwater in the area of the project site is anticipated to flow to the north to northeast towards the Napa River.

### 2.5 DESCRIPTION OF STRUCTURES, ROADS AND IMPROVEMENTS

The project site consists of a 16.9 acre agricultural property, and contains no permanent structures or significant property improvements. An unpaved pedestrian path begins at the end of Adams Street and runs along the entire length of the northwest side of the project site. The pathway is located on top of a constructed levee that was constructed by the City of St. Helena for the control of flooding from the Napa River.

The project site contains approximately seven acres of developed vineyards that are located on the southern side of the project site. The remainder of the project site includes approximately 9.9 acres of undeveloped grasslands.

There is a water supply well located on the northern side of the project site. The well appears to be inoperable.

### 2.6 CURRENT ADJOINING PROPERTIES

The project site is bound on the north and west by agricultural properties that include developed vineyards and on south and east by developed residential properties.

## 3.0 USER PROVIDED INFORMATION

### 3.1 TITLE RECORDS

A Preliminary Title Report dated March 27, 2014 was reviewed for the project site. Title records dating from March 27, 2014 to the present were reviewed on the Napa County Recorder's Office web site. A copy of the report is enclosed in Appendix B.

### 3.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS (AULS)

A review of Title information was performed using available public documents from the Napa County Recorder's Office and the Preliminary Title Report dated March 27, 2014. No environmental liens or Use Limitations were noted in record information reviewed for this assessment.

### 3.3 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

The project site property is owned by Dennis R. Hunter.

The project site is currently unoccupied.

### 3.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The ASTM Standard requires an evaluation of environmental issues that would result in a devaluation of the property. There were no issues of environmental concern observed at the project site identified as part of this assessment that would be expected to affect the full and fair use and value of the project site property.

### 3.5 PREVIOUS ENVIRONMENTAL REPORTS

No environmental reports were available for the project site.

### 3.6 PHASE I QUESTIONNAIRE

A Phase I Questionnaire was completed by the prospective buyer, Ben VanZutphen. This questionnaire has been included in Appendix C.

## 4.0 RECORDS REVIEW

### 4.1 ENVIRONMENTAL RECORDS SOURCES

EBA contacted Environmental Data Resources (EDR) of Southport, Connecticut, to conduct a comprehensive Federal, state and local environmental records search for the project site and properties within a one-mile radius of the project site. The purpose of the database search was to identify potential exposure to the subject property from various environmental concerns and/or hazardous materials releases. The following databases and environmental programs are included in the database search:

- National Priority List
- Proposed National Priority List Sites
- NPL Federal Superfund Liens
- National Priority List Deletions
- CERCLIS Comprehensive Environmental Response, Compensation, & Liability Information System
- Federal Facility Site Information listing
- CERC-NFRAP CERCLIS No Further Remedial Action Planned

The Environmental Record Search (ERS) consists of a map showing the location of the identified sites relative to the project site, a summary listing the identified sites by street names, and a final report describing the sources investigated and the resulting findings. It should be noted that the findings are those noted on the regulatory database(s) and that accuracy and completeness of record information varies among information sources, including government sources. The ERS findings are supplemented by interviews with owners/occupants/employees, and local government officials. Agency records review and historical data review are also used to ascertain the potential environmental significance of sites reported in the ERS. Results of the record search are presented in Appendix D.

The project site is not identified in environmental databases or regulatory agency files as having issues of environmental concern. Several properties in the surrounding area were identified within a one-mile radius of the project site boundary as having environmental concerns. Relevant near site properties are further discussed below.

### 4.2 PROJECT SITE

The project site property was not identified in regulatory agency files or databases as having environmental concerns and there is no indication of the historic use, generation or disposal of hazardous materials and/or waste at the project site. Further there is no indication of the current or historic use of either underground or aboveground fuel storage tanks at the project site.

It should be noted that there are records of the use of agricultural pesticides at the project site that have been applied to the vineyard. Records obtained from the Napa County Agricultural Commissioner's Office include the use of herbicides, fungicides and miticides. The use of agricultural pesticides is regulated and overseen by the Napa County Agricultural Commissioner's Office in accordance with Title 3 of the California Code of Regulations. It does not appear that any agricultural chemicals are stored or mixed at the project site. Copies of the available Pesticide Use Reports are included in Appendix E.

It should be further noted that historic records, including historic aerial photographs, indicate that a portion of the project site was used as an orchard dating from the 1940's. Agricultural operations conducted during this time period often used agricultural pesticides, such as organochlorines and arsenic, which are long lived and persistent in the environment. The use of these materials would have been at a time period that no regulatory oversite or reporting were required. No records of such use was encountered in regulatory records reviewed for this assessment and further no testing for these compounds was conducted as part of this assessment.

#### 4.2.1 PROPERTIES WITHIN THE APPROXIMATE MINIMUM SEARCH DISTANCE

Several near site properties were identified in EDR Radius Map Report as having environmental concerns within the minimum search distance from the project site property as required by ASTM Standard 1527-13. A review of available information regarding the

identified properties indicates that all of the identified properties are located at a distance of greater than 1,000 feet from the project site. In addition, regulatory agency records indicate that all of the identified site have completed environmental investigation and remediation with regulatory oversight and direction from applicable regulatory agencies. Given the proximity, case status and hydraulically co-gradient nature of sites identified within the approximate minimum search distance it is unlikely that these sites will present an environmental threat to the project site.

**Additional Sites**

Several additional sites within a one-mile radius of the project site were identified in regulatory agency files and databases as having issues of environmental concern. A review of the available information indicates that many of these properties are identified as generators of hazardous materials and/or wastes and are regulated for such use, storage and disposal. Several of the other identified sites consist of closed contaminant sites that have been characterized and closed with regulatory oversight. These sites are seen as posing no environmental threat to the project site.

#### 4.2.2 ORPHAN SITES

EDR orphan site designation indicated insufficient address information for an identified site to be plotted. EBA reviewed the Orphan Sites identified in the Radius Map Report. Neither the project site nor any near site properties were identified in the Orphan Summary.

#### 4.2.3 VAPOR ENCROACHMENT SCREENING

Preliminary vapor encroachment screening pursuant to ASTM Standard 2600-10 was conducted for the project site property in conjunction with this assessment. Tier 1 vapor screening was performed to determine if vapor intrusion was a threat to the present or future use of the project site due to the presence of the documented releases of petroleum hydrocarbons at near site properties. The Tier 1 screening is based on the following factors:

- Types and concentrations of contaminants present
- Soil characteristics
- Depth to groundwater
- Location of the project site property in relation to the known or suspected contaminants
- Vapor conduits
- Cleanup status of the contaminated property

ASTM-2600 sets a minimum distance of 1/10 mile (528 feet) for petroleum hydrocarbons and 1/3 mile (1,742 feet) for volatile organic compounds as an initial criteria distance for screening vapor threats. A review of the available information indicates that there are several properties within these minimum search distances that have documented releases of contaminants to soil and groundwater. However, no properties identified as having releases of petroleum hydrocarbons were identified within 528 feet of the project site boundaries. A review of available information regarding the remaining sites with historic volatile organic compound impacts within 1,742 feet of the project site boundaries, indicates

that all of the sites have been investigated and remediated to the satisfaction of applicable regulatory agencies and granted case closure status by the regulating agencies. There is no indication that the releases at these properties have impacted the project site and all are seen as posing a minimal threat to the project site.

Based on this information the threat of vapor intrusion to the project is seen as unlikely.

### 4.3 ADDITIONAL ENVIRONMENTAL RECORDS SOURCES - INTERVIEWS & REGULATORY AGENCY REVIEWS

Supplemental interviews and research were performed based on findings from the environmental records search. The interview and research process targeted both project site and regulatory personnel and regulatory agencies in an attempt to ascertain the nature and status of known environmental issues. Regulatory agencies and individuals contacted during the information review process included:

- Mr. Ben VanZutphen – Prospective Developer of Project Site
- Noah Housh – City of St. Helena Planning Department
- St. Helena Planning and Building Department
- Napa County Recorder's Office
- Napa County Planning, Building and Environmental Services Website
- Napa County Agricultural Commissioner's Office
- San Francisco Bay Regional Water Quality Control Board
- California Department of Toxic Substances Control
- California State Water Resources Control Board Geotracker Web Site
- California Department of Toxic Substances Control Envirostor Website

Regulatory agency files were reviewed at the agencies listed above. The findings from the file reviews are as follows:

**ST. HELENA PLANNING AND BUILDING DEPARTMENT**

Development and building records were available and reviewed at the St. Helena Planning and Building Department that dated from the mid 1980's to the present. The majority of the available records are related to a flood mitigation project that occurred in the early 2000's on the parcel adjacent to the northeast of the project site.

**NAPA COUNTY ASSESSOR'S OFFICE**

Development and tax records were reviewed at the Napa County Assessor's Office. No significant data gaps were noted within the available information.

**NAPA COUNTY RECORDER'S OFFICE**

Recorded deeds and other relevant site documentation were reviewed at the Napa County Recorder's Office. No environmental liens or deed restrictions were noted in the available information.

**NAPA COUNTY AGRICULTURAL COMMISSIONER'S OFFICE**
Pesticide Use Reports for the use and applicable of agricultural pesticides were obtained from the Napa County Agricultural Commissioner's Office.

**SAN FRANCISCO BAY REGIONAL WATER QUALITY CONTROL BOARD**
Files available at the San Francisco Bay Regional Water Quality Control Board are duplicated and uploaded to GeoTracker. Therefore, available information for near site properties were reviewed on the GeoTracker web site.

**CALIFORNIA DEPARTMENT OF TOXIC SUBSTANCES CONTROL**
No files were available for the project site property at this agency.

**CALIFORNIA STATE WATER RESOURCES CONTROL BOARD GEOTRACKER WEB SITE DATABASE**
The Geotracker web site was consulted to determine if either the project site or surrounding properties were identified in this environmental database as having environmental concerns. The project site was not identified. Several near site properties were identified.

**CALIFORNIA DEPARTMENT OF TOXIC SUBSTANCES CONTROL ENVIROSTOR WEB SITE DATABASE**
The Envirostor web site was consulted to determine if either the project site or surrounding properties were identified in this environmental database as having environmental concerns. The project site was not identified in this environmental database. One nearby site was identified.

### 4.4 PHYSICAL SETTING SOURCES
Several sources of information were reviewed to establish the physical setting of the project site property including the following:

- Google Earth
- USGS Topographic Maps
- Published Geologic references

### 4.5 HISTORICAL USE INFORMATION FOR THE PROJECT SITE
The history of the project site was researched to ascertain the past use from the present back to the property's first developed use. Reasonably ascertainable historical information sources were reviewed to determine the history of the project site property. The following historical sources were reviewed as part of this assessment:

- Historical aerial photographs
- Historical Maps and research
- Interviews with persons knowledgeable about the project site.

#### 4.5.1 HISTORICAL SUMMARY
The first developed use of the project site appears to start sometime prior to 1947. Historic aerial photographs indicate that the project site was largely utilized for cultivation purposes, notably vineyards and orchards. From the available information it appears that the project

site has remained generally undeveloped with limited property use, with the exception of vineyards that are currently present on the southwestern portion of the project site.

As discussed herein the project site was also associated with the construction of a flood control project that included a constructed levee that is located along the western and northern sides of the project site. The flood control project also includes a stormwater catch basin that is reported to collect stormwater runoff from the developed portions of St. Helena located to the south and east of the project site. The flood control basin then pumps the collected water to the Napa River located to the north and east of the project site.

The history and use of the project site is known and documented through several means including available public records and historic aerial photographs. It should be recognized that there are data gaps in the history and use of the project site that are due to the passage of time, a lack of available property owners and a lack of historical documentation regarding the historic use of the project site. These data gaps are seen as insignificant.

### 4.5.2 Historical Aerial Photographs

Historical aerial photographs were obtained from Environmental Data Resources for the years 1947, 1953, 1958, 1968, 1973, 1982, 1993, 2006, 2010, and 2014. Aerial photographs can indicate changes in land use of a site over time. The following presents our findings from a review of the available photographs.

**1947 Photograph**

The 1947 photograph indicates the presence of an orchard in the northeast portion of the project site. The remainder of the project site is visible as undeveloped grasslands. It should be noted that a series of holding ponds are visible along the southeastern border of the project site. The surrounding area appears to consist of low density residential developments towards the southeast and agricultural development towards the north and west.

**1953 Photograph**

The 1953 photograph indicates no significant changes to the project site from the 1947 photograph. The adjacent and surrounding area appears generally unchanged.

**1958 Photograph**

The 1958 photograph indicates no significant changes to the project site from the 1953 photograph. The adjacent and surrounding area appears generally unchanged.

**1968 Photograph**

The 1968 photograph indicates that the orchard previously located in the northeast portion of the project site has been removed. The remaining portion of the project site and the surrounding area remains generally unchanged.

**1973 Photograph**

The 1973 photograph indicates the project site with developed vineyards in the central and southwest portions of the property. The remaining portion of the project site remains unchanged. It should be noted that the holding ponds southeast of the project site have

been removed in the 1973 photograph. The adjacent and surrounding area appears to be in the initial stages of suburban development.

**1982 PHOTOGRAPH**
The 1982 photograph indicates the appearance of a holding pond in the northeast portion of the project site. The greater surrounding area appears to have undergone significant residential development since the 1973 photograph.

**1993 PHOTOGRAPH**
The 1993 photograph indicates no significant changes to the project site from the 1982 photograph. The greater surrounding area appears generally unchanged.

**2006 PHOTOGRAPH**
The 2006 photograph indicates no significant changes to the project site from the 1993 photograph. The adjacent and surrounding area appears to have undergone significant residential development.

**2010 PHOTOGRAPH**
The 2010 photograph indicates that a portion of the vineyard in the northeast portion of the project site have been removed and the area appears to have been regraded. The adjacent and surrounding area appears generally unchanged.

**2014 PHOTOGRAPH**
The 2014 photograph indicates no significant changes to the project site from the 2010 photograph. The adjacent and surrounding area appears generally unchanged.

Copies of the aerial photographs are included in Appendix F.

### 4.5.3 SANBORN FIRE INSURANCE MAPS
No Sanborn Fire Insurance Map coverage is available for the project site property.

### 4.6 HISTORICAL USE INFORMATION FOR ADJOINING PROPERTIES
Historic research was ascertained for adjoining properties by reviewing the historical documents referenced above.

## 5.0 SITE RECONNAISSANCE

### 5.1 METHODOLOGY AND LIMITING CONDITIONS
EBA personnel conducted site inspections on February 12, 2018. The site reconnaissance entailed viewing the project site and the surrounding areas. The site was inspected to observe the property and to identify discernible or potential environmental concerns. In addition, a reconnaissance of adjacent properties was performed to confirm surrounding land use and conditions. Information was obtained by interviews with knowledgeable individuals regarding the past and current uses of the project site. No limitations were encountered that limited the extent of the property inspection. Findings from the site reconnaissance activities are summarized in the following sections.

### 5.2 CURRENT USE OF THE PROPERTY
The project site is currently utilized as a vineyard.

### 5.3 EXTERIOR OBSERVATIONS
As discussed the project site consists of a developed vineyard with some grasslands. There are no structures present at the project site. At the time of the property inspection the project site was observed to be clean and well maintained with no issues of environmental concern.

### 5.4 INTERIOR OBSERVATIONS
No structures are present at the project site, therefore no interior inspections or observations were made as part of this assessment.

### 5.5 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS
There were no hazardous substances or petroleum products observed at the project site during the site reconnaissance.

### 5.6 ODORS
No odors were observed at the project site during the site reconnaissance.

### 5.7 POOLS OF LIQUID
No pools of free liquid were observed at the project site during the site reconnaissance.

### 5.8 DRUMS
No drums were observed at the project site during the site reconnaissance.

### 5.9 UNIDENTIFIED SUBSTANCE CONTAINERS
No unidentified drums or containers were observed at the project site during the site reconnaissance.

### 5.10 INTERIOR STAINS OR CORROSION
No stained soil or corrosion were observed at the project site during the site reconnaissance.

### 5.11 DRAINS AND SUMPS
No drains or sumps were observed at the project site during the site reconnaissance.

### 5.12 PITS, PONDS OR LAGOONS
No pits, ponds or lagoons were observed at the project site during the site reconnaissance.

### 5.13 STAINED SOIL OR PAVEMENT
There was no stained soil or pavement observed at the project site during the site reconnaissance.

### 5.14 SOLID WASTE
No solid waste was observed at the project site during the site reconnaissance.

### 5.15 STRESSED VEGETATION
No areas of stressed vegetation were observed at the project site during the site reconnaissance.

### 5.16 WELLS
A water supply well is located on the northern portion of the project site. At the time of the property inspection, the well was not in use.

### 5.17 SEPTIC SYSTEMS
There is no records of septic systems at the project site.

### 5.18 ELECTRICAL TRANSFORMERS
A pole mounted electrical transformer is present at the northern portion of the project site that appears to be associated with the power infrastructure for the water supply well. At the time of the property inspection the transformer appeared to be intact with no indication of leakage or failure.

### 5.19 UNDERGROUND STORAGE TANKS
There is no record of the current or historic use of underground fuel tanks at the project site.

### 5.20 ABOVE GROUND STORAGE TANKS
No above ground fuel tanks were observed at the project site during the site visit.

### 5.21 UTILITIES
The only utility observed at the project site is the power pole and transformer that services the water supply well.

### 5.22 FILL MATERIALS
It appears that the construction of the flood control levee and associated work included regrading and filling portions of the project site. It is assumed that the fill materials were from the flood control project and did not include imported fill materials.

### 5.23 ASBESTOS
No structures are currently present at the project site, therefore there is no likelihood of asbestos containing materials being present.

### 5.24 LEAD PAINT
No structures are currently present at the project site, therefore there is no likelihood of lead paint being present.

### 5.25 RADON
The U.S. Environmental Protection Agency Radon Zone Classification for Napa County is 2, which is defined as having a moderate potential to have radon concentration between 2 to 4 picocuries per liter (pCi/L). The U.S. EPA action level for radon is 4.0 pCi/L. Based on

the radon concentration information, it is unlikely but possible that radon abatement activities would be required at the project site; however it should be noted that no testing for radon has been performed.

## 6.0 DISCUSSION

Development at the project site likely began prior to the 1947 aerial photograph. Sequential aerial photographs starting from 1947 indicate the presence of an orchard and vineyards at the project site. No structures currently exist on the project site, and there is no evidence that indicates the presence of historical structures at the property. Currently, a portion of the project site appears unutilized, while the remaining portion appears to be used in the cultivation of grapes.

The project site is not identified in regulatory agency databases or files as having issues of environmental concern and there is no indication of the use, generation or disposal of hazardous materials or wastes at the project site. Further, there is no indication of the current or historic use of underground fuel storage tanks at the project site.

Several sites are identified in the surrounding areas as having issues of environmental concern. These sites are located more than 1,000 feet from the boundaries of the project site, and are listed in regulatory databases as closed investigations. From a review of the available information all the identified sites in the surrounding area are seen as posing a minimal threat to the project site.

It should be noted that there are records of the use of agricultural pesticides at the project site that have been applied to the vineyard. Records obtained from the Napa County Agricultural Commissioner's Office include the use of herbicides, fungicides and miticides. The use of agricultural pesticides is regulated and overseen by the Napa County Agricultural Commissioner's Office in accordance with Title 3 of the California Code of Regulations. It does not appear that any agricultural chemicals are stored or mixed at the project site. Additionally, historical photographs indicate the presence of an orchard on the project site in the Late 1940's. Though the usage of organochlorine pesticides may have historically occurred, it is unlikely that any significant concentrations would be present onsite.

## 7.0 CONCLUSIONS/RECOGNIZED ENVIRONMENTAL CONDITIONS

EBA Engineering has performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 for the property identified as APN 009-030-057. Any exceptions to, or deletions from, this practice are described herein. Based on conclusions from the environmental records search, historical data review, and the site reconnaissance we find no evidence of recognized environmental conditions in connection with the project site property.

# 8.0 NON-SCOPE CONSIDERATIONS

## 8.1 NON-SCOPE CONSIDERATIONS

The following environmental issues are outside the scope (non-scope considerations) of the standard practice defined by ASTM Standard Practice E 1527-13:

- Regulatory Compliance;
- Cultural and Historic Resources;
- Industrial Hygiene;
- Health and Safety;
- Ecological Resources;
- Endangered Species;
- Indoor Air Quality;
- High Voltage Power Lines;
- Biological Agents; and
- Mold

EBA identified no ASTM non-scope considerations/RECs in connection with the project site that represent potential business environmental risk but are outside the standard scope of services prescribed by ASTM Standard Practice E 1527-13.

## 8.2 ADDITIONAL SERVICES

No additional services beyond the standard scope of services prescribed by ASTM Standard Practice E 1527-13 were requested by the Client.

# PRELIMINARY REPORT

Order Number : 463973
Title Unit Number : 7931

Buyer/Borrower Name: :
Seller Name: : Dennis R. Hunter

Property Address: APN# 009-030-057, Napa, California

In response to the above referenced application for a Policy of Title Insurance, Stewart Title of California, Inc. hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a Policy or Policies of Title Insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referenced to as an Exception on Schedule B or not excluded from coverage pursuant to the printed Schedules, Conditions, and Stipulations of said Policy forms.

The printed Exceptions and Exclusions from the coverage and Limitations on covered Risks of said policy or policies are set forth in Exhibit A attached. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limits of Liability for certain coverages are also set forth in Exhibit A. Copies of the policy forms should be read. They are available from the office which issued this report.

Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Exhibit A of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters, which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.

This report, (and any supplements or amendments thereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance a binder or commitment should be requested.

Dated as of: March 27, 2014 at 7:30 a.m.

# SCHEDULE A

**The estate or interest in the land hereinafter described or referred to covered by this report is:**

Fee

**Title to said estate or interest at the date hereof is vested in:**

**Dennis R. Hunter, dealing with his separate property, who acquired title as an unmarried man**

# LEGAL DESCRIPTION

**The land referred to herein is situated in the State of California, County of Napa, City of Napa, and described as follows:**

Portions of that certain real property situate in the City of St Helena, County of Napa, State of California being a portion of Parcel One described in the Grant Deed to the City of St Helena recorded March 15, 2005 at Document No. 2005-0009620 Official Records Napa County and a portion of the lands described in the Grant Deed to Dennis R. Hunter recorded December 7, 2001, at Document No. 2001-0043130 Official Records Napa County, said portions being more particularly described as follows:

COMMENCING at the southwestern corner of the above reference lands to Dennis R. Hunter; thence along the southwestern line of said lands S60°50'08"E, 50.00 feet to the True Point of Beginning; thence leaving last said line N29°14'27"E, 851.74 feet; thence N47°03'45"E, 107.96 feet; thence 560°46'20"E, 22.90 feet; thence N32°22'33"E, 450.36 feet; thence N60°54'21"W, 10.02 feet; thence N32°22'33"E, 177.79 feet; thence N50°49'49"E, 264.81 feet to the general southwestern line of the above referenced Parcel One to the City of St Helena; thence along said general southwestern line S71°07'20"E, 2.96 feet; thence leaving last said line N41°18'58"E, 254.98 feet; thence N49°42'50"E, 48.52 feet; thence N60°38'24"E, 44.19 feet; thence S 7729°32'38"E, 64.19 feet; thence S84°21'35"'E, 142.68 feet; thence S78°16'37"E, 64.79 feet; thence S70°20'25"E, 86.57 feet; thence S47°50'36"E, 68.79 feet; thence S62°05'04"E, 77.73 feet to the southeastern line of said Parcel One to the City of St. Helena; thence along last said line S28°56'09"W, 279.88 feet to the northeastern corner of said lands to Dennis R. Hunter; thence along the general southeastern and southwestern lines of said lands to Dennis R. Hunter N60°46'20"W, 234.63 feet; thence S29°13'40"W, 1258.77 feet; thence N60°51'11"W, 449.33 feet; thence S29°36'59"W, 665.66 feet; thence N60°50'08"W, 64.96 feet to the True Point of Beginning.

Assessor's Parcel Number 009-030-057-000

(End of Legal Description)

# SCHEDULE B

**At the date hereof, exceptions to coverage in addition to the printed exceptions and exclusions contained in said policy or policies would be as follows:**

**Taxes:**

A. Property taxes, which are a lien not yet due and payable, including any assessments collected with taxes, to be levied for the fiscal year 2014 – 2015.

B. General and Special City and/or County taxes, including any personal property taxes and any assessments collected with taxes, for the fiscal year 2013 - 2014:

| | | |
|---|---|---|
| 1st Installment: | $11,242.63 | Paid |
| 2nd Installment: | $11,242.63 | Open |
| Parcel No.: | 009-030-057 | |
| Code Area: | 003-000 | |

C. Assessments, if any, for Community Facility Districts affecting said land which may exist by virtue of assessment maps or notices filed by said districts. Said assessments are collected with the County Taxes.

D. The lien of supplemental taxes, if any, assessed pursuant to the provisions of Chapter 3.5 (commencing with Section 75) of the Revenue and Taxation Code of the State of California.

**Exceptions:**

1. Any lien, or right to a lien, for services, labor, or material heretofore or hereafter furnished, imposed by law and not shown by the Public Records

2. An easement for public utilities and rights incidental thereto in favor of Pacific Telephone and Telegraph Company as set forth in a document recorded March 28, 1930 in Book 49 at Page 169 of Official Records, affects as described therein.

3. An easement for underground water pipeline and rights incidental thereto in favor of the City of St. Helena as set forth in a document recorded December 5, 1972, in Book 895 at Page 383 of Official Records, affects as described therein.

4. The matters contained in an instrument entitled “Hunt Avenue Storm Drain Reimbursement Agreement” dated November 14, 1995, by and between the City of St. Helena and St. Helena Office Park, a California general partnership and B & E Properties, a California general partnership upon the terms therein provided recorded November 29, 1995, as Instrument 1995-026769 of Official Records.

5. The matters contained in an instrument entitled “Temporary Construction Easement” dated December 9, 2008, by and between Dennis R. Hunter, Grantor and the City of St. Helena, Grantee upon the terms therein provided recorded April 17, 2009, as Instrument 2009-0009317 of Official Records.

   Affects as shown on map attached thereto

6. The matters contained in an instrument entitled "Utility Easement Agreement" dated December 9, 2009, by and between Dennis R. Hunter, Grantor and the City of St. Helena, Grantee upon the terms therein provided recorded April 17, 2009, as Instrument 2009-0009318 of Official Records.

   Affects as shown on map attached thereto.

7. Deed of Trust to secure an indebtedness in the amount shown below, and any other obligations secured thereby:

| | |
|---|---|
| Amount: | $10,000,000.00 |
| Dated: | May 12, 2009 |
| Trustor: | Dennis R. Hunter, dealing with his separate property |
| Trustee: | Stewart Title of California, Inc. |
| Beneficiary: | First Community Bank |
| Recorded: | May 19, 2009 as Instrument No. 2009-0012656 of Official Records |
| Loan No.: | 0001 801006 06 |

   The above deed of trust is reflected as an equity line loan or a revolving line of credit. Prior to final payoff we will require a written statement from the beneficiary that the account has been closed, the enclosed indemnity (for refinance purposes only) signed by the owner/trustor, and or a full reconveyance must be submitted for recording concurrent with payoff.

8. The matters contained in an instrument entitled "Temporary Construction Easement" dated December 9, 2008, by and between City of St. Helena and Dennis R. Hunter upon the terms therein provided recorded April 17, 2009 as Instrument No. 2009-0009317, of Official Records.

9. The matters contained in an instrument entitled "Utility Easement Agreement" dated December 9, 2008, by and between City of St. Helena and Dennis R. Hunter upon the terms therein provided recorded April 17, 2009 as Instrument No. 2009-0009318, of Official Records.

10. Matters which may be disclosed by an inspection or by a survey of said land satisfactory to this Company, or by inquiry of the parties in possession thereof.

11. Rights of parties in possession.

(End of Exceptions)

## NOTES AND REQUIREMENTS

A. If an Owners Policy will be requested, please be aware that unless instructed otherwise, we will issue a CLTA Standard Coverage Owners Policy. If a different form of policy is contemplated for this transaction, please advise and contact your title officer for additional requirements.

B. There are no conveyances affecting said land, recorded with the County Recorder within 24 months of the date of this report.

C. This report can be used as an expedited search/starter in a subsequent sale.

D. This report is preparatory to the issuance of an ALTA loan Policy. We have no knowledge of any fact which would preclude the issuance of the policy with CLTA Endorsement Forms 100 and 116 and if applicable, 115 and 116.2 attached.

E. The charge for a policy of title insurance, when issued through this title order, will be based on the Basic Rate.

F. The map attached, if any, may or may not be a survey of the land depicted hereon. Stewart Title expressly disclaims any liability for loss or damage which may result from reliance on this map except to the extent coverage for such loss or damage is expressly provided by the terms and provisions of the title insurance policy, if any, to which this map is attached.

G. A Preliminary Change of Ownership Report must be completed by the transferee (buyer) prior to the transfer of property in accordance with the provisions of Section 480.3 of the Revenue and Taxation Code. The Preliminary Change of Ownership Report should be submitted to the recorder concurrent with the recordation of any document effecting a change of ownership. If a document evidencing a change of ownership (i.e. Deed, Affidavit-Death Joint Tenant) is presented to the recorder for recording without a preliminary change of ownership report, the recorder may charge an additional $20.00

H. If your property is in San Francisco, it is the requirement of the City and County of San Francisco that a Transfer Tax affidavit to be completed and signed by the Grantor for each deed submitted for recording. This is an addition to a Preliminary Change of Ownership Report.

In addition to County Transfer Tax, any conveyance of the herein described property may be subject to a City Transfer and/or Conveyance Tax, as follows.

| | |
|---|---|
| Alameda | $12.00 per thousand |
| Albany | $11.50 per thousand |
| Berkeley | $15.00 per thousand |
| Cloverdale | $1.10 per thousand |
| Cotati | $1.90 per thousand |
| Culver City | $4.50 per thousand |
| Hayward | $4.50 per thousand |
| Los Angeles | $4.50 per thousand |
| Mountain View | $3.30 per thousand |
| Oakland | $15.00 per thousand |
| Palo Alto | $3.30 per thousand |
| Petaluma | $2.00 per thousand |
| Piedmont | $13.00 per thousand |

| | |
|---|---|
| Pomona | $2.20 per thousand |
| Redondo Beach | $2.20 per thousand |
| Richmond | $7.00 per thousand |
| Riverside | $1.10 per thousand |
| Sacramento | $2.75 per thousand |
| San Leandro | $6.00 per thousand |
| City and County of San Francisco | Up to $250,000 = $5.00 per thousand<br>$250,000 to $1,000,000 = $6.80 per thousand<br>$1,000,000 to $5,000,000 = $7.50 per thousand<br>$5,000,000 to $10,000,000 = $20.00 per thousand<br>Above $10,000,000 = $25.00 per thousand<br>(Do not add the additional $1.10 for County Tax, it is included.) |
| San Jose | $3.30 per thousand |
| San Mateo | $5.00 per thousand |
| San Rafael | $2.00 per thousand |
| Santa Monica | $3.00 per thousand |
| Santa Rosa | $2.00 per thousand |
| Sebastopol | $2.00 per thousand |
| Vallejo | $3.30 per thousand |
| Waterford | $0.55 per thousand |
| Winters | $1.10 per thousand |
| Woodland | $1.10 per thousand |

Additional Requirements for "Short Sale" Transactions in which a lender will accept less than the outstanding balance of its loan as full satisfaction of the obligation:

The Company will require, prior to the issuance of a policy of title insurance, evidence that the first-position trust deed holder has received and acknowledged all payments to be made to subordinate-position lien holders, regardless of whether such payments are to be made from proceeds or from contributions by real estate brokers and/or buyers in the subject transaction, or from other third-party sources. Evidence shall include but not be limited to: (a) a written demand from the first-position trust deed holder acknowledging and approving payments to subordinate-position lien holders from proceeds and otherwise; or (b) a supplemental letter or amended demand from the first-position lien holder acknowledging payments to be made to subordinate lien holders from sources other than proceeds (including broker commissions and additional buyer deposits).

## CALIFORNIA "GOOD FUNDS" LAW

California Insurance Code Section 12413.1 regulates the disbursement of escrow and sub-escrow funds by title companies. The law requires that funds be deposited in the title company escrow account and available for withdrawal prior to disbursement. Funds received by Stewart Title of California, Inc. via wire transfer may be disbursed upon receipt. Funds received via cashier's checks or teller checks drawn on a California Bank may be disbursed on the next business day after the day of deposit. If funds are received by any other means, recording and/or disbursement may be delayed, and you should contact your title or escrow officer. All escrow and sub-escrow funds received will be deposited with other escrow funds in one or more non-interest bearing escrow accounts in a financial institution selected by Stewart Title of California, Inc.. Stewart Title of California, Inc. may receive certain direct or indirect benefits from the financial institution by reason of the deposit of such funds or the maintenance of such accounts with the financial institution, and Stewart Title of California, Inc. shall have no obligation to account to the depositing party in any manner for the value of, or to pay to such party, any benefit received by Stewart Title of California, Inc.. Such benefits shall be deemed additional compensation to Stewart Title of California, Inc. for its services in connection with the escrow or sub-escrow.

If any check submitted is dishonored upon presentation for payment, you are authorized to notify all principals and/or their respective agents of such nonpayment.

**4 4STG Privacy Notice 1 (Rev 01/26/09) Stewart Title Companies**

**WHAT DO THE STEWART TITLE COMPANIES DO WITH YOUR PERSONAL INFORMATION?**

Federal and applicable state law and regulations give consumers the right to limit some but not all sharing. Federal and applicable state law regulations also require us to tell you how we collect, share, and protect your personal information. Please read this notice carefully to understand how we use your personal information. This privacy notice is distributed on behalf of the Stewart Title Guaranty Company and its affiliates (the Stewart Title Companies), pursuant to Title V of the Gramm-Leach-Bliley Act (GLBA).

The types of personal information we collect and share depend on the product or service that you have sought through us. This information can include social security numbers and driver's license number.

All financial companies, such as the Stewart Title Companies, need to share customers' personal information to run their everyday business—to process transactions and maintain customer accounts. In the section below, we list the reasons that we can share customers' personal information; the reasons that we choose to share; and whether you can limit this sharing.

| Reasons we can share your personal information | Do we share? | Can you limit this sharing? |
|---|---|---|
| **For our everyday business purposes**— to process your transactions and maintain your account. This may include running the business and managing customer accounts, such as processing transactions, mailing, and auditing services, and responding to court orders and legal investigations. | Yes | No |
| **For our marketing purposes**— to offer our products and services to you. | Yes | No |
| **For joint marketing with other financial companies** | No | We don't share |
| **For our affiliates' everyday business purposes**— information about your transactions and experiences. Affiliates are companies related by common ownership or control. They can be financial and nonfinancial companies. *Our affiliates may include companies with a Stewart name; financial companies, such as Stewart Title Company* | Yes | No |
| **For our affiliates' everyday business purposes**— information about your creditworthiness. | No | We don't share |
| **For our affiliates to market to you** | Yes | No |
| **For nonaffiliates to market to you.** Nonaffiliates are companies not related by common ownership or control. They can be financial and nonfinancial companies. | No | We don't share |

We may disclose your personal information to our affiliates or to nonaffiliates as permitted by law. If you request a transaction with a nonaffiliate, such as a third party insurance company, we will disclose your personal information to that nonaffiliate. [We do not control their subsequent use of information, and suggest you refer to their privacy notices.]

| Sharing practices | |
|---|---|
| **How often do the Stewart Title Companies notify me about their practices?** | We must notify you about our sharing practices when you request a transaction. |
| **How do the Stewart Title Companies protect my personal information?** | To protect your personal information from unauthorized access and use, we use security measures that comply with federal and state law. These measures include computer, file, and building safeguards. |
| **How do the Stewart Title Companies collect my personal information?** | We collect your personal information, for example, when you<br>• request insurance-related services<br>• provide such information to us<br>We also collect your personal information from others, such as the real estate agent or lender involved in your transaction, credit reporting agencies, affiliates or other companies. |
| **What sharing can I limit?** | Although federal and state law give you the right to limit sharing (e.g., opt out) in certain instances, we do not share your personal information in those instances. |

| Contact Us | If you have any questions about this privacy notice, please contact us at: Stewart Title Guaranty Company, 1980 Post Oak Blvd., Privacy Officer, Houston, Texas 77056 |

CLTA Preliminary Report Form

**Exhibit A (Revised 06-03-11)**

**CALIFORNIA LAND TITLE ASSOCIATION**
**STANDARD COVERAGE POLICY – 1990**

**EXCLUSIONS FROM COVERAGE**

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.

3. Defects, liens, encumbrances, adverse claims or other matters:

   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;

   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;

   (c) resulting in no loss or damage to the insured claimant;

   (d) attaching or created subsequent to Date of Policy; or

   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.

4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.

5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.

6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

CLTA Preliminary Report Form

**EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I**

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.

   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.

2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.

3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.

4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.

5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.

6. Any lien or right to a lien for services, labor or material not shown by the public records.

**CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (02-03-10)**
**ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE**

**EXCLUSIONS**

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:

   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.

   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.

2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.

3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.

4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;
   c. that result in no loss to You; or
   d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.
5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.

   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy.

**LIMITATIONS ON COVERED RISKS**

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

| | Your Deductible Amount | Our Maximum Dollar Limit of Liability |
|---|---|---|
| Covered Risk 16: | 1 % of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less) | $10,000.00 |
| Covered Risk 18: | 1 % of Policy Amount Shown in Schedule A or $5,000,00 (whichever is less) | $25,000.00 |
| Covered Risk 19: | 1 % of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less) | $25,000.00 |
| Covered Risk 21: | 1 % of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less) | $5,000.00 |

**2006 ALTA LOAN POLICY (06-17-06)**
**EXCLUSIONS FROM COVERAGE**

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to

   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;

   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.

   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.

2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.

3. Defects, liens, encumbrances, adverse claims, or other matters

   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.

4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.

5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.

6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is

   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.

7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

**EXCEPTIONS FROM COVERAGE**

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) that arise by reason of:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

**2006 ALTA OWNER'S POLICY (06-17-06)**

**EXCLUSIONS FROM COVERAGE**

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.

3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

**EXCEPTIONS FROM COVERAGE**

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) that arise by reason of:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown in the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and that are not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

# AFFILIATED BUSINESS ARRANGEMENT DISCLOSURE STATEMENT

Date: March 31, 2014

To : _____

APN# 009-030-057
Property: Napa, California 94558

From: Stewart Title of California, Inc.

This is to give you notice that Stewart Title of California, Inc. ("Stewart Title") has a business relationship with Stewart Solutions, LLC, DBA – Stewart Specialty Insurance Services, LLC ("Stewart Insurance"). Stewart Information Services Corporation owns 100% of Stewart Insurance and Stewart Title of California. Because of this relationship, this referral may provide Stewart Title a financial or other benefit.

Set forth below is the estimated charge or range of charges for the settlement services listed. You are NOT required to use the listed provider(s) as a condition for purchase, sale, or refinance of the subject Property. THERE ARE FREQUENTLY OTHER SETTLEMENT SERVICE PROVIDERS AVAILABLE WITH SIMILAR SERVICES. YOU ARE FREE TO SHOP AROUND TO DETERMINE THAT YOU ARE RECEIVING THE BEST SERVICES AND THE BEST RATE FOR THESE SERVICES.

| ***Stewart Insurance Settlement Service*** | ***Charge or range of charges*** |
|---|---|
| Hazard Insurance | $400.00 to $6,500.00 |

# PHASE I QUESTIONNAIRE

**USER QUESTIONNAIRE - Phase I Environmental Site Assessment**

**To the best of your ability please provide answers to the following questions:**

**(1.)** Did a search of *recorded land title records* (or judicial records where appropriate, see below) identify any environmental liens filed or recorded against the p*roperty* under federal, tribal, state or local law?

Yes___

No ✓

**(2.)** Did a search of *recorded land title records* (or judicial records where appropriate, identify any activity use limitations (AULs), such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *property* and/or have been filed or recorded against the *property* under federal, tribal, state or local law?

Yes___

No ✓

**(3.)** Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes___

No ✓

**(4.)** Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

Yes___

No ✓

**(5.)** Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example,

(a.) Do you know the past uses of the *property*?

Yes___

No ✓

(b.) Do you know of specific chemicals that are present or once were present at the *property*?

Yes___

No ✓

(c.) Do you know of spills or other chemical releases that have taken place at the *property*?

Yes___

No ✓

(d.) Do you know of any environmental cleanups that have taken place at the *property*?

Yes___

No ✓

**(6.)** Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of releases at the *property*?

Yes___

No ✓

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

# EXECUTIVE SUMMARY

**STANDARD ENVIRONMENTAL RECORDS**

***Federal RCRA generators list***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/30/2017 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

**EDR HIGH RISK HISTORICAL RECORDS**

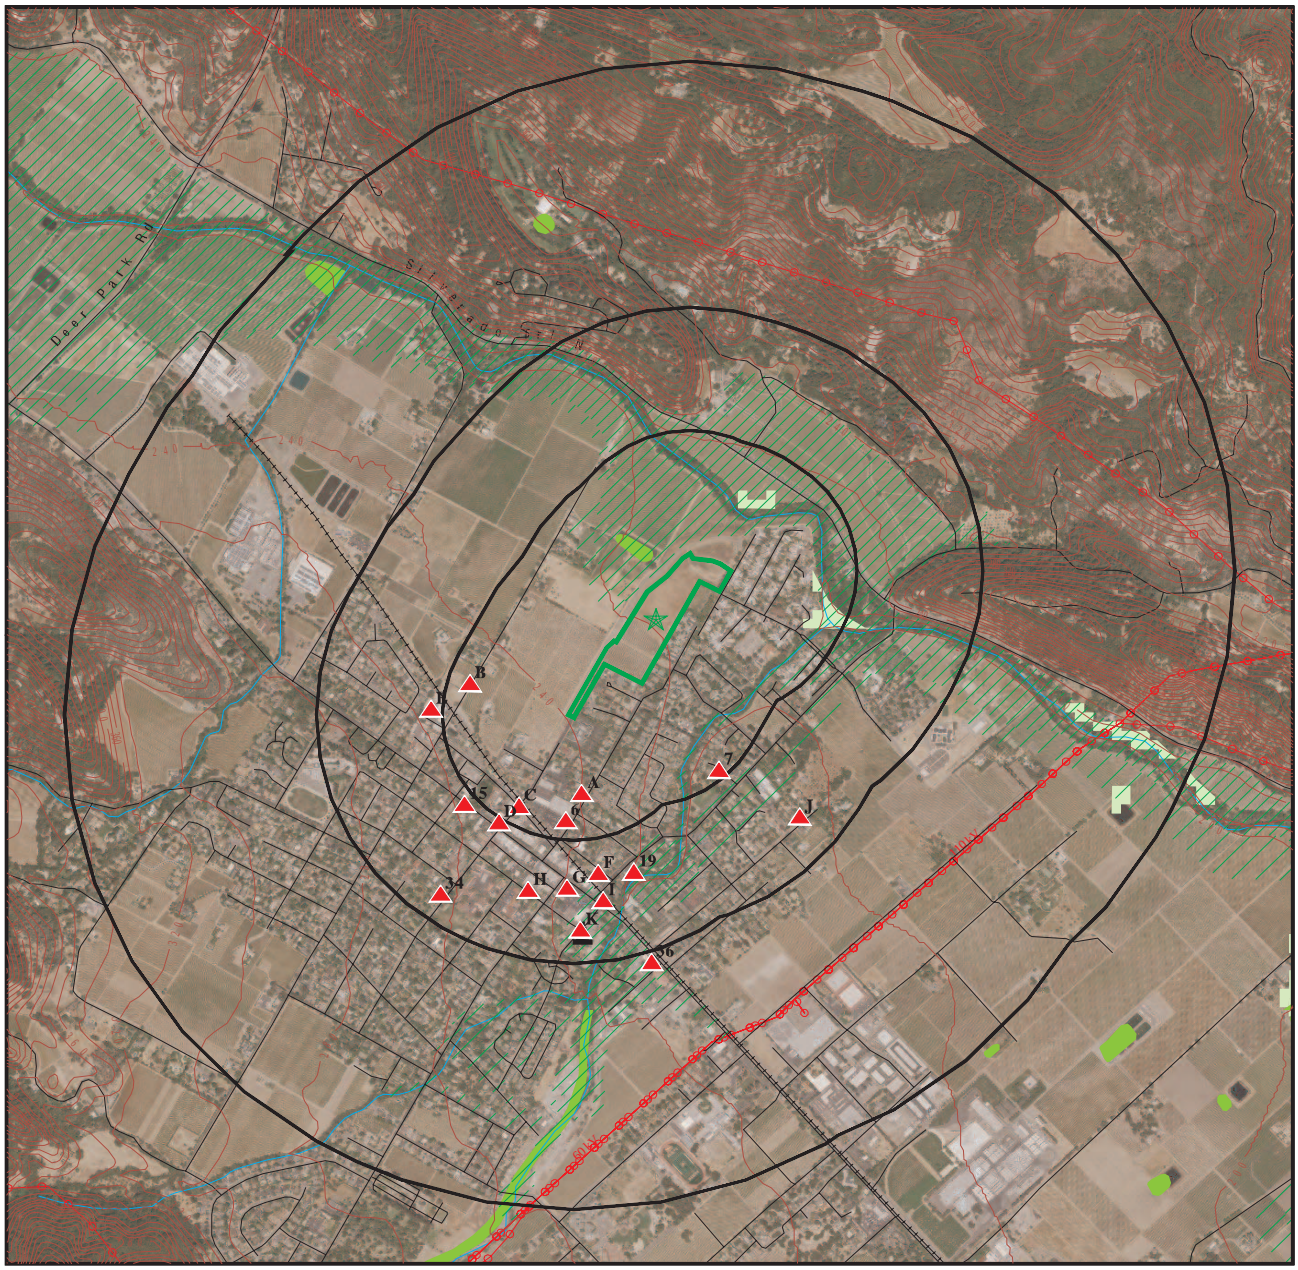
***EDR Exclusive Records***

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the

## EXECUTIVE SUMMARY

environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.



| Equal/Higher Elevation | Address | Direction / Distance | Map ID | Page |

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Currently, the Site in an operating 76-branded automotive fueling station with convenience store, two (2) operating 10,000-gal underground storage tanks (USTs) . Release of gasoline was first reported in Dec 1990. Groundwater monitoring began in June 1994, with off-Site groundwater monitoring wells advanced in Feb 1995. Five (5) single-walled USTs were removed in 1996. Elevated levels of petroleum hydrocarbon contaminants were discovered. Other gas service stations exist proximal to the Site; a Chevron and Exxon are both upgradient. Soil and groundwater extraction has been performed on and off Site. Five (5) monitoring wells and three (3) extraction wells currently operate on Site.

Environmental Interest/Information System
STATE MASTER

Registry ID: 110002955204

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

| File Location: | Regional Board |
| Potential Media Affected: | Other Groundwater (uses other than drinking water) |
| Potential Contaminants of Concern: | Other Solvent or Non-Petroleum Hydrocarbon |
| Site History: | A manufactured gas plant (MGP) operated at the site from 1883 until 1926. In 1930, PG&E acquired the site, dismantling the MGP upon introduction of natural gas to the region in 1931. Polycyclic aromatic hydrocarbons, petroleum hydrocarbons, arsenic, and lead have been detected during subsurface investigations at the site. |

| Completed Document Type: | Site Screening |
| Completed Date: | 05/22/1987 |
| Comments: | Completed Site Screening. Results of site investigations indicate that site soils contain elevated levels of arsenic, polycyclic aromatic hydrocarbons (PAHs), total extractable petroleum hydrocarbons, and total petroleum hydrocarbons as gasoline (TPH-g). Groundwater samples detected elevated concentrations of benzene, TPH-g, and PAHs. |

| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Remedial Investigation / Feasibility Study |
| Completed Date: | 04/10/2006 |
| Comments: | Approved report detailing additional investigation of soil beneath Mitchell Drive, soil on the MPP, and soil on the main project site. |
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Operations and Maintenance Report |
| Completed Date: | 06/17/2008 |
| Comments: | Not reported |
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Fact Sheets |
| Completed Date: | 12/05/2006 |
| Comments: | Fact sheet summarizes results of site investigations, cleanup goals, and cleanup recommendations. |
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Site Screening |
| Completed Date: | 02/04/1987 |
| Comments: | Site setting and historical uses identified. Twelve surface soil samples collected. Polycyclic aromatic hydrocarbon (PAH), lead, and arsenic levels quantified. Mercury and cyanide not detected. |
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Preliminary Endangerment Assessment Report |
| Completed Date: | 08/29/1991 |
| Comments: | Site investigation indicated the presence of polycyclic aromatic hydrocarbons (PAHs) and volatile organic compounds (VOCs) from historic gas manufacturing activities. Total petroleum hydrocarbons were also detected. Risk assessment identified direct exposure to surface soil as the only plausible exposure pathway at the Site. Site determined to be secured and unoccupied. Further subsurface investigation and capping recommended. |
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Health & Safety Plan |
| Completed Date: | 07/01/2000 |
| Comments: | Site-specific plan for worker safety in accordance with federal and state regulations. Establishes personal protective equipment, site control, decontamination, and emergency response procedures for the site. |
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Remedial Investigation Report |
| Completed Date: | 08/11/2004 |
| Comments: | Approved supplemental remedial investigation. Report concluded that soil impacts extend to 30 feet below ground surface, while PAHs are present in groundwater to 65 feet bgs. Lateral and vertical migration of contaminants is limited by low permeability soils. Contaminants were not observed in nearby Sulphur Creek. |

|---|---|
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Pilot/Treatability Study Report |
| Completed Date: | 01/10/2005 |
| Comments: | Approved report of phase one pilot testing and work plan for phase two testing. Phase one testing included five-day dual phase extraction, bench-scale testing of chemical oxidation of contaminants in soil, and analysis of field data for indications of biodegradation. Phase Two testing to include dual-phase extraction with ethanol-enhanced recovery of NAPL. |

| | |
|---|---|
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Monitoring Report |
| Completed Date: | 09/01/2005 |
| Comments: | Approved groundwater monitoring report. Analytical results for contaminants in perched groundwater were generally consistent with historic results. Contaminant concentrations in groundwater zones A, B, and C were generally higher than historic results. No arsenic or PAHs were detected in surface water. |

| | |
|---|---|
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Risk Assessment Report |
| Completed Date: | 10/19/2001 |
| Comments: | Approved the site risk assessment report which concluded that PAHs, arsenic, and benzene are the primary COCs at the site. Potential exposure pathways were determined to be extraction of shallow groundwater and construction activities involving disruption of soils and/or groundwater. Impacts on Sulfur Creek were determined to be within acceptable limits, as COCs in shallow groundwater were determined to be present at concentrations below ecological screening levels. |

| Completed Document Type: | Site Screening |
| Completed Date: | 05/22/1987 |
| Comments: | Completed Site Screening. Results of site investigations indicate that site soils contain elevated levels of arsenic, polycyclic aromatic hydrocarbons (PAHs), total extractable petroleum hydrocarbons, and total petroleum hydrocarbons as gasoline (TPH-g). Groundwater samples detected elevated concentrations of benzene, TPH-g, and PAHs. |

| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Remedial Investigation / Feasibility Study |
| Completed Date: | 04/10/2006 |
| Comments: | Approved report detailing additional investigation of soil beneath Mitchell Drive, soil on the MPP, and soil on the main project site. |
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Operations and Maintenance Report |
| Completed Date: | 06/17/2008 |
| Comments: | Not reported |
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Fact Sheets |
| Completed Date: | 12/05/2006 |
| Comments: | Fact sheet summarizes results of site investigations, cleanup goals, and cleanup recommendations. |
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Site Screening |
| Completed Date: | 02/04/1987 |
| Comments: | Site setting and historical uses identified. Twelve surface soil samples collected. Polycyclic aromatic hydrocarbon (PAH), lead, and arsenic levels quantified. Mercury and cyanide not detected. |
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Preliminary Endangerment Assessment Report |
| Completed Date: | 08/29/1991 |
| Comments: | Site investigation indicated the presence of polycyclic aromatic hydrocarbons (PAHs) and volatile organic compounds (VOCs) from historic gas manufacturing activities. Total petroleum hydrocarbons were also detected. Risk assessment identified direct exposure to surface soil as the only plausible exposure pathway at the Site. Site determined to be secured and unoccupied. Further subsurface investigation and capping recommended. |
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Health & Safety Plan |
| Completed Date: | 07/01/2000 |
| Comments: | Site-specific plan for worker safety in accordance with federal and state regulations. Establishes personal protective equipment, site control, decontamination, and emergency response procedures for the site. |
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Remedial Investigation Report |
| Completed Date: | 08/11/2004 |
| Comments: | Approved supplemental remedial investigation. Report concluded that soil impacts extend to 30 feet below ground surface, while PAHs are present in groundwater to 65 feet bgs. Lateral and vertical migration of contaminants is limited by low permeability soils. Contaminants were not observed in nearby Sulphur Creek. |

|---|---|
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Pilot/Treatability Study Report |
| Completed Date: | 01/10/2005 |
| Comments: | Approved report of phase one pilot testing and work plan for phase two testing. Phase one testing included five-day dual phase extraction, bench-scale testing of chemical oxidation of contaminants in soil, and analysis of field data for indications of biodegradation. Phase Two testing to include dual-phase extraction with ethanol-enhanced recovery of NAPL. |

| | |
|---|---|
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Monitoring Report |
| Completed Date: | 09/01/2005 |
| Comments: | Approved groundwater monitoring report. Analytical results for contaminants in perched groundwater were generally consistent with historic results. Contaminant concentrations in groundwater zones A, B, and C were generally higher than historic results. No arsenic or PAHs were detected in surface water. |

| | |
|---|---|
| Completed Area Name: | PROJECT WIDE |
| Completed Sub Area Name: | Not reported |
| Completed Document Type: | Risk Assessment Report |
| Completed Date: | 10/19/2001 |
| Comments: | Approved the site risk assessment report which concluded that PAHs, arsenic, and benzene are the primary COCs at the site. Potential exposure pathways were determined to be extraction of shallow groundwater and construction activities involving disruption of soils and/or groundwater. Impacts on Sulfur Creek were determined to be within acceptable limits, as COCs in shallow groundwater were determined to be present at concentrations below ecological screening levels. |

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS**

***Federal NPL site list***

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017
Date Data Arrived at EDR: 12/22/2017

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Local Brownfield lists***

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.
Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.
Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.
Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

# PROFESSIONAL QUALIFICATIONS

# DAVID M. NOREN

## MANAGER, ENVIRONMENTAL SERVICES

### PROFESSIONAL CERTIFICATIONS/MEMBERSHIPS

Registered Environmental Assessor, California
OSHA 40 Hour Hazardous Waste Operations & Emergency Response Training
OSHA 8 Hour Hazardous Waste Activities Management Training
Supervisor Training in Hazardous Waste Operations
American Red Cross First Aid and CPR

Board Member North Coast Regional Water Quality Control Board

### EDUCATIONAL BACKGROUND

M.Sc., Environmental Management
University of San Francisco, San Francisco, California

B.Sc., Agricultural Science & Management
University of California Davis, Davis, California

### EXPERIENCE SUMMARY

Mr. Noren is a Registered Environmental Assessor with over 25 years of experience in the field of environmental assessments and investigations. Prior experience includes technical and management services for a wide range of environmental, hydrogeologic, and solid waste landfill projects. The nature and scope of these projects have included field and management positions for property assessments, assessments of surface and subsurface geologic investigations, underground fuel storage tank investigations and remediation, hydrogeologic characterization investigations, remedial action design and implementation of soil, groundwater, and landfill gas corrective action programs and storm water management sampling and reporting.

At EBA Engineering, Mr. Noren is the Manager of Environmental Services and oversees a number of projects including site investigations and monitoring, environmental assessments, as well as providing technical support and management services for solid waste management projects. The management requirements include the oversight of project budgets, client interactions, site investigation activities and field and reporting programs.

Mr. Noren has experience in the application of numerous investigative and treatment methodologies in a wide range of geologic environments including performing the investigation and remediation of a diverse range of contaminated sites and municipal solid waste facilities.

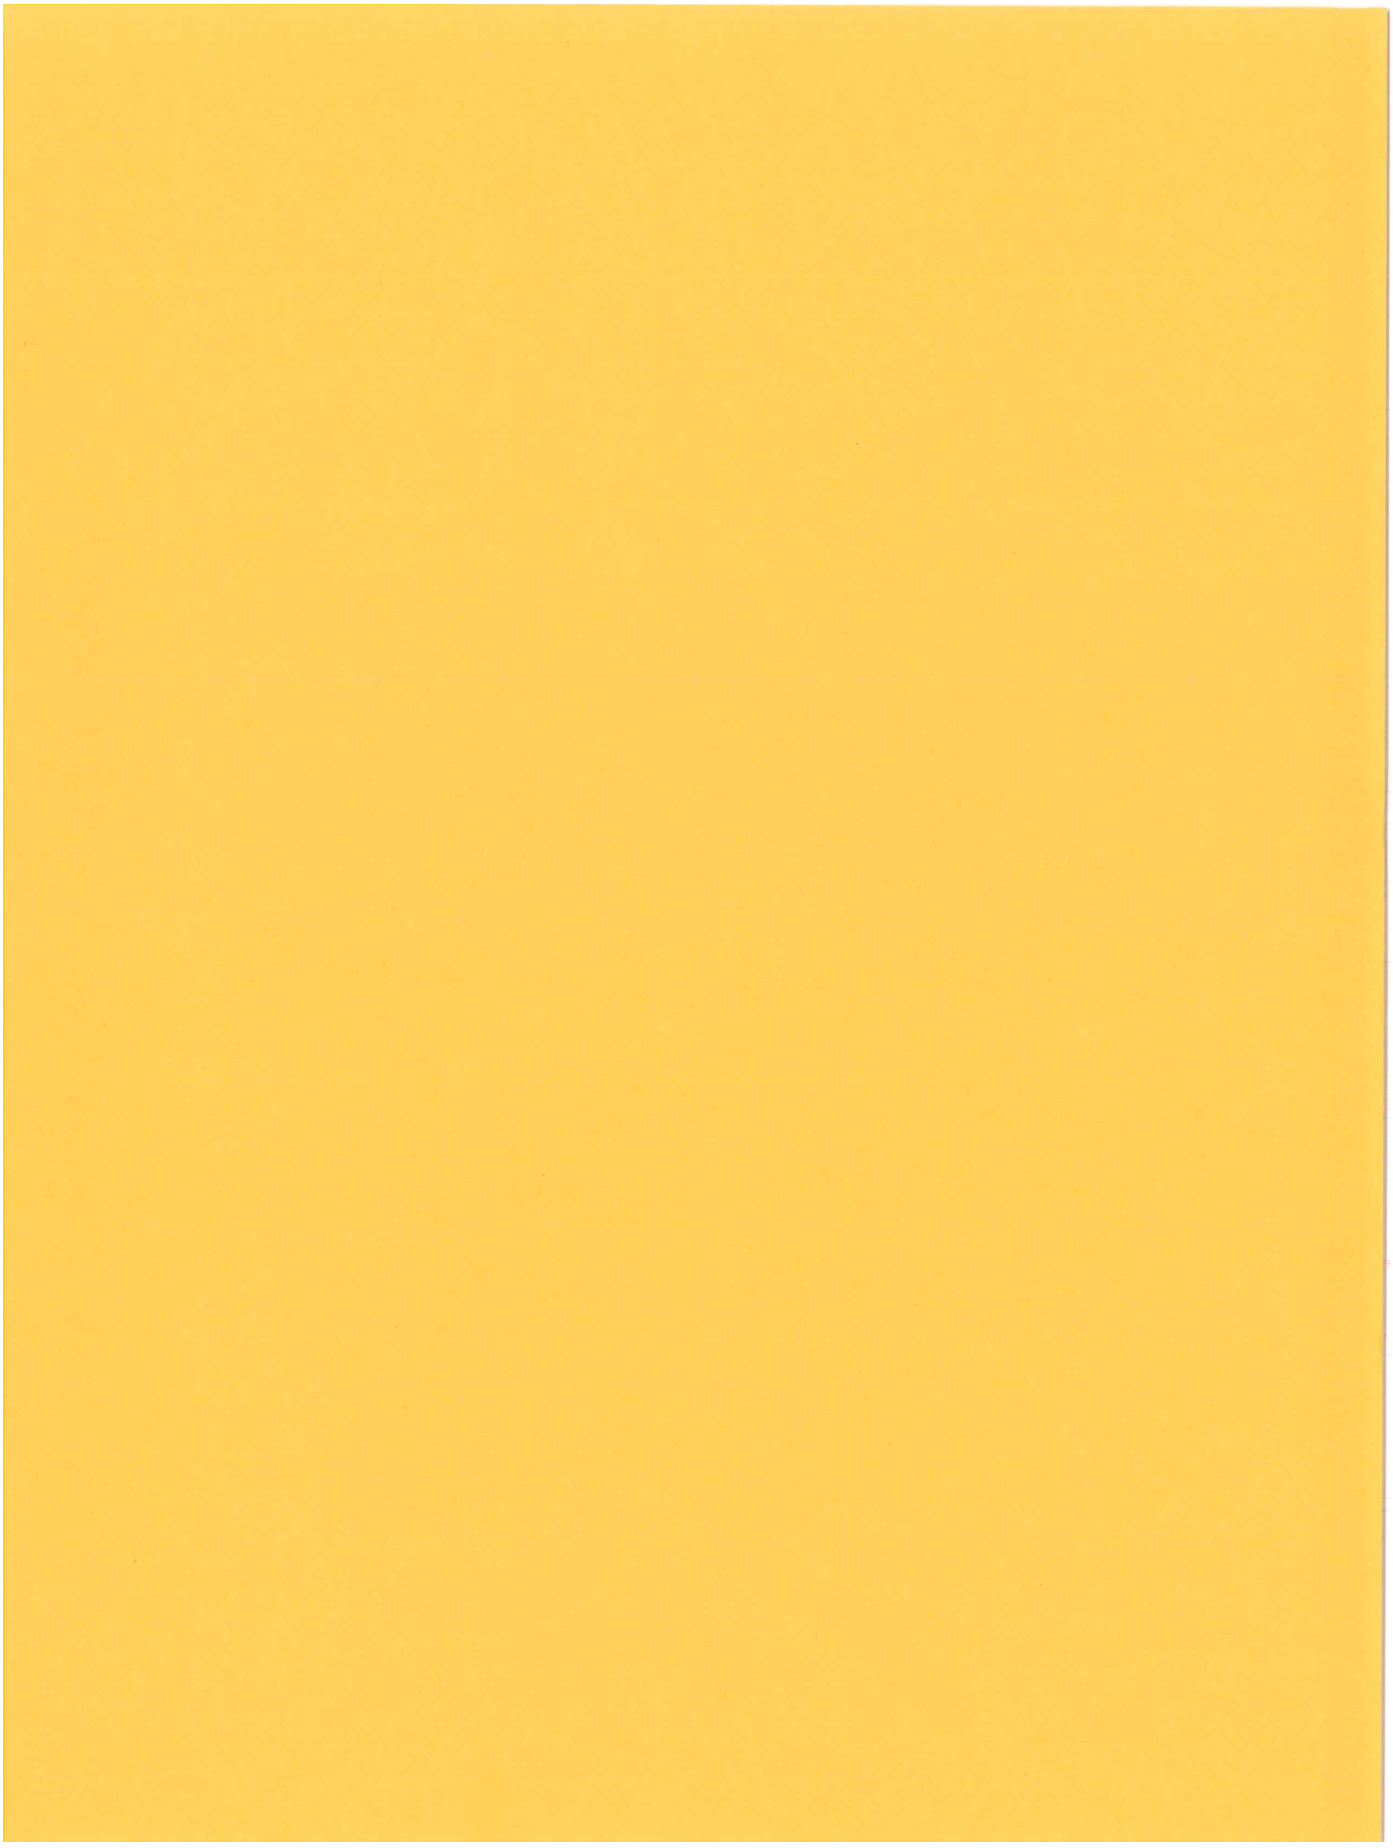
EXHIBIT C

Figure No. 6 – Overall Site Map Sub Basin Delineation Map
Mead & Hunt – Interior Drainage Analysis Final Report



## EXECUTIVE SUMMARY

This report is intended to respond to the City of St. Helena's Second Notification of Identified Issues - Hunter Residential Subdivision Tentative Map Application Comment number 2a. which asks us to, "Complete Hydrologic analysis identifying existing drainage features and patterns; modeling pre- and post- project run off rates and volumes; and substantiating applicants claim of adequate detention basin capacity made in the draft EIR..."

In order to substantiate the claim that the detention basin has adequate capacity we have included the January 2009 agreement of sale between The City of St. Helena and Dennis Hunter. Section 1.7c of the above agreement states, "The City will size, at no additional cost to Hunter, storm water drainage handling facilities downstream of the site, to be constructed as part of the [St. Helena Comprehensive Flood Control Protection Project], based upon projected build-out of the Hunter Remainder and the 3.58 acres, zoned Medium-density residential (MR) as of the Effective Date of this Agreement (as defined in the St. Helena Municipal Code Section 17.40), expressed as a 70% impervious drainage watershed". See Exhibit B for the full agreement.

We have also included portions of the previous City of St. Helena Comprehensive Flood Protection Project's Interior Drainage Analysis Final Report for the Miller Property/Hunter Property/Hunt Avenue. The sections included in Exhibit C demonstrates the existing and proposed conditions for the Hunter property referred to as Sub-basin 4 in Figure 6 of the report. The section included in Exhibit B show that for the existing 10-year storm event, sub-basin 4 was assigned an impervious percentage of 0, which matches the pre-project condition of the site. This same sub-basin was assigned a value of 70% impervious in the proposed 100-year storm event model. This proposed condition matches the agreement language for the Hunter property.

Per the Agreement with the City of St. Helena and the City of St. Helena Comprehensive Flood Protection Project's Interior Drainage Analysis Final Report for the Miller Property/Hunter Property/Hunt Avenue, it is assumed that the detention system installed as part of the Comprehensive Flood Protection Project accounts for the future development of the Hunter parcel to an extent of 70% impervious. The proposed Hunter parcel development has been shown to be only 58% impervious, and thus meets both the agreement and the condition analyzed in the Mead & Hunt report. As such no additional storm water volume control facilities should be required as part of the proposed Hunter subdivision. See Exhibit A for the proposed impervious area exhibit.

## CITY OF ST. HELENA AND HUNTER AGREEMENT

## AGREEMENT OF PURCHASE AND SALE

THIS AGREEMENT OF PURCHASE AND SALE ("**Agreement**") is made and entered into as of January ___, 2009 (the "**Effective Date**"), by and between the City of St. Helena (the "**City**"), and Dennis R. Hunter ("**Hunter**").

### RECITALS

A. Hunter owns that certain real property located in the City of St. Helena, State of California, consisting of approximately 3.69 acres, together with all appurtenant improvements, rights, interests, easements, tenements and estates, a portion of APN No. 009-030-020, more fully described on Exhibit A (the "**Hunter Property**").

B. A portion of the Hunter Property, consisting of approximately 1.20 acres, as shown on Exhibit B, is located below the flood plain (the "**1.20 Acres**"). The remaining portion of the Hunter Property, consisting of approximately 2.39 acres as shown on Exhibit B, is located above the flood plain (the "**2.39 Acres**"). A .10 acre portion of the Hunter Property located below the floodplain is not shown on Exhibit B

C. The City owns that certain real property located in the City of St. Helena, State of California, consisting of approximately 3.58 acres located below the flood plain, together with all appurtenant improvements, rights, interests, easements, tenements and estates, as more fully described on Exhibit C (the "**3.58 Acres**"). The Hunter Property and the 3.58 Acres may be referred to individually as a "property" and collectively as the "properties."

D. The Hunter Property and the 3.58 Acres are designated in the City's general plan as MR / Medium Density Residential 5.1 to 16 units per acre.

E. The City intends to use the 3.58 Acres for the advancement of the St. Helena Comprehensive Flood Control Protection Project (the "**Project**") based on the City's desire to acquire the Hunter Property from Hunter and Hunter's desire to acquire the 3.58 Acres from the City, in accordance with the terms and conditions set forth in this Agreement.

F. In furtherance of the Project, the City has secured a loan from the State Revolving Fund of the State Water Resources Control Board, the terms of which require that the City request funds for property acquisition thirty to forty-five (30-45) days before the close of escrow on the purchase of such property.

NOW, THEREFORE, for and in consideration of the mutual covenants and agreements contained in this Agreement, and other good and valuable consideration, the receipt and adequacy of which is hereby acknowledged by the parties hereby agree as follows:

### ARTICLE 1: LOT LINE ADJUSTMENT; EASEMENTS

1.1 Lot Line Adjustment. The City hereby covenants and agrees to promptly process and cause to be recorded at Closing (as defined below) the lot line adjustments required to establish the property configurations shown on Exhibit D, Following the Lot Line Adjustment,

the City will own 15.691 acres and Hunter will own 16.903 acres. The Lot Line Adjustment shall have been recorded in the Official Records of the County such that the Property can be transferred to Hunter in accordance with California Government Code Section 66410 et seq. (the "Map Condition"). In light of the decision in *Black Hills Investments, Inc. v. Albertson's Inc.* (2007) 146 Cal. App. 4th 883.

1.2 Grant of Temporary Easement. For good and valuable consideration, Hunter hereby grants to the City an exclusive easement (the "**Temporary Easement**") to use the Hunter Property prior to the Close of Escrow (as defined below) for the purposes set forth in the St. Helena Comprehensive Flood Control Protection Project. The Temporary Easement herein granted shall commence upon the Effective Date and shall merge into the grant deed upon Hunter's conveyance of the Hunter Property to the City.

1.3 Grant of Construction Easement. For good and valuable consideration, Hunter hereby grants to the City a temporary, non-exclusive easement (the "**Construction Easement**"), in accordance with the terms of that certain Construction Easement in the form attached hereto as Exhibit E, over, under, across, above and through that certain real property shown on Exhibit E hereto (the "**Construction Easement Area**") for ingress and egress and for construction related purposes in connection with the Project. This Construction Easement is intended to be temporary in nature and shall terminate on December 31, 2012.

1.4 Grant of Utility Easement. For good and valuable consideration, Hunter hereby grants to the City a non-exclusive perpetual easement (the **Utility Easement**"), in accordance with the terms of that certain Utility Easement in the form attached hereto as Exhibit F, over under, across, above and through that certain real property shown on Exhibit F hereto (the "**Utility Easement Area**") for the purposes of installing, constructing, operating, using, maintaining, repairing, and replacing utility facilities, lines or connections and any uses incidental thereto.

1.5 Depositing of Dirt. Hunter hereby grants to the City the right, at no additional cost to the City and at no cost to Hunter, to deposit dirt, excavated by the City in connection with the Project, on that certain real property (the "**Fill Area**") described on the Soil Stockpile Grading Plan attached hereto as Exhibit G. City and its contractors and agents shall prepare the Fill Area to receive the dirt by removing vines and other vineyard improvements and place the fill in a good and workman-like manner.

1.6 Well Access License. Hunter hereby grants to the City a license at no additional cost to the City and at no cost to Hunter, to access and use water from the existing well shown on Exhibit G in connection with the Project. For good and valuable consideration, Hunter hereby grants to the City a temporary, non-exclusive license (the "**Well Access License**") over, under, across, above and through properties to be owned by Hunter, including the 3.58 Acres. This Well Access License is intended to be temporary in nature and to continue only during the performance of the Project. The Well Access License shall terminate, without the necessity of further documentation, upon completion of the Project.

1.7 Drainage Improvements. The City intends as a part of the Project to build certain retention and drainage facilities as specifically described as follows:

(a) The City will construct a compacted earth fill pad on the remainder of APN No. 009-030-020 ("**Hunter Remainder**") (exclusive of the Hunter Property) and on the 3.58 Acres in accordance with the enclosed Exhibit G. The source of the soil material to construct the pad shall be the City's Flood Protection Project, with unsuitable material (defined as organic content in excess of 3.5%) segregated and placed in areas outside of the useable pad area shown on Exhibit G. Pad construction will comply with the notes on the exhibit and finish graded to provide positive drainage in accordance with Exhibit G. The level of the pad may vary based upon the amount of material generated from the Project with the elevation of the pad adjusted uniformly.

(b) Upon completion of the Project, the then existing drainage patterns for the Hunter Remainder and the 3.58 Acres shall remain undisturbed by the City, with exception of the new pad drainage. Drainage ditches on the pad will be routed to the new detention basin shown on Exhibit G. The City will modify its existing detention basin inlet from the storm drain system to provide a storm drain inlet for pad drainage.

(c) The City will size, at no additional cost to Hunter, storm water drainage handling facilities downstream of the site, to be constructed as part of the Project, based upon projected build-out of the Hunter Remainder and the 3.58 Acres, zoned Medium-density Residential (MR) as of the Effective Date of this Agreement (as defined in the St. Helena Municipal Code Section 17.40), expressed as a 70% impervious drainage watershed.

(d) The City agrees to reroute the existing water main crossing the Hunter Remainder in Easement 895 (OR 383 NCR), as shown on the enclosed Exhibit H. Relocation will be completed by the City prior to development of the Hunter Remainder and the 3.58 Acres. The City's easement for the section of pipe being abandoned will be quit-claimed and returned to Hunter once the relocation is complete.

1.8 Sewer Connection. Upon any application for development of the Hunter Property as referenced in this Agreement, City will not unreasonably withhold its permission for Hunter to cross City property to access a sewer connection. Nothing in this section shall be construed as an entitlement to development under the current medium density residential zoning, and Hunter is responsible for obtaining all necessary development approvals from the City and any other agencies with jurisdiction over the Hunter Property.

1.9 Covenants Running with the Land. The terms and conditions contained in this Article 1 shall (a) constitute covenants running with the land, (b) survive the Close of Escrow, and (c) bind the parties hereto, their heirs, successors and assigns.

1.10 Payment of Taxes. All real property taxes and assessments on the Hunter Property (prior to Close of Escrow) and the Construction Easement Area shall be payable by Hunter.

## ARTICLE 2: PURCHASE AND SALE

2.1 Hunter Property. The parties hereby acknowledge and agree that the City requires the Hunter Property in connection with the Project. Accordingly, the City has forced a sale of the Hunter Property by Hunter under the threat of condemnation, on the terms and conditions set forth herein.

2.2 3.58 Acres. As partial consideration for the sale of the Hunter Property pursuant to Section 2.1, above, the City hereby agrees to convey the 3.58 Acres to Hunter, on the terms and conditions set forth herein.

## ARTICLE 3: PURCHASE PRICE

3.1 Purchase Price. The parties hereby acknowledge and agree that the fair market value of the 1.20 Acres and the 3.58 Acres is Three Hundred Twenty Five Thousand Dollars ($325,000) per acre and that the fair market value of the 2.39 Acres is Seven Hundred Thousand Dollars ($700,000) per acre. Consequently, the agreed upon value of each property is as follows:

| Property | Value | |
|---|---|---|
| 3.58 Acres | $1,163,500 | (valued at $325,000 per acre) |
| 1.20 Acres | $390,000 | (valued at $325,000 per acre) |
| 2.39 Acres | $1,673,000 | (valued at $700,000 per acre) |

Thus, the balance of the purchase price to be paid by the City at Closing shall be **$899,500** [the value of the 1.20 acres and the 2.39 acres ($1,673,000 + $390,000) minus the credit received by the City for the 3.58 acres ($1,163,500)].

## ARTICLE 4: CLOSING

4.1 Closing. Hunter hereby covenants and agrees to cooperate with the City in connection with the City's application for a loan from the State Revolving Fund of the State Water Resources Control Board and satisfying all requirements thereof. The consummation of the transactions contemplated herein (the "**Closing**" or "**Close of Escrow**") shall occur on or before February 1, 2008 at the office of North Bay Title Co, Santa Rosa, California ("**Escrow Agent**"); provided, however, that the date for the Close of Escrow shall be subject to extension to the extent required by the State Revolving Fund. Upon satisfaction or completion of all closing conditions and deliveries, the parties shall direct Escrow Agent to immediately record and deliver the closing documents to the appropriate parties and make disbursements according to the closing statements executed by the City and Hunter.

4.2 Escrow Fee. Except as expressly provided herein to the contrary, the escrow fee, if any, charged by Escrow Agent, shall be paid in accordance with customary practices in Napa County.

4.3 Hunter's Deliveries into Escrow. At least one (1) business day prior to the Closing Date, Hunter shall deliver to Escrow Agent for distribution to the appropriate party(ies) at Closing, the following:

(a) Grant Deed. A grant deed in conformity with the custom in the State of California, executed and acknowledged by Hunter, conveying to the City fee simple title to the Hunter Property.

(b) Prorations. Hunter's share of any prorations or expenses.

(c) Tax Certificates. A Foreign Investment in Real Property Tax Act affidavit and a California Form 593-C, executed by Hunter.

(d) State Law Disclosures. Such disclosures and reports as are required by applicable state and local law in connection with the conveyance of real property.

(e) Additional Documents. Any additional documents that the City or the Escrow Agent may reasonably require for the proper consummation of the transactions contemplated by this Agreement.

4.4 The City's Deliveries into Escrow. At least one (1) business day prior to the Closing Date, the City shall deliver to Escrow Agent for distribution to the appropriate party(ies) at Closing, the following:

(a) Purchase Price. The balance of the purchase price, if any, plus or minus applicable prorations and expenses.

(b) Grant Deed. A grant deed in conformity with the custom in the State of California, executed and acknowledged by the City, conveying to Hunter fee simple title to the 3.58 Acres.

(c) State Law Disclosures. Such disclosures and reports as are required by applicable state and local law in connection with the conveyance of real property.

(d) Additional Documents. Any additional documents that Hunter or the Escrow Agent may reasonably require for the proper consummation of the transactions contemplated by this Agreement.

4.5 Closing Statements. At least one (1) business day prior to the Closing Date, Hunter and the City shall deposit with Escrow Agent executed closing statements consistent with this Agreement in the form required by Escrow Agent.

## ARTICLE 5: PRORATIONS AND EXPENSES

5.1 Prorations.

(a) Taxes and Assessments. All non-delinquent real estate taxes and non-delinquent assessments on the properties shall be prorated as of 12:01 a.m. on the day of the Close of Escrow based on the actual current tax bill. All delinquent taxes and all delinquent assessments, interest and penalties (if any) with respect to a property, shall be paid at the Close of Escrow by the party conveying such property. If any information needed for the final proration of any item is not available as reasonably determined by Escrow Agent and the parties are notified of the same prior to Closing, the parties shall re-prorate such item after Closing and payment shall be made promptly to the party entitled thereto. The provisions of this Section 5.1(a) shall survive the Close of Escrow

(b) Sales, Transfer, and Documentary Taxes. The parties shall pay, in accordance with customary practices in Napa County, all sales, gross receipts, compensating, stamp, excise, documentary, transfer, deed or similar taxes and fees imposed in connection with the transactions contemplated hereunder.

5.2 No Brokers. Hunter and the City represent and warrant each to the other that they have not dealt with any real estate broker, sales person or finder in connection with this Agreement. In the event of any claim for broker's or finder's fees or commissions in connection with the negotiation, execution or consummation of this Agreement or the transactions contemplated hereby, each party shall indemnify and hold harmless the other party from and against any such claim based upon any statement, representation or agreement of such party.

## ARTICLE 6: REPRESENTATIONS AND WARRANTIES

6.1 Hunter's Representations and Warranties. Hunter represents and warrants to the City that:

(a) Conflicts and Pending Actions or Proceedings. There is no agreement to which Hunter is a party or, to Hunter 's knowledge, binding on Hunter which is in conflict with this Agreement. There is no action or proceeding pending or, to Hunter's knowledge, threatened against Hunter or relating to the Hunter Property which challenges or impairs Hunter's ability to execute or perform its obligations under this Agreement.

(b) No Encumbrances. Hunter has not alienated, encumbered, transferred, mortgaged, assigned, pledged, or otherwise conveyed its interest in the Hunter Property or any portion thereof, nor entered into any agreement to do so, and there are no liens, encumbrances, mortgages, covenants, conditions, reservations, restrictions, easements or other matters affecting the Hunter Property, except as disclosed in the preliminary title report delivered to the City. Hunter shall not, directly or indirectly, alienate, encumber, transfer, mortgage, assign, pledge, or otherwise convey its interest prior to the Close of Escrow, as long as this Agreement is in force. Any encumbrances which are recorded against the property prior to the Close of Escrow must include a release provision that will permit the sale to close and must provide for the removal of the encumbrance before Close of Escrow. The removal of all encumbrances is a condition precedent to the Close of Escrow.

(c) Contractors and Suppliers. All contractors, subcontractors, suppliers, architects, engineers, and others who have performed services or labor or have supplied materials in connection with Hunter's acquisition, development, ownership, or management of the Hunter Property have been paid in full and all liens arising therefrom (or claims which with the passage of time or the giving of notice, or both, could mature into liens) have been satisfied and released.

6.2 City's Representations and Warranties. The City represents and warrants to Hunter that the City has the full right, capacity, power and authority to enter into and carry out the terms of this Agreement The City represents that the 3.58 Acres has a current zoning of medium-density residential as shown on the City's current zoning map. This Agreement has been duly executed by the City, and upon delivery to and execution by Hunter shall be a valid and binding agreement of the City.

6.3 Survival of Representations and Warranties. The representations and warranties set forth in this Article 6 are made as of the Effective Date and are remade as of the Closing Date and shall not be deemed to be merged into or waived by the instruments of Closing, but shall survive the Closing. However, the representation of the zoning of the 3.58 Acres is a representation of the zoning at the time of Close of Escrow only and such representation shall not survive this Agreement. Each party agrees to defend and indemnify the other against any claim, liability, damage or expense asserted against or suffered by such other party arising out of the breach or inaccuracy of any such representation or warranty.

## ARTICLE 7: DEFAULT AND REMEDIES

7.1 Default. If the transactions contemplated hereunder fail to close as a result of a party's default, the non-defaulting party shall be entitled to such remedies for breach of contract as may be available at law and/or in equity including, without limitation, the remedy of specific performance.

7.2 Notice of Default. Except for a party's failure to close on the Closing Date, neither party shall have the right to declare a default by the other party and terminate this Agreement because of a failure by such other party to perform under the terms of this Agreement unless the other party shall fail to cure such failure to perform within ten (10) days after its receipt of written notice of such failure to perform.

7.3 Other Expenses. If this Agreement is terminated due to the default of a party, such defaulting party shall pay any fees due to Escrow Agent.

## ARTICLE 8: DUE DILIGENCE; AS-IS; RELEASE

8.1 Due Diligence Investigation. Hunter acknowledges that it has had an opportunity to conduct its due diligence investigation of the 3.58 Acres, and hereby approves the condition and suitability of the 3.58 Acres for Hunter's purposes. Hunter has determined that the 3.58 Acres is currently zoned medium-density residential and acknowledges that nothing in this Agreement shall be construed as an entitlement to development under the current medium density residential zoning, and Hunter is responsible for obtaining all necessary development approvals from the City and any other agencies with jurisdiction over the Hunter Property.. The

City acknowledges that it has had an opportunity to conduct its due diligence investigation of the Hunter Property, and hereby approves the condition and suitability of the Hunter Property for the City's purposes. The parties shall continue to operate and maintain their respective properties, prior to the Close of Escrow, in substantially the same manner that such were operated and maintained as of the Effective Date.

(a) Hunter has reviewed a preliminary title report for the 3.58 Acres and approved all of the following exceptions to title: (a) standard printed exceptions in the preliminary title report; (b) general and special real property taxes and assessments constituting a lien not yet due and payable; and (c) the title exceptions listed on Exhibit I attached hereto. The City shall deliver title to the 3.58 Acres to Hunter at the Closing subject only to the foregoing approved exceptions.

(b) The City has reviewed a preliminary title report for the Hunter Property and approved all of the following exceptions to title: (a) standard printed exceptions in the preliminary title report; (b) general and special real property taxes and assessments constituting a lien not yet due and payable; and (c) the title exceptions listed on Exhibit J attached hereto. Hunter shall deliver title to the Hunter Property to the City at the Closing subject only to the foregoing approved exceptions.

8.2 "As-Is" Sale. Each party hereby acknowledges and agrees that, neither the other party, nor anyone acting for or on behalf of such other party, has made any representations, warranties, or promises, concerning the condition of the properties or any other aspect of the properties. Each party further acknowledges that HE OR IT WILL BE ACQUIRING THE PROPERTIES, AS APPLICABLE, BASED UPON THEIR "AS-IS" CONDITION AND THEIR STATE OF REPAIR INCLUSIVE OF ALL FAULTS AND DEFECTS, WHETHER KNOWN OR UNKNOWN, AS MAY EXIST AS OF THE CLOSE OF ESCROW, AND EACH PARTY EXPRESSLY ASSUMES THE RISK THAT ADVERSE PHYSICAL, ENVIRONMENTAL, FINANCIAL AND LEGAL CONDITIONS MAY NOT BE REVEALED BY SUCH PARTY'S DUE DILIGENCE INVESTIGATION (IF ANY).

8.3 Disclaimer. Except for a breach of this Agreement, each party hereby fully and forever waives and disclaims, all warranties of whatever type or kind with respect to the property acquired by him or it, whether express, implied or otherwise including, without limitation, those of fitness for a particular purpose, tenantability, habitability or use.

8.4 Release and Waiver. Each party hereby fully and forever releases, acquits and discharges the other party of and from, and hereby fully and forever waives any and all claims, actions, causes of action, suits, proceedings, demands, rights, damages, costs, expenses or other compensation whatsoever, whether known or unknown, direct or indirect, foreseeable or unforeseeable, absolute or contingent ("**Claims**"), that such party now has or may have or which may arise in the future arising out of, directly or indirectly, or in any way connected with the condition of the property acquired by him or it. The parties hereby agree that the matters released in this Section 8.4 are not limited to matters which are known or disclosed and, with respect to the foregoing release, each party hereby waives any and all rights and benefits which he or it now has, or in the future may have, conferred upon him or it, by virtue of the provisions

of Section 1542 of the Civil Code of the State of California (or any other statute or common law principles of similar effect), which Section provides as follows:

> A GENERAL RELEASE DOES NOT EXTEND TO CLAIMS WHICH THE CREDITOR DOES NOT KNOW OR SUSPECT TO EXIST IN HIS OR HER FAVOR AT THE TIME OF EXECUTING THE RELEASE, WHICH IF KNOWN BY HIM OR HER MUST HAVE MATERIALLY AFFECTED HIS OR HER SETTLEMENT WITH THE DEBTOR.

In this connection, each party acknowledges and agrees that it understands that factual matters relating directly to the properties now unknown to him or it may have given or may hereafter give rise to claims that are presently unknown, unanticipated and unsuspected, and such party further acknowledges and agrees that the releases herein have been negotiated and agreed upon in light of that realization and that it nevertheless intends to release, discharge and acquit the other party from any such unknown claims.

Hunter's Initials: _____ City's Initials: _____

8.5 Delivery of Title Policy. At Hunter's request, the Title Company shall deliver to Hunter an owner's policy of title insurance issued by the Title Company as of the Closing Date, insuring Hunter as owner of fee simple title to the 3.58 Acres. At the City's request, the Title Company shall deliver to the City an owner's policy of title insurance issued by the Title Company as of the Closing Date, insuring the City as owner of fee simple title to the Hunter Property. Notwithstanding the foregoing, the Title Company's delivery or willingness to deliver the foregoing title policies shall not be a condition precedent to either party's obligation to close hereunder. Each party shall pay the premium for their respective title policies.

## ARTICLE 9: NOTICES

9.1 Notices. All notices required or permitted hereunder shall be in writing and shall be served on the parties at the addresses set forth below. Any such notices shall be either (a) sent by overnight delivery using a nationally recognized overnight courier, in which case notice shall be deemed delivered one business day after deposit with such courier, (b) sent by facsimile, in which case notice shall be deemed delivered upon transmission of such notice, or (c) sent by personal delivery, in which case notice shall be deemed delivered upon receipt. A party's address may be changed by written notice to the other party; provided, however, that no notice of a change of address shall be effective until actual receipt of such notice. Copies of notices are for informational purposes only, and a failure to give or receive copies of any notice shall not be deemed a failure to give notice.

## ARTICLE 10: MISCELLANEOUS

10.1 Parties Bound. This Agreement shall bind and shall inure to the benefit of the City, Hunter and their respective successors and assigns. Notwithstanding the foregoing, neither

party may assign this Agreement without the prior written consent of the other, and any such prohibited assignment shall be void.

10.2 Headings. The article and paragraph headings of this Agreement are for convenience only and in no way limit or enlarge the scope or meaning of the language hereof.

10.3 Invalidity and Waiver. If any portion of this Agreement is held invalid or inoperative, then so far as is reasonable and possible the remainder of this Agreement shall be deemed valid and operative, and, to the greatest extent legally possible, effect shall be given to the intent manifested by the portion held invalid or inoperative. The failure by either party to enforce against the other any term or provision of this Agreement shall not be deemed to be a waiver of such party's right to enforce against the other party the same or any other such term or provision in the future.

10.4 Governing Law. This Agreement shall, in all respects, be governed, construed, applied, and enforced in accordance with the law of the State of California.

10.5 Survival. The provisions of this Agreement that contemplate performance after the Closing and the obligations of the parties not fully performed at the Closing shall survive the Closing and shall not be deemed to be merged into or waived by the instruments of Closing.

10.6 No Third Party Beneficiary. This Agreement is not intended to give or confer any benefits, rights, privileges, claims, actions, or remedies to any person or entity as a third party beneficiary, decree, or otherwise.

10.7 Entirety and Amendments. This Agreement, together with all exhibits attached hereto and incorporated herein, embodies the entire agreement between the parties and supersede all prior agreements and understandings relating to the subject matter hereof. This Agreement may be amended or supplemented only by an instrument in writing executed by the party against whom enforcement is sought.

10.8 Time. Time is of the essence in the performance of this Agreement.

10.9 Attorneys' Fees. Should either party employ attorneys to enforce any of the provisions hereof, the party against whom any final judgment is entered agrees to pay the prevailing party all reasonable costs, charges, and expenses, including reasonable attorneys' fees, expended or incurred in connection therewith.

10.10 Construction. The parties acknowledge that the parties and their counsel have reviewed and revised this Agreement and agree that the normal rule of construction to the effect that any ambiguities are to be resolved against the drafting party shall not be employed in the interpretation of this Agreement or any exhibits or amendments hereto.

10.11 Calculation of Time Periods. Unless otherwise specified, in computing any period of time described herein, the day of the act or event after which the designated period of time begins to run is not to be included and the last day of the period so computed is to be included at, unless such last day is a Saturday, Sunday or legal holiday for national banks in the

location where the properties are located, in which event the period shall run until the end of the next day which is neither a Saturday, Sunday, or legal holiday. The last day of any period of time described herein shall be deemed to end at 5:00 p.m. Pacific time.

10.12 Further Assurances. In addition to the acts and deeds recited herein and contemplated to be performed, executed and/or delivered by either party at Closing, each party agrees to perform, execute and deliver, but without any obligation to incur any additional liability or expense, on or after the Closing any further deliveries and assurances as may be reasonably necessary to consummate the transactions contemplated hereby or to further perfect the conveyance, transfer and assignment of the properties hereunder.

10.13 Execution in Counterparts. This Agreement may be executed in any number of counterparts, each of which shall be deemed to be an original, and all of such counterparts shall constitute one Agreement. To facilitate execution of this Agreement, the parties may execute and exchange by email or facsimile counterparts of the signature pages.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the Effective Date.

TEMPORARY CONSTRUCTION EASEMENT

THIS TEMPORARY CONSTRUCTION EASEMENT (the "**Easement Agreement**") dated as of _____, 2008 is entered into by and between the City of St. Helena (the "**Grantee**"), and Dennis R. Hunter ("**Grantor**").

**W I T N E S S E T H:**

WHEREAS, Grantor is the owner of that certain real property described on Exhibit A, attached hereto and incorporated herein by this reference, in the City of St. Helena, Napa County, California (the "**Easement Property**").

WHEREAS, Grantee desires to perform certain work (the "**Work**") on the Easement Property in connection with the St. Helena Comprehensive Flood Control Protection Project (the "**Project**").

WHEREAS, Grantor is willing to grant certain easements to Grantee for the purposes of performing the Work on the Easement Property, on the terms and conditions set forth below.

NOW, THEREFORE, in consideration of the sum of One Dollar ($1.00) and other good and valuable consideration, paid by Grantee, the receipt and sufficiency of which is hereby acknowledged by Grantor, Grantor hereby grants, bargains, sells and conveys to Grantee, its successors and assigns, full and free right and authority for a non-exclusive easement for the performance of the Work on the Easement Property.

It is mutually covenanted and agreed by and between the parties hereto as follows:

1. Construction Easement. Grantor hereby grants and conveys to Grantee, its successors, assigns, and agents, a temporary, non-exclusive easement over, under, across, above and through the Easement Property for the purpose of performing the Work. Grantor and Grantee expressly agree that the Construction Easement shall be temporary in nature. The Easement shall terminate on December 31, 2012.

2. Ingress and Egress. Subject to the terms and provisions set forth herein, Grantee shall have the right of ingress and egress in, to, over, through and across the Easement Property for any purpose necessary or desirable for the full enjoyment of the rights granted to Grantee under this Easement Agreement.

3. Covenants of Grantor.

(a) Grantor shall not interfere with the use of or obstruct the operation of or access to the Easement Property. Any structure or building located on the Easement Property, or any grass, sod, shrubs, woody plants, other crops, trees or nursery stock located on the Easement Property which interferes with the use of or obstructs the operation of or access to the Easement Property may be removed by Grantee without liability for damages arising therefrom.

(b) Grantor covenants and agrees to remain fully liable and shall pay before delinquency all real estate taxes and assessments on the Easement Property.

4. Covenants of Grantee. Grantee represents, covenants, and warrants in favor of Grantor and its successors and assigns, as follows:

(a) Neither Grantee nor any licensee, agent, employee or independent contractor of Grantee (collectively, the "**Grantee Parties**") shall do or fail to do anything which could cause any charge, lien or encumbrance, including but not limited to any laborer's, mechanic's, vendor's, supplier's or materialman's lien, to attach to or otherwise encumber any part or all of the Easement Property and Grantee, at its sole cost and expense, shall immediately pay, discharge or otherwise cause to be removed any and all such charges, liens, and encumbrances.

(b) Grantee agrees to indemnify, defend and hold harmless the Easement Property and Grantor, and any successors and assigns of Grantor, from any costs, expenses, damages, claims or demands incurred or asserted against Grantor to the extent arising out of the activities or omissions of Grantee and/or the Grantee Parties in the performance of the Work and/or use of the Easement Property, except those due to (i) hazardous materials or conditions that are not (x) caused or (y) placed on the Easement Property or the adjacent lands of Grantor by Grantee or the Grantee Parties, (ii) latent defects on the Easement Property not related to Grantee's or the Grantee Parties' activities thereon, or (iii) the actions or omissions of Grantor, its directors, officers, members, agents or employees.

5. Binding Effect. The Construction Easement and the provisions of this Easement Agreement shall be covenants upon and shall run with the Easement Property. This Easement Agreement shall be binding upon and inure to the benefit of Grantor and Grantee, their respective successors and assigns and all future owners and lessees of any part or all of the Easement Property.

6. Governing Law. This Easement Agreement shall be governed and controlled as to validity, construction, interpretation, effect, enforcement and in all other respects by the statutes and the decisions of the courts of the State of California.

7. Amendment. This Easement Agreement may not be amended or modified except in a writing executed by both Grantor and Grantee.

8. Severability. The provisions of this Easement Agreement are separate and severable. If any provision of this Easement Agreement is held to be invalid, unenforceable, illegal or in conflict with any law, that provision shall be severed from this Easement Agreement and the remainder of this Easement Agreement shall not be impaired or otherwise affected by such severance, shall be construed, interpreted and enforced as if it did not contain such provision and shall remain in full force and effect.

9. Attorneys' Fees. If any action or proceeding is instituted to (i) enforce or interpret any provision of this Easement Agreement or (ii) as a result of the breach by a party to any of the terms hereof, then the prevailing party therein shall be entitled to recover its attorneys' fees and costs from the losing party.

10. Further Assurances. Each of the parties shall execute and deliver any and all additional papers, documents, and other assurances, and shall do any and all acts and things reasonably necessary in connection with the performance of their obligations hereunder and to carry out the intent of this Easement Agreement.

IN WITNESS WHEREOF the parties have executed this Easement Agreement the day and year first written above.

UTILITY EASEMENT AGREEMENT

THIS UTILITY EASEMENT AGREEMENT (the "**Easement Agreement**") dated as of _____, 2008 is entered into by and between the City of St. Helena (the "**Grantee**"), and Dennis R. Hunter ("**Grantor**").

**W I T N E S S E T H:**

WHEREAS, Grantor is the owner of that certain real property described on Exhibit A, attached hereto and incorporated herein by this reference, in the City of St. Helena, Napa County, California (the "**Easement Property**").

WHEREAS, Grantee desires to install and maintain certain utility facilities (the "**Work**") on the Easement Property in connection with the St. Helena Comprehensive Flood Control Protection Project (the "**Project**").

WHEREAS, Grantee and Grantor have entered into a Agreement of Purchase and Sale of even date herewith pursuant to which Grantee will acquire from Grantor certain real property ("**Grantee's Property**") in the vicinity of the Easement Property for purposes of the Project.

WHEREAS, Grantor is willing to grant certain easements to Grantee for the purposes of performing the Work on the Easement Property, on the terms and conditions set forth below.

NOW, THEREFORE, in consideration of the sum of One Dollar ($1.00) and other good and valuable consideration, paid by Grantee, the receipt and sufficiency of which is hereby acknowledged by Grantor, Grantor hereby grants, bargains, sells and conveys to Grantee, its successors and assigns, full and free right and authority for a non-exclusive easement for the performance of the Work on the Easement Property.

It is mutually covenanted and agreed by and between the parties hereto as follows:

1. Utility Easement. Grantor hereby grants and conveys to Grantee, its successors, assigns, and agents a non-exclusive, perpetual easement (the "**Utility Easement**") over, under, across, above and through the Easement Property for the purpose of installing, constructing, operating, using, maintaining, repairing, and replacing utility facilities, lines or connections and any

uses incidental thereto. The Utility Easement is appurtenant to and for the benefit of the Grantee's Property and constitutes a servitude on the Easement Property.

2. Ingress and Egress. Subject to the terms and provisions set forth herein, Grantee shall have the right of ingress and egress in, to, over, through and across the Easement Property for any purpose necessary or desirable for the full enjoyment of the rights granted to Grantee under this Easement Agreement.

3. Covenants of Grantor.

(a) Grantor shall not interfere with the use of or obstruct the operation of or access to the Easement Property. Any structure or building located on the Easement Property, or any grass, sod, shrubs, woody plants, other crops, trees or nursery stock located on the Easement Property which interferes with the use of or obstructs the operation of or access to the Easement Property may be removed by Grantee without liability for damages arising therefrom.

(b) Grantor covenants and agrees to remain fully liable and shall pay before delinquency all real estate taxes and assessments on the Easement Property.

4. Covenants of Grantee. Grantee represents, covenants, and warrants in favor of Grantor and its successors and assigns, as follows:

(a) Neither Grantee nor any licensee, agent, employee or independent contractor of Grantee (collectively, the "**Grantee Parties**") shall do or fail to do anything which could cause any charge, lien or encumbrance, including but not limited to any laborer's, mechanic's, vendor's, supplier's or materialman's lien, to attach to or otherwise encumber any part or all of the Easement Property and Grantee, at its sole cost and expense, shall immediately pay, discharge or otherwise cause to be removed any and all such charges, liens, and encumbrances.

(b) Grantee agrees to indemnify, defend and hold harmless the Easement Property and Grantor, and any successors and assigns of Grantor, from any costs, expenses, damages, claims or demands incurred or asserted against Grantor to the extent arising out of the activities or omissions of Grantee and/or the Grantee Parties in the performance of the Work and/or use of the Easement Property, except those due to (i) hazardous materials or conditions that are not (x) caused or (y) placed on the Easement Property or the adjacent lands of Grantor by Grantee or the Grantee Parties, (ii) latent defects on the Easement Property not related to Grantee's or the Grantee Parties' activities thereon, or (iii) the actions or omissions of Grantor, its directors, officers, members, agents or employees.

5. Binding Effect. The Utility Easement and the provisions of this Easement Agreement shall be covenants upon and shall run with the Easement Property. This Easement Agreement shall be binding upon and inure to the benefit of Grantor and Grantee, their respective successors and assigns and all future owners and lessees of any part or all of the Easement Property.

6. Governing Law. This Easement Agreement shall be governed and controlled as to validity, construction, interpretation, effect, enforcement and in all other respects by the statutes and the decisions of the courts of the State of California.

7. Amendment. This Easement Agreement may not be amended or modified except in a writing executed by both Grantor and Grantee.

8. Severability. The provisions of this Easement Agreement are separate and severable. If any provision of this Easement Agreement is held to be invalid, unenforceable, illegal or in conflict with any law, that provision shall be severed from this Easement Agreement and the remainder of this Easement Agreement shall not be impaired or otherwise affected by such severance, shall be construed, interpreted and enforced as if it did not contain such provision and shall remain in full force and effect.

9. Attorneys' Fees. If any action or proceeding is instituted to (i) enforce or interpret any provision of this Easement Agreement or (ii) as a result of the breach by a party to any of the terms hereof, then the prevailing party therein shall be entitled to recover its attorneys' fees and costs from the losing party.

10. Further Assurances. Each of the parties shall execute and deliver any and all additional papers, documents, and other assurances, and shall do any and all acts and things reasonably necessary in connection with the performance of their obligations hereunder and to carry out the intent of this Easement Agreement.

IN WITNESS WHEREOF the parties have executed this Easement Agreement the day and year first written above.

**Direct Title Inquiries to:**
Mitchell Glotzer
E-mail: MGlotzer@FirstAmNapa.com
Phone: (707) 254 4500

In response to the above referenced application for a policy of title insurance, this Company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance, describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception below or not excluded from coverage pursuant to the printed schedules, conditions and stipulations of said policy forms.

The printed exceptions and exclusions from the coverage of said policy or policies are set forth in Exhibit A attached. Copies of the policy forms should be read. They are available from the office which issued this report.

**Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Exhibit A of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered. It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.**

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a binder or commitment should be requested.

Dated as of July 17, 2008 at 7:30 A. M.

By: _____
Authorized Signatory

First American Title
Company of Napa

ORDER NO: T0011053-

The form of policy of title insurance contemplated by this report is:

ALTA Owner's Policy (6/17/06) with Regional Exceptions (Standard Coverage)

Title to said estate or interest at the date hereof is vested in:

**CITY OF ST. HELENA,**
**A MUNICIPAL CORPORATION**

The estate or interest in the land hereinafter described or referred to covered by this report is:

A FEE

At the date hereof exceptions to coverage in addition to the printed exceptions and exclusions contained in said policy form would be as follows:

1. General and special taxes and assessments for the fiscal year 2008-09, a lien not yet due or payable.
2. The lien of supplemental taxes, if any, assessed pursuant to Chapter 3.5 commencing with Section 75 of the California Revenue and Taxation Code.
3. Any easement for water course over that portion of said land lying within Napa River, together with any rights, interests and easements in favor of the public which exist, or are claimed to exist, over any portion of said land covered by water.
4. The terms and provisions contained in the document entitled "Deed" recorded December 12, 1901 as Book 71 of Deeds at page 278 of Official Records.
5. An easement for poleline and incidental purposes in the document recorded March 28, 1930 as Book 49 at page 169 of Official Records.
6. The terms and provisions contained in the document entitled "Grant of Storm Drain Easement" recorded May 28, 1993 as Series Number 1993 016818 of Official Records.
7. The terms and provisions contained in the document entitled "Hunt Avenue Storm Drain Reimbursement Agreement" recorded November 29, 1995 as Series Number 1995 026769 of Official Records.

- END OF EXCEPTIONS -

First American Title Company of Napa

ORDER NO: T0011053-

## LEGAL DESCRIPTION

The land referred to in this report is situated in the City of St. Helena, County of Napa, State of California, and is described as follows:

PARCEL ONE:
Commencing at an iron pipe monument on the Northwestern line of the 1-2/3 acre tract of land conveyed to the Town of St. Helena, a municipal corporation, by Deed of record in Book 67 of Deeds at page 331, said Napa County Records, said monument being at the Northeastern corner of the 10.08 acre tract of land conveyed to Josephine K. Jackse by Deed of record in Book 204 at page 244 of Official Records of Napa County; thence North 72° 21' West along the Northern line of said 10.08 acre tract and the Westerly extension thereof 499.2 feet; thence North 28° 41' 33" East 1116.8 feet to the center of the Napa River; thence down the center of said river following the meanderings thereof, South 41° 30' East 501.3 feet and South 86° East 265.6 feet to the intersection thereof with the Southeastern line of the lands formerly of D. O. Hunt; thence South 28° West along said Southeastern line 924.5 feet to the most Eastern corner of the 1-2/3 acre tract of the Town of St. Helena above referred to; thence North 62° West along the Northeastern line of said 1-2/3 acre tract 234.6 feet to the most Northern corner thereof; thence South 28° West along the Northwestern line thereof, 35 feet to the point of commencement.

APN 009-030-005

PARCEL TWO:
Two Rights of Way and Easements for private road purposes and all other uses and rights usually incidental thereto, including the right to maintain thereon power, light and telephone poles, lines, pipelines, and other facilities for the transmission of public utility services, as granted in the Deed from John E. Zimmermann to Robert Hartley, et ux, recorded January 15, 1946 in Book 236 at page 309 of Official Records of Napa County, described as follows:

a) Commencing at a 1-1/4 inch iron pipe monument, said monument being South 60° 45' East 463.7 feet from the Southwestern corner of the tract of land conveyed to George K. Gluyas by Deeds of record in Book 30 of Deeds at page 452 and in Book 29 of Deeds at page 341, said Napa County Records; thence North 28° 48' East 24 feet; thence South 60° 45' East 607.2 feet, more or less, to the Northwestern line of the tract above described; thence South 28° 41' 33" West along said Northwestern line 46.4 feet; thence North 68° 46' 15" West 71.37 feet, more or less, to the Southeastern line of the 15.5 acre tract of land conveyed to Percy V. Gordon, et ux, by Deed of record in Book 9 at page 349 of Official Records of Napa County; thence North 28° 45' West 32.2 feet to the most Eastern corner of said Gordon 15.5 acre tract; thence North 60° 45' West 537.3 feet to the point of commencement.

b) Commencing at a point on the Southeasterly line of Fulton Lane which point is located South 60° 45' East 25.0 feet from the 1-1/4 inch diameter iron pipe monument at the Southwesterly corner of the tract of land described in Deeds to George K. Glyuas of record in Book 29 of Deeds at page 341, said Napa County Records, and in Book 30 of Deeds at page 452, said Napa County Records; running thence South 60° 45' East 438.7 feet to a 1-1/4 inch

First American Title Company of Napa

ORDER NO: T0011053-

iron pipe monument; thence North 28° 48' East 16.5 feet; thence North 60° 45' West 463.7 feet; thence South 28° 45' West 16.5 feet; and thence South 60° 45' East 25.0 feet to the point of commencement.

b. The Assessor's Parcel Number(s), if any, contained in the legal description herein, are for quick identification purposes only, and are not a part of the actual legal descriptions.

c. Any statement regarding the acreage of the herein described land contained within the legal description in this report is derived from the public record and is for recorded deed purposes only. The Policy of Title Insurance contemplated by this report provides no insurance with respect to acreage and no acreage statement will appear within the legal description of such policy.

d. The County Recorder may charge an additional $20.00 recording fee, if not provided with a "Preliminary Change of Ownership Report" Form, for each Deed to be recorded. The purchaser is responsible for completing and signing this form.

e. Before an escrow can close, or funds placed in a Savings Account, the Seller must furnish a Taxpayer Identification Number to us so that we can file an IRS Form 1099S or its equivalent, with the Internal Revenue Service. This procedure is required by Section 6045 of the Internal Revenue Code.

f. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than the certain dollar amount set forth in any applicable arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. If you desire to review the terms of the policy, including any arbitration clause that may be included, contact the office that issued this Commitment or Report to obtain a sample of the policy jacket for the policy that is to be issued in connection with your transaction.

**Lenders Supplemental Report:**

g. According to the public records, there has been no conveyance of the land within a period of two years prior to the date of this report, except as follows:

Form No. 1068-1 (Rev. 06/17/06) ORDER NO: T0011053-

EXHIBIT A
LIST OF PRINTED EXCEPTIONS AND EXCLUSIONS (By Policy Type)

1. CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.

3. Defects, liens, encumbrances, adverse claims or other matters:

   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;

   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;

   (c) resulting in no loss or damage to the insured claimant;

   (d) attaching or created subsequent to Date of Policy; or

   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.

4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.

5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.

6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.

   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.

2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.

3. Easements, liens or encumbrances, or claims thereof, which are not shown by the public records.

4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.

5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.

## 2. CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (10/22/03)
## ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

### EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of any law or government regulation. This includes ordinances, laws and regulations concerning:

   a. building
   b. zoning
   c. Land use
   d. Improvements on the Land
   e. Land division
   f. environmental protection

This Exclusion does not apply to violations or the enforcement of these matters if notice of the violation or enforcement appears in the Public Records at the Policy Date.

This Exclusion does not limit the coverage described in Covered Risk 14, 15, 16, 17 or 24.

2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not apply to violations of building codes if notice of the violation appears in the Public Records at the Policy Date.

3. The right to take the Land by condemning it, unless:

   a. a notice of exercising the right appears in the Public Records at the Policy Date; or
   b. the taking happened before the Policy Date and is binding on You if You bought the Land without Knowing of the taking.

4. Risks:

   a. that are created, allowed, or agreed to by You, whether or not they appear in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they appear in the Public Records at the Policy Date;
   c. that result in no loss to You; or
   d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.d, 22, 23, 24 or 25.

5. Failure to pay value for Your Title.

6. Lack of a right:

   a. to any Land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.

This Exclusion does not limit the coverage described in Covered Risk 11 or 18.

### LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

For Covered Risk 14, 15, 16 and 18, Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

| | Your Deductible Amount | Our Maximum Dollar Limit of Liability |
|---|---|---|
| Covered Risk 14: (Subdivision Law Violation) | 1% of Policy Amount or $ 2,500 (whichever is less) | $ 10,000 |
| Covered Risk 15: (Building Permit) | 1% of Policy Amount or $ 5,000 (whichever is less) | $ 25,000 |
| Covered Risk 16: (Zoning) | 1% of Policy Amount or $ 5,000 (whichever is less) | $ 25,000 |
| Covered Risk 18: (Encroachment of Boundary Walls or Fences) | 1% of Policy Amount or $ 2,500 (whichever is less) | $ 5,000 |

3. AMERICAN LAND TITLE ASSOCIATION
RESIDENTIAL TITLE INSURANCE POLICY (6-1-87)

EXCLUSIONS

In addition to the Exceptions in Schedule B, you are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of any law or government regulation. This includes building and zoning ordinances and also laws and regulations concerning:
   - land use
   - improvements on the land
   - land division
   - environmental protection

This exclusion does not apply to violations or the enforcement of these matters which appear in the public records at Policy Date.

This exclusion does not limit the zoning coverage described in Items 12 and 13 of Covered Title Risks.

2. The right to take the land by condemning it, unless:
   - a notice of exercising the right appears in the public records
   - on the Policy Date
   - the taking happened prior to the Policy Date and is binding on you if you bought the land without knowing of the taking

3. Title Risks:
   - that are created, allowed, or agreed to by you
   - that are known to you, but not to us, on the Policy Date -- unless they appeared in the public records
   - that result in no loss to you
   - that first affect your title after the Policy Date -- this does not limit the labor and material lien coverage in Item 8 of Covered Title Risks

4. Failure to pay value for your title.

5. Lack of a right:
   - to any land outside the area specifically described and referred to in Item 3 of Schedule A
     OR
   - in streets, alleys, or waterways that touch your land

This exclusion does not limit the access coverage in Item 5 of Covered Title Risks.

4. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY (10-17-92)
WITH ALTA ENDORSEMENT-FORM 1 COVERAGE

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.

3. Defects, liens, encumbrances, adverse claims or other matters:

   (a) created, suffered, assumed or agreed to by the insured claimant;

   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;

   (c) resulting in no loss or damage to the insured claimant;

   (d) attaching or created subsequent to Date of Policy (except to the extent that this policy insures the priority of the lien of the insured mortgage over any statutory lien for services, labor or material or to the extent insurance is afforded herein as to assessments for street improvements under construction or completed at Date of Policy); or

   e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage.

4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with applicable doing business laws of the state in which the land is situated.

5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.

6. Any statutory lien for services, labor or materials (or the claim of priority of any statutory lien for services, labor or materials over the lien of the insured mortgage) arising from an improvement or work related to the land which is contracted for and commenced subsequent to Date of Policy and is not financed in whole or in part by proceeds of the indebtedness secured by the insured mortgage which at Date of Policy the insured has advanced or is obligated to advance.

7. Any claim, which arises out of the transaction creating the interest of the mortgagee insured by this policy, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that is based on:

   (i) the transaction creating the interest of the insured mortgagee being deemed a fraudulent conveyance or fraudulent transfer; or

   (ii) the subordination of the interest of the insured mortgagee as a result of the application of the doctrine or equitable subordination; or

   (iii) the transaction creating the interest of the insured mortgagee being deemed a preferential transfer except where the preferential transfer results from the failure:

      (a) to timely record the instrument of transfer; or

      (b) of such recordation to impart notice to a purchaser for value or a judgment or lien creditor.

*The above policy forms may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following General Exceptions:*

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.

2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.

3. Easements, claims of easement or encumbrances which are not shown by the public records.

4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.

5. Unpatented mining claims, reservations or exceptions in patents or in acts authorizing the issuance thereof, water rights, claims or title to water.

6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the public records.

5. 2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to

   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;

or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.

   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.

2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.

3. Defects, liens, encumbrances, adverse claims, or other matters

   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.

4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.

5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.

6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is

   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.

Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

*The above policy forms may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following General Exceptions:*

1. The lien of real estate taxes or assessments imposed on the Title by a governmental authority that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or in the Public Records.

2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or by making inquiry of persons in possession of the Land.

3. Easements, claims of easement or encumbrances that are not shown by the Public Records.

4. Any encroachment, encumbrance, violation, variation or adverse circumstance affecting the Title including discrepancies, conflicts in boundary lines, shortage in area, or any other facts that would be disclosed by an accurate and complete land survey of the Land, and that are not shown in the Public Records.

5. Unpatented mining claims; reservations or exception in patents or in acts authorizing the issuance thereof; water rights, claims or title to water.

6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the Public Records.

6. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY (10-17-92)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.

3. Defects, liens, encumbrances, adverse claims or other matters:

   (a) created, suffered, assumed or agreed to by the insured claimant;

   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;

   (c) resulting in no loss or damage to the insured claimant;

   (d) attaching or created subsequent to Date of Policy; or

   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the estate or interest insured by this policy.

4. Any claim, which arises out of the transaction vesting in the insured the estate or interest insured by this policy, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that is based on:

   (i) the transaction creating the estate or interest insured by this policy being deemed a fraudulent conveyance or fraudulent transfer; or

   (ii) the transaction creating the estate or interest insured by this policy being deemed a preferential transfer except where the preferential transfer results from the failure:

      (a) to timely record the instrument of transfer; or

      (b) of such recordation to impart notice to a purchaser for value or a judgment or lien creditor.

*The above policy forms may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage Policy will also include the following General Exceptions:*

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

2. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.

2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.

3. Easements, claims of easement or encumbrances which are not shown by the public records.

5. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.

5. Unpatented mining claims, reservations or exceptions in patents or in acts authorizing the issuance thereof, water rights, claims or title to water.

6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the public records.

7. 2006 ALTA OWNER'S POLICY (06-17-06)
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;

   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.

2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.

3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.

4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.

5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

*The above policy forms may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following General Exceptions:*

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. The lien of real estate taxes or assessments imposed on the Title by a governmental authority that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or in the Public Records.

2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or by making inquiry of persons in possession of the Land.

3. Easements, claims of easement or encumbrances that are not shown by the Public Records.

4. Any encroachment, encumbrance, violation, variation or adverse circumstance affecting the Title including discrepancies, conflicts in boundary lines, shortage in area, or any other facts that would be disclosed by an accurate and complete land survey of the Land, and that are not shown in the Public Records.

5. Unpatented mining claims; reservations or exception in patents or in acts authorizing the issuance thereof; water rights, claims or title to water.

6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the Public Records.

8. ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (10/13/01)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the Land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the Land; (iii) a separation in ownership or a change in the dimensions or areas of the Land or any parcel of which the Land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that s notice of the enforcement thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the Land has been recorded in the Public Records at Date of Policy. This exclusion does not limit the coverage provided under Covered Risks 12, 13, 14, and 16 of this policy.

   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the Land has been recorded in the Public Records at Date of Policy. This exclusion does not limit the coverage provided under Covered Risks 12, 13, 14, and 16 of this policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the Public Records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without Knowledge.

3. Defects, liens, encumbrances, adverse claims or other matters:

   (a) created, suffered, assumed or agreed to by the Insured Claimant;

   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;

   (c) resulting In no loss or damage to the Insured Claimant;

   (d) attaching or created subsequent to Date of Policy (this paragraph does not limit the coverage provided under Covered Risks 8, 16, 18, 19, 20, 21, 22, 23, 24, 25 and 26); or

   (e) resulting in loss or damage which would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.

4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of the Insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with applicable doing business laws of the state in which the Land is situated.

5. Invalidity or unenforceability of the lien of the Insured Mortgage, or claim thereof, which arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, except as provided in Covered Risk 27, or any consumer credit protection or truth in lending law.

6. Real property taxes or assessments of any governmental authority which become a lien on the Land subsequent to Date of Policy. This exclusion does not limit the coverage provided under Covered Risks 7, 8(e) and 26.

7. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This exclusion does not limit the coverage provided in Covered Risk 8.

8. Lack of priority of the lien of the Insured Mortgage as to each and every advance made after Date of Policy, and all interest charged thereon, over liens, encumbrances and other matters affecting the title, the existence of which are Known to the Insured at:

   (a) The time of the advance; or

   (b) The time a modification is made to the terms of the Insured Mortgage which changes the rate of interest charged, if the rate of Interest is greater as a result of the modification than it would have been before the modification. This exclusion does not limit the coverage provided in Covered Risk 8.

9. The failure of the residential structure, or any portion thereof to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This exclusion does not apply to violations of building codes if notice of the violation appears in the Public Records at Date of Policy.

## Privacy Policy

### We Are Committed to Safeguarding Customer Information

In order to better serve your needs now and in the future, we may ask you to provide us with certain information. We understand that you may be concerned about what we will do with such information – particularly any personal or financial information. We agree that you have a right to know how we will utilize the personal information you provide to us. Therefore, together with our parent company, The First American Corporation, we have adopted this Privacy Policy to govern the use and handling of your personal information.

### Applicability

This Privacy Policy governs our use of the information which you provide to us. It does not govern the manner in which we may use information we have obtained from any other source, such as information obtained from a public record or from another person or entity. First American has also adopted broader guidelines that govern our use of personal information regardless of its source. First American calls these guidelines its *Fair Information Values*, a copy of which can be found on our website at www.firstam.com.

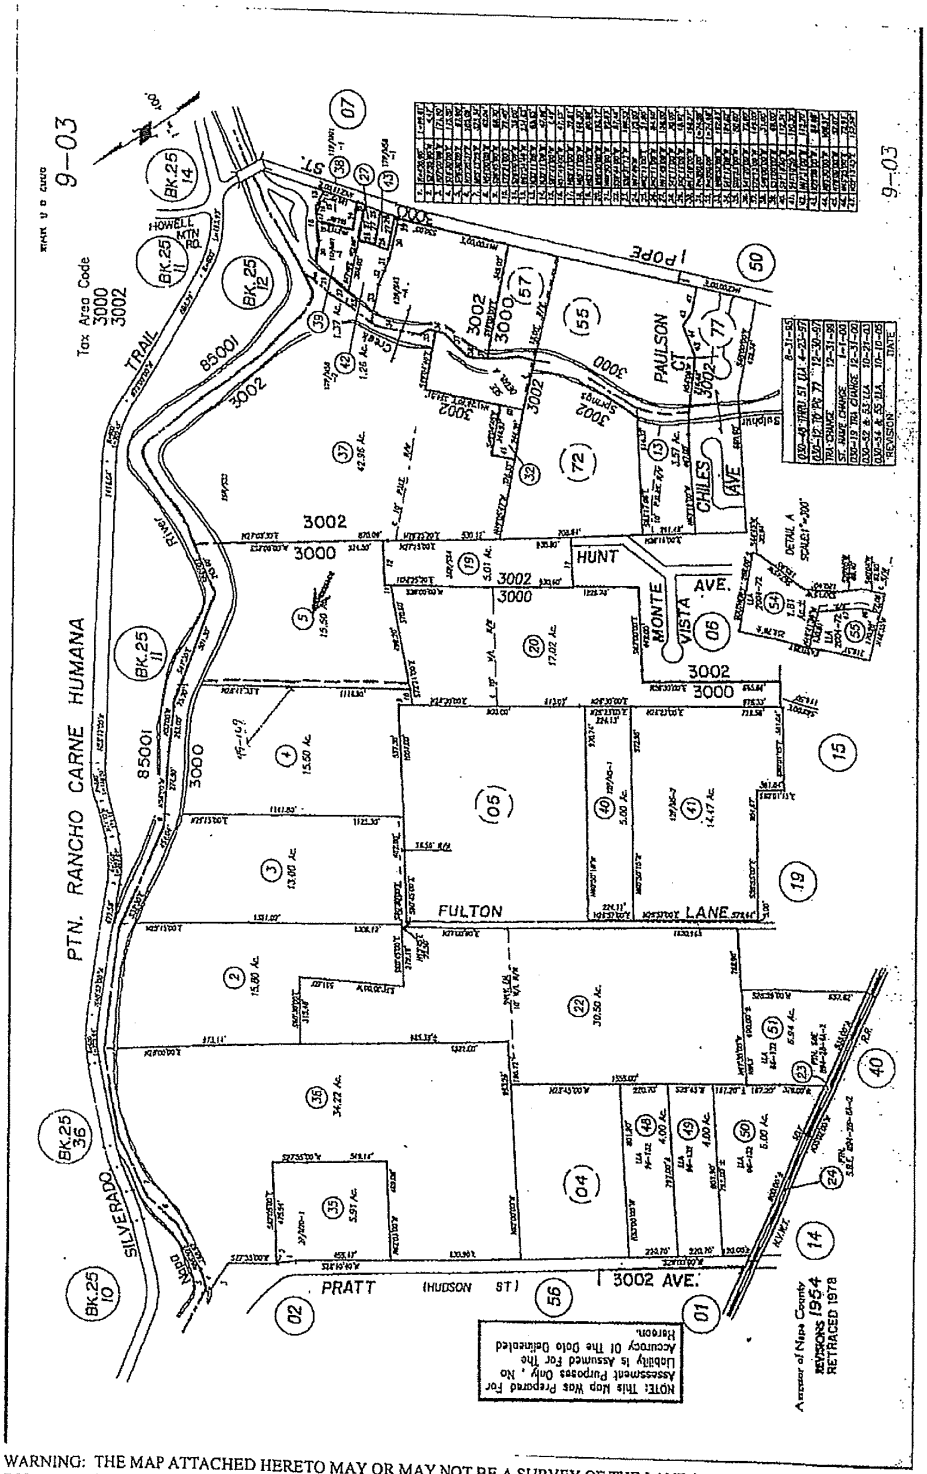
### Types of Information

Depending upon which of our services you are utilizing, the types of nonpublic personal information that we may collect include:

- Information we receive from you on applications, forms and in other communications to us, whether in writing, in person, by telephone or any other means;
- Information about your transactions with us, our affiliated companies, or others; and
- Information we receive from a consumer reporting agency.

### Use of Information

We request information from you for our own legitimate business purposes and not for the benefit of any nonaffiliated party. Therefore, we will not release your information to nonaffiliated parties except: (1) as necessary for us to provide the product or service you have requested of us; or (2) as permitted by law. We may, however, store such information indefinitely, including the period after which any customer relationship has ceased. Such information may be used for any internal purpose, such as quality control efforts or customer analysis. We may also provide all of the types of nonpublic personal information listed above to one or more of our affiliated companies. Such affiliated companies include financial service providers, such as title insurers, property and casualty insurers, and trust and investment advisory companies, or companies involved in real estate services, such as appraisal companies, home warranty companies, and escrow companies. Furthermore, we may also provide all the information we collect, as described above, to companies that perform marketing services on our behalf, on behalf of our affiliated companies, or to other financial institutions with whom we or our affiliated companies have joint marketing agreements.



### Former Customers

Even if you are no longer our customer, our Privacy Policy will continue to apply to you.

### Confidentiality and Security

We will use our best efforts to ensure that no unauthorized parties have access to any of your information. We restrict access to nonpublic personal information about you to those individuals and entities who need to know that information to provide products or services to you. We will use our best efforts to train and oversee our employees and agents to ensure that your information will be handled responsibly and in accordance with this Privacy Policy and First American's *Fair Information Values*. We currently maintain physical, electronic, and procedural safeguards that comply with federal regulations to guard your nonpublic personal information.

E-mail: MGlotzer@FirstAmNapa.com
Phone: (707) 254 4500

In response to the above referenced application for a policy of title insurance, this Company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance, describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception below or not excluded from coverage pursuant to the printed schedules, conditions and stipulations of said policy forms.

The printed exceptions and exclusions from the coverage of said policy or policies are set forth in Exhibit A attached. Copies of the policy forms should be read. They are available from the office which issued this report.

**Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Exhibit A of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered. It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.**

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a binder or commitment should be requested.

Dated as of July 21, 2008 at 7:30 A. M.

Authorized Signatory

First American Title
Company of Napa

ORDER NO: T0011052-

The form of policy of title insurance contemplated by this report is:

ALTA Owner's Policy (6/17/06) with Regional Exceptions (Standard Coverage)

Title to said estate or interest at the date hereof is vested in:

**DENNIS R. HUNTER,**
**AN UNMARRIED MAN**

The estate or interest in the land hereinafter described or referred to covered by this report is:

A FEE

At the date hereof exceptions to coverage in addition to the printed exceptions and exclusions contained in said policy form would be as follows:

1. General and special taxes and assessments for the fiscal year 2008-09, a lien not yet due or payable.
2. The lien of supplemental taxes, if any, assessed pursuant to Chapter 3.5 commencing with Section 75 of the California Revenue and Taxation Code.
3. An easement for underground water pipelines and incidental purposes in the document recorded December 5, 1972 as Book 895 at page 383 of Official Records.
4. The terms and provisions contained in the document entitled "Hunt Avenue Storm Drain Reimbursement Agreement" recorded November 29, 1995 as Series Number 1995 026769 of Official Records.
5. The terms and provisions contained in the document entitled "Certificate of Completion" recorded July 26, 2002 as Series Number 2002-0029720 of Official Records.
6. The lack of a right of access to and from the land.
7. Rights of parties in possession.

- END OF EXCEPTIONS -

First American Title Company of Napa

ORDER NO: T0011052-

## LEGAL DESCRIPTION

**Information Notes:**

a. General and special taxes and assessments for the fiscal year 2007-08.

| | | |
|---|---|---|
| First Installment | : | $8,876.85 PAID |
| Second Installment | : | $8,876.85 PAID |
| Tax Rate Area | : | 3000 |
| A. P. No. | : | 009-030-020 |

b. The Assessor's Parcel Number(s), if any, contained in the legal description herein, are for quick identification purposes only, and are not a part of the actual legal descriptions.

c. Any statement regarding the acreage of the herein described land contained within the legal description in this report is derived from the public record and is for recorded deed purposes only. The Policy of Title Insurance contemplated by this report provides no insurance with respect to acreage and no acreage statement will appear within the legal description of such policy.

d. The County Recorder may charge an additional $20.00 recording fee, if not provided with a "Preliminary Change of Ownership Report" Form, for each Deed to be recorded. The purchaser is responsible for completing and signing this form.

e. Before an escrow can close, or funds placed in a Savings Account, the Seller must furnish a Taxpayer Identification Number to us so that we can file an IRS Form 1099S or its equivalent, with the Internal Revenue Service. This procedure is required by Section 6045 of the Internal Revenue Code.

f. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than the certain dollar amount set forth in any applicable arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. If you desire to review the terms of the policy, including any arbitration clause that may be included, contact the office that issued this Commitment or Report to obtain a sample of the policy jacket for the policy that is to be issued in connection with your transaction.

**Lenders Supplemental Report:**

g. According to the public records, there has been no conveyance of the land within a period of two years prior to the date of this report, except as follows:

EXHIBIT A
LIST OF PRINTED EXCEPTIONS AND EXCLUSIONS (By Policy Type)

1. CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.

3. Defects, liens, encumbrances, adverse claims or other matters:

   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;

   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;

   (c) resulting in no loss or damage to the insured claimant;

   (d) attaching or created subsequent to Date of Policy; or

   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.

4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.

5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.

6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.

   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.

2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.

3. Easements, liens or encumbrances, or claims thereof, which are not shown by the public records.

4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.

5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.

## 2. CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (10/22/03)
## ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

### EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of any law or government regulation. This includes ordinances, laws and regulations concerning:

   a. building
   b. zoning
   c. Land use
   d. Improvements on the Land
   e. Land division
   f. environmental protection

This Exclusion does not apply to violations or the enforcement of these matters if notice of the violation or enforcement appears in the Public Records at the Policy Date.

This Exclusion does not limit the coverage described in Covered Risk 14, 15, 16, 17 or 24.

2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not apply to violations of building codes if notice of the violation appears in the Public Records at the Policy Date.

3. The right to take the Land by condemning it, unless:

   a. a notice of exercising the right appears in the Public Records at the Policy Date; or
   b. the taking happened before the Policy Date and is binding on You if You bought the Land without Knowing of the taking.

4. Risks:

   a. that are created, allowed, or agreed to by You, whether or not they appear in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they appear in the Public Records at the Policy Date;
   c. that result in no loss to You; or
   d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.d, 22, 23, 24 or 25.

5. Failure to pay value for Your Title.

6. Lack of a right:

   a. to any Land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.

This Exclusion does not limit the coverage described in Covered Risk 11 or 18.

### LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

For Covered Risk 14, 15, 16 and 18, Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

| | Your Deductible Amount | Our Maximum Dollar Limit of Liability |
|---|---|---|
| Covered Risk 14: (Subdivision Law Violation) | 1% of Policy Amount or $ 2,500 (whichever is less) | $ 10,000 |
| Covered Risk 15: (Building Permit) | 1% of Policy Amount or $ 5,000 (whichever is less) | $ 25,000 |
| Covered Risk 16: (Zoning) | 1% of Policy Amount or $ 5,000 (whichever is less) | $ 25,000 |
| Covered Risk 18: (Encroachment of Boundary Walls or Fences) | 1% of Policy Amount or $ 2,500 (whichever is less) | $ 5,000 |

3. AMERICAN LAND TITLE ASSOCIATION
RESIDENTIAL TITLE INSURANCE POLICY (6-1-87)

EXCLUSIONS

In addition to the Exceptions in Schedule B, you are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of any law or government regulation. This includes building and zoning ordinances and also laws and regulations concerning:
   - land use
   - improvements on the land
   - land division
   - environmental protection

   This exclusion does not apply to violations or the enforcement of these matters which appear in the public records at Policy Date.

   This exclusion does not limit the zoning coverage described in Items 12 and 13 of Covered Title Risks.

2. The right to take the land by condemning it, unless:
   - a notice of exercising the right appears in the public records
   - on the Policy Date
   - the taking happened prior to the Policy Date and is binding on you if you bought the land without knowing of the taking

3. Title Risks:
   - that are created, allowed, or agreed to by you
   - that are known to you, but not to us, on the Policy Date -- unless they appeared in the public records
   - that result in no loss to you
   - that first affect your title after the Policy Date -- this does not limit the labor and material lien coverage in Item 8 of Covered Title Risks

4. Failure to pay value for your title.

5. Lack of a right:
   - to any land outside the area specifically described and referred to in Item 3 of Schedule A
     OR
   - in streets, alleys, or waterways that touch your land

   This exclusion does not limit the access coverage in Item 5 of Covered Title Risks.

4. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY (10-17-92)
WITH ALTA ENDORSEMENT-FORM 1 COVERAGE

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.

3. Defects, liens, encumbrances, adverse claims or other matters:

   (a) created, suffered, assumed or agreed to by the insured claimant;

   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;

   (c) resulting in no loss or damage to the insured claimant;

   (d) attaching or created subsequent to Date of Policy (except to the extent that this policy insures the priority of the lien of the insured mortgage over any statutory lien for services, labor or material or to the extent insurance is afforded herein as to assessments for street improvements under construction or completed at Date of Policy); or

   e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage.

4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with applicable doing business laws of the state in which the land is situated.

5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.

6. Any statutory lien for services, labor or materials (or the claim of priority of any statutory lien for services, labor or materials over the lien of the insured mortgage) arising from an improvement or work related to the land which is contracted for and commenced subsequent to Date of Policy and is not financed in whole or in part by proceeds of the indebtedness secured by the insured mortgage which at Date of Policy the insured has advanced or is obligated to advance.

7. Any claim, which arises out of the transaction creating the interest of the mortgagee insured by this policy, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that is based on:

   (i) the transaction creating the interest of the insured mortgagee being deemed a fraudulent conveyance or fraudulent transfer; or

   (ii) the subordination of the interest of the insured mortgagee as a result of the application of the doctrine or equitable subordination; or

   (iii) the transaction creating the interest of the insured mortgagee being deemed a preferential transfer except where the preferential transfer results from the failure:

      (a) to timely record the instrument of transfer; or

      (b) of such recordation to impart notice to a purchaser for value or a judgment or lien creditor.

*The above policy forms may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following General Exceptions:*

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.

2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.

3. Easements, claims of easement or encumbrances which are not shown by the public records.

4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.

5. Unpatented mining claims, reservations or exceptions in patents or in acts authorizing the issuance thereof, water rights, claims or title to water.

6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the public records.

5. 2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to

   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;

or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.

   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.

2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.

3. Defects, liens, encumbrances, adverse claims, or other matters

   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.

4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.

5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.

6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is

   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.

Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

*The above policy forms may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following General Exceptions:*

1. The lien of real estate taxes or assessments imposed on the Title by a governmental authority that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or in the Public Records.

2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or by making inquiry of persons in possession of the Land.

3. Easements, claims of easement or encumbrances that are not shown by the Public Records.

4. Any encroachment, encumbrance, violation, variation or adverse circumstance affecting the Title including discrepancies, conflicts in boundary lines, shortage in area, or any other facts that would be disclosed by an accurate and complete land survey of the Land, and that are not shown in the Public Records.

5. Unpatented mining claims; reservations or exception in patents or in acts authorizing the issuance thereof; water rights, claims or title to water.

6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the Public Records.

6. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY (10-17-92)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.

3. Defects, liens, encumbrances, adverse claims or other matters:

   (a) created, suffered, assumed or agreed to by the insured claimant;

   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;

   (c) resulting in no loss or damage to the insured claimant;

   (d) attaching or created subsequent to Date of Policy; or

   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the estate or interest insured by this policy.

4. Any claim, which arises out of the transaction vesting in the insured the estate or interest insured by this policy, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that is based on:

   (i) the transaction creating the estate or interest insured by this policy being deemed a fraudulent conveyance or fraudulent transfer; or

   (ii) the transaction creating the estate or interest insured by this policy being deemed a preferential transfer except where the preferential transfer results from the failure:

      (a) to timely record the instrument of transfer; or

      (b) of such recordation to impart notice to a purchaser for value or a judgment or lien creditor.

*The above policy forms may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage Policy will also include the following General Exceptions:*

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

2. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.

2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.

3. Easements, claims of easement or encumbrances which are not shown by the public records.

5. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.

5. Unpatented mining claims, reservations or exceptions in patents or in acts authorizing the issuance thereof, water rights, claims or title to water.

6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the public records.

7. 2006 ALTA OWNER'S POLICY (06-17-06)
EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;

   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.

2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.

3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.

4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.

5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

*The above policy forms may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following General Exceptions:*

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. The lien of real estate taxes or assessments imposed on the Title by a governmental authority that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or in the Public Records.

2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or by making inquiry of persons in possession of the Land.

3. Easements, claims of easement or encumbrances that are not shown by the Public Records.

4. Any encroachment, encumbrance, violation, variation or adverse circumstance affecting the Title including discrepancies, conflicts in boundary lines, shortage in area, or any other facts that would be disclosed by an accurate and complete land survey of the Land, and that are not shown in the Public Records.

5. Unpatented mining claims; reservations or exception in patents or in acts authorizing the issuance thereof; water rights, claims or title to water.

6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the Public Records.

8. ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (10/13/01)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the Land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the Land; (iii) a separation in ownership or a change in the dimensions or areas of the Land or any parcel of which the Land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that s notice of the enforcement thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the Land has been recorded in the Public Records at Date of Policy. This exclusion does not limit the coverage provided under Covered Risks 12, 13; 14, and 16 of this policy.

   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the Land has been recorded in the Public Records at Date of Policy. This exclusion does not limit the coverage provided under Covered Risks 12, 13, 14, and 16 of this policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the Public Records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without Knowledge.

3. Defects, liens, encumbrances, adverse claims or other matters:

   (a) created, suffered, assumed or agreed to by the Insured Claimant;

   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;

   (c) resulting In no loss or damage to the Insured Claimant;

   (d) attaching or created subsequent to Date of Policy (this paragraph does not limit the coverage provided under Covered Risks 8, 16, 18, 19, 20, 21, 22, 23, 24, 25 and 26); or

   (e) resulting in loss or damage which would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.

4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of the Insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with applicable doing business laws of the state in which the Land is situated.

5. Invalidity or unenforceability of the lien of the Insured Mortgage, or claim thereof, which arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, except as provided in Covered Risk 27, or any consumer credit protection or truth in lending law.

6. Real property taxes or assessments of any governmental authority which become a lien on the Land subsequent to Date of Policy. This exclusion does not limit the coverage provided under Covered Risks 7, 8(e) and 26.

7. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This exclusion does not limit the coverage provided in Covered Risk 8.

8. Lack of priority of the lien of the Insured Mortgage as to each and every advance made after Date of Policy, and all interest charged thereon, over liens, encumbrances and other matters affecting the title, the existence of which are Known to the Insured at:

   (a) The time of the advance; or

   (b) The time a modification is made to the terms of the Insured Mortgage which changes the rate of interest charged, if the rate of Interest is greater as a result of the modification than it would have been before the modification. This exclusion does not limit the coverage provided in Covered Risk 8.

9. The failure of the residential structure, or any portion thereof to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This exclusion does not apply to violations of building codes if notice of the violation appears in the Public Records at Date of Policy.

*First American Title Company of Napa*

## Privacy Policy

### We Are Committed to Safeguarding Customer Information

In order to better serve your needs now and in the future, we may ask you to provide us with certain information. We understand that you may be concerned about what we will do with such information – particularly any personal or financial information. We agree that you have a right to know how we will utilize the personal information you provide to us. Therefore, together with our parent company, The First American Corporation, we have adopted this Privacy Policy to govern the use and handling of your personal information.

### Applicability

This Privacy Policy governs our use of the information which you provide to us. It does not govern the manner in which we may use information we have obtained from any other source, such as information obtained from a public record or from another person or entity. First American has also adopted broader guidelines that govern our use of personal information regardless of its source. First American calls these guidelines its *Fair Information Values*, a copy of which can be found on our website at www.firstam.com.

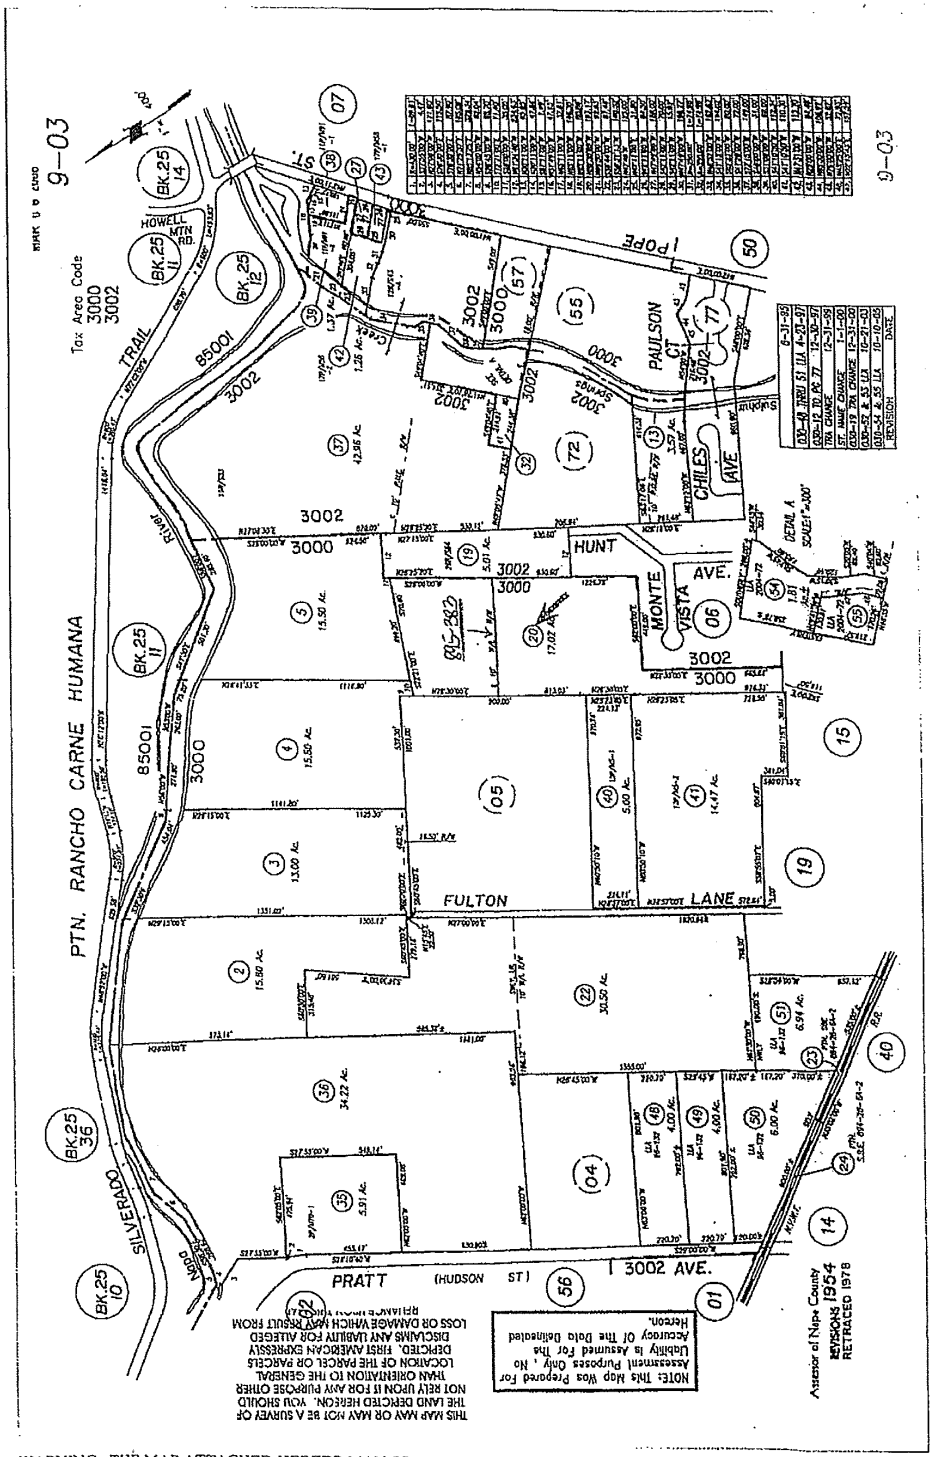
### Types of Information

Depending upon which of our services you are utilizing, the types of nonpublic personal information that we may collect include:

- Information we receive from you on applications, forms and in other communications to us, whether in writing, in person, by telephone or any other means;
- Information about your transactions with us, our affiliated companies, or others; and
- Information we receive from a consumer reporting agency.

### Use of Information

We request information from you for our own legitimate business purposes and not for the benefit of any nonaffiliated party. Therefore, we will not release your information to nonaffiliated parties except: (1) as necessary for us to provide the product or service you have requested of us; or (2) as permitted by law. We may, however, store such information indefinitely, including the period after which any customer relationship has ceased. Such information may be used for any internal purpose, such as quality control efforts or customer analysis. We may also provide all of the types of nonpublic personal information listed above to one or more of our affiliated companies. Such affiliated companies include financial service providers, such as title insurers, property and casualty insurers, and trust and investment advisory companies, or companies involved in real estate services, such as appraisal companies, home warranty companies, and escrow companies. Furthermore, we may also provide all the information we collect, as described above, to companies that perform marketing services on our behalf, on behalf of our affiliated companies, or to other financial institutions with whom we or our affiliated companies have joint marketing agreements.



### Former Customers

Even if you are no longer our customer, our Privacy Policy will continue to apply to you.

### Confidentiality and Security

We will use our best efforts to ensure that no unauthorized parties have access to any of your information. We restrict access to nonpublic personal information about you to those individuals and entities who need to know that information to provide products or services to you. We will use our best efforts to train and oversee our employees and agents to ensure that your information will be handled responsibly and in accordance with this Privacy Policy and First American's *Fair Information Values*. We currently maintain physical, electronic, and procedural safeguards that comply with federal regulations to guard your nonpublic personal information.

II. Existing Theoretical Domestic Water Demand ..... 1
III. Proposed Theoretical Domestic Water Demand ..... 1
IV. Landscape Water Demand ..... 2
V. Proposed Mitigation ..... 2
VI. In-Lieu Retrofit Fees ..... 2
VII. Conclusion ..... 5

## ATTACHMENTS

1. Water Neutrality Calculations
2. Conceptual Landscape Water Use Calculations – Spatial Design Group
3. Municipal Water Saving Measures

## I. BACKGROUND

In order to comply with the City of St. Helena's Water Neutral Policy, RSA+ is submitting to you this water analysis for the proposed Hunter Subdivision. This analysis documents the theoretical proposed water consumption for the new development and the options for water off-set mitigation.

## II. EXISTING THEORETICAL DOMESTIC WATER DEMAND

There is no current connection to the City of St. Helena domestic water system. Therefore, the existing demand is zero gallons per day.

## III. PROPOSED THEORETICAL DOMESTIC WATER DEMAND

It is our understanding based on communications with the City of St. Helena that the assumed water demand has been established to its satisfaction. The basis is repeated here for continuity.

The proposed development consists of 51 lots with detached 4-bedroom single-family residences, and an additional 25 two-bedroom multi-family residential units will be included in the development. The proposed water demand is calculated based upon water usage from water fixtures and appliances based on the number of occupants as laid out by The City of St. Helena Water Neutral Policy for Development. A list of the water performance requirements for fixtures and appliances follows.

| | | |
|---|---|---|
| A. | Showerheads | 8 min/shower/day/occupant |
| B. | Lavatory faucets | 0.25 min/3 times/day/occupant |
| C. | Kitchen faucets | 4 min/day/occupant |
| D. | Toilets | 3 flushes/day/occupant |
| E. | Clothes Washer | 0.37 load/day/occupant |
| F. | Dish Washer | 0.1 load/day/occupant |

Water usage from water fixtures and appliances that meet the minimum requirements of the 2010 California Green Building Standards Code (Title 24, Part 11) and the City of St. Helena Water Neutral Policy.

| | | |
|---|---|---|
| A. | Showerheads | 2.0 gallons per minute |
| B. | Lavatory faucets | 1.5 gallons per minute |
| C. | Kitchen faucets | 1.8 gallons per minute |
| D. | Toilets | 1.3 gallons per flush |
| E. | Clothes Washer | 19.7 gallons per load |
| F. | Dish Washer | 6.3 gallons per load |

Following the guidelines of the City of St. Helena policy, the analysis is to be completed based on two occupants per bedroom. Based on the City of St. Helena Water Neutral Policy for Development we have calculated the theoretical domestic water demand to be 17,752 gallons

per day (19.88 acre-feet per year) for the total development. These calculations can be found attached.

## IV. LANDSCAPE WATER DEMAND

Landscape irrigation will be provided by an existing well located at the site, thus landscape usage will not be included in this water neutrality study, as provided for in Municipal Code Section 13.12.010. Preliminary landscape water usage calculations prepared by Spatial Design Group indicated that irrigation will require 17.16 acre-feet. See Conceptual Landscape Water Use Calculations by Spatial Design Group in Attachment 2.

## V. PROPOSED MITIGATION

A variety of specific water offset mitigations were listed in our 2017 Report in summary form. Attached here is the detailed Report with the supporting documentation cited. These may be items that are pursued.

City of St. Helena Staff has asked us to review alternatives similar to those in American Canyon. Some of these options are converting parks to recycled water and expanding recycled water to other areas are discussed in American Canyon, however we don't believe that these options are as readily available in the City of St. Helena.

We discussed alternative options with City of St. Helena Public Works Director, Erica Ahmann Smithies, and understand there may be a few projects that could drastically increase the water savings to the City, and provide the offset the project needs. These options include the following and would be funded by payment of the in-lieu fee provided for by City Ordinance:

1. Assist the City in fixing the leaking transmission line between the City and Rutherford. It's our understanding there is a substantial amount of water lost as part of the old pipeline.
2. Place/replace water meters that are not in place or functioning improperly.
3. Paying the in-lieu fee to be used by the City for any of the options identified in the attached Report or otherwise selected by the City.

## VI. IN-LIEU RETROFIT FEES

The proposed project will result in the use of approximately 17,752 gallons per day. Since the existing parcel had no existing water usage, conservation measures on the site will not be able to achieve neutrality. Therefore, the project proposes to pay an in-lieu retrofit fee equivalent to the cost of retrofitting showerheads, sink and kitchen faucets, and toilets in existing residences to achieve the required water savings.

The theoretical residential water usage for homes with old fixtures are summarized in the table below:

Table 1 - Theoretical Water Use with Old Fixtures

| Fixture | Flow Rate (gal/min or gal/flush) | Flow Duration (min., flush, load, etc.) | Daily Uses per Occupant | Number of Occupants | Gallons per Day |
|---|---|---|---|---|---|
| Showerheads | 2.5 | 8 | 1 | 6 | 120 |
| Sink Faucets | 2.2 | 0.25 | 3 | 6 | 9.9 |
| Kitchen Faucets | 2.2 | 4 | 1 | 6 | 52.8 |
| Toilet | 2.2 | 1 | 3 | 6 | 39.6 |
| | | | | **Total** | **222** |

The theoretical residential water usage for homes with retrofitted low flow fixtures are summarized in the table below:

Table 2 - Theoretical Water Use with Retrofitted Low Flow Fixtures

| Fixture | Flow Rate (gal/min or gal/flush) | Flow Duration (min., flush, load, etc.) | Daily Uses per Occupant | Number of Occupants | Gallons per Day |
|---|---|---|---|---|---|
| Showerheads | 2 | 8 | 1 | 6 | 96 |
| Sink Faucets | 1.5 | 0.25 | 3 | 6 | 6.75 |
| Kitchen Faucets | 1.8 | 4 | 1 | 6 | 43.2 |
| Toilet | 1.28 | 1 | 3 | 6 | 23.04 |
| | | | | **Total** | **169** |

A residence with old fixtures uses 222 gallons per day (gpd), while a residence that has been retrofitted with low fixtures will use 169 gpd. An overall savings of 53 gpd.

The calculation for number of residences which would need to be retrofitted based on the anticipated demand for The Hunter Subdivision are shown in the tables below:

Table 3 - Proposed Water Use Savings

| | Gallons | |
|---|---|---|
| | **Daily** | **Annual** |
| Theoretical Water Use with Old Fixtures | 222 | 81140 |
| Theoretical Water Use with Retrofits | 169 | 61681 |
| **Savings** | **53** | **19458** |

Table 4 – Retrofits Required for Hunter Subdivision

| | Gallons | |
|---|---|---|
| | **Daily** | **Annual** |
| Hunter Subdiv. New Water Demand | 17752 | 6479480 |
| Water Savings per Residence w/Retrofit | 53 | 19458 |
| **Number of Residences to Retrofit** | **333** | **333** |

In order to offset the anticipated water demand at The Hunter Subdivision, 333 residences will need to be retrofitted.

The anticipated material and installation costs to retrofit a residence are shown in the tables below:

Table 5 - Retrofit Material Costs Anticipated

| **Material Cost per Residence** | **Qty** | ***Cost per Unit** | **Total Cost** |
|---|---|---|---|
| Toilet | 2 | $265.68 | $531.36 |
| Lavatory Faucet | 2 | $140.40 | $280.80 |
| Kitchen Faucet | 1 | $150.12 | $150.12 |
| Shower Head | 1 | $309.96 | $309.96 |
| **Total Estimated Material Cost per Residence*** | | | **$1,272.24** |

Table 6 - Retrofit Installation Costs Anticipated

| **Installation Cost per residence** | **Hours** | **Qty** | ***Cost per hour** | **Total Cost** |
|---|---|---|---|---|
| Toilet | 1.5 | 2 | $65.00 | $195.00 |
| Lavatory Faucet | 1.5 | 2 | $65.00 | $195.00 |
| Kitchen Faucet | 1.5 | 1 | $65.00 | $97.50 |
| Shower Head | 0.5 | 1 | $65.00 | $32.50 |
| **Total Estimated Labor Cost per Residence*** | | | | **$520.00** |

Table 7 – Total Estimated Costs of Retrofits

| | |
|---|---|
| Total estimated cost to retrofit each residence * | $ 1,792.24 |
| Number of residences to retrofit | $333.00 |
| **Total Estimated In-Lieu Fee Retrofit Cost*** | **$596,808.19** |

Material costs cited in the tables above are based upon sources found on www.amazon.com on August 28, 2020 with an 8% markup for tax for the following fixtures:

- Toilet - Kohler Cimarron Comfort Height two-piece 1.28gpf with Aqua Piston Tech Model #K-3887-0
- Lavatory Faucet - American Standard Tropic Centerset Model #7038201
- Kitchen Faucet - American Standard Monterrey Model #6409170
- Shower Head - American Standard Berwick Model #T430501

Labor costs cited in Tables 5-7 above for cost per hour are based upon estimates found at http://www.angieslist.com/articles/how-much-does-it-cost-hire-handyman.htm

## VII. CONCLUSION

The proposed project will result in the use of approximately 17,752 gallons per day. The proposed development will use water efficient fixtures and conservation measures to the maximum extent practicable. The offset of the project water demands may be best met through assisting the City of St. Helena with existing water system improvements via in-lieu fees. The project will pay $596,808 as an in-lieu retrofit fee equal to the cost of retrofitting enough residences with low flow fixtures to achieve savings equal to the proposed use.

## CONCEPTUAL LANDSCAPE WATER USE CALCULATIONS
## SPATIAL DESIGN GROUP

**SPATIAL DESIGN GROUP**
Planning - Urban Design - Landscape Architecture

August 2, 2019

Ben VanZutphen
237 Lorraine Ct.
Healdsburg, CA 95448

**RE: Hunter Residential Subdivision**
**Technical Memo - Conceptual Landscape Water Use Calculations**
**Adams Street & Starr Avenue, Saint Helena, CA (City File No. PL 10-040)**
*Job No.: 181002*

Spatial Design Group (SDG) is pleased to provide you with Conceptual Landscape Water Use Calculations and an Estimated Landscape Water Use Demand. Methodology is based on the State of California's Model Water Efficient Landscape Ordinance, adopted by the City of Saint Helena. Calculations are provided in the attached Appendix B and are based on hydrozones shown on the prepared Conceptual Water Use Plan.

**The estimated total landscape water use (ETWU) for the project is: 17.16 acre feet** (5,592,210 gal./ yr)

The following assumptions were used to estimate landscape water use:

1. The project will consist of single family residential homes and attached townhomes.
2. Street tree selections will be moderate or low water use varieties as shown on the TM.
3. Homes shown on the water use plans are worst case estimates , most likely smaller than the future homes. This results in a conservative estimate of total landscape areas.
4. Future landscape plan plant selections will be compliant with WELO and listed by WUCOLS. Plant factors used in the calculation are conservative and representative of climate adaptive and native plant species. Reference Evapotranspiration (ETo) for the project is 44.0 in/ yr.
5. Each single family home is estimated to have an approximate 200 sf lawn. Actual lawn sizes and locations to be determined and will comply with the City's WELO.

Sincerely,

Spatial Design Group

Dustin Maxam, RLA
Principal, Planner/ Landscape Architect

# MUNICIPAL WATER SAVING MEASURES

**Water saving measures for the City of St. Helena**

February 2017

The following outlines opportunities for the City of St. Helena to reduce water consumption and reliance on local water supplies. Measures include indoor and outdoor residential water efficiency upgrades, metering households, providing pre-rinse fixtures to restaurants and industrial kitchens, irrigation system audits and component replacements at public facilities, and aiding wine production facilities to reduce and recapture water used in production. These water saving measures would not only decrease St. Helena's water demand but would also reduce water and sewer bills. This may be particularly desirable given the February 2017 rate increases[1], which have on average increased a family's water bill annually by $432 or 24%.

Though water use in St. Helena has decreased in recent years, comparisons to nearby communities with similar weather patterns and use requirements suggests that there are likely opportunities for implementing water efficiency measures. The 2016 St. Helena Water and Wastewater Rate Study reports 2015 city water use at 502 million gallons or 1,540 acre-feet, well below the "safe yield water supply" of 1,950 acre-feet (AF)[2]. Given the City's population of around 6,000, the per capita water use for St. Helena in 2015 is approximately 220 gallons/day. According to California Regional Water Use Targets, the San Francisco Bay Region, of which St. Helena is included, has an interim water use target of 144 gallons per capita per day[3]. The Sonoma-Marin Saving Water Partnership has lead an effort over the past years to reduce per capita water use. This campaign has resulted an average 2015 per capita water use of 100 gallons/day among partner cities. Another comparison is average residential single-family home water use. The 2016 St. Helena Water & Wastewater Rate Study assumes average monthly water use in single family homes to be 8,228 gallons/month. The 2015 Santa Rosa Water Rate Study[4] estimates monthly water use in single family homes to be 7,000 gallons/month. All of this suggests that it is reasonable to assume that reducing water use St. Helena is an achievable goal.

This report provides descriptions of the most advantageous water saving projects for the City of St. Helena. A summary of these addressable water savings are listed below.

| Water Saving Measure | Annual Savings (AF) | Assumptions |
|---|---|---|
| Turf replacement | 16.7 | Assume 5 acres replaced |
| School/park Irrigation audits/upgrades | 5 | Assume 2 parks/schools upgraded |
| Greywater/rainwater harvesting residential | 0.65 | Assume systems installed at 20 homes |
| Swimming pool covers | 0.25 | Assume 10 covers installed |
| Residential household metering | 5.8 | Assume meters on 247 mobile homes |
| Indoor water efficiency upgrades, residential | 8.1 | Assume 200 homes upgraded |
| Pre-rinse valves for commercial/ industrial kitchens | 1.3 | Assume upgrades to 10% of commercial kitchens |
| Winery production water recapture | 4.6 | Assume moderate production facility |
| **Cumulative savings:** | 42.4 | |

**Outdoor Water Efficiency Upgrades & Landscape Conversion**

Replacing turf with water efficient landscaping and auditing existing irrigation systems can reduce peak water use in summer months, resulting not just water savings but also reducing the need for capital expenditures to meet future demand.

According to a 2015 California Urban Water Conservation Council report on Turf Removal & Replacement[5], average turf-replacement water savings in California rage from between 18-83%, depending largely on climate. California Drought Executive Order B-29-15[6] notes water savings from turf replacement projects can be between 13-70 gallons/year/square foot (sqft). For the City of Napa, projected savings from turf conversion projects was estimated at 25 gallons/year/sqft. Assuming a conservative water saving estimate of 25 gallons/sqft of lawn replaced, **replacing 5 acres of turf could save over 5 million gallons of water or 16.7 AF/ year.**

---

[5] Turf Removal & Replacement, Lessons Learned. California Urban Water Conservation Council. Briana Seapy. March 2015. https://cuwcc.org/Portals/0/Document%20Library/Resources/Publications/Council%20Reports/Turf%20Removal%20_%20Replacement%20-%20Lessons%20Learned.pdf

[6] California Drought Executive Order B-29-15, Directive #3, April 1, 2015. average water savings per square foot turf conversion lawn. Accessed February 12 2017.

Landscape irrigation audits at commercial and institutional sites can identify the need for simple changes to controller scheduling or emitter maintenance that can save customers tens of thousands of gallons per year. Smart irrigation controllers, which utilize real time data to optimize irrigation schedules. In the City of Napa, a project installing smart controllers at 25 City parks and 21 school fields saved over 600 AF between 2005 and 2010 at city parks and schools[7]. This represents an average of over 2.5 AF of annual water savings at each park or school location. St. Helena Unified School District has 4 school campuses and a District Office, and there are 10 City parks that could potentially benefit from irrigation audits and improvements. Given the example from the City of Napa, it is not unreasonable to predict that the City of St. Helena could experience similar water savings. **Upgrading irrigation systems at just 2 parks or schools in St. Helena may realize 5 AF/year of water savings per year.**

Laundry to landscape systems that use greywater to irrigate landscapes can put to use the 60 gallons/day of water generated from the washing machine to save a family of 4 40,000 gallons of water per year[8]. Changes to local and California code[9] have made it simple to install basic residential greywater systems. **Installing greywater systems at 20 homes could save 800,000 gallons of water or 0.25 AF/year.**

Rainwater harvesting both at a residential level or for commercial applications also has potential to reduce City water use. The City of St. Helena provides a rebate program for rainwater barrels or cisterns installed over 100 gallons. A 530 gallon Bushman tank filled 6 months out of the year could save 3,000 gallons of water per year. **20 households so equipped could save 0.4 AF/ year.** Commercially, rainwater collected in cisterns can be used to augment water needed in landscaping and potentially wine production or other industrial washing purposes. The amount of water saved will depend on weather patterns and how many times the cisterns can be filled in a year, but the savings could be significant.

Covers on swimming pools can also result in water savings. Swimming pool evaporation is reduced by 50% when the pool is covered. Assuming an average sized pool (430 square feet) this coulee mean over 8,000 gallons of water savings per year per newly covered pool[10]. From a google map search, there appear to be over 100 outdoor pools in St. Helena. **Covering just 10 of these pools, therefore, could save 0.25 AF/year.**

**Metering Residential Households**

There is evidence that installing volumetric water meters on previously unmetered single-family homes can result in substantial water savings. In a recent study done on three Northern and

---

[7] City of Napa Urban Water Management Plan. 2010. http://www.water.ca.gov/urbanwatermanagement/2010uwmps/Napa,%20City%20of/Napa,%20City%20of/UWMP%202010%20-%20NAPA.pdf

[8] http://watersprout.org/wp-content/uploads/2016/04/Integrated-GW-System-Info-Packet-1.pdf. Accessed February 12 2017.

[10] http://www.poolspanews.com/how-to/maintenance/evaporation-study-compares-water-savings-of-covers_o. Accessed February 14 2017.

Central California cities, monthly water consumption dropped by 13-21% after six months of metering on previously unmetered homes[11]. According to the 2016 Rate Study, there are 920 multi-family and mobile home units that are not individually metered, all with an average water use of 5,236 gallons/month. Installing individual meters across these accounts assuming a 13% reduction in water use could save over 23 AF of water per year. **Installing meters only at the 247 mobile homes could result in a water savings of 5.8 AF/year.**

**Indoor Residential Water Efficiency Upgrades**

Replacing old water fixtures and toilets is a proven technique for realizing lasting water savings. The 2016 residential toilet and water fixture program in Santa Rosa, CA, for example, provides a recent example of how homes in St. Helena could be quickly retrofitted. It is estimated that customers on average save 1,100 gallons of water per month after toilets, shower heads, and sink aerators are replaced with water efficient alternatives (assuming toilets replaced are 1.6gallons/flush or higher)[12]. In Santa Rosa, water efficient toilets, shower heads, and bathroom/ kitchen faucet aerators were installed at 5,500 residential sites in 2016 to realize a water savings of approximately 72.6 million gallons/year[13].

Residential developments such as mobile home parks and multi-family dwellings would be particularly advantageous partners to benefit members of the community on on the lowest income scale. There are 920 multi-family and mobile home units in St. Helena. **Retrofitting 200 of these homes could realize a water savings of 2.64 million gallons, or 8.1 AF/year.**

**Pre-Rinse Valves for Commercial & Industrial Water Customers**

30% of water in restaurants and industrial kitchens is typically used to pre-rinse dishes. Water efficient pre-rinse valves save 60 gallons of water for every hour of use[14]. The City of Santa Rosa recently replaced 250 pre-rinse valves in restaurants and commercial kitchens, estimating a water savings of over approximately 36,000 gallons/year for each replaced nozzle[15]. Restaurants, schools, industrial kitchens, and tasting rooms in St. Helena could all benefit from water efficient pre-rinse valves. According to Yelp there are over 50 restaurants in St. Helena and over 115 public winery facilities. **Providing water efficient pre-rinse valves to just 10% of these facilities could save over 1.3 AF/year**.

**Water Recapture in Wine Production**

Wineries in St. Helena are the biggest water users. Water use for wine production, particularly during the 60 days of harvest can be particularly high when tanks and vats are washed and sterilized. Between 2.6-6 gallons of water is typically used for each gallon of wine produced just during the wine production phase (does not include water used for irrigation or harvest).

Water purification techniques have been able to successfully recapture up to 99% of wine production process water, resulting in huge water savings. For example, Free Flow Wines in Napa, CA successfully installed a recapture system in 2015, realizing a savings of 1.5 million gallons of rinse water per year[16]. **Installing this type and size of rinse water recapture system could result in a savings of over 4.6 AF/year**. Wine industry municipal water customers in St. Helena such as Trinchero Family Estates could benefit from this type of water upgrade.

**Conclusion**

This is a preliminary investigation on the most feasible measures that could be taken to reduce water use in St. Helena. Further data and analysis would likely identify additional partnerships and opportunities. Though per capita water use in St. Helena has dropped significantly in recent years, comparisons to local counterparts show there are likely many opportunities to further reduce the City's water demand. This report outlines various water efficiency measures to cumulatively save 42 AF/year. All of this suggests that reducing water use by 12 acre-feet/year in St. Helena is a reasonable goal to achieve.

INTENTIONALLY LEFT BLANK

# 1 INTRODUCTION

The purpose of this Traffic Impact Study (TIS) is to identify potential traffic operations deficiencies associated with a proposed residential development known as the Hunter Subdivision (proposed project) located in the eastern portion of the City of St. Helena (City). The TIS will also determine whether the proposed project would be consistent with the City's level of service (LOS) standards contained in their *Traffic Impact Study Scoping Agreement* form. The project's scoping agreement has been approved by the City's Engineering Division and is provided as Appendix A. If LOS deficiencies are found, improvements are identified that would offset or reduce vehicle delay, or improve LOS.

***Senate Bill 743***

On September 27, 2013, Senate Bill (SB) 743 was signed into law, which changed the way transportation impacts are analyzed under the California Environmental Quality Act (CEQA). SB 743 required the Governor's Office of Planning and Research (OPR) to amend the CEQA Guidelines to provide an alternative to LOS for evaluating transportation impacts. Under the new transportation guidelines, an evaluation of LOS, or vehicle delay, is no longer considered an environmental impact under CEQA. The updates to the CEQA Guidelines required under SB 743 were approved by the California Natural Resources Agency on December 28, 2018. Under the new guidelines, vehicle miles traveled (VMT) has been adopted as the most appropriate metric to evaluate transportation impacts under CEQA. The OPR's regulatory text indicates that a public agency may immediately commence implementation of the new transportation impact guidelines, and that the guidelines must be implemented statewide by July 1, 2020.

A separate VMT analysis has been prepared, and its methodology, analysis results, findings, and mitigation measures (if any) are provided in the environmental impact report (EIR).

## 1.1 Purpose and Scope of the TIS

This TIS has been prepared per the City's *Traffic Impact Study Scoping Agreement* which contains guidelines for the preparation of a TIS. In addition, this TIS complies with the City's 1993 General Plan Transportation Element as well as the City's General Plan Update 2040, Circulation Element (2018) that was approved in June 2019.

The objectives of this TIS are:

- Document existing traffic conditions, including intersection levels of service in the study area;
- Estimate trip generation, distribution, and assignment characteristics for the proposed project;

- Analyze the traffic impacts that would occur as a result of project traffic under the Existing and Buildout Year (2040) conditions;
- Describe the potential impacts under the Existing and Buildout Year (2040) conditions;
- Identify improvements for any transportation facilities that would be inconsistent with the City's LOS policies;
- Describe the adequacy of project access locations;
- Analyze vehicular queuing to identify storage length issues;
- Analyze vehicle collisions within the past 5 years for major intersections; and
- Describe active transportation and transit facilities in the vicinity of the project site.

Dudek analyzed the following scenarios to identify potential LOS deficiencies and queuing and site circulation impacts associated with the proposed project:

**Existing Conditions**

The TIS includes a description of existing traffic conditions in the site vicinity, including the existing roadway system, existing weekday AM and PM peak hour traffic volumes, existing Saturday peak hour traffic volumes, existing weekday and Saturday roadway segment daily traffic volumes, and traffic operations. The existing condition is representative of the year (2018) when traffic counts were collected.

**Existing plus Project**

This condition includes analysis of traffic operations under existing conditions with project-related traffic added to the existing weekday AM and PM peak hour traffic volumes, and existing Saturday peak hour traffic volumes.

**Buildout Year (2040)**

This condition includes analysis of traffic operation under Buildout Year (2040) conditions within a long-term planning horizon period, consistent with the City's General Plan Update 2040 (General Plan Update), when the proposed project would be constructed and fully occupied. This scenario assumes buildout of the land uses designated in the City's General Plan Update because this is the most current information available. The proposed project is consistent with the site's residential land use types designated in the 1993 General Plan and the General Plan Update. Buildout (2040) volumes were derived from the Year 2040 Conditions analysis prepared by Fehr & Peers included in the *Draft Environmental Impact Report (DEIR) for the St. Helena General Plan Update, Chapter 3.13 Transportation and Traffic* (Dyett & Bhatia 2018).

## 1.2 Project Description

Figure 1 illustrates the project location and study area. The proposed project would be located on a 16.9-acre vacant site within the City along the eastern terminus of Adams Street and along the northern terminus of Starr Avenue. The project site is undeveloped with the exception of a small vineyard generally located in the southwestern portion of the site. The project site plan is shown in Figure 2.

The proposed project includes a residential subdivision tentative map consisting of 51 single-family residences, 25 affordable multifamily units, and 11 accessory dwelling units (ADUs) for a total of 87 dwelling units. Therefore, a cumulative total of 87 residential dwelling units is assumed for the purposes of this analysis. The project site is zoned for medium-density residential and is adjacent to other residential uses to its south and west, and vineyards and undeveloped/vacant parcels to its north and east.

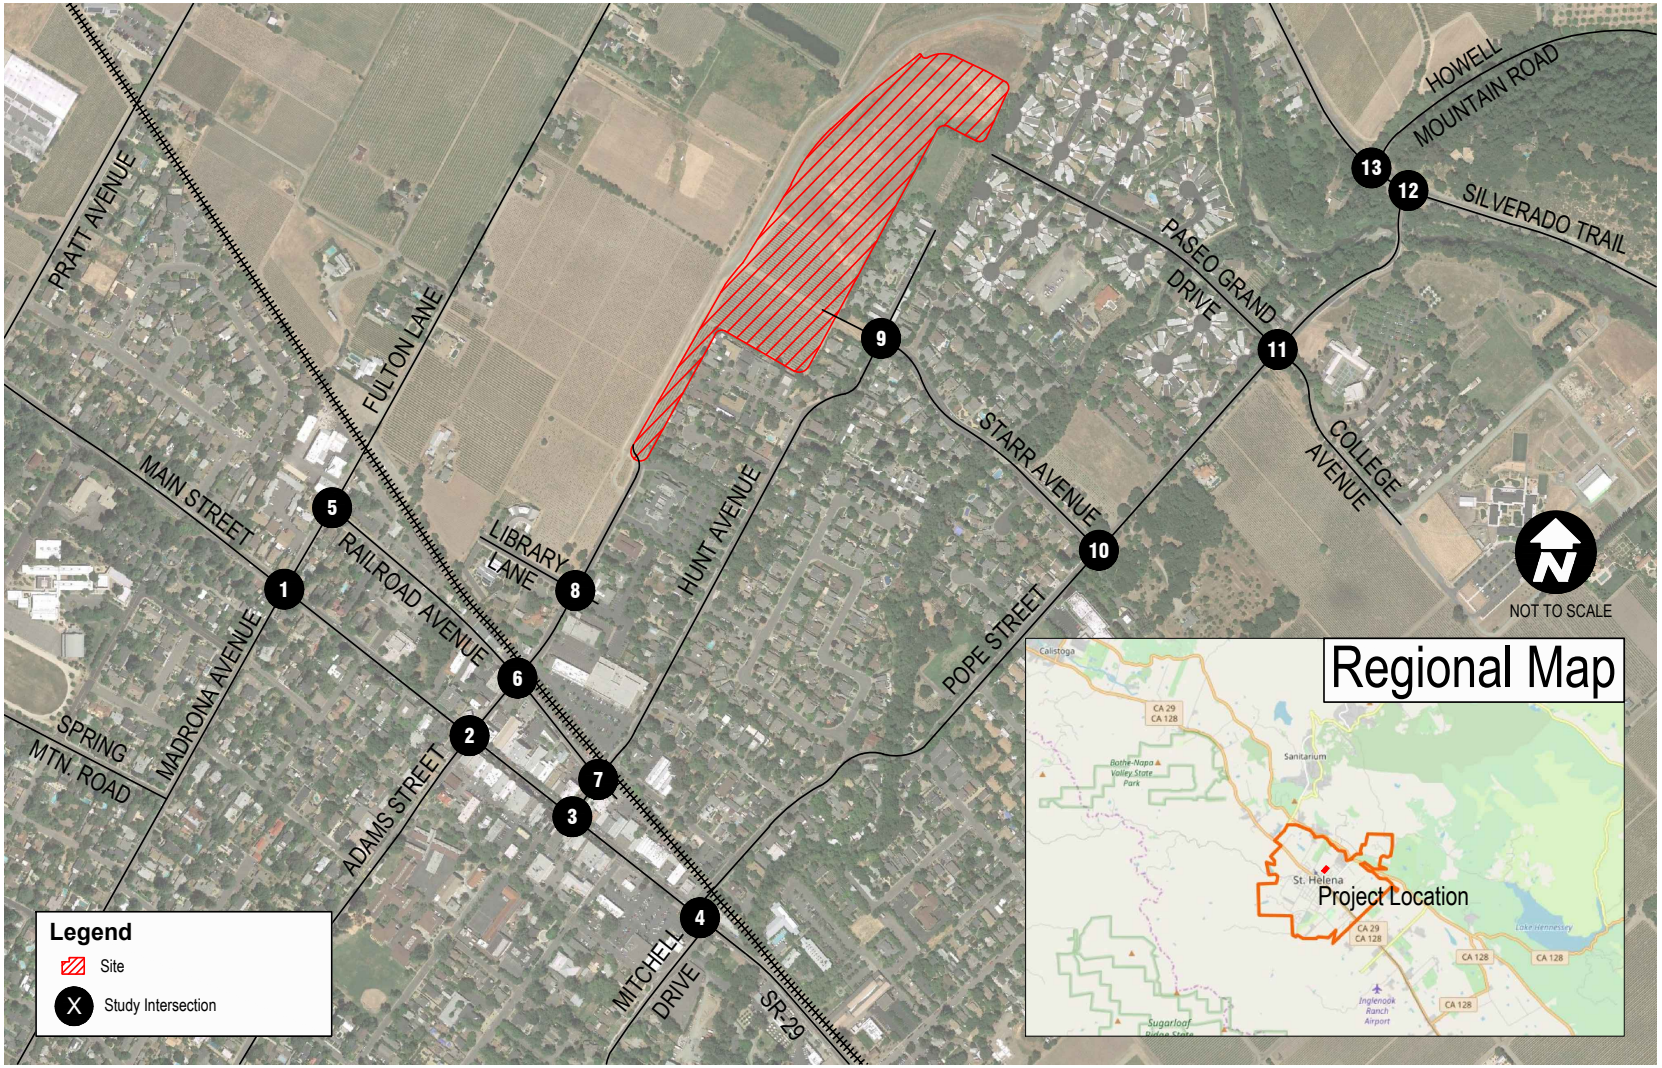
Currently, the project site is located without access to roadways; however, as part of the project Adams Street and Starr Avenue would be extended to serve the site. Primary access to the project site would be provided via the eastern extension of Adams Street, as well as the northern extension of Starr Avenue. Parking for future residences would be provided via private individual garages and driveways for single-family residences, covered carports for multifamily units, and publicly available on-street parking along the interior streets within the project site (as permitted).

## 1.3 Study Area and Scope

The scope of this TIS has been prepared in coordination with the City (see Appendix A), and focuses on the weekday AM (7:00 a.m. to 9:00 a.m.), PM (3:00 p.m. to 6:00 p.m.), and Saturday (2:00 p.m. to 4:00 p.m.) peak hour periods. These peak hour periods are analyzed for the hour of highest traffic volume between 7:00 to 9:00 AM, 4:00 to 6:00 PM; and, Saturday 2:00 to 4:00 PM. These periods represent the highest cumulative total traffic for the adjacent street system.

Per the approved Scoping Agreement, the study intersections include:

1. Main Street (State Route 29 – SR-29)/Fulton Lane – Madrona Avenue
2. Main Street (SR-29)/Adams Street
3. Main Street (SR-29)/Hunt Avenue
4. Main Street (SR-29)/Pope Street – Mitchell Drive
5. Railroad Avenue/Fulton Lane
6. Railroad Avenue/Adams Street



7. Railroad Avenue/Hunt Avenue
8. Library Lane/Adams Street
9. Starr Avenue/Hunt Avenue
10. Starr Avenue/Pope Street
11. Paseo Grand Drive – College Avenue/Pope Street
12. Silverado Trail/Pope Street
13. Silverado Trail/Howell Mountain Road

Further analysis for the 95th percentile queues for all intersections was also analyzed in order to evaluate existing storage lane lengths, especially in regard to left-turn lane queues at Main Street (SR-29).

The study intersections above were analyzed for the following study scenarios:

- Existing Conditions (2018)
- Existing plus Project
- Buildout (2040)

This TIS includes a description of existing conditions in the site vicinity, including roadway network, existing and buildout baseline weekday AM, PM, and Saturday peak hour traffic volumes, and traffic operations.

## 1.4 Congestion Management Program

The Napa Valley Transportation Authority (NVTA) is designated as the Congestion Management Agency (CMA) in Napa County. However, NVTA does not have an adopted Congestion Management Program (CMP). Instead, NVTA works with the region's Metropolitan Transportation Commission (MTC) to prepare the Napa County section of the Regional Transportation Plan (RTP). Currently, the NVTA does not have a LOS standard specific to traffic.

## 1.5 Methodology

The City's intersection evaluation methodology and impact criteria is based on the *Highway Capacity Manual* (HCM), HCM 6th Edition, methodology for signalized and unsignalized intersections, including intersections under Caltrans jurisdiction.

### 1.5.1 Intersections

The operational characteristics of an intersection are determined by calculating the intersection's LOS. The intersection, as a whole and its individual turning movements, can be described alphabetically with a range of levels of service (A through F), with LOS A indicating free-flow traffic and LOS F indicating extreme congestion and long vehicle delays. The intersection LOS was calculated using the HCM 6th Edition methodology. In the HCM, LOS is expressed in terms of the average intersection delay per vehicle for the peak 15-minute period within the analyzed hour.

At two-way, stop sign-controlled intersections, the LOS is defined in terms of the average vehicle delay of an individual movement. This is the industry standard method used to evaluate the performance of a two-way, stop sign-controlled intersection because the average vehicle delay is more closely reflected in terms of individual movements, rather than its performance overall. For this reason, LOS for a two-way, stop sign-controlled intersection is defined in terms of its individual movement. With this in mind, the total average vehicle delay (i.e., average delay of all movements) for a two-way, stop sign-controlled intersections should be viewed with discretion and for that reason is not what is reported within the peak hour intersection LOS tables in the following sections. Table 1 shows the relationship of the average control delay and LOS for signalized and unsignalized intersections.

**Table 1**
**Level of Service Criteria for Intersections using HCM Methodology**

| Level of Service | Average Control Delay (sec/veh) | | General Description |
|---|---|---|---|
| | *Signalized* | *Unsignalized* | |
| A | 0–10 | 0–10 | Free flow |
| B | >10–20 | >10–15 | Stable flow (slight delays) |
| C | >20–35 | >15–25 | Stable flow (acceptable delays) |

**Table 1**
**Level of Service Criteria for Intersections using HCM Methodology**

| Level of Service | Average Control Delay (sec/veh) | | General Description |
|---|---|---|---|
| | *Signalized* | *Unsignalized* | |
| D | >35–55 | >25–35 | Approaching unstable flow (tolerable delay, occasionally wait through more than one signal cycle before proceeding) |
| E | >55–80 | >35–50 | Unstable flow (intolerable delay) |
| F | >80 | >50 | Forced flow (jammed) |

**Source:** Highway Capacity Manual, Transportation Research Board, 2016.

### 1.5.2 Future Traffic Forecasts

Future traffic volumes for year 2040 were obtained from the General Plan Update EIR Section 3.13, Transportation and Traffic section. Based on review of the traffic modeling/forecasting data of the General Plan Update, the 2040 forecast traffic volumes have incorporated traffic generated by the proposed project. In addition, traffic generated by the project ADUs was added to the Buildout (2040) scenario.

### 1.5.3 Impact Criteria

**City of St. Helena**

The City's impact criteria is provided in the TIS Scoping Agreement form (Appendix A). The following LOS impact criteria are applicable to study area intersections:

- Operations at a signalized intersection along State Route 29 to deteriorate from LOS D, under conditions without the project, to LOS E or F, or, operations at other signalized intersections to deteriorate from LOS C under conditions without the project to LOS D, E or F.
- The LOS to deteriorate to LOS F for signalized intersections that operate at LOS E under conditions without the project.
- The average intersection delay to increase by more than five (5.0) seconds for signalized intersections that operate at LOS F under conditions without the project.
- The LOS to deteriorate to LOS D, E or F for unsignalized intersections operating at LOS C or better under conditions without the project, and the traffic volumes would satisfy the Caltrans peak hour volume warrant criterion for traffic signal installation. For unsignalized intersections on State Route 29 operating at LOS D or better under conditions without the project, the impact would be inconsistent with the City's LOS policies if the project would cause the LOS to deteriorate to LOS E or F, and the traffic volumes would satisfy the Caltrans peak hour volume warrant criterion for traffic signal installation.

- Average delay to increase by five (5.0) or more seconds for unsignalized intersections operating at unacceptable levels (LOS D, E or F; or LOS E or F on State Route 29) under conditions without the project, and the traffic volumes would satisfy the Caltrans peak hour volume warrant criterion for traffic signal installation.

A peak traffic signal warrant per the California Manual of Uniform Traffic Control Devices (CA MUTCD) was reviewed to determine whether the installation of a traffic signal may be warranted at unsignalized intersections with unsatisfactory LOS. The signal warrant compares the total traffic from both major street approaches, to the traffic of the single highest minor street approach. The signal warrant analysis is intended to provide guidance in determining the need to install a traffic signal based on data collected in the Federal Highway Administration Manual on Uniform Traffic Control Devices (FHWA MUTCD) and CA MUTCD guidelines. An intersection meeting a signal warrant itself does not constitute the only basis for installation of a traffic signal and instead serves as a tool, in addition to collision and engineering data, to provide guidance towards traffic signal installation.

**Caltrans**

All study area intersections along Main Street, also fall under Caltrans jurisdiction as Main Street is also listed as a state route under Caltrans jurisdiction; SR-29. As stated in the Caltrans *Guide for the Preparation of Traffic Impact Studies* (December 2002), the level of service for operating State highway facilities is based upon measures of effectiveness (MOEs). These MOEs describe the measures best suited for analyzing State highway facilities (i.e., freeway segments, signalized intersections, on- or off-ramps, etc.). Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on State highway facilities; however, Caltrans acknowledges that this may not always be feasible and if an existing State highway facility is operating at less than the appropriate target LOS, the existing MOE should be maintained.

INTENTIONALLY LEFT BLANK

# 2 EXISTING CONDITIONS

This section describes existing conditions within the identified study area. Descriptions are provided for the characteristics of the study area roadway network, peak hour traffic volumes, traffic operations, traffic safety, non-motorized facilities, and transit.

## 2.1 Existing Street System

Characteristics of the existing street system in the proposed project vicinity are shown in Table 2. Street classification data is derived from the Circulation Element of the draft *St. Helena General Plan Update 2040* (2018). As shown on Figure 2, the primary access points to the project site is provided via Adams Street or Starr Avenue. The existing traffic controls and geometrics at the study area intersections are shown on Figure 3.

**Table 2**
**Study Area Existing Street System Summary**

| Roadway | Street Classification | Posted Speed Limit (MPH)[1] | # of Travel Lanes | Parking | Sidewalks | Bicycle Lanes |
|---|---|---|---|---|---|---|
| Main Street (SR-29) | Regional Connector | 25 | 2 | Yes – along some sections | Yes | No |
| Fulton Lane/Madrona Avenue | Open Space/Rural Street | 25 | 2 | Yes – except for east of railroad tracks | Yes – except for east of railroad tracks | No |
| Adams Street | Downtown/Mixed-Use Street | 25 | 2 | Yes – along some sections | Yes | No |
| Hunt Avenue | Residential Street | 25 | 2 | Yes – along some sections | Yes – along some sections | Yes – Class III |
| Railroad Avenue | Downtown/Mixed-Use Street | 25 | 2 | Yes – along some sections | Yes – along some sections | No |
| Pope Street | Downtown/Mixed-Use Street | 25 | 2 | Yes – along some sections | Yes – along some sections | Yes – Class II and Class III |
| Starr Avenue | Residential Street | 25 | 2 | Yes – along some sections | Yes | Yes – Class II |
| Howell Mountain Road | Open Space/Rural Street | 35 | 2 | No | No | No |
| Silverado Trail | Rural Throughway[2] | 50 | 2 | No | No | Yes – Class II |

**Notes:** MPH = miles per hour
[1] Speed limit information derived from §10.08.010-0.20 of the City of St. Helena Municipal Code.
[2] Obtained from the Circulation Element of the *Napa County General Plan* (2008).

## 2.2 Pedestrian Facilities

The pedestrian infrastructure within the study area depends largely on the types of land uses, as agricultural or open space land uses generally lack pedestrian amenities, as seen in segments of Adams Street near the edge of the project site boundary. Around the perimeter of developed land along Starr Avenue and Hunt Avenue, the study area generally contains sidewalks, lighting, landscaping, signage, and Americans with Disabilities Act (ADA)-compliant curb ramps. Railroad crossings are generally in good condition to allow safe crossings for pedestrians. Near the project site, Adams Street and Starr Avenue would be extended to provide vehicle, bicycle and pedestrian access to the site. Sidewalks would be provided along both sides of the street allowing safe pedestrian access to the site. The project site would facilitate accessibility to the downtown St. Helena corridor by way of existing sidewalks that would provide access to several neighborhood services such as Main Street, retail and grocery stores, and the St. Helena Public Library.

## 2.3 Bicycle Facilities

As shown in Table 2, there are a number of bicycle facilities within the study area. Class I bikeways, also known as bike paths or shared-use paths, are facilities with an exclusive right-of-way for bicyclists and pedestrians, separated from roadways. The project is not proposing any Class I bike paths. Class II bicycle lanes, which are striped and demarcated areas of roadway that separate bicyclists from motorists, are available along the entirety of Starr Avenue and Silverado Trail and the majority of Pope Street from Railroad Avenue to Paseo Grand Drive-College Avenue. Class III bicycle routes, are shared roadways where vehicles and bicyclists equally share the road, but do not contain a striped bike lane. Class III bicycle routes are provided along Hunt Avenue and portions of Pope Street, east of Railroad Avenue and west of Paseo Grand Drive-College Avenue, towards the approach to the Pope Street Bridge. Along the project access, Starr Avenues connects the site to the larger St. Helena bicycle network via Pope Street or Hunt Avenue. The City's Bicycle Plan was adopted in 2012 as part of the wider Napa County Transportation and Planning Agency's Bicycle Master Plan. Several improvements were identified such as Class III bicycle routes along Main Street and Class II bicycle lanes along Adams Street.

## 2.4 Transit System

The NVTA manages Vine Transit, which provides transit service in the greater Napa County region and most closely serves the project study area and site. The St. Helena Shuttle, Vine Route 10, and Vine Route 29 all provide differing levels of frequency and connectivity to transit riders within the study area.

The St. Helena Shuttle route operates every weekday for one morning and one afternoon on a fixed route starting at 7:50 a.m. and then again, at 3:15 p.m., circulating throughout the City and stopping

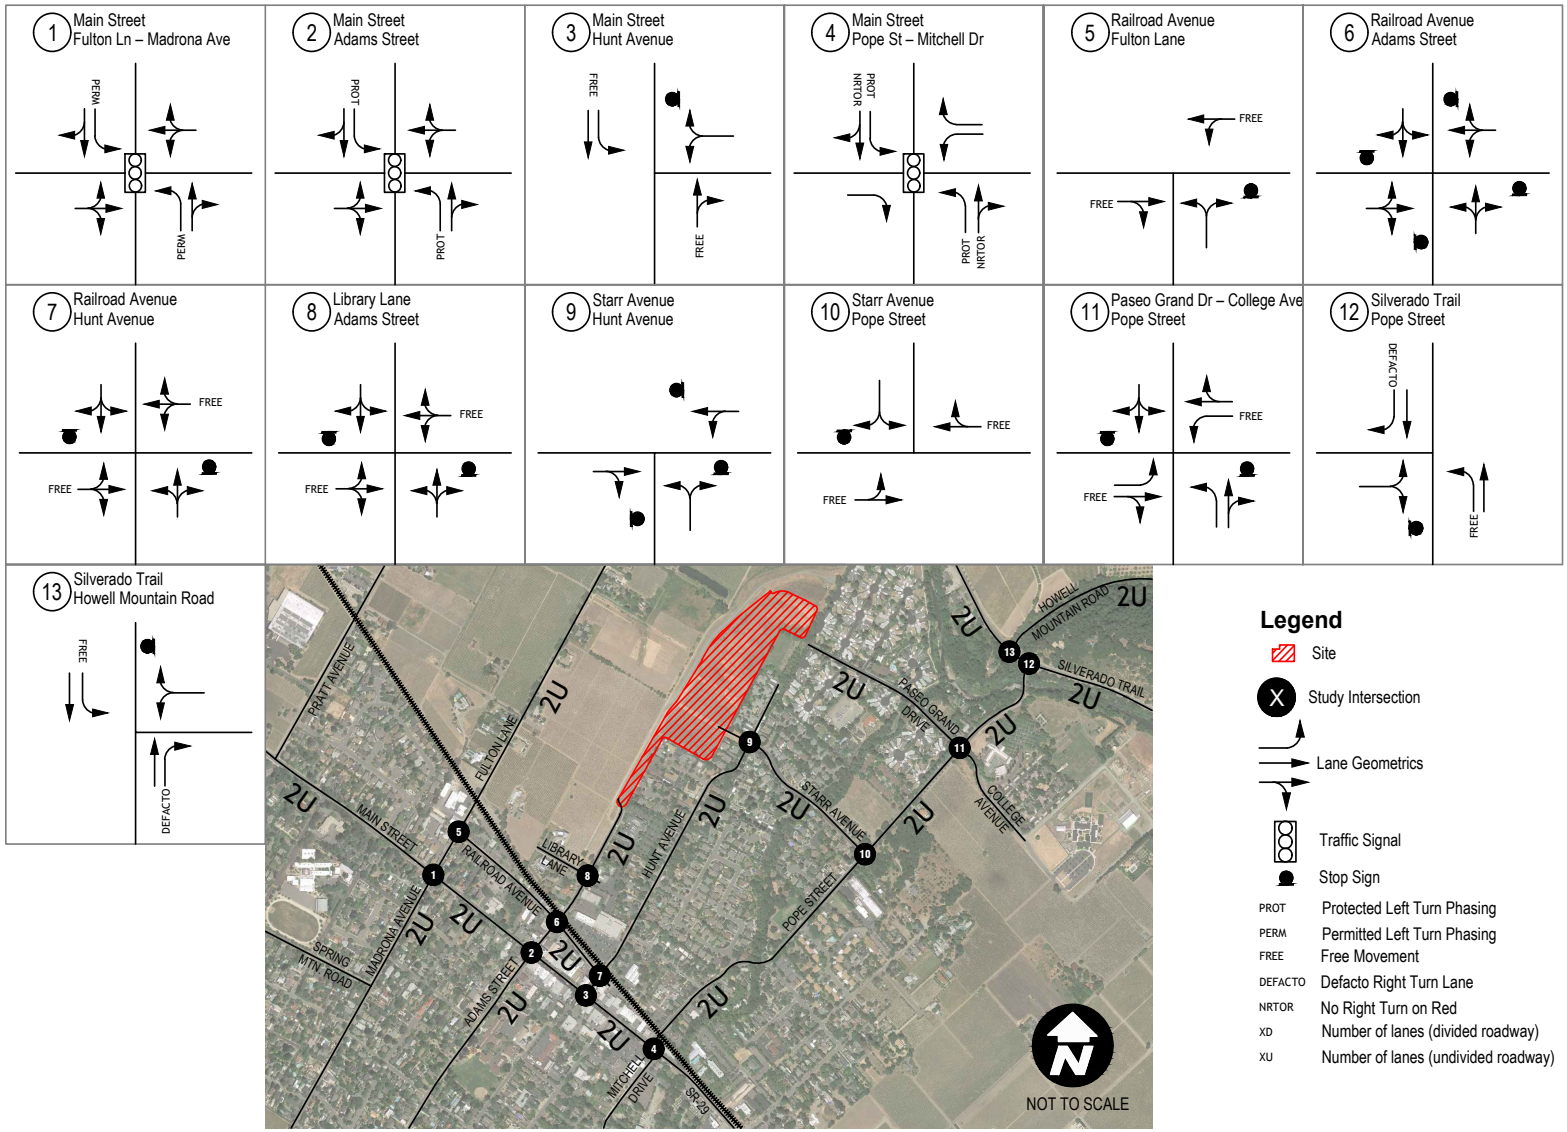
directly adjacent to the project site at the intersection of Starr Avenue/Hunt Avenue. The shuttle provides access to several schools in the City as well as an east-west connection through the city. Outside of the fixed route, the shuttle operates as an on-demand, door-to-door service within much of the city limits Monday to Thursday from 7:45 a.m. to 6:00 p.m. with extended hours Friday until 11:00 p.m. Weekend service is also provided with service on Saturdays from 10:00 a.m. to 11:00 p.m., and on Sundays from 12:00 p.m. to 7:00 p.m. Service is not provided on major holidays.

Vine Route 10 is a regional transit route that connects the cities of Calistoga and Napa, with stops within the study area along Main Street at Adams Street and at Pope Street/Mitchell Drive. Weekday service generally occurs every 45 minutes starting at 6:15 a.m. and ending at 10:44 p.m. Weekend service is provided every hour and is truncated during the morning and night periods. Service is not provided on weekends or major holidays.

Vine Route 29 connects Calistoga southward towards the greater Napa County residential core, connecting to the Vallejo Ferry and finally the El Cerrito BART station. The nearest stop within the study area is the St. Helena Post Office located on Main Street. Service is primarily provided twice during the morning and afternoon periods starting at 5:22 a.m. and ending at 6:35 p.m. Service is not provided on weekends or major holidays.

The Napa Valley Wine Train also passes through the city; however, it is mainly utilized as a tourist attraction and not for commuting purposes. Stops are limited and occur on an irregular basis in the city. The Wine Train's proximity to Main Street can result in increased congestion and vehicle queueing, as well as the potential to impede emergency access across Adams Street and Hunt Avenue. The Wine Train blocks egress and ingress at Adams Street and Hunt Avenue for up to two minutes at a time departing and arriving, therefore these crossings will be closed or delayed for a maximum of eight minutes per day. The Wine Train is mandated to keep all grade crossings clear; therefore, the limited speed in the area is what constitutes the delay described above.

## 2.5 Pope Street Bridge



The Pope Street Bridge is a narrow two-lane historic bridge that spans the Napa River and connects the City with Silverado Trail, a regional roadway that provides north-south access through Napa County. Silverado Trail also serves as an alternative route to Main Street (SR-29). The Pope Street Bridge is largely unimproved, and is constructed of stone, creating narrow lanes and reduced speed for motorists. This also creates a situation where bicyclists share the road with vehicles, creating potential areas of conflict. Operationally, the Pope Street Bridge allows for one lane of westbound traffic, creating conflicts between vehicles turning onto Pope Street versus vehicles turning onto Silverado Trail. Collisions between these conflict points were analyzed in depth in the following sections. Additionally, emergency access can be impeded due to congestion along the bridge, creating difficulty for services to be provided to areas along Silverado Trail.

## 2.6 Traffic Volumes

Existing peak hour turning movement counts at the study intersections were conducted in April 2018, during the week (and Saturday) of the Napa Arts in April Art Festival and celebration in Lyman Park. Per review of Caltrans data from the previous seven years, the month of April was identified as the peak month for traffic volumes in the St. Helena downtown area based on traffic volumes on Main Street (SR-29), north and south of Adam Street.[1] This data is presented in Appendix B. Therefore, these volumes represent a high traffic period during the year and present a conservative existing baseline scenario.

Traffic volumes were balanced between intersections. Raw intersection turning movement counts are provided in Appendix B. Existing weekday AM and PM peak hour traffic volumes, and Saturday peak hour volumes, are summarized in Figures 4 and 5, respectively. These volumes were used to evaluate existing weekday and Saturday traffic conditions.

[1] The second busiest time in the area is during the fall harvest "crush" period in the month of October.

## 2.7 Intersection Operations

An intersection LOS analysis was prepared for the existing weekday and Saturday conditions using the HCM methodology discussed in Section 1. Detailed LOS worksheets and signal warrants are included in Appendix C. Tables 3 and 4 show the results of the weekday and Saturday, respectively, existing conditions LOS analysis.

**Table 3**
**Existing Weekday Peak Hour Intersection LOS**

| Intersection | Control | AM Peak | | PM Peak | |
|---|---|---|---|---|---|
| | | *Delay*[1] | *LOS*[2] | *Delay*[1] | *LOS*[2] |
| 1. Main Street/Fulton Lane – Madrona Avenue | signalized | 13.0 | B | 11.2 | B |
| 2. Main Street/Adams Street | signalized | 22.9 | C | 20.8 | C |
| 3. Main Street/Hunt Avenue | unsignalized | 16.9 | C | 18.3 | C |
| 4. Main Street/Pope Street – Mitchell Drive | signalized | **148.7** | **F** | **110.1** | **F** |

# 3 PROJECT TRAFFIC

This section documents project-generated changes on the surrounding transportation system and at the study intersections.

## 3.1 Trip Generation

Trip generation estimates for the project were calculated based upon the trip rates from the Institute of Transportation Engineers' *Trip Generation, 10th Edition* (ITE 2017). Average trip generation rates represent weighted averages from studies conducted throughout the United States and Canada since 1980 that surveyed the identified use.[2] For example, "single-family detached housing," which has the highest trip generation rate per dwelling unit of all residential uses, specifically identifies all detached homes on individual lots, with a typical site being a suburban subdivision.

In order to reflect the correct intensity of land use and project traffic, the single-family detached housing rate was also used for the income-restricted housing, while the multifamily housing rate was used for the ADU rate. The calculation of project trip generation estimates for the weekday and Saturday is shown in Tables 5 and 6, respectively.

As shown in Table 5, during a weekday the project would generate 798 daily trips, 62 AM peak hour trips (16 inbound and 46 outbound), and 82 PM peak hour trips (52 inbound and 30 outbound).

**Table 5**
**Weekday Project Trip Generation**

| **Trip Generation Rates[1]** | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | *AM Peak Hour* | | | *PM Peak Hour* | | |
| *Land Use* | *Daily Trip Rate* | *Unit* | *% In* | *% Out* | *Total* | *% In* | *% Out* | *Total* |
| Single-Family Detached Housing (ITE Code 210) | 9.44 | DU | 0.19 | 0.56 | 0.74 | 0.62 | 0.37 | 0.99 |
| Multifamily Housing (Low-Rise) (ITE Code 220) | 7.32 | DU | 0.11 | 0.35 | 0.46 | 0.35 | 0.21 | 0.56 |

| **Trip Generation** | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | | | *AM Peak Hour* | | | *PM Peak Hour* | | |
| *Land Use* | *Total No. of Units* | *Unit* | *Daily* | *In* | *Out* | *Total* | *In* | *Out* | *Total* |
| Single-Family Detached Housing | 51 | DU | 481 | 10 | 28 | 38 | 32 | 19 | 51 |
| Accessory (Granny) Units | 11 | DU | 81 | 1 | 4 | 5 | 4 | 2 | 6 |
| Affordable Housing[2] | 25 | DU | 236 | 5 | 14 | 19 | 16 | 9 | 25 |
| **Total Trip Generation** | | | **798** | **16** | **46** | **62** | **52** | **30** | **82** |

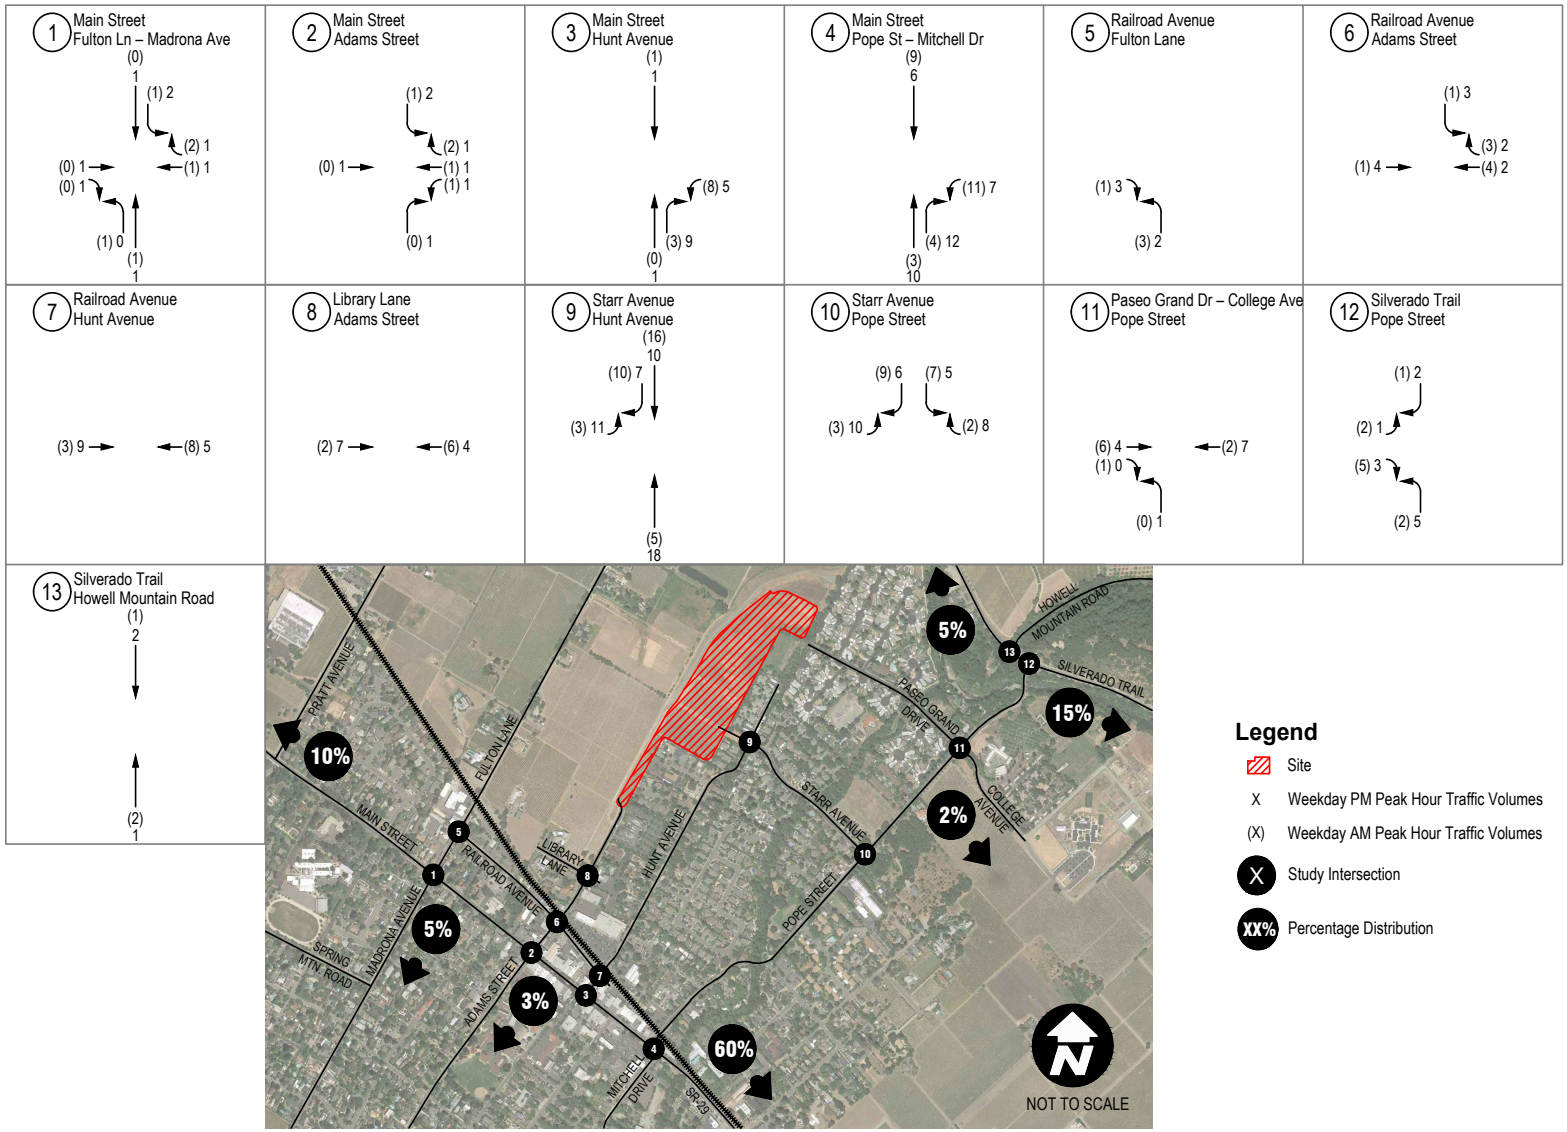
**Notes:**
1 Trip rates from the Institute of Transportation Engineers, Trip Generation, 10th Edition, 2017.

2 Single-Family and multifamily land uses are based on surveys and weighted averages. Rates are not based on a specified number of bedrooms or vehicles per household.

[2] Reflects use of Single-Family land use since this rate is more conservative (higher trip generation) as compared to multifamily housing.

As shown in Table 6, during a Saturday the project would generate 815 daily trips, and 80 peak hour trips (40 inbound and 40 outbound).

**Table 6**
**Saturday Project Trip Generation**



| Trip Generation Rates[1] | | | | | |
|---|---|---|---|---|---|
| | | | Peak Hour | | |
| *Land Use* | *Saturday Trip Rate* | *Unit* | *% In* | *% Out* | *Total* |
| Single-Family Detached Housing (ITE Code 210) | 9.54 | DU | 0.47 | 0.47 | 0.93 |
| Multifamily Housing (Low-Rise) (ITE Code 220) | 8.14 | DU | 0.35 | 0.35 | 0.70 |

| Trip Generation | | | | | | |
|---|---|---|---|---|---|---|
| | | | | Peak Hour | | |
| *Land Use* | *Total No. of Units* | *Unit* | *Daily* | *In* | *Out* | *Total* |
| Single-Family Detached Housing | 51 | DU | 487 | 24 | 24 | 48 |
| Accessory (Granny) Units | 11 | DU | 90 | 4 | 4 | 8 |
| Affordable Housing[2] | 25 | DU | 239 | 12 | 12 | 24 |
| **Total Trip Generation** | | | **815** | **40** | **40** | **80** |

**Notes:**
[1] Trip rates from the Institute of Transportation Engineers, Trip Generation, 10th Edition, 2017.
[2] Reflects use of Single-Family land use since this rate is more conservative (higher trip generation) as compared to multifamily housing.

## 3.2 Trip Distribution and Assignment

Project trips were distributed to the study area intersections using the existing travel patterns and logical commute routes for project-related traffic. Project trips were assigned to the study area intersections by applying the project trip generation estimates to the trip distribution percentages at each study area intersection. Single-family and ADU trips were distributed and assigned together, as shown on Figure 6, while the multifamily housing trips were distributed and assigned separately, as show on Figure 7. The total project trip assignment is shown in Figure 8. The project trip distribution and assignment for Saturday includes all uses combined and is shown on Figure 9.

INTENTIONALLY LEFT BLANK

# 4 EXISTING PLUS PROJECT

## 4.1 Traffic Volumes

The project trip assignments shown in Figure 8 were added to the existing weekday traffic volumes shown in Figure 4 to derive the Existing plus Project weekday AM and PM peak hour traffic volumes. Figure 10 illustrates the Existing plus Project weekday AM and PM peak hour traffic volumes that were used to evaluate Existing plus Project weekday traffic conditions.

The project trip assignments shown in Figure 9 were added to the Existing Saturday traffic volumes shown in Figure 5 to derive the Existing plus Project Saturday peak hour traffic volumes. Figure 11 illustrates the Existing plus Project Saturday peak hour traffic volumes that were used to evaluate Existing plus Project Saturday traffic conditions.

## 4.2 Intersection Operations

An intersection operations analysis was conducted for the study area to evaluate the Existing plus Project weekday AM and PM peak hour, and Saturday peak hour conditions. Intersection operations were calculated using the LOS methodology described in Section 1. The following presents the results of the project analysis.

Tables 7 and 8 show the results of the Existing plus Project weekday and Saturday LOS analysis, respectively, and provides a comparison to the Existing (without project) conditions for the weekday peak hours using the HCM methodology described previously at all intersections. Detailed LOS worksheets and signal warrants are included in Appendix C.

As shown in Table 7, based on the appropriate impact criteria, all of the study area intersections would continue to operate at a satisfactory LOS, except for the following intersections:

- 4. Main Street/Pope Street – Mitchell Drive: Continues to operate with unsatisfactory LOS at LOS F during both the AM and PM peak hours, however the increase in delay is less than 5.0 seconds in the AM peak hour (4.8 seconds), while the increase in delay is greater than 5.0 seconds in the PM peak hour (11.4 seconds). This constitutes a deficiency with the City's LOS impact criteria (discussed in Section 1.5.3 above) for the PM peak hour.

- 11. Paseo Grand Drive – College Avenue/Pope Street: Continues to operate with unsatisfactory LOS at LOS D in AM peak hour. This intersection is unsignalized and does not satisfy a peak hour signal warrants (traffic signal), and the increase in delay is less than 5.0 seconds (1.1 seconds). Therefore, the project would not exceed the City's impact criteria and would be consistent with the City's LOS policies.

**Table 7**
**Existing plus Project Weekday Peak Hour Intersection Level of Service**

| Intersection | Control | Existing | | | | Existing Plus Project | | | | Delay Change | | Impact? | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | AM Peak Hour | | PM Peak Hour | | AM Peak Hour | | PM Peak Hour | | | | | |
| | | Delay[1] | LOS[2] | Delay[1] | LOS[2] | Delay[1] | LOS[2] | Delay[1] | LOS[2] | AM | PM | AM | PM |
| 1. Main Street/Fulton Lane – Madrona Avenue | signalized | 13.0 | B | 11.2 | B | 13.2 | B | 11.4 | B | 0.2 | 0.2 | no | no |

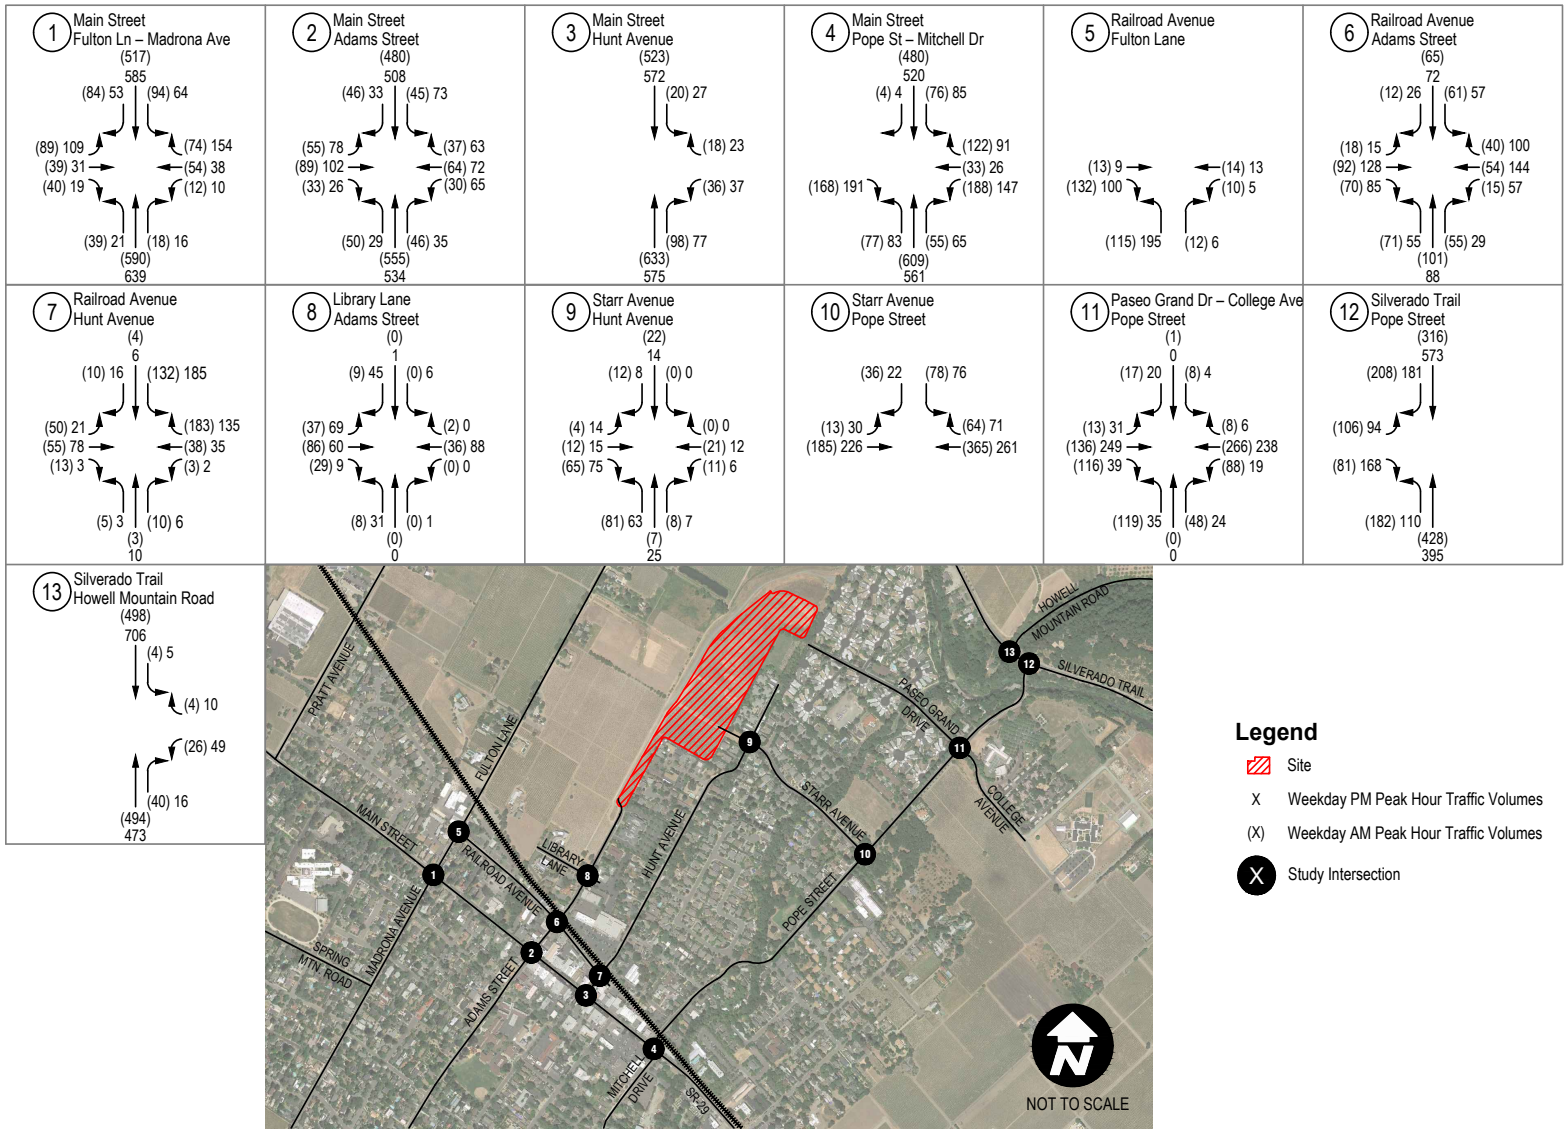
| 12. Silverado Trail/Pope Street | unsignalized | 20.2 | C | 21.0 | C | 0.8 | no |
| 13. Silverado Trail/Howell Mountain Road | unsignalized | 15.2 | C | 15.2 | C | 0.1 | no |

**Notes:**
[1] Average seconds per vehicle
[2] Level of Service (LOS)
**BOLD** value indicates unsatisfactory LOS

- 12. Silverado Trail/Pope Street: Continues to operate with unsatisfactory LOS at LOS D in the PM peak hour. This intersection is unsignalized and satisfies the peak hour signal warrant (traffic signal) for the PM peak hour, however the increase in delay is less than 5.0 seconds (1.3 seconds). Therefore, the project would not exceed the City's impact criteria and would be consistent with the City's LOS policies.



As shown in Table 8, based on the appropriate impact criteria, most of the study area intersections would continue to operate at a satisfactory LOS (LOS D or better for intersections along Main Street – SR-29, and LOS C or better for all other intersections) during the Saturday peak hour, except for the following intersections:

- 4. Main Street/Pope Street – Mitchell Drive: Continues to operate with unsatisfactory LOS at LOS F, however, the increase in delay is less than 5.0 seconds (3.7 seconds). Therefore, the project would not exceed the City's impact criteria and would be consistent with the City's LOS policies.

Based on the LOS results of the Existing plus Project weekday and Saturday peak hour traffic analysis, and the City's impact criteria, the proposed project would be inconsistent with the City's LOS policies, and would require an improvement:

- 4. Main Street/Pope Street – Mitchell Drive: LOS F during the weekday PM peak hour.

An improvement for this intersection is provided in Section 6 below.

# 5 BUILDOUT (2040) CONDITIONS

This section describes impacts under Buildout (2040) conditions within the study area for intersection operations, and analyzes impacts based on the threshold criteria.

## 5.1 Planned Pedestrian and Bicycle Facility Improvements

The pedestrian infrastructure within the study area would remain largely unaffected by the proposed project. As Starr Avenue is extended northward and Adams Street extended eastward, additional sidewalks connecting the proposed project to the surrounding area would provide pedestrian access to the surrounding residential community. Additionally, the NVTA has plans for the Vine Trail, a network of bicycle and pedestrian paths that will connect all the Napa County communities, with construction in the St. Helena area anticipated to begin as early as 2021. The Vine Trail, as tentatively proposed, would proceed through sections of the proposed project by way of Adams Street and Starr Avenue.

## 5.2 Transit System

The NVTA has published a report, *Vision 2040 Moving Napa Forward Transportation Plan*, which outlines policies to improve system safety of all users, serve the transportation needs of all users regardless of age, income or ability, and to improve overall reliability of the transit system. As the shift from one-car trips to multi-modal and active transportation uses increases, the plan would require collaboration with the City and other jurisdictions to modify service as needed to serve the community. The plan would also promote the Vine Trail as an active transportation use, and along with the proposed General Plan's "Complete Streets" approach, improve overall connectivity, ease of access, and safety for all members of the community.

The Wine Train is not expected to increase frequency, but could potentially add stops within the City, and additional commuter or freight train traffic is not expected to occur through 2040.

## 5.3 Traffic Volumes

Buildout (2040) traffic volumes are based on the forecast volumes from the St. Helena General Plan Update 2040 Draft EIR. The proposed project was included in the 2040 circulation analysis, and traffic volumes generated by the project's ADUs were added to the Buildout (2040) conditions. Furthermore, the General Plan Update analysis did not include any of the following roadway extensions described within the Draft EIR:

- Connection 1: Starr Avenue extension north to Adams Street;

- Three options for connection 2, extension to Mills Lane: Starr Avenue (connection 2A), College Avenue (connection 2B), or Allison Avenue (connection 2C);
- Connection 3: Oak Avenue from Charter Oak Avenue to Grayson Avenue and limited access from Mitchell Drive to Charter Oak;
- Connection 4: Adams Street extension from its current eastern terminus to Starr Avenue;
- Two options for connection 5, extension to Silverado Trail: Adams Street (connection 5A) or Mills Lane (connection 5B).

These connections would require further study and City Council approval.

Within the Draft EIR, 2040 traffic volumes were forecast using existing (2018) count data and the four-step Napa-Solano Travel Demand Model. It should be noted that the 2018 count data used in that Draft EIR is the same as the 2018 count data used in this TIS. The Base Year version of the model was calibrated and validated to year 2018 traffic volume counts based on validation targets documented in the *Caltrans 2017 Regional Transportation Plan Guidelines Update*. The calibration and validation procedure is a typical process in traffic volume forecasting whereby the model is fine-tuned to replicate observed travel behavior in the study area prior to developing forecasts. After the calibration procedure, the Base Year model met all validation targets for both the weekday AM and PM peak hour model scenarios. Saturday midday traffic patterns and volumes mimic the weekday PM peak hour scenario, so travel demand model growth data from the PM peak hour model was used to develop the Saturday midday traffic volume forecasts.

Buildout (2040) weekday AM and PM peak hour traffic volumes are summarized in Figure 12, and were used to evaluate Buildout (2040) weekday traffic conditions. Buildout (2040) Saturday PM peak hour traffic volumes are summarized in Figure 13 and were used to evaluate Buildout (2040) Saturday traffic conditions.

## 5.4 Intersection Operations

An intersection LOS analysis was prepared for the weekday and Saturday Buildout (2040) conditions using the HCM methodology discussed in Section 1. Detailed LOS worksheets and signal warrants are included in Appendix C. Tables 9 and 10 show the results of the weekday and Saturday Buildout (2040) conditions LOS analysis, respectively.

As shown in Table 9, most of the study area intersections are forecast to operate with satisfactory LOS (LOS D or better for intersections along Main Street – SR-29, and LOS C or better for all other intersections) under weekday Buildout (2040) conditions except for:

- 4. Main Street/Pope Street – Mitchell Drive: LOS F in AM and PM peak hours. The proposed project would contribute traffic to this LOS deficiency.
- 11. Paseo Grand Drive – College Avenue/Pope Street: LOS E in AM peak hour. This intersection would remain unsignalized in the Buildout condition, and would not satisfy the peak hour signal warrant in the AM peak hour. Therefore, this would be consistent with the City's LOS policies.
- 12. Silverado Trail/Pope Street: LOS E in AM peak hour, and LOS F in the PM peak hour. This intersection would remain unsignalized in the Buildout condition. However, the AM and PM peak hour traffic volumes would satisfy the peak hour signal warrant. The proposed project would contribute traffic to this LOS deficiency.

**Table 9**
**Buildout (2040) Weekday Peak Hour Intersection LOS**

| Intersection | Control | AM Peak | | PM Peak | |
|---|---|---|---|---|---|
| | | *Delay*[1] | *LOS*[2] | *Delay*[1] | *LOS*[2] |
| 1. Main Street/Fulton Lane – Madrona Avenue | signalized | 22.3 | C | 14.6 | B |
| 2. Main Street/Adams Street | signalized | 29.8 | C | 24.4 | C |
| 3. Main Street/Hunt Avenue | unsignalized | 19.0 | C | 22.3 | C |
| 4. Main Street/Pope Street – Mitchell Drive | signalized | **164.0** | **F** | **132.4** | **F** |
| 5. Railroad Avenue/Fulton Lane | unsignalized | 10.6 | B | 11.5 | B |

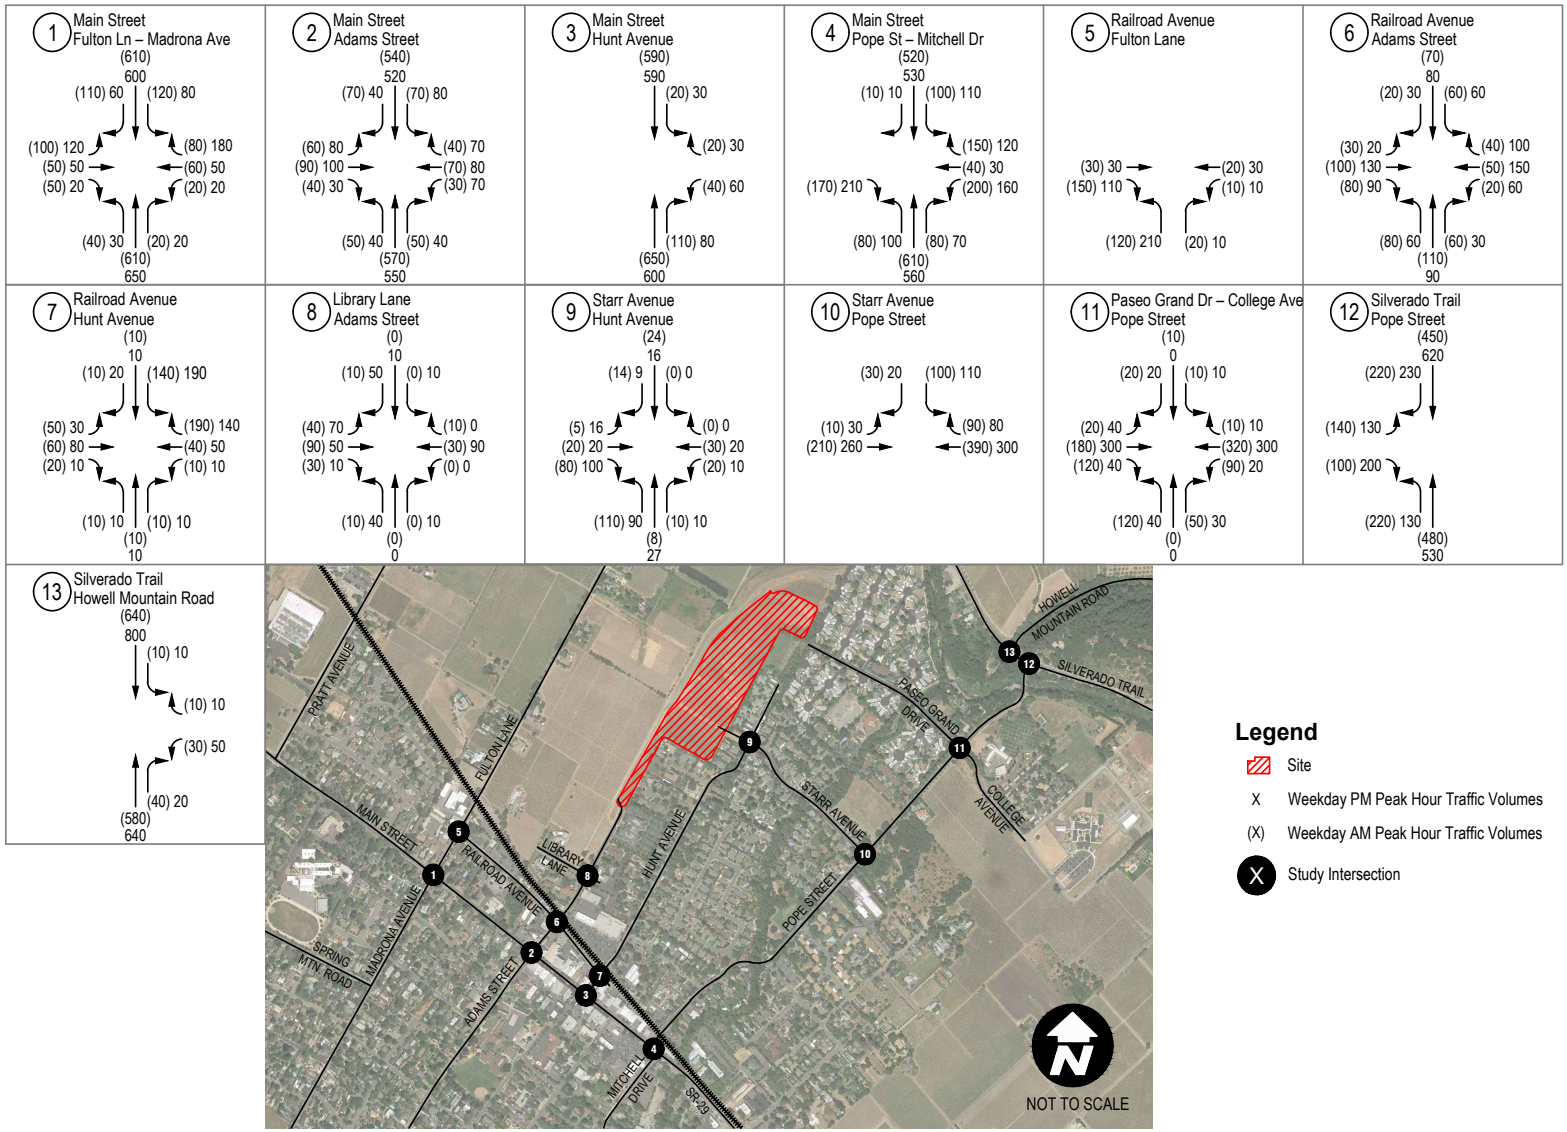
**Table 10**
**Buildout (2040) Saturday Peak Hour Intersection LOS**

| Intersection | Control | Saturday PM Peak | |
|---|---|---|---|
| | | *Delay*[1] | *LOS*[2] |
| 1. Main Street/Fulton Lane – Madrona Avenue | signalized | 23.6 | C |
| 2. Main Street/Adams Street | signalized | 39.9 | D |
| 3. Main Street/Hunt Avenue | unsignalized | 25.3 | D |

**Table 10**
**Buildout (2040) Saturday Peak Hour Intersection LOS**

| Intersection | Control | Saturday PM Peak | |
|---|---|---|---|
| | | *Delay*[1] | *LOS*[2] |
| 4. Main Street/Pope Street – Mitchell Drive | signalized | **146.8** | **F** |
| 5. Railroad Avenue/Fulton Lane | unsignalized | 10.4 | B |
| 6. Railroad Avenue/Adams Street | unsignalized | 8.9 | A |
| 7. Railroad Avenue/Hunt Avenue | unsignalized | 12.3 | B |
| 8. Library Lane/Adams Street | unsignalized | 8.5 | A |
| 9. Starr Avenue/Hunt Avenue | unsignalized | 7.5 | A |
| 10. Starr Avenue/Pope Street | unsignalized | 13.4 | B |
| 11. Paseo Grand Drive – College Avenue/Pope Street | unsignalized | 16.1 | C |
| 12. Silverado Trail/Pope Street | unsignalized | **82.1** | **F** |
| 13. Silverado Trail/Howell Mountain Road | unsignalized | 19.8 | C |

**Notes:**
1 Average seconds per vehicle
2 Level of Service (LOS)
**BOLD** value indicates unsatisfactory LOS
**Source**: Dudek 2019.



As shown in Table 10, most of the study area intersections are forecast to operate with satisfactory LOS (LOS D or better for intersections along Main Street – SR-29, and LOS C or better for all other intersections) per the City's LOS standards under Saturday Buildout (2040) conditions except for:

- 4. Main Street/Pope Street – Mitchell Drive: LOS F in the weekday and Saturday peak hours. The proposed project would contribute traffic to this LOS deficiency.
- 12. Silverado Trail/Pope Street: LOS F. This intersection would remain unsignalized in the Buildout condition. However, its Saturday peak hour volume would satisfy the peak hour signal warrant. The proposed project would contribute traffic to this LOS deficiency.

Based on the LOS results of the Buildout (2040) weekday and Saturday peak hour traffic analysis, and the City's impact criteria, the proposed project would create an LOS deficiency at the following intersections, and would require improvements:

- 4. Main Street/Pope Street – Mitchell Drive: LOS F during the weekday and Saturday peak hours.
- 12. Silverado Trail/Pope Street: LOS E during the weekday AM peak hour, LOS F during the weekday PM peak hour and Saturday peak hours. The weekday and Saturday peak hours volumes satisfy peak hour signal warrants.

Improvements for these LOS inconsistencies are provided in Section 6 below.

# 5 SPECIAL ISSUES

This section provides analyses of specific transportation/circulation issues pertaining to the proposed project as directed by the City in the project's Scoping Agreement. This includes an analysis of the project's access and circulation, and a vehicular queueing analysis for the critical storage turn lanes for the study area intersections, including primary driveway and secondary access points to the site. In addition, a qualitative collision analysis was also completed to identify safety concerns for motorists, pedestrians, and bicyclists.

## 5.1 Project Access and Circulation

As mentioned previously, the proposed project would extend Starr Avenue northward into the project site, and intersect with Adams Street, which the project would also extend eastward from its current terminus. As Starr Avenue is extended approximately northward, it would narrow from approximately a 75-foot right-of-way (ROW) to a 60-foot ROW with 4-foot-side sidewalks and a 6-foot-wide planter strip on both sides of the street, consistent with the City's street standards. This extension, along with Adams Street, would be designed to accommodate emergency service vehicles and maintain accessibility for pedestrians and bicyclists according to City design standards.

Additionally, internal public residential streets within the project site would be created to accommodate neighborhood circulation and provide on-street parking on both sides of the Starr Avenue and Adams Street extensions (where permitted). These roadways would be designed to be consistent with all applicable City design criteria and conform to the City's Municipal Code (§16.32.060) to ensure that emergency service vehicles can adequately circulate within the project site.

Per review of the site plan, and field observations of existing on-street conditions around the site on Adams Street and Starr Avenue, there are no visual obstructions that would impede vehicles, bicyclists, and pedestrians from having safe access to and from the site.

## 5.2 Queueing

Vehicular queues on all study intersections were calculated for the 95th percentile (design) queues for the weekday AM and PM, and Saturday peak hours using the Synchro/SimTraffic software. The queues were calculated to determine whether left- or right turning traffic at intersections would spill over into through lanes and potentially impede vehicles causing intersection delays, which may contribute to unsatisfactory LOS results measured intersections. The 95th percentile queues were determined for the Existing, Existing plus Project, and Buildout (2040) conditions.

### 5.2.1 Existing Condition

Table 11 presents the calculated queues for major movements, including left turns, right turns, and through lanes at the study intersections for the existing condition.

**Table 11**
**Existing AM, PM, and Saturday Peak Hour Calculated 95th Percentile Queues[1]**

| | NBL | 100 | 84 | 66 | 66 | no | no | no |
| | SBR[3] | 225 | 26 | 19 | 16 | no | no | no |
| 13. Silverado Trail/Howell Mountain Road | WBLR[3] | 850 | 47 | 61 | 59 | no | no | no |
| | NBR | 50 | 17 | 0 | 15 | no | no | no |
| | SBL | 100 | 7 | 13 | 18 | no | no | no |

**Notes:**
1 Based on 95th percentile (design) queue length in SimTraffic 10.
2 Measured in feet.
3 Length measured to nearest intersection.
4 Length measured to roadway terminus.
5 Does not exist.
**BOLD** Queue exceeds storage length.
**Source:** Dudek 2019.

Based on Table 11, most of the study intersections do not exceed storage length for the highest calculated 95th percentile queues in the weekday and Saturday peak hours of the existing condition except for:

- 4. Main Street/Pope Street – Mitchell Drive: Westbound right turn lane (WBR) in the AM peak hour (exceeded by 13 feet); and, the northbound left turn lane (NBL) in the AM and PM peak hours (exceeded by 26 feet and 12 feet, respectively). These storage lane exceedances would be approximately one car length or less (assuming length of standard vehicle is 22 feet, including front and rear space).

### 5.2.2 Existing plus Project

Table 12 presents the calculated 95th percentile (design) queues at the study area intersections for the Existing plus Project condition.

**Table 12**
**Existing plus Project AM, PM and Saturday Peak Hour**
**Calculated 95th Percentile Queues[1]**

| Intersection | Movement | Pocket Length[2] | Existing plus Project | | | Exceeds Turn Pocket Length? | | |

**Notes:**
1 Based on 95th percentile (design) queue length in SimTraffic 10.
2 Measured in feet.
3 Length measured to nearest intersection.
4 Length measured to roadway terminus.
5 Does not exist.
**BOLD** Queue exceeds storage length.
**Source:** Dudek 2019.

Based on Table 12, similar to the existing condition, most of the study intersections do not exceed storage length for the highest calculated 95th percentile queues in the weekday and Saturday peak hours of the Existing plus Project condition except for:

- 4. Main Street/Pope Street – Mitchell Drive: WBR in the AM peak hour (exceeded by 17 feet), NBL in the AM and PM peak hour (exceeded by 18 feet and 7 feet respectively). These storage lane exceedances would be approximately one car length or less (assuming length of standard vehicle is 22 feet, including front and rear space).

While the queues calculated in the Existing plus Project condition were slightly less (less than one car length) than the existing condition, due to calculation variations and optimized signal timing, the calculated Existing plus Project queues generally show that addition of project traffic to Main Street/Pope Street would not create a measurable increase of vehicular queues at the intersection.

### 5.2.3 Buildout (2040) Condition

Table 13 presents the calculated queues for major movements, including left turns, right turns, and through lanes at the study area intersections for the Buildout (2040) scenario.

**Table 13**
**Buildout (2040) AM, PM and Saturday Peak Hour Calculated 95th Percentile Queues[1]**

| Intersection | Movement | Pocket Length[2] | Buildout (2040) | | | Exceeds Turn Pocket Length? | | |

| | NBR | 50 | 7 | 0 | 0 | no | no | no |
| | SBL | 100 | 20 | 20 | 26 | no | no | no |

**Notes:**
1 Based on 95th percentile (design) queue length in SimTraffic 10.
2 Measured in feet.
3 Length measured to nearest intersection.
4 Length measured to roadway terminus.
5 Does not exist.
**BOLD** Queue exceeds storage length.
**Source:** Dudek 2019.

Based on Table 13, during the Buildout (2040) condition, the following study area intersections would have 95th percentile queues that would exceed their storage lanes:

- 1. Main Street/Fulton Lane – Madrona Avenue: SBL in the AM peak hour (exceeded by 28 feet). These storage lane exceedances would be approximately 1.5 car lengths or less.
- 3. Main Street/Hunt Avenue: WBLR in the Saturday peak hour (exceeded by 4 feet). This exceedance would be approximately one car length or less.
- 4. Main Street/Pope Street – Mitchell Drive: WBR in the AM peak hour (exceeded by 24 feet); and, NBL in the AM (exceeded by 36 feet), PM peak hour (exceeded by 34 feet), and in the Saturday peak hour (exceeded by 1 foot). These storage lane exceedances would be approximately 1.5 car lengths or less.
- 11. Paseo Grand Drive – College Avenue/Pope Street: EBL in the PM peak hour (exceeded by 9 feet) and the Saturday peak hour (exceeded by 5 feet); and, EBTR in the PM peak hour (exceeded by 39 feet). The exceedance on the EBL lane would be less than one car length, while the exceedance on the EBTR lane would be approximately six car lengths.
- 12. Silverado Trail/Pope Street: EBLR in the AM peak hour (exceeded by 26 feet), PM peak hour (exceeded by 204 feet); and, the Saturday peak hour (exceeded by 265 feet). These exceedances would be approximately twelve car lengths or less.

## 5.3 Collision Analysis

A qualitative collision analysis was performed to disclose the collision history in the study area. Five years of collision data, from 2014 to 2018, was obtained from the California Highway Patrol's (CHP) *Statewide Integrated Traffic Records System* (SWITRS). It is important to note that it may take up to six months for a collision to appear within the database, therefore data for 2018 may be incomplete.

The SWITRS database is a public system that processes and collects data from CHP and other police agencies. The database was queried to select for all collisions occurring within the jurisdiction of the St. Helena Police Department (SHPD) and then narrowed down to the study area intersections that contained collisions resulting in pedestrian or bicyclist injury, as well as collisions occurring at intersections. Most "rear-end" type of collisions were not considered in this analysis since these types of collisions are considered to be by fault of the driver and not because of the intersection or roadway layout, or lack of signalization. SWITRS files are included in Appendix D.

**Table 14**
**Collision Summary (2014-2018)**

| Nearest Study Intersection | # of Total Collisions | Total # of Injured[1] | Total # of Pedestrians Injured | Total # of Bicyclists Injured | Primary Cause |
|---|---|---|---|---|---|
| 1. Main Street/Fulton Lane – Madrona Avenue | 9 | 4 | 1 | 0 | Ran light; improper turn |
| 2. Main Street/Adams Street | 4 | 3 | 3 | 0 | Left turn/pedestrian crossing conflict |
| 3. Main Street/Hunt Avenue | 2 | 0 | 0 | 0 | Left turn/pedestrian crossing conflict; improper turn |
| 4. Main Street/Pope Street – Mitchell Drive | 5 | 2 | 1 | 0 | Unsafe speed |
| 11. Paseo Grand Drive – College Avenue/Pope Street | 1 | 0 | 0 | 0 | Improper turn |
| 12. Silverado Trail/Pope Street | 15 | 12 | 0 | 0 | Left turn and right-of-way conflicts |
| 13. Silverado Trail/Howell Mountain Road | 4 | 3 | 0 | 0 | Improper turn |

**Note:** Consists of all injured parties (motorists, pedestrians, and bicyclists).
**Source**: SWITRS Database Query conducted March 27, 2019.

As the table shows, the total number of people injured within the 40 reported collisions is 24 people, 5 of which were pedestrians, and zero bicyclists. The intersection of Silverado Trail/Pope Street had the highest number of total collisions recorded. These collisions may be attributed to

the narrowing of Pope Street at both approaches to the narrow Pope Street Bridge, creating slower moving traffic heading towards a higher speed roadway (Silverado Trail).

## 5.4 Vehicle-Miles of Travel (VMT)

As stated previously, SB 743 required OPR to amend the CEQA Guidelines to provide an alternative to LOS for evaluating transportation impacts. Under the new transportation guidelines, LOS, or vehicle delay, will no longer be considered an environmental impact under CEQA. VMT has been adopted as the most appropriate measure of transportation impacts under CEQA.

Table 3.13-6 in the General Plan Update Draft EIR shows an increase in overall VMT within the City, however this does not take into account mode shifts (motorists shifting to bicycle or transit uses). Finally, the analysis concludes that with policies framed in the draft 2040 General Plan Update, VMT would be reduced on a per-capita basis and impacts would be less than significant.

A separate VMT analysis has been prepared, and its methodology, analysis results, findings, and mitigation measures (if any) are provided in the EIR.

## 5.5 Parking

The City's Municipal Code provides regulations for minimum on-site parking requirements for residential land uses (§17.124.030 (A)).

Specifically, the parking regulations mandate that for two or more bedroom dwelling units "one covered space for each dwelling unit plus one space for each dwelling unit which need not be covered" is to be provided. The income-restricted housing would consist of 25 garaged spaces along with 37 guest spaces. Parking demand for the single-family and accessory dwelling units would be accommodated by a garage and driveway attached to the residence. As the project has not submitted detailed site plan and floor plan designs, future plans should follow the City's parking requirements and be designed to sufficiently accommodate all elements of the project.

INTENTIONALLY LEFT BLANK

# 6 RECOMMENDED IMPROVEMENTS

The following section provides improvements for project LOS deficiencies identified in the traffic analyses above.

## 6.1 Existing plus Project

Based on the LOS results of the Existing plus Project weekday and Saturday peak hour traffic analysis, and the City's impact criteria, the proposed project would create an LOS deficiency at the following intersection, and would require an improvement:

- 4. Main Street/Pope Street – Mitchell Drive: LOS F during the weekday PM peak hour.

With the implementation of Improvement-1, the project's delay increase would be reduced to less than 5.0 seconds (delay would decrease below the existing baseline delay in the PM peak hour). Therefore, the project's impact to Main Street/Pope Street – Mitchell Drive would be consistent with the City's LOS policies:

**Improvement-1** Prior to issuance of a Certificate of Occupancy, the project applicant shall coordinate with the City and Caltrans to implement the following improvement to the intersection of Main Street/Pope Street – Mitchell Drive:

- Westbound right turn phase to allow for overlapping turns. This will allow for permitted right turns occurring during a red light and also a protected right-turn phase occurring turning a non-conflicting movement, such as the southbound left-turn protected phase.

## 6.2 Buildout (2040)

Based on the LOS results of the Buildout (2040) weekday and Saturday peak hour traffic analysis, and the City's impact criteria, the proposed project would contribute to LOS inconsistencies at the following intersections, and would require improvements:

- 4. Main Street/Pope Street – Mitchell Drive: LOS F during the weekday and Saturday peak hours.
- 12. Silverado Trail/Pope Street: LOS E during the weekday AM peak hour, and LOS F during the weekday PM peak hour and Saturday peak hours, and weekday and Saturday peak hour volumes satisfy peak hour signal warrants.

The following improvements would make the project consistent with the City's LOS policies per the City's impact criteria. However, since the City cannot guarantee implementation of these

improvements due to the uncertainty of construction feasibility as it would require coordination with Caltrans and Napa County. Additionally, although the City levies traffic impact fees, as explained in Section 3.32.100 of the Municipal Code, it is not clear whether intersection improvements are included. The City's Development Impact Fee Study Report does not identify necessary improvements that would directly alleviate project related LOS impacts listed below as part of the traffic mitigation impact fee program.

The City may require the applicant to pay a fee to fully, or partially, implement a transportation improvement; however, there is no specific mechanism to allocate fees directly to the impacted locations. Therefore, there are no feasible improvements to reduce the project's impact to the Main Street/Pope Street and Silverado Trail/Pope Street intersections to be consistent with the City's LOS policies.

**Improvement-2** Prior to issuance of a Certificate of Occupancy, the City may require the project applicant to pay fees towards the implementation of the following improvement to the intersection of Main Street/Pope Street – Mitchell Drive:

- Construction of one or more of the various roadway connections recommended in the St. Helena General Plan Update EIR (discussed in detail in Section 3.13 – Transportation and Traffic). These connections would improve overall LOS in the Buildout (2040) scenario:
  - Connection 2A: College Avenue extension to Mills Lane (may require realignment of Mills Lane to meet Main Street/Grayson Avenue intersection).
  - Connection 3: Oak Avenue extension from Mitchell Drive to Grayson Avenue.
  - Connection 2B, Connection 2C, Connection 5B, or a combination of Connections 1, 4 and 5A may provide congestion relief to Main Street/Pope Street-Mitchell Drive, but these improvements have additional considerations related to neighborhood traffic volumes and costs related to crossings of the Napa River.

**Improvement-3** Prior to issuance of a Certificate of Occupancy, the City may require the project applicant to pay fees towards the implementation of the following improvement to the intersection of Silverado Trail/Pope Street:

- Installation of a traffic signal at the intersection, as well as, at the adjacent, closely-spaced intersection Silverado Trail/Howell Mountain Road. This intersection is recommended for signalization according to

the analysis in the St. Helena General Plan Update EIR. With a traffic signal in-place, this intersection would operate with satisfactory LOS.

# 7 FINDINGS AND RECOMMENDATIONS

Based on the results of the analysis in this TIS, the following summarizes the traffic deficiencies of the proposed project. General findings include:

- For a typical weekday the project would generate 798 daily trips, 62 AM peak hour trips (186 inbound and 46 outbound), and 82 PM peak hour trips (52 inbound and 30 outbound).
- For a typical Saturday the project would generate 815 daily trips, and 80 peak hour trips (40 inbound and 40 outbound).
- Under the Existing plus Project weekday scenario, all of the study area intersections would continue to operate at an acceptable LOS and not result in an LOS deficiency with the addition of the project except for:
    - 4. Main Street/Pope Street – Mitchell Drive: Continues to operate with unsatisfactory LOS at LOS F during the AM and PM peak hours, however the increase in delay is greater than 5.0 seconds only in the PM peak hour (4.8 seconds and 11.4 seconds, respectively).
        - Improvement required includes a westbound overlapping right-turn phase. This would ensure consistency with the City's LOS policies.
- Under the Existing plus Project Saturday scenario, all of the study area intersections would continue to operate an acceptable LOS with the addition of the project. Therefore, the proposed project would be consistent with the City's LOS policies, and no improvements are required.
- Under the Buildout (2040) weekday and Saturday scenarios, all of the study area intersections would continue to operate at an acceptable LOS and not result in an LOS deficiency except for:
    - 4. Main Street/Pope Street – Mitchell Drive: LOS F during the weekday and Saturday peak hours.
        - Construction of one or more of the various roadway connections recommended in the St. Helena General Plan Update EIR (discussed in detail in Section 3.13 – Transportation and Traffic).
        - However, since the City cannot guarantee implementation of this improvement due to the uncertainty of construction feasibility as it would require coordination with Caltrans and Napa County. Additionally, although the City levies traffic impact fees, as explained in Section 3.32.100 of the Municipal Code, it is not clear whether intersection improvements are included. The applicant will pay its

required traffic fees; however, there is not a specific mechanism to allocate traffic impact fees directly to the impacted locations. Therefore, the project would be inconsistent with the City's LOS policies at the Main Street/Pope Street intersection.

- 12. Silverado Trail/Pope Street: LOS E during the weekday AM peak hour, and LOS F during the weekday PM peak hour and Saturday peak hours, and weekday and Saturday peak hour volumes satisfy peak hour signal warrants.
  - Installation of a traffic signal at the intersection, as well as, at the adjacent, closely-spaced intersection Silverado Trail/Howell Mountain Road. This intersection is recommended for signalization according to the analysis in the St. Helena General Plan Update EIR. With a traffic signal in-place, this intersection would operate with satisfactory LOS.
  - However, since the City cannot guarantee implementation of this measure due to the uncertainty of construction feasibility as it would require coordination with Napa County; and, since the City does not have a fair-share or developer fee program to collect fees, the project would be inconsistent with the City's LOS policies at the Silverado Trail/Pope Street intersection.

- Project site access, parking, circulation, and emergency vehicle ingress/egress shows that there are no project-related inconsistencies.

# APPENDIX A

*Scoping Agreement*

**CITY OF ST HELENA**

# TRAFFIC IMPACT STUDY SCOPING AGREEMENT

A Traffic Impact Study (TIS) is an integral tool in the development review process. A TIS provides a clear understanding of how a project may affect the local and regional transportation networks. In essence, a TIS details a projects contribution to the roadway system traffic loads, establishes if a nexus exists to require a particular project to contribute to transportation improvements, and last, provides a lens through which to determine a project's compatibility with the applicable transportation plan.

A Traffic Impact Study (TIS) shall be required as determined necessary by the Public Works Director, if one or more of the following scenarios exist:

1. high project trip generation:
    a. Generates over 100 peak hour trips
    b. Generates 50 to 100 peak hour trips – and, affected facilities are experiencing noticeable delay; approaching unstable traffic flow conditions (LOS "C" or "D").
    c. Generates 1 to 49 peak hour trips; the following are examples that may require a full TIS or some lesser analysis
        1. Affected facilities are experiencing significant delay; unstable or forced traffic flow conditions (LOS "E" or "F").
        2. The potential risk for a traffic incident is significantly increased (i.e., congestion related collisions, non-standard sight distance considerations, increase in traffic conflict points, etc.).
        3. Change in local circulation networks that impact a State highway facility (i.e., direct access to State highway facility, a non-standard highway geometric design, etc.).
2. high volume or high speed on road where project access is taken
3. collision history
4. sight distance concerns
5. proximity to impacted facilities

*If a traffic study has been previously prepared for a project, a new or updated study may be required by if the traffic study is more than two years old and/or the proposed project has changed such that the PM peak hour trip generation is expected to increase by more than 10%. Any information used from a previously completed traffic impact study must be formally referenced in the text of the report. Similarly, any traffic data, analyses, results, conclusions and/or recommendation used from other traffic studies must be appropriately references. Copies of data and information informing the referenced study shall be included as an appendix in the traffic impact study.

**SCOPING**

To determine whether a traffic impact study is necessary and if so, to establish concurrence between the applicant and the City of St. Helena and to detail key assumptions, the following scoping agreement shall be completed by the applicant for review and approval by the Public Works Director prior to proceeding. Key information to be addressed includes:

**TRAFFIC IMPACT STUDY SCOPING AGREEMENT**
**CITY OF ST HELENA**

- Approximation of trip generation, distribution and assignment
- Identification of potentially affected transportation facilities
- Identification of pipeline projects to be assumed under baseline and cumulative scenarios
- Proposed assumptions, deviations from standard ITE methodology, or proposed changes to the Citywide circulation systems not assumed under the General Plan.

**PROJECT OVERVIEW**

**Project number:** _____

**Project Name:** Hunter Subdivision

**Project Location:** Intersection of Adams Street and Starr Avenue; northern terminus of Starr Avenue, see Figure 1.

**Project Contact:** Dennis Pascua, Dudek, dpascua@dudek.com, 760-479-4256

Mladen Popovic, Dudek, mpopovic@dudek.com, 510-601-2503

**Project Description:** The proposed project would include the development of 51 single-family residences, an additional 25 attached residential units, and 11 accessory dwelling (granny-flat) units for a total of 87 dwelling units. The project is located on a 16.9-acre site along Adams Street in the northeast section of the City. The site is currently located without access to roadways; however, Adams Street and Starr Avenue will be extended to provide vehicular access to the site. Figure 2 shows the project site plan.

**Property Description:** *(Land Use/Acreage/Zoning/ Context)*

The project is approximately 16.9-acre site located at the northern terminus of Starr Avenue. Assessor's Parcel Number is 009-030-057. The land uses that surround the project site are currently characterized as a mixture of office and residential development, open space, and vineyards. Uses immediately south of the project site are primarily residential, both single- and multi-family, including the Vineyard Valley Mobile Home Park. Office uses are located immediately adjacent to the site's most western edge at the terminus of Adams Street.

**TRAFFIC IMPACT STUDY SCOPING AGREEMENT**
**CITY OF ST HELENA**

1993 General Plan Land Use is Medium Density Residential (MDR), permitting densities between 5.1 to 16.0 dwelling units per acre. Zoning designation is Medium Density Residential (MR). The current density of the proposed project is 5.1 dwelling units per acre. Therefore, the project is consistent with current City General Plan and zoning standards and requirements.

| | |

**H. Site Plan (attach)**

**I. Special Issues**

**TRAFFIC IMPACT STUDY SCOPING AGREEMENT**
**CITY OF ST HELENA**

1. 95th Percentile Queues: Analysis for the 95th percentile queueing for major intersections will be conducted in order to evaluate storage length concerns that residents may have with the project, especially in regards to left-turn lane queues at Main Street. This analysis will be conducted using SimTraffic (version 10) software. Vehicular queuing will also be assessed at the railroad crossings at Adams Street, Hunt Avenue, and Pope Street. Dudek will assess the forecast vehicular queues at these crossings based on the frequency and use of the Napa Valley Wine Train.

2. On-Site Circulation and Access: Since the project site will extend two streets to serve vehicles to/from the site (Starr Avenue and Adams Street), site access and circulation will be evaluated, in addition to emergency vehicle access. Parking within the project site will be evaluated in accordance with parking standards within the St. Helena Municipal Code.

3. Non-Motorized Vehicle Access: A detailed pedestrian, bicycle, and transit accessibility analysis will be conducted to evaluate the proposed project and its ability to provide safe and reliable alternative modes of transportation. A vehicle collision analysis will also be evaluated for major intersections, utilizing California Highway Patrol data (SWTRS) from the past five years.

4. Pope Street Bridge: The Pope Street Bridge, a narrow historical bridge, that connects St. Helena to the Silverado Trail, will be analyzed for potential intersection improvements to alleviate significant vehicular queuing on the bridge. Such improvements may include traffic signalization and/or a roundabout (connecting with Howell Mountain Road).

***This letter acknowledges the City of St Helena Engineering Division requirements for the traffic impact analysis of the following project.***

**Recommended by:**

Consultant Rep _____ Date April 24, 2018

**Approved by:**

City of St Helena
Director of Public Works _____ Date April 26, 2018

**TRAFFIC IMPACT STUDY REQUIRED COMPONENTS**[1]

**1. EXECUTIVE SUMMARY.** The Executive Summary shall include a general description of the project scope, existing conditions, potential impacts of the project, traffic operations and conclusions, mitigation measures, and recommendations. This summary shall be complete in itself and not dependent on supplementary data included by reference. Not to exceed 1 page in length.

**2. INTRODUCTION.** The introduction serves as a background summary to detail the purpose of the project, location, study area boundaries, study scope, intersections and roadways to be analyzed, as well as, study scenarios. Any pertinent transportation and land development information prepared within the last five years or considered to be current by the Public Works Directors should be reviewed and summarized in the Traffic Impact Study.

**3. PROJECT CHARACTERISTICS**

**A. PROJECT DESCRIPTION.** A detailed description of the proposed project, including all information used (square footage, rooms, employees, parking spaces, transportation demand measures, operational characteristics, project phasing, etc) to determine traffic-generating characteristics.

**B. EXISTING CONDITIONS.** A qualitative description of roads, intersections, driveways, parking facilities, and pedestrian and bicycle facilities in the vicinity of the project. The determination of roads and intersections to be included in the TIS shall be made in consultation with the Public Works Director and shall the generally follow the ITE Transportation and Land Development guidelines. This section shall also include an evaluation of existing Level of Service for all study roads and intersections. The discussion of traffic volumes shall distinguish between passenger vehicles (e.g. cars, pick-ups, SUVS), heavy vehicles (semi-trucks, buses, delivery vans) motorcycles, bicyclists, and pedestrians.

Keep in mind that Location information is often best presented graphically in figures which should include a vicinity map showing the project site and study area boundaries in relation to the surrounding system. Additionally, roadways that provide access to the project site and are included in the study area should be identified.

**C. TRIP GENERATION.** Include trip generation estimates for the project based on industry standard trip generation values or other methods approved by the Public Works Director, such as local trip generation rates and vehicle-miles of travel (VMT). Typically, these values will be derived from the current edition of Trip Generation, published by the Institute of Transportation Engineers (ITE). Adjustments to these values may be appropriate assuming the applicant proposes acceptable specific and permanent measures that will reduce the traffic generation potential of the project. The engineer must submit the proper documentation to sufficiently support any proposed reduction.

Trip generation shall be represented for the following periods;

I. Average Daily Traffic (ADT)
II. Weekday a.m. peak (peak hour of adjacent street, not peak of generator)
III. Weekday p.m. peak (adjacent street, if required by Public Works)
IV. Weekend peak hour traffic, if required by Public Works

[1] These guidelines are periodically updated to reflect changes in City policies, the regulatory environment, and the state of the transportation impact analysis practice.

- *If and when required, all traffic counts shall be conducted between 4:00 p.m. to 6:00 p.m. on a Tuesday, Wednesday or Thursday during the normal public school period (i.e. September to May) unless requested otherwise*

**D. TRIP DISTRIBUTION.** Description of the projected directional distribution of traffic and provide exhibit. The estimates of percentage distribution of trips for the proposed project to destinations outside the study area must be clearly stated in the TIS. Trip Distribution origins and destinations with roadways and/or compass points must be clearly stated in the text of the report and shown on a figure. Recent studies and existing data regarding traffic patterns may be used to support these assumptions, where available. A map showing the percentage or number of project trips on each street must be provided as part of the traffic study graphics. It is highly recommended that the method used to distribute trips is acceptable by the City Traffic Engineer prior to conducting any analysis.

**TRIP ASSIGNMENT.** Provide a trip assignment analysis that shows pre- and post- project analysis.

**3. IMPACT ANALYSIS**

The City of St. Helena has adopted the following level of Service Standards to be applied to roads and intersections

A significant impact would occur if one of more of the following scenarios exist:

- Operations at a signalized intersection along State Route 29 to deteriorate from LOS D under conditions without the project to LOS E or F, or operations at other signalized intersections to deteriorate from LOS C under conditions without the project to LOS D, E or F.

- The LOS to deteriorate to LOS F for signalized intersections that operate at LOS E under conditions without the project.

- The average intersection delay to increase by more than five seconds for signalized intersections that operate at LOS F under conditions without the project.

- The LOS to deteriorate to LOS D, E or F for unsignalized intersections operating at LOS C or better under conditions without the project, and the traffic volumes would satisfy the Caltrans peak hour volume warrant criterion for traffic signal installation. For unsignalized intersections on State Route 29 operating at LOS D or better under conditions without the project, the impact would be significant if the project would cause the LOS to deteriorate to LOS E or F, and the traffic volumes would satisfy the Caltrans peak hour volume warrant criterion for traffic signal installation.

- Average delay to increase by five or more seconds for unsignalized intersections operating at unacceptable levels (LOS D, E or F; or LOS E or F on State Route 29) under conditions without the project, and the traffic volumes would satisfy the Caltrans peak hour volume warrant criterion for traffic signal installation.

- Operations on street segments to deteriorate from LOS D under conditions without the project to LOS E or F. For street segments that operate at LOS E under conditions without the project, the impact would be significant if the project would cause the LOS to deteriorate to LOS F.

- •An increase of more than five percent for average daily traffic for street segments that operate at LOS F.

In addition, please also analyze the project's traffic impacts as they relate to the most up to date version of Napa County's guidelines and policies:

- The County shall seek to maintain an arterial Level of Service D or better on all county roadways, except where maintaining this desired level of service would require the installation of more travel lanes than shown on the Circulation Map.

- The County shall seek to maintain a Level of Service D or better at all signalized intersections, except where the level of service already exceeds this standard (i.e., Level of Service E or F) and where increased intersection capacity is not feasible without substantial additional right-of-way.

- No single level of service standard is appropriate for un-signalized intersections, which shall be evaluated on a case-by-case basis to determine if signal warrants are met.

Methodology employed to determine LOS shall follow that outlined in the latest edition of the Highway Capacity Manual, published by the Transportation Research Board, and any related computer software based on its analysis methods.

**A. SCENARIOS**

The LOS of all affected intersections shall be analyzed under the following scenarios

a. Existing ; Existing + project
b. Baseline; Baseline + project
c. Cumulative; Cumulative + project

The list of pipeline projects for use in developing Baseline (approved; but not completed projects) shall be obtained from the Public Works Department.

*Cumulative conditions shall be determined by use of traffic forecasts from approved Napa Valley Transportation Authority (NVTA) models, where available. Information on current model availability, and data files for those models, may be obtained from NVTA. In limited situations where appropriate to the scale of the proposed development, a 20-year growth factor determined from historic traffic volume trends, or a buildout "trafficshed" approach, may be used with approval from Public Works.*

The required traffic scenarios shall be represented in the format below and shall be followed by a narrative detailing the content represented in the table and highlighting impacts expected to occur under the respective scenario.

**TRAFFIC IMPACT STUDY SCOPING AGREEMENT**
**CITY OF ST HELENA**

**TABLE __**
**INTERSECTION LEVELS OF SERVICE: SCENARIO AND SCENARIO + PROJECT**

| | | Scenario | | | | Scenario + project | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | AM Peak Hour | | PM Peak Hour | | AM Peak Hour | | PM Peak Hour | |
| Intersection | Control Type[a] | Delay | LOS | Delay | LOS | Delay | LOS | Delay | LOS |
| 1. intersection | | | | | | | | | |
| 2. intersection | | | | | | | | | |
| 3. intersection | | | | | | | | | |
| 4. intersection | | | | | | | | | |

**B. SITE ACCESS/ SITE DISTANCE**

a. Sight distance and intersection corner distance relative to new and existing project driveways.
b. Considerations for truck and other large vehicle operations.
c. Considerations for freight loading zones, if applicable.
d. Considerations for passenger loading zones, if applicable.

**C. ON SITE CIRCULATION**

a. Includes a discussion of on-site circulation complete with descriptions of the proposed access points, turn prohibitions, number of lanes proposed, on-site transit stop locations, driveway throat depth, parking supply/demand/parking aisle circulation, on-site pedestrian circulation, bicycle parking, on/off-site delivery truck circulation, railroad at-grade crossings and any other applicable circulation issues.

**D. CONSTRUCTION PERIOD IMPACTS**

a. Includes a discussion of any unusual circumstances anticipate during construction. Proposed transportation facility closures, construction signage, safety features, and detours shall be included. At no time will any street capacity be reduced or closed without written permission from the Engineering Division.

**E. QUEUING**

a. Evaluate the maximum length of queue at intersections in the immediate vicinity of the proposed project, including proposed project driveways (if applicable), during the peak hour generator, and provide opinion on whether the development will significantly affect operations at other closely spaced public road intersections. If so, recommend appropriate mitigation measures.

**F. SAFETY ANALYSIS**

a. A safety analysis that evaluates the collision history in the immediate vicinity of the proposed project, and provide an opinion on whether the development will significantly affect existing safety conditions. If so, recommend appropriate mitigation measures.

**TRAFFIC IMPACT STUDY SCOPING AGREEMENT**
**CITY OF ST HELENA**

**G. ALTERNATIVE MODES OF TRANSPORTATION**

a. Pedestrian
b. Bicycle
c. Public transit

**The report shall identify any quantifiable benefit which can be attributed to improvements to these modes, as part of the Impact Analysis. Recommend appropriate mitigation measures as needed.*

**H. WARRANTS.** Engineers shall conduct traffic warrant analysis when intersection analysis indicates that installation of a traffic control signal may be justified based on operational, safety or other requirements, as deemed by the City. In addition, on State highways, consideration for roundabout (yield control) must also be included if it may be a viable and practical solution. ____

**I. IDENTIFICATION OF SIGNIFICANT IMPACTS.** This section shall detail whether any of the significance criteria adopted by the City of St. Helena or County of Napa are met

**J. SIGNIFICANT IMPACT MITIGATION.** The study shall conclude by identifying appropriate measures to reduce potential impacts to less than significant levels.

**K. APPENDICES**

As appropriate, all transportation analysis should including the following appendices:

1. Complete sets of all required traffic, bicycle and pedestrian counts and estimated volumes, including traffic volumes with applied growth factors, etc.
2. Complete sets of all Level of Service calculations, including summary and rationales for the variables used in the calculations.
3. Complete sets of all analysis assumptions, including trip generation rates, trip distribution, trip assignment, and other analysis assumptions that were completed as part of the study.
4. Other appendices, as needed.

**Table 1**
**Trip Generation Summary (Weekday)**

| Trip Generation Rates[1] | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| *Land Use* | *Daily Trip Rate* | *Unit* | *AM Peak Hour* | | | *PM Peak Hour* | | |
| | | | *% In* | *% Out* | *Total* | *% In* | *% Out* | *Total* |
| Single-Family Detached Housing (ITE Code 210) | 9.44 | DU | 0.19 | 0.56 | 0.74 | 0.62 | 0.37 | 0.99 |
| Multifamily Housing (Low-Rise) (ITE Code 220) | 7.32 | DU | 0.11 | 0.35 | 0.46 | 0.35 | 0.21 | 0.56 |

| Trip Generation | | | | | | | | | |
