# City of St. Helena
# Special City Council Meeting
# Monday, May 1, 2023 @ 6:00 PM
# Vintage Hall Board Room - Second Floor
# 465 Main Street, St. Helena

**PLEASE NOTE: Any person who wishes to speak regarding an item on the agenda or make a comment under the "Oral Communication" portion of the agenda may do so, but please observe the time limit of four minutes.**

**The City Council meeting will be live-streamed on Comcast Channel 28 and on the City's website.**

***Public comment*** **for City Council meetings will be accepted via email to publiccomment@cityofsthelena.org. All public comments must be received three hours prior to the meeting. All other public comments received after the deadline will be attached to the item the next business day or soon thereafter. Public comments will not be read out loud but will be publicly available and attached to the on-line City Council agenda.**

**Simultaneous Spanish interpretation services during meetings can be scheduled upon request. To ensure interpreters are available, requests must be made at least 72 hours in advance by calling the Office of the City Clerk at (707) 968-2640 or emailing cityclerk@cityofsthelena.org.**
**The schedule of upcoming meetings and published meeting agendas can be found on the City of St. Helena website at https://sthelena.civicweb.net/portal/.**

**Servicios de interpretación en español durante la reunión pueden ser solicitados por el público. Para asegurar que los intérpretes estén disponibles, los servicios tienen que ser solicitados al menos 72 horas antes de la reunión llamando a la oficina de la Secretaria de la Ciudad al (707) 968-2640 o por correo electrónico a cityclerk@cityofsthelena.org .**
**El horario de las reuniones publicadas y próximas puede ser localizado en el sitio de web de la Ciudad en https://sthelena.civicweb.net/portal/ .**

1. CALL TO ORDER
2. ROLL CALL
   Mayor: Paul Dohring, Vice Mayor Eric Hall:, City Council Members: Anna Chouteau, Lester Hardy, Billy Summers
3. ADOPTION OF THE AGENDA
4. PUBLIC COMMENT:
   Under California law, public comments at special meetings are limited to subjects on the agenda only. Therefore public comment will take place during consideration of the item. Each person's comments shall be limited to 4 minutes.
5. PUBLIC HEARING:

5.1. ***Attachments numbered 1-32 will be listed as separate items below due to the large file sizes.*** 7 - 673

Request by Ben and Kelly Van Zutphen to subdivide a 16.9-acre parcel to establish 51 single-family residential lots, 11 of which are proposed with accessory dwelling units on approximately 13.4 acres. A 3.13-acre parcel will be established to accommodate a 25-unit multi-family housing development. Two additional remnant parcels (Parcel A; 0.06 acres) and (Parcel B; 0.04 acres) will remain with no plans for future development. A total of 87 units are intended to be built. The currently vacant project site is located north of Hunt Avenue and east of the future extension of Adams Street within the Medium Density Residential (MR) Zoning and (MDR) General Plan districts.

CEQA Determination: Environmental Impact Report
Prepared By: Eric Norris, Planning Consultant
Recommendation:
After considering the project, staff report, supporting documents, technical studies and all testimony, written and spoken, the Planning Commission of the City of St. Helena recommends that the City Council:

1. Adopt the attached Resolution certifying the Final EIR, and approving a Mitigation Monitoring Program, Findings of Fact and Statement of Overriding Considerations; and

2. Adopt the attached Resolution approving the requested Tentative Map No. 2022-001, File #PL10-040 for the Hunter Subdivision project.

6. ADJOURNMENT

The next Regular City Council meeting is scheduled for May 9, 2023, at 6:00 p.m.

This agenda was posted at City Hall, 1088 College Avenue, and at Vintage Hall, 465 Main Street, St. Helena, California on April 21, 2023.

Cindy Tzafopoulos, City Clerk

In Compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please call the City Clerk's Office (707) 967-2792. Notification 72 hours prior to the meeting as required by Section 202 of the Americans with Disabilities Act will enable the City to make reasonable arrangements to ensure accessibility to this meeting.

Any supplemental writings or documents distributed to a majority of the City Council regarding any item on this Agenda, after the posting of the Agenda, will be available for public review in the City Clerk's Office located at 1572 Railroad Avenue, St. Helena, California, during normal business hours and by appointment. In addition, such writings or documents will be made available on the City's web site at https://sthelena.civicweb.net and will be available for public review at the respective meeting.

Report to the City Council
Special City Council - 01 May 2023

**Agenda Section:** **PUBLIC HEARING:**

**Subject:** **Request by Ben and Kelly Van Zutphen to subdivide a 16.9-acre parcel to establish 51 single-family residential lots, 11 of which are proposed with accessory dwelling units on approximately 13.4 acres. A 3.13-acre parcel will be established to accommodate a 25-unit multi-family housing development. Two additional remnant parcels (Parcel A; 0.06 acres) and (Parcel B; 0.04 acres) will remain with no plans for future development. A total of 87 units are intended to be built. The currently vacant project site is located north of Hunt Avenue and east of the future extension of Adams Street within the Medium Density Residential (MR) Zoning and (MDR) General Plan districts.**

**CEQA Determination:** **Environmental Impact Report**

**Prepared By:** Eric Norris, Planning Consultant

**Reviewed By:** April Mitts, Assistant City Manager

**Approved By:** Anil Comelo, City Manager

---

## BACKGROUND

The following is a discussion of the project's setting and background.

### 1993 General Plan

The subject property has been designated since at least 1993 for development with Medium Density Residential homes. The 1993 General Plan land use map designates the property for Medium Density Residential (MDR), which is described as follows in the 1993 General Plan:

*The MDR designation provides for single-family detached and attached homes, secondary residential units, public and semi-public uses, and similar and compatible*

*uses. Residential densities shall be in the range of 5.1 to 12.0 dwelling units per gross acre. The MDR designation is the predominant residential designation, occurring throughout large areas of the City. The wide distribution of this designation is intended to maintain a development pattern in newly developing areas that is consistent with historic development patterns.*

As discussed later in this report, the proposed subdivision was submitted and accepted as a complete application (that is, ready for staff review and analysis) in 2011, when the 1993 St Helena General Plan was in effect. Although the 1993 General Plan was replaced in 2019 by the current General Plan (the "2019 General Plan"), the 1993 General Plan is used in this report because state law regulating the review of subdivision maps mandates the use of the Plan that was in place when an application was filed. A discussion of the proposed subdivision's consistency with the General Plan adopted in 2019 is included later in this report for informational purposes.

**Zoning**

At the time that application for the proposed subdivision was accepted as complete, the zoning for the site, as shown on the City's Zoning Map, was Medium Density Residential (MR). The current zoning designation is the same. The Zoning Map as it existed in 2011 and in its current form are both attached to this report.

The MR zoning district provides for single-family detached homes, accessory dwelling units, limited agricultural uses and compatible uses.

The Zoning Code (both at the time of application completeness and today) describes the MR zoning district as follows:

*"The MR district is established for consistency with the medium density residential general plan designation. The district provides for single-family detached homes, accessory dwelling units, limited agricultural uses and compatible uses. Residential densities shall not be less than 5.1 dwelling units per acre nor more than sixteen (16) dwelling units per acre." [Zoning Code 17.40.010]*

Municipal Code Section 17.40.060 (Development Standards) establishes the standards for lots:

- Minimum lot area: 7,000 square feet
- Minimum lot width and frontage: 70 feet
- Minimum density: 5.1 units per acre

The parcels proposed for single-family residential lots range in size from 7,000 square feet to 12,814 square feet. All proposed lots meet the minimum depth and width requirement of 70 feet.

The MR district allows a minimum density of 5.1 dwelling units per acre up to a maximum of 16 dwelling units per acre. The Tentative Map would accommodate at least 87 units on a 16.9-acre site resulting in a proposed density of 5.15 dwelling units per acre in compliance with the MR district minimum density requirement.

All other applicable standards related to the siting and development of the proposed structures, including lot coverage, floor area ratio, and structure height and setbacks, will be reviewed for compliance when the proposed dwelling units are submitted to the City for design review and a conditional use permit (for the multi-family homes).

**PROJECT PROCESSING HISTORY**

It is important to note that although this site has remained an undeveloped parcel, it has been designated for residential development since at least 1993 (see General Plan discussion).

**2010: Application Submitted**

On September 9, 2010, the applicants, Ben and Kelly Van Zutphen, applied to the City to subdivide an approximately 17-acre parcel of land in the eastern area of the city, east of the existing terminus of Adams Street. The proposed subdivision would create lots for 51 single-family homes and 11 accessory dwelling units, and a 52nd lot on which at least 25 multi-family housing units would be built. Several rounds of review and revisions transpired over the course of the next six months.

**2011: Application Complete/1st EIR Process Begins**

On March 25, 2011, a completeness letter was issued by the City to the applicants along with a request for additional information related to the existing well and site drainage. The Planning Commission held a “pre-scoping” meeting on July 19th to review the Initial Study and gather public comments. On August 6th, the Planning Commission held a second “pre-scoping” meeting and directed the Planning Department to issue a Request for Proposals (RFP) for the project’s Environmental Impact Report. On December 6th, the Planning Commission held a public scoping meeting for the project EIR.

**2012: Draft EIR #1 Released for Public Review**

On March 19, 2012, the Notice of Preparation for the Draft EIR #1 was circulated. The Draft EIR was released on March 29th for public and agency review with the initial comment period scheduled to end on July 13th, then extended an additional 45 days to end on September 4th, with a Draft EIR public comment meeting held on August 28th.

**2013: Planning Commission Considers Draft EIR #1**

Urban Planning Partners (consultants contracted to prepare the Draft EIR) commenced preparation of responses to comments in January of 2013. On September 17, 2013, the Planning Commission considered certification of the Final EIR. The item was presented to the Planning Commission then continued to a future date but was not acted on.

Following the Planning Commission meeting and continuance of the item, additional information was submitted to the City that included a re-design of the intersection of Pope Street and the Silverado Trail. This re-design resulted in the requirement for additional CEQA analysis of the project EIR.

**2014 - 2015**
No significant progress was documented for the project or the project EIR in the years 2014 to 2015.

**2016: Draft EIR #1 Revised**
Urban Planning Partners completed revisions to the Draft EIR and resubmitted to the City in approximately the middle of 2016. DEIR revisions resulted in request for information regarding water use and affordable housing provisions for the Tentative Map. On October 3rd, City staff requested additional information and funding from the applicant. Staff met with the applicant on December 20th to discuss the details of the request for additional information and funding.

**2017: Draft EIR Consultant Quits; New EIR Consultant**
On April 21, 2017, the project applicant provided some requested information but did not provide additional funding until May 2017. On May 19th, Urban Planning Partners declined to complete the project EIR and officially confirmed resignation on June 29th. City staff sent requests for consultation services to three planning consulting firms on the City's approved Master Services Agreement list. None of the firms replied to the request for services and on September 14th, the City issued a Request for Proposals soliciting proposals from qualified environmental consultants for the preparation of an EIR for the project. On December 12th, Dudek is contracted to complete the project EIR.

**2018: Preparation of EIR #2 Begins/Revised Map and Info Submitted**
On March 6, 2018, the city issued a new Notice of Preparation, and the public comment period is initiated, followed by a public scoping meeting held on March 12th. The public comment period ends on April 13th. On August 3rd, the applicant submitted a revised tentative map and supporting documentation, with the subdivision design remaining largely unchanged.

**2019: Revised Map and Info Submitted**
On February 1, 2019, the applicant submitted an updated tentative map, a proposed Affordable Housing Agreement, and additional technical studies. The applicant was contacted on September 4th and informed that further work on the project application and EIR will not commence until unpaid balances are remitted to the City. On November 26th, the City approved an augmented budget for Dudek to complete additional technical work for the project EIR following payment from the applicant.

**2020: EIR Preparation Continues**

On March 16th, augmentation of the Dudek budget was approved for the completion of a Vehicle Miles Travelled (VMT) study, General Plan Goals and Policies update, and Wildfire analysis to include in the project EIR.

**2021: Draft EIR #2 Circulates for Public Review/Response to Comments Begins**
On February 9, 2021, the Dudek budget was approved for augmentation again to include a second Administrative Draft EIR, second Screen-check DEIR, and Final EIR preparation. On April 27th, Interwest was contracted by the City to provide planning services and manage the processing of the project. The City held a public comment period on the second Draft EIR from September 23rd to November 8th (45 days); with the comment period later extended to November 30th (67 days total) due to the volume of comments received and requests for additional time from commenters. Dudek began preparation of responses to comments in December.

**2022: Response to Comments on EIR #2 Continues/Staff Report Prepared**
On April 12, 2022, Dudek requested additional funding to complete the project FEIR. The City prepared a Professional Service Agreement (PSA)to facilitate a sewer line capacity study on April 22nd in response to technical comments raised as part of the Draft EIR public review. The staff report package for Planning Commission is prepared for the November 1, 2022 meeting.

In response to numerous requests from the public for additional time to review the staff report package, the November 1, 2022, Planning Commission meeting was cancelled. The meeting was subsequently rescheduled for February 7, 2023; the staff report package was updated and republished, and new public hearing notices were published and mailed. In response to comments on one aspect of the traffic analysis for the proposed project, a typographical error in the Traffic Impact Analysis was made and the Final EIR was amended to include this change.

## PROJECT DESCRIPTION

The proposed project being considered by the Planning Commission at this time is a Tentative Subdivision Map to subdivide an approximately 17-acre parcel of land in the eastern area of the city, east of the existing terminus of Adams Street. The proposed subdivision would create lots for 51 single family homes, and a separate parcel (lot 52) on which multi-family attached housing units would be built. The proposed Tentative Subdivision Map is included as Attachment 3 to this report.

Approval of the tentative subdivision map is the first necessary but not final step for the subdividing of the property; future discretionary applications would define the design of the development that would take place on the lots created by the subdivision.

Including the ADUs, the project as currently envisioned by the applicant would have 87 homes, which is the minimum number of homes that can be built on the site per its existing General Plan and Zoning designations. A summary of the currently proposed residential units is shown below:

Single Family Homes: 51 units Attached
Multi-Family: 25 units
Accessory Dwelling Units: 11 units
TOTAL: 87 units

The overall residential density of the project, including all residential types, is 5.15 units per acre (87/16.9 = 5.15).

Each of the single-family lots would be at least 7,000 square feet in size, with larger corner lots and cul-de-sac lots.

As part of the first phase of construction, infrastructure to support the proposed project would be developed, including:

- Storm drain, and sanitary sewer facilities will be constructed per City standards. All lots have been designed to drain to the street.
- Per the General Plan Circulation Element, Starr Avenue will be extended through the project area across an existing City-owned parcel, and Adams Street will be extended eastward to connect with Starr. Internal roadways would be constructed. All streets have been designed according to the City standards. Starr Avenue and Adams Street will also include on-street bicycle lanes.

An existing well will be preserved on proposed Parcel B and connected to an on-site “purple pipe” water distribution system to provide all landscape irrigation and outdoor needs (car washing, etc.) throughout the project site. The well and onsite water system would be owned and maintained by a homeowners association.

The “panhandle” potion of Lot 52 will be landscaped and maintained by the property owner.

If the proposed Tentative Map is approved, prior to any construction occurring, the project will also require approvals by the City Council of a Final Map, an Affordable Housing Agreement, Design Review approval by the Planning Commission for the proposed single-family homes and a Conditional Use Permit for the development of the proposed multi-family homes. Public meeting notices will be sent for all future hearings. These applications are not being considered at this time but will be submitted and reviewed at a future date.

Also, a small portion of lot #51 (see Attachment 3) is located on City-owned property, currently intended as part of the right of way of Adams Street. A proposed condition of approval requires that this property be vacated and transferred to the applicant prior to recordation of the Final Map.

**DISCUSSION**
**ANALYSIS**

Tentative Maps are governed by Section 16.16 of the St Helena Municipal Code (SHMC), as well as the California Subdivision Map Act. Specifically, Sections 16.16.060 (Planning Commission action) and 16.16.070 (City Council action) require the proposed Map to be first presented to Planning Commission for review and recommendation to City Council. Section 16.16.080(A) defines the findings that must be made for the Planning Commission to recommend approval of a tentative map. While there are a number of concerns that have been expressed by the community, a Tentative Map may only be denied if it is found to be inconsistent with the findings below (from Section 16.16.080 of the St Helena Municipal Code):

*A. In recommending approval or conditional approval or in approving or conditionally approving a tentative map, the planning commission and city council shall find:*

*1. That the proposed subdivision, together with the provisions for its design and improvement, is consistent with the general plan, any applicable specific plan, and other applicable provisions of this code; and*

*2. Except for condominium conversion projects where no new structures are added, that the design of the proposed subdivision provides, to the extent feasible, for future passive or natural heating or cooling opportunities in the subdivision, as described in the state Subdivision Map Act and any guidelines promulgated by the city council.*

In addition, the proposed subdivision is a “housing development project” as defined by State law, and in recent years the State legislature has passed legislation that significantly restricts the grounds pursuant to which a housing development project can be denied. Specifically, Government Code Section 65589.5(j)(1) provides that if a housing development project complies with applicable objective general plan, zoning, and subdivision standards and criteria in effect at the time the application was deemed complete, the City may only deny the project if it finds, based on written findings supported by a preponderance of the evidence in the record that both of the following conditions exist:

1. The housing development project would have a specific, adverse impact upon the public health of safety unless the project is disapproved or approved upon the condition that the project be developed at a lower density. As used in this paragraph, a "specific, adverse impact" means a significant, quantifiable, direct, safety standards and unavoidable impact, based on objective, identified written public health or safety standards, policies, or conditions as they existed on the date the application was deemed complete.

2. There is no feasible method to satisfactorily mitigate or avoid the adverse impact identified pursuant to paragraph (1), other than the disapproval of the housing

development project or the approval of the project upon the condition that it be developed at a lower density.

Other, more general policy considerations not related to these findings or to consistency with the General Plan (such as the other concerns expressed by the public) should not be cited in a recommendation to approve or deny the proposed subdivision.

The following sections describe staff's analysis of each of the findings required for approval of a tentative map, which staff recommends can be made.

**1993 General Plan Consistency**
Because the application for the proposed subdivision was deemed complete by the City in 2010, at a time when the City's 1993 General Plan was in place, the 1993 General Plan was used to determine "… consistency with the general plan."

Staff's review of applicable policies from the 1993 General Plan is included as Attachment 4 to this staff report. Staff's recommendation is that the proposed subdivision is consistent with all applicable 1993 General Plan policies.

Although consistency with the General Plan adopted in 2019 (the "2040 General Plan Update") is not part of the determination of General Plan consistency, an analysis has been prepared by staff and is included as Attachment 5 to this staff report. The conclusion of staff's analysis is that the proposed project is also consistent with the current (2019) General Plan.

**Specific Plan Consistency**
The proposed subdivision is not located in a Specific Plan area.

**Zoning Code Consistency**
For the purposes of the proposed subdivision map, consistency with "… other applicable provisions of this code" is determined by reviewing the map in relation to the density and lot standards for the MR zoning designation.

Other portions of the Zoning Code or the St Helena Municipal Code which deal more specifically with development projects (that is, the construction of homes and other structures) are not relevant to the consistency of the subdivision map, which is the only application being considered at this time. Those separate findings, where needed, would be made at the time subsequent applications are submitted to the City.

As noted earlier in this report, Municipal Code Section 17.40.060 (Development Standards) establishes the standards for lots in the MR zoning district:

- Minimum lot area: 7,000 square feet
- Minimum lot width and frontage: 70 feet
- Minimum density: 5.1 units per acre

Based on a review of the proposed subdivision, staff recommends that the map complies with and is consistent with these standards:

- All proposed residential lots1 are at least 7,000 square feet in size
- All proposed residential lots are at least 70 feet in width
- The overall density of the project, including the proposed 25 multi-family homes on Parcel 52 and the proposed 11 accessory dwelling units, is 5.15 units per acre, which meets the minimum required density.

(1. Non-residential lots, such as the lot containing the existing well, are not subject to the minimum standards and are not included in this analysis.)

**Design for Passive or Natural Heating or Cooling**
This standard is described as follows in the State of California Subdivision Map Act:

*(b) (1) Examples of passive or natural heating opportunities in subdivision design, include design of lot size and configuration to permit orientation of a structure in an east-west alignment for southern exposure.*

*(2) Examples of passive or natural cooling opportunities in subdivision design include design of lot size and configuration to permit orientation of a structure to take advantage of shade or prevailing breezes.*

*(c) In providing for future passive or natural heating or cooling opportunities in the design of a subdivision, consideration shall be given to local climate, to contour, to configuration of the parcel to be divided, and to other design and improvement requirements, and that provision shall not result in reducing allowable densities or the percentage of a lot that may be occupied by a building or structure under applicable planning and zoning in effect at the time the tentative map is filed. [CA Govt Code section 66473.1]*

Based on an analysis of the proposed subdivision, staff recommends that the map provides, to the extent feasible, opportunities for passive or natural heating or cooling, as discussed below.

- Approximately 40 of the proposed lots would allow a house oriented in an east-west configuration, allowing these homes, if properly designed, to take advantage of solar exposure.
- Approximately 40 of the proposed lots would allow for homes oriented so that, if front and rear doors and windows were opened, the prevailing upvalley breeze would provide for natural cooling.
- There is no existing shade on the property, but future homes would be required to install landscaping, including trees that would provide shade.

**CEQA**
A Notice of Preparation of a Draft Environmental Impact Report (SCH# 2018032014) was prepared and available for public review and comment during the state-mandated 30-day public review period from March 6, 2018, through April 9, 2018. A public scoping meeting was held on March 12, 2018. Concerns raised from public agencies and the public include impacts to the property from potential flooding, traffic and circulation impacts, increased water demand, and impacts to cultural resources.

A Draft EIR was prepared with a 45-public review period beginning on September 23, 2021 and ending on November 8, 2021. Due to the volume of comments, the public review period was extended to November 30, 2021, for a total of 67 days.

The Draft EIR is included as Attachment 6 to this report. The proposed Final EIR, which includes comments on the Draft EIR and responses to comments, is included as Attachment 7. The Mitigation Monitoring and Reporting Program is included in the Resolution in Attachment 1.

One comment received after the publication of the November 2022 Planning Commission agenda package called attention to a minor typographical error in Table 7 of the Traffic Impact Analysis (Appendix K to the Draft EIR) which overstated the project's impact to the intersection of Silverado Trail/Pope Street. Due to a typographical error, the TIA published with the Draft EIR incorrectly showed a future level of service of "E" at this location; the corrected version shows a future level of service of "C" (the analysis of delay was correct and showed a "LOS C" level of delay). This change is shown in Chapter 3 of the Final EIR, "Changes to the Draft EIR."

All documents referenced in the EIR are available for inspection upon request.

**Topics Addressed in the Draft EIR**
The Draft EIR discusses the project's impacts associated with the following topics.

The Draft EIR's conclusions are discussed later in this report; conclusions of the EIR about the significance of impacts for each topic are shown below.

- Aesthetics (Potentially Significant, but mitigation available)
- Agriculture and Forest Resources (Less than Significant)
- Air Quality (Less than Significant)
- Biological Resources (Potentially Significant, but mitigation available)
- Cultural and Tribal Resources (Potentially Significant, but mitigation available)
- Energy (Less than Significant)
- Geology and Soils (Potentially Significant, but mitigation available)
- Greenhouse Gas Emissions (Less than Significant)
- Hazards and Hazardous Materials (Potentially Significant, but mitigation available)
- Hydrology and Water Quality (Less than Significant)
- Land Use and Planning (Less than Significant)

- Mineral Resources (Less than Significant)
- Noise and Vibration (Potentially Significant, but mitigation available)
- Population and Housing (Less than Significant)
- Public Services (Less than Significant)
- Recreation (Less than Significant)
- Traffic and Transportation (Significant and Unavoidable)
- Tribal Cultural Resources (Less than Significant)
- Utilities and Service Systems (Less than Significant)
- Wildfire (Less than Significant)

**Alternatives Considered**
The EIR evaluated four Alternatives in addition to the proposed project. The four alternatives (described in detail in the Draft EIR) are:

- Alternative 1) *No Project/No Development Alternative, described in the Draft EIR as, "… the Proposed Project would not be approved or constructed. Under this alternative, the Project site would retain its current land use designation and zoning consistent with both the 1993 General Plan and the City's current 2019 General Plan.*

- Alternative 2) *No Project/General Plan, described as, "… the Project would be developed consistent with the underlying MDR land use designation and MR zoning which allows development of the Project site with residential uses up to a maximum density of 12 dwelling units/acre (du/ac) under the 1993 General Plan MDR designation which was revised to 16 du/ac under the 2019 General Plan consistent with the MR zoning, which permits a maximum density of 16 du/ac. For the purposes of this alternative a density of 9 du/ac was assumed for a total of 152 single-family residential units."*

- Alternative 3) *Park/Open Space Preserve Alternative, described as, "… includ[ing] an approximately 1-acre park/open space that would preserve a majority of the on-site wetlands to help lessen impacts to seasonal wetlands … To accommodate the park three lots would need to be removed … and vegetated swales to capture runoff would be located adjacent to developed areas. … The remaining approximately 16-acres would be developed with approximately the same number of residential units as the Proposed Project and would maintain a density of 5.1 du/ac."*

- Alternative 4) *Increased Density/Affordable Housing Alternative, which "... includes the approximately 1-acre park to preserve a majority of the on-site seasonal wetlands with the remaining approximately 16-acres designated for up to 180 affordable housing units, assuming a density of 11.3 dwelling units per acre (du/ac) … The units would be attached housing (duplex or triplex) and would be 100% affordable."*

The alternatives are described in detail and analyzed in Chapter 5 of the Draft EIR.

Based on the analysis in the Draft EIR, Alternative 1, the No Project Alternative, would result in the fewest environmental impacts, and is the "environmentally superior

alternative." However, Section 15126.6(e)(2) of the CEQA Guidelines states that if the environmentally superior alternative is the No Project Alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives.

Of the alternatives evaluated, Alternative 3, the Park/Open Space Preserve alternative is the environmentally superior alternative. However, according to the Draft EIR, "… this alternative would not avoid all of the significant impacts associated with the Project and all of the identified mitigation would still be required."

**Potentially Significant Impacts**
Impacts of potential significance requiring mitigation were identified in the following areas:

- Aesthetics
- Biological Resources
- Cultural and Tribal Cultural Resources
- Geology and Soils
- Hazards and Hazardous Materials
- Noise and Vibration

The Draft EIR concluded that mitigation was available to reduce all of these impacts to a level of Less Than Significant.

A summary listing of all potentially significant impacts and their associated mitigation measures is included in the Executive Summary in the Draft EIR (Attachment 6 to this staff report). Detailed discussions of impacts and mitigation are provided in Section 3 of the Draft EIR.

**Significant and Unavoidable Impact: Vehicle Miles Traveled**
Based on the analysis in the Draft EIR, impacts related to Transportation and Traffic (specifically, Vehicle Miles Traveled or "VMT") were found to be significant and unavoidable. This impact relates to the number of miles that will be traveled in motor vehicles by persons living in the proposed subdivision (trips to work, school, shopping, etc.). This impact is discussed in detail in Section 3.14 of the Draft EIR.

State law, effective January 1, 2020, requires the local agencies examine this impact and that the impacts of a proposed project on roadway congestion (historically, the standard used by most California cities and counties) is no longer included in an EIR. (The traffic congestion impacts of the proposed project were examined, but for purposes of determining consistency with General Plan congestion policies, this analysis is not included in the Draft EIR.)

The state's intent in requiring that VMT be projected is to focus efforts statewide on reducing unnecessary vehicle travel, generally by locating homes closer to jobs, shopping, and other daily needs, and by increasing the use of public transit, walking, and

bicycling. As discussed in the Draft EIR, reductions in VMT for residential projects like the proposed project in semi-rural areas are difficult to achieve.

Compared to a commercial development, which could implement ride-sharing programs, residential projects have few options available to effectively reduce vehicle travel; none are available to reduce VMT for the Hunter subdivision enough to reduce this impact to a level of Less Than Significant.

For this reason, the Draft EIR concluded that this impact is Significant and Unavoidable.

**Statement of Overriding Considerations**

State law provides a means for the approval of a project which is identified to have one or more significant impacts. To do so, the local agency must adopt a Statement of Overriding Considerations which provides the reasons why the agency feels that the benefits of the project outweigh (or "override") the potential impacts. A Statement of Overriding Considerations has been prepared (included in Attachment 1 to this report) which provides the following reasons why approving the project is appropriate:

1. The Project provides needed housing to the City, particularly affordable housing.
2. The City, per the adopted 2015 Housing Element, has a jobs to housing ratio above the County average, indicating a need for additional housing. As of the most recent Housing Element Progress Report (April 2022), the City had not met its regional housing needs allocation for very-low or moderate income housing.
3. The Project would implement the City's General Plan. The Project site is identified as a housing site in the City's current General Plan, the current Housing Element, and the previous two iterations of the City's General Plan.
4. The significant and unavoidable impact is related to VMT. Ultimately VMT per capita will be reduced by providing necessary housing in jurisdictions with a high number of jobs. As stated previously, the City of St. Helena currently has a jobs housing imbalance which the Project will help address.
5. The Project will pay development fees which will assist in needed infrastructure improvements in the City, including wastewater treatment and collection systems.
6. The Project would construct the extension of Starr Avenue and the partial extension of Adams Street consistent with the General Plan Circulation Element.

The Statement of Overriding Considerations concludes,

*The City Council hereby declares that the foregoing benefits provided to the public through the approval and implementation of the Project outweigh the identified significant adverse environmental impact of the Project that cannot be mitigated. The City Council finds that each of the Project benefits separately and individually outweighs all of the unavoidable adverse environmental effects identified in the EIR and therefore finds those impacts to be acceptable.*

**Public and Agency Comments on the Draft EIR**

A total of 121 Draft EIR comment letters were received from the 2021 public review and Response to Comments were prepared and included in the Final EIR. Notification of the availability of the Final EIR was sent to the agencies, organizations, and individuals that provided comments. Topics addressed in the comments include:

- Concern about the capacity of downstream sewer lines to accommodate additional flows generated by the project.
- Concern about the "high density" of the proposed project.
- Concern about the loss of open space and the ability to walk on informal trails located on the project site.
- Concern about projected water use and the ability of the project to feasibly comply with the City's water neutrality requirement.
- Concern about future traffic congestion and traffic safety impacts (including for children walking to school).
- Concern about the project's impact on the ability of residents in the Vineyard Valley mobilehome community to evacuate in the event of an emergency.
- Concern about the ability of the City-constructed levee on the Napa River (built to protect the Vineyard Valley mobilehome community from flooding) to protect new homes in the proposed project.
- Concerns about changes to the appearance of the project site when existing open space and vines are replaced with a suburban neighborhood.
- Concerns about the project's effect on the City's plans to construct a new roadway connection to the Silverado Trail.

Responses to all of the comments received during the public review period are included in the Final EIR and Responses to Comments, Attachment 7 to this staff report.

Based on thorough review of the comments by City staff, legal counsel, and the EIR consultant, none of the comments or responses raised any issues which would require recirculation of the Draft EIR. Attachment 7 includes a list of minor errata changes to the Draft EIR which were included in the responses to comments.

**Mitigation Monitoring and Reporting Plan**

A Mitigation Monitoring and Reporting Program was prepared for the potential impacts that require mitigation and is contained in the Executive Summary, Section ES.6 of the Draft EIR. Findings for Certification of the Environmental Impact Report and adoption of the Mitigation Monitoring and Reporting Program, and approval of Tentative Map File #PL10-040 are contained in the Resolution prepared for this project.

**Revised Conditions of Approval**

Following the publication of the November 2022 Planning Commission package, City staff and the applicant have discussed a number of changes to the proposed conditions of approval requested by the applicant. Staff ultimately agreed to some of the requested changes, but disagreed with others, as shown below.

Changes agreed to or rejected by staff are shown below; condition numbers reflect the updated conditions of approval as included in the Resolution approving the Tentative Map (attachment 2 to this report). The updated conditions of approval are included in the proposed Resolution approving the Tentative Map.

On February 7, the Planning Commission was also presented with changes to conditions of approval #85, #89 and #90. The Commission recommended that these changes, discussed below. be included in the final conditions of approval.

Conditions Revised

The following conditions of approval reflect changes requested by the applicant and make minor changes suggested by City staff to reflect standard City procedures. The final conditions are shown below, followed by a discussion of the changes made.

COA 22: The owners of the 51 single family residences and the multi-family development on parcel 52 shall be members of a homeowner's association, or another funding mechanism acceptable to the City, dedicated to the maintenance of the project's common areas, the internal irrigation system (fed by the well on Parcel B), and the well on Parcel B.

*COA #22 was revised to require that the owners of Lot 52 are part of a HOA or other funding mechanism, and to allow flexibility in the type of funding mechanism established to maintain common areas, the internal irrigation system, and the well on Parcel B.*

COA 26: Prior to issuance of building permits, the applicant shall develop a building construction plan to be approved by the Planning Director and Building Official to ensure that the homes meet or exceed Title 24 Energy Efficiency Standards and receive a green rating under either the LEEDS, Green Points Checklist, or other acknowledged rating system for energy conservation and green building practices. The latest version of the City of St. Helena green building standards will apply at the time of building permit submittal.

*COA #26 was revised to show a requirement to "meet or exceed" Title 24 Energy Efficiency Standards (prior version required exceedance, which is not consistent with City practice).*

COA 27: All City, state, federal and other applicable local ordinances, rules, regulations and policies in effect at the time of issuance of a grading or building permit shall be complied with.

*This is a new condition of approval which is typically applied to development projects and inadvertently not included in earlier versions of the conditions of approval.*

COA 32: Mechanical equipment, including heating and air conditioning units and spa equipment, shall be located away from property lines and shall be shielded or enclosed

to minimize noise levels. Noise generated shall not exceed 60 dBa, Ldn. This condition of approval implements Mitigation Measure NOI-1 from the project environmental impact report, Chapter 8.24 of the St Helena Municipal Code, and noise-related policies of the St Helena General Plan, including policy 8.3.11 from the 1993 General Plan and policy PS2.4 from the 2019 General Plan. [Note: Formerly numbered as COA #31; renumbered due to the insertion of COA #27]

*COA #32 was revised to add reference to the sources for the requirement to place HVAC units to minimize noise levels.*

COA 36: Prior to recordation, the Final Map shall be designed per City standards to the satisfaction of the Public Works Director to accommodate the following facilities in the right of way of both Starr Avenue and Adams Street:

- Curb and Gutter in accordance with City Standard #310 for a 24" gutter.
- Sidewalks, either attached to the curb or detached from the curb, on both sides of the street along Starr Avenue, and only on the south side of Adams Street, in accordance with City Standard #315
- Parking lane on both sides of the street in accordance with City Standard #301 for a "Collector" street.
- Class II on-street bike lane on both sides of the street in accordance with Caltrans'
- Highway Design Manual Index 1003.2 but not less than 5 feet wide.
- Two vehicle travel lanes in accordance with City Standard #301 for a "Collector" street.
- Striping to delineate parking, bike, and travel lanes. [Note: Formerly numbered as COA #35; renumbered due to the insertion of COA #27]

*COA #36 was revised to clarify that City Standard #315 (see the second bullet item) allows the sidewalk to be either attached to the curb or separated from the curb by a parkway strip. This COA was also revised to indicate that "City standards" would be used to determine the design of the facilities shown on the Final Map.*

COA 41: All public facilities damaged by construction activities shall be the responsibility of the Applicant and shall be repaired per City standards to the satisfaction of the City at the Applicant's expense. [Note: Formerly numbered as COA #40; renumbered due to the insertion of COA #27]

*COA 41 was revised to indicate that City standards will be used to determine whether repairs have been completed correctly.*

COA 48: Except for the existing well on Lot 19 of the Tentative Map that will be providing irrigation water to this development, all existing wells, septic tanks and/or underground fuel storage tanks shall be abandoned under permit and inspection of Napa County Department of Environmental Health. If applicant determines that there are none, prior to the issuance of a grading permit, the project engineer shall provide a letter describing

the scope of the search done to make this determination and demonstrating, in a manner consistent with City standards and proper engineering practices and to the reasonable satisfaction of the City Engineer, that there are no other existing wells, septic tanks and/or underground fuel storage tanks within the boundaries of the Tentative Map. [Note: Formerly numbered as COA #47; renumbered due to the insertion of COA #27]

*COA 48 was revised to refer include, "… in a manner consistent with City standards and proper engineering practices" as the standard for verifying compliance with this condition of approval.*

COA 66: Street A: Prior to the issuance of a Certificate of Occupancy, Street A shall be improved to include two 10 ft. travel lanes, two 8 ft. parking lanes, curbs, gutters, a 6 ft. planter strips and 4 ft. sidewalk on the south side of the road and a 10-foot distance from the face of curb to the right-of-way line on the west side of the road. The total right-of-way width shall be 56 feet. The area between the curb and the right-of-way line on the west side of the street shall be graded such that it can be passable by pedestrians (cross slopes should not exceed 5%). The structural section of the street shall be per recommendations contained in the Soils Report. [Note: Formerly numbered as COA #65; renumbered due to the insertion of COA #27]

*COA #66 has been revised to require two 10-foot-wide travel lanes in Street A, rather than 12-foot-wide lanes. This was done to conform with City standards for local streets.*

COA 69: Access from Lot 52 to Starr Avenue shall be for EVA and pedestrian purposes. Ownership of this parcel shall be the same as Lot 52, or the access point shall be made part of Lot 52. [Note: Formerly numbered as COA #68; renumbered due to the insertion of COA #27]

*COA #69 has been revised to eliminate specific requirements for the width of Lot 52 while maintaining its use for emergency vehicle access and pedestrian use.*

COA #85. The proposed well and appurtenances (pump, etc.) for this development shall be owned and operated by the Homeowner's Association for this development. The well shall supply irrigation water for all landscaping of common areas and on all lots within the subdivision to limit use of domestic water produced by the City. Signage shall be provided on each lot warning of the use of well water and that the well water shall not be used for domestic purposes. Piping for all irrigation water from the well shall be purple pipe (same as used for recycled water). Also, disclosure statements (either through disclosures as required by the Department of Real Estate or on the final map) shall be provided to all property owners notifying them about use of well water and statements warning that well water should not be used for domestic purposes. If the City's reclaimed water system becomes available at the project site, the onsite irrigation system shall be connected to the reclaimed water system and the well shall be permanently closed. [Note: Formerly numbered as COA #84; renumbered due to the insertion of COA #27]

*COA #85 has been added to require that the onsite irrigation system be connected to the City's reclaimed water system when it is available at the site, and that the onsite well be closed at that time.*

COA 87: Prior to the issuance of the first building permit, all City-required improvements related to storm water for the project shall be installed by the project developer at its expense. Drainage improvements shall be designed and funded by the developer in accordance with the Design Criteria utilizing the rationale method and any applicable adopted City drainage plans. [Note: Formerly numbered as COA #86; renumbered due to the insertion of COA #27]

*COA #87 has been revised to clarify the timing of this condition, and to state that the developer is responsible for installing improvements as required by the City and the developer's expense.*

COA 89: Prior to the issuance of the first building permit, the applicant shall submit for review and approval, drainage plans and hydraulic calculations prepared by a Registered Civil Engineer. The drainage plans and calculations shall indicate the following conditions before and after development:

•Quantities of water, water flow rates, major water courses, drainage areas and patterns, diversions, collection systems, flood hazard areas, sumps and drainage courses. [Note: Formerly numbered as COA #88; renumbered due to the insertion of COA #27]

*COA #89 includes a minor wording change ("Prior to issuance of the first building permit…") to clarify the timing of this condition.*

COA 90: Post-Development storm water discharge from parcel 009-030-057 shall not exceed the pre-development discharge including the projected build-out, expressed as a 30% undeveloped pervious and 70% impervious drainage watershed. Applicant shall prepare an analysis to show compliance with this COA. Refer to COA #90 for additional requirements of the analysis. [Note: Formerly numbered as COA #89; renumbered due to the insertion of COA #27]

*COA #90 has been revised to clarify that post-development stormwater "leaving the site" must not exceed specified levels (which assume development of the site) and that the applicant provide an analysis to confirm this level.*

COA #91 - Prior to building permit issuance, the applicant shall provide to the City an analysis of the capacity and condition of existing drainage facilities downstream of the development (including any detention/retention ponds), including recommendations for on-site and/or off-site drainage improvement, which shall be constructed prior to the issuance of the first certificate of occupancy. Site grading and drainage improvements shall be shown on the improvement plans. In the unlikely event that the downstream facilities require improvements, the applicant shall enter a Funding Agreement as a

means of reimbursement from the City. [Note: Formerly numbered as COA #90; renumbered due to the insertion of COA #27]

*COA #91 has been revised to provide for potential reimbursement by the City for the cost of downstream flood control improvements built by the applicant.*

COA 93: Prior to Final Map recordation, the developer shall obtain a construction easement from the City over Parcel 009-030-019 to construct the drainage improvements, wall, and fence on lots 5-20. The drainage ditch on Lots 5-20 shall be privately owned and maintained. [Note: Formerly numbered as COA #92; renumbered due to the insertion of COA #27]

*COA #93 has been revised to clarify that the City of St Helena is the owner of the parcel over which a construction easement is needed, and that individual homeowners will be responsible for maintaining a future drainage ditch on their lots.*

COA 98: Prior to approval of the final map, the developer shall either complete required improvements in accordance with the approved improvement plans or enter into a Subdivision Improvement Agreement with the City. A certificate of occupancy shall not be issued for any structure until required improvements are completed consistent with City standards to the satisfaction of the City Engineer. [Note: Formerly numbered as COA #97; renumbered due to the insertion of COA #27]

*COA #98 has been revised to indicate that City standards will be used to determine whether improvements have been installed correctly.*

COA 108: All streets, curbs, gutters, sidewalks or other public facilities damaged in the course of construction associated with this development shall be the responsibility of the Developer and shall be repaired per City standards to the satisfaction of the City at the Developer's expense. [Note: Formerly numbered as COA #107; renumbered due to the insertion of COA #27]

*COA #108 has been revised to indicate that City standards will be used to determine whether repairs have been completed correctly.*

COA 110: Dust control must be maintained per City standards to the City's satisfaction. [Note: Formerly numbered as COA #109; renumbered due to the insertion of COA #27]

*COA #110 has been revised to indicate that City standards will be used to determine whether dust control have been maintained correctly.*

COA 111: A certificate of occupancy shall not be issued for any structure until required improvements are completed per City standards to the satisfaction of the City Engineer. [Note: Formerly numbered as COA #110; renumbered due to the insertion of COA #27]

*COA #111 has been revised to indicate that City standards will be used to determine whether improvements have been installed correctly.*

COA 119: Prior to the issuance of a Certificate of Occupancy, the developer is responsible for fire hydrants to be included and installed within the development in compliance with City standards (number, location and spacing) to the satisfaction of the Fire Department. Locations of the fire hydrants shall be approved by the Fire Department prior to approval of the final map. [Note: Formerly numbered as COA #118; renumbered due to the insertion of COA #27]

*COA #119 has been revised to indicate that City standards will be used to determine whether fire hydrants have been placed and installed correctly.*

Conditions Not Revised As Requested by the Applicant
The applicant requested the following changes, which were not agreed to by staff:

COA 73: The applicant requested to include a dollar cap on the cost of improvements that will be installed at his expense to achieve water neutrality. Staff's position is that improvements to achieve the required reduction in overall domestic water use must be installed to achieve water neutrality, regardless of cost.

COA 88: The applicant requested deleting this condition. Staff disagreed, but did agree to minor wording changes, as discussed above.

COA 90: The applicant requested that this condition be deleted, and that post-development stormwater flows leaving the site be allowed to increase. Staff disagreed, pointing out that the applicant agreed as part of the settlement of a lawsuit with the City not to protest requirements to install the improvements required by this condition.

COA 91: The applicant requested that this condition be deleted. Staff disagreed; this requirement to provide detailed hydrological analysis of proposed stormwater systems is a standard requirement for all development projects.

**Tentative Map Updates**
To respond to comments received since the publication of the November 2022 Planning Commission package, the updated proposed tentative map includes the following minor changes:

- Lot 52 now shows conceptual grading and elevation and indicates that the proposed use is "Multi-Family Residential".
- A note has been added to Sheet 4 including condition of approval #35 in its entirety to clarify changes that must be made to accommodate pedestrian and bicycle facilities in the public right of way prior to recordation of a Final Map.
- The property owner's name has been updated to "White Fang Properties, LLC," to reflect a change in ownership that occurred in October 2022.

**OTHER PROJECT ISSUES**

Based on public input and prior review of the project, the following are issues of concern to the public, but not necessarily related to the approval at hand.

- Water Neutrality
- Trail/Open Space
- Levee/Flooding
- Parking
- Aesthetics
- Sewer Capacity
- "High Density" Nature of the Project
- Traffic/Congestion
- Intersection Design Adams Street/Starr Avenue and Starr Avenue/Street A
- Vacation of City Property

These issues are discussed below.

**Water Neutrality**

The issue of Water Neutrality and the project's ability to comply with the City's requirement for no net increase in demand for domestic water, is addressed in detail in Master Response #2 to the comments on the Draft EIR.

In summary, the Draft EIR concluded that a variety of measures (detailed in Appendix J to the Draft EIR) are available that would either decrease water demand or increase the efficiency of the City's water system so that the additional demand created by the proposed project would be offset and overall citywide demand would not increase. The Master Response also notes that the use of the onsite water well for irrigation and other outdoor uses is part of the overall strategy to reduce water demand for the project.

A condition of approval is also included requiring the applicant to identify and implement specific water system improvements to achieve water neutrality prior to issuance of any building permits.

**Trail/Open Space**

Many commenters expressed concern about how the project would affect their ability to use the portion of the existing public Napa River Trail system adjacent to the project site.

As noted in the responses to comments on the Draft EIR on this topic, the Final EIR includes this statement:

The Project does not propose removing the existing trail or levee maintenance road, as explained in Section 3.12, Public Services and Recreation on page 3.12-17 and on page 2-23 in Chapter 2, Project Description.

The trail system is located entirely outside of the proposed project and would not be affected by the proposed project. An illustration of the existing trail in relation to the proposed subdivision is included as Attachment 14 to this staff report.

**Levee/Flooding**

Many commenters expressed concern about various issues associated with the City-constructed levee adjacent to the project site. These include:

- Questions about the engineering standards and requirements used to design and construct the levee.
- Whether the levee was constructed or inspected by the U.S. Army Corps of Engineers.
- Whether the levee would adequately protect the project site.
- Whether the capacity of the City-owned flood basin adjacent to the project site would be affected by the proposed project to the extent that its capacity would be exceeded.
- Whether the City is properly maintaining the levee, including controlling rodents whose burrows could affect the integrity of the levee.
- Whether climate change could cause changes in flooding that would affect the ability of the levee to protect the project site.

Detailed responses to these concerns are provided in Master Response #3 to comments on the Draft EIR. Very brief summaries of the more detailed information in the Master Response include:

- The levee was designed and built by the City to meet US Army Corps of Engineers (USACOE) standards. Numerous levees throughout the US are built by local agencies in the same; not all levees are built by the USACOE.
- The levee was designed to provide protection from a “200-year” flood on the Napa River (a flood event which would be expected to occur once every 200 years, or with a 1-in-200 chance of occurring in any given year). This exceeds the usual 100-year standard.
- The adjacent flood basin was designed to accommodate storm flows from the subdivision, and assumed more paved and developed area (and, therefore, more storm flows) than would be expected from the project as now proposed. The basin can handle storm flows from the proposed project.
- The City is properly maintaining the levee, including rodent control. Maintenance records are available online and at city hall.
- Because the levee was designed to accommodate a more severe flooding event than required (200-year vs 100-year), future increases in storm flows in the Napa River (if they occur as a result of climate change) would be handled better than if the levee were designed to minimum 100-year standard.

**Additional Levee Comments**

Since the preparation of the Master Responses, comments have continued to be received regarding the levee adjacent to the project site and the protection it provides to the project area.

These comments and responses from the Public Works Department are addressed in a "Frequently Asked Questions" document included as Attachment 23 to this staff report.

The City has also received comments asserting that the City would be "strictly liable" for any flooding that could occur either due to overtopping or failure of the levee. Those comments are addressed in a separate memo sent to the City Council by the City Attorney, and included with this staff report as Attachment 32.

**Parking**

Several commenters expressed concern that the new homes in the subdivision would cause parking on local streets to increase. While the responses to the comments from the perspective of the Draft EIR note that parking is not a CEQA issue which needs to be examined in the environmental document, staff offers the following responses from a planning perspective:

- Any development which takes place in the subdivision will be subject to detailed review to ensure that City parking standards are met. These include required parking for single and multi-family homes, both of which require a combination of covered and uncovered onsite parking.
- Parking on public streets is available to anyone; except where specifically signed, the City does not limit parking on public streets in the vicinity of the proposed subdivision.
- Because the project does not contain any features that would tend to attract large numbers of people on a regular basis, staff does not foresee any unusual increases in on-street parking in the vicinity as a result of the proposed project.

**Aesthetics**

Many commenters expressed concern about the change in appearance of the project site that would occur if homes replaced the existing open fields and vines.

The Draft EIR examines impacts to aesthetics in detail in section 3.1, "Aesthetics/Visual Resources." A brief summary of the Draft EIR's conclusions:

- The St Helena General Plan does not designate any specific views that are to be protected, but does provide general policies which seek to, "… [protect] views from streets, parks, and open spaces to vineyards, agriculture, and hillsides."
- The proposed project orients its major streets so that views of surrounding hillsides and open space areas will be retained.
- Future development will be reviewed through the Development Review process, at which time specific home designs and placements will be reviewed by City staff and the Planning Commission to ensure that it complies with City standards.

**Sewer Capacity**
Many commenters expressed concern about the impact of the proposed project on the capacity of sewer lines downstream of the project, and especially in the Vineyard Valley mobilehome community, where the existing sewer system occasionally overflows during heavy rains (when rainfall essentially "leaks" into the City's sewer system and therefore increases flows and causes overflows).

This issue is examined in detail in Master Response #4 in the Final EIR, which includes the results of a detailed analysis of sewer capacity. A summary of the detailed Master Response #4:

- Due to the unwanted infiltration of rainwater into the sewer system during storms, the capacity of the sewer lines downstream of the project is occasionally exceeded, causing overflows. This is referred to a "Peak Wet Weather Flows" or "PWWF."
- During dry weather, flows in the sewer lines do not include rainwater, and the capacity of the lines is not exceeded.
- This lack of capacity during PWWF conditions is known to the City, and a future increase in the size of a sewer line downstream of the proposed subdivision has been identified to correct this problem.
- During dry weather conditions, there is sufficient capacity in the downstream sewer line to accept flows from the proposed project without overflowing.
- During PWWF conditions, flows from the proposed project would represent 0.5% of the flows in the line. While overflows can be expected in the downstream line until improvements are constructed, adding flows from the proposed project would not increase either the number or the severity of the overflows.
- Capacity is available at the City's sewage treatment plan to handle flows from the proposed project.

The proposed project, the EIR concludes, would not have an adverse impact on the City's sewer system.

**"High Density" Nature of the Project**
Several commenters expressed concern about placing a "high density" residential project adjacent to the existing Vineyard Valley mobilehome community. These commenters were apparently opposed to the project.

Staff notes that the Vineyard Valley community, with an overall density of approximately 5.4 dwelling units per acre (based on a review of aerial photography), is slightly more dense (a "higher density") than the proposed subdivision (5.1 dwelling units per acre).

As noted earlier in this report, the proposed project is at the lowest allowable density in the Medium Density Residential land use category, which ranges from 5.1-12.0 units per acre (1993 General Plan) and 5.1-16.0 units per acre (2019 General Plan).

Based on staff's analysis, the commenters who expressed concern about a "high density" project are expressing an opinion that is not supported by the actual project density. These commenters may be supporting a lower planned density of development for the project site, but the project must comply with the minimum density of 5.1 units per acre.

**Traffic/Congestion**
Many commenters expressed concern about increased traffic congestion as a result of the proposed project. While this impact is not examined the Draft EIR (because changes in state environmental law have removed discussion of traffic congestion from environmental documents), the traffic analysis prepared for the proposed project included an analysis of traffic and congestion impacts.

A brief summary of the results of the traffic analysis is provided in Attachment 15 to this report. The full text of the analysis is in Appendix K to the Draft EIR (Attachment 6 to this report).

**Intersection of Adams Street/Street A/Starr Avenue**
During staff's review of the proposed subdivision, concerns were expressed that because the intersections of Adams Street/Starr Avenue and Starr Avenue/Street are relatively close to each other, drivers could face difficulties negotiating the combination of these intersections. A modified design was developed that would end Street A at a cul-de-sac which would be open only to emergency vehicles, eliminating one of the intersections and simplifying the traffic movements.

However, a review of the City's roadway standards concluded that there is no clearly defined objective standard for intersection spacing, and that the proposed design meets all of the City's roadway design standards.

Therefore, staff did not recommend that the subdivision be revised to include the alternative roadway design (a cul-de-sac at Starr Ave/Street A).

**Vacation of City Property**
A small portion of proposed Lot 51 (at the southwest corner of Adams Street and Starr Avenue) is located on City-owned property which is currently proposed as part of the future right-of-way of Adams Street. This has been reviewed and found to be acceptable by the Public Works department (the portion of Lot 51 is not needed as future right-of-way), but approving the lot as proposed will require that the City vacate this property.

A proposed condition of approval is included to require the applicant to take appropriate steps to transfer this piece of City property to the applicant.

**2019 GENERAL PLAN CONFORMANCE**
An analysis of the proposed project's conformance with applicable policies of the current 2019 St Helena General Plan is included as Attachment 5 to this staff report. Based on

staff's analysis, the project conforms with all applicable policies, including the proposed type and density of residential density proposed.

Note: As discussed earlier in this report, the 1993 St Helena General Plan, which was in effect at the time the application for the proposed subdivision was accepted as complete in 2011, is used in the official determination of consistency with the "General Plan." The analysis of conformance with the current 2019 General Plan is provided for informational purposes only.

**ISSUES**

Project issues include the significant and unavoidable impacts, public comments received in the Draft EIR, and other issues not related to the approval of the tentative map, as noted above.

**PLANNING COMMISSION HEARING 2-7-2023 CORRESPONDENCE**

The City has addressed three specific letters received as part of the public testimony from the last Planning Commission hearing (see attachments 17,18 and 20):

- Letter from the law firm of DP&F, dated 10-31-22, titled, "RE: Hunter Subdivision Project Environmental Impact Report, File #PL10-040" (Attachment 16a)
- Letter from the law firm of DP&F, dated 10-31-22, titled, "RE: Hunter Subdivision Project Tentative Map No. 2022-001, File #PL10-040" (Attachment 16b)
- Letter from the Napa County Bicycle Coalition, dated 11-1-22, titled, "Public Comment Re: Item 5.1: Hunter Subdivision Project EIR" (Attachment 19)

The following letters were received immediately prior to the February 7, 2023 Planning Commission meeting:

- Letter from the law firm of Holland & Knight (representing the applicant), dated 2-2-23, titled, "Re: City of St. Helena, Unlawful Conditions on Hunter Subdivision Project"

Response: Staff and the city attorney have reviewed the letter. In response to the first point raised in the letter, city staff is recommending a change to a condition to reflect the settlement.

The City is not persuaded by any of the other arguments raised. There is no improper exercise of discretion when conditions must be completed to the satisfaction of the city engineer because the city engineer's decision rests on established objective industry and city standards. The engineer is satisfied if the applicant satisfies objective engineering standards. Nor is this a valid basis for an unconstitutional-taking claim since the owner will be left with plenty of economic use even if the owner doesn't get everything that it is asking for.

- Letter from the law firm of DP&F, dated 2-6-23, titled, "RE: Hunter Subdivision Project Environmental Impact Report, File #PL10-040" (Attachment 26 to this report)

Response: The response to this letter is Attachment 28 to this report.

- Letter from the law firm of DP&F, dated "RE: Hunter Subdivision Project Tentative Map No. 2022-001, File #PL10-040" (Attachment 27 to this report)

Response: The response to this letter is Attachment 29 to this report.

- Letter from the Napa County Bicycle Coaltion, dated 2-7-23, titled, "Public Comment Re: Item 5.1: Public Hearing - Hunter Subdivision Project" (Attachment 30 to this report)

Response: The response to this letter is Attachment 31 to this report.

**CITY COUNCIL HEARING 5-1-2023 CORRESPONDENCE**

Responses to letters received after publication of this staff report will be attached to the agenda.

**FISCAL IMPACT**

There are no direct fiscal impacts to the General Fund resulting from the approval of the Tentative Parcel Map. Future development of the project site could increase the property tax and impact fee revenues, based on the size and value of the future homes that would be built in the subdivision.

**RECOMMENDED ACTION**

After considering the project, staff report, supporting documents, technical studies and all testimony, written and spoken, the Planning Commission of the City of St. Helena recommends that the City Council:

1. Adopt the attached Resolution certifying the Final EIR, and approving a Mitigation Monitoring Program, Findings of Fact and Statement of Overriding Considerations; and

2. Adopt the attached Resolution approving the requested Tentative Map No. 2022-001, File #PL10-040 for the Hunter Subdivision project.

**From:** Ethan Walsh, City Attorney

**Date:** April 16, 2023

**Re:** Hunter Subdivision Project; Discussion of Flood Liability Issues

## QUESTIONS PRESENTED

The City is scheduled to consider the Hunter Tentative Subdivision Map (the "Project") on May 1, 2023. The City has received public comments in connection with the proposed Project expressing concern that the City would be liable for damages in the event of flooding as the result of a failure or overtopping of the City owned levee adjacent to the proposed Project. In a recent letter directed to Mayor Dohring and me, which I have enclosed with this email, Arlene Corsetti indicated she believes the City would be strictly liable[1] in the event of a failure or overtopping of levee constructed as part of the St. Helena Flood Control Project.

This memo clarifies the legal standard that applies to cases involving the failure of publicly owned flood control facilities, like the City's levee.

## ANALYSIS

### I. Strict Liability Does Not Apply to Flood Control Projects

The City would not be strictly liable if the City's levee failed or was overtopped during a flood event. The California Supreme Court has held that "the fact that a dam bursts or a levee fails is not sufficient, standing alone, to impose liability." (*Belair v. Riverside County Flood Control District* (1988) 47 Cal.3d 550, 565.) To establish liability, a plaintiff must prove that (1) the flood control improvement failed to function as intended; (2) this failure constituted a proximate cause of the claimed damages; (3) the public agency acted unreasonably in designing,

[1] Strict liability is a legal standard that means, in this context, that the City could be held liable for damages and injuries resulting from flooding, without any showing by the plaintiffs that the City was at fault or that the City's negligence caused the damages or injuries.

500 Capitol Mall, Suite 1700, Sacramento, CA 95814
Phone: (916) 325-4000 | Fax: (916) 325-4010
BBKLAW.COM

constructing, or maintaining the flood control improvement; and (4) this unreasonable conduct constituted a proximate cause of the claimed damages. (*Id.* at pp. 559-567.)

In cases where property owners suffer damages due to flooding resulting from the failure of flood control of other government owned facilities, those that suffer damages will generally seek relief based on a claim of inverse condemnation. "When there is incidental damage to private property caused by governmental action, but the governmental entity has not reimbursed the owner, a suit in 'inverse condemnation' may be brought to recover monetary damages for any 'special injury,' i.e., one not shared in common by the general public." (*Locklin v. City of Lafayette* (1994) 7 Cal.4th 327, 362.)

The general rule in inverse condemnation cases is that "any physical injury to real property proximately caused by [a public] improvement as deliberately designed and constructed is compensable under [Article 1, § 19 of the California Constitution], whether foreseeable or not." (*Belair v. Riverside County Flood Control District* (1988) 47 Cal.3d 550, 558, quoting *Albers v. County of Los Angeles* (1965) 62 Cal.2d 250, 263-264.) While the general rule renders a public agency strictly liable for inverse condemnation—regardless of whether the injury was foreseeable and without regard to the presence or absence of fault, the California Supreme Court has set forth a more lenient rule in the context of flood control improvements. (See *Pacific Bell v. City of San Diego* (2000) 81 Cal. App. 4th 596, 610-615.)

In particular, the California Supreme Court has recognized that "a public agency that undertakes to construct or operate a flood control project clearly must not be made the absolute insurer of those lands provided protection." (*Belair*, *supra*, 47 Cal.3d at p. 565.) Accordingly, a public agency is not strictly liable for damages resulting from the failure of a flood control facility. (*Ibid*.; see also *Locklin*, *supra*, 7 Cal.4th at pp. 367-368.)

II. Courts Employ a Four-Part Test to Determine Inverse Condemnation Liability Based on Flooding Related Damages

A plaintiff seeking compensation against a public entity for flooding-related damages caused by failure of a flood control improvement must generally establish the following four elements in an inverse condemnation action:

(1) The flood control improvement failed to function as intended;

- Example: *Tri-Chem, Inc. v. Los Angeles County Flood Control Dist.* (1976) 60 Cal.App.3d 306, 311 [no inverse condemnation liability where the drainage system had a design capacity of only 550 to 700 cfs, whereas runoff during the storm that resulted in the flood reached approximately 1,096 cfs; under these facts, there was no evidence that the project failed to function as intended; rather the flooding occurred in spite of the flood control improvement, not because of the improvement]; see also *Belair, supra*, 47 Cal.3d at pp. 561-562.)

(2) The failure of the flood control improvement to function as intended constituted a proximate cause of the claimed damages

- Note: Where forces not induced by the public flood control improvement (such as a rainstorm) contribute to the injury, proximate cause is established where the public improvement constitutes a "substantial concurring cause" of the injury—i.e., where the injury occurred in substantial part because the improvement failed to function as it was intended. "The public improvement would cease to be a substantial contributing factor, however, where it could be shown that the damage would have occurred even if the project had operated perfectly, i.e., where the storm exceeded the project's design capacity." (*Belair*, *supra*, 47 Cal.3d at pp. 559-560.)

- Example: *Shaeffer v. State of California* (1972) 22 Cal.App.3d 1017, 1020 [no liability where the net result of the flood control improvement "was a lesser amount of flooding than that which would have occurred in the absence of the improvement"], disapproved on other grounds in *County of San Diego v. Miller* (1975) 13 Cal.3d 684; see also *Belair*, *supra*, 47 Cal.3d at pp. 561-562 [explaining how courts may find proximate cause absent where there is no evidence that the project failed to function as intended].)

(3) There was some unreasonable conduct on the part of the defendant public entity in designing, constructing, or maintaining the flood control improvement.

- Example: "[W]hen a public flood control improvement fails to function as intended, and properties historically subject to flooding are damaged as a proximate result thereof, plaintiffs' recovery in inverse condemnation requires proof that the failure was attributable to some unreasonable conduct on the part of the defendant public entities." (*Belair*, *supra*, 47 Cal.3d at p. 567; see also *Bunch v. Coachella Valley Water District* (1997) 15 Cal.4th 432, 436 ["When a water project fails … causing flood damage, the issue is whether the system's design, construction, and maintenance were reasonable."].)

(4) The public agency's unreasonable design, construction, or maintenance constituted a substantial cause of the damages.

- Example: Public agency's inadequate maintenance of channel constituted a substantial cause of damages resulting from levee's failure. (*Arreola v. County of Monterey* (2002) 99 Cal.App.4th 722, 742-743.)

III. Courts Focus on the Reasonableness of the City's Conduct

The California Supreme Court has repeatedly affirmed the rule that a public agency is not strictly liable for damages resulting from failure of a flood control improvement, but that the agency may be liable if the agency's "unreasonable conduct" constituted a substantial cause of the damages. Three Supreme Court cases—*Belair v. Riverside County Flood Control District*, *Locklin v. City of Lafayette*, and *Bunch v. Coachella Valley Water District*—shed some light on what qualifies as reasonable conduct.

In *Belair v. Riverside County Flood Control District*, seventeen property owners filed suit against the Riverside County Flood Control District ("RCFCD") after a flood control levee on the bank of the San Jacinto River gave way, freeing the river to flood parts of the City of San Jacinto. (*Belair*, *supra*, 47 Cal.3d at p. 554.) The California Supreme Court held that these plaintiffs established the first two elements outlined in the previous section above—i.e., (1) the levee failed to function as intended because it had a design capacity of 86,000 cfs, but the maximum flow in the channel at the time of the breach was approximately 25,000 cfs, and (2) the levee's failure to function as intended proximately caused the claimed damages, as the breach was not caused by volume, speeds, or heights of water beyond the design capacity of the levee. (*Belair*, *supra*, 47 Cal.3d at p. 560.) The plaintiffs thus established that "the levee's failure to function as intended constituted a substantial concurring – or proximate – cause of the damages." (*Ibid*.)

Though the plaintiffs established the above two elements, the California Supreme Court nevertheless held that RCFCD was not liable for inverse condemnation where the plaintiffs did not establish the third element outlined above—i.e., that there was some unreasonable conduct on the part of the public agency. In particular, *Belair* noted that the plaintiffs failed to produce any evidence that RCFCD had acted unreasonably in the design, construction, operation, or maintenance of the levee, or that their damages were caused by any act or failure to act on the part of RCFCD. (*Belair*, *supra*, 47 Cal.3d at p. 556.) In reaching this holding, the Supreme Court rejected the plaintiffs' assertion that inverse condemnation liability required proof only of the fact that the levee had failed to function within its design capacity, and that this failure caused their damages. (*Ibid*.) The California Supreme Court explained:

> Contrary to plaintiffs' position, the fact that a dam bursts or a levee fails is not sufficient, standing alone, to impose liability. However, where the public agency's design, construction or maintenance of a flood control project is shown to have posed an unreasonable risk of harm to the plaintiffs, and such unreasonable design, construction or maintenance constituted a substantial cause of the damages, plaintiffs may recover ….

(*Belair*, *supra*, 47 Cal.3d at p. 565.)

"When a public agency erects improvements to protect against floodwaters, it must, at a minimum, act reasonably." (*Belair*, *supra*, 47 Cal.3d at p. 567.) There is no bright-line rule, however, governing what constitutes "reasonableness." "The reasonableness of the public agency's conduct must be determined on the facts of each individual case, taking into consideration the public benefit and the private damages in each instance." (*Belair*, *supra*, 47 Cal.3d at p. 566.) The Supreme Court did explain that reasonableness in this context "is not entirely a matter of negligence, but represents a balancing of public need against the gravity of private harm." (*Id.* at pp. 565-566.)

The California Supreme Court subsequently elaborated in *Locklin v. City of Lafayette* that this balancing requires consideration of the following six factors:

"(1) The overall public purposes being served by the improvement project;

(2) the degree to which the plaintiff's loss is offset by reciprocal benefits;

(3) the availability to the public entity of feasible alternatives with lower risks;

(4) the severity of the plaintiff's damage in relation to risk-bearing capabilities;

(5) the extent to which damage of the kind the plaintiff sustained is generally considered as a normal risk of land ownership; and

(6) the degree to which similar damage is distributed at large over other beneficiaries of the project or is peculiar only to the plaintiff."

(*Locklin*, *supra*, 7 Cal.4th at p. 368-369; see also *Bunch*, *supra*, 15 Cal.4th at p. 451.)

In *Bunch v. Coachella Valley Water District*, the Supreme Court applied this six-factor test to determine the reasonableness of the Coachella Valley Water District's flood control-related actions. In concluding the agency acted reasonably, the Supreme Court explained:

> In sum, the record shows the trial court's conclusion the District acted reasonably and promptly in repairing post-Kathleen damage and in taking steps to develop a more permanent flood control plan was sound. Expert testimony indicated the detailed steps the District undertook to secure expert technical and engineering information on repairing its facilities and in managing those repairs represented sound engineering practice. Expert testimony was in conflict as to the engineering feasibility of the short-term solution of repairing the breach in the West Magnesia Springs Canyon stormwater facilities to restore the preexisting level of flood protection, allowing the District to devote its remaining resources to developing a comprehensive flood control plan. But as the Court of Appeal observed, the trial court reasonably relied on the District's expert testimony that any attempt to "quick fix" the problem by realigning the diversion levee and lining it with stronger material would have failed during Tropical Storm Dolores. Thus, the trial court based its finding of reasonableness on a careful analysis of several factors, including the project's purpose to divert the potentially dangerous natural flow in order to prevent flood runoff from fanning out over the Magnesia Cove alluvial plain, the public need for the project, the risk of private harm, the alternatives available to reduce the risk of harm, and the District's overall fiscal and flood control responsibilities.

(*Bunch*, *supra*, 15 Cal.4th at pp. 453-454.)

## CONCLUSION

The cases regarding liability stemming from flood control projects make clear that the City would not be liable for damages simply because a flood event occurred, or even simply based on the failure of the levee, were that to occur at some point in the future. Any risk of liability would be based on and evaluation of the specific facts in event of future flooding, based on the factors described above. To limit its exposure to liability, and more importantly, to protect the community from future flooding, the City should conduct regular maintenance and inspections of the levee, and conduct repairs of the levee when deemed necessary or appropriate. This continuing inspection, maintenance and repair of the levee will help to demonstrate reasonable behavior on the part of the City. Further, the levee was designed and constructed in accordance with US Army Corps of Engineers standards to a 200 year flood standard. There is no indication that the design or the construction of the levee was unreasonable. The City should continue to be diligent in its inspection and maintenance of the levee, as it should with all public infrastructure. However, the City is not subject to strict liability based on its ownership of the levee, and any future liability will be based on whether the City is reasonable, based on the multifactor test described in this memo.

cc: Anil Comelo, City Manager
Maya DeRosa, Community Development Director

April 11, 2023

Hello, my name is Arlene Corsetti and I live at 1401 Spring Street St Helena

Tonight, I would like to say a few words about the Hunter Project. I know there is a May meeting but I will not be in St Helena on that date. In addition, I would like to speak about the City's legal liability re: the Hunter project which I think takes precedent over the EIR or other considerations.

I have written letters about this to the City, the City Council, the St Helena Star, Mayor Dohring and the city attorney, Ethan Walsh. As of today's date, I have not had an acceptable answer to my concerns.

I have been advised by Mr. Walsh that he has sent a copy of my letter with his remarks to the Mayor and the Council members.

The short and long of this issue is that the building of the Hunter project will increase the city's legal liability by in excess of $150 million dollars. The levee which will abut the Hunter project is owned by the city of St Helena. By California law levee and dam ownership subjects the owner to strict liability. Strict liability means the owner of the levee is responsible for losses cause by the levee without consideration of negligence. In other words, losses to the property of the Hunter project caused by a levee failure or seepage would be born by the city of St Helena. When there was only fallow land on the other side of the levee this was acceptable, but not if there is a multimillion-dollar property development behind the levee.

In the past, the City of St Helena has held the State of California harmless of any losses caused by the levee. In addition, the Federal government could only be engaged in the loss if we had used the Army Corp of Engineers. We chose to use another engineering group. Some would say that this problem can be solved by flood insurance. Any flood insurance held by property owners of the Hunter project would pay the homeowners. It is very likely the insurance company would exercise its right to subrogation its claim against the city because of the strict liability of levee owners which is the city.

What would happen if the city did not have the money to pay for a loss from the levee. The city would have to assess a tax against each city property owner. In case of a total loss this could be as much as $50,000 per property owner. I know of no property owner in St Helena willing to assume this liability.

I am advising the City council that they must deal with this issue before they meet on the EIR or other Hunter project issues. To deal with this, the City Council must make a statement to each property owner that the city does not have liability for damage to the Hunter project caused by a failure of the levee in any manner and the citation of the law that can give them this position.

I believe without this statement to property owners the city needs to convene a special election to vote on the building of the Hunter project. I do not believe the council has the moral right to burden city property owners with these liabilities without their direct approval.

At the very least the City should engage the State of California to re assume this liability since the State has given St Helena such an onerous task of building so many homes. We are a small rural community

bounded by an agricultural preserve. We have limited abilities to build all the homes the State wants us to build.

Here are the options I see for the city:

1. Do not allow the building of the Hunter project thereby avoiding this extra liability entirely
2. Give an absolute statement to the citizens of St Helena as to why we do not have the liability for damages from the levee and cite the appropriate law that backs this statement
3. Go back to the State of California and ask them to assume liability for the levee if they in any way require us to build this project.
4. Put it to a simple majority vote of the residents of the city as to their willingness to allow the Hunter project to be built.
5. Swap this land for other city owned land.

Ethan Walsh City Attorney; City of St Helena

Paul Dohring: Mayor City of St Helena

Re: Hunter Project and The St Helena Levee

Thank you for your reply to my letter. By background, I spent 30 years advising and looking at the legal liability for US Major Corporations and Public Entities. For this reason, I have a concern for the City of St Helena and its property owners re: the Hunter Project

You correctly state that the City of St Helena gave a Hold Harmless to the State of California at the time money was given to build the levee owned by the City of St Helena. I will henceforth refer to the levee as the St Helena levee That would absolve the State of liability for a levee failure.

I believe that since we purposely did not use the US Army Corp of Engineers to build the levee ( we were the only City not to use the Corp of Engineers for the Napa Flood project) there would be very little liability for the Federal Government should there be a levee failure.

The City of St Helena owns this levee and has a responsibility to maintain and inspect the levee. I believe California dams and levees also fall under the doctrine of "Strict Liability"". Please refer to the Paper published by The Association of State Floodplain Managers. The Paper is entitled Liability for Water Control Structure Due To Flooding. In its conclusion is states that " Strict Liability for damage caused by the release of water from a water control facility ( including levees ) is the general rule of law in the United States."

At this time, we would also need a real review of our levee. Each year a person from the Department of Public works walks the levee, says it is fine and signs an inspection sheet. This person does not have a background in levee and dam engineering. If we have had an outside levee or dam engineering company give their opinion on the levee, I have been unable to find such a paper or inspection.

The City of St Helena now sits in the unenviable position of not having the Federal Government or the State of California as a backstop should there be any kind of levee failure. I know that many worry the most about an overtopping or direct breach of the levee but much damage is also done by seepage from levees as they age.

The area where the Hunter project is slated to be built was purposely created by the building of the levee. We used Measure A funds to build the levee. Item G of the Measure A bill states specifically "None of the projects in the Plan are intended or designed to encourage population growth in Napa County. All of the projects are for flood protection, preserving ground water integrity, reducing sediment in the Napa River System and for maintaining the reliability of the water supply for the existing Napa County populations."

The land of the proposed Hunter project was specifically not to be used for housing as stated in Measure A. It was always meant for flood protection and preservation of ground water. And as such for the existing Napa County population; not for additional population created by a housing project.

So where is the city now? It has no liability protection from the Federal Government or the State of California. It has a levee which falls under the jurisdiction of Strict liability which covers most damages.

The Hunter project area was what was left of part of a natural floodplain to mitigate water release incase of an overtop, breach or excessive seepage. Not to have non permeable structures on that land.

So how can we build 87 units on this land. We can't. St Helena would likely be liable for any water damage caused in any way by the levee failure. If those buildings average sale price of $2,000,000 we would be looking at increasing the City Liability by at least $174 million. If there was that kind of loss the City itself would not be able to pay the loss and would look towards the St Helena property owners to split the bill. I know of no property owner in this town willing to do that. You say " But there will not be that kind of damage". Take a look at losses from mold in case of flooding. In many cases structures were deemed unfit to rebuild and had to be taken down to their foundations.

Now lets now look at insurance. Even if you could get every potential homeowner to buy Flood Insurance the Flood Insurers would look to the City of St Helena in a subrogation action to repay them for a loss. Flood insurers could also look at where the homes were purposely built on a 100-year flood plain and decide not to insure the project at all.

In 2011 the U.S. Army Corp of engineers published a paper titled " Levees – What you Should Know to Manage Your Risk. It stated " Flooding will happen, no levee is fool proof" Look at Houston. It sits in a 500-year flood plain and it has had flood damage 3 times in 5 years. In 2009 a paper from UC Berkely states "When including an additional 4 percent annual chance of a flooding due to human factors and error including engineering, design, modeling, monitoring, operation and maintenance, the 100-year flood is now a 20-year flood and the chance of major flooding and damages over a 30-year mortgage becomes 78 percent."

How the Hunter Project got passed the Planning Commission is a question. Chris Warner stated that he was a lawyer and all this was legal, Rosaura Segura was promised affordable housing, Autumn Anderson's erudite reply was " Ditto" and John Ponte just looked like he was happy to pass this hot potato to someone else. It does not seem to matter what information is provided the city. It is essentially ignored. I understand the city wants to increase housing. This is just not the plot of land to put housing on.

---

Vineyard Valley Park helped get Flood Project through fo the safety all in St. Helena.
Now that Flood Project will be totally destroyed by a plan for 87 homes. Vineyard Valley is not a dumping ground for sewage from these homes to run through our 40 year old pipes down Our Main Street. We do not need mud and water flowing over the back wall into our park. That was why the Flood Control Project was meant to stop. We should not be a Main Street for all if the new homes. We need to be able to get out over the levee in case of fires, floods, etc. The choking traffic onto Pope, Star and all of St. Helena will make it extremely difficult to get anywhere without monumental traffic jams.
Please do not approve this project for the good of all.
Thank you, Carla Holm

RE: HUNTER PROJECT EIR – NOT READY FOR APPROVAL

Dear Mayor Dohring, Councilmembers, Chair Ponte, Commissioners, City Manager Comelo, Community Development Director DeRosa:

The EIR is mistaken when it concludes in its discussion of Aesthetics (3.1-24-26) that the Project would have a less than significant impact on the current incredible views that the approximately 17 acres of open space affords. In addition, in its discussion entitled Agriculture and Forestry Resources (3.2), the FEIR concludes that the impact created by the loss of the vineyard acreage contained in the parcel would be "less than significant." (3.2-14) This statement is patently incorrect.

The 17 acres proposed for development is located on one of the most beautiful areas of St. Helena. It is treasured by the residents of St. Helena. It is the last large parcel of undeveloped land on the East side of town and, aside from its gorgeous vistas, provides ample room to walk, run, ride bikes, fly kites, and toss balls for pets. While recreation room is important for the health of the community, this acreage is essential for its safety.

The large open space with few trees and its 6.2 acre vineyard has proved invaluable as a major fire-break. Vineyards have proven to be buffers, which can slow or halt the progress of wildfires. During the 2020 fires, embers did start a burn area on this property. Imagine what could have happened if the area had been developed. Allowing a subdivision to be built on this land will deprive the contiguous neighborhoods of invaluable protection and will endanger the residents.

We all know that given the progress of climate change, the threat of wildfires is something we shall have to live with. The likelihood of wildfires poses another problem for the residents of St. Helena: will they continue to be able to purchase Homeowners Insurance? Personally, since I moved to the Napa Valley in 1992, I have had three different carriers. Most disturbingly, after the fires of 2017 and 2020, AIG informed me, early in 2022, that they were ceasing to write Homeowner Policies in Northern California. It took several months before I secured

another policy and that company sent inspectors to examine my house, both inside and out. They asked a lot of questions about the neighborhood and noted the open space at the corner of Hunt and Starr as a positive item. If the City Council allows the Hunter Project to move forward eliminating this invaluable firebreak, it remains to be seen if insurers will be willing to write Homeowner policies for existing homes as well as the future housing.

This is just one instance where the FEIR has failed to recognize and analyze an important impact of the Hunter Project, which will affect the safety of the residents of St. Helena. There are many others. It is difficult to understand why the Planning Commission has decided to recommend that the City Council prematurely accept the EIR when impacts such as this have been ignored. Furthermore, while California mandated that communities such as St. Helena must add housing, SB9 states that "if a local agency makes a written finding that a project would create a specific, adverse impact upon public health and safety or the environment without a feasible way to mitigate such impact, the agency may still deny the housing project."

Respectfully,

Isobel Luria
1173 Starr Avenue

**Subject:** [External] Hunter Project

Dear Mayor and City Council Members,

I am heartened by the Mayor's efforts to enhance communication---however the Special Meeting for which I did not receive an email (I am signed-up to receive them) is a perfect example of lack of transparency and what appears to be an effort to keep the citizen's in the dark. The Hunter project was the best attended meeting of the Planning Commission I have seen with twenty speakers and yet it goes before the City Council with **NO opportunity to get the word out in the paper.** Scheduled as a separate meeting with little to no time to prepare. One has to ask, why is this? Is this what is meant by encouraging transparency and communication? I hope not. Not only was it not noticed properly there are no documents to review on the website---and no easy links to the same. Is this by design or oversight?

Perhaps it is the same reason that a city employee told me that our city manager was threatening not to fill their vacant positions unless the employees supported the Hunter Project. This is inappropriate and unseemly. The Hunter Project has the potential to impact everyone in town and out of town in multiple ways from traffic, to water, to liability for when the levee fails. **Note I did not say if the Levee fails.** In my presentation to the Planning Commission I quoted from the Hunter EIR

*"The Project site is now designated Zone X, **which FEMA identifies as an area with a moderate to low risk of flooding due to a levee failure** and is considered protected from a 100-year flood event (FEMA 2018)."*

Please note this was in 2018 before we saw bomb cyclones, saw multiple atmospheric rivers. Climate change is going to get more extreme, not less so. Drought years and deluge years---that is the new normal.

**So the risk of flooding due to LEVEE FAILURE is MODERATE to Low Risk.** And on Pg 549

> *"However, because there remains residual risk of flooding from catastrophically large floods (such as a 500-year flood) or levee failures, residents in flood-prone areas, even if outside of a regulatory flood zone, have the option to purchase optional flood insurance ."*

There is unlikely to be ANY FLOOD INSURANCE available to those in the project. What this doesn't say is the risk the city incurs should the levee fail and the potential lawsuits, cleanup and disaster relief necessary. The CITY acts as if the Levee is not an issue. **The Army Corps of Engineers** states in their **Principles of the levee safety program**:

- Levees **do not eliminate flood risk**, **but can provide critical time for local emergency management officials to evacuate residents safely**.

The premiere expert on Levees in California is Jeffrey Mount, professor emeritus at **UC Davis and former chair of the Department of Geology and the founding director of the Center for Watershed Sciences and a senior fellow at the Public Policy Institute of California**. Jeff Mount states:

> **""There are two kinds of levees: Those that have failed, and those that will fail,"**

And yet the City of St Helena knows better than the experts and reassures everyone we have the water and the levees are safe. This project has no business being built behind the levee. There are more suitable places to locate housing that do not put the residents and the city at financial risk.

Please NOTE that this **FLOOD PLAIN is the PERFECT place to practice slow water**---by the retention basin holding water until it can Recharge the GROUNDWATER Stores. It is not far from our critical Stonebridge Wells. Even though no other community uses wells in Napa County, there is a good reason to use them over reservoirs. They don't lose water to evaporation and need less treatment.

Is this another one of those situations where the City of Saint Helena makes one poor decision after another and NO ONE has the COURAGE to stop making them? The **fear** that the City is out of compliance with our housing, is **NOT a GOOD reason for approving a housing project in the floodplain**. THINK!!! Half the cities in California are out of compliance---you could use this as leverage for help with infrastructure etc...I am in support of moderate to low income housing---that is what we need. We do not need more multimillion dollar homes to add to the city's liability.

**FEAR** of being sued by the developer is going to be peanuts compared with the lawsuits that will accrue to the City after the Levee breaches. Take a look at the developer's track record. It is NOT GOOD. They have a poor rating with the BBB and settled a lawsuit by the state this fall. If the City Council approves this in spite of every issue that has been raised it is because they are acting out of FEAR of the now, rather than the reckoning that will come. ANd the staff is supporting this because their unfunded pensions are already looking toward the revenue from this to balance the books. And yet the City Manager just keeps recommending more staff, more raises; as if money grew on trees. Enough already. **I am pleading with the City Council to grow a backbone, and say NO.** Short term pain is better than the agony that will follow this project.

Respectfully,

Kelly Wheaton

---

Greetings,

As a homeowner at Vineyard Valley Senior Mobile Home Park, Mary Thomas West and John West are 100 percent OPPOSED to the home expansion on the Hunter Project flood plane which we are living next to.

The city liability if there is a flood impact should be enough to VOTE NO for this project.

What is happening concerning the impact of sewage issues and is it being hooked up to Vineyard Valley sewage lines?? The recent EIR Public Hearing Notice only mentions well / water impact.

Vineyard Valley's aging sewage system cannot handle more homes AND the potential in-law units that could markedly increase the population using the existing infrastructure.

The nervous Vineyard Valley Seniors are venomously opposed to this development and we do not understand why you would even be considering this proposal with this much public opposition.

Thank you,

Mary Thomas West and John West

**Subject:** [External] Hunter Development - Oppose it!

Dear City Council, Planning Commissioners, City Manager,

Wake Up All of You! Read remarks from WE THE PEOPLE on Next Door and editorials in the St. Helena Star. Read Mark Epstein's excellent article in the St. Helena Star. Do you understand people from both East and West sides of town OPPOSE the Hunter development?

WE THE PEOPLE voted for you and gave you the responsibility to act on our behalf.

WE THE PEOPLE are trusting you to stand up fiercely to State mandates (many California cities are already opposing this absurd mandate) and threats from developers. SAFETY FOR WE THE PEOPLE must be your priority. The State of California understands this.

Do not ignore us as the Planning Commission did. That was not respectful. You serve us. WE THE PEOPLE are not "insignificant. "

**To:** Cindy Tzafopoulos <ctzafopoulos@cityofsthelena.org>
**Subject:** [External] Please provide these comments for tonight's meeting to the Planning Commission, Planning Dept and City Council. Thank you for your assistance.

Honorable Planning Commission Chair and Honorable Commissioners,

You as public servants know, it is the sworn responsibility of commissioners and councilmembers to require any critical information when making decisions that could severely and adversely impact the citizens of St Helena, particularly with regard to decisions that pose risks for property loss, injury, or loss of life. In the case of this project, risks are related to levee failure or overtopping.

With that in mind, approving an EIR that would place human beings on a location where their safety relies solely on a levee, without proper documentation to back safety claims does not adequately address the "Hazards" component of the EIR, and must be deemed not complete.

1) **The EIR continues to refer to the St Helena levee as being designed to the 200 year flood level, despite the FEMA Letter of Map Revision provided to St Helena states that the Levee is accredited to the 100 year flood level.** The EIR reply to public comments about levee safety with climate change, wildfire scarring and upstream development is: "Because the levee was designed to accommodate a more severe flooding event than required (200-year vs 100-year), future increases in storm flows in the Napa River (if they occur as a result of climate change) would be handled better than if the levee were designed to minimum 100-year standard." Our city officials can and should require written verification of their claim. To accept it without evidence places St Helena taxpayers at risk for liability of misleading new residents living at that location.

2) **The levee is now over a decade old. Visible compaction to the top of the levee is measurable and apparent**, and as with dirt levees, is due to a web of gopher trenching visible throughout. It is the compaction of the open trenches that causes subsidence of the levee which reduces it's height and

capacity to safeguard from flooding. This location has undergone repeated, catastrophic flooding, and the public and city officials have the right and responsibility for a full levee inspection and evaluation prior to allowing the housing of innocent and unsuspecting people. What data is the EIR basing their claim on that "the levee is safe"? **The EIR must provide information that the levee has not suffered compaction or subsidence over the last 12 years by providing documentation or an inspection report.**

3) The **Applicant proposes a fire "escape route" for that will be constructed into the side of the levee**. Based on this, the EIR does not address "hazards".
    - Will the applicant just build a road into the side of the levee? **Can the city/applicant legally alter the levee structure without submitting it to FEMA** – will it affect the Letter of Map Revision which is based on the exact structure and design submitted for the Letter of Map Revision? **How does a road cut into the side of the levee affect the integrity** of a levee which the entire subdivision and surrounding neighborhoods depend on for flood risk reduction?
    - **What is the escape route for the eastern lots during a flood event where the levee fails or overtops**? The EIR states that the evacuation route is on top of the levee. How does the EIR explain the use of the levee as an evacuation route if it is being overtopped or fails during a flood?
    - **What is the grade of that "escape route"** and is it passable?
    - Does the DWR or **any agency involved in funding the levee construction allow for building a road into the side of the levee**?

4) The EIR states that maintenance of the SH levee has been ongoing, yet a public records request provided reports that show years of no/missing maintenance records. The public has the **right to validation of the EIR's unsubstantiated claims of consistent levee maintenance by providing the full records (2011 through 2023) as an addendum or a link** to them on the city site. The Final EIR simply says "they are available at City Hall", yet they are not. Simply stating "they are there" is not an answer to the public's question, and should not be accepted by our representatives acting on our behalf.

In summary, “Hazards” is an EIR component that assesses public safety, and this EIR has not provided documentation to back their claims despite repeated public outcry. Once the map is accepted, the applicant has no responsibility to the people living at risk behind the levee that we taxpayers own, operate, maintain and are liable for into perpetuity. Please represent our interests and demand the EIR adequately assess public safety as required by law, and evaluate the true condition of the levee condition and re-state in the EIR it’s capability to the 100 year flood as FEMA deemed it to be.

Thank you for your service to this community. Your time and dedication is much appreciated.

Ann Nevero

## DETERMINATION

This document provides the determination from the Department of Homeland Security's Federal Emergency Management Agency (FEMA) regarding a request for a Letter of Map Revision (LOMR) for the area described above. Using the information submitted, we have determined that a revision to the flood hazards depicted in the Flood Insurance Study (FIS) report and/or National Flood Insurance Program (NFIP) map is warranted. This document revises the effective NFIP map, as indicated in the attached documentation. Please use the enclosed annotated map panels revised by this LOMR for floodplain management purposes and for all flood insurance policies and renewals in your community.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Information eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 847 South Pickett Street, Alexandria, VA 22304-4605. Additional Information about the NFIP is available on our website at http://www.fema.gov/business/nfip.

# LETTER OF MAP REVISION
# DETERMINATION DOCUMENT (CONTINUED)

## COMMUNITY INFORMATION

**APPLICABLE NFIP REGULATIONS/COMMUNITY OBLIGATION**

We have made this determination pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (P.L. 93-234) and in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, P.L. 90-448), 42 U.S.C. 4001-4128, and 44 CFR Part 65. Pursuant to Section 1361 of the National Flood Insurance Act of 1968, as amended, communities participating in the NFIP are required to adopt and enforce floodplain management regulations that meet or exceed NFIP criteria. These criteria, including adoption of the FIS report and FIRM, and the modifications made by this LOMR, are the minimum requirements for continued NFIP participation and do not supersede more stringent State/Commonwealth or local requirements to which the regulations apply.

We provide the floodway designation to your community as a tool to regulate floodplain development. Therefore, the floodway revision we have described in this letter, while acceptable to us, must also be acceptable to your community and adopted by appropriate community action, as specified in Paragraph 60.3(d) of the NFIP regulations.

NFIP regulations Subparagraph 60.3(b)(7) requires communities to ensure that the flood-carrying capacity within the altered or relocated portion of any watercourse is maintained. This provision is incorporated into your community's existing floodplain management ordinances; therefore, responsibility for maintenance of the altered or relocated watercourse, including any related appurtenances such as bridges, culverts, and other drainage structures, rests with your community. We may request that your community submit a description and schedule of maintenance activities necessary to ensure this requirement.

**COMMUNITY REMINDERS**

We based this determination on the 1-percent-annual-chance flood discharges computed in the FIS for your community without considering subsequent changes in watershed characteristics that could increase flood discharges. Future development of projects upstream could cause increased flood discharges, which could cause increased flood hazards. A comprehensive restudy of your community's flood hazards would consider the cumulative effects of development on flood discharges subsequent to the publication of the FIS report for your community and could, therefore, establish greater flood hazards in this area.

Your community must regulate all proposed floodplain development and ensure that permits required by Federal and/or State/Commonwealth law have been obtained. State/Commonwealth or community officials, based on knowledge of local conditions and in the interest of safety, may set higher standards for construction or may limit development in floodplain areas. If your State/Commonwealth or community has adopted more restrictive or comprehensive floodplain management criteria, those criteria take precedence over the minimum NFIP requirements.

We will not print and distribute this LOMR to primary users, such as local insurance agents or mortgage lenders; instead, the community will serve as a repository for the new data. We encourage you to disseminate the information in this LOMR by preparing a news release for publication in your community's newspaper that describes the revision and explains how your community will provide the data and help interpret the NFIP maps. In that way, interested persons, such as property owners, insurance agents, and mortgage lenders, can benefit from the information.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Information eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 847 South Pickett Street, Alexandria, VA 22304-4605. Additional Information about the NFIP is available on our website at http://www.fema.gov/business/nfip.

## LETTER OF MAP REVISION
## DETERMINATION DOCUMENT (CONTINUED)

We have designated a Consultation Coordination Officer (CCO) to assist your community. The CCO will be the primary liaison between your community and FEMA. For information regarding your CCO, please contact:

Ms. Sally M. Ziolkowski
Director, Mitigation Division
Federal Emergency Management Agency, Region IX
1111 Broadway Street, Suite 1200
Oakland, CA 94607-4052
(510) 627-7175

**STATUS OF THE COMMUNITY NFIP MAPS**

We will not physically revise and republish the FIRM and FIS report for your community to reflect the modifications made by this LOMR at this time. When changes to the previously cited FIRM panel(s) and FIS report warrant physical revision and republication in the future, we will incorporate the modifications made by this LOMR at that time.

Because this revisions involves minor changes to the backwater BFEs along Sulphur Creek and does not change the whole foot BFEs shown on the effective FIRM, we are not revising the Flood Profile for Sulphur Creek.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Information eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 847 South Pickett Street, Alexandria, VA 22304-4605. ## LETTER OF MAP REVISION
## DETERMINATION DOCUMENT (CONTINUED)

### PUBLIC NOTIFICATION OF REVISION

A notice of changes will be published in the Federal Register. This information also will be published in your local newspaper on or about the dates listed below and through FEMA's Flood Hazard Mapping website at https://www.floodmaps.fema.gov/fhm/Scripts/bfe_main.asp.

LOCAL NEWSPAPER Name: *The Napa Valley Register*
Dates: June 29, 2012 and July 6, 2012

Within 90 days of the second publication in the local newspaper, a citizen may request that we reconsider this determination. Any request for reconsideration must be based on scientific or technical data. Therefore, this letter will be effective only after the 90-day appeal period has elapsed and we have resolved any appeals that we receive during this appeal period. Until this LOMR is effective, the revised flood hazard determination information presented in this LOMR may be changed.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Information eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 847 South Pickett Street, Alexandria, VA 22304-4605. Vineyard Valley 1986 – immediately adjacent to the Hunter proposed project location

Honorable Planning Commission Chair and Honorable Commissioners,

You as public servants know, it is the sworn responsibility of commissioners and councilmembers to require any critical information when making decisions that could severely and adversely impact the citizens of St Helena, particularly with regard to decisions that pose risks for property loss, injury, or loss of life. In the case of this project, risks are related to levee failure or overtopping.

With that in mind, approving an EIR that would place human beings on a location where their safety relies solely on a levee, without proper documentation to back safety claims does not adequately address the "Hazards" component of the EIR, and must be deemed not complete.

1) **The EIR continues to refer to the St Helena levee as being designed to the 200 year flood level, despite the (attached) FEMA Letter of Map Revision provided to St Helena states that the Levee is accredited to the 100 year flood level.** The EIR reply to public comments about levee safety with climate change, wildfire scarring and upstream development is: "Because the levee was designed to accommodate a more severe flooding event than required (200-year vs 100-year), future increases in storm flows in the Napa River (if they occur as a result of climate change) would be handled better than if the levee were designed to minimum 100-year standard." Our city officials can and should require written verification of their claim. To accept it without evidence places St Helena taxpayers at risk for liability of misleading new residents living at that location.

2) **The levee is now over a decade old. Visible compaction to the top of the levee is measurable and apparent**, and as with dirt levees, is due to a web of gopher trenching visible throughout. It is the compaction of the open trenches that causes subsidence of the levee which reduces it's height and capacity to safeguard from flooding. This location has undergone repeated, catastrophic flooding, and the public and city officials have the right and responsibility for a full levee inspection and evaluation prior to allowing the housing of innocent and unsuspecting people. What data is the EIR basing their claim on that "the levee is safe"? **The EIR must provide information that the levee has not suffered compaction or subsidence over the last 12 years by providing documentation or an inspection report.**

3) The **Applicant proposes a fire "escape route" for that will be constructed into the side of the levee**. Based on this, the EIR does not address "hazards".
    - Will the applicant just build a road into the side of the levee? **Can the city/applicant legally alter the levee structure without submitting it to FEMA** – will it affect the Letter of Map Revision which is based on the exact structure and design submitted for the Letter of Map Revision? **How does a road cut into the side of the levee affect the integrity** of a levee which the entire subdivision and surrounding neighborhoods depend on for flood risk reduction?
    - **What is the escape route for the eastern lots during a flood event where the levee fails or overtops**? The EIR states that the evacuation route is on top of the levee. How does the EIR explain the use of the levee as an evacuation route if it is being overtopped or fails during a flood?
    - **What is the grade of that "escape route"** and is it passable?
    - Does the DWR or **any agency involved in funding the levee construction allow for building a road into the side of the levee**?

4) The EIR states that maintenance of the SH levee has been ongoing, yet a public records request provided reports that show years of no/missing maintenance records. The public has the **right to validation of the EIR's unsubstantiated claims of consistent levee maintenance by providing the full records (2011 through 2023) as an addendum or a link** to them on the city site. The Final EIR simply says "they are available at City Hall", yet they are not. Simply stating "they are there" is not an answer to the public's question, and should not be accepted by our representatives acting on our behalf.

In summary, "Hazards" is an EIR component that assesses public safety, and this EIR has not provided documentation to back their claims despite repeated public outcry. Once the map is accepted, the applicant has no responsibility to the people living at risk behind the levee that

we taxpayers own, operate, maintain and are liable for into perpetuity. Please represent our interests and demand the EIR adequately assess public safety as required by law, and evaluate the true condition of the levee condition and re-state in the EIR it's capability to the 100 year flood as FEMA deemed it to be.

Thank you for your service to this community. Your time and dedication is much appreciated.

Ann Nevero

## Cindy Tzafopoulos

**From:** ann@nieman.org
**Sent:** Monday, April 10, 2023 9:21 AM
**To:** Cindy Tzafopoulos
**Subject:** [External] Refusal to Accept Liability

**Cindy,**

**This public comment is for the Hunter project meeting coming up. Please send to City Council, City Manager, Planning and Public Works Directors. Thank you very much. Ann**

**To: The City of St Helena - City Council, Planning Commission, City Manager, City Staff**

**Date: April 2023**

**We believe the decision to put new development in a flood-risk area that relies on the St Helena levee for flood protection is reckless and endangers people, property, and the financial security of the City and residents of St Helena who are fully liable for levee performance as stated in California AB 1898. *(Reference 1)***

**We ask the city to prepare a detailed analysis of the risk to the city of St Helena and its residents, and inform the public prior to any further action.**

**We strongly urge that the city negotiate with the State of California to reverse its refusal to accept liability for the levee *(Reference 1)* , since the State's public pressure *(Reference 2)* to approve the new development behind it places extensive and unnecessary risk on the taxpayers of St Helena.**

**----------**

Background:

If approved, the new development will fully rely on the City-owned levee for flood protection. Additionally, it will increase flood risk to the existing adjacent properties by replacing the open permeable acreage on the existing historic floodplain with hardscape and increased elevation (*Reference 5)*.

Concern for public safety and financial liability have been a long standing issue regarding new development in the residual risk zone behind the St Helena levee.

Citizens have diligently provided public comment with overwhelmingly opposition to any new development that depends on the levee for flood protection; in writing, in meetings with staff and councilmembers, and in person during city council and planning commission meetings.

In addition, local community groups representing a wide range of residents from across the City have worked together to present the inconsistencies, errors, code/zoning violations, safety issues and liability with the proposed development in a flood risk area along the Napa River that will be reliant on our levee for flood protection.

These concerns are only enhanced with climate change projections of continued, heightened weather events such as atmospheric rivers, bomb cyclones, and record-breaking storms worldwide. *(Reference*

*4)* In addition, severe scarring from recent wildfires on adjacent hillsides significantly increases runoff to the river and low-lying area. FEMA's LOMR to St Helena encourages local governments to re-assess flood risks under changing conditions. *(Reference 6))*

These conditions add even more pressure on the city's levee system and increase the likelihood of flood damage similar to the State-wide destruction to Levees, Dams, Bridges and Roads causing catastrophic loss of property and life. Just last month, the levee break near the city of Parajo caused widespread evacuations and left behind water soaked properties and displaced residents for months or years to come.

Yet, at the February 7, 2023 Planning Commission meeting which prompted hundreds of individual and community group letters and public comments providing valid documentation and proven legal opinions on issues such as zoning irregularities, flood risk concerns, unintended use of Measure A flood tax funds, and insufficient exit routes in a flood risk area, the Planning Commission approved the subdivision Tentative Map behind the levee.

Importantly, the explanation by city officials for moving forward with this ill-conceived project has centered around the State of California pressuring the City of St Helena to permit new housing on that site, regardless of the impact to St Helena. Yet, the State has refused to accept any liability for levee performance and subsequent damages (in Assembly Bill 1898) so the liability rests squarely on the shoulders of the people and the City of St Helena.

It is unacceptable to put the people of St Helena at such extreme risk. We refuse to accept liability unless the State takes on the liability for enforcing its excessive housing program which was strongly criticized by the CA State Auditor *(Reference 8)* and pressures the St Helena to make this reckless decision by threatening us with fines, legal action and loss of local control. *(Reference 2)*

**Summary of Critical Considerations:**

- The City of St Helena built the levee to reduce flood risk after catastrophic flooding occurred 3 times in 25 years to existing properties, not to put more people in harm's way. *Photo 1*
- The Measure A Flood Tax *(Reference 7*) was voted in by the people of Napa Co. to reduce flood risk for the existing Napa County population as of the date of the Measure A Ordinance 11/4/95

"None of the projects were intended to encourage population growth…" Section 2. G

Against the listed requirements, the proposed new development a) was not existing before the levee was built b) will get direct benefits and enable growth by taking advantage of reduced flood safety building requirements, and eliminating the requirement for properties to purchase FEMA flood insurance.

This is a direct misuse of Measure A tax funds and clearly violates voters' intent in adopting the Measure.

- The taxpayers of St Helena are wholly responsible for the operation, maintenance and performance of their levee. This responsibility, cost and liability extends into perpetuity, so St Helena taxpayers carry the costs and liability for the next 5, 50, 100, or 200 years plus, which financially burdens this generation and every future generation of St Helena residents with the liability for property damages and associated public safety.
- There is no Federal liability, because St Helena did not partner with the Federal Army Corps of Engineers in design and construction; it was done by private engineering and construction firms.
- There is no State liability. The city borrowed/received funding from the State of California. In providing that funding, the State required that the City take all liability, and the State be indemnified. Verbiage below:

State of California Assembly Bill 1898 (excerpts)

The People of the State of California do enact as follows:

(c) A county or local agency may receive the funds only if it

enters into an agreement with the department pursuant to which the city or local agency agrees to indemnify and hold and save harmless the state, its officers, agents, and employees for any and all liability for damages that may result from the project.

(d) For the purposes of this section, "liability for damages"

includes, but is not limited to, liability for damages relating to the construction or operation of the project or the failure of the project to operate as intended.

**Final Conclusion –**

**Because the proposed new development behind the levee:**

- **Will put new properties and people on a floodplain that has catastrophically flooded repeatedly,**
- **Will potentially flood adjacent properties when hardscape replaces permeable open space;**
- **Will rely solely on the St Helena levee for flood safety;**
- **Will render St Helena Residents fully liable for flood related damage or loss of life on the new development;**
- **Will burden generations of St Helenans into perpetuity with the full liability and costs as long as the development exists**

**We residents of St Helena-**

- **Believe that this is a reckless and unacceptable decision which significantly threatens our financial security, safety and community well-being.**
- **Refuse to be held financially liable for any and all damage, loss, injury or death incurred as a result of levee malfunction, failure or overtopping if new development behind the levee is approved without State assurances for liability.**
- **Insist that the City NOT move forward in any way on development without securing the State of California to reverse its refusal to accept liability *(Reference 1)* for damages relating to the levee, because the State has threatened[i] the city with the possibility of extreme fines, loss of local planning control and lawsuits to pressure St Helena to approve new development on the flood-risk zone behind the City owned levee.**
- **St Helena elected officials cannot in good faith serve the people of St Helena, by making a decision that jeopardizes the financial liability and risk to St Helenans, its holdings or its public safety. The State cannot remain indemnified by obliging a small local community to assume all the risks and costs of State pressure to build in a flood risk area.**

*

PHOTO 1 - St Helena properties in 1986 on the same floodplain as the proposed new development behind the city owned levee, illustrating the potential for catastrophic damage to new development in the event of levee failure.

---

I'm very supportive of the Hunter Street project as it will being housing and an increased tax base to the city, which the city desperately needs.

I'm totaly opposed to the mega mansion on Fir Hill. A compound that size has no place in our city and the threat of a lawsuit should not cause the council to cave. Principle is on the side of the city on this one.

Thank you,

**Subject:** [External] Press Release - April 21st - Questions Section
**Date:** Saturday, April 22, 2023 10:30:16 AM

Dear Ms. Tzafopoulos,

FYI

I live in Vineyard Valley and worked with Chief Hartley after the Glass Fire to establish the first fire drill two summers ago which we then successfully held again last summer. The back half of our park exited up and over the levee road to Adams Street. The following statement in the press release of April 21 has me greatly concerned.

"The St Helena Police Department, which conducts annual practice evacuations in the Vineyard Valley area, does not find that the Hunter project will make evacuations more difficult. By providing new roadway connections, the project will allow for both existing and future residents to leave the area during an evacuation."

1. What at exactly are the *reasons* the police dept. think the Hunter project “will not make evacuations more difficult”?
(I can name several right now)

2. What new roadway connections???

a. Where and when will they be constructed?

b. Does SH actually have any *room* to construct new roadways *leading out of town*???

c. Where will the money come from? What guarantee do we have that these new roads will be built?

d. Will these new "roadway connections" be built before, during, or after the Hunter development is built?

e. Where are the plans for these new roads? They will take a very long time to build and if it is after the development is built, we will be in the SAME dangerous situation we are in right now regarding public safety and emergence evacuations.

3. How will *the project* "allow" for this co-existing evacuation? According to the statement above, they are relying on "new roadway connections" and *nothing else.*

4. Common sense would dictate that this proposal of new roadway connections which would supposedly "allow for both existing and future HP residents to leave the area during an evacuation" would be planned ahead of approval and building of the

development and those plans would be available to the citizens of SH, not just an afterthought.

I have sent this email to Maya DeRosa, the Mayor, and city council members.

Elizabeth Green
Vineyard Valley

April 21, 2023

TO: Honorable Mayor and Members of City Council

FROM: Our Town St. Helena Board of Directors

SUBJECT: Hunter Project: Proposed Subdivision Tentative Map / FEIR

**Overview**

In 2022, Our Town St Helena (OTSH) provided written testimony expressing concerns related to the proposed Hunter Project within the constraints of the Tentative Map and Final Environmental Impact Report review processes. In summary, the subdivision as proposed misses the extremely rare opportunity to address St. Helena's acute housing need. Speculative homes that are likely to be marketed and sold as second homes will do more harm than good in that regard. St Helena needs housing for people who live here full time, work here, shop here, dine here, and attend school here.

OTSH's primary concerns are:

1) the single-family lots are sized to support large homes that will likely sell in the $2.0-$3.0 million-plus range in today's market and will not be affordable for our community's working people, young families and seniors; and

2) the parcel designated for "affordable housing" is segregated from the remainder of the homes, and, as such, is in direct conflict with the City's inclusionary housing ordinance that requires integration of the affordable homes and similar bedroom/bathroom counts as the single-family homes.

If the tentative subdivision map is approved as proposed, with large single-family lots and one multi-family parcel off to the side, the Council's approval would be in direct conflict with the 1993 General Plan (the plan in place when the application was deemed complete). More discussion is provided below and in previous communications to the Planning Commission.

The City Council has a rare opportunity to work proactively with the developer of the Hunter Subdivision to create a project that really works for the community. Notwithstanding public safety concerns expressed by others, OTSH believes development on this property should result in higher density than what is proposed to achieve greater affordability. The property is close to downtown, local jobs and services, and schools and would greatly reduce through-town traffic if people who actually worked in nearby businesses could afford to live there. If the applicant is

interested in helping St Helena solve its acute housing crisis, there are creative ways to make that happen and still generate a return on investment to the developer's bottom line.

**Proposed Tentative Map**

**Inconsistency with 1993 General Plan**

OTSH takes exception to staff's conclusion that the proposed development is consistent with the 1993 General Plan's Guiding Policy 2.6.19 which states:

> "Permit higher density housing in single family neighborhoods as long as the development character of the single family area is maintained (i.e., lot widths, orientation to street, building heights, etc.)."

Objectively, the proposed tentative map is inconsistent with 2.6.19 because the large lot where higher-density housing (25 units) would be developed is sized insufficiently to maintain the development character of the single-family homes in the manner the language describes. As drawn, the map pre-supposes a multi-level, multi-family development, with no additional information (i.e., illustrations that show how such a development would be positioned on the site, provide on-site services and parking, etc.).

Other guiding policies in the 1993 General Plan, while more difficult to evaluate objectively, also suggest the proposed subdivision falls short of fully complying with the General Plan.

> 2.6.14 Encourage a mix of housing types and price ranges to allow choice for current and future generations of St. Helenans.
>
> 2.6.16 Encourage the development of higher density housing in areas near the center of town and close to recreation and services.

The policies encourage higher density and more urban housing solutions near the city center so current and future generations can walk or bicycle to town and afford to live close to where they work. The proposed subdivision achieves the lowest density allowed for the single-family lots within the zoning designation, and relies on ADUs and the multi-family "carve-out" to achieve this lowest-allowed density.

**Inconsistency with the 2019 General Plan**

While the proposed subdivision's consistency with the 2019 General Plan is not as relevant for the decisionmakers to determine whether to approve or deny the proposed tentative map, it is important for leaders and the general public to be cautious about the use of terms like "market rate" and "more affordable" which are not clearly defined.

City staff's analysis concluded the proposed subdivision is consistent with the 2019 General Plan and more specifically policies LU2.1 and ES1.4 (below) because *"The proposed project includes market-rate single family homes and two types of units intended to be more affordable: accessory dwelling units and multi-family units."*

Land Use (LU2.1): Promote a mix of housing types and price ranges that are consistent with the Housing Element RHNA categories of housing affordability.

Economic Sustainability (ES1.4): Encourage the creation of workforce housing to support the local employment base in keeping with small town smart growth.

The use of the term "market rate" to imply the single-family homes will somehow meet RHNA categories should be considered more closely. "Market rate" is simply what the market will support, where RHNA relies on Area Median Income (AMI) to establish categories of affordability for varying income levels and household sizes. Using today's housing market data, the "market rate" for a single-family home similar in size and configuration to what is being proposed is approximately $2-3 million (conservatively), while a St. Helena moderate-income household earning $95,000-$143,000 can afford to buy a home in the $285,000-$420,000 range.

To truly encourage housing that would serve our community, the Hunter subdivision should be made up of smaller lots to promote higher density and allow for homes the "missing middle" working professionals and younger families in our area will be able afford. OTSH recommends a supportable density would be around 128 (nowhere near the maximum allowed 270). At this density and with a creative approach, the homes could serve households earning 150 to 200 percent of the AMI. We are talking about teachers, medical professionals, small business owners, construction workers, and City personnel, among others.

(Furthermore, counting accessory dwelling units (ADUs) as "more affordable" only works if the ADUs are truly serving as housing at affordable prices. To ensure the units truly provide affordable housing, the City must create a policy / program to require the developer restricts and regulates the ADUs. While this is not something that can be considered for the tentative map approval, it should be part of the future affordable housing agreement.)

**Closing**

OTSH firmly believes the proposed tentative map is objectively inconsistent with the 1993 General Plan Guiding Policy 2. 6.19 and should not be approved by the City Council. Further, we encourage the developer and City to work together to create a plan that provides the vital housing our community needs now and into the future to ensure St Helena is a sustainable, economically thriving city with small-town character. We know it takes substantial City resources to process development applications, entitlements and building plan checks, so the City should ensure that the proposed development will meet the community's needs in exchange for allocation of these limited resources.

We see this as a positive opportunity for the City and developer to work together to achieve mutual goals. We ask the City Council to provide the leadership and the developer the cooperation to go beyond just meeting bare minimum zoning standards so that an innovative, inclusive neighborhood can be created.

P.O. Box 94, St Helena, CA 94574 (707) 302-5111 www.OurTownStHelena.org

**Subject:** [External] Hunter Subdivision Input

Hi Maya:

Please see my comments below relative to the Hunter Subdivision Tentative Map. Unfortunately I cannot attend the meeting tonight.

Thx,

Joe

**********

As a small developer who has encountered formidable resistance in executing a project in St. Helena, I do not take lightly the responsibility of providing input to another developer's project application.

I will limit my comment to two points:

1) The Housing Element / RHNA / St. Helena

The purpose of the Housing Element and the RHNA allocations as legislated and regulated by the State of California is an attempt to equitably distribute the anticipated population growth of California to all the Counties and Municipalities of the State. The HE process however does not greatly distinguish the unique challenges of every community in California. In the case of St. Helena and other desirable second home communities, the Housing Element and RHNA processes completely miss the objective in the allocation of target numbers for the "market rate" category of housing. Placing goals on St. Helena to build more market rate housing without capping AMI regarding the market rate development (ie. 200%, 300%??) serves no purpose other than to open St. Helena up for speculative development for more second homes. By one account we are closing in on ~60% second homes in the city limits. The Hunter Project as proposed will only grow that number.

I am particularly concerned that the the Chair of the Planning Commission when recommending approval of the Tentative Map for the Hunter Subdivision made a comment to the effect that this project helps achieve RHNA goals both market and below market, and that "all housing is good housing..." in St. Helena that is simply not true, and is a dangerous way to look at our unique challenges,. We will gain no benefit from developing a subdivision that will by economic necessity be targeted to second home buyers. The price for these homes will not be listed <$2M and more likely closer to $3M. As such, building 50+ SF homes will do nothing to serve the needs of this community. We need housing for people who live here full time, work here, shop here, and volunteer here. It is that simple.

2) The same tired old Subdivision Map

At some point, one would hope that we take a fresh look at the way we develop our SIngle Family Subdivisions. Curved streets. Blah. Stop signs and not roundabouts. Blah. Two-car garage facing the street. Blah. No front yard orientation. Blah. No porches. Blah. Architectural consistency. Blah. But more importantly. Are there not more creative ways of

developing the community we desire? What if we doubled the density of the SFH development, reduced the square footages to <2000 SF and cut the entry price (or capped the AMI (say 300%) so that working professional families can purchase them? Teachers. Police. Firefighters. Winemakers. Professional Staff. Etc. Or what if we required ADUS attached to SFHs that are deed restricted and have rental requirements? Then maybe we don't have a deserted neighborhood during weekdays and off-season. And we bring vitality to the downtown. What if we integrated the affordable housing into the SFH neighborhood with duplexes or fourplexes that were to scale rather than isolating them on a separate parcel? Is this not the code?

California has many, many challenges ahead.
Housing is one of the big ones.
Start thinking out of the box.
The post-war subdivision model does not fit here.
It actually never did.

Once again. Thanks for listening.

Joe McGrath

Anil Camelo, City Manager
City of St. Helena
1088 College Avenue
St. Helena, Ca. 94574

City Council,

I want to voice my concerns regarding the traffic study and lack of mitigation for increased traffic. The current traffic study does not delineate which month the data was obtained. As you are aware, traffic increases during harvest time with tourist and agricultural vehicles on the roadways accessing wineries.

The EIR fails to assess whether or not the adjusted baseline counts adequately represent peak harvest season conditions or estimates the number of vehicles evacuating during a natural disaster. The EIR is inadequate as an informations document.

Additionally, the EIR does not assess rail operations during temporary blockage during an emergency accessing the Project site when the train passes Adams, Hunt and Pope streets.

The Wine Train schedule changes during peak tourist season. This may affect whether additional trains are added. There was no mention of analysis and its impact.

The EIR should have evaluated the project with the connection of Adams to the Silverado Trail. Even though the City currently has no plans for the connection, given the location of the Hunter Project and the fact that the Adams/Silverado Trail would have dramatic consequences for the livability of the proposed units as well as significantly increased traffic demands at key intersections like Adams, Railroad and Adams with Main and the proposed Starr with Adams. This analysis is absent from the document.

If City Council declares that the benefits provided to the public through the approval and implementation of the Project outweighs the identified significant adverse

environmental impact of the Project that cannot be mitigated, it will be doing so with incomplete and misleading data. The adverse impact of the Project is acute.

I am requesting you return the EIR to the Planning Commissioners until a traffic expert can give an accurate traffic analysis which would include the above analysis which is absent in the EIR.

Thank you,

Maria Villegas, Chairperson

## LETTER OF MAP REVISION
## DETERMINATION DOCUMENT (CONTINUED)

### COMMUNITY INFORMATION

**APPLICABLE NFIP REGULATIONS/COMMUNITY OBLIGATION**

We have made this determination pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (P.L. 93-234) and in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, P.L. 90-448), 42 U.S.C. 4001-4128, and 44 CFR Part 65. Pursuant to Section 1361 of the National Flood Insurance Act of 1968, as amended, communities participating in the NFIP are required to adopt and enforce floodplain management regulations that meet or exceed NFIP criteria. These criteria, including adoption of the FIS report and FIRM, and the modifications made by this LOMR, are the minimum requirements for continued NFIP participation and do not supersede more stringent State/Commonwealth or local requirements to which the regulations apply.

We provide the floodway designation to your community as a tool to regulate floodplain development. Therefore, the floodway revision we have described in this letter, while acceptable to us, must also be acceptable to your community and adopted by appropriate community action, as specified in Paragraph 60.3(d) of the NFIP regulations.

NFIP regulations Subparagraph 60.3(b)(7) requires communities to ensure that the flood-carrying capacity within the altered or relocated portion of any watercourse is maintained. This provision is incorporated into your community's existing floodplain management ordinances; therefore, responsibility for maintenance of the altered or relocated watercourse, including any related appurtenances such as bridges, culverts, and other drainage structures, rests with your community. We may request that your community submit a description and schedule of maintenance activities necessary to ensure this requirement.

**COMMUNITY REMINDERS**

We based this determination on the 1-percent-annual-chance flood discharges computed in the FIS for your community without considering subsequent changes in watershed characteristics that could increase flood discharges. Future development of projects upstream could cause increased flood discharges, which could cause increased flood hazards. A comprehensive restudy of your community's flood hazards would consider the cumulative effects of development on flood discharges subsequent to the publication of the FIS report for your community and could, therefore, establish greater flood hazards in this area.

Your community must regulate all proposed floodplain development and ensure that permits required by Federal and/or State/Commonwealth law have been obtained. State/Commonwealth or community officials, based on knowledge of local conditions and in the interest of safety, may set higher standards for construction or may limit development in floodplain areas. If your State/Commonwealth or community has adopted more restrictive or comprehensive floodplain management criteria, those criteria take precedence over the minimum NFIP requirements.

We will not print and distribute this LOMR to primary users, such as local insurance agents or mortgage lenders; instead, the community will serve as a repository for the new data. We encourage you to disseminate the information in this LOMR by preparing a news release for publication in your community's newspaper that describes the revision and explains how your community will provide the data and help interpret the NFIP maps. In that way, interested persons, such as property owners, insurance agents, and mortgage lenders, can benefit from the information.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Information eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 847 South Pickett Street, Alexandria VA 22304-4605 Additional information about the NFIP is available on our website at http://www.fema.gov/business/nfip.

MAINTENANCE OF FLOOD PROJECT COMPONENTS

FLOOD PROJECT COMPLETEDC June 2011

FEMA ISSUED LETTER OF MAP REVISION ( LOMR ) IN JUNE 2012

FEMA requirements for maintenance of flood project components are as follows:

A. NFIP regulations Subparagraph 60.3(b)(7) requires communities to ensure that the flood-carrying capacity within the altered or relocated portion of any watercourse is maintained. This provision is incorporated into your community's existing floodplain management ordinances; therefore, Responsibility for maintenances of the altered or relocated watercourse, including any related appurtenances such as bridges, culverts, and other drainages structures, rests with your community. We may request that your community submit a description and schedule of maintenance activities necessary to ensure this requirement.
B. FEMA further states "State/Commonwealth or community officials, based on knowledge of local conditions and in the interest of safety, may set higher standards for construction or may limit development in floodplain areas. If your State/Commonwealth or community has adopted more restrictive or comprehensive floodplain management criteria, those criteria take precedence over the minimum NFIP requirements.

The above is to emphasize how important it is to have qualified people do required inspections and that the deficiencies noted are addressed in a timely manner. I do not find this to be the case in my review of inspection reports since they were started in 2015 three years after the LOMR from FEMA. The same deficiencies were reported year after year and up until the present.

I am satisfied that the City of St. Helena hired very capable people in the Mead and Hunt Engineering firm as well as Mitch Swanson as Geomorphologist. The project was built using the highest standards. It was not built by the ACOE because the City of St Helena would have been required to wait approximately ten years to even start the process. This information was provided to me by Eric Sklar who was on the City Council at the time of the development and construction of the project and he was most the most involved CC member working on the development and construction. The following are my observations after reviewing inspection reports from 2015 to 2023.

10-30-15 Josh Shaw and signed by Ste3ve Palmer

A. Erosion of levee embankment at top of outlet behind concrete.
B. Corrosion and rust on metal components
C. No operations or inspection records present. No refresher training.
D. Areas where ground is eroding toward base of structure – foundation concrete structure.

10-26-16 Josh Shaw and signed by Steve Palmer

A. Still no emergency procedures. No operations
B. Erosion by Sulphur creek by outlet gate.
C. Gophers present. Burrows control program not effective or non existent.
D. Concrete structure tilting and sliding.
E. Joint material erosion.
F. No operations or inspection records present. No refresher t raining.

G. Ground eroding at base of structure. ( I assume this is the flood wall. )

10-17-17 Josh Shaw with signature of Steve Palmer.

A. No emergency procedures.
B. Trash, debris, weeds and small trees along levee.
C. Gopher holes present.
D. Areas of tilting, sliding and settlement. Needs repair.
E. Joint material eroding
F. Evidence of active seepage.

09-24-18 - Darren Gardell Signed by Steve Palmer

A. No emergency procedures.
B. Trash and debris on levee
C. Minor slope stability problem.
D. Erosion occurring on or near levee.
E. Existing animal burrows program needs to be improved.
F. Tilting and sliding that threatens structure integrity.
G. Ground erosion toward base.
H. Joint material deterioration.
I. Evidence of active seepage.
J. Pump station -NO maintenance and inspection records.

12-06-19 Erica Smithers

A. Minimally acceptable.
B. Excessive vegetation and trees too close to floodwall.
C. Dog feces thrown over wall.
D. Floodwall settled 3 inches in many locations.
E. Silicone within joints throughout floodwall failing.
F. Pumps inadequately maintained.
G. Sump pump overgrown with blackberry bushes.
H. A PLAN WILL BE DEVELOPED.

04-10-20 Erica Smithies IDENTICAL REPORT

07-22-20 Erica Smithies IDENTICAL REPORT

11-05-20 IDENTICAL REPORT

12-01 20 Erica Smithies

a. Floodwall settling and polyurethane sealant cracking.
b. Early signs of erosion Creekside of floodwall.

12-01-20 SOME REMEDIATION DONE

a. Weed abatement along floodwall, access points throughout flood project.
b. New generator installed.

c. Contractor has begun cleaning discharge channel, removing invasive trees.
d. Crews will utilize the basil treatment on bushes to mitigate any future issues.
e. Work will be completed in the spring when access is permitted for such work.

03-05-21 Mark Rincon --- No indication of who did the inspection. Hard to believe it is the Department Head.

A. Unwanted vegetation growth along levee embankment, blackberry bushes etc. ( Still no permit? )
B. Erosion Creekside of wall. Being addressed as part of CIP-R19-03. ( when ? )

07-07-2021

a. Floodwall settled 1.5 inches ( was 3 " in 2018 )
b. Small trees and bushes encroaching on floodwall. ( I guess basil treatment didn't work?)
c. Polyurethane sealant – seams falling apart in wall. ( Was supposed to be budgeted for 2021 so why hasn't it been done?)
d. Dog feces and yard clippings again dumped over wall. ( Did City notify Vineyard Valley Manager?)
e. Blackberry bushes returned near well pump.

Recommendations from 07-07-21 report

a. Public Works Engineer to obtain quote during 2021 budget to work on surface cracks in wall.
b. Staff will reach out to Vineyard Valley Management about dumping dog feces, fish carcasses and yard clippings over wall.
c. Continuous animal burrowing in place that includes the elimination of active burrowing and filling of the existing burrows. ( If this is true then why are there photographs of burrowing still actively taking place. )
d. Floo9d debris buildup at discharge channel from October 21st heavy rain. ( This is 9 months later )

09-14-22 Mark Rincon Ibarra

a. Polyurethane cracking in floodwall still happening. Engineer to obtain quotes within the 2022 construction season. ( This has gone on for year after year after year.)
b. Debris in discharge channel. Will be removed as part of RMA work. ( What is RMA)

02-14-23 Mark Rincon Ibarra - Taylor Hamilton

a. Gives an A to animal control. ( This despite continued photographing of holes from burrowing.)
b. Some brush and weed growth along floodwall.
c. Plywood, brush clippings, used cigar etc. being thrown over floodwall.
d. Wall is still offset.
e. Early erosion base of wall at 17 and 19 Los Robles. ( This erosion first mentioned in 2016)
f. Joint material deteriorating and cracking at MOST joints around floodwall.

My comments are bracketed. Pat Dell

June 25, 2023

To: Mayor Paul Dohring, Vice Mayor Eric Hall, Council members Chouteau, Hardy, and Summers. City Manager Anil Comello.

From: Pat Dell

I have sent my comments on the Hunter Development EIR to the Planning Commission previously so I will not repeat myself. I have concentrated my efforts in this letter on communicating with the City Council and City Manager on Affordable Housing, City fulfilling the FEMA requirements for maintenance and management of the components of the St. Helena Comprehensive Flood Control and River Restoration Project, safe evacuation in case of a natural disaster for Vineyard Valley residents as well as the persons who would be living in the Hunter development. The Planning Commission kicked the can down the road to you because they said it met the requirement from the state for affordable housing.

THIS IS NOT AN AFFORDABLE HOUSING PROJECT. It is a development of homes for above moderate-income people. The City is required to build only 66 units of above moderate-income houses in the 6th cycle which is 8 years. Are you going to allow Mr. Hunter to fill that entire requirement and deny other builders based on having fulfilled your RHNA requirement? No attention has been given to the inclusionary housing ordinance which is crucial. I have watched this City avoid, fail, drag its feet, do surveys ad nauseum and not do a thing except help Our Town St. Helena to build the only housing for low income and working people that has happened in the 23 years that I have lived here. The City did have an Affordable Housing Committee several years ago whose members were authorized to issue an RFP for Affordable Housing Developers to submit a plan for about 35 units for the Adams Street Property. The Committee received several excellent proposals, the PC liked all of them but the mayor at that time refused to have any of them presented. This is not a primary issue for any City Council member or City Manager or something would be happening. Our Town St. Helena has between 40 and 60 units of affordable housing in the pipeline. You own with no mortgage the entire Adams Street property, the railroad property, the Main Street property. I have not heard or read of any action on your part to build affordable housing on any of those properties. You should have a St. Helena Housing Agency with staff that understands housing and you should be developing an association with an affordable housing builder such as Burbank Housing who know how to get financing.

I have reviewed the FEMA requirements for the City in the LOMR. I have reviewed the inspections of the components of the flood control project from 2015 to the present time. This is attached as an addendum because it is three pages long. I am also attaching the FEMA language in the LOMR. The flood project was completed in 2011 and certified in 2012. It took until 2015 to start inspections. When they were begun there were no emergency procedures, no operations or inspection records present. No refresher training. That remained true in 2016. When reading this I felt sorry for the staff member doing the inspection and submitting the report. He was crying out for help and getting none. I have attached a full review to this report so I will only say that although the project was built to FEMA and ACOE standards the City was and still is negligent in the maintenance of the project.

My comments regarding safe evacuation from Vineyard Valley and the Hunter Project are based on my experience as well as the MASTER RESPONSE section of the EIR in the library. This is a response to comments submitted by people who are concerned about the project. The St. Helena Police Department has made a judgement call pertaining to evacuation based on an emergency drill September 20, 2021.

This was not an adequate drill and no one in the SHPD is a traffic engineer. First of all, it was not a surprise. We were all informed ahead of time. Secondly and most importantly, it only included half of the homes in Vineyard Valley. The residents living on the east side went out over the levy. There are 125 homes on the east side of VV The homes on the west side were told to go out on Pope Street. There are 115 homes on the west side of VV. These people did not have the experience of driving out over the levee. If the emergency is at night there would need to be lights and temporary barriers to prevent people from driving off the levee. If the emergency requires evacuation of the east side of St. Helena it will be bumper to bumper. You have Stonebridge apartments, Silverado Orchards and Vineyard Valley, all high-density communities all trying to get in line on Pope St. Not to mention the people on Star, Meadowcreek etc. who will also need to get out. This is not a simple evacuation exercise solution to a very serious problem. Apparently the SHFD and SHPD recognized the danger was great enough that it required some emergency accommodation. However, none of them are qualified to determine whether there will be damage to the levee by building an onramp for access. This is a disaster waiting to happen and you must deny the building of this project.

Make Mr. Hunter an offer he can't refuse and leave that property agriculture or a proper park for the east side of St. Helena.

Sincerely, Pat Dell

**Subject:** [External] Public Comment for May 1 Special City Council

Hi Cindy,

Just resending this comment below to make sure it is included in the May 1 Special meeting as a public comment. Thanks as always.

Ann

**Cindy,**

**This public comment is for the Hunter project meeting coming up. Please send to City Council, City Manager, Planning and Public Works Directors. Thank you very much. Ann**

**To: The City of St Helena - City Council, Planning Commission, City Manager, City Staff**

**Date: May 2023**

**We believe the decision to put new development in a flood-risk area that relies on the St Helena levee for flood protection is reckless and endangers people, property, and the financial security of the City and residents of St Helena who are fully liable for levee performance as stated in California AB 1898. *(Reference 1)***

**We ask the city to prepare a detailed analysis of the risk to the city of St Helena and its residents, and inform the public prior to any further action.**

**We strongly urge that the city negotiate with the State of California to reverse its refusal to accept liability for the levee *(Reference 1)* , since the State's public pressure *(Reference 2)* to approve the new development behind it places extensive and unnecessary risk on the taxpayers of St Helena.**

**----------**

Background:

If approved, the new development will fully rely on the City-owned levee for flood protection. Additionally, it will increase flood risk to the existing adjacent properties by replacing the open permeable acreage on the existing historic floodplain with hardscape and increased elevation (*Reference 5)*.

Concern for public safety and financial liability have been a long standing issue regarding new development in the residual risk zone behind the St Helena levee.

Citizens have diligently provided public comment with overwhelmingly opposition to any new development that depends on the levee for flood protection; in writing, in meetings with staff and councilmembers, and in person during city council and planning commission meetings.

In addition, local community groups representing a wide range of residents from across the City have worked together to present the inconsistencies, errors, code/zoning violations, safety issues and liability with the proposed development in a flood risk area along the Napa River that will be reliant on our levee for flood protection.

These concerns are only enhanced with climate change projections of continued, heightened weather events such as atmospheric rivers, bomb cyclones, and record-breaking storms worldwide. *(Reference 4)* In addition, severe scarring from recent wildfires on adjacent hillsides significantly increases runoff to the river and low-lying area. FEMA's LOMR to St Helena encourages local governments to re-assess flood risks under changing conditions. *(Reference 6))*

These conditions add even more pressure on the city's levee system and increase the likelihood of flood damage similar to the State-wide destruction to Levees, Dams, Bridges and Roads causing catastrophic loss of property and life. Just last month, the levee break near the city of Parajo caused widespread evacuations and left behind water soaked properties and displaced residents for months or years to come.

Yet, at the February 7, 2023 Planning Commission meeting which prompted hundreds of individual and community group letters and public comments providing valid documentation and proven legal opinions on issues such as zoning irregularities, flood risk concerns, unintended use of Measure A flood tax funds, and insufficient exit routes in a flood risk area, the Planning Commission approved the subdivision Tentative Map behind the levee.

Importantly, the explanation by city officials for moving forward with this ill-conceived project has centered around the State of California pressuring the City of St Helena to permit new housing on that site, regardless of the impact to St Helena. Yet, the State has refused to accept any liability for levee performance and subsequent damages (in Assembly Bill 1898) so the liability rests squarely on the shoulders of the people and the City of St Helena.

It is unacceptable to put the people of St Helena at such extreme risk. We refuse to accept liability unless the State takes on the liability for enforcing its excessive housing program which was strongly criticized by the CA State Auditor *(Reference 8)* and pressures the St Helena to make this reckless decision by threatening us with fines, legal action and loss of local control. *(Reference 2)*

**Summary of Critical Considerations:**

- The City of St Helena built the levee to reduce flood risk after catastrophic flooding occurred 3 times in 25 years to existing properties, not to put more people in harm's way. *Photo 1*
- The Measure A Flood Tax *(Reference 7*) was voted in by the people of Napa Co. to reduce flood risk for the existing Napa County population as of the date of the Measure A Ordinance 11/4/95

"None of the projects were intended to encourage population growth…" Section 2. G

Against the listed requirements, the proposed new development a) was not existing before the levee was built b) will get direct benefits and enable growth by taking advantage of reduced flood safety building requirements, and eliminating the requirement for properties to purchase FEMA flood insurance.

This is a direct misuse of Measure A tax funds and clearly violates voters' intent in adopting the Measure.

- The taxpayers of St Helena are wholly responsible for the operation, maintenance and performance of their levee. This responsibility, cost and liability extends into perpetuity, so St Helena taxpayers carry the costs and liability for the next 5, 50, 100, or 200 years plus, which financially burdens this generation and every future generation of St Helena residents with the liability for property damages and associated public safety.
- There is no Federal liability, because St Helena did not partner with the Federal Army Corps of Engineers in design and construction; it was done by private engineering and construction firms.
- There is no State liability. The city borrowed/received funding from the State of California. In providing that funding, the State required that the City take all liability, and the State be indemnified. Verbiage below:

State of California Assembly Bill 1898 (excerpts)

The People of the State of California do enact as follows:

(c) A county or local agency may receive the funds only if it

enters into an agreement with the department pursuant to which the city or local agency agrees to indemnify and hold and save harmless the state, its officers, agents, and employees for any and all liability for damages that may result from the project.

(d) For the purposes of this section, "liability for damages"

includes, but is not limited to, liability for damages relating to the construction or operation of the project or the failure of the project to operate as intended.

**Final Conclusion –**

**Because the proposed new development behind the levee:**

- **Will put new properties and people on a floodplain that has catastrophically flooded repeatedly,**
- **Will potentially flood adjacent properties when hardscape replaces permeable open space;**
- **Will rely solely on the St Helena levee for flood safety;**
- **Will render St Helena Residents fully liable for flood related damage or loss of life on the new development;**
- **Will burden generations of St Helenans into perpetuity with the full liability and costs as long as the development exists**

**We residents of St Helena-**

- **Believe that this is a reckless and unacceptable decision which significantly threatens our financial security, safety and community well-being.**
- **Refuse to be held financially liable for any and all damage, loss, injury or death incurred as a result of levee malfunction, failure or overtopping if new development behind the levee is approved without State assurances for liability.**
- **Insist that the City NOT move forward in any way on development without securing the State of California to reverse its refusal to accept liability *(Reference 1)* for damages relating to the levee, because the State has threatened[i] the city with the possibility of extreme fines, loss of local planning control and lawsuits to pressure St Helena to approve new development on the flood-risk zone behind the City owned levee.**
- **St Helena elected officials cannot in good faith serve the people of St Helena, by making a decision that jeopardizes the financial liability and risk to St Helenans, its holdings or its public safety. The State cannot remain indemnified by obliging a small local**

**community to assume all the risks and costs of State pressure to build in a flood risk area.**

City of St. Helena
1088 College Avenue
St.Helena, Ca 94574

Dear City Council,

I would like to address the Levee and its maintenance for the upcoming City Council Meeting of May 1, 2023. In the City's response in the FEIR, Levee. Staff Report 2/7/23 pg 26 of 3768.

- Whether the levee was constructed or inspected by the U.S. Army Corps of Engineers

City Response

The levee was designed and built by the City to meet U.S. Army Corps of Engineers standards. Numerous levees throughout the US are built by local agencies in the same; not all levees are built by the USACOE.

In a Memorandum for Record, date 11 Aug 2009, Subject: Site Visit Trip Report-St. Helena Flood Risk Management and Environmental Restoration Project-Project site visit 6 Aug 2009:

1. Purpose - This is to capture salient observations regarding the existing site conditions and construction activities, as well as to capture discussion points from the PDT's site visit with the City of St. Helena on 6

Aug 2009, with regard to the St. Helena Comprehensive Flood Protection Project.

2. Background - The City of St. Helena's Comprehensive Flood Protection Project has been authorized under WRDA2007. Using its own funds (State Revolving Funds), the City began to construct the project in May 2009. This was the first Corps site visit for this project. The PDT intended to observe the "Without-Project" site conditions as much as possible, and observe the on-going construction activities.

3. Site Observation a. They have already almost completed the levee and have begun work on constructing Floodplain Terrace B, the detention pond, and ground densification for the use of the flood wall.

Discussion d. The PM reminded them that this is still the City's project, it is not a Corps-sponsered project until we determine Federal interest, feasibility, and execute the appropriate agreements.

5. Conclusion - Based on the site visit and the likelihood that the current project as it is being constructed will NOT meet Corps standards. I suggest we inform HQUSACE as soon as practical.

In a letter dated October 15, 2009, Department of the Army, Laurence M. Farrell, Lieutenant Colonel, U.S.Army Commanding, addressed to Mary Neilan, City Manager states:

I would like to caution you that until the Assistant Secretary of the Army for Civil Works approves the Feasibility Report and determines that the work the City has performed is integral to the project, **the City continues to bear full financial liability for its efforts".**

Additionally, "A). During the course of the site visit and cursory review of the City's planning documentation, the Corps identified several concerns with the City's project as it is designed and being constructed. Some of these issues include the structural stability of the floodwall, vegetation within your levee and floodwall system, future operation and maintenance of the flood wall, and potential flooding impact downstream."

The levee and flood wall do not meet Corps standards. Additionally, the Corps makes it very clear, the City “continues to bear full financial liability for its efforts”.

The levee has been an ongoing issue and continues to create concern. These concerns are not only the stability of the levee, but the financial liability which will be put on city taxpayers. Our City Council needs to act responsibly and in the best interest of its residents.

I ask that you reject the EIR and not use state requirements for affordable housing to override the lack of mitigation. To say this project will contain affordable housing is a falsehood.

Thank you,

Maria Villegas, Chairperson

St. Helena Citizens for a Sustainable Future

# Beyond the Double Veto: Housing Plans as Preemptive Intergovernmental Compacts

CHRISTOPHER S. ELMENDORF[†]

*The problem of local-government barriers to housing supply is finally enjoying its moment in the sun. For decades, the states did little to remedy this problem and arguably they made it worse. But spurred by a rising Yes in My Backyard (YIMBY) movement, state legislatures are now trying to make local governments plan for more housing, allow greater density in existing residential zones, and follow their own rules when reviewing development applications. This Article describes and takes stock of the new state housing initiatives, relating them to preexisting Northeastern and West Coast approaches to the housing-supply problem; to the legal-academic literature on land use; and, going a bit further afield, to the federal government's efforts to protect the voting rights of African Americans in the Jim Crow South. Of particular interest, we will see that in California, ground zero for the housing crisis, the general plan is evolving into something that resembles less a traditional land-use plan than a preemptive and self-executing intergovernmental compact for development permitting, one which supersedes other local law at least until the local government has produced its quota of housing for the planning cycle. The parties to the compact are the state, acting through its housing agency, and the local government in whose territory the housing would be built. I argue that this general approach holds real promise as a way of overcoming local barriers to housing supply, particularly in a world—our world—where there is little political consensus about the appropriate balance between local and state control over land use, or about what constitutes an illegitimate local barrier. The main weakness of the emerging California model is that the state framework does little to change the local political dynamics that caused the housing crisis in the first place. To remedy this shortcoming, I propose some modest extensions of the model, which would give relatively pro-housing factions in city politics more leverage and facilitate regional housing deals.*

## INTRODUCTION

In 1971, Fred Bosselman and David Callies famously described a "quiet revolution" in land-use law.[1] Prodded by the nascent environmental movement, states were fettering local governments with new planning mandates, new requirements for public participation, and new procedures for state-level review of local plans. In some instances, states seemed poised to preempt local land-use authority entirely.

Looking back twenty years later, Callies remarked that the "'ancient regime' of local land use controls" had been "metamorphosed rather than . . . overthrown."[2] The quiet revolution had culminated not in state preemption, but rather in the local embrace, or cooptation, of sensitive-lands and growth-control missions, and an overlay of environmental review and state-permitting requirements[3]—what economist William Fischel dubbed "the double veto."[4] Development opponents who had lost a local battle could now use state law and state tribunals to take another whack.

Callies expressed concern that the "plethora of . . . requirements" might simply "choke off development, the good with the bad."[5] His warning proved prescient. Anti-development interests used the new regulatory frameworks to slow housing production on urban and suburban lands, not just in remote natural areas.[6] In the coastal states that led the "quiet revolution," the supply of new housing was throttled, with devasting equity, economic, and environmental repercussions.[7]

But something new is afoot. California, posterchild for the housing crisis, is laying groundwork to make heretofore restrictive local governments allow as much new housing as "healthy housing markets" in "comparable regions of the nation" would produce.[8] Though a number of states have set quantitative targets for the production of subsidized, income-restricted housing units, and a few states have instructed local governments to accommodate projected population growth with new housing at a variety of price points, California will be the first to assign market-rate housing quotas shaped by a nationally normed standard.[9]

These quotas are to be accommodated by local governments through the "housing elements" of their general plans.[10] Belying its nominal status, the California housing element is transmuting into something that resembles less a traditional land-use plan than a preemptive and self-executing intergovernmental compact for development permitting. The parties to the agreement are the state, acting through its housing agency, and the local government, whose general plan the housing element revises. Developers may apply for permits on the authority of the housing element itself, irrespective of contrary local ordinances, at least until the jurisdiction has produced its quota of housing for the planning cycle. Local governments must provide advance notice to the state before amending their housing elements, and the state agency may respond by decertifying the housing element, exposing the local government to financial and regulatory sanctions.

Beyond the planning mandates, state legislators are also trying more directly to preempt local restrictions on housing density.[11] Pro-housing lawmakers have won national media acclaim for bills to upzone land near transit stations, and to authorize additional dwelling units on parcels locally zoned for single-family homes.[12]

This Article describes and takes stock of the new state housing initiatives, relating them to preexisting Northeastern and West Coast approaches to the housing-supply problem; to the legal-academic literature on land use; and, going a bit further afield, to the federal government's efforts to protect the voting rights of African Americans in the Jim Crow South. I shall argue that statutes that directly preempt local restrictions on housing of certain types or densities are prone to failure, but that the emerging California model of the plan as a preemptive intergovernmental compact for development permitting holds some promise as a political solution to the housing-supply problem.

The underlying difficulty is this: local government have, by tradition, very broad authority over land use and housing development, which has come to be exercised through discretionary permitting regimes.[13] Local governments also have better information than the state about local conditions, preferences, and practices. Under these circumstances, state mandates requiring local governments to allow certain housing types or densities are fragile and easily vitiated. If the state tells localities to allow accessory dwelling units (ADU) on parcels zoned for single family homes, for example, and the localities don't want them, the local governments can bring the localities' zoning into compliance while using discretionary design review to saddle ADU projects with expensive, ad hoc, and unpredictable conditions. Local governments can also use their residual regulatory authority to enact more systematic barriers to ADUs, such as costly building code amendments, setback or parking requirements, fees, layers

Agenda Item #5.1.

of internal appeals, and so on. The history of California's ADU statute illustrates this dynamic all too vividly.[14]

If the state is to intervene effectively under such circumstances, it is not enough to make discrete, liberalizing changes to the local regulatory baseline for housing development. The state also needs some way to block the retrogressive stratagems of local governments, including bad-faith exercises of permitting discretion.

The emerging California model of the general plan positions the state to do precisely this—and to do it in a manner that is politically discreet and responsive to local conditions, and thus suited to a world (our world) in which there is no general political consensus about the proper balance between state and local control over land use, or about what constitutes an illegitimate barrier to housing supply.[15] The baseline change occurs not by state legislative command, but through the local government's articulation in its housing element of appropriate densities for developable parcels and a schedule of actions to remove development constraints. These local commitments are made under pressure from the state, as the state determines housing need and penalizes local governments that do not adopt a new, "substantially compliant" housing element every eight years. But the state's hand is not particularly visible, as state-local negotiations over the housing element play out in a low-limelight administrative setting, rather than in the legislative arena.

The housing element's *de jure* status as a component of the local government's own general plan, and the obscure process through which state approval is obtained, should help state legislators parry any accusation that they have, through the housing-element framework, imposed a statewide zoning map and development code on local governments. Yet, to the extent that housing elements are self-executing and supersede contrary local requirements as a matter of state law, the aggregate set of housing elements has the potential to function much like a statewide zoning and development code, controlling permitting by local governments until such time as the locality has produced its quota of housing for the cycle.

The new regulatory baseline defined by a housing element is substantially, but not completely, locked in. A local government may amend its housing element without the state agency's consent,[16] but doing so is costly. The locality must provide advance notice and a justification, and the agency may respond by decertifying the housing element, exposing the local government to fiscal and possibly regulatory sanctions. This "soft" lock-in mechanism is just about right for a world lacking political consensus about the appropriate balance between local and state control over land use. It discourages local governments from circumventing the regulatory baseline, while leaving open a path for the most

Page 117 of 4422

dogged and influential anti-housing jurisdictions to get what they want without bringing down the whole regime.

All in all, the emerging California framework positions a pro-housing governor, acting through the state housing agency, to push very hard against local "NIMBYism" when the political stars align—and also to propitiate locally powerful interests when necessary.[17]

One should not be too Pollyannaish though. The California model is very much a work in progress. Its full realization may require changes to the legal standard for a "substantially compliant" housing element,[18] as well as stronger mechanisms for developers to obtain project-level exemptions from local standards or procedures that hinder plan-compliant projects. And then there is the matter of setting housing targets. The traditional methods have rewarded exclusionary locales with small quotas,[19] and while California's new "healthy housing markets" approach sounds promising, it leaves much to be desired in the statutory particulars. Finally, even if California develops sensible housing targets, local governments with superior information about local practices, conditions, and political tolerances may still manage to bamboozle or cow the state agency into accepting dysfunctional housing elements.

This highlights the California model's most fundamental weakness: the state-law framework positions an agency to pressure local governments from above, but it does not generate bottom-up political incentives for local officials to heed the interests of the outsiders (such as prospective residents) they now ignore.[20] I shall argue, however, that with a few modest tweaks, the California model could also be used to redistribute political authority and policymaking discretion at the municipal level toward relatively pro-housing actors—from the voters to the city council, and from the city council to the mayor.[21] The extensions I propose would also facilitate the sort of citywide and regional housing bargains for which Professors Rick Hills and David Schleicher have advocated.[22] In sum, the California framework could easily evolve into a source of bottom-up as well as top-down attacks on local barriers to new housing.

The balance of this Article unfolds as follows. Part I furnishes the motivation, briefly describing the transformation in housing supply and prices that has occurred over the last fifty years, and the attendant social, economic and environmental consequences. Part II provides an overview of state frameworks

17. The acronym NIMBY stands for Not In My Backyard, and is an epithet used to describe anti-development activists who parochially resist changes to land use in their neighborhoods.

18. The reforms previewed in this paragraph are fleshed out in Part IV.

19. *See infra* Subpart II.B.2.

20. The outsiders, of course, are the prospective residents who would benefit from expansion of the housing supply.

21. In California, so-called "general law" cities lack a separately elected mayor. *See* CAL GOV'T CODE §§ 36501, 34851 (West 2019). Section 36501 provides that general law cities shall be governed by a city council, a city clerk, a city treasurer, a police chief, a fire chief and any subordinate officers or employees as required by law. Section 34851 authorizes a city-manager form of government for general-law cities. In these cities, the reallocation of authority could run to the city manager rather than to the mayor.

22. *See infra* Subpart IV.B.

that developed from the 1970s to the 1990s for superintending local regulation of housing supply and the critiques these frameworks engendered. Part III describes notable recent reforms to the state frameworks, discussing California's evolution and flagging examples from other states. Part IV offers a tentative defense of planning for housing through preemptive intergovernmental compacts and explains how the California model could be extended to put bottom-up as well as top-down pressure on local barriers to housing supply. I compare the problem of overcoming local barriers to housing supply to the problem the federal government faced in the 1960s when it undertook to dismantle Jim Crow, and I argue that the emerging California model of the plan can be understood as an adaptation of the regulatory paradigm of the federal Voting Rights Act for a structurally similar problem whose solutions are not (yet) the object of a sustaining consensus in the body politic.

## I. MOTIVATION: BOOMS WITHOUT BOOMTOWNS

### A. THE STYLIZED FACTS

For nearly all of American history, economic development unfolded more or less as follows.[23] A new technology or discovery would make certain places suddenly valuable. Entrepreneurs would locate to these high-value places and bid up wages, causing workers to flood in. A construction boom would ensue, furnishing housing to workers who had relocated from other parts of the country. Speculative bubbles or a temporary imbalance between supply and demand occasionally drove the price of housing above the cost of construction, but these fluctuations were temporary; soon enough, the price of housing would revert to construction cost.

This familiar pattern has broken down. The major cities of the West Coast and the Northeast have experienced a massive, decades-long economic shock accompanied by meager population growth and little expansion of the housing stock.[24] The population influx that has occurred in these economically fortunate places consists mostly of high earners.[25] Although wages for low-skilled labor have risen too,[26] housing has become so expensive that it's no longer worthwhile for low-skill workers to emigrate from the low-wage regions.[27]

---

27. *See* Schleicher, *supra* note 23, at 82–83, 115–16, and sources cited therein.

Proving the point that the escalation of housing prices is not a nationally uniform phenomenon, economists Edward Glaeser and Joseph Gyourko estimate that as of 1985, about 6% of metropolitan regions had a median home price more than 25% above the cost of production.[28] By 2013, the share of metro areas in the high-cost bin had nearly doubled to 10%, still only a modest number.[29] Yet the small subset of metro areas afflicted by high housing prices is very economically significant. Los Angeles, San Francisco, New York, Seattle, the District of Columbia, Boston, and Denver are all in the high-cost bucket.[30] These regions have barely expanded their housing supply, even as the affordable metropolises of the South and Southwest—cities such as Atlanta, Charleston, Orlando, Houston, Phoenix, and Las Vegas—issued building permits between 2000 and 2013 totaling 30%–60% of their year-2000 housing stock.[31]

Geomorphology is an obvious difference between the high-cost coastal cities and their still-affordable counterparts in the South and Southwest, but regulation rather than "oceans and slopes" seems to be the principal housing-supply barrier in high-cost regions.[32] In a careful study of Manhattan, Glaeser and co-authors found that the cost of adding a new floor to an existing building, while very expensive, was only about half of what the additional living space would sell for.[33]

The scholarly consensus holds that regulatory barriers to new housing have become much more stringent in the high-cost regions since the late 1960s and early 1970s.[34] Exactly how much more stringent is hard to say, because it is difficult to quantify regional and over-time variation in the intensity of land-use regulation. Local regulations can take an almost innumerable number of forms—height limits, density and lot-size limits, setback requirements, design guidelines, neighbor notification requirements, development fees and in-kind exactions, historical preservation, price restrictions, open space preservation, environmental review requirements, prevailing-wage and local-workface labor requirements, and so forth.[35]

ECON. 265, 266 (2009) (describing "remarkable variety" and "astonish[ing] vague[ness]" of land-use regulations uncovered through the authors' in-depth investigation of Boston-area suburbs).

Agenda Item #5.1.

Moreover, while the original theory of zoning presupposed that conforming projects would be approved as of right, development permitting in the high-cost regions has become thoroughly discretionary, requiring project-by-project negotiations over design, scale, public benefits, affordable housing set asides, and so much more.[36] Local governments and neighborhood NIMBYs use this discretion to kill projects they dislike, and though some projects make it through, the delays and uncertainties can be very costly.[37] The actual intensity of land-use regulation in a world of discretionary permitting is a function not just of the rules that exist on paper; rather, it is the interactive product of rules, interest groups, and the preferences of local administrators.[38]

Economists have tried to quantify and compare the stringency of land-use regulation by surveying nationally representative samples of local public officials, and aggregating the results into indices.[39] The general finding, unsurprisingly, is that metro areas with stricter regulation also have higher housing prices.[40] In theory, this could reflect the internalization of aesthetic and congestion externalities from new development, but studies that attempt to quantify benefits as well as costs have largely found that the costs of development restrictions far outweigh the benefits.[41]

There is no national time-series dataset on local land use regulation, but scholars have assembled detailed time series for California, the Boston area, and a few other locales. Difference-in-difference studies using these data corroborate the national, cross-sectional analyses: the adoption of most types of development restrictions reduces the number of housing units permitted in the next time period, relative to "control" jurisdictions that did not enact such restrictions.[42] The over-time studies also confirm that in expensive coastal regions, there has been a dramatic upswing in the number and variety of local land-use regulations.[43]

There is, however, one important commonality between the high-cost metro areas of the West and Northeast, and the low-cost metros of the South and

Southwest: density stasis in extant residential neighborhoods.[44] Prior to the Great Depression, it was common for single-family homes in growing regions to be torn down and replaced by small apartment buildings.[45] Yet when housing development picked up again after World War II, the old pattern of residential intensification did not materialize.[46] Whether due to the spread of Euclidian zoning,[47] the interstate highway system,[48] or the increasing popularity of private covenants,[49] housing development since the 1940s and especially post-1970 has occurred mostly through building on outlying "greenfields" and, to a lesser extent, on repurposed industrial "brownfields."[50] The main observable difference between the expensive coastal regions and their affordable inland counterparts is that less raw land has been converted from non-housing uses in the former areas.

## B. CAUSES

Why did some jurisdictions throw up the barricades to new housing while others continued to welcome development, at least in previously non-residential areas? A standard view, popularized by economist William Fischel in his 2001 book, *The Homevoter Hypothesis*, places the blame on incumbent homeowners.[51] Risk averse, and deeply concerned about the value of their most important asset (their home), suburban homeowners turn out in droves to oppose any development that might change the character of the neighborhood. Local governments end up functioning as *de facto* homeowner cartels. There are some puzzles though. No one suburb can exercise much power over the overall supply (and hence, price) of housing in a metropolitan region composed of numerous suburbs. And why would suburban homevoter cartels block housing starting in the 1970s, but not beforehand, and why in the Northeast and the West, but not in the South?

Fischel posits that general price inflation, and the environmental movement, explain the 1970s inflection point.[52] Inflation made homes into more

economically important assets.[53] The environmental movement engendered local open-space and "small is beautiful" initiatives, particularly in affluent, topographically interesting communities, which raised the real price of existing homes.[54] This triggered a vicious spiral, as homeowners observing rising prices became more focused on protecting the value of their ever-more-important asset.[55] Corroborating Fischel's hypothesis, Saiz finds that metro areas whose natural geography most constrains housing production—and which, therefore, "naturally" experience larger housing-price runups during local economic expansions—are also the metro areas with the tightest regulatory constraints.[56] The small size of towns in the Northeast, and the availability of the ballot initiative in the West, made local governments in these areas particular easy for homeowners to control.[57]

Empirically, the enactment of growth controls in a given suburb makes it more likely that nearby suburbs will do the same.[58] Thus do the decentralized decisions of many politically independent subdivisions cumulate into region-wide barriers to new housing. Development is pushed outward, into rural exurbs where owners of undeveloped land tend to have more political power,[59] or inward, into central cities, which were long thought to be controlled by "growth machine" business coalitions.[60]

If growth machines truly dominated urban politics, the deflection of development pressure from the suburbs might not constrain the regional supply of housing very much. But in economically productive coastal cities, the growth machine ran out of steam.[61] In 1960, Los Angeles was zoned for four times its then-current population.[62] Today, it's zoned for the number of people it has.[63] Using parcel-level data from New York, Vicki Been and colleagues find that the probability of a parcel being upzoned for higher-density development is

63. *Id.* More precisely, it has been zoned for 92% of the number of people that it has. *Id.*

inversely correlated with the proportion of owner-occupied parcels nearby.[64] Homevoters are clearly exercising sway in the central city, not just in homogeneous suburbs.[65]

Anti-gentrification activists have also become a fixture of urban politics in expensive cities.[66] They are using discretionary permitting regimes and state environmental review laws as leverage to demand expensive "community benefit" concessions from developers,[67] or to block projects outright. The costs, delays, and uncertainties involved in negotiating a community benefit agreement constitute a large, *de facto* tax on new housing development in the urban core.

One might think that renters, who comprise a large share of the voting-eligible population in many cities, would be stalwart allies of developers. But renters vote at much lower rates than homeowners,[68] and though renters are generally more pro-development than homeowners,[69] renters in expensive cities have classic NIMBY preferences. They oppose projects in their neighborhood, even though they would favor citywide measures to increase housing development.[70] Alas, their neighborhood-level preferences are likely to be more consequential for new development (or its absence), since upzoning and project-approval decisions tend to be made on a neighborhood-by-neighborhood basis, with councilmembers deferring to one another on projects in their districts.[71]

71. Schleicher, *supra* note 23, at 85.

## C. CONSEQUENCES

Barriers to housing development in the expensive coastal metropolises have at least three types of deleterious impacts: they exacerbate socioeconomic inequality; they induce pollution, particularly greenhouse gas emissions; and they undermine national economic welfare.

### *1. Inequality*

The escalating price of housing in economically productive coastal regions has made incumbent homeowners rich.[72] One study finds that returns on housing investments account for nearly all of the much-discussed increase in capital's share of national income since 1970.[73] Other studies show that land-use restrictions exacerbate segregation within metropolitan regions.[74]

There are also serious consequences for socioeconomic mobility across generations. Using income-tax microdata, Raj Chetty and co-authors have shown that intergenerational mobility in the United States varies greatly with geography.[75] Some locales "in the United States have relative mobility comparable to the highest mobility countries in the world, such as Canada and Denmark, while others have lower levels of mobility than any developed country for which data are available."[76] Many of the high-opportunity communities are found in the expensive metropolitan areas.[77] If more poor families could afford to emigrate from the South and the declining regions of the Midwest, more poor children would reach the middle class.

---

72. *See, e.g.*, Glaeser & Gyourko, *supra* note 28, at 22; David Albouy & Mike Zabek, *Housing Inequality* (Nat'l Bureau of Econ. Research, Working Paper No. 21916, 2016) (documenting increase in housing-consumption inequality since 1970 and showing that it is mostly due to location-specific changes in dwelling-unit value, rather than more dispersion in the size and other observable characteristics of dwelling units consumed by the rich and the poor).

73. *See* Matthew Rognlie, *Deciphering the Fall and Rise in the Net Capital Share: Accumulation or Scarcity?*, BROOKINGS PAPERS ECON. ACTIVITY, Spring 2015, at 1, 3. To be sure, a more liberal regime of land use in expensive coastal cities would not necessarily reduce returns to capital. Liberalization would probably reduce the value of the existing housing stock, but increase the value of land.

74. Michael C. Lens & Paavo Monkkonen, *Do Strict Land Use Regulations Make Metropolitan Areas More Segregated by Income?*, 82 J. AM. PLAN. ASS'N 6, 6 (2016) (showing strong correlation between land use regulation and income segregation across metro areas); Jessica Trounstine, The Geography of Inequality: How Land Use Regulation Produces Segregation and Polarization 2 (July 2018) (unpublished working paper) (on file with author) (showing that restrictive land use policies exacerbate racial segregation).

75. Raj Chetty & Nathaniel Hendren, *The Impacts of Neighborhoods on Intergenerational Mobility II: County-Level Estimates*, 133 Q. J. ECON. 1163, 1164 (2018); Raj Chetty et al., *Where is the Land of Opportunity? The Geography of Intergenerational Mobility in the United States*, 129 Q.J. ECONOMICS 1553, 1619 (2014).

76. Raj Chetty et al., *supra* note 75, at 1556. This is not just the byproduct of chance variation in the distribution of, say, "good families" across localities. Comparing siblings who moved to high-mobility zones at different ages and examining the subset of people who were displaced by adverse economic shocks, it is estimated that one-half to two-thirds of the geographic variation is causal. 77. Arthur Acolin & Susan Wachter, *Opportunity and Housing Access*, 19 CITYSCAPE 135, 136 (2017).

Agenda Item #5.1.

### 2. *Environment*

Regulatory barriers to housing production in coastal cities displace growth to regions with less temperate climates and more autocentric commuting patterns, resulting in greater greenhouse gas emissions.[78] Americans who move to opportunity nowadays are mostly moving to the Atlantas, Houstons, and Phoenixes of the world, not to the mild coastal climes of Los Angeles, San Francisco, Portland, and Seattle.[79] Within metro areas, development restrictions in city cores and inner suburbs push growth to outlying rural areas, gobbling up land that may have value as natural habitat or parkland, and relegating the new homeowners to greenhouse-gas-intensive commutes.[80]

California is famous in environmental circles for its ambitious greenhouse-gas emission targets.[81] So far, the state is making impressive progress—except in the transportation sector.[82] California has little hope of meeting its 2030 and 2040 targets without a huge reduction in transportation emissions, and this is unlikely to be achieved unless urban and suburban communities start accommodating a lot of new, higher-density housing, particularly near transit stations.[83]

### 3. *National Economic Welfare*

As David Schleicher and others have emphasized, barriers to new housing in economically successful metro areas affect national economic welfare.[84] They deprive would-be residents of the "agglomeration" benefits of dense labor markets, where stiff competition among firms for workers raises wages, where workers have insurance (in the form of fallback job options) in the event that they prove to be a bad fit with one employer, and where innovation is nurtured by the everyday exchanges that occur when people live and work close to others

Agenda Item #5.1.

who are similarly engaged.[85] Schleicher also observes that mobility barriers make it harder for the Federal Reserve Bank to establish sensible monetary policies.[86] A lax monetary policy, calibrated to regions of the United States that have suffered negative shocks, would cause inflation in the thriving regions, whereas a tighter policy suited to the successful regions would perpetuate unemployment in other areas.

Economists have tried to quantify the national-welfare losses from underproduction of housing in expensive coastal markets.[87] These efforts are model-dependent and rest on strong assumptions, but by most estimates, GDP would be at least a couple of percentage points higher if housing supply could expand to the "natural" equilibrium point where price equals the average (non-regulatory) cost of production.[88]

## II. HOW THE EXPENSIVE STATES HAVE TRIED (?) TO MAKE HOUSING MORE AFFORDABLE

State efforts to check unduly restrictive zoning in the now-expensive coastal metropolises got underway in the late 1960s and 1970s, around the same time that housing prices in these areas began to separate from prices elsewhere in the nation. Though each state followed its own path, if one squints a bit, one can discern two basic models. I will call these the Northeastern Model and the West Coast Model, after the regions where each predominates. California, Oregon, and Washington (as well as Florida) follow the West Coast Model, while the Northeastern Model is found in New Jersey, Massachusetts, Connecticut, Rhode Island, and Illinois.

The Northeastern Model treats the affordability/housing supply problem as essentially about suburban regulatory barriers to subsidized, income-restricted housing. The primary goal is to get each local government to accommodate its "fair share" of low-income housing, and the primary tool is the "builder's remedy," a judicial or administrative proceeding whereby developers of housing projects with a large proportion of income-restricted units may obtain exemptions from local regulations.

The West Coast Model treats the problem instead as one of local regulatory barriers to producing enough housing to accommodate projected household growth across all income categories. Local governments are required to enact and periodically update a comprehensive plan or "housing element" that

85. Schleicher, *supra* note 23, at 102. There is also some evidence that people underestimate losses to their own welfare from long commutes. *See* Alois Stutzer & Bruno S. Frey, *Stress that Doesn't Pay: The Commuting Paradox*, 110 SCANDINAVIAN J. ECON. 339, 340 (2008). Causal claims about this alleged cognitive bias are a bit suspect, since researchers have not been able to randomly assign commutes to workers and compare workers' projected well-being with their realized well-being. But whether or not they undervalue time lost to commuting, buyers and renters in expensive coastal markets are clearly willing to pay big premiums for housing near jobs and transit—if only the market would provide it.

86. Schleicher, *supra* note 23, at 88–96.

87. *See* Glaeser & Gyourko, *supra* note 37 (reviewing literature).

88. *Id.* at 24 fig.4.

Agenda Item #5.1.

explains how the jurisdiction will accommodate its share of state-projected population growth. These plans are subject to review and approval by a state agency. Localities without a compliant plan may lose access to certain funding streams, but traditionally, they have not been exposed to strong builders' remedies.

As we will see, there has been some cross-fertilization between the Northeastern and West Coast states. For example, housing need determinations in California are made in a loosely similar way to housing need determinations in New Jersey, except that California assesses need for market-rate as well as subsidized housing. And, echoing the builder's remedy of the Northeastern Model, California has authorized developers of affordable housing to bypass local zoning rules if the local government lacks a substantially compliant housing element. Conversely, most Northeastern Model states now immunize local governments from the builder's remedy if the locality submits its affordable-housing plan to a state agency and the agency approves it. This is analogous to plan-review under the West Coast Model, except review in the Northeastern Model states only addresses income-restricted housing.

The Northeastern Model and West Coast Model are not the only ways in which states have acted to accommodate more housing, denser housing, or more below-market-rate units. A few states have created incentive programs to encourage denser housing near mass transit, and many more provide for tax abatements or tax increment financing to encourage redevelopment of deteriorating areas. I focus here on the Northeastern and West Coast Models, however, because they capture the principal means by which parent states of expensive local governments have undertaken to regulate locally erected barriers to new housing. As such, these models are the precursors and reference points for the spate of "Yes In My Backyard" housing bills now making their way through the statehouses, the subject of the next Part.

## A. THE NORTHEASTERN MODEL: BUILDER'S REMEDY, SAFE HARBORS, AND INDIFFERENCE TO MARKET-RATE HOUSING

### *1. The Framework*

The Northeastern Model is a legacy of the civil rights movement. Cities in the 1970s were in disarray. White people with means had fled to the suburbs and were using large-lot zoning and other exclusionary tactics to keep poor people and minorities from following behind them.[89] Civil rights activists demanded state intervention to make the "tight little islands" of suburbia accept their fair share of low-income housing.[90] The aim was to dismantle concentrated urban poverty and racial isolation, giving poor black families in the central cities

89. *See generally* ANTHONY DOWNS, OPENING UP THE SUBURBS: AN URBAN STRATEGY FOR AMERICA (1973).

90. *See* Lawrence Gene Sager, *Tight Little Islands: Exclusionary Zoning, Equal Protection, and the Indigent*, 21 STAN. L. REV. 767 (1969).

Agenda Item #5.1.

access via housing to the good schools and increasingly bountiful employment opportunities of the suburbs.[91]

New Jersey's courts in the *Mt. Laurel* line of cases famously converted this civil rights demand into state-constitutional doctrine.[92] In Massachusetts, Connecticut, Rhode Island, and Illinois, the legislature answered the call.[93] But all of these states eventually settled on a similar strategy for opening up the suburbs. A state-level actor—the legislature, an administrative agency, or the courts—sets a target for the number of "below-market rate" (BMR) dwelling units in the territory of each local government.[94] In New Jersey, BMR quotas emerge from a complicated and contentious process of periodically determining regional "needs" and then jurisdiction-specific "fair shares,"[95] whereas Massachusetts, Rhode Island, Connecticut, and Illinois have simply declared that 10% of the housing stock of each locality should consist of BMR units.[96] (BMR units are subject to deed restrictions permitting them to be sold or rented only to persons who earn no more than a defined share of the Area Median Income, and at restricted prices.[97])

93. On the history of the Massachusetts framework, see Sharon Perlman Krefetz, *The Impact and Evolution of the Massachusetts Comprehensive Permit and Zoning Appeals Act: Thirty Years of Experience with a State Legislative Effort to Overcome Exclusionary Zoning*, 22 W. NEW ENG. L. REV. 381, 384–89 (2001). Regarding Connecticut, see Robert D. Carroll, Note, *Connecticut Retrenches: A Proposal to Save the Affordable Housing Appeals Procedure*, 110 YALE L.J. 1247, 1253–55 (2001). The Illinois framework, which dates to 2003, is summarized in ILL. HOUS. DEV. AUTH., AFFORDABLE HOUSING PLANNING AND APPEAL ACT: 2013 NON-EXEMPT LOCAL GOVERNMENT HANDBOOK (rev. Jan. 7, 2014), [hereinafter ILL. HANDBOOK], https://www.ihda.org/wp-content/uploads/2016/03/Final2013AHPAANELGHandbook.pdf. Regarding Rhode Island, whose framework dates to 1991, see Town of Burrillville v. Pascoag Apartment Assocs., LLC, 950 A.2d 435, 439–40 (R.I. 2008).

94. Rachel G. Bratt & Abigail Vladeck, *Addressing Restrictive Zoning for Affordable Housing: Experiences in Four States*, 24 HOUSING POL'Y DEBATE 594, 596 (2014).

95. The state projects population growth in each of six regions, estimates the share of growth likely to consist of low- and moderate-income people, adds to this the number of low- and moderate-income households in the region who currently lack subsidized housing or inhabit substandard housing, and adjusts for projected demolitions and conversions of existing housing units. Having so determined each region's need, the state allocates a share of it to each political subdivision within the region, weighing the amount of undeveloped land in the subdivision, the characteristics of its population, and the quantity of BMR housing it has produced in the past. *See In re* Declaratory Judgment Actions Filed by Various Municipalities, 152 A.3d 915 (N.J. 2017) (instructing lower courts on housing-need calculation); Roderick M. Hills, Jr., *Saving* Mount Laurel?, 40 FORDHAM URB. L.J. 1611, 1619–23 (2013) (discussing controversy).

96. *See* Sam Stonefield, *Affordable Housing in Suburbia: The Importance but Limited Power and Effectiveness of the State Override Tool*, 22 W. NEW ENG. L. REV. 323, 339 (2001). Massachusetts has not sidestepped it entirely, however, in those jurisdictions below the 10%-of-housing-stock threshold that seek an exemption from the builder's remedy (on which, see *infra* notes 96–99 and accompanying text) must submit an affordable housing plan tied to projected population growth in various income categories. *See* MASS. DEP'T OF HOUS. & CMTY. DEV., G.L. C.40B COMPREHENSIVE PERMIT PROJECTS: SUBSIDIZED HOUSING INVENTORY II-8–II-10 (2014), https://www.mass.gov/files/documents/2017/10/10/guidecomprehensivepermit.pdf.

97. Bratt & Vladeck, *supra* note 94, at 598 (comparing BMR housing definition in several states).

Agenda Item #5.1.

The second feature of the Northeastern Model is the so-called builder's remedy. If a local government denies a project with a substantial fraction of BMR units, typically 20–25%,[98] the developer may appeal to a state tribunal and obtain an exemption from otherwise-applicable local ordinances.[99] In these proceedings, the burden of proof is on the local government to show that any local interests adversely affected by the project outweigh the regional or statewide need for BMR units.[100] To prevent local governments from killing BMR projects with delays, Massachusetts and Rhode Island deem qualifying projects approved as a matter of law if the local government fails to act on the permit application within a brief window of time.[101] However, only nonprofit or limited-profit developers are entitled to speedy permitting, which limits the disruptive potential of the "deemed approved" proviso.[102]

The final component of the Northeastern Model is a safe harbor. Local governments that have met their BMR target, or that have received state approval of their BMR housing plan, are immune from the builder's remedy.[103]

---

98. *See, e.g.*, 45 R.I. GEN. LAWS ANN. § 45-53-4(a) (2019) (25%); *In re* Adoption of N.J.A.C. 5:96 & 5:97, 6 A.3d 445, 463 (N.J. Super. Ct. App. Div. 2010), *aff'd as modified In re* Adoption of N.J.A.C. 5:96 & 5:97, 74 A.3d 893 (N.J. 2013) ("[A] 20% set-aside requirement has been considered the norm in the administration of the *Mount Laurel* doctrine."); Stuborn Ltd. P'ship v. Barnstable Bd. Of Appeals, Decision on Jurisdiction, No. 98–01, 1999 WL 34782799, at *6–*7 (Mass. Hous. Appeals Comm., Mar. 5, 1999) (25%).

99. These proceedings take place before an administrative tribunal in Massachusetts, Rhode Island, and Illinois, and courts in Connecticut. ILL. HANDBOOK, *supra* note 93 (describing the Illinois procedures); *see* Carroll, *supra* note 93 (describing the Connecticut procedures); Krefetz, *supra* note 93 (describing the Massachusetts procedures); Town of Burriville v. Pascoag Apartment Assocs., LLC, 950 A.2d 435, 438 (R.I. 2008) (exemplifying Rhode Island procedures). In New Jersey, the proceedings took place before courts initially, then an agency, and most recently before courts again, since the agency was declared "defunct." *See In re Declaratory Judgment Actions*, 152 A.3d at 918-22 (summarizing history). Additionally, Rhode Island restricts the builder's remedy to projects that are publicly subsidized. 45 R.I. GEN. LAWS § 45-53-3 (2019). And Massachusetts restricts it to projects proposed by public agencies, nonprofits, and "limited divided" organizations. MASS. GEN. LAWS ch. 40B, § 21 (2019).

101. Regarding the expedited, "comprehensive permit" procedure in Massachusetts and Rhode Island, see, respectively, 28 ARTHUR L. ENO, JR. & WILLIAM V. HOVEY, MASS. PRACTICE SERIES § 23.30 (4th ed. Supp. 2016–2017); Erika Barber, Note, *Affordable Housing in Massachusetts: How to Preserve the Promise of "40B" with Lessons from Rhode Island*, 46 NEW ENG. L. REV. 125, 132–33 (2011).

102. *See* Ellen Callahan, *Will an Increase in Profits Increase Affordable Housing? Examining the Limited Dividend Requirement of Chapter 40B of the Massachusetts General Laws*, 50 SUFFOLK U. L. REV. 649, 654 (2017) (describing and critiquing this limitation).

103. Regarding New Jersey, see section 52:27D–313–317 of the New Jersey code; *see also In re* Adoption of N.J.A.C. 5:96 & 5:97, 110 A.3d 31, 45 (N.J. 2015) (stating that "substantive certification" of plan "afford[s] the ordinances implementing the housing elements of such municipalities a strong presumption of validity in any exclusionary zoning action and, thus, would provide powerful protection from a builder's remedy"); Hills Dev. Co. v. Twp. Of Bernards, 510 A.2d 621, 651, 653–54 (N.J. 1986) (explaining certification procedure). Regarding Massachusetts, see title 760, section 56.03 of the Code of Massachusetts Regulations; MASS. DEP'T OF HOUS. & CMTY. DEV., G.L. C.40B COMPREHENSIVE PERMIT PROJECTS: SUBSIDIZED HOUSING INVENTORY II-8–II-10 (2014), https://www.mass.gov/files/documents/2017/10/10/guidecomprehensivepermit.pdf (exempting local governments that both have a current, state-approved "housing production plan" in place, and produced affordable units equal to 0.5% of their total housing stock during the previous year). Regarding Rhode Island, see title 45, section 45–53–4 of the General Laws of Rhode Island (stating that the review board may deny affordable-housing development application if the local government "has an approved affordable housing plan

Agenda Item #5.1.

To obtain the plan-based immunity, localities typically must adopt an inclusionary-zoning ordinance, which requires developers of multi-unit projects to set aside a percentage as BMR units or pay an in-lieu fee.[104] Local governments are also encouraged to enact a "density bonus" ordinance, allowing projects with a substantial share of BMR units to be somewhat denser or bulkier than otherwise permitted.[105]

The underlying premises of the Northeastern Model seem to be (1) that the problem of housing affordability deserves the state's attention only insofar as it affects poor people; and (2) that the problem can be redressed only through the construction or rehabilitation of deed-restricted BMR units. Massachusetts, Connecticut, Rhode Island, and Illinois could hardly be more explicit about this, as they condition exposure to the builder's remedy *solely* on the locality's weak BMR track record or plan, and they provide the remedy *solely* for builders of BMR units.[106] And while New Jersey has recognized that a generous supply of new market-rate units may make existing units more affordable—thus reducing the regional need for BMR housing[107]—the state's courts have resisted efforts to account for market-supply effects in the calculation of regional needs.[108] A

---

and is meeting housing needs, and the proposal is inconsistent with the affordable housing plan"); DIV. OF PLANNING, R.I. DEP'T OF ADMIN., STATE GUIDE PLAN ELEMENT 423 app. D (2006), http://www.planning.ri.gov/documents/guide_plan/shp06.pdf (reprinting guidelines for affordable housing plans). Regarding Illinois, see ILL. HANDBOOK, *supra* note 93, at 13 (noting, inter alia, that local governments are exempt from builder's remedy if they adopt an affordable housing plan establishing a goal that 15% of all new housing consist of affordable units). In contrast to the other Northeastern states, Connecticut does not appear to offer plan-based immunity. Instead, it limits the threat of the builder's remedy by allowing local governments to adopt a temporary affordable-housing moratoria, provided that certain criteria are met. *See* CONN. GEN. STAT. § 8–30g(l) (2019).

104. *See* Stonefield, *supra* note 96, at 334–35 (noting that, with the partial exception of Massachusetts, the Northeastern Model states have all pushed local governments to achieve their affordable housing targets through zoning regimes designed to induce private developers to set aside BMR units).

105. *See* 42 R.I. GEN. LAWS § 128-8.1(g) (2019) (directing agency to promulgate guidelines for inclusionary zoning and density bonuses); DIV. OF PLANNING, R.I. DEP'T OF ADMIN., STATE GUIDE PLAN ELEMENT 423 app. D (2006), http://www.planning.ri.gov/documents/guide_plan/shp06.pdf (reprinting Inclusionary Zoning Guidelines, which call for the BMR set-aside to be offset more than 1:1 with extra market-rate units through a density bonus); *In re* Adoption of N.J.A.C. 5:96 & 5:97, 6 A.3d 445, 461–64 (N.J. Super. Ct. App. Div. 2010), *aff'd*, *In re* Adoption of N.J.A.C. 5:96 & 5:97, 74 A.3d 893 (N.J. 2013) (invalidating Third Round Regulations for implementing *Mt. Laurel* because, *inter alia*, the regulations did not provide sufficient density bonuses or other incentives for private construction of BMR housing).

106. *See supra* text accompanying notes 98–103.

107. *See In re* Adoption of N.J.A.C. 5:94 & 5:95, 914 A.2d 348, 362 (N.J. Super. Ct. App. Div. 2007) (stating that the housing agency had "recognized filtering as the most significant market force in reducing housing need").

108. *See id.* at 372–75 (criticizing agency's filtering adjustment for disregarding current data on house prices and paying no need to whether local governments actually would increase the supply of market-rate housing). In 2015, responsibility for fair-share calculations was reassigned to the judiciary pursuant to *In re* Adoption of N.J.A.C., 110 A.3d 31, and the housing-need determinations since then have not adjusted for filtering. *See In re* Twp. Of S. Brunswick, 153 A.3d 981, 994 (N.J. Super. Ct. Law Div. 2016) (acknowledging filtering as relevant in principle but stating that neither expert had "satisfactorily addressed the deficiencies identified by the Appellate Division" with respect to filtering estimation); *In re* Mun. of Princeton, No. MER-L-1550-15, 2018 WL 1352272, at *40–42 (N.J. Super. Ct. Law Div. 2018) (same).

Page 131 of 4422

New Jersey municipality that meets its fair-share obligation for BMR units may zone the rest of its land as restrictively as it wishes.[109]

*2. Critiques*

The Northeastern Model has been bashed from many directions.[110] The most fundamental concern for present purposes is the deep mismatch between the Model's conception of the housing-supply problem and the actual problems described in Part I. The root problem today is not (or not just) the racist or snooty suburb trying to keep out poor folks, but rather an unwillingness on the part of governments throughout expensive metro areas to allow enough market-rate housing, especially dense housing near transit. As the gentrification fights attest, there are now plenty of affluent whites willing to live near poor people and minorities,[111] but there is not enough housing to go around.

Some critics posit the Northeastern Model is not only mismatched to today's housing problems but actually exacerbates them.[112] Because Northeastern Model states (other than New Jersey) define the affordable-housing target as a *percentage* of the total housing stock (10%), rather than as an *amount* of new housing units,[113] they effectively punish suburban communities that approve market-rate housing projects. Any new market rate units will reduce the BMR share of the community's housing stock, potentially exposing the jurisdiction to builder's remedy lawsuits. There's also some evidence that the Northeastern Model has led suburban governments to buy up developable parcels for protected parks and open space, so that the parcels cannot be used to house locally unwelcome populations.[114]

On the other hand, the Northeastern Model may have induced some local governments to accommodate reasonably dense housing projects they would otherwise have rejected. The least fiscally burdensome way for a local government to meet its affordable-housing target is to make it profitable for developers to build projects with a substantial fraction of BMR units. Courts in New Jersey have also put some pressure on local governments to zone for fairly

109. S. Burlington Cnty. NAACP v. Mount Laurel, 456 A.2d 390, 421 (N.J. 1983) (stating that jurisdictions which meet their fair-share obligations are free to enact "large-lot and open space zoning").

110. Some critics complain that deed-restricted BMR units are a terribly inefficient way to subsidize housing for poor people. *See, e.g.*, Robert C. Ellickson, *The False Promise of the Mixed-Income Housing Project*, 57 UCLA L. REV. 983 (2009) (arguing for portable housing vouchers instead). Others fault the states for inadequate commitment. *See What Is the Mount Laurel Doctrine?*, FAIR SHARE HOUS. CTR., http://fairsharehousing.org/mount-laurel-doctrine (last visited Nov. 6, 2019). Still, others want the states to better account for the filtering of market-rate units into or out of "affordable" price points. *See* Hills, *supra* note 90, at 1639–44.

111. For a review of the literature on time trends in white preferences for residential integration, see Nicholas O. Stephanopoulos, *Civil Rights in a Desegregating America*, 83 U. CHI. L. REV. 1329, 1351–52 (2016).

112. *See, e.g.*, FISCHEL, ZONING RULES, *supra* note 4, at 359–62.

113. *See supra* text accompanying note 96.

114. *See* FISCHEL, ZONING RULES, *supra* note 4, at 359–60.

Agenda Item #5.1.

dense, low-cost housing forms, and have pushed back against BMR requirements that are so onerous as to render development unprofitable.[115]

The few empirical studies that have tried to sort out how the Northeastern Model has affected total housing supply are inconclusive.[116] About the best that can be said for the model is that while its conception of the housing-affordability problem is too narrow, it has induced construction of BMR units without clearly diminishing the overall supply of new housing.

## B. THE WEST COAST MODEL: SUPERVISED PLANNING FOR PROJECTED POPULATION GROWTH

### *1. The Framework*

The West Coast Model emerged from the wave of enthusiasm for comprehensive planning that washed over the states in the 1960s and 1970s.[117] Housing wasn't the focus of the initial planning mandates,[118] but it became much more central in the 1980s and 1990s.[119] By 1991, when Washington enacted its

115. *Id.*

116. A recent difference-in-difference study finds that the *Mt. Laurel* intervention in New Jersey caused an increase in the multifamily and townhome housing stock in New Jersey counties relative to similar counties in New York, but not Pennsylvania (where the courts have also invalidated exclusionary zoning). *See* Nicholas J. Marantz & Huixin Zheng, *Exclusionary Zoning and the Limits of Judicial Impact*, J. PLAN. EDUC. & RES. 1 (2018). Another study finds that during the 1990s, a greater proportion of new construction in New Jersey consisted of multi-family units than in seven comparison states. *See* GARY K. INGRAM & YU-HUNG HONG, LINCOLN INST. OF LAND POLICY, EVALUATING SMART GROWTH: STATE AND LOCAL POLICY OUTCOMES 25–27 (2009), https://www.lincolninst.edu/sites/default/files/pubfiles/evaluating-smart-growth-full.pdf. In Connecticut, adoption of the Northeastern Model did not reduce housing production in Connecticut suburbs relative to nearby "control" suburbs in New York (a state that has not adopted the model). *See* Nicholas J. Marantz & Harya S. Dillon, *Do State Affordable Housing Appeals Systems Backfire? A Natural Experiment*, 28 HOUSING POL'Y DEBATE 267, 269 (2018). On the other hand, there's suggestive evidence that New Jersey suburbs, which voted (unsuccessfully) against the Northeastern Model, have used public "parkland" bonds to buy up and set aside parcels that have low value as parkland but high value for housing development. *See* Stephan Schmidt & Kurt Paulsen, *Is Open-Space Preservation a Form of Exclusionary Zoning? The Evolution of Municipal Open-Space Policies in New Jersey*, 45 URB. AFF. REV. 92, 94 (2009).

117. *See* Daniel R. Mandelker, *The Role of the Local Comprehensive Plan in Land Use Regulation*, 74 MICH. L. REV. 899 (1976) (describing environmental, civil rights, and federal funding influences on the new planning requirements).

118. *Id.* at 900.

119. California's framework legislation dates back to 1968, but the Regional Housing Need Allocation (RHNA) and state-review requirements were not established until the early 1980s. *See* William C. Baer, *California's Fair-Share Housing 1967 2004: The Planning Approach*, 7 J. PLAN. HIST. 48, 54–62 (2008). Oregon's framework dates back to 1973 and acquired its modern form by 1979. *See* Paul A. Diller & Edward J. Sullivan, *The Challenge of Housing Affordability in Oregon: Facts, Tools, and Outcomes*, 27 J. AFFORDABLE HOUSING & COMMUNITY. DEV. L. 183, 185–86, 204–10 (2018); Robert L. Liberty, *Oregon's Comprehensive Growth Management Program: An Implementation Review and Lessons for Other States*, 22 ENVT'L L. REP. 10367, 10368 (1992); Edward J. Sullivan, *The Quiet Revolution Goes West: The Oregon Planning Program 1961–2011*, 45 J. MARSHALL L. REV. 357, 367–72 (2012). Washington's framework, the Growth Management Act, dates back to 1990. *See* Paul Marshall Parker, The Evolution of Growth Management in Washington: 25 Years and Counting (2015) (unpublished manuscript), https://www.washington-apa.org/assets/docs/2015/Events/GMA_Gala_Event/parker_presentation_gma_25_years_and_counting.pdf. Florida's regime originated in the early 1970s, but state review of local plans for various required elements was

Agenda Item #5.1.

Growth Management Act, the three West Coast states (and Florida) had all embraced the following principles. First, local governments have a duty to plan, on a state-mandated cycle (generally seven to ten years)[120], for enough new housing to accommodate projected population growth.[121] Second, local comprehensive plans, or at least their "housing elements," must be submitted to

not mandatory until the mid 1980s. *See* Nancy Stroud, *A History and New Turns in Florida's Growth Management Reform*, 45 J. MARSHALL L. REV. 397, 400–06 (2012).

120. CAL. GOV'T CODE § 65588 (West 2019) (eight-year cycle); OR. REV. STAT. § 197.629 (2017) (seven- to ten-year cycle); FLA. STAT. § 163.3191 (2019) (seven-year cycle); WASH. REV. CODE § 36.70A.130 (2019) (eight year cycle).

121. In Washington, "[c]ounty officials . . . select[] a 20-year . . . planning target from within the range of high and low prepared by [the state finance agency]. . . . [T]hen within each county, population planning targets for cities, towns, and unincorporated areas are developed among all affected local jurisdictions." *Growth Management Act County Projections*, OFFICE OF FIN. MGMT., https://www.ofm.wa.gov/washington-data-research/population-demographics/population-forecasts-and-projections/growth-management-act-county-projections (last visited Nov. 6, 2019). The housing element of the plan must "[i]nclude[] an inventory and analysis of existing and projected housing needs that identifies the number of housing units necessary to manage projected growth . . . mak[ing] adequate provisions for existing and projected needs of all economic segments of the community." WASH. REV. CODE § 36.70A.070(2) (2019). In Oregon, local governments must plan for "needed housing" "in one or more zoning districts . . . with sufficient buildable land to satisfy that need." OR. REV. STAT. § 197.307(3) (2019). "Needed housing," in turn,

> [M]eans all housing on land zoned for residential use . . . that is determined to meet the need shown for housing within an urban growth boundary at price ranges and rent levels that are affordable to households within the county with a variety of incomes, including but not limited to households with low incomes, very low incomes and extremely low incomes.

OR. REV. STAT. § 197.303(1) (2019). "Needed housing" is determined using a 20-year population forecast. *See* OR. REV. STAT. § 197.296(2) (2019) (requiring cities to adjust growth boundaries and/or density to accommodate needed housing per 20-year forecast); OR. ADMIN. R. 660-024-0040 (2019) ("The determination of 20-year residential land needs for an urban area must be consistent with the appropriate 20-year coordinated population forecast."). In 2013, Oregon's legislature assigned responsibility for making the associated population-forecast projection to the Population Research Center at Portland State University (for most of the state) and to the Metro regional government (for the Portland area). *See* Edward J. Sullivan, *Population Forecasting and Planning Authority*, 48 URB. LAW. 47, 62–64 (2016). The California process for determining housing need is described in the text accompanying *supra* notes 119–120, and *infra* note 122. *But see also* CAL. GOV'T CODE § 65584 et seq. (West 2019); CAL. AFFORDABLE HOUS. LAW PROJECT, CALIFORNIA HOUSING ELEMENT MANUAL 18–21 (3d ed. 2013) [hereinafter CAL. MANUAL]. In Florida:

> The plan must be based on at least the minimum amount of land required to accommodate the medium projections as published by the Office of Economic and Demographic Research for at least a 10-year planning period . . . . Absent physical limitations . . . population projections for each municipality, and the unincorporated area within a county must, at a minimum, be reflective of each area's proportional share of the total county population and the total county population growth.

FLA. STAT. § 163.3177(f)(3) (2019).

a state agency for review.[122] Third, local land-use regulations and by extension, local permitting decisions must conform to the plan.[123]

Population forecasts are made by a state agency and forwarded to local planners.[124] Oregon, Washington, and Florida instruct their local governments to convert these population forecasts into estimates of needed housing for "all economic segments of the community."[125]

California goes a step further.[126] In 1980, the state legislature enacted a framework for periodically establishing regional housing quotas through negotiations between the state Department of Housing and Community Development (HCD) and regional associations of local governments, the so-called Councils of Governments.[127] Though HCD ultimately determines the size

122. Oregon requires local governments to have their comprehensive plans and implementing regulations "acknowledged" by the state agency. *See* Sullivan, *supra* note 119, at 370–71. This process was completed by 1986. *Id.* Amendments to an acknowledged plan must be submitted for state review. *See* OR. REV. ST. § 197.610 (2019). Additionally, plans covering urban areas (with a few exceptions) must be updated and submitted for state review every seven to ten years. *Id.* § 197.629. For a comparison of the post-acknowledgment amendment and periodic review processes, see Sullivan, *supra* note 109, at 370–72, 392–93. In California, local governments must submit draft housing elements and amendments to Housing and Community Development (HCD) for review. If HCD objects, the local government may enact the element or amendment anyway but must make findings regarding why it believes the element substantially complies. HCD then makes a written determination about substantial compliance and if it finds noncompliance, may refer the matter to the Attorney General for enforcement. *See* CAL GOV'T CODE § 65585 (West 2019); *See* CAL. MANUAL, *supra* note 121, at 15. In Washington, plans and plan amendments must be submitted to the state Department of Commerce for review at least sixty days before adoption. *See* WASH. REV. CODE § 36.70A.106 (2019); WASH. ADMIN. CODE § 365-196-630 (2019). If the department believes that the plan is inadequate, it may initiate a proceeding before the Growth Management Hearing Board. *See* WASH. REV. CODE § 36.70A.280 (2019). In Florida, plans and plan amendments must be submitted to the state planning agency (and several other agencies) for comments after the local government's first public hearing. After adoption of the plan or plan amendment, the final package is sent back to the state agency, which has forty-five days to make a compliance determination. If the agency finds the plan non-compliant, it may initiate proceedings before the Division of Administrative Hearings, which adjudicates plan validity. *See* FLA. STAT. §§ 163.3184(4)(e)(4), 163.3184(5) (2019). For a history of earlier incarnations of the Florida plan-review process, see Stroud, *supra* note 119 (offering a history of this background).

123. California's consistency requirements are codified as sections 65860, 66473.5, and 65583, subsection I of the California Government Code. Regarding Florida, see Stroud, *supra* note 119, at 400–01, 414 (describing emergence of consistency requirement in the early 1970s, and its preservation even during the 2009–2011 "counter-revolution" against strong state oversight of local planning). In Washington, the courts seem somewhat ambivalent about the consistency requirement. *Compare* Citizens for Mount Vernon v. City of Mount Vernon, 947 P.2d 1208, 1214 (Wash. 1997) (deeming the comprehensive plan only a "guide" or a "blueprint"), *with* King Cty. V. Cent. Puget Sound Growth Mgmt. Hearings Bd., 979 P.2d 374, 380 (Wash. 1999), *as amended on denial of reconsideration* (Sept. 22, 1999) (holding that urban growth boundaries designated in plan are binding). Oregon has strong consistency requirements, enforceable via "work task" orders that the state land-use agency may issue to local governments. *See* OR. REV. STAT. § 197.636 (2019); Liberty, *supra* note 119, at 10372.

124. In California and Washington, the population projections are made by the state's department of finance. *See* CAL. GOV'T CODE § 65584 et seq. (West 2019); WASH. REV. CODE § 43.62.035 (2019). In Oregon, they are made by a state university, see section 195.033 of the Oregon Revised Statutes, and in Florida, they are made by the state's Office of Economic and Demographic Research, see section 163.3177 of the Florida Statutes.

125. *See* FLA. STAT. § 163.3177(f)(3); OR. REV. STAT. §§ 197.296(2) & 197.303(1); WASH. REV. CODE § 36.70A.070(2).

126. *See generally* CAL. MANUAL, *supra* note 121, at 18–21.

127. 1980 Cal. Stat. ch. 1143 (adding CAL. GOV'T CODE § 65580 et seq.).

Agenda Item #5.1.

of each region's quota (the "regional housing needs assessment," or RHNA), the Councils are invited to provide information and propose methodologies for translating the state's population forecasts into housing quotas.[128] RHNAs are subdivided into four affordability bands: housing units to be produced over the planning cycle for households of very-low, low, moderate, and above-moderate incomes, respectively[129] ("above-moderate" is code for market-rate housing).[130] Councils of Governments then allocate their region's quotas among the member governments.[131] This roughly resembles the process of determining and then allocating regional housing need in New Jersey, except that New Jersey considers only the need for subsidized housing, and New Jersey allocations have been made by courts or agencies, rather than by confederations of local governments.[132]

Beyond the essential commonalities noted above—periodic planning to accommodate state-forecasted population growth, state review of the plan, and a duty to conform local law to the plan—the housing frameworks of the West Coast Model states differ in many important particulars.

Consider how the planning mandate is enforced. In all of the West Coast Model states, local governments that fail to adopt a compliant housing element, on the state's timeline, may lose access to certain streams of funding.[133] In Washington, this appears to be the only consequence, and it is suffered only in the discretion of the governor.[134] In California and Oregon, local governments that do not maintain a compliant plan also put their regulatory autonomy at risk. California's courts and Oregon's Land Conservation and Development Commission (LCDC) have enjoined non-compliant local governments from issuing land-use permits.[135] In Oregon, permits issued by local governments that

131. CAL. GOV'T CODE § 65584.03 (West 2019).

132. In New Jersey, "regional need" is the sum of the region's "present need" (defined as substandard or too-expensive housing now occupied by the region's poorer residents) and projected "future need" (new housing for new poor families, per projected population growth). The "gap" between a local government's prior-round affordable housing quota and its actual production during that planning cycle is also carried forward. *See In re* Declaratory Judgment Actions Filed by Various Municipalities, 152 A.3d 915 (N.J. 2017).

Agenda Item #5.1.

lack an approved comprehensive plan may also be invalidated for not conforming to the state's nineteen land-use goals.[136] Though no West Coast Model state has established a full-blown builder's remedy to enforce the planning duty,[137] California has recently taken some steps in this direction,[138] and Oregon's state-oversight body may remedy planning defaults by ordering development projects approved.[139]

The West Coast Model states also differ in how they superintend plan implementation. In Oregon, the LCDC has authority to review actions and inactions by local governments at the implementation stage, and to issue prescriptive "work task" orders if the LCDC deems implementation inadequate.[140] The commission also has broad rulemaking authority, which it has used to establish minimum zoning densities.[141] By contrast, Washington's oversight entity, the Growth Management Hearing Board (GMHB), has no authority to establish minimum densities or any other "public policy," and its remedial powers are very limited.[142] All it can do is forward its findings of noncompliance to the governor, who then decides whether to cut funding from the disobedient local government.[143] In California, HCD lacks general rulemaking authority and has had virtually no oversight role with respect to plan implementation,[144] although recent reforms are starting to change this.[145]

California and Oregon have taken some steps to thwart local evasion of the plan at the project-permitting stage. Both states set time limits within which local

136. Local land use actions, such as rezonings and permit decisions, may be challenged before the state's Land Use Board of Appeals (LUBA), and are reviewed for consistency with the state's land use goals *unless* the jurisdiction has adopted an LCDC-approved land use plan. *See* OR. REV. STAT. § 197.835(5) (2017); Liberty, *supra* note 119, at 10371.

Agenda Item #5.1.

governments must act on permit applications,[146] and local governments may deny permits only on the basis of objective standards (Washington and Florida do not have such requirements).[147] In California, the housing element must include an analysis of constraints to the "development of housing for all income levels,"[148] and a "schedule of actions" to "[a]ddress and, where appropriate and legally possible, remove constraints."[149]

Finally, the West Coast Model states vary in the strength of their commitment to periodic plan revision. At one end of the spectrum is California and, arguably, Washington. California, as we have seen, periodically assesses regional housing needs and requires local governments to update their housing elements shortly after receiving RHNA allocations.[150] In Washington, local governments must update urban growth boundaries on the official cycle if the state's forecast of local population growth has changed since the last round.[151] In Oregon, by contrast, the theory of periodic plan revision has given way to a practice of ad-hoc amendment.[152] Oregon, by statute, requires most urban communities to revise their plans on a regular cycle,[153] but LCDC regulations have exempted local governments that choose other, simplified procedures for plan amendments.[154] Ed Sullivan, a veteran of the Oregon scene, reports that periodic review outside of the Portland metro area has become virtually a dead letter, and that piecemeal plan amendments provide little opportunity for LCDC to examine local housing policies.[155] Florida's abandonment of periodic, state-supervised plan revision has been even more thoroughgoing.[156]

156. In 2011, the Florida legislature repealed the formerly mandatory duty of local governments to update and submit general plans for state review on a seven-year cycle. FLA. STAT. § 163.3191 (2010) (repealed 2011); Stroud, *supra* note 119, at 412. Now it suffices for local governments to write a septennial letter reporting their

*2. Critiques*

Critiques of the West Coast Model are, to some extent, state-specific, which should hardly be surprising given the differences described above. The critiques are also time-specific, especially as to California, whose state housing framework has undergone big changes since the early 2000s and especially over the last few years. But measured by results, the West Coast Model has been a disappointment everywhere.

Oregon and Washington have achieved somewhat denser patterns of housing development than other similar states, which is consistent with their stated goal of confining growth within urban boundaries while producing sufficient housing.[157] Yet "the increase in [Portland and Seattle's] . . . rate of housing production pales in comparison to what similarly-sized cities like Phoenix and Atlanta have achieved through outward expansion."[158] And despite the Oregon LCDC's unique authority to establish minimum densities and direct the implementation of comprehensive plans, ninety percent of the residential land in Oregon's largest city remains zoned for single-family homes.[159]

Since California adopted its RHNA framework in 1980, the state has become the poster child for housing policy dysfunction. A prominent 2005 study found that local governments in California with state-approved housing elements issued no more building permits than noncompliant jurisdictions, controlling for observable jurisdiction-level characteristics.[160] A more recent study finds some evidence that localities with approved housing elements developed more BMR housing—*but less market-rate housing*—than similar localities without certified housing elements.[161]

---

self-assessed need for plan amendments. FLA. STAT. § 163.3191(1) (2019). According to leading land-use attorney, Nancy Stroud, the housing element of a newly formed Florida municipality will get a careful look and be rejected by the state if it does not accommodate forecasted population growth, but municipalities are effectively on their own once they have an initial, state-approved plan in place. Telephone Interview with Nancy E. Stroud, Of Counsel, Lewis, Stroud & Deutsch, P.L. (Oct. 2, 2018).

157. *See* Issi Romem, *Can U.S. Cities Compensate for Curbing Sprawl by Growing Denser?*, BUILDZOOM (Sept. 14, 2016), https://www.buildzoom.com/blog/can-cities-compensate-for-curbing-sprawl-by-growing-denser.

158. *Id.*

159. Diller & Sullivan, *supra* note 119, at 225 n.224 (reporting figures as of Dec. 23, 2017).

160. Paul G. Lewis, *Can State Review of Local Planning Increase Housing Production?*, 16 HOUSING POL'Y DEBATE 173 (2005).

161. *See* Ramsey-Musolf, *supra* note 130 (comparing jurisdictions in the Los Angeles and Sacramento regions with and without approved housing elements). A problem with studies in this vein is that rich jurisdictions are likely to have more planning capacity, greater NIMBYism, and more opportunities to extract rents through inclusionary-zoning requirements than poor jurisdictions; and planning capacity is probably correlated with having an approved housing element. This would bias the results of studies that treat jurisdictions without an approved element as counterfactuals for jurisdictions with an approved element, unless one has good measures of planning capacity and NIMBYism. For a case study of two Silicon Valley suburbs which suggests that California's framework is becoming more effective, see Jessie Agatstein, *The Suburbs' Fair Share: How California's Housing Element Law (and Facebook) Can Set a Housing Production Floor*, 44 REAL EST. L.J. 219 (2015).

Agenda Item #5.1.

So what went wrong? One must be a bit circumspect in answering this question, because there is no state whose land-use interventions have been shown to expand the supply of housing substantially. I would venture, however, that the failures of the West Coast Model are at least partly due to (1) the use of projected household growth rather than market conditions to set housing-supply targets, and (2) a misplaced presumption of local good faith with respect to the design and implementation of land-use plans.

*a. Aiming at the Wrong Target*

The West Coast Model improves on its Northeastern counterpart by recognizing that local governments may over-restrict market-rate housing development.[162] It also furnishes a procedural framework for negotiating regional (California)[163] or countywide (Washington and Oregon)[164] housing goals in advance of discrete rezoning and project-permitting decisions.[165] But the West Coast Model launches these negotiations with a specific target in mind, and the target is perverse: accommodating *projected* household growth.[166]

A region that has allowed little new housing will have a depressed rate of new household formation, but this hardly means that the region has little need for new housing. On the contrary, if many people want to live in the region, the barriers to new housing will manifest in sky-high prices for existing housing; this, in turn, slows the rate of new household formation.[167] Young adults who cannot afford a place of their own will live with their parents or stacked up with roommates. The corresponding slowdown in the rate of household formation yields a smaller projection of "regional housing need," while the economic reality is exactly the opposite.[168]

---

162. *See supra* text accompanying notes 121–125.

163. *See* CAL. GOV'T CODE § 65584 et seq. (West 2019); CAL. MANUAL 18–21; *see also supra* text accompanying note 121.

164. *See, e.g.*, OR. REV. STAT. § 197.296(2) (2017) (regarding zoning in Oregon); WASH. REV. CODE § 36.70A.106 (2019) (regarding the submission process in Washington); *see also supra* text accompanying notes 121–123. In practice, county-level coordination never worked very well in Oregon, and the state's population forecaster now tells each city in a county how much growth it shall accommodate. *See* Sullivan, *supra* note 121, at 59–65.

165. As Rick Hills and David Schleicher have emphasized, such procedural frameworks can reduce the impact of NIMBYism on land use decisions, if there's a viable mechanism to enforce the agreements. *See infra* Subpart IV.B.2.

166. *See* CAL. GOV'T CODE § 65584 et seq. (West 2019).

167. *See* Sarah Mawhorter, Housing Policies in California Cities: Seeking Local Solutions to a Statewide Shortfall (Dec. 2018) (unpublished working paper), http://californialanduse.org/working-papers.html.

168. California law also presumes that "housing need" for new households at a particular income level can only be accommodated with new housing units, which are sold or rented at a price those households can afford—hence the division of the RHNA into units for very-low, low, moderate, and above-moderate income households. This overlooks the effect of new construction—or its absence—on the price of existing units. If the market produces loads of new luxury housing, some people will trade up, and existing less-fancy units will become more affordable. Conversely, if there are serious barriers to meeting demand for new luxury units, developers will scoop up existing less-fancy homes, renovate them, and put them on the market as luxurious, like-new units.

Agenda Item #5.1.

Because population and household growth in high-demand regions is endogenous to housing supply, it makes little sense to fix supply targets on the basis of population projections. Oregon all but acknowledges this point. Regulations issued in 2014 tell the state's population forecaster to account for local governments' "[p]lanned new housing," "[e]xpected changes to zoning designations or density," and "[a]dopted policies regarding population growth."[169] Yet other Oregon laws tell local governments to gauge their housing needs and draw urban boundaries on the basis of the population forecast.[170] Thus does the planning dog chase its own tail.

The absurdity of basing housing-need determinations on population forecasts is well illustrated by the fact that, for the current planning cycle in California, the city of Beverly Hills—with a median home price of roughly $3.5 million[171]—received an affordable housing quota of precisely three units, and a market-rate quota of *zero* units.[172] When journalists noticed this and began asking snarky questions, the city's leadership responded that the tiny allocations were reasonable because Beverly Hills's population was not growing.[173] According to the traditional logic of the West Coast Model, the city's leadership had it exactly right. And this illustrates just how wrong it is for states to base local housing obligations on population-growth projections. Under any sane regime, a region comprised of Beverly Hillses—of cities that have utterly stanched population growth despite astronomical demand—would be presumptively categorized as having enormous unmet housing need.[174]

Or consider that San Francisco County, which as of this writing "has the highest total RHNA target assigned relative to population" of all counties in the state,[175] is expected to accommodate a mere 7.5% increase in its housing stock over the 2014–2022 planning cycle.[176] More than 60% of San Francisco's target consists of subsidized, below-market-rate units that will not be built for decades,

169. PORTLAND STATE UNIV., FORECAST AND DELIVERABLES, 577-050-0050(3) (2019), https://www.pdx.edu/ogc/sites/www.pdx.edu.ogc/files/Amended%20577-050-0050%20Forecast%20Process%20and%20Deliverables.pdf. For a history of Oregon population forecasting, see Sullivan, *supra* note 121.

176. The city's RHNA share for the current planning cycle totals 28,870 units, and its housing stock circa 2013 totaled 376,081 units. *See* S.F. GEN. PLAN, 2014 HOUSING ELEMENT, at PART I (2015) [hereinafter 2014 HOUSING ELEMENT].

Page 141 of 4422

Agenda Item #5.1.

if ever. They will not be built because, as the city's housing element frankly acknowledges, producing that much below-market housing would require a stunning *$7.3 billion* in subsidies.[177]

This is not normal or healthy. San Francisco, one of the nation's most expensive housing markets, should be producing new market-rate housing at many times the rate contemplated by its RHNA allocation. Whereas San Francisco's eight-year target for market-rate units corresponds to a housing-stock expansion of *less than 3%*, the economically productive metropolises in our nation's more affordable regions increased their housing stock by *30%–60%* over just the period from 2000 to 2013.[178] The Charlestons, Atlantas, and Phoenixes of the world didn't manage this feat with billion upon billion in public subsidies. They did it simply by allowing developers to build.[179] San Francisco should too—but it won't face much pressure to do so unless it's assigned a much bigger RHNA for unsubsidized housing.

This is not to say that there is one uniquely best or most defensible way to set housing-supply targets. But if West Coast Model states were serious about the problems canvassed in Part I, they would be well advised to tie local housing quotas to good indicators of unmet demand (such as housing prices that substantially exceed the usual costs of production),[180] as well as actual or potential access to job centers via convenient, non-greenhouse-gas-intensive modes of commuting.

Or, more simply, the state might require *every* local government to zone for a substantial increase in housing supply, and then let the market determine which regions shall grow. In recognition of the fact that the affordable metro areas of the South and Southwest managed to increase their housing supply by 30%–60% in barely more than a decade,[181] policymakers in a high-cost state might decide that local governments should plan for a potential 50% increase in housing supply, and maintain this "potential growth buffer" through decennial revisions of the general plan and zoning maps. A state agency would review the periodic revisions, rejecting those that fail to demonstrate potential for 50% growth (relative to the then-current housing stock), or that assign the buffer to difficult-to-develop sites.

The details of such a scheme are far beyond the scope of this Article. For now, suffice it to observe that West Coast Model states are not going to solve the housing-supply problem so long as cities or regions can effectively pick their

Agenda Item #5.1.

own housing quotas by enacting onerous controls that curtail population growth notwithstanding high demand.

*b. The Misplaced Presumption of Good Faith*

A key takeaway from the political science and economics research surveyed in Part I is that homeowners wield outsized influence over local governments, and that the self-interest of incumbent homeowners is at war with the public interest in expanding the housing stock of high-cost metro areas. Yet the West Coast Model states have tacitly assumed that local governments will try diligently and in good faith to meet the state's housing targets. This presumption of good faith is manifested in the standards for judicial review of local housing plans, and in the lack of a robust state-law framework to prevent or deter local governments from evading commitments in their state-approved plans.

Begin with judicial review. California courts have long treated housing elements as "legislative enactments" entitled to the usual presumption of validity that other legislation enjoys—even if the state agency has rejected the housing element in question.[182] So long as the housing element "contain[s] the elements mandated by the statute," the courts will uphold it.[183] Whether it actually enables construction of the required number of units has been deemed *irrelevant as matter of law* to the housing element's validity.[184]

In Washington and Florida, the reviewing state agency cannot make binding determinations about the validity of a housing plan, but may challenge the plan before an administrative tribunal.[185] In both states, "comprehensive plans and development regulations . . . are presumed valid upon adoption,"[186]

182. *See, e.g.*, Fonseca v. City of Gilroy, 56 Cal. Rptr. 3d 374, 387 (Ct. App. 2007) (restating and applying doctrine that housing element is a legislative enactment subject to strong presumption of validity, notwithstanding agency disapproval); Buena Vista Gardens Apartments Ass'n v. City of San Diego Planning Dep't., 220 Cal. Rptr. 732, 737, 739 (Ct. App. 1985) (stating that "the appropriate standard of appellate review is whether the local . . . [government] has acted 'arbitrarily, capriciously, or without evidentiary basis,'" and upholding housing element notwithstanding state agency's rejection of it for want of, *inter alia*, "a comprehensive five-year schedule of actions" (internal quotation marks omitted) (citations omitted)). For a review of other cases to similar effect, see Field, *supra* note 135, at 54–61.

183. *Fonseca*, 56 Cal. Rptr. 3d at 387.

184. *Id.* at 382 ("[J]udicial review of a housing element for substantial compliance with the statutory requirements does not involve an examination of the merits of the element," that is, "*whether the programs adopted are adequate to meet their objectives*." (emphasis added) (citations omitted) (quoting Black Prop. Owners Ass'n v. City of Berkeley, 28 Cal. Rptr. 2d 305 (Ct. App. 1994)); *Buena Vista Gardens*, 220 Cal. Rptr. at 737 (treating agency's view of workability of plan as a "merits" question not for courts to consider in judging plan's validity).

185. In Washington, this adjudicator is the specialized Growth Management Hearing Board. *See* 24 WASH. PRAC., ENVIRONMENTAL LAW & PRACTICE § 18.3 (2d ed. 2019). In Florida, it's the general-purpose Division of Administrative Hearings. *See* FLA. STAT. § 163.3184 (2019).

Page 143 of 4422

and the burden of proof is on the party challenging them.[187] Washington's administrative tribunal "shall find compliance" unless it determines that the plan or development regulation at issue "is clearly erroneous."[188]

Only Oregon has firmly rejected judicial deference to local governments with respect to the plan. Approval by the LCDC is necessary to make a comprehensive plan legally effective,[189] and Oregon courts give LCDC actions the usual deference afforded to administrative rules and orders.[190]

Beyond the legal standards for housing plan validity, the tacit presumption of good faith is also manifested in the lack of backstopping measures to counteract local evasion of duly adopted plans. Zoning and other local ordinances must be consistent with the plan, but consistency challenges have to be brought within a brief window of time following enactment of the ordinance at issue,[191] and courts strongly defer to local governments when evaluating consistency.[192]

California and Oregon purport to limit local evasion of the plan at the project-permitting stage, by requiring local agencies to use only "objective" standards,[193] and to act on project applications within a fixed, reasonably short period of time.[194] But these strictures are less binding than they appear, and their weakness represents another manifestation of the tacit presumption of good faith. For example, time limits under California's Permit Streamlining Act kick in only *after* the local government has completed reviews under the California Environmental Quality Act and resolved any internal appeals.[195] Environmental appeals of municipal decisions are heard by the city council.[196]

187. WASH. REV. CODE § 36.70A.320(2) (2019); *see also* FLA. STAT. § 163.3184(5)(2)(a) (2019) (stating that plans rejected by the state agency still enjoy a presumption of validity, and that it is the agency's burden to prove "by a preponderance of the evidence that the comprehensive plan or plan amendment is not in compliance" with state law).

188. WASH. REV. CODE § 36.70A.320(3) (2019).

192. *See* Marracci v. City of Scappoose, 552 P.2d 552, 553 (Or. Ct. App. 1976) (rejecting developer's argument that project that complied with the plan could not be denied on basis of more restrictive zoning ordinance, on ground that it was local government's prerogative to decide when and how to evolve "more restrictive zoning ordinances . . . toward conformity with more permissive provisions of the plan"); *see also* CECILY TALBERT BARCLAY & MATTHEW S. GRAY, CALIFORNIA LAND USE & PLANNING LAW 25–26, 46–47 (36th ed. 2018) (discussing "arbitrary and capricious" and "no reasonable person" standards in California). The California courts have been more willing to enforce those policies of the general plan that the courts deem to be "fundamental, mandatory and clear." *See, e.g.*, Ideal Boat & Camper Storage v. Cnty of Alameda, 145 Cal. Rptr. 3d 417, 425 (Ct. App. 2012).

193. *See* Honchariw v. Cty. of Stanislaus, 132 Cal. Rptr. 3d 874, 875–76, 880 (2011) (discussing objective standards requirement and tracing it to a bill enacted in 1999); *see also supra* note 147 and accompanying text.

194. *See* CAL. GOV'T CODE § 65950 (West 2019); *see also supra* text accompanying note 146.

195. *See* CAL. GOV'T. CODE § 65950(a); Eller Media Co. v. City of L.A., 105 Cal. Rptr. 2d 262, 264 (Ct. App. 2001).

196. CAL. PUB. RES. CODE § 21151 (West 2019).

So if a city councilmember wants to kill a housing project in her district, she can always insist on further, better, or different environmental analyses. Once the clock finally starts to run on the developer's permit application, local officials may "encourage" the developer to withdraw and resubmit it,[197] perhaps suggesting that if only this or that change were made, the application would more likely be approved. Or the decisionmaker may approve the project with conditions that make it tough to build or market. Weird or unexpected conditions might be challenged on the theory that the underlying development standard violates the state's objectivity requirement, but this is a crapshoot. Objectivity is a matter of degree,[198] and in any event, California's objectivity requirement only governs conditions that reduce a project's density or render it "infeasible."[199]

Finally, and perhaps most significantly, the tacit presumption of good faith is reflected in the lack of any material consequences for local governments that fail to meet their housing targets. Prior to the 2017 California housing package (discussed in the next Part), no West Coast Model state had enacted statutory ex-post punishments tied to actual housing construction over the planning cycle. This is in sharp contrast to the Northeastern Model states, which expose jurisdictions that fail to meet their BMR-housing targets to the feared builder's remedy.[200] Though Massachusetts, Rhode Island, and New Jersey provide for plan-based exemptions from the builder's remedy, Massachusetts and Rhode Island extend this exemption only to local governments making adequate yearly progress toward their affordable-housing goals.[201]

In principle, housing agencies in the West Coast Model states could incentivize local follow-through by announcing that the agency will review a locality's *next* plan very harshly if the local government fails to meet its housing targets under the current plan. Cities hoping to avoid fiscal and regulatory sanctions for not having an approved plan would then have good reason to permit the housing for which they planned. But to induce compliance in this way, the state agency must have authority to reject a housing plan as unlikely to work, given the local government's track record. California law historically would not allow this, and the presumption of validity in Washington and Florida works against it too.[202]

Putting all these pieces together—the inane, population-forecast metric of housing need; the deference to local governments on the substance of their plans;

197. *See* CAL. GOV'T CODE § 65943 (West 2019) (stipulating that clock restarts with each resubmission of an application).

198. *Cf.* Rogue Valley Ass'n of Realtors v. City of Ashland, No. 97-260, slip op. at 17 (Or. LUBA Sept. 24, 1998) ("[F]ew tasks are less clear or more subjective than attempting to determine whether a particular land use approval criterion is clear and objective.").

199. *See* CAL. GOV'T CODE § 65589.5(d) (West 2019).

200. *See supra* Subpart II.A.

201. *See supra* note 101 and accompanying text. In New Jersey, the prospect of a court-ordered builder's remedy hangs over all local land use decisions, so local governments disregard outcomes at their peril. *See supra* text accompanying note 99.

202. *See* CAL. GOV'T CODE § 65589.5(d) (West 2019); FLA. STAT. § 163.3184(5)(2)(a) (2019); WASH. REV. CODE § 36.70A.320(2) (2019).

Agenda Item #5.1.

the barriers to consistency challenges; the lack of an expeditious procedure for permitting projects that conform to the plan but violate contrary local ordinances; and the failure to punish or reward local governments on the basis of housing outcomes—one cannot help but wonder whether the state legislators who forged the West Coast Model were themselves acting in good faith. Did they really mean to overcome local barriers to the supply of an adequate amount of new housing, or was the mandate to plan for "needed housing" just a means of prettifying some other agenda?[203]

## III. THE NEW YIMBY MEASURES

Legal scholars and economists who write about housing-supply barriers have tended to regard state-level interventions skeptically, if at all.[204] Their skepticism is rooted in the risk that state control of local land-use regulation will enable local homevoter coalitions to band together into regional cartels.[205] In the absence of state control, the argument goes, developers should be able to buy off *some* local governments in a region and thereby increase the regional housing supply.[206] But once the state gets involved, antidevelopment interests can wield state law to make every local government establish rigid growth boundaries, onerous inclusionary zoning ordinances, or other restrictions that stanch the regional supply of new housing.

The state-cartelization thesis may be overdrawn—local governments have proven themselves quite capable of coordinating exclusionary policies without directives from the state[207]—but the traditional Northeastern and West Coast Models do not inspire much confidence in the states' ability to intervene constructively in local land use. And yet, as housing prices in the expensive metro areas rocketed upward following the Great Recession of 2007–2009, the states, led by California, responded with forceful measures to increase the supply of market-rate as well as BMR housing. This Part explains California's

203. In Oregon and Washington, the "other agenda" was presumably the establishment of urban growth boundaries. In California, the other agenda is less apparent, but it may have been to support developers of BMR housing (much like the Northeastern Model); *cf.* Ramsey-Musolf, *supra* note 130 (finding, during study period, that jurisdictions with approved housing elements produce more BMR housing, but less market-rate housing, than jurisdictions without approved housing elements).

204. *See, e.g.*, FISCHEL, ZONING RULES, *supra* note 4, at 54–57, 365–67 (discussing weakness of state housing requirements, and concluding with a dozen-item menu of suggestions for combatting housing supply restrictions, on which the "state planning mandate" is not mentioned). One exception is an article by John Infranca, written independently of this Article, which also discusses state ADU and density mandates. *See* John Infranca, *The New State Zoning: Land Use Preemption Amid a Housing Crisis*, 60 B.C. L. REV 823 (2019). Infranca focuses on upzoning by state statute, whereas I think the more promising reforms concern housing quotas and the nature of the plan. *See infra* Parts III & IV.

205. *See, e.g.*, FISCHEL, ZONING RULES, *supra* note 4, at 307 (suggesting that homeowners in Portland metro area favor regional controls as a means of restricting housing supply); Robert C. Ellickson, *Suburban Growth Controls: An Economic and Legal Analysis*, 86 YALE L.J. 385, 434–35 (1977) (discussing this risk).

206. *See* Ellickson, *supra* note 205, at 404–10 (arguing that developer influence means that exclusionary practices by some homogenous suburbs are unlikely to distort allocation of housing and people across metro areas).

207. *See supra* Part I.

Agenda Item #5.1.

reworking of its housing framework, as well as recent initiatives in California and other states to curtail the locally popular practice of zoning developable land exclusively for single-family homes on large lots.

Pushing the state-level interventions is a nascent Yes In My Backyard (YIMBY) movement.[208] YIMBY groups are springing up around the country to lobby for more housing at the state and local levels.[209] The YIMBYs' state-legislative and fundraising successes warrant a rethinking of the state-cartelization thesis, a point to which I shall return below.

### A. CALIFORNIA STRENGTHENS THE WEST COAST MODEL

Starting around 2005 and accelerating a decade later, California passed a flurry of bills that try to answer critiques of the West Coast Model. In 2017 alone, the legislature enacted a fifteen-bill housing package. The state is feeling its way toward a better way of setting housing-supply targets, and the tacit presumption of good faith on the part of local governments is under attack.

#### *1. Devising a Better Target*

California Senate Bill 828 (SB 828), enacted in 2018, begins to establish a new ground norm for RHNAs, the regional housing targets.[210] The bill was a political compromise and leaves in place the old idea of tying housing quotas to population projections, while adding a new overlay of administrative discretion to plump up regional quotas on the basis of a nationally normed affordability goal.[211] Determinations of housing need are to account for the percentage of "cost burdened" households in the region (households spending more than 30% of their income on housing), relative to "the rate of housing cost burden for a healthy housing market."[212] The "healthy housing market" standard is in turn defined as a cost-burden rate "no more than the average [such rate] in comparable regions throughout the nation."[213] Similarly, the "overcrowding

208. *See* Kenneth Stahl, *"Yes in My Backyard": Can a New Pro-Housing Movement Overcome the Power of NIMBYs?*, 41 ZONING & PLAN. L. REP., Mar. 2018.

209. *See* Stahl, *supra* note 208; *see also YIMBY*, WIKIPEDIA, https://en.wikipedia.org/wiki/YIMBY (last visited Nov. 6, 2019).

210. S.B. 828, 2017–2018 Leg. (Cal. 2018). SB 828 builds on a measure passed a year earlier, A.B. 1068, which curtailed Council of Governments (COG) authority to deviate from the state's official population forecast, and which added "[t]he percentage of renters' households that are overcrowded" as a factor to be weighed when converting the population forecast into RHNA quotas. *See* Assemb. B. 1086, 2017-2018 Gen. Assemb. (Cal. 2017) (amending CAL. GOV'T CODE §§ 65584, 65584.01, 65584.05 (West 2019)).

211. The bill, as passed initially by the state senate, provided that HCD "shall grant allowances" for the factors discussed in this paragraph, but the state assembly removed this language in favor of a more permissive authorization "to make adjustments." *See* https://leginfo.legislature.ca.gov/faces/billVersionsCompareClient.xhtml?bill_id=201720180SB828&cversion=20170SB82895AMD.

212. S.B. 828 § 2 (amending CAL. GOV'T CODE § 65584.01(b)).

213. *Id.*

Page 147 of 4422

Agenda Item #5.1.

rate" among renter households should be "no more than the average overcrowding rate in comparable regions throughout the nation."[214]

SB 828 is a very important development in the housing policy dialectic. The bill explicitly confronts, and condemns, the way in which exclusionary jurisdictions have, until now, been rewarded for their exclusion with small housing quotas.[215] The idea of a nationally normed "healthy markets" standard represents a new and facially plausible alternative to setting housing quotas on the basis of population trends.[216] But the bill's metric of housing-market health is problematic: the "percentage of cost burdened households" fails to account for the effect of prices on population flows. As housing becomes more expensive in supply-constrained markets, less affluent residents are evicted or bought out and leave for cheaper pastures, and only rich people choose to move in.[217] This tends to equalize the share of cost-burdened households across supply-constrained and unconstrained regions.[218] Indeed, in economic models with costless mobility, an interregional disparity in the percentage of household income spent on housing will persist only if certain regions offer locational amenities not found elsewhere.[219] So, ironically, the fact that a region has a persistently large share of cost-burdened households may indicate that it is doing a very good job protecting environmental and other characteristics which make it desirable, not that it suffers from welfare-reducing supply constraints.

These conceptual problems notwithstanding, California's housing agency may still manage to ramp up housing quotas using the authority granted by SB 828. Specifically, the housing agency could try to convert disequilibrium changes in the share of cost-burdened households into bigger RHNAs for the state's expensive, supply-constrained regions. Because moving between regions is costly, supply-constrained regions experiencing positive economic shocks are

214. *Id.*

215. S.B. 828 § 3 (amending CAL. GOV'T CODE § 65584.04(f)) (stating that neither "[p]rior underproduction of housing . . . from the previous regional housing needs allocation" nor "[s]table population numbers" shall be "a justification for a determination or a reduction in a jurisdiction's share of the regional housing need").

216. And the bill's influence may be spilling across state lines: Oregon is about to launch its first state-directed regional housing needs assessment, and has authorized the state housing agency to consider not only population forecasts, but also "economic trends" and "trends in density and . . . urban residential development." H.B. 2003 § 1, Gen. Assemb, Reg. Sess. (Or. 2019). Oregon has also told local governments estimating housing need to "adopt findings related to changes in," *inter alia*, "housing costs" and "household incomes." Or. HB 2003 § 10(a).

217. *See, e.g.*, ROMEM & KNEEBONE, *supra* note 25 (finding that the San Francisco Bay Area has the greatest socioeconomic disparity between its in-migrants, who tend to be rich, and its out-migrants, who tend to be poor, of all metro areas in the United States).

218. Tellingly, the share of cost-burdened households in the San Francisco region is smaller than that in the Riverside-San Bernardino region. *See California's High Housing Costs: Causes and Consequences*, LEGISLATIVE ANALYST'S OFFICE (Mar. 16, 2015), https://lao.ca.gov/Infographics/californias-high-housing-costs. This is the case even though the price of housing relative to replacement cost in the San Francisco region is almost twice as high as in the San Bernardino-Riverside region. *See* Romem, *supra* note 180.

219. *See, e.g.*, Albouy and Ehrlich., *supra* note 41(presenting model in which high housing costs relative to wage persist in equilibrium only because of locational amenities).

also likely to experience at least temporary increases in the share of cost-burdened and overcrowded households.[220] In the fall of 2019, HCD used its new authority to *triple* the RHNA for the Southern California Association of Governments.[221]

To be sure, newly ambitious RHNAs under SB 828 might not achieve very much if California's courts continue to give unstinting deference to local governments' housing elements, and if even the best of plans come to naught because there are no guardrails on implementation. But California has started responding to these critiques as well.

### 2. *Upending the Presumption of Local Good Faith*

I suggested earlier that if a state took seriously the political economy of local land use, the state would presume bad faith rather than good faith with respect to the design and implementation of the housing element, and backstop approved housing elements with strong measures to combat local governments' evasion of their state-approved plans.[222] California is starting to take this idea to heart.

#### a. *The Standard for a "Substantially Compliant" Housing Element*

California has not expressly abrogated the courts' deferential, check-the-boxes test for the validity of a housing element,[223] but local governments can no longer count on judicial or administrative tolerance of dysfunctional housing plans. HCD now openly rejects the courts' gloss on substantial compliance, applying a more functional test (at least since 2012) and all but inviting legal challenge.[224] In 2017, the legislature authorized HCD to review housing-element implementation and, upon discovering a serious failure of implementation, to rescind the agency's finding that the housing element substantially complies with state law.[225] This new emphasis on implementation is hard to square with the courts' longstanding position that substantial compliance is just a matter of

220. Price controls—rent control and BMR deed restrictions—may mute this.

221. Liam Dillon, *Southern California Must Plan for 1.3 Million New Homes in the Next Decade, Newsom Says*, L.A. TIMES (Aug. 22, 2019) https://www.latimes.com/california/story/2019-08-22/southern-california-housing-growth.

222. *See supra* Subpart II.B.2.

223. Regarding the traditional test, see *supra* notes 182–184 and accompanying text.

224. *See* Barbara E. Kautz, Housing Elements: Beware of What You Promise (Sept. 19, 2013) (unpublished working paper) (criticizing a 2012 letter from HCD to the Association of Bay Area Governments, in which the agency wrote: "While a court may review a housing element to find whether it contains the elements mandated by the statute, the Department's review considers the adequacy of information, program commitments, and timeframes to meet various statutory goals and objectives") https://www.cacities.org/UploadedFiles/LeagueInternet/28/288f671f-501d-4ce4-9099-557bd10ef7f0.pdf.

225. Assemb. B. 72, 2017–2018 Gen. Assemb. (Cal. 2017) (adding CAL. GOV'T CODE § 65585(i)(1)(a) (West 2019) (A.B. 72). The first enforcement action under A.B. 72 was filed against a city that amended a specific plan in a manner that conflicted with the housing element. *See* Complaint, Cal. Dep't of Hous. & Cmty. Dev. v. City of Huntington Beach, No. 30-2019-01046493-CU-JR-CJC (Cal. Sup. Ct. Jan. 25, 2019).

Agenda Item #5.1.

whether the housing element "contains the elements mandated by the statute."[226] So too is a new requirement that local governments allocate their RHNA shares to imminently developable sites,[227] as is a fairly recent statutory provision encouraging affordable-housing developers to challenge housing elements' assignment of RHNA shares to sites.[228] The California Supreme Court, which has yet to address what constitutes a substantially compliant housing element, may eventually conclude that the legislature has tacitly ratified HCD's gloss on substantial compliance.[229]

*b. Pressure to Remain in Compliance*

In the early 1990s, only about a quarter of California jurisdictions had HCD-approved housing elements in place.[230] By the early 2000s, more than 50% were compliant.[231] Today the figure is about 90%.[232] This evolution reflects escalating legislature and judicial pressure to adopt and maintain compliant housing elements. The legislature has tied local governments' eligibility for an ever-lengthening list of grant programs to housing element compliance,[233] and trial courts have enjoined noncompliant local governments from issuing building permits for commercial and other uses.[234] In 2005, the legislature stripped local

226. Fonseca v. City of Gilroy, 56 Cal. Rptr. 3d 374, 387 (Ct. App. 2007); *see also* text accompanying note 183.

227. *See infra* text accompanying notes 244–247.

228. *See infra* note 245.

229. It is significant in this regard that A.B. 72 was enacted subsequent to HCD's public flaunting of the judicial test for substantial compliance. Also, in 2018, the legislature codified its intent to "ensure that future housing production meets, at a minimum, the regional need established for planning purposes." S.B. 828, 2017-2018 Leg. (Cal. 2018) (adding CAL. GOV'T CODE § 65584(a)(2) (West 2019)).

As for the origins of the "substantial compliance" test, it was added to the housing element law in 1984, and at that time the legislature expressed its intent to codify the standard first applied in *Camp v. Bd. Of Supervisors*, 176 Cal. Rptr. 620 (Ct. App. 1981). *See* Hernandez v. City of Encinitas, 33 Cal. Rptr. 2d 875, 880 (Ct. App. 1994) (quoting the legislative declaration). *Camp* is actually a better decision than many more recent "substantial compliance" cases, because the *Camp* court gave considerable weight to the views of the state housing agency and characterized "substantial compliance" as a matter of substance rather than form. *See* 176 Cal. Rptr. at 629–32. Thus, the statutory origins of the substantial compliance standard would not prevent the California Supreme Court from putting a more demanding gloss on it than the lower courts have to date. However, because the substantial compliance test per *Camp* governs challenges to any element of the general plan, not just the housing element, *see* 176 Cal. Rptr. At 629, the California Supreme Court may be wary of making the test very demanding.

230. *See* PAUL G. LEWIS, CALIFORNIA'S HOUSING ELEMENT LAW: THE ISSUE OF LOCAL NONCOMPLIANCE 21–22 (2003) (reporting that 19% were deemed compliant in 1991, and 37% by 1993).

231. *Id.* at 4–5 fig.1.1, fig.1.2 (noting that in 2002, 51% of cities and 66% of counties were deemed by HCD to be compliant).

governments without compliant housing elements of authority to use local zoning or the general plan to deny 20%-BMR projects on any site where housing is a permitted use.[235] Additional penalties are in the offing: a 2019 statute subjects noncompliant local governments to escalating monthly fines of up to $600,000.[236] It also authorizes courts to appoint a judicial agent with "expertise in planning" to "bring the jurisdiction's housing element into substantial compliance."[237] No city will relish the prospect of bleeding $600,000 a month while a court rewrites its housing element.

*c. The New, Self-Executing Housing Element?*

The traditional West Coast requirement that local ordinances conform to the plan did little to help developers get projects approved. In California, a consistency challenge had to be brought within ninety days of enactment of the ordinance,[238] and even a successful challenge might result only in an order telling the local government to make the ordinance consistent (rather than an order approving a housing project). But a little-noticed reform adopted in 2004 and extended in 2018 lays down a path for later, as-applied challenges. The 2004 legislation requires local governments to approve 20%-BMR projects whose location and density comport with the housing element, "even [if the project] is inconsistent with both the jurisdiction's zoning ordinance and general plan land use designation."[239] The 2018 statute put developers of 100% market-rate projects on similar footing,[240] and, in conjunction with an amendment the previous year, appears to have eliminated deference to local governments on the question of whether zoning is consistent with the housing element or other

236. Assemb. B. 101, 2019–2020 Gen. Assemb. § 4 (Cal. 2019) (adding subsections (k)–(n) to CAL. GOV'T CODE § 65585 (West 2019) (explaining that the local authority can be imposed a fine of up to $100,000, which is subject to increase by a factor of six if the court finds the original fees insufficient); *see also* Liam Dillon and Taryn Luna, *California Leaders Strike Deal to Give Cities and Counties Hundreds of Millions to Fight Homelessness*, L.A. TIMES (June 27, 2019), https://www.latimes.com/politics/la-pol-ca-homeless-housing-money-state-budget-20190627-story.html.

237. CAL. GOV'T CODE § 65585(l)(3)(B).

238. *See* CAL. GOV'T CODE § 65860(b) (West 2019); *see also supra* text accompanying note 198.

239. Assemb. B. 2348, 2003–2004 Gen. Asemb. § 4 (Cal. 2004) (amending CAL. GOV'T CODE §§ 65589.5(d)(5)(A), 65915(b)(1) (West 2019)).

240. *See* Assemb. B. 3194, 2017–2018 Gen. Assemb. (Cal. 2018) (adding CAL. GOV'T CODE § 65589.5(j)(4) (West 2019)) (requiring approval of projects that comply with the general plan—of which the housing element is a part—notwithstanding "zoning standards and criteria" to the contrary). In contrast to the 2004 amendments for twenty percent BMR projects, the 2018 amendments are silent on whether local governments must grant permits for housing-element-compliant projects if the housing element conflicts with the land-use element and thus violates the background state-law requirement of "horizontal consistency" among components of the general plan. However, an intermediate court of appeals has held that housing elements that conflict with other components of the plan are valid and enforceable so long as the housing element acknowledges the inconsistency and spells out an action plan to fix it, for example, by amending the conflicting component of the plan. *See* Friends of Aviara v. City of Carlsbad, 148 Cal. Rptr. 3d 805, 810–11 (Ct. App. 2012).

Agenda Item #5.1.

components of the general plan.[241] The thrust of these reforms is to make the housing element self-executing.[242] Developers may apply for permits on the authority of the housing element, and the local officials who review the project must disregard more restrictive zoning ordinances. Local governments that deny or reduce the density of a project in violation of this principle must pay the prevailing party's attorney fees.[243]

*d. The Requirement of Imminently Developable Sites*

A favorite ruse of anti-housing local governments has been to assign their RHNA shares to sites that are impractical to develop.[244] A limited builder's remedy, enacted in 2005, puts some pressure on local governments not to do this,[245] and in 2017, California took another big step, ordering local governments

241. The 2018 amendments do not expressly prescribe an evidentiary standard for resolving questions about the consistency of zoning with the general plan. However, when the consistency language was added to the bill, the associated bill analysis emphasized that the legislature had in 2017 abrogated deference to local governments on questions about a project's consistency with applicable standards, and quoted language to the effect that a project must be deemed compliant with the plan if a "reasonable person" could deem it so. *See* BILL ANALYSIS, Assemb. B. 3194, SEN. COMMITTEE ON TRANSP. & HOUS. 4 (2018), https://leginfo.legislature.ca.gov/faces/billAnalysisClient.xhtml?bill_id=201720180AB3194; *see also* text accompanying notes 248-252 (describing and contextualizing the new evidentiary standard). This drafting history, together with the stated purpose of A.B. 3194—to thwart local efforts to evade the HAA by zoning for less bulk or density than the general plan allows, thereby shunting multifamily housing projects into discretionary variance or rezoning processes, *see* BILL ANALYSIS, Assemb. B. 3194, SEN. FLOOR 3–4 (2018), https://leginfo.legislature.ca.gov/faces/billAnalysisClient.xhtml?bill_id=201720180AB3194 (suggesting strongly that local governments are now prohibited from denying or reducing the density of housing projects if a reasonable person *could* deem the project compliant with the plan, notwithstanding zoning standards that are more restrictive).

242. Indeed, it appears that even commitments made in the housing element to allow greater bulk or density by some specified date in the future can now be enforced through the HAA. *See* BILL ANALYSIS, Assemb. B. 3194, SEN. GOV'T & FIN., (2018), https://leginfo.legislature.ca.gov/faces/billAnalysisClient.xhtml?bill_id=201720180AB3194 (distinguishing legitimate from illegitimate denials of projects whose density is consistent with the density contemplated for the site by the general plan, giving as example of the former a denial during "a [reasonable] period between an amendment to portions of a general plan, such as the housing element, and when the local government updates its zoning ordinances to match the general plan"); Assemb. B. 72, 2017–2018 Gen. Assemb. (Cal. 2017) (adding CAL. GOV'T CODE § 65585(i) (West 2019) (using term "inconsistency" in reference to "*any* failure to implement *any* program actions included in the housing element") (emphasis added).

243. CAL. GOV'T CODE § 65585.5(k)(2) (West 2019).

244. This bit of conventional wisdom is indirectly supported by the California Legislative Analyst's finding that most multi-family construction occurs on sites which are *not* designated for multifamily construction in the corresponding housing element. *See* LEGISLATIVE ANALYST'S OFFICE, DO COMMUNITIES ADEQUATELY PLAN FOR HOUSING? 8–9 (2017) [hereinafter LAO, DO COMMUNITIES ADEQUATELY PLAN], https://lao.ca.gov/reports/2017/3605/plan-for-housing-030817.pdf. Evidently, cities "plan" for multifamily housing where its uneconomical to build, and then work out case-by-case exemptions for certain developers.

245. The relevant statutory provisions state that if the local government has not designated sufficient sites for its low- and moderate-income RHNA shares, it may not rely on local zoning or the general plan to deny a project that is proposed for a residential site in which at least twenty percent of the units would be affordable to lower-income households. *See* CAL. GOV'T CODE § 65589.5(d)(5)(B) (West 2019); S.B. 575, 2005–2006 Leg. § 1 (Cal. 2005). The only allowable ground for denial in most cases is that the project would have a "specific, adverse impact upon the public health or safety." CAL. GOV'T CODE § 65589.5(d)(2). In these proceedings, the local agency has the burden of proof "to show that its housing element does identify adequate

Agenda Item #5.1.

to accommodate their RHNA allocations on imminently developable sites.[246] Using HCD-issued forms, local governments must furnish a parcel-by-parcel enumeration of the available or potentially available sites for housing development, noting for each parcel its "realistic and demonstrated" development potential at various levels of affordability, current uses of the parcel, barriers to development at the parcel's potential density over the next period in the planning cycle, and any steps the local government intends to take to remove those constraints.[247]

*e. An End to Deference on Project-Specific Denials and Density Reductions*

As far back as 1982, with the first iteration of its Housing Accountability Act (HAA), California recognized that local governments may try to evade state housing mandates through project-specific shenanigans, such as unwarranted delay, bad-faith application of existing standards, or denial on the basis of post hoc requirements invented for the purpose of killing the project.[248] The original HAA provided that local governments may deny or reduce the density of a housing project that complied with applicable development standards at the time the permit application was submitted only if the decisionmaker makes "written findings supported by substantial evidence" that the project would have a "specific, adverse [and non-mitigable] impact upon the public health or safety."[249] Subsequently, the legislature clarified that only "objective" standards could be used to deny or reduce the density of a project.[250]

The difficulty with this requirement is that development standards are never perfectly clear, and it's hard for judges who lack intimate familiarity with the development process to say whether a standard is clear enough to qualify as "objective."[251] The 2017 housing package includes a clever fix: housing proposals must be deemed compliant with applicable development standards "if there is substantial evidence that would *allow a reasonable person to conclude*"

---

sites with appropriate zoning and development standards and with services and facilities to accommodate . . . [the jurisdiction's] share of the regional housing need for the very low, low-, and moderate-income categories." CAL. GOV'T CODE § 65589.5(d)(5).

246. *See* Fonseca v. City of Gilroy, 56 Cal. Rptr. 374, 390–91 (Ct. App. 2007) (discussing 2005 amendments, while applying previous standards which did not require parcel identification); Assemb. B. 1397, 2017–2018, Gen. Assemb. (Cal. 2017) (delineating criteria for what counts as an available site).

247. Assemb. B. 1397, 2017–2018 Gen. Assemb. (Cal. 2017) (amending CAL. GOV'T CODE CODE §§ 65583(a)(3), 65583.2 (West 2019)). If the local government assigns more than fifty percent of its lower-income RHNA share to presently non-vacant parcels, it must make findings supported by substantial evidence that the existing use of each such parcel "is likely to be discontinued" during the planning period. CAL. GOV'T CODE § 65583.2(g)(2)(West 2019).

248. 1982 Cal. Stat. 5484, ch. 1438 (adding CAL. GOV'T CODE § 65589.5 (West 2019)).

249. *Id.*

250. S.B. 948, 1999–2000 Leg. (Cal. 1999) (amending CAL. GOV'T CODE § 65589.5(d)(2)).

Agenda Item #5.1.

that the project conforms to the standards.[252] So if a local government chooses to employ mushy standards, it will have enormous difficulty denying any project, as the very mushiness of the standards means there will almost always be enough evidence to allow (not require) a reasonable person to conclude that the standards were met.

The 2017 amendments also hack away at local governments' discretion to deny zoning-compliant projects on the basis of alleged health or safety impacts. Previously, such projects could be denied or reduced in density if there was substantial evidence in the record to support the local government's health or safety finding.[253] Going forward, the local government must show *by a preponderance of the evidence* that the project would have a "significant, quantifiable, direct, and unavoidable [public health or safety] impact, based on objective, identified written public health or safety standards . . . as they existed on the date the application was deemed complete."[254] The local government must make these findings in writing within sixty days of its decision,[255] and, if the decision is challenged in court, the local government must carry the burden of proof.[256] Lest judges fail to get the message, the legislature in 2018 declared that adverse health and safety impacts from new housing "arise infrequently."[257]

Finally, recent amendments to the HAA extend standing to sue to "housing organizations" and potential residents, and require defendants to pay the attorney's fees of prevailing plaintiffs.[258] Developers who have ongoing relationships with a local government may be wary of litigating, say, a modest reduction in the size of their project. The attorney's fee and liberal standing provisions enable other parties to step in and make local governments follow their own rules.

### *f. Statutory Consequences for Failing to Meet Housing Targets*

With the passage of California Senate Bill 35 (SB 35) in 2017, California became the first West Coast Model state to make local governments liable for failing to meet state housing targets, not just for failing to plan.[259] SB 35 directs HCD to determine mid-cycle and at the end of the cycle whether each local government is on pace to meet, or has met, its RHNA targets.[260] If a local government falls short, it must permit as-of-right development of qualifying

252. Assemb. B. 1515, 2017–2018 Leg. § 1 (Cal. 2017) (amending CAL. GOV'T CODE § 65589.5(f)(4)).

253. The Housing Accountability Act originally required "written findings supported by substantial evidence" that the project would have "a specific, adverse [and not feasibly mitigable] impact upon the public health or safety." 1982 Stats. 5484, ch. 1438.

Agenda Item #5.1.

projects that comply with objective zoning and development standards.[261] Projects submitted under SB 35 must be approved or rejected by the local government within a brief window of time or else they are deemed approved as a matter of law, and they are exempt from environmental review.[262]

In keeping with the idea of the housing element as self-executing and preemptive, SB 35 provides that in the event of inconsistency between "zoning, general plan, subdivision, or design review standards . . . a development shall be deemed consistent with the objective zoning and subdivision standards . . . if the development is consistent with the standards set forth in the general plan."[263] (The housing element is a component of the general plan.)

Though SB 35 projects must meet several other criteria that may blunt the statute's impact,[264] the statute advances an important principle: the local prerogative to use cumbersome, discretionary permitting procedures is conditional on the local government actually permitting the amount of new housing—including market-rate housing—that the state expects of it.[265]

* * *

California's housing policy contraption would have made Rube Goldberg blush. But abstracting from the jury-rigged details, the big picture is this: California, home to the nation's most expensive housing markets, is groping its way toward a nationally normed, "healthy housing market" standard for how much new housing local governments must accommodate. California has also taken steps to make state-approved housing plans self-executing, so that developers can get permits for plan-compliant projects notwithstanding contrary local ordinances. California has terminated judicial deference to local governments on the question of whether a development proposal complies with applicable zoning, development, environmental, and safety standards. And, using fee-shifting rules, liberal standing, and evidentiary reforms, California has armed interest groups and private citizens to challenge permit denials and density reductions, as well as the adequacy of the housing plan as a whole. These are unabashedly pro-housing reforms, applicable to market-rate as well as affordable projects.

Taken together, the California reforms are redefining the character and function of the comprehensive plan. Rather than serving as an "impermanent

261. *See* S.B. 35, § 3 (now codified as CAL. GOV'T CODE § 65913.4 (West 2019)).

262. CAL. GOV'T CODE § 65913.4(b) & (c).

263. CAL. GOV'T CODE § 65913.4(a)(5)(B).

264. The project must have at least ten percent BMR units (more if the jurisdiction has a compliant housing element and met its quota for market-rate housing in the previous cycle), must not use sites that were recently occupied by residential tenants or rent-controlled dwelling units, and, for larger projects, must pay union wages. CAL. GOV'T CODE § 65913.4(a)(4), (7) & (8).

265. The same principle is also advanced by another statutory provision added in 2017, which stipulates that local governments may not count a parcel toward their lower-income RHNA quota without rezoning it for by-right development, if the parcel had been counted toward the quota but not developed in the previous planning cycle. *See* Assemb. B. 3197, 2017–2018 Gen. Assemb. (Cal. 2017) (amending CAL. GOV'T CODE § 65583.2I (West 2019)).

constitution" for zoning and development ordinances,[266] or as a statement of a community's aspirations for its built environment,[267] the plan, through its housing element, increasingly resembles a compact between the local government and the state about development permitting. Through the plan, local governments provide the state with an inventory of developable or re-developable parcels within their territory, agree to accommodate a certain number of new housing units on those parcels, and commit to a schedule of actions to remove development constraints.[268] In return for making these promises, the local government maintains its eligibility for certain funding streams and avoids incursions on its regulatory autonomy. Developers, housing organizations, and potential residents can enforce the compact in court, both by suing the local government to make it follow through on rezoning and other actions promised in the housing element, and by demanding building permits on the authority of the housing element itself, even if the project conflicts with other local ordinances.

And yet this agreement is not quite a contract. The housing element, as a component of the local government's general plan, remains local law, and may itself be amended without the state agency's consent. The agency can respond to bad amendments by decertifying a housing element midcycle—exposing the local government to a loss of funding and possibly builder's remedy lawsuits—but the agency cannot compel the local government to stick to the original compact. Nor may the agency rewrite the housing element of a local government that has failed to revise its housing element on the state's cycle.

One can think of the housing element, then, as a kind of provisionally preemptive state intervention in local land use. The state has considerable influence over the housing element's content, and while in place, the housing element supersedes contrary local regulations and establishes a basis for development permitting. But the housing element's preemptive character is softer than that of ordinary state law, both because the housing element must be locally adopted before it takes effect, and because it can be changed by the local government without the concurrence of the state—albeit at the price of risking pecuniary and regulatory sanctions.

It bears emphasis, finally, that the California transformation I have described in this section is still a work in progress. Housing elements in practice may fall pretty far short of the (evolving) statutory ideal. For example, during the most recent planning cycle, HCD approved the housing element of famously supply-constrained San Francisco, notwithstanding the plan's utterly vacuous program to address and remove constraints.[269] The California framework seems

266 For influential statements of this theory of the plan, see Charles M. Haar, *In Accordance with a Comprehensive Plan*, 68 HARV. L. REV. 1154 (1955); Mandelker, *supra* note 117.

269. *See* 2014 HOUSING ELEMENT, *supra* note 176, at C.23–C.24 app. C (setting forth a few vaguely stated, ongoing program actions to address constraints, while entirely ignoring one of the primary constraints identified the housing element's own analysis of constraints: the city's very unusual and cumbersome discretionary review

Agenda Item #5.1.

unlikely to achieve very much absent political leadership from the governor and HCD to make it work. The state's recently elected governor, Gavin Newsom, has made housing a priority, so his tenure will be an important test case for the framework.[270]

### B. DENSITY MANDATES

In 1981, Oregon's LCDC promulgated the Metropolitan Housing Rule, which sets minimum zoning densities for cities in the Portland metro area.[271] Ever since, land-use scholars have regarded the rule with a kind of wry bemusement, as if to say, "Oh, leave it to Oregon's urban-boundary enthusiasts to try something way too zany for any other state."[272] Yet in recent years, and on both coasts, states have begun to challenge local control over housing density, including the density of market-rate housing. This is an ideologically important development because, as Part II explained, the expensive Northeastern states traditionally regarded the "affordability problem" as being solely about barriers to the construction of subsidized, deed-restricted housing,[273] and because even West Coast states often privilege projects with a large share of BMR units.[274]

To date, most of the new density interventions have focused on so-called ADUs, small homes which may be developed in an under-utilized garage or basement, or added in the backyard of existing or proposed house.[275] Washington, California, Oregon, New Hampshire, and Vermont now require local governments to permit ADUs on parcels zoned for single family homes.[276] Connecticut, Florida and Rhode Island have proceeded a bit more indirectly, encouraging ADUs by allowing local governments to count them toward the

procedure); Letter from Paul McDougall, Hous. Policy Manager, Cal. Dep't of Hous. & Cmty. Dev., to John Rahaim, Dir., Planning Dep't, City of S.F. (Sept. 10, 2014) (on file with author) (deeming the city's draft housing element compliant, without comment on constraints).

270. *See* Alexei Koseff, *Newsom Blazing a Trail of His Own*, S.F. CHRONICLE, Feb. 23, 2019, at A7 (comparing Newsom's housing positions with those of his predecessor).

271. The rule is codified at OR. ADMIN. R. 660-07-000–660-07-360 (2018). For discussion of its history, see *City of Happy Valley v. Land Conservation & Dev. Comm'n*, 677 P.2d 43, 44 (Or. 1984).

272. *See, e.g.*, FISCHEL, ZONING RULES, *supra* note 4, at 303–07, 366-67 (describing that Portland is "Oregon's boat to float"); Hills, *supra* note 95, at 1639–42 (praising Metropolitan Housing Rule, but describing the adoption of anything similar in New Jersey, the subject of his article, as "improbabl[e]").

273. *See supra* Subpart II.A.

274. *See supra* Subpart III.B. (describing reforms in California).

275. ADUs are typically defined by statute as a small dwelling (for example, less than 800 or 1200 square feet) contained within, or located in close proximity to, another existing or zoning-authorized structure. *See, e.g.*, CAL. GOV'T CODE § 65852.150 (West 2019).

276. *See* CAL. GOV'T CODE § 65852.2 (West 2019); N.H. REV. STAT. ANN. § 674:72 (2018); VT. STAT. ANN. Tit. 24, § 4412(1) (2019); WASH. REV. CODE § 43.63A.215 (2019); S.B. 1051, 2017– 2018 Leg. § 6 (Or. 2017) (enacted); WASH. STATE. DEP'T. OF CMTY., TRADE, AND ECON. Agenda Item #5.1.

locality's fair-share obligation for affordable housing.[277] Several other states have enacted modest ADU incentive programs.[278]

More aggressive density mandates are also on the table. In 2019, Oregon enacted a statewide upzoning bill that requires cities with at least 25,000 residents to allow fourplexes in all areas zoned for residential use, and cities with 10,000–25,000 residents to allow duplexes.[279] Cities that fail to bring their zoning ordinances into compliance within two to three years will have to permit duplexes and fourplexes pursuant to a default model ordinance issued by the LCDC.[280]

The most ambitious of the statewide upzoning bills would rezone residential parcels near transit stations for four-to-five story buildings.[281] California state senator Scott Wiener has been pushing this idea since early 2018,[282] drawing national attention to the connections between housing density, socioeconomic mobility, mass transit, and climate change.[283] So far his efforts have been unavailing,[284] but the governor has signaled support,[285] legislators in other states are picking up on the idea,[286] and it seems safe to say that statewide

In Massachusetts, one house of the legislature has voted to require every local government to zone at least one district "of reasonable size" for multi-family housing, at state-prescribed minimum densities. *See* S.B. 2311, 189th Gen. Court § 6 (Mass. 2016) (enacted); *see also* Katie

Agenda Item #5.1.

upzoning bills will be the subject of ongoing debate and attention in the years ahead, in California and beyond.[287]

The statewide upzoning bills have generated a lot of excitement, but it's not clear that states will be able to get local governments to allow significantly more housing simply by preempting local restrictions on size and density. The evolution of California's ADU legislation offers an instructive lesson.[288] The state's ADU framework dates to 1982, when the legislature decreed that local governments may disallow ADUs within residential zones only if the locality makes findings of "specific adverse impacts on the public health, safety, and welfare."[289] Many local governments responded by "authorizing" ADUs while requiring ADU applicants to obtain onerous, discretionary permits.[290] Concerned that local governments were abusing their discretion, the state legislature, in 2002, directed local governments to permit ADUs ministerially; demanded approval of ADU applications that conform to state-prescribed requirements (irrespective of local ordinances); prescribed a template to which local ADU ordinances must conform; and required local governments to submit their ADU ordinances to the state housing agency for review.[291] The 2002 bill did not, however, displace "height, setback, lot coverage, architectural review, site plan review, fees, charges, and other zoning requirements generally

287. In addition to overt density mandates, several states have tried to use regulatory safe harbors to prod local governments into zoning for greater density. Oregon, Washington, California, and New Jersey provide examples. Since the mid-2000s, California has encouraged rezoning for higher densities through a safe-harbor provision in the housing element law. Sites zoned at or above the statutory minimum densities are deemed to have adequate density, as a matter of law, to accommodate a portion of the jurisdiction's lower-income RHNA share. *See* Assemb. B. 2348, 2003–2004 Gen. Assemb. (Cal. 2004) (adding CAL. GOV'T CODE § 65583.2 (West 2019)). Similarly, in New Jersey, localities seeking immunity from the builder's remedy must zone at minimum densities for 20%-BMR projects. *See In re* Adoption of N.J.A.C. 5:96 & 5:97, 6 A.3d 445, 461–64 (N.J. Super. Ct. App. Div. 2010), *aff'd In re* Adoption of N.J.A.C. 5:96 and 5:97, 74 A.3d 893, 897 (N.J. 2013) (invalidating regulation which, in the court's view, would have allowed local governments to comply with their *Mt. Laurel* obligations by zoning land at insufficient density and with excessive BMR requirements). In Oregon and Washington, state agencies have derived minimum zoning densities from the principle of confining growth within urban boundaries. Oregon's latest regulation, issued in 2009, spells out density safe harbors for local governments throughout the state that seek to adjust their growth perimeter. OR. ADMIN. R. § 660-024-0040(8) (2018). The Washington Supreme Court invalidated the Growth Management Hearing Board's attempt to create "bright line" minimum urban densities. *See* Viking Properties, Inc. v. Holm, 118 P.3d 322, 329 (Wash. 2005) (en banc). However, observers see Washington as having *de facto* density requirements for land within the growth boundaries. *See* Egon Terplan, *Learning from Washington's Growth Management Act*, THE URBANIST (July 31, 2017), https://www.spur.org/publications/urbanist-article/2017-07-31/learning-washington-s-growth-management-act ("Within urban areas, most growth must be allocated with minimum densities of four units per acre.").

Agenda Item #5.1.

applicable to residential construction in the zone in which the property is located."[292]

Studying the response to this statute, Margaret Brinig and Nicole Garnett collected the zoning ordinances of every California municipality with more than 50,000 people, as well as public-meeting minutes and news stories. They found that most California cities—including Los Angeles, San Diego, and San Francisco—effectively thwarted the new mandate with a "thousand paper cuts."[293] Cities discouraged ADU construction via design review, costly building-material mandates, rental restrictions, owner-occupancy requirements, minimum lot sizes, conditional use permits, permit-filing fees, impact fees, and tight allowances for the permissible size of an ADU.[294] Some of these requirements probably violated state law, but anti-ADU local governments had few compunctions about pushing the envelope of their reserved authority.[295]

Frustrated by local intransigence, California enacted additional ADU bills in 2016, 2017, and 2019. The 2016 statute further constrains local requirements for parking, unit size, fire sprinklers, utility-connection fees, and lot-line setbacks.[296] Additional tweaks were made in 2017,[297] and in 2019 the legislature created an essentially unqualified right for every homeowner in the state to add a freestanding backyard ADU of up to 800 square feet, plus a "junior ADU" of up to 500 square feet within the envelope of an existing structure.[298] The 2019 legislation also preempted local impact fees on ADUs of up to 750 square feet.[299] The new measures seem to have generated a flood of ADU applications,[300] which suggests that local intransigence can be overcome *if* the legislature is willing to preempt a ton of local law and terminate local permitting discretion.

TIMES (Oct. 10, 2019) https://www.latimes.com/california/story/2019-10-10/california-single-family-zoning-casitas-granny-flats-adus (noting that Los Angeles has received 13,300 requests to build ADUs since 2017 legislation, a twenty-fold increase over previous application rate).

Agenda Item #5.1.

And yet, it's hard to imagine an upzoning-near-transit bill passing if the bill knocks out discretionary local control over development permitting. Notably, Senator Wiener's bills would have left in place local authority over demolition control, design standards, permitting procedures, fees, and much more.[301] If a similar bill is eventually enacted, local governments will have a field day inventing ways to evade it.[302]

### C. CONCLUSION

Spurred by the YIMBY movement, legislatures in the high-cost coastal states are showing new interest in local governments' land-use policies and are intervening in new and unambiguously pro-housing ways. There is clearly a receptive audience among state policymakers for ideas about how to overcome local NIMBYism and increase the supply of market-rate as well as BMR housing, particularly near mass transit. But there also seems to be some uncertainty about how best to proceed. Just about everything is on the table: new ways of setting housing-supply targets (national norming); new density requirements (ADUs and beyond); new tools for pressing local governments to follow their own rules (attorney's fees, evidentiary standards, time limits, as-of-right permitting, and permitting on the basis of the housing element); and more prescriptive requirements for the housing plan itself (imminently developable sites).

## IV. A WAY FORWARD: "HOUSING ELEMENTS" AS TOP-DOWN AND BOTTOM-UP DEVICES FOR OVERCOMING LOCAL BARRIERS TO HOUSING

This Part takes up the "how best to proceed" question. Without purporting to offer a universal answer—there probably is none—I will suggest a variation on the emerging California model of the housing element as a preemptive intergovernmental compact for development permitting. The argument sounds in political economy, not normative theory. I take it as given that economically productive metro areas should allow a lot more housing to be built, especially in high-density forms near transit. The question is how to get them to allow it.

Today the California model, like its West Coast antecedents, represents a largely top-down strategy for controlling local barriers to housing supply.[303] The state tells local governments how much new housing they must accommodate through their housing elements, and the state uses the threat of fiscal and

301. For an explanation from its author, see Scott Wiener, *S.B. 827 Retains an Awful Lot of Local Control and Community Planning*, MEDIUM (Apr. 8, 2018), https://medium.com/@Scott_Wiener/sb-827-retains-an-awful-lot-of-local-control-and-community-planning-b1d111fc1007.

302. That said, a statewide upzoning-near-transit bill would probably accomplish more in California than in most other states, because California's Housing Accountability Act makes it difficult for local governments to impose discretionary conditions on otherwise permissible projects whose effect is tantamount to reducing the project's density. *See supra* notes 248–256 and accompanying text. But local governments could still impose nondiscretionary fee, design, labor, and affordability requirements that make many transit-near-density projects uneconomic to build.

303. *See supra* Subpart III.A.2.

Agenda Item #5.1.

regulatory sanctions to induce local governments to adopt compliant housing elements.[304] It is a fair question, though, whether any high-cost state will be able to expand the supply of housing substantially without changing the *local* politics of housing—the political dynamics in cities and suburbs that led to decades of underproduction.

A central contribution of this Part is to show that the emerging California model can readily be adapted to put bottom-up as well as top-down pressure on local barriers to housing supply. Specifically, with a few modest extensions, the California framework could be used to increase the political leverage and policymaking discretion of relatively pro-housing factions in city politics, and to facilitate regional housing deals by enabling local governments to make credible commitments to one another.

Boiled down to essentials, the proposed variation on the California model combines a procedure for periodically (and unobtrusively) redefining the local regulatory baseline for housing development, in keeping with the state's goals; a mechanism to guard the new baseline against the retrogressive tactics of local governments; and interventions that redistribute policymaking authority toward relatively pro-housing factions at the local level.

In defending this approach, I develop a historical analogy to Jim Crow and the federal Voting Rights Act (VRA). The problem states now face in trying to control local barriers to housing supply is structurally quite similar to the problem the federal government faced in the 1960s when it undertook to dismantle the regime of publicly enforced racial hierarchy that prevailed throughout the South. In both cases, a central government seeks to control the behavior of local officials whose political incentives operate at cross purposes with the objectives of the central government. In both cases, the central government lacks the political will or administrative resources to entirely subsume the local government's functions.

The VRA tackled the local-political-incentives problem by defining a new regulatory baseline for voting, one which enfranchised black citizens *en masse*.[305] White office holders then had to answer to black preferences—or else find some new way to keep blacks from voting.[306] To forestall local evasion of the new regulatory baseline, VRA provided for centralized, pre-implementation review of all future changes to voting standards and procedures.[307] My variation on the California model embodies the same basic ideas—new regulatory baselines, preclearance to guard against retrogression, and redistribution of political power—but adapts them to deal with a context in which there is no general consensus about what the new baseline should be, doubtful support for centralizing control over the traditionally local government function in question,

306. *See infra* Subpart IV.B.1.
307. *See infra* Subpart IV.B.1.

Agenda Item #5.1.

and no easy enfranchisement-oriented solution for the political incentive problem.[308]

Subpart IV.A lays out the elements of my proposal, and briefly explains what further reforms would be needed to fully realize it in the state that's come closest to date, California. Subpart IV.B explains the model's top-down and bottom-up mechanisms for inducing local governments to relax locally erected barriers to new housing.

### A. ELEMENTS OF THE MODEL

Extending California's recent innovations, the model I shall defend has the following components:

> (1) The state, through a housing agency under control of the governor, periodically determines the minimum amount of new housing that each region of the state shall accommodate over the planning cycle. The agency or a regional council of governments then divvies up the regional need among local governments. Both the need determination and the divvying should be grounded in economic conditions—not population projections—so that new housing is added where it would be more valuable, and so that escalating prices result in higher housing quotas. (Alternatively, the state might just require all economically significant regions to maintain a substantial potential-housing buffer, such as, capacity to accommodate a 30–50% increase in the housing stock over the course of a decade.)[309]
>
> (2) After receiving their housing targets, local governments must draft and submit to the state housing agency a parcel-specific "housing element," in which the locality explains how it will accommodate its share of state-determined housing need, or the housing buffer, over the planning cycle. The housing element may spell out or incorporate by reference zoning, fees, and development standards and procedures applicable to the parcels. It must also identify local constraints to development of the planned-for housing, and set forth a schedule of actions to mitigate or remove unreasonable constraints.
>
> (3) A state-certified housing element, once enacted by the local government, becomes the local government's highest law with respect to land use, at least until the local government has produced its quota of housing for the cycle.[310] It supersedes any contrary provisions found in local regulations, ordinances, ballot measures, the general plan, or the city or county charter. (This is the sense in which the model establishes a preemptive compact. A state-law framework empowers the local legislative body and the state agency *acting together* to preempt contrary local law, including law that the municipal legislature cannot override on its own, such as the city charter.)
>
> (4) To reduce information costs for developers and planning department staffers, housing elements should include an appendix listing any local ordinances, regulations, or charter provisions that the local government and the state agency agree to deem preempted by the housing element. Some such

308. Local officials might be less resistant to new housing if potential future residents were enfranchised to vote in local-government elections, but this would require a radical break with traditional civic arrangements.

309. *See supra* Subpart IV.A.

310. The state might allow local governments to restrict development in ways that contravene commitments made in the housing element after the local government has produced its quota of housing for the cycle.

measures may be preempted as of the date of the housing element's enactment, while others may be preempted prospectively. (For example, the housing element might deem an identified constraint to be preempted in the future if it is not reformed by the date listed in the housing element's schedule of actions to ameliorate constraints.)

(5) To discourage local hamstringing of projects that comply with size and density conditions specified in the housing plan, the state should authorize developers and third-party interest groups to bring as-applied challenges to local regulations and procedures, while flipping the traditional presumption of consistency. Thus, just as California's HAA now stipulates that housing projects shall be deemed compliant with applicable standards if there is substantial evidence in the record that would allow a reasonable person to find the project compliant, housing projects should also be deemed *exempt* from any local procedure, fee, or other requirement if there is substantial evidence in the record that would allow a reasonable person to find the requirement, as applied to the project in question, inconsistent with the housing element.

(6) A housing element "substantially complies" with state law if (a) the state agency determines that the local government, operating with the housing element in place, is substantially certain to meet its housing quota, or (b) the agency concludes that achievement of the quota is uncertain, or infeasible without public subsidy, but that the housing element removes or appropriately commits the local government to removing all unreasonable or unnecessary regulatory and procedural constraints to meeting the housing target.[311] Courts should defer to the agency's certification decision if supported by substantial evidence. [312] The housing agency should have authority to establish, by regulation, classes of presumptively unreasonable constraints.

(7) A local government may amend its housing element during the planning cycle if the locality gives the state agency proper notice including written findings about whether the amendment would or would not render the housing element noncompliant.[313] The agency may respond with suggestions, requests for further information, and, as appropriate, warnings about decertification. The local government shall again notify the agency upon adoption of the amendment, at which point the agency shall either recertify or decertify the housing element.[314] Decertification would strip the housing element of its preemptive force *vis-à-vis* provisions of local law that

311. Here, a slight variation in word choice ("unreasonable" vs. "unnecessary") may end up being consequential, as "necessity" connotes a stricter standard than "reasonable." Note also that if the state adopts the "potential-housing buffer" approach at step (1), then housing element validity will usually be evaluated under (4)(b), because market conditions will not usually support a 30–50% expansion of the housing stock over the planning cycle even in the absence of regulatory constraints.

312. If the agency fails to act on a housing element within a brief period of time (say, sixty days), the element shall be deemed certified by operation of law.

313. If it proves necessary, the state could further strengthen the framework by stipulating that housing elements and housing-element amendments to which the state agency has properly objected may be adopted only through an exceptional local legislative procedure such as, for example, supermajority vote of the city council, or supermajority council vote followed by referendum approval.

314. If the agency fails to act within a reasonable period of time (say, sixty days), the housing element would be deemed recertified as a matter of law.

> take precedence over ordinary municipal legislation (such as provisions found in the charter or adopted by popular vote).
>
> (8) Local governments shall report annually to the state housing agency on development applications received, applications approved and denied, time from submittal of application to final approval/denial, and anything else that the state agency deems reasonably necessary for monitoring implementation of housing elements.
>
> (9) Local governments that lack a current, state-approved housing element, or whose housing element has been decertified, should face substantial and prompt pecuniary sanctions.
>
> (10) If a local government fails to enact a certified housing element by the statutory deadline, the mayor, with the approval of the state housing agency, should be authorized to issue an interim housing element.[315] An interim housing element would have the same legal effect as a regularly adopted housing element, but shall lapse in (say) 180 days, unless reissued by the mayor and reconfirmed by the housing agency at that time. Development proposals submitted while an interim housing element is in effect shall be permitted on the basis of it, even if the permitting decision occurs after the interim element has lapsed or been replaced.

To be clear, neither California nor any other state has fully realized this model. As of this writing, California still falls short in several significant respects:

*First*, California has just begun to wrestle with the inadequacies of the population-forecast approach to determining housing need.[316] The state is feeling its way toward an alternative, but the shape of what's to come is not yet apparent.

*Second*, it's doubtful that local governments may use the housing element to suspend constraints found in the city charter or adopted by voters, outside of extreme cases where the measure at issue unequivocally disables the local government from meeting its RHNA target.[317] Courts have done backflips to

---

315. For cities without a mayor-council form of government, the state could delegate authority to issue interim housing elements to the city manager, or to the president of the city council. Also, a state-approved interim housing element should either be exempt from review under the California Environmental Quality Act (CEQA), or subject to review but not subject to being enjoined if environmental review has not been completed prior to issuance of the housing element. CEQA-induced delays would defeat the whole point of interim housing elements—namely, ensuring that local governments have an up-to-date, compliant housing element in place, and thereby avoiding the environmental and social harms associated with a lack of sufficient, appropriately located new housing.

316. *See supra* notes 211–222 and accompanying text.

317. The main source of the doubt is a provision stating, "Nothing in this article shall be construed to be a grant of authority . . . with respect to measures that may be undertaken or required by a local government to be undertaken to implement the housing element of the local general plan." CAL. GOV'T CODE § 65589(c) (West 2019). Since municipal legislative bodies ordinarily lack authority to override voter-adopted or charter-embedded measures, treating the housing element as superseding such measures would be tantamount to treating the housing element article of the government code as a "grant of authority" to municipal legislatures. For examples of extreme cases where voter-adopted measured were found to be preempted, see Bldg. Indus. Ass'n v. Oceanside, 33 Cal. Rptr. 2d 137 (Ct. App. 1994); Urban Habitat Program v. Pleasanton, No. RG06-293831 (Cal. Super. Ct. Mar. 12, 2010).

preserve voter-adopted measures that make it difficult, if not facially impossible, for the local government to accommodate its RHNA share.[318]

*Third*, local governments can still throw up lots of barriers to housing-element-compliant projects. While recent reforms to the HAA prevent local governments from denying or reducing the density of a project on the basis of zoning that a reasonable person could deem inconsistent with the plan (including the housing element),[319] the HAA does not exempt projects from fees, procedures, and other non-zoning constraints at cross purposes with the plan. Finally, there is no established convention, such as a "preemption appendix," for giving low-cost notice to developers and planning staff about any features of the local development process that the local government agrees to deem preempted by the housing element.

*Fourth*, California has no provision for interim housing elements. One city, Encinitas, has gummed up the state framework with a charter provision requiring housing elements to be enacted by referendum vote.[320] The city's voters have consistently rejected the housing elements presented to them.[321] As the housing element becomes more legally consequential under state law, other cities are likely to parrot Encinitas unless the state neutralizes their efforts.

*Fifth*, the state legislature has not adopted an explicit, functional definition of what constitutes a "substantially compliant" housing element—although the definition proposed here is similar to the definition that HCD now uses,[322] and it's arguable that HCD's definition has been tacitly ratified by the legislature.[323]

These caveats notwithstanding, California has certainly taken big steps toward the model I have sketched. The state has strengthened the preemptive force of the housing element and made it self-executing in key respects;[324]

---

318. *See, e.g.*, Shea Homes Ltd. v. Alameda, 2 Cal. Rptr. 3d 739 (Ct. App. 2003) (rejecting preemption claim because it was *possible* that the measure would not conflict with housing element, at least if voters approved certain measures in the future); *cf.* Bldg. Indus. Ass'n of San Diego v. Encinitas, No. 37-2017-00023267-CU-WM-NC (Cal. Super. Ct. Dec. 12, 2018) (declining to enjoin voter-approval requirement for future housing elements because the city's voters might behave reasonably in the future, notwithstanding their rejection of every housing element considered in the previous thirty years).

319. *See supra* text accompanying notes 238–242.

320. *Bldg. Indus. Ass'n of San Diego*, slip op. at 4; *Judge Orders the City of Encinitas to Adopt a Housing Element; City's First Since 1992*, PUB. INTEREST LAW PROJECT (Jan. 9, 2019), http://www.pilpca.org/2019/01/09/encinitas-housing-element-order/ (noting that city has not enacted a housing element update for nearly thirty years). While the court order in *Bldg. Indus. Ass'n of San Diego* counts as a one-time success, the court refused to enjoin Encinitas's voter-approval requirement prospectively, so the strategy of embedding voter- or supermajority-approval requirements in city charters may still be attractive to NIMBY activists hoping to gum up the housing-element process or pressure HCD into approving weak housing elements.

321. Barbara Henry, *Encinitas Voters Turn Down City's Latest Housing Plan Ballot Measure*, THE SAN DIEGO UNION-TRIBUNE (Nov. 7, 2018) https://www.sandiegouniontribune.com/sd-no-housing-plan-20181107-story.html.

322. *See* Kautz, *supra* note 224 ("the Department's review considers the adequacy of information, program commitments and timeframes to meet various statutory goals and objectives").

323. *Compare supra* notes 182–184 and accompanying text (explaining traditional standard of review), *with* notes 222–229and accompanying text (arguing that recent legislation supports functional compliance standard, and noting HCD's gloss on substantial compliance).

324. *See supra* Subpart III.A.2.

Agenda Item #5.1.

housing-need determinations are now supposed to reflect national norms concerning "healthy housing markets;"[325] the housing agency and (more tacitly) the legislature have pushed back against the traditional, deferential-to-local-governments conception of "substantial compliance";[326] and the legislature has subjected local governments that remain out of compliance to a schedule of escalating fiscal penalties.[327]

### B. THE CASE FOR THE MODEL

The case for my proposal depends on the nature of the problem to be solved. From the point of view of a YIMBY state legislator who, let us assume, is well versed in the relevant economics, political science, and legal-academic literatures, the problem of overcoming locally-erected barriers to housing has the following salient features: extreme but geographically uneven preference conflict between state and local officials; substantial intracity conflicts over housing policy, at least in larger cities; asymmetric information (local governments have the advantage); a tradition of local control over land use; and weak or uncertain support in the statewide electorate for transferring control to the state.

> (1) Extreme but geographically uneven preference conflict between the state government (which wants more housing) and the municipal actors responsible for zoning and project permitting, many of whom want to preserve the status quo.

As Part I explained, many local governments in expensive regions of the nation are dominated by homevoters who have strong financial interests in opposing new housing—especially housing in their neighborhoods—and who vote accordingly. Making the state/local conflict all the more intense is the fact that new housing can change local electorates in ways that threaten incumbent officeholders. Imagine a sleepy suburb of single-family homes that is compelled to permit five-story residential buildings within a half mile of transit stations, as a California lawmaker has proposed.[328] In come thousands of new residents whose land-use preferences are likely to be quite different than those of the existing homeowners.[329] Local politicians who've built their brands serving

325. *See supra* Subpart III.A.1.

326. *See supra* Subpart III.A.2.

327. *See supra* Subpart III.A.2. The legislature has also removed some exceptions that charter cities previously enjoyed. *See* S.B. 1333, 2017–2018 Leg. (Cal. 2018) (amending CAL. GOV'T CODE § 65700 to apply consistency and other requirements to charter cities). These amendments respond to The Kennedy Comm'n v. Huntington Beach, 224 Cal. Rptr. 3d 665 (Ct. App. 2017) (holding that charter cities are not required to make zoning and specific plans consistent with their housing element).

328. *See supra* text accompanying notes 281–283.

329. If the newcomers are renters, they'll support the development of more rental housing (though perhaps not in their neighborhoods). *See* Hankinson, *supra* note 69. And even as owners, they'll probably have a greater taste for density, and less willingness to pay for roads and parking, than existing residents who own dispersed single-family homes.

Page 167 of 4422

Agenda Item #5.1.

homogenous, single-family-home neighborhoods will have a strong personal incentive to block the change, not just to put on a show opposing it.

That said, the degree of state/local preference conflict over new housing is geographically uneven. The state wants a lot more housing in some places (near transit and employment centers), but not in others (environmentally sensitive lands, and places where prices haven't escalated). And among the local governments targeted for more housing, opposition to the state's agenda is likely to be much stronger in affluent, homogenous communities where nearly everyone is a homeowner than in mixed polities where renters make up a large share of the electorate.[330] Opposition may also be weaker in communities that elect their local governments at-large rather than by-district.[331]

> (2) Intracity conflict over housing policy, the outcome of which may depend on procedural rules and the relative strength of the mayor and the city council.

Particularly in cities that are socioeconomically and housing-tenure diverse, housing policy is likely to be an ongoing source of political conflict and compromise rather than an issue on which homevoters always get their way. Business interests may be forceful advocates for pro-growth policies,[332] while neighborhood groups will favor local restrictions. Mayors, to a first approximation, are likely to be more supportive of liberal housing policies than city councilpersons elected from territorial districts.[333] This is so because mayors answer to city-wide electorates, not district-specific constituencies (where neighborhood groups are well organized), and because mayors run in relatively expensive elections (making them more dependent on deep-pocketed business interests).[334] As well, because of their higher profile, mayors have a better

330. But as Subpart I.B. explained, many big cities are also showing "NIMBY" characteristics.

331. *See* Michael Hankinson & Asya Magazinnik, How Electoral Institutions Shape the Efficiency and Equity of Distributive Policy (Sept. 17, 2019) (unpublished working paper), http://mhankinson.com/assets/hankinson_magazinnik.pdf (finding that shifts from at-large to by-district elections induced by the California Voting Rights Act caused substantial reductions in number of housing permits issued citywide). Researchers have also found that zoning was adopted earlier in cities that elected their councils by-district rather than at-large, and that cities with by-district elections have more exclusionary zoning codes. *See* James Clingermayer, *Distributive Politics, Ward Representation, and the Spread of Zoning*, 77 PUB. CHOICE 725, 730, 733–34 (1993); James Clingermayer, *Electoral Representation, Zoning Politics, and the Exclusion of Group Homes*, 47 POL. RES. Q. 969, 975–78 (1994). This is consistent with the idea that neighborhood/homevoter interests have more power under districted than at-large electoral systems. *See* Aaron Deslatte et al., *Policy of Delay: Evidence from a Bayesian Analysis of Metropolitan Land-Use Choices*, 46 POL'Y STUD. J. 674, 689–90 (2018) (finding that in cities with districted elections, the degree of building-industry concentration has weaker influence on permitting delays).

332. An increase in housing supply that brings down prices would raise the effective (real) wage paid to workers, at no cost to employers.

333. *See* Roderick M. Hills, Jr. & David Schleicher, *Planning an Affordable City*, 101 IOWA L. REV. 91, 112–15, 124–29 (2015) [hereinafter Hills, Jr. & Schleicher, *Planning*]. Notably, the pending California bills to upzone all land in the state near transit and job centers for four-to-five story buildings has (as of this writing) been endorsed by the mayors of San Francisco, Oakland, San Jose, Sacramento, and Stockton, but no endorsements from city council members have been announced. Scott Wiener (@Scott_Wiener), TWITTER (Jan. 17, 2019, 8:20 AM), https://twitter.com/Scott_Wiener/status/1085934772717641728.

334. Hills, Jr. & Schleicher, *Planning*, *supra* note 333, at 112–15, 124–29.

Agenda Item #5.1.

chance than city members of developing a personal brand known to voters,[335] which may provide some buffering against the discontent of homevoters reacting to neighborhood change.

One consequence of these intracity conflicts (coupled with a lack of strong parties in municipal legislatures) is that the procedures through which land-use policy is developed can have big consequences for housing outcomes.[336] Specifically, as Rick Hills and David Schleicher have argued, a city's policy is likely to be more accommodative of new housing if it is forged through citywide grand bargains, rather than worked out seriatim through project- or site-specific decisions.[337] The seriatim, project-specific approach privileges the interests of those who have the most at stake in individual projects (like the neighborhood NIMBYs),[338] whereas the prospect of a grand bargain can activate groups that would benefit from a big citywide or regional increase in the supply of housing (such as employers and municipal labor unions), particularly if the mayor plays an agenda-setting role.[339]

> (3) Asymmetric information about how best to reconcile the state's desire for more housing with local preferences over urban form and community character.

YIMBY state legislators know they want a lot more housing, and higher density housing, in expensive regions of the state. But they probably have little if any idea about how to assemble a given number of units into a built-form package that minimizes public opposition in any given locale. The local officials who make project-approval decisions on a daily basis are likely to have a much better sense of this.

> (4) A deeply rooted tradition of discretionary local control over land use, such that local governments have an enormous variety of tools with which to vitiate prescriptive mandates from the state.

We saw in Part III that state legislators are increasingly willing to tell local governments that they must allow certain types of housing (like ADUs), or certain densities of housing. But as evidenced by the nearly forty-year game of cat and mouse that California has played with local governments over ADUs, it's doubtful that nondiscrimination requirements ("treat housing type X the

335. *See* Christopher S. Elmendorf & David Schleicher, *Informing Consent: Voter Ignorance, Political Parties, and Election Law*, 2 U. ILL. L. REV. 363, 398–403 (2013).

336. More specifically, it is internal conflict plus the lack of meaningful partisan competition for control of city government that makes the procedural rules so important. *See* Roderick M. Hills, Jr. & David Schleicher, *Balancing the "Zoning Budget,"* 62 CASE W. RES. L. REV. 81, 124–27 (2011) [hereinafter Hills, Jr. & Schleicher, *Balancing*].

337. *See id*; Hills, Jr. & Schleicher, *Planning*, *supra* note 333.

338. *Cf.* Katherine Levine Einstein et al., *Who Participates in Local Government? Evidence from Meeting Minutes*, 17 PERSP. ON POL. 28, 28–46 (2019) (studying minutes of planning and zoning board meetings in the Boston area and finding that homeowners are vastly overrepresented among people who comment on land-use issues, and nearly always speak in opposition to proposed developments).

339. Business interests are hard to engage on individual projects (which considered in isolation have no tangible effect on the regional housing market), but will be highly motivated to lobby on proposals that would materially increase the total supply of housing in the labor markets from which they hire. *See supra* note 332.

Agenda Item #5.1.

same as housing type Y") or narrow mandates ("allow housing type X on parcels zoned for single-family homes") will actually result in local governments permitting a lot more housing. Such requirements do not prevent local agencies from exercising their permitting discretion to stymie projects they dislike,[340] or from enacting facially neutral ordinances that make the state-favored housing type tough to develop.

To be sure, California's HAA generally prevents local governments from denying or reducing the density of projects that comply with objective standards, but the Act does not prevent local governments from otherwise *conditioning* projects in extremely subjective ways.[341] So it was that San Francisco's planning commission recently demanded changes to an infill condo development because the windows looked too upscale,[342] and turned back a small ADU-and-an-addition project because the commission thought the architect could improve the unit's internal layout.[343] This kind of nitpicking leads to interminable delays, and positions anti-development factions to weigh down projects with uneconomic conditions.[344]

> (5) Weak or (at best) highly uncertain support in the statewide electorate for consolidating state control over zoning and development permitting.

Strong conflicts between state and local preferences often give rise to field preemption,[345] so perhaps it's not surprising that California has cut off most local discretion with respect to ADUs. Yet thoroughgoing state control over ADUs is probably tenable only because ADUs pose such trivial threats to neighborhood character and homeowner wealth. No interest group cares enough to wage a big battle against ADU mandates. At some point, though, strong pro-housing interventions by the state may engender serious pushback, such as a ballot initiative to constitutionalize local control over land use.[346] Should that occur,

341. *See* CAL. GOV'T CODE § 65589.5(j)(1) & (5) (West 2019).

342. *See* Laura Wenus, *Development Delayed as SF Commission Wants Less Aggressive Design*, MISSIONLOCAL (Feb. 24, 2017), https://missionlocal.org/2017/02/development-delayed-as-sf-commission-wants-less-aggressive-design/ (quoting planning commissioner Myrna Melgar, "Big windows, to me, are a statement of class and privilege").

343. *See* Scott Feeney (@graue), TWITTER (Aug. 23, 2018, 6:16 P.M.), https://twitter.com/graue/status/1032798736160718849.

344. The HAA's distinction between density-reducing and non-density reducing conditions is rather arbitrary, because a significant risk of substantial conditions or delays will deter developers from even proposing redevelopment projects that are only modestly more profitable than the next best use of the land.

345. *See generally* Richard Briffault, Essay, *The Challenge of the New Preemption*, 70 STAN. L. REV. 1995 (2018) (exploring city-level enactment of liberal policies and state-level preemption of those same policies in states with Republican-dominated legislatures and Democratic cities).

346. In California, an umbrella organization of anti-housing activists recently formed to lobby the state and support allied candidates for local and state offices. *See Livable California Celebrates Candidates*, LIVABLE CAL. (Nov. 10, 2018), https://www.livablecalifornia.org/second-post/ (documenting the group's actions). As of this writing, there are two pending state-constitutional "home rule" challenges to SB 35—the 2017 state statute which requires expedited, by-right permitting of certain projects—if the local government has failed to meet its housing targets. *See generally* Petition for Writ of Mandamus and a Complaint for Declaratory Relief and Injunctive Relief, Huntington Beach v. State, No. 30-2018-00984280-CU-WM-CJC (Cal. Super. Ct. Apr. 4,

it's not at all clear that YIMBYs would prevail. Some recent opinion polls suggest that a supermajority of the California electorate objects to giving the state more authority over development permitting,[347] although other polls find broad support for higher density housing near transit.[348] Public opinion outside of California appears to be quite protective of local control, but there has not been much work on the subject.[349]

* * *

To sum up, the housing problem is a very tough nut: the preferences of local officials tend to diverge sharply from the preferences of the pro-housing faction in state government; local governments can vitiate state mandates by exploiting their permitting discretion, residual regulatory authority, and superior information; and state lawmakers who would like to wrest control of zoning and development permitting from local governments cannot count on support from the statewide electorate.

2018); Letter from Dee Williams-Ridley, City Manager, City of Berkeley Planning & Dev. Dep't, to Dana Ellsworth (Sept. 4, 2018), https://www.cityofberkeley.info/uploadedFiles/Clerk/Level_3_-_General/1900%20Fourth%20Street%20090418.pdf (denying SB 35 permit application on ground that state law is unconstitutional). I expect the SB 35 challenges to fail, but their failure could catalyze a ballot initiative to expand cities' home rule powers over land use.

347. *See* USCDORNSLIFE, USC DORNSIFE/LOS ANGELES TIMES CALIFORNIA POLL (2018), https://dornsife.usc.edu/unruh/past-polls/. The study found that, by a 3:1 margin, registered and likely California voters endorsed proposition that "[t]he authority to approve housing developments should remain primarily with cities and counties," as opposed to "[t]he state should have greater authority to approve housing developments than it does now." *Id.* at 8. It also found that voters are more than twice as likely to attribute housing unaffordability to "lack of rent control" and "lack of funding for low income housing," than to "too little homebuilding" or "restrictive zoning rules." *Id.* at 7. For more on this, see Carson Bruno, *Californians See the Housing Affordability Crisis as a Threat to the California Dream*, EUREKA (May 19, 2015), https://www.hoover.org/research/californians-see-housing-affordability-crisis-threat-california-dream (reporting results of Hoover Institution poll, finding that (1) while most Californians see housing affordability as a big problem, only about a third favor relaxing zoning or open-space requirements to accommodate more housing; and (2) that when respondents were asked about "new housing in your area," the only type of housing to receive majority support was single family homes with large yards).

348. *See* Californians & Their Government, *supra* note 69, at 5 (finding that "62 percent [of likely voters] favor requiring local governments to change zoning for new development from single-family to multi-family housing near transit and job centers").

349. Marble & Nall, *supra* note 69. The authors recently surveyed residents of the nation's twenty largest metro areas and found overwhelming support for "giving neighborhoods more voice over development proposals." *See id.* at 13, tbl.A-5. Conversely, they found a lack of support for "changing local laws to allow more construction." *See id.* They also asked about a hypothetical state law to require local governments to allow apartment buildings and found majority support only among those renters who also favor a national housing guarantee. *See id.* While one might think that liberal homeowners would be moved to support high-density housing, the authors show that self-interest trumps ideology. For a useful comparison, see Hankinson, *supra* note 69, at 491, figs. C8 & C9 (reporting results from national survey showing that in average-to-expensive cities, only about 25% of homeowners would support a 10% increase in the citywide housing supply, whereas about 50%–60% of renters in the same cities would support the policy); *see also* Andrew H. Whittemore & Todd K. BenDor, *Exploring the Acceptability of Densification: How Positive Framing and Source Credibility Can Change Attitudes*, 10 URB. AFF. REV. 1, 24–28 (2018) (finding in a national survey that several positive frames reduced, rather than increased, homeowners' support for a denser-than-typical residential project in their neighborhood).

As the balance of this Subpart will explain, the model I have outlined—building on and extending the recent California reforms—aims to crack the housing nut with complementary top-down and bottom-up forces. Applying pressure from above, the state would use the threat of fiscal penalties to get local governments to periodically revisit and liberalize their entire framework for housing development, including zoning maps, development standards and fees, permitting procedures, and anything else that might stand in the way of achieving the local government's quota of new housing. This periodic redefinition of the local regulatory baseline would occur in a manner that is politically discreet, sensitive to information asymmetries, and resistant to backsliding. The complementary, bottom-up strategy is to subtly shift the balance of local policymaking authority toward more housing-tolerant factions, while giving these factions the ability to use state law to make credible regulatory-reform commitments.

*1. From the Top Down: Baseline Change and Lock-In, Done Discreetly*

It should now be clear that if states are to curtail local barriers to the supply of housing, it is not enough to preempt discrete local rules, such as height and density limits near transit stations. Changes to the regulatory status quo must be backstopped against the evasive tactics of local governments wielding residual regulatory authority and permitting discretion. The bigger the intervention, the greater the need for backstopping.

There is one seminal example of a higher-level government acting under conditions of extreme preference conflict to change the regulatory status quo among lower-level governments, while effectively backstopping the new regulatory baseline against evasion: the Voting Rights Act of 1965 (VRA),[350] through which Congress overcame generations of black disenfranchisement in the South.[351] The variation on the California model I have sketched represents an effort to borrow and adapt the VRA paradigm.

Structurally, the problem facing Congress in 1965 was in key respects quite similar to the problem faced today by state lawmakers trying to induce local governments to allow a lot more housing in areas of economic opportunity. In both cases, the central government wants local governments to heed the interests of a class of outsiders (blacks in the VRA example, would-be residents in the housing example), but the local governments don't allow the outsiders to vote in their elections, and the interests of the excluded outsiders are at war with the interests of those who do vote.[352] In both cases, adherence to the central

350. Voting Rights Act of 1965, Pub. L. No. 89–110, 79 Stat. 437 (1965).

351. *See generally* ALEXANDER KEYSSAR, THE RIGHT TO VOTE: THE CONTESTED HISTORY OF DEMOCRACY IN THE UNITED STATES 206-17 (2009); J. MORGAN KOUSSER, COLORBLIND INJUSTICE: MINORITY VOTING RIGHTS AND THE UNDOING OF THE SECOND RECONSTRUCTION (1991).

352. There is also considerable evidence that opposition to new, higher-density housing is exacerbated by cultural or racial hostility to would-be newcomers, particularly among conservatives. *See* Jonathan Mummolo & Clayton Nall, *Why Partisans Do Not Sort: The Constraints on Political Segregation*, 79 J. POLITICS 45, 48–49 (2017) (showing that conservatives prefer racially homogenous neighborhoods); Trounstine, *supra* note 76,

government's policies would transform local electorates in ways that could jeopardize incumbent politicians' hold on office.[353] In both cases, preference conflict between the central government and local governments varies with geography. By the mid-20th century, black disenfranchisement was mostly a Southern phenomenon, and within the South, blacks were geographically concentrated.[354]

So, what did the federal government do about black disenfranchisement? Initially, it tried to enforce the 15th Amendment with affirmative litigation.[355] By the 1950s, many federal courts stood ready to enjoin unconstitutional discrimination against black voters, but prescriptive mandates in the form of injunctions didn't achieve much black enfranchisement.[356] When one discriminatory law was invalidated, another would be enacted to take its place.[357] When voting registrars were personally enjoined from violating the rights of African Americans, they would resign and the jurisdiction would move to have the injunction lifted, thus positioning a newly appointed registrar to continue his predecessor's unconstitutional conduct.[358]

But with the VRA, the cat finally caught the mouse. Congress's solution for Jim Crow disenfranchisement was to ban one particularly damaging instrumentality of racial discrimination—tests of literacy and moral character as a prerequisite to voting[359]—and to backstop the ban by *conditionally preempting all changes* to state and local electoral practices in the South.[360] No electoral reform in the so-called "covered jurisdictions" could take effect unless approved by the U.S. Department of Justice or the District Court for the District of Columbia.[361] The burden of proof in these preclearance proceedings was on the covered jurisdiction to show that the change was neither intended to make minority voters worse off ("retrogression"), nor likely to have that effect.[362] In

Agenda Item #5.1.

short, Congress both changed the regulatory baseline for voting and locked in the new baseline with the preclearance mechanism.

It was an elegant solution. The ban on literacy and moral-character tests knocked out the principal source of local discretion with respect to voter registration, and thus the channel of *sub rosa* discrimination.[363] Meanwhile, the preclearance framework adroitly navigated between two competing dangers: the risk that a covered jurisdiction would invent some discriminatory substitute for literacy tests, and the risk that the federal administrator would push the covered jurisdictions too hard, inducing so much local opposition as to inadvertently fell the whole regime. The substantive modesty of the retrogression standard, which allowed local governments to change their practices in any way that did not make minority voters worse off, limited the risk of administrative overreach.[364] Conversely, the procedural requirement that covered jurisdictions bear the burden of proving that proposed changes were non-retrogressive made it difficult for subnational governments to exploit asymmetric information about the likely effects of a change. If the federal administrator couldn't tell whether a change would make minority voters worse off, the law required her to block it, unless or until the subnational government revealed why the change would not be retrogressive.[365]

The VRA was enormously successful. Registration and turnout rates among African Americans in the South surged almost overnight.[366] Several studies comparing adjacent "covered" and "noncovered" counties show that blacks in the covered jurisdictions realized huge gains in non-electoral domains as well, such as labor market outcomes.[367] Once blacks could vote, Southern politicians paid attention to their interests.[368]

368. In addition to the studies cited *supra* note 367, see Sophie Schuit & Jon C. Rogowski, *Race, Representation, and the Voting Rights Act*, 61 AM. J. POL. SCI. 513, 524 (2017) (showing effects on roll call votes of Members of Congress on civil rights legislation).

Agenda Item #5.1.

The model I have sketched for housing is akin to the VRA, in that it combines baseline change with a preclearance-type lock-in mechanism.[369] A new regulatory baseline is periodically established through housing elements, and retrogression is controlled through centralized, pre-implementation review of housing-element amendments.

But there are also some significant differences. Most important, the new regulatory baseline for housing is negotiated administratively on a case-by-case basis, and periodically revisited, rather than prescribed by statute once and for all.[370] And whereas the VRA categorically eliminated the principal source of local "permitting discretion" with respect to voting, the housing framework tacitly delegates the analogous question to an administrative agency, which must decide whether the discretionary permitting arrangements of any given local government constitute unreasonable constraints on housing development.[371]

The lock-in mechanism also diverges somewhat from the VRA paradigm. Whereas the VRA conditionally preempted the field of electoral regulation, barring local governments from changing any standard, rule, or procedure without federal preapproval, the California model for housing is much less draconian, even with the extensions I have proposed. Local governments remain free to enact or modify any rule or regulation that is subordinate to the housing element, without pre-implementation review. Indeed, local governments may unilaterally amend the preemptive compact itself (the certified housing element), putting the onus on the state to decertify the housing element or accede to the amendment. The regulatory baseline defined by the original compact is therefore "locked in" only to the extent that the local governing body fears the sanctions associated with decertification or wants to maintain the suspension of charter provisions or voter-approved measures that the certified housing element has superseded.[372]

---

369. One might suppose that the Fair Housing Act (FHA)—the federal government's 1960s-era response to discrimination in the housing market—would offer a better model than the VRA. But the FHA (in contrast to the VRA) effected neither a clear revision to the regulatory baseline for new housing, nor a mechanism to prevent retrogression. At best, the FHA expressed an aspiration: no unnecessary, racially disparate impacts. *See* Tex. Dep't of Hous. and Cmty. Affairs v. Inclusive Cmtys. Project, Inc., 135 S. Ct. 2507, 2522 (2015). But the FHA depends entirely on case-by-case litigation (like 15th Amendment enforcement prior to the VRA), and the goal that informs FHA disparate-impact analysis can be understood in two different and often mutually contradictory ways. *See id.* at 2548–50 (Alito, J., dissenting). Therefore, it's not surprising that the FHA's impact has been very limited. *See* Stacy E. Seicshnaydre, *Is Disparate Impact Having Any Impact? An Appellate Analysis of Forty Years of Disparate Impact Claims under the Fair Housing Act*, 63 AM. U. L REV. 357, 421 (2013) (reviewing decades of case law and finding that housing-barrier challenges under the FHA almost never succeed).

370. *See supra* Subpart IV.A.

371. *See supra* Subpart IV.A (proposing definition of "substantial compliance," which calls for administrative review of reasonableness of any local barrier to achieving a locality's housing quota if achievement of the quota is uncertain).

372. Under both current California law and the extension that I have sketched, the state agency lacks authority to impose a housing element of its own design on a local government which is out of compliance. This distinguishes the model from standard "cooperative federalism" arrangements, which often authorize a federal agency to promulgate implementation plans on a state's behalf if the state fails to enact its own, federally

Agenda Item #5.1.

These departures from the VRA paradigm have an underlying logic: they accommodate the absence of a political consensus about metropolitan land use. By the mid-1960s, when Congress passed the VRA, there had emerged an elite national consensus that blacks should be able to vote on the same terms as whites, and that no one should have to surmount a test of literacy or moral character, or pay a tax, as a prerequisite to voting.[373] By contrast, there is today no readily articulable, state-level consensus about how much new housing should be planned for and where it should go. Nor has local discretion in development permitting come to be regarded as illegitimate. No doubt many homeowners are quite happy that their planning commission and city council can impose ad hoc limitations on nearby projects. The mantra of "local control over land use" elicits broad support in statewide surveys of public opinion.[374]

Under these circumstances, the political genius of the emerging California model is that it should soon enable the state to bring about something functionally similar to a statewide zoning and development code, without quite appearing to do so. More precisely, the governor will be well positioned to bring this about *if* California authorizes the housing agency to plump up regional housing quotas on the basis of market conditions; settles on a functional definition of housing element "substantial compliance"; clarifies that certified housing elements supersede all local law to the contrary, including charter and voter-enacted provisions; and establishes evidentiary and procedural rules (such as the proposed extension of the Housing Accountability Act) that make it feasible for developers to get plan-compliant projects exempted from cumbersome local rules that were not authorized by the housing element.[375] The first two steps are necessary to prevent restrictive local governments from dodging meaningful administrative scrutiny of their housing restrictions (by showing either that their housing element notionally "contains the elements mandated by statute,"[376] or that they will meet a trivial housing target even with substantial constraints in place). The third and fourths steps are necessary to make the theoretical preemptive effect of the housing plan a practical reality.

Once California completes these steps, the set of local housing elements, viewed as a whole, will be akin to a statewide zoning and development code for an ample quantity of new housing. The housing elements, locally drafted but approved by a state agency, will control the basic size-and-density terms for development. The state agency, under control of the governor, can be expected to establish fairly aggressive housing targets, and generally to review housing elements with an exacting eye. This is so because the governor, of all the state's

approved plan. *Cf.* Dave Owen, *Cooperative Subfederalism*, 9 U.C. IRVINE L. REV. 177, 186–88 (2018) (discussing federal Clean Water Act in relation to state-local cooperative programs).

373. *See* Bruce Ackerman & Jennifer Nou, *Canonizing the Civil Rights Revolution: The People and the Poll Tax*, 103 NW. U. L. REV. 63, 72 (2009).

374. *See supra* notes 347–349 and accompanying text.

375. These conditions correspond to Elements of the Model (1), (6), (3), and (5) respectively, per *supra* Subpart IV.A.

376. *See supra* notes 182–184 and accompanying text.

Agenda Item #5.1.

elected officials, is likely to be the most reliably supportive of pro-housing policies. The governor answers to the statewide electorate, not just to homeowners in the high-cost regions. The governor runs in expensive statewide elections, which means that deep-pocketed business interests are likely to have her ear as well.[377] Gubernatorial elections are also relatively high-turnout and high-information affairs, which makes them hard for homevoters to control.[378] And because the governor's capacity to carry out her non-housing agenda depends on tax revenue, the governor should be quite sensitive to housing bottlenecks on economic growth.[379]

Yet even as housing elements in the aggregate would function like a preemptive statewide zoning and development code, the rules that apply within the territory of a local government will have been proposed initially by that government, negotiated with the state in a low-limelight administrative setting, and codified as a component of the locality's own general plan, rather than as state law. The housing element's *de jure* status as local law, and the obscure process through which state approval is obtained, should help state legislators parry any accusation that they have imposed a statewide zoning map.

The local prerogative to draft the housing element means that local governments have substantial leeway to decide how best to reconcile the state's housing objectives with local preferences over the built environmental and community character. Importantly though, under the test for substantial compliance that I have proposed, a local government could only avoid administrative scrutiny of the reasonableness of its zoning, development standards, procedures, and fees if the local government persuades the state agency that the locality is "substantially certain" to meet its housing target.[380] Much as the VRA's evidentiary standards encouraged covered jurisdictions to come forward with evidence about the likely effects of a proposed election-law change,[381] so too does the proposed test for substantial compliance encourage local governments to rectify information asymmetries in housing element review, either by sharing information about local conditions with the state or by committing to development standards and procedures that render

377. *Cf.* Liam Dillon, *How California's Candidates for Governor Want to Fix the State's Housing Problems*, L.A. TIMES (May 10, 2018), https://www.latimes.com/politics/la-pol-ca-governor-housing-roundup-20180510-htmlstory.html. (summarizing housing positions platforms of leading candidates for Governor of California in 2018, nearly all of whom took strong positions in favor of expansion of supply).

REV. 393, 404 (2007) (finding that homeowners are vastly overrepresented in suburban local government elections relative to their share of the voting-eligible population, and that their vote choice in these elections is informed more by particular issues or personal knowledge of candidates rather than partisanship); Joseph T. Ornstein, Municipal Election Timing and the Politics of Urban Growth (Apr. 30, 2018) (unpublished manuscript) (on file with author) (finding that off-cycle local government elections, which result in lower turnout, lead to more restrictive housing policies).

379. *See supra* Subpart I.C.3.

380. *See supra* Subpart IV.A. (element #6).

381. *See* Christopher S. Elmendorf & Douglas M. Spencer, *Administering Section 2 of the Voting Rights Act after* Shelby County, 115 COLUM. L. REV. 2143, 2154 (2015).

Agenda Item #5.1.

inconsequential phenomena that are hard for the state to see.[382] Similarly, the proposed evidentiary standard for project-specific preemption challenges would give local officials a strong incentive not to hide local development requirements by omitting them from the housing element's analysis of constraints. If a state-certified housing element openly acknowledges and justifies a restriction, the local government would have a strong argument that no reasonable person could deem normal applications of that restriction inconsistent with the housing element. But if the constraint is not acknowledged in the housing element, and if it materially delays, downsizes, or raises the cost of a developer's plan-compliant project, project proponents would have a strong case for an exemption and the local government would be on the hook for proponents' legal fees.

Notice also that to the extent that there does emerge a political consensus about unacceptable land-use controls—either in general or as to certain retrograde local governments—the state housing agency could easily incorporate these norms into its review of housing elements. For example:

- The agency could announce that, as a general matter, it will deem housing elements not to have "remov[ed] all unreasonable regulatory and procedural constraints"[383] unless the housing element requires local authorities to process development applications exclusively on the basis of procedures, standards, and fee schedules that were published on the planning department's website prior to date on which the developer's application was deemed complete.[384] The informational costs and project risks generated by a local government's failure to commit to this transparency principle arguably represent an unreasonable constraint on housing production.
- The agency could announce that, as a general matter, discretionary permitting of housing-element-compliant projects will be deemed to be an "unreasonable constraint" *if* the jurisdiction failed to meet its housing target during the previous planning cycle.[385] This would put pressure on local governments to commit to ministerial permitting through their housing element.[386]
- The agency could push local governments whose development permitting is unusually slow to enact, through their housing elements, a

382. For example, the preferences of local officials who review permit applications.

383. *See supra* Subpart IV.A. (element #6).

384. SB 330, enacted just before this Article went to press, prohibits local governments from applying to a project "ordinances, policies, and standards" not in effect when the developer's preliminary application was submitted. *See* S.B. 330, 2018-2019 Leg. (Cal. 2019) (adding CAL. GOV'T CODE § 65589.5(o) (West 2019)). Because of SB 330, there's no longer much reason for HCD to try to bring about similar local commitments through housing element review. I retain the example mainly to illustrate how reforms that housing advocates have pursued through the legislature could just as easily (and often more easily) be pursued in the administrative arena, under a robust housing element / state review framework.

385. Oregon's state planning agency has ordered local governments to eliminate discretionary approval standards *vis-a-vis* "needed housing." *See, e.g.*, BILL KLOOS, FAIR HOUSING COUNCIL OF OREGON—PLANNING FOR HOUSING: DON'T FORGET THE BASICS 18 (May 15, 2008) (citing LCDC Compliance Order (Aug. 23, 1982) and Staff Report (Aug. 19, 1982) at 28-19); *id.* (citing LCDC Work Task Order 02-WKTASK-001412, at 4 (June 27, 2002) (faulting planned development overlay zoning for insufficient clarity).

386. The commitment would be credible since the housing element is the highest law of the local government, and because amending the housing element risks decertification.

Agenda Item #5.1.

> local fix for gaping loopholes in the Permit Streamlining Act.[387] This California statute stipulates that if a public agency fails to complete its review of a project within a designated period of time, the project shall be deemed approved as a matter of law. But the clock starts to run only after the agency has completed environmental reviews,[388] and the clock is tolled by internal appeals. With an eye to chinking these gaps, the housing agency might announce that as to jurisdictions whose permitting times were very slow during the previous cycle (and which failed to meet their targets), the agency will deem the local government to have "unreasonable constraints" *unless the housing element includes a deemed-approved proviso* limiting review of plan-compliant projects to (say) twelve months, inclusive of environmental studies and internal appeals.[389]

As valuable as it would be to empower the housing agency to establish such norms by regulation, it is equally important that the framework not *require* any of this. The agency should be allowed to proceed case-by-case rather than by general rule if it wishes. The agency should be able to issue loose guidelines rather than firm rules, or rules that establish only rebuttable presumptions, thereby retaining flexibility to make politically informed judgements about what different local governments will tolerate. Because the strength of state/local preference conflict over housing varies geographically, and because some communities have greater political resources for pushing back than others, a state-law framework for boosting the supply of housing needs this flexibility.

### 2. *From the Bottom Up: Strengthening Pro-Housing Actors in City Politics, and Facilitating Regional Deals*

While top-down pressure applied through housing-element review and preclearance of amendments is central to the framework I have sketched, it is not everything. My extension of the California model would also strengthen the hand of *local* actors who favor more accommodative housing policies, in ways that go considerably beyond what California has achieved to date.

For example, city councils would be able to unfetter themselves from voter-enacted growth controls and permitting rigmarole—and to do this without going to the voters, and while deflecting blame to someone else. A council would need only to obtain the state agency's approval of a housing element that conflicts with the problematic voter-adopted constraints. If homevoters complain, the city council can respond, "The state pushed us to do it; we had to or else we'd lose funding." And if homevoters gripe to the governor or the

387. For citations to the provisions of the Permit Streamlining Act mentioned in this paragraph, see *supra* note 195.

388. That is, environmental review under CEQA. *See supra* note 195.

389. To be sure, a housing element's "deemed approved" provision could not, as such, exempt the local government from otherwise applicable state law such as CEQA. But CEQA review is only triggered by discretionary government actions. *See* BARCLAY & GRAY, *supra* note 192, at 144. And if the housing element commits the local government to approving projects ministerially (at least after a certain period of time following project submission), then CEQA would become inapplicable at that time.

housing agency, the state-level actors can answer in kind: "All we did was approve *your city council*'s proposal for accommodating a reasonable amount of new housing. If you want it done differently, tell them, but don't complain to us."

Notice also that the proposed framework gives the city council a menu of options, varying in certainty and transparency, for displacing problematic local constraints to new housing. At one end of the spectrum, the council could list a local rule or practice in the housing element's appendix as one which is "deemed preempted" as of the date of the housing element's enactment. This would be tantamount to voting to repeal the constraint, except that doing it through the housing element may help shift some blame to the state. At the other end of the spectrum, the council could simply omit certain known constraints from the list of constraints that the housing element acknowledges and justifies. This would set up developers to argue for project-specific exemptions on the theory that a reasonable person *could* deem the constraint inconsistent with the housing element. At the same time, city lawmakers could plausibly deny that they ever intended to preempt the constraint. An intermediate option is to list the constraint in the housing element's appendix with a future date of preemption, stipulating that it shall then be preempted if not reformed beforehand.[390] This would shift the burden of legislative inertia to defenders of the constraint while foisting political responsibility for the tough choice of what to do about it onto a future city council. In sum, the menu of options allows the city council to tailor its constraint-alleviation strategy to the political exigencies of the moment.

To be sure, city councils are not reliably pro-housing actors.[391] Given the choice, some will jealously defend local constraints on housing development. Still, survey evidence suggests that many city council members understand the housing-supply problem and would like to do something about it, but feel hemmed in politically.[392] A state-law framework that positions city councils to remove constraints while dodging blame should do some good, perhaps especially with respect to older, voter-adopted constraints whose undoing may seem less an affront to today's electorate.

My adjustments to the California model would also bolster mayors *vis-à-vis* city councils in negotiations over the housing element. (As explained above,

390. To similar effect, the housing element could state that certain densities or floor-to-area ratios for designated sites will be made available by a specified future date. *See supra* note 242 (arguing that such commitments are already directly enforceable through project-specific litigation under the HAA).

391. If elected from territorial districts, they will tend to be responsive to homeowner interests in the neighborhood. *See supra* note 333 and accompanying text.

392. *See* PAUL G. LEWIS & MAX NEIMAN, CITIES UNDER PRESSURE: LOCAL GROWTH CONTROLS AND RESIDENTIAL DEVELOPMENT POLICY 41–51 (2002) (concluding, based on survey of local officials in California, that most city members have neutral or pro-growth attitudes toward housing, but are often cowed by grassroots, anti-growth factions); *see also* Michael Manville & Taner Osman, *Motivations for Growth Revolts: Discretion and Pretext as Sources of Development Conflict*, 16 CITY & COMMUNITY 66, 70 (2017) (arguing, based on several case studies, that voter-adopted growth controls often result from perception that city councils too readily grant variances and rezonings to accommodate developers).

mayors are likely to be more supportive of liberal housing policies.)[393] The key move is to authorize mayors to promulgate interim housing elements if the state's deadline has passed without the local government enacting a compliant housing element using the normal, locally prescribed procedures. Once mayors have this power, city councils will make generous concessions *ex ante* to the mayor, in the hopes of avoiding a veto or other mayorally induced delay of the council's housing element.

Notice finally that my extension of the California framework would powerfully support bottom-up initiatives to plan for more housing in a region. Consider by way of illustration the recent efforts of the Metro Mayors Coalition in Greater Boston and the Committee to House the Bay Area ("CASA") in the San Francisco Bay Area.[394] In each case, a regional planning entity convened a consortium of elected officials,[395] and the consortium developed quantitative targets for new housing in the region as well as guidelines for zoning and development-permitting reforms.[396] These efforts build on Rick Hills and David Schleicher's important insight that land-use policy is likely to be more accommodative of new housing if it can be forged through grand bargains on citywide or larger scales, rather than worked out seriatim through project- or site-specific upzonings and downzonings.[397]

As Hills and Schleicher acknowledge, the central challenge for the grand-bargain approach is "designing an enforcement mechanism."[398] What is to keep individual members of a city council from defecting, once community groups and nearby homeowners start complaining about specific projects in the councilmember's district? Or, at the regional level, what is to keep the municipalities that forge a Greater Boston or Greater Bay Area plan from reneging on their commitments to one another? California's experience since the early 1980s with its RHNA process suggests that regionally coordinated plans are worthless if the plans don't actually compel local governments to remove development constraints or issue building permits.[399]

399. *See supra* Subpart II.B.2.

Agenda Item #5.1.

But consider how the Metro Mayors and CASA undertakings could play out if the parent state had the legal framework I have sketched in place. Quantitative housing goals set by the collaborative would probably become *de facto* floors for the state's housing-need assessment for the region. Knowing that there's a regional-elite consensus for a certain amount of new housing, the state's housing agency would have little reason to demand less.[400]

Similarly, the collaborative's guidelines for zoning and regulatory reform would inform the agency's review of "constraints" under housing elements submitted by local governments in the region. If most of the region's local governments have, through the collaborative, condemned a particular barrier to development, the state housing agency would have a strong political and legal basis on which to disallow it *in that region*, if not elsewhere.[401] Moreover, commitments made in housing elements to remove such constraints would be credible, both because constraints listed in the preemption appendix would automatically sunset on the specified date, and because any later-adopted substitute for such constraints would be vulnerable to an as-applied preemption challenge.

If the understandings reached through Metro-Mayor type collaboratives can be enforced in these ways, it should be much easier to motivate local officials to join the regional planning efforts in the first instance. As well, the interest groups that stand to benefit from a big increase in the regional housing supply, such as chambers of commerce and municipal unions, would have strong incentives to lobby the collaborative.[402]

*3. Caveats*

The model I have sketched holds considerable promise, and to operationalize it in the West Coast Model states (especially California) would require only modest tinkering with extant state-law frameworks. But the model's limitations should be acknowledged, too. Some NIMBY governments may manage to exploit their superior information about local conditions to bamboozle the state agency into certifying dysfunctional housing elements.[403] Other NIMBY localities may be able to get the agency to approve transparently

400. This assumes there's some play in the joints of the housing need determination. As explained above, California recently revised the statutory framework governing this determination in ways that give considerable discretion to the housing agency. *See supra* Subpart III.A.1.

401. Opposition to the constraint by leaders of a supermajority of the local governments suggests that it is probably unreasonable in light of regional housing needs.

402. No doubt NIMBY groups will organize to lobby the collaborative too, but it may be harder for them to get homeowners riled up by the collaborative's policy proposals, as opposed to tangible projects in the homeowner's neighborhood.

403. This risk is exacerbated by resource shortages at the California housing agency. *See* LAO, DO COMMUNITIES ADEQUATELY PLAN, *supra* note 244, at 7 (noting that as of 2017, HCD had only a $1 million budget line and seven staff persons for housing element review). The main advantage of state-mandated upzoning (for example, requiring local governments to allow four-to-five story buildings on all parcels near transit), relative to the housing-element approach, is that state-mandated upzoning obviates the risk of local governments "complying" by assigning their quota to hard-to-develop sites.

Agenda Item #5.1.

awful housing elements by arguing that the dysfunctional features are necessary to forestall a local insurrection.[404] Finally, as economists and legal scholars have long argued, there is always some risk that state institutions for regulating land use will end up serving regional homevoter cartels.[405] This risk must be weighed, however, against the reality of extreme supply constraints in the absence of state control, and the potential payoff from using state law to empower a relatively pro-housing set of actors at the local level.

## CONCLUSION

Fifty years in the making, the problem of local barriers to housing supply in economically productive regions is finally having its moment in the sun. To the present moment of possibility, this Article has contributed both a descriptive account of the state frameworks for controlling local housing-supply restrictions, and an extension and defense of the model toward which our nation's most expensive and supply-constrained state, California, seems to be evolving.

The model is one of preemption by intergovernmental compact. The state periodically establishes regional housing-production targets, which are divvied up among local governments. Local governments must submit to the state housing agency a parcel-specific plan for how they will meet their quotas, including a schedule of actions to remove local constraints on the development of housing. Once approved by the agency and enacted as a local ordinance, this plan—the "housing element"—becomes the highest law of the local government with respect to land use. Developers may apply for building permits on the authority of the housing element itself. Local governments seeking to amend their housing element must provide notice and a written justification to the state's housing agency, and the agency may respond by decertifying the housing element, exposing the local government to pecuniary and possibly regulatory sanctions.

While "double vetoes"—opportunities under state law to overturn locally approved development permits—are certainly one legacy of the states' land-use interventions since the 1960s, they're no longer the whole story. The statutory evolution charted in this Article is now positioning advocates to use state law, and state-approved housing plans, to challenge not project approvals, but the local regulations and exercises of permitting discretion that stand in the way of desperately needed new housing.

404. For example, San Francisco's (HCD-approved) housing element tries to justify extant constraints that "conserve and protect existing housing and neighborhood character" by arguing that without such constraints, "an even greater check on new housing construction could result from public opposition to new development." 2014 HOUSING ELEMENT, *supra* note 178, at I.86.

J. ADMINISTRATIVE APPEAL RATES ARE MUCH HIGHER THAN CEQA LITIGATION RATES WITHIN THESE FIVE CITIES ..... 71

**PART IV: DISCUSSION ..... 72**

A. IN THESE CITIES, TIME LAGS IN ENTITLEMENT (AND ASSOCIATED COSTS) ARE MORE LIKELY DRIVEN BY LOCAL FACTORS, NOT CEQA OR ITS REQUIREMENTS ..... 72
B. VARIABILITY AND UNCERTAINTY IN THE ENTITLEMENT PROCESS ACROSS THESE JURISDICTIONS MAY BE A MORE CRITICAL FACTOR INFLUENCING ENTITLEMENT TIMELINES THAN STRINGENCY ..... 74
C. UNEVEN LAND USE REGULATION ACROSS A CITY MAY OPERATE AS A TOOL OF EXCLUSION ..... 77

D. MORE DATA IS NEEDED ABOUT THE RISK OF DISPLACEMENT THROUGH NEW DEVELOPMENT ..... 78
E. STATE LEVEL REFORM PROPOSALS THAT WOULD REDUCE LOCAL AUTHORITY REQUIRE BETTER DATA ..... 78
F. THE STATE SHOULD NOT ONLY MANDATE, BUT DIRECTLY SUPPORT GOOD DATA REPORTING ..... 80
**CONCLUSION: COMPLEX ISSUES REQUIRE A MULTI-PRONGED RESEARCH APPROACH ..... 83**

## Introduction

Reducing vehicle miles traveled through increasing the use of public transit and improving transit access is critical to reduce greenhouse gas ("GHG") emissions in California. Housing development properly focused in infill areas with transit accessibility (transit-oriented development or "TOD") may significantly reduce greenhouse gas emissions if it increases transit usage and results in reducing vehicle miles traveled. Senate Bill 375[4] recognizes that meeting GHG reduction targets through increased transit use requires the adoption of sustainable, integrated regional transportation and community planning strategies to promote TOD.

But housing costs in the coastal communities of California near major regional economic centers and transit are too high for many families. Low-income families that cannot afford housing near their work commute ten percent further than commuters elsewhere[5] which may directly undermine the goals of recent legislation intended to address climate change. Research also links high housing costs within coastal communities, like the Bay Area, to the resegregation of the region,[6] a crisis with major implications for public welfare and public health outcomes.[7] Infill development in transit accessible neighborhoods within these coastal communities must therefore occur equitably to avoid the risk of displacing low-income populations from these neighborhoods or exacerbating current cost barriers to entry for low-income populations into highly desirable neighborhoods with substantial transit accessibility or transit investment.[8] The goals of reducing GHG emissions and equity are thus linked; emissions reductions cannot occur if commute times are increasing because low- and middle-income communities are pushed to farther rings of the suburbs and forced to drive to access economic centers of opportunity.

Even as California's state legislature responded in 2017 with the passage and signing of housing bills[9] meant to address escalating housing costs, legislators and

others acknowledged that more is needed to address California's housing crisis.[10] One recurring theme in the ongoing coverage and discussion of the housing crisis is an argument that state-mandated environmental review under the California Environmental Quality Act ("CEQA") is a significant contributor to the housing crisis because it adds time and money to the development process, and that given the persistent housing crisis, CEQA merits legal reform.[11] Others advance that local land use regulations significantly constrain housing development[12] and have proposed legislation to narrow local authority over infill development near transit.[13]

Existing urban planning and urban economics research correlates the overall stringency of a jurisdiction's land use regulations with high housing costs and income segregation.[14] But this research, though important, cannot answer the question of which specific elements of local land use regulation or state environmental review contribute disproportionately to either the cost of housing or the exclusion of low-income communities from these metro areas. Despite these limitations, the impact of this research and similar work has been far reaching, surfacing in statewide policy briefs[15] and political debates about proposed legislation.[16]

Recognizing the limits of existing data sets and past research applicable to California, and the importance of the current policy debate, we began a case study of land use development within specific cities in California. We undertook this study to better understand what specific regulations of land use development in California may contribute to the state's housing crisis by increasing development approval timelines.[17] We also examined the specific impact of local and state mandated processes on all housing development, including affordable housing development, supply, and access.

This article proceeds in four parts. Part I of our article will cover the elements of land use law we identify as having the closest relationship to the ongoing policy reform debate, and then will explain the findings and limitations of existing research in relationship to current California policy reform proposals. Part II of this article provides details about our methods and research approach to respond to this gap in the research. Part III of our article presents detailed findings from our research on the first set of cities within our study. Part IV of our article places our findings within the context of other research and offers the policy implications of what we have learned so far, and the research still necessary.

## Part I: Background

We first situate our research in a legal and scholarly context by providing a brief overview of the specific provisions of state and local law that are particularly relevant to infill residential development, and then we provide an overview of the academic literature that explores how land use regulation may have impacts on housing production, housing affordability, and on equity in housing outcomes.

### A. Navigating the law applicable to entitlement processes in California[18]

State law governs the regulatory landscape for housing construction in California in two important ways. First, state law empowers and mandates local governments to develop their own regulatory processes to control development.

California); *cf.* Letter from Kyle Jones to Scott Wiener (Jan. 18, 2018), https://perma.cc/9HCE-2RS4 (opposing SB-827 on behalf of the Sierra Club California as "a heavy-handed approach . . . that will ultimately lead to less transit being offered and more pollution generated"); Letter from Rich Gross & Jaqueline Waggoner to Scott Wiener (Apr. 9, 2018) (on file with authors) (opposing SB-827 on behalf of Enterprise Community Partners "unless it is amended to explicitly serve the housing needs of low-income Californians"); Letter from Brian August et al. to Scott Wiener (Mar. 20, 2018) (on file with authors) (opposing SB 827 on behalf of California Rural Legal Assistance Foundation, Housing California, and Western Center on Law & Poverty "unless it is amended to address the proposal's impact on gentrification and exclusion").

17. Approval timeframes have generally been connected to higher costs of development. *See* discussion *infra* Section I.B.1.

18. The approval process to obtain a building permit is referred to as the entitlement process.

Second, state law imposes additional procedural and substantive requirements on local government regulatory processes—we discuss one of the most important of those state law components, the California Environmental Quality Act.

### 1. Local law governing infill development

California law permits cities to employ a range of tools to review and approve housing development based on a hierarchical system of land use law.[19] The General Plan—likened to a "constitution" for long-term physical development of the city or county[20]—sits at the top of "the hierarchy of local government law regulating land use" in California.[21] State law requires that each jurisdiction have a General Plan, and the General Plan must include comprehensive language that describes the city's long-range vision, policies, and objectives for development. The General Plan codifies the city's planning law, but it may do so with varying degrees of specificity. Also, with one exception, California law does not require that jurisdictions update their General Plan according to a set schedule; the law only suggests "periodic" updates.[22]

Although not required by state law, some cities may also incorporate provisions within the General Plan for Specific Plans to address anticipated growth. Particularly relevant for infill development in major cities, Specific Plans may direct development to particular locations. Specific Plans may also be extremely detailed and direct nearly every aspect of development[23] by codifying acceptable land uses[24] and requiring review of proposed development for compliance with the Specific Plan.

Next within this hierarchy are zoning ordinances. Zoning ordinances (defined generally) include maps and text that when combined provide specificity as to the type of development (type and intensity of use and form) permissible

19. We focus exclusively on components of California land use law that are specifically implicated in this research study. We do not attempt to discuss the breadth and applicability of the complex body of law that practitioners and academics describe as "land use law" within California. For relevant treatises, *see* CECILY BARCLAY & MATTHEW GRAY, CURTIN'S CALIFORNIA LAND USE & PLANNING LAW (Solano Press 2014); STEPHEN KOSTKA, PRACTICE UNDER THE CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEB 2014). For a guide intended for planning professionals that summarizes California land use law, *see* WILLIAM FULTON & PAUL SHIGLEY, A GUIDE TO CALIFORNIA PLANNING, (Solano Press 5th ed. 2018).

20. CAL. GOV'T CODE §§ 65300, 65302(g)(7) (2010); *see also* MILLER & STARR CALIFORNIA REAL ESTATE DIGEST, *Zoning and Planning* § 10 (3d ed. 2018); *see* DeVita v. Cty. of Napa, 889 P.2d 1019, 1023–25 (Cal. 1995) (citing Lesher Commc'ns, Inc. v. City of Walnut Creek, 802 P.2d 317, 321–22 (Cal. 1990)).

21. DeVita, 889 P.2d at 1023–25 (citing Neighborhood Action Grp. v. Cty. of Calaveras, 203 Cal. Rptr. 401, 406–07 (Ct. App. 1984)).

22. The General Plan is comprised of seven elements: land use, open space, noise, circulation, housing, conservation, and safety. *See* CAL. GOV'T CODE § 65302. The Housing Element, which details how the jurisdiction will satisfy its allocation of the regional housing need, is the only element that must be updated according to a planning schedule.

23. *See* KOSTKA, *supra* note 19, § 4.2.

24. *See* CAL. GOV'T CODE § 65451(a); *see also* Hafen v. County of Orange, 26 Cal. Rptr. 3d 584, 591 (Ct. App. 2005).

within specific neighborhoods.[25] Zoning in California operates to restrict development while also incentivizing development proposed in the General Plan[26] or mandating exactions.[27]

State law also carves out some local government land-use authority through specific mechanisms that are directly related to housing development.[28] Notable examples include Density Bonuses[29] intended to incentivize and increase affordable housing production and an Accessory Dwelling Unit[30] law intended to increase housing production in otherwise low-density residential neighborhoods.

But how each city employs these tools is varied. In some cities, the General Plan may contain very specific language that not only guides development policy, it may also closely regulate the form of land use designations.[31] Likewise,

25. For a definition of zoning, *see* KOSTKA, *supra* note 19, § 4.1. *See infra* Sections II–IV for a discussion of "base zoning." By "base zoning" we mean the underlying zoning district and use (residential, commercial, or industrial) provided for in the text of the ordinance and zoning map.

26. *See id.* § 4.

27. *See generally* CAL. GOV'T. CODE §§ 66000–66025; Williams Commc'ns, LLC v. City of Riverside, 8 Cal. Rptr. 3d 96, 107–08 (Ct. App. 2003). California law broadly defines exactions as a monetary fee or dedication of land to the public that local governments require of developers as a condition of development approval. The value of the exaction cannot exceed "the estimated reasonable cost of providing the service or facility for which the fee or exaction is imposed" if it is a condition of development approval. *See* CAL. GOV'T. CODE § 66005(a); KOSTKA, *supra* note 19, §§ 18.7, 18.51. The definition of "public facilities" is also broad, encompassing "public improvements, public services and community amenities." *See* CAL. GOV'T. CODE § 66000(d). In short, exactions are a response to the limits on a California city's ability to generate revenue and offer a "nontax" way for local governments to get money or land from developers to support needed infrastructure and services. *See* KOSTKA, *supra* note 19, § 18.7.

28. For a list of state laws limiting local authority in zoning, *see* KOSTKA, *supra* note 19, § 4.28.

29. *See* CAL. GOV'T CODE §§ 65915–65918. Density bonuses are incentives to encourage developers to propose new development providing for specific types of senior housing or affordable housing; the incentive operates by allowing the developer a "density increase over the maximum allowable gross residential density" where the proposed new development provides for senior or affordable housing. *See id.* § 65915(f). It also operates to provide waivers from specific development standards (detailed within the local or state law—often referred to as "on menu") in exchange for the developer providing specific types (and percentages) of senior housing or affordable housing.

30. Accessory Dwelling Units, otherwise known as ADUs, are "an attached or a detached residential dwelling unit which provides complete independent living facilities for one or more persons" that is an accessory to an existing residential use on the parcel. *See* CAL. GOV'T CODE § 65852.2. State law grants local governments authority to enact local laws to permit ADUs that comply with a set of criteria (addressing form) even within zoning districts that are limited to single-family dwellings. More significantly, it imposes a requirement on local governments to provide a streamlined development process for proposed ADUs that meet specified criteria. *See id.* § 65852.2(a)(3).

31. The General Plan of the City of San Jose is illustrative. *See e.g.*, City of San Jose, *Envision San Jose 2040 General Plan* Chapter 5 at 9, http://www.sanjoseca.gov/DocumentCenter/View/474 (prescribing use districts, density and Floor Area Ratio (FAR) ranges, and height limits).

a Specific Plan may be very general in some cities—and in other instances it may closely regulate development. To complicate things even more, California treats charter cities and general law cities differently on the issue of whether the city's zoning ordinances must be consistent with the city's General Plan.[32] This sometimes results in inconsistency between a charter city's zoning and its General Plan, or more specifically, the continued presence of outdated zoning ordinances even as the city's policy on specific types of development changes.[33]

State law also grants California cities substantial latitude in how they approve residential development within the framework of the relevant plans and zoning ordinances. We group the land use tools into four general categories. First, cities can allow for an objective ministerial process (or "by-right" process) when proposed development conforms to the underlying base zoning district's use and density requirements.[34] Cities can also impose requirements for subjective discretionary review for categories of projects that are still built within the framework of the zoning ordinance—in other words, the zoning ordinance itself contemplates that at least some property owners would propose these projects, but they must meet a certain set of conditions to obtain one of these types of permits. Examples include conditional use permits or specific plan permits.[35] Cities also impose discretionary review when the proposed project would not comply with the

32. Zoning ordinances within general law cities must be consistent with the general plan, but these same consistency requirements do not apply to charter cities unless the city's charter requires consistency with the general plan. *See* CAL. GOV'T. CODE §§ 65803; 65860(d). Charter cities within California enjoy freedom to legislate at the local level over "municipal affairs" even if a conflict with State law may exist under Article XI, section 5 of the California Constitution. This directly impacts zoning in California charter cities. Although the California Constitution does not expressly define "municipal affair," land use and zoning are consistently classified as exempt from the planning and zoning provisions of the California Government Code, unless the city's charter indicates otherwise. *See* City of Irvine v. Irvine Citizens Against Overdevelopment, 30 Cal. Rptr. 2d 797, 799–800 (Ct. App. 1994). But the provisions of a general plan within every city must be internally consistent. *See* CAL. GOV'T. CODE §§ 65302, 65300.5.

33. The City of San Jose is illustrative. Of the forty-six rezonings in the City of San Jose, fifteen involved wholesale changes in use district—for example from Light Industrial to a residential designation—and many others involved more intensive escalations in residential density. Only one of these fifteen rezonings required a General Plan Amendment; only three of the remaining thirty-one rezonings required a General Plan Amendment. The fact that General Plan Amendments were not necessary shows that the General Plan permitted the desired use and intensity of the development. This suggests that the base zoning in some locations had not been updated after the most recent General Plan enactment.

34. Ministerial approvals are approvals in which a government agency simply applies law to fact without using subjective judgment. In Friends of Westwood Inc. v. City of Los Angeles, 235 Cal. Rptr. 788, 793 (Ct. App. 1987), the Court of Appeal held that "the touchstone" of the discretionary-ministerial distinction "is whether the approval process involved allows the government to shape the project in any way which could respond to any of the concerns which might be identified in an environmental impact report."

35. *See e.g.,* S.F. MUNI. CODE § 329 (describing Large Project Authorizations for Eastern Neighborhoods Plan Area); S.F. MUNI. CODE § 303 (describing Conditional Use Authorization requirements applicable across all zones); REDWOOD CITY MUNI. CODE § 47.1–47.5 (describing Planned Community permits for areas with a Precise Plan in place).

applicable zoning ordinance; this includes when the developer is seeking an exemption from the zoning ordinance (variance) or asking the city to zone the project site differently (rezoning), or to change or update the General Plan to allow for the proposed project.

Finally, cities in California can also impose discretionary review even when a proposed project is consistent with the underlying base zoning district's use and development controls; in other words, cities can provide for development standards (including density and use), while also imposing aesthetic controls that may impose discretionary review that is particularly subjective in nature.[36] Examples of this include design review, architectural review, site development review, and historical preservation review/certificate of appropriateness.[37]

Another important feature within local law relevant to infill development is the regulation of subdivision, or the process of dividing land into two or more parcels for the purpose of sale, lease, or financing.[38] Subdivision can be horizontal—dividing a single parcel of land into two or more units—or vertical—dividing the airspace above the land into two or more units.[39] Also important for infill development within central cities are Development Agreements, which allow for cities to enter into agreements with developers through a local legislative act that "freezes" the applicable land use regulations (including zoning) for the property to protect the developer from any adverse impacts imposed by changes to the development standards during the development process.[40] Development Agreements are relevant to large phased development projects.

36. *See* BRIAN BLAESSER, DISCRETIONARY LAND USE CONTROLS: AVOIDING INVITATIONS TO ABUSE OF DISCRETION XIX, XX, 11 (6th ed. 2003) (noting that many of the discretionary provisions involve "community character" components that are highly subjective, that design codes increasingly involve subjective standards that "emphasize flexibility over precision" and that "[a]rchitectural design review ordinances provide some of the worst examples of vague statements of purpose and overbroad standards that invite abuse. Such ordinances frequently lack sufficiently clear standards and vest too much subjective decision making in the architectural review board officials.").

37. For design review-related provisions, *see* REDWOOD CITY MUNI. CODE § 45.2(A); PALO ALTO MUNI. CODE § 18.76.020(b)(2)(D); OAKLAND MUNI. CODE §§ 17.136.040(3)–(4). For a historic preservation-related provision, *see* S.F. MUNI. CODE § 1006. For site development review, see SAN JOSE MUNI. CODE § 20.100.010.

38. *See* CAL. GOV'T CODE § 66424.

39. The California Subdivision Map Act regulates the design and improvement of subdivision; however, local governments control these design and improvements through the enactment of a local subdivision ordinance. *Id.* § 66411. The process begins when a developer seeking to create five or more units of land files a Tentative Map application. *Id.* § 66428(b). After the approval of the Tentative Map, the developer must comply with any imposed conditions before filing for Final Map approval. *Id.* § 66457. For the purposes of the California Environmental Quality Act (*see* discussion *infra* Section I.A.2), the Tentative Map is the discretionary trigger—Final Maps are not typically discretionary actions. *Id.* § 66474.1. For this reason, we have tracked Tentative Map approvals, not Final Map approvals. State and local law also governs the consolidation or merger of lots into a single lot, termed a lot line adjustment. *Id.* § 66412(d). Certain lot line adjustments do not require tentative maps. *Id.* § 66412(d).

40. *See* CAL. GOV'T. CODE § 65867. For a general description, *see* KARL E. GEIER & SEAN R. MARCINIAK, MILLER AND STARR CALIFORNIA REAL ESTATE § 21:29 (4th ed. 2015).

### 2. Environmental review under the California Environmental Quality Act

Modeled after the National Environmental Policy Act ("NEPA"), CEQA combines mandatory information disclosure with public participation to "open[] government decision-making to public scrutiny."[41] CEQA is "[o]ne of California's most cherished institutions and one of its most controversial."[42] CEQA's focus is on government projects and approvals that produce significant environmental impacts.[43]

#### a. Local governments often determine CEQA's applicability

CEQA applies to any residential development project that requires a public agency's discretionary approval.[44] In the context of urban land development, the lead public agency is usually the local Planning Department[45] and with some exceptions, it is the lead agency that determines whether the required approval is discretionary or ministerial.[46] Though building permits are presumptively ministerial (or "by right"), local agencies can specify otherwise in their laws.[47] Conditional or special use permits, variances, Development Agreements, subdivision maps, or zoning changes are typically discretionary approvals[48] because Planning Departments are not legally obligated to grant these types of

41. Bradley C. Karkkainen, *Toward a Smarter NEPA: Monitoring and Managing Government's Environmental Performance*, 102 COLUM. L. REV. 903, 913 (2002).

42. *See* JOHN LANDIS, ROLF PENDALL, ROBERT OLSHANSKY & WILLIAM HUANG, FIXING CEQA: OPTIONS AND OPPORTUNITIES FOR REFORMING THE CALIFORNIA ENVIRONMENTAL QUALITY ACT 1 (Cal. Pol'y Seminar ed., 1995).

43. CAL. PUB. RES. CODE § 21002.

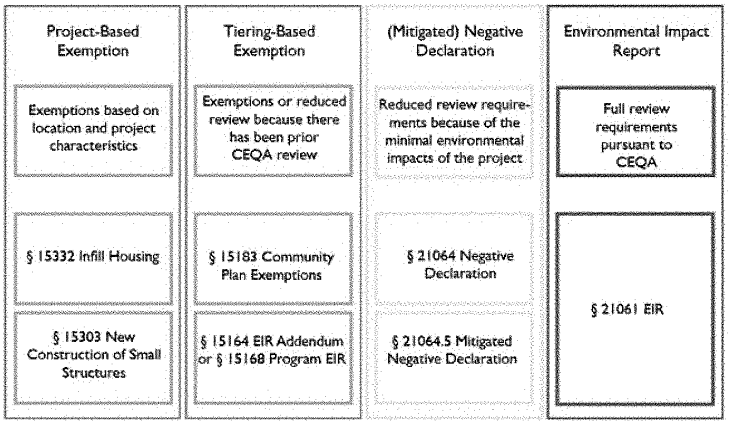
44. CAL. PUB. RES. CODE § 21080.

45. State law requires each city and county to have a planning agency—either an administrative body or a commission—to carry out the state planning laws, which include General Plan laws discussed in this Part. *See* CAL. GOV'T. CODE §§ 65100, 65101. Planning agencies generally enforce the local zoning code and make land use determinations. *See* MILLER & STARR, 7 CAL. REAL EST. § 21:1 (4th ed., 2015).

46. *See* CEQA GUIDELINES § 15369 (2016) (codified at 14 C.C.R. § 15369 (2016)). "CEQA Guidelines" refers to Title 14 of the California Code of Regulations, which implement PUB. RES. CODE § 21080 et seq. *See Friends of Westwood Inc.*, 235 Cal. Rptr. at 793 (finding building permits to be presumptively ministerial).

47. *See* CEQA GUIDELINES § 15268(b). San Francisco is one city that makes building permits discretionary through their charter. *See* discussion *infra* Section IV.

48. *See* CAL. GOV'T CODE § 65583.2 ("the phrase 'use by right' shall mean that the local government's review of the owner-occupied or multifamily residential use may not require a conditional use permit, planned unit development permit, or other discretionary local government review or approval that would constitute a 'project' for purposes of [CEQA]"). Another example is provided through the state law that requires that Development Agreements be adopted by a local legislative act, preventing them from being ministerial approvals. *See supra* note 33.



approvals; instead, they use discretionary judgment to evaluate the project based on subjective criteria.[49]

Discretionary projects may still be exempt from CEQA. The legislature has carved out statutory exemptions in the Public Resources Code, and thirty-three categorical exemptions have been developed in the California Code of Regulations, which are more commonly referred to as the CEQA Guidelines.[50] In this article, we focus on the exemptions most relevant to infill development. For example, a lead agency can use the Class 32 infill exemption for infill development; if an urban infill project satisfies five conditions, it can bypass CEQA review.[51] Other common forms of exemptions are the Class 3 exemption for new construction or conversion of small structures and the Class 1 exemption for existing facilities.[52]

Tiering is a way to streamline environmental review under CEQA by allowing environmental review of a proposed project to focus on a narrow set of issues that have not already been evaluated in a prior Environmental Impact Report ("EIR"). If all the issues have been evaluated in a previous EIR, then no further study is necessary. Tiering necessarily requires a prior environmental review document (generally an EIR) that is usually connected to a prior and large-scale planning approval; however, the source of the document can vary. A Community Plan Exemption, for example, is a tiering-based exemption available to projects consistent with a community plan, general plan, or zoning.[53] Another form of tiering is the Program EIR, which can exempt future development activity from environmental review, provided that no underlying conditions have changed.[54] An EIR Addendum is commonly used for projects that will be built out in phases under a master plan and master EIR where the underlying conditions of approval have not changed.[55] If some of these conditions have changed, then the lead agency can prepare a Supplemental EIR, which only needs to contain information necessary to make the original EIR adequate.[56]

49. *See* CEQA GUIDELINES §15357.
50. *Id.* §§ 15300–15333.
51. *Id.* § 15332. These factors are: (1) the project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations; (2) the proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban uses; (3) the project site has no value, as habitat for endangered, rare or threatened species; (4) approval of the project would not result in any significant effects relating to traffic, noise, air quality, or water quality; and (5) the site can be adequately served by all required utilities and public services.

55. *See id.* § 15162.
56. *See id.* § 15163.

**Figure 1: Types of Environmental Review**

### b. The disclosure requirements under CEQA

For projects that are not categorically exempt or exempt based on prior EIR analysis, the lead agency conducts an Initial Study[57] to assess whether the project will have a significant effect on the environment. If not, the agency issues a Negative Declaration ("ND").[58] If the project will have a significant effect on the environment, but the developer can incorporate mitigations that reduce their significance, then the agency issues a Mitigated Negative Declaration ("MND").[59] A lead agency must prepare an EIR where there is substantial evidence that the project will have a significant effect on the environment[60] and where it is not clear from the Initial Study that these impacts can be mitigated below a significance threshold.[61]

An important debate in the context of CEQA implementation is over the merits of project-specific CEQA review (which focuses on individual projects) and plan- or program-level CEQA review (e.g., review focused on Specific Plans, neighborhoods, or city-wide programs). One issue is the effectiveness of project-specific review. On the one hand, CEQA's information mandate when applied at the project level can force agencies to "identify and confront the environmental consequences of their actions" in that particular project.[62] CEQA's procedural

57. *See* CEQA GUIDELINES § 15063(a).
58. *Id.* § 15070(a).
59. *Id.* § 15070(b)(2).
60. *Id.* § 15063(b)(1), § 15060 (indicating a project may also bypass the Initial Study to proceed directly to the EIR)

62. Karkkainen, *supra* note 41, at 904.

requirements can enable cost-effective mitigation, because agencies can take into account "the site-specific circumstances" of the project "in a flexible manner" and propose feasible mitigations in a way that applying blanket regulations would not.[63] CEQA also operates to mitigate project-specific environmental problems where there are lapses in regulation because its procedural framework is sufficiently flexible to mitigate environmental problems that other, more general laws are slower to address.[64] A project-specific EIR, however, cannot inform a long-term perspective or mitigate the regional and cumulative effects of development that are better suited to the general plan process.[65]

The other issue relates to cost. As noted above, plan or program-level EIRs can generally reduce the costs of subsequent CEQA review through tiering: prior research has found the differences between a Categorical Exemption, MND, and EIR, in time and cost, can be great.[66] Therefore, tiering that allows project-level review to occur at the MND or Categorical Exemption level can reduce project-level costs substantially. However, cities generally pay the costs of plan- or program-level CEQA review, while developers pay for the costs of project-specific CEQA related documents and studies.[67] For cash-strapped jurisdictions, particularly in the wake of Proposition 13, which reduces the amount of property taxes that stay within local jurisdictions,[68] the project-specific EIR presents a more economically feasible way of considering environmental effects than an update to

63. ELISA BARBOUR & MICHAEL TEITZ, CEQA REFORM: ISSUES AND OPTIONS 4 (Pub. Pol'y Inst. of Cal. ed., 2005) (emphasis omitted).

64. *See id.* for a further discussion of how CEQA fills these regulatory gaps; Giulia Gualco-Nelson, *Reversing Course in California: Moving CEQA Forward*, 44 ECOL. L. Q. 155, 164 (2017).

65. *See* Robert Olshansky, *The California Environmental Quality Act and Local Planning*, 62 J. AM. PLAN. ASS'N. 313, 317 (1996). EIRs are very effective tools to analyze project-specific impacts but many environmental effects are cumulative in that they are not traceable to a single project. Traffic, for example, is a regional issue stemming from historic patterns of land use and disinvestment in public transportation. Unfortunately, instead of promoting long-term planning, CEQA often "burden[s] a single project with all of a region's problems"—a nearly impossible undertaking. *Id.*

66. *See* Kenneth Bley, *Beware of Planners Bearing Gifts*, COX CASTLE NICHOLSON (Jan. 20, 2015), https://perma.cc/HD4K-MDNH (noting that "[p]reparing an MND . . . also requires significant time and money, although, in the short run, less than an EIR). Substantively, EIRs must contain more detail and studies than an MND. EIRs require (1) detailed information about the proposed project's significant effects on the environment; (2) ways in which the significant effects of such a project might be minimized; and (3) alternatives to the project. *See* CAL. PUB. RES. CODE § 21061. However, in long the run, as Bley notes, if there are legal challenges, MNDs might end up costing more because they are potentially less defensible in court. *See* Bley, *supra* note 66 (discussing the standards of review for an MND and EIR).

67. *See* Olshansky, *supra* note 65, at 319-20.

68. Passed as a voter initiative in 1978, Proposition 13 is an amendment to the California Constitution that froze property tax values at 1976 assessed value levels and fixed tax increases at a maximum of two percent per annum. CAL. CONST. art. XIIIA, §§ 1(a), 2(a). This has led to a sharp decline in the revenue local governments receive from property tax revenue. *See* LEGISLATIVE ANALYST'S OFFICE, COMMON CLAIMS ABOUT PROPOSITION 13 at 2 (2016).

the General Plan because it effectively shifts the costs of CEQA compliance to individual developers.[69] The cost of a project-specific EIR, for example, is significantly lower than the cost of a General Plan update (typically financed from the city's general fund), and the project applicant bears most of the cost.[70]

Critics have also attacked the way agencies unpredictably apply CEQA both within the same jurisdiction and across the state, an inconsistency that critics say increases not only the time and money spent on CEQA review, but also the risk of litigation.[71] And some critics question whether or not CEQA actually leads to meaningful mitigation of harm.[72] Because CEQA leaves implementation entirely to local control, agencies can weigh environmental harms and social or economic benefits differently.[73]

### c. The public participation requirements of CEQA

Public participation is the democratic cornerstone of CEQA. CEQA has strict notice provisions that enable the public to participate in every major phase of environmental review. The notice requirements are demanding for an EIR. Immediately after determining that an EIR is necessary, the lead agency must issue a Notice of Preparation.[74] After posting this notice, the agency begins work on the Draft EIR. The agency must then notice and post the Draft EIR for public review for at least thirty days.[75] During this period, the public submits comments about the agency's findings. The lead agency must review and prepare a written response to all comments received during this period.[76] The agency incorporates these responses into the Final EIR and then recirculates it to the public.[77] Within five days of certifying the Final EIR, the agency will file a public Notice of Determination ("NOD") with the county clerk.[78]

The Office of Natural Resources promulgates CEQA guidelines for implementation, but no state agency substantively oversees CEQA.[79] Citizen suits are the sole enforcement mechanism to ensure a lead agency's compliance. NODs trigger the statute of limitations to bring suit,[80] and CEQA lawsuits are easy to file. Filing fees are relatively inexpensive, and courts limit proceedings to the administrative record, which obviates the need for a lengthy discovery process.[81]

69. *See* Olshansky, *supra* note 65, at 320.
70. *Id.* at 319–20. In 1996, the average cost of an EIR was $38,214. The average cost of a General Plan was $208,000.

CEQA also allows plaintiffs to easily satisfy standing requirements.[82] The ease of CEQA litigation has been a source of significant criticism of the statute, with critics arguing that it increases uncertainty and costs for developers.[83]

## B. What prior research has told us about the impact of California's land use regulations on housing supply and spatial equality

Meeting California's statewide goals to reduce GHG emissions requires equitable infill development. Housing development properly focused in infill TOD areas may significantly reduce emissions in part by increasing transit usage[84] and reducing vehicle miles traveled.[85] The state legislature has recognized that meeting GHG reduction targets through increased transit use requires the adoption of sustainable, integrated regional transportation and community planning strategies.[86] Research suggests, however, that law promoting sustainable urban development without an equity focus may lead to "environmental gentrification"[87] and may directly undermine intended policy goals of reducing GHG emissions.[88]

82. In Save the Plastic Bag Coalition v. City of Manhattan Beach, the California Supreme Court refused to apply the federal "zone of interests" test for CEQA litigation. 254 P.3d 1005, 1012–13 (Cal. 2011). Limiting standing under CEQA has been proposed as a way to reduce the proliferation of CEQA litigation. *See* Eric Biber, *Could Standing Save CEQA?* LEGAL PLANET (Apr. 9, 2012), https://perma.cc/7CHE-HKR3.

87. *See, e.g.*, MALO HUTSON, THE URBAN STRUGGLE FOR ECONOMIC, ENVIRONMENTAL AND SOCIAL JUSTICE: DEEPENING THEIR ROOTS 20 (Routledge ed., 2016) (citing Melissa Checker, *Wiped Out by the "Greenwave": Environmental Gentrification and the Paradoxical Politics of Urban Sustainability*, 23 CITY & SOC'Y 210, 210 (2011) ("While it appears as politically-neutral, consensus-based planning that is both ecologically and socially sensitive, in practice, environmental gentrification subordinates equity to profit-minded development")); Hamil Pearsall, *Moving out or Moving in? Resilience to Environmental Gentrification*, 17 LOC. ENV'T 1013, 1013 (2012) ("Sustainability initiatives and environmental improvements that lack adequate attention to the social justice dimension of environmental change produce environmental gentrification").

88. Notably, the characteristics of ridership also suggest that if low-income communities that have historically lived in central city neighborhoods and used transit at the highest rates are displaced from central cities, TOD investment may not achieve its intended policy goals. *See* Robert Cervero, *Transit-Oriented Development's Ridership Bonus: A Product of Self-Selection and Public Policies*, 39 ENV'T & PLAN. 2068, 2083–84 (2007). The decline of transit ridership in Los Angeles, despite new investments in public transportation and upzoning around these stations, is an acute example of this issue. *See* MICHAEL MANVILLE ET AL., FALLING TRANSIT RIDERSHIP: CALIFORNIA AND SOUTHERN CALIFORNIA (S. Cal. Ass'n of Gov'ts ed., 2018). Also, the LAO reported that low-income

Multiple studies examine the relationship between land use regulation and its specific impacts on housing supply and housing costs as well as its impacts on spatial equality. We thus discuss and summarize the findings and methods of two research areas: (1) studies that explore the relationship of land use regulation on housing supply and costs (indirect or direct impact on housing costs), and (2) studies that explore the relationship of land use regulation on spatial equality (indirect or direct impact on segregation/exclusion).[89] Our summary identifies the key conclusions of that literature, and how the current methodological approaches of that literature limit the ability to either generalize from the study findings or identify specific policy solutions.

### 1. Understanding land use regulation as a constraint on supply

California's home prices and rents are higher than anywhere else in the country; home prices are 2.5 times the national average and rents are fifty percent higher.[90] Using basic supply and demand economics, urban economists posit that a sharp decline in supply beginning in the 1970s has led to the affordability crises in many of the nation's coastal cities, like those in California, where the labor market is strong and demand for housing is high.[91] Building on the work of William Fischel—who coined the term "homevoter hypothesis" to describe a home owner's

families that work within coastal communities, but cannot afford housing near their work, commute ten percent farther than commuters elsewhere and concluded that high housing costs that result in longer commutes risk undermining the goals of recent legislation intended to address climate change. *See* LAO REPORT, *supra* note 5, at 3.

89. We focus here only on research that directly touches on the debates over housing costs and regulation in California. The relevant literature that engages with the impact of land use regulation (defined broadly to encompass both local land use regulations and state law) on both housing costs and spatial equality is large. For a comprehensive literature review that focuses on an econometric analysis of land use regulation *see* generally, Joseph Gyourko & Raven Molloy, *Regulation and Housing Supply* (Nat'l Bureau of Econ. Research Working Paper No. 20536, 2014). For a summary of studies and writing on how stringency within land use regulation impacts supply, *see* Vicki Been, *City NIMBYs,* 33 J. LAND USE & ENVTL. L. 217, 223 n.24 (2018). For a review of the literature that engages public investment (related to land use) and gentrification and displacement, *see* Miriam Zuk et. al, *Gentrification, Displacement and the Role of Public Investment: A Literature Review*, URBAN DISPLACEMENT (Mar. 3, 2015), https://perma.cc/QER4-XC2H.

90. *See* LAO REPORT, *supra* note 5, at 3.

91. *See* LAO REPORT, *supra* note 5, at 7 ("Beginning in about 1970, however, home prices throughout the state began to accelerate. Prices were eighty percent above U.S. levels by 1980, and by 2010, the typical California home was twice as expensive as the typical U.S. home"); *see also* Edward L. Glaeser, Joseph Gyourko & Raven Saks, *Why is Manhattan So Expensive? Regulation and the Rise in Housing Prices*, 48 J. L. & ECON. 331, 337 (2005) (beginning in the 1970s, the U.S. experienced a sharp decline in the supply of housing nationwide). Other studies have found a sharp decline in building permits beginning in the 1990s. *See* CAL. DEPT. HOUSING & CMTY. DEV., CALIFORNIA'S HOUSING FUTURE: CHALLENGES AND OPPORTUNITIES 6 (2018).

inherent motivation to maximize the value of their property[92]— much urban economics research attributes the change in housing production to the rise of "historical preservationists in New York City [and] conservationists in California. . . ."[93] In this literature, supply constraints are the primary cost of land use regulation. These studies reach this result by measuring the gap between the physical costs of producing the housing unit and the sales price for the housing unit.[94] If the gap between production costs and sales price is narrow, the market is efficient and affordable; where the gap between sale price and production costs is wider, housing is unaffordable. Large disparities between price and production cost are generally understood as indirect evidence of the costs of land use regulation.[95] Because of the difficulty of measuring the impact of particular land use policies, [96] urban economists use proxies such as declining permitting levels, declining heights and densities, and increasing sale prices, which together provide indirect evidence for a "regulatory tax."[97]

In 2002 Glaeser and Gyourko found that generally home sale prices are within forty percent of hard construction costs nationwide, but California's housing prices were substantially higher than construction costs.[98] They concluded the gap between hard costs and sale price is not a function of higher land costs,[99] and found that stringent land use regulation which imposes longer than average[100] lag times between permit application and approval creates an "implicit zoning tax."[101] However, for our purposes a key limitation of this research is that it is unable to isolate which land use regulations might impose the lag time in development.[102]

99. *Id.* at 17. Because the cost of a house on a 10,000 square foot lot versus an identical house on a 15,000 square foot lot is close in value, if high land values were a real driver of cost, the house on the larger lot would be worth more. But high prices were not associated with higher densities. A classic free market land model would suggest that densities would increase as land becomes more expensive due to an exogenous scarcity, but in California the researchers found that high cost areas were associated with lower not higher densities. One notable caveat to this study is that the authors only use data from single-family home sales and exclude all multifamily, cooperative or condominium sales. Thus, their approximation of "density" will likely skew lower. More expensive, but comparatively less dense, housing presents indirect evidence of stringent land use regulation

100. Defined as six months based on the underlying survey. *Id.* at 19–20.

101. *See* Glaeser & Gyourko, *supra* note 14, at 17. Glaeser & Gyourko derive this data from the 1989 Wharton Land Use Control Survey, a precursor to the Wharton Residential Land Use Regulatory Index ("WRLURI"). *See* discussion *infra* Section I.B.1(a).

102. These studies also employ national averages to describe very local issues. For example, some studies use RS Means Construction data for hard construction costs, which

### a. Exploring stringency and constraints on housing supply through national surveys

In an effort to understand how regulations might shape housing costs, in the 2000's two groups of researchers completed two national surveys that both contributed to the analysis of the financial cost of land use regulation and produced

reflects national averages of construction costs per square foot rather than actual costs. To adjust these national averages for certain metro regions, RS Means inflates them by a set percentage. This inflation, however, does not consider higher than average labor cost or equipment costs in a particular location. Building in expensive metro areas is spatially constrained and requires higher costs for staging, storage, and transportation. *See About RSMeans Data*, RSMEANS DATA (Oct. 23, 2018, 4:00 PM), https://perma.cc/A37F-2ANS. Labor markets also tend to be stronger in high cost areas, which increases construction costs. According to the California Legislative Analyst's 2015 report, these factors heavily influence the cost of housing construction in California. *See* LAO REPORT, *supra* note 5, at 14. Also, a recent McKinsey study suggests that low construction productivity is a major driver of construction costs and time delays. FILIPE BARBOSA ET AL., REINVENTING CONSTRUCTION: A ROUTE TO HIGHER PRODUCTIVITY 2–3 (McKinsey Global Inst. ed., 2017). (noting that in its sample "over the past ten years less than one-quarter of construction firms have matched the productivity growth achieved in the overall economies in which they work, and there is a long tail of usually smaller players with very poor productivity. Many construction projects suffer from overruns in cost and time.").

In addition, while the studies assume efficient market conditions, in reality, home sale prices include all the transaction costs that the developer needs to recoup, such as the cost of financing (carrying capital, lender origination fees, issuance fees, insurance), investor ROI (which is typically higher in high cost metro areas), legal fees, taxes, and developer and contractor profit. *See, e.g.,* Memorandum from Keyser Marston Assoc., to Pleasant Hill BART Station Leasing Auth., (Nov. 12, 2014) http://www.co.contra-costa.ca.us/DocumentCenter/View/34410/Condominium-Feasibility-Study (describing a developer's pro forma feasibility analysis for condominiums adjacent to the Pleasant Hill BART station: "The output of the pro forma is the average condo sale price required for project feasibility. The pro forma estimates the costs to build the project including land acquisition, direct construction costs, and indirect and financing costs." These costs must be recouped for the project to be feasible.)

Though land use regulation can certainly increase these costs by prolonging the approvals process, many of these costs exist independent of land use regulation.

In 2005, Glaeser, Gyourko, and Saks made a better case for the regulatory tax formula as applied to the housing market in Manhattan. In Manhattan, where most people live in dense multifamily structures, the cost of adding an additional floor of units is the marginal cost of building up rather than the cost of purchasing additional land. This implies that choosing to add an additional floor would be a function of regulatory approvals rather than the availability of land. The study found that buildings today are on average shorter than they were from the beginning of the century to the 1970s. Moreover, the ratio of sales price to construction costs fluctuated between 1.5 and 1.7 throughout the 1980s and 1990s. This suggests that regulation prevents developers from maximizing density, which would tie the sale price to construction cost. The authors also suggest that the regulatory tax is not solely a product of laws on the books, but rather how these laws are applied and supplemented their data with case studies of wealthy New York constituents that organized to block a 17-story apartment building on the Upper East Side. Though the underlying zoning actually permitted the 17-story height, the wealthy neighborhood constituents used landmark preservation law to reduce the building height to nine stories. *See* Glaeser, Gyourko & Saks, *supra* note 91, at 334.

important datasets that other researchers would rely on.[103] In 2006 Pendall, Puentes, and Martin published the results of their survey of land use in 1,844 jurisdictions from the fifty largest metropolitan areas. The survey asked planning staff about their perceptions of the jurisdiction's use of zoning, comprehensive planning, growth containment measures, impact fees, building permit caps, or affordable housing incentives, and for perceptions of regulation (more or less) from the 1970s to 1990s.[104] The team then coded these results to create "regulatory clusters" (groups of jurisdictions with similar land use typologies) on a spectrum—traditional (typically the most exclusionary), reform, and deregulated jurisdictions.[105] To gauge the level of exclusionary land use regulation, the survey asked whether a jurisdiction would allow construction by right or by special permit of a forty-unit two-story apartment building sitting on five acres.[106]

In terms of permissive zoning, the most exclusionary jurisdictions were in the Northeast, whereas San Francisco, San Diego, Seattle, and other western metro areas were the least exclusionary.[107] At that time, nearly two-thirds of the Western metro regions surveyed had affordable housing incentive programs and nearly half had dedicated affordable housing funds.[108] Although zoning in Western metro regions might have been the most permissive in terms of density and variety of housing stock (in some cases even rivaling New York), these western jurisdictions used other regulatory tools—like urban growth containment measures, impact fees, and permit caps—that made it more expensive and difficult to develop housing.[109]

Pendall's 2006 study does not explain how affordable housing incentives can modify an underlying exclusionary land use system (for example, by exempting affordable housing from certain impact fees), but the study results suggest that some metro regions, though ostensibly committed to constructing affordable housing, are actually employing regulatory tools that decrease supply, or that there could be a mismatch between means and ends. Housing prices were highest in "reform" jurisdictions that have permissive underlying zoning but employ a variety of land use tools that include growth control (e.g., San Francisco and Denver).[110] And housing costs in these areas are higher than in the North East where traditional exclusionary zoning is employed.[111]

108. Since the time of the Pendall study, California has dissolved its Redevelopment Agencies—a primary source of affordable housing funding, which has negatively impacted many of these funds. *See* discussion *infra* Section III.

109. *See id.* at 14 (containment), 17 (impact fees), 19 (permit caps).

110. *Id.* at 31.

111. *Id.* at 30. Unsurprisingly Houston and Dallas-San Antonio, which the study considered nearly unregulated with the exception of impact fees, had the lowest housing

The Pendall study does not examine whether the jurisdiction requires environmental review, which in California impacts the type of housing that can be built regardless of the underlying zoning controls. Because of the national scope, the study also did not focus on how land use regulations are applied. For example, Pendall notes that San Francisco has permit caps, but fails to note that they apply only to certain commercial developments and not residential or mixed-use properties.[112] These issues are likely applicable to other jurisdictions as well.

At around the same time as the Pendall survey, Gyourko, Saiz, and Summers conducted another major national survey of land use practices to build the Wharton Residential Land Use Regulatory Index ("WRLURI") with the aim of determining the "average" degree of land use regulation in the nation by focusing on process and outcomes, rather than just the presence of regulatory constraints.[113] The WRULRI distributed a fifteen-question survey to planning officials in 2,649 jurisdictions.[114] Participants ranked their perception of the importance of certain factors that influence local government decisions on how to regulate the rate of residential development on a 1-5 scale.[115] They also ranked the involvement of certain organizations—including local councils, communities, state legislature, and local courts—in the land use regulation process. The survey asked respondents to (a) identify how much the cost of land development has increased in the last ten years as well as the average length of the entitlement process as compared to ten years ago; (b) provide the number of board and commission approvals required to approve projects with zoning changes versus projects without zoning changes; (c) identify whether the community has permit caps, minimum lot size requirements, and open space or affordable housing or infrastructure exactions; and (d) identify the number of applications for zoning changes filed and approved in the last year. To assess each state legislature's involvement in the planning process and the involvement of the state courts, Gyourko, Saiz, and Summers used Foster and Summers's fifty state survey[116] that determined the features typical of judicial

prices. While Pendall 2006 notes that housing prices were once low in Austin, the study notes that the growth of the high-tech sector has increased housing costs above Houston and San Antonio. Housing prices aside, reform jurisdictions and Texas had more in common in terms of social demographics. Both have higher concentration of college graduates in their central city than in their suburbs. Low-income people and people of color were dispersed more evenly throughout the suburbs in reform areas and Texas, whereas they are primarily concentrated in the central city in traditional jurisdictions.

112. *See, e.g.*, S.F. Planning Dep't, *Office Development Annual Limitation Program*, (Oct. 23, 2018, 4:00 PM), https://perma.cc/DN94-CDKW. In 1985, San Francisco enacted the Annual Office Limit Program which caps the annual permitting of office space on a square foot basis; this square footage limitation does not apply to residential housing.

113. Joseph Gyourko, Albert Saiz & Anita Summers, *A New Measure of the Local Regulatory Environment for Housing Markets: The Wharton Residential Land Use Regulatory Index*, 45 URB. STUD. 693, 694 (2008).

114. *Id.* at 696.

115. *Id.* at 719–21. Some of these factors included supply of land, cost of new infrastructure, density restrictions, impact fees, opposition to growth, and school crowding.

116. *See* DAVID FOSTER & ANITA SUMMERS, CURRENT STATE LEGISLATIVE AND JUDICIAL PROFILES ON LAND-USE REGULATIONS IN THE US 3–8 (2007) (surveying land use laws—such as legal standards for exactions—in all 50 states).

review for exactions, fair share development requirements, building moratoria, and spot zoning.[117] They also used data on ballot box planning measures from a database that tracks initiatives nationwide.[118] The authors then created an index of eleven land use stringency indicators: local political pressure, state political involvement, state court involvement, local zoning approval (includes environmental review), local project approval, local assembly (democracy), supply restrictions, density restrictions, open space, exactions, and approval delay.[119]

The WRLURI's stringency index provided policymakers a general assessment and comparative analysis of whether a jurisdiction's land use system is more or less "stringent" and whether it imposes more lag time to approvals. In the least regulated community nationally, density restrictions were relatively permissive, open space requirements were unlikely to be imposed, and the lag time between application and issuance of a building permit was approximately three months.[120] The average community required two levels of approvals to grant a zoning change and at least one approval for a project without a zoning change, but did not put project approvals to a popular vote by the community, and minimum lot sizes, open space, and exactions were not onerous.[121] The typical lag between application and permit issuance was six months.[122] The most stringently regulated communities required a local popular vote to approve a project and one more level of approval for a project even without a zoning change; density restrictions and high minimum lot sizes were also more prevalent.[123] The average approval timeline in stringently regulated communities was 10.5 months.[124] Stringently regulated communities tended to have high stringency values for all the land use indicators.[125] Stringency was also strongly correlated with community wealth.[126] Interestingly, regulations were highly variable even within the same state, highlighting the ubiquity of local rather than state control.[127]

117. Gyourko, Saiz & Summers, *supra* note 113, at 701. *See also* FOSTER & SUMMERS, *supra* note 116, at 3. The Foster and Summers 50 state survey ranked states on a scale of 1 to 3: states that scored a 1 gave little deference to local municipalities; states that scored a 3 nearly always defer to the municipality. The number of cases consulted per state ranges from one in Alaska to a high of fifteen in California. Foster & Summers also used information on new legislative enactments and governor's actions to rank the state legislative involvement on the same scale.

127. *Id.* at 712 ("For example, in Massachusetts which has a state average that is 1.56 standard deviations above the national mean, 10 per cent of the communities (8 out of 79) still have WRLURI values below zero and thus are more lightly regulated than the average place in the country").

In 2018, the WRLURI continues to remain highly influential. The finding that stringency is associated with higher housing costs is particularly important because it drives much of the policy debate around land use in California.[128] The index also has been used in subsequent studies[129] and informs survey design for related research.[130]

For instance, many researchers have used the WRLURI to examine relationships between housing supply and other variables. In 2010, Saiz used the WRLURI and satellite data to establish that the most geographically constrained jurisdictions—meaning the jurisdictions with the least available land to develop[131]—also had the highest stringency values on the WRLURI.[132] Saiz found that regions with the most inelastic supply are also the most geographically constrained in terms of mountainous topography and internal water (e.g., flood plains, wetlands).[133] Areas with the most geographic constraints also had the highest stringency values on the WRLURI.[134] Housing and population growth were also predictive of more stringent regulation.[135] Though this does not establish causality, Saiz's results evoke the homevoter hypothesis, suggesting that people who invest in expensive high growth areas want more regulation to retain value in their investment.[136]

128. In an effort to drive down housing costs, the California legislature has aimed to reduce the number of local regulations for certain types of residential developments. SB 35 requires local jurisdictions not in compliance with RHNA obligations to approve certain residential developments containing ten to fifty percent affordable housing through a ministerial process. S.B. 35, 2017–2018 Reg., Leg. Sess. (Cal. 2017). SB 827—which would have created a by-right process to approve residential developments exceeding underlying height limitations in transit zones—failed last year; however, the bill will likely be resurrected in some form during the next legislative cycle. *See* Alissa Walker, *Sen. Scott Wiener Will Introduce New Version of Transit Density Bill*, CURBED LA (Oct. 9, 2018), https://perma.cc/R5KK-S4HP.

A few key limitations of the WRLUI study make reliance on that study problematic. First, the authors assign stringency variables to metropolitan statistical areas ("MSAs").[137] This index tells us that San Francisco was more highly regulated than the national average.[138] But the stringency level for San Francisco, for example, is composed of thirteen observations drawn from five counties. The stringency value might not necessarily characterize the regulatory process across those five counties. Second, the WRLURI only focuses on the approval process in theory. This approach is ill-suited to understanding and distinguishing drivers of delays that could be related to local variations in planning practice rather than what the law mandates. Third, the WRLURI identifies stringency at a single point in time in 2005. Using the data (or findings) to describe current conditions risks ignoring changes in the regulatory process that occurred after the point in time of the survey or data collection.[139] Fourth, the sub-index values derive from inherently subjective survey questions submitted to only one planning official per jurisdiction; the bias or perspective of a single person could substantially skew the stringency measurement.[140] Finally, although areas with the most stringent regulation have the highest housing costs, all regulations might not impact that cost in the same way.

**b. Exploring stringency and constraints on housing supply through a statewide or regional survey**

National surveys provide a big picture of the regulatory environment across the country, but regional and statewide surveys may more effectively identify the regulatory determinants of housing inelasticity,[141] and are necessary to understand how land use affects housing supply given the local and heterogeneous nature of land use regulation.[142] Local metropolitan surveys require more resources than a national survey, and "the enormity of [this] effort prevents it from being easily replicated in many . . . markets."[143] California has benefited from at least five regional and state-specific studies.[144]

137. Gyourko, Saiz & Summers, *supra* note 113, at 713.

138. *Id.* at 714 (finding that the least regulated jurisdictions were located within the Midwest, whereas the most regulated jurisdictions were in the coastal metro areas, with the most stringent land use systems located in the North East).

139. *See* Been, *supra* note 89, at 227 for a similar argument.

140. The potential for these types of biases is further explained in the context of CEQA in LANDIS, PENDALL, OLSHANKSY & HUANG, *supra* note 42, at 116. The authors note that planners' "livelihoods depend in no small part on administering [CEQA]."

141. Glaeser & Ward 2008, for example, used a highly resource-intensive method that enabled them to disaggregate minimum lot sizes, wetlands, and infrastructure regulation as the major determinants of permitting and costs in the Boston metro area. Edward L. Glaeser & Bryce Ward, *The Causes and Consequences of Land Use Regulation: Evidence from Greater Boston*, 65 J. OF URB. ECON. 265 (2008).

144. We omit discussion of several earlier California focused surveys conducted in 1989 (MADELYN GLICKFELD AND NED LEVINE, REGIONAL GROWTH AND LOCAL REACTION:

Quigley, Raphael & Rosenthal 2009 used a method similar to WRLURI to create a regulatory stringency index for the San Francisco Bay Area. The authors surveyed building officials in eighty-six jurisdictions in 2007, and then supplemented their data with surveys of land use officials conducted between 1992–1999.[145] The 2007 survey addressed a variety of factors that affect housing development, including duration, timing, specific regulations, political influence, project approval procedures, delays, inclusionary zoning, and open space.[146] Building officials provided information on the number of approvals required for certain types of projects and the presence of certain types of regulation connected to restricted growth.[147] They also conducted online surveys of professional builders and environmental consultants, who provided self-reported data on a total of 37 single-family (121 units) and 25 mixed-use developments (331 units) in 33 land use jurisdictions.[148] These questions asked about "perceived level of controversy" associated with certain project types, "regulatory reasonableness," "transparency," and "estimates [of] the 'all-inclusive cost of the entire entitlement process."[149] Indexing the results of both surveys, the authors created the Berkeley Land Use Regulation Index ("BLURI").[150]

The BLURI does not necessarily contradict the findings of the WRLURI, but highlights that local context is important when assessing land use regulation in California. The BLURI indicated that the average approval lag between application and permit was 2 years for a multifamily development and 2.5 years for a single-family home development.[151] Within this time frame, environmental approvals took 2.3 years for single-family homes and 1.9 years for multifamily.[152]

Other findings from the BLURI closely track the WRLURI. The numbers of approvals required to build a unit of housing closely correlated with high housing costs.[153] Regulatory stringency was consistently associated with higher costs for construction, longer delays in completing projects, and greater uncertainty about the elapsed time to completion of residential developments.[154] Political

influence was another important factor, with jurisdictions in Marin County, the City of Richmond, and the consolidated City and County of San Francisco reporting the strongest political influence.[155] Berkeley and mixed-income cities like San Jose and Vallejo ranked in the middle in terms of political influence.[156]

Another more recent California-focused survey includes the California Land Use Regulatory Index ("CaLURI"). The CaLURI provides better insight into the geographic variability of land use stringency across California. Jackson sent surveys to planning staff in 540 cities and counties, and 420 jurisdictions responded.[157] The survey asked questions about the land use process and policies, including specific residential development standards like bulk, height, setback requirements, and floor area ratio restrictions.[158] The survey also asked whether the jurisdiction permitted low-cost housing alternatives, like mobile homes, as well as whether the jurisdiction restricts growth through its General Plan.[159] Other questions asked about affordable housing requirements, average approval times, permit caps, and planners' perceptions of the groups that wield the most political influence, as well as the main drivers of development regulation.[160] Jackson aggregated the sub-indices to create a stringency measure for each responding jurisdiction.[161]

Jackson found that the San Francisco Bay Area is the most stringently regulated region in California.[162] Whereas Southern California is more likely to restrict the form of new development, the Bay Area tends to prohibit development outright.[163] Notably, Jackson also found that the variation in regulatory stringency between coastal and inland communities was not statistically significant.[164] One major variation between coastal and inland communities is affordable housing mandates and low-cost housing alternatives. Coastal jurisdictions, where housing is the most expensive, are more likely to have affordable housing mandates and are more likely to permit mobile home parks than inland communities.[165] Jackson also found that contrary to previous studies, regulatory stringency is not a proxy for supply elasticity.[166] Instead geographic constraints are a more appropriate proxy.[167]

### c. Exploring supply constraints through the case study approach

Surveys focused within metropolitan regions or a single state may more effectively pinpoint the actual regulations that might constrain supply than national surveys. But even localized surveys cannot easily evaluate how laws are implemented at a project level. Mixed method case studies offer more insight. John Landis's 2000 report for the Department of Housing and Community Development ("HCD Landis Report") illustrates the value of case studies to explore land use regulations and residential development in California.

The HCD Landis Report is comprised of a case study of 46 housing developments approved between 1995-1997 in 31 cities and counties.[168] The authors selected the jurisdictions based on shared strong demand for housing, policies that were not anti-growth, and extensive experience processing high volumes of development applications.[169] The authors sent surveys to these pre-selected jurisdictions asking planners to identify a "typical" development in their community.[170] The authors next traveled to the community, reviewed and copied the case file for the typical development, sent the case file to the developer to make any needed corrections, and conducted in-person interviews to supplement any gaps in information.[171]

Landis found that the average approval time for the 24 single-family home case studies was 11 months, with each project subject to an average of 3.3 reviews.[172] For multifamily units, this timeline shrunk to 6.7 months, with only 2.3 separate reviews.[173] One of these reviews was typically non-legislative—meaning the approval did not require a rezoning or a General Plan Amendment—such as design review or approval by a neighborhood group.

Notably, this work explored the role of CEQA on lag times.[174] Some results were unsurprising. For example, the type of CEQA review directly coincided with approval timeline, with average delays of three years and twelve continuances for EIRs.[175] But other results were surprising. Of the twenty-two

168. JOHN D. LANDIS ET AL., RAISING THE ROOF: CALIFORNIA HOUSING DEVELOPMENT PROJECTIONS AND CONSTRAINTS 1997–2020, 95–96 (Cal. Dep't of Housing and Cmty. Dev. ed., 2000).

169. *Id.*

170. LANDIS ET AL., *supra* note 167, at 95. The authors specified a typical project in their survey instrument as: single or multi-family projects larger than 25 units; projects for which the review process had been fully completed; and projects that had experienced a typical approval process.

171. *Id.* at 96.

172. *Id.* at 101. The authors define 'review' as "the number of separate discretionary actions by the local planning commission, city council (or board of supervisors) or any other . . . review body, such as a design review board."

173. *Id.* at 107.

174. Landis had specifically explored the role of CEQA in earlier work. *See* LANDIS, PENDALL, OLSHANSKY & HUANG, *supra* note 42.

175. LANDIS ET AL., *supra* note 168, at 102. For a discussion of CEQA review, *see* Part I.A.2 *supra.*

multi-family case studies, only one project had to conduct an EIR.[176] Eight projects received NDs, six received MNDs, and six projects were processed under a tiered EIR from a prior Specific Plan.[177] In contrast, three single-family home projects conducted an EIR, twelve projects used a tiered EIR, and eight projects were issued NDs and MNDs.[178]

This study's CEQA results have interesting implications for the overall planning process. A third of multifamily projects were processed under a Specific Plan, compared to two-thirds of single-family homes that went through the Planned Unit Development ("PUD") process.[179] The difference in approval times suggests that Specific Plans can significantly cut down on approval delays, although single-family home PUDs were approved much faster than re-zones or General Plan Amendments.[180] The case studies also suggested that certain jurisdictions were not complying with the California Permit Streamlining Act (Cal. Gov. Code § 65950 et seq.), which required all jurisdictions—including charter cities[181]—to approve projects within certain time windows.[182]

Development selection for this case study limits the capacity for generalizations from the findings. First, the authors selected the jurisdictions based on their openness to new development, which likely skews the approval timeline, causing it to appear shorter. Second, the individual project case studies themselves were selected by local planners, who could import certain biases into the projects they recommend for analysis. Third, the study only looked at one project in each jurisdiction, limiting the ability to assess variance around the "typical" project.

Although the data is over twenty years old, and the contemporary development climate has drastically changed in the intervening years, the McKinsey Global Institute recently used the HCD Landis Report to predict the

176. *Id.*

177. *Id.*

178. *Id.*

179. *Id.* Planned Unit Development (PUD) in California refers to a zoning classification and a type of development that is intended to provide cities a degree of flexibility not typical of "conventional" zoning by, for example, permitting development of differing form and uses on a single or associated parcels. The definition and operation of the PUD will vary considerably depending on the city and local ordinance. *See* KOSTKA, *supra* note 19, § 7.40. The cities we studied, discussed in Parts II, III and IV, illustrate its diverse meaning at the local level. A PUD in San Jose, for example, always requires a re-zoning followed by a second permit that solidifies the design requirements. SAN JOSE MUN. CODE § 20.120.110 (2013). PUDs in Palo Alto—called Planned Community Districts—also require a rezoning but not a subsequent permit. *See* PALO ALTO MUN. CODE § 18.38.065 (2014). But a Planned Unit Development in Oakland, San Francisco, and Redwood City operates much more like a conditional use permit. *See* S.F. MUN. CODE § 304; REDWOOD CITY MUN. CODE §§ 46.1–46.7 (2005); OAKLAND MUN. CODE § 17.142.004.

180. LANDIS ET AL., *supra* note 168, at 102.

181. CAL GOV'T CODE § 65921 (1977).

182. LANDIS ET AL., *supra* note 168, at 108–09. For example, Negative Declarations must be adopted within 180 days from when the project application is accepted as complete, with certain extensions acceptable for applicant delays. CAL. PUB. RES. CODE § 21151.5 (1997); CEQA GUIDELINES § 15107 (2010). A Final EIR must be certified within one year of the project application's acceptance as complete. CAL. GOV'T CODE § 6595 (1985).

costs of current land use approval processes and the monetary benefits of reform.[183] Basing these projections on the HCD Landis Report as well as undisclosed expert interviews, McKinsey estimated the current approvals process at six months for simple projects and more than three years for complex projects.[184] The McKinsey study found that shortening the approval process in California could reduce the cost of housing by more than $12 billion through 2025 and accelerate project approvals by an average of four months.[185] The most significant gains of improving land use processes would accrue to projects that require a zoning change or a General Plan Amendment and projects that require an EIR.[186] Savings to projects undergoing streamlining under a Specific Plan are minimal, indirectly suggesting that streamlined approval processes are working efficiently.[187] McKinsey likely drew those last conclusions directly from Landis's study, which found that amongst the case study projects, use of long-term planning like Specific Plans reduces delay.[188] These results suggest that jurisdictions should consider investing in Specific Plans that enable streamlined review for discretionary projects and/or ministerial approvals.[189] These results also suggest that land use regulations may be stringent but still efficient in terms of approval times when there is a comprehensive plan for future growth in place.

Remarkably, although developers frequently refer to CEQA as "the third rail of California politics,"[190] current empirical research into how CEQA constrains supply continues to be fairly limited. The California Legislative Analyst's Office ("LAO") has identified CEQA as a culprit in delaying or reducing residential construction in the state.[191] The LAO conducted an independent review of CEQA documents submitted to the state between 2004-2013 and found that agencies took 2.5 years to approve a project-specific EIR.[192] While this figure includes non-residential projects that could potentially provoke more controversy, it is not inconsistent with the findings of the BLURI survey. But as noted in the Landis

study and as discussed below, an EIR is not the only CEQA outcome.[193] In 2016, BAE Economics published a study that concluded that no evidence supported arguments that CEQA was a barrier to development (defined to include more than housing), examining four development projects involving environmental review and finding that direct environmental review costs ranged from .025 to .05% of total project costs.[194]

In summary, the relevant research on the relationship between regulation and housing costs has found a strong connection, but that research has relied on inferences drawn from the gap between construction costs and sales prices or on surveys of planners and other stakeholders about their understanding of the regulatory process. While some research uses mixed method case studies, the methods still limit generalizability. Overall, the research has also found correlations between high-income levels and property values with regulation, significant variation across jurisdictions in terms of regulatory frameworks and stringency, high levels of complexity in the land-use regulatory process, and possible benefits for facilitating approvals through the use of specific or neighborhood-level planning processes.

### 2. Understanding land use regulation as a tool of exclusion

Another important line of research examines whether stringency in land use regulation is associated with racial and/or economic exclusion, which in turn can contribute to spatial inequality.[195] For example, using income and racial segregation data and the Pendall 2006 land use survey, Rothwell and Massey in 2010 found a strong relationship between density and income segregation.[196] The higher a metropolitan area's density score, the lower the degree of class segregation.[197] These findings support the exclusionary suburb paradigm, in which wealthy suburbs use zoning to maintain low-density development that effectively excludes low-income people and minorities.[198]

193. MISCHKE ET AL., *supra* note 183, at 28–39.

("Decades of scholarship—legal and sociological—outline how these policies left low-income families stranded in faltering cities whose abandonment by suburban homeowners-to-be at least left behind a large supply of low-cost housing") (citing FISCHEL, *supra* note 92); Richard Briffault, *Our Localism: Part I—The Structure of Local Government Law*, 90 COLUM. L. REV. 1 (1990); Robert C. Ellickson, *Suburban Growth Controls: An Economic and Legal Analysis*, 86 YALE L. J. 385, n.3 (1977); *see also* S. Burlington Cty. NAACP v. Twp. of Mount Laurel (Mount Laurel II), 456 A.2d 390 (N.J.

Spatial inequality, however, is not limited to exclusive suburbs within metropolitan areas. Gentrification within central cities, for example, is associated with segregation, exclusion, discrimination,[199] and the displacement of low-income communities.[200] Discussing spatial inequality thus requires consideration of exclusionary strong-market cities[201] and the growing suburbanization of the poor.[202] One theory (built on prior legal and economic studies) about exclusionary zoning within the strong market central city might explain the persistence of spatial inequality as more affluent populations move into formerly low-income neighborhoods: Demand for development controls increases as cities become denser and richer, evidenced by the tightening of development controls as affluent individuals return to cities, reversing decades of urban flight. [203] Gentrification, under this theory, would stem from the gradual tightening of restrictions that reflect the preferences of newly arrived affluent urban workers who prefer wealthier established neighborhoods that disallow new development and who flock to the lower-income neighborhoods adjacent to these wealthy anti-development areas, driving up the rents and disrupting the normal filtering process.[204] This theory of

(2010) (finding that "while poverty has grown on the whole, the most recent data also make clear that American poverty is becoming an increasingly suburban phenomenon").

203. MANGIN, *supra* note 198, at 92.

204. *Id.* at 95. Filtering is a theory based on supply-side solutions to the inadequate supply of affordable housing stock, in which the construction of middle- to upper-quality housing stock opens up opportunities for lower-quality housing stock as middle to upper-income households occupy better housing. *See* William C. Baer & Christopher B. Williamson, *The Filtering of Households and Housing Units*, 3 J. OF PLAN. LITERATURE 127, 128–29 (1988). However, economists have noted that filtering may be an inefficient tool to support increased housing for low-income households in markets with high development costs. In such contexts, any gains in affordable housing stock might be accompanied by harms associated with downgrading and abandonment of neighborhood environments providing the low-income housing stock. *See* Galster & Rothenberg, *Filtering in Urban*

exclusionary zoning in central cities influences current legal research in this arena.[205]

Based on this theoretical framework, by opposing market-rate development in their neighborhoods and rejecting a supply-side solution to the gentrification problem, some anti-gentrification advocates, community development, and affordable housing practitioners may be working against their own interests.[206] The author did not propose inclusionary housing incentives as a response to the exclusionary zoning within the central city but suggested reducing regulation incrementally—particularly aesthetic and historical preservation.[207] Easing local control over land use and supporting a supply-side solution (even for market-rate development) to gentrification and displacement is a dominant theme in California's public policy debate and public discourse about potential solutions to the housing crisis, but it is not without controversy.[208]

For some, the term "exclusionary zoning" suggests that the remedy would be more permissive density. But a 2015 study suggests a more complex problem.[209] Comparing land use stringency data from the WRLURI survey with a segregation index, Lens and Monkkonen found that the overall WRLURI score—a measurement of local regulatory stringency—did not correlate with income segregation, which suggests that not all land use regulations contribute to class

206. *See* MANGIN, *supra* note 198, at 93–94. Others have made similar arguments but acknowledge the methodological challenges of determining whether increasing supply contributes to increased housing costs. *See* Vicki Been, Ingrid Gould Ellen & Katherine O'Regan, *Supply Skepticism: Housing Supply and Affordability*, NYU FURMAN CTR (Draft Oct. 26, 2017), https://perma.cc/YDU7-PJNX; *see also* Been, *supra* note 89, at 244–45.

207. MANGIN, *supra* note 198, at 119–20.

208. The Yes In My Backyard (YIMBY) movement is an example. *See Let's End California's Housing Crisis: Support SB 827 – Sen. Wiener's Transit Rich Housing Bonus Bill*, CAL. YIMBY (Oct. 27, 2018), https://perma.cc/J5LA-3G6A; *see also* LAO REPORT, *supra* note 5 (using data from The Displacement Project to conclude that increasing supply of market-rate housing would curtail displacement of low-income households); *but see* Miriam Zuk & Karen Chapple, *Housing Production, Filtering and Displacement: Untangling the Relationships,* BERKELEY IGS RES. BRIEF (May 2016), https://perma.cc/SJX5-YP3S (responding to this report and offering a more nuanced analysis: the data showed market-rate and subsidized housing reduce displacement pressures at the regional level, but not at the block level, at least not in San Francisco, and that market-rate production is associated with higher housing costs for low-income households, but lower median rents, in subsequent decades). *See also* Miriam Zuk, Ian Carlton, & Anna Cash, *SB 827 2.0, What are the implications for communities in the Bay Area?* THE URB. DISPLACEMENT PROJECT (Oct. 1, 2018) https://perma.cc/3H9A-AJKT (finding that the SB-827 proposal, to reduce discretionary review of certain types of infill development near transit, would have resulted in a six-fold increase in feasibility of market-rate housing in affluent areas, and a seven-fold increase in inclusionary housing in moderate income areas, but that 60% of the financially feasible development was located in gentrifying or low-income areas, and over 65% of residential demolitions for development would have occurred in these neighborhoods).

209. LENS & MONKKONEN, *supra* note 129, at 12.

segregation.[210] Density restrictions are strongly correlated with income segregation and seclusion of the super elite.[211] But the correlation was equally strong for jurisdictions that mandated high minimum densities as well as those that kept densities low.[212] Understood within the context of the Rothwell & Massey work, this suggests that other restrictive forces are at play even in areas with permissive density—like central cities. Notably, income segregation is higher where local governments are more involved in entitlement approvals and communities put more pressure on the government to control growth[213] and lower in places with a higher degree of state involvement in local planning decisions.[214] Jurisdictions that require multiple levels of government approvals to build are more segregated.[215] Finally, the authors observed higher levels of income segregation in MSAs with central cities that regulate land use more stringently than surrounding suburbs.[216] The authors concluded that inclusionary incentives and reduced local control might be the most effective at reducing segregation.[217]

There is little research that aims to identify *which* land use regulations may be contributing to exclusion within cities generally, and insufficient recent research that focuses specifically on California.[218] There are two recent reports that explore the role of CEQA litigation as a tool to block infill development, although both examine CEQA's impact on more than housing development. In 2015, the law firm Holland & Knight produced a widely circulated report analyzing all CEQA lawsuits filed within a fifteen-year period and found that eighty percent of CEQA litigation in the past fifteen years targeted infill development.[219] While scholars have criticized this report for its overly inclusive definition of infill development,[220] this observation finds some support in earlier studies that found most CEQA litigation to occur in large cities.[221] Although it does not focus

218. Anika Singh Lemar, *Zoning as Taxidermy: Neighborhood Conservation Districts and the Regulation of Aesthetics*, 90 IND. L. J. 1525, 1563 (2015). Lemar, for example, explored the use of aesthetic regulations within walkable "conservation neighborhoods" with close proximity to the urban center and transit—specifically conservation districts— to constrain supply, but none within California. Lemar posits that urban residents are using conservation districts as a new public law form of private Covenants, Conditions, and Restrictions ("CC&Rs")—a hypothesis she finds support for in factual findings from published state opinions. Unlike CC&Rs, however, which must be adopted unanimously, a vocal minority of the neighborhood can organize to form a conservation district.

exclusively on housing development, it appears consistent with the observations of Mangin 2014 and Lens & Monkkonen 2016 that dense cities are using land use regulation as an exclusionary tactic. The 2016 report from BAE Economics, however, found low rates of litigation and infrequent use of EIRs.[222]

## C. How the limits of past research make it challenging to inform proposed legal reform

Past research tells us that stringency in land use regulation is correlated with certain outcomes—be it reduced housing supply and increased housing costs, or increased income segregation and spatial inequality. But it does not establish causation, nor does it identify which land use regulations, specifically, are correlated with these outcomes. It may be that increasing housing supply across multiple income levels or redressing spatial inequality within our urban communities is not as simple as drastically reducing regulation. And yet proposed legal reforms continue to target process, advancing solutions like reducing the number of approvals, more state oversight over local zoning decisions,[223] and CEQA reform.[224] Each of these elements of process serve important goals, like open government, public participation, and disclosure and mitigation of potential environmental harms. If we are uncertain which element of process increases

222. *See* JANET SMITH-HEIMER ET AL., *supra* note 194. A much earlier study used a survey and found that responses indicated CEQA litigation is relatively rare, with fifty-eight percent of the responding communities reporting no CEQA litigation between 1985-1990. *See* LANDIS, PENDALL, OLSHANSKY & HUANG, *supra* note 42, at 90. Eighty percent of jurisdictions reported zero or one lawsuits within that five-year timeframe. The authors estimated that across California, there is one lawsuit per 354 CEQA reviews. Attempts to find demographic variables driving the variation across communities were unsuccessful; the only statistically significant correlation showed that CEQA litigation is more common in larger cities, in white-majority cities, and in Democratic-majority cities. But this data predates recent CEQA streamlining initiatives as well as case law that made business, rather than environmental interests, easier to leverage. *See e.g.,* Save the Plastic Bag Coalition 254 P.3d at 1011-12 where the California Supreme Court refused to apply the federal "zone of interests" test for CEQA litigation.

223. For example, decisions at the state-level—although perhaps less biased towards local political power players—could take much longer than decisions at the local level. *See e.g.,* FISCHEL, *supra* note 5, at 276 (regional governance structures in Oregon and Washington have had mixed results, and New Jersey Mt. Laurel Fair Share requirements have failed to yield integrated demographic mixes). Research shows that Massachusetts Chapter 40B has been effective, although it is difficult to disentangle the coercive threat of state action with local incentives to construct affordable housing. *See* Carolina K. Reid, Carol Gallante & Ashley F. Weinstein-Carnes, *Borrowing Innovation, Achieving Affordability: What We Can Learn from Massachusetts Chapter 40B*, TERNER CTR. FOR HOUSING INNOVATION (2016).

224. *See* Dan Walters, *Brown Talks CEQA Reform, but Hasn't Done It*, CALMATTERS (Aug. 2, 2018) https://perma.cc/EF2X-VD2Y (discussing Governor Brown's call for comprehensive CEQA reform). Moderate reforms have succeeded in the legislature. *See e.g.,* A.B. 2341 2017–2018 Leg., Reg. Sess. (Cal. 2018) (reducing significance of certain aesthetic impacts); A.B. 2782 2017–2018 Leg., Reg. Sess. (Cal. 2018) (allowing an EIR to discuss non-environmental benefits of a proposed project).

housing costs, or exacerbates or contributes to segregation or gentrification, eliminating or curtailing process may sacrifice one set of policy goals without achieving another.

The research showing that permissive density does not equate with spatial equality is particularly troubling for California. California's signature housing legislation, the Housing Element of the General Plan, requires jurisdictions to plan for and zone for density to accommodate their portion of their regional housing need.[225] In addition to well-noted problems, (for example, Housing Element law places no affirmative production requirement on the jurisdiction beyond re-zonings),[226] this model implicitly assumes that density is a proxy for affordability.[227] As the most recent work around exclusionary central cities suggests, zoning for density does not necessarily result in opening up access to cities, as there are likely non-zoning barriers to development within exclusionary central cities.

More inquiry into how the land use approval process plays out within individual cities is therefore necessary to implement effective state-level reform. In essence, we are grappling with a series of local problems that have regional and statewide implications. Unlike surveys that often depend on generalizations across multiple jurisdictions and necessarily depend on perceptions of the regulatory process by the surveyed stakeholders, case studies can effectively unpack the local variation and the potential impacts of specific regulations within these local contexts and ground-truth actual outcomes of land-use regulatory processes. And because land use planning has changed over the past twenty years, current data that reflects these changes is needed to explore these issues.

## Part II: Methods

Crafting effective and targeted policy interventions to promote equitable infill development requires understanding what legal barriers to increased housing production exist; what legal tools afford meaningful participation in land use planning; and how current development patterns are affecting affordable housing opportunities within TOD areas or areas receiving substantial transit investment. Our study seeks to address these issues by examining whether local land use law and/or environmental regulations governing infill development individually, or in conjunction, present significant obstacles to equitable infill development. Based on our review of existing research (discussed in Part I) we hypothesized that:

225. *See* CAL. GOV'T. CODE § 65583 et seq. The affirmative rezoning obligation only applies, however, if a jurisdiction has failed to meet certain obligations—for example, by failing to zone for sufficient sites to meet its share of the Regional Housing Needs Assessment (RHNA) for the prior planning period.

226. Paul G. Lewis, *California's Housing Element Law: The Issue of Local Noncompliance* 10, PUB. POL'Y INST. OF CAL. (2003).

227. *Id.* (finding that "cities with significant housing unit goals are left with . . . rezoning existing neighborhoods for higher density housing").

1. There are significant legal, planning, and regulatory barriers to advancing equitable infill development within transit-accessible neighborhoods in high cost coastal cities;
2. The most significant barriers will emerge in local land use regulations that limit or slow infill development in transit-accessible neighborhoods and *not* in state environmental regulation; and,
3. State law aimed at incentivizing infill development in transit-accessible neighborhoods is applied differently (and sometimes ineffectually) within these local contexts.

Based in part on these descriptive hypotheses, we also began with a baseline hypothesis that future policies to advance state-level GHG reduction goals in a way that also promotes equitable infill development will require policy interventions that meet a number of important requirements, including (a) accounting for the heterogeneity of local regulations; (b) accounting for varied application of state streamlining provisions (or varied planning practice) in relationship to the political culture and revenue demands of the specific local context; and (c) either are (i) constructed at the local level to advance equitable infill development in transit-accessible locations; or (ii) are carefully targeted approaches to reducing local discretion over proposed infill development in transit-accessible locations that nonetheless protect the voice of vulnerable communities, minimize or prevent displacement of existing low-income residents, and ensure access to transit for future low-income residents. To test our hypotheses, we employed a case study approach that joins qualitative[228] and legal research methods, employing overlapping phases of data collection and sequenced analysis.[229]

## A. Choosing study sites: focusing first on the Bay Area

Our first phase of research involved selecting strong market charter cities[230] of various sizes within California major metropolitan areas (specifically, urban core cities and first ring suburban communities) experiencing robust

228. *See* JOHN W. CRESWELL, RESEARCH DESIGN: QUALITATIVE, QUANTITATIVE, AND MIXED METHODS APPROACHES, 185-204 (Vicki Knight et al. eds., 4th ed. 2014).

229. *See* ROBERT K. YIN, CASE STUDY RESEARCH: DESIGN AND METHODS (SAGE Publications, Inc. 6th ed. 2014); BRUCE L. BERG & HOWARD LUNE, QUALITATIVE RESEARCH METHODS FOR THE SOCIAL SCIENCES 325 (Pearson ed., 8th ed. 2011).

230. Charter cities within California enjoy some freedom to legislate at the local level over "municipal affairs" even if a conflict with state law may exist under Article XI, section 5 of the California Constitution. Although the California Constitution does not expressly define "municipal affair," land use and zoning are consistently classified as exempt from the planning and zoning provisions of the California Government Code, unless the city's charter indicates otherwise. *See e.g.* CAL. GOV'T CODE §§ 65803, 65860(d); City of Irvine, 30 Cal. Rptr. 2d at 799–800.

economic growth. The cities also needed to have transit accessibility or have capacity for TOD[231] and be in high demand.[232]

We began our work within the Bay Area, with a focus on San Francisco and San Jose. In 2015, the California Legislative Analyst's Office attributed high housing costs statewide in large part to the lack of housing supply in California's coastal communities.[233] This report identified the San Francisco-Metropolitan Division ("MD") and the San Jose-Sunnyvale-Santa Clara MSA as having the first and second highest housing costs in the state in 2015, respectively. Using American Community Survey data and California Department of Housing and Community Development's State Income Limits for 2017, we selected additional cities within the San Francisco-Oakland-Hayward MSA and San Jose-Sunnyvale-Santa Clara MSA using multiple criteria, including: demographic criteria, (population size, average household income, percentage of the population living in poverty, and area median income), land area, and population density.[234] To be considered for the study, each city needed a minimum population of 50,000 people and a minimum land area of 7 square miles.[235]

We used California's Regional Housing Need Allocation ("RHNA")[236] to steer us towards jurisdictions that have transportation and other infrastructure in place or planned, and can sustainably support increased housing supply[237] including infill development.[238] All of our first five selected cities face acute

231. PETER CALTHORPE, URBANISM IN THE AGE OF CLIMATE CHANGE (Island Press ed., 2d ed. 2010).

232. MALO HUTSON, *supra* note 87, at 20; PAUL KNOX & LINDA MCCARTHY, URBANIZATION: AN INTRODUCTION TO URBAN GEOGRAPHY (Pearson, 3d 2012).

233. LAO REPORT, *supra* note 5, at 3.

234. Area Median Incomes, or AMI, are provided by California's Department of Housing and Community Development State Income Limits, which provides income eligibility criteria for affordable housing programs. *See generally*, Memorandum from Jennifer Seeger, Assistant Deputy Director Division of Housing Policy Development to Interested Parties (June 9, 2017), https://perma.cc/T9EU-AK4E.

235. Cities that are too small (in population or land area) may not provide enough data for any meaningful analysis.

236. RHNA is a goal of housing production that each jurisdiction within the state is mandated to achieve through the local jurisdiction's Housing Element of its General Plan.

237. Senate Bill 375 mandates that each of the state's 18 Metropolitan Planning Organizations develop a Sustainable Communities Strategy that links housing development with transportation investments. The Association of Bay Area Governments' (ABAG) Regional Housing Need Plan: San Francisco Bay Area 2014-2022, states its RHNA allocation methodology complies with SB-375 because it uses factors that "aim to expand housing and transportation options; increase access to jobs, particularly for low-income workers; and promote housing growth in places with high quality services, such as parks and schools. . . . [with] a fair share distribution between large cities and medium cities with high job growth and transit access." *Regional Housing Need Plan for San Francisco Bay Area: 2014-2022,* ASS'N OF BAY AREA GOV'TS at 3, https://perma.cc/B2V6-9UCP.

238. We used the RHNA to identify areas with adequate infrastructure (or planned infrastructure) but are mindful of the potentially disparate racial impact of housing allocation. *See* Press Release, Haas Institute for a Fair and Inclusive Society, New Research Shows Racial Disparities in Bay Area Housing Allocation Methodology (Aug. 23, 2017), https://perma.cc/VRL8-BWED.

affordability issues, and all cities have complex land use approvals processes that typify the type of "stringent" regulation called out by existing research. Our first five cities were San Francisco, San Jose, Oakland, Redwood City, and Palo Alto.[239]

## B. Analyzing the law: creating planning and development ordinance summaries

We first researched local ordinances and planning code provisions most relevant to residential/mixed use development approvals, starting with the most macro planning tools (the General Plan) and then drilling down to the micro level (use and development controls). We created a summary of planning and development controls in each jurisdiction, including permitted and restricted uses, height limitations within specific neighborhoods, maximum commercial and residential density and lot coverage, minimum parking requirements, exactions, and other dedication requirements. We also identified and cataloged all characteristics of local processes that would appear to increase affordable housing supply within the city, or preserve existing affordable housing, including inclusionary housing ordinances, local referenda to generate affordable housing supply, rent stabilization ordinances, anti-demolition ordinances, and neighborhood planning that taps into state-level streamlining initiatives. This step also identified the extent of a jurisdiction's "as of right" development—meaning development that does not require a discretionary permit from a local approval body. For the vast majority of developments that require a discretionary approval, these code summaries also helped identify general approaches to density and other building form controls that drive the discretionary approval process, the internal process for obtaining a building entitlement, and the extent to which cities use long term planning to expedite environmental review. These summaries informed development data collection, later analysis, and interview questions.

## C. Analyzing the projects: building the entitlement database

After completing the planning code summary for a city, we built a database for each selected jurisdiction that allows us to analyze land use and environmental review requirements for residential developments along with important characteristics, such as time to entitlements completion and size. This process required an emergent design, and went through three iterations to address variation in data access across cities and newly available data.

### 1. Defining five or more residential units

We chose the five-unit threshold in order to capture projects that most impact California's housing and climate goals. The five-unit threshold does not

239. We limit our findings in this article to these five cities, but are currently completing research within Los Angeles, Long Beach, Pasadena, and Santa Monica.

capture scattered site single-family homes, duplexes, or accessory dwelling units that are not developed as part of a larger development project. These scattered developments move through entitlement differently; they do not consistently present the type of dense infill development that can be the subject of the policy or political debate, and likely warrant their own research study.[240]

We have gathered data on single-family subdivisions or duplexes where they are part of a larger development that produces more than 5 units of housing because on net they are adding substantially more housing and density than what was there before (typically vacant or commercial land in our project years). This in turn, potentially advances housing supply and climate goals. For example, Oakland's mini lot ordinance allows a developer to subdivide a single lot to create "mini" lots that would not otherwise satisfy minimum lot requirements.[241] Developers in our data years used this process frequently to subdivide a lot that would normally only permit one or two single-family homes to create five or more single-family homes. This is an important process that significantly densifies neighborhoods.

We included all projects that contained an addition of five units to the housing stock. We did not net out demolished units from the new addition of units. Frequently, the exact number of units being demolished was not available, so for consistency, we chose to capture that the project would include demolition but disregard demolished units for the purposes of total unit count. For example, a proposal to demolish a duplex and replace it with a ten-unit building would be counted as ten units, not eight units, although we would also capture that the prior use was residential and involved demolition. If the proposal was to add five or more units to an existing residential development, we would not count the existing units in the total unit count. This would apply where there was a proposal to the convert commercial space to residential units in an existing mixed-use building, or build new units on a vacant portion of a residential site. These types of developments occurred infrequently in our database years.

We defined residential units broadly, encompassing live-work spaces, single room occupancy hotels, deed-restricted affordable housing, and student housing. We did not include facilities for the elderly dedicated to providing medical care or hospice care. We also did not include residential facilities constructed by hospitals to house patients' families.

240. The entitlement processes for individual single-family homes and duplexes are quite different than for larger projects. Individual homes and accessory dwelling units go through more streamlined processes than larger developments, frequently because they don't require the land divisions that a larger single-family subdivision would require. *See infra* Figure 4; *see also* S.B. 1069, 2015-2016 Leg., Reg. Sess. (Cal. 2016); A.B. 2299, 2015-2016 Leg., Reg. Sess. (Cal. 2016) (streamlining approval processes for accessory dwelling units).

241. OAKLAND MUNI. CODE § 17.142.010.

### 2. Defining project years: 2014, 2015, and 2016

We included projects that received all the entitlements necessary to file for a building permit in 2014, 2015, and 2016. Entitlement includes any discretionary planning approval, including subdivision approvals.

We chose our project years in order to minimize impact from the Great Recession years, but many jurisdictions extended pre-Great Recession entitlements during our study years. We did not count entitlements that were extensions of prior approved projects in our database. Post-entitlement developer-initiated modifications present a related issue. Sometimes a developer will receive an entitlement and then seek to modify it months or years later. We do not include the modification in our time frame calculations because it may not be reflective of planning process or law, but instead external factors related to the developer. Some data related to the Great Recession impacts could not be excluded. San Jose frequently uses the PUD Process, which begins with a rezoning later follow by a Planned Development Permit. In some instances, the delay between the rezoning and the permit was many years. This might be related to the Great Recession, but without more data it was impossible to solely attribute the delay to economic circumstances.

For appealed projects, we used the date of the original approval and not the date the project was upheld on appeal. Some jurisdictions have large appeals dockets and appeals are not always heard within a certain statutory timeframe. We wanted to ensure we were measuring the planning process, not how long it takes to schedule and hear an appeal. That being said, we are analyzing timeframes for appeals resolutions that will be forthcoming in future publications.

For jurisdictions that bifurcate more than one project approval—San Jose for example—we use the earliest application date and the latest approval date to bookend the entire process. San Francisco also differs from the other Bay Area jurisdictions in two important respects. The San Francisco Planning Code gives the Planning Commission the power to hear an appeal of a building permit application.[242] This process is known as Discretionary Review, and it was initiated for ten projects during our timeframe. Unlike the appeals process, Discretionary Review is internal to the approvals process in that it remains within the purview of the Planning Commission, as opposed to the Board of Supervisors or the Board of Appeals. The Planning Commission did not resolve Discretionary Review for six of these projects during our timeframe, which means none of them could have filed for a building permit in our project years. Thus, we could not include these projects in our final database. These projects are also small, 38 units on average, and highly unlikely to affect our overall data. Subdivision presents an additional issue. Unlike other jurisdictions that typically approve the Tentative Map (for both horizontal subdivision and condominium/airspace subdivision) concurrently with the underlying land use approvals, in San Francisco, we frequently observed Tentative Map approvals for condominiums that occurred months to years after the approval of the underlying entitlements. Unlike other jurisdictions where the Planning

242. S.F. MUNI. CODE §§ 311(d); 312(e).

Department usually manages subdivision review, in San Francisco the Department of Public Works primarily manages the Tentative Map approval process.[243] While Tentative Maps are an important part of the residential development process, we did not want to inflate planning approval timeframes due to factors outside the Planning Department's control. Thus for San Francisco, we only included subdivision approvals necessary to pull a building permit (for example, lot merger or horizontal subdivision) and not condominium maps that can be approved after obtaining a building permit. While projects that obtained condominium maps figure in our total approval counts, they do not factor into our overall approval timeframes.

San Francisco's response to the dissolution of the Redevelopment Agencies in 2011 also creates a distinct entitlement path that differs from the other selected jurisdictions.[244] San Francisco designated a successor agency—the Office of Community Investment and Infrastructure ("OCII")—after the dissolution of the Redevelopment Agencies in 2011 to fulfill the former Redevelopment Agency's outstanding obligations.[245] These obligations include development in redevelopment areas like Mission Bay, Transbay, and Bayview Hunters Point.[246] This entity is legally distinct from the City of San Francisco.[247] OCII approves the entitlement of new developments within these plan areas pursuant to protocols

243. *See* S.F. Department of Public Works, Subdivision Regulations § IV(D)(2015) (describing that once Planning issues the CEQA determination, "the Director of Public Works shall approve, conditionally approve, or deny the application within 50 days . . . ").

244. The Community Redevelopment Act gave local governments the authority to declare areas as blighted and in need of urban renewal, which enabled the city or county to distribute most of the growth in property tax revenue for the project area to the relevant Redevelopment Agencies as tax-increment revenues. *See* CAL. HEALTH & SAFETY CODE §§ 33020 et seq. In 2011, the California legislature dissolved the Redevelopment Agencies. *See* A.B. X126, 2011-2012 (Cal. 2011). Dissolution has severely constricted local governments' ability to finance affordable housing. *See* Casey Blount et al., *Redevelopment Agencies in California: History, Benefits, Excesses, and Closure* 7 (Working Paper No. EMAD-2014-01, 2014). https://www.huduser.gov/portal/publications/Redevelopment_WhitePaper.pdf (estimating a statewide average annual loss of 4,500 to 6,500 new affordable units).

245. San Francisco, Cal., Ordinance 11-12 (Jan. 26, 2012) (resolution transferring Redevelopment assets to successor agency); San Francisco, Cal., Ordinance 215-12 (September 25, 2012) (resolution designating Office of Community Investment and Infrastructure as successor agency).

246. *See* Office of Community Investment and Infrastructure, *Affordable Housing Production Report Fiscal Year 2016-2017* 2, https://sfocii.org/sites/default/files/2017%20ANNUAL%20REPORT%20-%20FY%2016%20-17%20FINAL.pdf. Outstanding obligations include the major approved developments in Hunters Point Shipyard/Candlestick Point, Mission Bay North and South and Transbay; disposition of former Redevelopment assets; and ensuring the development of affordable housing in the major approved developments.

247. *See* San Francisco, Cal., Ordinance 215-12 §3 (September 25, 2012).

outlined in each plan area document.[248] OCII also utilizes remaining tax increment funds within the plan areas to fund affordable housing development.[249]

The OCII approval process differs from projects approved through the Planning Department. The process varies depending on the Redevelopment Area, but generally OCII in partnership with a horizontal developer—which can be a public or private entity—selects the vertical developer for each parcel within the plan area.[250] Once the developer is selected, the developer submits a Basic Concept Plan that is responsive to the highly prescriptive design standards set forth in the area plan.[251] After approval of Basic Concept Plan, the developer submits for Schematic Review, which the agency must approve within 45 days of its submission.[252] In approving the schematic design, OCII makes CEQA determinations based on the master EIR for each Redevelopment Area.[253]

OCII is approving a substantial number of units,[254] including the majority of San Francisco's affordable housing units.[255] Our calculations in this paper do not include this process for several reasons. First, within our selected jurisdictions, no other successor agency is approving residential development entirely outside the jurisdiction's Planning Department. Omitting this pipeline of units enables us to provide a comparison of planning and entitlement processes by type and number of approvals; the OCII process would be a standalone process within our analysis. Second, this process is slowly being discontinued. By law, successor agencies cannot continue beyond the current redevelopment plan areas; redevelopment dissolution law requires obligations to sunset once the outstanding obligations are fulfilled.[256] Finally, these projects are not tracked within the Planning Department, and OCII has more limited data tracking than the Planning Department, so the type of data required to attempt analysis (in terms of number of total units entitled, number of approvals and timelines) is unavailable.[257] OCII's unique approval process will, however, be discussed in future publications as we continue to gather the required data, as it may be an example of expeditious approvals of affordable housing development that should be contemplated (even as redevelopment is being discontinued).

Phased projects present an additional complexity for measuring project time frames. Most notably Oakland entitles many projects under a single master EIR and Development Agreement that is phased over many years; in some cases phased projects crossed decades. Prior to filing for a building permit for each phase, the developer must obtain final design review from the City. For these projects, we did not measure the entire process from the date of the application for the master EIR and Development Agreement because the project was intentionally designed to be phased. In other words, the delay is not a product of law or planning process but rather market economics. This is consistent with the way we measure

254. *See* San Francisco Office of Community Investment and Infrastructure, Transbay Neighborhood (Transbay Project Area), https://sfocii.org/sites/default/files/TB%20Project%20Area%20Summary%20Sheet%20010418.pdf (stating that the Transbay redevelopment plan will lead to 4,150 new housing units, 35% of which will be affordable); San Francisco Office of Community Investment and Infrastructure, Bayview Hunters Point Redevelopment Projects and Rezoning FEIR Summary S-3, https://sfocii.org/sites/default/files/ftp/uploadedfiles/Projects/BVHPFEIRSum.pdf (estimating 3,700 net new units in the Bayview plan area); *See* San Francisco Office of Community Investment and Infrastructure, Mission Bay, https://sfocii.org/mission-bay (stating Mission Bay redevelopment area will produce 6,404 new housing units, 1,806 of which are affordable).

255. *See* Office of Community Investment and Infrastructure, *Affordable Housing Production Report Fiscal Year 2016-2017* 4 (noting that 552 funded affordable housing units and 51 inclusionary units were completed in fiscal year 2016-2017).

256. *See* Cal. Health & Safety Code § 34179.7 (specifying final conditions for completion of enforceable obligations and Redevelopment dissolution).

257. The data is unavailable primarily because the current data tracking system in San Francisco tracks planning entitlements not approvals from OCII. Although overall production counts are available for these redevelopment plan areas, additional work is needed to identify timelines and to disaggregate approvals on annual basis. We note that San Francisco has worked to make all relevant data points available to facilitate future comparative analysis of housing production..

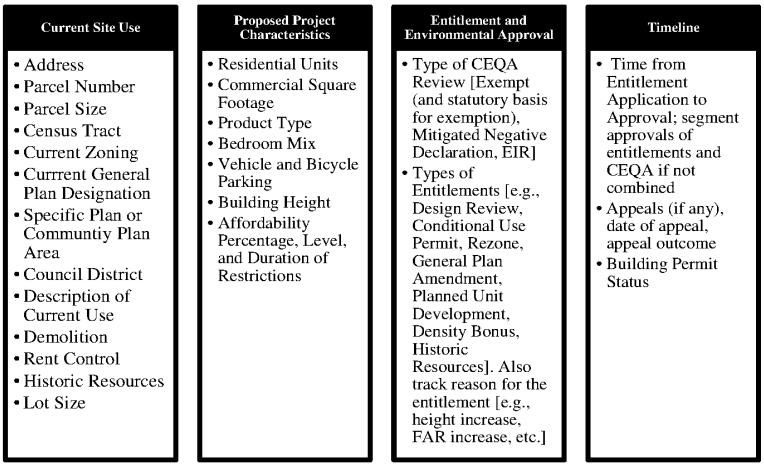
time frames for projects entitled under a Specific Plan—the developer's entitlement application kicks off the entitlement process, not the adoption of the Specific Plan.

Finally, some developers will obtain a project approval and later withdraw it, with the intent of filing for a new application. Despite the fact that this approval was later withdrawn, we still count the entitlement in our database because it successfully completed the planning process, regardless of whether it will ever be built.

### 3. Extracting the project data

To collect this data, we reviewed a jurisdiction's website to see what information could be readily obtained by reviewing public notices for all environmental review documents, lists of approved developments, parcel information maps, among other relevant information. We also searched property addresses within a jurisdiction's database to gather parcel-level information, such as lot size, census tract, and assessor data. To obtain information on property tax assessment and land transaction records, we searched by street address in Lexis/Nexis Public Records. We tracked any obvious holes in the data to confirm with planning department staff, and in some cases, we requested additional data through public records requests.

To analyze how each residential development of five or more units navigated the entitlement process, we gathered approximately twenty-five characteristics per development, relating to current site usage, proposed project characteristics, types of entitlements and environmental review, and approval timeline, including appeals. Where projects received more than one entitlement, we noted all entitlements, which is why the total land use approvals per jurisdiction are far greater than the number of projects. Similarly, many jurisdictions processed projects under more than one CEQA pathway—combining multiple project-based exemptions or a project-based exemption with review that tiered off a prior document. Depending on the accessibility of public data, these characteristics are drawn from project approval documents, zoning geographic information systems ("GIS"), tax assessor records, and city council and planning commission meeting minutes. This data revealed how local governments apply their planning code and other relevant ordinances at a micro level.



We entered this project specific data into an excel spreadsheet, retaining assigned project identifiers, all original descriptors, dates, and all unit counts. We then assigned a numeric code to specific project characteristics, use of local land use processes, and types of environmental review documents/exemptions to enable analysis of timeframes and frequency of certain approval types. To determine timeframes, we counted days from the application file date through the approval of the last discretionary entitlement, and then converted them into months by dividing by 30.5.

To provide a comprehensive assessment of all litigation against the entitled development projects of five or more units, we searched state and county records to identify all writs filed against each of our selected cities in the timeframe

of 2014 through 2017. We then pulled the records associated with litigated projects of five or more residential units entitled during our study period.

To spatially analyze this data, we mapped all city boundaries using data available from the city (San Francisco, Oakland) or Stanford's Digital Repository (San Jose, Redwood City, Palo Alto). Mapping of San Francisco plan areas uses GIS data from the San Francisco Planning Department. Area plan polygons for Redwood City, Oakland, and San Jose use georeferencing planning documentation maps to street centerline data for each municipality. BatchGeo provided geocoding for project addresses.

**Figure 2: Project Characteristics**

We then conducted initial analysis of our residential development database to identify possible entitlement patterns and inform the scope of interviews. We identified the land use characteristics that appeared to be associated most frequently with protracted development approval timelines, as well as the development characteristics that appeared to be associated with contentious approvals processes. This analysis yielded potential patterns of either accelerated timelines, protracted timelines, or contentious approval processes for residential development within certain areas.

We supplemented gaps in available online data with requests to planning staff officials. After the publication of our first working paper in February 2018,[258] San Francisco Planning Department provided us with more data, which enabled us to add ten developments that were not previously in our database. While

258. Moira O'Neill, Giulia Gualco-Nelson & Eric Biber, *Getting it Right: Examining the Local Land Use Entitlement Process in California to Inform Policy and Process* (Working Paper Feb. 2018), https://perma.cc/P68H-XY5E.

researching appeals, we discovered another large discrepancy with Oakland, which led us to add twenty-three new developments to our database that were not available to us when performing our initial search. Still, for reasons described in Part III, Oakland data access is limited. Of the ninety total developments in Oakland, we were only able to obtain final approval documents for forty-nine of these developments. San Jose also dropped two projects since the time of our prior paper due to duplicate projects that had separate entitlements filed under different addresses. While these new projects influenced the entitlement rates in these jurisdictions, they did not significantly alter our findings.

### D. Diving deeper into local context: in-depth interviews with key informants

To explore how law is applied in ways that project-level data could not, alone, reveal, we conducted in-depth interviews with key informants from each jurisdiction we chose to study. Building on our professional expertise in the field of land use, we used purposive sampling[259] to generate a list of potential participants across four stakeholder groups across all five cities: (1) public agency staff (including local planning staff, housing and community development staff, and city attorneys), (2) developers (market-rate and non-profit affordable), (3) community-based organizations and advocates, and (4) consultants (design, legal, and entitlement).[260] We identified seventy potential interview participants through examination of websites, professional reports, and project-level data. We successfully recruited twenty-nine participants for in depth interviews, with at least one participant within each stakeholder group and within each city. Some participants sat for more than one interview and had more than one role, which is why the totals do not add up to twenty-nine.

259. Although not engaging with a survey tool, we wanted to make sure that the participants were in some way representative of both stakeholders that directly interact with entitlement processes and stakeholders engaged with local-level policy reform that directly influences entitlement processes within these five cities. We therefore considered various forms of "sampling" used in survey methods when constructing our research design. *See Purposive Sampling,* in ENCYCLOPEDIA OF SURVEY RESEARCH METHODS (Paul J. Lavrakas ed., 2008), http://methods.sagepub.com/reference/encyclopedia-of-survey-research-methods/n419.xml.

260. In some cases, a single participant could represent more than one stakeholder group. In some instances, individuals we interviewed worked in, or for, two or more of the cities within our group of five.

**Figure 3: Research Interviews by Category**

| | Public Agency Staff | Developers | Community-Based Organizations /Advocates | Consultants | Total |
|---|---|---|---|---|---|
| San Francisco | 3 | 4 | 2 | 3 | 12 |
| San Jose | 3 | 2 | 3 | 4 | 12 |
| Oakland | 3 | 3 | 2 | 1 | 9 |
| Redwood City | 3 | 3 | 3 | 2 | 11 |
| Palo Alto | 3 | 3 | 3 | 4 | 13 |
| Total | 15 | 15 | 13 | 14 | 57 |

We conducted semi-structured interviews[261] with open-ended questions to collect perceptions of: the jurisdiction's approvals process, land use taxonomies that contribute most to delays and cost, the role of community in the public approvals process, social-economic-political factors that shape development patterns including important context (such as the local political climate and community tensions at play), and technical details not immediately obvious in the development data. We concluded interviews by sharing preliminary findings from our datasets with participants to gather feedback.

We transcribed our interviews verbatim and used open coding[262] to identify themes that emerged from the interviews. We then analyzed the interviews to identify perceptions about both local and state-level obstacles to advancing equitable infill development and whether proposed (and relevant) statewide legislative action might succeed in reducing time lags caused by local regulatory processes and the potential trade-offs (if any) of reducing those time lags. We then triangulated the data from our planning and development code summaries and development database (including identified patterns within the project-level data) with the themes emerging from interviews to test potential explanations of patterns and themes that we extracted from the interviews.

262. *See* BERG & LUNE, *supra* note 229, at 364–72.

## Part III:Findings

While our research continues, and we will be adding jurisdictions to our data set, we can provide an overview of completed research within our first Bay Area jurisdictions.

### A. All residential development of five or more units is discretionary in these cities, and each city imposes discretionary review at multiple points in the entitlement process

All five jurisdictions we examined require discretionary review for residential developments of five or more units. These discretionary review processes apply even if these developments comply with the underlying zoning code.[263] Four of these cities use aesthetic controls as a primary discretionary review mechanism. Oakland uses Design Review,[264] whereas Redwood City and Palo Alto employ Architectural Review.[265] San Jose chooses to use a Site Development Permit.[266] Among these five cities, San Francisco is unique in that it does not impose design or site development review on all projects. But San Francisco, through its city charter, imposes discretionary review on *all* proposed projects.[267] Absent its city charter that renders building permits discretionary, San Francisco would have permitted as of right nine projects — each ranging from eight to sixty-seven units. As Figure 4 shows, no other planning code in our case studies would permit this level of development without a discretionary approval. This is an example of how a charter city can impose discretionary review through a mechanism outside of the formalized planning and zoning process.

263. For a discussion of discretionary review, *see* Part I *supra* note 34.

264. OAKLAND MUNI. CODE §§ 17.136.040(3)–(4), 17.136.025(B)(1)(d).

265. REDWOOD CITY MUNI. CODE § 45.2(A); PALO ALTO MUNI. CODE § 18.76.020(b)(2)(B).

266. SAN JOSE MUNI. CODE § 20.100.010.

267. A city charter is the constitution for that local government. The provision of San Francisco's charter rendering all permits discretionary can be found in S.F. BUS. AND TAX REGULATIONS CODE § 26(a).

**Figure 4: Discretionary Review of Developments Consistent with Zoning**

| Jurisdiction | Primary Discretionary Review Mechanism | Residential Developments Exempt from Discretionary Review |
|---|---|---|
| San Francisco | Building Permits | None |
| San Jose | Site Development Permit | Single-family homes in limited circumstances.[268] |
| Redwood City | Architectural Permit | One-story single-family homes and duplexes |
| Palo Alto | Design Review | Up to two single-family homes and two duplexes.[269] |
| Oakland | Design Review | Secondary units |

It is also notable that within these five cities, the total numbers of land use/planning approvals are greater than the number of overall development projects in each jurisdiction. A single project might need to obtain Design Review approval and a Minor Variance from the Director of the Planning Department and a rezoning from the City Council.[270] Figure 5 illustrates. This requires a project to navigate multiple levels of local government review, which means that there is more than one step in the approval process that would pull the project within the scope of local discretion and trigger environmental review. It should also be noted that if development requires the subdivision of land into smaller parcels, additional discretionary review by local governments generally applies as well, which is accounted for in these numbers.[271] As Figure 5 also shows, the number of discretionary reviews per project does not differ dramatically across our jurisdictions, with Redwood City requiring, on average, the highest number of discretionary approvals.[272]

268. To be exempt from site development permits, single-family homes must meet height, FAR, and lot size requirements and cannot be located in riparian areas. SAN JOSE MUNI. CODE § 20.100.1030(A)–(C).

269. To qualify for design review exemption, the proposed development cannot be located in a conservation zone. PALO ALTO MUNI. CODE § 18.76.020(b)(2)(D).

270. *See* S.F. MUNI. CODE § 305 (limiting review of variances to the Zoning Administrator and Board of Appeals). In practice, many jurisdictions do permit concurrent review of entitlement applications. *See e.g.*, SAN JOSE MUNI. CODE § 20.100.140 (permitting concurrent review of multiple entitlement applications); OAKLAND MUNI. CODE § 17. 136.040(D) (permitting the Director to refer design review applications to the Planning Commission when coupled with certain types of variances).

271. For more information on subdivision, *see supra* notes 38–39.

272. To determine the number of discretionary approvals required per jurisdiction, we calculate total approvals and divide by the number of projects and then add one extra approval for CEQA.

**Figure 5: Types of Discretionary Review per Jurisdiction**

| Entitlement Types | San Jose | San Francisco | Oakland | Palo Alto | Redwood City |
|---|---|---|---|---|---|
| Site Development Permit/Design Review | 13 | 0 | 89 | 5 | 9 |
| Planned Development Permit | 50 | 5 | 9 | 0 | 4 |
| Conditional Use Permit ("CUP") | 0 | 33 | 55 | 0 | 1 |
| Tentative Map Permit | 36 | 59 | 33 | 4 | 8 |
| Rezoning | 46 | 4 | 1 | 0 | 0 |
| Historic Preservation Permit/Certificate of Appropriateness | 3 | 2 | 0 | 1 | 4 |
| GP Amendment | 5 | 1 | 0 | 0 | 0 |
| State or Local Density Bonus | 1 | 3 | 2 | 0 | 1 |
| Specific Plan Permit | 0 | 50 | 0 | 0 | 4 |
| Specific Plan Exception | 0 | 32 | 0 | 0 | 0 |
| Variance | 0 | 34 | 39 | 3 | 1 |
| Development Agreement | 0 | 0 | 0 | 0 | 4 |
| Other Approval | 4 | 6 | 1 | 0 | 0 |
| Total | 158 | 229 | 229 | 13 | 36 |
| **Average Approvals per project** | **2.43** | **2.41** | **2.54** | **2.60** | **2.77** |
| **Average Approvals with CEQA** | **3.43** | **3.41** | **3.54** | **3.60** | **3.77** |

## B. Four of these cities are all employing state-level statutory provisions to facilitate and expedite environmental review for developers

State law allows cities to take a diverse range of approaches to comply with CEQA requirements.[273] EIRs—the most onerous form of CEQA review—

273. For a discussion of the various environmental review options, *see supra* Part I.A.2.

occurred infrequently across all jurisdictions.[274] Relatively few projects within these five cities require a full EIR process primarily because jurisdictions are taking advantage of project- or tiering-based exemptions.[275] The figure below demonstrates that exemptions are the most common type of CEQA review for projects in most jurisdictions, with EIRs and MNDs in second and third place, respectively.[276] The most common forms of project-based exemptions included the Class 32 (infill), Class 3 (small structures), and Class 1 (existing facilities) exemptions discussed in Part I supra.

**Figure 6: Percentage of Projects by CEQA Review Type**

| | San Jose | San Francisco | Oakland | Redwood City | Palo Alto |
|---|---|---|---|---|---|
| **Exempt (Tiering)** | 46% | 69% | 106% | 69% | 0% |
| **Exempt (Project Based)** | 3% | 11% | 83% | 15% | 40% |
| **ND** | 2% | 2% | 0% | 0% | 0% |
| **MND** | 46% | 9% | 0% | 8% | 20% |
| **EIR** | 22% | 8% | 3% | 8% | 40% |

Even when adjusting by number of units, relatively few units go through EIRs with the exception of Palo Alto; however, more units are going through EIRs than MNDs. Additionally, more units go through tiering than project-based exemptions, with the exception of Oakland.

274. These are similar findings with LANDIS ET AL., *supra* note 168, at 99, 105.

275. For a discussion of tiering, *see supra* Part I.A.2.

276. As discussed below, a single project can undergo more than one type of CEQA review. Figures 6 and 7 do not back out these projects that receive multiple exemptions, which is why the percentages exceed 100 percent of the total number of projects and units. Oakland in particular will apply multiple tiering and project-based exemptions to a single project.

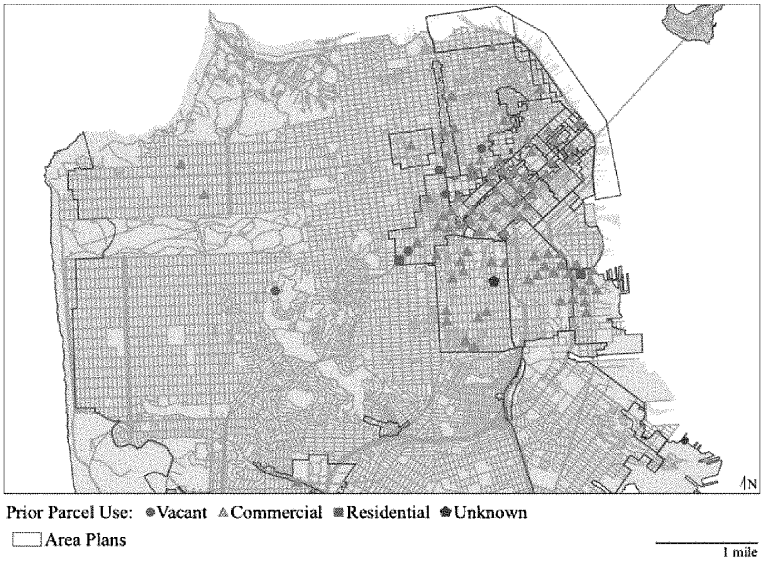

**Figure 7: Percentage of Units by CEQA Review Type**

| | San Jose | San Francisco | Oakland | Redwood City | Palo Alto |
|---|---|---|---|---|---|
| **Exempt (Tiering)** | 54% | 64% | 89% | 89% | 0% |
| **Exempt (Project Based)** | 0% | 3% | 52% | 9% | 7% |
| **ND** | 0% | 3% | 0% | 0% | 0% |
| **MND** | 14% | 11% | 0% | 1% | 3% |
| **EIR** | 49% | 24% | 9% | 1% | 90% |

Four of these jurisdictions appear to be making good faith efforts to engage in strategies that link housing and jobs to transportation and facilitate environmental review for developers. This means that each of these four cities is tapping into state-level statutory provisions designed to promote sustainable development by doing the bulk of the work to comply with CEQA, rather than imposing additional time and costs on developers. For example, the vast majority of relevant projects entitled within San Francisco and Oakland are also within specific plan areas that rely on these state-level statutory provisions to facilitate environmental review.[277]

277. For similar findings in the prior literature, *see* LANDIS ET AL., *supra* note 168, at 107–08.

**Figure 8: San Francisco Project Locations and Prior Uses**[278]

278. This map does not include residential development that OCII would be responsible for; however, this development is occurring in the eastern part of San Francisco, which does not alter our analysis that permissive density is not spread across the City evenly.

**Figure 9: San Jose Project Locations and Prior Uses**

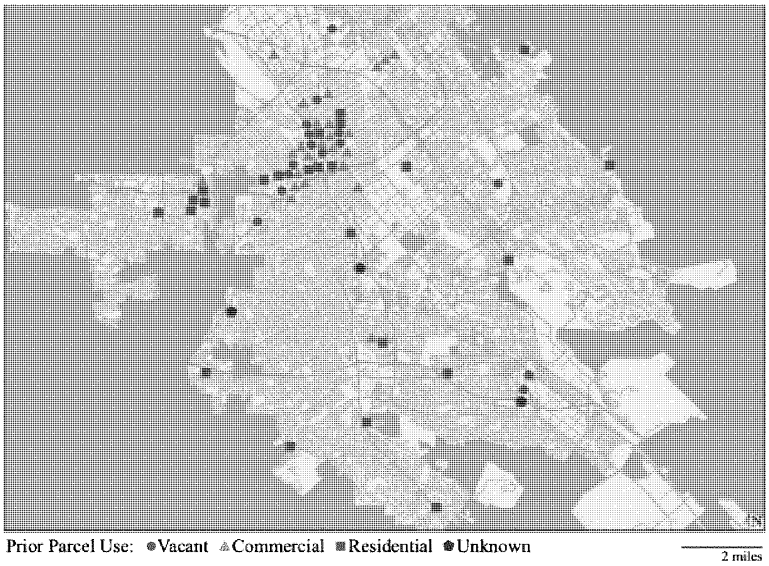

**Figure 10: Oakland Project Locations and Prior Uses**

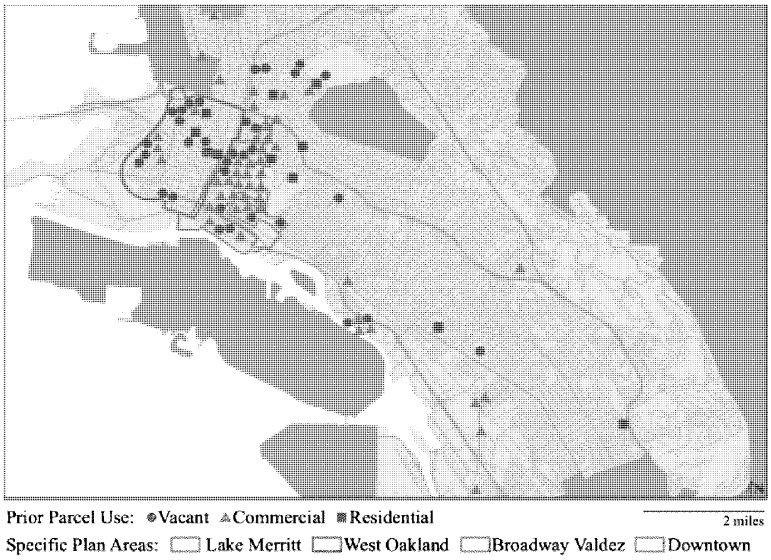

**Figure 11: Redwood City Project Locations and Prior Uses**

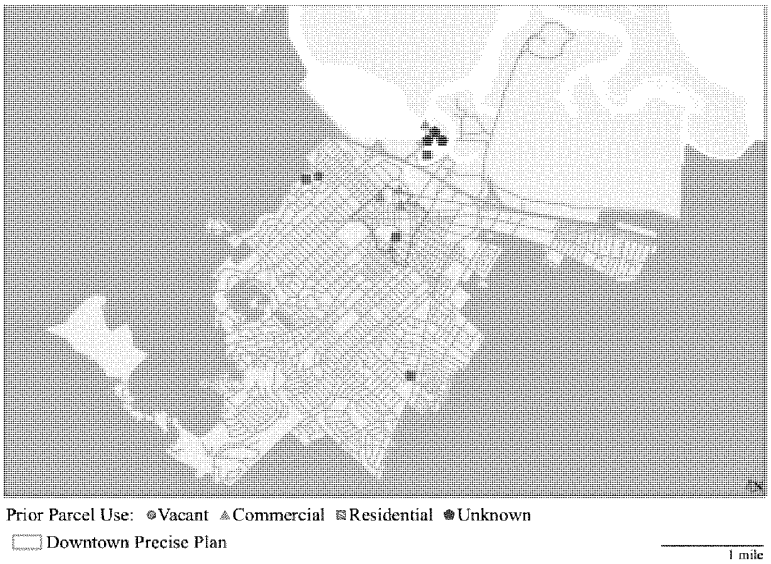

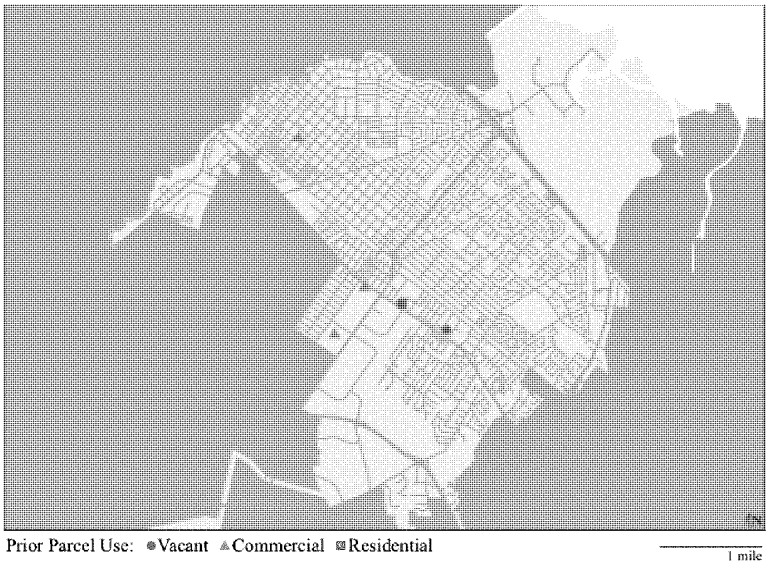

**Figure 12: Palo Alto Project Locations and Prior Uses**

## C. Use of CEQA exemptions varies across cities

Like the discretionary review mechanisms discussed above, many projects in Oakland are receiving multiple CEQA exemptions, which leaves open the question of why planners take these additional measures. Interview data suggests planners are doubling up on CEQA exemptions to forestall against perceived political challenges to the project. If a project qualifies for more than one CEQA exemption, planners will evaluate the project under each possible exemption. Other jurisdictions, however, rarely make use of exemptions outside of tiering situations. For example, given that most development in these jurisdictions is infill, the fact that so much development receives the Class 32 exemption in Oakland, but not San Francisco or San Jose, is peculiar. Interview data also indicates that within Palo Alto, Redwood City, and San Jose there may be some confusion within planning departments and amongst developers about which types of CEQA documents are the most legally vulnerable on appeal. Perception of legal defensibility may in turn inform decisions on which type of CEQA review to undertake.

Analyzing project size as a function of CEQA, data shows that projects with EIRs in these five cities generally tend to be larger than projects that undergo other types of CEQA review. All jurisdictions with the exception of Redwood City prepared an EIR for their single largest project. Nonetheless, the projects going through the exemption process are not small, averaging over fifty units for four of our five jurisdictions.[279]

Yet significant inter-jurisdictional variations still persist.[280] Projects that received a project-based exemption in Oakland are on average, twice the size as projects that received a project-based exemption in San Francisco. In Redwood City, projects that use tiering are larger than projects that use tiering in both San Francisco and Oakland. Figure 7 shows that even with a larger mean size for EIRs, EIRs are a small fraction of the total capacity being entitled in most jurisdictions.

279. *Cf.* Hernandez, Friedman & DeHerrera, *supra* note 219, at 31 ("the overwhelming majority of CEQA compliance documents, however, involve the use of restricted regulatory exemptions for extremely minor projects, such as repairing single-family homes, acquiring park lands, making minor modifications to existing uses such as modifying signage or repairing piping or other infrastructure, etc.").

280. The variability in environmental review processes is consistent with Gyourko, Saiz & Summers, *supra* note 113, at 694, who found significant variability in local land use regulation.

**Figure 13: Mean Project Size By CEQA Type**

| | San Jose | San Francisco | Oakland | Redwood City | Palo Alto |
|---|---|---|---|---|---|
| All Types of Exemption | 193 | 84 | 93 | 98 | 10 |
| Tiering Exemptions | 205 | 94 | 96 | 109 | 0 |
| Project Based Exemptions | 8 | 24 | 67 | 51 | 10 |
| ND | 10 | 125 | 0 | 0 | 0 |
| MND | 69 | 117 | 0 | 12 | 8 |
| EIR | 403 | 291 | 282 | 8 | 125 |

### D. There is substantial variation in entitlement timelines across these five cities that does not appear to correspond with stringency in either environmental regulation or local entitlement processes, or project size

Timeframes for entitlements vary significantly across jurisdictions for similar projects and across different project sizes within the same jurisdiction. Focusing first on environmental review processes, the difference in timeframes does not appear immediately attributable to environmental review legal requirements. Instead, it appears these cities apply the same environmental review provisions to similar projects in different ways—with significant variations in the total timelines for entitlement. For example, both the City of Oakland and the City of San Francisco use the section 15183 Community Plan Exemptions ("CPE") to reduce CEQA compliance obligations for proposed projects within plan areas[281] that have a relatively recent full EIR that the respective city completed. However, Oakland's CPE process moves much faster than San Francisco's. The median CPE entitlement in Oakland is seven months. In San Francisco, a CPE takes over twenty-four months. In contrast, a full EIR in San Jose, for which there is no prior study, takes nearly thirty months, just six months longer than a CPE in San Francisco.[282]

281. Plan Area terminology varies according to jurisdictions and the size of the plan area. Redwood City refers to these plans as "Precise Plans," San Jose and Oakland both use the terms "Area Plans" and "Specific Plans," and San Francisco calls them "Area Plans."

282. Some jurisdictions apply different types of CEQA review to a single project. A CPE in Oakland is often combined with a section 15332 exemption. EIRs in San Jose are often paired with later addendums or supplemental EIRs. A CPE in San Francisco can be paired with a Focused EIR. The numbers above do not control for these multiple types of CEQA review due to the small sample sizes that would result. Even controlling for multiple types of CEQA review, the general trends hold true. Projects that only received a CPE in Oakland took 7 months; projects in San Francisco that only received a CPE still take 23

Interview data attributes the delay in environmental review within cities to planning practice and the level of attention put into staff reports, rather than the complexities of particular project proposals. Jurisdictions vary in a developer's ability to manage and communicate with their CEQA consultants during the preparation of the environmental documents. Interview participants shared the perception that the inability to directly select or manage consultants can lead to lower quality environmental documents, as well as time delays.[283] These results also indicate the potential importance of political context in the approval process.[284]

Figures 14 and 15 together indicate that the number of approvals required (often used as one important metric for stringency) does not necessarily correspond to entitlement timelines.[285] All five cities impose discretionary review on all projects through multiple local regulations, and all require, on average, more than three approvals (including environmental review). But, the variability in timelines for similarly sized projects is great. Redwood City had shorter timeframes for entitlement, particularly compared to San Francisco and San Jose. Interview participants highlighted how variability in entitlement timelines tends to be related to local practice. Examples include staff-level variations in performing application intake, to higher-level decisions on the amount of commercial development that must occur before a developer-applicant can even propose residential development in certain neighborhoods.[286] These choices in practice may be a response to political and fiscal pressures that prompt cities to embed discretionary review into the entitlement process.

Project size also does not appear to explain delay in approval timelines. Large projects do not always take longer to entitle than small projects. In San Jose,

months; projects that only received an EIR in San Jose took 14 months (measuring by the median).

283. *See e.g.*, SAN FRANCISCO PLANNING DEP'T, *Environmental Review Process Summary* 5 (2011), https://perma.cc/8BLP-B4T4 ("While the project sponsor pays all costs for preparation of the necessary consultant-prepared documents, the Department scopes, monitors, reviews, and approves all work completed by consultants").

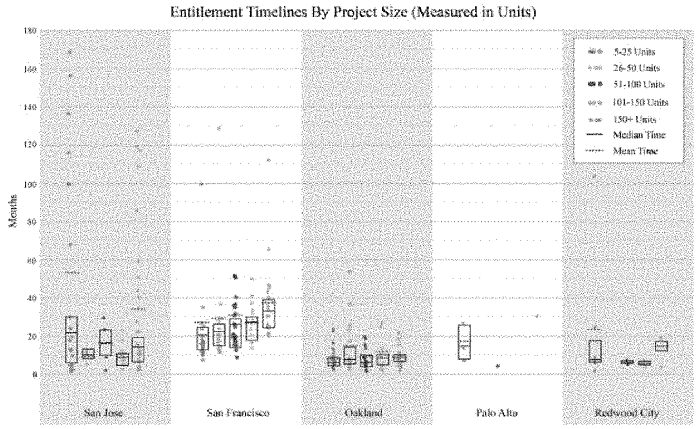
284. *See* John Quigley, Raphael & Rosenthal, *supra* note 14, at 281–282.

285. These results are consistent with Jackson, *supra* note 130, at 141, who found that regulatory stringency did not affect supply elasticity, and are in tension with Gyourko, Saiz & Summers, *supra* note 113, at 695, who found that regulatory stringency did correlate with timeframes. *See also, supra* Figure 5.

286. San Jose's Urban Villages, for example, are transit-oriented, mixed-use neighborhoods that aim to balance job and housing growth. San Jose, *Envision San Jose 2040 General Plan*, Chapter 1 at 18 (2018). To achieve this, Urban Villages utilize "Growth Horizons" that stipulate certain commercial and office targets before residential development can be unlocked (with the exception of 100% affordable housing developments). *Id.* at Chapter 7 at 6, 19. While San Jose has long shouldered much of the region's housing burden without commensurate increases in job growth, these policies can impede residential growth in transit-accessible locations. *See* Memorandum from Harry Freitas and Kim Walesh to Honorable Mayor and City Council (Apr. 3, 2015), https://perma.cc/LM39-GC3T (noting that San Jose is the only major city in the US with more residents leaving San Jose during the day to go to work than non-residents commuting in for work).

projects between five to twenty-five units take nearly seven months longer to entitle than projects with more than 150 units. In Redwood City the difference is about five months, which is significant given Redwood City's entitlement timeframe is seven months across all projects. Figure 14 shows the mean and median entitlement timeframes across jurisdictions by project size.[287] The extreme intra-jurisdictional variation skews mean timeframes higher.

**Figure 14: Total Entitlement Time Frames by Project Size**



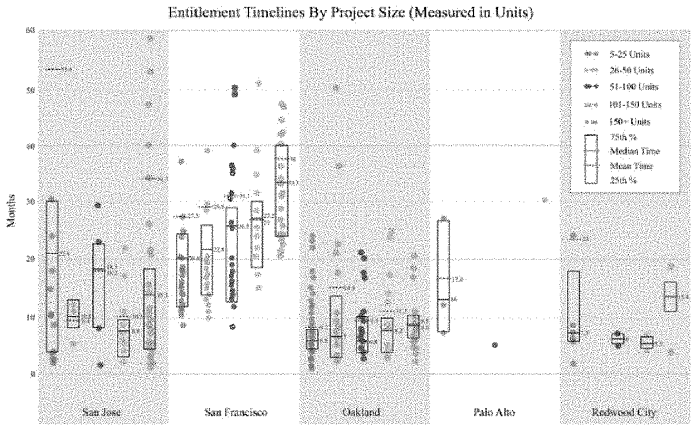


Figure 15 below narrows the approval timeframe to sixty months—in the process removing some outlier projects visible in Figure 14—but provides a better representation of means and medians across all jurisdictions.

287. When referencing timeframes in this Article we refer to the median unless otherwise noted.

**Figure 15: Entitlement Timelines Within 60 Months by Project Size**

Although we are pursuing additional research to better understand issues with project size, multiple explanations for the different outcomes emerged in interviews. One potential explanation is that smaller projects are occurring in areas that do not benefit from prior environmental review and thus cannot tier off a prior environmental document. Another potential theory is that the type of developer building in the twenty-five-unit range lacks the capital and sophistication to navigate the approval process as efficiently as developers undertaking larger projects. In interviews, small developers expressed feelings of being shut out from the Bay Area development boom because of a lack of access to key planning departmental staff or the inability to afford the right consultants with well-established relationships in the planning department.

## E. Substantial variation in housing project entitlement across these five cities exists despite regulatory stringency

Similarly, housing entitlement—both as a measure of land area and population—varies dramatically. As a measure of land area, San Francisco entitles the most housing despite it having the longest approval timeframe. [288] San Francisco is also the most geographically constrained jurisdiction in our dataset years; when measuring land area as a function of population, San Francisco has the densest existing development. This is not entirely consistent with research in Part I that linked more geographically constrained regions with supply constraints.[289]

288. As discussed in Part II, entitlement numbers for San Francisco do not include units approved through OCII—the successor to the former Redevelopment Agency—in Redevelopment Plan Areas. This data is still unavailable.

289. *See* Saiz, *supra* note 129, at 1254.

Redwood City has the second-fastest approval timeline, but entitles less housing per square mile than San Francisco, Oakland, and San Jose. Redwood City is also one of the least geographically constrained cities. Interview data suggests that market barriers, such as the differential cost of construction and sale or rental prices, do not entirely explain this discrepancy. In low-density communities, developers are also factoring in the political feasibility of proposing a denser product, even where that density is permissible under the base zoning. This suggests that in jurisdictions with overall low-density development patterns, a streamlined approval process may be insufficient to entitle substantial housing, if barriers like lack of appropriately zoned land and/or lack of political will are present. [290]

**Figure 16: Entitlement Production by Land Area and Population Intensity**

| | Land Area ($mi^2$)[291] | Total Entitled Units | Entitled Units per Square Mile | Population | Population Per Square Mile[292] |
|---|---|---|---|---|---|
| **San Francisco** | 47 | 9,768 | 208 | 870,887 | 18,581 |
| **San Jose** | 177 | 11,463 | 65 | 1,025,000 | 5,806 |
| **Oakland** | 56 | 8,958 | 161 | 420,005 | 7,528 |
| **Redwood City** | 19 | 1,100 | 57 | 84,950 | 4,374 |
| **Palo Alto** | 24 | 277 | 12 | 67,024 | 2,807 |

Adjusting on a per capita basis, Oakland and Redwood City—the two jurisdictions with the fastest timelines—are on top in terms of output, with Oakland in a distant lead.

290. This appears consistent with Kristoffer Jackson, *supra* note 130, at 141, who found that regulatory stringency did not affect supply elasticity, and is in tension with Gyourko, Saiz & Summers, *supra* note 113, at 695.

291. Land areas taken from the 2010 Census. *See*, *QuickFacts,* U.S. CENSUS BUREAU, https://perma.cc/L97A-BD8T (last visited Oct. 23, 2018).

292. Population taken from American Communities Survey 2012-2016 estimates. *See American Community Survey Data Profiles*, U.S. CENSUS BUREAU, https://www.census.gov/acs/www/data/data-tables-and-tools/data-profiles/2016/ [https://perma.cc/3T9K-8RPQ] (last visited Oct. 23, 2018).

**Figure 17: Units Entitled Per 1,000 People Over 3 Years**

| | Population | Entitled Units | Units per 1,000 people over 3 years |
|---|---|---|---|
| San Francisco | 870,887 | 9,768 | 11 |
| San Jose | 1,025,000 | 11,463 | 11 |
| Oakland | 420,005 | 8,958 | 21 |
| Redwood City | 84,950 | 1,100 | 13 |
| Palo Alto | 67,024 | 277 | 4 |

Potential explanations for Oakland's lead may be both local context[293] and local government initiatives to accelerate dense infill development.[294] The community's response to concerns of gentrification, increasing housing costs, and displacement have included community based organizations advocating and collaborating with the regional transit agency to support dense TOD with major affordability components.[295] These combined factors involved major phased developments, some beginning in the 1990s, with phases in the 2014, 2015, 2016 data years contributing to the number of units entitled during our study years. Interview participants also shared perceptions of differing political and community pressure around development outcomes and processes across these cities. Interview participants described Oakland as generally welcoming development, San Francisco as welcoming of affordable development but not as favorable to major market-rate development projects, and Palo Alto as welcoming of very little dense development. Some participants who work in multiple cities also shared the perception that the political and community responses to development in Oakland will begin to mirror their observations in San Francisco.

293. Oakland experienced decades of population decline and disinvestment distinguishable from the other cities and has historically had a lower median household income and higher rate of poverty. *See generally* Robert O. Self, AMERICAN BABYLON: RACE AND THE STRUGGLE FOR POSTWAR OAKLAND (2005); Chris Rhomberg, NO THERE THERE: RACE, CLASS, AND POLITCAL COMMUNITY IN OAKLAND (2007). We draw comparisons of rate of poverty and median household incomes from 2010 census data and American Community Survey estimates. *See QuickFacts*, U.S. CENSUS BUREAU, *supra* note 291.

294. The City of Oakland began its 10K program in the 1990s under former Mayor Jerry Brown, who Professor Rhomberg described as having "offered Oakland as a haven to private developers fleeing overbuilt conditions in San Francisco and promised to expedite approval for market-rate apartments and condominiums built without city subsidies or requirements for affordable housing." Rhomberg, *supra* note 293, at 189. The 10K initiative generated controversy and exacerbated existing concerns about increasing housing costs, gentrification, and the displacement of people of color. Rhomberg, *supra* note 293, at 183–94.

295. For example, the Unity Council in the Fruitvale neighborhood took the lead on several major TOD development projects around the Fruitvale BART station with affordability and community use components—work that began as early as 1992. Rhomberg, *supra* note 293, at 190–92.

### F. Most of the projects entitled within these three years involve the development of housing where there was none

Whether proposed development risks displacement through the conversion or elimination of affordable housing—including rent controlled, deed restricted, or naturally affordable housing—presents an important equity consideration. This also implicates important climate concerns if residential demolition is reducing overall density. During these project years, the majority of residential developments of five or more units or more entitled within all cities are on vacant or commercial land,[296] rather than land with a prior residential use. These results are summarized below and displayed in Figures 8–12 above.

**Figure 18: Prior Parcel Uses**

| Prior Parcel Use | San Jose | San Francisco | Oakland | Palo Alto | Redwood City |
|---|---|---|---|---|---|
| Residential | 23 | 2 | 11 | 1 | 4 |
| Residential % | 35% | 2% | 12% | 20% | 31% |
| Commercial | 24 | 87 | 45 | 3 | 5 |
| Commercial % | 37% | 92% | 50% | 60% | 38% |
| Vacant | 15 | 5 | 34 | 1 | 1 |
| Vacant % | 23% | 5% | 38% | 20% | 8% |

Redwood City and San Jose have higher occurrences of entitlement where the prior use was residential. Of the four projects that replaced residential uses in Redwood City, at least two were multifamily structures. In San Jose, the vast majority of these residential uses are single-family homes—and the new developments were substantially denser than the single-family homes that were demolished. In San Jose, four of the twenty-three projects that replaced residential uses were multi-family structures that could potentially have been subject to rent control. One of these multi-family buildings was a 216-unit rent-controlled building whose demolition left many long-time residents with few other affordable rental options.[297] These rent-controlled units were not replaced in the new development, nor did the new development contain inclusionary housing units.[298] From our limited data, it seems this scale of rent-controlled demolition is rare in these cities; however, more research is needed to investigate other potential rent-

296. Vacant land includes lots with no improvements or lots that contain a surface parking lot with no permanent structures. Commercial land includes lots with commercial or industrial uses, such as warehouses, restaurants, storage facilities, or retail. Residential lots include single-family homes, mobile homes, multifamily buildings, single room occupancy hotels, and residential motels.

297. Ramona Giwargis, *San Jose council denies appeal to stop Reserve apartment demolition*, THE MERCURY NEWS (June 22, 2016), https://perma.cc/EN52-FXDE.

298. Ramona Giwargis, *San Jose: Tempers flare over The Reserve displacement*, THE MERCURY NEWS (Mar. 16, 2016), https://perma.cc/5HCX-28AL.

controlled demolitions in our jurisdictions. Lastly, we found no deed-restricted affordable housing that was demolished during our project-years.

### G. Deed-restricted affordable housing entitlement is low across all jurisdictions; however, deed-restricted affordable housing benefits from faster approval time frames

Entitlement rates (in terms of units) to support affordable housing production across all jurisdictions are low for these years. San Francisco—the only jurisdiction to apply inclusionary housing requirements to both rental and for sale housing during the project years[299]—has the highest rates of entitlement of affordable housing by units, with 11% of all new units deed-restricted to low and middle income households. 100% of deed-restricted affordable housing in San Francisco is entitled in just over twelve months, which is thirteen months faster than market rate development. In San Jose, an affordable development is entitled nearly ten months faster than market rate development. In Oakland—where the process is compressed relative to San Francisco and San Jose—affordable development is approved about two months faster than market rate development.

Unlike other Bay Area jurisdictions, most of the affordable housing units entitled in San Francisco outside of former Redevelopment Areas came through inclusionary obligations imposed on market-rate developers.[300] While we do not have complete data on inclusionary housing compliance for all our developments in San Francisco, at least twenty-eight developments—30% of projects—elected to pay the in-lieu fee rather than build the housing on-site. As our interviews highlight, the in-lieu fees are important sources of gap finance for nonprofit affordable housing developers especially after the dissolution of the Redevelopment Agency.[301] Interestingly, the jurisdictions with the fastest

299. San Jose's inclusionary housing ordinance was on hold during the first two years of our research due to ongoing litigation. *See Cal. Bldg. Indus. Ass'n v. City of San Jose,* 61 Cal. 4th 435, 443 (2015) (noting that the California Superior Court enjoined implementation of the ordinance). Though the California Supreme Court upheld the inclusionary housing ordinance against a takings challenge, the ordinance only applied to for-sale developments during our project years. *See id.* at 442, 461. The ordinance currently applies to both for-sale and rental developments. *See* SAN JOSE MUNI. CODE § 5.08.400.

300. The opposite is likely true in former Redevelopment Areas managed by OCII. *See* Office of Community Investment and Infrastructure, *Affordable Housing Production Report Fiscal Year 2016-2017* (noting that 552 funded affordable housing units and 51 inclusionary units were completed in fiscal year 2016-2017). Funded projects refer to 100% affordable housing developments as opposed to inclusionary housing units, where the affordable housing units are a smaller percentage of the total units. This also underscores the importance of redevelopment for affordable housing production.

301. The Community Redevelopment Act gave local governments the authority to declare areas as blighted and in need of urban renewal, which enabled the city or county to distribute most of the growth in property tax revenue for the project area to the relevant Redevelopment Agencies as tax-increment revenues. *See* CAL. HEALTH & SAFETY CODE §§ 33020 et seq. In 2011, the California legislature dissolved the Redevelopment Agencies. *See*

entitlement time frames—Oakland and Redwood City—also have the lowest rate of entitlement of affordable units, which may suggest affordable housing developers need more than an efficient process to make deals feasible. Interview data also suggests that high land and labor costs, coupled with the loss of funding from Redevelopment Agency tax increment programs[302] are primary barriers to developing more affordable units within these cities. The interviews yielded differing accounts as to whether discretionary approval imposed significant challenges to affordable development. Notably, interview data indicated that an increasingly elaborate building permit process also poses barriers to the timely completion of affordable developments. While the scope of this study does not address the length and complexity of the actual building permit process, this is an important area for future study.

**Figure 19: Affordable Units by Jurisdiction**

| | San Jose | San Francisco | Oakland | Palo Alto | Redwood City |
|---|---|---|---|---|---|
| # Units | 11,463 | 9,755 | 9,555 | 277 | 1,100 |
| # Affordable Units | 613 | 1,110 | 333 | 70 | 11 |
| Affordable % | 5% | 11% | 4% | 25% | 1% |

Given the three-year timeframe of our study, and because 100% affordable housing developments are so infrequently entitled, the rate of entitlement (in terms of percentage number of units entitled) is by itself insufficient to determine a jurisdiction's policy on affordable housing. Palo Alto is emblematic. While Palo Alto had the lowest rate of entitled units across all our Bay Area cities, it had the highest rate of affordable housing entitlements (25%), because a large affordable development happened to be entitled during our project years. Instead, looking at the planning and development codes for the presence of local ordinances that directly incentivize affordable development, the overall rate of entitlement in terms of units entitled, and entitlement timeframes provides a more accurate assessment of a city's affordable housing policy.

A.B. X126, 2011-2012 (Cal. 2011), https://perma.cc/5FSN-AMNH. Dissolution has severely constricted local governments' ability to finance affordable housing. *See* Casey Blount et al., *Redevelopment Agencies in California: History, Benefits, Excesses, and Closure* (2014), https://perma.cc/3QUD-FPTY (estimating a statewide average annual loss of 4,500 to 6,500 new affordable units).

302. These tax-increment revenues were a large source of affordable housing finance. *See* Blount, *supra* note 301.

### H. San Francisco, Redwood City, Oakland, and San Jose all provide for density and development incentives to promote transit-oriented development that have caused developers to site most development in these growth incentive zones

Most jurisdictions in our study are easing density and parking restrictions in targeted growth areas near transit and are drawing on Specific Plans to facilitate development in targeted growth areas. Downtown San Jose—with its proximity to Caltrain and light rail—is one example. San Jose's General Plan lifted height limitations in most downtown areas, giving developers more flexibility in design and construction type.[303] The General Plan also allows for up to 800 dwelling units per acre and a 30.0 FAR for mixed-use projects in the downtown area.[304] These are high densities relative to San Jose's Mixed-Use Commercial Districts where residential developments max out at six stories and fifty dwelling units per acre.[305] Parking reductions of up to fifty percent are also available for certain mixed-use projects in downtown.[306] Additionally, San Jose's Diridon Station Area Plan rezoned land including portions of downtown and areas adjacent to the Diridon Caltrain station, to allow for residential use at higher densities than previously allowed, with the goal of connecting transit-accessible housing to jobs.[307]

While Redwood City's historic pattern of land use development is largely auto-centric, the City's current General Plan focuses growth and development in mixed-use activity centers and along pedestrian-friendly transportation corridors that are connected to the regional transit system. The General Plan allows for more intense development (40 to 60 dwelling units per acre) along major thoroughfares, particularly Veterans Boulevard, Broadway, and El Camino Real.[308] Redwood City's Downtown Precise Plan ("DTPP") also seeks to create a "pedestrian friendly, walkable district [with] good transit access."[309] Instead of focusing solely on increased development incentives, like reduced parking or open space requirements or more permissive density, Redwood City accomplishes its vision by improving processes that facilitate faster review and approvals for development

303. SAN JOSE MUNI. CODE § 20.70.200. Because of the downtown area's proximity to the airport, no building can be permitted with a height that exceeds the elevation restrictions prescribed under Federal Aviation Regulations Part 77 (14 C.F.R. Part 77) unless certain conditions are met.

304. *See* City of San Jose, *supra* note 286, at Chapter 5 at 9.

305. *Id.* at Chapter 5 at 6.

306. SAN JOSE MUNI. CODE § 20.70.330.

307. *See* CITY OF SAN JOSE, DIRIDON STATION AREA PLAN, Appendix B (last visited Oct. 26, 2018) https://perma.cc/D9E5-53ZE.

308. *See* CITY OF REDWOOD CITY, GENERAL PLAN, Urban Form and Land Use at BE-39 (2010), https://www.redwoodcity.org/departments/community-development-department/planning-housing/planning-services/general-plan-precise-plans/general-plan/.

309. *See* REDWOOD CITY, DOWNTOWN PRECISE PLAN, Introduction at 3, (2011), https://www.redwoodcity.org/departments/community-development-department/planning-housing/planning-services/general-plan-precise-plans/downtown-precise-plan.

projects within the DTPP. Conformance with the DTPP's prescriptive design and development standards is mandatory; however, participants share the perception that conformance with the guidelines ensures swifter approvals, which is also shown in our project data.[310]

Like Redwood City, San Francisco has used specific planning to concentrate growth in key transit-accessible neighborhoods. The City has lifted traditional density limitations by shifting to a form-based code in these areas so that building envelope and bedroom mix are the primary limitation on density.[311] San Francisco has also attempted to facilitate development in infill, transit-accessible neighborhoods outside the boundaries of these specific plan areas through the use of local density bonus programs like HomeSF that can provide up to an additional two stories of height outside of the specific plan neighborhoods.[312]

Since most development is indeed occurring within these growth areas, we can infer that these efforts have been successful overall—consistent with prior research that found that Specific Plans can facilitate approval processes.[313] Much can also be inferred based on where projects are not sited in these jurisdictions, as shown by the maps in *supra* Part III 4. Indeed, cities are not relaxing density and development standards uniformly within their boundaries. Interviews suggest that the political will to allowing dense development only extends to certain geographic areas. Interview participants from Redwood City, San Francisco, and San Jose have characterized this as the "grand bargain," in which constituents consent to increased density in growth in key areas in return for "leav[ing] the low-density residential neighborhoods alone."

In addition to the obvious equity implications of refusing to site dense development in lower-density areas,[314] the lack of political will also has ramifications in cities like San Francisco, that may undermine efforts to address climate change. San Francisco's western side sees virtually no development, yet is linked to the city's downtown via high quality light rail and bus lines.[315] Interviews have also raised examples of transitional single-family home neighborhoods where a denser residential product could be possible on paper, but not politically. The lack of development in these areas supports the presence of political—not necessarily planning or zoning—barriers.

## I. Very few of these entitled projects were challenged in court

A close examination of the projects entitled during our study period in these five cities suggests litigation rates are quite low. At a basic level, our data

310. *Id.* at 25.

311. *See e.g.*, COUNTY OF SAN FRANCISCO, EASTERN NEIGHBORHOODS PLAN: EAST SOMA AREA PLAN,

312. S.F. MUNI. CODE § 206.3.

313. *See* LANDIS ET AL., *supra* note 168, at 95-96.

314. *See* Mangin, *supra* note 198, at 92.

315. *See e.g.*, J.K. Dineen, *In a wealthy SF neighborhood, residents fight low-income housing*, S.F. CHRONICLE (Nov. 16, 2016), https://perma.cc/YN4X-3YNR.

reveals that lawsuits challenging residential and mixed-use projects over five units is more common than the generic CEQA litigation rates reported in prior studies (all estimated at below 1%).[316] Nonetheless, the overall litigation rates are low regardless of whether they were measured with respect to number of projects or number of units. This directly conflicts with the perceptions of our interview participants, many of whom perceived CEQA litigation rates to be much higher within each city.

**Figure 20: Litigation Rates by Project and Unit Counts**

| | Total Projects | Total Units | Litigated Projects | % | Litigated Units | % |
|---|---|---|---|---|---|---|
| **All Jurisdictions** | 268 | 31,566 | 7 | 3% | 1,994 | 6% |
| **San Francisco** | 95 | 9,768 | 3 | 3% | 1,273 | 13% |
| **San Jose** | 65 | 11,463 | 2 | 3% | 583 | 5% |
| **Oakland** | 90 | 8,958 | 1 | 1% | 47 | 0% |
| **Redwood City** | 13 | 1,100 | 1 | -- | 91 | 8% |
| **Palo Alto** | 5 | 277 | 0 | -- | 0 | 0% |

The total number of projects litigated across all five cities is low. We have omitted the litigation rates by projects in Redwood City and Palo Alto because of the limited number of projects within each city (Palo Alto had no litigated projects; it had only a handful of projects.). For example, in Redwood City, one out of thirteen projects lead to a litigation rate of 8%. Comparing San Francisco (95 entitled projects), Oakland (90 entitled projects), and San Jose (65 entitled projects) gives us more information on the potential impact of CEQA litigation.

Notably, the variation in the number of lawsuits within these jurisdiction does not appear to coincide with overall housing entitlement approval timelines, at least not in these project years. San Jose's environmental review process appears faster than San Francisco's, which is one of the slowest among our jurisdictions. Moreover, not a single CPE was litigated in San Francisco nor in Oakland, therefore the litigation rates likely cannot explain the stark differences in CPE timeframes in these two jurisdictions.

It also appears that only two of the nine litigated projects had affordable housing units within them (one with 11% and the other 33%). Both were located in San Francisco. Notably, none of the 100% affordable housing developments entitled during the study period within these five cities were litigated; however,

316. *See* CAL. OFFICE OF SENATE RESEARCH, POLICY MATTERS (2018), https://perma.cc/34HL-K8SX; Smith-Heimer et al., *supra* note 194; CAL. ST. SENATE ENVTL. QUALITY COMM., CEQA SURVEY (2017), https://perma.cc/9HXP-RFYR.

affordable housing developments have been litigated outside our time frames and remain the subject of substantial press coverage.[317]

Excluding settlement, CEQA defendants have frequently won more cases than plaintiffs.[318] Settlement could be treated as a partial victory for plaintiffs, in which case success rates are about twice as high than for defendants. Of the ongoing cases, the plaintiff lost in the trial court in all three cases and then appealed. The success rates do not appear to vary substantially by type of claim. Of the six lawsuits including CEQA claims, three settled and defendants won once. Of the five lawsuits including non-CEQA claims, three settled and defendants won one.

CEQA and non-CEQA claims were approximately equally likely to be raised by plaintiffs in the lawsuits. Of the seven lawsuits, six raised CEQA claims, but four of those six also raised planning and zoning claims. One lawsuit also raised planning and zoning related claims but did not raise CEQA claims. This means that six projects raised CEQA claims, five projects raised non-CEQA claims, two lawsuits raised CEQA claims only, and one lawsuit raised non-CEQA claims. There are two potential explanations for this. Once a plaintiff decides to sue a project based on planning and zoning violations, the marginal cost of adding an additional CEQA claim is likely not prohibitive. But the reverse is also true—the marginal cost of adding a planning and zoning claim to a CEQA suit is likely not great either. Regardless, non-CEQA claims (for example, that project approvals violated state or local zoning or planning codes) appear to be just as common as CEQA claims. This suggests that CEQA is not the only driver of litigation in this context. It also suggests that eliminating CEQA might not eliminate legal challenges to most of the projects that were litigated during this study period in these cities.[319]

317. The lawsuit against Habitat for Humanity in Redwood City is illustrative. Two attorneys filed suit against an approved affordable housing development, alleging that the height of the building would block sunlight in their office windows. The project was only half of the allowable height in the Downtown Precise Plan area. The lawsuit eventually settled. *See* Press Release, Holland & Knight, Holland & Knight Achieves Favorable Settlement for Habitat for Humanity in Legal Battle over Proposed Affordable Housing Development (July 26, 2018), https://perma.cc/ZST9-UG3B; *See also* Zachary Carr, *Settlement reached over height of downtown affordable housing*, THE DAILY J. (Jul. 21, 2018) https://perma.cc/UUD8-W9X3.

318. We note that given the small sample size of our litigation data set (seven lawsuits), any conclusions we draw about the nature and resolution of litigation will be limited. We expect to draw firmer conclusions after collecting additional litigation data from the Los Angeles area.

319. One caveat to this conclusion is that different levels of judicial scrutiny to different kinds of claims may mean that non-CEQA land use lawsuits may be less (or more) likely to succeed in court than CEQA lawsuits. If this is the case, then eliminating one kind of lawsuit may have some impact on litigation outcomes and impacts on development. Again, our limited data set from the Bay Area does not allow us to draw firm conclusions on this point, but we will gather more data on this from the Los Angeles area.

**Figure 21: Types of Legal Claims**

| | |
|---|---|
| Lawsuits with CEQA claims | 6 |
| Lawsuits with non-CEQA claims* | 4 |
| Projects that raised only CEQA claims | 2 |
| Projects that raised only non-CEQA claims* | 1 |

*non-CEQA claims include procedural violations or violations of planning and zoning law.

## J. Administrative appeal rates are much higher than CEQA litigation rates within these five cities

We recognize that litigation rates do not tell the entire story of the threat of litigation and how it impacts the residential development process. CEQA critics have discussed how the threat of litigation may deter developers from even filing entitlement applications; this threat can also lead developers to capitulate to a plaintiff's demands even before a lawsuit is filed. While it is difficult to empirically measure the threat of CEQA litigation given existing datasets, project administrative appeals provide a useful proxy in several ways. First, under state law a project appeal is a prerequisite to filing a CEQA lawsuit, since a plaintiff must first exhaust administrative remedies.[320] Second, a project appeal can provide a potential plaintiff with a hook to leverage settlement before filing suit.

We found that appeals rates in Oakland, San Francisco, and San Jose are significantly higher than the litigation rates across all three of these jurisdictions for these study years. Notably, the appeals rates also more closely approximate our interview participants' estimations of the frequency of CEQA litigation—however, in some cases, interview estimations were still significantly higher. When adjusting for appeals as a percentage of total units entitled, the appeals rate increases in every jurisdiction, showing that larger-than-average projects are being challenged. One potential explanation for the higher rate of appeals is that projects expend significant resources in making projects "bulletproof" in anticipation of future litigation. The lower litigation rates might reflect the fruit of those labors, with the higher appeals rates proxying for the threat of that litigation.

The success rates for administrative appeals are more difficult to determine than litigation, due to the limitations in how certain jurisdictions track appeals in the meeting minutes for their appellate bodies. From the high appeals rates relative to litigation rates, it can be inferred that developers are settling with potential plaintiffs before a lawsuit is filed. An alternative explanation is that if appeals usually fail, that failure may discourage some plaintiffs from filing lawsuits. Further data on how these appeals are resolved will help distinguish between these possibilities. We will be collecting that data in our future research, as well as data on the types of claims raised in appeals.

320. CAL. PUB. RES. CODE § 21177 (2016).

**Figure 22: Appealed Projects Per Jurisdiction**

| Project Characteristics | San Jose | San Francisco | Oakland | Palo Alto[321] | Redwood City |
|---|---|---|---|---|---|
| # Projects | 65 | 93 | 93 | 5 | 13 |
| # Appealed Projects | 6 | 15 | 13 | -- | 2 |
| % of total projects | 9% | 16% | 14% | -- | 15% |
| # Units | 11,463 | 9,768 | 8,958 | 277 | 1,100 |
| # Appealed Units | 1,631 | 2,996 | 1,941 | -- | 493 |
| % of total units | 14% | 31% | 22% | -- | 45% |

## Part IV: Discussion

Our findings reveal that all the jurisdictions studied provided for dense infill development but retained discretionary control over new residential developments of five or more units, primarily through aesthetic control. All five cities required a similar number of approvals. Despite these similarities, the local processes yielded widely different results in rates of entitlements, length of approval periods, and implications for equity. These findings are both consistent and in conflict with past research and leave open important questions for future exploration. They also directly inform current political and policy debates.[322]

### A. In these cities, time lags in entitlement (and associated costs) are most likely driven by local factors and not CEQA or its requirements

CEQA reform continues to hold the attention of politicians and policymakers.[323] Data collected from these five cities (some of the most expensive cities in the state) suggests that reforming CEQA does little to address time lags in entitlement (and associated costs) within these cities, primarily because the time lag variations across cities does not appear to be driven by CEQA or its

321. We were not able to obtain Palo Alto appeals data at the time of publication.

322. In these conclusions, we emphasize that we will continue to collect data from cities around the state. We limit our conclusions to these five cities and will present comparative analysis across the Bay Area and Los Angeles in future work.

323. Most recently in the 2018 Gubernatorial debate, the Republican candidate (with experience developing housing in the Midwest) attributed the high costs of housing to the law "for slowing project approvals and adding to costs of development" but focused his attention on "overhauling" CEQA as a potential solution to California's persistent housing crisis, noting that the power that cities and counties currently have over land development "is appropriate." *See* Liam Dillon, *Newsom, Cox split on how California governments should respond to the housing affordability crisis*, L.A. TIMES, (Oct. 8, 2018), http://www.latimes.com/politics/essential/la-pol-ca-essential-politics-may-2018-newsom-cox-split-on-how-california-1539020247-htmlstory.html.

requirements. First, data indicates these cities often employ tools to facilitate CEQA compliance, and that neither entitlement timelines nor production appears to coincide with the type of land-use approval processes or environmental review employed. For example, an exempt project in San Francisco takes twice as long as in Oakland, and nearly as long as a full EIR in San Jose. Thus, local practices and context (such as staffing levels, political dynamics and leadership, or planning department practices that respond to political dynamics and directives), appear to more strongly influence environmental review and entitlement timelines, rather than CEQA requirements.[324]

Based on our initial findings, a better focus for the state to improve housing production and reduce delay in approval processes would be changing the local regulatory systems that cities develop for land-use approvals. This might include altering the processes or discretion of local governments to structure and administer local land-use review processes, changing the political and fiscal incentives around housing approval by local governments, and providing stronger and more enforceable legal obligations against cities to use their land use approval processes to facilitate housing entitlements.[325]

Second, it is unclear whether CEQA reform would address the impact of litigation on the housing entitlement process. Some of our interview participants discussed the necessity of "bullet-proof EIRs"[326] to forestall CEQA litigation from neighborhood groups. Nonetheless, we have not observed many of these project-level EIRs in the five cities, which suggests that variations in entitlement process timelines between these five cities may not be easily attributable to neighborhood groups abusing state regulation in response to proposed project characteristics. While op-eds, research, and reform proposals often focus on EIRs and CEQA litigation,[327] the data from these five cities indicates that some of the largest projects, those most likely to have significant environmental impacts, do not

324. *See* Christopher S. Elmendorf, *Beyond the Double-Veto: Land Use Plans as Preemptive Intergovernmental Contracts* 9 (Draft Oct. 10, 2018) ("the actual intensity of regulation is a function not just of the rules that exist on paper but of the interest groups that have organized to enforce them, and the attitudes and priorities of the local officials who implement them.").

325. In this last category, we particularly have in mind continuing efforts to strengthen the obligations of local governments under state law to provide Housing Elements in their general plans that facilitate issuance of housing entitlements. Here the state legislature could build on its efforts in the housing package it enacted in 2017. *See, e.g.*, CAL. GOV'T CODE §§ 65400, 65883.2, 65884.09; *see also* Elmendorf, *supra* note 324, at 41-8.

326. This refers to our interpretation of statements from interview participants, describing the need for an EIR document that has sufficient analysis of environmental impacts and technical information to withstand judicial review should the project be challenged in court in terms similar to the term "bullet-proof" used by Barbour & Michael Teitz, *supra* note 63, at 15.

327. Hernandez, Friedman & DeHerrera, *supra* note 219, at 8; Jennifer Hernandez, *California Environmental Quality Act Lawsuits and California's Housing Crisis*, 24 HASTINGS ENVTL. L. J. 21, 23 (2018), https://perma.cc/J7GV-TB48; *see also supra* note 11.

require EIRs (although EIR projects are on average larger than non-EIR projects), and that CEQA litigation is infrequent.[328]

Finally, comparing our findings to the HCD Landis Report reinforces our conclusion that targeting CEQA may not achieve intended policy goals—at least not in these cities—and shows the importance of the increase in discretionary review as a potential driver of timeframes. Landis found a lower overall instance of EIRs in California—about 4% of multi-family developments or 9% of single-family home developments. Our EIR rate is comparatively higher, with around 10% of all projects across all jurisdictions. Our average approval times are also notably longer at 25 months across all cities (with a range of 10 to 34), versus the 11 months for a single-family and 6.7 months for multi-family developments in the Landis study. However, the use of project-based tiering is dissimilar from the rate of 26% in the Landis study; we found a rate of 55% in our project years. Notably, the number of approvals per project is also distinguishable. The Landis study found 2.8 approvals per project on average while our research shows 3.6 on average. Our data suggests that despite more frequent streamlined CEQA review, overall approval time frames within certain cities are increasing as numbers of approvals per project increase. This further illustrates the inability of state CEQA reform to address the issue of time lags in entitlement processes. The local land use regulatory process in general—and the imposition of discretionary review by local governments in particular—is therefore a key issue for policymakers and researchers to consider.

## B. Variability and uncertainty in the entitlement process across these jurisdictions may be a more critical factor influencing entitlement timelines than stringency

Our findings generally conform to national surveys like Pendall and WRLURI. These five cities are highly regulated coastal communities that have permissive density, high (and similar) numbers of approvals, and affordable housing incentives. Our findings are also somewhat consistent with the BLURI, in that the BLURI found that the timeframe to complete "permit-review" was about 2 years for multi-family housing and 2.5 years for single-family housing.[329] We found a 25-month review period on average in our jurisdictions across all project types, which is roughly consistent with BLURI's findings, provided their

328. However, we again note the limitations of our current data which can only assess to a limited extent how important the threat of litigation is to whether projects are proposed and how projects are modified in the approval process. We hope to further investigate those questions once we gather additional data on litigation and administrative appeal data from across the state. In particular, one question is whether projects go through EIRs not because of higher environmental risk, but because of higher political risk. Projects that face significant community opposition require EIRs because of the nature of the entitlement process that political opposition creates. Those projects in turn are therefore more likely to be litigated. Again, with additional data from more projects, we hope to explore this question.

329. Quigley, Raphael & Rosenthal, *supra* note 14, at 289.

timeframes do not include the issuance of building permits,[330] but again, we found that the range is great (10 to 34 months). We also found, similar to the Pendall study, that aesthetic controls can be an important factor in the number of units entitled.

However, these are general consistencies that say little about how local regulation, discretionary review, or local process operates. BLURI found that larger cities have more required approvals, which is not entirely supported by our data, as smaller cities like Palo Alto, Redwood City, and Oakland required more approvals than San Francisco and San Jose, which are larger in size.[331] Also, although four of the five cities use aesthetic controls (considered subjective)[332] as the primary mechanism for discretionary review, while also providing for density within the base zoning, and all cities required approximately the same number of approvals, Oakland and Redwood City had comparatively shorter entitlement timelines.[333] This tells us that stringency, if defined by the type and number of discretionary approvals, appears to operate in Redwood City and Oakland in very different ways than in neighboring cities. This also cautions against generalizing state-level policy reform proposals from how land use processes operate within a single city, or even a single region.[334]

In addition, the variation in entitlement processes across these jurisdictions may factor into constraining supply or increasing costs. This variation appears to present informational barriers for newcomers to the market—even for some working within the same region. Variation may impede a developer from navigating the development process within each of these cities without substantial local knowledge. This complexity and variation could also impact the capacity of planning staff to help developers understand the entitlement process. Our interview data confirms that well-capitalized developers with existing relationships and experience in specific jurisdictions are the best situated to navigate these complex local contexts, giving them a competitive advantage. Also, project-level data indicates that larger projects do not necessarily take more time, but often take less time, than smaller projects. If the complexity and requirements of environmental review were the issue, this is not intuitive. This suggests that larger market-rate projects—to the extent that they benefit from expertise and better capitalization—can navigate the processes in these cities in less time than smaller-scale developments. This raises concerns about monopolization, as the cost of acquiring local knowledge forces new market participants out, which could also contribute

330. The BLURI is unclear about whether it is measuring the entire development process from entitlement application to building permit issuance or just the process to obtain a land use entitlement. Depending on how the survey was itself phrased, the vague terminology might have also influenced participants' responses. If the BLURI is including building permit issuance, our timeframes would be much longer.

331. *Id.* at 282. Note that BLURI might have been measuring approvals to obtain a building permit, which might also skew this response.

332. *See* Blaesser, *supra* note 36, at xix.

333. Oakland and Redwood City also had median timelines on certain size projects that were also closer to the 6 months average.

334. This last point emphasizes the importance of collecting additional data from Los Angeles and other areas in California, which we are in the process of collecting.

to increased housing costs. The difficulty in accessing this data for our research purposes also supports this proposition.

A second related issue is the lack of predictability in the process within specific cities. Interviews suggest that unpredictability, as opposed to stringency, in process imposes costs that may keep developers from advancing a project. As discussed in Part III, Redwood City successfully mitigated this unpredictability issue by its Downtown Precise Plan, which imposes more prescriptive development requirements to help with certainty and reduced timeframes. Although prescriptive design requirements have drawbacks,[335] if a jurisdiction is going to impose aesthetic review, explicit design standards can reduce the inherent subjectivity of aesthetic review.[336] As project-level data across all five cities demonstrates, Redwood City moves comparatively quicker, although all five cities have stringent local ordinances. This suggests that Redwood City's approach, which maintains local discretion and a high number of approvals (compared to national averages), could potentially reduce approval timeframes and increase production yields.[337]

Redwood City therefore provides a compelling case study of how to incorporate improvements in discretionary processes in the planning of a new, dense transit-oriented neighborhood, and how to maintain discretionary review and stringency while also expediting entitlement processes. San Francisco, on the other hand, illustrates how the benefits of specific planning tools that promote infill development might be significantly outweighed by the costs of a protracted approval process. This approval process appears related to either San Francisco's unique charter provision (that renders even building permits discretionary actions) or a political culture that influences (and slows) planning practices.

335. Interview participants have noted that highly prescriptive design standards generally give architects less ability to maneuver around building form. They can also have cost impacts if the regulations prescribe more expensive materials, more open space, or a more expensive construction type.

336. *See* e.g., Lemar, *supra* note 218, at 1563 (noting that "whether a building is visually appealing is a subjective inquiry. Whether a building is consistent with the existing architectural context is a *supposedly* objective one) (emphasis added); Brian Soucek, *Aesthetic Judgment in Law*, 69 ALA. L. R. 382, 417 (2017) (noting that aesthetic judgment in land use regulation extends beyond the question of "what types of buildings or uses of land are the prettiest" to judgments about an area's identity and social cohesion).

337. Litigation is another potential source of uncertainty for entitlement processes that can increase costs. However, at least in our current data, litigation occurs at relatively low rates, while all projects go through ambiguous and uncertain design review. Thus, at least initially it appears to us that providing certainty in the design review process is more important for improving the entitlement process than reducing litigation (again with the caveat identified in note 311, *supra*, about the threat of litigation). This is the approach taken by the state legislature when it enacted SB 35, which eliminates much discretionary review for certain qualifying affordable housing developments in cities that have not met their housing goals. *See* CAL. GOV'T CODE § 65400 (West 2018).

## C. Uneven land use regulation across a city may operate as a tool of exclusion

Lens and Monkkonen's research indicates that stringency in land use regulation correlates with income segregation, but that this correlation still exists in jurisdictions with permissive density.[338] This suggests that other land use controls, beyond base zoning, contribute to income segregation. Our findings may contribute to an understanding of what may be occurring—at least within these five cities.

As discussed in Part III,[339] all these cities move affordable housing development through entitlement much faster than market rate development. None of the 100% affordable housing developments within our data set were the subject of litigation. This suggests that entitlement processes (in terms of timelines) and environmental review (in terms of opportunity for legal challenge) were likely not the constraint on affordable housing supply during these three years. We emphasize, however, that because these cities approved so few 100% affordable housing developments within our dataset years, it is difficult to ascertain too much about timelines. Moreover, it is possible that opposition to affordable housing might shift if these cities approved substantially more 100% affordable housing developments or approved them in different areas.

Planning and zoning analysis indicates that four of our five cities provide for permissive density and employ tools to incentivize dense residential development near transit, but that permissive density and incentives for growth are not evenly distributed in these same cities.[340] This can create a scarcity issue (in terms of appropriately zoned land within cities) even though these same cities presumably have permissive density. Interview data suggests that the increasing cost of appropriately zoned land presents a major obstacle to affordable housing supply. This combined with drastic reductions in financing available for affordable housing impacts production, because combined, they create fewer opportunities for affordable housing development within these cities. Study participants across all categories repeatedly emphasized that legislative efforts must target both issues, as they operate together to limit deed-restricted affordable development, particularly after the loss of redevelopment funds.

Project data also confirmed that very few affordable units were entitled in our study years across all cities. San Francisco had the highest rate of affordable units entitled, at 11%, which came primarily through its inclusionary ordinance (outside of the former Redevelopment Areas). The lack of financing and suitable zoning for affordable housing developments, along with the importance of affordable housing mandates on market-rate developments in producing affordable units, lends some support to Lens and Monkkonen's recommendation for inclusionary zoning.[341] Still, inclusionary housing is insufficient to solve the

338. *See* Lens and Monkkonen, *supra* note 129.
339. *See supra* Part III.7.
340. *See supra* Part III.8.
341. *See* Lens and Monkkonen, *supra* note 129, at 12.

affordable housing crisis for all segments of the population. The formerly homeless, for example, require service-enriched housing,[342] as do other special needs populations.[343] Inclusionary housing aside, the fact that San Francisco had essentially no development of 5 or more units outside of specific plan areas and former Redevelopment Areas indicates inadequately zoned land may be a barrier to future dense development, both for affordable and market-rate.

## D. More data is needed about the risk of displacement through new development

Supply-side solutions have been proposed repeatedly in both the academic and policy literature, as well as proposed legal reforms, with some research identifying potential displacement as an immediate and direct consequent of development. This poses difficult questions for policymakers at both the local and state level on how to promote dense infill development without displacing existing residents, and whether or how local or state proposals are avoiding a tradeoff of displacement for increased future supply.[344] Most of the proposed development in these five cities was on vacant, commercial or industrial land, except San Jose which had one entitled project involving the demolition of a 216 unit rent-controlled building subject to rent stabilization. However, these findings are limited. We only observed five cities in a region, and not all these cities had rent stabilization ordinances. More data across high cost cities with minimal vacant land, particularly those with rent stabilization ordinances, is needed to evaluate the potential impact of any proposed policy that may implicate this issue.

## E. State-level reform proposals that would reduce local authority require better data

In these five cities, legal reform to promote equitable infill development may come in the form of state legislative reductions in local discretion over specific types of development; alternatively, legal reform may originate in the electorate or city council of these cities by choosing to reduce the amount of discretionary review for development. State-level action is difficult; there have been successful efforts to reduce local discretion,[345] but two major recent proposals for by-right or

342. *See e.g.*, Kevin Fagan, *Solution to SF's homeless problem starts with supportive housing*, S.F. CHRONICLE (June 29, 2016), https://perma.cc/9EFH-J4U2.

343. The California Tax Credit Allocation Committee defines these special needs populations as "[i]ndividuals living with physical or sensory disabilities and transitioning from hospitals, nursing homes, development centers, or other care facilities; individuals living with developmental or mental health disabilities; individuals who are survivors of physical abuse; individuals who are homeless . . . ; individuals with chronic illness, including HIV; homeless youth . . . ." *See* 4 C.C.R. § 10325(g)(3) https://perma.cc/J3R4-9SWP.

344. *See e.g.*, Zuk and Chapple, *supra* note 208.

345. *See* S.B. 35, 2017 2017-2018 Leg., Reg. Sess. (Cal. 2018).

limited by-right development have failed.[346] While our case studies suggest that some political will to increase affordable housing supply exists in at minimum four of these cities, it is unclear how broad that impulse extends across the state or how strong it may be.

Assuming a new proposal limiting local discretion over infill development with affordability is politically feasible, the variation in local processes observed in these five cities in a single region is substantial enough that without good data across multiple cities and regions, there is a high risk that state-level reform of local process may not advance intended policy goals.

For example, recent legislation such as SB-35[347] attempts to eliminate the CUP requirement for certain projects consistent with zoning, but the complexity of the entitlement processes may prevent this legislation from accomplishing what is needed in these five cities. For instance, some cities impose a myriad of specific plan approvals on zoning-compliant projects that happen to be located within a specific plan area.[348] Although these approvals are functionally similar to CUPs, on paper they are different processes. HCD has drafted proposed regulations that appear to cover specific plan permits within the ministerial process.[349] San Jose provides another example. Most projects in San Jose go through the PUD process, which requires rezoning and thus renders a project ineligible for SB-35. Yet the same PUD process in San Francisco and Oakland can occur without rezoning. Even though the PUD process accomplishes the same goals in these jurisdictions, the application is significantly different. Without knowledge of these nuances, lawmakers cannot draft legislation that accurately addresses the problem and provides clear guidance to local stakeholders. Moreover, without an understanding of the distribution of non-zoning compliant projects entitled each year, lawmakers may find their legislative tools unable to solve the right problems. Even legislation that is effective when enacted may quickly become ineffective due to local government efforts to restore control over new development. For instance, SB-35 may be unable to avoid cities downzoning or enacting more inflexible design criteria to force all approvals through rezoning or variance processes that are not subject to state streamlining. SB 166—California's "no net loss" law—prohibits jurisdictions from reducing residential density to a lower residential density than what was utilized to determine compliance with housing element law.[350] While this helps mitigate unintended impacts of SB-35, it is unclear if the provision applies

346. *See* CAL. DEP'T OF FIN., STREAMLINING AFFORDABLE HOUSING APPROVALS: TRAILER BILL TECHNICAL MODIFICATIONS (6-10-16) (2016), https://perma.cc/GDS6-XVCR, at 5–6; S.B. 827 Reg. Leg. Sess. (2017-2018) (Cal. 2018).

347. *See* S.B. 35, 2017 Leg., Reg. Sess. (Cal. 2018).

348. Examples of this include the Large Project Authorization in certain use districts of San Francisco's Eastern Neighborhood plan area or the Planned Community Permit in Redwood City's Downtown Precise Plan. *See* S.F. MUNI. CODE § 329; REDWOOD CITY MUNI. CODE § 47.1-47. 5.

349. *See* Memorandum from Cal. Dep't. Housing & Community Dev., Draft SB-35 Regulations § 301(a), Sept. 28, 2018, https://perma.cc/J5U7-KDKN (defining the ministerial process as "non-discretionary and cannot require a conditional use permit or other discretionary local government review or approval").

350. *See* CAL. GOV'T CODE § 65863 (2018).

to charter cities.[351] Moreover, SB-35 may be ineffective in jurisdictions where base zoning has not been updated to reflect General Plan updates.[352] Finally, jurisdictions are increasingly regulating density based on height and building form. In many places, height—not a limit on dwelling units per acre or FAR—is the major barrier to building more units. Future state legislation should consider these evolving zoning standards.[353]

### F. The state should not only mandate, but directly support good data reporting

Perhaps the single most important finding explored in this article is also the most obvious—poor data access to project approvals in many jurisdictions. Results are only accurate to the extent that data provided to the public through public portals and commission minutes are accurate. While better-resourced jurisdictions have advanced parcel information tools and sophisticated websites, many rely on outdated online permit systems that are not updated with current data. Oakland is an extreme example of what can result from inadequate resources—their online permit system often contains incomplete information and has no link to approval documents. While we supplemented these shortfalls with minutes from Planning Commission and City Council meetings, some projects go through an administrative, department-level review for which complete data was not available. While we erred on the side of caution and included six projects in our database that do not have complete data, we caution that it is possible that these six projects skew the total number of approved projects higher than what it actually is. Additionally, Oakland's pre-application process that some projects utilize prior to submitting a formal application was also inconsistently logged in their online system, which could influence approval timelines. We cannot infer that Oakland's poor data access is either deliberate or a reflection of local policy; the city's continued work to supplement state requirements around open government suggests the opposite.[354] It is more likely that Oakland, which faces a uniquely persistent budget

351. Section 65803 exempts charter cities from compliance with §§ 65800 – 65912 of the Planning and Land Use Code unless explicitly stated otherwise. The text of SB 166 does not explicitly apply its requirements to charter cities. All of the jurisdictions studied are charter cities. *See* CAL. GOV'T CODE § 65803 (2018). For a legal interpretation that the new requirements do apply to charter cities, *see* Public Interest Law Project, SB 166 (2017) Memorandum at 6, https://perma.cc/TK7V-AMYD. Without an amendment to the Government Code, determining applicability will likely require litigation.

352. *See* discussion of San Jose, *supra* Part I n.33.

353. We note that SB 827, which failed, attempted to do this. *See* S.B. 827, 2017-2018 Leg., Reg. Sess. (Cal. 2018) (the proposed legislation exempted eligible applicants from certain height requirements).

354. In 1997 Oakland passed its own Sunshine Ordinance to supplement Brown Act requirements around open government, developed in partnership with the League of Women Voters and the California First Amendment Coalition. This ordinance covers meeting minutes and agendas relevant to discretionary approvals of residential development. *See* OAKLAND MUNI. CODE §§ 2.20.010 et seq. (Oakland Sunshine Ordinance).

crisis,[355] is severely under-resourced given city initiatives to accelerate development and the growing demand for housing.

In contrast, cities like San Francisco have excellent data access that allows us to determine precisely what was approved each year according to our parameters. However, even good publicly accessible data does not fully reflect the complexity of the planning process. San Francisco employs a streamlined application process[356] that integrates processes that constitute distinct approval pathways in other jurisdictions, like design review. The fact that there are no formal design review approvals in San Francisco does not mean these processes are not happening. San Francisco's various specific plan permits also combine what is essentially a CUP and variance process into one, reducing the number of CUPs and variances in that jurisdiction. More projects are receiving variances than these numbers suggest. Jurisdictions like San Jose, on the other hand, employ very distinct approval processes, which also influences timeline. The majority of developments in San Jose go through the PUD process, which involves a rezoning and a permit approval that happen sequentially, rather than in tandem. Our interviews suggest that developers often complete the rezoning and then sell the land to different developers who later secure the permit. The time lag between these two milestones may slightly exaggerate approval timelines in San Jose for PUD projects.

Although top-down state reform of environmental regulations (or local regulation over land use) may encounter substantial difficulties, improving data access is an important first step to accurately understand the problem. Extracting project-level data is very time and resource intensive. There are few jurisdictions statewide that have development approval data in one centralized repository. Supporting jurisdictions to provide access to project-specific data on land use approvals, CEQA compliance, and overall time frames will help inform top down policy making in critical ways. Improving the quality of data and access to data can also help researchers and policymakers identify how long processes take and identify inefficiencies and redundancies that exist in local processes. This could also immediately help affordable housing developers determine what funding is required for the entitlement process. Finally, publicly available data about approval timeframes and processes may increase public and political pressure on local governments to make processes more effective and efficient.

SB 35 has somewhat advanced this issue some, in that it requires annual data reporting (which includes reporting total number applications received, projects entitled, building permits issued, and total number of certificates of occupancy issued).[357] The state could build on this requirement to support this

355. *See* Daniel Borenstein, *Despite booming economy, Oakland finances deteriorate*, THE MERCURY NEWS (March 3, 2017), https://perma.cc/8MT4-7X3P.

356. In early 2018, San Francisco overhauled its entitlement application process. While this new process would likely impact data collection for projects applying for entitlements post-2018, this new process does not affect our data years. CITY AND COUNTY OF SAN FRANCISCO, CHANGES TO PRELIMINARY PROJECT ASSESSMENT, Apr. 2, 2018, https://pe rma.cc/AEE5-LD4T.

357. *See* CAL. GOV'T CODE § 65400 (2018); *see also* Elmendorf, *supra* note 324, at 47.

work through two additional mechanisms. The first would be funding to support existing data reporting requirements (including those proposed here). As discussed previously, not all jurisdictions are equally resourced, and this appears to have a significant impact on the quality of a city's data. We anticipate that without additional support, at least some city reports will be unreliable. The second would be an enhanced housing element reporting obligation that requires jurisdictions to log information on approval processes and timeframes in a centralized repository with consistent terminology across jurisdictions. To the extent that processes are so dissimilar that they cannot be analogized, this centralized repository could contain explanations. This will aid not only in understanding entitlement processes, but will also help legal organizations to enforce housing element obligations. Housing issues present regional concerns, and current data accessibility and quality presents obstacles to comparative and regional analysis on both trends (rate of entitlement), and processes (which processes may work better).

Smaller steps would also be beneficial. For example, linking existing GIS or zoning data with assessor parcel information and building permit systems is a great first step to understanding how entitlements and building permit processes interact. Linking these systems to provide this data can make housing element reporting obligations more robust. Ideally, improved data access can illuminate more of the internal planning process, by providing detail that is not immediately apparent from approval documents (like the amount of time environmental review adds to the approval process). Interview data suggests that improved entitlement reporting and data can particularly benefit affordable housing developers. Financing affordable housing requires artful layering of state, local, and federal finance—each with their own set of eligibility requirements.[358] Funding applications also happen in cycles. For example, in California, the 9% Low Income Housing Tax Credit has two funding rounds per year.[359] For most of these programs, the site must already be entitled in order to be eligible for funding.[360] Thus, timing entitlements with the funding cycles is very important to affordable housing developers. In an era of limited funding, timing the cycle correctly maybe the difference between a project being funded or not. Improved data can assist developers to improve their predevelopment strategy, especially in areas where they have less experience developing. As discussed above, we observed that these jurisdictions appear to process affordable housing faster than market rate housing.

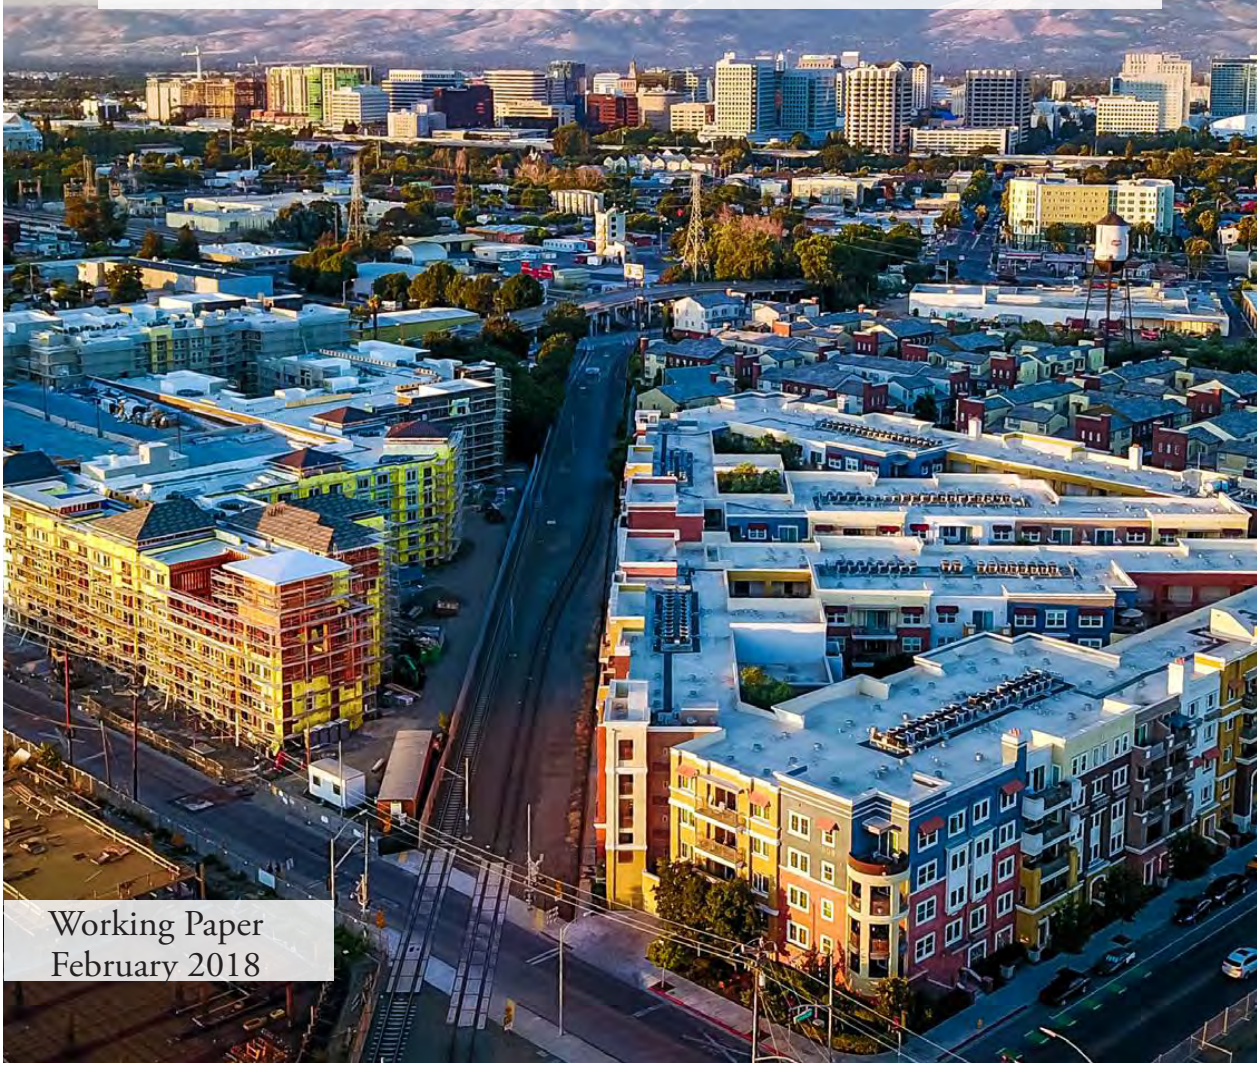
360. *See e.g.*, 4 C.C.R. § 10325(f)(4) (2018) ("Applicants shall provide evidence, at the time the application is filed, that the project as proposed is zoned for the intended use and has obtained all applicable local land use approvals which allow the discretion of local elected officials to be applied . . .").

From this, we can infer that some jurisdictions treat affordable housing differently, and nuances in process should be made publicly available. This is especially true in jurisdictions where affordable housing entitlement is slower than comparable market-rate development.

## Conclusion: Complex issues require a multi-pronged research approach

Our work continues and we are exploring how entitlement operates within other cities throughout the state. At each turn we are reminded there is no single solution to this perplexing problem. Even within land use regulation, entitlement is not the only issue for housing production in California. Increasingly onerous building safety regulations—ranging from seismic standards to renewable energy mandates—may also impose substantial costs on development. The building permit process itself is highly variable by jurisdiction, and interviews suggest it is another source of time delay. Interview participants also referenced construction and labor costs as a major barrier to feasibility. Labor costs, however, do not stem solely from Project Labor Agreements[361] or prevailing wage requirements;[362] developers have also noted a drop in skilled tradespeople post-Great Recession, which has created labor scarcity and implicates workforce development issues. Further study on these factors is necessary. More information is also required on the demand side of the equation—specifically how income and preferences influence where people live and whether they use transit. In sum, we need a better understanding of both sides of the equation (supply and demand), with a clear focus on equity in order to reduce GHG emissions through equitable infill development.



361. Project Labor Agreements are collective bargaining agreements between building trade unions and contractors that govern terms and conditions of employment for all workers on a construction project. *See Project Labor Agreements*, AFL-CIO, (last visited Oct. 26, 2018), https://perma.cc/C8VX-UC8G.

362. *See, e.g.*, CAL. GOV. CODE § 65913.4(a)(1)-(10) (2004) (defining prevailing wage to be the "general prevailing rate of per diem wages for the type of work and geographic area, as determined by the Director of Industrial Relations pursuant to Sections 1773 and 1773.9 of the Labor Code").

BerkeleyLaw
UNIVERSITY OF CALIFORNIA
Center for Law, Energy & the Environment

The Center for Law, Energy & the Environment (CLEE) channels the expertise and creativity of the Berkeley Law community into pragmatic policy solutions to environmental and energy challenges. We work with government, business, and the nonprofit sector to help solve urgent problems that require innovative and often interdisciplinary approaches. Drawing on the combined expertise of faculty, staff, and students across UC Berkeley, we strive to translate empirical findings into smart public policy solutions that better our environmental and energy governance systems.

BERKELEY IURD INSTITUTE OF URBAN AND REGIONAL DEVELOPMENT

Through collaborative, interdisciplinary research and practice, IURD supports students, faculty, and visiting scholars to critically investigate and improve processes and outcomes that shape urban equity around the world. IURD defines urban equity as focused efforts to address avoidable inequalities by targeting resources and improvements for populations and places that have experienced socioeconomic, racial, gender and/or other injustices.

One of IURD's research areas is Urban Governance, which includes the Law and Governance Research Group. This research group is collectively engaged in research at the intersection of planning, environmental and land use law, and local government. The research group pursues engaged scholarship to advance IURD's mission of promoting urban equity and support informed policy making.

COLUMBIA GSAPP URBAN PLANNING

The Urban Community and Health Equity Lab is based in the Graduate School of Architecture, Planning, and Preservation (GSAPP) at Columbia University. The mission of the Urban Community and Health Equity Lab is to conduct interdisciplinary research to transform institutions, policies, and practices that cause health inequities, both domestically and internationally. Specifically, its research uses a social justice framework, and is at the intersection of architecture, law, public health, public policy, and urban planning.

# TABLE OF CONTENTS

2 Executive Summary

3 What is at stake?

4 What are we studying?

6 What have we learned so far?

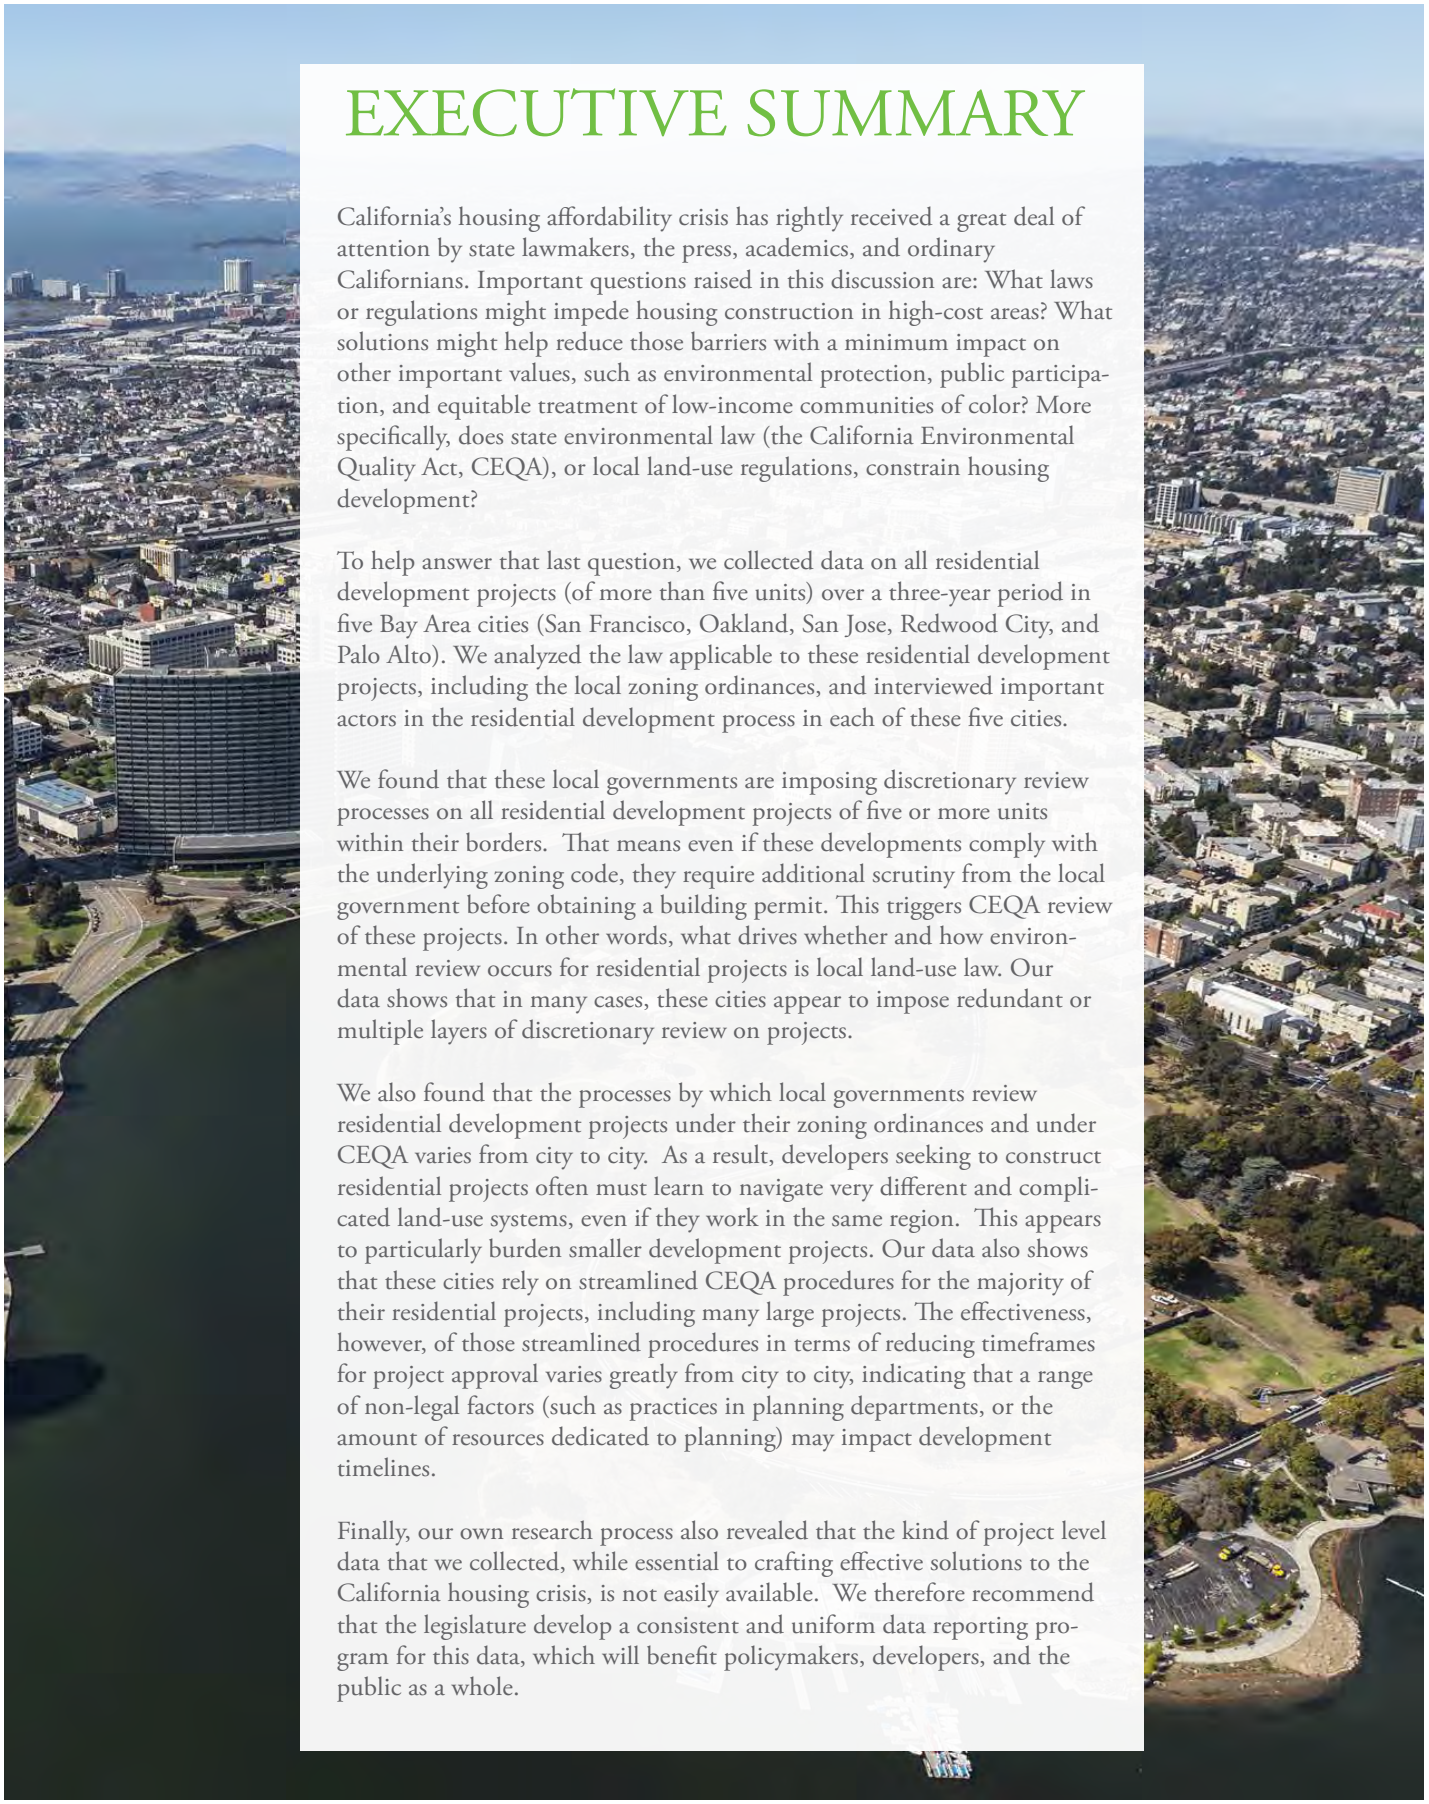
6 Key Finding #1: All residential development over five units is discretionary in each jurisdiction.

7 Key finding #2: The mechanisms by which cities require discretionary review are extremely different, and usually redundant.

9 Key finding #3: How these jurisdictions apply environmental review under the California Environmental Quality Act varies.

12 Key finding #4: There are significant variations in timeframes for entitlements across jurisdictions and across project sizes within the same jurisdiction.

13 Key finding #5: Even when jurisdictions use similar state law provisions to facilitate environmental review, the timeframes can vary.



13 Key Finding #6: There is significant variability across jurisdictions in terms of total projects entitled, total number of units entitled, total number of units entitled per capita, and density of dwellings entitled per acre.

16 What are the implications?

20 What do we recommend right now?

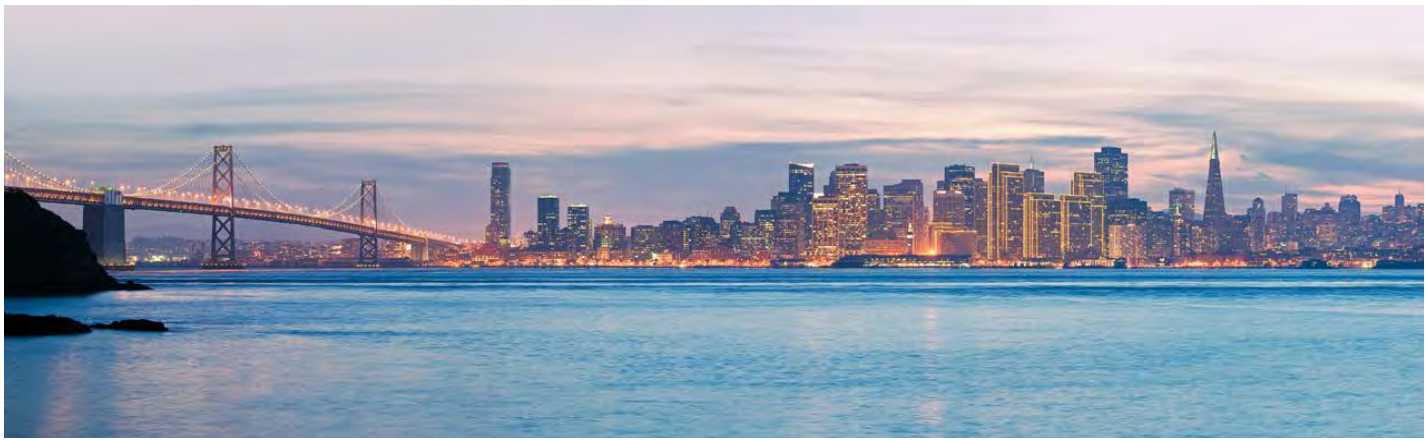
# EXECUTIVE SUMMARY

California's housing affordability crisis has rightly received a great deal of attention by state lawmakers, the press, academics, and ordinary Californians. Important questions raised in this discussion are: What laws or regulations might impede housing construction in high-cost areas? What solutions might help reduce those barriers with a minimum impact on other important values, such as environmental protection, public participation, and equitable treatment of low-income communities of color? More specifically, does state environmental law (the California Environmental Quality Act, CEQA), or local land-use regulations, constrain housing development?

To help answer that last question, we collected data on all residential development projects (of more than five units) over a three-year period in five Bay Area cities (San Francisco, Oakland, San Jose, Redwood City, and Palo Alto). We analyzed the law applicable to these residential development projects, including the local zoning ordinances, and interviewed important actors in the residential development process in each of these five cities.

We found that these local governments are imposing discretionary review processes on all residential development projects of five or more units within their borders. That means even if these developments comply with the underlying zoning code, they require additional scrutiny from the local government before obtaining a building permit. This triggers CEQA review of these projects. In other words, what drives whether and how environmental review occurs for residential projects is local land-use law. Our data shows that in many cases, these cities appear to impose redundant or multiple layers of discretionary review on projects.

We also found that the processes by which local governments review residential development projects under their zoning ordinances and under CEQA varies from city to city. As a result, developers seeking to construct residential projects often must learn to navigate very different and complicated land-use systems, even if they work in the same region. This appears to particularly burden smaller development projects. Our data also shows that these cities rely on streamlined CEQA procedures for the majority of their residential projects, including many large projects. The effectiveness, however, of those streamlined procedures in terms of reducing timeframes for project approval varies greatly from city to city, indicating that a range of non-legal factors (such as practices in planning departments, or the amount of resources dedicated to planning) may impact development timelines.



Finally, our own research process also revealed that the kind of project level data that we collected, while essential to crafting effective solutions to the California housing crisis, is not easily available. We therefore recommend that the legislature develop a consistent and uniform data reporting program for this data, which will benefit policymakers, developers, and the public as a whole.

# WHAT IS AT STAKE?

Housing costs throughout California continue to rise—particularly in metro areas. As the state legislature responded last fall with the passage and signing of housing bills[1] meant to address escalating housing costs, legislators and others acknowledged that more is needed to address California's housing crisis.[2] One recurring theme in the ongoing coverage and discussion of the housing crisis is an argument that state-mandated environmental review under the California Environmental Quality Act (CEQA) is a significant contributor to the housing crisis because it adds time and money to the development process.[3] Local land-use regulations might also play a significant role. Existing research correlates the overall stringency of a jurisdiction's land use regulations with high housing costs.[4] While this research recognizes that multiple components contribute to increased costs, it does not identify which specific elements of local land use regulation or state environmental review contribute disproportionately to housing costs. As economists have observed, the "heterogeneity in land use restrictions across localities is so extensive that it is almost impossible to describe the full complexity of the local regulatory environment."[5] Despite these limitations, the impact of this research and similar work has been far reaching, surfacing in statewide policy briefs.[6]

We assume that regulation of land-use development in California contributes to the state's housing crisis by increasing development approval timelines, which in turn drives up the cost of development. But that still leaves the question of which aspects of state and local regulation are the primary barriers to additional residential development. Answering that question is essential to developing effective legal reforms, and it requires careful analysis of how individual land-use regulations operate within local contexts. CEQA is only one part of the overall regulation of California's land-use development. In general, constructing a major housing development requires local government approval at multiple stages. The approval process to obtain a building permit is referred to as the entitlement process, and CEQA applies to a development if the local government's entitlement process is discretionary. If the development is "as of right"—meaning a development meets certain zoning and planning requirements and does not need any additional scrutiny by the local government to get a building permit—as a general matter, no CEQA compliance is required. In addition, CEQA can take a range of forms and impose different levels of burden on the developer. Local governments often have significant ability to shape the kinds of CEQA compliance that individual developments must satisfy.

If CEQA poses a significant obstacle to housing development, then legal reform that minimizes the loss in environmental protection while allowing for increased housing production might be the right approach. But because CEQA comes into play where a local government has the discretion to approve/disapprove a proposed project, targeting a state environmental review statute may do little to address the housing supply crisis if local regulation of land-use development through planning and zoning is the real issue. Misguided CEQA reform could undermine environmental protection throughout the state without providing meaningful improvements to our housing situation.

# WHAT ARE WE STUDYING?

Determining whether a state law like CEQA drives delays in entitlements within local jurisdictions requires answering two important questions: (1) How much development is actually occurring as of right, and how much development is subject to discretionary government review within local jurisdictions? (2) If CEQA environmental review is occurring, in what form does it take?

To answer these questions, we used case studies[7] to better understand a local problem with regional and statewide implications. For our first set of case studies, we selected charter cities* of various sizes within the same strong market region—the Bay Area in Northern California.

All five cities, Oakland, Palo Alto, Redwood City, San Francisco, and San Jose, are located within the same regional economy characterized by robust economic growth, high housing demand that outstrips supply and acute affordability issues.[8] All of the cities have the capacity for Transit Oriented Development (TOD).[9] Housing development within this region would therefore promote sustainable growth goals.

We also chose our first cities from the Bay Area because the California Legislative Analyst's Office has attributed high housing costs statewide in large part to the lack of housing supply in California's coastal communities.[10] That report specifically identified the San Francisco Metropolitan Division (MD) and the San Jose-Sunnyvale-Santa Clara Metropolitan Statistical Area (MSA) as having the first and second highest housing costs in the state in 2015, with the Oakland-Hayward-Berkeley MD having fourth highest housing costs statewide. And all five cities have complex local land use ordinances that typify the type of stringent regulation called out by existing research. These five cities therefore offered an excellent starting point for this research.

Each of our case studies began with a review of local ordinances[11] that contain planning and zoning rules, followed by careful analysis of how each residential development of five or more units navigated the entitlement process in 2014, 2015, and 2016.[12] Next, we completed a total of 29 in depth interviews with city planners, market rate and affordable housing developers, consultants, private counsel, city attorneys, and representatives from community-based organizations, across these five cities.[13] These interviews uncovered local perceptions of the approvals process, the role of community in the public approvals process, and important project context (including the local political climate and community tensions at play) not immediately obvious in the specific project data. While we are continuing our research and adding jurisdictions to our data set, we present initial findings from our research on these five cities below. This is only the first in a series of reports that will detail our findings, and these findings are limited to data pulled from our first set of cities. We are collecting additional data from other cities throughout the state.

* Charter cities within California enjoy some freedom to legislate at the local level over "municipal affairs" even if a conflict with State law may exist under Article XI, section 5 of the California Constitution. Although the California Constitution does not expressly define "municipal affair," land use and zoning are consistently classified as exempt from the planning and zoning provisions of the California Government Code unless the city's charter indicates otherwise. See e.g., CAL. GOV'T CODE §§ 65803, 65860(d); *City of Irvine v. Irvine Citizens Against Overdevelopment*, 25 Cal. App. 4th 868, 874 (1994).

# WHAT HAVE WE LEARNED SO FAR?

## Key Finding #1: All residential development over five units is discretionary in each jurisdiction.

All of the jurisdictions we examined require discretionary review for residential developments of five or more units. In fact, in four of our five Bay Area jurisdictions, residential developments of two or more units require discretionary approval. That means even if these developments comply with the underlying base zoning district's use and density requirements, they require additional scrutiny from the local government before obtaining a building permit. The table in Figure 1, below, provides an overview.

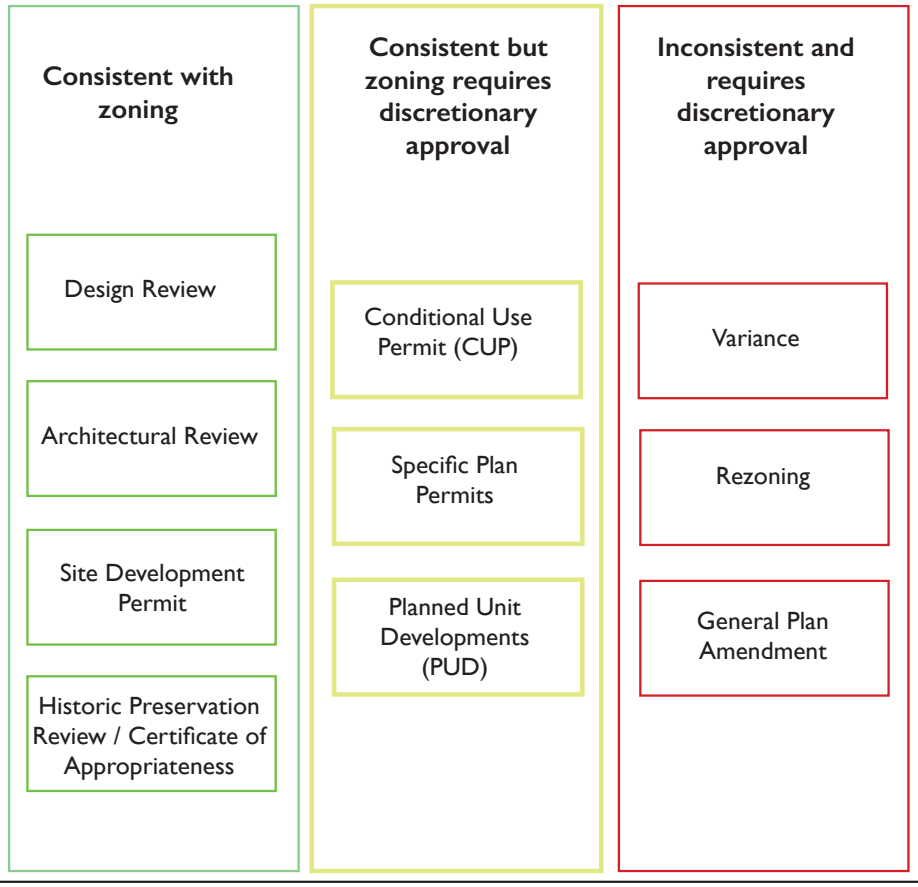


**Figure 1. Discretionary Review of Developments Consistent with Base Zoning**

| Jurisdiction | Primary Discretionary Review Mechanism | Residential Developments Exempt from Discretionary Review |
|---|---|---|
| San Francisco | Building Permits | None |
| San Jose | Site Development Permit | Single-family homes in limited circumstances[14] |
| Redwood City | Architectural Permit | One-story single family homes and duplexes |
| Palo Alto | Architectural Review | Up to two single-family homes and two duplexes[15] |
| Oakland | Design Review | Secondary units |

## Key Finding #2: The mechanisms by which cities require discretionary review are extremely different, and usually redundant.

California land use law offers cities a range of tools to review and approve housing development. Cities typically choose among these tools to ensure discretionary review of residential development. These five cities demonstrate how varied those choices are. Though cities generally draw on land-use law tools to ensure discretionary review, San Francisco's city charter imposes discretionary review on all new developments.[16]

**Figure 2. Types of Discretionary Review Mechanisms**

The first column lists tools that impose discretionary review that are applied even where a proposed project is consistent with the underlying base zoning district's use and density requirements. The second column lists requirements for discretionary review for categories of projects that are built within the framework of the zoning ordinance—in other words, the zoning ordinance itself contemplates that some projects must obtain one of these types of permits. The third column provides categories of discretionary review that attach to a project when the proposed project would not comply with the zoning ordinance; this includes when the developer is seeking an exemption from the zoning ordinance (variance), or asking the city to zone the project site differently (rezoning), or change or update the General Plan to allow for the proposed project.

**Figure 3. Instances of Discretionary Review across Jurisdictions**

| | Design / Site Plan Review | Historic Preservation | CUP | Specific Plan Permit | PUD | Variance | Rezoning | General Plan Amendment | Total Number of Projects |
|---|---|---|---|---|---|---|---|---|---|
| San Francisco | N/A | N/A | 26 | 46 | 2 | 29 | 1 | 1 | 85 |
| San Jose | 13 | 3 | 0 | N/A | 52 | 0 | 48 | 5 | 67 |
| Oakland | 66 | 0 | 31 | N/A | 1 | 26 | 2 | 0 | 67 |
| Palo Alto | 5 | 1 | 0 | N/A | 0 | 3 | 0 | 0 | 5 |
| Redwood City | 9 | 4 | 0 | 4 | 4 | 2 | 0 | 0 | 13 |

As the table in Figure 3 shows above, the total numbers of land use/planning approvals (such as rezonings, conditional use permits, or General Plan amendments) are greater than the number of overall development projects in each jurisdiction. This suggests there are significant redundancies in the way these jurisdictions map discretionary review to residential developments. A single project might need to obtain Design Review approval and a Minor Variance from the Director of the Planning Department and a rezoning from the City Council.[17] This requires navigating multiple levels of local government where only one approval process would be sufficient to pull the project within the scope of local discretion. It should also be noted that if the development requires the subdivision of land into smaller parcels, additional discretionary review by local governments generally applies as well.

## Key Finding #3: How these jurisdictions apply environmental review under the California Environmental Quality Act varies.

These cities take a diverse range of approaches to comply with CEQA requirements. As Figures 5 and 6 show, relatively few projects within these five cities require a full Environmental Impact Report process (or EIR). Many of these jurisdictions appear to be making good faith efforts to increase their supply of housing by engaging in specific planning strategies that link housing and jobs to transportation and facilitate environmental review for developers. This means that the city is tapping into state-level sustainable development initiatives and doing the bulk of the work to comply with state environmental review requirements, rather than imposing additional time and costs on to developers to comply with CEQA. Like the discretionary review mechanisms discussed above, many projects are receiving multiple CEQA exemptions, which leaves open the question of exploring why planners take these additional measures.

Analyzing project size as a function of CEQA, our data shows that projects with EIRs in these cities generally tend to be larger than projects that undergo other types of CEQA review (see Figure 7). Nevertheless three jurisdictions—San Francisco, Oakland, and Redwood City—did not prepare an EIR for their single largest project in our dataset years. Significant variations in other categories also persist. Project and Tiering-Based Exempt* projects in San Jose tend to be larger on average than EIR projects in Oakland. Projects with (Mitigated) Negative Declarations** in San Jose are smaller than Exempt projects in all jurisdictions but Palo Alto.

Because so many projects complete CEQA review via mechanisms other than EIRs, a large majority of all approved units did not require an EIR for project-level CEQA review. Our data indicates that compliance routes other than EIRs are not reserved for extremely minor projects, and are a key component of infill residential development in California.

* Tiering is way to streamline environmental review under CEQA by allowing environmental review of a proposed project to focus on a narrow set of issues that have not already been evaluated in a prior EIR. It necessarily requires a prior EIR that is usually connected to a prior and large-scale planning approval (for a community plan or specific plan, for example).

** A Mitigated Negative Declaration is a CEQA document where a developer recognizes that a project as originally proposed would have had significant environmental impacts, so the developer proposes modifications that instead will take certain steps to eliminate the risk of significant environmental impacts.

**Figure 4. Types of CEQA Review Mechanisms**

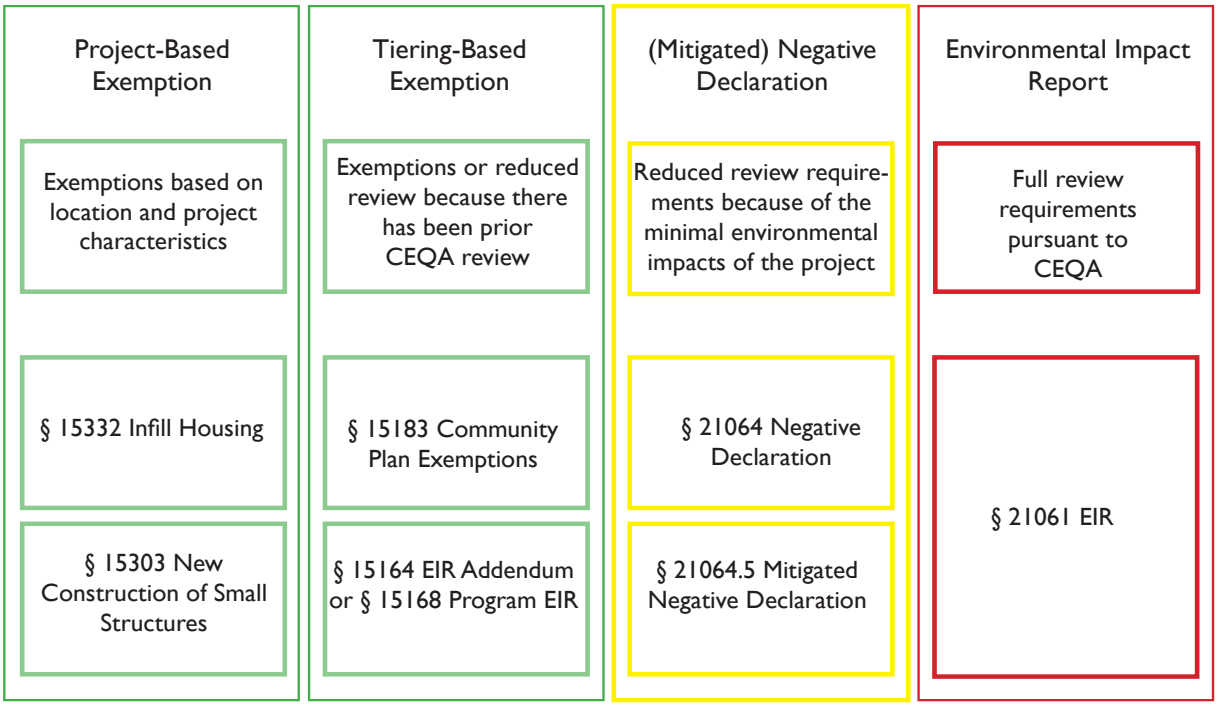

**Figure 5. Instances of CEQA Review across Jurisdictions**

| | Project- Based Exemptions | Tiering-Based Exemptions | Mitigated Negative Declaration | Negative Declaration | EIR | Total Number of Projects |
|---|---|---|---|---|---|---|
| San Francisco | 4 | 68 | 7 | 2 | 6 | 85 |
| San Jose | 1 | 30 | 23 | 4 | 13 | 67 |
| Oakland | 56 | 66 | 0 | 0 | 2 | 67 |
| Palo Alto | 2 | 1 | 1 | 0 | 1 | 5 |
| Redwood City | 2 | 9 | 1 | 4 | 1 | 13 |

**Figure 6. Percentages of CEQA Review Type by Project**

| | Project-Based and Tiering Exemptions | MND/ND | EIR |
|---|---|---|---|
| San Francisco | 82% | 11% | 7% |
| San Jose | 44% | 38% | 18% |
| Oakland | 98% | 0% | 2% |
| Redwood City | 65% | 29% | 6% |
| Palo Alto | 60% | 20% | 20% |

**Figure 7. Mean Project Size (Units) by CEQA Review Type**

| | Project-Based and Tiering Exemptions | MND/ND | EIR |
|---|---|---|---|
| San Francisco | 92 | 140 | 229 |
| San Jose | 186 | 66 | 382 |
| Oakland | 78 | 0 | 172 |
| Redwood City | 96 | 105 | 8 |
| Palo Alto | 30 | 8 | 180[18] |

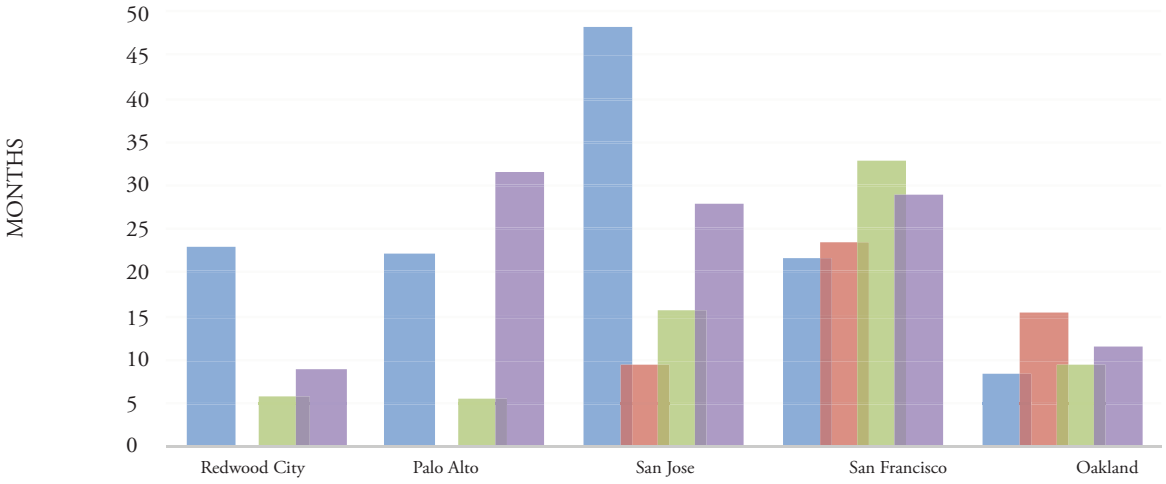
**Figure 8. Total Number of Units Per CEQA Review Type[19]**

| | Project-Based Exemptions | Tiering-Based Exemptions | MND/ND | EIR | Total Number of Units |
|---|---|---|---|---|---|
| San Francisco | 269 | 5,885 | 1,260 | 1,121 | 8,534 |
| San Jose | 15 | 5,310 | 1,778 | 4,473 | 11,575 |
| Oakland | 1,797 | 4,071 | 0 | 284 | 6,152 |
| Redwood City | 102 | 696 | 268 | 8 | 1,074 |
| Palo Alto | 19 | 70 | 8 | 180 | 277 |
| Total | 2,202 | 16,031 | 3,314 | 6,065 | 27,612 |

## Key Finding #4: There are significant variations in timeframes for entitlements across jurisdictions and across project sizes within the same jurisdiction.

Figures 9 and 10 show the mean and median approval timelines for projects of varying sizes in each jurisdiction. Projects that experienced unusually slow or fast approval timeframes heavily influence the mean approval timeline. Median time frames more accurately reflect the time frames a typical project would experience.

**Figure 9. Mean Approval Time by Project Size**



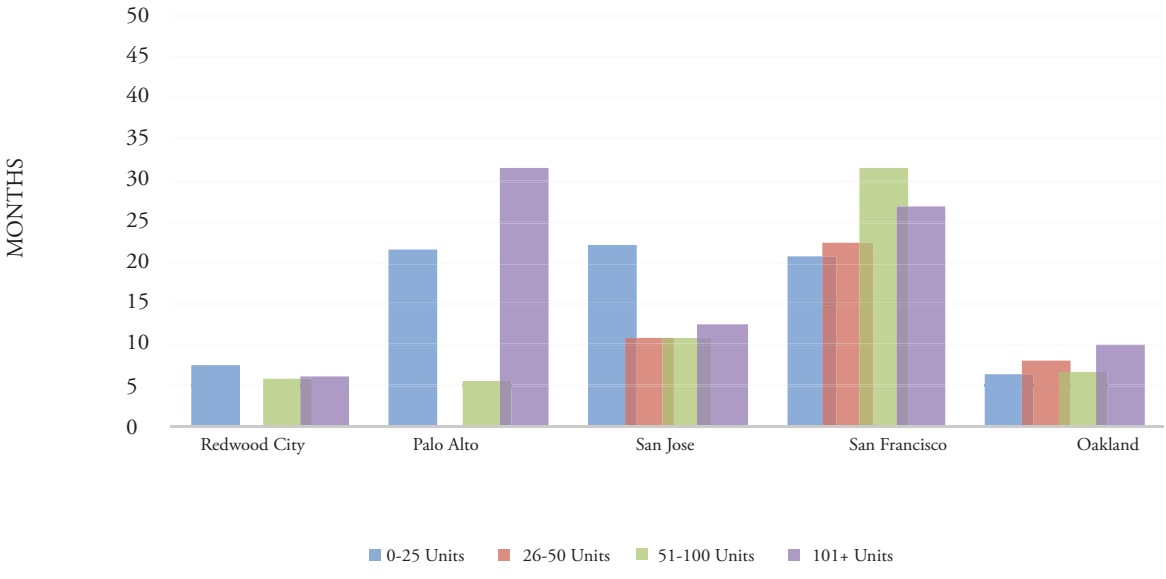


**Figure 10. Median Approval Time by Project Size**

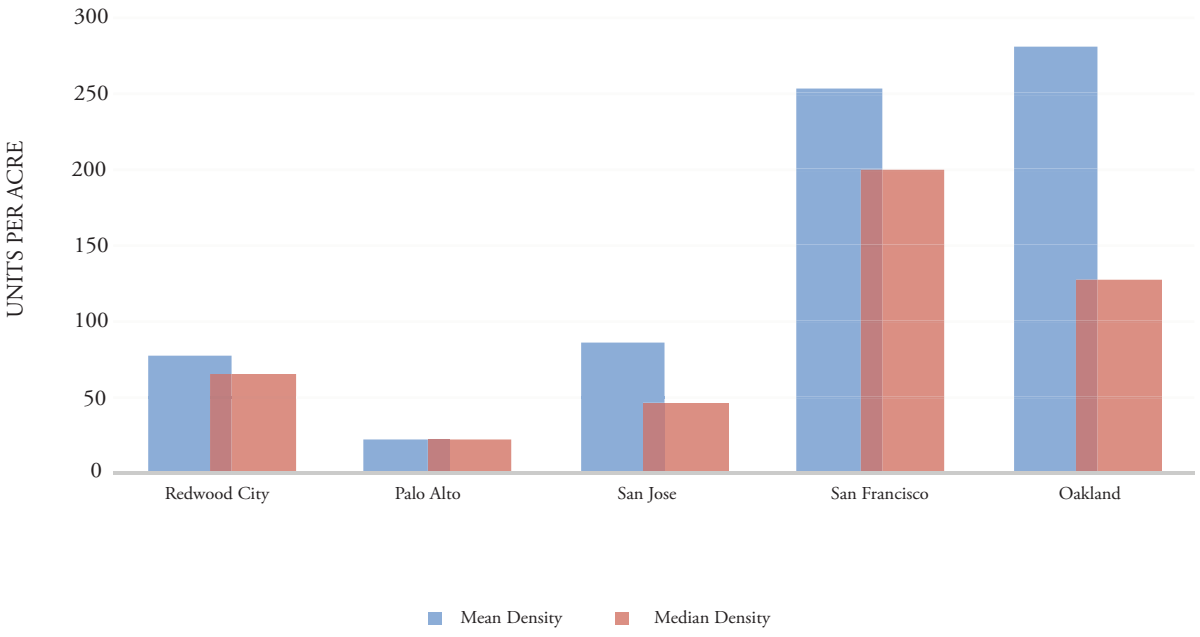
## Key Finding #5: Even when jurisdictions use similar state law provisions to facilitate environmental review, the timeframes can vary.

These cities apply the same environmental review provisions in different ways—with significant variations in the timelines for entitlement. For example, the City of Oakland and the City of San Francisco both use the § 15183 Community Plan Exemptions (CPE) to reduce CEQA compliance obligations for proposed projects within plan areas* that have a relatively recent full EIR that the respective city completed. But Oakland's CPE process moves much faster than San Francisco's. The median CPE entitlement in Oakland is 7 months. In San Francisco, a CPE takes 23 months (nearly two years). In contrast, a full EIR in San Jose, for which no prior study has occurred, takes 24 months. [20]

## Key Finding #6: There is significant variability across jurisdictions in terms of total projects entitled, total number of units entitled, total number of units entitled per capita, and density of dwellings entitled per acre.

Measuring the time it takes to entitle a project is one way to understand how entitlement processes enable development in a jurisdiction. Counts of actual projects and units are another. The table below provides a summary of how many projects and how many units these five cities entitled in 2014, 2015, and 2016. Project and unit count alone cannot convey a complete picture of how entitlement processes operate within each city. By calculating how many units each city is entitling per capita,[21] we can get a better sense of how many units each city is entitling relative to their respective sizes measured by population. Examining the data this way, we see that Oakland entitles the most units given its population size, followed by Redwood City, then San Jose, San Francisco, and Palo Alto (see Figure 11).



Calculating both the mean and median number of dwelling units per acre in each jurisdiction can also allow us to compare projects entitled in each jurisdiction in terms of density, which has important implications for state level sustainability goals.[22] Our data indicates that projects entitled in San Francisco, generally, during this three year period are of a higher density than the other jurisdictions we examined (see Figure 12); however, high mean density values observed in jurisdictions like Oakland suggests that there are a small number of very dense projects being approved, despite lower overall density. San Jose—which on average entitles the largest projects of our case study jurisdictions—has relatively low density even when compared to smaller jurisdictions like Redwood City.

* Plan Area terminology varies according to jurisdiction and the size of the plan area. Redwood City refers to these plans as "Precise Plans," San Jose and Oakland both use the terms "Area Plans" and "Specific Plans," and San Francisco calls them "Area Plans."

**Figure 11. Project and Units Entitled Per Capita**

| | Total Projects | Total Units | Units Per 1,000 People |
|---|---|---|---|
| Oakland | 67 | 6,152 | 15 |
| Redwood City | 13 | 1,074 | 13 |
| San Jose | 67 | 11,575 | 11 |
| San Francisco | 85 | 8,534 | 10 |
| Palo Alto | 5 | 277 | 4 |

**Figure 12. Dwelling Units Per Acre**

# WHAT ARE THE IMPLICATIONS?

**In these cities, the pace of housing development appears to be driven by the amount and sequence of discretionary review, not the CEQA process.** These five local governments are choosing to opt into CEQA through their choice to embed discretionary review into the entitlement process. The problem (and potential costs) associated with environmental review do not appear to originate with state environmental regulation. Also, some of our interview participants discussed the necessity of "bullet-proof EIRs"* to forestall CEQA litigation from neighborhood groups. But we have not observed many of these EIRs in these five cities, suggesting that the variation in entitlement process timelines between these five cities may not be easily attributed to neighborhood groups abusing state regulation in response to proposed project characteristics. While op-eds, research, and reform proposals often focus on EIRs and CEQA litigation,[23] the data from these five cities indicates that some of the largest projects, those that are the most likely to have significant environmental impacts, did not require EIRs (although EIR projects do tend on average to be larger than non-EIR projects).

This data also shows how these cities, while preserving their discretionary review, are often employing tools to facilitate CEQA compliance. As Figures 9 and 10 above show, large projects do not always take longer to entitle than small projects, which suggests local practices in a given jurisdiction—rather than project-specific characteristics—are driving the entitlement timeline. These practices vary, but they tend to be outside the control of the developer-applicant. Examples we observed in our cities range from staff-level variations in performing application intake and departmental pre-selection of environmental consultants, to higher-level decisions about the amount of commercial development that must occur before a developer-applicant can even propose residential development. These choices in practice might also be a response to political and fiscal pressures that also prompt cities to embed discretionary review into the entitlement process. We are pursuing additional research now to better understand this issue, and to explore what is occurring in other jurisdictions throughout the state.

**The lack of consistency in the entitlement process across these jurisdictions makes it difficult to navigate development within each of these cities unless you have substantial local knowledge.** Though entitlement processes remain fairly consistent within a given jurisdiction, the variation across these jurisdictions presents informational barriers for newcomers to the market—even for some working within the same region. This complexity and variation may also impact the capacity of planning staff to help developers understand the entitlement process. Our interview data also confirms that well-capitalized developers with existing relationships and experience in specific jurisdictions are the best situated to navigate these complex local contexts, providing them a competitive advantage. Also, as noted, larger projects do not necessarily take more time, and often take less time, than smaller projects. If environmental review were the issue, this is not intuitive. This suggests that larger projects—to the extent that they benefit from expertise and better capitalization—can navigate the process in these cities in less time than smaller-scale developments. This could raise concerns about monopolization as the cost of acquiring local knowledge keeps new market participants out. The difficulty in accessing this data for our research purposes, described below, also lends support to this proposition.

* "Bullet-proof" refers to an EIR document that has sufficient analysis of environmental impacts and technical information to withstand judicial review should the project be challenged in court.

**Dealing with process is a necessary but insufficient approach to reform.** There is variability in outcomes across jurisdictions because of different local processes and local planning practices. The data shows that even where two cities use identical state law provisions to facilitate the environmental review process, the approval timelines still vary considerably. The example provided above, comparing San Francisco and Oakland, illustrates this. Oakland's code, while similar to San Francisco's, appears more inflexible.* And yet the entitlement process employed in Oakland still takes considerably less time. Interview data also suggests that local politics informs local interpretation and application of state law and local land-use ordinances. This suggests that proposed reforms should contemplate standardizing more planning practices across jurisdictions.

In other cases, local process and planning practice are not even the issue. San Francisco, for example, is unique in that it does not impose design or site development review on all projects. Absent its city charter that renders building permits discretionary, San Francisco would have permitted as of right eight projects — each ranging from 8 to 22 units. As Figure 1 shows, no other planning code in our other four case studies would permit this level of development without a discretionary approval. This is an example of how a charter city can impose discretionary review through a mechanism outside of the formalized planning process.

The variation in processes at the local level is substantial enough that without good data, there is a risk of unintended negative consequences when attempting to reform local process at the state level. Extracting project-level data is time and resource intensive. We know from our ongoing research that few jurisdictions statewide have development approval data in one centralized repository. Requiring jurisdictions to provide access to project-specific data on land use approvals, CEQA compliance, and overall time frames will help inform top down policy making in critical ways.

For example, recently enacted legislation such as SB-35[24] attempts to lift the Conditional Use Permit (CUP) requirement for certain projects consistent with zoning, but the complexity of the entitlement processes may prevent this legislation from accomplishing what is needed in these five cities. One such example is the myriad of specific plan approvals imposed on zoning compliant projects that happen to be located within a specific plan area.[25] Though these approvals are functionally similar to CUPs, on paper they are different processes. San Jose provides another example. Most projects in San Jose go through the Planned Unit Development (PUD) process, which requires a rezoning and renders a project ineligible for SB-35. Yet the same PUD process in San Francisco and Oakland can occur without a rezoning. Even though the PUD process is accomplishing the same goals in these jurisdictions, the application is markedly different. Without knowledge of these nuances, lawmakers cannot draft legislation that accurately targets the problem and provides clear guidance to local stakeholders. Moreover, without an understanding of the distribution of non-zoning compliant projects entitled each year, lawmakers might find their legislative tools are not solving the right problems. Also, our data shows that local governments want to retain discretion over new development. SB-35 may not be able to avoid cities downzoning or enacting more inflexible design criteria to force all approvals through a rezoning or variance process that is not subject to state streamlining.

* Flexibility refers the degree to which developers must obtain relief from the zoning use and design controls to build their projects. The high occurrence of variances and CUPs in Oakland — both of which provide relief from design controls — are indicative of an inflexible code in that developers must frequently obtain relief from its requirements.

The risks of policymaking without access to data also implicate broader concerns than a simple housing production metric. The recently proposed SB-827[26] targets all local land use discretion for certain kinds of infill development near transit. Though this is arguably the most effective approach to address the constraints that local land use regulation imposes on housing production, our data also highlights potential shortcomings. Here, we identify two. First, there is a potential impact on environmental protections. A significant number of projects are subject to CEQA processes that impose mitigation measures.* In some instances, this environmental review and mitigation process is much more than a formality. The classic example of this is the Mitigated Negative Declaration (MND) process. Jurisdictions like San Francisco and San Jose use tiering or community plan exemptions to impose project-level mitigations; this suggests that infill developments are having impacts on air, water, and traffic significant enough for jurisdictions to require mitigation. Unless there are environmental protections already embedded in local ordinances or state law to address the environmental impacts requiring these mitigations, eliminating discretionary review might allow for environmental impacts that these mitigations would have prevented. If discretionary review goes away, lawmakers should contemplate how to replicate these protections at a state level or mandate that local governments address these issues through non-discretionary local regulatory standards.

Second, there is a risk of harming the least empowered and most vulnerable within cities. Eliminating discretionary review impacts community voice. Discretionary review typically requires a public hearing, which enables community participation. Existing research shows that updating the General Plan or enacting specific plans are costly endeavors typically funded from a city's general fund.[27] For jurisdictions that do not regularly engage in these macro-level planning processes, project-level approvals provide one of the few mechanisms for the community to participate in the development of their city. And even in jurisdictions that do use these planning processes, not all community members are equally empowered to participate in the planning process. So long as issues of inequity in the planning process persist because some residents and neighborhoods have substantially more political power than others, any proposed reform that targets discretionary review without a clear focus on equity risks disproportionately harming vulnerable populations with the least amount of political power.

To be clear, our interview data suggests that contemplating equity in a proposed reform does not mean that retaining all current local discretion over development is the best path forward. Our interview data suggests that in some instances, taking away a measure of local control can offer a shield to local officials that have demonstrated a willingness to approve sustainable affordable housing development despite substantial pushback from affluent and powerful neighborhood groups unwilling to contemplate any development within their community. But not all of our five cities are situated similarly. They are diverse in not just in terms of population size, but in terms of land values, public resources, and demographics. Just as some cities cannot afford to engage community in the same way as others, some cities must pursue cost-sharing with developers to promote affordable housing development and infrastructure improvements. Thus, legal reform should not be blunt; it should be carefully tailored to address the imbalance of power that exists within cities and within the region (between cities).

* Mitigation is a feature of a proposed project design that reduces what would have been a significant environmental impact by avoiding, minimizing, or compensating for a potential adverse effect that would have otherwise created a significant environmental impact.

STOP

# WHAT DO WE RECOMMEND RIGHT NOW?

**The value of improving access to good data cannot be overstated.** Although top-down state reform of environmental regulations (or local regulation over land use) may encounter substantial difficulties, something the state could do now would be to provide guidance to jurisdictions on how to provide better access to accurate project-specific data on land use approvals, and require all jurisdictions to maintain relevant data in a central repository. Improving the quality of data and access to data would help researchers and policymakers identify how long these processes take, and identify inefficiencies and redundancies that exist in local processes. Being able to determine how long each process takes could in turn immediately help affordable housing developers determine what necessary funding is required for the entitlement process.

Each jurisdiction we studied readily provided any requested data to the extent they had it (without a public records request), and it was clear that each jurisdiction works to make data publicly accessible. Still, we discovered in our own research process that our findings are limited both by the availability and accuracy of data in the various planning databases of any given jurisdiction. In Oakland for example, some projects elect to go through a pre-application process prior to formally submitting their application for review, which could influence approval timelines.[28]

In other jurisdictions, the complexity of the planning process is not fully reflected in the data that is publicly accessible. San Francisco employs a streamlined application process that integrates processes that constitute distinct approval pathways in other jurisdictions, like design review and historic resources review. Just because there are no formal design review or historic resources approvals in San Francisco does not mean these processes are not happening. San Francisco's various specific plan permits also combine what is essentially a CUP and variance process into one, which reduces the number of CUPs and variances in that jurisdiction. More projects are receiving variances than these numbers suggest. Jurisdictions like San Jose, on the other hand, employ very distinct approval processes, which also influences timeline. The majority of developments in San Jose go through the PUD process, which involves a rezoning and a permit approval that happen sequentially rather than in tandem. Our interviews suggest that often developers complete the rezoning and sell the land to a different developer who then secures the permit phase of the approval. The time lag between the two milestones might slightly exaggerate approval timelines in San Jose for PUD projects.

Though all our five cities make efforts to provide access to project approval data, this access could be greatly improved by providing the information in a centralized repository that uses consistent terminology across jurisdictions. To the extent that processes are so dissimilar that they cannot be analogized, this centralized repository should contain explanations. Smaller steps would also be welcome. Linking existing geographic information systems (GIS) or zoning data with assessor parcel information and building permit systems, for example, would be a great first step, particularly because housing element law at the time only required annual reporting based on building permits issued not numbers of units entitled. In our experience, it is not always easy to cross-check housing element reporting obligations with building entitlements because not everything that gets entitled is immediately built. Linking these systems to provide this data could make housing element reporting more robust.

[11] These ordinances include the San Francisco Planning Code, the Oakland Planning Code, the Redwood City Zoning Ordinance, the San Jose Zoning Ordinance, and the Palo Alto Zoning Ordinance.

[12] Because residential development larger than 5 units in Palo Alto rarely occurs, our findings for this jurisdiction are based on an extremely limited sample size.

[13] In some instances, individuals we interviewed worked in, or for, two or more of the cities within our group of five.

[14] To be exempt from site development permit, single family homes must meet height, FAR, and lot size requirements and cannot be located in riparian areas. San Jose Municipal Code § 20.100.1030(A)-(C).

[15] To qualify for design review exemption, the proposed development cannot be located in a conservation zone. Palo Alto Municipal Code § 18.76.020(b)(2)(D).

[16] A city charter is the constitution for that local government. The provision of San Francisco's charter rendering all permits discretionary can be found in the San Francisco Business and Tax Regulations Code § 26(a).

[17] Although in many jurisdictions, Zoning Administrators and Planning Directors can allow the Planning Commission to issue variances for certain projects.

[18] The MND/ND and EIR processes in Palo Alto only have one project each, so we are unsure of how representative these projects are generally of the process. The 180-unit EIR development, for example, which will provide faculty housing for Stanford as part of the larger Mayfield Development Agreement, is out of scale with the typical development pattern in Palo Alto.

[19] Because many projects undergo more than one CEQA review type, we weighted units across the total number of CEQA review types. For example, a 100-unit project that received both a Community Plan Exemption (CPE) and an EIR was weighted 50 units in each category.

[20] Some jurisdictions apply different types of CEQA review to a single project. A CPE in Oakland is often combined with a § 15332 exemption. EIRs in San Jose are often paired with later addendums or supplemental EIRs. A CPE in San Francisco can be paired with a Focused EIR. The numbers above do not control for these multiple types of CEQA review due to the small sample sizes that would result. Even controlling for types of CEQA review, the general trends holds true. Projects that only received a CPE in Oakland took 7 months; projects in San Francisco that only received a CPE still take 23 months; projects that only received an EIR in San Jose took 14 months.

[21] Population data is from ACS 2016 5-Year Estimates.

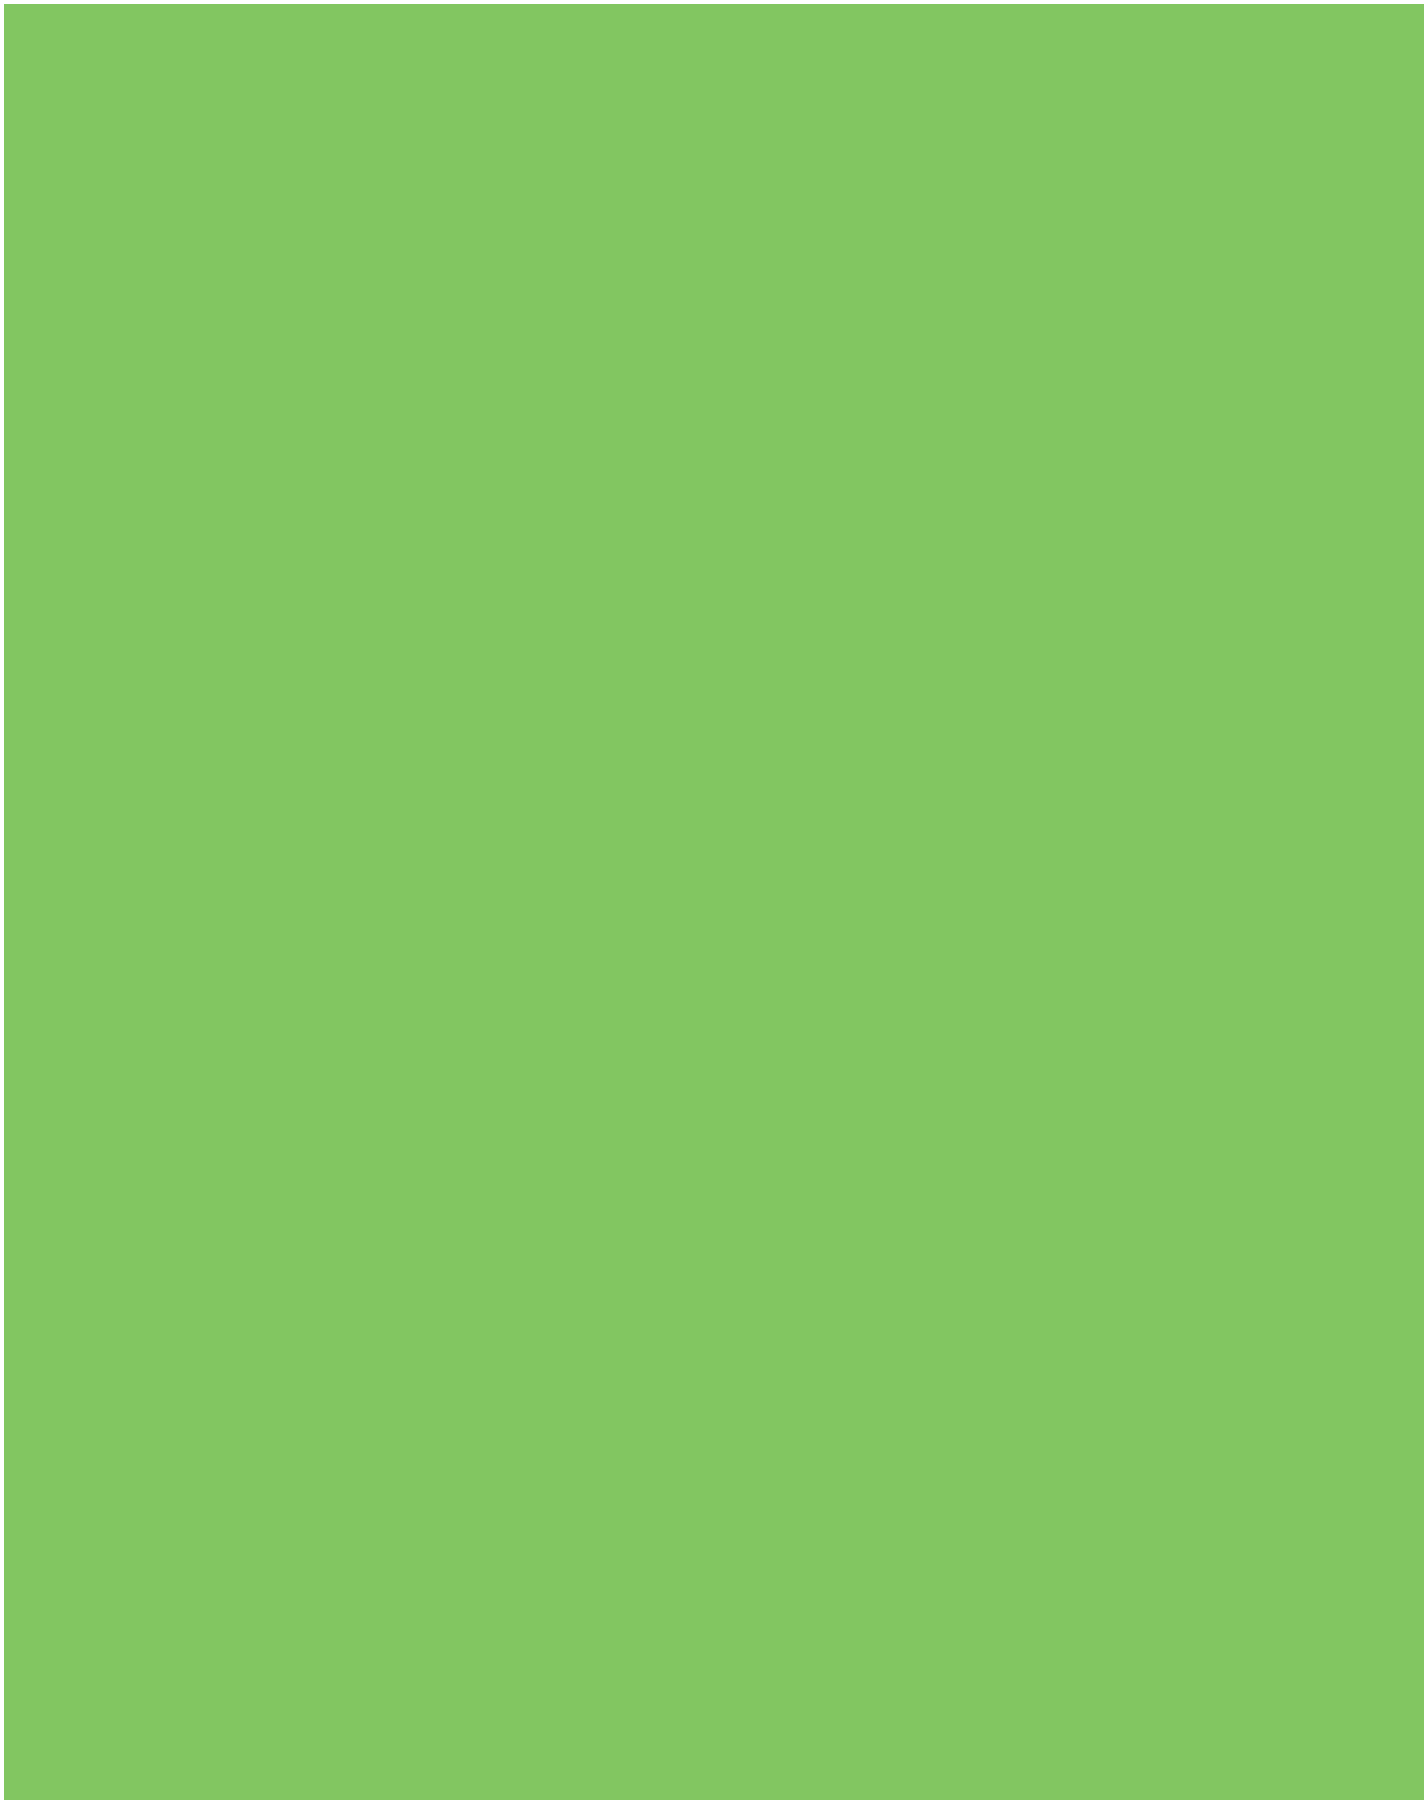
[23] *See* Jennifer Hernandez, David Friedman & Stephanie Deherrera, In the Name of the Environment, Holland & Knight (2015).



[24] *See* S.B. 35, 2017–18 Leg., Reg. Sess. (Cal. 2018).

[25] Examples of this include the Large Project Authorization in certain use districts of San Francisco's Eastern Neighborhoods plan area or the Planned Community Permit in Redwood City's Downtown Precise Plan. San Francisco Planning Code § 329; Redwood City Zoning Code § 47.1-47.5.

[26] *See* S.B. 827, 2017–18 Leg., Reg. Sess. (Cal. 2018).

[27] Robert B. Olshansky, *The California Environmental Quality Act and Local Planning*, 62 J. AM. PLAN. ASS'N 313, 319-320 (1996).

[28] Oakland's pre-application dates were not consistently available in the system. This means that what appears to be relatively fast approval times in Oakland might be influenced by these incomplete database entries. Similarly, in Oakland, some projects had the same approval date as initial application date. Where possible, we found the underlying approval documents to correct for this inaccuracy in the system. But the approval documents for three projects were unavailable, so we removed them from our data set, which slightly decreased the total unit and project numbers for Oakland.

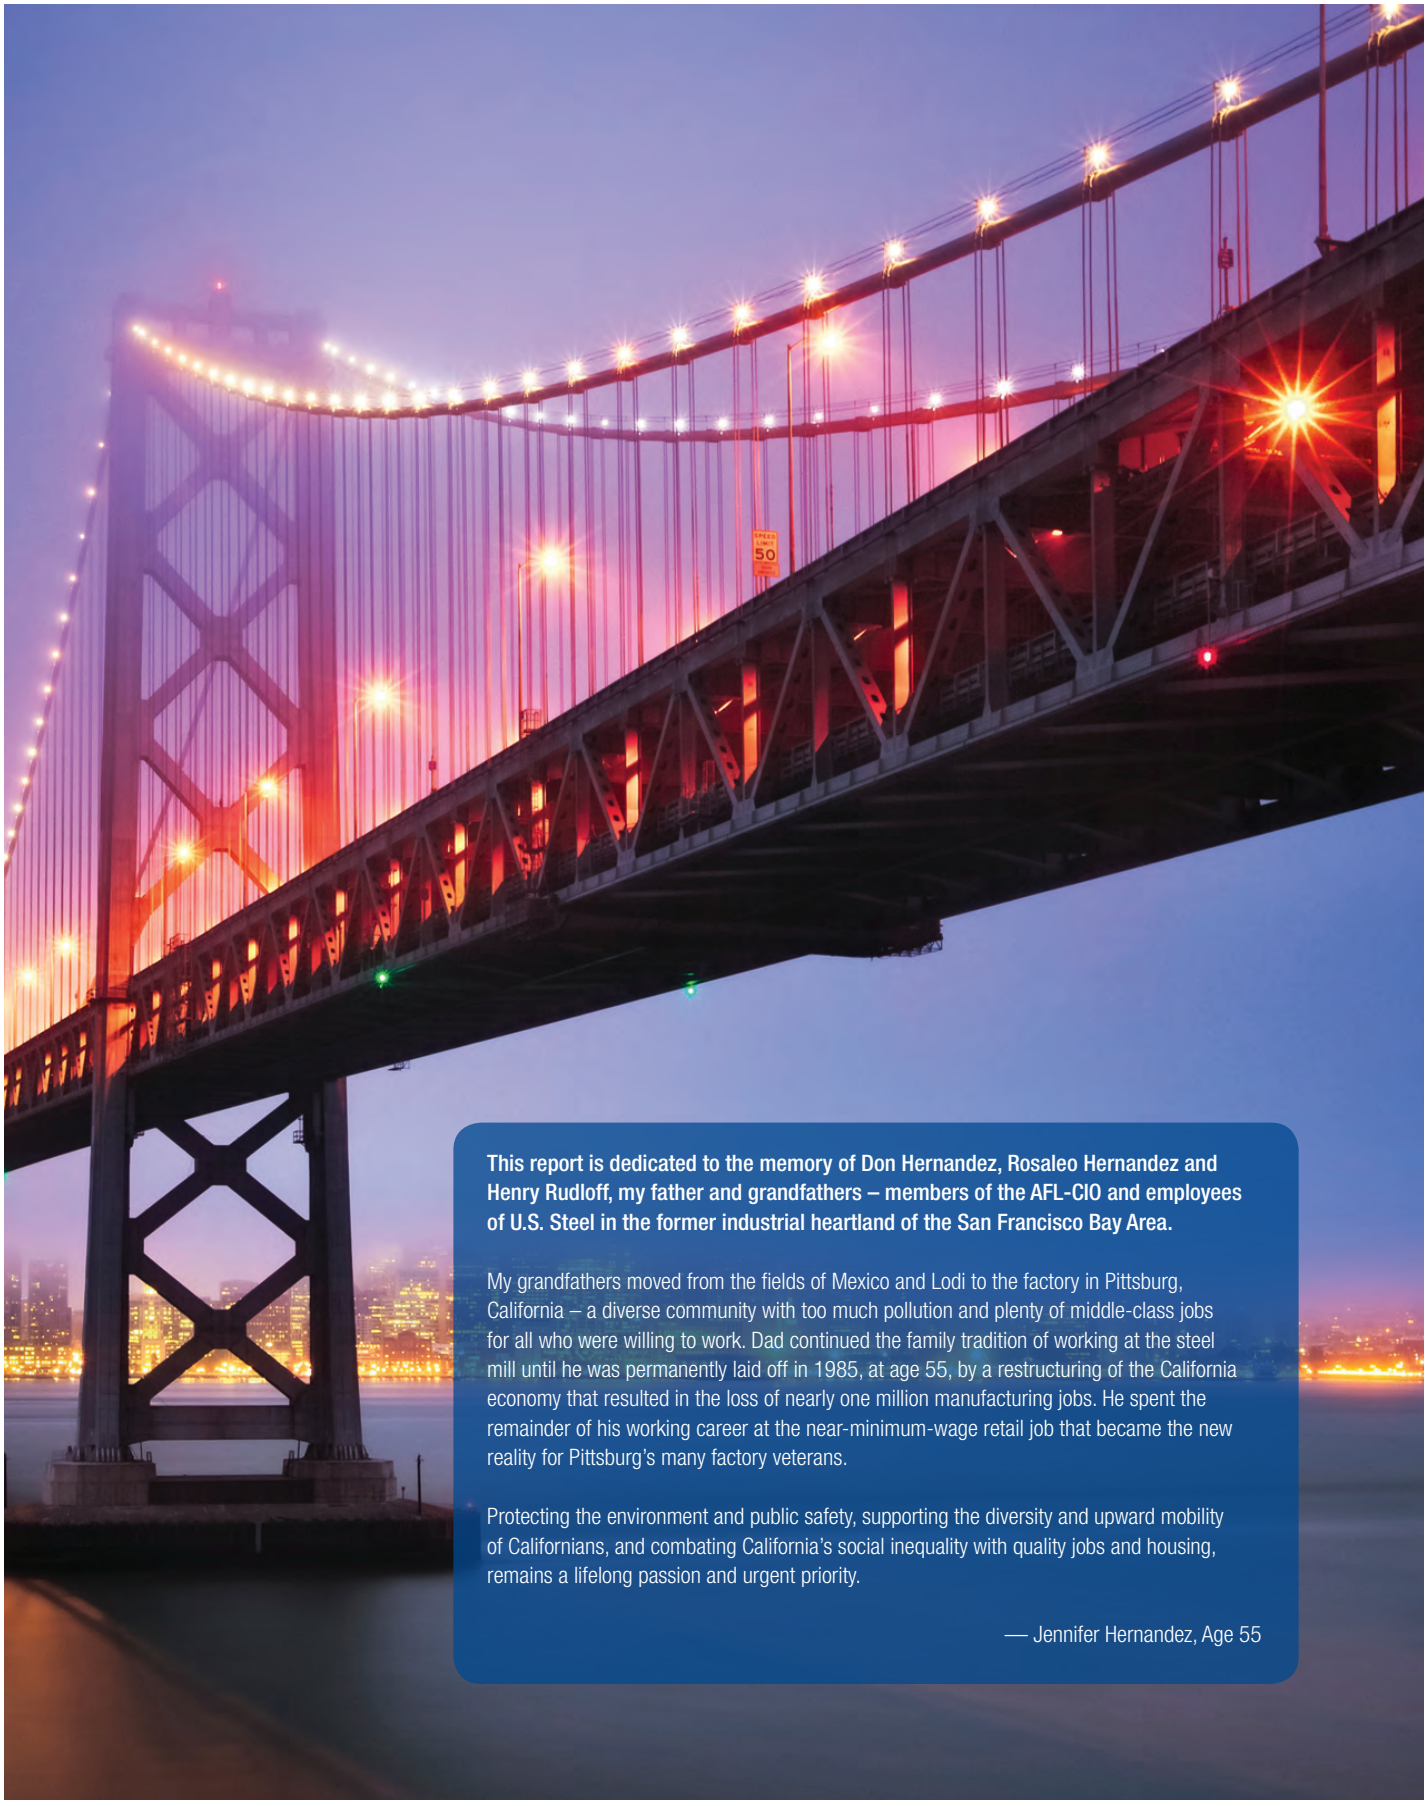
# PREFACE

This report analyzes all CEQA lawsuits filed in California over a three-year study period, 2010-2012, to describe how CEQA lawsuits are used in practice. The study demonstrates that about half of CEQA lawsuits target taxpayer-funded projects with no "business" or other private sector sponsor, and that the most frequent targets of CEQA lawsuits are projects designed to advance California's environmental policy objectives. Specifically, for CEQA lawsuits targeting construction projects, 80% of CEQA lawsuits target "infill" projects in established communities rather than "greenfield" projects on undeveloped or agricultural lands outside established communities. The most commonly targeted type of public infrastructure project was transit systems, the most commonly targeted type of industrial/utility project was renewable energy projects (primarily solar projects that were required to pay prevailing wages), and the most commonly targeted type of private sector project was infill housing (primarily higher-density, multifamily urban housing). The study also confirms that CEQA litigation abuse by parties seeking to advance non-environmental interests is widespread, and that duplicative CEQA lawsuits against implementation of the same project or plan can delay and derail projects, such as development of transit-served neighborhoods in urban areas, by decades.

CEQA litigation abuse has been decried by a broad range of public, private and non-profit groups – and by elected leaders and their staff. CEQA has been singled out as one of the key causes of runaway housing prices (especially in coastal counties) and as a major reason California has fallen far behind other states in creating, retaining, and onshoring middle-class manufacturing jobs that have helped create a manufacturing renaissance in other states. As one of California's signature "new economy" companies, Google, explained, its major fiber facilities would not be built in California, "in part because of the regulatory complexity here brought on by CEQA and other rules. Other states have equivalent processes in place to protect the environment without causing such harm to business processes and therefore create incentives for new services to be deployed there instead."

Ending CEQA litigation abuse is the most cost-effective "incentive" available to restore California's jobs base, make housing more affordable, and meaningfully improve the future of the nearly nine million Californians that the U.S. Census Bureau reports are living in poverty.

The study recommends three reforms to curtail CEQA litigation abuse, and cites the precedent for each:



1. **Extend CEQA transparency to CEQA lawsuits by requiring those filing lawsuits to disclose their identity and environmental (or non-environmental) interests.** This transparency is already required in CEQA's attorney fee motions and amicus filings.

2. **Eliminate sequential, duplicative lawsuits aimed at derailing plans and projects for which an Environmental Impact Report (EIR) has already been certified and either was not challenged or was upheld in court.** This CEQA compliance track already exists for implementation of specific plans and now-defunct redevelopment agency plans.

3. **Preserve CEQA's existing structure and access to litigation remedies for environmental purposes, but restrict judicial use of the extraordinary remedy of invalidating project approvals to projects that would cause a significant adverse threat to public health, irreplaceable tribal resources or ecological systems.** This judicial remedy restriction was granted to the Kings Arena basketball project in Sacramento.

This study demonstrates that about half of CEQA lawsuits target taxpayer-funded projects with no "business" or other private sector sponsor, and that the most frequent targets of CEQA lawsuits are projects designed to advance California's environmental policy objectives.

**This report is dedicated to the memory of Don Hernandez, Rosaleo Hernandez and Henry Rudloff, my father and grandfathers – members of the AFL-CIO and employees of U.S. Steel in the former industrial heartland of the San Francisco Bay Area.**

My grandfathers moved from the fields of Mexico and Lodi to the factory in Pittsburg, California – a diverse community with too much pollution and plenty of middle-class jobs for all who were willing to work. Dad continued the family tradition of working at the steel mill until he was permanently laid off in 1985, at age 55, by a restructuring of the California economy that resulted in the loss of nearly one million manufacturing jobs. He spent the remainder of his working career at the near-minimum-wage retail job that became the new reality for Pittsburg's many factory veterans.

Protecting the environment and public safety, supporting the diversity and upward mobility of Californians, and combating California's social inequality with quality jobs and housing, remains a lifelong passion and urgent priority.

— Jennifer Hernandez, Age 55

# INTRODUCTION

This report analyzes all lawsuits alleging violations of the California Environmental Quality Act (CEQA) over a three-year study period: 2010-2012.[1]

Prior CEQA studies have focused on the much smaller fraction of CEQA lawsuits that actually result in a published appellate court decision on the substantive adequacy of an agency's environmental evaluation of a project.[2] This study period overlaps with the last three years of a companion CEQA Judicial Outcomes study of all published CEQA appellate court cases involving the substantive adequacy of CEQA compliance over a 15-year study period (1997-2012).[3]

A simple comparison of the number of CEQA lawsuits filed during this study period to the average number of CEQA lawsuits that result in published judicial opinions over the 15-year period of the companion study shows that only about 5% of CEQA lawsuits result in a published appellate or California Supreme Court decision. Although local media report on some of the 200-plus CEQA lawsuits filed annually, these lawsuits are not tracked systematically. This study presents the first comprehensive report of CEQA litigation in practice, and reveals the pattern of agency actions targeted by CEQA lawsuits for the entire body of CEQA petitions,[4] including the 95% of CEQA lawsuits that do not result in published appellate court opinions.

The study confirms that CEQA litigation abuse is indeed widespread. A variety of special interest groups use CEQA lawsuits throughout California to pursue non-environmental objectives, such as lawsuits targeting transit, renewable energy, transit-oriented housing and regulatory programs designed to achieve California's ambitious environmental protection and climate change laws.

The study also demonstrates that CEQA litigation is overwhelmingly used in cities, with special-interest CEQA lawsuits targeting core urban services like parks, schools, libraries and even senior housing – most often by Not In My Backyard (NIMBY) opponents who conflate their individual "environment" (i.e., the view outside their bedroom window) with environmental policies and mandates that require acceptance of neighborhood-scale changes such as making more efficient use of existing park and school facilities for California's growing (and diverse) population.

Of greatest concern at a policy and political level, CEQA litigation abuse allows polite, passionate neighbors to oppose change – in the name of "the environment" – including the changes required to address environmental priorities such as climate change, and changes required to address California's growing population, including people of different economic, ethnic, religious and other demographic characteristics than project opponents. In cases involving opposition to projects like affordable housing, mosques and youth parks, the greatest social travesty of CEQA litigation abuse is the empowerment (and concealment) of bigots.

Part 1 describes the results of the study across several key factors: what kinds of projects are targeted in CEQA lawsuits, where the targeted projects are located, what kinds of parties file CEQA lawsuits, and who bears the cost of CEQA lawsuits (and litigation preparation practices such as "overdoing" CEQA studies to reduce the potential for a lawsuit loss).

Part 2 presents the stories behind the statistics, and includes anecdotal information from published media reports and other sources about actual and threatened CEQA lawsuits to help illustrate the real-life effect of CEQA litigation abuse on housing, critically needed jobs, schools and workforce training, and on all manner of public infrastructure, from transit to libraries to renewable energy.[5]

Part 3 concludes with recommendations for three moderate CEQA statutory reforms to end egregious lawsuit abuse and return this great law to its mission: protecting the environment and public health, informing and involving the public, and assuring transparency and accountability for agency decisions that affect the environment.

Of greatest concern at a policy and political level, CEQA litigation abuse allows polite, passionate neighbors to oppose change – in the name of "the environment" – including the changes required to address environmental priorities such as climate change, and changes required to address California's growing population, including people of different economic, ethnic, religious and other demographic characteristics than project opponents.

PART 1

# CEQA LAWSUITS IN THE REAL WORLD – THE NUMBERS

This study is designed to provide comprehensive information about current CEQA litigation practices: what kinds of "projects" are targeted by CEQA lawsuits, how many of these lawsuits challenge "infill" projects in cities and other developed communities, what CEQA compliance tracks result in lawsuit challenges, and who files CEQA lawsuits. The aim is to inform policy discussions about the nature and extent of CEQA litigation abuse (use of CEQA for non-environmental purposes) – and inform equity and economic discussions about whether CEQA's 1970 statutory framework for private-party litigation enforcement needs to be updated to align with California's environmental priorities.

## A. Politics 101: Half of All CEQA Lawsuits Target Taxpayer Projects – Not "Business"

Although the political debate around CEQA is persistently framed by many as a battle between "business" and "enviros" (environmental advocacy groups), as a legal matter, CEQA applies to all discretionary agency actions, including approvals of public construction projects, approvals of agency plans, policies, and fund allocations, and the approval of regulations and ordinances (including regulations and ordinances to reduce pollution or conserve open space). The framing of CEQA as a "business v. enviro" political debate is not supported by the data: half of CEQA lawsuits target agency projects for which there is no private sector sponsor at all,[6] and many private sector projects – such as CEQA lawsuits targeting single-family home renovations[7] – have no business sponsor either.

### CEQA Challenges to Public Agency Projects

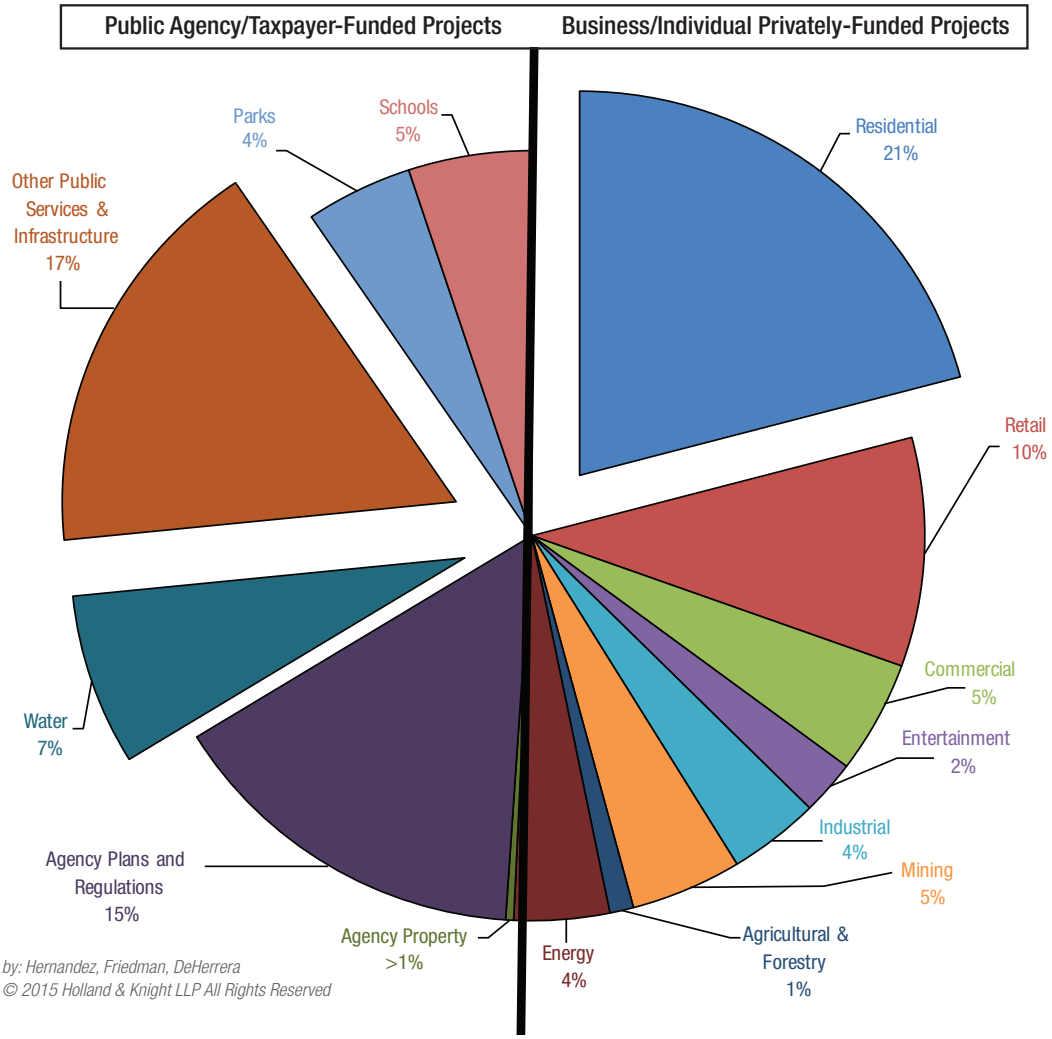
Public agency approvals to acquire or renovate parks, and build or modify all types of public facilities and infrastructure – ranging from small public service facilities like schools, fire stations and libraries to larger public infrastructure projects, such as transit systems and wastewater treatment plants – are all "projects" triggering the need for an Environmental Impact Report (EIR) or other CEQA document or determination, and all of these agency actions can be challenged in CEQA lawsuits.[8]

### CEQA Litigation: Degree of Adverse Effects Often Ignored by Sacramento's Leaders and Special Interests

Special interests and political leaders in Sacramento have grown comfortable with viewing CEQA through an "enviro v. business" prism. For example, State Senator Darrell Steinberg excluded public agencies responsible for implementing projects – and complying with CEQA – from negotiation sessions aimed at seeking common ground to modernize CEQA. Stung by their exclusion, the Public Works Coalition, a broad alliance of public agencies that collectively represents nearly every school, county and special district in California, unsuccessfully attempted to join the dialogue in a plea to legislative leaders, writing:

> "It is widely recognized that many of CEQA's key requirements are fundamentally uncertain. No matter how much time and how many resources have been invested…a project opponent can craft arguments as to why a lead agency failed to fully comply with CEQA. As a result, it is very difficult for lead agencies to effectively execute CEQA decisions that can be upheld in court if they are challenged."
>
> "What often compromises the virtues of CEQA are individuals and groups with ulterior motives who exploit CEQA's uncertainties through litigation, or the threat of litigation, to achieve objectives that have nothing to do with environmental protection."
>
> "Each misuse and abuse of CEQA not only wastes scarce public resources that would otherwise fund essential public services, it also damages the integrity of meaningful environmental protection."
>
> – Public Works Coalition letter, January 29, 2013
> (*Copy available on request from the authors of this report.*)

The framing of CEQA as a "business v. enviro" political debate is not supported by the data: half of CEQA lawsuits target agency projects for which there is no private sector applicant or developer.



Copyright © 2015 Holland & Knight LLP All Rights Reserved 

CEQA also defines "project" to include agency actions that are mandatory under other federal and state laws. This includes developing and implementing plans and regulations covering many different topics. Again, these range from those that affect relatively large groups or areas such as General Plan updates that apply to a whole city or county, and greenhouse gas or other pollution reduction regulations that apply statewide, to agency actions that have a far smaller reach, such as a city ordinance limiting single-use plastic bags or requiring permits for marijuana dispensaries, or a city plan to improve housing affordability or focus development in areas served by existing or planned transit services.[9]

Agencies also manage property and facilities, and property management decisions that involve no physical modifications to existing facilities – such as converting an underutilized women's prison to a men's prison to relieve prison overcrowding,[10] or outsourcing management of a city-owned property[11] – are subject to CEQA, and during this study period were targeted by CEQA lawsuits.

As shown by Figure 1, about half – just over 49% – of CEQA lawsuits target agency actions for which there is no private sector proponent (business, non-profit or individual applicants seeking agency approval or funding).

> For the majority of CEQA lawsuits, CEQA's compliance costs, including litigation costs and obligatory payment of attorneys' fees, fall on California taxpayers - not "business."

For the half of all CEQA lawsuits targeting public agency projects, CEQA's compliance costs and litigation risks, including payment of attorneys' fees to parties successfully suing agencies, are borne by taxpayers.

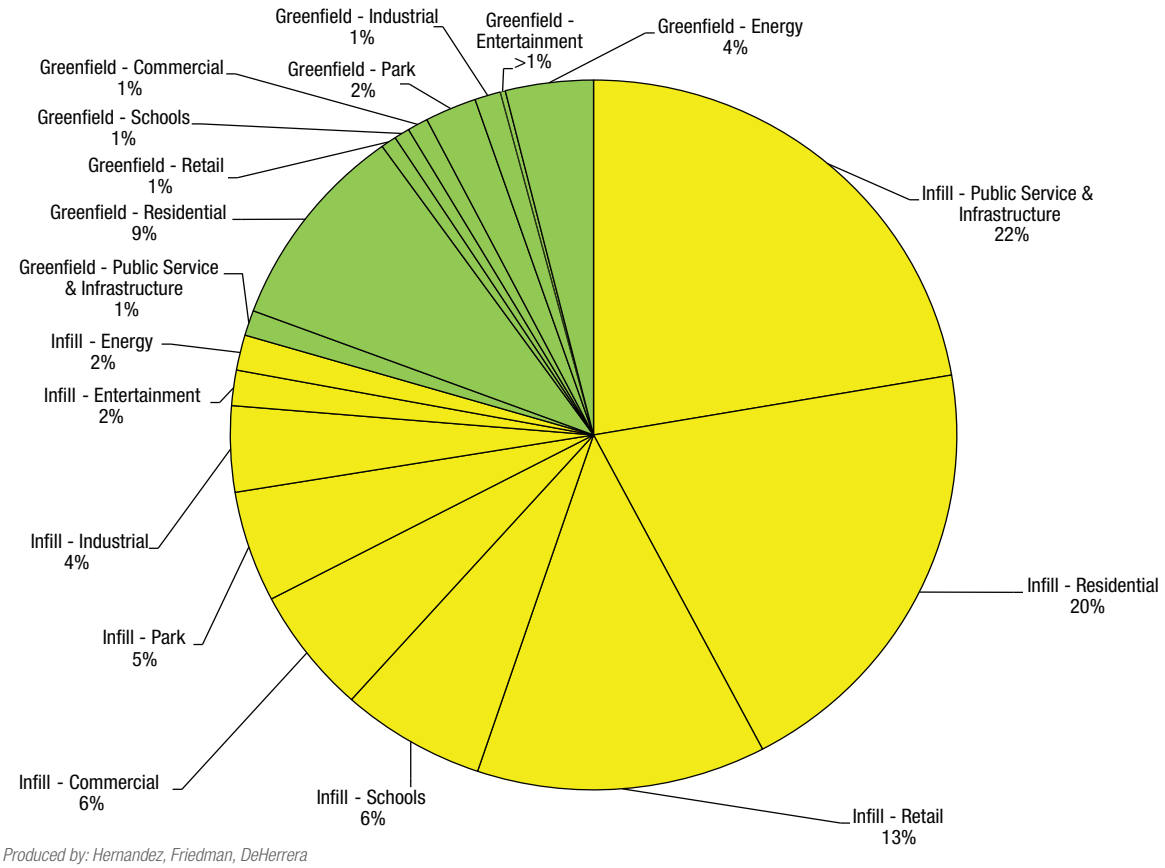
If electricity generation projects (which during the study period included only new renewable energy facilities such as solar farms) and "repowered" existing electricity plants proposed to be modified to use cleaner new technologies to reduce air or water pollution[12] are added to this public sector category based on the fact that California's ratepayers must ultimately pay for these projects, just over 53% of CEQA's lawsuits involve projects that are paid for by the same taxpayer-generated revenue pool of property taxes, sales taxes and other taxes and fees that are otherwise available to pay for schools, parks, libraries, public health and social services, law enforcement, fire and emergency services, road and infrastructure maintenance, and other public agency services and facilities.

Public infrastructure is the most frequent target of CEQA lawsuits, and within this category the most frequent litigation target is transit projects – the same projects that reduce per capita greenhouse gas emissions and other air pollutants by providing an alternative to automobiles (especially for commuters). Regional and global environmental benefits are achieved by transit improvements, but local neighborhood groups forced to accept new transit systems frequently do not support these improvements, and use CEQA lawsuits to try to stop, delay or modify transit infrastructure.

For the majority of CEQA lawsuits (public agency lawsuits plus ratepayer-funded electric generation), CEQA's compliance costs, including litigation costs and obligatory payment of attorneys' fees, fall on California taxpayers – not "business." Agencies (and taxpayers) cannot recover litigation attorneys' fees if agencies win CEQA lawsuits, nor can agencies (or taxpayers) block lawsuits filed by parties using CEQA for non-environmental purposes.

Figure 1 also shows that the private-sector projects challenged in CEQA lawsuits are overwhelmingly non-polluting land uses that often raise intense localized concerns about increased population densities and resulting demands on public services and local roadways. The largest single target of CEQA lawsuits against private projects are residential projects (21%), followed by retail projects (10%), commercial (non-industrial) projects (5%) and entertainment (2%) projects. The categories of projects with the greatest potential to cause pollution or adversely affect protected species – Industrial (4%), Agricultural/Forestry (1%), Mining (5%) and Renewable Energy/Energy Retrofit projects (4%) – comprise only 14% of all CEQA lawsuits filed during the study period.

CEQA litigation overwhelmingly targets "infill" development that accommodates population and economic growth that would otherwise spill into undeveloped exurban areas.



## B. CEQA Lawsuits Overwhelmingly Target "Infill" Projects, Not "Sprawl"

Another common political assertion by the entrenched special interests that defend CEQA litigation's status quo is that CEQA litigation mostly combats "sprawl" development that causes longer commutes, destroys farms and wildlands, and draws financial and human capital away from urban areas.

This study proves that the opposite is true: CEQA litigation overwhelmingly targets "infill" development that accommodates population and economic growth that would otherwise spill into undeveloped exurban areas. Of the cases that could be constructed in either "greenfield" rural or exurban locations, or "infill" locations in established communities,[13] 80% of CEQA lawsuits targeted "infill" projects, and only 20% targeted "greenfield" projects, as shown in Figure 2. It is noteworthy that at 80%, the number of CEQA lawsuit petitions filed against infill projects is higher than the 62% of infill projects addressed in reported appellate court cases.[14] As a result, this study demonstrates that earlier studies that examined only reported appellate court cases substantially understated the extent to which CEQA lawsuits target infill projects.

**Figure 2**
**CEQA Lawsuits Targeting Greenfield Versus Infill Projects**

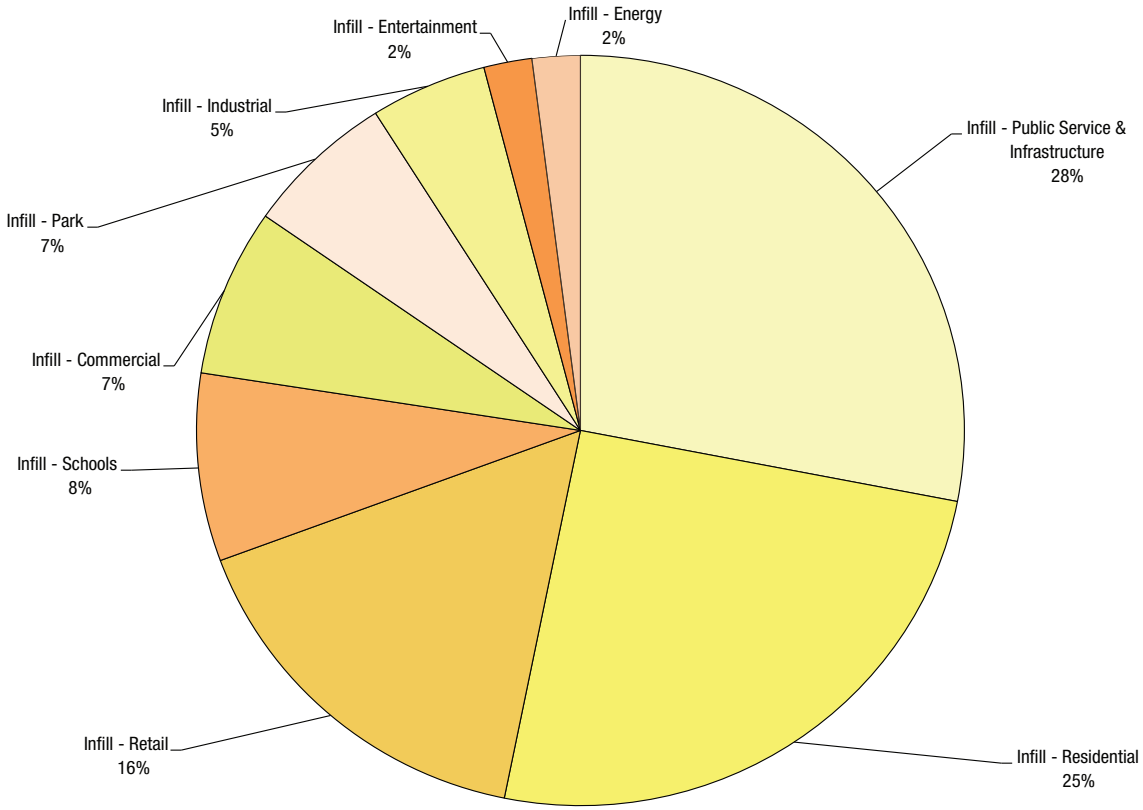
"Infill" projects include private and public sector projects located entirely within one of California's 482 cities,[15] or located immediately adjacent to existing developed areas in an unincorporated county. Projects located in county areas that are not immediately adjacent to existing development, even if they are adjacent to major infrastructure such as an interstate highway, are classified as "greenfield."



Not every challenged agency project falls into either the "infill" or "greenfield" category. For example, many agency regulatory decisions –such as statewide greenhouse gas reduction regulations or county general plans governing both developed and less developed areas of a county,[16] or water supply management projects that include physical modifications to water infrastructure that occur in a different location than the often-multiple locations where water will ultimately be delivered for consumption[17]– do not fit within this "infill/greenfield" paradigm. Similarly, although the majority of the 36 lawsuits challenging mining, agricultural, and forestry projects involved agency approvals regulating existing operations, and thus fell roughly within the "redevelopment" concept often associated with "infill" (e.g., approval of a mine reclamation plan for an existing mine), none of these inherently open-space projects that are located based on pre-existing natural characteristics such as mineral reserves, were categorized as either "infill" or "greenfield" projects.[18] The location of all challenged private sector projects other than mining, agricultural and forestry projects was classified as "infill" or "greenfield."

## Infill Lawsuits by the Numbers

Of the four-fifths of the study sample that were "infill" CEQA lawsuits, Figure 3 illustrates the fact that CEQA lawsuits most often targeted the public facilities and infrastructure that served these infill area populations – and public transit systems (which exclude roads and highways) were the top target of these CEQA infill infrastructure lawsuits.[19] The second-most-likely infill target was housing. As shown in Figure 4, almost half (45%) of the lawsuits challenging infill residential projects were aimed at higher-density, transit-oriented attached units (e.g., apartments and condominiums).[20] It is also noteworthy that over 6% of all infill CEQA lawsuit targets were urban park projects, ranging from trail improvements to accommodate disabled anecdotal visitors[21] to playground and playfield improvements.[22] (Further anecdotal information about these and other types of challenged projects is provided in Part 2 of this study).

Impassioned infill project opponents are typically local residents who may in principle support many statewide environmental mandates that require fundamental changes to the character of California communities by prioritizing new development with higher densities (e.g., multi-story apartment or condominium projects) along transit corridors and promoting higher-density "mixed use" projects that include residential, retail services, and employment uses (e.g., offices) on the same property, but who adamantly oppose such changes in their own community. Such projects typically provide for less parking, and cause more traffic congestion, than traditionally lower-density development patterns like single-family detached homes or traditional shopping malls. As has been observed by notable environmental advocacy groups such as the Natural Resources Defense Council and the California League of Conservation Voters, the environmental benefits of denser development patterns are regional or even global (e.g., more transit use means lower air emissions including greenhouse gases), but these overarching environmental benefits are poorly suited to the structure of CEQA.[23] In fact, localized traffic congestion can be a daily irritant to frustrated residents, and congestion can also result in higher localized air pollution levels such as diesel particulate matter.[24]

### Then-Oakland Mayor (and now Governor) Jerry Brown unsuccessfully urged the California Supreme Court to Avoid Extending CEQA to Urban Design Disputes

In an unsuccessful plea to the California Supreme Court to reverse an appellate court decision allowing residents of single-family homes in a planned community to use CEQA to raise private "aesthetic impact" objections to block more affordable planned townhomes, in 2005 then-Oakland Mayor Jerry Brown wrote:

> "The appellate court decision incorrectly held that neighbors' aesthetic distaste for the city's approved lot sizes, setbacks, street width, housing style, and other design matters constituted a potentially significantly effect on the environment, thereby requiring preparation of an EIR..."
>
> "Unless the [appellate court] decision is reversed, we are deeply concerned that our city's elegant density policy of infill development will be undermined by long delays and expensive but useless analysis – analysis paralysis."
>
> "Since 2000, six separate EIRs have been prepared for various of these [higher-density, transit-oriented residential] projects at a cost of millions of dollars and unconscionable delay."
>
> "[This] illustrates the profoundly negative impacts that the escalating misuse of CEQA is having on smart growth and infill housing" and "strikes at the heart of majoritarian democracy and long standing precedents requiring deference to city officials when they are interpreting their own land use rules."
>
> "The [appellate court] found aesthetically degrading the 'excessive massing of housing with insufficient front, rear and side yard setbacks [citation omitted].' Just as cogently, other people may well conclude that the close arrangement ... fostered a cozy, neighborly intimacy. The fact that narrow streets are unfriendly to speeding cars and that neighbors are thrust into close contact may well be viewed as a superior quality of living rather than a negative impact."
>
> "CEQA discourse has become increasingly abstract, almost medieval in its scholasticism. Nevertheless, if you apply common sense and the practical experience of processing land use applications, you will conclude that what is at stake in this case is not justiciable environmental impacts but competing visions of how to shape urban living."

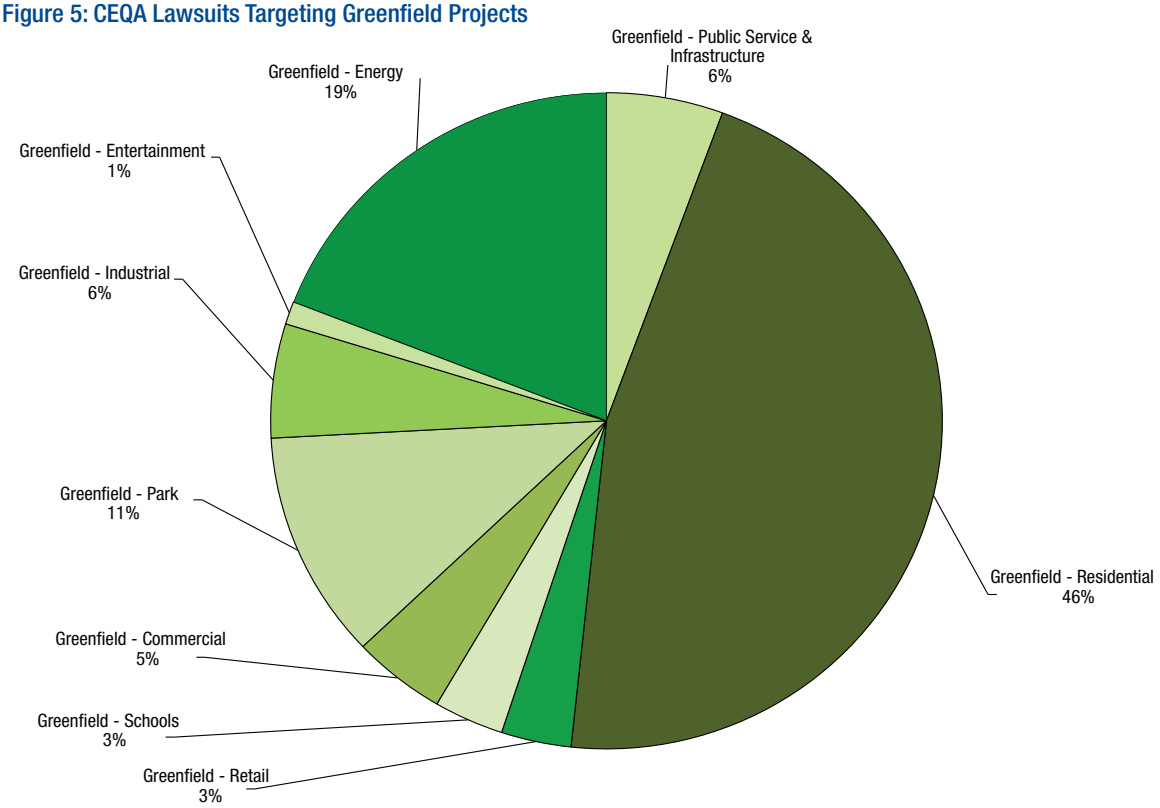
— Hon. J. Brown, amicus brief to the California Supreme Court in *Pocket Protectors v. City of Sacramento* (No. C046247) 2005.

The court declined to review or reverse the appellate court decision. Mayor Brown then successfully sought a partial, time-limited CEQA exemption for Oakland's urban projects. This is an example of the "one-off" special CEQA deals periodically cut by the Legislature as discussed in Part 3 of this report.

"CEQA discourse has become increasingly abstract, almost medieval in its scholasticism. Nevertheless, if you apply common sense and the practical experience of processing land use applications, you will conclude that what is at stake in this case is not justiciable environmental impacts but competing visions of how to shape urban living."
– Oakland Mayor Jerry Brown (2005)

For NIMBY litigants opposed to higher-density development and other neighborhood-scale changes in their communities, CEQA statutes and case law provide many examples of the legitimacy of privatized "environmental" protection. Protection of an individual's view, protection of an individual's "quality of life" measured by convenient access to ample parking supplies, and the absence of any localized increases in ambient noise or traffic congestion, are all recognized as CEQA impacts. CEQA also does not create any ranking system for impacts: each significant impact is as significant as any other, and each warrants as much mitigation as is feasible, resulting in inevitable policy trade-offs that are then litigated by the losing side of the political debate. Policymakers may support transit and higher-density development on transit corridors; residents may not, and if they lose at the policy level their next step is the courthouse, where they can allege dozens of technical study flaws in CEQA documents, and are likely to stop the approved project if even one study flaw is identified. (Part 3 includes a proposed reform of CEQA remedies for technical study flaws.)

Other reasons petitioners challenge infill projects run the political (and policy) spectrum, and often have little or nothing to do with "the environment." Anti-abortion protesters used a CEQA lawsuit in an attempt to block a planned parenthood clinic proposed to be located in an existing building in a neighborhood that already offered abortion services, asserting that the city violated CEQA by failing to appropriately consider the noise nuisance that the protesters would themselves create in the neighborhood if the clinic was allowed to open.[25] Mosque projects were targeted by those not sharing the same religious orientation, and one case included a plaintiff calling itself a "patriot" group.[26] Transitional housing for foster youth who "age out" of the traditional foster home programs on their 18th birthday,[27] affordable housing[28] and supportive senior housing[29] were targeted with improbable assertions of increased traffic and parking congestion. In addition, concerns were reported about "those people" and "loitering youth," and fears of "increased crime and vandalism," that are more evocative of a hoped-for past era of civil rights abuses than the "modern" self-image of wealthy, liberal – and notoriously NIMBY – coastal communities.[30]



In addition, concerns were reported about "those people" and "loitering youth," and fears of "increased crime and vandalism," that are more evocative of a hoped-for past era of civil rights abuses than the wealthy, liberal – and notoriously NIMBY – coastal communities.

### Greenfield Challenges

As shown in Figure 2, greenfield projects make up only 20% of the projects targeted by CEQA lawsuits.[31] Figure 5 shows the distribution of CEQA lawsuits against different types of greenfield projects. Just under half of these involve residential projects, including primarily "master planned communities" which include a mix of retail, commercial and employment components, schools and parks, along with associated public services and infrastructure, and are typically located either at the edge of existing developed areas already served by highways or other public infrastructure, or new or expanded resort projects. The second-largest category of greenfield development lawsuits targeted new renewable energy facilities, such as solar plants. Challenges to "greenfield" park projects like park trail construction or other projects designed to improve the visitor experience or increase visitation made up over 10% of the challenged greenfield projects; infrastructure and public service projects (e.g., a new high school in an unincorporated county community[32]) made up the remainder of the "greenfield" project category. More information about and examples of these projects are provided in Part 2 of this report.

## Bottom Line: CEQA Litigation Overwhelmingly Targets Infill Projects

This study definitively shows that housing and other types of projects that could, in principle, be located in either a greenfield or infill location are four times more likely to be sued if they are located in an infill location.[33] Notwithstanding the much higher CEQA litigation risk, the market continues to demand growth in California coastal counties. As a result, housing developers and agencies seeking to satisfy this market demand and comply with state mandates for higher-density, transit-oriented housing factor in CEQA compliance and litigation costs (and delays) when pricing projects. CEQA adds to housing costs. As the California Legislative Analyst recently reported, CEQA and other NIMBY opposition, as well as various regulatory and growth restrictions in coastal communities, have caused California's for-sale and rental housing prices to be far higher – more than double the cost – of any other state in the nation.[34]

> "Any party can file a CEQA lawsuit, even if it has no environmental purpose. For example, a competitor can file a CEQA lawsuit to delay or derail a competing project."

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

NIMBY opposition to coastal county housing projects has steep costs. Taking into account the cost of housing, the U.S. Census Bureau has confirmed that California has earned the dubious distinction of having the highest percentage, and by far the greatest number, of people living in poverty of any state.[35]

No one asserts that Coastal California's excessive housing costs and supply shortfalls are all attributable to CEQA litigation abuse. That said, the fact is that CEQA litigation is a weapon most often fired at infill projects: the transit-oriented, higher-density, lower energy and lower water-consuming projects that myriad state policies have determined to be environmentally superior to rural "sprawl." People who cannot afford to live in California's coastal counties are then forced inland, where housing costs drop by half or more (e.g., Inland Empire housing costs are less than half of Orange County and Los Angeles housing costs),[36] but require long workplace commutes, since more employment opportunities remain in coastal counties. Those who cannot afford proximate urban housing are then the victims of more NIMBY opposition to transportation solutions, such as transit systems and HOV-lane additions to highways. With residents of inland counties paying far more for energy (e.g., for air conditioning in hotter climates) and more for gasoline (as a result of longer commutes, plus fuel surcharges such as the cap and trade-based greenhouse gas pricing increase that became effective in 2015), the "environmental" use of CEQA litigation against infill projects by NIMBYs disproportionately targets what was once the backbone core of the Democratic party: poor, working class and minority citizens.

> Why should we continue to tolerate litigation abuse of California's premier environmental statute to block non-polluting infill projects?

> The "environmental" use of CEQA litigation against infill projects by NIMBYs disproportionately targets what was once the backbone core of the Democratic party: poor, working class and minority citizens.

## C. Everybody Files CEQA Lawsuits – for Any Reason

CEQA lawsuits have several unique attributes not shared by any other environmental statute in the United States:

- **First, any party can file a CEQA lawsuit, even for a non-environmental purpose.** For example, a competitor can file a CEQA lawsuit to delay or derail a competing project,[37] and a labor union can file a CEQA lawsuit to secure an agreement that gives the union that filed the lawsuit control over which project jobs will be allocated among which unions.[38]

- **Second, a CEQA lawsuit can be filed anonymously.** Neither the public, the judge, the public agency defending the lawsuit, nor the private applicant for the 50% of the CEQA lawsuits that have a private applicant,[39] are entitled to know who is suing them. They also are not entitled to know whether the lawyer who filed the CEQA lawsuit even has a client or is simply pursuing a "bounty hunter" claim for a quick (and typically confidential) financial settlement payoff. CEQA lawsuits also can be filed on behalf of a previously non-existent, unincorporated association with a sympathetic-sounding name (e.g., "Friends of Sustainable Neighborhoods"), provided that one member of the newly formed "association" filed any agency comment at any time prior to agency approval of the project. A lawsuit may allege any CEQA violation that was raised by any party at any time prior to agency approval, even if the objecting party agrees that the alleged deficiency was adequately addressed by the agency as part of the CEQA and project approval process.

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

The California Legislature has consistently declined to require disclosure of the identity and interest of those filing CEQA lawsuits. In late 2014, the California Judicial Council – which has independent authority to adopt court rules requiring disclosure – declined to extend its existing CEQA litigation disclosure rules (currently applicable to those filing "friend of court" amicus briefs in CEQA cases, and those seeking recovery of attorney fee awards in concluded CEQA lawsuits), to parties filing CEQA lawsuits. The Judicial Council concluded that requiring disclosure of CEQA litigants was a policy matter to be decided by the Legislature.[40]

As discussed in Part 3, the Legislature's refusal to extend CEQA's transparency mandate to those filing CEQA lawsuits provides a vivid illustration of how the special interests that use CEQA for non-environmental purposes exert their power in the legislative arena.

CEQA lawsuits are also relatively inexpensive: a case can be brought for the cost of a county court filing fee of a few hundred dollars. In addition, lawsuits require only preparation of a complaint or "petition" (which can allege very generalized deficiencies in an agency's environmental documentation) and two briefs (an opening brief typically limited to 25 pages, and a reply brief typically limited to 10-25 pages), with one court hearing in front of a judge typically lasting less than one day. The lawsuit is decided based on the content of the agency's "administrative record," the contents of which are prescribed by statute. The challenger is required to prepare or pay for preparation of the administrative record, but there is no prompt statutory remedy available if the challenger fails to timely prepare or pay for the cost of the record. Record preparation disputes can extend the time required to resolve a CEQA lawsuit for a year or longer.

The Legislature's refusal to extend CEQA's transparency mandate to CEQA lawsuits provides a vivid illustration of how the special interests that use CEQA for non-environmental purposes wield power in the legislative arena.

In the published CEQA appellate court cases that comprise the body of jurisprudence available for determining the probable outcome of a CEQA lawsuit, challengers enjoy nearly 50/50 odds of winning.

CEQA lawsuits proceed through California's three levels of judicial review: the trial court process can extend over two years, an automatic and mandatory right to appellate court review can require another one to two years, and a discretionary appeal to the California Supreme Court can take another year or longer. All litigation process times have been stressed by substantial budget cuts to the judiciary.

The simple act of filing a CEQA lawsuit, without seeking an injunction or awaiting any judicial remedy, vests the challenger with tremendous leverage. As documented in several recent CEQA studies of appellate court decisions:[41]

- In the published CEQA appellate court cases that comprise the body of jurisprudence available for determining the probable outcome of a CEQA lawsuit, challengers enjoy nearly 50/50 odds of winning.[42]
  - Even if the agency completed an EIR – the most elaborate and costly form of CEQA document, which by statute is to be upheld if it is supported by "substantial evidence in the record" even if "substantial evidence in the record" also supports a contrary conclusion or decision – the plaintiff still prevailed 43% of the time. To put the remarkably favorable odds of winning a CEQA lawsuit into perspective, in a meta-study of 11 administrative lawsuits nationally, including 5,081 federal court cases, agency challengers lost in 69% of the cases – and the Internal Revenue Service, which is required by Congress to closely track and quickly address adverse court claims, loses only 22% of its cases.[43]

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

  - For "Negative Declarations," which are a less costly and less time-consuming type of CEQA document, the standard of judicial review is whether an opponent has made a "fair argument" that a project "may" have even a single adverse environmental impact. Negative declarations fail to withstand judicial scrutiny in 56% of the cases.

- CEQA documents must now study in excess of 100 different "environmental" topics. For each topic, an agency must correctly address the "setting" and "baseline," evaluate the project's "impacts," and identify "significance thresholds" for measuring whether an impact is indeed "significant" or "less than significant." For each "significant" impact, an agency must then identify "feasible" mitigation measures to "avoid" or "reduce to a less than significant level" such impacts, correctly identify "reasonably foreseeable future projects or plans" in the "project vicinity" (which may result in a significant adverse "cumulative" impact – even for a project impact that has been mitigated to a less than significant level), identify and evaluate a "reasonable range" of "feasible" alternatives to a project that can attain "all or most" of the project's "objectives," explain its conclusions with "findings," and then disclose "significant unavoidable impacts" for which no feasible mitigation measure or alternative is available. It is not enough under CEQA for a project to comply with a previously adopted plan for which an EIR has already been prepared, nor is it enough to demonstrate that a project complies with California's famously strict environmental standards that govern everything from energy and water efficiency to greenhouse gases and species protection.

- It is virtually impossible for lawyers engaged in CEQA litigation, and judges deciding CEQA cases, to avoid raising questions or concerns about whether an agency correctly completed all required components of the CEQA analytical process. It is also hard for judges, once they decide that an agency "did the air quality calculations incorrectly," to conclude that the agency should not be required to repeat this or other analytical steps.

CEQA documents must now study in excess of 100 different "environmental" topics.

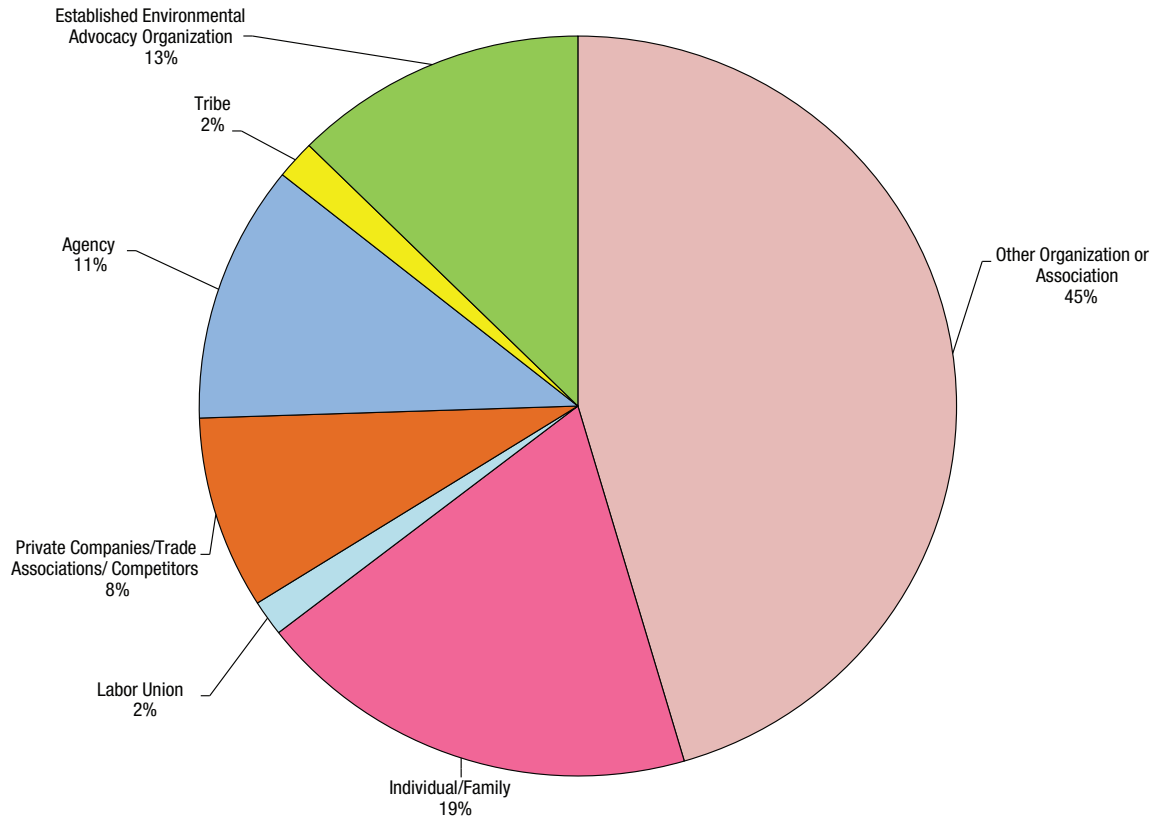
- The most likely remedy in the event the court rules that an agency has not completed the required level of analysis and processing is for a judge to vacate the agency's project approval, and require more CEQA study. Vacating the project approval means, simply, that the project must be halted – as is – at the time when the decision is issued (absent special dispensation by a judge, such as weather-proofing by installing blue tarps on exposed plywood roofs) for the 2-4 years (or more) needed to repeat the agency CEQA process, and then return to court for a new trial court ruling and another round of appellate court review. In a recent case, a completed high-rise apartment project with tenants was served with a tenant eviction notice when a judge determined – years after the fact – that a historic resources study of a now-demolished former Spaghetti Factory restaurant fell short of what CEQA requires.[44]

- To address many conflicting CEQA appellate court decisions, as of May 2015, the California Supreme Court has 10 pending CEQA cases under review. These cases deal with a variety of issues with wide applicability throughout California. This includes the interplay between CEQA and California's climate change laws and policies,[45] the extent to which CEQA covers public safety services, and can require as "mitigation" staffing for police and fire services,[46] the extent to which increased demand for transit is an "environmental" impact requiring mitigation,[47] and the extent to which pre-existing environmental conditions (e.g., ambient levels of noise or odors or vehicle exhaust) should be evaluated under CEQA since these are environmental impacts on a project, rather than project impacts on the environment.[48] Some of these cases have been pending for several years, and the California Supreme Court is under no hard deadline for reaching a final decision, either by ruling for or against the agency targeted by the CEQA lawsuit or by remanding the case back to the lower courts for further consideration.

- There is no limit to the number of times a project can be sued under CEQA: each discretionary approval by each agency can be the subject of a separate CEQA lawsuit. For example, more than 20 lawsuits have been filed over the past 30 years against an infill redevelopment project in Los Angeles, most of which involve alleged CEQA deficiencies,[49] including two lawsuits filed during the 2010-2012 study period for this report.[50]

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

- A separate California "free speech" statutory prohibition – forbidding "strategic lawsuits against public participation" – prevents lawsuits from being filed against project opponents for any reason, such as tortious interference or even extortion.[51] In the most notorious of the recent cases, a student housing company run by enterprising alumni from the University of Southern California sought to control the student rental market by filing a CEQA lawsuit to block a project being built by a competing student housing developer. To gain further leverage, the housing company filed eight more CEQA lawsuits against the developer's other California projects, and then filed two more lawsuits against projects by relatives of the developer under a statute similar to CEQA in Washington state. The targeted developer filed a federal civil racketeering lawsuit against the student entrepreneurs, who had by then repeatedly described themselves as the "Al-Qaeda of CEQA." A federal judge declined to dismiss the federal lawsuit, and the entrepreneurs closed up shop.[52]



With these odds, these judicial remedies, these issues awaiting clarification from the Supreme Court, and these and other war stories, it should come as no surprise that banks making construction loans, and government agencies making time-sensitive grant and appropriations decisions, usually decline to fund projects while a CEQA lawsuit is pending. There is no bonding or other requirement that applies to project opponents who file CEQA lawsuits, project opponents are not required to pay attorneys' fees if the agency ultimately wins the lawsuits, and project opponents are entitled to seek judicial approval of reimbursement of their attorneys' fees and a "multiplier" or bonus amount for helping enforce an "environmental" law if they win even a partial victory on one environmental study topic regardless of whatever their real motivation is harming competitors, negotiating labor terms, derailing new environmental protections, or stopping "those people" from coming into a neighborhood.

Figure 6 presents our assessment of the types of parties ("petitioners") filing CEQA lawsuits. Because some CEQA lawsuits include multiple types of petitioners (e.g., one or more individuals and one or more groups), the total number of petitioners is larger than the total number of lawsuits filed. If there were multiple entities of the same type (e.g., multiple individuals), then only the petitioner type (e.g., "individual") was tallied. We created seven petitioner types: (1) individuals/families; (2) local/regional entities including unincorporated associations with sympathetic-sounding new names, but no readily-accessible track record of environmental litigation advocacy; (3) private companies such as competitors and trade associations; (4) other public agencies unhappy with the decision of the "lead" public agency that prepared the CEQA documentation; (5) Native American tribes; (6) labor unions; and (7) state and national environmental advocacy groups (e.g., the Sierra Club and Communities for a Better Environment).

It should come as no surprise that banks making construction loans, and government agencies making time-sensitive grant and appropriations decisions, usually decline to fund projects while a CEQA lawsuit is pending.

## Figure 6: Types of Petitioners Filing CEQA Lawsuits

*Produced by: Hernandez, Friedman, DeHerrera*
*Copyright © 2015 Holland & Knight LLP All Rights Reserved*

About two-thirds (64%) of the petitioners filing CEQA lawsuits are either individuals or "other" organizations or associations. Recognized state and national environmental advocacy groups, by contrast, comprise only 13% of the CEQA petitioners. These statistics are not surprising; environmental advocacy groups generally support the types of infill development, including transit systems and other urban services, that are the most frequent targets of CEQA lawsuits. CEQA litigation abuse is primarily the domain of NIMBYs and anonymous new unincorporated entities, including those using CEQA for non-environmental purposes.

One surprising outcome of the study (to the authors, at least), however, is the frequency with which agencies use CEQA to sue each other. Agencies comprise 11% of CEQA petitioners, and largely fall into two groups: agencies seeking more "mitigation" – physical improvements to roadways or other infrastructure, or fee payments – from the "lead" agency that prepared the CEQA document and approved the project, and agencies fighting the zero sum game of allocating (and paying for) California's water resources. Although some tribal representatives have been active in CEQA reform discussions, tribes comprised only 2% of CEQA petitioners – and tribal projects were also the target of CEQA lawsuits.

CEQA litigation abuse is primarily the domain of NIMBYs and anonymous new unincorporated entities, including those using CEQA for non-environmental purposes.

Labor unions appeared as named parties in only 2% of CEQA petitions, business groups and competitors comprised 8% of the petitioner category, and inter-agency disputes accounted for 11% of petitioners.

Because the identity of those filing CEQA lawsuits is not required to be disclosed (a troubling exception to CEQA's disclosure and transparency mandates and public purpose), the authors of this study called more than 100 of the public agencies that had been targeted by CEQA lawsuits to get further information from agency planning or attorney staff about the nature of the parties filing CEQA lawsuits. From these interviews we learned the following:

- ***Business competitors***. Private sector competitive abuse of CEQA often garners the strongest political criticisms, but is part of a systematic approach to advance competitive business objectives with unconventional tactics. In "Protecting Market Share: The Boundaries of Competitive Engagement," a consulting group boasts that it is "the world leader in land use politics" and explains:

  > "The courts have sanctioned the right to organize community opposition that urges government officials and agencies to deny land use permits to applicants, even when the underlying motive of the opposition is protecting market share and eliminating competition. What's more, the courts are protecting third-party funding sources, in many cases anonymous funding sources, which support the opposition efforts in order to block potential competition."[53]

Private sector competitive abuse is not limited to direct competitors (e.g., union versus non-union grocers or other competing retailers). Sometimes economic competitors are simply fighting projects that could increase their operating costs or decrease their access to "free" public resources. For example, a surface strip mining company that depends on maintaining a very shallow groundwater level in a remote valley has filed a CEQA lawsuit against a water project that proposes to transport some of the water stored in the valley to urban users – which could affect mining operations.[54] Private party disputes over water and other localized resources can result in contract claims and other lawsuits – but CEQA lawsuits to protect the commercial interests of miners strays far afield of CEQA's environmental protection goals.

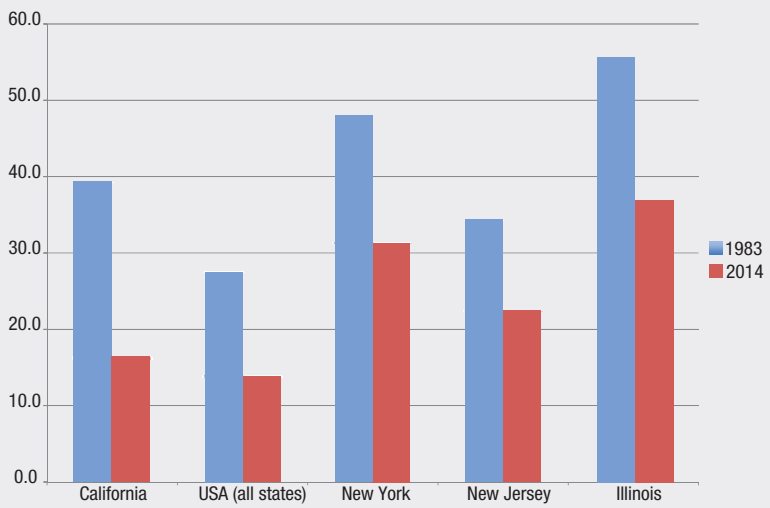
- ***Regulated party petitioners*** generally identified themselves in CEQA petitions. Regulated industries tended to file CEQA lawsuits in the name of a trade association, and used CEQA to try to delay or modify regulations by asserting that more elaborate environmental studies were required to accurately assess a regulation's true environmental impacts (e.g., local agencies targeted by a trade group to block restrictions on the use of plastic bags),[55] or to more thoroughly document the environmental trade-offs in regulations that allegedly prioritized one policy objective over others (e.g., restrictions on the use of "once-through" water to cool power plants).[56] One of the more interesting examples of this regulated party petitioner pattern were CEQA lawsuits filed against marijuana dispensary use permit ordinances, in which parties aligned with medical marijuana purveyors asserted that placing limits on the number of authorized dispensaries could drive up prices, thereby forcing people to either drive longer for less expensive pot (with resulting traffic, air pollution, and greenhouse gas emissions) or grow their own pot and thereby consume more water during drought conditions.[57]

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

> Labor tends to use CEQA litigation (and litigation threats) to gain control of project job allocations and wages, but also uses CEQA in disputes with other labor unions.

- ***Construction trade unions*** were more likely to be identified in petitions than other trade unions, but unions filing CEQA lawsuits typically did not identify themselves as a union. Labor tends to use CEQA litigation (and litigation threats) to gain control of project job allocations and wages, but also uses CEQA in disputes with other labor unions. In the high percentage of renewable projects in the Southern California desert that were threatened or sued under CEQA, for example, two different labor petitioner groups – each affiliated with a different construction trade union – each filed their own CEQA lawsuit against the same project.[58] This occurred in a reported dispute over which union would control the jobs created by these projects, and the competing unions used CEQA lawsuits in lieu of using the federal regulatory process for resolving territorial disputes.[59] Labor CEQA lawsuits were filed even for jobs requiring payment of prevailing wages and other negotiated terms that are generally perceived as favorable by the community and policy stakeholders (e.g., agency approval conditions requiring hiring of local businesses or residents, small businesses, minority-owned businesses or women-owned businesses).[60] Such union lawsuits reportedly sought to control job allocations to union members and allies. Agencies that declined to require Project Labor Agreements (PLAs) as conditions of project approval have been particular targets of these labor tactics, such as San Diego's expansion of its convention center.[61]

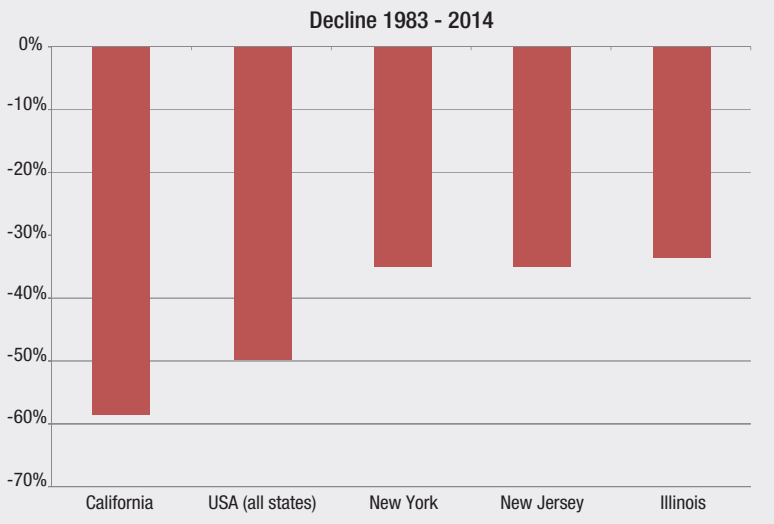
- ***Non-construction unions*** are even less likely to be named in CEQA petitions, in part due to federal law restrictions on the manner in which such unions are allowed to use unconventional tactics (like CEQA lawsuits) to bargain over wage and working condition issues with their employers. By far the largest category of these cases involve CEQA challenges to non-union retailers, particularly Walmart.[62] Lawsuits filed against Walmart and similar projects were all filed by "local" groups with environmental-sounding names, although union backing of such lawsuits was well known (and open union opposition to such projects was clear in the administrative agency approval process).[63] Another noteworthy case involved a union lawsuit against the closure of a luxury clothing store, and the opening of a replacement store in a nearby city, in a reported bid to avoid the need to organize a union and enroll employees at the new store.[64]



### CEQA Helped Assure that the U.S. Manufacturing Resurgence Bypassed California

As commenter Richard Rider recently observed:

> "So, CEQA saves California?? Guess the other 49 states are cesspools of pollution and filth. Surely they envy us our protections."
>
> "Well, the other states DO like CEQA. After all, California is the engine of prosperity – for the other 49 states."
>
> "FACT: From 2007 through 2010, 10,763 industrial facilities were built or expanded across the country – but only 176 of those were in CA. So with roughly 12% of the nation's population, CA got 1.6% of the built or expanded industrial facilities. Stated differently, adjusted for population, the other 49 states averaged 8.4 times more manufacturing growth than did California."
>
> — Richard Rider, comment on Voice of San Diego article, "The Great Uncertainty Facing California Businesses" (comment posted December 21, 2014), *available at* http://www.cmta.net/20110303mfgFacilities07to10.pdfProsperity (accessed May 28, 2015).



It is noteworthy that CEQA lawsuits do not appear to have materially affected California's workforce participation in private labor unions, based on available national data.

### Bar Graph 1: Percent Union Members in Construction Workforce in 1983 and 2014

There is no evidence that California construction trade use of CEQA lawsuits (and lawsuit threats) is materially helping increase union membership in construction trades. As shown in Bar Graph 1, California construction trades have a higher rate of union membership than the national average. However, California construction trades also have a lower membership rate than other blue state flagships such as New York, New Jersey, Massachusetts and Illinois as measured over a multi-year period ending in 2014. Bar Graph 2 shows that California's construction unions have suffered a higher percentage decline in construction trade union membership relative to other states during the same period. California's construction union membership picked up slightly between 2012 and 2014, but still lags behind 24 other blue and purple states such as Illinois, New York, Indiana, Hawaii, Ohio, Pennsylvania and Wisconsin.

Job loss from NIMBY use of CEQA lawsuits (and CEQA lawsuits more generally) – which affects prevailing wage jobs, and both construction and non-construction unions – has been documented by various studies. One such analysis was prepared by the noted Southern California economist John Husing. It evaluated seven projects targeted by CEQA lawsuits and concluded that from just these projects, 3,245 prevailing wage jobs, paying workers an average annual wage of $100,502, were delayed or eliminated on an annual basis. The total affected annual lost wages and benefits was $326.1 million.

Some union lawsuits represent distinct trade-offs between construction and operating unions, highlighted in an agency appeal dispute regarding union participation in a new transit car manufacturing facility in Los Angeles.[65] For various reasons, including California's consistently poor business rankings (generally attributed to high regulatory hurdles, CEQA litigation uncertainty, and other tactics), the post-recession resurgence of middle-class manufacturing jobs in the United States has largely bypassed California.[66] A CEQA challenge to the new construction of one of the very few new manufacturing facilities proposed to be located in Los Angeles in many years – for the manufacture of transit cars paid for by Los Angeles taxpayers – was derailed by a union that filed a CEQA appeal seeking a "card check" agreement with the manufacturer. ("Card check" is an expedited process for enrolling employees in a union and bypassing the ordinary union election process.) The manufacturer initially declined to accept the "card check" procedure, and announced that it would relocate the plant outside California, at which point political intervention resulted in a compromise that created fewer prevailing wage construction jobs – the new manufacturing facility would not be built – but delivered the "card check" outcome sought by the union litigant. The press reported that there were no environmental benefits included in the negotiated outcome.[67] It is noteworthy that this example did not result in an actual CEQA lawsuit being filed, since a political compromise occurred at the agency approval level.

- ***NIMBYs.*** Notwithstanding the more frequently reported non-environmental use of CEQA by unions and business competitors, NIMBYs comprised by far the largest number of project opponents, particularly for infill projects. NIMBY opponents were often characterized as "older" or "wealthier" or "less ethnically diverse" than the part of the population that would benefit from the challenged project, particularly for urban schools, parks, and multifamily housing projects. As a noted land use expert has observed, "[t]he people who are most apt to fight things have six-figure incomes and nice houses and college and post-college degrees."[68] NIMBYs and their advocates are often personally impassioned about protecting "their" environment, defining the "environment" as their local community. In fact, one of their advocates has waged an unsuccessful campaign to banish the term "NIMBY" from public use, calling it the "N-word" of CEQA."

- ***"Greenmail" and "Bounty Hunter Lawyers."*** Numerous lawsuits filed by entities with community-sounding names were attributed to lawyers that used CEQA to extract monetary, non-environmental, confidential settlements from agency and/or private project sponsors. Several media stories have named two lawyers, including a Southern California lawyer who filed the largest number of CEQA lawsuits during the study period, as engaging in "greenmail" – using environmental laws to extract monetary settlements for private gain. There are also reported allegations of widespread violations of state and federal tax laws by dozens of the non-profit CEQA petitioners organizations formed by, and sharing the same address, relatives and colleagues of, the lawyer filing the highest number of CEQA lawsuits during the study period.[69]

NIMBYs comprised by far the largest number of project opponents, particularly for infill projects. NIMBY opponents were often characterized as "older" or "wealthier" or "less ethnically diverse" than the part of the population that would benefit from the challenged project, particularly for urban schools, parks, and multifamily housing projects.

> CEQA lawsuits are filed by businesses seeking to derail competitors, labor unions wanting to control the allocation of jobs, NIMBYs opposed to neighborhood-scale change even when limited to the repair of existing houses or occupancy of existing buildings, and lawyers who collect substantial, confidential monetary settlements without ever identifying their clients. Collectively, these paint a troublesome picture of undesirable, and abusive, civil lawsuits clogging California's overburdened and underfunded judiciary.

- ***Other Community Groups.*** During interviews, there were no reports of non-environmental community advocacy groups (e.g. poverty advocates) filing CEQA lawsuits to leverage non-environmental settlement terms. There were community groups deeply concerned about localized environmental conditions, and there were "Community Benefit Agreements" as well as "Development Agreements" negotiated typically as part of the political process with agency staff and elected leaders. These agreements included providing non-environmental benefits, such as prioritizing local residents in hiring or providing affordable housing, contributing to local job training or educational programs, and supporting the arts and other activities.[70] These and similar community agreements known to the authors emerged as a result of political advocacy and organizing efforts rather than CEQA lawsuits.

- ***National and Regional Environmental Organizations.*** About 13% of CEQA lawsuits included as named petitioners established statewide environmental advocacy groups such as Communities for a Better Environment and the Center for Biological Diversity, and established regional environmental advocacy groups such as Endangered Habitats League. These lawsuits were more likely to target greenfields projects, projects or plans involving highway or industrial plant expansions, and state regulatory programs involving pollution control or resource extraction. Some local chapters of major organizations (e.g., the Sierra Club and Audubon Society) also field CEQA lawsuits, and generally pursued the same agenda as the established environmental groups that did not operate with a chapter structure. If CEQA's standing requirements (the right to file a lawsuit to enforce CEQA) was modified to be in alignment with its parent federal statute, the National Environmental Policy Act (NEPA), these environmental advocacy groups would continue to have full access to judicial review and enforcement of CEQA – and the projects these groups target tend to have a much larger environmental footprint than the infill spats that currently dominate the judiciary's CEQA litigation caseload.

- ***California Tribes*** appeared in only about 2% of CEQA cases and were more likely to participate in lawsuits with multiple petitioners including established state and national environmental organizations. Tribal projects were also targeted by CEQA lawsuits. (It is noteworthy that the study period pre-dated the January 2013 effective date of Assembly Bill 52 (Gatto), which expands CEQA requirements relating to tribal consultation and mitigation.)

CEQA lawsuits filed by businesses seeking to derail competitors, labor unions wanting to control the allocation of jobs, NIMBYs opposed to neighborhood-scale change even when limited to the repair of existing houses or occupancy of existing buildings, and lawyers who collect substantial, confidential monetary settlements without ever identifying their clients – collectively, these paint a troublesome picture of undesirable, and abusive, civil lawsuits clogging California's overburdened and underfunded judiciary.

What's most shocking, however, is that these abusive litigation tactics are being undertaken in the name of "the environment" – when in fact the environment, jobs, affordable housing, public parks, and a broad range of other important social and political priorities are derailed, delayed, or made far more costly by CEQA litigation abuse. As many commenters have noted, a powerful political alliance between labor and environmental advocacy groups has prevented CEQA lawsuit abuse reforms.

The editorial board of the *San Francisco Chronicle* recently summarized succinctly the challenge of CEQA reform:[71]

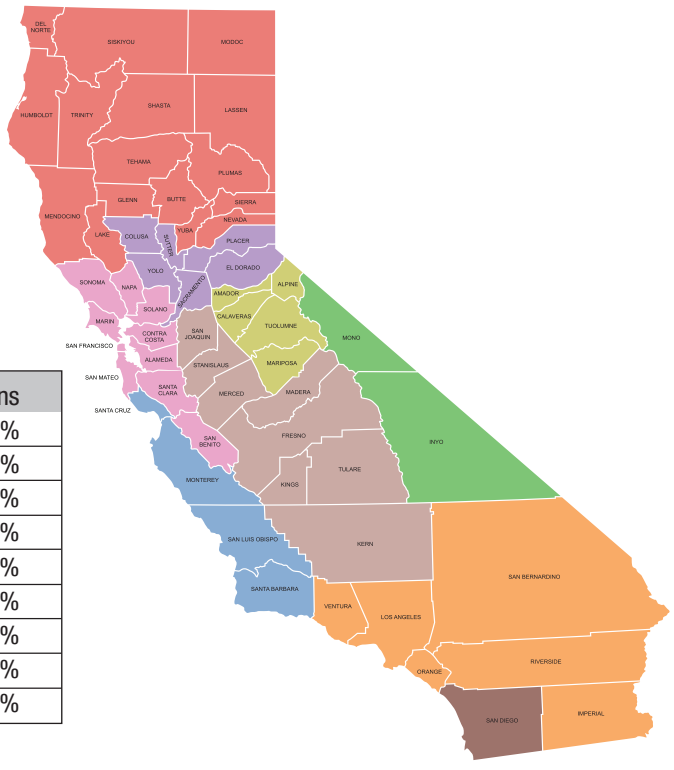
> "The problem: The 40-year-old California Environmental Quality Act is vulnerable to exploitation from interests whose motivations have nothing to do with protecting resources. Lawsuits have been filed by labor unions as leverage for organizing and even by business competitors.
>
> The solution: The law needs to be reformed to provide greater transparency on who is actually bringing a lawsuit, along with faster legal review and tighter guidelines on the basis for litigation.
>
> Who's in the way: Environmental and labor groups are adamantly opposed to substantive reforms."

The need for CEQA reform was identified as a top priority in all 14 regional conferences sponsored by the California Economic Summit, a partnership between California Forward and the California Stewardship Network.

## D. CEQA Lawsuits Occur in All California Regions: More Lawsuits are Filed in Large Population Centers, but Major Projects are Challenged Everywhere

California's population is the largest and among the most diverse in the country. California is the third-largest state, and its communities are distributed among exceptionally diverse topographic and climatic zones. Despite this diversity, however, the need for CEQA reform was identified as a top priority in all 14 regional conferences sponsored by the California Economic Summit, a partnership between California Forward (a non-partisan, non-profit organization working to identify common sense steps Californians can take to make government work) and the California Stewardship Network (a civic effort to develop regional solutions to the state's most pressing economic, environmental, and community challenges).[72] One conclusion from the first summit:

While the California Environmental Quality Act (CEQA) has strong benefits to ecosystems, public health, and environmental quality, the CEQA process has been misused, often substantially increasing costs of projects and delaying both private sector job-creating investments and critical public-works projects important to competitiveness and public safety.[73]



Each region weighed in with its own tales of CEQA litigation abuse, such as "document dumping" tactics used to derail project approvals by parties who ignored what was often a multi-year public review and comment process, greenmail lawsuits by bounty-hunter lawyers, and NIMBY lawsuits over a single-family home on an existing lot in an existing neighborhood.

Consensus CEQA modernization recommendations from this extraordinary collection of regional leaders from government agencies, environmental organizations, businesses, educators and other key stakeholders include:

- Increase transparency and reduce uncertainty in the CEQA administrative and litigation processes.
- Eliminate non-environmental uses of the statute (e.g., thwarting competition, NIMBY challenges to change, leveraging non-environmental monetary benefits and "greenmail").
- Refocus CEQA administrative and litigation processes to improve environmental outcomes.
- Avoid duplicative CEQA review processes.
- Focus CEQA modernization on "3E" outcomes – those that will improve the quality of California's environment, economic competitiveness and community equity.[74]

This study demonstrates how widespread CEQA litigation has become throughout the state. Figure 7 shows the distribution of the CEQA lawsuits filed during the study period in California's major regions.

### Figure 7: Distribution of CEQA Lawsuits in California Regions

| Map | Region | Petitions |
|---|---|---|
| | Los Angeles & Inland Empire | 33% |
| | San Francisco Bay Area | 22% |
| | San Joaquin Valley | 13% |
| | San Diego | 10% |
| | Sacramento Area | 8% |
| | Central Coast | 6% |
| | Northern California | 5% |
| | Sierra Foothills | 2% |
| | Mojave Desert | 1% |

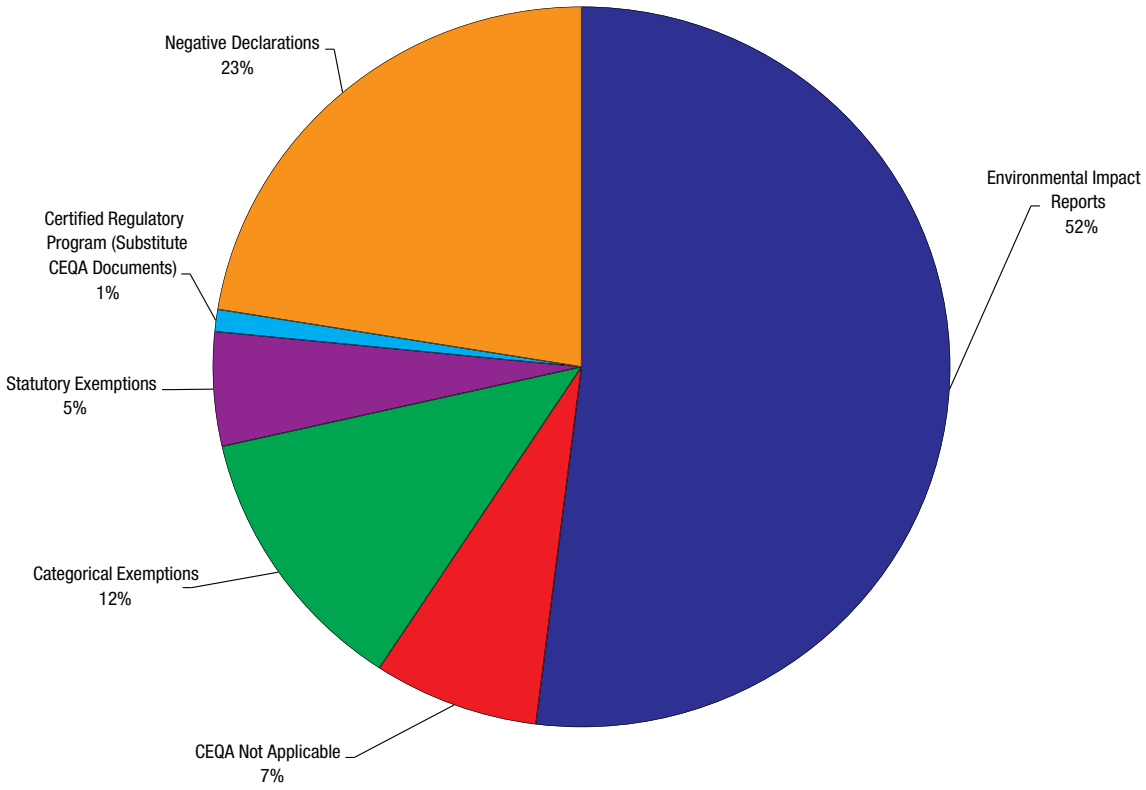
## E. More Thoroughly Studied Big, Well-Funded Projects Get Sued More Often Than Smaller, Less Well-Funded Projects

During CEQA reform debates, defenders of the CEQA litigation status quo have cited the thousands of agency decisions made in larger jurisdictions, such as Los Angeles and San Francisco, and the comparatively small number of CEQA lawsuits filed in those cities.[75] The overwhelming majority of CEQA compliance documents, however, involve the use of restricted regulatory exemptions for extremely minor projects,[76] such as repairing single family homes,[77] acquiring park lands,[78] making minor modifications to existing uses such as modifying signage or repairing piping or other infrastructure, etc.[79] Figure 8 shows the categories of CEQA compliance documentation tracks that are challenged in CEQA lawsuits.



As background, because CEQA applies to "discretionary" project approvals, and because many cities require such "discretionary" approvals for even very minor activities (e.g., building a deck in the backyard of a single-family home,[80] or opening a retail store, restaurant or even medical clinic in an existing building[81]), CEQA does indeed apply to hundreds of thousands of agency decisions that are of zero interest, and zero visibility, beyond the permit applicant and the city staffer at the building counter. In the most extreme example, by its charter *all* permits issued in San Francisco are considered "discretionary" and trigger CEQA review.

CEQA also has more than 30 regulatory "exemptions" for projects that do not typically result in any significant environmental impacts; statutory exemptions for politically-connected projects (e.g., stadiums and prisons); exemptions for practically imperative actions that could collapse under the financial, scheduling and litigation risk costs inherent in CEQA (e.g., bus stop locations and fares, groundwater management regimes); and a "common sense" exemption from CEQA reflected in the statute and case law (e.g., whether a public agency buys Coke or Pepsi for its vending machines – even if selecting one product will require longer truck trips and cause more air pollution than another).

Because CEQA applies to "discretionary" project approvals, and because many cities require such approvals for even very minor activities, CEQA applies to hundreds of thousands of agency decisions that are of zero interest, and zero visibility, beyond the permit applicant and the city staffer at the building counter.

## Figure 8: CEQA Compliance Tracks Targeted by CEQA Lawsuits

*Produced by: Hernandez, Friedman, DeHerrera*
*Copyright © 2015 Holland & Knight LLP All Rights Reserved*

The study shows that larger projects for which full EIRs are prepared, and the far more detailed environmental studies included in EIRs, get sued much more often than smaller projects that qualify for CEQA exemptions or are processed with a shorter-form "Negative Declaration." Unfortunately, larger projects and EIRs are the norm for the kinds of transformational projects that California's environmental policy mandates and diverse, growing population demand, such as utility-scale solar and wind facilities, transit systems, modifications of city and county land use plans to provide for higher-density and transit-oriented development, and larger-scale urban housing and employment projects that implement such higher-density land use plans. The cost of an EIR can exceed $1 million and require more than a year to complete, presenting a daunting economic hurdle for all but the most well-funded projects. Smaller and much more leanly funded projects, such as park trail renovations and the adaptive reuse and remodeling of existing structures (which also generally include building code upgrades to improve public safety and implement "green" state mandates like water- and energy-conservation fixtures), can spend in excess of $50,000 on less costly alternatives to EIRS such as Negative Declarations, but are also easier to topple with threatened or actual CEQA lawsuits that would cost hundreds of thousands of dollars in legal fees and project delay costs, e.g., loss of grants, bank loans and other funding sources.

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

> The act of simply filing a CEQA lawsuit can kill the most environmentally benign small project, while the destinies of big projects are controlled by the financial appetite of combatants willing to continue writing checks totaling millions of dollars to the legions of by-the-hour consultants and attorneys in the "CEQA industry."

CEQA lawsuits can delay, but typically do not derail, really "big" projects with ample financial resources. On the other hand, CEQA lawsuits can stop "small" projects supported by poorly funded agencies (e.g., parks and schools), non-profits (e.g., workforce training and affordable housing), small businesses (e.g., restaurant and auto repair shops) and individuals (e.g., owners of small businesses and single-family homes). The act of simply filing a CEQA lawsuit can kill the most environmentally benign small project, while the destinies of big projects are controlled by the financial appetite of combatants willing to continue writing checks totaling millions of dollars to the legions of by-the-hour consultants and attorneys in the "CEQA industry."

- **Environmental Impact Reports (EIRs)** are the most elaborate and costly CEQA compliance track, and are required for projects that may cause one or more significant adverse impacts, unless the project qualifies for a statutory or regulatory exemption, or falls within the jurisdiction of an agency that has approval to manage its own version of a CEQA process. There are different types of EIRs,

including an "addendum" process for adding new information to an EIR. All EIRs are grouped together for purposes of this study. Notwithstanding the fact that projects that undertake EIRs get the most elaborate and comprehensive levels of study and public review, they are also the "big" projects that are far more likely to attract a CEQA lawsuit: 52% of challenged CEQA projects involve EIRs. Often-passionate local disagreements about the merits of whether to proceed with the project at all (e.g., for solar and transit projects, and higher-density urban infill projects), and equally determined efforts to secure project labor agreements or delay competitors, play out in CEQA lawsuit challenges that are legally framed as EIR deficiencies, such as alleged problems with traffic or air quality technical calculations.

- **A Negative Declaration** may only be used for a non-exempt project for which there is no "fair argument" in the agency record that one or more significant adverse impacts "may" occur. A small project that does not qualify for a Categorical Exemption most often proceeds with the Negative Declaration compliance track. However – particularly in urban areas with existing environmental challenges like traffic congestion and traffic-related air pollution, or infrastructure challenges relating to water or wastewater, or temporary but bothersome construction noise or traffic diversion impacts – defending a Negative Declaration can be almost futile. Less than a quarter of CEQA lawsuits challenge Negative Declaration CEQA documents.

- **A project may be wholly or statutorily exempt** from one or more of CEQA's procedural or substantive projects by the Legislature (subject to the Governor's approval).

- **"Regulatory categorical exemption"** applies to projects which "normally" do not have any significant adverse impacts, and which fit within the parameters of one of more than 30 exemption "classes" included in the regulations implementing CEQA.

- **The common sense "exemption"** from CEQA arose from judicial interpretations of the CEQA statute, and is also reflected in CEQA's regulations.

Agencies are encouraged, but not required, to complete CEQA paperwork for projects that are exempt from CEQA under a statutory, categorical, or common sense exemption. CEQA petitions that alleged that agencies completed no CEQA documents were separately tallied for this study, although from our interviews we learned that the agency had concluded that the challenged project qualified for one or more exemptions.

Sometimes agencies used multiple CEQA compliance tracks, including, for example, processing a project with both an Addendum (based on an earlier EIR for an earlier version of the project or for a land use plan) and a Negative Declaration that provided an additional increment of public review processing. In these few cases, the study tally included each compliance track, and this resulted in more tallied CEQA compliance tracks than projects.

While statewide statistics are not compiled on the number of EIRs, Negative Declarations and exemption decisions made annually, there are far fewer EIRs prepared relative to the other CEQA compliance tracks. Nevertheless, EIRs are most frequently challenged and thus a higher percentage of EIRs are challenged than other forms of CEQA documents. As one of the defenders of CEQA's litigation status quo indeed reported, for Los Angeles, "all the big projects are sued."[82] This study confirms that big projects with EIRs get sued most often under CEQA, and shows that CEQA lawsuits are used far more often to nitpick the analytical adequacy of an EIR than to challenge the environmental analyses (or lack thereof) in Negative Declarations or exemption determinations.

As one of the defenders of CEQA's litigation status quo reported, for Los Angeles, "all the big projects are sued." This study confirms that big projects with EIRs get sued most often under CEQA.

PART 2

# CEQA Lawsuit Targets – The Stories Behind the Statistics

Comprehensive study statistics tell only part of the CEQA litigation story. Reviewing actual CEQA petitions filed against real projects paint a more vivid picture of the all-too-frequent (and non-environmental) abuse of CEQA as do media and other reports of CEQA administrative appeals seeking to derail projects before final agency approval. These examples illustrate fundamental and sometimes passionate disagreements about the appropriate land use or other policy decision at issue, but none involve avoiding the type of harm to "the environment" envisioned when CEQA was enacted in 1970.

Comprehensive study statistics tell only part of the CEQA litigation abuse story. Reviewing actual CEQA petitions filed against real projects paint a more vivid picture of the all-too-frequent non-environmental (and anti-environmental) abuse of CEQA.

It is also important to recognize that all of the challenged CEQA projects have already run the gauntlet required to secure lead agency approvals: only approved projects can be sued under CEQA. This approval gauntlet can include bruising and protracted public debates in community meetings, at the Planning Commission, City Council or County Board of Supervisors, and even at the ballot box among the voters in a community. Many CEQA lawsuits, especially NIMBY and labor lawsuits, are filed by the losers in these political battles – and use CEQA litigation as the final leverage they have available to overturn the decision that emerged from the democratic process. Because the act of filing a CEQA lawsuit is enough to block most forms of private and public sector funding, the stakeholders and public agency decision-makers who supported the project then lose (permanently or for the period that the lawsuit is pending) the benefits promised by the project.

Some examples of CEQA litigation in action illustrate that even lawsuits filed for "environmental" purposes involve policy disagreements, not the extent to which the "environmental" impacts of an approved project have been appropriately studied and mitigated.

- ***Stop Affordable Housing in Silicon Valley – Let's Make a Free Farm Instead.*** A Santa Clara infill site located next to a major transit center and regional mall, and bordered by single-family homes, illustrates the democratic decision-making process – and the community's loss of an important project benefit due to a CEQA lawsuit.[83] The site was formerly a small experimental farm owned by the Regents of the University of California. The Regents determined that the site was no longer suitable for this use, and embarked on a planning and development process with extensive community stakeholder engagement. Ultimately the majority of the community favored redevelopment with three components: single-family homes adjacent to the existing single-family homes in the neighborhood, a new neighborhood park for use by local residents, and critically needed market-rate and affordable apartments for seniors. A small but passionate group opposed this plan and instead lobbied for an urban farm that would produce food and provide hands-on farm education in Santa Clara. They had no money to purchase this public property for their desired use, and instead they wanted the cash-strapped UC system to dedicate this surplus property to non-profit urban farming uses. The urban farming advocates unsuccessfully filed administrative appeals to block the city's project approval, and ultimately – and again unsuccessfully – attempted to reverse the project approval through a citywide referendum vote on the project. The group also filed a CEQA lawsuit, which the courts ultimately concluded had no merit.

During the several years that the lawsuit remained pending, the senior housing project first lost critically needed public grant funding, and ultimately lost crucial redevelopment agency funding. About a decade later, the components of the project that remained financially viable – single-family homes and a new neighborhood park – were completed, but the senior project remains derailed by funding shortfalls. The site was never destined to be an urban farm: even had the CEQA lawsuit been successful, the Regents and city would have simply corrected the CEQA study and re-approved the project. In the heart of Silicon Valley – one of the most jobs-housing imbalanced areas of California, where lengthy commutes and costly housing are both norms – seniors who may have voluntarily sold their homes if they could stay in town (thereby making existing homes available for purchase by families) lost. So did seniors in need of scarce affordable housing, and hundreds of families with seniors in need of quality local housing with senior support services. And the people who would have built and staffed the senior housing center lost, too.[84]

This case and others described below help illustrate how a CEQA lawsuit can be used to attempt to thwart the democratic process. In this case, the project was obstructed by passionate opponents who could not persuade The Regents to donate state-owned lands for non-economic uses, could not persuade the city to restrict authorized site uses to urban agriculture instead of housing for seniors and families and a new neighborhood park, and could not persuade the voters to overturn the city's decision to approve the project.

To the extent that CEQA was intended to prevent agencies from approving projects that are harmful to the environment, this and other cases demonstrate that this is simply not the objective of most CEQA litigants today. This part of our report illustrates a sample of the projects behind the statistics, along with projects that did not even make it into the study statistics because the project was killed or withdrawn or never started because of CEQA's inherently unpredictable, lengthy and costly pattern of litigation abuse for any purpose, by any party.

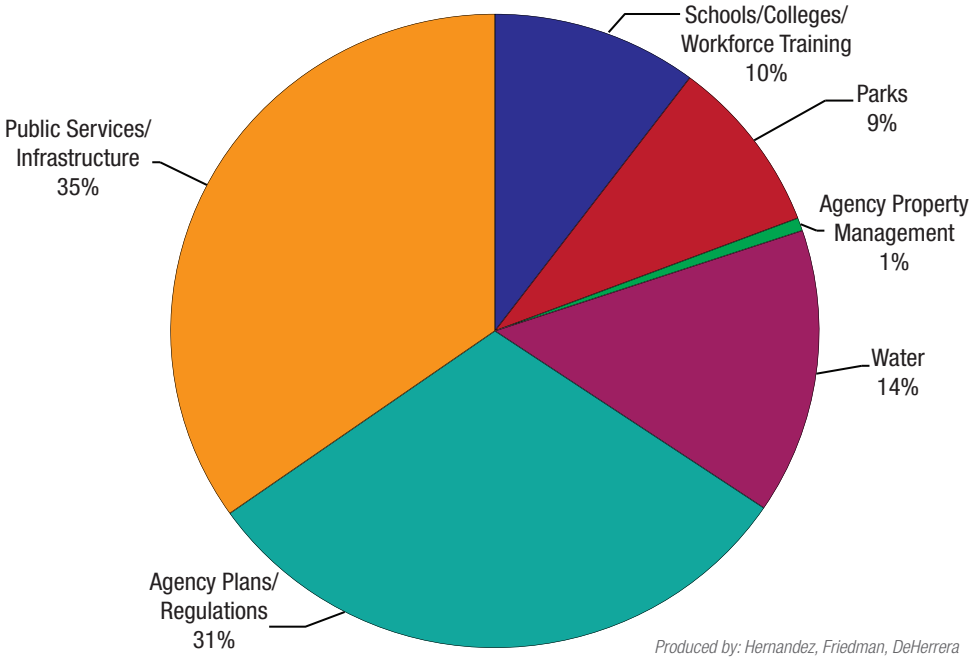
## A. Public Agency Projects

As depicted in Figures 1 and 9, about half of CEQA lawsuits target public agency projects, plans or regulations and involve no private sector applicant, resulting in CEQA's compliance and litigation costs and risks being borne solely by taxpayers.[85] It is critical to understand that the cost of CEQA lawsuits is not simply paying attorneys and experts to defend the lawsuit. Once a CEQA lawsuit has been filed (often for well under $10,000 in court filing fees), even if the agency is ultimately determined (after 2-5 years or more of trial and appellate court proceedings) to have complied with CEQA, taxpayers can suffer hundreds of millions of dollars of increased costs. As recently reported by the *San Diego Union Tribune*:

> "[Petitioner Attorney] is big on suing local governments. He has sued San Diego many times. Sometimes he wins, as when he challenged the financing scheme for the expansion of the downtown convention center. Sometimes he accepts financial settlements. Often, he loses. But even when he loses it can cost taxpayers big time. [Petitioner Attorney] sued San Diego last year, twice, seeking to block a $120 million bond issue the city planned for street repair and other infrastructure. He lost the first suit and the second suit never got to trial. The city finally sold the bonds last week, attracting significant investor interest and raising all the cash the city wanted. But because [Petitioner Attorney] appealed the ruling in his first suit, and even though he will likely lose that too, the city had to pay a higher interest rate to the investors, 4.04% compared to the 3.8% that had been estimated. The difference in interest rates will mean an estimated $200,000 a year in additional debt service. For 30 years total, some $6 million. Thanks, [Petitioner Attorney]."[86]

It is critical to understand that the cost of CEQA lawsuits is not simply paying attorneys and experts to defend the lawsuit. Once a CEQA lawsuit has been filed (often for well under $10,000 in court filing fees), even if the agency is ultimately determined to have complied with CEQA, taxpayers can suffer hundreds of millions of dollars of increased costs.

Copyright © 2015 Holland & Knight LLP All Rights Reserved 



Taxpayers can suffer major financial losses even from threatened CEQA lawsuits. For example, a critical part of the $1.4 billion improvement project to construct a carpool lane and related improvements along a 10-mile stretch of Interstate 405 over the Sepulveda Pass required the replacement of an overpass at Mulholland Drive. A multi-year EIR had been completed to address scores of community concerns – but a small group of wealthy neighbors near the overpass raised aesthetic objections to the overpass design, and wanted a "world class architect" hired to build a prettier overpass. Fighting the neighbors' threatened CEQA lawsuit would have resulted in the loss of critical federal funding and hundreds of construction jobs during the depths of the Great Recession – even if the adequacy of the EIR was ultimately upheld after several years of litigation. Therefore, the agency chose to cave in, and built a modified bridge design that not only caused taxpayers millions of additional dollars, but also required two weekend closures of Interstate 405, which is one of the busiest highways in California.[87]

> Taxpayers can suffer major financial losses even from threatened CEQA lawsuits.

Taxpayer costs tell only a small part of the CEQA litigation abuse story: CEQA lawsuits hurt real people, with real needs, for non-environmental reasons.

## 1. Schools, Colleges, and Workforce Training Projects

The 2010-2012 study period saw public school funding plunge during the Great Recession.[88] Only limited federal and state funds were available for school capital projects (and public funding is most often unavailable for projects caught up in litigation), and operating budgets were reduced to near-crisis levels. Thirty-one CEQA lawsuits were filed against schools during the study period: 55% targeted K-12 projects, and the remainder targeted college and adult education training projects. Just over 90% of the petitions challenged schools in infill locations, with the vast majority of those lawsuits targeting renovations or expansions of existing campuses.[89]

Almost all school challenges were filed by neighbors objecting to increasing the utilization of existing school facilities. As discussed in detail below, converting an elementary school to a middle school, adding nighttime lighting or artificial turf to school playfields, or objecting to the construction or expansion of a school, led the litany of claims against K-12 schools. A sample of filed and threatened lawsuits against K-12 school projects follows:

- ***Everybody Hates Middle School.*** El Cerrito, a small city in the East Bay, is served by the West Contra Costa School District, which covers several cities and has a substantial student population meeting the poverty criteria required to qualify for free or subsidized lunches, a large population of students for whom English is not their first language, and other challenges common to urban school districts. The middle school serving El Cerrito was determined to be directly above an earthquake fault, and was required to be relocated. The district examined its options, and concluded that a former elementary school (mostly idled) located a short distance away from the middle school was the most suitable alternate location for the relocated middle school. The district completed the CEQA document required for the relocation of the students and reuse of the elementary school site, and – facing a statutory deadline for vacating the seismically unsafe middle school, and an expiration date for funding demolition – demolished the existing middle school and placed students in temporary trailers on the playground for the few months required to complete the relocation. Several years later, the students remain in trailers – victims of a CEQA lawsuit filed by neighbors of the elementary school who adamantly opposed converting their idled elementary school campus to a middle school. The alleged environmental harms were the usual NIMBY litany of traffic congestion and traffic-related air quality and noise, but there were also stark (and unstated, in public debate) demographic contrasts between the mostly older, white NIMBY neighbors and the young, diverse affected students.[90]

- ***Keep Schools Vacant on Nights and Weekends.*** Renovations to an elementary school that included a "multi-purpose room" – a staple of modern school construction on smaller campuses that often combines a cafeteria and an assembly space – were opposed by a passionate group of Mill Valley parents who were concerned that the multi-purpose room would be used for "other" purposes – disturbing the otherwise vacant schoolrooms during bucolic evenings or weekends in the tony Marin County suburb. The settlement cost paid by the challenged school district: more than $100,000, including more than $60,000 paid to the NIMBY group's lawyer.[91]

- ***Too Much Physical Education.*** The single-largest category of CEQA lawsuits against K-12 schools during the study period challenged installation of turf and lighting to increase use of existing sports fields.[92] Athletic facilities in many school districts pre-date the landmark civil rights legislation that ushered in today's era of girls' athletics, and increasing density – and student populations – in urban areas also exceeds the seasonal, daytime hours of availability for traditional turf fields. Add in two more layers of increased land use efficiency – "joint use" of school athletic facilities for youth and adult leagues who typically pay fees to cash-starved school districts, and national and state policy to encourage physical exercise as part of wellness and anti-obesity initiatives – and the result is clear: we must safely increase use of school sports fields. For neighbors facing increases in evening noise levels, and neighborhood parking shortfalls and traffic congestion, these national, state and regional imperatives unfairly burden their neighborhood and families, and spawned numerous CEQA lawsuits.

With neighbors lined up against kids in team uniforms, the politics of these disputes are tough. But should California's signature environmental statute be the costly, multi-year final battlefield for neighborhood opponents with the resources to immediately derail time-limited funding? Should these neighbors be able to persuade the judiciary to upend the school's decision because one expert asserts that the school's experts did the traffic count or noise study incorrectly? Since most of these playfield upgrades were processed with a CEQA Negative Declaration or Categorical Exemption, one expert that disagrees with the school's expert can be enough to derail these projects[93] since CEQA generally requires only a "fair argument" that the playfield upgrades "could" cause even one significant adverse impact (aesthetic, noise, traffic, parking,

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

disruption of the "character of the community"). A lawsuit loss for the school typically remains in a vacated project approval pending a full EIR costing hundreds of thousands of dollars. And the playfield upgrade battle is fought in the name of "the environment."[94]

Challenges to adult education were also most often attributed to neighbor concerns about increased utilization or changes to existing campus facilities. A sample of workforce training projects targeted in filed and threatened CEQA lawsuits follows:

- ***Preserve My Closed Landfill, Not Workforce Training for Critical Local Jobs***. In Los Angeles, goods movement – the logistics of moving products to and from the huge regional ports in Los Angeles and Long Beach – comprises over 20% of the Southern California economy. The Los Angeles/ Long Beach (LA/LB) port complex primarily handles shipping packed in metal containers that automate the cargo loading and unloading processes. The complex is the largest port in the Western Hemisphere, and the ninth-largest port in the world.[95] Approximately 40% of all U.S. container trade, with a cumulative value of approximately $400 billion, passes through the LA/LB ports.[96] The LA/LB port complex is one of the most important economic engines in Southern California and in the state. Based on estimates published by the ports, trade through the LA/LB complex accounts for approximately 1.2 million jobs, or 15% of total employment in Los Angeles, Orange, San Bernardino, Riverside and Ventura counties. Port trade also generates nearly 1.6 million jobs, or 9% of total California employment, as shown in Table A below.

**Table A: Regional and State Employment Generated by Trade Through the Los Angeles and Long Beach Ports[97]**

| | Five-County Region | California |
|---|---|---|
| Port of Los Angeles | 896,000 | 1,200,000 |
| Port of Long Beach | 316,000 | 371,000 |
| Total LA/LB Ports | 1,212,000 | 1,571,000 |
| Total Employment | 8,091,000 | 17,200,000 |
| Percent LA/LB Trade-Related Employment | 15% | 9% |

*Produced by: Hernandez, Friedman, DeHerrera*
*Copyright © 2015 Holland & Knight LLP All Rights Reserved*

The LA/LB ports stimulate regional and state transactions and wages that contribute to the state's gross domestic product (economic output) and generate significant state and local tax revenues. Port data indicates that trade through the LA/ LB complex produces approximately $116 billion in economic value to the state, including spending for port industry services, port-related transportation, and spending by import and export businesses. This level of economic activity is approximately 5.6% of the total state economic output (approximately $2 trillion). The ports also generate approximately $11 billion in state and local tax revenues per year, or about 11% of the state's total general fund expenditures ($100.7 billion) in 2013.[98]

Truck driving jobs in the goods movement sector are a major employment opportunity in the region, especially for adults lacking high school diplomas or strong English skills. A paved, closed landfill in the City of Los Angeles provided a perfect location for a truck driving training facility: it was proximate to transit service and candidate students from economically disadvantaged nearby areas, and could supply trained drivers to the region's ports.[99] Incensed neighbors, who had worked for years to finally shut down the landfill, objected to this training facility and insisted that there be no new uses on the paved landfill (primarily using the same "environmental" reasoning of traffic and air quality impacts, as well as noise from traffic). Neighbors lost their case with the LA City Council, but defeated the project (and its Latino sponsor) in a CEQA lawsuit. Once the CEQA lawsuit was filed, the all-important federal funding source was compromised, and this workforce housing project died.[100]

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

- ***Stop Jobs in Imperial County.*** According to the U.S. Bureau of Labor Statistics, Imperial County's unemployment rate in March 2015 was 19.9 %, compared to California's 6.5% statewide unemployment rate in the same month.[101] Imperial County has land – almost 5,000 square miles – and approved using less than 500 acres for a law enforcement training facility that would create 200 jobs serving students from California and other states. The training facility's sponsor also volunteered to permanently preserve more than 550 acres – about 60% of the school site – as permanent open space. The project came to the attention of the same Marin County attorney who was filing CEQA lawsuits against Imperial's solar projects (discussed below), along with a local tribe. Even though a full EIR had been prepared, the sponsors lacked the financial resources to pay to defend the lawsuit (and risk being held liable for the Marin County attorney's legal fees). The project was dropped in 2011, when annual statewide unemployment averaged over 11% and Imperial County was suffering a whopping 29.1% annual unemployment rate.[102]

The final category of school projects – colleges – tell a more diverse but now-familiar story.

- ***Old Fight, New Tactics: Town-Gown Conflicts and CEQA***. Community colleges, California State University, and the University of California systems are not subject to local government land use permitting or mitigation fee requirements, and disputes between "town" and "gown" over campus projects (and campus contributions to local services provided by the town) have periodically flared up before and after CEQA's 1970 enactment. CEQA lawsuits provide a judicial opportunity to leverage more favorable local government outcomes for these "town-gown" disputes. Two of these (involving Cal State East Bay[103] and San Diego State[104]) are now pending at the California Supreme Court, and involve the determination of the extent to which CEQA requires mitigation for increased demands on police and transit services, as well as the extent to which CEQA can require a public university to raise or divert private funds for CEQA mitigation (instead of scholarships or other educational support purposes) after the California Legislature has declined to approve budgets authorizing universities to pay for these local agency services.

  The appellate court came down squarely against Cal State San Diego, concluding that CEQA's mitigation mandates trumped the University's authority to elect how to spend private donations and public grant funds, and also trumped the decisions of the Legislature and Governor in allocating taxpayer funds to colleges and local governments.[105]

  The appellate courts also extended CEQA's exceptionally elastic definition of "the environment" to recognize as "impacts" requiring mitigation, student use of regional trails (Hayward campus)[106] and transit services (San Diego campus). These cases have remained pending for several years, and there is no deadline by which the Supreme Court must reach a decision. Available funding for campus projects is gone or remains at risk of being redirected to less litigious campus communities.

Community colleges were also targeted by CEQA lawsuits during the study period, including expansions proposed on several campuses with time-limited and competitive state or federal funding, but involved NIMBY rather than host city challenges.[107]

All challenged public college projects involved construction activities limited to "infill" locations on existing campus properties that are expected to increase student populations and efficient use of campus facilities.

Private colleges had their share of CEQA lawsuits, although the study period included the recession, when smaller donations meant fewer campus projects. Two examples from Los Angeles tell startling tales of CEQA litigation abuse:

- ***Keep that Parking Lot Quiet.*** Emerson College proposed to build a small satellite campus on a tiny (0.85 acre) slice of Hollywood used for surface parking; the vertical project would include classrooms, dorm space, and apartments for four faculty members. An adjacent music studio asserted that the construction noise would drive them out of business, but refused to provide access for noise study experts who could evaluate the problem and find a solution. The college ultimately prevailed (a year later) after a costly lawsuit, and the project was completed.[108]

- ***Conquest Housing – the Self-Described "Al-Qaeda of CEQA" – Tries to Conquer All.*** The University of Southern California is perched on the edge of downtown Los Angeles, and has substantially grown in prestige, donations, students – and demand for student housing. Adjacent communities have objected to the "gentrification" of scarce affordable housing by university students who can pay higher rents, and USC responded with a commitment to prioritize construction of new student housing on university property, including a site located across the street from a new regional transit station. USC sought bids from qualified urban housing developers, and chose Urban Partners to complete the EIR and construct the new 421-unit dorm.

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

Two USC alumni who were buying up community housing for student use (the gentrification practice that had drawn community ire), and doing business for the USC Trojans as "Conquest Student Housing LLC," then attempted to derail this large new project and block their student housing competitor. Conquest filed a CEQA lawsuit against the USC Urban Partners project, but also filed CEQA lawsuits against all other pending Urban Partners projects in California and against two projects by relatives of Urban Partners principals in Washington state (where Conquest had no business operations). The lawsuits nearly destroyed Urban Partners, which had established a track record of building community support for public-private partnerships. USC and Urban Partners ultimately filed a federal racketeering lawsuit against Conquest,[109] citing to media stories reporting Conquest principals commenting on how to use CEQA to "bomb" projects and paying community members to file negative comments against their competitors. Conquest demanded that the racketeering and related claims be dismissed on the grounds that Conquest was only exercising its First Amendment "free speech" rights against the Urban Partners project. However, in a unique outcome among CEQA's competitor lawsuits, the federal district court declined to dismiss the racketeering charges against Conquest – whereupon a settlement was reached and Conquest (or at least its website) appeared to fold up shop. Stopping a transit-oriented dormitory to preserve local housing for non-student use in the name of the environment qualifies as CEQA litigation abuse.[110]

## 2. Other Public Service and Infrastructure Projects

Another often underreported category of CEQA lawsuits involves projects designed to provide necessary public services and infrastructure to existing communities, to adjust the use of existing facilities to respond to changing demographic or program needs, and to upgrade existing infrastructure to meet new legal mandates or service needs.[111] This category of public agency projects attracted the largest number of CEQA lawsuits during the study period.[112]

The most frequent type of local infrastructure targeted by CEQA "environmental" lawsuits were public transit projects,[113] followed by projects involving highways (all of which involved either High Occupancy Vehicle lanes or modifications to existing interchanges or crossings to address public safety concerns),[114] municipal waste management (all but one of which involved infill transfer and recycling facilities, not new or expanded landfills),[115] stormwater management (all of which were designed to improve water quality and reduce flooding),[116] telecommunications equipment (antennas and cable boxes required for improved Internet and wireless communications),[117] local street and landscaping upgrades,[118] and sewage system upgrades (such as pipe replacements).[119] No form of public infrastructure and service project was apparently too small to escape irritating at least one person enough to draw a lawsuit – a new fire station,[120] and renovations to an existing library[121] and an existing museum[122] – also drew lawsuits in the name of "the environment."

Transit projects attracted the highest number of CEQA lawsuits during the study period. Transit systems in the Los Angeles region were particularly targeted, notwithstanding legal mandates to establish and improve transit services to reduce traffic congestion, improve ambient air quality, and reduce greenhouse gas emissions.

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

Some samples of these taxpayer-funded public project CEQA lawsuit challenges:

### CEQA's Most Frequent Infrastructure Target: Transit

Transit projects attracted the highest number of CEQA lawsuits during the study period. Transit systems in the Los Angeles region were particularly targeted, notwithstanding legal mandates to establish and improve transit services to reduce traffic congestion, improve ambient air quality, and reduce greenhouse gas emissions. Transit system investments were also a key priority of the Obama administration's job creation program during the recession, and a huge amount of federal transit became available – but only for "shovel ready" projects (i.e., funding those not mired in litigation). During the study period, several transit lawsuits were filed by cities unhappy with the location of transit stops, or of mitigation measures. Others were filed by NIMBYs, and one was filed by a property owner who reaped a stunning financial reward of public funds in what was really an eminent domain property value dispute.[123]

- ***More Study Needed of Squeaky Wheels and Grease.*** One of the more notable transit project lawsuits resulted in the invalidation of an EIR based on the alleged incomplete analysis of the potential for increased grease drippage and wheel squeals resulting from putting more passenger commuter trains on existing railroad tracks that were already being actively used for cargo and other trains.[124]

- ***Metro "Gold" Line is "Gold" – for the Holdout Property Owner.*** The Gold Line starts near Pasadena, passes through downtown Los Angeles, and then extends into East Los Angeles. It reduces downtown traffic on several stressed freeways, and serves an exceptionally diverse ridership. The Gold Line maintenance yard is in the City of Monrovia, northeast of downtown. A property owner facing an eminent domain proceeding after having declined to voluntarily sell his property for the maintenance yard responded with six lawsuits filed over a three-year period, one of which alleged that the transit agency responsible for the Gold Line had failed to comply with CEQA.[125] Litigation would have resulted in more than $100 million in delay-related costs, which would have threatened project financing. The agency ultimately settled all six lawsuits for $24 million, more than four times the assessed value of the 4.5-acre property.[126]

- ***CEQA Requires Transit to be Invisible – Right?*** Neighbors opposed to the Expo Line connecting Culver City to downtown Los Angeles (and linking to other transit lines) argued that the new light rail system should be underground to reduce environmental impacts. A surprisingly brisk four-year trip through the trial court (where the NIMBYs lost) and appellate court (where the NIMBYs lost again) culminated in a landmark California Supreme Court decision,[127] which determined that the EIR was indeed fundamentally flawed in its study of air quality and traffic impacts because it failed to analyze the project in relation to the existing environment. Continuing the surprising trajectory of this CEQA case, the court nevertheless concluded that these flawed technical studies and resulting flawed EIR evaluation was nevertheless not sufficiently prejudicial to cause ordinary people to be confused about the short-term traffic, parking, and air quality construction, as well as start-up operational disruption caused by the transit project. To summarize this surprising litigation outcome: extraordinary Supreme Court decision: the EIR was flawed on the two topics that draw the most critical court scrutiny based on the Judicial Outcomes study (traffic and air quality),[128] but the Supreme Court declined to impose CEQA's most common judicial remedy (vacating project approvals pending an EIR re-do).[129]

Other wealthy communities, such as Atherton[130] and Beverly Hills,[131] also sued to halt (or drive to the invisible and financially infeasible underground) transit projects during the study period.

No discussion of CEQA challenges to transit would be complete without the tangled story of the state's High Speed Rail (HSR) project. Although initially approved by the voters, the project has undergone a variety of adjustments based on funding, routing, lawsuits and other factors. An initial "programmatic" EIR was done for the HSR project, which was targeted by several lawsuits.[132]

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

Supplemental EIRs were also required under the structure of the programmatic EIR. Risking court (and funding) losses, the Brown administration successfully persuaded a federal agency that federal preemption precluded a CEQA judicial remedy that would delay or vacate HSR.[133] A state appellate court subsequently decided that federal preemption did not preclude normal CEQA processing and the full range of judicial remedies, but concluded that the first EIR was legally adequate.[134]

Several HSR CEQA lawsuits remain pending, and, as is true for many complex infrastructure projects (e.g., operation and upgrades of state water project system components, discussed in more detail below), CEQA lawsuits remain pending while subsequent related EIRs and project components or phases are approved, leaving the legal status of the overall project as well as its constituent parts vulnerable to a single adverse judicial decision in any one of several pending proceedings (often heard by different judges and appellate panels). Such uncertainty adversely affects the cost and availability of funding for these public infrastructure projects.

## Most Improbable Infrastructure and Public Service Targets of CEQA Lawsuits

No critical public service facility is too critical, or too small, to be targeted by CEQA lawsuits. Again, CEQA also provides a comfortably safe haven for bigots.

- ***Mosques and Churches.*** Religious buildings earned the distinction of being the most frequently challenged non-infrastructure, public service projects. For example, CEQA lawsuits were filed against two mosques,[135] and neighbor opposition to mosques has been successful in blocking mosques without lawsuits.[136] Although the CEQA lawsuits alleged environmental impacts such as traffic and air quality, the reported public debate was more openly hostile – and more openly discriminatory – of Islam.

- ***Libraries, Fire Station, Museums and Medical Care.*** Two CEQA lawsuits challenged libraries.[137] One involved a new fire station long sought by the community but opposed by the nearest neighbors,[138] two fought museums,[139] one (filed outside the study period and thus omitted from the statistical compilation) opposed allowing air ambulance services at an existing airport,[140] and renovations prompted by seismic renovation mandates resulted in four challenges to hospitals.[141] Two of the hospital lawsuits reportedly involved unions seeking bargaining leverage;[142] the remainder of the litigants for this suite of challenges appear to be NIMBY organizations and individuals.

- ***Existing Airports.*** Continued use of airports and runway modifications of existing airports accounted for three CEQA lawsuits during the study period.[143]

- ***Prisons.*** A prison expansion,[144] a prison closure,[145] and gender conversion of a prison,[146] all drew CEQA lawsuits during the study period. The expansion and gender conversion faced community opposition; union involvement was alleged in the prison closure project. Opponents of converting a women's prison to a men's prison presented evidence that male prisons generated more traffic and traffic-related air emissions because (sadly) male prisoners get more visitors than female prisoners.

- ***Non-Vehicular Streetscape Improvements.*** Several CEQA lawsuits targeted sidewalk maintenance and landscaping. These are overwhelmingly NIMBY lawsuits. Neighbors from one street in Beverly Hills sued to block only replacement of the street trees on their side of the street,[147] a landlord sued to block demolition of a closed and crumbling elevated sidewalk based on the potential that he may have to reduce rents,[148] and there have been numerous examples of bike plan and bike path CEQA lawsuits.[149] A generational divide is evident in the bike plan lawsuits, which tend to be filed by older merchants opposed to traffic congestion and reductions in street parking.

- ***Telecommunication Projects.*** NIMBY opposition to visible telecommunication equipment remains vehement in several communities, prompting numerous lawsuits and agency administrative appeals. Local residents object to adverse "aesthetic" impacts, and allege public health risks (e.g., encouraging graffiti or public urination) for surface-mounted equipment.[150]

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

- ***CEQA and California's Response to 9/11.*** Telecommunication equipment controversies prompted a "one-off" statutory exemption from CEQA for the federally funded communication towers that are designed to allow all emergency response personnel (from multiple agencies) in the Los Angeles area to communicate on the same frequency. The federal funding program to link local first responders was prompted by the World Trade Center attack on September 11, 2001; the substantial federal funds allocated to install the required telecommunication equipment were scheduled to expire (and could not be accessed if litigation was pending and the telecommunication project was not "shovel ready" by the deadline). To avoid losing the federal funds, in 2012 the Legislature exempted this system from CEQA – more than 10 years after 9/11.[151]

- ***High Occupancy Vehicle Lanes and Safety Improvements for State Highways.*** State highway projects were targeted by several CEQA lawsuits; all involved improvements to existing highways such as the installation of High Occupancy Vehicle (HOV) lanes to reduce congestion, promote carpooling and renewable fuel use, and reduce localized air pollution and greenhouse gases.[152] Environmental advocacy groups were more likely to be involved in these lawsuits, which reflect an ongoing policy disagreement about whether to make any improvements to highways at all – or make commuting so painful that people will just stop living in suburbs, or at least start taking transit. Transit utilization is definitely increasing (notwithstanding CEQA lawsuits against transit projects, as discussed above). The Bay Area Rapid Transit system, for example, carried 100,000 more riders in 2014 than it did five years ago, and now lacks adequate capacity to accommodate peak hour demand, recently earning a spot on the *San Francisco Chronicle's* "What's Not Working" list.[153] The extraordinarily high cost of housing in coastal counties also forces many people into less costly inland locations and long commutes; deliberate policies to maintain choking congestion on major freeways disproportionately affects inland areas that tend to have lower educational attainment levels, much lower annual incomes and much greater ethnic diversity than California's coastal enclaves.[154]

- ***Local Streets.*** The same policy debate about whether or when to invest in projects that accommodate automobiles occurs for local street improvement projects, which are more likely to be targeted by NIMBYs that are not affiliated with environmental advocacy organizations. Projects facing objections range from modifying local roads and traffic signals in order to more efficiently manage traffic and reduce congestion (and air pollution and noise from congestion), to repurposing lanes or parking spaces in order to provide more efficient and safe routes for buses and bikes.[155]

- ***Stormwater Management.*** Stormwater and flood management infrastructure – generally related to repair work, upgrades to meet more stringent water quality standards, or climate change adaptation – attracted a handful of CEQA lawsuits.[156] As with highways and streets, the extent to which infrastructure system improvements are needed to appropriately manage stormwater "upstream" (e.g., with measures to capture and reuse stormwater on individual properties) or "downstream" (e.g., with seawall or flood channel stabilization or maintenance) remains an issue of ongoing interest to environmental advocates, who tend to use CEQA in this context to leverage more or different management measures than those mandated by the Legislature or water management agencies.

- ***Solid Waste Management.*** Recycling, composting and transfer facilities in urban locations (many of which manage more than one of these functions), and landfills, were the third-most-likely targets of Public Service and Infrastructure projects (after Transit and Highways). The absence of CEQA lawsuits against hazardous waste treatment, storage and disposal facilities is notable. Many facilities have shut down (causing more waste to be transported for disposal outside California), and permit renewals of existing facilities remain largely mired in bureaucratic and political disputes; until a permit is actually renewed, no CEQA lawsuit can

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

be filed.[157] One state official reported to the authors that fear of having to complete an EIR on a hazardous waste facility, and the resultant risk of court losses and exposure to liability for payment of attorneys' fees to project opponents, were among the reasons that the Department of Toxic Substances Control (DTSC) had fallen years behind schedule in completing the legally mandated review and permit renewal process for the state's remaining hazardous waste treatment, storage, recycling and disposal facilities.[158]

## 3. Park Projects

It is tempting to summarize this category of CEQA lawsuits by saying that people who sue park projects don't want to let anyone else use "their" park. Since almost all park funding comes from taxpayer or philanthropic sources, derailing these projects with CEQA lawsuits always puts the continued availability of these fragile funding sources at risk – and can result in near-permanent shackles on the status quo.

Two stories on park projects help provide context for this category of challenged projects. Although one of the two stories occurred prior to the study period, it established the most important judicial guidance for CEQA implementation for existing parks, thus making it worthy of discussion.

- ***Should CEQA Keep Trails Out of Urban Parks?*** Santa Cruz received funding to construct a trail through an urban park and make it handicap-accessible in compliance with the Americans with Disabilities Act. The California Native Plant Society sued, alleging that because the improved trail would be near a protected plant, the environmentally superior – and thus CEQA-mandated – trail alignment needed to skirt around the edge of the park, rather than through the park. Both parties spent years litigating the dispute. Ultimately, the appellate court determined that since the purpose of the project was to construct a park trail, that purpose would not be served – and CEQA did not in fact mandate – construction of a trail around, as opposed to through, the park. Project funding, and the original cost of trail construction, were left in limbo for years.[159]

- ***How Did Climate Change CEQA Litigation Cost a Coastal Park $50 Million in Philanthropic Funding?*** The Playa Vista redevelopment project, sandwiched between the Los Angeles community of Venice and the clifftop home of Loyola University, holds the dubious distinction of being sued more often than any other California project known to the authors. Almost all the lawsuits involved CEQA claims, two of which occurred during the study period. (As noted above, Playa Vista was sued more than 20 times, over more than 20 years, by a determined handful of financially able neighbors.) Decades ago, a negotiated outcome of one of these lawsuits (the only lawsuit filed by major environmental groups) was an agreement to permanently preserve and restore the coastal portion of this site to a coastal wetlands preserve. The Annenberg Foundation committed $50 million in philanthropic funds to restore the coastal marsh, build a network of trails, and construct a visitor center on this major new coastal addition to the Los Angeles park system. Faced with unceasing threats of CEQA lawsuits, and mired in a regulatory permit lawsuit now pending at the California Supreme Court alleging that it improperly considered climate change impacts,[160] the state's CEQA lead agency was unable to commit to when it would be able to finally complete an EIR for the park restructuring project, which would allow for the Annenberg Foundation to fund the completion of planned park improvements. (The agency was also on notice that it would be immediately sued as part of the ongoing pattern of NIMBY challenges to all discretionary agency approvals for the project.) The Annenberg Foundation finally withdrew its $50 million funding commitment late in 2014, and there is no identified funding source that would allow for the public access and coastal marsh restoration project long envisioned for this urban infill site.[161]

The pantheon of 27 CEQA lawsuits filed against park projects sued during the study period were almost evenly divided between open space restoration, habitat projection and related passive park use projects like trails, and active park use projects such as playgrounds and sports fields, equestrian arenas, golf courses and a shooting range.[162] In this category of challenged projects,[163] there were only two golf courses[164] (and one proposal to end golf course use),[165] and the shooting range involved an existing facility that needed to be cleaned up due to lead poisoning risks – the CEQA lawsuit was filed in an attempt to block or amend the cleanup order.[166]

The active recreation park projects, in particular, highlight the dispute between passive park users (hikers, bird-walkers) and active sport team users (derided as "recreationists" in some communities). The urban park project lawsuits also highlight notable differences in the age, class, and ethnicity of park project users versus park project opponents.

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

- ***Keep Those Sports Fields Idle Most of the Time.*** As with challenges to school playfield projects, high demand for sports field remains an acute, year-round need in many urban areas. Natural turf consumes water, requires fertilizers and other enhancements, cannot be used during and for some time after rainfalls, and must be periodically idled and replanted. Artificial turf, partly produced from waste tires, allows for much higher utilization rates, requires almost no water, and is easier to maintain. Night lighting also increases utilization. These sports field modifications (artificial turf and night lighting) draw concerns about traffic and parking impacts from increased utilization, and also about the relative hazards of artificial and natural turf field surfaces (although both the Environmental Protection Agency and Consumer Product Safety Commission have issued assurances about the absence of adverse health impacts of artificial turf).[167] Installing artificial turf on the Beach Chalet soccer fields in Golden Gate Fields, estimated to triple the available playing time in a location that has no adjacent residential neighbors, was the first project to utilize artificial turf that was subject to a full EIR (an unusual case since most park projects qualify for some level of streamlined CEQA study). The project was first repeatedly challenged politically, then legally in an unsuccessful CEQA lawsuit, then politically again at the Coastal Commission, and finally with a ballot box battle seen as pitting long-term, trusted environmental activist opponents (including the local Sierra Club chapter) against the families and younger residents of California's most expensive large city. The voters rejected opponents' pleas to block the project, which is now under construction after many years (following a brief post-election "sit-in" by project opponents).[168]

- ***CEQA Protects Children – Not Dogs***. Mission Dolores Park is shared among several densely populated San Francisco neighborhoods and offers tennis courts, a basketball court, a multi-use (soccer/softball) sports field, a children's playground and an operational building that includes public restrooms. All facilities – but most acutely the restrooms, which had been shuttered for many months, leaving restroom service available only from sub-optimal porta-potties – were in acute need of rehabilitation and repair. City taxpayers responded generously and approved bonds to improve this and other parks, kicking off a multi-year planning process. Mindful of passionate feelings about the park from multiple stakeholders, the city used a portion of the bond funding to pay for a full EIR. The resulting park renovation plan had something for everyone, while largely preserving all core elements of the park. Predictably, a CEQA administrative appeal was filed. Less predictably, even in San Francisco, was the fact that the appeal argued that the park should contain two children's playgrounds rather than one playground and one dog play area because children's playgrounds are a public health issue and help combat childhood obesity.[169]

- ***CEQA Protects Eelgrass – Not Children or Dogs.*** Dolores Park was not CEQA's first encounter with dogs and children. Trail use and dogs in another Bay Area park project – a state park located on a former landfill in San Francisco Bay that spans portions of Berkeley and Albany – prompted a lawsuit by a local environmental activist who asserted that any trail (presumably used by children and dogs) could harm eelgrass visible only during low tides in the Bay's chilly waters.[170] This is only the latest chapter in the multi-lawsuit saga that helped create the East Shore State Park project. Prior to the study period, dedication of a portion of the waterfront area, which also hosts a large horse racetrack facility and related barns, to a new soccer field complex prompted a multi-year conflict between the (primarily youth league) soccer playing "recreationists" and the (primarily youth league circa-1960) passive trail/bird-watching "enviro" advocates.[171]

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

## 4. Agency Plans and Regulations

This category of CEQA lawsuits challenged decisions by agencies to approve plans, programs and regulations but did not involve physical modifications to public service facilities or infrastructure, or approvals of private sector projects such as housing or commercial development. Fifteen percent of CEQA petitions challenged these taxpayer-funded agency plans and regulations, and this category comprised the second-largest group of CEQA lawsuits filed against public agencies.

> ***Land Use Plans.*** More than 50% of the challenged regulatory projects involved city or county approvals of land use plans: General Plans, Specific Plans, Community Plans, Area Plans and Airport Land Use Plans, to guide future land use and development activities[172] and, in one case, to guide a regional transportation agency's redirection of funding to transit and higher-density housing to meet the state's ambitious greenhouse gas reduction mandates.[173]

For city and airport land use plans, NIMBYs are the dominant opponents of these plans, although some challenges are brought by environmental advocacy groups and historic preservation advocacy groups. Some communities are nearly frozen by political or legal land use planning disputes, and the cost – in money and political capital (inclusive of CEQA litigation risks) – have proven daunting obstacles to routine preparation of updated land use plans. For example, although state law requires General Plans for most cities to be updated every five years, some cities such as Los Angeles have not comprehensively updated their General Plan in decades and instead update different Plan elements or components over time, with overlapping lawsuits filed against component parts such as "community plan" land use components.[174]

County land use plans are more likely to be challenged in CEQA lawsuits filed by (or joined by) established national and state environmental advocacy groups that want to limit or preclude development outside established communities.

The major regional land use plan challenged during the study period – a lawsuit against the San Diego Association of Governments (SANDAG), which serves as a regional transportation planning agency for the allocation of federal and other funding for transportation infrastructure – is one of two pending CEQA lawsuits at the California Supreme Court regarding the application of CEQA in relation to California's climate change laws such as the Assembly Bill 32 (Pavley)[175] and Senate Bill 375 (Steinberg).[176] SANDAG's regional land use and transportation plan was found by the California Air Resources Board to be in compliance with applicable climate change laws, but the California Attorney General and Sierra Club (among others) sued alleging that CEQA requires more than compliance with statutory greenhouse gas reduction mandates.[177]

Climate change mandates currently play a major role in land use planning. These mandates range from reducing greenhouse gas emissions with renewable energy electric generation, and cleaner cars and fuels, to (of greatest relevance to the land use planning process) redirecting future California growth to higher-density, transit-oriented development patterns (e.g., requirements that communities plan to authorize development of assigned numbers of affordable and market-rate housing units).[178] Senate Bill 375 and other climate-related laws and policies collectively provide a framework mandating that cities and counties fully accommodate predicted population growth levels that are often far higher than has ever been permitted, and requiring higher-density development patterns such as "granny units" (second units in single family homes), more affordable and/or smaller housing types with higher-density (e.g., multi-story apartment and condominium projects), and more transit and fewer accommodations for personal cars (i.e., fewer or separately priced parking spaces, intentionally congested roadways and highways to discourage peak hour automobile use, etc.).

Local stakeholders in many communities oppose the foundational changes that land use plans implementing these climate change mandates will cause, along with the environmental impacts from plan implementation. These impacts – and trade-offs – are required to be disclosed in the EIRs prepared for these land use plans. Several agencies have documented the environmental trade-offs between plans that allow for primarily continuation of California's traditional suburban-scale lower densities, plans that allow for a mix of densities but with a far greater focus on transit corridors and higher-density urban centers, and plans that allow only high density urbanized development and transit.

To date, California's regional planning agencies – and the greenhouse gas reduction targets established by the Legislature – allow for the middle course (the mix, with increased transit and higher densities in urban cores like downtown areas of even smaller towns), acknowledging the panoply of adverse CEQA impacts caused by either of the other two planning extremes. In the California Supreme Court case against SANDAG referenced above, and in a separate case involving a Los Angeles development project that was included in the Southern California Association of Government regional plan that met greenhouse gas reduction goals,[179] environmental advocacy groups have argued that CEQA requires the more extreme plan – transit and high density development – based on climate change imperatives. This fundamental land use policy dispute is being played out in the context of CEQA litigation, while, on a parallel track, the Governor

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

> Opponents of plans currently have endless "second bites" at the CEQA litigation apple, since both the land use plan, and every project undertaken to implement the approved plan, can be separately litigated by the same party under CEQA.

and legislators are debating whether to adopt new greenhouse gas reduction goals, which would be rendered far less relevant if the Supreme Court decides that CEQA itself requires implementation of "all feasible mitigation measures" to achieve an 80% greenhouse gas reduction goal for the state.[180]

Land use plans have definite consequences to the physical environment as well as to the softer "environment" that people identify as the existing character of their community. In most communities, land use plans are funded entirely from general taxpayer funds. Many commenters have noted that the frequency of plan updates, and the quality of plans and accompanying CEQA documents, is necessarily limited given the many competing uses of these general funds. Opponents of land use plans currently have endless "second bites" at the CEQA litigation approved apple since both the plan, and every project undertaken to implement the approved plan, can be separately litigated by the same party under CEQA. Though outside the study period, three lawsuits filed against the Bay Area's regional greenhouse gas reduction plan provide an excellent snapshot of the deep policy divides regarding the ability of existing communities to retain their "character" and the role of CEQA in mandating greenhouse gas reductions to address global climate change. The first lawsuit was filed by a Marin County group alleging that the EIR and plan were defective in that there are other effective ways of reducing greenhouse gas emissions (e.g., greater reliance on electric cars and renewable energy) that had far fewer environmental impacts to existing communities; the second was filed by an association of developers that alleged that the EIR and plan did not provide an enforceable mechanism to require notoriously anti-growth communities (like Marin) to accept the high housing densities required by the plan; and the third was filed by environmental advocates who alleged that the EIR and plan failed to go far enough in removing or otherwise reducing emissions from vehicles – especially heavy trucks – from highways near poor communities.[181] From the authors' perspective, each of these lawsuits present clear policy arguments – none of which are best resolved by a judiciary parsing through thousands of pages of technical studies in the context of a CEQA lawsuit.

- ***Local Regulations: Plastics, Pot and Potpourri.*** Another frequently challenged regulatory agency action during the study period were local ordinances to ban or limit the use of single-use plastic bags, and local ordinances to regulate medical marijuana dispensaries.[182]

  - » Plastic bag lawsuits were generally attributed to plastic bag manufacturers and trade associations, who also continue to oppose recently adopted legislation imposing statewide plastic bag restrictions. The Supreme Court has affirmed the right, under existing CEQA legislation, of a non-California plastics manufacturer trade association to file CEQA lawsuits.[183] Dozens of other cities have also prepared CEQA studies and have defended CEQA lawsuits (at substantial taxpayer expense) in support of plastic bag ordinances.[184] Plastic bag use advocates have raised various arguments about the relative impacts and benefits of single-use plastic bags, including for example food safety, and the relative impacts and costs of alternatives such as paper bags.

  - » Medical marijuana ordinances have been adopted by some agencies, since local business and occupancy license rules for this previously illegal use did not exist prior to voter approval in 1996 of California's medical marijuana initiative (Proposition 215).[185] Several local agencies that have attempted to adopt ordinances limiting or requiring permits for medical marijuana (similar to those required for adult bookstores or liquor stores) have been targeted by CEQA lawsuits alleging that such an ordinance cannot be adopted without exhaustive environmental studies and a full EIR.[186]

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

Most other regulatory agency challenges to local agency actions involve other types of ordinances (e.g., regulation of views, billboards, trash and stormwater management, water conservation, etc.).[187] Some are brought by parties objecting to being regulated, others are brought by advocates seeking more stringent regulations, and some are simply "one-off" challenges filed for leverage against the target agency.

- ***Regional Agency Regulatory Challenges.*** Several regional agencies were the target of CEQA lawsuits during the study period,[188] and two of these remain pending after many years of litigation at the California Supreme Court.
  - » The San Diego Association of Governments (SANDAG), discussed at length above, is enmeshed in a pending Supreme Court CEQA case regarding the extent to which CEQA imposes a different or more stringent greenhouse gas reduction mandate on regional land use and transportation plans than the greenhouse gas reduction targets established for such plans under SB 375.[189]
  - » The Bay Area Air Quality Management District (BAAQMD) established recommended CEQA "thresholds" for determining whether air or greenhouse gas impacts should be considered "significant," and the California Supreme Court is evaluating whether CEQA requires an evaluation of the environment's impact on a project (at issue is a threshold requiring that a project examine and mitigate for pre-existing ambient levels of toxic air contaminants, typically from diesel vehicular exhaust), or whether CEQA applies only to a project's impacts on the environment.[190] (This is a fundamental CEQA issue, since numerous appellate court decisions have concluded that CEQA requires assessing the environment's impact on a project, but several appellate courts have reached opposite conclusions including one of the infamous Playa Vista project lawsuits).[191]

Other CEQA lawsuits targeted regional agency regulatory requirements regarding water quality, such as agricultural runoff.[192]

- ***State Agency Regulatory Challenges.*** State agency regulatory challenges involve challenges either by the target of the regulation, or by environmental advocates seeking a judicial interpretation of CEQA that requires the agency to expand or modify regulations that are otherwise consistent with the statutory mandate.

For example, similar to the pending SANDAG lawsuit, environmental advocates argued that CEQA prohibited, or at least more severely constrained, the California Air Resources Board's ("CARB") proposed cap and trade program for reducing greenhouse gas emissions from the industrial and fuels sectors; CARB lost the first lawsuit, and won the second after completing a more thorough CEQA study of its cap and trade regulations.[193]

Other challenged state regulations involve pesticides, protected species, oil and gas production, mining and maritime resources. It is noteworthy that regulated parties tend to file CEQA lawsuits challenging regulations in Sacramento or Fresno County, and environmental advocates tend to file CEQA lawsuits challenging regulations in Alameda County or San Francisco.[194]

## 5. Water Projects

Forty-four CEQA lawsuits (7%) challenged water projects during the study period.[195] One involved removing a dam;[196] the remainder all involved disputes about the management, extraction, allocation or transfer of groundwater and surface waters, including surface waters conveyed by the state and federal water systems that link to the Sacramento delta. The intersection between California's byzantine water rights laws and CEQA is, at best, oblique. The California Legislature adopted the most significant new groundwater legislation in California's history in 2014, the Sustainable Groundwater

> The current drought emergency has brought renewed attention to water resource management. California's often-bitter water combatants continue to block CEQA reform for any significant water-related infrastructure, including reclaimed water plants, desalination facilities, and new groundwater and surface storage facilities.

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

Management Act of 2014 (SGMA), which requires, among other features, preparation of groundwater management plans for various groundwater basins.[197] So uncertain is CEQA's application to water rights and management issues, and so cumbersome, costly and unpredictable are CEQA's compliance costs and litigation outcomes, that the Legislature elected to simply exempt the new groundwater management plans from CEQA altogether.[198]

Water lawsuits involve the most frequent use of CEQA litigation by one agency against another agency, and reflect the dire reality – even before the current drought – of California's zero-sum water resource allocation decisions. For every party finding "new" water there is a party who believes it lost a real or perceived right to that water, or were over- or under-compensated – in money or CEQA mitigation – for challenged projects that range from one-time water transfers, to system storage or conveyance modifications, to rights to store and use flood waters from winter storms (often not fully "claimed" under water rights laws), to the use of water for particular purposes. Several of the lawsuits filed during the study period involved the state and federal water projects, both of which draw water from the Delta for transport to the Central Valley and Southern California.[199] More creative, and larger, water projects drew multiple lawsuits. For example, the Cadiz water project, which proposes to transfer groundwater fed by desert mountain stormwater runoff from a remote inland valley to coastal Orange County, drew seven lawsuits, (only four of which were provided to the authors in response to the California Public Records Act request): a labor union group sued, a mining company stripping salts and minerals from shallow valley surface water sued, and two suits were filed by multiple national environmental advocacy groups (the Center for Biological Diversity, Audubon Society, Sierra Club, etc.).[200]

The current drought emergency has brought renewed attention to water resource management. SGMA requires preparation of Sustainable Groundwater Management Plans that include mandatory elements including achievement of sustainable groundwater management practices to avoid potentially catastrophic overdrafting of California's groundwater resources.[201]

It is noteworthy that the Legislature and the broad coalition of key stakeholders – including environmental advocacy organizations – that supported SGMA also quietly concurred that Groundwater Management Plans would be statutorily exempt from CEQA.[202] Similarly, Governor Brown's emergency declarations on the drought have included limited CEQA exemptions imposed under emergency authority.[203] Nevertheless, California's often-bitter water combatants continue to block CEQA streamlining for any significant water-related infrastructure, including reclaimed water plants (which allow for the treatment and reuse of sewage), desalination facilities, and new groundwater and surface storage facilities.

An interesting example of a CEQA water project lawsuit, although not filed during the study period, was removal of sediment buildup in an existing reservoir located in Los Angeles County. Sediment removal would restore the dam's water storage capacity and protect lands downstream from the reservoir from flood risks. To reduce localized impacts, the sediment removal plan was to be implemented over five years – and to avoid impacts to sensitive species and flood-related risks, the sediment removal could only occur between April and October. The local Audubon Society chapters and a neighbor group sued alleging that less sediment removal was really needed, and that the EIR failed to adequately consider traffic, air quality and greenhouse gas impacts.[204]

CEQA, which in its heyday was used to challenge nuclear plants, coal-fired plants and plants burning hazardous waste or garbage, is now used most frequently to challenge solar and wind renewable energy projects – precisely the "green" projects that are most critical to meeting California's climate change reduction mandates.

## 6. Energy Projects

Four percent of the CEQA petitions filed during the study period involved energy projects.[205] The highest number of petitions (46%) challenged solar projects, with wind projects coming in second place.[206] Retrofits of existing natural gas and biomass electric generation plants wanting to install cleaner energy or lower-water consuming technology were targeted in 16% of the petitions.[207] Relicensing one hydropower dam, and allowing more geyser-field steam to power an existing electric generation plant, comprised the two challenged hydro projects.[208] One existing biomass project seeking a clean energy retrofit approval was challenged,[209] along with two new biomass facilities, one facility that proposed to repurpose agricultural wood waste for energy consumption was sued,[210] and another facility proposed to gasify sewage sludge for electric consumption.[211]

Natural gas, once considered the environmental gold standard for power plant production, comprises the only non-renewable fuel in an energy production facility targeted by CEQA lawsuits. CEQA, which in its heyday was used to challenge nuclear plants, coal-fired plants and plants burning hazardous waste or garbage, is now used most frequently to challenge solar and wind renewable energy projects – precisely the "green" projects that are most critical to meeting California's climate change reduction mandates.

The challenged solar projects were primarily located in the California desert; the highest number of lawsuits were filed in Imperial County, followed by Kern County.[212] Multiple lawsuits were filed against several projects, including lawsuits filed by two union groups competing for job allocation and wage/benefit agreements (Project Labor Agreements).[213] Many of these projects relied on federal or state funding that required workers to receive "prevailing wages" and related benefits, so the competing union lawsuits were just that – use of CEQA lawsuits to leverage PLAs for each union group.[214]

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

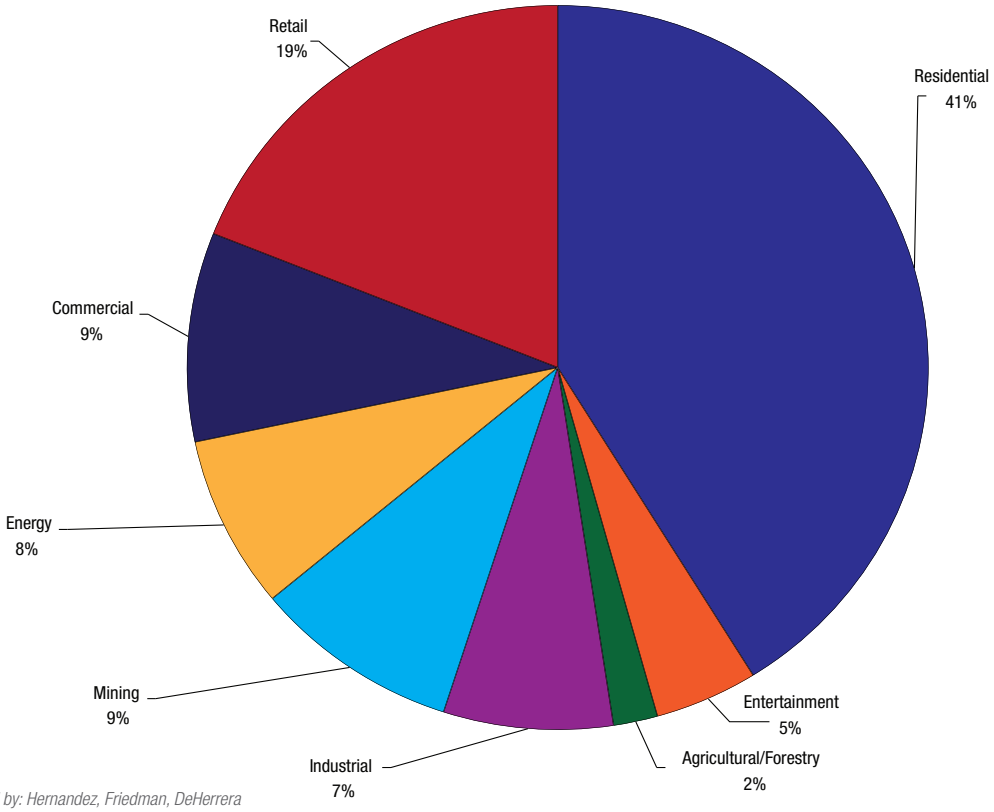
Labor-aligned economists have made a compelling case for the need for jobs during the recession, especially in hard-hit Imperial County, which had the highest unemployment rate of any county in the United States.[215] One major obstacle to creating new jobs in the county is the fact that a pending CEQA lawsuit generally disqualifies renewable energy facilities from receiving federal grants (and then financially equivalent tax credits) of up to 30% of a facility's capital costs from the federal government under financial incentives programs begun in 2009. While harshly critical of the consequences of losing Imperial County employment opportunities to a proposed solar facility in Mexico, the union groups using CEQA lawsuits against solar projects in Imperial County were comfortable in playing a game of "chicken" with solar developers who could not afford to lose federal subsidies. The story of union use of CEQA lawsuits and litigation threats against solar projects was reported in detail in *The New York Times*:

> "When a company called Ausra filed plans for a big solar power plant in California, it was deluged with demands from a union group that it study the effect on creatures like the short-nosed kangaroo rat and the ferruginous hawk. By contrast, when a competitor, BrightSource Energy, filed plans for an even bigger solar plant that would affect the imperiled desert tortoise, the same union group, California Unions for Reliable Energy, raised no complaint. Instead, it urged regulators to approve the project as quickly as possible.
>
> One big difference between the projects? Asura had rejected demands that it use only union workers to build its solar farm, while BrightSource pledged to hire labor-friendly contractors."[216]

*The Times* went on to quote several stakeholders in this then-unfolding 2009 story about CEQA lawsuits against subsidized renewable energy projects:

- A representative for the state's contractors asserts that "[t]he environmental challenges are the unions' major tactic to maintain their share of industrial construction – we call it greenmail," and estimates that it raises project costs by approximately 20%.
- A Sierra Club representative who is politically aligned with labor (a "blue-green alliance"): "It's not a warm fuzzy thing they are doing; it's a very self-interested thing they are doing. But it has a large ancillary public benefit."
- A solar developer reports, "Let's just say that it is clear to us from experience that if we do not enter into a project labor agreement, the costs and schedule of the project is interminable."
- An attorney representing the union noted, "We've been tarred and feathered more than once on this issue. We don't walk away from environmental issues."[217] In fact, there are numerous instances of unions "walking away" once a Project Labor Agreement is executed, particularly prior to final administrative agency project approval as was the case with the Los Angeles subway car manufacturing facility dispute.

Union use of CEQA litigation threats and CEQA lawsuits continues to focus on projects that are mandated – or at least fully aligned – with California's climate change mandates, including green manufacturing and infill residential development, as described in the next section of this report.



## B. Private Sector and Commercial Projects

As shown in Figure 10, approximately 41% of challenged private sector and commercial projects involve housing. In fact, housing projects drew the highest number of CEQA lawsuits during the study period.

A *New York Times* article on union use of CEQA lawsuits against solar projects compared two proposals, both with potential environmental issues. California Unions for Reliable Energy objected to one project where using union-only labor was rejected - but it supported another where the hiring of labor-friendly contractors was promised.

### Figure 10: CEQA Petitions Targeting Private Sector Projects

*Produced by: Hernandez, Friedman, DeHerrera*
*Copyright © 2015 Holland & Knight LLP All Rights Reserved*

Retail projects were the second most likely privately-funded projects to be challenged (19%); just over 50% of these challenged retail projects involve Walmart or a similar "big box" store, and the challenges were generally attributed to unions representing retail clerks working for Walmart's competitors, with reported involvement in some instances by Walmart competitors and/or NIMBYs.[218]

Commercial projects, such as offices and hotels but excluding warehouses, were the next-mostly-likely project to be challenged, at just under 10%. These were generally attributed to NIMBY opposition, although unions were reportedly involved in a convention center and some hotel challenges.[219]

The study period also included 28 lawsuits against mining and oil and gas extraction projects. Mining projects, most of which involved aggregate mines for gravel extraction and processing, comprise about three quarters of these petitions, with the remainder challenging oil and gas extraction projects. Challenged projects typically involved activities on existing sites, and included both increased extraction activity and environmental reclamation and restoration.[220]

Industrial projects, more than half of which were warehouses linked to the Southern California logistics and goods movement sector that includes the Ports of Los Angeles and Long Beach, comprise 7% of CEQA lawsuits filed against privately funded projects during the study period. All remaining industrial projects were in economic sectors with pricing structures that place a premium on proximity to customers (e.g., asphalt mixing,[221] bakery[222]), and essentially serve proximate populations within California.[223] None of these "industrial" targets of CEQA lawsuits could easily be located outside of California. Industrial projects that have locational flexibility, including both new and existing manufacturing facilities, were not targeted by CEQA lawsuits because it appears that virtually no major

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

> Industrial projects that have locational flexibility, including both new and existing manufacturing facilities, were not targeted by CEQA lawsuits because virtually no major new manufacturing facilities were proposed during this period. This cannot be attributed to the recession or outsourcing manufacturing jobs overseas: the United States has actually experienced a resurgence of manufacturing jobs.

new manufacturing facilities were proposed during this period. This cannot be attributed to the recession or outsourcing manufacturing jobs overseas: the United States has actually experienced a resurgence of manufacturing jobs. As noted in the authors' *Social Equity* report:

> California job growth particularly lags far below the national average in manufacturing, and the state's regulatory system is consistently rated as the worst in the country for business development. In 2010-2014, the state added only 4,400 manufacturing jobs, compared with 672,000 new jobs in the rest of the country. Manufacturing jobs provide some of the highest income opportunities for less educated workers than other working and middle class employment options. In January 2015, for example, the *Los Angeles Times* reported that the state's relatively poor manufacturing employment growth since 2010 (1% versus 6.7% for the U.S., and 15% in many states, such as Indiana and South Carolina) hurts California's middle-class workforce because manufacturing is "the classic path to higher paying jobs for less-educated workers." The state's diminishing ability to sustain quality middle class employment options is consistent with the increases in poverty, inequality and relatively slow growth of high school and community college educated residents California has experienced since 1970.[224]

An assortment of entertainment projects – an amusement park, a tribal casino, an annual fireworks display and other routine community events at public parks, and two dance/music facilities – comprised 5% of private sector project CEQA petitions.[225] These lawsuits were reportedly all linked to either NIMBYs or "greenmail" lawyers.

Two percent of the private sector CEQA petitions involved agricultural projects: primarily wineries (including those with tasting rooms or other visitor-serving facilities); and these lawsuits were filed by NIMBYs.[226] There was also one timber management project (a freight train linkage to more efficiently transport authorized harvested timber, replacing some trucks and resulting in a net decrease in air pollutants and greenhouse gas), filed by an environmental advocacy group opposed to timber harvesting.[227]

Some commercial and entertainment projects are owned and managed by public agencies as part of economic development or related efforts, such as convention centers, fairgrounds and major sports facilities. Because these types of projects are also sponsored by the private sector, they are included in the compilation of private sector projects. As a result, the study slightly understates (by less than 5%) the number of agency projects targeted by CEQA lawsuits.

Finally, energy projects are also categorized as private sector projects, although given the combination of substantial federal and state subsidies, and regulated ratepayer payment structures, these projects were also referenced in the narrative discussion of public sector projects in the preceding section of this report.

## 1. CEQA and Middle Class Jobs in Signature California Industries: Green Technology and Entertainment

A persistently under-reported result of CEQA's chronic litigation abuse is job loss, particularly in the middle class job sector. Job loss from NIMBY use of CEQA lawsuits (and CEQA lawsuits more generally) – which affects prevailing wage jobs, and both construction and non-construction unions – has been documented by various studies. One such analysis was prepared by the noted Southern California economist John Husing. It evaluated seven projects targeted by CEQA lawsuits and concluded that from just these projects, 3,245 prevailing wage jobs, paying workers an average annual wage of $100,502, were delayed or eliminated on an annual basis. The total affected annual lost wages and benefits of $326.1 million.

Unaffordable housing and wealthy stockholders are a green technology hallmark of California's economic recovery, but two of California's most successful companies passed on the opportunity to create jobs for middle-class workers by choosing to open their new manufacturing plants in Nevada[228] (Tesla) and New York (SolarCity).[229] These companies did not "race to the bottom" at the expense of American workers; they "raced to the market" by siting facilities that they knew could be opened – on time – in America.

### Jobs Are A Public Health Priority Ignored by CEQA

Risa Lavizzo-Mourey, MD, MBA, and president and CEO of the Robert Wood Johnson Foundation, joined Mark Pinsky, president and CEO of Opportunity Finance Network, to urge recognition of the relationship between public health and employment:

> "Economic growth and job creation provide more than income and the ability to afford health insurance and medical care. They also enable us to live in safer homes and neighborhoods, buy healthier foods, have more leisure time for physical activity, and experience less health-harming stress."
>
> "We need to recognize that income security and economic opportunities lead to a healthier, more productive workforce and reduced healthcare costs, which in turn, leads to a stronger economy."
>
> "The end goal? Create and sustain job growth across the country. Improve communities. Improve health. Give people the opportunities to make smart, healthy decisions so that they can act in the best interests of their communities, themselves, and future generations."

As noted by the editorial board of the *San Diego Union Tribune*, there is a "manufacturing renaissance in the United States – a phenomenon that stops at the California border."

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

California job growth lags far below the national average in manufacturing. The *Los Angeles Times* reported that this hurts California's middle-class workforce, because manufacturing is "the classic path to higher paying jobs for less-educated workers.

As noted by the editorial board of the *San Diego Union Tribune*, there is a "manufacturing renaissance in the United States – a phenomenon that stops at the California border."

> "Manufacturing jobs are a classic stepping stone into the middle class, paying much better than service or retail work. Such jobs in the aerospace and automobile industries were a central pillar of the state's economy from World War II to the end of the cold war. Then California and the rest of the United States began to hemorrhage millions of manufacturing jobs to lower-cost nations, especially China. In the last half-dozen years, however, as wages soared in China and as exploding U.S. natural gas and energy production drove energy costs down, we've seen a 'reshoring' phenomenon in which dozens of manufacturers have returned to America – sometimes to the states in which they were originally based. Except the Golden State. Returning manufacturers take "a fresh look at the whole country. Unless you're forced to be in California for some reason, increasingly it's hard to find reasons that you have to be here." Manufacturing jobs in California have edged up 1% over the past five years versus about 7% nationally. Unfortunately for the millions of state residents without white-collar job skills, these sorts of statistics don't seem to bother California's dominant Democrats. Environmentalists are more likely to see factory jobs as grubby and unsavory than as welcome. There's also the view offered by Governor Jerry Brown and others that amounts to a shrug – there's nothing anyone can do about the fact that lots of people want to live here, so of course California will be an expensive place to live. That's only partly true. The streamlining and fine-tuning of the California Environmental Quality Act recommended by the past three governors would make building factories much cheaper."[230]

CEQA litigation risks make it impossible for companies with locational flexibility – such as manufacturers – to predict when they can open state-of-the-art manufacturing facilities for green technology, even if they comply with all of California's stringent environmental and labor laws, and earn community support and aging appeals.

***California is a Global "Market-Maker" for Electric Vehicles – But Loses the Tesla Battery Manufacturing Plant to Nevada and SolarCity Solar Panel Manufacturing Plant to New York.*** California was unsuccessful in its effort to persuade Tesla to locate its next major manufacturing facility – building batteries for cars and buildings – in California. SolarCity and Tesla were both offered significant financial incentives by their host states, but California officials were unwilling to commit even the state's newest lucrative revenue sources – cap and trade revenues from the sale of GHG emission allowances – to these major middle-class job creation projects.[231]

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

The cost to Californians seeking jobs: thousands of long-term middle-class jobs and related economic benefits that would have been created for Californians by the new Tesla and Solar City manufacturing plants.

Manufacturing jobs lost to higher-emitting GHG states is indeed an effective approach to reducing GHG produced in California – but the loss of middle-class manufacturing jobs based on CEQA litigation uncertainty also increases global GHG emissions and deprives Californians (and California taxpayers) of the jobs and revenues sparked by the state's climate policy leadership.[232]

As another example of California's signature "new economy" companies, Google, recently explained that its major fiber facilities would not be built in California "in part because of the regulatory complexity here brought on by CEQA and other rules. Other states have equivalent processes in place to protect the environment without causing such harm to business processes and therefore create incentives for new services to be deployed there instead."[233]

Tesla and SolarCity, along with Google, are building companies and divisions based on the renewable energy and electric car mandates adopted in California. None of these companies have complained about California's stringent air and water pollution regulations, or species protection, water conservation, open space preservation, and workplace safety laws and regulations. CEQA – and specifically the schedule delays and uncertain outcome of often non-environmental use of CEQA litigation – is a unique challenge that can, with no cost to taxpayers, be fixed with the moderate legislative reforms discussed below.

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

### California Has Shrinking Share of Private Sector, Non-Construction Jobs Relative to Other Democratic Party Strongholds

Union use of CEQA litigation as a labor bargaining tool for non-construction private sector employers is subject to different federal labor laws than those that apply to building trades; generally, organized labor cannot use CEQA litigation to secure workplace jobs or negotiate wages or working conditions with manufacturing, office, hospital or other private sector employers. Union use of CEQA outside the building trade sector is nevertheless widely reported in CEQA disputes, especially involving challenges to retail projects (e.g., Walmart), hotels, hospitals and major public venues (e.g., sports stadiums and convention centers). Project Labor Agreements (PLAs) secured by construction trades can also include non-construction job provisions.

Notwithstanding union use of CEQA lawsuits against employers, California's private sector union participation rates remain much lower than other traditionally union-supportive, Democratic Party strongholds such as New York, Hawaii and Michigan, and have even fallen well behind red states such as Alaska, Nevada and Kentucky. For example, California's percentage of union jobs in the manufacturing sector, 7.2%, ranks 20th – behind Alaska, Delaware, Hawaii, Illinois, Indiana, Iowa, Kentucky, Louisiana, Michigan, Minnesota, New Jersey, New York, Ohio, Oregon, Pennsylvania, Rhode Island, Washington, West Virginia and Wisconsin.

Since none of the states with greater manufacturing sector union participation than California allow anonymous or union use of environmental lawsuits for non-environmental purposes, traditional political organizing, rather than CEQA litigation, appears to account for the greater success of unions in other blue (and even red) states.

Hirsch and David Macphearson, Current Popuation Survey (CPS Outcoming Rotation Group (ORG) Earnings File (2015)), *available at* http://unionstats.gsu.edu/State%20U_1983.xls and http://unionstats.gsu.edu/State_U_2012.xlsx (accessed April 30, 2014); John Husing, CEQA Working Group, "Misuse of CEQA and Prevailing Wage Workers" (September 12, 2013), *available at* http://ceqaworkinggroup.com/wp-content/uploads/2013/09/Final-Husing-Report.pdf (accessed May 28, 2015).

> Another of California's signature "new economy" companies, Google, recently explained that its major fiber facilities would not be built in California "in part because of the regulatory complexity here brought on by CEQA and other rules."

Longstanding California companies have also relocated their headquarters and other facilities outside the state, again resulting in significant middle-class job losses (especially in Los Angeles) that are unlikely to be recaptured given the locational flexibility and shareholder duties of corporations. Some of the companies that shuttered headquarters and major facilities in California under the current Administration include Nestle,[234] Toyota (3000 jobs in Torrance),[235] and Occidental Petroleum.[236] Media reports regarding employers departing to other states indicate that Texas, Arizona, Nevada, Utah and Florida are top destinations; all of these states have significantly higher per capita GHG emissions than California.[237]

Even the environmental "mitigation" programs of the "clean and green" technology sector have been targeted with CEQA lawsuits. Silicon Valley's employment growth has been nothing short of extraordinary, but the Bay Area's housing supply continues to lag far behind demand. Large employers have responded (sometimes voluntarily, and sometimes as a "mitigation measure" imposed under CEQA as part of the project approval process), with programs to reduce employee automobile commutes.

The most visible and costly of these programs are bus fleets that fan out across the Bay Area to transport employees to and from work. (Burbank's movie studios have collaborated on similar bus fleets, as have other large employers, such as some campuses of the University of California.) A coalition of groups alarmed by the influx of technology workers to San Francisco neighborhoods, filed a CEQA lawsuit against the city's regulation of bus stops for this fleet of transit mitigation buses.[238] (A union group seeking to force the employers to use bus contractors with union drivers also joined in the CEQA lawsuit.) The lawsuit alleges "gentrification" as a new environmental impact requiring analysis and mitigation under CEQA (including the argument that lower-paid workers forced out by high housing costs have to commute longer), along with allegations that the bus fleet itself causes unacceptable traffic congestion, noise and air pollution on city streets.[239] A fully occupied bus replaces 120 cars, reduces the need for tech employees to own cars (thereby reducing the need for parking), and has lower collision risks than the fleet of displaced cars. The bus fleet for multiple employers now exceeds 500, resulting in 50,000 fewer round-trip automobile commute trips daily. One major employer agreed to require union drivers, but the CEQA lawsuit remains pending.[240]

Clean and green technology companies are not the only major employment centers targeted by CEQA. Another signature California industry, entertainment, is likewise targeted by a range of CEQA lawsuits.[241]

The wildly successful Harry Potter books and movies hit the market more than 10 years ago, with the last movie in the series released in 2009. Universal Studios acquired the right to develop a Harry Potter theme park ride and related attractions at both its Orlando and Los Angeles amusement parks. The Orlando Harry Potter theme park opened in 2010, and instantly became a top-ranked tourist attraction that helped sustain visitation during the recession. The Los Angeles Harry Potter theme park had a very different adventure: as an integral component of the Universal Studio "Evolution Plan" for the 397-acre studio and amusement park campus, the project first went through nearly a decade of administrative processing, including CEQA studies, and an extensive community outreach process that eventually enlisted 7,500 active supporters.[242] The project was designed to include the Harry Potter ride and other amusement park upgrades, renovated movie and television production facilities and offices for NBCUniversal studios, and 3,000 higher-density, transit-oriented residential units in an urbanized area of Los Angeles County.[243] Bowing to intense neighborhood opposition to higher-density housing, the project's residential component was ultimately dropped (notwithstanding acute housing needs and an affordability crisis in Los Angeles and other parts of Coastal California),[244] and the project was finally approved in 2013.[245] The CEQA lawsuit challenge was filed in 2014, when neighbors who had successfully demanded that park-related traffic be routed away from their neighborhood onto a new freeway interchange sued to stop the closure of the substandard former interchange as part of the freeway improvements.[246] California still does not have a Harry Potter ride – while Florida has reaped five years of Harry Potter jobs and tourism dollars. The Los Angeles Universal Studio project was projected to create 30,000 permanent jobs.[247]

> Clean and green technology companies are not the only major employment centers targeted by CEQA. Another signature California industry, entertainment, is likewise targeted by a range of CEQA lawsuits.

Farther north, in the land of Star Wars, after nearly 10 years George Lucas had finally won approval in 1996 for a long-range Master Plan for the Grady campus in Marin County that hosts LucasFilms, Industrial Light and Magic, and other game design and related Lucas enterprises. After many more years of post-approval processing, in 2012, Lucas was on the verge of receiving final approvals to actually construct just a fraction of the development previously approved in 1996 (by which time he had also agreed to scale back the approved project and instead preserve more open space and restore a creek). Neighbors in notoriously anti-growth Marin County were having none of it, even neighbors who had moved in after the 1996 "vested" approval for the campus Master Plan. Lucas was likewise fed up, and on the eve of project approval – facing the certainty of neighbor CEQA lawsuits, and the uncertainty of the timing and outcome that comes with CEQA lawsuits – he withdrew his application after having spent millions of dollars and many years attempting to complete the two full cycles of CEQA processing required by Marin County.[248] Lucas is one of the county's very few large employers (and corporate taxpayers), but a handful of neighbors could invest a few thousand dollars in a CEQA lawsuit guaranteed to buy years of litigation uncertainty. The final score: neighbors win, Marin (and California) loses 800 construction and permanent jobs, hundreds of millions in tax revenues and other indirect economic benefits, and more than $50 million of environmental restoration work planned for the 78% of the campus proposed for permanent open space preservation.[249] A new skirmish in this neighbor dispute was initiated in early 2015, when Lucas announced he would seek approval to build quality affordable housing in Marin (an extremely high-cost, low-supply housing market) – without seeking scarce federal and state affordable housing funding.[250] His wealthy neighbors immediately voiced their vehement opposition to this new project as well, and the affordable housing proposal has also been abandoned.

## 2. CEQA and Small Business

The U.S. Small Business Administration reports that small businesses have created about 75% of the net new jobs created in the economy.[251] CEQA litigation abusers, particularly NIMBYs and competitors, have found small business to be an easy target.

One well-reported story involves Moe's Gas Station, a small independent station operating next to a freeway interchange in the heart of Silicon Valley. Moe's decided to add a new pump island (three new gas dispensers), and Moe's neighbor – a competing small gas station – used aggressive CEQA tactics to try to derail Moe's.[252] The competitor first unsuccessfully tried to block the project as part of the city's administrative review and approval process, which included a CEQA study and approval of a "Negative Declaration" confirming that the project would cause no significant adverse impacts. The majority of Negative Declarations fail in reported appellate court cases examined over a 15-year study period,[253] and sure enough, Moe's competitor won its CEQA lawsuit challenge to

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

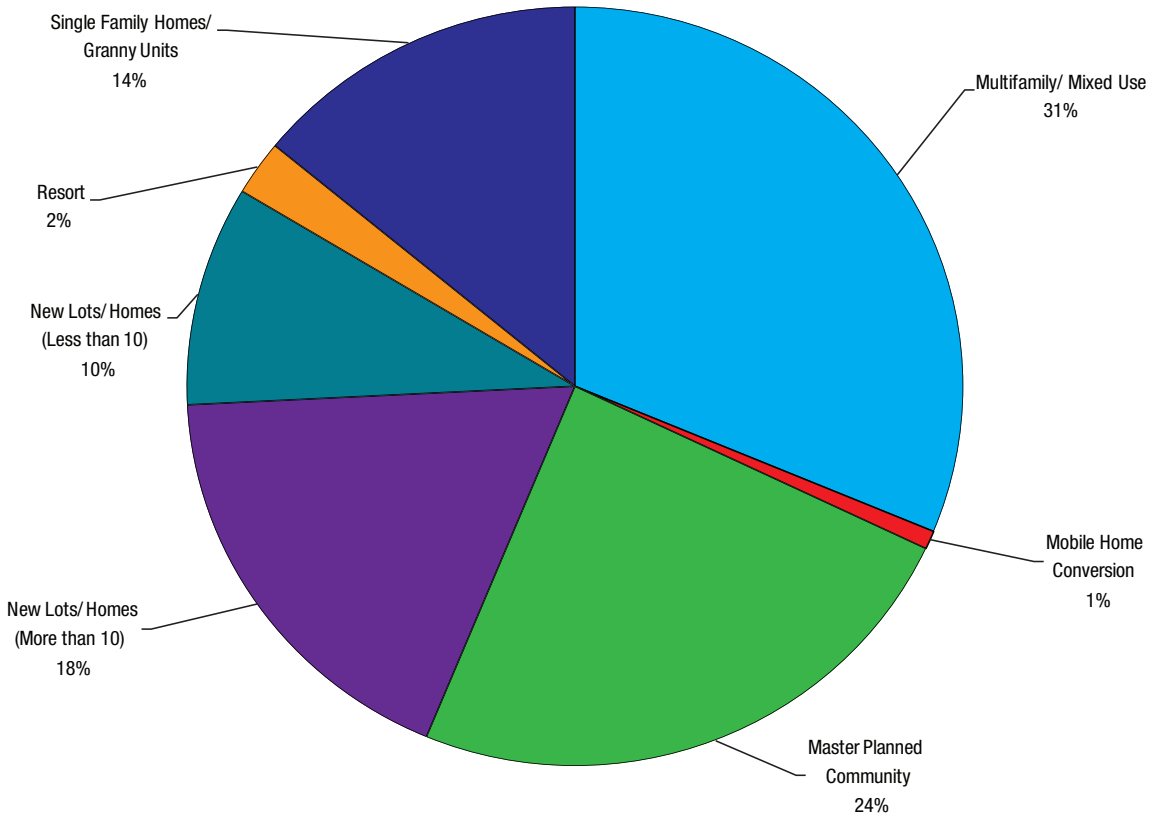
> One well-reported story involves Moe's Gas Station, a small independent station operating next to a freeway interchange in the heart of Silicon Valley.

the Negative Declaration – and Moe's approval was rescinded. Moe was next required to prepare an Environmental Impact Report, at a reported cost well in excess of $100,000, and repeat the CEQA administrative process for longer than a year. Moe's competitor filed various objections to increase the cost of the studies and delay completion of the process, but ultimately Moe got his approval – and his competitor promptly responded with another CEQA lawsuit. Moe won the second lawsuit, and got to build the small new pump island. Total costs for this gas station expansion: more than $500,000 for Moe and the city.[254]

In the San Diego County community of Poway, an automotive repair shop decided the neighborhood could not support a new competitor – and filed a CEQA lawsuit challenging the business license (for use of an existing facility) of a new automobile repair shop. Like other Negative Declaration challenges, Poway lost – but the judge (who in that case was fully aware of the competitor's identity and interests) elected to simply order more environmental study rather than shutting down the targeted business. Nearly $200,000 later, the new, minority-owned auto repair shop survived the CEQA gauntlet – notwithstanding an 18-month ordeal, and a disabling increase in its debt burden and other unanticipated business costs.[255]

Similarly competitor-based lawsuits range from freeway interchange "travel plazas" to large regional malls.[256]

In Berkeley, where CEQA was the tool of choice used against a proposed Starbucks occupancy by a Peet's-loving group of neighbors, CEQA remains a favorite for neighbors opposed to new occupants of existing storefronts. The proposed occupancy of vacant storefront proposed by the owners of a very successful downtown Mexican restaurant ran headlong into the wealthy, white reality of the city's tony "Elmwood" district – who also used CEQA to oppose restaurant occupancy of the same space in 2007.[257] This study shows that 17% of lawsuits filed against retail projects involve challenges to the occupancy of existing structures.[258]

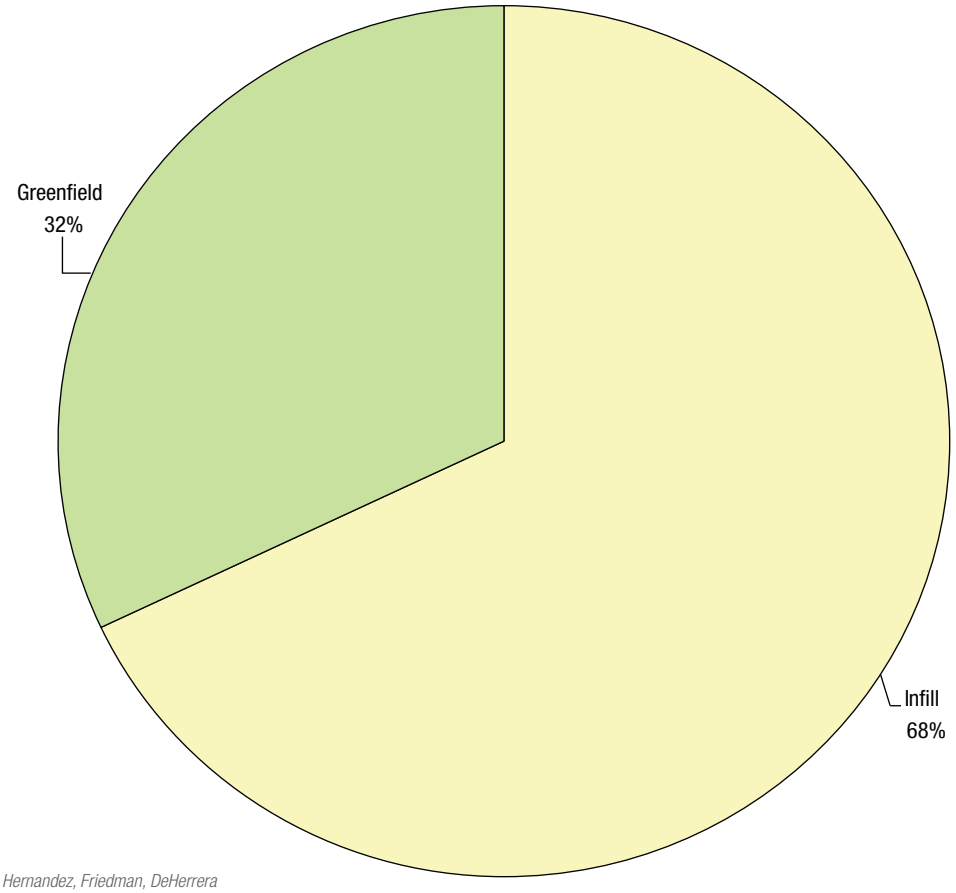


A range of other small commercial businesses – restaurants, neighborhood retailers, the Planned Parenthood clinic in South San Francisco, clinics – were targeted by CEQA lawsuits, even if the project involved only occupancy of existing buildings.[259] The environmental consequences of actually occupying a vacant structure – familiar infill "impacts" like traffic (and traffic-related impacts like air quality, noise, parking and greenhouse gas) – are the focal points of these NIMBY-inspired lawsuits.

## 3. CEQA and Housing

Housing is the single largest target of CEQA lawsuits. As shown in Figure 1, 21% of lawsuits challenged residential projects. Figure 11 takes a closer look at the various types of housing projects being challenged, and confirms that CEQA lawsuits most often target higher-density housing in urban locations – precisely the type of housing that *must be built* to comply with current California environmental climate change priorities such as AB 32 and SB 375.

### Figure 11: CEQA Petitions Challenging Residential (and Mixed Uses Including Residential) Projects



*Produced by: Hernandez, Friedman, DeHerrera*

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

As shown in Figure 12, more than two-thirds of lawsuits challenging residential projects targeted projects in "infill" locations. The infill housing projects targeted by CEQA lawsuits also collectively comprise the vast majority of challenged affordable housing, support service housing, and senior housing projects. The largest challenged infill housing projects are master planned communities on former military bases; the housing types challenged most often are higher-density apartment and condominium apartments.[260]

The infill housing projects targeted by CEQA lawsuits also collectively comprise the vast majority of challenged affordable housing, support service housing, and senior housing projects.

**Figure 12: More Than Two-Thirds of CEQA Residential Project Lawsuits Targeted Infill Development**

*Produced by: Hernandez, Friedman, DeHerrera*
*Copyright © 2015 Holland & Knight LLP All Rights Reserved*

The most frequently challenged housing type is "multifamily" projects, typically multi-story apartments and condominiums.[261] Some of these projects are also "mixed use" and have, for example, retail stores or office space on lower floors, and residential units on upper floors.[262] Every multifamily project within the survey sample was also an infill project.[263] Climate change policy experts and land use planners love these multifamily, mixed use and attached housing product types because they create the higher population densities needed to support transit service, and create the promise of a "walkable" community where people do not need to get into their car to buy groceries, visit a restaurant or go to work. To further discourage automobile ownership and use, these projects also tend to have fewer and more costly parking places.

Some people who live near areas where higher densities are proposed, however, hate these projects. CEQA lawsuits target these projects in both established high density urbanized areas such as San Francisco and Los Angeles, as well as elsewhere in California where higher-than-existing but still very modest densities are proposed (e.g., a three-story senior housing project in a single-family home area in Sacramento was challenged as "massive" by a NIMBY lawsuit).[264]

Typically these types of higher-density, urban housing projects go through four or five separate, and largely duplicative, rounds of full EIRs in administrative proceedings that can take more than 10 years. The ongoing efforts by the City of Los Angeles to create a higher-density, transit-oriented corridor in Hollywood provides a case study in how CEQA processing delays, duplicative rounds of CEQA studies, and multiple CEQA lawsuits, have empowered a passionate group of neighbors fundamentally opposed to this new urbanized vision for the community – and all at taxpayer expense.

The ongoing efforts by the City of Los Angeles to create a higher-density, transit-oriented corridor in Hollywood provides a case study in how CEQA processing delays, duplicative rounds of CEQA studies and multiple CEQA lawsuits, have empowered a passionate group of neighbors fundamentally opposed to this new urbanized vision for the community – at taxpayer expense.

## 4. Transit-Oriented Development: Hollywood and Beyond

- ***Welcome to Hollywood.*** Los Angeles is the second-largest city in the nation (after New York). Within the city, the Hollywood and East Hollywood neighborhoods are ranked as "high" density, with over 20,000 and 30,000 people (respectively) per square mile.[265] The adjacent, 1.8-acre independent city of West Hollywood has a slightly lower density, with more than 34,000 additional residents – but nevertheless made it to the 16th-densest city in the United States based on 2010 census data.[266] In short, this area of Los Angeles is already among the most densely populated areas of the United States – more dense than 20th-ranked San Francisco.

- ***EIR Rounds One and Two.*** Los Angeles is well on its way to completing a regional transit system that includes the "Red Line" subway service through Hollywood.[267] Planning and construction of the Red Line, which was informed by EIRs and several lawsuits, took over two decades. Approved EIRs included projections about population increases and higher-density development along the new transit corridor.[268] The primary EIR for the Red Line was completed in 1983, and then subject to a voluminous new supplemental EIR process completed in 1989.

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

- ***EIR Rounds Three and Four – with Five on its Way***. With the Red Line approval process nearing a hoped-for end, the city completed a Community Plan to guide future development – and increased density around the new subway – in 1988.[269] Nevertheless, the city then spent another 21 years, ending in 2012, updating its land use plan for the Hollywood community to substantially increase density in this existing urban area.[270] The plan was approved by a unanimous vote of the City Council. Neighborhood opponents called it "Skyscraper Hell" and vowed to sue.[271] They did – three CEQA lawsuits were filed against the plan. (As noted above, land use plans are the most frequent regulatory action targeted by CEQA lawsuits.)

After almost two years in litigation, the trial court – the first of three layers of state judicial review allowed in CEQA lawsuits – ruled that the City's EIR was deficient. Resolving two of the lawsuits, the judge first observed that the:

> "Hollywood Community Plan Update (and its corollary environmental impact report [EIR]), which is a principal subject of this litigation, is a comprehensive, visionary and voluminous planning document which thoughtfully analyzes the potential for the geographic area commonly referred to as Hollywood."

But he also concluded that the EIR was "fundamentally flawed" because it used an expert agency population estimate that was higher than the 2010 census data, which first became available only after the Draft EIR was published (rendering all population-based EIR studies deficient); he also decided that additional alternative land use plans should have been considered.[272] Resolving the second lawsuit, which was brought by an organization called "Fix the City," the trial court also concluded that the city had failed to provide for adequate infrastructure analysis, mitigation and implementation.[273] The trial court judge eventually vacated the city's approval of the Hollywood Community Plan, thereby calling into question all projects approved under the now-vacated plan, and putting all pending projects in limbo.[274] The judge's decision will result in EIR Round Five: pending completion of a revised EIR, the city will continue to implement the 1988 Community Plan and EIR.[275]

- ***EIR Round Six.*** Senate Bill 375 requires California's metropolitan regions to develop land use and transportation plans to meet ambitious California greenhouse gas reduction targets in 2020 and 2035.[276] The Southern California Association of Governments (SCAG) approved the regional plan and accompanying EIR for the state's largest (by geography and population) region in 2012.[277] Substantially increasing density in Hollywood along the transit line is included in the SCAG plan, which was developed with years of coordination with cities and other stakeholders.

- ***Project EIRs – Rounds Seven and Eight, Nine, Ten and Beyond.*** Meanwhile, several projects – higher-density, transit-oriented projects – had been approved, and even constructed, in the area covered by the newly vacated Community Plan and EIR, by the valid Red Line EIR, and by the never-challenged SCAG EIR. These projects were also targeted by CEQA lawsuits filed by the same neighborhood opposition group. The city has suffered a steady string of CEQA losses for challenged projects; two multifamily housing projects ensnared by CEQA include:

  - **Historic Spaghetti.** A completed apartment project that replaced a former "Old Spaghetti Factory" restaurant with surface parking survived its first round of CEQA litigation. Although the vacant restaurant building had been substantially renovated over the years, and was not on either a federal or state register of historic structures, CEQA's ambiguous requirements allowed the restaurant to warrant special treatment as a historic structure – and required the apartment developer to preserve the façade of the restaurant as the facing of the new apartment building. The "façade preservation" mitigation was later determined to be structurally infeasible, so the city instead required the developer to reconstruct a visually identical replacement façade rather than preserve the original wall.

    In the second round of CEQA lawsuits against this project (by which time the original developer had lost its investment), the neighbors won their argument that approval of the replacement façade should have had a new round of CEQA review and the judge ordered the city's approval of this now-completed residential project vacated, a judicial outcome that – left unchallenged – would force existing residential tenants to vacate, and prohibit other completed units from being rented, pending completion of a new historic structure study and CEQA process.[278] For development of this site, this was ***EIR Round Seven*** – soon to be followed based on the CEQA lawsuit outcome by ***EIR Round Eight*** – for increasing development densities based on policies first adopted in 1983.

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

» **Wrong Millennium.** A mixed use residential apartment project that included hotel, commercial and retail uses was successfully challenged by the same neighborhood group and a hotel competitor[279] – and harshly criticized by the state's transportation agency for having unacceptable impacts on a notoriously congested freeway. The developer waited for the lawsuit outcome before starting construction, and after two years of litigation – preceded by several years of community outreach, planning and environmental studies – a trial court concluded that the EIR's traffic analysis was technically flawed, and project approvals should be vacated.[280] This was ***EIR Round Nine*** – again to be followed by ***EIR Round Ten*** – for increasing development density in the same Hollywood area.

The first Red Line EIR was approved in 1983; 30 years later, the higher-density vision for this transit corridor remains mired in several overlapping CEQA lawsuits. This Hollywood parade of costly EIRs and overlapping CEQA lawsuits illustrates a four-decade debate, which remains ongoing, about the relative policy merits of high-density development, increased congestion, transit utilization policy and increased demands on already-strained urban infrastructure.

- ***"Smart Growth - Beyond Hollywood" – Increasing Densities and Transit Use in Urban Areas***. Hollywood's urban densification debate, dubbed "Smart Growth" by density advocates, is being repeated in dozens of other California communities. State climate mandates and urban infill advocates believe California's coastal communities must dramatically increase densities, but many residents – with enough resources – strongly disagree. Under CEQA, this very fundamental policy disagreement moves into a multi-year litigation venue where burdened trial court judges are forced to wade through technical and legal arguments about the sufficiency of thousands of pages of studies. Additionally, the most common CEQA judicial remedy – an order to vacate years-old project approvals and restart the environmental study process – does not actually resolve the policy debate but merely restarts the agency/applicant/consultant/attorney churn for still more CEQA studies, to be bickered over in still more judicial sequels of the same densification policy dispute.

As many commentators have observed, there is no end in sight to policy disagreements about the density and character of existing California communities, and the use of CEQA lawsuits by those who lose these policy disputes. As summarized by the website Curbed Los Angeles, and the non-partisan California Legislative Analyst's Office, earlier this year:[281]

> California is a beautiful and desirable place to live, but it's also one of the hardest places to afford to live. Los Angeles is particularly brutal: it's got the biggest disconnect between incomes and rents of anywhere in the nation, and it's the place to be if you're looking to have your dreams of homeownership crushed. Is there any hope? A new report out from the Legislative Analyst's Office shows that the groundwork for LA's housing shortage was laid a long time ago, and it's going to be hard work undoing it. Just how short on housing is LA? In order to keep housing prices in check, California overall would have had to build more (70,000 to 110,000 additional units each year), build denser, and build especially in the coastal areas (including Los Angeles) and central cities (as opposed to building mostly inland and in areas way outside of cities as has been done in the past). California also should have been doing this for decades already. Because it didn't, "the state probably would have to build as many as 100,000 additional units annually—almost exclusively in its coastal communities—to seriously mitigate its problems with housing affordability." And that's in addition to the 100,000 to 140,000 units that the Golden State is already planning to build. If the state had done all that, California's housing prices still would have continued to grow and would still be higher than the rest of the country's now, but the disparity between them would have been less gaping.

Excerpted Figures from California Legislative Analyst's Report, "California's High Housing Costs: Causes and Consequences (2015)"

**Figure 3**

**California Home Prices Have Grown Much Faster Than U.S. Prices**

It is also worth noting that the higher-density development favored by California's climate policies require far more costly housing units than traditional single-family homes. While urban density advocates argue that home prices outside the urban core are unfairly priced based on their need for public infrastructure such as roads and sewer systems, costly urban infrastructure upgrades are also often required for major urban projects.[282] And as recently confirmed in a regional conference on the Bay Area Housing Crisis,[283] the data in Table B, below, shows the dramatically different construction pricing structures for lower density and higher-density housing project types in the Bay Area, as well as the smaller living spaces provided by higher-density housing.

**Table B: Bay Area Housing Construction Cost Comparison**
**(May 8, 2015 presentation to MTC Planning Committee/ABAG Administrative Committee by J. Fearn, D. Pinkston, N. Arenson)**

| Housing Type | Dwelling Units/Acre (Density and Height) | Unit Size | Cost of Material/Labor Compared to Single Family Home |
|---|---|---|---|
| Single Family Home Mid-Sized Lot (SFH) | 5<br>2 Stories | 2,750 | NORM used for comparison purposes |
| SFH Small Lot | 15<br>3 Stories | 2,400 | **1.3X higher than mid-size lot SFH**) |
| Townhome (units share common walls) | 20<br>3 Stories | 2,000 | **1.5X higher than SFH** (lower consumer price than either SFH) |
| Townhome/Condo | 26<br>4 Stories | 1,900 | **2.0X higher than SFH** (lower consumer price than SFH or townhome) |
| Midrise Condos | 50<br>5 Stories + (including some Parking) | 1,050 | **3.0-4.0X higher than SFH** (feasible only in expensive urban markets) |
| Highrise | 100+<br>8-50 Stories + (including some Parking) | 1,050 | **5.5x-7.5X higher than SFH** (feasible only in extremely expensive urban markets) |

The higher-density housing (primarily midrise and highrise buildings) typically challenged in these CEQA infill lawsuits already requires home buyers to pay dramatically higher prices for comparatively smaller units. With the exception of the City of San Francisco, however, the Legislative Analyst's Office (LAO) Report concluded that housing density increased in California's coastal metro areas during 2000-2010 by only 4% relative to density increases of 11% in a comparison group that included Boston, Seattle, Washington, D.C., Miami and even traditionally "sprawling" Las Vegas.[284]

When the costs of CEQA-related study preparation and processing are factored in, housing costs in California's NIMBY-rich litigious coastal communities increase even more. The LAO estimates that even absent litigation, CEQA and land use entitlement processing for housing projects in California's ten largest cities between 2004-2013 took, on average, two and one half years to complete – and sometimes resulted in smaller projects with fewer units.[285]

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

If higher-density housing is an environmental policy priority, then CEQA litigation undermines this priority. A broad spectrum of stakeholders agree that CEQA reform is needed if higher-density, transit-oriented housing goals needed to achieve California's GHG reduction mandates are to be achieved.

- Two of California's leading environmental advocacy organizations, the Natural Resources Defense Council and the California League of Conservation Voters, co-authored a report on SB 375 which noted that "because CEQA is focused on 'projects,' it faces limitations, especially for achieving effective mitigation of the global warming impacts associated with VMT [vehicles miles traveled]…. In fact, in the hands of opponents to a high-density project, CEQA could threaten the implementation of an effective greenhouse gas reduction strategy."[286]

- Planning and real estate development experts from the public and private sectors come together in an Urban Lands Institute report that reached a similar conclusion about the need to reform CEQA to achieve the greenhouse gas reduction goals of SB 375: "Requirements of the California Environmental Quality Act (CEQA) should be reexamined and refined to promote specific land use and transportation projects that help achieve SB 375's desired outcomes. Such refinements can be designed to reduce the burden of excessive documentation while providing desired environmental protection, and fostering development of urban growth patterns and transportation systems that reduce carbon emissions."[287]

As discussed in greater detail in Part 3, notwithstanding widespread recognition of the need for CEQA reform to promote higher-density development, meaningful CEQA reform continues to fall victim to Sacramento special interests. Two more examples of CEQA challenges to higher-density apartment projects, both located adjacent to existing or planned Bay Area Rapid Transit (BART) stations in the Bay Area, help illustrate why:

- ***Transit-Oriented Development Challenged by Unions in Dublin.*** For decades, BART has encouraged communities to adopt plans and policies to encourage higher-density development around BART stations. Communities hosting newer BART stations, such as Dublin, receive additional funding to help plan (and complete EIRs for) station area plans, which are then "built out" as market conditions warrant. One of the few CEQA streamlining provisions that does exist is for residential projects that are consistent with, and implement, a previously-approved form of land use plan called a "Specific Plan." Multifamily housing developer Avalon Bay proposed to build a new apartment complex at the Dublin BART station using this CEQA compliance streamlining statute for an approved Specific Plan, which had its own EIR. A labor union seeking a Project Labor Agreement (PLA) sued under CEQA, asserting that the Specific Plan EIR's failure to expressly address GHG emissions made this transit-oriented, high-density apartment project ineligible for CEQA streamlining. Eventually, the courts ruled against the union (which sued under the banner of the "Concerned Citizens of Dublin" in their CEQA lawsuit).[288]

If higher-density housing is an environmental policy priority, then CEQA litigation undermines this priority. A broad spectrum of stakeholders agree that CEQA reform is needed if higher-density, transit-oriented housing goals needed to achieve California's GHG reduction mandates are to be achieved.

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

> Notwithstanding widespread recognition of the need for CEQA reform to promote higher-density development, meaningful CEQA reform continues to fall victim to Sacramento special interests.

- ***Transit-Oriented Development Challenged by Union in Milpitas.*** The city of Milpitas, which straddles the East Bay and Silicon Valley, suffered a similar ordeal when it approved an apartment project near the new Milpitas BART station. The same union that challenged the Dublin apartment project filed another unsuccessful CEQA lawsuit in an attempt to leverage a PLA for this workforce housing project; the lawsuit resulted in substantial delays and increased costs.[289]

The "Blue-Green" political alliance between powerful unions and environmental organizations, along with union use of CEQA litigation threats and lawsuits to leverage PLAs from higher-density, transit-oriented housing, has virtually neutralized meaningful CEQA reform in Sacramento, as discussed further in Part 3 of this report.

A less reported political schism within the ranks of CEQA's litigation status quo defenders is a disagreement among California environmental advocacy groups about higher-density urban housing projects. Environmental advocacy groups that lobby for land use, transit and housing policies and funding programs to support precisely this type of higher-density, infill residential development have many local environmental activist and attorney members who cherish the right to oppose such high-density projects whenever they are proposed in their localized neighborhood's "environment."

- ***No Residential Project Is Too Small To Challenge.*** Another less-reported pattern of CEQA lawsuits is the extent to which CEQA litigation targets single-family home construction and renovation projects in established neighborhoods: during the study period, 15 CEQA lawsuits challenged single-family home projects, and three more targeted duplexes or second units in single-family neighborhoods.[290] One such single-family home CEQA lawsuit, from Berkeley, was filed against a project that received unanimous neighbor and Planning Commission/City Council support but was opposed by a distant city resident.[291] This CEQA challenge remains languishing "on remand" from the California Supreme Court more than six years after project approval.[292] Some of these single-family home projects involve only repair work or minor modifications, but CEQA litigation abuse is a readily available tool for fence-line neighbor skirmishes.

- ***Adaptive Housing Reuse of Existing Structures.*** CEQA challenges were also lodged against projects that convert approved or existing structures such as office buildings or hotels into housing. In one well-publicized case, in the depths of the recession an approved office building in San Jose was proposed for conversion into critically needed, transit-oriented housing. Local unions filed a CEQA appeal, insisting that they would pursue environmental challenges against the project unless the developer used union labor. The developer was already using union labor, but from a different union local than the union local that filed the CEQA lawsuit.[293] (Hijacking California's premier environmental statute as a proxy to fight a territorial battle among unions was a frequent tactic used during the study period, and most notably targeted solar and other renewable energy projects, as discussed above.[294])

- ***Master Planned Community Challenges.*** "Master Planned Communities" are defined for study purposes as larger projects that include thousands of housing units, community-serving retail, office or other employment uses to provide for a balance between housing units and employment opportunities, and at least one new elementary school. Such projects typically are implemented over a period of 10-30 years, and some are sued by multiple stakeholders on multiple occasions over a period of a decade or more. "Infill" examples of master planned communities range from the redevelopment of former military bases and industrial facilities, to the development of infill areas within existing cities or unincorporated county communities.[295] A slight majority of challenged Master Planned Community projects are located in unincorporated county "greenfield" areas rather than "infill" locations, but it is noteworthy that almost all are located immediately adjacent to existing communities and major infrastructure – and were generally included in regional land use plans that met California's aggressive 2020 and 2035 GHG reduction targets under SB 375. Master Planned Communities represent investment commitments in excess of $1 billion each, and provide thousands of construction and other jobs for decades. These projects are more likely to be challenged by established environmental advocacy groups opposed to virtually all new "greenfield" development.

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

- ***Subdivision Development Projects*** typically consist of proposals to construct smaller numbers of single-family homes and townhomes, often with neighborhood-scale amenities like retail services and parks. Over 75% of the challenged subdivision projects were in infill locations.[296]

- ***How Much Is CEQA Used to Combat Housing "Sprawl" in California?*** As shown in Figure 12, more than two-thirds of CEQA lawsuits challenging housing targeted infill housing projects. And as the regional greenhouse gas reduction plans completed under SB 375 have demonstrated – and as numerous CEQA lawsuit losses challenging these infill projects show – infill projects also have adverse environmental impacts under CEQA. These impacts include not only traffic congestion and parking but the environmental attributes of traffic and parking (traffic-related air emissions including greenhouse gases, noise and public safety), as well as impacts to aging urban infrastructure and public service facilities that were never designed to accommodate the type of huge density increases that the most radical of the GHG reduction targets – 80% less GHG than 1990 levels notwithstanding population and economic growth – demand.

Just as CEQA is not a "business v. enviro" debate, it is not a "sprawl" debate. California has already conquered sprawl. As reported by California Planning and Development Report publisher Bill Fulton, recent reports from both the U.S. Census Bureau and the EPA confirm that California has long accommodated more of its population growth in urbanized areas than in rural areas.[297] A recent report by the EPA confirms that California has had a long-term pattern of favoring "infill" over exurban growth, and over a 60-year study period has consistently accommodated a higher percentage of population growth in urbanized areas.[298]

In the housing project context, CEQA lawsuits are used by anyone for any purpose: by climate activists to challenge EIRs for not doing enough to study and/or reduce GHGs (e.g., the SANDAG lawsuit), by neighborhood activists for not doing enough to study and/or reduce the many consequences of urban congestion, by labor on any topic to leverage PLAs, and by NIMBY or even anonymous parties to stop any change (even repairing the drainage on their neighbor's existing house[299]). CEQA stops, stalls and shrinks housing projects – and is one of the key reasons that California's houses cost 2.5 times more than in the rest of the country and that California rents are double those than elsewhere in the United States. Extraordinarily high housing costs, losses and threatened losses for middle-class jobs accessible to the hundreds of thousands of adult Californians lacking even a high school degree, gas and electricity prices that are also persistently higher than the rest of the country, and California's environmental policies – led by CEQA – have created a perfect pricing storm that lands on the back of the young, the poor, minorities and the under-educated.

Extraordinarily high housing costs, losses and threatened losses for middle-class jobs accessible to the hundreds of thousands of adult Californians lacking even a high school degree, gas and electricity prices that are also persistently higher than the rest of the country, and California's environmental policies – led by CEQA – have created a perfect pricing storm that lands on the back of the young, the poor, minorities and the under-educated.

## 5. Other Private Sector Projects

Only 10% of CEQA lawsuits target industrial, forestry, mining, or agricultural projects – in popular understanding, the kinds of projects for which "pollution" or "destruction of sensitive natural environments" warrants the greatest level of concern.

As with much of CEQA lore, a closer look at the actual projects at issue tells a far more environmentally benign story:

- The largest CEQA challenge target in the agricultural and forestry category was wineries, a signature land use supporting a thriving tourist trade and a broad range of employment opportunities for some of California's most productive agricultural lands and picturesque landscapes.[300] The majority of these lawsuits targeted wineries with tasting rooms or other public spaces that would attract more visitors and add traffic to local roads. No non-agricultural operations were targeted. Wineries need to comply with stringent water quality, endangered species, worker protection, and other environmental standards. NIMBY lawsuits against winery-related visitors do not make a compelling case for preserving the CEQA litigation status quo.

- Only one timber-related CEQA lawsuit was filed during the study period, and this project involved using lower-emission rail rather than trucks for the transport of timber.[301] In the 10-year period from 2005-2011, California's timber production volume was only 37% of what it was from 1985-1994, a decrease of more than 60%.[302] Federal and state endangered species and water quality protection permit requirements and lawsuits (including lawsuits filed under CEQA's federal parent law, NEPA, California's Forest Practices Act and related permit requirements, and the politics and policies of public lands management including implementation of sustainable forestry practices) dwarf the role of CEQA litigation in actual timber management mandates. This lawsuit challenges a rail project, and is mired in the same CEQA v. federal law preemption arguments as the California High Speed Rail project.

- There were only 23 CEQA petitions that challenged industrial (manufacturing, assembly, processing) projects statewide – slightly more than the 18 CEQA lawsuits filed against single-family homes and secondary units.[303] The majority – 61% – of these CEQA "industrial" lawsuits challenged warehouse projects. The policy and legal debate over environmental practices in the goods movements sector typically reaches crescendo levels for projects involving the Ports of Los Angeles and Long Beach, where 10 years of CEQA and other lawsuits resulted in various settlements mandating cleaner trucks and other cargo movement practices – and has already resulted in one trip to the U.S. Supreme Court in a case that concluded that CEQA's mitigation mandates do not trump uniform federal laws on interstate trucking and truck emission standards.[304]

  A more recent CEQA port case, filed just after the study period, involves the expansion of the BNSF rail yard, which would shift more cargo onto railcars and off trucks and roadways. The BNSF lawsuit joins CEQA to federal environmental mandates of the Clean Air Act (pursuant to which a regional plan effectively prohibits all new sources of toxic air emissions, including localized emissions that would occur near the rail yard even though regional shipping emissions would decrease with a shift from rail to trucks).[305] The warehouse CEQA lawsuits filed during the study period did not involve these major Port operations, and each involved a single warehouse project – all but one located in the Inland Empire and desert areas of Southern California. CEQA does not provide local land use lead agencies with the authority to regulate trucking (or truck emissions), so these lawsuits tend to fall into either the "greenmail" category or a classic land use dispute by those wanting a different use for the warehouse property.

- There were 28 lawsuits filed challenging mineral resource extraction projects. The majority – 21 – involved "aggregate," which includes materials like sand, gravel and crushed stone, that are used to make concrete and asphalt concrete.[306] Aggregates are the most mined materials in the world, and are a key ingredient in asphalt and cement.[307] EIRs were prepared for all but five of these lawsuits. Seven of these lawsuits involved oil and gas drilling projects: one challenged new state environmental protection regulations relating to hydraulic fracturing and other well stimulation techniques, five challenged continued production (including drilling of new wells) in an existing oil recovery area in Whittier, and one challenged oil exploration testing in Kern County.[308] Neighboring landowners and environmental advocacy groups appear to be the litigants in most of these mining-related CEQA lawsuits.

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

- All remaining challenged industrial projects were in sectors with economic pricing structures that place a premium on reduced transportation costs and proximity to customers: three asphalt plants and one concrete plant that use, but do not have an onsite mine producing, aggregate materials; two beverage plants; one food processing plant; one gravel plant; and one temporary gypsum stockpile for agricultural use.[309] Several of these projects were sponsored by small business operators; all are also required to obtain land use, air quality, water quality, species protection and other applicable environmental permits – and comply with environmental standards – that did not exist when CEQA was enacted in 1970.

There can be no question that CEQA plays a critical disclosure and analysis role for all of these projects, but do these projects warrant preservation of the CEQA litigation status quo?

PART 3

# Curtailing CEQA Litigation Abuse – Restoring CEQA's Role of Assuring Public Transparency and Accountability for Avoiding and Mitigating Adverse Impacts to the Environment and Public Health

CEQA was not etched onto stone tablets or penned with a feather quill centuries ago. Enacted in 1970, CEQA litigation practice has remained essentially unchanged since the California Supreme Court decided that CEQA applies to private as well as public sector projects, and should be "broadly" interpreted to protect the environment.[310] As CEQA critic Governor Jerry Brown has explained, however, over the past four decades the courts have issued hundreds of judicial interpretations of CEQA that have morphed this great environmental law into a "blob" of contradictions and uncertainty – often misshapen, misused, mismanaged and, as shown by this study, used to thwart important environmental policies like climate change.[311]

## A. Media Reports of Widespread CEQA Litigation Abuse - and Calls for Meaningful CEQA Reform

The need for CEQA reform has been repeatedly confirmed by all major state editorial boards, by the current and former governors, by local elected officials and – for discrete moments, which quickly pass – by California's legislative leadership. Some excerpts calling for CEQA reform include:

- The ***Los Angeles Times*** concluded that CEQA had received a "black eye" when abused by a union group to leverage jobs for its members (who were already going to be paid prevailing wages), which resulted in abandonment of a major new manufacturing facility in an approved industrial park, and in an area with very high unemployment, for the production of taxpayer-funded Metro cars. As the editorial board noted, "now that [union] IBEW had reached a deal with Kinkisharyo, the company's opponents no longer needed to use the California Environmental Quality Act to beat it into submission."[312] This is not the first time the *Los Angeles Times* editorial board has commented on CEQA abuse:

  > "Many a bad project has been slowed, stopped or greatly improved because of [CEQA] – but many a perfectly acceptable project has withered and died because of the time and cost involved in sometimes frivolous litigation. Those lawsuits can derail a proposal even when the real object isn't environmental protection. Businesses use CEQA to hinder competitors; interests groups litigate for years, even decades, not so much to prevail on a matter of principle as to wear out a proponent."[313]

- The ***San Francisco Chronicle*** has likewise published several editorials on CEQA abuse, especially challenges brought by NIMBYs. *The Chronicle* recently opined that "of all the well-documented abuses of the California Environmental Quality Act, "the most absurd" may well be the lawsuit (languishing after more than 18 months in trial court) filed by abortion protesters against a Planned Parenthood clinic proposed to be located in

CEQA was not etched onto stone tablets or penned with a feather quill centuries ago. Over the past four decades the courts have issued hundreds of judicial interpretations of CEQA that have morphed this great environmental law into a "blob" of contradictions and uncertainty – often misshapen, misused, mismanaged and, as shown by this study, used to thwart important environmental policies like climate change.

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

an existing building, asserting that the city failed to adequately take into account the noise and public safety disruptions that the protesters themselves promised to create if the clinic was allowed to open. *The Chronicle* concluded:

> "This nonsense must stop. The 40-year-old CEQA has been a critical tool for preserving our natural resources, but it has also been exploited by interests whose motives have nothing to do with the environment, such as businesses that stifle would-be competitors or unions looking for leverage.
>
> We can now add women's health services to the toll of public goods that have been stymied by the California Legislature's refusal to stand up to the interests of special groups who seem to think CEQA should remain carved in stone."[314]

- The ***San Jose Mercury News*** has likewise long recognized the damage caused by CEQA abuse, and called for reform:

> "Economic growth must be a top priority. And one of the best ways to accomplish it is to reform the California Environmental Quality Act..... [CEQA] challenges often prevent development that could create jobs or help businesses survive without harming the environment, and they contribute to California's reputation as unfriendly to business. Four decades after Ronald Reagan signed CEQA into law, it's time for an update."[315]

A broad chorus of editorial boards harshly criticized former Senate President Pro-Tem Darrell Steinberg's sweetheart CEQA relief bill for his hometown basketball team's new arena. The *San Jose Mercury News* called out Senator Steinberg for limiting CEQA reform to his pet project:

> "Senate President Pro-Tem Darrell Steinberg knows the California Environmental Quality Act needs to be reformed. Why else would he make a last-minute push to exempt a proposed NBA arena in Sacramento, a top priority of his, from provisions of the law?
>
> Yet Steinberg won't agree to broader CEQA reforms that would do for the rest of the state what he wants to do for the Sacramento Kings. CEQA reform for me, but not for thee?.... This time, the hypocrisy is hard to take.
>
> [CEQA] is a key reason the state has been able to preserve much of its natural beauty as its economy boomed. But CEQA is regularly abused. Labor unions use it to extract concessions from developers. NIMBYs use it to stop development in their backyards. And businesses use it to stop competitors from expanding. The law needs to be updated to stop these abuses."[316]

The chorus criticizing Senator Steinberg also included the *Sacramento Bee*, which wrote:

> "No doubt, the proposed Sacramento arena could be a crucial catalyst for a more vibrant region and central city. But cities up and down California also have important developments on the drawing boards. Like the proposed arena, many are infill projects that create jobs, reduce sprawl and have few negative environmental impacts. Too often CEQA is exploited to stop good projects. Opponents who care nothing about the environment use the threat of CEQA lawsuits to leverage better labor deals or thwart a competitor."[317]

- ***The San Francisco Chronicle*** agreed, saying that Steinberg was "just plain wrong" and noting that "there are plenty of worthy projects around the state that are threatened by litigation under a law that is being exploited by individuals and special interests with motives that have nothing to do with the environment."[318]

- ***The San Diego Union Tribune*** has a long track record of calling for meaningful CEQA reform, writing in 2007: "CEQA has become... a tool of extortion for a long list of special interest groups that have little – if any – interest in the environment."[319] More recently, the *San Diego Union Tribute* reported on a short-lived CEQA reform proposal that would have integrated this 1970-statute with modern environmental and human health protection standards, curtailed duplicative CEQA challenges for projects that complied with plans that had already gone through CEQA, and ended anonymous CEQA litigation abuse by requiring disclosure for those filing lawsuits:

  > "The fact that Governor Jerry Brown, State Senator Darrell Steinberg, and a bi-partisan group of state lawmakers say it's time for substantial reform of the California Environmental Quality Act is good news.... The CEQA proposal that surfaced this week was real reform. It would have streamlined the way projects get approved by eliminating duplicative reviews and limiting "greenmail" – litigation that uses environmental rules to force concessions or de facto payoffs to project opponents."[320]

- The ***Sacramento Bee*** has agreed: "CEQA is ripe for manipulation and needs updating. It is too often abused to slow down projects for reasons that have nothing to do with environmental protection."[321]

- Earlier this year, the ***Sacramento News & Review*** issued "NIMBY Awards" for the worst CEQA abuses (and abusers).[322] In an accompanying editorial, the publisher wrote:

  > "I am an environmentalist. I attended the first Earth Day in 1970. I supported cap and trade. I want a carbon tax.… As an environmentalist, I am ashamed that environmental regulation is preventing low-income housing from being built, is significantly increasing the cost of building in California, is allowing groups to blackmail developers into a variety of concessions and is wasting government resources to negotiate an out-of-control process."[323]

As an environmentalist, I am ashamed that environmental regulation is preventing low-income housing from being built, is significantly increasing the cost of building in California, is allowing groups to blackmail developers into a variety of concessions and is wasting government resources to negotiate an out-of-control process.

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

- The ***Orange County Register*** noted that CEQA "[r]eform is long overdue. The environment must be protected, but CEQA has been used as a hammer to unfairly punish even environment-friendly development."[324]

- The ***Fresno Bee*** weighed in with several calls for reforming CEQA, noting that it is "outdated" and specifically criticizing the Legislature for the "bad habit" of "handing out a pass on the troublesome CEQA, which most legislators agree needs reforming, to only a few politically connected people." The editorial board wrote: "Let's reform the act [CEQA] in its entirety, giving the same consideration to everyone falling under CEQA, and not just those who have special access to important legislative leaders, or their pet projects."[325]

- ***The Bakersfield Californian*** observed: "CEQA is a critical and necessary piece of legislation that protects California's varied and fragile environment and ecosystem from abuse, overdevelopment and environmental harm. But when NIMBYs (not in my backyard) use it to stall projects that do not negatively impact the land, CEQA has been abused."[326]

- The ***Santa Cruz Sentinel*** observed: "CEQA… has too often been used by a variety of interests acting out of self-interest more than first wanting to further environmental protections. CEQA lawsuits have contributed to California's reputation as a state unfriendly to business and overly regulated.... The new Democratic supermajority in the Legislature should take up the governor's call to reform the California Environmental Quality Act." [327]

- The ***Petaluma Argus Courier*** noted: "[B]ecause CEQA has not been updated or revised since it went into effect more than four decades ago, the law enables determined development opponents to misuse it to delay or stop projects that would not cause any serious environmental harm."[328]

In an op-ed on January 28, 2013, the *North Bay Business Journal* wrote:

> "Most people would agree that if a school, hospital or road project has been subjected to extensive environmental review and met all federal, state and local environmental laws, including the Clean Water Act, the Endangered Species Act and the Clean Air Act, the project should go forward without being sued for purported environmental reasons. Unfortunately, today, these projects are being delayed and face increased costs – many times to taxpayers – or killed altogether because of abusive litigation that has nothing to do with the environment.
>
> "[L]ike most other tools that are 40 years old, today's CEQA needs to be modernized to ensure that this policy is working in tandem with the myriad of other environmental laws and regulations that have been added since its inception."[329]

## B. Elected Leadership Support for CEQA Reform

Existing and former elected leaders have agreed on the need for CEQA reform.

- Early in his first term, ***Governor Jerry Brown*** used his State of the State Address to call for CEQA reform:

> "We … need to rethink and streamline our regulatory procedures, particularly the California Environmental Quality Act. Our approach needs to be based on more consistent standards that provide greater certainty and cut needless delays."[330]

The Governor has also called CEQA reform "the Lord's work"[331] and made clear that the Legislature's periodic claims that it has "reformed" CEQA are "illusory": "I've always said about CEQA, it's like a vampire. Unless you strike to put a silver stake through it, there's always a law somewhere that's brought into the process, and the exemptions are more illusory."[332]

> Governor Brown – who has called CEQA reform "the Lord's work" – has also expressed exasperation about it. "I've always said about CEQA, it's like a vampire. Unless you strike to put a silver stake through it, there's always a law somewhere that's brought into the process, and the exemptions are more illusory."

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

- In two op-eds, former ***California Governors Gray Davis, Pete Wilson and George Deukmejian*** joined in making a bipartisan plea for CEQA reform:

  > "While CEQA's original intent must remain intact, now is the time to end reckless abuse of this important law; abuses that are threatening California's economic vitality, costing jobs, and are wasting valuable taxpayer dollars."[333]

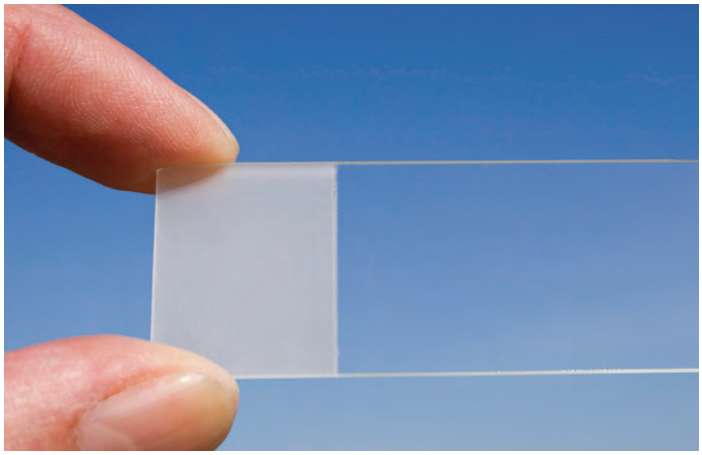
  > "CEQA has also become the favorite tool of those who seek to stop economic growth and progress for reasons that have little to do with the environment. Today, CEQA is too often abused by those seeking to gain a competitive edge, to leverage concessions from a project or by neighbors who simply don't want any new growth in their community – no matter how worthy or environmentally beneficial a project may be."[334]

- Local elected leaders have also decried CEQA abuse. To cite to just one of many examples, former ***Ventura City Manager Rick Cole*** notes that "while there is absolutely no question that the adoption and enforcement of CEQA has produced dramatic improvements in environmental quality," there is also "absolutely no question that it has been shamelessly misused and distorted to stop, delay or make hellishly expensive the infill development that is California's only alternative to suburban sprawl" – and that CEQA is "frequently hijacked to protect the narrow economic interests or personal preferences of well-heeled interest groups."[335]

## C. Reforms to Preserve CEQA - Not CEQA Litigation Abuse

Three moderate reforms would restore CEQA to its critical role of assuring transparency and environmental accountability in public agency actions:

### 1. Require Transparency in CEQA Litigation to Prevent Non-Environmental Litigation Abuse



Under current court rules, parties bringing CEQA lawsuits (and on occasion lawyers representing no known party at all) are entitled to conceal their identity and interests, make up a non-existent environmental-sounding group name, and baldly assert that they are suing "to protect the environment." Court rules already require disclosure for parties seeking to file "friend of court" advisory briefs

Transparency to reveal the non-environmental interests of CEQA litigants is a powerful weapon against abuse, and it's a fair and long-overdue CEQA litigation reform.

in CEQA lawsuits,[336] and require disclosure for any party seeking to recover attorneys' fees if they win a CEQA lawsuit.[337] Transparency should extend to all phases of CEQA litigation. However, some CEQA petitioner attorneys have long been criticized in the media for "greenmail" – leveraged financial settlements with little or no environmental benefit included in the settlement agreements – when the petitioner attorney declines to identify a client, when the "client" is located miles away from the challenged project, or when the "client" has no knowledge of any other members of the newly-formed "Committee [Against Change]."[338]

Neither California nor the "environment" benefit from anonymous CEQA litigation abuse, nor are CEQA's non-environmental plaintiffs allowed to sue to enforce federal environmental laws or the CEQA-like laws in effect in many other states. Transparency to reveal the non-environmental interests of CEQA litigants is a powerful weapon against abuse, and it's a fair and long-overdue CEQA litigation reform.

The CEQA Research Council, an informal group of CEQA practitioners from the public and private sectors with an average of more than 30 years of experience with CEQA, requested that the Judicial Council modify court rules to require the same kind of transparency and disclosure at the beginning of CEQA lawsuits (the filing of petitions and answers) that is already required of those seeking to recover attorneys' fees at the end of CEQA lawsuits.[339] After deliberating,

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

> Reform would not in any manner curtail lawsuits filed by environmental advocacy groups, or by individuals who are actually at risk from a project's adverse environmental impacts.

the Judicial Council suggested that this was a rule change more appropriately decided by the Legislature.[340] However, in another vivid illustration of the power of the entrenched special interests who use (and abuse) CEQA lawsuits, legislative proposals modeled on federal environmental statutes requiring petitioners to disclose their identity and confirm that they are seeking to enforce CEQA for environmental rather than non-environmental purposes have not seen the light of day, and have been withdrawn or sidelined by policy committee leaders. As the influential "Think Long Committee for California" of the Berggruen Institute has noted:

> "Petitioners should be able to bring a CEQA lawsuit only if they have, and can demonstrate in court, a legitimate and concrete environmental concern about a project, as well as the absence of a competitive commercial or economic interest on their part in the project."[341]

It is also important to recognize that this reform would not in any manner curtail lawsuits filed by environmental advocacy groups or by individuals who are actually at risk from a project's adverse environmental impacts. Controversial projects with alleged significant adverse "environmental" impacts – with the potential to cause adverse public health impacts or harm to the natural ecology (e.g., the types of concerns raised by mines and landfills, and large-scale power, water and infrastructure projects) are far more likely to be sued by regional and national environmental advocacy groups and named individuals. The rights of those parties to seek judicial review of agency CEQA compliance practices would remain unchanged.

In contrast, anonymous parties who seek to block improvements to underutilized neighborhood parks, schools, apartment projects and libraries – and business competitors and NIMBYs seeking to protect their economic interests, and lawyers with sham or non-existent clients seeking "greenmail" financial settlements – would lose the right to continue to abuse CEQA litigation for non-environmental purposes.

## 2. Eliminate Duplicative CEQA Lawsuits: Enforce CEQA Once, Not 20+ Times

CEQA applies to every "discretionary" decision made by a public agency, but many of our laws, regulations and ordinances now require multiple agencies to make separate decisions on the same project, and also require the same agency to make multiple decisions about implementation of the same project over time.

- **Playa Vista** – a single urban redevelopment project in Los Angeles that is in the final phases of converting a polluted aircraft manufacturing facility into a coastal park, medium-density housing, and a "Silicon Beach" mix of employment uses – has been sued under CEQA over 20 times over more than 20 years – including lawsuits filed during the 2010-2012 study period for this report.[342]

- **Newhall Ranch**, long included in Los Angeles County and adjacent city plans as the continuation of adjacent master planned development projects in northern Los Angeles County, and also included in the region's approved (and not litigated) plan to achieve the regional greenhouse gas reduction goals established by SB 375, has been sued almost 20 times in less than 20 years, including two lawsuits during the study period (one of which is now pending at the California Supreme Court).[343]

> Duplicative CEQA lawsuits create a strong deterrent against comprehensive community planning such as General and Community Plans, and can result in a "project-by-project" review and approval pattern that is driven solely by opportunistic private sector development applications.

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

- Duplicative CEQA lawsuits also create a strong deterrent against comprehensive community planning such as General and Community Plans that assure orderly change with adequate investment and public services, and instead are more likely to result in a "project-by-project" review and approval pattern that is driven solely by development applications. The ongoing, 40-year saga of Hollywood's efforts to adopt and implement a higher-density, transit-oriented development pattern is one of several reasons that the City of Los Angeles has not attempted a comprehensive General Plan update for many decades. Communities that do decide to bite the bullet (and comply with state law mandates) by updating local land use plans find themselves targets of CEQA lawsuits – with the plan and the lawsuit both funded by taxpayers. Forty-nine CEQA lawsuits were filed against city and county land use plans during the study period.[344]

Duplicative CEQA lawsuits delay projects, but they also delay the jobs projects create, increase overall project costs, and contribute to California's extraordinarily high housing costs. Duplicative CEQA lawsuits also impede achievement of important environmental priorities that require long-term commitments and a stable implementation framework, such as reducing greenhouse gas emissions and qualifying for federal transit funding by increasing ridership with higher-density housing and employment uses along designated transit corridors. Passionate people can oppose higher-density and transit, but projects that comply with approved land use plans for which a lawful CEQA process was already completed should not be subject to repeated CEQA litigation by staunch plan opponents.

Supervisor Scott Wiener from San Francisco successfully navigated the city's infamously complex politics to establish a clear deadline for filing CEQA lawsuit challenges once, not multiple times, for the same project.[345] That even San Francisco is ahead of the Legislature in reducing CEQA litigation abuse by curtailing duplicative lawsuits is further evidence of the power of special interests in Sacramento.

## 3. Insufficiently Detailed Technical Studies Should Be Remedied with Corrected Studies — and More Mitigation and Public Review, If Warranted - Not Rescinded Project Approvals

Lawyers are trained in critical thinking, and there are few lawyers – and fewer judges – who can avoid concluding that a CEQA study could not have been improved in some manner for some topic from an armchair quarterback seat 2-6 years after the study was completed. CEQA currently requires the study of nearly 100 separate topics, each of which also has six separate subparts. In any academic setting, answering 541 questions correctly on a 600-question test would result in an "A" – and answering more than half right would still earn a passing grade. While the courts and Legislature have recognized that CEQA does not demand perfection, in CEQA litigation practice almost 50% of lawsuits result in a finding that an agency missed the mark on only one or two technical study topics – and then usually for just one or two sub-parts of that topic. The most common judicial remedy in CEQA lawsuits, however, is not to fix the part of the study that fell short – e.g., by augmenting a traffic study with more recent traffic counts and, if warranted, more traffic mitigation – but to vacate the agency's approval of the entire project pending unspecified further CEQA compliance steps.

> The appropriate remedy for the vast majority of CEQA lawsuits is to fix the technical study gap, require more public disclosure and comment, require more mitigation if appropriate under the corrected study, and hold decision-makers accountable for their final actions.

Notwithstanding the precedent recently set by the California Supreme Court in the *Smart Rail* decision discussed above, trial and appellate court judges persist in vacating entire project approvals even for apparently trivial errors such as the need to update a traffic count for a single intersection for a San Francisco infill project.[346] CEQA lawsuits should not derail projects getting 90% of 600 questions correct.

The Legislature should extend to all projects – not just donor- and voter-rich projects like the Sacramento Kings arena – CEQA litigation remedy reform that precludes vacating a project approval unless proceeding with the project would cause the type of "irreparable harm" that is normally required for injunctive judicial relief (e.g., project-related pollution could cause a substantial public health risk, or planned construction could damage an irreplaceable tribal resource or cause significant harm to the natural ecology). The appropriate remedy for the vast majority of CEQA lawsuits is to fix the technical study gap, require more public disclosure and comment, require more mitigation if appropriate under the corrected study, and hold decision-makers accountable for their final actions.

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

Since most CEQA lawsuits either seek to permanently derail a project (the NIMBY objective), or gain maximum leverage against the project sponsor for non-environmental purposes (the objective of greenmail lawyers, labor unions and business competitors using CEQA lawsuit tactics), the current judicial remedy of vacating project approvals after six or more years of public and judicial review is a nuclear threat that stops environmentally beneficial and widely-supported projects (and stops some proposed projects from completing or even beginning the CEQA agency approval process).

Aligning CEQA litigation injunctive remedies with ordinary standards for injunctive relief – as was done for the Kings Arena project by special legislation – preserves CEQA's disclosure framework, still demands careful environmental evaluation and mitigation, and guarantees a second round of public and political review of required fixes to any flawed studies. However, this reform will weed out abusive CEQA litigants by reducing their leverage from stopping or delaying an environmentally benign or beneficial project to requiring corrected studies and additional mitigation.

This reform will also substantially curtail CEQA litigation aimed at stopping infill projects (targeted by the vast majority of CEQA lawsuits), rather than simply assuring that the challenged agency complies with CEQA. A traffic study that misses the mark on measuring impacts to a single intersection may justifiably require correction (and additional mitigation, if required by the corrected study). However, vacating an agency approval for a partially or even fully-built (and occupied!) infill project because of an alleged technical deficiency in a traffic, parking, aesthetics, public service, historic resource, and the myriad other studies now required by CEQA, can delay for years or even derail plans and projects designed to achieve important environmental, equity, economic and other public policy objectives. Agencies that missed the mark on a study should be required to fix the study (and do more mitigation if the study shows increased significant impacts), but the approved project should proceed unless doing so causes a true risk to public health, irreplaceable tribal resources or the natural ecology.

This modified judicial remedy reform would also recognize the important role that other agencies (and environmental laws) play in requiring projects to meet the hundreds of other environmental and public safety standards that are now required by laws that did not exist when CEQA was adopted in 1970. California's regulatory standards are among the most stringent standards in the world (e.g., seismic safety, air quality, hazardous materials, stormwater management, energy and water conservation).

Vacating project approvals after six or more years of public and judicial review is a nuclear threat that stops environmentally beneficial and widely-supported projects.

Finally, this modified judicial remedy reform would also curtail CEQA litigation abuse for design and lifestyle disagreements between elected majorities of the Legislature and local agencies, and individuals seeking to prevent change in their communities. While these disagreements may be passionate, they are also fundamentally political – not "environmental." As Governor Brown eloquently urged in his *Pocket Protector* amicus mentioned above, allowing CEQA litigation against urban design choices:

> "[I]llustrates the profoundly negative impacts that the escalating misuse of CEQA is having on smart growth and infill housing" and "strikes at the heart of majoritarian democracy and long standing precedents requiring deference to city officials when they are interpreting their own land use rules."
>
> "The [appellate court] found aesthetically degrading the "excessive massing of housing with insufficient front, rear and side yard setbacks [citation omitted]. Just as cogently, other people may well conclude that the close arrangement . . . fostered a cozy, neighborly intimacy. The fact that narrow streets are unfriendly to speeding cars and that neighbors are thrust into close contact may well be viewed as a superior quality of living rather than a negative impact."
>
> "CEQA discourse has become increasingly abstract, almost medieval in its scholasticism. Nevertheless, if you apply common sense and the practical experience of processing land use applications, you will conclude that what is at stake in this case is not justiciable, environmental impacts but competing visions of how to shape urban living."

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

The California Supreme Court declined to review or reverse the *Pocket Protectors* appellate court decision, which resulted in a two-year delay of partially constructed townhomes pending completion of an EIR that made no changes to the approved project, but did result in the visual blight of tacked-on blue roof tarps to wood-framed, two-story attached townhomes the neighbors had sought to stop entirely. This judicial outcome served no environmental purpose, just as no environmental purpose is served by NIMBY design spats (or lawyers hunting greenmail payouts) over setbacks, parking ratios and private views.

This proposed reform would return CEQA to its original purpose, which is assuring adequate study, disclosure and feasible avoidance or mitigation of significant adverse project impacts after many years of judicial uncertainty.

## D. How Previous Legislative CEQA "Reforms" Fell Short: A Short History of Unicorns, Whack-A-Mole, Buddy Bills, Sleight-of-Hand, and Political Panic

As numerous media reports and editorials demonstrate, CEQA litigation abuse for non-environmental (and even anti-environmental) purposes is not "new news." However, this comprehensive study of CEQA lawsuit petitions is the first proof that the majority of CEQA lawsuits are the result of NIMBY-based opposition to localized infill projects that change the status quo to help advance California's climate change policies and address urgent need for housing, jobs, infrastructure and services in California communities. CEQA's litigation abuse status quo defenders have been politically agile, however, in periodically enacting illusory CEQA "reforms" that have no effect – and even expand – opportunities for litigation abuse of CEQA for non-environmental reasons.

- **CEQA's Herd of Unicorns.** Unicorns are well known to children and adults as an attractive creature that is much discussed, but never seen. CEQA "reforms" cynically intended to mute criticism of CEQA litigation abuse similarly target an attractive but mythical "project" that simply does not exist. By far the most noteworthy examples of CEQA reform "unicorns" are statutory provisions branded as "exempting" or "streamlining" infill development projects.[347] The problem is that these statutory "reforms" include qualifying criteria that have been extremely effective in assuring that no project is ever eligible for CEQA streamlining, and even if such projects do miraculously appear, the "reforms" do nothing to curb CEQA litigation abuse by NIMBYs or other stakeholders. Some examples:

  - Senate Bill 375,[348] the landmark statute mandating that California revise its regional transportation and land use plans to meet GHG reduction benchmarks for 2020 and 2035, included what its sponsors trumpeted as a "CEQA exemption" for particular types of infill housing that meet dozens of standards and are located in designated neighborhoods of designated communities. In the seven years since SB 375 has been in effect, and as confidently predicted by land use experts when SB 375 was being debated, no project has qualified for this unicorn exemption. SB 375 also included a lesser level of "CEQA streamlining" – a partial pass on the need to consider impacts like "growth inducement" in EIRs – on a CEQA topic that has not been seriously contested in lawsuits in several decades, while failing to provide any "streamlining" provisions on the litany of CEQA deficiencies alleged in most CEQA lawsuits aimed at infill projects, like noise, congestion, air quality, public services, aesthetics, traffic and parking.

> CEQA's litigation abuse status quo defenders have been politically agile in periodically enacting illusory CEQA "reforms" that have no effect – and even expand – abuse of CEQA for non-environmental reasons.

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

» An earlier "infill" exemption included in CEQA, Senate Bill 1925,[349] fared even worse: in the 13 years since this law was enacted, we were unable to locate a single project statewide that qualified for this infill exemption.

» Senate Bill 226 was yet another attempt to "streamline" CEQA for designated types of infill projects.[350] Again, the criteria for eligible projects are drawn narrowly (e.g., projects that have a significant amount of surface level parking are ineligible), and the level of CEQA "streamlining" again does not target the infill lawsuit litany. Although the statute is silent on this point, the state Office of Planning & Research (OPR) issued regulatory guidance ("CEQA Guidelines") that asserted that the "streamlined" form of CEQA studies that could be used under SB 226 for eligible projects would be subject to a more favorable standard of judicial review: courts should uphold an agency's approval if it is supported by "substantial evidence" like an EIR, rather than vacate the agency's approval if opponents have made a "fair argument" that even one impact "may" be significant under the current CEQA streamlining allowed for any type of project qualifying for a "Negative Declaration."[351] Even if this untested, partial SB 226 streamlining worked perfectly, the litigation failure rate risk for infill projects remains over 40% – far too high to qualify for standard construction loans or other forms of financing critical to infill projects.

Apart from infill-related unicorn exemptions, the Legislature sometimes adopts non-reforms that can be described as – but do not actually work as – efforts to curb CEQA litigation abuse.

» For example, in 2010 the Legislature enacted a statute to prohibit "frivolous" CEQA lawsuits. The impossible statutory criteria for what actually constituted a "frivolous" lawsuit (to be "frivolous," a lawsuit must be "totally and completely without merit") made this another "unicorn" reform – discussed but never seen in practice, notwithstanding the prevalence of well-known "bounty hunter" CEQA[352] lawsuits (lawyers who decline to identify, and may not even have, a client) and projects targeted by over 20 lawsuits filed by the same or related parties.

» A more recent example involves Assembly Bill 900,[353] which created a "fast track" litigation pathway for qualifying types of "leadership projects" which required a capital investment of more than $100 million, and commitments to implement a list of various special interest priorities. Modeled after a "Buddy Bill" to expedite construction of a football stadium in Los Angeles (see below), AB 900's litigation fast track was two-fold. The first level of the judiciary (the trial courts) were skipped entirely, and the second level of the judiciary (the appellate courts) were required by the statute to resolve the lawsuit in 270 days (nine months). Notwithstanding significant legal arguments that the California Constitution forbade "skipping" the trial court, and that the "separation of powers" in the California Constitution precluded the Legislature from imposing a hard deadline on appellate courts, the Legislature enacted AB 900 with the promise of fast-tracking "big" projects during the Great Recession. Not surprisingly, constitutional challenges to AB 900 were successful – and the portion of AB 900 that allowed "skipping" the trial court were held unlawful. The court did not address the nine-month "deadline" that remains in AB 900 – but as bills to expand the list of qualifying projects are considered, the Legislature has been repeatedly reminded by various stakeholders (including representatives of the judiciary) of the complete impracticability and unenforceability of this nine-month deadline for getting through a trial process that generally takes about two years, an appellate court process that generally takes another two years, and a California Supreme Court process that can take 1-3 years. Pretending that a nine-month unenforceable CEQA litigation fast track will bypass the 2-6-plus-year judicial process is another "unicorn" reform – much discussed, but never seen.

Sometimes unicorns never even make it into enacted legislation. Trusted lobbyists can simply tell the California Legislature about what CEQA does – and does not – do, and these assertions then gain a remarkable level of traction, even when there is no basis in law or fact for these statements. In 2015, the award for the most widespread CEQA political falsehood is the entirely mythical assertion that CEQA exempts affordable housing projects. The entirely unicorn affrodable housing "exemptions" have no real world effect, of course, as confirmed by the many examples of affordable housing CEQA lawsuit challenges noted in this study – as well as the LAO's courageous report confirming the problem caused by CEQA to housing affordability.[354]

- **Whack-A-Mole.** Whack-A-Mole is a classic arcade game where "moles" pop up randomly on a nine-hole grid, and players get points for whacking as many moles as possible with an oversized foam hammer. As stories of particularly egregious examples of CEQA litigation abuse reach critical mass outside – and even within – Sacramento, another successful political strategy deployed by CEQA's litigation abuse status quo defenders is to treat each new outrageous example of CEQA abuse as a "mole" to be whacked by an ineffective toy statutory exemption hammer.

> After losing its first Bike Plan CEQA lawsuit, San Francisco could not even paint a bike lane safety stripe for the years it took city staff to prepare a full EIR.

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

» CEQA lawsuits blocking city plans to make increasingly-congested urban streets safer for bikes, pedestrians and cars reached an outrageous low point when the bike plans approved by San Francisco and other cities were sued by merchants and NIMBYs opposed to the loss of parking spaces to bike lanes. After losing its first Bike Plan CEQA lawsuit, San Francisco could not even paint a bike lane safety stripe for the several years it took city staff to prepare a full EIR for its bike plan.[355] The Legislature responded to this embarrassment with an incomplete (and thus largely ineffective) CEQA exemption for bike plans.[356]

» As public outcry (including criticisms from environmental allies) grew over the use of multiple CEQA lawsuits by unions competing for territory against time-constrained, federally subsidized solar energy projects at the height of the recession, the Legislature enacted a CEQA "reform" bill to encourage solar panel installations on top of existing rooftops.[357] Rooftop solar installations are either statutorily or categorically exempt from CEQA under existing law (depending on the type of permit required by a local agency), and there were no CEQA lawsuits targeting rooftop solar during the study period (which overlapped precisely with the period when warring territorial claims resulted in CEQA lawsuits and CEQA lawsuit threats against utility-scale solar projects). Nevertheless, CEQA's status quo defenders triumphantly pronounced this inconsequential new statute as "CEQA reform."

• **Buddy Bills: CEQA For The Political Elite.** Another time-honored legislative CEQA tradition is to give a CEQA pass to the Legislature's political favorites. While more current examples include three professional sport team facilities (two football stadiums in Los Angeles, both of which remain unbuilt,[358] and one Basketball Arena in Sacramento now under construction),[359] CEQA's 45-year history is tarnished by several of these "Buddy Bills" – such as CEQA exemptions for new state prisons backed by the powerful prison guard union,[360] CEQA exemptions allowing for other professional sports team projects (e.g., early property condemnation by the San Francisco Giants as they prepared to build their new downtown ballpark),[361] and a CEQA exemption covering all activities required for Los Angeles to host the Olympic Games in 1984.[362]

Another time-honored legislative CEQA tradition is to give a CEQA pass to the Legislature's political favorites.

- **Sleight-of-Hand and Misdirection: "Reforms" that Actually Expand CEQA Litigation Abuse**. The most audacious of CEQA's legislative "reforms" are those that actually invite more abusive CEQA lawsuits.

  - So far in 2015, the most audacious bill – hands-down – was authored by Senator Hannah-Beth Jackson. Senator Jackson is from Senate District 19, which is dominated by the wealthy no-growth coastal community of Santa Barbara. Her SB 122[363] originally expanded CEQA by adding a new public comment process to the already-lengthy EIR process, but has since been scaled back to "just" add new litigation compliance pitfalls for ordinary CEQA projects. Existing law allows preparation of the administrative record – the contents of which are the subject of the CEQA lawsuit – to be prepared by the project opponents and certified as complete by the agency, or prepared by the agency and paid for by the project opponents.[364] Since the ever-more-elaborate CEQA studies prepared to try to increase the odds of winning a CEQA lawsuit can run into the thousands – and sometimes tens of thousands – of pages, parties initiating CEQA lawsuits have balked at the cost of either preparing or paying for the preparation of the administrative record. SB 122 allows what is already a common practice – a private party applicant can choose to pay for the cost of preparing the administrative record to help expedite completion of legal briefs and oral argument. However, this legislation also creates two brand new litigation pitfalls by requiring lead agencies to electronically post incomplete and even erroneous draft CEQA documentation, and by imposing new compliance deadlines for electronic posting of comments, applicant-prepared and agency-prepared documents in only 5-7 days, which is months in advance of (and in addition to) current requirements for completing the Final EIR and Negative Declaration process.

  - Senate Bill 743[365] was a Buddy Bill to protect the Sacramento Kings Arena project from the risk of being blocked or delayed by a CEQA lawsuit. Pushed through in the closing days of the Legislative session of 2013, last-minute amendments to SB 743 included two important infill CEQA streamlining provisions. First, infill projects in qualifying locations do not need to consider "aesthetics" or "parking" as CEQA impacts. Second, SB 743 invited OPR to propose an alternative to the "Level of Service" congestion-based metric used to evaluate the significance of project traffic delays, given that traffic congestion, along with traffic-related air quality and public safety impacts, are the most frequently challenged CEQA infill project topic (as well as being the source of the greatest popular frustration with higher-density development proposals). SB 743 could have simply eliminated LOS from CEQA for infill projects, as it did for the parking and aesthetics CEQA impact categories, and substantially curtailed litigation targets for infill projects. It did the opposite, however, by specifically maintaining in CEQA air quality and safety impacts that are a direct function of LOS congestion levels, and by inviting OPR to develop a replacement metric that would then create an untested new CEQA litigation pitfall. In response to this legislation, OPR proposed to expand CEQA by adding yet another new "Vehicle Miles Travelled" impact – and further proposed to require that initially only infill projects comply with this new VMT mandate. OPR's prior decision to add a new regulatory impact to CEQA – for greenhouse gas emissions – has sparked more than a decade of new CEQA litigation claims, two of which remain pending in the California Supreme Court. For infill projects to run a decade-long gauntlet of lawsuits over a new CEQA "VMT" impact, while still being required to evaluate "LOS" congestion for air quality, public safety, noise, plan consistency and other purposes, is an example of a reform that expands CEQA litigation abuse opportunities against the very type of projects that California's climate goals have prioritized.[366]

> The most audacious of CEQA's legislative "reforms" are those that actually invite more abusive CEQA lawsuits.

 Copyright © 2015 Holland & Knight LLP All Rights Reserved

The Legislature's expansion of CEQA has richly rewarded the defenders of the CEQA litigation abuse status quo. The rest of California does not fare as well.

- Politician Panic. Sometimes CEQA litigation abuse is just too hard to defend, even for CEQA's legion of accomplished status quo defenders. What's most remarkable about these bills – enacted in a panic to avoid closer public scrutiny of outrageous fiscal or policy CEQA abuse – is that CEQA litigation *could* be aimed at such environmentally benign projects.

  Assembly Bill 2564 (Ma) created a CEQA exemption for the "maintenance, repair, restoration, reconditioning, relocation, replacement, removal, or demolition of an existing pipeline" that is less than one mile long and located within a public right-of way. This bill was enacted after a natural gas pipeline ruptured in San Bruno, killing several people and wounding more. The state's pipeline regulatory agency responded in part by ordering utilities to immediately inspect, and repair or replace, deficient pipelines throughout the state. A CEQA process for studying and approving this new statewide mandate would have taken many years, and could have been delayed even longer by CEQA lawsuits. Politician panic set in at the prospect of multi-year delays for the repair of deficient pipelines, and a "1-mile" CEQA exemption was enacted. It is politically impolite to ask how many pipeline segments were repaired or replaced in "1-mile" bites.[367]

  Other examples of Politician Panic exemptions include repairs "initiated within one year of damage" to highways damaged by earthquakes, landslides, and other natural disasters ("What do you mean I can't repair the road?!?");[368] agency decisions to disapprove a project ("What do you mean we have to spend millions to study a project we know we don't want to do!?!");[369] and the "establishment or modification of rates, tolls, fares or other changes needed to maintain or provide adequate" transit service ("We don't have enough money to keep the buses running, and we have to divert millions on environmental studies before raising the fares?!?").[370]

  The Politician Panic bills, like other categories of CEQA legislative exemptions, have helped conceal the absurdity of CEQA's reach – and opportunities for CEQA litigation abuse – into routine management of safety, maintenance and services.

## E. Help CEQA Work: Why Ending CEQA Litigation Abuse Helps Californians and the Environment

Defenders of the CEQA litigation status quo launched a "CEQA Works" website as part of a campaign against CEQA reform.[371] The website explains that the mission of the coalition is to defend CEQA's current structure of Transparency, Mitigation, Comprehensive Protection, Public Participation, and Community Enforcement. The three moderate CEQA litigation abuse reforms discussed above are consistent with, and advance, each of these goals:

- **Transparency is expanded.** Not only does transparency continue to apply to all aspects of the CEQA compliance process, which already requires the careful evaluation and disclosure of project environmental impacts, but under the proposed reforms transparency is extended into the CEQA litigation process to assure that this great environmental law is actually being used to protect the environment and public safety, and not simply as a "greenmail" tactic by cloaked parties seeking to advance non-environmental goals.

The Legislature's expansion of CEQA has richly rewarded the defenders of the CEQA litigation abuse status quo. The rest of California has not fared as well.

Copyright © 2015 Holland & Knight LLP All Rights Reserved 

- **Mitigation obligations under CEQA remain unchanged by the proposed reforms.**

- **Comprehensive protections of all impacts, including cumulative impacts, remain unchanged by the proposed reforms.**

- **Public participation CEQA compliance procedures are likewise unchanged by the proposed reforms.** Extending the transparency mandate to the litigation process increases public disclosure, and provides the public with meaningful information about who is using CEQA – and why – for approved projects.

- **Community enforcement in the courts is preserved for parties willing to be identified and seeking to protect the environment.** According to CEQA Works, "CEQA must continue to provide the public with the right to sue to enforce its protections, a key tool to protect communities, particularly those in disadvantaged areas." The three recommended reforms will make it much harder to sue projects for non-environmental reasons, and will make it impossible to hide the identity of those seeking to enforce this great California law. Since CEQA lawsuits disproportionately attack infill projects – the kind of projects that will help the disadvantaged by providing employment and public benefits such as transit and water infrastructure, affordable housing and parks, and public services such as schools and urban libraries – ending CEQA litigation abuse for non-environmental purposes will expedite completion of these projects and return California to an era of progress rather than process.

One need look no further than the dismal, multi-decade delays caused by CEQA litigation abuse against transit and multifamily housing projects in Los Angeles to recognize that CEQA currently best serves the defenders of the status quo – often those who are wealthier, whiter, older, and more aligned with the special interests wedded to CEQA litigation abuse for non-environmental purposes – and often to the detriment of the very "disadvantaged" that the CEQA Works coalition agrees should be protected.

The problem of CEQA litigation abuse is clear. The Governor has attempted to navigate his own course through CEQA, arguing that the state's largest transit infrastructure project – High Speed Rail – is exempt from CEQA based on federal preemption of rail operations. Ultimately, ending CEQA litigation abuse is a political question before the Legislature. Despite the strident efforts of special interest defenders of the litigation status quo – and despite the Legislature's non-reform "unicorns" and related tactics to avoid meaningful CEQA reform – the stories of CEQA litigation abuse are now too widespread, and too numerous, to continue to ignore.

CEQA litigation practice is no longer aligned with California's environmental equity or economic objectives, and CEQA reform is long past overdue. Approval of new bond measures, the extension of higher income taxes, and the expenditure of cap and trade funds, should all be deferred until CEQA is modernized to prevent litigation abuse – which will ensure that taxpayer funds are used on progress and projects, and not on process and posturing.

# CONCLUSION

CEQA litigation abuse is real, it is harming people (especially the poor, the working class, and the young), and it is obstructing rather than advancing critical environmental, equity, and economic priorities. We have a choice. We can continue to enrich the armies of consultants and lawyers who make their living from CEQA, and continue to allow projects that comply with California's stringent environmental standards, and have undergone intense public scrutiny and comprehensive environmental studies, to be derailed, delayed, or made far more costly by disgruntled NIMBYs and those using CEQA for non-environmental reasons.

Or, alternatively, we can end the CEQA "arms race" and limit CEQA litigation to its original environmental purpose, where its sister statutes such as NEPA and state versions of CEQA continue to thrive. Under this alternative, environmental advocacy groups can still sue to enforce CEQA and still seek the extraordinary judicial remedy of rescinding a project approval for a deficient CEQA analysis that could allow the project to harm public health, irreplaceable tribal resources or ecological resources. Under this alternative reality, CEQA's analytical and mitigation requirements, and CEQA's public transparency and accountability mandates, would be preserved.

CEQA litigation abuse by anonymous or secret petitioners seeking non-environmental outcomes such as competitive advantage, control of project jobs, and extortionate cash settlements - and to deal with localized neighborhood spats - will end.

CEQA litigation abuse is real, it is harming people (especially the poor, the working class, and the young), and it is obstructing rather than advancing critical environmental priorities.

Using CEQA nomenclature, under this preferred alternative, California will remain an environmental leader, and our Legislature and Governor (and the majority of California voters) can continue to lead on important environmental issues such as climate change and drought.

Today, CEQA litigation practice is no longer aligned with California's environmental objectives, and CEQA reform is long past overdue. Approval of new bond measures, the extension of higher income taxes, and the expenditure of cap and trade funds, should all be deferred until CEQA is modernized to prevent litigation abuse, to make sure taxpayer funds are used on progress and projects, not on process and posturing.

# AUTHORS

The authors of this report are attorneys in the California environmental and land use practice group of the international law firm Holland & Knight.

**Jennifer Hernandez**, co-chair of Holland & Knight's National Environmental Team, leads Holland & Knight's West Coast Land Use and Environment Practice Group. She is also a member of the firm's Directors Committee. Ms. Hernandez has written two books and more than 50 articles on environmental and land use topics, and has taught in law school and college classes at Stanford, Hastings, Boalt Hall and UC Davis. She is a graduate of Harvard University and Stanford Law School, received a California Lawyer of the Year award from the California Bar Association's *California Lawyer*, and was named a top minority lawyer by *The National Law Journal*. Ms. Hernandez has spent decades on the boards of non-profit environmental advocacy groups, was appointed by President Clinton as a trustee for the San Francisco Presidio, and has won numerous awards on environmental and land use pro bono advocacy work for minority and underserved communities – including the "Big Brain" award from the Greenlining Institute, and a Proclamation from then-Mayor Willie Brown naming October 9, 2002, as "Jennifer Hernandez Day in San Francisco" for her work as a "warrior on the brownfields."

**David Friedman** is of counsel in Holland & Knight's Government Section and practices in the firm's Los Angeles office. He focuses on land use and development, state and federal resource policy, and regulatory counseling. His experience includes the analysis and legal support of project water supply assessments, endangered species impacts, and wetlands and water permitting. Dr. Friedman received his J.D. from UCLA Law School (Order of the Coif), and his Ph.D. from the Massachusetts Institute of Technology. Dr. Friedman served as a Fulbright Fellow in Japan, a National Science Foundation Fellow, a Senior Fellow at the New America Foundation and a fellow at the Progressive Policy Institute (the think tank for the Democratic Leadership Council under President Bill Clinton).

**Stephanie DeHerrera** is a law clerk in Holland & Knight's West Coast Land Use and Environment Practice Group. She received her J.D. at Hastings College of the Law, where she was a member of the board of the Hastings Constitutional Law Quarterly. Ms. DeHerrera previously interned in the San Francisco City Attorney's land use division and was program director at the Organizing and Leadership Academy.

## Publications

Holland & Knight's West Coast Land Use and Environmental Group periodically publishes analyses of California legal and policy data, including information documenting the use, and abuse, of CEQA. Other recent reports on CEQA include the following:

## Holland & Knight

Holland & Knight's West Coast Land Use and Environment Practice Group periodically analyzes California policy data and court rulings regarding the ways in which CEQA, the California Environmental Quality Act of 1970, is both used and abused. Part of one of the largest law firms in the United States, the group's lawyers have extensive experience and knowledge in all aspects of land use and environmental law, from acquisitions and project development to environmental audits and compliance assessments.

Holland & Knight is a global law firm with more than 1,100 lawyers and other professionals in 22 U.S. offices, as well as Bogotá and Mexico City. Our lawyers provide representation in litigation, business, real estate and governmental law. Interdisciplinary practice groups and industry-based teams provide clients with access to attorneys throughout the firm, regardless of location.

| The New 49'ers, Inc., et al. v. State of California, et al. | Norcal | 4/12 | State | Regulatory | State - Regulation | Agency | N/A | Environmental Impact Report |

This Appendix lists all CEQA lawsuits provided to the authors by the California Attorney General's Office in response to a Public Record Acts Request. For some projects, multiple lawsuits were filed, and this Appendix shows the second and subsequent lawsuits in grey shading. The authors also became aware that not all CEQA lawsuits filed during the study period (2010-2013) were provided by the Attorney General's Office. Since there was no ready means of finding all "missing" lawsuits, the Appendix – and the study's statistical compilations – are limited to those cases provided by the Attorney General's Office.

# ENDNOTES

[1] CEQA requires that the California Attorney General's office be provided with a copy of each CEQA lawsuit "petition," which describes the challenged project and the alleged CEQA compliance deficiencies. Copies of all such petitions filed between January 1, 2010 and December 31, 2012 were obtained by Holland & Knight from the California Attorney General's office, pursuant to a California Public Records Act request. This study includes all 613 CEQA lawsuits (just over 200 lawsuits per year) filed throughout California during the three-year study period.

[2] *See e.g.*, Thomas Law Group Litigation Study (2013).

[3] Jennifer Hernandez et al., Holland & Knight, CEQA Judicial Outcomes: Fifteen Years of Reported California and Supreme Court Decisions (2015), *available at* http://www.hklaw.com/Publications/CEQA-Judicial-Outcomes-Fifteen-Years-of-Reported-California-Appellate-and-Supreme-Court-Decisions-05-04-2015/ (accessed May 26, 2015).

[4] Although this study includes all petitions forwarded to the authors by the office of the California Attorney General (CAG) office in response to a California Public Records Act (CRPA) request for copies of all petitions received by CAG during the study period (2010 to 2012), published media reports include (and the authors have subsequently verified) that not all petitions actually filed were provided in response to this CPRA request. For example, a lawsuit filed by union interests against a transit-oriented development project in Milpitas, and several lawsuits against the high-speed rail project such as the lawsuit filed by the City of Atherton and other Peninsula communities, were not produced pursuant to this CPRA request. These omissions may be attributed either to the fact that these petitioners failed to comply with CEQA's statutory mandate of providing copies of all CEQA petitions to the CAG, or to the inadvertent omission of these Petitions by the CAG staff responding to our CPRA request.

[5] The authors would like to extend special gratitude to the leadership and members of the CEQA Working Group, a public/private sector coalition formed to modernize CEQA to eliminate CEQA litigation abuse. This includes co-chairs Carl Guardino of the Silicon Valley Leadership Group and Gary Toebben of the Los Angeles Chamber of Commerce, and many members who offered examples of CEQA litigation abuse, including: Lucy Dunn of the Orange County Business Council; Bill Allen and David Flaks from the Los Angeles County Economic Development Corporation; Paul Granillo of the Inland Empire Economic Partnership; Jim Wunderman and Matt Regan of the Bay Area Council (and Shiloh Ballard, now of the Silicon Valley Bicycle Coalition); the California Infill Builders Federation (a public/private sector coalition working to advance infill development led by former State Senate President Pro Tem Don Perata and aided by award-winning journalist Roland De Wolk); California Forward (a bipartisan organization working to end partisan gridlock and support governance reforms to improve public outcomes for public health, environmental protection and sustainable communities led by Executive Director Jim Mayer and Board chair Lenny Mendonca); the Southern California Leadership Council (a bipartisan collaboration of leaders from the public and private sectors, including Greg McWilliams and Rich Lambrose); Carol Schatz from the Central City Association; Tracy Rafter from the LA Business Federation; CORO fellow Sean Kiernan; and many other regional leaders and staff. Thanks also to the many experts who contributed case studies and other information used in this article, including the Sacramento public policy firm Baker, Castillo & Fairbanks; southern California economist John Husing; Sacramento policy advocate Cassie Gilson; members of the CEQA Research Council (a group of CEQA attorneys and practitioners representing public and private sector clients whose members have an average of 30 years of experience with CEQA compliance and litigation practice); and scores of experienced (and patient) representatives from local, regional and state agencies, the Legislature and the Brown administration, and from labor, environmental, affordable housing, environmental justice, education, park, minority, land trust, lending, investing and media organizations. A special thanks to Claudia Cappio, formerly with the Brown Administration (2011-14), and presently with the City of Oakland. Finally, thanks to the many members of the Holland & Knight West Coast Environmental and Land Use Practice Group who contributed to this study with research on these CEQA lawsuits, including partners Betsy Lake, Tamsen Plume, Amanda Monchamp, Nicholas Targ, David Preiss, Brad Brownlow, Tara Kaushik and Chelsea Maclean; associates Paula Kirlin, Dan Golub, Spencer Potter and Joey Meldrum; and law clerks Rob Taboada and Sofia Aguilar. While the authors are grateful to these and other parties who are focused on the need to modernize CEQA to end CEQA litigation abuse, the opinions and recommendations in this study are the authors' and should not be attributed to any other person or organization. This report cites to media reports and other specified sources for factual information about examples of CEQA lawsuits and the litigation practices by individuals and groups; they were not independently investigated by the authors.

[12] *See* discussion of all "Energy" projects in Section 3.A.6, *infra; see* also Appendix A for reference to all "Energy" projects challenged during the study period.

[13] "Projects" that included no physical construction activities (e.g., approval of agency regulations) and construction projects that had no locational optionality as infill community uses (e.g., commercial agricultural and mines) occurred in multiple jurisdictions (e.g., water supply projects where source of water, location of water improvements, and/or use of water, were distributed across multiple locations and jurisdictions). In addition, public agency management of agency-owned properties were not classified as either "greenfield" or "infill" projects.

[23] NRDC/CLCV,"Communities Tackle Global Warming" (2009), *available at* http://www.nrdc.org/globalwarming/sb375/files/sb375.pdf (accessed May 26, 2015). "Because CEQA is focused on projects and on mitigating the impacts of those projects, it is not suited to the type of large-scale, comprehensive analysis required to effectively reduce VMT. In fact, in the hands of opponents to a high-density project, CEQA could threaten the implementation of an effective greenhouse gas reduction strategy."

[24] While CEQA demands that tens of millions of dollars of project traffic studies be completed annually, and traffic-related impacts are by far the most litigated CEQA impact issues (especially for infill projects), the fact is that our best effort to carefully predict traffic volumes and patterns from new development is relatively poor. In "Phantom Trips, Overestimating the Traffic Impacts of New Development," academic Adam Millard-Ball reviews the accuracy of the leading national methodology for estimating traffic, the Institute for Traffic Engineers (ITE)'s *Trip Generation*. The author concludes that *Trip Generation* methodology "overestimates trips by 55% – likely because its data represent a biased sample of development in the United States. Moreover, the data in *Trip Generation* are ill-suited to many analyses of traffic impacts, development impact fees, and greenhouse gas emissions, because they do not account for substitution effects. Most trips "generated" by new developments are not new, but involve households reshuffling trips from other destinations. These twin problems – theoretical and practical – are likely to lead to the construction of excessive roadway infrastructure and the overestimation of the congestion, fiscal and environmental impacts of new development." David Levinson, Transportationist, "Phantom Trips," (December 17, 2014), *available at* http://transportationist.org/2014/12/17/8101 (accessed May 26, 2015).

[59] Unions filing CEQA lawsuits typically seek a "Project Labor Agreement" (PLA) that specifies which and how many jobs are required to go to the union and to its affiliated entities. PLAs also typically include wage and benefit terms, and may include worker training and qualification terms such as requirements for union-based apprentices. Since public and private construction projects receiving public funding subsidies such as the solar projects are generally required to pay prevailing wages, PLA negotiations relate more to union control and/or participation in the project workforce than payment of prevailing wages.

[60] For example, the manufacturer of Metro railcars leased land from the Los Angeles World Airport (LAWA), and as a lessee was required to comply with the County's Living Wage Ordinance, Affirmative Action Program, Contractor Responsibility Program, and Child Support Obligations ordinance. *See* resolution approving lease, *available at* http://clkrep.lacity.org/onlinedocs/2014/14-0707_misc_5-28-14.pdf (accessed May 26, 2015).

[62] *See* Appendix A for reference to all "Walmart/Big Box Store" projects challenged during the study period.

[63] One pattern that emerged in these lawsuits involved submitting to the "lead" CEQA agency a detailed project opposition letter sent by an attorney representing a union, to make clear for political and negotiation purposes a union's CEQA lawsuit threat. The actual CEQA lawsuit, once filed, used arguments raised in the union attorney letter but named a new "group" rather than the union as the party filing the CEQA lawsuit.

[93] CEQA's unique (and some would say notorious) "fair argument" standard is well established by statute and case law. For projects that would generally qualify for a "Categorical Exemption" because the project meets regulatory criteria for a type of project that typically has no significant adverse impacts, there is a split in appellate court cases as to when and how the "fair argument" standard applies. A potentially decisive case on this topic – involving construction of a single-family home on an existing lot, which received unanimous approval from the Berkeley Planning Commission and City Council as well as support from the project's immediate neighbors, is one of 10 cases pending (as of the time of issuance of this study) before the California Supreme Court, which is currently considering whether to reconsider the split decision issued earlier in 2015. The challenged home has been delayed by more than six years of CEQA litigation. *Berkeley Hillside Pres. v. City of Berkeley* (2015) 60 Cal. 4th 1086; California Supreme Court Case Information Webpage, *available at* http://appellatecases.courtinfo.ca.gov/search/case/mainCaseScreen.cfm?dist=0&doc_id=2009144&doc_no=S201116 (accessed May 26, 2015). *See also, Petition for Rehearing (pending), at* http://www.berkeleyside.com/wp-content/uploads/2015/03/S201116_PFR_BerkeleyHillside-3-17-15.pdf (accessed May 26, 2015).

[127] *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority, et al.* (2013) 57 Cal.4th 439.

[128] Jennifer Hernandez et al., Holland & Knight, CEQA Judicial Outcomes: Fifteen Years of Reported California and Supreme Court Decisions (2015), *available at* http://www.hklaw.com/Publications/CEQA-Judicial-Outcomes-Fifteen-Years-of-Reported-California-Appellate-and-Supreme-Court-Decisions-05-04-2015/ (accessed May 27, 2015).

[129] As discussed in greater detail in Part 3.b, Remedy Reform, other appellate courts have declined to extend the *Neighbors for Smart Rail* common sense remedy approach. For example, the 8 Washington Project resulted in a rare CEQA loss for San Francisco, when the trial court judge vacated project approvals concluding that updated traffic counts should have been done – precisely the type of minor technical detail that the Supreme Court was unpersuaded was required in *Neighbors for Smart Rail. Neighbors to Preserve the Waterfront, et al. v. City and County of San Francisco, et al.* (2012), *see* Appendix A; *see also* Case No. CPF 12 512356, *available at* http://webaccess.sftc.org/Scripts/Magic94/mgrqispi94.dll?APPNAME=WEB&PRGNAME=ValidateCaseNumberSHA1&ARGUMENTS=-ACPF12512356 (accessed May 27, 2015). Similarly, a judge concluded that a supplemental historic building study should have been done for a demolished building on a site now occupied by a completed residential project with existing tenants – and ordered that the project approvals be vacated (making ongoing occupancy by tenants illegal) pending completion of the new study. *La Mirada Avenue Neighborhood Association of Hollywood v. [149] During the study period, bike path renovations were challenged in Seal Beach. *Bay City Partners, LLC v. City of Seal Beach, et al.* (2011), *see* Appendix A. San Francisco's Bicycle Plan had an even more tumultuous path to judicial approval. *Coalition for Adequate Review, et al. v. City and County of San Francisco* (2014) 229 Cal.App.4th 1043. The city initiated the plan to add 34 miles of new bike lanes in order to address the alarming increase in the number of collisions between bicycles and cars in certain locations across the City. After a four-year-long injunction imposed by the trial court costing the city invaluable grant funding, the appellate court validated the EIR and removed the injunction. *San Francisco Examiner*, "S.F. bike plan injunction to cost city $35K" (July 21, 2006), *available at* http://www.sfexaminer.com/sanfrancisco/sf-bike-plan-injunction-to-cost-city-35k/Content?oid=2159056 (accessed May 27, 2015).

# When Super-Statutes Collide

## CEQA, the Housing Accountability Act, and Tectonic Change in Land Use Law

Christopher S. Elmendorf, Martin Luther King, Jr. Professor of Law, UC Davis
Timothy G. Duncheon, Law Clerk, U.S. District Court, the Northern District of California*

July 25, 2022

Abstract. This paper explores the slow-motion collision between two statutes at the center of California's housing crisis: the California Environmental Quality Act and the state's Housing Accountability Act. Each statute has a bona-fide claim to being a "super-statute," one which exerts a "broad effect on the law." Yet the two statutes came of age in different eras—the California Environmental Quality Act in the 1970s and the Housing Accountability Act in the 2010s—and have fundamentally different institutional and normative premises. After tracing the evolution of the statutes, we explore two problems at their intersection: (1) cities' use of endless environmental review to launder the denial of housing projects that the Housing Accountability Act means to protect; and (2) analytical confusion about the proper scope of environmental review for projects protected by the Housing Accountability Act. We propose solutions that harmonize the two laws, remaining faithful to the text and purpose of the California Environmental Quality Act while fulfilling the Housing Accountability Act's instruction that it be interpreted "to afford the fullest possible weight to the interest of . . . housing." But our solutions are not inevitable. In another possible future, the California Environmental Quality Act runs roughshod over the Housing Accountability Act, crippling California's efforts to provide more housing and, ironically, to respond to the threat of climate change. We hope this paper's intervention makes that future a bit less likely.

## Introduction

In October of 2021, San Francisco's Board of Supervisors voted down a proposal to build nearly 500 new homes—many affordable—on an empty downtown parking lot at 469 Stevenson Street.[1] A politically influential activist had been lobbying the developer to "donate" a portion of the site to the city, which the city could then bank for future development as smaller, 100% affordable project.[2] The developer refused to play ball. After much hue and cry about speculative gentrification impacts, the Supervisors put the kibosh on the project, notwithstanding the planning commission's determination that the project complied with all applicable requirements.[3]

Afterwards, one supervisor said he'd "feel very good about this vote" if the site "become[s] a 100% affordable project," but that if "15 years from now it's still a parking lot, then I will not feel good."[4]

This might seem like ordinary urban land-use politics. In California, however, much of what used to pass as ordinary land-use politics is now against the law. The Supervisors' vote came right on the heels of a major Court of Appeal decision upholding California's Housing Accountability Act (HAA), which the Legislature has greatly strengthened in recent years.[5] The HAA now requires cities to approve housing projects that a reasonable person *could* deem compliant with applicable standards, even if other reasonable people might disagree.[6] It upends the world of discretionary development permitting that took hold in the 1970s, when local governments in high-demand housing markets converted land use regulation into a medium for wheeling and dealing over the terms on which any proposed project could proceed.[7]

Electronic copy available at: https://ssrn.com/abstract=3980396

The twist in the Stevenson St. case is that, technically, the Supervisors did not actually vote to deny the project. They voted instead to require further study of putative project impacts pursuant to the California Environmental Quality Act (CEQA)—while making clear that they aimed to kill it.[8] Other cities have used similar maneuvers, albeit to much less fanfare.[9] This presages the epic legal clash that we explore in this paper.

The HAA and CEQA both have fair claims to being what professors Bill Eskridge and John Ferejohn call "super-statutes."[10] As Eskridge and Ferejohn define it, a super-statute is a law that

> (1) seeks to establish a new normative or institutional framework for state policy and (2) over time does "stick" in the public culture such that (3) the super-statute and its institutional or normative principles have a broad effect on the law—including an effect beyond the four corners of the statute.[11]

As we explain in Part I, CEQA became super in the 1970s, thanks to a run of California Supreme Court decisions that construed it broadly so as to give, as the Court saw it, "the fullest possible protection" to the environment.[12] The HAA began earning its stripes much more recently. The turning point came in 2017, when the Legislature dramatically strengthened the law and codified that it "be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."[13]

The ostensible super-ness of the two statutes creates a predicament for courts and other actors because CEQA and the HAA could not be more different in their basic institutional and normative principles. Consider this:

- CEQA's working premise is that "new construction" is bad for the environment.[14] "Current environmental conditions" in the vicinity of a proposed project should be

[8] *See infra* TAN __.
[9] See Letter from Daniel R. Golub on behalf of the Housing Action Coalition to the Hon. Barbara J. Parker, Oakland City Attorney, re: 1396 Fifth Street, Oct. 21, 2021 (on file with authors) (challenging city council's decision to sustain an appeal of the planning commission's unanimous determination that the housing project was exempt from CEQA); *Sonoma - 149 Fourth St*., CARLA BLOG, https://carlaef.org/legal-case/149-fourth-st-sonoma/ (stating that housing organization had settled their HAA claim after "r[unning] into an unfriendly judge who decided that nothing could overrule a city's CEQA decision").

[13] S.B. 167, 2017–2018 Reg., Leg. Sess. (Cal. 2017).
[14] *See*, *e.g*., Friends of Westwood, Inc. v. City of Los Angeles, 191 Cal. App. 3d 259, 269 (1987) ("the purpose of CEQA is to minimize the adverse effects of new construction on the environment"). This premise is laid bare by the fact that CEQA requires no analysis before a government agency denies a project, see Cal. Pub. Res. Code § 21080(b)(5) (exempting "[p]rojects which a public agency rejects or disapproves"), whereas a full EIR is required if there's a "fair argument" that the approval of a project "may" have a significant environmental effect on any aspect of the physical environment, no matter how large the project's countervailing environmental benefits. *See* No Oil, Inc. v. City of Los Angeles, 13 Cal. 3d 68 (1974). Although CEQA codifies a legislative intent that agencies in regulating private activities give "major consideration … to preventing environmental damage, while providing a decent home and satisfying living environment for every Californian," Cal. Pub. Res. Code § 21000(g), the proviso

Electronic copy available at: https://ssrn.com/abstract=3980396

preserved if at all possible.[15] By contrast, the HAA regards the construction of housing in urbanized areas as presumptively good for the environment. It opens with a legislative finding that local barriers to housing development cause "urban sprawl, excessive commuting, and air quality deterioration," "undermining the state's environmental and climate objectives."[16]

- CEQA privileges slow, careful, deliberative evaluation of every possible environmental impact. If there is a "fair argument" that a project "may" have any significant local environmental impact, CEQA compels the preparation of an exhaustive environmental impact report (EIR).[17] Litigation over the sufficiency of a CEQA clearance usually blocks construction while the case crawls along.[18] The HAA calls for speed. It requires cities to notify developers of any general plan or zoning standards a project violates within thirty to sixty days after receiving the complete project application,[19] and it stipulates that violations of the state's Permit Streamlining Act of 1977 (PSA) shall be deemed violations of the HAA.[20]

- Courts in CEQA cases presume that cities act in good faith (unless the city shortcuts environmental review).[21] When pertinent facts and empirical inferences are disputed,

about "a decent home … for every Californian" has to date had no apparent effect on the courts' CEQA jurisprudence.

[15] *See* CAL. PUB. RES. CODE § 21002 (declaring "the policy of the state that public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects"); 14 CAL. CODE REGS § 15125 (stating that an EIR shall describe existing environmental conditions in the vicinity of the project, and that this description of existing conditions shall normally serve as the baseline for evaluating potential environmental effects of the project).

[16] CAL. GOV'T CODE § 65589.5(a). *See also* CAL. GOV'T CODE § 65589.5(b) ("It is the policy of the state that a local government not reject or make infeasible housing development projects ... without a thorough analysis of the economic, social, and environmental effects of the action").

[17] No Oil, Inc. v. City of Los Angeles, 13 Cal. 3d 68, 75 (1974).

[18] STEPHEN L. KOSTKA & MICHAEL H. ZISCHKE, PRACTICE UNDER THE CALIFORNIA ENVIRONMENTAL QUALITY ACT § 23.92 (CEB 2021) ("PRACTICE TIP: Injunctions are often not necessary to prevent work on the project from proceeding. Although the project applicant may start construction while litigation is pending, the applicant proceeds at its own risk. Because an adverse ruling on the merits by the trial court may result in an order enjoining construction, the project applicant may not be willing to start construction before the trial court decides the case.") (citations omitted).

[19] CAL. GOV'T CODE § 65589.5(j)(2).

[20] CAL. GOV'T CODE §§ 65589.5(j) & (h)(6).

[21] This presumption manifests doctrinally as a distinction between *de novo* or "independent judgment" and deferential "substantial evidence" review. On questions where cities are considered trustworthy, the courts review the city's decision deferentially ("substantial evidence"); on questions where cities' competence or good faith is doubted, courts review the city's decision de novo. The principal CEQA issues that get *de novo* / independent judgment review are about shortcutting of environmental review, specifically (1) determinations that a project does not require an EIR because there's no "fair argument" that the project may have a significant environmental effect, see STEPHEN L. KOSTKA & MICHAEL H. ZISCHKE, PRACTICE UNDER THE CALIFORNIA ENVIRONMENTAL QUALITY ACT § 6.76 (CEB 2021) (citing and discussing cases); (2) whether an EIR sufficiently discussed a potential environmental impact, see *Sierra Club v. County of Fresno*, 6 Cal. 5th 502, 511 - 16 (2018); and (3) whether the agency complied with the procedural requirements of CEQA, *id.* at 512. Conversely, cities' factual determinations and empirical inferences are reviewed deferentially. *Sierra Club*, 6 Cal. 5th at 511-16.

Electronic copy available at: https://ssrn.com/abstract=3980396

> courts give deference to the city's judgment.[22] The HAA distrusts cities. It eliminates the traditional deference courts gave to cities regarding a housing project's compliance with local standards;[23] it prevents cities from using discretionary standards to deny or reduce the density of a project;[24] it disables cities from applying most standards that post-date the developer's filing of a preliminary project application;[25] and it authorizes courts to order the approval of projects that were denied in bad faith.[26]

So how will the HAA and CEQA fit together? On one view, CEQA must reign supreme, because a longstanding provision of the HAA states, "Nothing in this section shall be construed to relieve the local agency from complying with … the California Environmental Quality Act."[27] California courts have sometimes (less than carefully) concluded that such a clause entirely subordinates one statute to another.[28]

But, as noted, the California legislature more recently proclaimed that the HAA "shall be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."[29] To achieve its stated purpose—to "meaningfully and effectively curb[] the capability of local governments to deny, reduce the density for, or render infeasible housing development projects"[30]—the HAA must exert gravitational pull on CEQA. The alternative is a world in which cities would have virtually unfettered discretion to use CEQA to delay projects indefinitely, to force project proponents to pay for round after round

[22] *Sierra Club*, 6 Cal. 5th at 511-16.
[23] CAL. GOV'T CODE § 65589.5(f)(4); Cal. Renters Legal Advoc. & Educ. Fund v. City of San Mateo, 68 Cal. App. 5th 820, 283 Cal. Rptr. 3d 877, 892-95 (2021) (rejecting city's argument for deference on meaning of its design guidelines. and applying HAA's "reasonable person" standard to determine project's compliance).
[24] CAL. GOV'T CODE § 65589.5(h)(8) & (j); Cal. Renters Legal Advoc. & Educ. Fund v. City of San Mateo, 68 Cal. App. 5th 820, 283 Cal. Rptr. 3d 877, 890-94 (2021) (reversing city's denial of project because city relied on design guidelines that were not objective).
[25] CAL. GOV'T CODE § 65589.5(o).
[26] CAL. GOV'T CODE § 65589.5(k)(1) (A)(ii).
[27] CAL. GOV'T CODE § 65589.5(e).
[28] For an illustration of how "reigning supreme" works in practice, consider the Court of Appeal's treatment of the relationship between a different environmental statute (the Coastal Act) and a different housing statute (the Density Bonus Law) in *Kalnel Gardens, LLC v. City of Los Angeles*, 3 Cal. App. 5th 927, 208 Cal. Rptr. 3d 114 (2016). Like the HAA, the Density Bonus Law states that it shall not be construed in derogation of the Coastal Act. *Compare* Cal. Gov't Code 65589.5(e), *with* Cal. Gov't Code 65915(m). However, the Coastal Act provides that the agency in charge of coastal development permits "may not require measures that reduce residential densities below the density sought by the applicant if the density sought is within the permitted density [under local zoning plus state density bonus law], unless the issuing agency ... makes a finding, based on substantial evidence in the record, that the density sought by the applicant cannot feasibly be accommodated on the site in a manner that is in conformity with [the Coastal Act]." Cal. Pub. Res. Code § 30604(f). In *Kalnel Gardens*, the agency denied the housing project on aesthetic grounds without making this infeasibility finding. The court excused the agency from the finding requirement on the theory that an outright denial of a housing project is not a "density reduction." 3 Cal.App.5th at 947. This wordplay move was textually unnecessary (surely reducing density to zero can be described as a "reduction in density") and had the effect of categorically elevating the Coastal Act over the Density Bonus Law, notwithstanding pretty clear textual indications that the Legislature wanted the two laws to be integrated with one another. *See* Cal. Pub. Res. Code § 30604(f); Cal. Gov't Code § 65915(f)(5) & (j).
[29] S.B. 167, 2017–2018 Reg., Leg. Sess. (Cal. 2017); CAL. GOV'T CODE § 65589.5(a)(2)(L).

of expensive environmental studies,[31] and to encumber projects with costly mitigation requirements even if the project would be a big environmental win.[32]

California's housing and climate goals hang in the balance. Because CEQA focuses government decisionmakers on environmental impacts in the vicinity of a project, and because CEQA does not apply at all when cities say "no" to housing, CEQA gives asymmetric leverage to neighborhood opponents of the infill development that California needs to deal with climate change.[33] These projects are an environmental win: building dense housing in urban areas dramatically reduces vehicle emissions,[34] as the HAA recognizes, and alleviates pressure to build in the state's wildfire-prone "wildland-urban interface."[35] Harmonizing CEQA and the HAA is no mere academic exercise.

* * *

This paper runs as follows. Part I recounts the evolution of CEQA and the HAA, illustrating their respective claims to super-statute status. We will see that CEQA's super-ness was revealed in part by its crushing of a pro-development precursor to the HAA, the PSA.[36] We will also explore the history of the HAA's CEQA savings clause.

Part II delves into the problem one of us has dubbed "CEQA-laundered project denials," now exemplified by the Stevenson St. project in San Francisco.[37] The municipal strategy of using CEQA to evade the HAA exploits soft spots in CEQA and background principles of administrative law. But we shall argue that an HAA construed as "super" can provide a remedy nonetheless, either directly or through its gravitational pull on CEQA and administrative law.

[32] *See infra* Parts II & III.

[33] *See* J.B. Ruhl & James Salzman, *What Happens When the Green New Deal Meets the Old Green Laws?*, 44 VT. L. REV. 693, 718 (2020) ("Laws like the NEPA [the federal analogue to CEQA] … empower environmental protection interests to demand renewable energy projects meet stringent short-term goals--the 'kill zero bats' standard--when doing so may jeopardize the long-term goal of saving all the bats, so to speak.") CEQA also excuses decisionmakers from any obligation to analyze the environmental consequences of maintaining the status quo, see CAL. PUB. RES. CODE § 21080(b)(5) (excluding "[p]rojects which a public agency rejects or disapproves"). This leaves cities free to lock in a low-density status quo (or even valet parking lots!) near transit stations, notwithstanding the central importance of infill development for reducing vehicular greenhouse gas emissions.

Part III contends that the HAA ought to shape environmental impact analysis itself. Because CEQA only applies to discretionary governmental acts,[38] environmental review for HAA-protected housing projects should consider only impacts caused by discretionary conditions of approval imposed by the city, not all of the impacts that result from adding new dwelling units to the site. This only makes sense: the latter are caused by a statute (the HAA), not municipal discretion, and CEQA does not apply to state legislation.[39] Our HAA-informed gloss on the scope of CEQA review would eliminate substantial environmental reviews for the mine run of zoning-compliant housing projects.[40]

But that is only one possible future. Another is that CEQA swallows the HAA, worsening California's affordability crisis, increasing greenhouse gas emissions, and exacerbating socioeconomic and racial inequality.[41] This would only create more fodder for thosewho argue that California is symbolically liberal but operationally conservative.[42] Stay tuned.

## I. How CEQA and the HAA Became "Super"

Recall Eskridge and Ferejohn's definition. A super-statute is a law that:

> (1) seeks to establish a new normative or institutional framework for state policy and (2) over time does "stick" in the public culture such that (3) the super-statute and its institutional or normative principles have a broad effect on the law—including an effect beyond the four corners of the statute.[43]

Below, in Section I.A, we explain how CEQA became a super-statute in the 1970s and then muscled a precursor of the HAA out of the way. Section I.B takes up the HAA and shows how it is becoming super today. In Section I.C, we explore the legislative history and current import of the provision stating that the HAA does not "relieve" a city from CEQA.

## A. The California Environmental Quality Act

Enacted in 1970, CEQA heralded a transition from Governor Pat Brown's California—a land of burgeoning suburbs and massive water and highway construction projects—to the slow-growth California that his son, Jerry, would preside over.[44] CEQA requires state and local agencies to study and disclose the environmental effects of discretionary agency actions that may have a significant effect on the environment, and to mitigate adverse effects if feasible.[45] Whether the Legislature intended CEQA to be a super-statute is open to debate, but, looking back, it is clear that CEQA did "establish[] a new normative [and] institutional framework for state policy" and that the framework "stuck in the public culture" and had "a broad effect on the law."[46]

Two early judicial decisions launched CEQA on its path to super-ness. In *Friends of Mammoth v. Board of Supervisors*, the California Supreme Court gave a "broad interpretation to the act's operative language" and extended CEQA to cover private activities (such as homebuilding) that require public permits.[47] Next came *No Oil, Inc. v. City of Los Angeles*, which held that CEQA requires preparation of a full EIR "whenever it *can be fairly argued* ... that the project *may* have *a* significant environmental impact," not just where the project is likely to have "important" or "momentous" impacts.[48]

Beyond their immediate holdings, *Friends of Mammoth* and *No Oil* stood for a larger principle: that CEQA should be construed broadly and purposefully to give "the fullest possible protection" to the environment.[49] Although the legislature has repeatedly tinkered with CEQA,[50] it hasn't challenged this foundational maxim, which courts continue to invoke to this day.[51]

CEQA has also had "an effect beyond the four corners of the statute."[52] The best example is the courts' reliance on CEQA to disembowel the Permit Streamlining Act (PSA),[53] which was something of a precursor to the Housing Accountability Act.

The PSA originally required cities to approve or deny applications for a "development project" within one year of receiving a complete application, on pain of the project being "deemed

---

[44] For an in-depth look at how this transition played out in the California Supreme Court, see Joseph F. DiMento et al., *Land Development and Environmental Control in the California Supreme Court: The Deferential, the Preservationist, and the Preservationist-Erratic Eras*, 27 UCLA L. REV. 859 (1980).

approved" as a matter of law.[54] The Act did not expressly state that an agency's failure to complete environmental review within the one-year period would result in the project's constructive approval, but everything about the statute suggests that this was the Legislature's intention.

Consider, first, that the same bill that established the one-year PSA deadline also established deadlines for completing and certifying a CEQA review, the longest of which is also one year.[55] The bill as enacted also stated that the PSA's one-year limit for project approval may be waived if the lead agency prepares an environmental impact statement under the National Environmental Policy Act (NEPA), the federal analogue to CEQA.[56] This implies that if a project *only* requires review under CEQA, it is subject to the PSA's usual one-year limit and constructive approval penalty. Finally, the opening article of the PSA declared, "To the extent that the provisions of this chapter conflict with *any other provision of law*, the provisions of this chapter shall prevail."[57] No carveout for CEQA was provided.

Yet when courts confronted the question of whether a development project could be deemed approved under the PSA notwithstanding the agency's failure to complete and certify an EIR, they answered with a perfunctory no.[58] In two paragraphs of cursory analysis, the Court of Appeal concluded that automatic approval under the PSA would be unthinkably "drastic," apparently because the legislature did not specifically "mention EIR certification in the [PSA's] automatic approval provisions."[59] The gravitational pull of CEQA overwhelmed what should have been a fairly easy inference from the text and structure of the PSA, with the result being that the PSA's one-year clock starts to run only *after* CEQA review is completed.

In theory, the PSA decision left open the possibility of enforcing CEQA's time limits through mandamus (rather than automatic approval), but later decisions undermined this remedy too. Although a panel of the Court of Appeal did say that mandamus is available if a city sits on a completed EIR without taking action to certify or disapprove it,[60] a subsequent Court of Appeal decision, *Schellinger Brothers v. City of Sebastopol*,[61] held that courts may not order a city to certify an EIR (as opposed to ordering the city to make up its mind about whether to certify it).[62] Even more damningly, *Schellinger* held that the project applicant had, by cooperating with the city well past the one-year deadline, forfeited its right to enforce CEQA's deadlines.[63]

Nowhere did *Schellinger* acknowledge that developers have an obvious economic incentive to cooperate with cities that exercise discretionary authority over their projects. That the court's

decision had the practical effect of nullifying the PSA for any project that requires an EIR also went unmentioned. The legislature probably intended that the CEQA and PSA deadlines run concurrently, but courts instead decided that they run back-to-back and that the first one (CEQA) is essentially unenforceable. The pull of the super-statute had enervated the PSA.

One measure of a statute's super-ness is what a society will sacrifice to give it effect. If there are high costs to compliance with a statute's mandate, then giving effect to the statute will more likely exert a strong effect on the law.[64] But if the costs are trivial, the statute probably doesn't exert a significant effect. For example, if CEQA required merely that an agency approving a discretionary project check a box on a form labeled "environmental review," agencies would have to comply "broadly" (i.e., in many contexts), but the very low cost of compliance would render insignificant the effect on the law.

It is notoriously difficult to measure CEQA's costs, because a big portion of those costs come in the form of projects that were never proposed on account of CEQA, and there is no credible way of estimating the universe of forgone projects in the absence of quasi-random variation in which sites are subject to CEQA.[65] However, the courts, the executive branch, and the legislature have certainly elaborated CEQA in ways that evince a willingness to incur substantial costs. The gutting of the PSA is just one example.

But CEQA is certainly more onerous than its federal analogue. The federal statute on which CEQA was patterned, NEPA, requires only an analysis of environmental impacts,[66] whereas CEQA also requires *mitigation to insignificance* of every identified impact—unless "economic, social, or other conditions make it infeasible."[67]

Further, CEQA permits only narrow exemptions. The legislature has authorized the Office of Planning and Research and the Natural Resources Agency to create exemptions through the CEQA Guidelines, but it has not told them to weigh the costs of environmental review when deciding what to exempt. Rather, it instructed them to exempt "classes of projects that have been determined *not to have a significant effect* on the environment."[68] The Guidelines further provide that an exemption may not be issued to an otherwise-qualified project if there is a "reasonable

[64] *See* Eskridge & Ferejohn, *supra* note 10, at 1244-45 (arguing that the Supreme Court's decision in *TVA v. Hill* enjoining the completion of a $120 million dam because it would destroy the habitat of the endangered snail darter was strong evidence that the Endangered Species Act was a super-statute).

[65] If geographic subsets of the state were selected at random and excluded from CEQA, then future development outcomes in those portions of the state could serve as a "control group" for evaluating the effect of CEQA on development outcomes. One could attempt a rough comparison in development outcomes with nearby states that lack a CEQA-like law (say, Oregon), but the confounding variables are of course legion.

[66] *See* Vermont Yankee Nuclear Power Corp. v. Nat. Res. Def. Council, Inc., 435 U.S. 519, 558 (1978) ("[NEPA's] mandate to the agencies is essentially procedural"); Strycker's Bay Neighborhood Council, Inc. v. Karlen, 444 U.S. 223, 227–28 (1980) ("once an agency has made a decision subject to NEPA's procedural requirements, the only role for a court is to insure that the agency has considered the environmental consequences; it cannot interject itself within the area of discretion of the executive as to the choice of the action to be taken") (internal citations and punctuation omitted).

possibility that the activity will have a significant effect on the environment due to unusual circumstances."[69]

Prevailing notions about what counts as an environmental impact have also become more expansive over time. The Office of Planning and Research publishes an "environmental checklist form" to help lead agencies decide whether a project requires an EIR.[70] The current form has 90 checkboxes for types of "potentially significant" impacts;[71] a generation ago, it had about 1/3 fewer.[72]

The gradual sprawl of CEQA to encompass more and more varieties of impact no doubt owes much to early California Supreme Court decisions declaring that CEQA should be construed broadly and rejecting the notion that CEQA covers only "important" or "momentous" impacts.[73] But rules about CEQA litigation and remedies probably deserve some of the credit (or blame) too. Courtroom doors swing open for any opponent of a project who wants to challenge an agency's allegedly unlawful short-cutting of environmental review—such as granting an exemption or approving a negative declaration for a project that should have been processed with an EIR;[74] or certifying an EIR that should have addressed certain potential impacts in more detail;[75] or approving a project with conditions that fail to mitigate identified environmental impacts to the maximum feasible extent.[76] So long as the plaintiff's objection was raised in the administrative process, it can be litigated in court,[77] and the party behind the lawsuit does not even have to reveal their identity.[78] The simple act of filing a CEQA claim is usually enough to put a project on ice, at least for a while, since lenders generally won't finance a project until any legal claims against it have been resolved.[79] And if the plaintiff prevails, they can often recover

Electronic copy available at: https://ssrn.com/abstract=3980396

attorneys' fees from the defendant.[80] These mutually reinforcing factors encourage speculative legal attacks on the environmental reviews of controversial projects.[81]

By contrast, if a permitting agency "long-cuts" environmental review—for example, if it requires an EIR for a project that could have been processed with an exemption, or if it refuses to certify an EIR unless studies are conducted of alleged impacts that are not actually impacts within the meaning of CEQA—the project proponent has no practical remedy. We explain why this is so in Part II.A, *infra.* For now, the important point is what follows from the asymmetry. It encourages agencies to err on the side of CEQA excess, particularly for controversial projects with well-funded opponents. It also means that when courts encounter CEQA, they will almost always do so in the context of a claim that the agency did too little review, not too much. And when a trial court holds that the agency should have studied a new kind of putative environmental effect and a Court of Appeal affirms, that new environmental effect can become part of the CEQA canon. That's so even if the court erred, because the California Supreme Court grants only about 3 percent of petitions for review in civil appeals.[82]

Writing about a seemingly unrelated field of law—patents—Jonathan Masur has argued that such asymmetries tend to ratchet the law in the direction favored by the parties who have the opportunity and incentive to sue.[83] In his example, denials but not grants of patents by the Patent and Trademark Office are appealable to the Federal Circuit.[84] As a result, the appellant in a case before the Federal Circuit is almost always arguing that the Patent and Trademark Office afforded too little protection to an alleged invention, not too much. Although most such claims fail, the occasional wins tend to extend the law in a more-stuff-is-patentable direction.[85] The Patent and Trademark Office then becomes even more liberal in granting patents, and future cases challenging potential patent denials will occur on facts that (if the claim is vindicated) would move the law toward an even more pro-patent position.[86]

So too with CEQA. Asymmetric litigation pressure encourages fulsome environmental reviews, not boundary-pushing thin reviews that might generate precedents that limit CEQA's reach. In a world where agencies err on the side of too much environmental review, not too little, it's hard for courts to make new law limiting CEQA's reach without speaking in dicta, i.e., articulating

[80] KOSTKA & ZISCHKE, *supra* note 21, §§ 23.126 - 23.137.
[81] The actual share of proposed housing projects that undergo CEQA litigation is probably quite small. A recent study of all approved (not proposed) projects in twenty jurisdictions found that only about 2.8 percent were the subject of litigation. Moira O'Neill et al., Examining Entitlement in California to Inform Policy and Process: Advancing Social Equity in Housing Development Patterns, at 80 (Final Report to the California Air Resources Board, Mar. 18, 2022), https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3956250. While most of the cases featured CEQA claims, other claims were brought as well. *Id.* at 82. However, the small share of approved projects that face CEQA litigation is only the tip of an iceberg: it doesn't tell us anything about payoffs that were made to avoid litigation, or expenses that were incurred to bulletproof environmental review documents, or projects that faced litigation and were withdrawn because of it, or projects that were never proposed in the first place because developers judged the CEQA compliance costs and litigation risks to be too high.

permissible shortcuts that an agency could have taken but did not. Speaking in dicta is of course disfavored.[87] This is not to say that courts never have opportunities to chip away at CEQA,[88] but the opportunities are rarer than they would be if agencies also faced claims from plaintiffs arguing that an environmental review exceeded what CEQA requires. CEQA's super-ness today is due not just to deliberate decisions by the California Supreme Court and executive branch agencies, but also to fifty years of asymmetric litigation pressure.

## B. The Housing Accountability Act

In its current form, the HAA prevents cities from denying or reducing the density of housing projects that comply with applicable, objective planning and zoning criteria—unless the city shows that the project would violate a health or safety standard.[89] It establishes rules of construction,[90] procedure,[91] evidence,[92] and remedies[93] that are very favorable to housing.

But the HAA was far from super as enacted in 1982, though even then it had become clear that cities were putting the breaks on housing production.[94] The law originally consisted of just two short paragraphs telling local governments to approve zoning-compliant housing projects unless the project would injure public health or safety.[95] A 1990 amendment added special additional protections for affordable projects (today, a qualifying affordable project must be at least 20 percent low-income or 100 percentmoderate income).[96]

[94] CAL. LEGISLATIVE ANALYST'S OFFICE, CALIFORNIA'S HIGH HOUSING COSTS: CAUSES AND CONSEQUENCES 7 (2015), https://lao.ca.gov/reports/2015/finance/housing-costs/housing-costs.pdf (noting that California home prices were 80 percent higher than the national average by 1980, compared to just 30 percent higher than the national average in 1970). Since then, there has been extensive literature exploring the political economy and public choice explanations for why so few American cities are pro-development. *See, e.g.*, William A. Fischel, THE HOMEVOTER HYPOTHESIS: HOW HOME VALUES INFLUENCE LOCAL GOVERNMENT TAXATION, SCHOOL FINANCE, AND LAND-USE POLICIES 1 (2001) (describing the organizing power of local incumbent homeowners); David Schleicher, *City Unplanning*, 122 YALE L.J. 1670, 1676-78 (2013) (emphasizing the power individual local legislators have over their districts in the absence of differentiated party competition); Roderick M. Hills, Jr. & David Schleicher, *Balancing the "Zoning Budget"*, 63 CASE WEST. L. REV. 81 (2011) (emphasizing the difficulty of mobilization by developers against seriatim downzonings).

Electronic copy available at: https://ssrn.com/abstract=3980396

Subsequent tweaks to the HAA (1) disallowed local governments from denying zoning-compliant projects except on the basis of written health or safety standards;[97] (2) defined projects as zoning-compliant if they satisfy the objective standards found in the city's zoning code and general plan as of the date of the developer's project application;[98] (3) cracked down on certain obvious ruses, such as cities redefining zoning-code violations as health-and-safety violations;[99] (4) required cities that wrongfully deny an affordable project to pay the prevailing party's legal fees;[100] (5) authorized courts to compel cities to take action on a wrongfully denied project within 60 days;[101] and (6) authorized courts to fine cities that deny projects in bad faith and continue dilly-dallying after the court's order.[102]

All of this sounds pretty super, but if the test for a super-statute is that it "sticks" in "the public culture" and "has a broad effect on the law,"[103] then the HAA did not become a serious candidate until 2016-2017. There had been very few reported cases under the statute, most likely because developers who hope to do business with a city in the future are naturally reluctant to sue it. In 2015, however, a ragtag bunch of self-described "YIMBYs" ("Yes In My Back Yard" advocates for housing) coalesced in San Francisco, discovered the HAA, and started suing suburbs for denying regionally needed housing.[104] It was not entirely clear whether they even had standing, but the legislature answered their call and authorized HAA enforcement by "housing organizations."[105]

A year later, in 2017, the legislature enacted a trio of bills that dramatically strengthened the HAA and declared it to be super.[106] Assembly Bill 1515 took up the question of what it means for a housing project to comply with general plan, zoning, and design standards.[107] The courts had long given deference to cities on such matters, refusing to set aside municipal determinations that a project is noncompliant if any reasonable person could agree with the city's conclusion.[108] Assembly Bill 1515 turned that doctrine on its head, defining projects as compliant as a matter of law if any reasonable person could deem the project to comply on the record before the city, notwithstanding reasonable or even strong arguments going the other way.[109]

A companion bill, Senate Bill 167, required cities to give prompt written notice to developers of any zoning, general plan, or design standard that the proposed project violates, on pain of the project being deemed to comply as a matter of law.[110] Senate Bill 167 also narrowed the HAA's carveout for health and safety standards by requiring cities to show by a preponderance of the evidence that the project would in fact violate a specific health or safety standard.[111] (The previous evidentiary standard gave cities a lot of slack.) Finally, Senate Bill 167 codified numerous legislative findings, including:

> The Legislature's intent in enacting [the HAA] in 1982 and in expanding its provisions since then was to significantly increase the approval and construction of new housing … by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects.... That intent has not been fulfilled.[112]

And:

> It is the policy of the state that this section be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing.[113]

A year later, the legislature added:

> It is the intent of the Legislature that the conditions that would have a specific, adverse impact upon the public health and safety [within the meaning of the HAA] arise infrequently.[114]

In 2019, the legislature codified a preliminary application process, allowing developers to quickly establish a vesting date subsequent to which newly adopted standards may not be used to deny or downsize the project.[115] The legislature also spelled out what it means for a standard to qualify as objective, such that it may be used to deny or reduce the density of a housing project.[116]

All of this certainly evinces a legislative intent to forge a super-statute, but whether the HAA "'stick[s]' in the public culture such that ... its institutional or normative principles have a broad effect on the law"[117] ultimately depends on how other actors respond to it. Will the courts and the executive branch also treat the HAA as super?

In *California Renters Legal Advocacy and Education Fund v. City of San Mateo* ("*California Renters*"), the pumped-up HAA passed its first judicial test with flying colors.[118] The city had denied a small condo project on the basis of the city's Multi-Family Design Guidelines, which prescribe "a transition or step in height" between new multifamily buildings and adjoining single-family homes.[119] When a nonprofit housing organization challenged the project denial in court, San Mateo argued that the HAA violated both its right to "home rule" under California's constitution and the prohibition against delegation of municipal authority. In the alternative, the city asserted that the HAA's definition of project compliance left intact the tradition of judicial deference to cities on questions about the meaning of local ordinances, and that the city in denying the project had plausibly "interpreted" its design guidelines to require setbacks the project lacked. A trial court accepted the city's constitutional and statutory arguments,[120] but the Court of Appeal would have none of it.

Before the appellate court, San Mateo and local government *amici* mustered new constitutional attacks on the HAA—not just home rule and private delegation, but due process too.[121] It would have been easy for the Court of Appeal to dodge the new issues, but the court reached out and decided all of the constitutional questions—against the city—thereby securing the HAA's footing going forward.[122] The appellate court also carefully traced the evolution of the HAA, juxtaposing it against the seeming intractability of California's housing shortage. It concluded, "The HAA is today strong medicine precisely because the Legislature has diagnosed a sick patient."[123]

The legislature's instruction that the HAA "be interpreted and implemented in a manner to afford the fullest possible weight to … housing" was reiterated three times in the court's opinion.[124]

As for San Mateo's design guidelines, the Court of Appeal held that they were not objective, and, in the alternative, that a reasonable person could deem the project at issue to comply with them.[125] Hard-eyed independent judicial review, not deference, was the order of the day. Deferring to the city's interpretation of the Guidelines would be "inappropriate," the court explained, lest the City "'circumvent[] what was intended to be a strict limitation on its authority.'"[126]

Sess. (Cal. 2017); CAL. GOV'T CODE § 65913.4.

Electronic copy available at: https://ssrn.com/abstract=3980396

*California Renters* is only one case,[127] but already other courts have taken note.[128] Even more notably, other actors in California's legal-political establishment are also embracing the HAA and signaling that they want it to have "a broad effect on the law."[129] After the trial court in *California Renters* struck down the HAA, Attorney General Becerra announced that his office would intervene on appeal.[130] When the Court of Appeal's decision came down, new Attorney General Bonta put out a press release trumpeting the big win.[131]

While *California Renters* was pending, the Governor requested and the legislature authorized funding for a new Housing Accountability Unit within the Department of Housing and Community Development (HCD).[132] Fully staffed, the Housing Accountability Unit will be a 25-person team that investigates alleged violations of state housing law, sends warning letters to cities, and makes referrals to the Attorney General's new "housing strike force."[133] The HAA is not the only housing law the Housing Accountability Unit and the strike force will enforce, but it is the capstone, and the fact that these new enforcement capacities came together in the shadow of *California Renters* suggests that the HAA is in fact bringing about "a new normative [and] institutional framework for state policy," one which will "stick[] in the public culture" and have "a broad effect on the law."[134]

The acid test is now at hand. Two days after San Francisco's Board of Supervisors stalled the Stevenson St. project—voting to require further environmental study while treating the vote as a project denial[135]—the director of the state housing department announced that the Housing Accountability Unit had launched an investigation.[136] Is the HAA super enough to stand up to CEQA? Or will it tumble like its precursor, the PSA?

## C. A Note on the HAA's CEQA Savings Clause

The opening for San Francisco's maneuver in the Stevenson St. case was a proviso in the HAA that states, "Nothing in this [statute] shall be construed to relieve [a city] from complying with . . . the California Environmental Quality Act."[137] This clause originated as a perfunctory addition to a pro-housing 1990 bill, SB 2011, which sought to augment the HAA with a powerful "builder's remedy" that would exempt affordable housing projects from local regulations.[138]

The sponsors of SB 2011 argued that cities without a compliant "housing element"—a state-approved plan to accommodate the city's share of regionally needed housing—should not be allowed to deny affordable housing project except on narrow, enumerated grounds.[139] The bill as introduced would have barred noncompliant cities from applying their zoning code, general plan, or development standards to an affordable project.[140]

Early in the legislative process, some advocates expressed concern about exempting affordable housing from CEQA and other environmental laws.[141] SB 2011 was promptly amended to include the above savings clause and ensure that the HAA did not "relieve" a city from complying with CEQA.[142] However, in reading the entire bill file, we found no memo, letter, bill summary, newspaper clipping, or anything else explaining *how* anyone thought CEQA would or should be applied to this new class of zoning-exempt projects. Nor did anyone address CEQA's application to the traditional class of HAA-protected projects in cities with compliant housing elements, i.e., projects that comply with the city's objective general plan and zoning standards.

Most of the debate over SB 2011 centered on arguments that the bill would let developers run roughshod over local planning. Eventually some softening amendments were added,[143] but, backed by a coalition of business groups and affordable housing advocates,[144] the bill passed both houses of the legislature in a form that was expected to be transformative.[145] Governor

[141] *See* Fax Transmittal to Paula Carrell from John [last name not legible], Mar. 28, 1990 (providing draft of amendments) (on file with authors).
[142] *See supra* note 141; S.B. 2011, 1989-1990 Reg., Leg. Sess. (Cal. 1990), as amended in Senate, Apr. 5, 1990 (on file with authors).
[143] The most important of these allows local governments to apply "development standards" that are consistent with meeting their housing targets. *See* CAL. GOV'T CODE 65589.5(f)(1); Question & Answer Paper, SB 2011, Sen. Leroy Greene, Ch. # 1439, 1990, at 3-4 (stating that the development standards exception "appears to supersede" the bill's core requirement that cities not impose conditions that render the project infeasible, so long as the development standards are consistent with "objectives stated in the housing element").
[144] Vlae Kershner, *Bill to Force Cities to Build Low-Income Housing Gets Ok*, S.F. CHRONICLE, Aug. 22, 1990 (describing SB 2011 as "one of the biggest legislative surprises of the current session" and "supported by an odd coalition of liberal housing advocates and conservative business groups").
[145] *See infra* notes 146-147 and accompanying text (describing bill's characterization by state agencies); Kershner, *supra* note 144 (calling SB 2011 "a powerful bill designed to bludgeon exclusive suburban communities into accepting low-income housing"). In folder 10 of the bill file, there is an newspaper clipping of unmarked origin that quotes Burlingame city council candidate Dorothy Cusick, "Unless we get the housing element of our general plan

Electronic copy available at: https://ssrn.com/abstract=3980396

Deukmejian's Office of Local Government Affairs urged a veto, contending that the enrolled bill would "prohibit a city . . . from denying a high density apartment project [in] a low density single-family residence area."[146] But his HCD recommended approval, quoting advocates who called it the most important housing bill in a decade.[147]

The Governor followed HCD's advice and signed the bill into law. Yet the new builder's remedy, so feared and vaunted, never amounted to much. We canvassed developers, housing advocates, and HCD staffers for examples of its use, and found just one attempt—which failed.[148] But the CEQA savings clause that was added as an uncontroversial check on the builder's remedy lives on, constraining not only the imagined zoning-noncompliant project in a city without a compliant housing element, but also—at least potentially—every plain vanilla, fully plan- and zoning-compliant project anywhere in the state. How seriously it constrains these ordinary projects will depend on how the arguments of Parts II and III of this paper are received.

Needless to say, it would be odd to read a minor addition to a pro-housing bill as inadvertently gutting the very statutory scheme it meant to strengthen. The Office of Local Government Affairs and others vociferously opposed SB 2011 because they believed it would prevent cities from denying high-density affordable apartment projects in low-density neighborhoods. Presumably they wouldn't have fought the bill if they had thought its CEQA proviso allowed cities to put any and all HAA-protected projects on ice. It also bears emphasis that the CEQA savings clause was added to SB 2011 several months before a Court of Appeal read CEQA to gut the PSA—and almost two decades before another Court of Appeal rendered the CEQA timelines essentially unenforceable.[149] Circa 1990, it was reasonable to believe that the risk of CEQA abuse was minimal because prolonged CEQA delays were simply illegal.

So the CEQA savings clause should not be read to swallow the HAA. But neither should it be read out of the statute. The legislature confirmed as much in 2019, when it added a new provision and a correlative CEQA carveout to the HAA.[150] The new provision bars cities from applying almost any development standard or fee to a project if the measure was adopted after the developer's filing of a preliminary project application—except that the city may apply the measure if "necessary to avoid or substantially lessen an impact of the project under the California Environmental Quality Act." [151]

---

updated, there's not much the City Council can do to prevent a developer from building multiple dwelling units without regard to zoning, lot setbacks and densities if 20% of the units are designated low cost."

The difficult task of courts and administrators today is to harmonize the two super-statutes: to ensure that cities complete appropriate environmental reviews without using CEQA to slip the HAA's grip. We explore how to do so in the next Parts.

## II. Does the HAA (or anything else) Provide a Remedy for CEQA-Laundered Project Denials?

The HAA prevents cities from denying or reducing the density of housing projects, but, as noted, it does not exempt projects from environmental review.[152] And although CEQA spells out time limits for the completion of environmental reviews, those limits have proven illusory in court.[153] So if a city wants to deny a project that the HAA protects, what's to keep the city from laundering the denial, as it were, through CEQA? Can the city keep asking the developer for additional environmental studies until, after squandering years and fortunes, the developer cries uncle and walks away?

That's the million-dollar question raised by our running example, the San Francisco Board of Supervisors' vote sustaining a local gadfly's appeal of the Stevenson St. project. Rather than deny the project outright or reduce its density (likely HAA violations), the Board reversed the planning commission's certification of the project's EIR and directed the clerk to prepare findings that it was inadequate.[154]

Yet in view of what the appellant wanted and what Supervisors said at the hearing and afterwards, it's pretty clear that the Board's real objective was not to air out and mitigate specific environmental impacts but to nix the project. The appellant, a local political power broker,[155] made no bones about his goal. In an op-ed and blog post, he demanded that the project sponsor donate at least a third of the site to the city for development of a (smaller) affordable housing project.[156]

Electronic copy available at: https://ssrn.com/abstract=3980396

Most of the Supervisors who voted "No" argued that the project was not affordable enough and would cause gentrification[157]—which is not an environmental impact,[158] and which is exceedingly unlikely to be caused by the project in any event.[159] Supervisor Mandelman told a reporter that he'd "feel very good about this vote" if the site "become[s] a 100% affordable project," but that if "15 years from now it's still a parking lot, then I will not feel good."[160] That's an explanation for a vote to deny, not a vote for further environmental study. Supervisor Melgar said the problem was that the developer hadn't "negotiated a deal" with TODCO, the politically powerful nonprofit that led the charge against the project.[161] That of course has no bearing on the adequacy of the EIR.

The supervisors who voted "No" also knotted themselves up with self-contradictory objections. For example, Ronen and Mandelman stressed that the developer didn't have financing and that the project probably wasn't economically viable (the implication being: "don't blame us for blocking housing"),[162] yet they also demanded that the developer reserve more units for low-income households[163]—which would make the project even more difficult to finance.

---

[157] Supervisor Walton argued that the new housing would "have a very significant displacement and social economic impact on the Sixth Street corridor." Joe Kukura, *Supes Shoot Down 27-Story SoMa Residential Tower Over Seismic, Displacement Concerns*, SFIST, Oct. 27, 2021, https://sfist.com/2021/10/27/supes-shoot-down-27-story-soma-residential-tower-over-earthquake-displacement-concerns/. Supervisor Preston stated he was "baffled" that the city did not get independent guidance in analyzing impacts of gentrification and displacement. Tim Redmond, *In Dramatic Move, Supes Block Huge Luxury Housing Project in Soma*, 48HILLS, Oct. 27, 2021, https://48hills.org/2021/10/in-dramatic-move-supes-block-huge-luxury-housing-project-in-soma/. Supervisor Chan commented that it was "interesting" that the Planning Commission did not "broaden its analysis" to include gentrification impacts. *Id.*

[158] *See* Porterville Citizens for Responsible Hillside Dev. v. City of Porterville, 157 Cal. App. 4th 885, 905–06 (2007) ("Unsubstantiated fears about potential economic effects resulting from a proposed project are not environmental impacts that may be considered under CEQA."). CEQA focuses on impacts on the "physical environment," see Cal. Pub. Res. Code § 21065, 4 Cal Code Regs §§ 15060(c)(2), (3), 15378(a), not social impacts. However, one envelope-pushing trial court recently required CEQA analysis of potential "displacement effects" from a university's decision to increase enrollment without providing a commensurate increase in student housing. *See* Save Berkeley's Neighborhoods v. Regents of Univ. of Cal., No. RG19022887, Alameda Sup. Ct., Aug. 23, 2021; Eric Biber, *CEQA and Socioeconomic Impacts*, LEGAL PLANET, Sept. 24, 2021, https://legal-planet.org/2021/09/26/ceqa-and-socioeconomic-impacts/.

[159] The vast majority of studies with a plausible strategy for identifying the causal effect of new housing development on nearby rents have found that the effect is negative. For a review, see SHANE PHILLIPS ET AL., RESEARCH ROUNDUP: THE EFFECT OF MARKET-RATE DEVELOPMENT ON NEIGHBORHOOD RENTS (UCLA Lewis Center, Feb. 17, 2021), https://www.lewis.ucla.edu/research/market-rate-development-impacts/. Adverse gentrification effects near the Stevenson St. project are particularly unlikely because the low-income residents nearby live in protected single-room occupancy hotels, subsidized housing projects, and rent-controlled apartments. *See* Randy Shaw, *What Drives SF's Gentrification? It's Not What Many Think*, BEYONDCHRON, Nov. 2, 2021, https://beyondchron.org/what-drives-gentrification-its-not-what-many-think/.

The representative who came closest to voicing an environmental objection was Supervisor Ronen, who expressed concern that the project's foundation might be inadequate.[164] She pointed to another downtown project, the Millennium Tower, that had required an expensive retrofit, and she argued that the EIR for Stevenson St. should have fleshed out the seismic issues in detail.[165] (The Initial Study treated these issues as "insignificant" because they're addressed by the building code and an engineering peer review required of all large buildings.[166] Accordingly, the EIR did not further address them.[167]) However, no one put any evidence in the record suggesting that a code-compliant, peer-reviewed project on the site would be an earthquake hazard to people or buildings nearby. Nor, as best we can tell, had Ronen or any other supervisor objected to previous EIRs that treated seismic impacts as adequately addressed through the building code and engineering peer review. In any case, contrary to Ronen's claims to the press, the impact of an earthquake on a proposed building is not an "environmental impact" under CEQA.[168]

All of this suggests that that the seismic safety issue—the only plausibly legitimate justification for the Board's decision to reverse the CEQA certification[169]—was pretextual. It was a fig leaf to cover up what the Board intended but was not allowed by law to do: to disapprove the project because it's too big, or not affordable enough, or because the project sponsor hadn't acceded to the appellant's land-donation demand.

## A. Capitalizing on Administrative Law's Achilles Heel

The strategy of laundering project denials through CEQA is nothing if not clever, for it takes advantage of two soft spots in administrative law: agency delay and agency bad faith.

### 1. Delay

The Board of Supervisors' vote to reverse certification of the Stevenson St. EIR was tantamount to saying, "We haven't made up our mind about this project, and we need more information before we can make up our mind." When agencies say they need more time to gather

[164] J.K. Dineen, *State Investigating S.F.'s Decision to Reject Turning Parking Lot into 500 Housing Units*, S.F. CHRONICLE, Oct. 28, 2021.

[168] *See* Dineen, *supra* note 164 (quoting Supervisor Ronen). CEQA requires analysis of the impact of the building on the environment, not the environment on the building. *See* Cal. Bldg. Industry Ass'n v. Bay Area Air Quality Mgmt. Dist., 362 P.2d 792, 803 (Cal. 2015) (holding that CEQA Guideline which provided that "an EIR on a subdivision astride an active fault line should identify as a significant effect the seismic hazard to future occupants of the subdivision," was "clearly erroneous and unauthorized under CEQA").
[169] To be clear, this justification would be legitimate only if there were a "fair argument" that the building itself may cause significant damage to the physical environment in the vicinity of the site, in the event of an earthquake. *Cf. id.* [168] at 802 (holding that CEQA analysis should consider "exacerbating effect" of new construction on existing environmental hazards, but not the effect of the hazard on the new construction or its occupants).

Electronic copy available at: https://ssrn.com/abstract=3980396

information, courts normally let them have it. If an antsy plaintiff sues, the court will say that the suit is premature because there's not yet a "final" agency decision, or because the plaintiff hasn't "exhausted her administrative remedies," or because the case isn't yet "ripe."[170] After all, it would be a waste of judicial resources and a big practical problem for governance if anyone waiting in line for an agency decision could ask a judge to let her jump the queue.[171]

The legal doctrines that prevent plaintiffs from attacking agency delay have exceptions, but the exceptions are very narrow. For example, California courts excuse plaintiffs from exhaustion when further agency proceedings would be "futile"—but only if the plaintiff can "positively state" what the agency has decided (thus rendering further proceedings pointless).[172] The courts have also waived exhaustion when the agency has no legal authority to conduct the proceeding at issue,[173] and when pursuit of further proceedings would result in "irreparable harm."[174] None of these exceptions fits the Stevenson St. scenario. The Board of Supervisors carefully avoided "positively stating" its decision; there's no question that the Board is authorized by law to be the city's ultimate CEQA decider; and the irreparable-harm exception is "applied rarely and only in the clearest of cases."[175]

It is also true that if the legislature prescribes clear-cut timelines for an agency decision, a plaintiff can, in theory, use traditional mandamus to get a court order requiring the agency to act.[176] But as we illustrated in Part I's discussion of *Schellinger* and the CEQA timelines, these cases make courts uncomfortable.[177] At most, a court will order the agency *to make a decision*,

---

[170] *See*, *e.g.*, AIDS Healthcare Found. v. State Dep't of Health Care Servs., 241 Cal. App. 4th 1327, 194 Cal. Rptr. 3d 425 (2015) (holding that decision of administrative agency reversing order of the administrative law judge and remanding for additional proceedings before the administrative law judge is unreviewable).

[171] The exhaustion doctrine is "principally grounded on concerns favoring administrative autonomy (i.e., courts should not interfere with an agency determination until the agency has reached a final decision) and judicial efficiency (i.e., overworked courts should decline to intervene in an administrative dispute unless absolutely necessary)." Farmers Ins. Exch. v. Superior Ct., 826 P.2d 730, 739 (Cal. 1992). California courts often treat these three doctrines—exhaustion, finality, and ripeness—as more or less interchangeable. *See, e.g.*, California Water Impact Network v. Newhall Cty. Water Dist., 161 Cal. App. 4th 1464, 1489 (2008) (describing exhaustion as "closely related" to finality); O.W.L. Found. v. City of Rohnert Park, 168 Cal. App. 4th 568, 584 (2008) (stating that finality is an "outgrowth" of ripeness). See also Ticor Title Ins. Co. v. F.T.C., 814 F.2d 731 (D.C. Cir. 1987), in which the three judges each issued their own opinion explaining why the case was untimely, relying on the same facts and normative considerations but using different doctrinal labels: exhaustion per Judge Edwards, finality per Judge Williams, and ripeness per Judge Green.

[172] Jonathan Neil & Assoc., Inc. v. Jones, 94 P.3d 1055, 1067 (Cal. 2004) (quoting Sea & Sage Audubon Soc'y, Inc. v. Plan. Com., 668 P.2d 664, 667 (Cal. 1983)).

[173] Coachella Valley Mosquito & Vector Control Dist. v. California Pub. Emp. Rels. Bd., 112 P.3d 623, 629 (Cal. 2005) (noting that the exception turns on a three-factor test involving "[1] the injury or burden that exhaustion will impose, [2] the strength of the legal argument that the agency lacks jurisdiction, and [3] the extent to which administrative expertise may aid in resolving the jurisdictional issue").

[174] Kaiser Found. Hosps. v. Superior Ct., 128 Cal. App. 4th 85, 105 (2005).

[175] City & Cty. of San Francisco v. Int'l Union of Operating Engineers, Loc. 39, 151 Cal. App. 4th 938, 948 (2007).

[176] CAL. CIV. PROC. CODE § 1085(a) (authorizing a writ of mandate "to compel the performance of an act which the law specially enjoins"); *e.g.*, Sunset Drive Corp. v. City of Redlands, 73 Cal. App. 4th 215, 221 (1999) (holding that, under section 1085, a court may compel a city to make its decision in the time period required under CEQA); *see also* Norton v. S. Utah Wilderness All., 542 U.S. 55, 65 (2004) (explaining that, under the federal APA, "when an agency is compelled by law to act within a certain time period, but the manner of its action is left to the agency's discretion, a court can compel the agency to act, but has no power to specify what the action must be").

[177] *See supra* text accompanying notes 62-63.

Electronic copy available at: https://ssrn.com/abstract=3980396

as opposed to telling the agency *what to decide*.[178] And if the developer cooperates with the city past the deadline, the doctrine of laches may bar their claim altogether.[179]

### 2. Bad Faith

The other formidable barrier to a judicial fix for CEQA-laundered project denials is the principle that courts should review agency decisions solely on the basis of the reasons stated by the agency at the time of the decision, rather than probing to figure out the agency's real reason and setting the decision aside if the real reason was not authorized by law.

To the extent that the Board's decision to require further CEQA study of the Stevenson St. project is reviewable at all, a court would normally uphold the decision so long as the findings prepared by the clerk include *some* legitimate reason for additional CEQA study.[180] The stated rationale must also draw some support from the record of materials before the Board, but the evidentiary demand is lax.[181] If a reasonable person could agree with the Board's decision in light of the evidence in the record, courts generally will accept it.[182]

In federal administrative law, there is a narrow exception to these general precepts. Upon a "strong showing of bad faith," a court may peer behind the agency's public rationale and the record of contemporaneous materials the agency assembled to justify it.[183] If the court concludes from this investigation that the agency's stated reasons were pretextual, the court may set aside the agency's decision—even if the stated reasons (if real) would have sufficed to justify it. This obscure doctrine enjoyed a moment of renaissance when Chief Justice Roberts invoked it to invalidate the Trump Administration's addition of a citizenship question to the U.S. Census. But even as the Chief Justice insisted that courts "are 'not required to exhibit a naivete from which

[178] *Schellinger Bros.*, 179 Cal. App. 4th at 1265 (noting that a section 1085 (traditional mandamus) remedy "issues to compel the performance of a ministerial duty, and even then it will not compel the exercise of such a duty in a particular fashion").
[179] *Id.* [178] at 267-70.
[180] Judicial review in CEQA cases is usually limited to the record of the agency proceeding. *See* KOSTKA & ZISCHKE, *supra* note 21, §§ 23.48 - 23.56; *cf.* MITCHELL E. ABBOTT ET AL., CALIFORNIA ADMINISTRATIVE MANDAMUS § 6.119 (CEB 2021) ("Whether the scope of review is the substantial evidence test or the independent judgment test, the trial court cannot substitute its own findings to cure the agency's inadequate findings as an alternative to remanding the case to the agency....") (citations omitted). The deferential "substantial evidence" standard governs judicial review of "the agency's conclusions, findings and determinations, the scope of the EIR's analysis, the amount or type of information contained in the EIR, the methodology used to assess impacts, and the reliability or accuracy of the data supporting the EIR's conclusions." KOSTKA & ZISCHKE, *supra* note 21, § 23.34.
[181] Nominally, the city's decision must be supported by "substantial evidence" in the record, but this standard is not demanding. It requires only "enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached." 14 CAL CODE REGS § 15384(a). *See also* Laurel Heights Improvement Ass'n v Regents of Univ. of Cal., 47 Cal. 3d 376, 393 (1988); KOSTKA & ZISCHKE, *supra* note 21, § 23.34.
[182] *See supra* note 181.
[183] Citizens to Pres. Overton Park, Inc. v. Volpe, 401 U.S. 402, 420 (1971) (noting that "inquiry into the mental processes of administrative decisionmakers is usually to be avoided," but it may be permitted upon "a strong showing of bad faith or improper behavior"); SEC v. Chenery Corp., 318 U.S. 80 (1943) (stating the general rule that agency action may only be upheld on the contemporaneous record).

Electronic copy available at: https://ssrn.com/abstract=3980396

ordinary citizens are free,'"[184] he was at pains to limit the bad-faith exception. The Census dispute was not "a typical case in which an agency may have both stated and unstated reasons for a decision," but rather the "rare" one in which the agency's "sole stated reason" "seems to have been contrived."[185]

It is for very good reasons that the bad-faith exception is very narrow. Much like aggressive judicial review of agency delay, courtroom trials focused on the real reasons for agency action would gum up the work of government.[186] Discovery requests and depositions would divert public officials from their charge.[187] Courts would struggle to disentangle the mix of political and policy-minded considerations that shape agency decision making—especially when the leaders of the agency in question (a city council) are elected officials who inevitably pay attention to politics even when acting in a quasi-judicial capacity (hearing a CEQA appeal).

Finally, it's black-letter law that when an agency messes up, the judicial remedy is to vacate the agency's decision and remand for a do-over.[188] Even in the Census case, the Court did not strike the citizenship question from the Census: it just told the Commerce Department to try again.[189] But what does this achieve if the agency is in bad faith? A court order telling San Francisco's Board of Supervisors to rehear the Stevenson St. CEQA appeal would be an invitation to re-launder the denial, minus the revealing tweets. The pointlessness of the remedy strongly reinforces the argument for not engaging the pretext question in the first place.[190]

* * *

Given the formidable barriers to challenging agency inaction and getting courts to do anything about agency bad faith, and given the lack of any specific remedy under CEQA if a city demands more environmental review than the statute requires, it should come as no surprise that the caselaw about CEQA abuse is very scant. Looking for cases in which someone argued that an

---

[184] Department of Commerce v. New York, 139 S. Ct. 2551, 2575 (2019) (quoting United States v. Stanchich, 550 F.2d 1294, 1300 (2d Cir. 1977).
[185] *Id.* [184]
[186] *See* Gavoor & Platt, *Administrative Records After* Department of Commerce v. New York, 72 ADMIN. L. REV. 87, 98 (2020) (predicting that extra-record review in the federal context will "divert resources from agencies' core missions, compulsorily draw the attention of officers of the United States who should otherwise be engaging in the executive function of running the government, and cause long delays with more bet-the-agency litigation"); *see also* Jennifer Nou, *Census Symposium: A Place for Pretext in Administrative Law?*, SCOTUSBLOG, June 28, 2019, https://www.scotusblog.com/2019/06/census-symposium-a-place-for-pretext-in-administrative-law/ (voicing similar concerns).
[187] *Dep't of Commerce*, 139 S. Ct. at 2583 (Thomas, J., concurring in part and dissenting in part) (predicting that the majority's application of the exception will "enable[] partisans to use the courts to harangue executive officers through depositions, discovery, delay, and distraction").
[188] CEQA codifies this principle. CAL. PUB. RES. CODE § 21168.9(c) ("Nothing in this section authorizes a court to direct any public agency to exercise its discretion in any particular way."). *See also* KOSTKA & ZISCHKE, *supra* note 21, § 23.125 ("The requirement in Pub Res C § 21168.9(b) that a peremptory writ of mandate specify what action by the agency is necessary to comply with CEQA is limited by the provision in § 21168.9(c) that the statute does not authorize a court `to direct any public agency to exercise its discretion in any particular way.'").
[189] *Dep't of Commerce*, 139 S. Ct. at 2576.
[190] While the *Department of Commerce* remand resulted in the Census going forward without a citizenship question, this was a happenstance of timing: by the time the Supreme Court's decision came down in June 2019, it was too late for the Census Bureau to redo its decision before the 2020 Census. But where there is no impending deadline, a remand is very unlikely to result in a different outcome.

Electronic copy available at: https://ssrn.com/abstract=3980396

agency broke the law by doing "too much" CEQA review is like trying to find the proverbial needle in a haystack of cases about whether an agency did too little.

We did, eventually, find two cases.[191] In one, the trial court held that courts lack "the authority to review the appropriateness of" a city's decision to require additional environmental study and another round of public comment following circulation of a draft EIR.[192] The Court of Appeal sustained the trial court's decision on other grounds (laches), without addressing the trial court's holding on reviewability.[193] In the other, a county board of supervisors voted to require an EIR for a mining company's exploration permit, rejecting the planning staff's recommendation of a mitigated negative declaration.[194] The court sustained the county's decision without addressing finality or exhaustion.[195]

The bottom line is that fifty years into the life of CEQA, there is not a single Court of Appeal opinion addressing whether a local agency's decision to require additional, unwarranted environmental review is subject to judicial review or, if reviewable, whether there's a remedy beyond remanding to the agency for reconsideration.[196] The lack of caselaw no doubt reflects the remote odds that such a claim would result in a meaningful win.

## B. But the HAA Is a Game Changer, Right?[197]

The foregoing ought to douse any hope one might have about using CEQA or background principles of administrative law to curtail CEQA-laundered project denials. But when the project getting laundered is a *housing project*, a court must consider the Housing Accountability Act as well. And the HAA gives the general principles of administrative law a real shakeup, reworking some and tossing others in the garbage:[198]

- The HAA expressly authorizes judicial inquiry into bad faith.[199] "Bad faith" as defined by the Act "includes ... an action that is frivolous or otherwise entirely without merit."[200] This means that a court can find bad faith without subpoenas, depositions, or other

[191] In addition to the cases discussed in this paragraph, there is also a pending case in which plaintiffs are trying to use a federal statute, the Racketeer Influenced and Corrupt Organizations Act, 18 U.S.C. § 1962 et seq., to curtail sham CEQA litigation by competitors of a project. *See* Arthur F. Coon, *CEQA Meets RICO: Round Two*, MILLER STAR REGALIA, July 31, 2020, https://www.ceqadevelopments.com/2020/07/31/ceqa-meets-rico-round-two/ (discussing *Relevant Group, LLC et al v. [200] CAL. GOV'T CODE § 65589.5(l).

Electronic copy available at: https://ssrn.com/abstract=3980396

searching inquiry into the mental processes of city council members. Objective frivolousness is enough.

- In cases where a court finds bad faith, the HAA supplants the traditional do-over remedy. It authorizes courts to order the project approved and to retain jurisdiction to ensure that this order is carried out.[201] (Even if there's no finding of bad faith, the HAA provides that courts shall issue an order compelling compliance within sixty days and fine the city if it misses the deadline.[202])

- The HAA provides at least a partial remedy for delay, by defining "[d]isapprove the housing development project" to include "[f]ail[ing] to comply with the time periods [for project review] specified in [the PSA]."[203]

- The HAA eliminates judicial deference to local governments on all questions about whether a housing development project complies with applicable standards.[204]

The HAA's stance is one of extreme distrust toward local governments. In 1982, the legislature stated that "the excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing."[205] But as the legislature noted in 2017, when it strengthened various HAA provisions, "[t]he Legislature's intent in enacting this section in 1982 . . . has not been fulfilled."[206] Hence the new policy going forward: "that [the HAA] be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."[207]

But there's a catch. While the HAA provides a powerful remedy for bad-faith project denials, its only explicit remedy for delay is tied to the PSA. Yet as noted in Part I, the PSA clock doesn't

start to run until CEQA review has been completed,[208] and the HAA does not "relieve [a city] from … complying with" CEQA.[209]

How can a court make sense of these conflicting directives? In the rest of this Part, we sketch three possible solutions.

## C. Solutions

### 1. Bad-Faith Delay Through CEQA Reversal as HAA "Disapproval"

Our first solution is for courts to hold that a city's delaying of a project in bad faith amounts to "disapproval" under the HAA, at least if the delay occurs through a negative vote on a formal approval the developer needs. Importantly, if courts conclude that a bad-faith denial of a CEQA clearance[210] is a "disapproval," they can order the project approved. That is because the HAA empowers courts to use this supercharged remedy when a city denies a project in bad faith.[211]

The HAA's definition of "disapproval" is broad. It includes "any instance in which a local agency . . . votes on a proposed housing development project application and the application is disapproved, including any required land use approvals or entitlements necessary for the issuance of a building permit."[212] The certification of an EIR or other CEQA clearance is one of many "approval[s]" or "entitlement[s]" which a developer must obtain before eventually landing a building permit. And it is an approval that a city council reversing a CEQA clearance "votes" to deny.[213]

On the other hand, the fact that the HAA doesn't expressly list "legally inadequate CEQA analysis" as a permissible ground for disapproval of a housing development project suggests that the legislature may not have thought that a city council's reversal of a CEQA certification would qualify as a housing-project disapproval.[214] Were the HAA an ordinary statute, this missing

---

[208] *See supra* text accompanying notes 58-59.
[209] CAL. GOV'T CODE § 65589.5(e).
[210] By "denial of a CEQA clearance," we mean an official determination that a project is not entitled, at the time of the determination, to the CEQA approval sought by the developer. This would include a vote to deny a CEQA exemption, a vote to require an EIR instead of approving the negative declaration sought by the developer, a vote against certifying an EIR, or, as in the case of the Stevenson St. project in San Francisco, a vote to reverse a certification of an EIR.
[211] CAL. GOV'T CODE § 65589.5(k)(1)(A)(i).
[212] CAL. GOV'T CODE § 65589.5(h)(6) (emphasis added).
[213] The same reasoning would apply with equal force to any other bad-faith denial of a CEQA clearance, such as a decision by a planning commission or city council to deny an exemption or to refuse to certify a negative declaration or EIR.
[214] *See* CAL. GOV'T CODE 65589.5(j)(1) (stating that a local agency which "proposes to disapprove [an HAA-protected] project or to impose a condition that the project be developed at a lower density" "shall base its decision ... upon written findings supported by a preponderance of the evidence on the record that both of the following conditions exist": (A) that the project "would have a specific, adverse impact upon the public health or safety unless the project is disapproved or approved upon the condition that the project be developed at a lower density"; and (B) that "[t]here is no feasible method to satisfactorily mitigate or avoid the adverse impact ... other than the disapproval

Electronic copy available at: https://ssrn.com/abstract=3980396

affirmative defense would cut pretty strongly against reading "disapproval" to include even bad-faith reversals of CEQA clearances. But the HAA in its current incarnation is meant to be a super-statute, "interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."[215] This interpretive instruction, together with the parallel legislative finding that local governments have for too long managed to evade the legislature's intent to "meaningfully and effectively curb[] [their] capability ... to deny, reduce the density for, or render infeasible housing development projects,"[216] suggests that the legislature wants courts to read the statute flexibly as may be necessary to countermand evasive local tactics the legislature did not anticipate.

A line-drawing problem remains: it can't be true that every municipal denial of a CEQA clearance is a "disapproval" within the meaning of the HAA.[217] Some denials are meritorious. In other cases, a city council may reasonably believe that a project opponent's CEQA appeal has merit, even if some judges would disagree. At what point does a city council's reversal of a CEQA clearance become an HAA "disapproval"? The remedial provisions of the HAA point toward an answer: when the CEQA reversal is in bad faith.[218] Like the party to a contract who commits anticipatory breach, the city that denies a CEQA clearance in bad faith signals that it has no intention of performing its legal obligation under state law, namely, to approve the HAA-protected project unless it violates an objective health or safety standard.[219] That the HAA singles out bad-faith conduct by cities provides a justification for, and a limitation upon, expansive readings of "disapproval."[220]

What constitutes bad faith in this context? Again, the HAA provides guidance: "For purposes of this section, 'bad faith' includes, but is not limited to, an action that is frivolous or otherwise entirely without merit."[221]An objectively frivolous denial of a CEQA clearance should therefore land the city in the bad-faith doghouse. But not only this, for the phrase "is not limited to" implies that there are other ways to end up in the doghouse. A natural inference from the text and purpose of the HAA is that it is also bad faith for a city to do indirectly (e.g., via CEQA) what the HAA prohibits the city from doing directly.[222]

---

of the housing development project or the approval of the project upon the condition that it be developed at a lower density").

[215] S.B. 167, 2017–2018 Reg., Leg. Sess. (Cal. 2017)

[216] CAL. GOV'T CODE § 65589.5(a)(2)(K).

[217] For example, if the CEQA review was legally inadequate, surely a city council's reversal of the planning commission's certification of the CEQA review would not constitute a "disapproval" of the project. And even if some judges might consider the CEQA review legally sufficient, a city council that had a good-faith and well-substantiated belief that the review was legally inadequate probably should not be regarded as "disapproving" the project just because the council voted to reverse the CEQA clearance.

[218] CAL. GOV'T CODE § 65589.5(l).

[219] The analogy to anticipatory breach is not exact, because traditionally anticipatory breach is found only if the breach is express or the repudiating party "puts it out of his power to perform so as to make substantial performance of his promise impossible." Taylor v. Johnston, 15 Cal. 3d 130, 137, 539 P.2d 425, 430 (1975).

[220] Note that the HAA's findings also evince special concern about municipal bad faith. *See*, *e.g.*, CAL. GOV'T CODE § 65589.5(a)(2)(K) ("The Legislature's intent in enacting this section in 1982 and in expanding its provisions since then was to ... meaningfully and effectively curb[] the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled.").

[221] CAL. GOV'T CODE § 65589.5(l).

[222] A subtly different question is whether a pretextual denial of a CEQA clearance should be deemed to violate the HAA when the apparent reason for the denial is to induce the developer to agree to a condition that would make the

Electronic copy available at: https://ssrn.com/abstract=3980396

In our running example, the appellant, John Elberling, was clearly gunning for an outcome that the HAA proscribes. After the Board of Supervisors voted to reverse the EIR certification for Stevenson St., Elberling published an op-ed and blog post faulting the project sponsor for not agreeing to a "compromise" under which the developer would donate a third of the parcel to the city, and the city and the developer would then build side-by-side projects with fewer total units than the project as proposed.[223] This land transfer would unquestionably violate the HAA if demanded by the city as a condition of approval, as the HAA bars "impos[ing] a condition that the project be developed at a lower density."[224]

The further question is whether a court should attribute the appellant's purpose to the city. Here the caselaw on racial discrimination is instructive. "The Supreme Court has long held, in a variety of circumstances, that a governmental body may not escape liability under the Equal Protection Clause merely because its discriminatory action was undertaken in response to the desires of a majority of its citizens."[225] Thus, it's unlawful for a state to designate candidates' racial identity on the ballot and thereby enable discrimination by voters;[226] for a court to deny a parent custody of their child on the ground that the parent's interracial relationship would expose the child to societal discrimination;[227] for employers to refuse to hire men because their customers prefer to be served by women;[228] or for a city council to "knowingly acquiesce[] to race-based citizen opposition" in denying a housing project or rezoning.[229]

---

project more difficult to develop, and which the city does not have authority to impose, but which the HAA does not proscribe. For example, building trade unions are notorious for using CEQA to hold up projects unless or until the developer signs a labor agreement with the union. *See infra* note 353 and accompanying text. Federal labor law makes it unlawful for cities to insist on project-labor agreements as a condition of approval, see Golden State Transit Corp. v. City of Los Angeles, 475 U.S. 608, 614 (1986) (holding that cities may not use taxicab licensing to regulate balance of power between management and labor), but the HAA allows any condition of approval unless it has the effect of rendering an affordable housing development "infeasible," CAL. GOV'T CODE § 65589.5(d), or is functionally equivalent to a reduction in density, CAL. GOV'T CODE § 65589.5(j)(1) & (g)(7). The pretextual denial of a CEQA clearance for labor reasons may result in the city running afoul of the CEQA timelines (*see infra* Part II.C.2 ), or may violate background principles of state administrative law (*see infra* Part II.C.3), or may even expose the city to liability under federal labor law or due process via section 1983 (see Golden State Transit Corp. v. Los Angeles, 493 U.S. 103 (1989); Sunset Drive Corp. v. City of Redlands, 73 Cal. App. 4th 215, 225 (1990)), but it probably should not be held to violate the HAA unless the labor condition the city desires is ruled out by the HAA.

If a court concluded that San Francisco violated the HAA by "knowingly acquiesc[ing]" to Elberling's goal of using CEQA to achieve what the HAA proscribes, similar blog posts and op-eds by CEQA appellants will likely become a thing of the past. But even after anti-housing activists wise up and refrain bald admissions of unlawful motive, the courts can still provide a check on municipal acquiescence to unlawful private sentiment. When opponents of an affordable housing project turned out in droves at a public hearing to complain about property values, community character, "undesirable" residents, and crime, the courts have sometimes inferred that racial animus was a "significant factor" behind the opposition, even in cases where project opponents avoided "explicitly racial language."[230] So too, when the great mass of public comment at a CEQA hearing focuses on a project's objectionable scale or socioeconomic impacts, a judicial fact finder should have little trouble concluding that rabble rousers' goal was to block the project or reduce its density, not to ensure that *environmental* impacts are properly studied and mitigated.[231]

Another important precedent for our proposal is the Second Circuit's decision in *Fortress Bible Church v. Feiner*, which holds that a city's pretextual use of environmental review can violate the Religious Land Use and Institutionalized Persons Act (RLUIPA).[232] RLUIPA forbids a city from imposing a substantial burden on religious practice through an "individualized assessment[] of the proposed uses for the property" "in the implementation of a land use regulation"[233] The statute defines "land use regulation" as a "zoning or landmarking law, or the application of such a law, that limits or restricts a claimant's use or development of land (including a structure affixed to land)."[234] In *Fortress Bible Church v. Feiner*, the court found that the Town of Greenburgh violated RLUIPA when it used environmental review to delay and reject a Pentacostal Church's proposed project.[235] The court observed that the town had rejected the recommendation of its own Planning Commissioner that the project's impacts did not warrant a positive declaration under New York's State Environmental Quality and Review Act (SEQRA) and initiated review anyway "after the Church refused to accede to the Town's demand that it donate a fire truck or provide some other payment in lieu of taxes."[236] The court also noted that a Zoning Board member had told the Planning Commissioner "on multiple occasions" that he should "stop" or "kill" the project, and that the Planning Commissioner (who disagreed) was replaced.[237] Although RLUIPA does not mention environmental laws, the Second Circuit concluded that environmental review fell within its scope when it was used "as a vehicle to

[230] Mihany, 819 F.3d at 606-12; Smith v. Town of Clarkton, 682 F.2d 1055, 1066 (4th Cir. 1982); Avenue 6E Investments, LLC v. City of Yuma, Ariz., 818 F.3d 493, 504-07 (9th Cir. 2016).
[231] This inference would be especially straightforward if the CEQA clearance at issue is an EIR or negative declaration because these clearances may not be issued until the project is officially approved or denied. 14 C.C.R. § 15025(b). Because of this, a party that wants a legitimate condition of approval (one which doesn't reduce density) placed on the project can ask for it at the same time they pursue their CEQA argument. If they make flimsy CEQA demands without asking for legitimate conditions of approval, it's a fair inference that they probably want to achieve through CEQA something that the HAA disallows.
[232] 694 F.3d 208, 217-18 (2d Cir. 2012).

Electronic copy available at: https://ssrn.com/abstract=3980396

resolve zoning and land use issues."[238] In short, the Court found bad faith: the town had "disingenuously used SEQRA to obstruct and ultimately deny the Church's project" and had "manipulated its SEQRA findings statement to 'kill' the project."[239]

Would reading HAA "disapproval" to encompass the bad-faith denial of a CEQA clearance "relieve[]" cities of complying with CEQA?[240] No. Consider the Stevenson St. project again. San Francisco's planning department prepared a full EIR for the project, which the planning commission certified as complete.[241] So long as the court concludes that the EIR was in fact legally sufficient, an order directing the city to approve the project would do no violence to the HAA's CEQA-savings clause.[242] The court could also allow the Board of Supervisors a brief window of time to decide whether to impose any additional mitigation requirements on the project, in light of the findings of the EIR.[243] This would honor CEQA's policy that elected officials bear final responsibility for deciding what to do about identified environmental impacts.[244]

---

[238] *Id*. [235] at 218.

[239] *Id*. [235] The Ninth Circuit has noted the argument that an application of CEQA might violate RLUIPA but has not reached the question. San Jose Christian Coll. v. City of Morgan Hill, 360 F.3d 1024, 1036 (9th Cir. 2004). Although no other circuits have squarely considered whether RLUIPA applies to environmental review, they have found that non-land use laws such as building or sewer codes might, citing *Feiner* and noting that "it is not the label that a government puts on its regulation that determines whether RLUIPA applies, but rather *how the regulation actually functions*." *See, e.g*., Redeemed Christian Church of God (Victory Temple) Bowie, Maryland v. Prince George's Cnty., Maryland, 17 F.4th 497, 509 (4th Cir. 2021) (emphasis added).

[240] CAL. GOV'T CODE § 65589.5(e).

[241] S.F. Planning Com'n Motions Nos. 20960 & 20961 (July 29, 2021), available at https://sfbos.org/sites/default/files/bag102621_agenda.pdf.

[242] We discuss the legislative history of this clause in Part IV, *infra*. By way of preview: there's no evidence that the legislature gave any consideration to the issues raised in this paper.

[243] The HAA specifies that a court which finds a violation "shall issue an order ... compelling compliance with this section within 60 days, including, but not limited to, an order that the local agency take action on the housing development project or emergency shelter." CAL. GOV'T CODE § 65589.5(k)(1)(A)(ii).

One wrinkle is that the city might use CEQA mitigation requirements pretextually. Recall that the HAA provides that a housing project "shall be subject only to the ordinances, policies, and standards adopted and in effect when a preliminary application" containing the required information is submitted. CAL. GOV'T CODE § 65589.5(o)(1). Yet subdivision (o) goes on to provide that a city *can* subject the project to a "ordinance, policy, standard, or any other measure" postdating the preliminary application if that measure is "necessary to avoid or substantially lessen an impact of the project" under CEQA. *Id.* § 65589.5(o)(2), (o)(2)(C). Thus, a city might try to impose onerous post hoc "measures" that it insists are "necessary to avoid or substantially lessen" CEQA impacts of the project but that in fact are not. An unlawful mitigation measure could come in at least two varieties: it could either (1) pertain to an impact that is cognizable under CEQA (say, water quality) but not be "necessary to avoid or substantially lessen" it; or (2) be "necessary to avoid or substantially lessen" an impact that is not cognizable under CEQA at all (say, gentrification). In an action brought under § 65589.5(k)(1)(A)(III)(ia), the court would need to determine whether the city's mitigation requirement runs afoul of subsection (o), likely by engaging in a bad faith/pretext analysis similar to that the Second Circuit employed in *Fortress Bible Church v. Feiner*.

[244] *See* CAL. PUB. RES. CODE § 21151(c) (providing that if a nonelected decision-making body of a local lead agency certifies a final EIR, the agency must allow the certification to be appealed to the agency's elected decision-making body, if one exists); 14 CAL. CODE REGS § 15090(b) (same). It might also be argued that a court must give the Board an opportunity to specify further mitigation conditions, in view of the CEQA provision stating, "Nothing in this section authorizes a court to direct any public agency to exercise its discretion in any particular way." CAL. PUB. RES. CODE § 21168.9(c). We disagree. The court order we're contemplating would be an order issued pursuant to the HAA, not pursuant to CEQA, so the limitations on judicial remedial authority under CEQA would not apply to it.

Electronic copy available at: https://ssrn.com/abstract=3980396

Another counterargument is that the Board in voting to reverse the EIR certification didn't actually determine whether the project could go forward or what its density would be. It just said it wanted more information. This finality argument would be a strong counter under general administrative law principles. But in taking a practical, real-world approach to "disapproval," the HAA undercuts it. For example, delay beyond the time limits of the PSA is explicitly an HAA disapproval,[245] even though such delay doesn't entail any *de jure* act or statement of reasons by the city. A formal vote reversing a CEQA clearance looks considerably *more* final and at least has the trappings of an agency action.

It is also worth emphasizing that while the terms "finality" and "exhaustion" connote on-off switches—a decision is either final or not, a plaintiff has either exhausted their administrative remedies or not—finality and exhaustion in the permitting context are always matters of degree. Thus, courts have long treated a city council's vote to deny a development proposal as final enough for judicial review, despite the fact that the developer could return to the city with a different proposal for the site that the council *might* find satisfactory. This doctrine reflects a practical judgment that requiring developers to suffer two or three rounds of defeat at the city council before gaining access to the courts would strike the wrong balance between conservation of judicial resources and municipal autonomy, on the one hand, and protection for the rights of property owners, on the other.

The HAA tips the balance toward earlier judicial review. It emphasizes that the public interest, rather than mere property rights, is at stake when a California city thwarts a housing development project. The HAA's judgment about the public interest, and its warning about municipal bad faith, ought to inform judicial thinking about finality and exhaustion in the housing context.

California's HCD has signaled support for reading "HAA disapproval" to include pretextual CEQA-clearance reversals.[246] In a letter to San Francisco about Stevenson St. and another project, the Department called the Supervisors' vote an "effective denial" and asked the city to explain its rationale within thirty days.[247] The letter emphasized, as we do, that disapproval includes "denial of other required land use approvals or entitlements necessary for the issuance of a building permit."[248] And it noted that, in light of the Supervisors' "various vague concerns" with the project, it was "unclear what actions these project applicants are required to take to advance these projects."[249] If an agency that the Legislature has authorized to enforce the HAA concludes that bad-faith denials of CEQA clearances are "disapprovals" within the meaning of the HAA,[250] a court need not go out of its way to conclude the same.

### 2. Enforcing CEQA Timelines in Light of the HAA

Another way for courts to tackle the problem of CEQA-laundered housing denials is to use the Legislature's bolstering of the HAA as an invitation to limit or reject *Schellinger Brothers v. City of Sebastopol*,[251] the case that rendered CEQA's one-year deadline practically unenforceable.

Under this approach, a court would not order the project approved (as in our first solution). Rather, the court would order the city to certify any legally sufficient CEQA study after the pertinent CEQA deadline has lapsed. By making CEQA's deadlines enforceable, this approach would also give practical effect to the HAA's incorporation of the PSA's timelines into the definition of "disapproval," as the PSA clock starts to run only after completion of CEQA review.[252]

As we explained in Part I, *Schellinger* held that judges may not order a city to certify an EIR (as opposed to ordering the city to make up its mind about whether to certify it).[253] *Schellinger* also said that the project applicant had, by cooperating with the city and making project revisions well past CEQA's deadline, forfeited its right to enforce the deadline.[254]

The most basic problem with *Schellinger* is that it makes a hash of the HAA's definition of "disapproval." As noted, the HAA defines disapproval to include noncompliance with the PSA deadlines, but the PSA clock only starts to run after CEQA review is done.[255] So if there's no practical way of forcing cities to comply with CEQA's deadlines, then the delay-oriented piece of the HAA's definition of disapproval is a dead letter. That doesn't befit any statute, let alone one which the legislature has declared to be super.

As for *Schellinger*'s laches holding (that the developer who cooperates past a deadline forfeits her right to enforce it), equitable doctrines are not supposed to be used in ways that "nullify an important policy adopted for the benefit of the public."[256] Whatever might have been said about the HAA when *Schellinger* was decided in 2009, there is no gainsaying that, today, the Act's policy of expeditious permitting is "important" and inures to the "benefit of the public.[257]

[251] 179 Cal. App. 4th 1245 (2009).
[252] CAL. GOV'T CODE § 65589.5(h)(6).
[253] *See supra* text accompanying notes 61-63.
[254] 179 Cal. App. 4th 1245, 1267–70. A future court might distinguish *Schellinger* on the ground that the project proposal at issue morphed considerably during the long period of CEQA review. *See id.* at 1250-53. On the other hand, cities should not be able to evade the CEQA deadlines by pressuring developers into revising their project proposals.
[255] CAL. GOV'T CODE § 65950.
[256] Golden Gate Water Ski Club v. Cty. of Contra Costa, 165 Cal. App. 4th 249, 263 (2008) (holding that laches is unavailable for this reason); Feduniak v. California Coastal Com., 148 Cal. App. 4th 1346, 1381 (2007) (same).
[257] The laches holding of *Schellinger* is also suspect on traditional equitable grounds. First, the doctrine of laches is only supposed to penalize plaintiffs who "unreasonabl[y]" delay bringing suit. Conti v. Bd. of Civ. Serv. Commissioners, 461 P.2d 617, 622 (Cal. 1969). *Schellinger* failed to ask whether it's reasonable for a developer whose business depends on securing discretionary permits from a city to cooperate with the city's review process well past any statutory deadline (bringing suit only as a last resort). Second, as an equitable doctrine, the laches defense should have no currency when the city acts in bad faith (has "unclean hands"), as San Francisco appears to have done in reversing the EIR certification for Stevenson St. *See* Prang v. Los Angeles Cty. Assessment Appeals Bd. No. 2, 54 Cal. App. 5th 1, 18 (2020) ("Factually, laches, as an equitable doctrine, is not available to a party with unclean hands.").

Electronic copy available at: https://ssrn.com/abstract=3980396

CEQA allows one year for completion of an EIR.[258] A recent study of housing project entitlements in twenty California cities found that the median project in San Francisco took twenty-seven months to entitle; only 5 percent were entitled in under a year.[259] Stevenson St. is more of the same. The project application was submitted on October 3, 2018.[260] The Initial Study, which determined that an EIR was required, was completed almost a year later.[261] By statute, however, an Initial Study is supposed to be completed within a *month*, not a *year*.[262] The planning department released its draft EIR for public comment not long after the Initial Study (March 11, 2020), but the department took ages compiling its response to comments, and the final EIR wasn't certified by the planning commission until July 29, 2021.[263] This was nearly three years after the developer's submission of the project application. And then came the appeal to the Board of Supervisors, resulting in further delay.

Bearing these facts in mind, and reading CEQA in light of the newly "super" policy of the HAA, a court might reasonably hold (1) that CEQA's deadlines are enforceable by mandamus regardless of whether the developer has cooperated with the city past the deadline (contra *Schellinger*), and (2) that if the applicable CEQA deadline has passed and a legally sufficient environmental review document has been prepared, the city must certify it.

The second holding might seem to depart from the background norm that a court can only order an agency to act, rather than telling it how to act.[264] But sometimes only one course of action is available to the agency, in which case a court may direct the agency to do what the law requires of it.[265]

In short, we're proposing that, in light of the HAA, courts hold that cities have a ministerial duty to certify any legally sufficient environmental review document once the CEQA review deadline has passed.[266]

[259] Moira K. O'Neill et al., Examining Entitlement in California to Inform Policy and Process: Advancing Social Equity in Housing Development Patterns 93 (Nov. 8, 2021), https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3956250.
[260] San Francisco Planning Com'n Motion No. 20961 (hearing date: July 29, 2021).
[261] Notice of Preparation of Environmental Impact Report, Case No. 2017-014833ENV, San Francisco Planning Department, Oct. 2, 2019.
[262] CAL. PUB. RES. CODE §§ 21080.1, 21080.2 (requiring lead agency to make "final" determination of whether to prepare an EIR, negative declaration, or mitigated negative declaration within thirty days of project application being determined to be or deemed complete).
[263] S.F. Planning Com'n Motions Nos. 20960 & 20961 (July 29, 2021), available at https://sfbos.org/sites/default/files/bag102621_agenda.pdf.
[264] CEQA's remedial provisions authorize courts to order "specific action as may be necessary to bring the [an agency] decision into compliance with" the statute, CAL. PUB. RES. CODE § 21168.9(a)(1), (3), but also declare, "Nothing in this section authorizes a court to direct any public agency to exercise its discretion in any particular way," CAL. PUB. RES. CODE § 21168.9(c).
[265] Berkeley Hillside Pres. v. City of Berkeley, 60 Cal. 4th 1086, 1122, 343 P.3d 834, 858 (2015), as modified (May 27, 2015) (stating that lower court on remand "may order preparation of an EIR only if, under the circumstances, the City would lack discretion to apply [an] exemption or to issue a negative declaration").
[266] A possible counterargument might be that this would only incentivize an anti-housing city council to put maximal pressure on the planning department so that it rejects the EIR of any large housing project in the first instance. That way, a city would avoid ever having a "legally sufficient EIR" for the court to order the city to

Electronic copy available at: https://ssrn.com/abstract=3980396

The courts could also give cities a brief window to decide what changes to the project or other mitigation should be required in view of the environmental study. This splitting of the baby—letting the politicians choose mitigation but not legally unnecessary environmental study past the CEQA deadline—would go a good distance toward reconciling CEQA with the HAA. It would breathe some life into the PSA deadlines (which the HAA incorporates into its definition of disapproval[267]) without impinging on municipal authority to impose mitigation conditions on development approvals (which the HAA countenances so long as they don't reduce the project's density[268]).

### 3. Levering "Pretext" for Judicial Review of CEQA-Clearance Denials

Our third solution is inspired by Chief Justice Roberts's opinion in *Department of Commerce v. New York.*[269] Instead of putting an expansive gloss on HAA "disapproval," or battling *Schellinger* to make the CEQA deadlines judicially enforceable, a court would hold that a city-council or planning-commission vote to deny a CEQA clearance is reviewable for pretext in limited circumstances. Specifically, a plaintiff's "strong showing of bad faith" would render the decision to require further environmental study reviewable (notwithstanding the usual exhaustion requirement), and, if the court determines that the city acted in bad faith, the court would hold the city's decision unlawful under background principles of administrative law.

This solution invites a number of questions. First, is it even available in California? Second, once the door has been opened to pretext inquiries in this context, what's to keep them from spreading across all of state administrative law, at a high cost to courts and agencies alike?[270] Third, would this solution be meaningful as a practical matter, given that the standard judicial remedy in CEQA cases is a remand for a do-over, which is basically an invitation for the bad-faith agency to better cover its tracks? Whereas our prior two solutions yield straightforward and effective remedies—a court order directing the city to approve the project (solution #1) or to certify a CEQA clearance (solution #2)—designing an effective remedy for pretextual use of CEQA without reference to HAA "disapproval" or the CEQA deadlines may be a bit trickier.

As to the first question: The solution is available in the sense that it hasn't been ruled out by the California Supreme Court. Although there is a pretty strong norm against looking behind the official record assembled by an agency, the Court has reserved the question of whether there

approve. However, this work-around might be difficult. Because the developer is paying for the EIR and hiring the consultants, a planning department will have trouble disguising unusually slow processing, and it cannot altogether refuse to consider a complete EIR. Yet, at least in some cities, there is still probably some risk of political pressure down the chain. *Cf.* David J. Barron, *From Takeover to Merger: Reforming Administrative Law in an Age of Agency Polarization*, 76 GEO. WASH. L. REV. 1095, 1096 (2008) (noting that, in the federal context, agency officials often want to align their actions with the preferences of their political overseers).

[267] CAL. GOV'T CODE § 65589.5(h)(6).

[268] CAL. GOV'T CODE § 65589.5(j)(1).

[269] 139 S. Ct. 2551 (2019).

[270] See sources cited in note 186, *supra.*

Electronic copy available at: https://ssrn.com/abstract=3980396

might be a "limited" exception for "agency misconduct."[271] The state supreme court has also allowed extra-record evidence in challenges to "ministerial or informal administrative actions," on the theory that they merit less deference.[272]

The second question—whether pretext claims can be cabined—is serious[273] but not hard to answer. The HAA and the institutions now being erected to enforce it offer guardrails. In light of the HAA's skepticism about municipal good faith, a court could hold that "CEQA pretext" claims are only available if the environmental clearance concerns an HAA-protected project. Or, going a step further, a court could hold that pretext claims are available only if HCD or the Attorney General makes the preliminary "strong showing of bad faith," or otherwise raises serious concerns about the city's development-review processes.[274] This holding would limit pretext litigation to cases where a coordinate branch of state government has balanced the benefits and costs and deemed the inquiry worthwhile.

The remedy question concerns us more.[275] If a court finds that a city's CEQA reversal was pretextual, must it send the whole thing back and give the city another chance to dress up its decision all over again? Not necessarily. The California Supreme Court has endorsed the "inherent power" of a trial court to send only *part* of a decision back to the agency, while retaining jurisdiction to issue judgment later.[276] Perhaps a court in a pretext case could treat a CEQA certification as mostly complete (and valid), retain jurisdiction, and give the city a short period of time to address any legitimate concerns identified by the court on a limited remand. This would light a fire under the city and ensure that the case comes back to the same judge.[277]

Other unusual remedies would also be worth considering. Consider what courts do when a decision maker is found to have prejudged the facts or otherwise manifested bias in violation of due process. Normally, the court disqualifies the biased arbiter and remands for a fair hearing before another hearing officer. The Court of Appeal has said that a city's "malicious[] or

---

[271] Western States Petroleum Ass'n v. Superior Court, 888 P.2d 1268, 1276 n.5 (Cal. 1995); *see id.* at 1278 (leaving open the possibility that such evidence may be admissible "under unusual circumstances or for very limited purposes not presented in the case now before us").

[272] *Id.* [271] at 1277; *see* Michael Asimow, *The Scope of Judicial Review of Decisions of California Administrative Agencies*, 42 UCLA L. REV. 1157, 1234-37 (1995) (discussing and critiquing the use of an "open record" in these cases).

[273] *See supra* Part II.A (discussing reasons why courts generally abjure inquiry into pretext).

[274] *Cf.* Letter from Shannan West, Housing Accountability Unit Chief, Dep't of Hous. & Cmty. Dev., to Kate Conner, LEED AP, Manager, Priority Projects and Process, San Francisco Planning Dep't, Nov. 22, 2021 (on file with authors) (concluding, "HCD is concerned specifically that the Stevenson Project and O'Farrell Project that have been effectively denied without written findings as well as larger trends in the City/County's review of housing") (emphasis added).

[275] *See supra* text accompanying notes 188-190.

[276] Voices of the Wetlands v. State Water Res. Control Bd., 257 P.3d 81, 98-99 (Cal. 2011) (stating that administrative mandamus "impose[s] no absolute bar on the use of prejudgment limited remand procedures such as the one employed here").

[277] Although the traditional remedy is to give the city another chance to rationalize its pretextual decision to require further environmental studies, the administrative mandamus statute also allows a court to order a city to "take such further action as is specially enjoined upon it by law." CAL. CIV. PROC. CODE § 1094.5(f). This provision therefore may authorize a stronger remedy, when read in light of the HAA's definition of disapproval or the synergism of PSA and the CEQA time limits.

Electronic copy available at: https://ssrn.com/abstract=3980396

arbitrar[y]" refusal to certify a CEQA document violates due process.[278] If that's right, a city council's bad-faith reversal of a CEQA clearance would violate due process too, and the biased decision maker should be disqualified on remand. If just a few councilmembers were found to be biased, a court could disqualify them and remand for a do-over by the rest of the council (if a quorum remains).[279] But a court generally cannot disqualify the whole decision-making body that must decide the case, so there is no analogous remedy if a quorum of the council has shown bad faith.[280] Hence the need for innovation beyond the usual do-over remedy.[281] On the other hand, the judicial norm against telling agencies what they must do is very strong, and without specific textual authorization—e.g., the HAA directing courts to order projects approved, or CEQA specifying deadlines for completion of environmental review—we fear that judges would be reluctant to deviate from the standard remedy, even in a pretext case.

One more point about remedies is worth mentioning. Insofar as bad-faith denials of a CEQA clearance violate due process, the city is liable for damages.[282] The prospect of having to compensate a developer for holding costs and the expense of additional environmental studies might be enough to discourage some cities from trying to launder housing denials through CEQA.

* * *

After a forty-year saga, the HAA is at a moment of truth. Will courts nodding to background principles of administrative law stand by while city councils deny 500-home projects on frivolous environmental grounds? Or will courts take to heart the HAA's renunciation of the old ways and appreciate—finally—that housing is the rare domain in which city councils are not to be trusted at all?

---

[278] Sunset Drive Corp. v. City of Redlands, 73 Cal. App. 4th 215, 225, 86 Cal. Rptr. 2d 209, 217 (1999).

[279] Nasha v. City of Los Angeles, 125 Cal. App. 4th 470, 484, 22 Cal. Rptr. 3d 772, 781 (2004) (vacating a decision where the outcome was determined by the vote of a council member who was not a "reasonably impartial, noninvolved reviewer").

[280] Caminetti v. Pac. Mut. Life Ins. Co. of Cal., 139 P.2d 908, 920 (1943). But in at least one case, this rule did not apply where there was a legally sufficient underlying decision that the court could let stand. *See* Mennig v. City Council, 86 Cal. App. 3d 341, 351–52 (1978) (disqualifying the city council because it was "embroiled" in the dispute and letting stand the civil service commission's earlier decision).

[281] Consider the following thought experiment: what if a court, after concluding that an entire city council must be disqualified, remanded to a *different* city council? For example, what if the court disqualified the San Francisco Board of Supervisors from certifying the EIR as to Stevenson St. and remanded to the Oakland City Council? (No doubt Oakland would have considerably less hesitation in helpfully approving a legally sufficient EIR on behalf its neighbor...while also getting to bill its time!). This solution strikes us as promising, but it would probably require explicit legislative authorization.

[282] 73 Cal. App. 4th 215, 225, 86 Cal. Rptr. 2d 209, 217 (1999) (holding that a city's "malicious[] or arbitrar[y] refus[al] … to complete [within the statutory time period] an EIR for a project which requires one" period violates due process and exposes the city to liability for damages under 42 U.S.C. § 1983).

## III. Calibrating Environmental Review to the Scope of Municipal Discretion Under the HAA

This paper has focused thus far on whether the HAA, CEQA, or background principles of administrative law can provide a remedy if a city refuses to approve a legally sufficient CEQA clearance for a housing development project, in order to pressure the developer to withdraw or agree to a density reduction that the HAA prohibits. This Part takes up the prior question of what *is* a legally sufficient CEQA review when the project in question is protected by the HAA. We argue that present-day conventions rest on a fundamental mistake about the proper scope of CEQA review. The typical HAA-protected project should trigger only a very narrow review.

CEQA requires state and local agencies that have discretion to choose among possible options to study environmental effects before making their choice.[283] In theory, this leads to better agency decisions. But when other laws require an agency to select a particular option, CEQA doesn't apply.[284] There's no reason to write a detailed list of the pros and cons of different options if you know from the start exactly which choice you have to make.

When a developer submits a housing proposal, the HAA substantially limits the choices open to the city. So you would think that review under CEQA would be limited accordingly. You would, unfortunately, be wrong—at least as a description of current practice.[285]

So it is that a proposal to build 500 apartments on a downtown San Francisco parking lot, a block from the subway, in a designated "priority development area" under the region's climate plan, ended up mired for years in the most extensive and costly form of environmental review required by CEQA: the EIR.

And why? Because San Francisco's planning department had concluded, on the basis of a 342-page Initial Study, that a "fair argument" could be made that the Stevenson St. project may have a significant local environmental impact in the form of shadows, wind, or (during construction) noise and air pollution.[286] The Initial Study evaluated the project's potential impact relative to current environmental conditions nearby.[287] It did not ask whether the project would have a significant marginal impact, relative to any other project of the size that the HAA entitles the developer to build on the site.

If the Stevenson St. project's marginal impact would be close to nil (as we think likely), then the EIR was an environmentally pointless exercise. Its real function, apparently, was to give local

[283] CAL. PUB. RES. CODE § 21080(a) (CEQA applies to "discretionary projects proposed to be carried out or approved by public agencies").
[284] KOSTKA & ZISCHKE, *supra* note 21, §§ 4.24 - 4.26A.
[285] *See infra* notes 286-288 and 299 (explaining course of environmental review for Stevenson St. project in San Francisco). Discussions with leading CEQA practitioners have persuaded us that the Stevenson Street project's EIR is representative of current practice.
[286] Notice of Preparation of Environmental Impact Report, Case No. 2017-014833ENV, San Francisco Planning Department, Oct. 2, 2019.
[287] *Id.* [286] at 2-3, 73-218.

Electronic copy available at: https://ssrn.com/abstract=3980396

activists and city officials a way to tie up the project until the developer either walked away or paid off the politically connected nonprofit that led the charge against it.[288]

The argument of this Part is that the scope of CEQA review of housing development projects should be tailored to the scope of municipal discretion. A housing project should require an EIR only if the city exercises discretion to shape the project in some way that generates a significant marginal impact, relative to what the HAA compels the city to approve.[289] This approach would not "relieve local governments from complying with" CEQA.[290] But it would require overturning or significantly limiting several judicial precedents that have been incorporated into the official CEQA Guidelines.[291] As such, our proposal poses a stark test of whether the HAA really is a super-statute, one which "sticks in the public culture" and exerts "a broad effect on the law."[292] If courts and the gubernatorial appointees responsible for the CEQA Guidelines get behind our approach, then the HAA will in fact "meaningfully and effectively curb[] the capability of local governments" to hobble housing development projects.[293] If they do not, there can be little doubt that NIMBY ("Not In My Back Yard") cities will become ever more expert at exploiting CEQA to undermine the HAA.

## A. "Effect" Relative to What? Defining a Reference Alternative for CEQA Review of HAA-Protected Projects

We begin with an elementary point about causation. It is senseless to try to characterize the environmental effect of a proposed housing project without comparing it to some alternative use of the site. Consider an analogy: What is the effect of a new drug or medical device? The answer depends on what you're comparing it to. Relative to a placebo, the effect of the new drug may be large. Compared to the best treatment currently in use, the effect of the very same drug could be small or even negative.[294]

The same goes for housing projects. They have effects only when they are compared to some alternative. Let's call the point of comparison the reference alternative. What is conventionally labeled "the baseline" in an environmental impacts study is, properly understood, a compound of two things: an alternative use of the site (the "reference alternative") and a projection of environmental conditions in and around the site conditional on that use of it.

---

[288] *See* Heather K. Knight, *S.F.'s Real Housing Crisis: Supervisors Who Took a Wrecking Ball to Plans for 800 Units*, S.F. CHRONICLE, Oct. 30, 2021 (quoting one supervisor who said he'd "feel very good about this vote" if the project site becomes "a 100% affordable housing project," and another who complained that the developer hadn't struck a deal with a local nonprofit, TODCO); J.K. Dineen, *'You Don't Mess with Him': How an S.F. Housing Advocate Wields Power by Funding Ballot Measures*, S.F. CHRONICLE, Nov. 18, 2021 (profiling the head of TODCO).

[289] CEQA is not an independent source of municipal discretion. CAL. PUB. RES. CODE § 21004 ("In mitigating or avoiding a significant effect of a project on the environment, a public agency may exercise only those express or implied powers provided by law other than this division.").

[290] CAL. GOV'T CODE § 65589.5(e).

[291] *See infra* notes 314-320 and accompanying text.

[292] Eskridge & Ferejohn, *supra* note 10, at 1216.

[293] CAL. GOV'T CODE § 65589.5(a)(2)(K).

[294] These points follow from what is now called the "potential outcomes" framework for causal inference. *See generally* Donald B. Rubin, *Causal Inference Using Potential Outcomes: Design, Modeling, Decisions*, 100 J. AM. STATISTICAL ASS'N 322 (2005).

Electronic copy available at: https://ssrn.com/abstract=3980396

CEQA analyses, relying on CEQA caselaw, usually elide this fundamental point. By convention, they purport to measure the "effect" of a project relative to "current environmental conditions" on the site and in its vicinity.[295] This is a misleading point of reference if current environmental conditions would change absent the project. No medical researcher would measure the "effect" of an experimental treatment by comparing the health status several years in the future of elderly patients who received the treatment with their health at the time the treatment was administered. That comparison would obscure the effect of the treatment, because old people tend to decline as they age.

The CEQA analyst's conceptual mistake about baselines is not a problem if the permitting agency has authority to deny the project and doing so would maintain current environmental conditions. In such circumstances, the current-environmental-conditions baseline is equivalent to treating the "no-action alternative" as the reference alternative. This is like a placebo reference condition in a drug trial.

But the current-environmental-conditions baseline is nonsensical when the public decisionmaker lacks legal authority to maintain it. This is precisely the situation that cities face when developers propose HAA-protected housing projects. Cities may place discretionary conditions of approval on such projects, but they may not deny the project or reduce its density.[296] The environmental impact of the project should therefore be gauged relative to a reference-alternative project of the scale the city is required by law to approve. Because the purpose of CEQA is to guide the exercise of discretion, the only "effects" that belong in a CEQA-mandated environmental review are those that would be caused by the agency's exercise of discretion.

* * *

How would this work in practice? The first step in CEQA review (for non-exempt projects) is preparation of an Initial Study, which determines whether the project will be processed with an EIR or a simpler negative declaration. An EIR is required if the Initial Study reveals any "fair argument" that the project "may" have a significant impact on the environment.[297] Current practice elides the question of whether potential impacts are fairly traceable to the agency's exercise of discretion.

An HAA-informed protocol for CEQA review of housing projects would pose the threshold HAA question at the outset of the Initial Study: Does the project as proposed comply with applicable, objective general plan, zoning and development standards, as defined in the HAA?[298]

---

[295] *See generally* KOSTKA & ZISCHKE, *supra* note 21, §§ 12.16 - 12.20 (summarizing CEQA caselaw and guidelines about baselines).

[296] CAL. GOV'T CODE § 65589.5(j)(1). Again, CEQA is not an independent source of discretion—"a public agency may exercise only those express or implied powers provided by law other than this division." CAL. PUB. RES. CODE § 21004.

[297] KOSTKA & ZISCHKE, *supra* note 21, §§ 6.1 - 6.80.

[298] Cal. Gov't Code 65589.5(f)(4). This inquiry should address only those standards of which the city gave proper notice to the developer of noncompliance, as specified in Cal. Gov't Code 65589.5(j)(2). Note also that if the project qualifies for a density bonus under state law, this will render some local development standards inapplicable. *See generally* JON GOETZ & TOM SAKAI, GUIDE TO THE CALIFORNIA DENSITY BONUS LAW (rev'd Jan. 2021).

Electronic copy available at: https://ssrn.com/abstract=3980396

If this question is answered affirmatively, the project is HAA-protected, and the city may deny or downsize the project only if it violates a written, objective health or safety standard within the meaning of the HAA. The Initial Study for an HAA-protected project should gather information about potential health / safety violations and determine whether a preponderance of the evidence establishes a violation. A conventional CEQA review (using a no-project or current-environmental-conditions baseline) is in order only if such a violation is established, because in that case the city may deny the project.

If an HAA-protected project doesn't violate health or safety standards, the city's discretion is limited to altering the project with conditions of approval that do not reduce its density, and the CEQA baseline should be defined accordingly.

There are two plausible reference alternatives in this circumstance. First, the analysis could proceed using a project-as-proposed benchmark. The reviewer would inventory any discretionary conditions of approval that the city is considering imposing on the project, and then benchmark (1) environmental conditions if the project goes forward with the discretionary condition(s) imposed, against (2) environmental conditions if the project goes forward without the panels. The difference represents the environmental effect of the city's exercise of discretion.

To illustrate, if a city was considering a discretionary condition of approval that would require rooftop solar panels, and concerns were raised about glare from the panels, the Initial Study would undertake to determine whether there is a fair argument that the rooftop solar panels may cause a significant environmental impact in the form of glare, relative to the scenario in which the city approves the project in the form it was proposed.

Alternatively, the city could posit a green-reference benchmark, measuring the impact of an HAA-protected project relative to a model "green" project of the same density on the same site. The green-reference alternative might be defined as a project that provides the minimum number of on-site parking spaces; that uses low-energy building materials; and that minimizes impermeable ground cover (insofar as the city has authority to impose such conditions). The key point is that the green reference alternative would be a legally available option, and as such represents an informative benchmark against which to compare the proposed project.

Under either model, it would be the rare HAA-protected project that requires an EIR. Cities do not often impose conditions that reduce environmental amenities in the vicinity of a project, so the project-as-proposed benchmark would yield *pro forma* negative declarations in most cases. As for the green-reference benchmark, developers who anticipate opposition from neighbors, unions, or other interest groups would likely conform their proposal to the green benchmark, which would result in a negative declaration. If the project as proposed is HAA-protected and uses the green-reference design, then by construction it would have no environmental effects for CEQA purposes.[299]

[299] Needless to say, the environmental studies prepared for the Stevenson St. project in San Francisco did not hew to these principles. The HAA was nowhere mentioned in the Initial Study. The study did briefly discuss general plan and zoning standards, noting one potential violation, but it did not distinguish objective from subjective standards or explain whether the city had provided the developer with timely written notice of noncompliance. Notice of Preparation of Environmental Impact Report 67-71, Case No. 2017-014833ENV, San Francisco Planning

Electronic copy available at: https://ssrn.com/abstract=3980396

## B. Does CEQA Allow It?

The idea of tailoring the scope of environmental review to the scope of agency discretion has precedent under statutory analogues to CEQA at the national level and in New York. In *U.S. Department of Transportation v. Public Citizen*, the U.S. Supreme Court held that an environmental impact study prepared by the Department in connection with the North American Free Trade Agreement need not analyze pollution resulting from an increase in Mexican truck traffic, because the Department had no legal authority to exclude Mexican trucks.[300] "[W]here an agency has no ability to prevent a certain effect *due to its limited statutory authority over the relevant actions*, the agency cannot be considered a legally relevant 'cause' of the effect" and need not consider it during environmental review.[301] To date, no California court has ruled on whether CEQA incorporates the proximate-causation theory of *Public Citizen*, but California courts do seek guidance from NEPA precedents when tough questions arise under CEQA.[302]

In New York, courts got to a similar place by rejecting the "no-build baseline" in cases where the project proponent may build something as of right.[303] Specifically, if a developer proposes an office or residential building that would require rezoning, on a site where a smaller building is allowed as of right, the effect of the proposed project is analyzed relative to the "as-of-right

---

Department, Oct. 2, 2019. Putative effects were assessed relative to current conditions on the site and in the vicinity. *See id*. at 2-3, 59-67, 73-218. Had the analysis proceeded as we recommend, the Initial Study probably would have concluded that no EIR was required, since the city had not proposed (so far as we can tell) any discretionary condition of approval that would damage the environment; since nothing in the Initial Study identified any respects in which the proposed design and materials fell short of any green-design norm; and since the study did not identify an objective, properly noticed general plan or zoning standard, or health or safety standard, that the project arguably violated.

The Initial Study did note that the project relied on waivers of several local development regulations, pursuant to state density bonus law. *Id.* at 67-68. However, the HAA protects projects that rely on state density bonus law. CAL. GOV'T CODE § 65589.5(j)(3) ("For purposes of this section, the receipt of a density bonus pursuant to Section 65915 shall not constitute a valid basis on which to find a proposed housing development project is inconsistent, not in compliance, or not in conformity, with an applicable plan, program, policy, ordinance, standard, requirement, or other similar provision specified in this subdivision.").

[300] 541 U.S. 752, 767 (2004)

[301] *Id.* [300] at 770 (emphasis added). The current status of this principle under NEPA is uncertain. The Trump Administration issued regulations that read *Public Citizen* broadly. *See* CEQ, Update to the Regulations Implementing the Procedural Provisions of the National Environmental Policy Act, 85 Fed. Reg. 43,305, 43,343-44, 43,375 (July 16, 2020). The Biden Administration then issued regulations that read it quite narrowly—essentially an option that an agency may elect in some circumstances rather than as a constraint on the scope of review. *See* CEQ, National Environmental Policy Act Implementing Regulations Revisions, 87 Fed. Reg. 23,453, 23,465 (April 20, 2022) (stating that *Public Citizen* addressed a "unique context" and that the Trump rule "inappropriately transform[ed] a Court holding affirming an agency's exercise of discretion in a particular factual and legal context into a rule that could be read to limit agency discretion"). *See also id.* at 23,466 ("CEQ also is removing the potential limitations on consideration of … "effects that the agency has no ability to prevent due to its limited statutory authority or would occur regardless of the proposed action").

[302] KOSTKA & ZISCHKE, *supra* note 21, § 22.4 (observing that "NEPA cases continue to play an important role in adjudication of CEQA cases, *especially when a concept developed in NEPA decisions has not yet been applied in CEQA cases"*) (emphasis added).

[303] MICHAEL B. GERRARD ET AL., ENVIRONMENTAL IMPACT REVIEW IN NEW YORK § 8A.04 (2021).

Electronic copy available at: https://ssrn.com/abstract=3980396

alternative" rather than the "no-build alternative" or "current environmental conditions."[304] Because the city lacks authority to deny the smaller project, it would be uninformative to conduct an environmental review using a no-project baseline.

Like NEPA and New York's SEQRA, CEQA exempts ministerial permits from environmental review.[305] Discretion is always the trigger.[306] However, the Court of Appeal has held in several cases that if a city has any discretion to shape a project, the city must analyze and mitigate the impact of project "as a whole" relative to a current-environmental-conditions baseline.[307] Projects whose permitting is "not wholly ministerial and not entirely discretionary but a compound of both" have been treated as entirely discretionary for CEQA purposes.[308] In one case, an EIR was produced using a zoning-complaint-project baseline, similar to New York practice, and the California Court of Appeal rejected it out of hand.[309]

This line of cases is rooted in CEQA's traditional premises: that new construction is presumptively bad for the environment,[310] and that CEQA should be construed broadly to give "the fullest possible protection" to the environment.[311] The working assumption is that requiring more environmental review and mitigation is the greener way. But as we've seen, the HAA

---

[304] *Id.* [303]; NYC MAYOR'S OFFICE OF ENV. COORDINATION, CEQR TECHNICAL MANUAL § 2.7 (Nov. 2020), https://www1.nyc.gov/assets/oec/technical-manual/2020_ceqr_technical_manual.pdf ("Sometimes, private applicants state an intention to develop their property in the future, with or without approval of a proposed project.... If the lead agency determines it is reasonable to assume that the applicant's stated No-Action scenario would occur in the future without the proposed project, the scenario would constitute the No-Action scenario for analysis purposes.").

[306] CAL. PUB. RES. CODE § 21080(a),

[307] People v. Dep't of Hous. & Cmty. Dev., 45 Cal. App. 3d 185 (1975); Friends of Westwood, Inc. v. City of Los Angeles, 191 Cal. App. 3d 259 (1987); Friends of Juana Briones House v. City of Palo Alto, 190 Cal. App. 4th 286 (2010). *See also* KOSTKA & ZISCHKE, *supra* note 21, § 4.27. *But see* McCorkle Eastside Neighborhood Group v. City of St. Helena, 31 Cal. App. 5th 80 (2018) (holding that limited discretion conferred by city's design review ordinance does not trigger CEQA review, because the type of aesthetic changes authorized by the code could not mitigate environmental impacts within the meaning of CEQA). Note also that the CEQA Guidelines define "effect" and "impact" (synonymously) to mean "effects which are caused by the project." 14 CAL. CODE REGS § 15358. Future environmental conditions not caused by the discretionary project are not impacts within the meaning of CEQA. It follows that a CEQA analysis ought to reflect some choice of a reference alternative (as opposed to the "current environmental conditions" baseline), for, as we have seen, it is nonsensical to speak of the "effect" of a course of action without comparing outcomes under that scenario to outcomes under an alternative course of action.

[308] People v. Dep't of Hous. & Cmty. Dev., 45 Cal. App. 3d at 193.

[309] Woodward Park Homeowners Assn., Inc. v. City of Fresno, 150 Cal. App. 4th 683, 707-09 (2007) (rejecting EIR whose "bottom-line conclusions ... emphasized the marginally increased impacts of the proposed project over build-out under existing zoning"). The court faulted the EIR for not "present[ing] a clear or a complete description of the project's impacts compared with the effects of leaving the land in its existing state." *Id.* at 708. Left unaddressed was the question of whether the city had legal authority to choose a project alternative that would leave the land in that state. *See also* City of Carmel–by–the–Sea v. Board of Supervisors, 183 Cal. App. 3d 229, 246 (1986) (holding that county must consider impacts of rezoning on existing physical environment; comparison of project possible under old zoning with project possible under proposed new zoning "bears no relation to real conditions on the ground").

[310] See, e.g., *Friends of Westwood*, 191 Cal. App. 3d at 266-67 ("As applied to private projects, the purpose of CEQA is to *minimize the adverse effects of new construction* on the environment. … Thus the touchstone is whether the approval process involved allows the government to shape the project *in any way* which could respond to any of the concerns which might be identified in an environmental impact report.") (emphasis added).

[311] *Id*. [310] at 267 ("doubt whether a project is ministerial or discretionary should be resolved in favor of the latter characterization").

Electronic copy available at: https://ssrn.com/abstract=3980396

inverts this premise when it comes to housing. The HAA declares new construction of zoning-compliant housing projects to be presumptively good for the environment,[312] and it aims to "meaningfully and effectively curb[] the capability of local governments to deny, reduce the density for, or render infeasible housing development projects."[313] A reading of CEQA that leaves cities with open-ended discretion to require time-consuming studies and costly mitigation of so-called "impacts" that are not even caused by the city's exercise of discretion would do pointless violence to the policy of the HAA.

In the near term, however, any effort to use the HAA to put a limiting gloss on misbegotten CEQA-baseline precedents would be complicated by the fact that those precedents have been incorporated into the official CEQA Guidelines.[314] The Guidelines stipulate that "the physical environmental conditions in the vicinity of the project, as they exist at the time the notice of preparation [of the EIR] is published . . . will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant."[315] This "existing conditions baseline" "shall not include hypothetical conditions, such as those that might be allowed, but have never actually occurred, under existing permits or plans."[316]

The only exception that the Guidelines presently recognize is that an agency may use a "projected future conditions . . . baseline . . . if it demonstrates . . . that use of existing conditions would be either misleading or without informative value to decision-makers and the public."[317] This exception codifies a practice that developed around very long-term projects, such as railways.[318] Neither the Guidelines nor any published case approves the use of a "future-conditions baseline" where the future in question is a build-out of the project site under an alternative development scenario. Then again, neither the Guidelines nor any published case has considered the implications of the HAA for CEQA baselines or causation.

Though it wasn't written for the HAA problem, the Guidelines' narrow allowance for "future conditions" baselines recognizes that circumstances may arise where the conventional baseline is inappropriate. And the crux of our argument is that it is misleading and uninformative—and a waste of resources, and a serious threat to the environmental and housing policies of the HAA—to require developers to engage in a multi-year analysis of putative environmental "effects" that are the byproduct of a nondiscretionary statutory mandate, not the discretionary choices of the local permitting authority itself.

We have found only one case in which a court considered the relationship between the HAA and CEQA. *Sequoyah Hills Homeowners Assn. v. City of Oakland*[319] concerned a housing development on vacant land in the Oakland Hills. The zoning of the site allowed up to eighty-eight single-family homes, but the developer "'pre-mitigated' by proposing to build only 46

Electronic copy available at: https://ssrn.com/abstract=3980396

homes."[320] The city ordered an EIR using a current-conditions baseline and evaluated several alternatives, including one with only thirty-six homes.[321] Neighboring homeowners sued, arguing that the EIR was insufficient because it failed to analyze additional lower-density alternatives as a way of mitigating the visual impact of the project.[322] The Court of Appeal held that the city did not abuse its discretion.[323] CEQA only requires consideration of "feasible" alternatives,[324] the court emphasized, and the reduced-density alternatives urged by the neighbors were foreclosed by the HAA and therefore infeasible as a matter of law.[325]

What the court did not point out (perhaps because no one challenged the city's use of a current conditions baseline) is that an EIR focused on the visual impacts of the Sequoyah Hills project was a huge waste of time and money. No one disputed that the project "would stand out because of its relatively higher density and its location on a prominent hillside overlooking the existing residential development."[326] But the city didn't have discretion to make the developer choose an alternative with fewer homes, so the impact of the project should not have been characterized as "significant" unless it was shown that *a significantly less obtrusive project of the same density could have been built on the site*.[327]

But the recent decision in *Save the Hill Group v. City of Livermore*[328] could point the other way. In the EIR for a development of forty-four residences near a wetland, the city noted, in its discussion of the no-project alternative, that that the area was already zoned residential so it was "not necessarily feasible to assume the site would remain undeveloped in the long term."[329] The court faulted the EIR for not addressing the feasibility of downzoning the site or buying and preserving it with a conservation fund, something the city had recently done with another nearby property.[330] *Save the Hill* might be read broadly to require environmental impacts to be evaluated relative to a "current conditions" baseline for every project whose site could, in theory, be purchased by the city and preserved in its current form. The preservation alternative is in some sense "legally available" if the developer would be willing to sell the parcel at a price that the city could pay.[331]

*Save the Hill* did not, however, consider the HAA, *Sequoyah Hills*, or CEQA's core distinction between ministerial permits (exempt from environmental review) and discretionary permits

[320] *Id.* [319] at 709.
[321] *Id.* [319]at 710.

[325] *Id.* [319] at 715-16.
[326] *Id.* [319] at 711.
[327] And even that's a stretch, as nothing in the *Sequoyah Hills* opinion suggests that Oakland had open-space-visual-impact guidelines, from which a least-intrusive project design (i.e., the green-reference benchmark) might be adduced. Absent such guidelines, the CEQA review should have used a project-as-proposed benchmark.
[328] 76 Cal. App. 5th 1092 (2022), *review denied* (July 13, 2022).
[329] *Id.* at 1109.
[330] *Id.* at 1110-12.
[331] Indeed, if a state or local ordinance authorizes the city to acquire the site by eminent domain, the preservation alternative would be legally available even if the developer is not willing to sell the parcel.

Electronic copy available at: https://ssrn.com/abstract=3980396

(subject to environmental review).[332] *Save the Hill* vitiates CEQA's ministerial/discretionary distinction because a city with available discretionary funds can always, in theory, purchase any given site on which a project subject to ministerial review has been proposed, thereby transmuting the ministerial project into a discretionary project. Contra *Save the Hill*, a city's discretion in the permitting context must mean *regulatory* discretion, not *enterprise* discretion, i.e., the discretion the city could exercise if it were to acquire the site as a market participant.[333]

At a minimum, courts should limit *Save the Hill* to the circumstances implied by its peculiar facts—specifically, to projects on unusual sites that, in the normal course of events, would probably be acquired and preserved by the city regardless of whether a housing project was proposed.[334] Otherwise, a city could foist pointless delays and paperwork (through an EIR) on any project just by establishing a nominal "land preservation fund" and putting enough money in it to create the theoretical possibility of buying any site on which a housing development happens to be proposed.[335]

Instead of reading *Save the Hill* broadly, future courts should follow another recent case, *Tiburon Open Space Committee v. County of Marin*[336] which reinforced *Sequoyah Hills* and vindicated the larger principle of tailoring CEQA review to the scope of an agency's regulatory discretion. At issue was a low-density residential project nearly as old as CEQA itself. In 1976, litigation between the developer and the county ended with a stipulated settlement that entitled the developer to build forty-three single-family homes on half-acre lots.[337] But nothing comes easy for developers in Marin, and the project went through additional litigation (concluding with a stipulated judgment in 2007) and an EIR process that took nearly a decade to wrap up.[338] Opponents challenged the EIR for not adequately analyzing a reduced-density alternative with thirty-two rather than forty-three homes.[339] The court's response was sharp and to the point: the thirty-two-unit alternative was "legally infeasible," because inconsistent with the 1976 and 2007

---

[332] *See* CAL. PUB. RES. CODE § 21080(a) (CEQA applies to "discretionary projects proposed to be carried out or approved by public agencies"); Protecting Our Water & Env't Res. v. Cnty. of Stanislaus, 10 Cal. 5th 479, 472 P.3d 459 (2020) (explicating the ministerial/discretionary line).
[333] *Cf.* Joseph L. Sax, *Takings and the Police Power*, 74 YALE L.J. 36, 62-63 (1964) (distinguishing between government acting in regulatory and enterprise capacities for purposes of a theory of unconstitutional takings).
[334] In *Save the Hills*, the city had two conservation land-acquisition funds that it had recently used nearby, and the project site was eligible for acquisition using these funds. 76 Cal. App. 5th at 1109-12; Dan T. Coenen, *Untangling the Market-Participant Exemption to the Dormant Commerce Clause*, 88 MICH. L. REV. 395 (1989) (exploring distinction in Dormant Commerce Clause jurisprudence between government as regulator and government as market participant),
[335] In discussing the possibility that the City change the zoning designation at the project site, the Court seemed to assume that the only potential difficulty was the possibility of a Takings Clause lawsuit. Id. at 1111-12 & n.5. But downzoning the project site very likely would violate state law. The HAA requires cities to process housing project applications on the basis of standards in place at time of application, and this takes downzoning off the table. CAL. GOV'T CODE § 65589.5(o). And *Sequoyah Hills* held that an EIR needn't consider "reduced-density alternatives" that HAA doesn't permit. CAL. GOV'T CODE § 66300(b), (i). Moreover, downzoning might separately violate the Housing Crisis Act, which disallows downzoning unless the City modifies zoning or standards elsewhere in the city to ensure no net loss in residential capacity. CAL. GOV'T CODE § 66300(b), (i).

[337] *Id.* at 710-11.
[338] Draft EIRs were prepared for previous iterations of the project in 1996 and 2001. The draft EIR for the project at issue in *Tiburon Open Space* decision was first circulated in 2011. *See id.* at 715, n. 6.
[339] *Id.* at 728-29.

Electronic copy available at: https://ssrn.com/abstract=3980396

settlements, and therefore "could legitimately have been omitted from the EIR."[340] Accordingly, any attack on the EIR's analysis of that alternative must fail.[341]

"The scope of environmental review must be commensurate with an agency's retained discretionary authority," the *Tiburon Open Space* court emphasized, "including any limitations imposed by legal obligations."[342] *Sequoyah Hills* was said to be "unusually instructive" on this point.[343] But the passage in *Tiburon Open Space* that most strongly encourages a rethinking of how CEQA applies to housing approvals that are ministerial in some respects but discretionary in others is the closing peroration.[344] Although "CEQA was meant to serve noble purposes," the court wrote, "it can be manipulated to be a formidable tool of obstruction, particularly against proposed projects that will increase housing density."[345] The court then critiqued CEQA as a statute that "has not aged well," one which is "worsening California's housing crisis" by serving as "the tool of choice for resisting change that would accommodate more people in existing communities."[346] The opinion concludes:

> It must be tough enough when the opposition is purely private. However, when private opposition is joined with official hostility, CEQA becomes an even more fearsome weapon. When the project proponent faces sustained private opposition, plus the combined animus of two levels of local government, the temptation to throw in the towel must be overwhelming.
>
> Something is very wrong with this picture.[347]

This is more a sensibility than a recipe for CEQA reform. But it is a striking illustration of how recent efforts to address California's housing shortage are leading judges and others to question the formerly sacrosanct CEQA. And, as we've shown in this section, the sensibility of *Tiburon Open Space* can be paired with its central legal proposition—calibrate the scope of environmental review to scope of agency discretion—to yield a CEQA that does not threaten HAA-protected projects.

## C. The Governor's Role

Courts are conservative creatures. It is rare that they upend long-established precedents—or editorialize against a statute. Although the newly-super HAA provides a very good rationale for courts to revisit, and limit, the dubious CEQA-baseline precedents, other actors also have important roles to play.

CEQA authorizes the Governor's Office of Planning and Research and the Natural Resources Agency to issue implementing guidelines.[348] At least once every two years, the Office of Planning and Research "shall recommend proposed changes or amendments" to the Guidelines, which the Natural Resources Agency then can certify and adopt.[349] If environmental review is to be reshaped by an HAA-informed theory of causation, the Guidelines are an excellent tool with which to do it.[350]

The Guidelines are a good tool for this purpose not only because making policy and changing direction is, by tradition, more squarely in the agency wheelhouse than the judicial wheelhouse, but also because of politics.[351] Through his appointments and directives, the Governor can shape the Guidelines.[352] And the Governor is probably better positioned than any other state-level actor to navigate the politically treacherous waters of CEQA reform.

Though CEQA was spawned at a moment of environmental idealism, the continued strength of CEQA today has much to do with the constellation of interest groups—first and foremost the building trades unions—that have mastered the art of using CEQA to extract costly concessions from developers.[353] In expensive housing markets, the threat of CEQA litigation and delay can

---

[348] CAL. PUB. RES. CODE § 21083.
[349] CAL. PUB. RES. CODE § 21083(f).
[350] The courts give substantial deference to the guidelines. *See* California Bldg. Indus. Assn. v. Bay Area Air Quality Mgmt. Dist., 62 Cal. 4th 369, 381 (2015) ("Whether the Guidelines are binding or merely reflect the Resources Agency's interpretation of the statute, we should afford great weight to the Guidelines when interpreting CEQA….").
[351] A further point: risk-averse developers will not push the CEQA envelope without a cooperative city partner (one which is willing to roll the dice on a streamlined CEQA review) and a strong basis for thinking that the courts will accept the innovation. Thus, if the Governor doesn't use the Guidelines to invite HAA-tailored CEQA analysis of housing projects, the courts may never have an occasion to consider whether this type of analysis is legally sufficient. Even if courts adopt our position that a bad-faith denial of a CEQA clearance violates the HAA (*see* Part II.C.1, *supra*), a developer would not succeed in challenging a city's denial of a negative declaration (in favor of a full EIR) if the city reasonably relied on existing CEQA precedents about causation and baselines. By contrast, if the Governor does use the Guidelines as we suggest, the interest groups that benefit from the status quo are sure to sue right away, and the courts have held that facial challenges to a new CEQA Guideline may be brought as soon as the Guideline takes effect. *See* Communities for a Better Env't v. Cal. Res. Agency, 103 Cal. App. 4th 98, 106, 126 Cal. Rptr. 2d 441, 446 (2002), as modified (Nov. 21, 2002) ("At issue in this case is whether the subject Guidelines, which public agencies must follow to implement CEQA, facially violate CEQA statutes and case law. As such, the matter presents a concrete legal dispute ripe for our consideration.").
[352] The Governor has the power to appoint the Director of Planning and Research. CAL. GOV'T CODE § 65038; *see id.* § 65037 (stating that the Director "shall be responsible to the Governor"). The Secretary of the Natural Resources Agency is appointed by the Governor, subject to Senate confirmation, and "hold[s] office at the pleasure of[] the Governor." CAL. GOV'T CODE § 12801. *See also* Miriam Seifter, *Gubernatorial Administration*, 131 HARV. L. REV. 483, 527 (2017) (noting the "substantial control governors possess over the majority of state agencies that have no constitutional status").
[353] The extent of what is sometimes called "CEQA greenmailing" is impossible to quantify because of nondisclosure agreements, but anecdotal evidence of the practice and, especially, the vehemence with which the building trades lobby against CEQA reform suggest that the problem is substantial. *See generally* Manuela Tobias, *What One Thing Do Republican Recall Candidates Blame for California's Housing Crisis?*, CALMATTERS, Sept. 7, 2021 (canvassing the debate over CEQA); Christian Britschgi, *How California Environmental Law Makes It Easy For Labor Unions To Shake Down Developers*, REASON, Aug. 21, 2019, https://reason.com/2019/08/21/how-california-environmental-law-makes-it-easy-for-labor-unions-to-shake-down-developers/ (discussing mechanisms and reviewing evidence of CEQA greenmailing); Matt Levin, *Commentary: Five Things I've Learned Covering California's Housing Crisis that You Should Know*, CALMATTERS, Jan. 6, 2021 (stating, as "Lesson 4," that "[t]he state construction workers'

Electronic copy available at: https://ssrn.com/abstract=3980396

be used to make developers sign project-labor and "community benefit" agreements with influential unions and nonprofits.[354] The building trades wield a lot of power in Sacramento, and in recent years they've derailed every legislative proposal for CEQA reform or streamlining unless it requires qualifying projects to use union labor.[355] Not even a trivial bill that would let churches build affordable housing without CEQA review could escape Labor's grip.[356]

But a popular governor should feel much less threatened by the building trades than the average state legislator, who needs campaign donations and third-party independent expenditures just for name recognition.[357]

Of course, no Governor can single-handedly make the HAA stick in a manner that limits abusive use of CEQA. If there were a legislative consensus that project-labor agreements are more important than housing production, the legislature could quickly abrogate any reformist CEQA Guidelines and then override a gubernatorial veto. But it's a fair hope that no such veto-proof consensus exists. California's Republican legislative caucus is no fan of CEQA,[358] and Democratic legislators are loathe to override their co-partisan Governor.[359] Moreover, politically vulnerable legislators, who wouldn't dare cast a roll call vote against the trades, may acquiesce in the appointment of pro-housing committee chairs, who in turn could block any bill that would undo a revision of the CEQA Guidelines. It is also possible that a transparent, public debate about CEQA abuse—a debate that would probably accompany any legislative effort to roll back the reformed Guidelines—might itself subtly alter the politics of CEQA reform, in a way that gives the HAA the upper hand.[360]

---

union has way more influence than you think it does," and detailing union's central role in killing bills that would create CEQA exemptions for housing development); Manuela Tobias, *Is Union Labor Requirement in the Way of Easing California's Affordable Housing Crisis?*, CALMATTERS, June 16, 2021 (reporting on unions' success in blocking any housing bill that does not include a "skilled and trained" labor requirement).

[357] The Governor as of this writing, Gavin Newsom, was elected by a twenty-four point margin, https://ballotpedia.org/California_gubernatorial_election,_2018, and defeated a recall attempt by the same margin, https://ballotpedia.org/Gavin_Newsom_recall,_Governor_of_California_(2019-2021). He has also railed against CEQA, calling it "so damn abused" and blaming Ronald Reagan for it. Tweet from @manuelatobiasm, reporting on Governor's news conference, May 13, 2022, 11:08 am, https://mobile.twitter.com/manuelatobiasm/status/1525176181707837441.

[358] Tobias, *supra* note 353.

[359] Joe Garofoli, *Why Lawmakers Won't Override a Veto from Newsom, or Any Other Governor, S.F. Chronicle*, Oct. 15, 2021.

[360] A side note: Given the constellation of interests with a stake in the CEQA and housing fight, one might worry that an unexpectedly broad reading of the HAA, or of CEQA, would undermine future legislative reform by making it harder for swing voters in the legislature to have confidence in the compromises they might secure. Professors Rodriguez and Weingast have argued that "expansionist" judicial interpretation of progressive federal statutes passed in the 1960s and early 1970s had exactly this effect vis-a-vis later Congresses. Daniel B. Rodriguez & Barry R. Weingast, *The Paradox of Expansionist Statutory Interpretations*, 101 NW. U.L. REV. 1207 (2007). Their argument has a lot of force in cases where an expansionist reading of the statute would disrupt a discernable legislative bargain. But where the statute being read expansively features a codified legislative instruction to read it

Electronic copy available at: https://ssrn.com/abstract=3980396

Although super-statutes on Eskridge and Ferejohn's telling embody great normative principles,[361] it appears that CEQA's continued potency owes much to a small number of rent-seeking interest groups that depend on it. The generational clash between the HAA and CEQA is about power as much as principle.

## IV. Conclusion

Most legal scholarship on administrative law and statutory interpretation focuses on federal law and seeks to reach trans-substantive answers to the Big Questions. Questions like, "When is an agency decision final for purposes of judicial review?," "In what circumstances may a court look behind the stated reasons for agency action?," and "When should the policies of one statute inform the interpretation of another?" Yet trans-substantive answers are often disappointingly elusive.

In exploring this family of questions in the context of one state (California) and one area of law (land use), we hope to open some eyes to the world beyond the federal paradigm, a world in which the Big Questions take on different and sometimes surprising hues. For example, the pretext inquiry, which can seem intractable, pointless, or even illegitimate in the context of federal administrative law (where the Administrative Procedures Act offers no textual support for it, and where the agency head is usually the alter ego of the President),[362] looks much more appropriate when the agency is an elected city council, the domain is land use, and the council is constrained by a state law whose central premise is that city councils are not to be trusted in development permitting.

We also hope this paper serves as a useful reminder that super-statutes aren't super for all time. In 1970, in the wake of massive construction projects and rapid development across California, it was reasonable to believe that slowing construction down would help the environment. The foundational CEQA cases were decided accordingly. But today, slow construction of housing in developed, high-demand places has made housing wildly unaffordable where people want to live, exacerbating socioeconomic and racial inequality. What's more, slow construction

---

expansively (like that in the HAA), and where the expansive reading concerns a question the Legislature did not even debate (baselines and causation for CEQA analysis of HAA protected projects), it can't be said that the judiciary or the executive branch is undermining legislative compromise by giving effect to the codified interpretive instruction. Indeed, it's possible that when the legislature added the interpretive instruction to the HAA in 2017, it did so because lawmakers wanted judges to interpret the statute in ways that would achieve pro-housing objectives while saving lawmakers from taking politically "tough" votes against the trades. We don't know whether this is the case, any more than we know whether the CEQA-savings clause was added to the HAA in 1990 to propitiate building-trades unions. But in the absence of any information about this, it would be odd for courts to refrain from fitting CEQA and the HAA together in a way that honors the policies of both statutes because of some remote possibility that doing so would unravel a secret legislative bargain.

[361] Eskridge & Ferejohn, *supra* note 10, at 1216-17 (stating that super-statutes "occupy the legal terrain once called 'fundamental law,' foundational principles against which people presume their obligations and rights are set," and that such statutes "are both principled and deliberative and, for those reasons, have attracted special deference and respect").

[362] *See* Gavoor & Platt, *supra* note 186; Nou, *supra* note 186.

Electronic copy available at: https://ssrn.com/abstract=3980396

undermines today's environmental goals by pushing new housing to fire-prone inland areas from which residents must commute for hours in carbon-spewing cars.[363]

In its amendments strengthening the HAA, the legislature rejected many of CEQA's normative premises in the context of housing. Courts should take heed.

CITY OF ST. HELENA CITY COUNCIL
1088 College Avenue
St. Helena, CA 94574

**Re: Hunter Subdivision Project**

Dear Mayor Dohring, Vice Mayor Hall, and Councilmembers:

Holland & Knight LLP has represents Dennis Hunter, Kelly and Ben Vanzutphen, and White Fang Properties, LLC (collectively, the "Applicant Team") in connection with the Hunter Subdivision project located north of Hunt Avenue (APN 009-030-057) (the "Project") in St. Helena (the "City"). Our West Coast Land Use & Environmental Law practice group focuses specifically on enforcing recently reformed provisions of state housing law, in particular Housing Element Law and the Housing Accountability Act.

We appreciate the City Planning Commission recommendation of approval of the Project and staff's recommendation that the Council approve the Project as well. As set forth *infra*, and acknowledged in staff's reports on the Project, approval of this extraordinarily delayed Project is critical to the City's compliance with Housing Element Law and is required by the Housing Accountability Act ("HAA").[1] However, we follow up on the issues raised in our February 2, 2023 Correspondence to the Planning Commission, which addressed numerous onerous conditions of approval (the "Conditions") that the City has imposed upon the Project. As detailed in that letter, 1) Conditions 88, 90, and 91 contradict the City's contractual promise to develop storm water infrastructure based on the projected build-out of the Project; 2) numerous Conditions contain subjective requirements that violate the HAA; and 3) many of the Conditions

[1] Gov. Code § 65589.5.

represent arbitrary property restrictions that lack proportionality to the impact of the Project and are therefore constitutionally impermissible.

The Applicant Team maintains its broader objections to the Conditions referenced in the February 2, 2023 Correspondence, but this letter focuses specifically on those Conditions with problematic requirements 1) related to water neutrality, or 2) that impact the City's contractual responsibility for storm water infrastructure. We note that, shortly before the February 7 Planning Commission hearing, City staff proposed revisions to three Conditions, and that these revised Conditions were ultimately adopted at the hearing. The Applicant Team appreciates the City's willingness to engage on the substance of these Conditions, but believes that further revisions are necessary to comply with applicable law, as addressed in greater detail below.

1. **The City's approval of the Project, under terms that will allow it feasibly to be developed, is crucial to the City's Compliance with Housing Element Law.**

As an initial matter, we note that the Department of Housing and Community Development ("HCD") recently rejected the City's draft housing element for the second time. As you know, the City's failure to provide meaningful assurances with respect to the Project was central to this rejection:

> The element is crediting 87 units from the Hunter Subdivision Project towards the RHNA. HCD's prior review found that the City must analyze the likelihood that this project will be built and units will be available during the planning period. Additionally, the prior review found that HCD has received public comments regarding the City's ability to process and approve this project in a timely manner. Further, this analysis is particularly important given that the project has been pending since the 4th cycle planning period and the project will help the City provide housing and build a portion of their RHNA. The element was revised to state that the project will receive "planning approvals in the near future" and the next planning commission hearing is in February. This does not address HCD's prior review. **The element should clearly indicate timelines and remaining steps to fully entitle this project and <u>demonstrate the likelihood these units will become available during the planning period</u>.** Lastly, the revised element is now crediting these units towards the City's above moderate-income RHNA. However, HCD received public comments from the applicant indicating that 20 percent of the project will be affordable via deed restrictions in line with the City's inclusionary requirements. The element could be revised to credit a portion of these units towards the City's lower-income RHNA. Based on the outcomes of a complete analysis, the element should include a program to monitor the progress of the project and take alternative action if the project is not entitled and permit are not issued in a timely manner.

The Applicant Team is eager to do its part to bring much-needed (and state-mandated) housing to the City. Approving the Project is only the least the City can do to satisfy the state and the public that the Project is a feasible development site, as the City's Housing Element promises; the City must also address Conditions that threaten the viability of the Project. Without ensuring that the Project is free from onerous and unlawful conditions that imperil the Project's feasibility, the City cannot meet its statutory obligation to "remove governmental constraints that hinder the locality from meeting its share of the regional housing need . . .."[2] Nor can the City achieve the fundamental goal of Housing Element Law, which "is not just to identify land, but to pinpoint sites that are adequate and realistically available for residential development targets . . .."[3]

To that end, this correspondence identifies the Conditions that present the most serious concerns, in the spirit of cooperation and in the interest of assisting the City's efforts to produce a housing element that complies with state law.

**2. Conditions 88, 90, and 91 should be revised to correctly indicate that the City is responsible for providing adequate storm water infrastructure for the Project site.**

As we explained in our previous correspondence, in January of 2009, Mr. Hunter and the City entered into an Agreement of Purchase and Sale (the "Agreement") with respect to the City's purchase of property in connection with its flood control project.[4] In the Agreement, the City committed "to build certain retention and drainage facilities," including a new detention basin and drainage ditches, and modifications to the then-existing detention basin inlet. Agreement, § 1.7. Per the Agreement, the City was obligated to construct this infrastructure "based upon the projected build-out of [the Project]." Agreement, § 1.7(c).

Conditions 88, 90, 91 implicate these obligations. They are discussed in turn below.

> **Condition 88.** Prior to the issuance of the first building permit, all City-required improvements related to storm water for the project shall be installed by the project developer at its expense. Drainage improvements shall be designed and funded by the developer in accordance with the Design Criteria utilizing the rationale method and any applicable adopted City drainage plans.

The Agreement obligates the City to develop storm water infrastructure based upon the projected build-out of the Project, as discussed above. This Condition flatly contradicts that obligation.

The Staff Report prepared for the May 1, 2023 City Council hearing indicates with respect to Condition 88: "The applicant requested deleting this condition. Staff disagreed, but did agree to

[2] Gov. Code § 65583(a)(5).
[3] Martinez v. City of Clovis (Apr. 7, 2023, No. F082914) ___Cal.App.5th___ [2023 Cal. App. LEXIS 268, at *52], citing Gov. Code § 65583(c)(1).
[4] The Agreement is attached hereto as **Attachment A**. The related Settlement Agreement resulting from a dispute regarding the Agreement is attached hereto as **Attachment B**.

minor wording changes, as discussed above."[5] The "minor wording changes," however, are not traceable to any concerns raised by the Applicant Team. To the contrary, those changes (clarifying that all storm water improvements must be installed prior to issuance, and that the Applicant Team must install those improvements at its expense) disregard the concerns raised by the Applicant Team in its February 2, 2023 correspondence.

This Condition should either be deleted entirely, or modified to reflect the City's ultimate responsibility for these improvements, in accordance with the Agreement.

> **Condition 90.** Post-development flows storm water discharge from parcel 009-030-057 shall not exceed the pre-development discharge including the projected build-out, expressed as 30% undeveloped pervious and 70% impervious drainage watershed. Applicant shall prepare an analysis to show compliance with this COA. Refer to COA #90 for additional requirements of the analysis.

The City amended this Condition prior to the February 7 Planning Commission hearing by deleting the existing language in its entirety and replacing it with the above language.

While the Applicant Team does not object to the substance of Condition 90, the cross-reference to Condition 90 (which should be corrected to reflect renumbering) introduces an apparently unintended ambiguity regarding which party is to bear the costs of any necessary improvements that are indicated by the analysis. The proposed revision that the Applicant Team suggests with respect to Condition 91 below should, if adopted, resolve this ambiguity.

> **Condition 91.** Prior to building permit issuance, the applicant shall provide to the City an analysis of the capacity and condition of existing drainage facilities downstream of the development (including any detention/retention ponds), including recommendations for off-site drainage improvements, which shall be constructed prior to the issuance of the first certificate of occupancy. Site grading and drainage improvements shall be shown on the improvement plans. <u>In the unlikely event that the downstream facilities require improvements, the applicant shall enter a Funding Agreement as a means of reimbursement from the City.</u>

The City amended Condition 90 by adding the underlined text prior to the February 7 Planning Commission hearing.

The Applicant Team requests that the Condition be further modified as follows to clarify that the City is responsible for reimbursing the Applicant, pursuant to the Agreement: "In the unlikely event that the downstream facilities require improvements, the applicant and the City shall enter a Funding Agreement whereby the applicant is reimbursed for said improvements by the City." The Staff Report, which suggests that the previous revisions were designed "to provide for

[5] Report to the City Council (May 1, 2023 Hearing), at 20 (https://sthelena.civicweb.net/document/73337/Hunter%20Project%20-%20EIR%20and%20Tentative%20Map.pdf?handle=1E3AF87EBDF8430C96935C79A339A296).

potential reimbursement by the City for the cost of downstream flood control improvements built by the applicant," indicates that this requested further revision is consistent with the City's intent.

The fact that the City revised Condition 91 to acknowledge its responsibility for storm water infrastructure is wholly inconsistent with its unexplained refusal to make the same revisions with respect to Condition 88. The Agreement obligates the City and the City alone to bear the cost of these improvements. The Conditions should be revised to reflect that obligation consistently.

3. **Condition 73 should be amended to allow the Project to offset water usage on a pro rata basis.**

Condition 73 concerns the requirement to offset the Project's water usage. As currently drafted, it reads as follows:

> **Condition 73.** As detailed in the Final EIR for the project, the Developer is required to offset the Project's water demand of 37.04 AFY. The Project's landscape water demand is estimated at 17.16 acrefeet per year, which is within the capacity of the existing on-site well. Due to the new potable water demand on the City system in the amount of 19.8 AFY, the Developer shall implement an alternative innovative method of mitigating water use as allowed under Section 13.12.030(B) of the SHMC and/or Appendix J of the EIR. The required improvements to offset water demand are as follows: Identify and implement offsite improvements that reduce water loss from the public water distribution system and/or identify and implement offsite improvements that result in a net increase in potable water availability equivalent to 19.8 AFY, or a combination of these. <u>No building permit may be issued until the City has confirmed that the Developer has completed the approved measures and such measures have been accepted by the City</u>, or Developer has entered into a public improvement agreement with the City to ensure the completion of such improvements and provided security in one of the forms described in Government Code section 66499 in an amount equal to the estimated cost of construction of the proposed offsite improvements as determined, or reviewed and approved, by the City Engineer. Any public improvements shall be constructed to St. Helena Public Works Construction Standards whenever applicable.

The Applicant Team requests that the underlined portion of Condition 73 be modified to allow the issuance of building permits as water neutrality is achieved on a pro rata basis. The Applicant Team proposes the following amendment, but is amenable to alternative language that will achieve the same result: "No building permit <u>for a given dwelling unit</u> may be issued until the City has confirmed that the Developer has completed the approved measures <u>to offset the water demand corresponding to that dwelling unit</u> and such measures have been accepted by the City…."

Allowing the Applicant Team to offset water demand incrementally, rather than for the entire Project at the outset, is significantly more economically feasible from the Applicant Team's perspective. From the City's perspective, meanwhile, the requested revision achieves the same water neutrality goals as the current language does. The Applicant Team submits that the

requested revision would represent a meaningful action from the City in doing its part to ensure that the Project is developed in a timeframe consistent with its obligations under Housing Element Law.

4. **The City should abide by the Staff Report's recommendations with respect to CEQA and state housing law.**

At its February 7, 2023 hearing, the Planning Commission unanimously recommended certifying the Final EIR that is before City Council. That recommendation was correct. The Project has been subject to CEQA review for more than a decade. To say that sufficient review has been conducted is an understatement. Irrespective of one's views about the merits of the Project, there is no legitimate question about whether the EIR that City staff prepared, and that the Planning Commission carefully reviewed and favorably recommended, meets the standards for certification provided in CEQA.[6]

The Staff Report also correctly observes that the Project is protected under the Housing Accountability Act ("HAA"), and that the HAA "significantly restricts the grounds pursuant to which a housing development project can be denied."[7] As the Staff Report rightly notes, disapproval of the Project must be based on a preponderance of evidence supporting a finding of a specific health or safety impact that cannot be avoided or mitigated, under the very demanding

[6] Many legal observers have noted with concern that some cities faced with a legal obligation to approve housing have tried to engage in bad faith arguments about the need for more CEQA in order to avoid having to ever approve the housing for which they have planned. *See, e.g.*, Jennifer L. Hernandez et al., In the Name of the Environment (2015); Moira O'Neill, et al., Getting it Right: Examining the Local Land Use Entitlement Process in California to Inform Policy and Process (Berkeley Law Center for Law, Energy & the Environment; Berkeley Institute of Urban & Regional Development, Columbia Graduate School of Architecture, Planning & Preservation, February 2018), available at https://www.law.berkeley.edu/wp-content/uploads/2018/02/Getting_It_Right.pdf (in major jurisdictions, "even if . . . developments comply with the underlying zoning code, they require additional scrutiny from the local government before obtaining a building permit," which "triggers CEQA review of these projects"; "Our data shows that in many cases, these cities appear to impose redundant or multiple layers of discretionary review on projects"); Moira O'Neill et al., Developing Policy from the Ground Up: Examining Entitlement in the Bay Area to Inform California's Housing Policy Debates, 25 HASTINGS ENVTL. L. J. 1, 73-77 (2019); Christopher S. Elmendorf, Beyond the Double Veto: Housing Plans As Preemptive Intergovernmental Compacts (2019) 71 HASTINGS L.J. 79, 132-34 (noting that especially before 2017, local jurisdictions were largely free to ignore their own plans for meeting regional housing goals, and could always use CEQA to kill housing approvals); Christopher S. Elmendorf & Timothy G. Duncheon, When Super-Statutes Collide: CEQA, the Housing Accountability Act, and Tectonic Change in Land Use Law (2022) ECOLOGY LAW QUARTERLY, VOL. 49 ( https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3980396). We are sure we have no need for any concern the City Council would resort to this kind of obviously unlawful action, such as by contending that the ten-year-plus process to achieve this EIR was somehow an insufficient environmental review.

[7] Report to the City Council (May 1, 2023 Hearing), at 7 (https://sthelena.civicweb.net/document/73337/Hunter%20Project%20-%20EIR%20and%20Tentative%20Map.pdf?handle=1E3AF87EBDF8430C96935C79A339A296).

definitions, burdens of proof and standards of review provided in the HAA.[8] As no such finding can be made here, it would be unlawful to disapprove the Project or reduce its density.

Finally, the Applicant Team notes that the EIR concludes that the Project would have significant and unavoidable environmental impacts with respect to Vehicle Miles Traveled ("VMT").[9] To be clear, the Applicant Team disputes these findings and the Council could and should find the impact actually less than significant.[10] But assuming *arguendo* that the EIR's conclusions are correct, the Staff Report's recommendation to adopt a Statement of Overriding Considerations is also correct. We note that CEQA provides for public agencies to adopt such a statement of overriding considerations where "specific overriding . . . legal . . . benefits" of approving a project outweigh its significant and unavoidable environmental effects.[11] Here, in addition to the considerations listed in staff's recommendations, the City's need to comply with the HAA and with Housing Element Law should also be considered an additional additional and independent legal benefit of approving the Project.[12]

//

[8] Report to the City Council (May 1, 2023 Hearing), at 7 (https://sthelena.civicweb.net/document/73337/Hunter%20Project%20-%20EIR%20and%20Tentative%20Map.pdf?handle=1E3AF87EBDF8430C96935C79A339A296).; Gov. Code § 65589.5(j)(1).

[9] Report to the City Council (May 1, 2023 Hearing), at 12-13 (https://sthelena.civicweb.net/document/73337/Hunter%20Project%20-%20EIR%20and%20Tentative%20Map.pdf?handle=1E3AF87EBDF8430C96935C79A339A296).

# STAFF REPORT

**DATE:** December 9, 2008

**TO:** Mayor and Council

**FROM:** Bert Johansson, City Manager

**RE:** Hunter Property Purchase/Sales Agreement

---

**BACKGROUND:**

The original EIR for the flood protection project was certified by the City Council in February 2004. The project approved at that time was referred to as the Enhancement Minimum Plan - Modification A (EMP-A) and is referred to in this document as the "2004 Plan".

Shortly following the City Council's approval of the 2004 Plan, an environmental advocacy organization called Living Rivers Council ("LRC") filed litigation against the City, alleging that the EIR certified by the City Council prior to project approval failed to satisfy the mandates of CEQA. Pursuant to settlement negotiations in 2005 between the City and LRC, a series of project refinements, proposed by LRC as part of a proposed Settlement Agreement between the parties, were considered and ultimately adopted by the City Council. These refinements were studied in an Addendum, which was considered by the City Council, along with the original EIR, prior to adopting the changes. The Addendum found, and the City Council concurred, that the refinements did not result in any new significant impacts nor any substantially more severe significant impacts than those disclosed in the original EIR. The revised project was referred to as the "2005 Plan".

In 2006, the City identified a funding shortfall that made full implementation of the 2005 Plan impossible for the foreseeable future. As a result of this fiscal reality, and because of the pressing need to obtain improved flood control for St. Helena, the City examined design alternatives that would substantially reduce project costs. A CEQA addendum for what become known as the 2006 Plan embodied the project refinements developed by the City in response to these changed circumstances. Notably, the City developed these refinements so as to be fully consistent with the express terms of the Settlement Agreement reached between the City and LRC to settle the CEQA litigation filed by LRC. The 2006 addendum examined the environmental impact of the project as proposed, which included elements of the 2004 Plan, the 2005 Plan, and the proposed refinements in comparison to the project impacts disclosed in the 2004 EIR for the original project. The City Council approved the CEQA addendum and the 2006 Plan on June 27, 2006.

On the basis of those approvals the attached purchase and sales agreement was negotiated with Mr. Dennis Hunter for acquisition of property necessary for the flood project.

**DISCUSSION/ANALYSIS:**

As it pertains to the attached proposed property acquisition, the 2006 Plan adopted the following refinements when compared to the February 2004 approvals:

- **Modified Terrace B** - Terrace B will be narrower within the VVMHP, and wider and higher in the vineyard adjacent to the VVMHP than in the 2004 Plan. Terrace B will not include an inlet from the river channel and will minimize the removal of trees in the riparian remnant.
- **No Relocation Area** - The number of home relocations will be reduced from 33 to 17. Where these home sites are occupied, the intent is to relocate them to unoccupied pads within the VVMHP and/or for the City to purchase available VVMHP homes as replacements. Where home sites to be removed are not occupied, no relocation is proposed. This eliminates the need to construct the relocation area in the adjacent vineyard.
- **Refinement No. 5/Drainage Design -** Drainage will be rerouted from an existing storm drain on Starr Avenue into a new storm drain that will be routed outside the new levee and then into a grass-lined swale that drains into and through Terrace B. The existing culverts that drain into the Napa River will be abandoned. Interior drainage will be via a detention basin with a low level culvert and lift pump facilities that will empty into the grass-lined swale on Terrace B.
- **Refinement No. 6/Soil Disposal -** Four options for soil disposal are included in the 2006 Plan: (1) disposal on the Miller Parcel and the vineyard portion of the Hunter parcel; (2) disposal on the Miller Parcel, the vineyard portion of the Hunter parcel and additional areas on the Hunter parcel; (3) disposal on the Miller Parcel with off haul of excess soil; and (4) off haul of all excess soil.
- **Adams Street Causeway/Bridge -** This project feature will be considered a separate project by the City and will only be considered after preparation of a separate CEQA evaluation.

The 2006 Plan also includes a public trail, described in the 2006 Plan as:

> [A]pproximately six feet wide and constructed with a compacted surface to be accessible to persons with disabilities. While the exact location of the trail is not set, it will begin in the vicinity of the end of the Adams Street levee at the outer edge of Terrace B and run on the river side of proposed new floodwall/levee. The trail will end in the vicinity of the southern tip of Terrace B.

As noted above, the 2004 project included the extension of Adams; however, this aspect of the project was eliminated after the Living Rivers Council litigation.

The 2004 CEQA/EIR document addressed growth inducing potential on land currently zone medium density residential, specifically the Hunter and Miller parcels. This finding was one of the areas of contention in the initial LRC litigation. In December, 2004, Napa Superior Court found that the EIR was inadequate in one respect—because it did not contain an adequate discussion of the cumulative impact analysis required by CEQA. In all other respects, it rejected LRC's challenge to the EIR; as it pertains to the growth inducing potential the court stated:

6. The Adequacy of the Assessment of Growth-Inducing Impacts.

LRC contends that the City failed to adequately analyze the project's growth-inducing impact because it did not discuss the environmental impacts of residential development expected to result from the flood protection provided by the subject project. The City counters that it adequately identified and discussed the growth-inducing impact of the project and determined it to be insignificant without the need for mitigation measures. The court finds that the EIR adequately discussed the general growth-inducing impact of the project. However, the specific environmental impacts of the residential development expected to result from the Adams Street extension and bridge will need to be fully analyzed during the project-level environmental review of that project in order to comply with CEQA.

LRC also filed litigation regarding the 2006 Plan. That litigation proceeded to the California Court of Appeal which issued a ruling in January 2008 affirming the City's actions.

To conform to the construction plans which are based upon the 2006 Plan, the flood project needs to acquire 3.69 acres of land from Dennis Hunter, a portion of APN No. 009-030-020 in order to construct maintenance roads, levees and public pathways for the flood project, in addition to easements for storm drains and water lines. A summary of the negotiations:

- The City's October 2007 appraisal indicated that the fair market value of the Hunter property interests was $558,000/acre.
- At a meeting in the Fall of 2007, Hunter indicated that he would have appraisal support for $900,000/acre or more than $3.3 million for the necessary property interests. This was far greater than any amount the City could afford.
- The only alternative to reaching a negotiated settlement with Hunter was to pursue an eminent domain action, which would result in extensive attorney's fees and costs, and not provide the fiscal certainty of a negotiated purchase. In addition, an eminent domain action would likely have delayed the project.
- The parties agreed to value the property above the floodplain at $700,000/acre and the property within the floodplain at $325,000/acre, so long as the City would also convey additional land from the former Miller parcel. These prices were based on the likelihood that a trial would result in a determination of land value between $900,000/acre and $558,000/acre. By utilizing the remnant of the former Miller parcel, the City is making an $899,500 cash payment. The calculation, as set forth in the Agreement, is as follows:

  Purchase Price. The parties hereby acknowledge and agree that the fair market value of the 1.20 Acres [Hunter floodplain property] and the 3.58 Acres [former Miller floodplain property] is Three Hundred Twenty Five Thousand Dollars ($325,000) per acre and that the fair market value of the 2.39 Acres [Hunter non-floodplain property] is Seven Hundred Thousand Dollars ($700,000) per acre. Consequently, the agreed upon value of each property is as follows:

| Property | Value | |
|---|---|---|
| 3.58 Acres | $1,163,500 | (valued at $325,000 per acre) |
| 1.20 Acres | $390,000 | (valued at $325,000 per acre) |
| 2.39 Acres | $1,673,000 | (valued at $700,000 per acre) |

Thus, the balance of the purchase price to be paid by the City at Closing shall be $899,500 [the value of the 1.20 acres and the 2.39 acres ($1,673,000 + $390,000) minus the credit received by the City for the 3.58 acres ($1,163,500)].

Throughout the process, the City consistently confirmed that any agreement would not constitute agreement to land use entitlements or promises to develop, development agreements, etc. The Agreement is simply a land exchange and purchase agreement – nothing more, nothing less. The Hunter property and the available portion of the former Miller parcel are already zoned for Medium Density Residential development, and the Agreement does not change that fact. The CEQA documentation discussed above noted:

> Consistent with the City of St. Helena's General Plan, removal of [the Hunter and Miller parcels] from the floodplain could facilitate the development of housing. The City has planned on this growth and factored the potential for new housing units on this property into its General Plan. (RDEIR, pp. 4-23 to 4-25.) Under the [2004] Project, however, only about half of [the Miller parcel] would be used for relocated VVMHP homes. The remainder of [Miller] would be retained permanently as open space. (RDEIR, p. 5-16.)

In the Agreement, about half of what would have been redeveloped on Miller will now be added to open space, as only 3.58 acres has been reconfigured for acquisition of the necessary Hunter property . Further, no development on the portion exchanged will occur unless and until Hunter submits a development application consistent with any subdivision and zoning requirements applicable at the that time, including the requirement for compliance with any CEQA review.

Because the property boundaries change, a lot line adjustment was necessary in order to formalize the new property boundaries. If Hunter intends in the future to development, he must still apply for entitlements and the City retains all of its powers, whatever those may be, to approve, comment on, and/or reject Hunter's development plans, including under CEQA. The Agreement does not affect the status quo or make it any easier for the land to develop. In fact, the 'panhandle' is smaller after the exchange than before the exchange, further complicating Hunter's development of this area,

The City will also save considerable construction costs (several hundred thousands of dollars estimated) under the Agreement, which permits depositing usable dirt, excavated as part of the project, on the Hunter property, instead of having to deposit the dirt offsite. The deposit of dirt is in conformance with the 2006 Addendum.

**FISCAL IMPACT:**

The $899,500 cash payment will be funded by the State Revolving Fund Loan

**ALTERNATIVES:**

1. Reject the purchase sales agreement
2. Propose changes
3. Accept the purchase sales agreement

**RECOMMENDED COUNCIL ACTION:**

Approve attached purchase sales agreement under terms outlined in the agreement and authorize the City Manager to execute the agreement.

**ATTACHMENTS/EXHIBITS:**

1. Agreement of Purchase and Sale.

**AGREEMENT OF PURCHASE AND SALE**

THIS AGREEMENT OF PURCHASE AND SALE ("**Agreement**") is made and entered into as of _____, 2008 (the "**Effective Date**"), by and between the City of St. Helena (the "**City**"), and Dennis R. Hunter ("**Hunter**").

RECITALS

A. Hunter owns that certain real property located in the City of St. Helena, State of California, consisting of approximately 3.69 acres, together with all appurtenant improvements, rights, interests, easements, tenements and estates, a portion of APN No. 009-030-020, more fully described on Exhibit A (the "**Hunter Property**").

B. A portion of the Hunter Property, consisting of approximately 1.20 acres, as shown on Exhibit B, is located below the flood plain (the "**1.20 Acres**"). The remaining portion of the Hunter Property, consisting of approximately 2.39 acres as shown on Exhibit B, is located above the flood plain (the "**2.39 Acres**"). A .10 acre portion of the Hunter Property located below the floodplain is not shown on Exhibit B

C. The City owns that certain real property located in the City of St. Helena, State of California, consisting of approximately 3.58 acres located below the flood plain, together with all appurtenant improvements, rights, interests, easements, tenements and estates, as more fully described on Exhibit C (the "**3.58 Acres**"). The Hunter Property and the 3.58 Acres may be referred to individually as a "property" and collectively as the "properties."

D. The Hunter Property and the 3.58 Acres are designated in the City's general plan as MR / Medium Density Residential 5.1 to 16 units per acre.

E. The City intends to use the 3.58 Acres for the advancement of the St. Helena Comprehensive Flood Control Protection Project (the "**Project**") based on the City's desire to acquire the Hunter Property from Hunter and Hunter's desire to acquire the 3.58 Acres from the City, in accordance with the terms and conditions set forth in this Agreement.

F. In furtherance of the Project**,** the City has secured a loan from the State Revolving Fund of the State Water Resources Control Board, the terms of which require that the City request funds for property acquisition thirty to forty-five (30-45) days before the close of escrow on the purchase of such property.

NOW, THEREFORE, for and in consideration of the mutual covenants and agreements contained in this Agreement, and other good and valuable consideration, the receipt and adequacy of which is hereby acknowledged by the parties hereby agree as follows:

ARTICLE 1: LOT LINE ADJUSTMENT; EASEMENTS

1.1 Lot Line Adjustment. The City hereby covenants and agrees to promptly process and cause to be recorded at Closing (as defined below) the lot line adjustments required to

establish the property configurations shown on Exhibit D. Following the Lot Line Adjustment, the City will own 15.691 acres and Hunter will own 16.903 acres.

1.2 Grant of Temporary Easement. For good and valuable consideration, Hunter hereby grants to the City an exclusive easement (the "**Temporary Easement**") to use the Hunter Property prior to the Close of Escrow (as defined below) for the purposes set forth in the St. Helena Comprehensive Flood Control Protection Project. The Temporary Easement herein granted shall commence upon the Effective Date and shall merge into the grant deed upon Hunter's conveyance of the Hunter Property to the City.

1.3 Grant of Construction Easement. For good and valuable consideration, Hunter hereby grants to the City a temporary, non-exclusive easement (the "**Construction Easement**"), in accordance with the terms of that certain Construction Easement in the form attached hereto as Exhibit E, over, under, across, above and through that certain real property shown on Exhibit E hereto (the "**Construction Easement Area**") for ingress and egress and for construction related purposes in connection with the Project. This Construction Easement is intended to be temporary in nature and shall terminate on December 31, 2012.

1.4 Grant of Utility Easement. For good and valuable consideration, Hunter hereby grants to the City a non-exclusive perpetual easement (the **Utility Easement**"), in accordance with the terms of that certain Utility Easement in the form attached hereto as Exhibit F, over under, across, above and through that certain real property shown on Exhibit F hereto (the "**Utility Easement Area**") for the purposes of installing, constructing, operating, using, maintaining, repairing, and replacing utility facilities, lines or connections and any uses incidental thereto.

1.5 Depositing of Dirt. Hunter hereby grants to the City the right, at no additional cost to the City and at no cost to Hunter, to deposit dirt, excavated by the City in connection with the Project, on that certain real property (the "**Fill Area**") described on the Soil Stockpile Grading Plan attached hereto as Exhibit G. City and its contractors and agents shall prepare the Fill Area to receive the dirt by removing vines and other vineyard improvements and place the fill in a good and workman-like manner.

1.6 Well Access License. Hunter hereby grants to the City a license at no additional cost to the City and at no cost to Hunter, to access and use water from the existing well shown on Exhibit G in connection with the Project. For good and valuable consideration, Hunter hereby grants to the City a temporary, non-exclusive license (the "**Well Access License**") over, under, across, above and through properties to be owned by Hunter, including the 3.58 Acres. This Well Access License is intended to be temporary in nature and to continue only during the performance of the Project. The Well Access License shall terminate, without the necessity of further documentation, upon completion of the Project.

1.7 Drainage Improvements. The City intends as a part of the Project to build certain retention and drainage facilities as specifically described as follows:

(a) The City will construct a compacted earth fill pad on the remainder of APN No. 009-030-020 ("**Hunter Remainder**") (exclusive of the Hunter Property) and on the 3.58 Acres in accordance with the enclosed Exhibit G. The source of the soil material to construct the pad shall be the City's Flood Protection Project, with unsuitable material (defined as organic content in excess of 3.5%) segregated and placed in areas outside of the useable pad area shown on Exhibit G. Pad construction will comply with the notes on the exhibit and finish graded to provide positive drainage in accordance with Exhibit G. The level of the pad may vary based upon the amount of material generated from the Project with the elevation of the pad adjusted uniformly.

(b) Upon completion of the Project, the then existing drainage patterns for the Hunter Remainder and the 3.58 Acres shall remain undisturbed by the City, with exception of the new pad drainage. Drainage ditches on the pad will be routed to the new detention basin shown on Exhibit G. The City will modify its existing detention basin inlet from the storm drain system to provide a storm drain inlet for pad drainage.

(c) The City will size storm water drainage handling facilities downstream of the site, to be constructed as part of the Project, based upon projected build-out of the Hunter Remainder and the 3.58 Acres, as currently zoned Medium-density Residential (MR) (as defined in the St. Helena Municipal Code Section 17.40), expressed as a 70% impervious drainage watershed.

(d) The City agrees to reroute the existing water main crossing the Hunter Remainder in Easement 895 (OR 383 NCR), as shown on the enclosed Exhibit H. Relocation will be completed by the City prior to development of the Hunter Remainder and the 3.58 Acres. The City's easement for the section of pipe being abandoned will be quit-claimed and returned to Hunter once the relocation is complete.

1.8 Sewer Connection. Upon any application for development of the Hunter Property as referenced in this Agreement, City will not unreasonably withhold its permission for Hunter to cross City property to access a sewer connection. Nothing in this section shall be construed as an entitlement to development, and Hunter is responsible for obtaining all necessary development approvals from the City and any other agencies with jurisdiction over the Hunter Property.

1.9 Covenants Running with the Land. The terms and conditions contained in this Article 1 shall (a) constitute covenants running with the land, (b) survive the Close of Escrow, and (c) bind the parties hereto, their heirs, successors and assigns.

1.10 Payment of Taxes. All real property taxes and assessments on the Hunter Property (prior to Close of Escrow) and the Construction Easement Area shall be payable by Hunter.

## ARTICLE 2: PURCHASE AND SALE

2.1 Hunter Property. The parties hereby acknowledge and agree that the City requires the Hunter Property in connection with the Project. Accordingly, the City has forced a sale of

the Hunter Property by Hunter under the threat of condemnation, on the terms and conditions set forth herein.

2.2 3.58 Acres. As partial consideration for the sale of the Hunter Property pursuant to Section 2.1, above, the City hereby agrees to convey the 3.58 Acres to Hunter, on the terms and conditions set forth herein.

## ARTICLE 3: PURCHASE PRICE

3.1 Purchase Price. The parties hereby acknowledge and agree that the fair market value of the 1.20 Acres and the 3.58 Acres is Three Hundred Twenty Five Thousand Dollars ($325,000) per acre and that the fair market value of the 2.39 Acres is Seven Hundred Thousand Dollars ($700,000) per acre. Consequently, the agreed upon value of each property is as follows:

| Property | Value | |
|---|---|---|
| 3.58 Acres | $1,163,500 | (valued at $325,000 per acre) |
| 1.20 Acres | $390,000 | (valued at $325,000 per acre) |
| 2.39 Acres | $1,673,000 | (valued at $700,000 per acre) |

Thus, the balance of the purchase price to be paid by the City at Closing shall be **$899,500** [the value of the 1.20 acres and the 2.39 acres ($1,673,000 + $390,000) minus the credit received by the City for the 3.58 acres ($1,163,500)].

## ARTICLE 4: CLOSING

4.1 Closing. Hunter hereby covenants and agrees to cooperate with the City in connection with the City's application for a loan from the State Revolving Fund of the State Water Resources Control Board and satisfying all requirements thereof. The consummation of the transactions contemplated herein (the "**Closing**" or "**Close of Escrow**") shall occur on or before November 1, 2008 at the office of North Bay Title Co, Santa Rosa, California ("**Escrow Agent**"); provided, however, that the date for the Close of Escrow shall be subject to extension to the extent required by the State Revolving Fund. Upon satisfaction or completion of all closing conditions and deliveries, the parties shall direct Escrow Agent to immediately record and deliver the closing documents to the appropriate parties and make disbursements according to the closing statements executed by the City and Hunter.

4.2 Escrow Fee. Except as expressly provided herein to the contrary, the escrow fee, if any, charged by Escrow Agent, shall be paid in accordance with customary practices in Napa County.

4.3 Hunter's Deliveries into Escrow. At least one (1) business day prior to the Closing Date, Hunter shall deliver to Escrow Agent for distribution to the appropriate party(ies) at Closing, the following:

(a) Grant Deed. A grant deed in conformity with the custom in the State of California, executed and acknowledged by Hunter, conveying to the City fee simple title to the Hunter Property.

(b) Prorations. Hunter's share of any prorations or expenses.

(c) Tax Certificates. A Foreign Investment in Real Property Tax Act affidavit and a California Form 593-C, executed by Hunter.

(d) State Law Disclosures. Such disclosures and reports as are required by applicable state and local law in connection with the conveyance of real property.

(e) Additional Documents. Any additional documents that the City or the Escrow Agent may reasonably require for the proper consummation of the transactions contemplated by this Agreement.

4.4 The City's Deliveries into Escrow. At least one (1) business day prior to the Closing Date, the City shall deliver to Escrow Agent for distribution to the appropriate party(ies) at Closing, the following:

(a) Purchase Price. The balance of the purchase price, if any, plus or minus applicable prorations and expenses.

(b) Grant Deed. A grant deed in conformity with the custom in the State of California, executed and acknowledged by the City, conveying to Hunter fee simple title to the 3.58 Acres.

(c) State Law Disclosures. Such disclosures and reports as are required by applicable state and local law in connection with the conveyance of real property.

(d) Additional Documents. Any additional documents that Hunter or the Escrow Agent may reasonably require for the proper consummation of the transactions contemplated by this Agreement.

4.5 Closing Statements. At least one (1) business day prior to the Closing Date, Hunter and the City shall deposit with Escrow Agent executed closing statements consistent with this Agreement in the form required by Escrow Agent.

## ARTICLE 5: PRORATIONS AND EXPENSES

5.1 Prorations.

(a) Taxes and Assessments. All non-delinquent real estate taxes and non-delinquent assessments on the properties shall be prorated as of 12:01 a.m. on the day of the Close of Escrow based on the actual current tax bill. All delinquent taxes and all delinquent assessments, interest and penalties (if any) with respect to a property, shall be paid at the Close of Escrow by the party conveying such property. If any information needed for the final

proration of any item is not available as reasonably determined by Escrow Agent and the parties are notified of the same prior to Closing, the parties shall re-prorate such item after Closing and payment shall be made promptly to the party entitled thereto. The provisions of this Section 5.1(a) shall survive the Close of Escrow

(b) Sales, Transfer, and Documentary Taxes. The parties shall pay, in accordance with customary practices in Napa County, all sales, gross receipts, compensating, stamp, excise, documentary, transfer, deed or similar taxes and fees imposed in connection with the transactions contemplated hereunder.

5.2 No Brokers. Hunter and the City represent and warrant each to the other that they have not dealt with any real estate broker, sales person or finder in connection with this Agreement. In the event of any claim for broker's or finder's fees or commissions in connection with the negotiation, execution or consummation of this Agreement or the transactions contemplated hereby, each party shall indemnify and hold harmless the other party from and against any such claim based upon any statement, representation or agreement of such party.

## ARTICLE 6: REPRESENTATIONS AND WARRANTIES

6.1 Hunter's Representations and Warranties. Hunter represents and warrants to the City that:

(a) Conflicts and Pending Actions or Proceedings. There is no agreement to which Hunter is a party or, to Hunter 's knowledge, binding on Hunter which is in conflict with this Agreement. There is no action or proceeding pending or, to Hunter's knowledge, threatened against Hunter or relating to the Hunter Property which challenges or impairs Hunter's ability to execute or perform its obligations under this Agreement.

(b) No Encumbrances. Hunter has not alienated, encumbered, transferred, mortgaged, assigned, pledged, or otherwise conveyed its interest in the Hunter Property or any portion thereof, nor entered into any agreement to do so, and there are no liens, encumbrances, mortgages, covenants, conditions, reservations, restrictions, easements or other matters affecting the Hunter Property, except as disclosed in the preliminary title report delivered to the City. Hunter shall not, directly or indirectly, alienate, encumber, transfer, mortgage, assign, pledge, or otherwise convey its interest prior to the Close of Escrow, as long as this Agreement is in force.

(c) Contractors and Suppliers. All contractors, subcontractors, suppliers, architects, engineers, and others who have performed services or labor or have supplied materials in connection with Hunter's acquisition, development, ownership, or management of the Hunter Property have been paid in full and all liens arising therefrom (or claims which with the passage of time or the giving of notice, or both, could mature into liens) have been satisfied and released.

6.2 City's Representations and Warranties. The City represents and warrants to Hunter that the City has the full right, capacity, power and authority to enter into and carry out the terms of this Agreement. This Agreement has been duly executed by the City, and upon delivery to and execution by Hunter shall be a valid and binding agreement of the City.

6.3 Survival of Representations and Warranties. The representations and warranties set forth in this Article 6 are made as of the Effective Date and are remade as of the Closing Date and shall not be deemed to be merged into or waived by the instruments of Closing, but shall survive the Closing. Each party agrees to defend and indemnify the other against any claim, liability, damage or expense asserted against or suffered by such other party arising out of the breach or inaccuracy of any such representation or warranty.

## ARTICLE 7: DEFAULT AND REMEDIES

7.1 Default. If the transactions contemplated hereunder fail to close as a result of a party's default, the non-defaulting party shall be entitled to such remedies for breach of contract as may be available at law and/or in equity including, without limitation, the remedy of specific performance.

7.2 Notice of Default. Except for a party's failure to close on the Closing Date, neither party shall have the right to declare a default by the other party and terminate this Agreement because of a failure by such other party to perform under the terms of this Agreement unless the other party shall fail to cure such failure to perform within ten (10) days after its receipt of written notice of such failure to perform.

7.3 Other Expenses. If this Agreement is terminated due to the default of a party, such defaulting party shall pay any fees due to Escrow Agent.

## ARTICLE 8: DUE DILIGENCE; AS-IS; RELEASE

8.1 Due Diligence Investigation. Hunter acknowledges that it has had an opportunity to conduct its due diligence investigation of the 3.58 Acres, and hereby approves the condition and suitability of the 3.58 Acres for Hunter's purposes. The City acknowledges that it has had an opportunity to conduct its due diligence investigation of the Hunter Property, and hereby approves the condition and suitability of the Hunter Property for the City's purposes. The parties shall continue to operate and maintain their respective properties, prior to the Close of Escrow, in substantially the same manner that such were operated and maintained as of the Effective Date.

(a) Hunter has reviewed a preliminary title report for the 3.58 Acres and approved all of the following exceptions to title: (a) standard printed exceptions in the preliminary title report; (b) general and special real property taxes and assessments constituting a lien not yet due and payable; and (c) the title exceptions listed on Exhibit I attached hereto. The City shall deliver title to the 3.58 Acres to Hunter at the Closing subject only to the foregoing approved exceptions.

(b) The City has reviewed a preliminary title report for the Hunter Property and approved all of the following exceptions to title: (a) standard printed exceptions in the preliminary title report; (b) general and special real property taxes and assessments constituting a lien not yet due and payable; and (c) the title exceptions listed on Exhibit J attached hereto. Hunter shall deliver title to the Hunter Property to the City at the Closing subject only to the foregoing approved exceptions.

8.2 "As-Is" Sale. Each party hereby acknowledges and agrees that, neither the other party, nor anyone acting for or on behalf of such other party, has made any representations, warranties, or promises, concerning the condition of the properties or any other aspect of the properties. Each party further acknowledges that HE OR IT WILL BE ACQUIRING THE PROPERTIES, AS APPLICABLE, BASED UPON THEIR "AS-IS" CONDITION AND THEIR STATE OF REPAIR INCLUSIVE OF ALL FAULTS AND DEFECTS, WHETHER KNOWN OR UNKNOWN, AS MAY EXIST AS OF THE CLOSE OF ESCROW, AND EACH PARTY EXPRESSLY ASSUMES THE RISK THAT ADVERSE PHYSICAL, ENVIRONMENTAL, FINANCIAL AND LEGAL CONDITIONS MAY NOT BE REVEALED BY SUCH PARTY'S DUE DILIGENCE INVESTIGATION (IF ANY).

8.3 Disclaimer. Except for a breach of this Agreement, each party hereby fully and forever waives and disclaims, all warranties of whatever type or kind with respect to the property acquired by him or it, whether express, implied or otherwise including, without limitation, those of fitness for a particular purpose, tenantability, habitability or use.

8.4 Release and Waiver. Each party hereby fully and forever releases, acquits and discharges the other party of and from, and hereby fully and forever waives any and all claims, actions, causes of action, suits, proceedings, demands, rights, damages, costs, expenses or other compensation whatsoever, whether known or unknown, direct or indirect, foreseeable or unforeseeable, absolute or contingent ("**Claims**"), that such party now has or may have or which may arise in the future arising out of, directly or indirectly, or in any way connected with the condition of the property acquired by him or it. The parties hereby agree that the matters released in this Section 8.4 are not limited to matters which are known or disclosed and, with respect to the foregoing release, each party hereby waives any and all rights and benefits which he or it now has, or in the future may have, conferred upon him or it, by virtue of the provisions of Section 1542 of the Civil Code of the State of California (or any other statute or common law principles of similar effect), which Section provides as follows:

> A GENERAL RELEASE DOES NOT EXTEND TO CLAIMS WHICH THE CREDITOR DOES NOT KNOW OR SUSPECT TO EXIST IN HIS OR HER FAVOR AT THE TIME OF EXECUTING THE RELEASE, WHICH IF KNOWN BY HIM OR HER MUST HAVE MATERIALLY AFFECTED HIS OR HER SETTLEMENT WITH THE DEBTOR.

In this connection, each party acknowledges and agrees that it understands that factual matters relating directly to the properties now unknown to him or it may have given or may hereafter give rise to claims that are presently unknown, unanticipated and unsuspected, and such party further acknowledges and agrees that the releases herein have been negotiated and agreed upon in light of that realization and that it nevertheless intends to release, discharge and acquit the other party from any such unknown claims.

Hunter's Initials: _____ City's Initials: _____

8.5 Delivery of Title Policy. At Hunter's request, the Title Company shall deliver to Hunter an owner's policy of title insurance issued by the Title Company as of the Closing Date, insuring Hunter as owner of fee simple title to the 3.58 Acres. At the City's request, the Title Company shall deliver to the City an owner's policy of title insurance issued by the Title Company as of the Closing Date, insuring the City as owner of fee simple title to the Hunter Property. Notwithstanding the foregoing, the Title Company's delivery or willingness to deliver the foregoing title policies shall not be a condition precedent to either party's obligation to close hereunder. Each party shall pay the premium for their respective title policies.

## ARTICLE 9: NOTICES

9.1 Notices. All notices required or permitted hereunder shall be in writing and shall be served on the parties at the addresses set forth below. Any such notices shall be either (a) sent by overnight delivery using a nationally recognized overnight courier, in which case notice shall be deemed delivered one business day after deposit with such courier, (b) sent by facsimile, in which case notice shall be deemed delivered upon transmission of such notice, or (c) sent by personal delivery, in which case notice shall be deemed delivered upon receipt. A party's address may be changed by written notice to the other party; provided, however, that no notice of a change of address shall be effective until actual receipt of such notice. Copies of notices are for informational purposes only, and a failure to give or receive copies of any notice shall not be deemed a failure to give notice.

## ARTICLE 10: MISCELLANEOUS

10.1 Parties Bound. This Agreement shall bind and shall inure to the benefit of the City, Hunter and their respective successors and assigns. Notwithstanding the foregoing, neither party may assign this Agreement without the prior written consent of the other, and any such prohibited assignment shall be void.

10.2 Headings. The article and paragraph headings of this Agreement are for convenience only and in no way limit or enlarge the scope or meaning of the language hereof.

10.3 Invalidity and Waiver. If any portion of this Agreement is held invalid or inoperative, then so far as is reasonable and possible the remainder of this Agreement shall be deemed valid and operative, and, to the greatest extent legally possible, effect shall be given to the intent manifested by the portion held invalid or inoperative. The failure by either party to enforce against the other any term or provision of this Agreement shall not be deemed to be a waiver of such party's right to enforce against the other party the same or any other such term or provision in the future.

10.4 Governing Law. This Agreement shall, in all respects, be governed, construed, applied, and enforced in accordance with the law of the State of California.

10.5 Survival. The provisions of this Agreement that contemplate performance after the Closing and the obligations of the parties not fully performed at the Closing shall survive the Closing and shall not be deemed to be merged into or waived by the instruments of Closing.

10.6 No Third Party Beneficiary. This Agreement is not intended to give or confer any benefits, rights, privileges, claims, actions, or remedies to any person or entity as a third party beneficiary, decree, or otherwise.

10.7 Entirety and Amendments. This Agreement, together with all exhibits attached hereto and incorporated herein, embodies the entire agreement between the parties and supersede all prior agreements and understandings relating to the subject matter hereof. This Agreement may be amended or supplemented only by an instrument in writing executed by the party against whom enforcement is sought.

10.8 Time. Time is of the essence in the performance of this Agreement.

10.9 Attorneys' Fees. Should either party employ attorneys to enforce any of the provisions hereof, the party against whom any final judgment is entered agrees to pay the prevailing party all reasonable costs, charges, and expenses, including reasonable attorneys' fees, expended or incurred in connection therewith.

10.10 Construction. The parties acknowledge that the parties and their counsel have reviewed and revised this Agreement and agree that the normal rule of construction to the effect that any ambiguities are to be resolved against the drafting party shall not be employed in the interpretation of this Agreement or any exhibits or amendments hereto.

10.11 Calculation of Time Periods. Unless otherwise specified, in computing any period of time described herein, the day of the act or event after which the designated period of time begins to run is not to be included and the last day of the period so computed is to be included at, unless such last day is a Saturday, Sunday or legal holiday for national banks in the location where the properties are located, in which event the period shall run until the end of the next day which is neither a Saturday, Sunday, or legal holiday. The last day of any period of time described herein shall be deemed to end at 5:00 p.m. Pacific time.

10.12 Further Assurances. In addition to the acts and deeds recited herein and contemplated to be performed, executed and/or delivered by either party at Closing, each party agrees to perform, execute and deliver, but without any obligation to incur any additional liability or expense, on or after the Closing any further deliveries and assurances as may be reasonably necessary to consummate the transactions contemplated hereby or to further perfect the conveyance, transfer and assignment of the properties hereunder.

10.13 Execution in Counterparts. This Agreement may be executed in any number of counterparts, each of which shall be deemed to be an original, and all of such counterparts shall constitute one Agreement. To facilitate execution of this Agreement, the parties may execute and exchange by email or facsimile counterparts of the signature pages.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the Effective Date.

# ATTACHMENT B

# SETTLEMENT AGREEMENT

This Settlement Agreement ("Agreement") is made by and between the City of St. Helena (the "City") and Dennis Hunter ("Hunter") (collectively the "Parties") with regard to the action entitled *Hunter v. City of St. Helena,* Case No. 26-57887 filed in the Napa County Superior Court ("Action").

The Parties desire to settle all claims relating to the Action, Contract and Project according to the terms of this Agreement.

NOW, THEREFORE, in consideration of the promises and mutual covenants contained herein, the Parties agree as follows:

## 1. DEFINITIONS

For purposes of this Agreement, the term "Contract" means the Agreement of Purchase and Sale dated January 2009 ("Contract"). The term "Project" means the St. Helena Comprehensive Flood Control Protection Project (the "Project").

## 2. NO ADMISSION OF LIABILITY

This Agreement is a mutual compromise and is not intended to be, nor shall it be construed as, an admission of liability by any party to any other party.

## 3. SETTLEMENT AMOUNT AND EXECUTION

The City shall pay Hunter a total sum of three hundred and twenty-five thousand dollars ($325,000.00) within ten (10) days of the full execution of this Agreement by the Parties. Hunter shall not be entitled to any payment, damages, attorneys fees or compensation of any kind other than the $325,000.00 required by this paragraph. This Agreement shall not be considered to be fully executed until it has been approved by the City of St. Helena City Council as set forth in Section 13 of this Agreement.

## 4. DISMISSALS OF ACTION

Within five (5) days of receipt of payment from the City, Hunter shall file a request for dismissal of the Action, with prejudice, with the Napa County Superior Court.

## 5. RELEASE, WAIVER AND COVENANT NOT TO SUE

Hunter, for himself, and his representatives, predecessors, successors, attorneys, assigns and agents, and each of them, hereby fully remises, releases, waives, covenants not to sue, and forever discharges the City, its

representatives, predecessors, successors, assigns, officers, agents, consultants, directors, stockholders, owners, servants, employees, sureties, architects, engineers, insurers, attorneys and affiliated and subsidiary corporations or companies, past and present, and each of them:

(1) Of and from any and all manner of known or suspected actions, suits, liens, debts, dues, damages, claims, sums of money, obligations, liabilities, judgments, bonds, executions and demands of every nature, kind and description whatsoever, at law, in equity or otherwise, which may have arisen under and by virtue of the laws of any jurisdiction, which Hunter has had or claims to have had or now has or claims to now have in connection with the Contract, Project and Action.

(2) Of and from any and all manner of known, suspected, or unknown actions, suits, liens, debts, dues, damages, claims, sums of money, obligations, liabilities, judgments, bonds, executions and demands of every nature, kind and description whatsoever, whether known or unknown, and whether suspected or unsuspected, either at law, in equity or otherwise, which may have arisen under and by virtue of the laws of any jurisdiction, which Hunter has had or claims to have had or now has or claims to now have in connection with the Action, including but not limited to the City's obligations under Section 1.5 and Section 1.7(a) of the Contract.

(3) As to any unknown claims not released by this Agreement, the City reserves all defenses.

As to the claims identified in Section 5(2), Hunter expressly waives and relinquishes all rights and benefits afforded by Section 1542 of the California Civil Code, which provides as follows:

> A General Release does not extend to claims which the Creditor does not know or suspect to exist in his or her favor at the time of executing the release, which if known by him or her must have materially affected his settlement with the debtor.

6. NO ASSIGNMENT

The Parties hereto, and each of them, represent and warrant to each other that they have not heretofore assigned or transferred or purported to assign or transfer to any person, firm, association, corporation or other entity, any claim or cause of action based on or arising out of, or in connection with any matter, fact, claim or cause of action alleged or referred to in this Agreement.

7. BINDING EFFECT

This agreement shall be binding upon, and shall inure to the benefit of the Parties hereto and their respective heirs, successors, representatives and assigns.

8. CALIFORNIA LAW

This Agreement is made, executed and entered into and is intended to be performed within the State of California, and that this Agreement is to be construed as such under California law.

9. EXPENSES

Each party hereto shall bear his and its own respective attorneys fees, costs and expenses of any kind arising out of any and all claims which have been settled by the terms of this Agreement.

10. CONSTRUCTION OF AGREEMENT

This Agreement was jointly prepared through negotiations of the Parties and the provisions of the Agreement are not to be strictly or liberally construed for or against any of the Parties.

11. ENTIRE AGREEMENT

This Agreement contains the entire agreement and understanding among the Parties hereto and supersedes and replaces all other prior negotiations, proposed agreements and agreements, written and oral. The Parties further declare and represent that no promise, representation or agreement not herein expressed has been made.

12. AMENDMENTS

No amendment, modification, waiver or termination of this Agreement shall be binding unless executed in writing by the Parties to be bound thereby.

13. COUNTERPARTS AND SIGNATURES

The Parties agree that this Agreement may be executed in counterpart and that each fully executed copy of the Settlement Agreement shall have the same binding force and effect as an original. The Parties further agree that facsimile and signatures transmitted by email shall have the same force and effect as original signatures.

14. APPROVAL BY THE CITY COUNCIL

This Agreement is subject to the approval of the St. Helena City Council and shall not be deemed effective or fully executed until approved by the St. Helena City Council, and signed by the City in accordance with law.

15. PUBLIC RECORD

This Agreement is a public record subject to disclosure to the public upon request pursuant to California law.

The undersigned hereby agree to the terms of this Settlement Agreement and represent and warrant that they have authority to sign this Settlement Agreement.

City Manager Comello

1. Traffic problem has existed since this application was first submitted should be mitigated. It has not been mitigated, therefore the project should be denied.
2. Hunter is Not an affordable housing project.
   25 units on a separate lot does not meet RHNA requirements nor St. Helena's Zoning Code. St. Helena's Zoning Code states that 20% of a Residential Housing Development Units must be affordable and completed not later than the market rate component. The affordable units must be comparable in the number of bedrooms, exterior appearance and overall quality to the market rate units. The affordable units are required to be disbursed through out the project. Hunter has NO affordable single family dwellings that apply to that criteria.
3. Public Safety: The Hunter Project adds at least 400 hundred people that would have to be evacuated if there were to be a fire or flood. If there were to be a fire on Pope Steet at night and Vineyard Valley, and the 400 residents of the Hunter project had to evacuate using the levee there would be a massive traffic jam that most likely result in a loss of lives. The evacuation practices that Vineyard Valley had were not surprises because the residents were warned ahead of time and half the park left over the levee and half on Pope street in the broad day light. In the night time the exit levee would have to be lite so 300 plus Vineyard Valley residents could see to evacuate over the levee. Public safety should be the top priority of the City Council.
4. Measure A was presented to the residents in order to vote on financing the Napa Valley Flood projects. Measure A section 2 G said "None of the projects in the Plan are intended or designed to encourage population growth in Napa County" The Hunter project will constitute large growth in St. Helena. Measure A had to pass with 67% of the vote and there is no way it would have if the voters did not believe Section 2 G of the ordinance. If you pass this you are going what was promised to the voters.

**Re: Hunter Subdivision Project**

Dear Mayor Dohring, Vice Mayor Hall, and Councilmembers:

Holland & Knight LLP has represents Dennis Hunter, Kelly and Ben Vanzutphen, and White Fang Properties, LLC (collectively, the "Applicant Team") in connection with the Hunter Subdivision project located north of Hunt Avenue (APN 009-030-057) (the "Project") in St. Helena (the "City"). Our West Coast Land Use & Environmental Law practice group focuses specifically on enforcing recently reformed provisions of state housing law, in particular Housing Element Law and the Housing Accountability Act.

We appreciate the City Planning Commission recommendation of approval of the Project and staff's recommendation that the Council approve the Project as well. As set forth *infra*, and acknowledged in staff's reports on the Project, approval of this extraordinarily delayed Project is critical to the City's compliance with Housing Element Law and is required by the Housing Accountability Act ("HAA").[1] However, we follow up on the issues raised in our February 2, 2023 Correspondence to the Planning Commission, which addressed numerous onerous conditions of approval (the "Conditions") that the City has imposed upon the Project. As detailed in that letter, 1) Conditions 88, 90, and 91 contradict the City's contractual promise to develop storm water infrastructure based on the projected build-out of the Project; 2) numerous Conditions contain subjective requirements that violate the HAA; and 3) many of the Conditions

[1] Gov. Code § 65589.5.

represent arbitrary property restrictions that lack proportionality to the impact of the Project and are therefore constitutionally impermissible.

The Applicant Team maintains its broader objections to the Conditions referenced in the February 2, 2023 Correspondence, but this letter focuses specifically on those Conditions with problematic requirements 1) related to water neutrality, or 2) that impact the City's contractual responsibility for storm water infrastructure. We note that, shortly before the February 7 Planning Commission hearing, City staff proposed revisions to three Conditions, and that these revised Conditions were ultimately adopted at the hearing. The Applicant Team appreciates the City's willingness to engage on the substance of these Conditions, but believes that further revisions are necessary to comply with applicable law, as addressed in greater detail below.

1. **The City's approval of the Project, under terms that will allow it feasibly to be developed, is crucial to the City's Compliance with Housing Element Law.**

As an initial matter, we note that the Department of Housing and Community Development ("HCD") recently rejected the City's draft housing element for the second time. As you know, the City's failure to provide meaningful assurances with respect to the Project was central to this rejection:

> The element is crediting 87 units from the Hunter Subdivision Project towards the RHNA. HCD's prior review found that the City must analyze the likelihood that this project will be built and units will be available during the planning period. Additionally, the prior review found that HCD has received public comments regarding the City's ability to process and approve this project in a timely manner. Further, this analysis is particularly important given that the project has been pending since the 4th cycle planning period and the project will help the City provide housing and build a portion of their RHNA. The element was revised to state that the project will receive "planning approvals in the near future" and the next planning commission hearing is in February. This does not address HCD's prior review. **The element should clearly indicate timelines and remaining steps to fully entitle this project and <u>demonstrate the likelihood these units will become available during the planning period</u>.** Lastly, the revised element is now crediting these units towards the City's above moderate-income RHNA. However, HCD received public comments from the applicant indicating that 20 percent of the project will be affordable via deed restrictions in line with the City's inclusionary requirements. The element could be revised to credit a portion of these units towards the City's lower-income RHNA. Based on the outcomes of a complete analysis, the element should include a program to monitor the progress of the project and take alternative action if the project is not entitled and permit are not issued in a timely manner.

The Applicant Team is eager to do its part to bring much-needed (and state-mandated) housing to the City. Approving the Project is only the least the City can do to satisfy the state and the public that the Project is a feasible development site, as the City's Housing Element promises; the City must also address Conditions that threaten the viability of the Project. Without ensuring that the Project is free from onerous and unlawful conditions that imperil the Project's feasibility, the City cannot meet its statutory obligation to "remove governmental constraints that hinder the locality from meeting its share of the regional housing need . . .."[2] Nor can the City achieve the fundamental goal of Housing Element Law, which "is not just to identify land, but to pinpoint sites that are adequate and realistically available for residential development targets . . .."[3]

To that end, this correspondence identifies the Conditions that present the most serious concerns, in the spirit of cooperation and in the interest of assisting the City's efforts to produce a housing element that complies with state law.

**2. Conditions 88, 90, and 91 should be revised to correctly indicate that the City is responsible for providing adequate storm water infrastructure for the Project site.**

As we explained in our previous correspondence, in January of 2009, Mr. Hunter and the City entered into an Agreement of Purchase and Sale (the "Agreement") with respect to the City's purchase of property in connection with its flood control project.[4] In the Agreement, the City committed "to build certain retention and drainage facilities," including a new detention basin and drainage ditches, and modifications to the then-existing detention basin inlet. Agreement, § 1.7. Per the Agreement, the City was obligated to construct this infrastructure "based upon the projected build-out of [the Project]." Agreement, § 1.7(c).

Conditions 88, 90, 91 implicate these obligations. They are discussed in turn below.

> **Condition 88.** Prior to the issuance of the first building permit, all City-required improvements related to storm water for the project shall be installed by the project developer at its expense. Drainage improvements shall be designed and funded by the developer in accordance with the Design Criteria utilizing the rationale method and any applicable adopted City drainage plans.

The Agreement obligates the City to develop storm water infrastructure based upon the projected build-out of the Project, as discussed above. This Condition flatly contradicts that obligation.

The Staff Report prepared for the May 1, 2023 City Council hearing indicates with respect to Condition 88: "The applicant requested deleting this condition. Staff disagreed, but did agree to

[2] Gov. Code § 65583(a)(5).
[3] Martinez v. City of Clovis (Apr. 7, 2023, No. F082914) ___Cal.App.5th___ [2023 Cal. App. LEXIS 268, at *52], citing Gov. Code § 65583(c)(1).
[4] The Agreement is attached hereto as **Attachment A**. The related Settlement Agreement resulting from a dispute regarding the Agreement is attached hereto as **Attachment B**.

minor wording changes, as discussed above."[5] The "minor wording changes," however, are not traceable to any concerns raised by the Applicant Team. To the contrary, those changes (clarifying that all storm water improvements must be installed prior to issuance, and that the Applicant Team must install those improvements at its expense) disregard the concerns raised by the Applicant Team in its February 2, 2023 correspondence.

This Condition should either be deleted entirely, or modified to reflect the City's ultimate responsibility for these improvements, in accordance with the Agreement.

> **Condition 90.** Post-development flows storm water discharge from parcel 009-030-057 shall not exceed the pre-development discharge including the projected build-out, expressed as 30% undeveloped pervious and 70% impervious drainage watershed. Applicant shall prepare an analysis to show compliance with this COA. Refer to COA #90 for additional requirements of the analysis.

The City amended this Condition prior to the February 7 Planning Commission hearing by deleting the existing language in its entirety and replacing it with the above language.

While the Applicant Team does not object to the substance of Condition 90, the cross-reference to Condition 90 (which should be corrected to reflect renumbering) introduces an apparently unintended ambiguity regarding which party is to bear the costs of any necessary improvements that are indicated by the analysis. The proposed revision that the Applicant Team suggests with respect to Condition 91 below should, if adopted, resolve this ambiguity.

> **Condition 91.** Prior to building permit issuance, the applicant shall provide to the City an analysis of the capacity and condition of existing drainage facilities downstream of the development (including any detention/retention ponds), including recommendations for off-site drainage improvements, which shall be constructed prior to the issuance of the first certificate of occupancy. Site grading and drainage improvements shall be shown on the improvement plans. <u>In the unlikely event that the downstream facilities require improvements, the applicant shall enter a Funding Agreement as a means of reimbursement from the City.</u>

The City amended Condition 90 by adding the underlined text prior to the February 7 Planning Commission hearing.

The Applicant Team requests that the Condition be further modified as follows to clarify that the City is responsible for reimbursing the Applicant, pursuant to the Agreement: "In the unlikely event that the downstream facilities require improvements, the applicant and the City shall enter a Funding Agreement whereby the applicant is reimbursed for said improvements by the City." The Staff Report, which suggests that the previous revisions were designed "to provide for

[5] Report to the City Council (May 1, 2023 Hearing), at 20 (https://sthelena.civicweb.net/document/73337/Hunter%20Project%20-%20EIR%20and%20Tentative%20Map.pdf?handle=1E3AF87EBDF8430C96935C79A339A296).

potential reimbursement by the City for the cost of downstream flood control improvements built by the applicant," indicates that this requested further revision is consistent with the City's intent.

The fact that the City revised Condition 91 to acknowledge its responsibility for storm water infrastructure is wholly inconsistent with its unexplained refusal to make the same revisions with respect to Condition 88. The Agreement obligates the City and the City alone to bear the cost of these improvements. The Conditions should be revised to reflect that obligation consistently.

3. **Condition 73 should be amended to allow the Project to offset water usage on a pro rata basis.**

Condition 73 concerns the requirement to offset the Project's water usage. As currently drafted, it reads as follows:

> **Condition 73.** As detailed in the Final EIR for the project, the Developer is required to offset the Project's water demand of 37.04 AFY. The Project's landscape water demand is estimated at 17.16 acrefeet per year, which is within the capacity of the existing on-site well. Due to the new potable water demand on the City system in the amount of 19.8 AFY, the Developer shall implement an alternative innovative method of mitigating water use as allowed under Section 13.12.030(B) of the SHMC and/or Appendix J of the EIR. The required improvements to offset water demand are as follows: Identify and implement offsite improvements that reduce water loss from the public water distribution system and/or identify and implement offsite improvements that result in a net increase in potable water availability equivalent to 19.8 AFY, or a combination of these. <u>No building permit may be issued until the City has confirmed that the Developer has completed the approved measures and such measures have been accepted by the City</u>, or Developer has entered into a public improvement agreement with the City to ensure the completion of such improvements and provided security in one of the forms described in Government Code section 66499 in an amount equal to the estimated cost of construction of the proposed offsite improvements as determined, or reviewed and approved, by the City Engineer. Any public improvements shall be constructed to St. Helena Public Works Construction Standards whenever applicable.

The Applicant Team requests that the underlined portion of Condition 73 be modified to allow the issuance of building permits as water neutrality is achieved on a pro rata basis. The Applicant Team proposes the following amendment, but is amenable to alternative language that will achieve the same result: "No building permit <u>for a given dwelling unit</u> may be issued until the City has confirmed that the Developer has completed the approved measures <u>to offset the water demand corresponding to that dwelling unit</u> and such measures have been accepted by the City…."

Allowing the Applicant Team to offset water demand incrementally, rather than for the entire Project at the outset, is significantly more economically feasible from the Applicant Team's perspective. From the City's perspective, meanwhile, the requested revision achieves the same water neutrality goals as the current language does. The Applicant Team submits that the

requested revision would represent a meaningful action from the City in doing its part to ensure that the Project is developed in a timeframe consistent with its obligations under Housing Element Law.

4. **The City should abide by the Staff Report's recommendations with respect to CEQA and state housing law.**

At its February 7, 2023 hearing, the Planning Commission unanimously recommended certifying the Final EIR that is before City Council. That recommendation was correct. The Project has been subject to CEQA review for more than a decade. To say that sufficient review has been conducted is an understatement. Irrespective of one's views about the merits of the Project, there is no legitimate question about whether the EIR that City staff prepared, and that the Planning Commission carefully reviewed and favorably recommended, meets the standards for certification provided in CEQA.[6]

The Staff Report also correctly observes that the Project is protected under the Housing Accountability Act ("HAA"), and that the HAA "significantly restricts the grounds pursuant to which a housing development project can be denied."[7] As the Staff Report rightly notes, disapproval of the Project must be based on a preponderance of evidence supporting a finding of a specific health or safety impact that cannot be avoided or mitigated, under the very demanding

[6] Many legal observers have noted with concern that some cities faced with a legal obligation to approve housing have tried to engage in bad faith arguments about the need for more CEQA in order to avoid having to ever approve the housing for which they have planned. *See, e.g.*, Jennifer L. Hernandez et al., In the Name of the Environment (2015); Moira O'Neill, et al., Getting it Right: Examining the Local Land Use Entitlement Process in California to Inform Policy and Process (Berkeley Law Center for Law, Energy & the Environment; Berkeley Institute of Urban & Regional Development, Columbia Graduate School of Architecture, Planning & Preservation, February 2018), available at https://www.law.berkeley.edu/wp-content/uploads/2018/02/Getting_It_Right.pdf (in major jurisdictions, "even if . . . developments comply with the underlying zoning code, they require additional scrutiny from the local government before obtaining a building permit," which "triggers CEQA review of these projects"; "Our data shows that in many cases, these cities appear to impose redundant or multiple layers of discretionary review on projects"); Moira O'Neill et al., Developing Policy from the Ground Up: Examining Entitlement in the Bay Area to Inform California's Housing Policy Debates, 25 HASTINGS ENVTL. L. J. 1, 73-77 (2019); Christopher S. Elmendorf, Beyond the Double Veto: Housing Plans As Preemptive Intergovernmental Compacts (2019) 71 HASTINGS L.J. 79, 132-34 (noting that especially before 2017, local jurisdictions were largely free to ignore their own plans for meeting regional housing goals, and could always use CEQA to kill housing approvals); Christopher S. Elmendorf & Timothy G. Duncheon, When Super-Statutes Collide: CEQA, the Housing Accountability Act, and Tectonic Change in Land Use Law (2022) ECOLOGY LAW QUARTERLY, VOL. 49 ( https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3980396). We are sure we have no need for any concern the City Council would resort to this kind of obviously unlawful action, such as by contending that the ten-year-plus process to achieve this EIR was somehow an insufficient environmental review.

[7] Report to the City Council (May 1, 2023 Hearing), at 7 (https://sthelena.civicweb.net/document/73337/Hunter%20Project%20-%20EIR%20and%20Tentative%20Map.pdf?handle=1E3AF87EBDF8430C96935C79A339A296).

definitions, burdens of proof and standards of review provided in the HAA.[8] As no such finding can be made here, it would be unlawful to disapprove the Project or reduce its density.

Finally, the Applicant Team notes that the EIR concludes that the Project would have significant and unavoidable environmental impacts with respect to Vehicle Miles Traveled ("VMT").[9] To be clear, the Applicant Team disputes these findings and the Council could and should find the impact actually less than significant.[10] But assuming *arguendo* that the EIR's conclusions are correct, the Staff Report's recommendation to adopt a Statement of Overriding Considerations is also correct. We note that CEQA provides for public agencies to adopt such a statement of overriding considerations where "specific overriding . . . legal . . . benefits" of approving a project outweigh its significant and unavoidable environmental effects.[11] Here, in addition to the considerations listed in staff's recommendations, the City's need to comply with the HAA and with Housing Element Law should also be considered an additional additional and independent legal benefit of approving the Project.[12]

# STAFF REPORT

**DATE:** December 9, 2008

**TO:** Mayor and Council

**FROM:** Bert Johansson, City Manager

**RE:** Hunter Property Purchase/Sales Agreement

---

**BACKGROUND:**

The original EIR for the flood protection project was certified by the City Council in February 2004. The project approved at that time was referred to as the Enhancement Minimum Plan - Modification A (EMP-A) and is referred to in this document as the "2004 Plan".

Shortly following the City Council's approval of the 2004 Plan, an environmental advocacy organization called Living Rivers Council ("LRC") filed litigation against the City, alleging that the EIR certified by the City Council prior to project approval failed to satisfy the mandates of CEQA. Pursuant to settlement negotiations in 2005 between the City and LRC, a series of project refinements, proposed by LRC as part of a proposed Settlement Agreement between the parties, were considered and ultimately adopted by the City Council. These refinements were studied in an Addendum, which was considered by the City Council, along with the original EIR, prior to adopting the changes. The Addendum found, and the City Council concurred, that the refinements did not result in any new significant impacts nor any substantially more severe significant impacts than those disclosed in the original EIR. The revised project was referred to as the "2005 Plan".

In 2006, the City identified a funding shortfall that made full implementation of the 2005 Plan impossible for the foreseeable future. As a result of this fiscal reality, and because of the pressing need to obtain improved flood control for St. Helena, the City examined design alternatives that would substantially reduce project costs. A CEQA addendum for what become known as the 2006 Plan embodied the project refinements developed by the City in response to these changed circumstances. Notably, the City developed these refinements so as to be fully consistent with the express terms of the Settlement Agreement reached between the City and LRC to settle the CEQA litigation filed by LRC. The 2006 addendum examined the environmental impact of the project as proposed, which included elements of the 2004 Plan, the 2005 Plan, and the proposed refinements in comparison to the project impacts disclosed in the 2004 EIR for the original project. The City Council approved the CEQA addendum and the 2006 Plan on June 27, 2006.

On the basis of those approvals the attached purchase and sales agreement was negotiated with Mr. Dennis Hunter for acquisition of property necessary for the flood project.

**DISCUSSION/ANALYSIS:**

As it pertains to the attached proposed property acquisition, the 2006 Plan adopted the following refinements when compared to the February 2004 approvals:

- **Modified Terrace B** - Terrace B will be narrower within the VVMHP, and wider and higher in the vineyard adjacent to the VVMHP than in the 2004 Plan. Terrace B will not include an inlet from the river channel and will minimize the removal of trees in the riparian remnant.
- **No Relocation Area** - The number of home relocations will be reduced from 33 to 17. Where these home sites are occupied, the intent is to relocate them to unoccupied pads within the VVMHP and/or for the City to purchase available VVMHP homes as replacements. Where home sites to be removed are not occupied, no relocation is proposed. This eliminates the need to construct the relocation area in the adjacent vineyard.
- **Refinement No. 5/Drainage Design -** Drainage will be rerouted from an existing storm drain on Starr Avenue into a new storm drain that will be routed outside the new levee and then into a grass-lined swale that drains into and through Terrace B. The existing culverts that drain into the Napa River will be abandoned. Interior drainage will be via a detention basin with a low level culvert and lift pump facilities that will empty into the grass-lined swale on Terrace B.
- **Refinement No. 6/Soil Disposal -** Four options for soil disposal are included in the 2006 Plan: (1) disposal on the Miller Parcel and the vineyard portion of the Hunter parcel; (2) disposal on the Miller Parcel, the vineyard portion of the Hunter parcel and additional areas on the Hunter parcel; (3) disposal on the Miller Parcel with off haul of excess soil; and (4) off haul of all excess soil.
- **Adams Street Causeway/Bridge -** This project feature will be considered a separate project by the City and will only be considered after preparation of a separate CEQA evaluation.

The 2006 Plan also includes a public trail, described in the 2006 Plan as:

> [A]pproximately six feet wide and constructed with a compacted surface to be accessible to persons with disabilities. While the exact location of the trail is not set, it will begin in the vicinity of the end of the Adams Street levee at the outer edge of Terrace B and run on the river side of proposed new floodwall/levee. The trail will end in the vicinity of the southern tip of Terrace B.

As noted above, the 2004 project included the extension of Adams; however, this aspect of the project was eliminated after the Living Rivers Council litigation.

The 2004 CEQA/EIR document addressed growth inducing potential on land currently zone medium density residential, specifically the Hunter and Miller parcels. This finding was one of the areas of contention in the initial LRC litigation. In December, 2004, Napa Superior Court found that the EIR was inadequate in one respect—because it did not contain an adequate discussion of the cumulative impact analysis required by CEQA. In all other respects, it rejected LRC's challenge to the EIR; as it pertains to the growth inducing potential the court stated:

6. The Adequacy of the Assessment of Growth-Inducing Impacts.

LRC contends that the City failed to adequately analyze the project's growth-inducing impact because it did not discuss the environmental impacts of residential development expected to result from the flood protection provided by the subject project. The City counters that it adequately identified and discussed the growth-inducing impact of the project and determined it to be insignificant without the need for mitigation measures. The court finds that the EIR adequately discussed the general growth-inducing impact of the project. However, the specific environmental impacts of the residential development expected to result from the Adams Street extension and bridge will need to be fully analyzed during the project-level environmental review of that project in order to comply with CEQA.

LRC also filed litigation regarding the 2006 Plan. That litigation proceeded to the California Court of Appeal which issued a ruling in January 2008 affirming the City's actions.

To conform to the construction plans which are based upon the 2006 Plan, the flood project needs to acquire 3.69 acres of land from Dennis Hunter, a portion of APN No. 009-030-020 in order to construct maintenance roads, levees and public pathways for the flood project, in addition to easements for storm drains and water lines. A summary of the negotiations:

- The City's October 2007 appraisal indicated that the fair market value of the Hunter property interests was $558,000/acre.
- At a meeting in the Fall of 2007, Hunter indicated that he would have appraisal support for $900,000/acre or more than $3.3 million for the necessary property interests. This was far greater than any amount the City could afford.
- The only alternative to reaching a negotiated settlement with Hunter was to pursue an eminent domain action, which would result in extensive attorney's fees and costs, and not provide the fiscal certainty of a negotiated purchase. In addition, an eminent domain action would likely have delayed the project.
- The parties agreed to value the property above the floodplain at $700,000/acre and the property within the floodplain at $325,000/acre, so long as the City would also convey additional land from the former Miller parcel. These prices were based on the likelihood that a trial would result in a determination of land value between $900,000/acre and $558,000/acre. By utilizing the remnant of the former Miller parcel, the City is making an $899,500 cash payment. The calculation, as set forth in the Agreement, is as follows:

  Purchase Price. The parties hereby acknowledge and agree that the fair market value of the 1.20 Acres [Hunter floodplain property] and the 3.58 Acres [former Miller floodplain property] is Three Hundred Twenty Five Thousand Dollars ($325,000) per acre and that the fair market value of the 2.39 Acres [Hunter non-floodplain property] is Seven Hundred Thousand Dollars ($700,000) per acre. Consequently, the agreed upon value of each property is as follows:

| Property | Value | |
|---|---|---|
| 3.58 Acres | $1,163,500 | (valued at $325,000 per acre) |
| 1.20 Acres | $390,000 | (valued at $325,000 per acre) |
| 2.39 Acres | $1,673,000 | (valued at $700,000 per acre) |

Thus, the balance of the purchase price to be paid by the City at Closing shall be $899,500 [the value of the 1.20 acres and the 2.39 acres ($1,673,000 + $390,000) minus the credit received by the City for the 3.58 acres ($1,163,500)].

Throughout the process, the City consistently confirmed that any agreement would not constitute agreement to land use entitlements or promises to develop, development agreements, etc. The Agreement is simply a land exchange and purchase agreement – nothing more, nothing less. The Hunter property and the available portion of the former Miller parcel are already zoned for Medium Density Residential development, and the Agreement does not change that fact. The CEQA documentation discussed above noted:

> Consistent with the City of St. Helena's General Plan, removal of [the Hunter and Miller parcels] from the floodplain could facilitate the development of housing. The City has planned on this growth and factored the potential for new housing units on this property into its General Plan. (RDEIR, pp. 4-23 to 4-25.) Under the [2004] Project, however, only about half of [the Miller parcel] would be used for relocated VVMHP homes. The remainder of [Miller] would be retained permanently as open space. (RDEIR, p. 5-16.)

In the Agreement, about half of what would have been redeveloped on Miller will now be added to open space, as only 3.58 acres has been reconfigured for acquisition of the necessary Hunter property . Further, no development on the portion exchanged will occur unless and until Hunter submits a development application consistent with any subdivision and zoning requirements applicable at the that time, including the requirement for compliance with any CEQA review.

Because the property boundaries change, a lot line adjustment was necessary in order to formalize the new property boundaries. If Hunter intends in the future to development, he must still apply for entitlements and the City retains all of its powers, whatever those may be, to approve, comment on, and/or reject Hunter's development plans, including under CEQA. The Agreement does not affect the status quo or make it any easier for the land to develop. In fact, the 'panhandle' is smaller after the exchange than before the exchange, further complicating Hunter's development of this area,

The City will also save considerable construction costs (several hundred thousands of dollars estimated) under the Agreement, which permits depositing usable dirt, excavated as part of the project, on the Hunter property, instead of having to deposit the dirt offsite. The deposit of dirt is in conformance with the 2006 Addendum.

**FISCAL IMPACT:**

The $899,500 cash payment will be funded by the State Revolving Fund Loan

**ALTERNATIVES:**

1. Reject the purchase sales agreement
2. Propose changes
3. Accept the purchase sales agreement

**RECOMMENDED COUNCIL ACTION:**

Approve attached purchase sales agreement under terms outlined in the agreement and authorize the City Manager to execute the agreement.

**ATTACHMENTS/EXHIBITS:**

1. Agreement of Purchase and Sale.

**AGREEMENT OF PURCHASE AND SALE**

THIS AGREEMENT OF PURCHASE AND SALE ("**Agreement**") is made and entered into as of _____, 2008 (the "**Effective Date**"), by and between the City of St. Helena (the "**City**"), and Dennis R. Hunter ("**Hunter**").

RECITALS

A. Hunter owns that certain real property located in the City of St. Helena, State of California, consisting of approximately 3.69 acres, together with all appurtenant improvements, rights, interests, easements, tenements and estates, a portion of APN No. 009-030-020, more fully described on Exhibit A (the "**Hunter Property**").

B. A portion of the Hunter Property, consisting of approximately 1.20 acres, as shown on Exhibit B, is located below the flood plain (the "**1.20 Acres**"). The remaining portion of the Hunter Property, consisting of approximately 2.39 acres as shown on Exhibit B, is located above the flood plain (the "**2.39 Acres**"). A .10 acre portion of the Hunter Property located below the floodplain is not shown on Exhibit B

C. The City owns that certain real property located in the City of St. Helena, State of California, consisting of approximately 3.58 acres located below the flood plain, together with all appurtenant improvements, rights, interests, easements, tenements and estates, as more fully described on Exhibit C (the "**3.58 Acres**"). The Hunter Property and the 3.58 Acres may be referred to individually as a "property" and collectively as the "properties."

D. The Hunter Property and the 3.58 Acres are designated in the City's general plan as MR / Medium Density Residential 5.1 to 16 units per acre.

E. The City intends to use the 3.58 Acres for the advancement of the St. Helena Comprehensive Flood Control Protection Project (the "**Project**") based on the City's desire to acquire the Hunter Property from Hunter and Hunter's desire to acquire the 3.58 Acres from the City, in accordance with the terms and conditions set forth in this Agreement.

F. In furtherance of the Project**,** the City has secured a loan from the State Revolving Fund of the State Water Resources Control Board, the terms of which require that the City request funds for property acquisition thirty to forty-five (30-45) days before the close of escrow on the purchase of such property.

NOW, THEREFORE, for and in consideration of the mutual covenants and agreements contained in this Agreement, and other good and valuable consideration, the receipt and adequacy of which is hereby acknowledged by the parties hereby agree as follows:

ARTICLE 1: LOT LINE ADJUSTMENT; EASEMENTS

1.1 Lot Line Adjustment. The City hereby covenants and agrees to promptly process and cause to be recorded at Closing (as defined below) the lot line adjustments required to

establish the property configurations shown on Exhibit D. Following the Lot Line Adjustment, the City will own 15.691 acres and Hunter will own 16.903 acres.

1.2 Grant of Temporary Easement. For good and valuable consideration, Hunter hereby grants to the City an exclusive easement (the "**Temporary Easement**") to use the Hunter Property prior to the Close of Escrow (as defined below) for the purposes set forth in the St. Helena Comprehensive Flood Control Protection Project. The Temporary Easement herein granted shall commence upon the Effective Date and shall merge into the grant deed upon Hunter's conveyance of the Hunter Property to the City.

1.3 Grant of Construction Easement. For good and valuable consideration, Hunter hereby grants to the City a temporary, non-exclusive easement (the "**Construction Easement**"), in accordance with the terms of that certain Construction Easement in the form attached hereto as Exhibit E, over, under, across, above and through that certain real property shown on Exhibit E hereto (the "**Construction Easement Area**") for ingress and egress and for construction related purposes in connection with the Project. This Construction Easement is intended to be temporary in nature and shall terminate on December 31, 2012.

1.4 Grant of Utility Easement. For good and valuable consideration, Hunter hereby grants to the City a non-exclusive perpetual easement (the **Utility Easement**"), in accordance with the terms of that certain Utility Easement in the form attached hereto as Exhibit F, over under, across, above and through that certain real property shown on Exhibit F hereto (the "**Utility Easement Area**") for the purposes of installing, constructing, operating, using, maintaining, repairing, and replacing utility facilities, lines or connections and any uses incidental thereto.

1.5 Depositing of Dirt. Hunter hereby grants to the City the right, at no additional cost to the City and at no cost to Hunter, to deposit dirt, excavated by the City in connection with the Project, on that certain real property (the "**Fill Area**") described on the Soil Stockpile Grading Plan attached hereto as Exhibit G. City and its contractors and agents shall prepare the Fill Area to receive the dirt by removing vines and other vineyard improvements and place the fill in a good and workman-like manner.

1.6 Well Access License. Hunter hereby grants to the City a license at no additional cost to the City and at no cost to Hunter, to access and use water from the existing well shown on Exhibit G in connection with the Project. For good and valuable consideration, Hunter hereby grants to the City a temporary, non-exclusive license (the "**Well Access License**") over, under, across, above and through properties to be owned by Hunter, including the 3.58 Acres. This Well Access License is intended to be temporary in nature and to continue only during the performance of the Project. The Well Access License shall terminate, without the necessity of further documentation, upon completion of the Project.

1.7 Drainage Improvements. The City intends as a part of the Project to build certain retention and drainage facilities as specifically described as follows:

(a) The City will construct a compacted earth fill pad on the remainder of APN No. 009-030-020 ("**Hunter Remainder**") (exclusive of the Hunter Property) and on the 3.58 Acres in accordance with the enclosed Exhibit G. The source of the soil material to construct the pad shall be the City's Flood Protection Project, with unsuitable material (defined as organic content in excess of 3.5%) segregated and placed in areas outside of the useable pad area shown on Exhibit G. Pad construction will comply with the notes on the exhibit and finish graded to provide positive drainage in accordance with Exhibit G. The level of the pad may vary based upon the amount of material generated from the Project with the elevation of the pad adjusted uniformly.

(b) Upon completion of the Project, the then existing drainage patterns for the Hunter Remainder and the 3.58 Acres shall remain undisturbed by the City, with exception of the new pad drainage. Drainage ditches on the pad will be routed to the new detention basin shown on Exhibit G. The City will modify its existing detention basin inlet from the storm drain system to provide a storm drain inlet for pad drainage.

(c) The City will size storm water drainage handling facilities downstream of the site, to be constructed as part of the Project, based upon projected build-out of the Hunter Remainder and the 3.58 Acres, as currently zoned Medium-density Residential (MR) (as defined in the St. Helena Municipal Code Section 17.40), expressed as a 70% impervious drainage watershed.

(d) The City agrees to reroute the existing water main crossing the Hunter Remainder in Easement 895 (OR 383 NCR), as shown on the enclosed Exhibit H. Relocation will be completed by the City prior to development of the Hunter Remainder and the 3.58 Acres. The City's easement for the section of pipe being abandoned will be quit-claimed and returned to Hunter once the relocation is complete.

1.8 Sewer Connection. Upon any application for development of the Hunter Property as referenced in this Agreement, City will not unreasonably withhold its permission for Hunter to cross City property to access a sewer connection. Nothing in this section shall be construed as an entitlement to development, and Hunter is responsible for obtaining all necessary development approvals from the City and any other agencies with jurisdiction over the Hunter Property.

1.9 Covenants Running with the Land. The terms and conditions contained in this Article 1 shall (a) constitute covenants running with the land, (b) survive the Close of Escrow, and (c) bind the parties hereto, their heirs, successors and assigns.

1.10 Payment of Taxes. All real property taxes and assessments on the Hunter Property (prior to Close of Escrow) and the Construction Easement Area shall be payable by Hunter.

## ARTICLE 2: PURCHASE AND SALE

2.1 Hunter Property. The parties hereby acknowledge and agree that the City requires the Hunter Property in connection with the Project. Accordingly, the City has forced a sale of

the Hunter Property by Hunter under the threat of condemnation, on the terms and conditions set forth herein.

2.2 3.58 Acres. As partial consideration for the sale of the Hunter Property pursuant to Section 2.1, above, the City hereby agrees to convey the 3.58 Acres to Hunter, on the terms and conditions set forth herein.

## ARTICLE 3: PURCHASE PRICE

3.1 Purchase Price. The parties hereby acknowledge and agree that the fair market value of the 1.20 Acres and the 3.58 Acres is Three Hundred Twenty Five Thousand Dollars ($325,000) per acre and that the fair market value of the 2.39 Acres is Seven Hundred Thousand Dollars ($700,000) per acre. Consequently, the agreed upon value of each property is as follows:

| Property | Value | |
|---|---|---|
| 3.58 Acres | $1,163,500 | (valued at $325,000 per acre) |
| 1.20 Acres | $390,000 | (valued at $325,000 per acre) |
| 2.39 Acres | $1,673,000 | (valued at $700,000 per acre) |

Thus, the balance of the purchase price to be paid by the City at Closing shall be **$899,500** [the value of the 1.20 acres and the 2.39 acres ($1,673,000 + $390,000) minus the credit received by the City for the 3.58 acres ($1,163,500)].

## ARTICLE 4: CLOSING

4.1 Closing. Hunter hereby covenants and agrees to cooperate with the City in connection with the City's application for a loan from the State Revolving Fund of the State Water Resources Control Board and satisfying all requirements thereof. The consummation of the transactions contemplated herein (the "**Closing**" or "**Close of Escrow**") shall occur on or before November 1, 2008 at the office of North Bay Title Co, Santa Rosa, California ("**Escrow Agent**"); provided, however, that the date for the Close of Escrow shall be subject to extension to the extent required by the State Revolving Fund. Upon satisfaction or completion of all closing conditions and deliveries, the parties shall direct Escrow Agent to immediately record and deliver the closing documents to the appropriate parties and make disbursements according to the closing statements executed by the City and Hunter.

4.2 Escrow Fee. Except as expressly provided herein to the contrary, the escrow fee, if any, charged by Escrow Agent, shall be paid in accordance with customary practices in Napa County.

4.3 Hunter's Deliveries into Escrow. At least one (1) business day prior to the Closing Date, Hunter shall deliver to Escrow Agent for distribution to the appropriate party(ies) at Closing, the following:

(a) Grant Deed. A grant deed in conformity with the custom in the State of California, executed and acknowledged by Hunter, conveying to the City fee simple title to the Hunter Property.

(b) Prorations. Hunter's share of any prorations or expenses.

(c) Tax Certificates. A Foreign Investment in Real Property Tax Act affidavit and a California Form 593-C, executed by Hunter.

(d) State Law Disclosures. Such disclosures and reports as are required by applicable state and local law in connection with the conveyance of real property.

(e) Additional Documents. Any additional documents that the City or the Escrow Agent may reasonably require for the proper consummation of the transactions contemplated by this Agreement.

4.4 The City's Deliveries into Escrow. At least one (1) business day prior to the Closing Date, the City shall deliver to Escrow Agent for distribution to the appropriate party(ies) at Closing, the following:

(a) Purchase Price. The balance of the purchase price, if any, plus or minus applicable prorations and expenses.

(b) Grant Deed. A grant deed in conformity with the custom in the State of California, executed and acknowledged by the City, conveying to Hunter fee simple title to the 3.58 Acres.

(c) State Law Disclosures. Such disclosures and reports as are required by applicable state and local law in connection with the conveyance of real property.

(d) Additional Documents. Any additional documents that Hunter or the Escrow Agent may reasonably require for the proper consummation of the transactions contemplated by this Agreement.

4.5 Closing Statements. At least one (1) business day prior to the Closing Date, Hunter and the City shall deposit with Escrow Agent executed closing statements consistent with this Agreement in the form required by Escrow Agent.

## ARTICLE 5: PRORATIONS AND EXPENSES

5.1 Prorations.

(a) Taxes and Assessments. All non-delinquent real estate taxes and non-delinquent assessments on the properties shall be prorated as of 12:01 a.m. on the day of the Close of Escrow based on the actual current tax bill. All delinquent taxes and all delinquent assessments, interest and penalties (if any) with respect to a property, shall be paid at the Close of Escrow by the party conveying such property. If any information needed for the final

proration of any item is not available as reasonably determined by Escrow Agent and the parties are notified of the same prior to Closing, the parties shall re-prorate such item after Closing and payment shall be made promptly to the party entitled thereto. The provisions of this Section 5.1(a) shall survive the Close of Escrow

(b) Sales, Transfer, and Documentary Taxes. The parties shall pay, in accordance with customary practices in Napa County, all sales, gross receipts, compensating, stamp, excise, documentary, transfer, deed or similar taxes and fees imposed in connection with the transactions contemplated hereunder.

5.2 No Brokers. Hunter and the City represent and warrant each to the other that they have not dealt with any real estate broker, sales person or finder in connection with this Agreement. In the event of any claim for broker's or finder's fees or commissions in connection with the negotiation, execution or consummation of this Agreement or the transactions contemplated hereby, each party shall indemnify and hold harmless the other party from and against any such claim based upon any statement, representation or agreement of such party.

## ARTICLE 6: REPRESENTATIONS AND WARRANTIES

6.1 Hunter's Representations and Warranties. Hunter represents and warrants to the City that:

(a) Conflicts and Pending Actions or Proceedings. There is no agreement to which Hunter is a party or, to Hunter 's knowledge, binding on Hunter which is in conflict with this Agreement. There is no action or proceeding pending or, to Hunter's knowledge, threatened against Hunter or relating to the Hunter Property which challenges or impairs Hunter's ability to execute or perform its obligations under this Agreement.

(b) No Encumbrances. Hunter has not alienated, encumbered, transferred, mortgaged, assigned, pledged, or otherwise conveyed its interest in the Hunter Property or any portion thereof, nor entered into any agreement to do so, and there are no liens, encumbrances, mortgages, covenants, conditions, reservations, restrictions, easements or other matters affecting the Hunter Property, except as disclosed in the preliminary title report delivered to the City. Hunter shall not, directly or indirectly, alienate, encumber, transfer, mortgage, assign, pledge, or otherwise convey its interest prior to the Close of Escrow, as long as this Agreement is in force.

(c) Contractors and Suppliers. All contractors, subcontractors, suppliers, architects, engineers, and others who have performed services or labor or have supplied materials in connection with Hunter's acquisition, development, ownership, or management of the Hunter Property have been paid in full and all liens arising therefrom (or claims which with the passage of time or the giving of notice, or both, could mature into liens) have been satisfied and released.

6.2 City's Representations and Warranties. The City represents and warrants to Hunter that the City has the full right, capacity, power and authority to enter into and carry out the terms of this Agreement. This Agreement has been duly executed by the City, and upon delivery to and execution by Hunter shall be a valid and binding agreement of the City.

6.3 Survival of Representations and Warranties. The representations and warranties set forth in this Article 6 are made as of the Effective Date and are remade as of the Closing Date and shall not be deemed to be merged into or waived by the instruments of Closing, but shall survive the Closing. Each party agrees to defend and indemnify the other against any claim, liability, damage or expense asserted against or suffered by such other party arising out of the breach or inaccuracy of any such representation or warranty.

## ARTICLE 7: DEFAULT AND REMEDIES

7.1 Default. If the transactions contemplated hereunder fail to close as a result of a party's default, the non-defaulting party shall be entitled to such remedies for breach of contract as may be available at law and/or in equity including, without limitation, the remedy of specific performance.

7.2 Notice of Default. Except for a party's failure to close on the Closing Date, neither party shall have the right to declare a default by the other party and terminate this Agreement because of a failure by such other party to perform under the terms of this Agreement unless the other party shall fail to cure such failure to perform within ten (10) days after its receipt of written notice of such failure to perform.

7.3 Other Expenses. If this Agreement is terminated due to the default of a party, such defaulting party shall pay any fees due to Escrow Agent.

## ARTICLE 8: DUE DILIGENCE; AS-IS; RELEASE

8.1 Due Diligence Investigation. Hunter acknowledges that it has had an opportunity to conduct its due diligence investigation of the 3.58 Acres, and hereby approves the condition and suitability of the 3.58 Acres for Hunter's purposes. The City acknowledges that it has had an opportunity to conduct its due diligence investigation of the Hunter Property, and hereby approves the condition and suitability of the Hunter Property for the City's purposes. The parties shall continue to operate and maintain their respective properties, prior to the Close of Escrow, in substantially the same manner that such were operated and maintained as of the Effective Date.

(a) Hunter has reviewed a preliminary title report for the 3.58 Acres and approved all of the following exceptions to title: (a) standard printed exceptions in the preliminary title report; (b) general and special real property taxes and assessments constituting a lien not yet due and payable; and (c) the title exceptions listed on Exhibit I attached hereto. The City shall deliver title to the 3.58 Acres to Hunter at the Closing subject only to the foregoing approved exceptions.

(b) The City has reviewed a preliminary title report for the Hunter Property and approved all of the following exceptions to title: (a) standard printed exceptions in the preliminary title report; (b) general and special real property taxes and assessments constituting a lien not yet due and payable; and (c) the title exceptions listed on Exhibit J attached hereto. Hunter shall deliver title to the Hunter Property to the City at the Closing subject only to the foregoing approved exceptions.

8.2 "As-Is" Sale. Each party hereby acknowledges and agrees that, neither the other party, nor anyone acting for or on behalf of such other party, has made any representations, warranties, or promises, concerning the condition of the properties or any other aspect of the properties. Each party further acknowledges that HE OR IT WILL BE ACQUIRING THE PROPERTIES, AS APPLICABLE, BASED UPON THEIR "AS-IS" CONDITION AND THEIR STATE OF REPAIR INCLUSIVE OF ALL FAULTS AND DEFECTS, WHETHER KNOWN OR UNKNOWN, AS MAY EXIST AS OF THE CLOSE OF ESCROW, AND EACH PARTY EXPRESSLY ASSUMES THE RISK THAT ADVERSE PHYSICAL, ENVIRONMENTAL, FINANCIAL AND LEGAL CONDITIONS MAY NOT BE REVEALED BY SUCH PARTY'S DUE DILIGENCE INVESTIGATION (IF ANY).

8.3 Disclaimer. Except for a breach of this Agreement, each party hereby fully and forever waives and disclaims, all warranties of whatever type or kind with respect to the property acquired by him or it, whether express, implied or otherwise including, without limitation, those of fitness for a particular purpose, tenantability, habitability or use.

8.4 Release and Waiver. Each party hereby fully and forever releases, acquits and discharges the other party of and from, and hereby fully and forever waives any and all claims, actions, causes of action, suits, proceedings, demands, rights, damages, costs, expenses or other compensation whatsoever, whether known or unknown, direct or indirect, foreseeable or unforeseeable, absolute or contingent ("**Claims**"), that such party now has or may have or which may arise in the future arising out of, directly or indirectly, or in any way connected with the condition of the property acquired by him or it. The parties hereby agree that the matters released in this Section 8.4 are not limited to matters which are known or disclosed and, with respect to the foregoing release, each party hereby waives any and all rights and benefits which he or it now has, or in the future may have, conferred upon him or it, by virtue of the provisions of Section 1542 of the Civil Code of the State of California (or any other statute or common law principles of similar effect), which Section provides as follows:

> A GENERAL RELEASE DOES NOT EXTEND TO CLAIMS WHICH THE CREDITOR DOES NOT KNOW OR SUSPECT TO EXIST IN HIS OR HER FAVOR AT THE TIME OF EXECUTING THE RELEASE, WHICH IF KNOWN BY HIM OR HER MUST HAVE MATERIALLY AFFECTED HIS OR HER SETTLEMENT WITH THE DEBTOR.

In this connection, each party acknowledges and agrees that it understands that factual matters relating directly to the properties now unknown to him or it may have given or may hereafter give rise to claims that are presently unknown, unanticipated and unsuspected, and such party further acknowledges and agrees that the releases herein have been negotiated and agreed upon in light of that realization and that it nevertheless intends to release, discharge and acquit the other party from any such unknown claims.

Hunter's Initials: _____ City's Initials: _____

8.5 Delivery of Title Policy. At Hunter's request, the Title Company shall deliver to Hunter an owner's policy of title insurance issued by the Title Company as of the Closing Date, insuring Hunter as owner of fee simple title to the 3.58 Acres. At the City's request, the Title Company shall deliver to the City an owner's policy of title insurance issued by the Title Company as of the Closing Date, insuring the City as owner of fee simple title to the Hunter Property. Notwithstanding the foregoing, the Title Company's delivery or willingness to deliver the foregoing title policies shall not be a condition precedent to either party's obligation to close hereunder. Each party shall pay the premium for their respective title policies.

## ARTICLE 9: NOTICES

9.1 Notices. All notices required or permitted hereunder shall be in writing and shall be served on the parties at the addresses set forth below. Any such notices shall be either (a) sent by overnight delivery using a nationally recognized overnight courier, in which case notice shall be deemed delivered one business day after deposit with such courier, (b) sent by facsimile, in which case notice shall be deemed delivered upon transmission of such notice, or (c) sent by personal delivery, in which case notice shall be deemed delivered upon receipt. A party's address may be changed by written notice to the other party; provided, however, that no notice of a change of address shall be effective until actual receipt of such notice. Copies of notices are for informational purposes only, and a failure to give or receive copies of any notice shall not be deemed a failure to give notice.

## ARTICLE 10: MISCELLANEOUS

10.1 Parties Bound. This Agreement shall bind and shall inure to the benefit of the City, Hunter and their respective successors and assigns. Notwithstanding the foregoing, neither party may assign this Agreement without the prior written consent of the other, and any such prohibited assignment shall be void.

10.2 Headings. The article and paragraph headings of this Agreement are for convenience only and in no way limit or enlarge the scope or meaning of the language hereof.

10.3 Invalidity and Waiver. If any portion of this Agreement is held invalid or inoperative, then so far as is reasonable and possible the remainder of this Agreement shall be deemed valid and operative, and, to the greatest extent legally possible, effect shall be given to the intent manifested by the portion held invalid or inoperative. The failure by either party to enforce against the other any term or provision of this Agreement shall not be deemed to be a waiver of such party's right to enforce against the other party the same or any other such term or provision in the future.

10.4 Governing Law. This Agreement shall, in all respects, be governed, construed, applied, and enforced in accordance with the law of the State of California.

10.5 Survival. The provisions of this Agreement that contemplate performance after the Closing and the obligations of the parties not fully performed at the Closing shall survive the Closing and shall not be deemed to be merged into or waived by the instruments of Closing.

10.6 No Third Party Beneficiary. This Agreement is not intended to give or confer any benefits, rights, privileges, claims, actions, or remedies to any person or entity as a third party beneficiary, decree, or otherwise.

10.7 Entirety and Amendments. This Agreement, together with all exhibits attached hereto and incorporated herein, embodies the entire agreement between the parties and supersede all prior agreements and understandings relating to the subject matter hereof. This Agreement may be amended or supplemented only by an instrument in writing executed by the party against whom enforcement is sought.

10.8 Time. Time is of the essence in the performance of this Agreement.

10.9 Attorneys' Fees. Should either party employ attorneys to enforce any of the provisions hereof, the party against whom any final judgment is entered agrees to pay the prevailing party all reasonable costs, charges, and expenses, including reasonable attorneys' fees, expended or incurred in connection therewith.

10.10 Construction. The parties acknowledge that the parties and their counsel have reviewed and revised this Agreement and agree that the normal rule of construction to the effect that any ambiguities are to be resolved against the drafting party shall not be employed in the interpretation of this Agreement or any exhibits or amendments hereto.

10.11 Calculation of Time Periods. Unless otherwise specified, in computing any period of time described herein, the day of the act or event after which the designated period of time begins to run is not to be included and the last day of the period so computed is to be included at, unless such last day is a Saturday, Sunday or legal holiday for national banks in the location where the properties are located, in which event the period shall run until the end of the next day which is neither a Saturday, Sunday, or legal holiday. The last day of any period of time described herein shall be deemed to end at 5:00 p.m. Pacific time.

10.12 Further Assurances. In addition to the acts and deeds recited herein and contemplated to be performed, executed and/or delivered by either party at Closing, each party agrees to perform, execute and deliver, but without any obligation to incur any additional liability or expense, on or after the Closing any further deliveries and assurances as may be reasonably necessary to consummate the transactions contemplated hereby or to further perfect the conveyance, transfer and assignment of the properties hereunder.

10.13 Execution in Counterparts. This Agreement may be executed in any number of counterparts, each of which shall be deemed to be an original, and all of such counterparts shall constitute one Agreement. To facilitate execution of this Agreement, the parties may execute and exchange by email or facsimile counterparts of the signature pages.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the Effective Date.

# ATTACHMENT B

# SETTLEMENT AGREEMENT

This Settlement Agreement ("Agreement") is made by and between the City of St. Helena (the "City") and Dennis Hunter ("Hunter") (collectively the "Parties") with regard to the action entitled *Hunter v. City of St. Helena,* Case No. 26-57887 filed in the Napa County Superior Court ("Action").

The Parties desire to settle all claims relating to the Action, Contract and Project according to the terms of this Agreement.

NOW, THEREFORE, in consideration of the promises and mutual covenants contained herein, the Parties agree as follows:

## 1. DEFINITIONS

For purposes of this Agreement, the term "Contract" means the Agreement of Purchase and Sale dated January 2009 ("Contract"). The term "Project" means the St. Helena Comprehensive Flood Control Protection Project (the "Project").

## 2. NO ADMISSION OF LIABILITY

This Agreement is a mutual compromise and is not intended to be, nor shall it be construed as, an admission of liability by any party to any other party.

## 3. SETTLEMENT AMOUNT AND EXECUTION

The City shall pay Hunter a total sum of three hundred and twenty-five thousand dollars ($325,000.00) within ten (10) days of the full execution of this Agreement by the Parties. Hunter shall not be entitled to any payment, damages, attorneys fees or compensation of any kind other than the $325,000.00 required by this paragraph. This Agreement shall not be considered to be fully executed until it has been approved by the City of St. Helena City Council as set forth in Section 13 of this Agreement.

## 4. DISMISSALS OF ACTION

Within five (5) days of receipt of payment from the City, Hunter shall file a request for dismissal of the Action, with prejudice, with the Napa County Superior Court.

## 5. RELEASE, WAIVER AND COVENANT NOT TO SUE

Hunter, for himself, and his representatives, predecessors, successors, attorneys, assigns and agents, and each of them, hereby fully remises, releases, waives, covenants not to sue, and forever discharges the City, its

representatives, predecessors, successors, assigns, officers, agents, consultants, directors, stockholders, owners, servants, employees, sureties, architects, engineers, insurers, attorneys and affiliated and subsidiary corporations or companies, past and present, and each of them:

(1) Of and from any and all manner of known or suspected actions, suits, liens, debts, dues, damages, claims, sums of money, obligations, liabilities, judgments, bonds, executions and demands of every nature, kind and description whatsoever, at law, in equity or otherwise, which may have arisen under and by virtue of the laws of any jurisdiction, which Hunter has had or claims to have had or now has or claims to now have in connection with the Contract, Project and Action.

(2) Of and from any and all manner of known, suspected, or unknown actions, suits, liens, debts, dues, damages, claims, sums of money, obligations, liabilities, judgments, bonds, executions and demands of every nature, kind and description whatsoever, whether known or unknown, and whether suspected or unsuspected, either at law, in equity or otherwise, which may have arisen under and by virtue of the laws of any jurisdiction, which Hunter has had or claims to have had or now has or claims to now have in connection with the Action, including but not limited to the City's obligations under Section 1.5 and Section 1.7(a) of the Contract.

(3) As to any unknown claims not released by this Agreement, the City reserves all defenses.

As to the claims identified in Section 5(2), Hunter expressly waives and relinquishes all rights and benefits afforded by Section 1542 of the California Civil Code, which provides as follows:

> A General Release does not extend to claims which the Creditor does not know or suspect to exist in his or her favor at the time of executing the release, which if known by him or her must have materially affected his settlement with the debtor.

6. NO ASSIGNMENT

The Parties hereto, and each of them, represent and warrant to each other that they have not heretofore assigned or transferred or purported to assign or transfer to any person, firm, association, corporation or other entity, any claim or cause of action based on or arising out of, or in connection with any matter, fact, claim or cause of action alleged or referred to in this Agreement.

7. BINDING EFFECT

This agreement shall be binding upon, and shall inure to the benefit of the Parties hereto and their respective heirs, successors, representatives and assigns.

8. CALIFORNIA LAW

This Agreement is made, executed and entered into and is intended to be performed within the State of California, and that this Agreement is to be construed as such under California law.

9. EXPENSES

Each party hereto shall bear his and its own respective attorneys fees, costs and expenses of any kind arising out of any and all claims which have been settled by the terms of this Agreement.

10. CONSTRUCTION OF AGREEMENT

This Agreement was jointly prepared through negotiations of the Parties and the provisions of the Agreement are not to be strictly or liberally construed for or against any of the Parties.

11. ENTIRE AGREEMENT

This Agreement contains the entire agreement and understanding among the Parties hereto and supersedes and replaces all other prior negotiations, proposed agreements and agreements, written and oral. The Parties further declare and represent that no promise, representation or agreement not herein expressed has been made.

12. AMENDMENTS

No amendment, modification, waiver or termination of this Agreement shall be binding unless executed in writing by the Parties to be bound thereby.

13. COUNTERPARTS AND SIGNATURES

The Parties agree that this Agreement may be executed in counterpart and that each fully executed copy of the Settlement Agreement shall have the same binding force and effect as an original. The Parties further agree that facsimile and signatures transmitted by email shall have the same force and effect as original signatures.

14. APPROVAL BY THE CITY COUNCIL

This Agreement is subject to the approval of the St. Helena City Council and shall not be deemed effective or fully executed until approved by the St. Helena City Council, and signed by the City in accordance with law.

15. PUBLIC RECORD

This Agreement is a public record subject to disclosure to the public upon request pursuant to California law.

The undersigned hereby agree to the terms of this Settlement Agreement and represent and warrant that they have authority to sign this Settlement Agreement.

Maya DeRosa, Building and Planning Director
Anil Camelo, City Manager
City of St. Helena

Dear City Council Members,

I am writing to bring to your attention a group of St. Helena residents who have been completely neglected. The Hispanic community has not had the opportunity to receive any information in writing regarding any impacts which would directly affect their safety.

As you are aware, the Hunts Grove apartments have a large number of residents who are Spanish speaking, and they will be directly impacted by the proposed Hunter Project.

In a letter dated April 7, 2023, from the Department of Housing and Community Development, Division of Housing Policy Development, states "During the housing element revision process, **the City must continue to engage the community, including organizations that represent lower-incomed, special needs households, by making information regularly available while considering and incorporating comments where appropriate."**

For this reason, I ask the City Council allow an extension of the EIR in order to interpret the EIR into Spanish. I would also ask City Council to engage the Hispanic community and all those listed above.

The extension time would be the sixty days as given for the DEIR. However this depends on how long it would take to get the document interpreted and available for public review.

Respectfully,

Maria Villegas

1166 MEADOWCREEK CIRCLE, ST. HELENA, CA 94574

Billy Summers, Councilman
Maya DeRosa, Building and Planning Director
Anil Camelo, City Manager
City of St. Helena
1088 College Avenue
St. Helena, Ca 94574

Dear City Council,

I would like to bring to your attention the Napa County Flood Protection Sales Tax Ordinance also known as Measure A (Revenue and Taxation Code Section 7285.5). "The transactions and use tax provisions of this Ordinance shall be applicable in the incorporated and unincorporated territory of the County of Napa."

Measure A-Section 2. Findings

I. The ultimate goal of the Plan is to provide flood protection, ***save lives, protect property,*** restore the Napa River, Napa Creek and other tributaries, maintain Napa County's economic vitality, and enhance riparian environments.

Furthermore, in a letter dated July 12, 2005, Office of the District Engineer , Napa County Flood Control and Water Conservation Project Re: Adams Alignment Levee states:

"...the question has been raised as to whether the levee is in fact intended to support a road rather than simply provide flood protection. The levee element serves two functions in the Project, (1) provide a

barrier against inundation, and (2) provide an onsite location for disposition of soils to be removed from the planned terraces. The levee is wider than what would be necessary if only inundation-prevention were the objective. The levee is wider in order to accommodate the disposition of soils to be removed from the terraces."

In a Press Release on April 21, 2023, the question "Will the Hunter project affect emergency evacuation? Answer: The St. Helena Police Department, which conducts annual practice evacuations in the Vineyard Valley area, does not find that the Hunter project will make evacuations more difficult."

The evacuation drills include Vineyard Valley residents use the top of the levee as an evacuation route. Measure A clearly states the levee has two functions, as a barrier against inundation and onsite location for disposition of soils. Therefore, this decreases the number of evacuation routes. Measure A requirements have been excluded from the analysis for evacuation routes.

Lastly, Measure A states, "Section 2. Findings G. None of the projects in the Plan are intended or designed to encourage population growth in Napa County. All of the projects are for flood protection, preserving ground water integrity, reducing sediment in the Spa River system, and for maintaining the reliability of the water supply for the existing Napa County populations of the effective date of this Ordinance."

Given the the project uses the 1993 General Plan, this Ordinance should be considered valid and upheld.

I urge the City Council to request analysis which would include Measure A requirements. I request the FEIR be rejected as written and returned to the Planning Commissioners for further evaluation.

Respectfully,

Maria Villegas, Chairperson

St. Helena Citizens for a Sustainable Future

1166 MEADOWCREEK CIRCLE, ST. HELENA, CA 94574

**From:** James Wickesberg
**To:** Public Comment
**Subject:** [External] Hunter Development
**Date:** Monday, May 1, 2023 10:45:33 AM

---

To the City Council:

I urge the council to vote NO on the Hunter project. Among other things, the informational video for the development claims that it would not impact traffic congestion or water usage. This is completely unbelievable for anyone who drives or pays for water in the city of St Helena. (The flood zone issues may be debatable, but they are not non-existent.) I fear that the lure of income for the city may make it difficult for council members to see beyond the developer's efforts to promote the project rather than acknowledge the unpleasant impact of a development of this nature.

**RE: Hunter Subdivision Project Environmental Impact Report. 2022-001, File #PL10-040**

Dear Mayor Dohring, Vice Mayor Hall, Council Members, City Manager Comelo, Community Development Director DeRosa:

As you are aware, we represent the Saint Helena Citizens for a Sustainable Future, a diverse group of City residents. We have provided several letters on this project to the Planning Commission on this project, highlighting several of the procedural and substantive deficiencies in the application process and consideration. (Those letters are included in your Agenda packet for the May 1 meeting, along with Staff's responses, and we encourage you to review those letters in chronological order for context. We have not set out again every point in those letters for sake of brevity; although due to the importance of the issues, some of that information is restated and emphasized below.)

The Planning Commission nevertheless – reluctantly as can be seen in the video of the hearing – passed the project on to the City Council. The Planning Commission appeared severely cowered by pressure to approve housing. Its referral to the City Council is thus not in any way persuasive that the Environmental Impact Report warrants certification, nor the underlying tentative map. A separate letter addresses the serious procedural and substantive issues with the tentative map itself and the Project generally failing to comply with the applicable General Plan and municipal code.

Review of the record shows the Planning Commission made the recommendation of approval on the notion the State is forcing it to approve housing. This violates CEQA. The decision to certify the EIR and approve the Project must only be made by the City because the City independently

believes it is complete and appropriate.[1] The Housing Accountability Act clearly states that it does not overrule CEQA.[2] The Council must make and take sole responsibility for its actions in exercising its judgment under CEQA and to the Project as a whole.

Prior correspondence to the Planning Commission highlighted the defects in the EIR. An attachment to the Staff Report for the February 7, 2023, Planning Commission meeting attempted to respond to those comments. Failing to do so credibly, Staff has tried again, with an additional response included as Attachment 28 to the Agenda Packet.

As discussed below, that response contradicts the EIR itself.[3] It misunderstands the impact and direction of the changed Napa Valley Subbasin management policies set by Napa County. It displays an ignorance of the City and the way people live, work, and go to school here that is disheartening. And it either does not know what a firebreak is, or forgets the existing vineyards protecting the Monte Vista neighborhood, and in turn the rest of the City, that will be removed.

Certification of a final EIR requires this Council to exercise its own independent judgment and analysis.[4] The Council should exercise that judgment to reject certification.

**Required Findings**

As discussed in our accompanying letter, the Project does not comply with the applicable general plan or zoning code. But even if it did, the subdivision Project must still be denied, as the Council can and must make the following findings:

> 1. The housing development project would have a specific, adverse impact upon the public health or safety unless the project is disapproved or approved upon the condition that the project be developed at a lower density.
>
> 2. There is no feasible method to satisfactorily mitigate or avoid the adverse impact identified other than disapproval of the housing development project or approval upon condition that the project be developed at a lower density.

[1] P.R.C. § 21082.1(c)(3) ("As part of the … certification of an environmental impact report, find that the report or declaration reflects the independent judgment of the lead agency.")
[2] Gov. C. § 65589.5(e) ("Neither shall anything in this section be construed to relieve the local agency from making one or more of the findings required pursuant to Section 21081 of the Public Resources Code or otherwise complying with the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code)."
[3] We note that the "Final" Final EIR, which was presented to the Planning Commission on February 7, 2023, was not posted on the City's website in violation of P.R.C. 21082.1(d). Only an earlier October 2022 version of the document was posted.
[4] P.R.C. § 21082.1(c)(3); CEQA Guideline 15090(a)(3).

(SHMC § 16.16.080(B).) For the following reasons, there is substantial evidence in the record that the Project presents adverse impacts to public health and safety which have not or cannot be mitigated.

By contrast, in order to Certify the EIR, the Council would need to find, in the exercise of its independent judgment, that "[c]hanges or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment."[5] Where significant impacts on the environment are identified, as here, the Council would also need to find "that specific overriding economic, legal, social, technological, or other benefits of the project outweigh the significant effects on the environment."[6] Those findings must be based on substantial evidence in the record.[7] As discussed further below, this standard for adoption of a statement of overriding considerations cannot be made on the current record.

**The EIR Fails to Adequately Analyze Groundwater Impacts as the Proposed Well Use on the Property Is Contrary to Current Standards**

As discussed in our prior letters but discussed further here in light of Staff's latest attempted response, the Project is for the subdivision of a 16.92 acre property. The EIR analyzed its proposed groundwater use of an on-site well of up to 17.16 acre-feet per year to provide for all on-site irrigation of public and private landscaping, as well as a small remnant of an existing vineyard.[8]

Not only the Draft, but the ***Final*** EIR recognized the well on the property was not in use and described it repeatedly as "inoperable." (E.g., DEIR at 3.9-43 ("the well is currently inoperable and would need to be repaired so it is operational."); 3.13-1 (well "has been used historically to supply irrigation water to the site but is currently inoperable"; 3.9-15; 3.13-2; 3.13-32. The FEIR fixed typographical errors in the text of 3.13-2, but still states the well is not currently in operation.) The Phase I Environmental Site Assessment performed in March 2018 also says the well is inoperable.

Somewhat incredibly, Staff's latest response in Attachment 28 on this issue is to directly contradict the EIR as to the "inoperable" well, and now claim that the well is operable after all. It attempts to drastically revise the CEQA baseline for the Project in an attachment to the Staff report that has not been circulated for public comment. Despite Staff's eleventh-hour efforts, substantial evidence in the record states that there is no operating well on the property, and it has not been operating for a considerable period of time. The use of the well had been long abandoned. The required baseline of "existing" water use on the parcel is zero.[9]

[8] DEIR 3.9-40.
[9] *See* Napa County Water Availability Analysis, May 12, 2015 (discussing throughout analysis of "existing" and "current" water usage compared to a proposed project.)

DEIR Appendix L, a September 9, 2021, Well Capacity Study Memorandum emphasizes that "it is recommended that the annual groundwater use conform with County policy." While phrased as a suggestion by the consultant, this is indeed a legal requirement. The City has always deferred well issues to the County because the City does not have its own department to handle such issues.[10]

Disturbingly, DEIR Appendix L was omitted from the February 2023 Staff Report to the Planning Commission (which we noted at the time), and it has now been withheld from the City Council as well despite it being a critical subject. Appendix L was prepared under the prior standard of a maximum allocation of 1 acre-foot of water per acre. It found the Project already not in compliance with that standard. Given this repeated identified issue, we can only conclude the Applicant does not like its conclusion that the Project's groundwater use must follow County policy and the use is not consistent with that policy, and thus had it removed it from the EIR and the Council's materials.

No update of that analysis has been prepared to comply with the revised substantially reduced allocation limit of the lesser of 0.3 ac-ft/ac or no-net-increase, though the outcome is obvious: the proposed project substantially exceeds the allowed groundwater allocation. The expert that prepared the Well Capacity Study has not opined on Staff's latest response attempting to undo the record.

Seemingly belatedly realizing that the well usage is indeed a significant barrier to the Project, Staff, on behalf of the applicant, has now attempted to estimate a historical use of the well.

There is no evidence, factual or legal, that the no-net-increase calculation can be properly divined from a hypothetical long-abandoned previous use. Staff's response, which is not attested to by a groundwater expert, attempts to reverse engineer a hypothetical past use that does not exist, of which there are no documented records, and which the EIR does not analyze. This is not competent, substantial evidence on which the Council can rely in certifying the EIR. (Indeed, it is not even referenced in the EIR, as it was just invented.) While historical use may in some cases be considered for baseline analysis (but only where the conditions have been in flux making the existing conditions not emblematic), there must be substantial evidence to support that baseline.[11] "**An existing conditions baseline shall not include hypothetical conditions**...."[12] To

[10] As such, Napa County would appear to be a Responsible Agency for the project's groundwater usage. However, the EIR fails to identify Napa County as a Responsible Agency.

[11] *Contra* CEQA Guideline 15125(a)(1) ("Generally, the lead agency should describe physical environmental conditions as they exist at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, from both a local and regional perspective. Where existing conditions change or fluctuate over time, and where necessary to provide the most accurate picture practically possible of the project's impacts, a lead agency may define existing conditions by referencing historic conditions, or conditions expected when the project becomes operational, or both, that are supported with substantial evidence.")

[12] CEQA Guideline 15125(a)(3) (emphasis added).

the extent Staff is now contending a different baseline should have been used, the EIR needs to be revised and recirculated.

In doing this, Staff brazenly accuses our prior comment of misunderstanding the County's unambiguous policy of limiting the use of wells subject to discretionary project approval to the lesser of 0.3 acre-feet per acre or no net increase. That "no net increase" is from "*existing*" uses.[13] This is readily apparent from the County's simple summaries of the new policy, and a published FAQ.

The limitation to the lesser of '0.3 ac-ft/ac or no net increase' applies to new discretionary uses of existing wells. A "Tier 1" analysis must be performed to document the "*existing"* uses on site and the potential increases. From the Napa County FAQ on the new well standards[14]:

> *10. Do the new standards apply to discretionary projects where projects rely on existing wells?*
>
> *Yes, if the project involves an increase in groundwater use on the existing wells.*
>
> *…*
>
> *14. Does the 0.3 AF/acre water use limitation also apply to new or modified discretionary permits?*
>
> *Yes. The WAA Guidelines will be updated to reflect this, but this limit goes into effect immediately.*

As stated by Napa County, its "new regulatory requirements for a Tier 1 analysis are pursuant to CEQA, Napa County's Water Availability Analysis (WAA) Guidelines, dated May 12, 2015, Napa County's Drought Emergency, Governor's Executive Order N-7-22, recent court decisions, and pending State litigation."[15]

These rules are clear. These rules are dictated by State law. They are not optional. Ignoring the County's requirements as dictated by State law, including CEQA and SGMA, and indeed the DEIR's own expert, would be an abuse of discretion.

[13] https://www.countyofnapa.org/DocumentCenter/View/25905/Well-Permit-Standards-and-WAA-Requirements--January-6-2023?bidId=
[14] (*See* Napa County Well Permit Standards FAQ, *available at* https://www.countyofnapa.org/DocumentCenter/View/25906/Well-Permit-Standards-FAQs---15-July-2022.)
[15] https://www.countyofnapa.org/DocumentCenter/View/25905/Well-Permit-Standards-and-WAA-Requirements--January-6-2023?bidId=

The project needs to be revised to comply with the current water use limitations, and the EIR must be corrected and recirculated considering the changes in groundwater policy that are unanalyzed.[16]

Further, as we noted previously, significant new information has been made available which contradicts the EIR's conclusions regarding the state of local groundwater. The significant new information from 2022 is that "**Several wells located near the Napa Valley Subbasin margin in the northeastern Napa area, southwestern Yountville area, and southeastern St. Helena area show periods of groundwater decline during times of drought**."[17] Although the proposed findings for the Project have been slightly modified since we noted this critical information, the EIR's simply ignoring the evidence of an increase in the severity of the project's impacts on groundwater resources is not reasonable.

As we said previously, the project needs to come up with at least an additional 12 acre-feet of water from somewhere else. It cannot do so from the well. The latest response does not change this fact. It does appear Staff, in consultation with the Applicant but not the public, have recognized this is a major problem; but are unwilling to address it directly. Staff have revised one of the conditions for the project: Proposed Condition of Approval 85 now suggests that the well should nevertheless be used for the project in violation of County policy, but then abandoned "if" the contemplated City reclaimed water system ever reaches the site. This is inconsistent with the law and, in any event, unreasonable.

**The EIR Fails to Conduct the Required Well Interference Analysis**

Further, and relatedly, the water neutrality analysis credits the more-than-17 acre-feet of water use from the well to "groundwater" as opposed to the City's water. By doing so it is purportedly not subject to the City's water neutrality ordinance. But this ignores the fact that the project site well is likely drawing from the same basin that supplies the City's wells. While Staff's latest response in Attachment 28 argues that some of the City's drinking water comes from other reservoirs, it has no actual response to the fact that the Project well will extract groundwater very close to the City's Stonebridge well, and thus is simply taking the City's water via other means.

There is no analysis of well interference which would suggest that the onsite well is a different source of water than the City's wells. This is despite **the City's September 27, 2018 Second Notice of Identified Issues Letter specifically requiring a well interference analysis**.[18] Thus, the EIR

[16] Note also that, because the well is proposed solely as non-potable water for outdoor irrigation and other non-consumption uses, the well is not a public water system that might otherwise be entitled to exceed this limit.
[17] (Napa Valley Subbasin Groundwater Sustainability Plan Summary, Executive Summary (Jan. 2022) p. 2, *available at* https://www.countyofnapa.org/DocumentCenter/View/23549/GSP_Executive-Summary-Abstract?bidId=.)
[18] *Available at:* https://www.cityofsthelena.org/sites/default/files/fileattachments/planning_resources/project/3486/second_issues_letter-final.doc.pdf

should have analyzed well interference. Having failed to do so, the well usage should have been included in the water neutrality analysis and required offset.

As discussed above, the failures to address significant new information regarding changes to County groundwater policy driven by State law and the depletion of groundwater locally is directly related to the severity of the project's impact on groundwater resources and requires additional analysis. The EIR failed to analyze well interference, an issue that was specifically identified as a potential significant impact. The EIR cannot be certified until these real and significant issues are addressed. Depletion of groundwater above allowed limits from the City's groundwater source presents an adverse impact to public health and safety that has not been properly analyzed or mitigated.

**The EIR's Water Neutral Analysis Is Outdated and Deficient**

Relying on the well for exterior water use and excluding it from its calculations, the EIR fancifully suggests that the Project will be water neutral, despite its demand for nearly 20 acre-feet (approximately 6.5 million gallons) per year beyond that produced by the onsite well. However, this conclusion is drawn from an analysis of potential water offsets from several years prior to the recent drought, the Phase I and Phase II water emergencies, and the substantial cutbacks that were made by residents of the City in response. Those measures greatly reduced water usage already, and there has been no update to the potential water offset analysis in several years, rendering it meaningless. As such, the Water Neutral Report, DEIR Appendix J, is fatally deficient and must be updated to account for current conditions. It relies on an analysis of potential water saving measures from February 2017.[19] There has been no consideration of the substantial changes in the last six years. Substantial new information has emerged since that time that has not been incorporated, including the responses to the drought and water emergency. At the very least, the EIR cannot be certified until Appendix J is updated, as there is no reliable evidence to conclude the water neutrality requirements can be met.

We also note the Applicant has recently requested revision of the Project's conditions of approval to allow for piecemeal compliance with the water neutrality ordinance. That request should be rejected. Given the scope of the offsets required, the Applicant will need to undertake a major water offset project prior to construction, and any such project must be considered in coordination with the development Project as a whole. It cannot be allowed to attempt to offset one house at a time.

**The EIR Fails to Analyze or Mitigate Traffic and GHG Impacts**

The Project's impacts on vehicles and traffic have of course been a major issue of contention. As the Staff report notes, the Project came to halt nearly a decade ago because improvements were

[19] DEIR Appx. J at Attachment 3, Municipal Water Saving Measures (Feb. 2017).

needed to the Silverado Trail/Pope Street intersection. The Applicant has now tried to move forward ignoring those necessary improvements.

More recently, the Applicant's counsel itself and numerous commenters opposed to the project have stated that the traffic analysis for the project is deficient. While the sides obviously offer different reasons and seek opposing results, it does appear that no one thinks the traffic analysis done here has been sufficient.

As we noted previously, there is extensive evidence in the record that the project's impacts on traffic are improperly analyzed and not mitigated despite available solutions being previously proposed. Although the Applicant suggests only vehicle miles travelled (VMT) and not level of service (LOS) should be the standard under CEQA, the only traffic study provided focuses on the latter.

Yet the EIR completely fails to thoroughly analyze or mitigate VMT. The DEIR's analysis uses an Affordable Housing percentage of 28.73%, whereas as of the current application, there is officially none. Staff's latest attempted response is that there must be some affordable housing in order to comply with the City's code, but no one can say exactly how much because no one knows, as the required information has not been submitted.

The EIR, apparently without relying on any traffic experts, essentially concludes that though the City has not adopted VMT significance thresholds, that the project is indeed significant in its impact, but that there is no mitigation available. This suggestion is directly contrary to the general plan itself, which provides for improvements to the City's street network that would lessen the length of the project's trips – particularly connection of Adams to Silverado Trail.[20] No analysis, however, was conducted; the only traffic study that was prepared on behalf of the Applicant generally indicated that the Project should be required to make improvements to the road network.

Staff's response to this issue is essentially that it sounds expensive and complicated, so there is no reason to look into it. That is not a reasonable response: this is a major development. It will likely cost a hundred million dollars to construct. It will generate well more than that in sales for the developer. That a necessary available on-site mitigation is ignored and unanalyzed because it might cost a small percentage of that is not reasonable.

In short, there is no credible evidence in the record to support the finding that reasonable mitigations or changes have been incorporated into the project to account for the significant impact of VMT, let alone LOS. The operative traffic study identified that road improvements were necessary mitigation. The Project was tabled for nearly a decade for this reason.

The Traffic Study (DEIR Exhibit K) – which the EIR appears to suggest now applies to analysis of the general plan rather than CEQA – repeatedly fails to use reasonable assumptions for the

[20] DEIR 3.14-19.

Project, substantially undercounts the expected traffic increase, and does not comport its analysis with the description or stated intended use of the Project. But whether or not the traffic study is used in consideration with CEQA's transportation element, the EIR's Greenhouse Gas analysis does depend on the traffic study. (DEIR 3.7-27.) As such, the flaws in the traffic study are a CEQA issue as well as a general plan issue, and the operational Greenhouse Gas analysis is inadequate. Idling vehicles are a substantial contributor to GHG emissions.[21] The EIR fails to analyze the significant impact of idling vehicles resulting from the Project sitting in the unmitigated traffic it will create.

Among other issues with the traffic study, the 11 Accessory Dwelling Units, which are touted as providing additional workforce housing, are allocated only 4 AM Peak Hour outbound trips. This makes no objective sense. Reasonable assumptions would suggest the affordable and multi-family units to lead to more trips for the residents of those units given the nature of the local workforce. Staff indicates that standard assumptions were used for these estimates, but there is nothing standard about work-force life in Napa Valley. There is no subway to walk to. Jobs are widely distributed and require driving for essentially all workers. Project-specific analysis is required where general assumptions are known to be inapplicable. The traffic study thus fails to account for the unique nature of the Napa Valley economy and local transportation demands, and significantly understates the impact of the Project.

It also ignores the reality of life in Saint Helena. For example, the traffic report apparently incredibly claims that the 87 new units will result in only two (2) people driving their children to school by crossing Main at Adams – the main access to the Project. And only one (1) will go pick their child up. (Traffic Study Figure 8, February 2023 Staff Report p. 2007.) Staff's latest response in Attachment 28 is to reveal its ignorance of St. Helena: its response is to "assume this comment refers to students attending St. Helena Elementary School on Adams Street" and to acknowledge the estimate of seven (7) students attending just that school (already belying the traffic study).

But anyone that actually lived here would know that all four of our public schools are on the west side of town. Getting to all of them from the Project would involve crossing or accessing Main Street, which is most likely to occur at Adams. Staff's suggestion that parents could choose other routes that are already known to be worse, such as Hunt Avenue or Pope Street, does not bolster the traffic analysis. Indeed, the Project is shown to have a material adverse impact on Pope/Main already.

Even worse, the existing analysis ignores the significant impact that the Project would have on evacuation routes in the event of an emergency. While for an individual scale event, it is possible that connection of Adams to Starr would be beneficial as the EIR and Staff suggests, that is not

[21] *See, e.g.,* U.S. Dept. of Energy, Idling Reduction for Personal Vehicles, *available at* https://afdc.energy.gov/files/u/publication/idling_personal_vehicles.pdf.

supported by substantial evidence for the case of a large-scale event. The City remains bottlenecked, particularly at Pope/Silverado.

As we discussed previously, the traffic study shows a nearly-quarter mile backup at the Pope Street bridge by 2040. The report admits "the project would be inconsistent with the City's LOS policies at the Silverado Trail/Pope Street intersection." And, shamefully, the Traffic Report essentially throws up its hands in acknowledging that improvements to Silverado Trail and Pope Street are necessary; but because they might be hard, nothing can be done about it.

The Traffic Report includes several required mitigation measures and improvements that are recommended to address traffic issues, yet none have been incorporated into the project. While the latest Staff response baldly suggests that the applicant cannot be required to construct these improvements individually, it does not conduct any analysis to reach that conclusion. Rather, the necessary improvements – especially connection of Adams to Silverado Trail, meet the *Nollan/Dolan* essential nexus and rough proportionality tests given that the improvement is necessarily located on, and immediately adjacent to, a very large-scale project.[22] And again, the Silverado Trail/Pope improvements were previously identified as necessary for the Project as well, which is why it languished. By failing to address these necessary issues, the project thus plainly is inconsistent with the General Plan, whether or not LOS is considered as a CEQA element.

The suggestion that a statement of overriding considerations can be adopted now without attending to the previously identified issues is contrary to law. Prior to adopting a statement of overriding considerations, the law requires that a finding be made that the impact is unavoidable and that changes or alterations have been included to mitigate or avoid the significant impacts.[23] That finding must be based on substantial evidence in the record.[24] However, the record of the Project, dating back more than a decade, is replete with evidence that traffic impacts of the Project can indeed be mitigated, and failure to do so is contrary to the applicable general plan principles.

Both the above-noted improvements to Silverado Trail/Pope Street and the planned connection of Adams Street to Silverado Trail have been repeatedly identified as mitigations to the impacts and risks of the project. Further, connection of Adams Street to Silverado Trail would substantially lessen project vehicle miles travelled (VMT), allowing project traffic direct access to a major thoroughfare without the additional distance travelled through City streets. Because such improvements are specifically contemplated in the City's long-term plans, but neither properly analyzed nor included as mitigation measures, failure to require the project to carry out this immediately-adjacent improvement that would directly mitigate the project's impacts on VMT (and LOS) is contrary to the evidence in the record and clearly inconsistent with the General Plan.

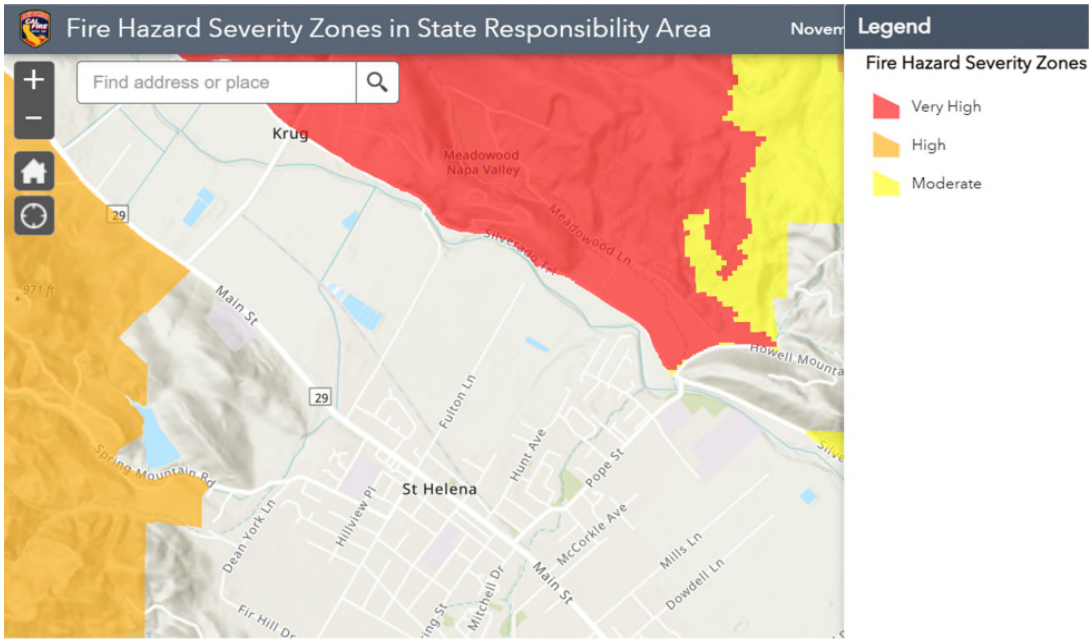
[23] P.R.C. § 21081.
[24] CEQA Guideline 15093.

**The EIR Fails to Analyze or Mitigate Impacts to Public Safety**



These failings to mitigate the Project's impacts on the road network underscore the EIR's failure to seriously analyze its substantial danger to the public, including wildfire and flood risks. Although the EIR notes that the property actually burned during the Glass Fire, there is no other acknowledgement that the property currently serves as critical firebreak for the rest of the City. Incredibly, Staff's latest response suggests that the Project site does not meet the definition of a firebreak. Staff apparently forgets the existing vineyard on the property – vineyards are widely recognized as acting as crucial firebreaks.[25]

The Board of Forestry's recently adopted 2021 State Fire Regulations emphasize the need to preserve and implement firebreaks in projects.[26] The EIR and proposed findings repeatedly ignore the Project's location near the SRA Very High Fire Hazard Severity Zone. Although the EIR Thresholds in the proposed Findings repeatedly state the issue of concern to be whether a project is "**in or near** state responsibility areas or lands classified as very high fire hazard severity zones" (VHFHSZ), the findings of less-than-significant impacts and related explanations repeatedly state only that the Project is not "in" the VHFHSZ.

Although the proposed findings say on page 63 that the Project is not near a SRA or VHFHSZ, that is obviously incorrect, making the entirety of the EIR's wildfire analysis unreliable and contrary to evidence. The Project is immediately adjacent to the VHFHSZ:

[25] *See, e.g., https://www.northbaybiz.com/2018/06/28/vineyards-as-firebreaks/*

[26] The project is not technically subject to CAL FIRE's jurisdiction, but the agency's emphasis on firebreaks is highly instructive and persuasive. Failure to adhere to State Fire Regulations that did not technically apply, and the naïve belief that urban development was immune to wildland fires, led to the destruction of Coffey Park in the 2017 Tubbs Fire. (*Despite clear risks, Santa Rosa neighborhood that burned down was exempt from state fire regulation,* LOS ANGELES TIMES (Oct. 15, 2017)*, available at: https://www.latimes.com/local/lanow/la-me-ln-coffey-park-explainer-20171011-story.html.*)

(CAL FIRE State Responsibility Area Fire Hazard Severity Zone Map.)[27]

The failure to analyze the Project as "**near**" the SRA/VHFHSZ is a critical shortfall. Again, this property *actually burned in the Glass Fire.*

Removing the Project's critical firebreak of six acres of vineyard is a wildfire impact that is not even acknowledged, let alone analyzed and mitigated. Removing the protective vineyard and expanding development at the Wildland-Urban Interface presents a clear and present danger to the current residents of the entire City. At a minimum, the Project must be revised and conditioned to retain a firebreak between the new development and existing development by leaving the existing vineyard intact.

The risk is substantially worsened by the failure to address the needed road improvements. Without connection of Adams Street to Silverado Trail and the mitigation of the Silverado Trail/Pope Street intersection conditions, the Project presents substantial threats to public safety.[28] The Project lacks safe emergency access and egress and would worsen existing emergency evacuation times for residents of the City. The Project creates specific threats to public safety by failing to mitigate its everyday traffic impacts and ignoring the potential for loss

[27] *See* https://osfm.fire.ca.gov/fire-hazard-severity-zones-maps-2022/.
[28] E.g., DEIR App. K, p. 15 (February 2023 Staff Report p. 1989) (Finding of the current Pope Street bridge: "emergency access can be impeded due to congestion along the bridge, creating difficulty for services to be provided to areas along Silverado Trail.")

of life and property that could occur as a result of the increased traffic on already overburden public roads during a wildfire.

Meanwhile, the Project will obstruct emergency access for existing residents, particularly those in Vineyard Valley. There is no evidence that the levee maintenance road is a suitable evacuation road for the Project. It does not meet the City's Fire Department Access Road Standards, which requires a 30-foot paved road with two feet of shoulders.[29],[30] The second access to Lot 52 also fails to meet this standard. (Relatedly, it is also unclear how the proposed terminus of Adams Street actually fits in the indicated location, which appears to require grading of the current western end of the levee.)

To the extent the levee maintenance road is a planned emergency access route for the Project, it must be improved to meet the City's Fire Access Road standards as part of the Project.[31] In turn, the environmental impacts thereof must be identified and examined in a revised EIR.

There is no evidence that the contemplated additional emergency access point onto the levee can be technically or legally constructed, particularly in light of the required conservation easements and numerous permit issues related to the flood control project, including the Incidental Take Permit under the Endangered Species Act.

The potential construction of housing behind a levee that appears to be substandard and poorly maintained is a significant threat to public safety that has been repeatedly downplayed by the Applicant and Staff, and requires rejection of this Project as currently proposed. As noted by other commenters, the City has repeatedly failed to maintain the levee, yet is financially responsible for the massive liability a failure would cause. As the Project is proposed behind a levee for which the City is entirely responsible, any failure thereof would result in ruinous liability to the City. Unless the Applicant is conditioned to post a security for the liability that it is seeking to take on by developing in a high-risk location, the financial risk of the Project cannot be concluded to warrant a statement of overriding considerations.

The current reemergence of Tulare Lake, inundating 100 square miles of homes and farms, is a prescient reminder that water finds a way to get to the lowest point, despite humans' efforts to defy gravity.[32] As the Project presents a real threat to the safety of the public, it should be rejected irrespective of any other considerations -- whether or not it technically complies with

[29] *See* City of St. Helena Street, Storm Drain & Sidewalk Standards, *available at* https://www.cityofsthelena.org/sites/default/files/fileattachments/public_works/page/2491/publicworkscitystandards_0.pdf

[30] We also note the levee maintenance road does not even meet the lesser Road and Street Standards dictated by Napa County or CAL FIRE for safe evacuation from a property with more than four residences of a paved 20' road with 2' shoulders. See Napa County Road and Street Standards, 2023, available at: https://napa.legistar.com/View.ashx?M=F&ID=11891814&GUID=307CAE5E-C950-4706-9300-255BFD6D91A2

[31] But there is no evidence the levee was designed to carry traffic or support a road, and correspondence from 2015 appears to suggest that the levee was not designed or anticipated to carry a roadway.

[32] https://www.sfchronicle.com/climate/article/tulare-lake-flooding-california-17905335.php

the City's zoning code or general plan (which as we have noted separately, it does not.) (Gov. C. § 65589.5(j)(1)(A) ("The housing development project would have a specific, adverse impact upon the public health or safety unless the project is disapproved.")).

**The EIR Is Deficient on Numerous Other Topics that Reveal Its Bias**

The EIR's analysis of numerous other topics is insufficient and shows a lack of serious effort to identify and mitigate impacts of the Project. Amongst those issues are the following:

**Aesthetics**

The EIR suggests there will be no impact on aesthetics, despite the Project being designed contrary to the General Plan's prohibition on the use of cul-de-sacs that obstruct vineyard views. The Project will substantially alter the current view from Adams Street/Library Lane, and remove or otherwise obstruct current vineyard and hillside views. While the EIR and proposed findings suggest the project will undergo design review in the future, no actual designs or use permit application for the multi-family parcel has been considered. As such, the EIR's conclusions are based on speculation, not actual substantial evidence in the record. This is the result of the Project's piecemeal consideration in violation of City code.

Moreover, while the EIR acknowledges the impact of lighting and requires mitigation by the Applicant, there does not appear to be any restriction on future residents from modifying or altering exterior lighting. The mitigation should be revised to address the potential for future spillover lighting-related issues and impose restrictions through appropriate CC&Rs.

**Agricultural Resources**

The Project calls for removal of multiple acres of vineyard directly contrary to the General Plan. 5.8 acres of Prime Farmland will be lost, again directly contrary to the General Plan, in addition to an 0.6 acres of Farmland of Statewide Importance. The failure to fully analyze or adopt an alternative project to preserve that Farmland lacks substantial or persuasive evidence to justify that this loss cannot be avoided or mitigated.

**Air Quality**

As discussed above, the Project's operation GHG emissions due to its contribution to vehicles stuck in traffic has not been properly analyzed. Vehicle emissions degrade air quality, both of GHG components and other emissions. As such, the EIR fails to fully consider the Project's air quality impacts.

**Biological Resources**

The Project is immediately adjacent to the Napa River and the habitat restoration project on the riparian side of the levee. The Project intends to fill four wetlands. While the project is required to obtain a permit for such fill, the proposed findings do not provide any evidence that such fill is

unavoidable, or that Alternative 3, the Park/Open Space Alternative which would preserve the wetlands, is not an environmentally superior alternative to the Project. Indeed, the Alternatives' analysis is sorely lacking, as there are numerous issues with the proposed Project that could have been address by Alternatives, particularly those that avoid removal of the vineyards.

**Land Use and Planning**

As discussed in the accompanying correspondence, the Project is wildly at odds with the applicable 1993 General Plan policies. It is likewise at odds with the current General Plan as well, for essentially the same reasons. The EIR's conclusion that the Project is consistent with the applicable General Plan and land use regulations, including the City's subdivision code, is contrary to the evidence in the record.

**Noise**

Because no design and no use permit for the multi-family development on Lot 52 has been presented, it is impossible to evaluate the noise impacts of a dense but undefined development. The EIR lacks any, let alone substantial evidence to support a finding, that the Project, and particularly Lot 52, will not have a significant impact on noise. Once again, the piecemeal approach to the Project renders the EIR insufficient as it fails to consider the whole of the Project.

**Recreation**

Although the EIR discusses the Project's potential impact on the use of other recreational facilities, it wholly ignores that the site is currently used for recreation, and that recreation site will be lost as a result of the Project. The Project will have a significant and unavoidable impact on recreation for the countless residents that currently use the property for recreation purposes. The proposed findings failure to even mention, let alone mitigate, these impacts lacks substantial evidence and fails to acknowledge the significant impact the Project will have on area residents' recreation.

**Failure to Provide Affordable Housing**

Because of the significant unavoidable impacts on the environment the Project will have, a statement of overriding considerations is required. A statement of overriding considerations requires balancing of, *inter alia,* the economic benefits of the project with its demands on the environment. However, there is no affordable housing agreement to consider that might balance the benefits of the Project to the pressing need for affordable housing. As noted separately, to the extent an affordable housing agreement is to be proposed in connection with the Project, it must be considered concurrently in order to meaningfully balance the economic and social impacts of the Project. Without that, any purported benefit would be purely speculative and lack substantial evidence.

Given the absence of an affordability plan to consider, there is no basis to conclude that the Project will provide the needed affordable housing consistent with the City's requirements that would warrant a statement of overriding considerations. As noted in our accompanying letter, the Applicant's prior efforts to propose an Affordable Housing Agreement were soundly rejected. The project design of shunting a potentially affordable multifamily project to the side of the single-family development was found contrary to the City's inclusionary policies. Relying solely on the position that the City's code requires some affordable housing and therefore justifies a current factual finding that the Project *does* provide that benefit is akin to concluding that every project complies with the law because the law requires it to.

This is not an instance where the Applicant simply has not yet proposed a plan. It did, and it was soundly rejected. The February 2020 Notification to the Applicant[33] was clear:

> *as we have discussed previously, City staff continues to have concerns with the fact that a portion of the affordable units will be provided as rental ADUs and the remainder of the affordable units clustered on a single parcel. Section 17.146.050(I) declares:*
>
> > *Affordable units shall be comparable in number of bedrooms, exterior appearance and overall quality of construction to market rate units in the same residential project. Subject to the approval of the planning commission, square footage of affordable units and interior features in affordable units need not be the same as or equivalent to those in market rate units in the same residential project, so long as they are of good quality and are consistent with contemporary standards for new housing. Affordable units shall be dispersed throughout the residential project, or, subject to the approval of the planning commission, may be clustered within the residential project when this furthers affordable housing opportunities.*

The Planning Commission has not been presented with any request to approve such a design. Indeed, City Staff concluded in 2020 that:

> *the affordable units are not dispersed throughout the project. Over two-thirds of the units are located on a single parcel, and an additional eleven ADUs will be located on a handful of the other 51 lots. The proposal does not meet the spirit nor the letter of the requirement that the units be dispersed throughout the project.*[34]

It appears that the current external planning consultant is ignoring City Staff's prior conclusions and did not include this information in its staff report for the Planning Commission to consider. The Planning Commission has now passed the project to the City Council without any analysis of

[33] Notification of Final Unresolved Issues and Questions (Feb. 27, 2020), *available at*: https://www.cityofsthelena.org/sites/default/files/fileattachments/planning_resources/project/3486/02-20-2020_unresolved_issues_and_questions_hunter-final-c2.pdf.
[34] Id.

the conflict of the Project with the City's affordable housing policy.[35] Worse, the Staff Report provided to the City Council notes that the Applicant submitted a proposed Affordable Housing Agreement on February 1, 2019, but does not mention the City's rejection in 2020 discussed above. This raises serious questions as to whether the EIR reflects the City's "independent judgment,"[36] and whether the City Council is receiving the full and complete analysis it is entitled to in making such a profoundly important decision.

Given the Applicant's repeated failures to submit an acceptable affordable housing plan, it is impossible to conclude that the Project will comply with the City's affordable housing policy. Indeed, the effort to approve solely the subdivision map to allow the creation of 51 single-family lots without scrutiny of the affordable housing component appears intended precisely to avoid the need to comply with the City's policies of integrating affordable housing of similar types and styles into a project.

To be blunt, the only integrated affordable housing proposal appears to be that a handful of rich people will make money off some poor people living in their backyards, while the rest of the affordable units are packed together in place of an existing vineyard. City Staff previously found this proposal not to meet City code. To approve the Project as currently presented, the Council will now need to ignore City Staff's prior conclusion it is contrary to City code. The City Council would need to make an affirmative finding that the Project is consistent with the City's affordability program and general plan and warrants approval despite its significant unavoidable impacts. It cannot do so on this record.

In light of the above, the Council must exercise its independent judgment to conclude the Project is inconsistent with the General Plan and municipal code and has failed to submit an acceptable affordability proposal or design, and to require the Project to be redesigned consistent with the City's objective standards.

**The Required Findings for a Statement of Overriding Consideration Cannot Be Made**

Statements of overriding consideration are required to explain in detail how and why the benefits of the proposed project outweigh the unavoidable, adverse environmental impacts and why the City is willing to accept such impacts. CEQA Guideline 15093 provides the following instructions:

> *(a) CEQA requires the decision-making agency to balance, as applicable, the economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposed project against its unavoidable environmental risks when determining whether to approve the project. If the specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposal project outweigh the*

[35] *See generally,* Report to the City Council, Special City Council 01 May 2023.
[36] P.R.C. § 21082.1(c)(3).

> *unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable."*
>
> *(b) When the lead agency approves a project which will result in the occurrence of significant effects which are identified in the final EIR but are not avoided or substantially lessened, the agency shall state in writing* ***the specific reasons to support its action based on the final EIR and/or other information in the record. The statement of overriding considerations shall be supported by substantial evidence in the record.***

The draft statement of overriding consideration fails to identify real, quantifiable benefits, and does not have evidence to rely on for affordable housing in particular. Again, there is no actual affordable housing proposal and the prior proposal was soundly rejected on the basis that the Project's design was discriminatory and inconsistent with City policy and the General Plan. The draft barebones statement "The Project provides needed housing to the City, particularly affordable housing" is not supported by any meaningful evidence in the record and is contrary to the current state of the Project. The Project does not supply a mix of types and affordability of housing as required by the General Plan, and does not supply any of the critical middle-income housing that is sorely lacking in the City.

By evading consideration of the Project's implementation of affordable housing requirements and multi-family use and design elements, it attempts to lock in a single-family development with no opportunity to require compliance with the City's inclusionary housing policies or General Plan requirements for a mix of housing types.

The apparent suggestion that simply all housing projects are good and must be approved is wrong. The Planning Commission made this error. The City Council should not repeat it.

**Conclusion**

The Applicant has repeatedly attempted to avoid scrutiny of the design of its project. The EIR presented for Certification poorly analyzes only a hypothetical, unsubmitted project, not the Project currently under consideration by the Council. In doing so, the EIR has failed to analyze numerous elements of the Project. Some are incapable of full consideration, such as aesthetics, without an actual proposed multi-family project. Others are clearly inadequate on the current record as discussed in detail above.

As detailed above, the Project's problems are numerous and, in short, present significant threats to public safety, and fail to meet the legal requirements of the City and the State with respect to, at a minimum, safety, environmental, water, and affordable housing.

The Project puts the current residents of the City at substantial risk to benefit White Fang LLC's development interests.

The EIR should not be certified. The substantial deficiencies discussed above require remediation and recirculation following the Applicant's submission of all of the necessary information for consideration of the whole of the Project.

Sincerely,

DICKENSON, PEATMAN & FOGARTY PC

| **Date:** | Monday, May 1, 2023 8:02:36 AM |

Dear City Council,
I have previously sent the planning commission my strong opposition to the Hunter Project.

As a resident and homeowner at nearby 1370 Grove Court, **I write to voice my strong opposition to the planned Hunter subdivision**. Even in its scaled back version, Environmental Impact Report File #PL10-040 will cause irreparable harm to the environment, and Native American burial grounds. In particular, especially given climate change, historic drought and now a very real flooding risk, I am concerned that the proposed findings require, at a minimum, additional analysis of a significant environmental issue facing all of California, sustainable groundwater management. I**nstead it appears that the project will violate water usage laws. It also appears that the construction of the road next to the levee and development will compromise the levee and constitute a threat to public safety.**

I am proud to live in a town that respects nature, the environment and prioritizes affordable groundwater and sustainable development for all its residents. Sustainable development, including traffic and evacuation zones, and protecting levees in case of flooding.

I urge you not to approve this report and this project. It will cause irreparable harm to the neighborhood and the environment and to water usage.

City of St. Helena City Council
1572 Railroad Avenue
St. Helena, California 94574

(707) 967-2783

Dear Members of the City Council of St. Helena,

I am writing regarding the Hunter Project Final Environmental Impact Report (FEIR). **I am writing to ask you to VOTE NO on approval of the FEIR.**

I am a resident of St. Helena and have a deep appreciation for the beauty and natural resources of our community. I am also concerned about the potential for flooding in the area.

The proposed development would be located on land that is currently protected by levees. These levees were built to protect the area from flooding, but they are not infallible. In fact, they have been breached several times in the past, most recently in 1986. If the levees were to fail, the proposed development would be at risk of flooding.

In addition to the flood risk, I am also concerned about the impact that the development would have on the environment. The proposed development would clear a significant amount of trees and vegetation, which would harm wildlife and contribute to climate change.

I urge you to reject the proposed housing development in Vineyard Valley, St. Helena. This development would pose a serious risk to the safety and well-being of our community.

Sincerely,

**Marija Jovanovic**

| **Subject:** | [External] Public Comment on Hunter Project |
| **Date:** | Monday, May 1, 2023 12:34:53 PM |

Dear City Council Members,

We share a property line with the proposed Hunter Project and are in opposition of the development. In addition to our concerns over loss of open space, water, flooding, etc. our top concern is the increased traffic in the neighborhood. Hunt and Starr Ave are already heavily trafficked, not only to vehicles but also to pedestrians. We currently have a major problem with vehicles speeding by our home and have been witness to several near accidents as well as a few vehicle accidents at the cross of Hunt and Monte Vista in which several people were transported to the hospital. Thankfully, there were no pedestrians present at the time of these accidents which is surprising when you constider how many people walk up and down Hunt Street each day.

There are a lot of families that live in the area, we have two young children of our own, and do not believe the current infrastructure safely handles all of the traffic through this area, let alone adding one-hundred+ cars to the mix.

Thank you for taking our concerns for the safety of our children and neighborhood into consideration.

Best Regards,
Nicole and Scott Dale
1326 Monte Vista Ave

**Subject:** [External] Hunter project discussion at May 1 City Council Meeting
**Date:** Sunday, April 30, 2023 1:03:35 PM

Please do NOT approve the Tentative Map proposed for the Hunter subdivision. It seems the map should be revised to mitigate the "significant and unavoidable" traffic and transportaion impacts it will have. Central Saint Helena already has gridlocked traffic twice a day most days and adding hundreds of more car trips daily will degrade the City's quality of life. The follow-on evacuation effects are worse. The flood safety and water use sections of the EIR seem to too credible. Finally the liabilities the project exposes the City to seem to have received little attention.

I'd urge the Council to work for a LOWER DENSITY map more in keeping with our City's identity and its ability to provide services.

**Subject:** [External] Public Comment for item 5.1 May 1 Special City Council Meeting

Hello Maya,
Please include this with the other Public Comments for item 5.1, May 1 Special City Council meeting.
Thanks.

There have been many concerns expressed by members of the St. Helena community over the last 12 years in public comments to the Planning Commission regarding the Hunter project application, including:

- the unsafe and inappropriate building location,
- negative impacts on traffic, especially emergency egress on the east side of St. Helena,
- unrealistic water use calculations in the proposal, which are not compliant with Napa County regulations,
- the need for differently configured affordable housing than the applicants have included in their proposal. Any affordable housing included in the Hunter project must conform to principles of inclusion and social justice by interspersing affordable housing units in an evenly distributed way throughout the St. project, not simply placing them in a cluster on a single parcel.

The Hunter project proposal is currently so vaguely defined that the mitigation measures suggested in the FEIR and even the hundred-plus conditions that City staff has recommended as prerequisites for Tentative Map approval in Planning Commission Report 140-157 fail to provide realistic and comprehensive solutions to these problems.

Will our City Council members commit to this flawed project, and thereby place the inevitable negative consequences in their personal legacies for years to come? I hope some serious thought will be applied to this today. It's not too late to avoid a bad decision.

While the Hunter project applicants have responded to some of the above concerns during the EIR process, taken as a whole, the mitigations proposed by the applicant, and now seemingly supported by the St. Helena Planning Commission, are unrealistic and unachievable. As a result, St. Helena City staff proposed the builder improve the project proposal through 123 conditions for approval (Planning Commission Report 140-157). In response to this good faith effort of the part of the City of St. Helena to bring this project application into some sort of safe and workable state, the Hunter/Vanzutphen group retained the law firm of Holland and Knight LLP to threaten legal action against the City for having the audacity to insist that this project's lack of

definition and many flaws be properly and realistically addressed. This response is proof the Hunter/Vanzutphen group have no interest in spending the time and money required to build this project in a compliant and safe manner. This threat of legal action against the City makes transparent the goal of the Hunter/Vanzutphen group to ‘make a fast buck’ and disappear.

Further evidence of the ill-defined nature and obscure details of the Hunter project is pointed out by Joshua Devore, in his letter to the Planning Commission, dated 2/6/23. “It appears that the FEIR has been revised since the prior version was published in October 2022. The FEIR is now dated as January 2023. However, no redline was provided and it is unclear what was changed; but it is clear that the document attached to the February 2023 Staff Report is not the FEIR which has been posted on the City’s website.” Also, Mr. Devore’s citation of a Violation of Subdivision Ordinance Section 16.16.020 in attachment 10, dated 2/6/23 with documentation of the applicant’s failure to submit concurrently the required discretionary approvals. How can the City Council assure that members of the public were accurately notified of the Hunter project elements if required discretionary approvals were never included in the project application or if changes to the FEIR documents have been made yet not indicated or published in such a way as to assure public access?

As Isobel Luria wrote in public comment to the Planning Commission on this matter, dated 2/3/23 “As it now stands, the City is being asked to approve a largely undefined project and ‘additional conditions and substantive design changes cannot be required, once a tentative subdivision map is approved.” Looking at the Hunter project as currently proposed, with the general failure (and apparent refusal, as evidenced by Hunter/Vanzutphen’s threat of legal action in attachment 4) to effectively mitigate issues of public safety, traffic, water neutrality and the need for inclusively located affordable housing, how can City Council responsibly approve any step forward on the Hunter project application? Personally, I’m stunned and disillusioned that this defective project is now before the City Council.

At this point in the 12+ year contentious discussion regarding the Hunter project, the mitigations proposed during the EIR process are efforts to save an irredeemably flawed, unsafe and unrealistic development proposal. If the Hunter project is built as proposed, the City of St. Helena and the citizens of St. Helena, including any new residents of the project, will reap negative financial, physical and emotional consequences for decades to come. If a simple citizen in the community, such as myself, can understand this, I’m sure the deficiencies of the Hunter Project must be clear and obvious to City staff and members of the City Council. No Statement of Overriding Considerations will ever heal the far-reaching damage done if the Hunter Project is approved as proposed. Is this something the City Council members wish to carry as their legacy?

For these reasons, I respectfully urge the City Council to halt consideration of the Hunter Subdivision Project Application.

Sherri Kelly

**COMMENT re: Resolution to approve Tentative Map No. 2022-001 and certify the Environmental Impact Report - File #PL10-040 for the Hunter Subdivision project.**

Water Audit California, an advocate for the public trust, objects that the Environmental Impact Report ("EIR") does not comply with due process, the procedural requirements of the California Environmental Quality Act ("CEQA"), or public trust duties, and does not contain sufficient evidence of adequate supply of water. Further, the EIR does not consider a reasonable and environmentally preferable alternative.

**(A) The EIR does not comply with due process or CEQA.**

Public notice requires a reasonable opportunity to consider the business being considered. Notice shall be given of a meeting of a legislative body and that specifies the "business to be transacted or discussed." This EIR has failed in that fundamental duty.

The agenda package for the subject EIR was posted on the CSH website late on the day on Friday, April 21, 2023. On Tuesday, April 25, 2023, at 7:13 p.m., Water Audit staff downloaded a reference copy of 3768 pages. Minutes later, on April 25, 2023 7:21 p.m., a

second copy was downloaded with a total of 3780 pages. This comment references a third copy downloaded on Wednesday, April 26, 2023, at 10:16 p.m., which also consisted of 3,780 pages. Reference was made throughout this comment to the page numbers assigned to the April 26 documents.

On Sunday, April 30, 2023, at 9:22 a.m. Water Audit staff noted that the agenda packet had increased to 4,318 pages, with the additional pages inserted, not appended. For example, the Dudek Well Completion Table that was on page 625 of 3780 on April 26 version is now page 1163 of 4,318 in the April 30 version. Accordingly, the page numbering in this comment do not relate to the packet currently before council.

This conduct renders comments unintelligible, deprives the public of the ability to comment and is a violation of due process.

**(B) Without a finding of sufficient water, this project cannot be built.**

Water supply resiliency is a threshold of significance for land use change or development projects. An EIR must answer the question posed by *CEQA, Section G, XVIII Utilities and Service Systems (d).*: "Would the project have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?

**(a) The CSH water supply has proven inadequate for present needs**

CSH relies on surface water runoff and groundwater from three sources to supply municipal water needs. All are vulnerable to water shortages during periods of sustained low rainfall.

The EIR asserts that this project is within the CSH "Safe Yield" declaration of 2,150 acre-feet ("AF"). The definition of "safe yield" is:

> "The safe annual yield of the St. Helena water supply system is that quantity of water which can be reliably delivered on an annual basis through most rainfall years, including a Dry Year (rainfall of 22" to 25.9") without undue hardship on water customers through water shortage restrictions. **It is recognized that the safe annual yield, as so defined, could place significant hardship on water customers in a Critically Dry Year (rainfall at 21.9" or less) or in periods of two or more consecutive Dry Years.**"

In making this determination, the CSH is departing from the principle that sufficient water must be available even in the event of multiple dry years. The California Constitution allows a city to make and enforce ordinances and regulations that do not conflict with the state's own general laws. However, where there is direct conflict between municipal and state law, the state law prevails.

While the City may chose to inflict upon its own citizens the burden of inadequate water by adroit definition, to pass CEQA muster the applicant and the City must establish that

objectively there is sufficient water, even in multiple dry years. The facts and the EIR do not and cannot carry this burden. [1]

**(i) State Water Project transfer from City of Napa.**

CSH was originally entitled to purchase 1,000 AF of water from the State Water Project North Bay Aqueduct through the Kern County Water Agency, but the mechanism for delivery of the water allotment did not exist. CSH was reluctant or unable to install the necessary engineering works. In 2006, the City of Napa purchased the City's 1,000 AF entitlement in exchange for agreeing to deliver to the City 400 AF. *EIR 728* A December 2011 Amendment increased CSH allocation from 400 acre-feet to 600 acre-feet.

However, these are nominal amounts. The actual deliveries are determined by the Department of Water Resources ("DWR") depending on each year's hydrologic conditions. The full entitlement amount would typically only be available during very wet years. The Department of Water Resources estimates that 62% of SWP contractors' entitlements would be available in a normal year, 29% would be available during a single-dry year, and 5% available during a multi-year dry period. *EIR 729*

Fortunately, because of extraordinary water management by the City of Napa, CSH has been able to skirt catastrophe in drought conditions. See the CSH Water Reports., which show Napa transfers in excess of 600 AF in 2019 and 2020, drought years.

**(ii) Surface water collection at Bell Canyon Reservoir**

Beginning in the 1960s, Bell Canyon reservoir has been the City's main water source, by collecting rainfall from a watershed to the northeast. While in the past the Bell Canyon Reservoir has been able to produce the largest portion of the City's water supply, recently that has not been the case. Bell Canyon production at 379 AF in 2022 was less than half of 2019 at 836 AF. In 2022, both the water transfer from the City of Napa (392 AF) and Stonebridge (467 AF) were greater than Bell Canyon's contribution (379 AF).

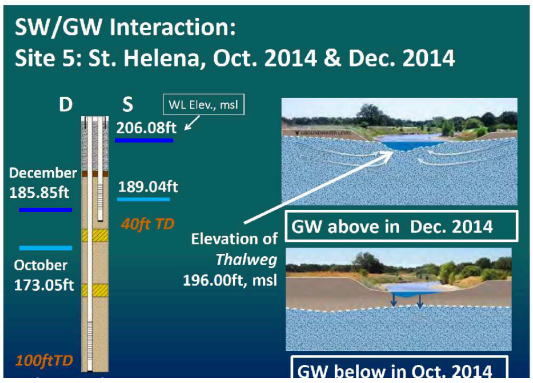
These figures are drawn from CSH's published public Water Reports. The EIR 725 does not cite to a record and are not in full accord with the facts. For example, the EIR states Stonebridge 2020 production to be 302 AF, while the Water Report is 363 AF. More significantly, the EIR omits entirely the years of 2021, 2022 and 2023.

Given climate driven change, historical reference to Bell Canyon production in the safe yield calculation is of little practical use.

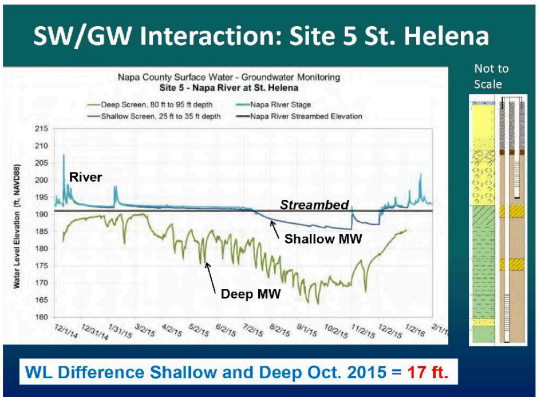
**(iii) Groundwater extraction by Stonebridge**

The City owns and operates two groundwater wells, collectively known as the Stonebridge Well Complex (herein "Stonebridge"). The City sees Stonebridge as a flexible water source in the system, using groundwater to balance system flows based on availability of water in Bell Canyon.

[1] In Exhibit H it is asserted that an average sufficient supply is 100 gallons per person per day. Under Phase II restrictions CSH residents have been rationed to 65 gallons per person per day.



The EIR states: “The City currently restricts the use of groundwater from these wells with the goal of limiting extraction to 450 AF per year for long term sustainability.” *EIR 729* “In an agreement with the environmental advocacy group Water Audit California, the City is monitoring water levels with a goal of limiting extraction to 450 AF per year on average. (Napa Valley Register, 2021)” *EIR 730* It is true that CSH agreed with Water Audit that it would measure water levels, however, when the City failed to perform, Water Audit sued. The inability to report the current cumulative proximate groundwater extractions required by this EIR is evidence of the City’s continuing failure.



See also: “Furthermore, the City’s groundwater would only account for a minimal amount of water use on the Project site, as the City currently limits the use of groundwater from the City’s wells in an agreement with the Water Audit.” *EIR 750*

Without citation to the record, the EIR asserts: “The Water Audit’s complaint does not ask for changes to existing water uses.” *EIR 2579*

There was and is no agreement between Water Audit and CSH regarding Stonebridge production of 450 AF per year, and there is no Napa Register article to that effect. Water Audit’s position is that the City shall do no harm to the public trust, and the City was unwilling to agree.

The litigation made clear reference to the injury caused to the public trust by CSH groundwater extraction. For example, it cited LSCE graphics presented to the Watershed Information Council in 2015:

At paragraph 46 of the litigation:

> In 2016, LSCE recommended that Napa County install additional monitoring of groundwater/surface water interactions in areas where data was lacking. No additional monitoring was installed. Although the CSH knew that its operation of the Pope Street wells was causing dewatering of the Napa River, no effort to mitigate injury to the public trust was undertaken. Further, the CSH permitted and authorized additional 31 groundwater extraction proximate to the recognized salmonid habitats of Bell Canyon, York, and Sulphur creeks without consideration of the potential impacts on the public trust, including but not limited to the Farmstead project and wells for Anomaly Wines, Beckstoffer and the St. Helena Public Cemetery.

At paragraph 47, Water Audit avowed: "Consultants hired by the CSH to prepare an Environmental Impact Report (EIR) for the proposed Hunter Subdivision twice falsely cite an agreement with Water Audit. No such agreements exist."

Nevertheless, these false assertions persist.

Among the numerous Prayers for Relief was: "CSH must modify its operation of the Pope Street wells to reasonably mitigate injury to the public trust." Clearly the litigation sought to diminish current excessive extraction.

Water Audit dismissed the CSH litigation at the request of prominent local leaders in the hope the City would change its conduct without continuing legal compulsion. The dismissal was made "without prejudice," a legal term meaning that Water Audit can file renewed litigation if CSH does not comply with its public trust duties.

**(b) CSH has been in a persistent state of water emergency.**

In 2011 CSH adopted a policy and mechanism for dealing with a potential "water emergency." A Phase I emergency was to be declared when storage reached 60%; Phase II was declared with storage reached 39%. Minimum permissible "Fire Storage" is 25%, so when a Phase II emergency is declared, the useful volume remaining is only 14%.

By way of incomplete but illustrative example of the impact on residents, during a Phase I emergency citizens may not add any water consuming appliances and must have City

approval for any appliances replaced. Replacing an existing residential dishwasher during a Phase 1 emergency is subject to City approval.

In October 2020[2] the City declared a Water Shortage Emergency, because the water in the Bell Canyon, the supply capacity of the Stonebridge wells and the water available from the City of Napa was not sufficient to meet the City's projected demands. In November 2020, when Bell Canyon storage reached 39%, the state of emergency was elevated to Phase II. The city did not downgrade from Phase II to Phase I until a year later, at the end of December 2021. During a Phase II emergency residents are limited to 65 gallons per person per day, a third of the community's pre-emergency unconstrained consumption.

As of the date of this comment, CSH has announced it anticipates dropping the Phase I emergency restrictions in July 2023, well over two years[3] after they were first imposed. "The current water rate structure includes a drought period surcharge that begins once the City implemented the Phase I Water Regulations. … Drought rates are 6% higher than non-drought rates."

This hearing is being held while CSH residences may not replace a dishwasher without approval and while they are already paying a premium due to the state of water emergency. Prima facie there is insufficient water in CSH for new development.

Emphasizing the current fragility of the City's water system, in the recent past the City has been unable to take delivery of water from the City of Napa in sufficient volume because the Rutherford pump station deferred maintenance led to a system failure. For months the Bell Canyon water treatment plant has had to rely upon contract workers because the City is unable to attract qualified staff. In February 2023 the City lost from 10-15% of its capacity when a Stonebridge well pump failed without a spare in inventory. Citing "significant deferred maintenance," Public Works Director Joe Leach said "Our water system continues to pose challenges." Truer words were never spoken.

Until the existing challenges are overcome, the City *cannot* commit to any additional demand.

**(v) The 1976 well is legally deemed abandoned, and cannot be used for this project.**

Although the EIR proposes to use site pumped groundwater, "the Project does not require obtaining a well drilling permit." EIR 2580, *3762.* "[T]here is an inactive groundwater well located in the northern portion of the Project site that may have been historically used to provide construction water for the City's Flood Protection Project and was used in the past for agricultural irrigation. The Project proposes to use this well for the irrigation of public and private landscaping and all other outdoor uses, which are estimated to require 17.16 AF per year. *EIR 2580, EIR 627*

---

[2] Otherwise reliably stated to have been *de facto* imposed on July 1, 2020 – See staff notes to 2022 Water Report

[3] By some measures, three years.

See also: “The Project site contains an inactive groundwater well adjacent to proposed Lot 19 in the northern portion of the property identified as Parcel B … This well may have been historically used to provide construction water for the earth moving activities associated with the City’s Flood Protection Project and may have been used in the past for agricultural irrigation. The existing condition of the well is considered inactive; however, as it was not being used at the time the Notice of Preparation was released. The Phase I Environmental Site Assessment completed for the Proposed Project noted that the well was inoperable at the time of the site visit (Appendix G).” *EIR 623* For the sake of clarity, this engineering work will be referred to as the “1976 well.”

A well analysis is referred to in the EIR as “Appendix L.” However, “Appendix L” was not appended to the DEIR in the Agenda Packet iterations. Reference herein is to Appendix L from the Draft EIR posted on the City’s CEQA webpage.

Appendix L narrative asserts that the 1976 well was tested by 24-hour pumping. That assertion was false. By referencing the pumping report, one can see that while pumping took place over the course of a day, the pumping was not continuous. <<>> It remains unknown how the well would perform under 24-hour sustained load.

Appendix L fails to acknowledge[4] that the wetlands survey did not include the well, as it was on a different property at the time the survey was performed (land then owned by the City.) If, as logic and topography imply, the 1976 well is in a wetland, then there are special concerns that have not yet been considered. A well should be located outside areas of flooding. This well in located proximate to a drainage ditch and collection pond, the latter intended to flood in high water. Good practice requires that the top of the well casing shall terminate above known levels of flooding caused by drainage or runoff from surrounding land. For community water supply wells, this level is defined as the:"...floodplain of a 100-year flood..." or above "...any recorded high tide...", (Section 64417, *Sitting Requirements, Title 22 of the California Code of Regulations*.) Surface drainage from areas near the well shall be directed away from the well. If necessary, the area around the well shall be built up so that drainage moves away from the well. Appendix L does not consider this subject.

Appendix L states that the screening on proximate monitoring wells is “unknown,” while a previous report by the same consultant was able to confidentially state the facts. It is only in the absence of that information that the consultant was then able to assert that the 1976 well does not draw from the Napa River. Had the proper reference been made, the only conclusion that could have been made was that water extracted from the volcanic rock zone in this location does deplete surface water flows.

Finally, Appendix L fails to acknowledge that by state law and municipal ordinance, the 1976 well is deemed to be abandoned, and the failure to destroy it is a continuing misdemeanor. Given the proven connectivity to Stonebridge, this is a serious matter of public health. Abandoned water wells can act as conduits for surface and subsurface pollution to enter groundwater supplies. Once polluted, groundwater is no longer drinkable.

CSH Ordinance 13.16.020 (E) states: “The city desires to require the location, construction and repair of water wells and other water systems to conform to California State

[4] In fact, the Applicant implies the contrary.

Department of Water Resources Standards as noted in DWR Bulletin Numbers 74-81 and 74-90 and as required in California Water Code Section 13801."

Water Code 13801 states in part that each city shall "adopt [an] abandonment ordinance that meets or exceeds the standards contained in Bulletin 74-81. The DWR publishes Combined Bulletins 74-81 and 74-90 (Water Well Standards). Part III, Section 21 reads: "A well is considered 'abandoned' or permanently inactive if it has not been used for one year, unless the owner demonstrates intention to use the well again." Part III Section 22 states "All "abandoned" wells and exploration, or test holes shall be destroyed. The objective of destruction is to restore as nearly as possible those subsurface conditions which existed before the well was constructed taking into account also changes, if any, which have occurred since the time of construction."

*Health and Safety Code* § 115700 provides that a well is considered 'abandoned' or permanently inactive if it has not been used for one year, unless the well owner properly maintains an inactive well as evidence of the intention for future use. Proper maintenance required to keep a well from becoming abandoned includes *a notice to the local health officer of an intent for future use*. No such notice has been given. The well site has not been kept clear of weeds and brush and has not been protected from flooding or run-off from adjacent lands.

Whether the well is capable of operation is irrelevant. By the process of law the 1976 well is deemed abandoned and it must be destroyed forthwith. Until this is done, the owner is guilty of a misdemeanor, and the City is acquiescent in the crime.

Assuming that the pump production rates are valid, it would seem an easy matter for the Applicant to simply drill a new well. That would pose a problem, however, as a new water availability study would have to consider its impact on the adjacent water course and the cumulative extractions of proximate wells as a matter of law. It is unlikely that a permit would be granted to drill a new well, even in permissive CSH.

Consultant RSA+ acknowledged in 2019 that a well interference study was necessary for the EIR, asserting that "It is assumed this has been performed under Dudek." It had not.

The Dudek "well completion" analysis is prima facie inadequate. Although it makes narrative reference to "well completion reports," no such records are appended or referenced. Wells discussed are not identified by their DWR number. The extraction from numerous large proximate wells are not considered, including but not limited to the Stonebridge wells. The narrative cites no sources.

**(vi) Contemporaneous LSCE reports contradict earlier works of sustainability.**

The EIR repeatedly asserts that increasing groundwater extraction by this project will be of no consequence as the SGMA process has deemed the status quo groundwater condition is stable and sustainable. In support of this proposition the EIR makes reference on thirty-two occasions to LSCE works published for the County and GSA in 2013, 2014, 2016 and 2017. (for limited example, at EIR 515, 523, 539, 621 & 622).

Fortunately, it is unnecessary to challenge each citation (although for the record, such challenge is made) because the most critical facts are those that were not presented. Omitted in its entirety is the most recent and pertinent of LSCE's work, the *Groundwater Sustainability Annual Report – 2022 (March 2023)* ("LSCE 2023").

In order to assess the groundwater condition, it is necessary to establish objective criteria. LSCE 2023 states that undesirable results for chronic lowering of groundwater levels occur when groundwater levels at (1) 20 percent of the groundwater levels at (2) representative monitoring sites are (3) below the defined minimum threshold (4) in the fall (September through October) (5) for three consecutive *non-drought years.* Note that this is a far more lenient standard than water insufficiency in drought years.

LSCE 2023 states that CSH and four other sites have fallen below the minimum threshold in non-drought years. The recurring and extended states of emergency speak adequately to the groundwater condition during drought.

LSCE 2023 asserts that there is injury to groundwater dependent ecosystems as a result of excess groundwater pumping and illustrates problem by illustrating the adverse surface water / groundwater interface caused by Stonebridge pumping.

LSCE 2023 admits that earlier representations that groundwater pumping was in sustainable balance were in error and now acknowledges that for five of the last seven years the sub-basin was over drafted beyond its sustainable limit, resulting in cumulative water storage loss.

LSCE 2023 concludes that one of the undesirable results of ground water depletion is injury to groundwater dependent ecosystems protected by the public trust. It concludes with multiple plans to remediate the injury, none of which contemplate the effects of further depletions of surface flows by additional extraction. Amongst government agencies, only CSH is considering such counter-productive conduct.

**(C) The EIR fails to consider a reasonable and environmentally preferable alternative.**

It is a distinction without a difference in terms of environmental injury whether water is extracted on the Hunter site or extracted at Stonebridge. The Stonebridge wells are hydrologically connected to the Hunter wells. To draw an analogy, Stonebridge and Hunter are but two different straws among many other straws sucking from the same glass of water. While there has been inadequate cumulative impact analysis, it is manifestly evident that the metaphorical glass is empty, and the public trust is dying.

The Napa River proximate to the Pope Street wells, June 2021
Image by Dr. Amber Manfree for Water Audit California

In January 2023 Water Audit proposed to the City an alternative to dewatering the Napa River: a transfer of surplus waters in the Rector Reservoir equal to the extraction from Stonebridge. See attached correspondence. An engineering working group from several jurisdictions, including water department staff from CSH, have been diligently considering the proposal (together with other components of resiliency) for the last several months. They have tentatively concluded that there are no significant technical obstacles to the process.

CDFW has opined that the transfer would be environmentally preferable to continued groundwater extraction and agreed that the owner of Rector could have environment credit for that facility's environmental obligations.

The primary obstacle is political intransigence. CSH has never acknowledged this alternative in public, instead continuing to extract from overdrawn public trust resources. This project merely exacerbates the problem.

It is submitted that it is a failure of CEQA process and an abuse of discretion to not consider this environmentally preferable alternative.

In conclusion, the EIR should not be certified. The project should be rejected as being incapable of conforming to CEQA water requirements, or at a minimum, the substantial deficiencies discussed above require remediation and recirculation following the Applicant's submission of all of the necessary information for consideration of the whole of the Project**.**

Respectfully,

Hi Bill,
I enjoyed talking to you recently and leaning more about the general concept of a potential transfer of water to increase St. Helena's water supply. Just to be clear, I conveyed my general interest i are always looking to augment our water supply. I don't have the benefit of many important details at this juncture, and I do not have the authority to formally "engage in a conversation regarding pur offset the City's Stonebridge wells production." Of course I would like to learn more about the process, conveyance possibilities, logistical challenges, engineering issues, and cost details going forw general proposal to our City Manager and Public Works Director, and I will leave it up to them to consider its merits and viability and make recommendations to our city council. I certainly want to exp for our city, and wish to keep communications open, but I do not want to get too far out in front of our city staff or city council. Thank you.
Paul

Greetings, David

It's hard to believe, but almost two years have passed since we last communicated. I hope you and yours are well.

Some things are different now, but unfortunately some things remain the same. Rector Reservoir is full, but the City of St Helena still dewaters the Napa River by its operation of the Stonebridg of the Rector Dam remains a losing reach, stubbornly resistant to rewetting. Expert opinion is that rewetting more than two miles of the mainstem Napa River would be of greater impact than a the Rector reach.

Please consider the following. Let me assure you at the outset, Water Audit will in no way profit from this transaction, although if this works it would be nice to get a producer's credit for the reco

I have spoken to City of St Helena Mayor Paul Doring, (copied on this email) and he would like to engage in conversation regarding purchasing water from DVA to offset the City's Stonebridge **understanding is that this would be a paper transaction only, and that there would be no engineering or construction work involved.** The City of Napa's Mayor Scott Sedgley has, in t community's interest, agreed to allow a senior member of his staff, Joy Eldredge, Napa's Deputy Utilities Director, to take lead on technical issues. She is known to your and CSH engineering systems, and her opinion on water transfer valuation is well respected. CDFW have agreed to participate and have endorsed the concept of the water transfer as a substitute for bypass into th the dam.

Assuming that CSH agrees to reduce Stonebridge operations proportionately, Water Audit is prepared to stipulate that the transfer would constitute DVA bypass pursuant to FGC 5937 and defe period (matching the term of the transfer agreement) any litigation regarding the Rector or Stonebridge reach. My understanding is that present good practice is to plan the quantum of deliverie time after consideration to the water available. Put another way, it will be a fundamentally different agreement than with the Town of Yountville and the Veterans Home.

The net effect is that DVA would be able to generate market rate revenue from its environmental releases to offset the costs of its monitoring programs as well as simultaneously satisfying its F Additionally, the DVA will be brought into the evolving process of coordinated regional water management, which offers the agency substantial peer benefits in changing climatic and regulatory this be a prototype effort, with continuous monitoring, review and revision as lessons are learned.

The Rector system was inspected, reviewed and reported in the spring of 2018 by Guy J. Schott, P.E., Associate Civil Engineer, State Water Resources Control Board Division of Drinking Wate are available on request. Consistent with / part of his reporting:

### Rector Reservoir

Owned by State of California Department of Veterans Affairs

**Safe yield**: 1,670;
**Existing Deliveries**: DFW <575 AF; Veterans Home & Yountville 740 AF
**Nominal surplus to safe yield:** 355 AF
***Maximum delivery surplus**: 2,200 AF*

***Stonebridge extractions:*** 400-600 AF

1.) Photos of Rector Reservoir (2018)

2.) SWRCB 1970 Water license.
5.55 cfs direct diversion (X365); 1,767 AF to storage each year, diversion 10.01 to 05.31; total permitted deliveries (dir.&indir) 3,518 AF; maximum storage 4,400 AF

3.) Rector water distribution network showing intertie to Napa/Conn pipeline. Shows raw water distribution to County yard and CDFW Silverado.

4.) December 2000 Department of Water Resources Yield study.
Bathymetric study AF; dead pool 487 AF; carry over storage 2,768 AF; safe yield 1,670 AF. The (unauthorized) raising of spillway elevation offset 54 years of infill on storage capacity.

5.) Storage capacity curve, NET of dead pool.
DVA should have real-time monitoring from 2018.

6.) Veterans Home and Town of Yountville Consumption etc. 1989-2000
Total production during reporting period <740 AF. Note the following is more recent.

7.) ALL DELIVERIES
Note "system losses" ranged up to 22%. Since Water Audit litigation they have been in mid to low single digits.

8.) WATER USED BY CDFW FROM RECTOR RESERVOIR 2005-2017
NOTE: Low CDFW demands from June to October annually. 2017 is an anomaly caused by experimental flows made as part of DVA study. Otherwise <575 AF.

<Attorney/client information redacted>

Good afternoon Paul

Thank you for your email.

As we discussed, this activity does not fall within my usual practice, so please forgive me if I inadvertently do not properly follow protocol. For the record, I do not have authority to speak for anyone. I do not have the authority to compel an agreement. In fact, one could argue that Water Audit should have nothing to do with solving CSH water problems, but as a matter of corporate philosophy we prefer to proffer reasonable solutions when we see them. We appreciate you considering our idea.

I have had preliminary collegial conversations with Ms. Eldredge about this proposition, and from those conversations have some been given some comfort about its viability. "It's not a mad idea," would be a fair characterization. She properly advised that she could not formally participate without her supervisors' instruction, so I went to see Mayor Sedgley, who agreed to take care of whatever was necessary for her to provide temporary guidance to this project. I am most grateful to both of them for being willing to go above and beyond to help solve this problem. Given my understanding of the engineering works, the City of Napa may be a necessary party to any deal here. For the record, by his courtesy Mayor Sedgley in no way bound the City of Napa to any further agreement of any kind. Assumably your staff will engage in appropriate conversations, and technical questions will be resolved. Respectfully, that is not the first order of business.

My communications with DVA on this topic have been professional, and as indicated in my January 18th email, my last was almost two years ago. While acknowledging some merit to this idea, as you have, naturally their first question was "Do you speak for CSH?" Clearly and obviously, I did and do not. At the time CSH counsel was unwilling to discuss the topic. Understandably, for that and other good reasons at the time, the possibility died on the vine. Time has passed, CSH has new leadership, and yet the problem of Stonebridge wells persists, so we are trying again to daylight this prospect for consideration with as little controversy as possible.

**Please note: unless you have a willing seller in the DVA the deal is a "non-starter"** without further discussion. Respectfully, everything else follows.

As no one should ever characterize my conversation with you as in any way binding on CSH, similarly, no one should ever characterize my communications with DVA as binding on that agency. It would seem efficient for DVA and CSH representatives, without the authority or intent to bind anyone, to meet and see if there's any possibility to be pursued. If not, then there is no waste of time. If so, staff can do what needs to be done to assess logistical, conveyance and engineering matters. I have great faith in engineers to find solutions.

A different order of business seems unfair to Ms. Eldredge and the City of Napa. While CSH may wish to pursue the matter, unless the DVA is onboard the exercise is a waste of time.

Thank you for getting this ball rolling.

Bill

**Subject:** [External] Response to Your Comments on the Hunter Subdivision

To Our Town St Helena:

Thank you for your letter of April 21, expressing your concerns about the development of the proposed Hunter Subdivision project and its compatibility with surrounding neighborhoods and consistency with the St Helena General Plan.

Your letter deals with two primary concerns:

*1) the single-family lots are sized to support large homes that will likely sell in the $2.0-$3.0 million-plus range in today's market and will not be affordable for our*

*community's working people, young families and seniors; and*

*2) the parcel designated for "affordable housing" is segregated from the remainder of the homes, and, as such, is in direct conflict with the City's inclusionary housing ordinance that requires integration of the affordable homes and similar bedroom/bathroom counts as the single-family homes.*

Our responses are provided below.

Issue: Homes on single family lots will be expensive and unaffordable to working people, young families, and seniors.

Response: The City recognizes that housing prices in St Helena present a challenge for many households. To address this issue, the City has adopted an updated Housing Element which includes extensive housing-related programs aimed at making housing affordable to households at all income levels, based on the City's fair share allocation of housing growth for the region. The City has also adopted specific regulations, including Chapter 17.146 of the ST Helena Municipal Code, one provision of which requires that 20 percent of all new housing in projects with more than five units (including the proposed project) be affordable to moderate and low-income households.

The City's position is that the 20 percent affordability requirement adequately provides for affordable housing opportunities within the Hunter project, which would be required to build 15 new affordable housing units. It is not the City's responsibility or policy to set the sale or rental price of the "market rate" units which will be built, but the requirement for affordable units strikes a reasonable balance between the sale of homes at market prices and the provision of affordable homes.

Please note that the City will not allow the proposed Accessory Dwelling Units to count toward meeting the affordable housing requirement, even though ADUs which are rented tend to be available at much lower prices than the single family homes that they are located with.

Before any construction of homes can begin, the applicant will be required to obtain City Council approval of an Affordable Housing Agreement, which will describe in detail how the requirements of SHMC 17.146 will be met. If the Council disagrees with the applicant's proposal and does not approve such an Agreement, no Final Map can be approved and no homes will be built until an agreement is reached and approved with the City Council.

Issue: Building affordable housing in one location on Lot 52 would conflict with General Plan policies and the St Helena Municipal Code. Specifically, you suggest that the development of multi-family homes on Lot 52 would conflict with Policy 2.6.19 of the 1993 General Plan,

*"Permit higher density housing in single family neighborhoods as long as the development character of the single family area is maintained (i.e., lot widths, orientation to street, building heights, etc.)."*

Your letter also asserts inconsistency with the following policies from the 2019 General Plan:

*Land Use (LU2.1): Promote a mix of housing types and price ranges that are consistent with the Housing Element RHNA categories of housing affordability.*

*Economic Sustainability (ES1.4): Encourage the creation of workforce housing to support the local employment base in keeping with small town smart growth.*

Response: These policies relate to the *affordability* of homes in the project (discussed above) and the *design* of the future single-family and multi-family homes. Although not stated in your letter, the proposed *density* of the proposed project is entirely consistent with the density assigned to the project site in the General Plan, and is in fact the minimum number of units which could be constructed within the existing General Plan land use designation. The project is less dense than both of the adjacent residential developments: the Vineyard Valley mobilehome community and the Hunts Grove apartments.

As you note, the project is currently proposed to include a mix of single family homes and multi-family units. The applicant has not provided specific designs for either the single-family or multi-family homes, but will be required to do so and obtain approval of both Design Review (for all of the homes) and a Conditional Use Permit (for the multi-family homes) from the Planning Commission.

Staff shares your concern that the new homes built in the Hunter project will need to be carefully designed to maintain compatibility with the surrounding area and to conform with all applicable requirements. Staff looks forward to reviewing and processing specific design proposals, but we currently do have such an application in hand and cannot speculate on what the applicant's specific proposal will be.

Please note that, while SHMC prefers that affordable units in a new residential development are distributed throughout the project, the City's regulations specifically provide for a method of approval of affordable housing which is either 1) different in size from market rate units or 2) clustered, or both:

*"Subject to the approval of the planning commission, square footage of affordable units and interior features in affordable units need not be the same as or equivalent to those in market rate units in the same residential project, so long as they are of good quality and are consistent with contemporary standards for new housing. Affordable units shall be dispersed throughout the residential project, or, subject to the approval of the planning commission, may be clustered within the residential project when this furthers affordable housing opportunities."* (SHMC 17.46.050.I)

City staff looks forward to receiving specific proposals from the applicant for the design of the new housing and the required Affordable Housing Agreement. If the Hunter Subdivision is approved, we encourage you to watch for these future proposals so that you can provide comments on the specific concerns that you expressed in your letter.

Again, thank you for your letter. We look forward to your attendance at the May 1 City Council

meeting.

If you have any other questions or comments, please feel free to contact me.

**RE: Hunter Subdivision Project Tentative Map No. 2022-001, File #PL10-040**

Dear Mayor Dohring, Vice Mayor Hall, Council Members, City Manager Comelo, Community Development Director DeRosa:

As you are aware, we represent the Saint Helena Citizens for a Sustainable Future, a diverse group of City residents. We have provided several letters on this project to the Planning Commission on this project, highlighting several of the procedural and substantive deficiencies in the application process and consideration. (Those letters are included in your Agenda packet for the May 1 meeting, along with Staff's responses, and we encourage you to review those letters in chronological order for context. We have not set out again every point in those letters for sake of brevity.)

The Planning Commission nevertheless –reluctantly as can be seen in the video of the hearing – passed the project on to the City Council. The Planning Commission appeared severely cowered by pressure to approve housing. Its referral to the City Council is thus not in any way persuasive that the tentative map nor its accompanying Environmental Impact Report warrant approval. A separate letter addresses the serious issues with the Environmental Impact Report.

This project has an extensive history. It was previously halted nearly a decade ago due to its impacts on traffic and needed improvements to the Pope Street/Silverado Trail intersection. It has recently moved forward, ostensibly on the notion that traffic is no longer an issue of concern under the California Environmental Quality Act, and thus can be ignored. This is incorrect – the impact on traffic is still highly relevant to whether the project is consistent with the General Plan.

But there are also countless other issues with the project raised by the hundreds of public comments raised in opposition. Some of these significant items are discussed further below.

In short, this Council's function is to determine whether the project is consistent with the City's residents' vision of St. Helena as described in the General Plan. Where it is not, it is the Council's job to reject the project to protect the current residents from the deigns of out-of-town developers. Given the languishing of this project by the applicant, it is subject to the 1993 General Plan rather than the current one; but its failures to fulfill the City's vision are nonetheless apparent.

**The City Council Meeting Must Be Rescheduled Because It Does Not Comply with the Law**

As a preliminary matter, the City Council has set the matter for hearing on May 1, 2023. That hearing is illegal and contrary to City code. The Planning Commission was required to file its report and recommendation with the City Council *prior* to setting a hearing on the tentative subdivision map. (SHMC § 16.16.070. ("At the next regular city council meeting **following the filing of the planning commission's report with it**, the city council shall fix the hearing date at which the tentative map will be considered by it, which date shall be within thirty (30) days thereafter.")) That did not happen. Indeed, no Planning Commission report and recommendation was prepared separate from the Staff Report prepared by Interwest Consulting Group provided with the public agenda for the May 1, 2023 Special Meeting.

This failure to proceed as required by law has deprived the public of the opportunity to review and comment on the legally mandated Planning Commission report and recommendation prior to the project being set for a hearing. The May 1, 2023, Special Meeting is thus contrary to law and must be rescheduled properly pursuant to SHMC § 16.16.070.

Indeed, it appears throughout the recent process that the City has been poorly served by the latest consultant on the project, Interwest Consulting Group. There has been no independent review of the project - only advocacy for the applicant by the retained outside service. The City has been repeatedly advised to ignore its municipal code to benefit the applicant. The City Council should take a sharp eye to any of the analysis provided by Interwest Consulting Group. Indeed, as discussed further below, the analysis is repeatedly directly contrary to the facts and law.

**The Tentative Map Cannot Be Approved Because the Complete Project Has Not Been Presented to the City, As Required by Law**

As described extensively in our prior correspondence to the Planning Commission, the City's code clearly and unambiguously requires the applicant to submit for *all* of the necessary approvals to carry out the project, including an affordable housing agreement and required multi-family use permit prior to consideration of a tentative map. The applicant has not done that. This failure to proceed as required by law is fatal to the project, and any approval will be a clear abuse of discretion.

As we set out previously in additional detail, Title 16 of the Saint Helena Municipal Code, the City's Subdivision Ordinance, provides unambiguously that:

> All applicants for tentative maps and tentative parcel maps **shall concurrently submit applications for *all* other discretionary approvals**, including but not limited to, conditional use permits, variances, rezonings, and general plan amendments.

(Subdivision Ord., § 16.04.120 (emphasis added.)) Here, however, the Staff Report directly admits "future applications" are required for additional discretionary portions of the project. This renders the approval illegal, the record incomplete, and consideration now directly contrary to Section 16.04.120's mandate that the requests be made "concurrently."

This isn't just a procedural nicety. Such a system makes perfect sense, as otherwise it is impossible to consider the whole of the project. Ignoring this rule is ignoring the entirety of the Project.

Attachment 29 to the May 1 Agenda, Staff 's second attempt at a response to our prior letter to the Planning Commission of February 6, 2023, acknowledges this failing by the applicant to submit the required approvals over the dozen years the Project has been pending. But it attempts to ignore that failure by arguing that the Applicant was supposedly not told of the requirements, and a state law adopted some six years after the application was deemed complete prevents the City from following its law now. That is wrong on both the facts and the law.

For example, the April 17, 2018 Notification of Identified Issues clearly identifies the requirement for and cites the code sections for the Affordable Housing and Conditional Use Permit for Multifamily Housing. The suggestion that the Applicant was not notified of these issues previously is contrary to the record:

> *The type of uses conceptually proposed on Lot 52 (duet multifamily units) require Conditional Use Permit and Design Review approval (see SHMC section 17.40.030.) and development of Lot 52 is required to meet the minimum gross density on the project site. Based on this, the City is following up on past requests for additional information as to the development of the multifamily parcel (and preferably Use Permit and Design Review applications) which provide more project specifics, and detail how the future development will comply with the requirements of the Medium Density Residential zoning and development standards.*[1]

The City had plainly been requesting this information for a considerable time. The September 27, 2018, Comment Letter indicated that the Applicant had provided a draft Affordable Housing agreement that failed to meet the City's standards. By February 2020, the Applicant had offered

[1] Available at: https://www.cityofsthelena.org/sites/default/files/fileattachments/planning_resources/project/3486/hunter_subdivision_issues_letter-april_2018.pdf

to enter into an Affordable Housing and Regulatory Agreement "in conjunction with the approval of a Tentative Subdivision Map." The City soundly rejected the plan as inconsistent with inclusionary housing principles in its Notification of Final Unresolved Issues and Questions.[2] It also clearly called out the need for a use permit for the multifamily development:

> *With 16.92 acres and a total of 87 units, the overall project density is 5.14 units per acre. The site is located within the Medium Density Residential (MDR) General Plan designation with a density range of 5.1 to 16 units per acre. The site is in the MR Zoning District that permits single family residences and Accessory Dwelling Units. Residential condominium projects, attached duplex or triplex units are permitted in the MDR District subject to the Approval of a Conditional Use Permit in each case. Based on your current subdivision plan,* ***you should concurrently submit a Conditional Use Permit application****.*

(Id. Emphasis added.) The Applicant has ignored this direction for years.

Staff's sole response is to argue the current version of the Government Code Section 65589.5(j), regarding the timing and contents of a response to a housing project application, which did not exist at the time of the project's application, *post hoc* controls the project. However, statutes do *not* generally apply retroactively,[3] and a plain reading of the timelines in Section 65589.5(j)(2) shows that applying that section retroactively to a prior application would have immediately made all actions on the Project – and every other similar project – suddenly untimely. This interpretation is unreasonable, and we are unable to locate any authority that would support Staff's position. Indeed, the First District Court of Appeal recently found directly to the contrary in connection with another amendment to the Housing Development code. Such amendments are ***not*** retroactive unless explicitly stated in the legislation.[4] Section 65589.5(j)(2) is thus inapplicable and is not a basis to ignore the City's code.

The other applications required for the Project – an affordable housing agreement and a use permit for multifamily development – are for other discretionary approvals. They are required by code and recognized in the EIR. They are not precluded by the legal "completeness" (or not) of the tentative map application itself – they are distinct legally mandated discretionary applications.

---

[2] Available at: https://www.cityofsthelena.org/sites/default/files/fileattachments/planning_resources/project/3486/02-20-2020_unresolved_issues_and_questions_hunter-final-c2.pdf

[3] "Generally, statutes operate prospectively only." *Ruegg & Ellsworth v. City of Berkeley (2021) 63 Cal.App.5th 277, 307 [277 Cal.Rptr.3d 649, 671, 63 Cal.App.5th 277, 307]* (quoting cases). "[A] statute may be applied retroactively only if it contains express language of retroactivity or if other sources provide a clear and unavoidable implication that the Legislature intended retroactive application." *Id.* (quoting cases.)

[4] *Ruegg & Ellsworth v. City of Berkeley* (2021) 63 Cal.App.5th 277, 307 [277 Cal.Rptr.3d 649, 671, 63 Cal.App.5th 277, 307], *reh'g denied (May 19, 2021), review denied (July 28, 2021.)*

And in any event, requiring additional supporting and clarifying information after a completeness determination is routine and allowed by the Permit Streamlining Act. The Permit Streamlining Act specifically contemplates the requirement for additional information following a completeness determination, and states specifically that "[t]he agency may, in the course of processing the application, request the applicant to clarify, amplify, correct, or otherwise supplement the information required for the application" and that a completeness determination "shall not be construed as limiting the ability of a public agency to request and obtain information which may be needed in order to comply with [CEQA]."[5] Indeed, the entirety of the EIR process occurred after the completeness determination was made. The suggestion that additional information on the planned "design and improvement"[6] of Lot 52 – which the Council is required to review and approve in connection with the subdivision – cannot be required after the completeness determination is specious.

The City needs to follow its own law and reject the piecemeal attempt at approval of only a part of the Project. Neither the Permit Streamlining Act nor the subsequent amendments to the Housing Accountability Act alter this; it is a failure to submit *all* of the information necessary to analyze the project as a whole, which the City's Subdivision Code – and CEQA – require to be considered and analyzed collectively.

Failure to proceed as required by law is an abuse of discretion.[7]

**The Required Findings Cannot Be Made**

Without a complete collection of the required discretionary approvals, the City simply cannot make the required findings for approval. The City Council must make two findings to approve a tentative map:

> 1. That the proposed subdivision, ***together with the provisions for its design and improvement***, is consistent with the general plan, any applicable specific plan, and other applicable provisions of this code; and
>
> 2. Except for condominium conversion projects where no new structures are added, that the design of the proposed subdivision provides, to the extent feasible, for future passive or natural heating or cooling opportunities in the subdivision, as described in the state Subdivision Map Act and any guidelines promulgated by the city council.

(SHMC § 16.16.080 (emphasis added.))

Put simply, one must know the entirety of what a subdivision project is in order to properly approve it. The City must approve not just the lots, but the "provisions for [their] design and

[5] Cal. Gov. C. § 65944(a), (c).
[6] SHMC § 16.16.080.
[7] Cal. C. Civ. P. 1094.5; *see, e.g., No Oil, Inc. v. City of Los Angeles (1974) 13 Cal.3d 68, 88 [118 Cal.Rptr. 34, 47, 529 P.2d 66, 79], supplemented (1975) 13 Cal.3d 486 [119 Cal.Rptr. 216, 531 P.2d 784].*

improvement."[8] The applicant continues to evade submission of those details for the most important component of the project.

The application seeks approval of 51 single family lots, and one multi-family lot with purportedly 25 units. That multi-family lot requires separate consideration and approval, as multi-family housing is a conditional use.[9] Conversely, as of this moment in time, the use indicated for Lot 52, the multi-family parcel, is not allowed.[10] The applicant thus is seeking to ram through its single-family lots without any analysis or consideration of the "design and improvement" of the multi-family portion of the project.

Doing so will severely restrict the City's ability to shape the critical affordable housing that the property has the possibility to provide. If the tentative map is approved without consideration of a*ll* of the necessary approvals, it eliminates the ability to require a larger affordable housing component. It also locks the City into directly violating the General Plan, as Lot 52 is entirely planted with vineyards. (Contra 1993 General Plan CD 4.3.5 (4.3.5 "Require future residential development to conform to the pattern and density of older, neighboring areas of town in order to complement existing town character and **ensure that densities are high enough to protect against unnecessary incursion into vineyard agricultural areas**.") Thus, directly contrary to the General Plan's policy of designing projects to avoid removal of vineyard, the City will be left with no choice than to approve the vineyard removal for the only multi-family parcel that is part of – and required by – the project to meet the minimum density requirements of the zoning code.

The property has been described as a key component of the City's housing plans. If that is to be true, it needs to be thoroughly and properly vetted. Rushing through an improper approval of a single-family home subdivision will have irreversible deleterious impacts on the City that will persist long after the current Council is out of office. We agree with and echo the letter from Our Town St. Helena: the discriminatory and inadequate cramming of a small multi-family development into an existing vineyard to make way for 51 luxury, likely-second homes is wholly inappropriate and contrary to the City's urgent needs for affordable housing. It is indeed contrary to law.

Moreover, there is no evidence that the project, which depends on 11 ADUs to purportedly meet the minimum density requirements, would achieve that threshold. Studies show that only approximately half of ADUs are used as rental units.[11] Thus, without deed restrictions requiring the rental of the ADUs, and conditions requiring minimum rental income and related fees, the ADUs are not meaningful additions to the City's housing stock or the required density. But again,

[8] *Id.*
[9]
[10] The applicant initially submitted a map with no development shown in Lot 52 at all. (*See* our Letter of October 31, 2022)
[11] UC Berkeley Center for Community Innovation, Implementing the Backyard Revolution: Perspectives of California's ADU Owners, (April 22, 2021), *available at:* https://www.aducalifornia.org/wp-content/uploads/2021/04/Implementing-the-Backyard-Revolution.pdf.

the applicant has failed to submit the mandated Affordable Housing Agreement that might inform whether such conditions could or would be met.

As discussed further below, the project is inconsistent with the General Plan for a host of reasons, including but not limited to its widespread ignorance of the applicable 1993 General Plan policies, impacts on traffic, public safety, destruction of vineyard, and water usage.

But, more basically, as a result of the failure to submit the multi-family use permit application and design, there is no evidence in the record to support the required second finding on passive or natural heating or cooling opportunities. There is no submitted design for Lot 52, the multi-family housing portion of the project. Although the staff report indicates that some of the single-family homes meet the requirement for passive or natural heating or cooling, there is no evidence that the multi-family homes will.

Put indelicately, on the current record the only finding favorable to the project the City Council could make is that it does not care whether the residents of the purportedly affordable portion of the development have had their interests in passive or natural heating or cooling attended to. And it must make this finding now, based on evidence in the record now – not simply condition future compliance.

As the second required finding cannot be made, the Project must be rejected. The Council can reach this conclusion now without further need to wade through the lengthy issue of General Plan consistency – or lack thereof.

**General Plan Inconsistencies**

Returning to the larger issue of the first required finding for approval, the woeful attempt in the General Plan consistency analysis provided with the agenda to show the project is consistent with the General Plan firmly demonstrates the opposite.[12] For example, and by no means exhaustive, the provided General Plan consistency analysis mentions only three of the dozens of applicable 1993 General Plan Land Use and Growth Management Elements.

Among those "LU" policies the analysis omits are the following:

> 2.6.5 Encourage the continuation of agricultural and low-intensity uses adjacent to the Urban Limit Line.
>
> 2.6.14 Encourage a mix of housing types and price ranges to allow choice for current and future generations of St. Helenans.
>
> 2.6.17 Minimize situations where new residential development will block public view of surrounding vineyards

[12] As the Project is subject to the 1993 General Plan, all references herein are to that version of the General Plan unless otherwise stated.

> 2.6.20 Encourage the subdivision and development of larger parcels (3 acres or more) as "planned unit developments" to ensure a more comprehensive and creative approach to planning the development as a single unit
>
> > *The "planned unit development" approach provides developers with greater design flexibility while ensuring the City adequate design review.* The *intent* is *to create developments that complement existing community character. The City will favor planned unit developments that provide generous amounts of open space, covered parking, the separation of pedestrian and vehicle traffic, and on larger tracts, a variety of housing types: single-family detached, duplex, and multi-family dwellings, in one and two-story structures.*
>
> 2.6.24 Require residential developers to contribute toward the provision of community facilities and services (e.g., recreation facilities and programs, educational facilities, traffic and transportation facilities and services) consistent with State law requiring a nexus between project impacts and required mitigation.

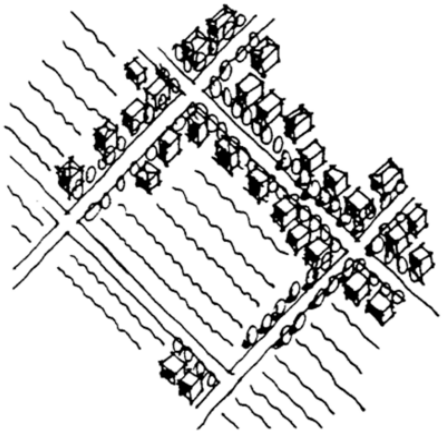
The consistency analysis ignores these elements because the Project ignores them.

The 1993 General Plan Community Design Element reflects a general rejection of 'suburbanization' of the City. In response to the nature of the recent development of the time, the 1993 General Plan, 4.2 Community Form and Character Issues, provided:

> *Residents are clearly concerned that the special character of St. Helena is being lost through new development and growth. Although the last ten years have seen little new development, residents perceive a continuing loss of character and values. In part, this perception is the result of the growth of the valley in general as a tourism destination, and the resultant traffic congestion and impact on local serving businesses. However,* ***it is also the result of the design and planning of new development, that is more suburban in nature than the historic pattern in town.***

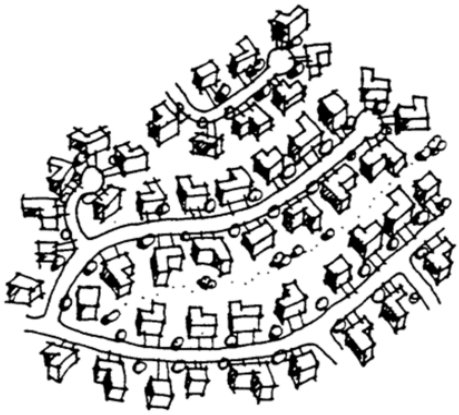
Put plainly: the City looked at the then-recent development on the East side, said 'we don't like it', and directed a return to the classic design of the West side of town.

Again, the General Plan consistency analysis wholly fails to comport the project to the applicable Community Design General Plan policies. It ignores numerous applicable policies, while addressing only a handful of the Community Design elements. Even then, the policies it does address show the project is directly at odds with the General Plan. For example, the consistency analysis states the following:



| | |
|---|---|
| 4.3.5 Require future residential development to conform to the pattern and density of older, neighboring areas of town in order to complement existing town character and ensure that densities are high enough to protect against unnecessary incursion into vineyard agricultural areas. | The proposed subdivision is consistent with the density requirements of the site's General Plan land use designation. |

Obviously, the explanation does not match the element. Instead of comporting the design to the older areas of town to avoid incursion into vineyard agriculture, the project merely purportedly meets the bare minimum density by squeezing in one dense parcel. The consistency analysis ignores the remainder of the element, which is unmet.



The next element similarly fails the straight-faced test:

| | |
|---|---|
| 4.4.1 Use the grid pattern of street layout as the template for future developing areas. Streets should be straight, should meet at right angles, and cul-de-sacs and a suburban pattern should be avoided. | The proposed street layout follows a grid pattern as much as possible, given the site's shape and the location of adjacent connecting streets. One cul-de-sac is included in the proposed subdivision where no other street pattern is feasible. |

To be clear, this is what the General Plan depicts as desired vs. not:

Traditional Grid Pattern

Suburban Pattern

(General Plan 4.4 at 4-16.)

In short, the City considered whether it wanted a project in the future exactly like that proposed, and rejected it. The excuse that the project meets the grid pattern as much as possible is incredible. Offsetting 'Street A' into an awkward intersection into a prototypical subdivision is directly contrary to the element. The design is also inconsistent with Element 4.6.2, which prohibits cul-de-sacs to block views of vineyards.

The next General Plan element analyzed, 4.4.2, the ability to continue Adams Street to Silverado Trail, also fails. The consistency analysis wrongly states that the project "will complete the planned roadway system." But the planned roadway system extends Adams Street to Silverado Trail. The project, on the other hand, obstructs a clear path to the east, and there is no evidence that construction of a public street on the existing levee is technically feasible nor safe. The levee was not designed to carry traffic, and there is no evidence that Adams Street can feasibly be extended if the project is constructed as proposed. Although the General Plan consistency analysis later acknowledges Transportation Element 5.3.2, which calls for extension of Adams to Silverado Trail, it does not consider how the project is consistent or inconsistent with the plan.[13]

There is no evidence that the project is anything other than a complete obstacle to completion of the road network's second access to Silverado Trail.

[13] The analysis also ignores related Public Health and Safety element 8.2.11: "Encourage and support regional efforts to displace motor vehicles off State Route 29 and onto alternative modes of transit." Failure to address access to Silverado Trail ignores this policy.

Returning to the offered 1993 Consistency Analysis, the next element analyzed again belies the consistency:

| | |
|---|---|
| 4.5.1 The sense of a strong connection to the surrounding agricultural open space and hillsides must be preserved in the future. Views of vineyard, hillsides, creeks and major landscape features should be maintained. | Views of the vineyards to the north of the proposed subdivision are currently available from the levee road, which will not be affected by the proposed project. |

The "sense of a strong connection" is plainly destroyed by the Project. The attempt at consistency is quite literally to tell residents they should walk around the Project and look the other direction. And similarly, the next element analyzed again shows the project wholly at odds with the General Plan:

| | |
|---|---|
| 4.7.3 The new eastern entry via the Adams extension should be planned to maximize open space and vineyard views. Where possible, vineyards should be maintained up to the road edge. Residential development should front on the road with sufficient lot depth to allow a generous setback for sound and privacy. Large specimen street trees should be planted in residential areas to mitigate the scale of the street and encourage pedestrian and bicycle movement. | The proposed project extends Adams Street to connect with the northward extension of Starr Avenue, but does not otherwise affect the layout or design of the future extension of Adams Street. |

The General Plan thus dictates residential development should front on Adams Street, not an oddly-adjacent 'Street A'. The future extension of Adams Street would plainly not front on residential developments, but instead would be adjacent to a feeder road. Instead of large yards facing Adams Street and preserving vineyards, the project results in the exact opposite – multiple roads created by removing vineyards.

This is also, for example, directly contrary to General Plan policy CD 4.3.26:

> Encourage residential building siting and design that is similar to that found in the older neighborhoods in town. In these areas consistent setbacks, porches and generously landscaped front yards add to community enjoyment by all. Restrict location of driveways and garages to minimize their visual impact on the street.

In short, this Project by no means meets the applicable General Plan's Land Use and Community Design elements.

It also fails to grapple with the most basic General Plan issue that stalled the project previously: traffic. Nearly a decade ago, it was identified that improvements were needed to the Silverado Trail/Pope Street intersection. The most recent traffic study still states that improvements to the intersection are necessary, and that the project will add traffic to that intersection to such an extent that in a short time, traffic will be backed up past the new City Hall. Yet, no mitigation whatsoever has been provided to account for these significant impacts on quality of life.

This violates the General Plan Traffic elements, including 5.4.1 and 5.4.2, which direct the City to attempt to maintain tolerable levels of service (at least LOS C) at the City's intersections.

More critically, the Project is inconsistent with the most important elements of the General Plan – those related to Public Health and Safety. Countless commenters have already opined that the Project is unsafe both to the current residents and the future residents. Those issues include that the project is flood prone, behind an uncertified levee with evidence of deficient maintenance. It is also a necessary firebreak that actually functioned as such in the 2020 fire. The proposed emergency access via the levee maintenance road is not what the levee was designed for and there is no evidence that using the levee for evacuation will be consistent with the long-term structural stability of the levee. Adding substantial population without addressing other transportation issues is a clear and imminent risk to the health and safety of the City's existing residents.

Meanwhile, the consistency analysis analyzed only two of the extensive list of Public Health & Safety elements of the General Plan. Of the two chosen, one is misleading:

| | |
|---|---|
| 8.5.7 Ensure that all streets and roads are adequate in terms of width, turning radius, and grade to facilitate access by City firefighting apparatus, and to provide alternative emergency ingress and egress. | The proposed subdivision has been reviewed by the Public Works and Fire departments for consistency with City roadway standards |

The staff report reveals that there actually was *no* standard for intersection design in the City's standards. Thus, despite the intersection of Adams Street/Starr/Street A being clearly awkward and dangerous (and contrary to design standards that could have been referenced such as those by Napa County or CalTrans), the consistency analysis simply states that the subdivision 'has been reviewed.' It has *not* been found safe or adequate. And again, access depends on the levee access road that is not designed for that use.

But most significantly, the consistency analysis ignores numerous other elements that are highly relevant to the Project, and with which it is in conflict. Among the 1993 General Plan Public Health & Safety elements that are unaddressed and unmet are numerous elements discouraging

construction within Flood Hazard Areas. Those Guiding Policies in Section 8.6 clearly discourage development subject to flood risk:

> 8.6.1 Prohibit the introduction of intensive urban development into designated Flood Hazard Areas.
>
> 8.6.2 Uses vulnerable to floods, including public facilities and infrastructure, shall be protected against flood damage at the time of initial construction.
>
> 8.6.3 Prohibit the construction of structures or flood barriers which would unnaturally divert flood waters or would increase flood hazards in other areas.
>
> 8.6.4 Require a grading permit for any filling, grading, or dredging that may increase potential for flood damage.
>
> 8.6.5 Restrict the alteration of natural flood plains, stream channels, and natural protective barriers which help accommodate or channel flood waters.
>
> 8.6.6 Prohibit the siting of uses within Flood Hazard Areas that could result in health and safety hazards due to the release of chemicals or other substances as a result of inundation or erosion.
>
> 8.6.7 Encourage the use of Flood Hazard Areas within new development areas for open space and recreation uses, including parks and greenbelts.
>
> 8.6.8 Ensure that any new development that is allowed within the floodplain is constructed so that the lowest floor elevation is at least one foot above the 100-year flood level.

Development exposed to flood risk is plainly discouraged. Moreover, implementing policy 8.6.11 "Require[s] developers with land adjacent to the Napa River to construct or contribute a fair share toward the construction of necessary flood control improvements."

As has been widely discussed by earlier commenters, the project places the entire development at risk of flooding. The staff report acknowledges the flood risk, but asserts it to be of a 200-year flood, and thus not a "Flood Hazard Area." Even assuming that to be true,[14] though less likely than a 100-year flood (but only by half), the risk to life and property remains and the potential ruinous financial liability to the City remains unaddressed. Indeed, the City's counsel has provided a legal analysis stating that the City could be held liable for flood damage, particularly if the levee is not adequately maintained. As such, compliance with General Plan policy 8.6.11 would suggest that at a minimum the Project be conditioned to indemnify the City from that potential liability via a bond for the replacement costs of the Project, and to be responsible for the costs of maintaining the necessary flood control improvements.

[14] There is considerable inconsistency in the record about the protection level afforded by the levee. We do note the FAQ provided as attachment 23 to the agenda misstates the 500 year flood risk as 0.02% annually. It should read 0.2%.

Finally, the Project conflicts with numerous Public Facilities and Services and Parks and Recreation policies. Among those is PF 9.4.6 which requires "All subdivision proposals shall be consistent with the need to minimize flood damage." However, the Project proposes to develop portions of the site subject to flood risk, and potentially places the City at ruinous financial risk as a result.

Thus, for all of the above reasons, and those stated by the numerous other commenters, the Project is inconsistent with the General Plan and the Council cannot make the required finding of consistency.

**Findings For Denial**

Pursuant to SHMC § 16.16.080(D), the City Council:

> may deny approval of the tentative map on any grounds provided by the law including, without limitation, a finding that the discharge of waste from the proposed subdivision into an existing community sewer system would result in, or add to, violation of existing requirements prescribed by a state regional water quality control board. A tentative map ***shall be denied*** if ***any*** of the following findings are made:
>
> 1. That the proposed map is not consistent with the general plan, applicable specific plans, or other applicable provisions of this code;
>
> 2. That the design or improvement of the proposed subdivision is not consistent with the general plan, applicable specific plans, or other applicable provisions of this code;
>
> 3. That the site is not physically suitable for the type of development;
>
> 4. That the site is not physically suitable for the proposed density of development;
>
> 5. That the design of the subdivision or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat. Notwithstanding the foregoing, the planning commission may approve such a tentative map if an environmental impact report was prepared with respect to the project and a finding was made pursuant to Section 21081(a)(3) of CEQA that specific economic, social or other consideration make infeasible the mitigation measures or project alternatives identified in the environmental impact report;
>
> 6. That the design of the subdivision or the type of improvements are likely to cause serious public health problems;

> 7. That the design of the subdivision or the type of improvements will conflict with easements of record or easements established by court judgment, acquired by the public at large, for access through or use of property within the proposed subdivision. In this connection, the city council may approve a map if it finds that alternate easements for access or for use will be provided and that those will be substantially equivalent to ones previously acquired by the public. This subsection shall apply only to easements of record or to easements established by judgment of a court of competent jurisdiction, and no authority is granted to the planning commission to determine that the public at large has acquired easements for access through or use of property within the proposed subdivision;
>
> 8. That all requirements of the California Environment Quality Act and the rules and procedures adopted by the city council pursuant thereto have not been met;
>
> 9. That the applicant has failed to submit complete or adequate information;
>
> 10. Subject to Section 66474.4 of the state Subdivision Map Act, that the land is subject to a contract entered into pursuant to the California Land Conservation Act of 1965 (commencing with Section 51200 of the Government Code) and that the resulting parcels following a subdivision of the land would be too small to sustain their agricultural use.

(Emphasis added.) As described above, and by countless other commenters, numerous of these findings can be made here. They include that:

- The proposed map is not consistent with the General Plan as discussed above.
- The design or improvement is not consistent with the General Plan as discussed above.
- The site is not physically suited for the proposed development as discussed above, particularly in regards to its location adjacent to the levee and removal of vineyard firebreaks.
- The site is not suited for the proposed density due to its location adjacent to the levee and lack of development of the road network, existing parking shortcomings, and removal of vineyard firebreaks.
- Substantial unmitigated environmental impacts persist and no overriding considerations justify those impacts, including impacts on groundwater, GHGs, aesthetics, and others as further discussed in our accompanying letter.
- The EIR does not comply with CEQA as discussed in our accompanying letter.
- The Applicant has failed to provide necessary information as discussed above.

**Conclusion**

The City Council members have a duty to the citizens that elected them to protect the City from adverse interests. It must manage the City consistent with the General Plan and the Municipal Code. This project violates both, and the Council should do its duty and protect the voters from this proposed violation of their collective will.

Sincerely,

DICKENSON, PEATMAN & FOGARTY PC

**Date:** Saturday, April 29, 2023 6:54:29 PM
**Attachments:** Comment re Hunter FEIR 4-29-23 7PM.pdf

---

Dear city council members,

Please find enclosed my public comment regarding the Hunter development FEIR, to be discussed at the upcoming city council meeting on May 1, 2023. Unfortunately I will not be able to attend as I will be out of town on business. However, I want to make sure that you receive my comment, and that you are also aware that I started a petition, which to date has been signed by 449 people.

Please reply and acknowledge timely receipt of this public comment.

Thank you.
Sincerely,
Angela M. Zivkovic

mderosa@cityofsthelena.org

Dear Members of the City Council of St. Helena,

I am writing regarding the Hunter Project Final Environmental Impact Report (FEIR). **I am writing to ask you to VOTE NO on approval of the FEIR.** This FEIR does NOT adequately address the safety of CURRENT St. Helena residents in the event of emergency evacuation due to natural disasters (i.e. flood, wildfire). **This FEIR does NOT provide evidence that the negative impact of the proposed development on public health and safety has been mitigated.**

I am also notifying you that I started a **petition on Change.org which has already received 449 signatures** to date (as of 7PM April 29, 2023), highlighting that a significant proportion of other St. Helena residents agree that this FEIR should not be approved, and that the safety of St. Helena residents is at stake.

I expressed my concerns in writing about this and other issues concerning the EIR for the Hunter development multiple times when the draft EIR was being reviewed.

*I reiterate my concerns here and request that the city council address these issues forthwith as it appears to me that **failure to address these concerns constitutes grounds for legal action***. I would like to bring to the city's attention recent advancements with regard to the **legal liability of ignoring climate change in development projects** and point the city council and planning commission members to a report prepared by the Conservation Law Foundation entitled "Climate Adaptation and Liability" https://www.clf.org/wp-content/uploads/2018/01/GRC_CLF_Report_R8.pdf. I urge the city council to carefully consider the consequences of ignoring and dismissing the issues that have been raised here with regard to the failure of the Hunter Project FEIR to take into account changing climate-related impacts on the city's ability to ensure safe evacuation during flood, mudslide, wildfire and other potential natural disaster events, for all but especially the East side residents of St. Helena.

I am aware that the city is obligated to comply with the Housing Accountability Act (Government Code Section 65589.5), which states that a housing development project that complies with the objective standards of the General Plan and Zoning Ordinance must be approved by the City, unless the City is able to make written findings based on the preponderance of the evidence in the record that either: (1) the City has already met its Regional Housing Needs Assessment (RHNA) requirement; (2) there is an impact to the public health and safety and this impact cannot be mitigated; (3) the property is agricultural land; (4) approval of the project would violate State or Federal law and this violation cannot be mitigated; or (5) the project is inconsistent with the zoning and land use designation and not identified in the General Plan Housing Element RHNA inventory. It is clear given the concerns raised below that **there is an impact to the public health and safety of the proposed development project that cannot be mitigated given the current city infrastructure limitations, and the increased and unaccounted for impacts of climate change.**

Here I address several specific comments in response to the Planning Commission Report (file number PL10-040 and TM 2022-001) Section 1 "Findings regarding less than significant impacts not requiring mitigation."

The following comments pertain to the following sections of the FEIR:

- Section H5: Emergency access
- Section H6: Wildland fires
- Section P2: Transportation hazards
- Section P3: Emergency access
- Section R1: Impairment of adopted emergency response plan or emergency evacuation plan
- Section R3: Infrastructure-related wildfire risks
- Section Q2: Sufficient water supplies

Comments:

1) **The FEIR does not address the actual concerns for CURRENT St. Helena residents regarding safe emergency evacuations during emergency situations such as wildland fires.** The FEIR states that the city fire department will evaluate the width of the roads to be constructed inside the development. This only addresses the ability of the future hypothetical residents of the Hunter development to exit the development itself. The width of the streets within the development and the extension of Starr Avenue past Hunt Street toward the development **HAS NO BEARING ON the additional traffic on the existing portion of Starr Avenue, Pope Street, Hunt Street, Highway 29, and Silverado Trail, which is where the real concern lies.**
    a. The question is not whether the development would adequately provide access for the development residents out of the development area, but how the project will impact those residents once they leave the development, and the rest of the citizens of St. Helena who all need to evacuate via the same limited routes out of the city and out of the valley. Once the hundreds of additional residents occupying hundreds of additional cars actually drive out of the development, they are going to have to funnel into the existing roadways, which are already impacted and cannot adequately handle evacuation in an emergency situation such as a quickly occurring wildland fires or catastrophic floods. Once these residents exit the development out Starr Avenue, they immediately impact everyone trying to drive out via Hunt or Pope Street.
    b. Evacuation across the Pope Street Bridge is the only way out of town via Silverado Trail for this part of town. As we all know, Pope Street Bridge is a historic bridge which is not capable of handling even the current number of cars that need to be able to evacuate out of the area. The bridge is extremely narrow with no shoulder. This is an unsafe, inadequate exit route on the best of days, much less during an emergency situation when people are panicked, driving less carefully, and there may be no power, thus no street lights.
        i. **The FEIR does NOT address replacement of the Pope Street Bridge** in order to make evacuations for East Side residents adequately safe with the addition of hundreds of additional vehicles that would result from the development.
    c. The estimates of only about 200 more residents in an 87+ unit development is ridiculous and inaccurate. There is no indication that the proposed development will limit the number of residents allowed per household, nor that it would limit or prohibit multi-family, or mixed adult households. **Households could have as many as 5 residents, with as many as 3 vehicles, which could result in double or even triple the number of additional vehicles potentially resulting from the development than has been estimated, posing a significantly higher impact on transportation hazards during emergency situations than is accounted for in the FEIR.**

i. The FEIR assumes a laughably low number of additional residents and cars from this development. All one has to do is look at how many additional cars beyond what was planned for the Hunt's Grove apartment complex are currently being parked on Starr Ave. A similarly much higher density of vehicles needing to overflow onto street parking would also potentially occur with the Hunter development, increasing the risks and hazards of collision, and increasing impacts on current street and traffic flows. Of course, the biggest concern is what happens under the increasing threat of catastrophic natural disasters and the ability of all St. Helena residents, current and future, to safely evacuate in an emergency.

d. Just as the recent "atmospheric river" weather event increased our awareness of the high risk of flooding on the Hunter parcel, perhaps even more convincingly it reminded us of the extreme vulnerability of recent burn areas to heavy rainfall, the resulting mud slides, and the further impacts on our roads. A case in point is the nightmare traffic that we experienced for nearly 3 weeks following the October 22, 2021 weather event that caused a mud slide that resulted in the closing of Silverado Trail (https://patch.com/california/napavalley/storm-takes-out-part-silverado-trail). Traffic on Highway 29, from vehicles being redirected from Silverado Trail north and south of town, was atrocious. Many residents who either needed to drive north or south out of town were dealing with traffic delays of up to 2 hours. On a normal day this is very frustrating and disruptive to work and school schedules. **In an emergency situation where fast-moving wildfires necessitate immediate evacuations, a situation such as this is a devastating problem for a town that has only two roads out of town.**

e. There are emergency scenarios, such as what occurred during the Glass fire, when evacuation out of the East side of town via Silverado Trail is not an option, as Silverado Trail may be exactly where the fire is and that route may be closed off. In this scenario, EVERYONE from the East Side of town will need to urgently and quickly evacuate up Pope Street and make a LEFT turn onto Highway 29. Again, this poses many additional problems that WERE NOT CONSIDERED IN THE FEIR.

i. First, all of West side residents, as well as potentially all of Calistoga may all be trying to evacuate south via Highway 29 at the same time. This is not a hypothetical scenario, this occurred in 2017 during the multiple simultaneous fires that burned north of Calistoga, and both East and West of St. Helena. In this kind of scenario, there would be A LOT of traffic all trying to move south, with vehicles already on Highway 29 needing to stop and allow vehicles from Pope Street to make a LEFT turn onto Highway 29. In an emergency situation where there is power loss, that turn signal would not be working. There would be extremely slow movement out onto Highway 29 from Pope Street under such circumstances. Very few drivers choose to stop to allow another vehicle to turn in front of them on a good day, much less in an emergency situation where lives are at stake.

**ii. The FEIR DOES NOT in any way address this major problem of how residents will safely and quickly turn onto Highway 29 to evacuate south out of town when there is extreme traffic in an emergency evacuation situation.**

iii. **The FEIR does NOT provide for widening of Highway 29,** nor does it address the danger of needing to make this left turn.

2) T**he FEIR does not in any way address the increased urgency and frequency at which these types of catastrophic events are occurring and are going to be occurring with the increasing effects of climate change**.

a. Climate change is happening. We all know it and have lived it and seen it over the last several years. Each fire season is worse than the last, each winter is warmer than the last, each year the weather patterns become more unpredictable. The recent conclusion from the United Nations Glasgow Climate Change Conference (COP26) meeting is that even if all countries that pledged to fully implement changes needed to meet agreed upon greenhouse gas reduction goals are actually able to meet those goals, we are still on a trajectory to see increases in the earth's temperature of at least 1.8 degrees Celsius (https://www.washingtonpost.com/climate-environment/2021/11/09/cop26-un-emissions-gap/). This means that **the recently experienced natural disasters in our area including wildfires, flooding, mud slides, and droughts, are only going to be more frequent, more extreme, and more unpredictable over the next 10-20 years and beyond.**
b. According to the National Interagency Fire Center the state of California faced over 8,000 fires that burned over 500,000 acres of land in 2002 (https://www.predictiveservices.nifc.gov/intelligence/2002_statssumm/fires_acres.pdf). In 2020 those numbers jumped to nearly 10,000 fires that burned over 4 million acres of land (https://www.predictiveservices.nifc.gov/intelligence/2020_statssumm/fires_acres20.pdf)! The state of California is facing unprecedented increases in wildfire incidences just in the last 20 years, at a time when the earth's temperature has increased by less than 1 degree Celsius (https://www.climate.gov/news-features/understanding-climate/climate-change-global-temperature), while **the *best-case* scenario projections for temperature change are on the order of 1.8 degrees Celsius over the next 20 years, strongly suggesting that the incidence and severity of wildfires is only going to increase**.
c. **The current FEIR does not account for the increase in risk of wildfire due to climate change. More fires means more evacuations and more people that need to be able to leave in a short amount of time in a limited geographic area with limited evacuation routes.**
d. The recent wildfires in Napa Valley and Sonoma Valley are a sobering reminder of what happens when wild, unpredictable winds coincide with extreme dry conditions and ignition sources. Sometimes those ignition sources are dry lightning, other times sparking generators, other times, devastatingly, even arson. Regardless of the ignition source, which in and of itself is growing in incidence (dry lightning storms in the Napa Valley in August?), the cold, hard truth is that **due to climate change the "wildfire season" in California is increasing. More and more days out of more and more months of the year, from as early as April to as late as December, there are days when the combined conditions of extremely low humidity and high winds make this area ripe for fires to start** (https://www.latimes.com/projects/wine-country-fires-california-sonoma-napa/). **The fact is that there are only two ways out of town. Highway 29 and Silverado Trail. These are both narrow, 2-lane highways that can only move so many cars out per minute,** and that is if all goes well and there are no accidents from people panicking and driving recklessly.

3) **The FEIR does NOT address the fact that the East side of town already houses the most vulnerable citizens in our city, encompassing multiple low-income housing units and homes for the elderly who have a variety of disabilities making it more difficult for them to safely evacuate in an emergency situation.** These are individuals who are not only at higher risk from injury but who are also less likely to be able to "evacuate early" as opposed to at the last minute once emergency shelters have been established, making the impact of urgent, last-minute

evacuations even more important. They may also be hard of hearing, or have a multitude of disabilities that may make leaving quickly, or even hearing sirens and being aware of an emergency a problem.

a. As examples of recent wildland fires both here in St. Helena, and in Napa as well as Santa Rosa have clearly shown over the last 6 years, wildland fires are increasingly wind-driven, fast-moving, unpredictable, and can occur in the middle of the night. The current roadways and infrastructure (i.e. bridges) are inadequate to ensure the ability of residents to safely evacuate in an emergency situation. **This is especially true for the most vulnerable residents of St. Helena, all of whom live DOWNSTREAM from the proposed development** and would have to compete with hundreds of additional vehicles trying to exit out of town. These residents include low-income residents from Hunt's Grove apartments, elderly individuals who live in assisted living facilities (e.g. Silverado Orchards), and a large number of elderly individuals in the Vineyard View 55+ community.
b. The proposed development is not in the part of town where half of the homes are second homes that sit unoccupied most of the year. **The East side of St. Helena where the Hunter parcel is located is the part of town where there are more people per square mile that need to be able to evacuate in an emergency.**
c. The **FEIR already concedes that the one environmental impact that cannot simply "be mitigated" is the unavoidable impact on traffic.** Phrasing it as a simple "traffic problem" makes it seem like just a minor nuisance. This is not about having to wait a few extra minutes to make a left turn onto Pope Street to get to work on a Monday morning. **This could mean the difference between a family being able to evacuate to safety in time, or not being able to do so** because they are stuck in traffic with hundreds more vehicles all competing for egress via the same limited roadways at the same time.
d. **This is also an equity issue:** the very people who are the most likely to have to wait until the last minute to evacuate and thus be in danger when traffic is backed up and they cannot evacuate from fire, are those who do not have the funds or ability to evacuate earlier than "necessary" because they cannot afford to simply pay for a hotel for days on end.

4) **The FEIR is based on outdated projections about the flooding risk in the proposed development area.** The Federal Emergency Management Agency (FEMA) is no longer using the outdated maps and terminology regarding flood areas that are used in the FEIR because climate change has rendered calculations based on historical data meaningless. The new Risk Rating 2.0 system has been in effect since October 2021. **This FEIR does NOT use the new FEMA Risk Rating 2.0 system** and instead relies on the outdated concepts such as "100-year flood" and 200-year flood" zones. Moreover, recent flooding events around the country have raised awareness about the growing, unprecedented impacts of climate change. For example, in this article published in Scientific American: https://www.scientificamerican.com/article/studies-sound-alarm-on-badly-out-of-date-fema-flood-maps/ attention has been focused on the fact that **FEMA maps are out of date and do not fully account for the dangers of flooding in the new era of climate change. Movements are under way around the country to curtail development in flood zones. It is irresponsible to use assessments based on historical data and rating systems which are no longer valid.**

a. **The entire idea of "100-year flood" or "200-year flood" zones is now outdated and no longer being used** because it uses outdated projections about yearly percentage risk of flooding based on irrelevant, old information about weather patterns over the last 100 years or 200 years. The new Risk Rating 2.0 is instead tailored to each individual property, and is designed to "adapt and re-adjust rates based on a changing, unpredictable climate," clearly highlighting the fact that **the risk of catastrophic floods and failing levies in certain high-risk areas is so volatile as**

**to be unpredictable** (https://www.houstonpublicmedia.org/articles/news/energy-environment/2021/06/24/401402/femas-changing-its-flood-insurance-program-heres-how-it-will-impact-texans/).

**b.** The new approach also takes into account more causes and types of flooding, including storm surge, river overflow and heavy rainfall, because **climate change is increasingly and unpredictably leading to flooding due to heavier rain falls, sea-level rise, and stronger wind and storm weather patterns**. The new risk rating policy was in effect starting October 1, 2021 for any new projects (https://www.fema.gov/flood-insurance/risk-rating).

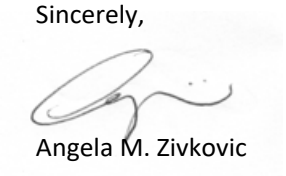
**c.** According to the official FEMA map of the city of St. Helena, the Hunter Subdivision project is clearly within a flood zone (https://map1.msc.fema.gov/firm?id=06055C0264E). Although the city paid for consultants to try to mitigate this risk by providing independent evaluations that take into account the mitigation of the flood risk due to the existence of the levee, this all goes out the window **with the current increased and unpredictable risks we are facing due to climate change**.

**d.** Furthermore, **Measure A, which was passed to approve and finance the construction of the levee, has a specific provision that "none of these projects are intended or designed to encourage population growth,"** meaning that the levies constructed throughout Napa Valley, including the levee in the city of St. Helena, were NOT intended to promote development behind those levies.

**e.** **The city of St. Helena already nearly went bankrupt once before after being sued by the residents of Vineyard Valley after the 1995 flood.** The future residents of the Hunter development could sue the city again when there is a future flood event. The levee was designated as being built to guard against a "200-year flood" risk, but as specified above, FEMA no longer uses these designations and instead uses the Risk Rating 2.0 system, **therefore there is currently no clear estimate of the % risk of a flood on any given year, nor of the ability of the levee to withstand a future potential catastrophic flood event. It is not even clear whether the future residents of the Hunter development would be able to secure flood insurance under the new system, opening up even higher possible liability for the city.**

f. Professor Nicholas Pinter, Professor in the UC Davis Department of Earth and Planetary Sciences, and Associate Director of the UC Davis Center for Watershed Sciences, wrote a very insightful and informative blog post on the topic of the St. Helena levee. In his blog he explains that **even with a levee constructed to withstand a "200-year flood" there is residual risk**. In other words, there is *at least* a 0.05% chance that a catastrophic flood even will occur, but this could be higher given the unpredictability of climate change. Who bears the cost of this (unknown amount of) residual risk every year? The residents of St. Helena. As explained by Dr. Pinter:

    i. "Residual risk also can be borne by the governmental agencies that facilitate "field of dreams" levees. Legal liability came to roost in California in 2003, when the Court of Appeals found the state liable for $500 million in damages resulting from a levee break on the Yuba River in February of 1986, the same storms that flooded St. Helena. The case was Paterno v. State of California, and **although the state neither built nor maintained the levee that gave way, the court found that it was responsible for inadequate maintenance and management of the system. And liability extends to counties and towns as well**; for example, **California Assembly Bill 80 made local jurisdictions liable for "property damage caused by a flood [if they] … unreasonably approv[e] new development in a previously undeveloped area** (a)" In the Paterno case, the financial hit of that $500 million decision shook the financial structure of the



entire state, such that California was forced to borrow funds from Merrill Lynch in order to pay the claims against it (b)."

5) **The FEIR does not adequately address the health and safety of current residents with regard to access to sufficient drinking water.**
   a. All of the estimates put forth in the document simply state that there will be sufficient water supplies in the future to accommodate the new development, citing data from 2013 and 2016, which are now completely meaningless and outdated. The city is currently cycling between states of emergency water shortage due to failing infrastructure.
   b. Climate change is permanently and irreversibly changing the groundwater and reservoir supplies that we rely on. **The calculations of water needs and Safe Yield are all based on outdated, historical information which does not account for actual decreases in water yields and replenishment of both reservoirs and groundwater due to climate change.**
   c. It is likely that instead of about 200 more residents there will in fact be more like 400 new residents, thereby increasing the water demand to double what was projected, **since water demand is, rightly so, based on number of people per household rather than number of households**.
   d. Unfortunately, our water shortage problems here in St. Helena are happening all over the state. **Wells are running dry** (https://calmatters.org/environment/2021/08/california-groundwater-dry/). Despite changes to California ground water laws in 2014 to enact sustainable practices that protect ground water, nine years later wells around the state continue to run dry. Current climate change projections, as outlined already above, are dire, and suggest that **drought severity, intensity, and duration will only worsen over the coming decades.** We simply cannot rely on old projections about water availability because we are in uncharted territory. Our ground water sources are not being normally replenished. The normal water cycles are not operating the way they used to. And it is not just wells that are running dry.
   e. Snowpack in the Sierras normally "supplies about 30% of water statewide when the spring melt comes and water runs off to be captured in the state's system of reservoirs" (https://www.sfgate.com/bayarea/article/Sierra-snowpack-satellite-image-atmospheric-river-16568005.php). But the snowpack in 2020 was only 59% of average, and even more disturbing and unexpected was the fact that 80% of the already lower than normal, predicted water runoff was simply soaked up or evaporated because the soils were so hot and dry, severely impacting water levels in reservoirs across the state. Yes, we had an unusually heavy rainfall and snowfall year this year, however, there is no way of predicting what the next several years hold and it is extremely likely that we will have more severe droughts. So it is **not just our ground water and wells that are drying up, our Sierra snowpack, and thus reservoirs and rivers are also drying up.** As mentioned earlier, climate change means that we are experiencing more and more warmer and warmer days, and this means that **even if we do get big storms the snowpack does not stick around, and even when we do get runoff from the snowpack, the earth is so parched that the water simply disappears on its way to our reservoirs.**
   f. We were lucky this year, with a very wet winter and very high snowpack, but there is no predicting whether we will get another wet winter again and how much rainfall and snowfall there might be over the coming years, again, due to the extreme unpredictability of climate change. **The FEIR does not account for new, unexpected, unpredicted risks of severe and sustained drought conditions due to climate change, and the impacts of these on the availability of safe drinking water for St. Helena residents.** Laughably simplistic solutions like the use of "low flow toilets" as a mitigation solution for our real water shortage issues that are

only going to worsen over time are inadequate. **We cannot rely on water supplies staying what they were even in the recent past, or being predictable based on what we used to know about how much water we might expect any given year based on old weather patterns.** In fact, it is quite clear that severe drought and water shortages are likely to occur with much greater frequency in the coming years and decades, as our ground water supplies, snowpack, river flows, and reservoir levels continue to be severely impacted by climate change.

The current FEIR falls far short of addressing the concerns cited above. The negative impacts of the proposed Hunter development on the health and safety of current St. Helena residents have NOT been mitigated. **The Hunter development would have significant impacts on public health and safety that cannot be mitigated.** Without FIRST significantly investing in improving city infrastructure, including widening Highway 29, replacing Pope Street Bridge, and improving city water infrastructure, the Hunter development would add hundreds of residents to a city with high wildland fire risk, high flood risk, crumbling infrastructure, and inadequate roadways, putting residents, including highly vulnerable low-income and elderly, at risk of not being able to safely evacuate in an emergency situation, and not having adequate access to safe drinking water. **It is the city council's responsibility to vote NOT to approve the Hunter development FEIR and to protect the citizens of St. Helena.**

Sincerely,

Angela M. Zivkovic

Hunter project

Please vote NO on this insanity. Cramming many, many homes in a flood zone behind Vineyard Valley is unsafe, will cause traffic problems, water issues, not to mention extreme noise pollution.

Ms. Tzafopoulos and the members of city council,

As neighbors of the proposed development, my family has significant concerns about the impact of increased traffic in our neighborhood. Clearly, the open space for safe recreation is a treasured asset to our community, and we enjoy it every single day. But putting that to one side, I have not seen a satisfactory response from the city as to how the increased traffic from this proposed development will NOT be putting us and our neighbors at risk in an evacuation. Where and how will additional roads be constructed? How will they be paid for? When will they be constructed? These are critical questions and the citizens deserve answers.

In addition to the evacuation impact, I'd also point that my children's bus stop is located at the intersection of Hunt and Starr and serves several families in the Hunts Grove apartment complex. I have to physically stand in the intersection when the bus is stopped to keep cars from blowing past it and endangering our children. Every day I see countless vehicles completely fail to stop at the intersection. This is a dangerous intersection for pedestrians already. What will happen when a hundred+ additional vehicles are introduced?

We are newer members to this community and we chose St. Helena because of the quality of life and the wonderful environment in which we hope our children will thrive. We deserve transparency and thoughtful planning from our city, especially when this quality of life hangs in the balance. I hope the council takes this into consideration and comes to a decision that will ensure the continued safety and well-being of the community.

---

Comment for City Council,

Due to the facts of construction in a FLOOD PLAIN and the unpredictable weather forecasts regarding Climate Change, the very real threat of fires and floods, exposing residents in The Hunter Project and surrounding areas to disastrous circumstances in evacuation efforts, and the possibility of great loss, it is very poor judgement to consider building homes in this Hunter Project area. It is unfair to the area's current and future residents who would live with an extreme lack of comfort and security. Levies have failed elsewhere in the past, and there is no guarantee that the levy to protect this housing project could not fail. This is not the risky venture that the people of St. Helena wish to present to our future neighbors. Please vote NO to theHunter Project.

Respectfully Submitted,
Ester Akersloot

Estimados Miembros del Consejo Municipal,

Estamos escribiendo para solicitar información sobre el Proyecto Hunter.

Hemos escuchado que se va a construir algo en St. Helena, pero no sabemos los detalles.

Le pedimos que nos dé tiempo para traducir todo la información de documentos que explican cómo nos afectará, ya que vivimos en Hunts Grove Apartamentos.

Hay rumores  de que hay más tráfico que pondría nuestro niños en riesgo. Actualmente, la gene no siempre se detainee en la señal de stop en la esquina de Hunt y Starr. Han habido muchas veces algunos de nuestros hijos casi han sido atropellados por un automóvil. Más trafico haria este problema peor.

Si es cierto, habrå más tráfico en nuestra área, necesitamos saber exactamente lo que se propone.

Le pedimos que nos dé más tiempo para traducir documentos antes de la reunión del 1 de mayo de 2023 para el ayuntantamiento. Estamos preguntando para una extensión.

Respectuosamente,

Residentes preocupados de Santa Helena

**Re: Hunter Subdivision Project**

Dear Mayor Dohring, Vice Mayor Hall, and Councilmembers:

Holland & Knight LLP represents Dennis Hunter, Kelly and Ben Vanzutphen, and White Fang Properties, LLC (collectively, the "Applicant Team") with respect to land use and housing law issues related to the Hunter Subdivision project located north of Hunt Avenue (APN 009-030-057) (the "Project") in St. Helena (the "City"). Our West Coast Land Use & Environmental Law practice group focuses specifically on enforcing recently reformed provisions of state housing law, in particular Housing Element Law and the Housing Accountability Act. We appreciate your careful review and attention to this Project, and through you wish to express our appreciation for the hard work of the City's staff and its appointed Planning Commissioners that led to the unanimous recommendation of staff and all Planning Commissioners in support of issuing the necessary approvals for the Project.

We support of the recommendation of the City's staff and Planning Commission for reasons that are set forth in the staff report and in our prior correspondence. Approval of the Project is both good public policy in light of the state's severe housing crisis, and required by applicable state housing law. We further write in response to two letters submitted to the City on Sunday, April 30, 2023 (yesterday) by a lawyer representing housing opponents Saint Helena Citizens for a Sustainable Future ("CSF"). These letters raise numerous novel issues regarding the Project, long after the comment period on the *second* Draft EIR has closed, on the literal eve of the Project's twelve-year journey to a planned City Council vote. As such, a full response to every point is impossible. Presumably, that was the intended result of such a late submission – a tactic

that the California Supreme Court has condemned. See Citizens of Goleta Valley v. Board of Supervisors (1990) 52 Cal.3d 553, 568 ("We cannot, of course, overemphasize our disapproval of the tactic of withholding objections, which could have been raised earlier in the environmental review process, solely for the purpose of obstruction and delay."). CSF's tactics of withholding these comments until the eve of the vote strongly supports the inference that these multiple objections were lodged not out of a good-faith effort to ensure a thorough public review but rather with the aim of delaying the approval of the Project or its ability to be constructed. Nevertheless, this letter responds to certain points raised by CSF.

1. **The City's approval of the Project, under terms that will allow it feasibly to be developed, is crucial to the City's Compliance with Housing Element Law.**

As an initial matter, we note that the Department of Housing and Community Development ("HCD") recently rejected the City's draft housing element for the second time. As you know, the City's failure to provide meaningful assurances with respect to the Project was central to this rejection:

> The element is crediting 87 units from the Hunter Subdivision Project towards the RHNA. HCD's prior review found that the City must analyze the likelihood that this project will be built and units will be available during the planning period. Additionally, the prior review found that HCD has received public comments regarding the City's ability to process and approve this project in a timely manner. Further, this analysis is particularly important given that the project has been pending since the 4th cycle planning period and the project will help the City provide housing and build a portion of their RHNA. The element was revised to state that the project will receive "planning approvals in the near future" and the next planning commission hearing is in February. This does not address HCD's prior review. **The element should clearly indicate timelines and remaining steps to fully entitle this project and demonstrate the likelihood these units will become available during the planning period.** Lastly, the revised element is now crediting these units towards the City's above moderate-income RHNA. However, HCD received public comments from the applicant indicating that 20 percent of the project will be affordable via deed restrictions in line with the City's inclusionary requirements. The element could be revised to credit a portion of these units towards the City's lower-income RHNA. Based on the outcomes of a complete analysis, the element should include a program to monitor the progress of the project and take alternative action if the project is not entitled and permit are not issued in a timely manner.[1]

[1] HCD, "City of St. Helena's 6th Cycle Revised Draft Housing Element" (April 7, 2023), Appendix at 2 (https://sthelenahousing.com/images/docs/napStHelenaDraftOut040723.pdf).

The Applicant Team is eager to do its part to bring much-needed (and state-mandated) housing to the City. Indeed, the Project's 87 units represent roughly one-third of the City's 6th Cycle Regional Housing Needs Allocation ("RHNA") of 256 units.[2] Given the City's past track record of development (i.e., only 110 units were permitted during the entire 5th Cycle),[3] it is no exaggeration to say that the City cannot comply with Housing Element Law without approving the Project.

Strikingly, CSF's letters wholly disregard the City's obligations under Housing Element Law and make no mention of the critical need to provide housing opportunities for the City's residents and the broader needs of the region - other than to dismiss those concerns out of hand. CSF also disregards the exhaustive, decade-plus review to which the City has subjected the Project. And, as explained herein, those letters disregard the City's broader obligations under state housing law, which has been significantly strengthened in recent years, and which controls over the City's municipal code. Put simply, CSF ask this Council to violate state housing law.

**2. The City's Procedures Are Proper.**

CSF alleges that today's City Council hearing is unlawful based on a hyper-technical reading of Section 16.16.070 of the Municipal Code, which CSF reads to require the preparation of a Planning Commission report separate from the Planning Commission resolution that was filed with the Council through the Staff Report. Certainly, the notion that the City's process – more than a decade of environmental review – has "deprived the public of the opportunity to review and comment on" the Project is unserious. In any event, the City is well within its rights to determine that the materials adopted by the Planning Commission at its February 7, 2023 hearing, and sent to the Council as demonstrated in the staff report, meet the requirements of Section 16.16.070. See Berman v. Regents of Univ. of California (2014) 229 Cal. App. 4th 1265, 1272 (agency interpretation of its own policies and procedures is entitled to great deference). We also note that the City is precluded by state housing law from subjecting the Project to more than five hearings once the application is deemed complete, and that this prohibition explicitly extends to continued hearings. Gov. Code § 65905.5(a).

Next, CSF seizes on Section 16.04.120 of the Municipal Code, which concerns the timing of applications for tentative maps. In Attachment 29 to the May 1 Agenda, City Staff states as follows:

> As staff has noted, the application for this map was accepted as complete on March 25, 2011. To the extent that City were to require compliance with this section, it should have done so at the time the tentative map was deemed complete rather than using it as ground for denial after fully processing the application. This is especially true given the restrictions that the

[2] City of St. Helena 2023-2031 Housing Element Updated (February Draft), at 2-194 (https://sthelenahousing.com/images/docs/SHHEU_HE_RevHCDDraft_2023_01_31_TRACKED.pdf).
[3] City of St. Helena 2023-2031 Housing Element Updated (February Draft), at 2-35 (https://sthelenahousing.com/images/docs/SHHEU_HE_RevHCDDraft_2023_01_31_TRACKED.pdf).

State Legislature has placed on local agencies' discretion to deny housing development projects. Government Code Section 65589.5(j)(2) provides a limited time for determin[ing] whether a housing development project is compliant with existing objective land use requirements. Specifically, Section 65589.5(j)(2) reads as follows:

> (2) (A) If the local agency considers a proposed housing development project to be inconsistent, not in compliance, or not in conformity with an applicable plan, program, policy, ordinance, standard, requirement, or other similar provision as specified in this subdivision, it shall provide the applicant with written documentation identifying the provision or provisions, and an explanation of the reason or reasons it considers the housing development to be inconsistent, not in compliance, or not in conformity as follows:
>
> > (i) Within 30 days of the date that the application for the housing development project is determined to be complete, if the housing development project contains 150 or fewer housing units.
> >
> > …
>
> (B) If the local agency fails to provide the required documentation pursuant to subparagraph (A), the housing development project shall be deemed consistent, compliant, and in conformity with the applicable plan, program, policy, ordinance, standard, requirement, or other similar provision.

There is no record that staff notified the applicant that other discretionary applications must be submitted concurrently prior to or immediately after deeming the tentative map application complete. Based on the restrictions imposed by Government Code Section 65589.5(j)(2), staff does not believe that the City can deny the application based on a failure to comply with Section 16.04.120.

Staff's analysis is correct. Government Code 65589.5 (the "HAA"), subdivision (j)(2) precludes the City from denying the tentative map application on the basis of an inconsistency with the requirements of Section 16.04.120, because the Applicant was not notified of such inconsistency within the required timeframe.

CSF argues that HAA subdivision (j)(2) is inapplicable because the project's application was submitted prior to (j)(2)'s enactment, and, according to CSF, cannot be imposed retroactively. This argument ignores the Legislature's directive that the HAA "be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing." HAA subd. (a)(2)(L). Nor does Ruegg & Ellsworth v. City of Berkeley (2021) 63 Cal. App. 5th 277 support CSF's position on retroactivity. Ruegg stood for the unremarkable proposition that a law that was not in effect when the city denied an application could not be used to retroactively invalidate the applicant's right to be processed under the law then in effect,

especially when doing so would deprive a property owner of vested rights. Ruegg, 63 Cal. App. 5th at 307.

In any event, CSF's focus on retroactivity is academic. Subdivision (j)(2) was added to the HAA pursuant to 2017's SB 167, which went into effect on January 1, 2018. Regardless of whether those provisions have retroactive effect, there is no dispute that they apply prospectively. Nor is there any dispute that the City failed to notify the Applicant of any inconsistency following that enactment. The earliest notice that CSF references occurred in September 27, 2018 – far beyond the January 31, 2018 timeframe contemplated by subdivision (j)(2).

CSF also ignores that laws other than the HAA prohibit the City from now demanding the application start all over. The Permit Streamlining Act, Gov. Code subd. 65920 *et seq.*, which is *not* recently enacted, prohibits this as well. In the Permit Streamlining Act, the Legislature has, since 1977, recognized the "statewide need to ensure clear understanding of the specific requirements which must be met in connection with the approval of development projects, Stats.1977, c. 1200, p. 3993, § 1, p.3993 (enacting Gov. Code § 65921), and has since that time required cities to identify any deficiencies in the completeness of application within 30 days of submittal, and to refrain from later contesting the application's completeness after it has accepted it as complete. Stats.1977, c. 1200, p. 3995, (enacting Gov. Code §§ 65943-44). CSF does not argue that *these* provisions were not in effect at the time the application was submitted. Nor is there any evidence that the Section 16.04.120 issue was raised at that time, as it was required to be under the Permit Streamlining Act.

CSF's arguments also ignore the practical realities confronting a project that has been under review for more than a decade. Since the tentative map application was deemed complete in 2011, key City personnel has turned over numerous times, leading to inconsistent guidance and advice. During the same period, the Municipal Code has also been amended numerous times. Against this backdrop, City staff are certainly correct to determine that the HAA's provisions, which are to be "interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing," HAA subd. (a)(2)(L), preclude it from denying the Project.

**3. CSF's Allegations Regarding General Plan Consistency Are Contrary to Law.**

CSF includes a laundry list of alleged inconsistencies with the City's General Plan and demands the Council agree with its interpretation of these provisions and deny the Project on that basis. This argument invites the City to violate the HAA.

Even for projects not protected under the HAA, a project does not need to conform to the letter of every single General Plan policy. See San Franciscans Upholding the Downtown Plan v. City & County of San Francisco (2002) 102 Cal.App.4th 656, 678 ("state law does not require precise conformity of a proposed project with the land use designation for a site, or an exact match between the project and the applicable general plan. … The courts have interpreted this provision as requiring that a project be in agreement or harmony with the terms of the applicable plan, not

in rigid conformity with every detail thereof.") (internal citations omitted). As such, even were it not for the HAA, the City would have discretion to approve the project even if had some arguable tension with one or several planning policies. But for a Project that *is* protected by the HAA, the question is not a close one.

"[T]he HAA has changed the legal landscape for considering . . . challenges to [a city's land use consistency] findings." Save Livermore Downtown v. City of Livermore (2022) 87 Cal.App.5th 1116, 1130. "The HAA deems a housing project consistent with a plan's policy, standard, or requirement 'if there is substantial evidence that would allow a reasonable person to conclude' it is consistent. Id., quoting Gov. Code, § 65589.5, subd. (f)(4).) "Objective," in turn, is defined as "involving no personal or subjective judgment by a public official and being uniformly verifiable by reference to an external and uniform benchmark or criterion available and knowable by both the development applicant or proponent and the public official." Gov. Code. 65589.5, subd. (h)(8). Finally, subdivision (f)(4) of the HAA specifies that "a housing development project or emergency shelter shall be deemed consistent, compliant, and in conformity with an applicable plan, program, policy, ordinance, standard, requirement, or other similar provision if there is substantial evidence that would allow a reasonable person to conclude that the housing development project or emergency shelter is consistent, compliant, or in conformity."

CSF's General Plan discussion fails on two fronts. First, virtually all of these provisions are facially subjective, in that they involves "personal or subjective judgment." *See* Policy 2.6.5 (to "encourage" agricultural uses), Policy 2.6.14 (to "encourage" a "mix of housing types and price ranges"), Policy 2.6.17 (to "minimize" situations where new development blocks views of vineyards), Policy 2.6.20 (to "encourage" "a more comprehensive and creative approach" to development), Policy 4.3.5 (to "protect against unnecessary incursion into vineyard agricultural areas"), Policy 4.4.1 (to avoid a "suburban pattern"), Policy 4.5.1 (to preserve "the sense of a strong connection to the surrounding … hillsides"), Policy 4.7.3 (to "maximize" vineyard views). Remarkably, CSF does not disclose that one of the primary bases on which it urges the Council to disapprove the Project – that the site is "not physically suitable" for the project site – was found to be an unlawful reason to disapprove a housing development more than a decade ago. Honchariw v. County of Stanislaus (2011) 200 Cal.App.4th 1066, 1079.

These General Plan policies are not "objective," to put it mildly. And as such, they cannot serve as the basis for a Project disapproval under the HAA. The City would be subject to the many negative consequences provided under the HAA if it were to disapprove the Project as CSF demands.

Second, CSF wholly fails to consider the proper evidentiary framework – whether "there is substantial evidence that would allow a reasonable person to conclude that the housing development project … is consistent, compliant, or in conformity" with the policies it references. Gov. Code 65589.5, subd. (f)(4). At most, CSF simply asserts that it does not believe the Project satisfies these policies. That is irrelevant. What matters – and what CSF fails to address – is

whether substantial evidence exists that would allow a reasonable person to reach a contrary conclusion. These provisions simply provide no lawful basis for the Council to disapprove this Project, as the City Attorney has advised the Council.

**4. The CEQA Letter Disregards the City's Obligations under State Housing Law, and Housing Element Law Specifically.**

CSF proceeds as though the City's conduct with respect to CEQA (which has entered its thirteenth year) was not constrained by the HAA or by the City's obligations to build 256 new units in the 6th RHNA Cycle. In fact, CSF goes so far as to state that the Planning Commission's recommendation of approval, allegedly made "on the notion [that] the state is forcing it to approval housing, … violates CEQA." To the contrary, as the Court of Appeal for the First District recently observed:

> "CEQA recognizes that an agency's discretion is limited by its own legal obligations. Accordingly, where a legal obligation limits an agency's discretion, the scope of environmental review likewise is limited. (See, e.g., Sequoyah Hills Homeowners Association v. City of Oakland (1993) 23 Cal.App.4th 704, 714–716, 29 Cal.Rptr.2d 182.) This is also consistent with CEQA's requirement that an agency exercise its discretionary powers in a manner 'consistent with express or implied limitations provided by other laws.' (Guidelines, § 15040, subd. (e) ....) Where a lead agency's discretion already is limited by legal obligations, therefore, the scope of environmental review adjusts in relation to the amount of discretion...."

Tiburon Open Space Committee v. County of Marin (2022) 78 Cal.App.5th 700, 732. See also id. at 782-83 ("It must be tough enough when the opposition is purely private. However, when private opposition is joined with official hostility, CEQA becomes an even more fearsome weapon. … Something is very wrong with this picture."). While CSF makes no mention of these obligations, we remind the City that its discretion with respect to CEQA "is limited by its own legal obligations." Id.

**5. CSF's Arguments Are Premised on a Local Standard that is Inconsistent with State Housing Law.**

CSF references Municipal Code Section 16.16.080(B), alleging that the City is required to make the following findings and thereby disapprove the Project:

> B. In recommending disapproval or in disapproving, or in recommending approval or in approving at a lower density a housing development which is in compliance with the applicable plans, zoning and development policies in effect at the time the project's application was determined to be complete, the planning commission and city council shall make written findings based upon substantial evidence in the record that both of the following conditions exist:

1. The housing development project would have a specific, adverse impact upon the public health or safety unless the project is disapproved or approved upon the condition that the project be developed at a lower density.

2. There is no feasible method to satisfactorily mitigate or avoid the adverse impact identified other than disapproval of the housing development project or approval upon condition that the project be developed at a lower density.

Specifically, CSF alleges that "there is substantial evidence in the record that the Project presents adverse impacts to public health and safety which have not or cannot be mitigated."

This standard is inconsistent with state housing law. First, the HAA (which of course governs and controls local governments' approval of housing projects) provides that "it is the intent of the Legislature that the conditions that would have a specific, adverse impact upon the public health and safety, as described in paragraph (2) of subdivision (d) and paragraph (1) of subdivision (j), arise infrequently." Gov. Code 65589.5, subd. (a)(3). The impact must be a "quantifiable" impact on "based on objective, identified written public health or safety standards, policies, or conditions as they existed on the date the application was deemed complete." Gov. Code § 65589.5(j)(1)(A). Neither the garden variety traffic concerns nor the other concerns alleged by CSF come close to this standard. Second, both the Municipal Code and CSF apply the "substantial evidence" standard for a finding of a "specific, adverse impact" on public health or safety. The HAA, by contrast, applies the higher "preponderance of the evidence" standard. Gov. Code 65589.5, subd. (j)(1). CSF does not argue that such findings can be made under this high threshold, and they cannot be.

**6. CSF's Criticisms of the EIR and the Statement of Overriding Considerations Are Erroneous.**

The EIR concluded that the Project would have significant and unavoidable environmental impacts with respect to Vehicle Miles Traveled ("VMT"). As we have explained repeatedly, the Applicant Team disputes these findings[4] and the Council could and should find the impact actually less than significant. But assuming arguendo that the EIR's conclusions are correct, the Staff Report's recommendation to adopt a Statement of Overriding Considerations is also correct. We note that CEQA provides for public agencies to adopt such a statement of overriding considerations where "specific overriding . . . legal . . . benefits" of approving a project outweigh its significant and unavoidable environmental effects. Here, in addition to the considerations listed in staff's recommendations, the City's need to comply with the HAA and with Housing Element Law should also be considered an additional and independent legal

[4] See Comment Letter 93 (Leslie R. Perry, "Comments to Draft EIR – Hunter Subdivision Project" (Nov. 1, 2021) (enclosing W-Trans, "Comments on the Environmental Impact Report (EIR) for Hunter Subdivision Project" (Nov. 1, 2021); DKS, "Review of City of St. Helena's Application of SB 743 Requirements Project #21082-000 of the Planned Residential Development" (Oct. 20, 2021)) (Planning Commission Report, pages 3006-3017); Pub. Res. Code §21082.2(a).

benefit of approving the Project. See Tiburon Open Space Committee v. County of Marin (2022) 78 Cal.App.5th 700, 733 ("A statement of overriding considerations—which is the finding described in subdivision (b) of section 21081—is to be used in situations where the public agency deems a project sufficiently important or desirable for reasons that override the normal obligation to mitigate significant environmental effects. One of those statutory reasons allows for considerations, conditions, or factors that are 'legal.'") (citing Pub. Res. Code §§ 21081, subds. (a)(3), (b), 21002.1, subd. (b); CEQA Guidelines § 15364).

CSF takes issue with the Statement of Overriding Considerations, primarily emphasizing the Statement's reference to the provision of affordable housing, because "there is no affordable housing agreement to consider[,]" and that "any purported benefit would be purely speculative and lack substantial evidence." CEQA Letter at 15. But there is no dispute that the City's inclusionary zoning ordinance applies to the Project, and neither is there any dispute that the Project will comply with this ordinance.

CSF criticizes this position as "akin to concluding that every project complies with the law because the law requires it to." CEQA Letter at 16. But that is not an improper conclusion. To the contrary, agencies may and often do assume compliance with regulatory requirements when making CEQA determinations. See, e.g., Oakland Heritage Alliance v. City of Oakland (2011) 195 Cal.App.4th 884, 906 ("a condition requiring compliance with regulations is a common and reasonable mitigation measure, and may be proper where it is reasonable to expect compliance.").

In any event, "an agency's decision that the specific benefits a project offers outweigh any environmental effects that cannot feasibly be mitigated … lies at the core of the lead agency's discretionary responsibility under CEQA and is, for that reason, not lightly to be overturned." City of Marina v. Board of Trustees of California State University (2006) 39 Cal.4th 341, 368. That CSF may have different policy priorities is hardly sufficient to invalidate the Statement of Overriding Considerations. That is particularly true here, where the City's obligations under state housing law and Housing Element Law in particular strongly compel a course of conduct that brings this twelve-plus-year saga to a close. See Tiburon, 78 Cal.App.5th at 732 ("Where a lead agency's discretion already is limited by legal obligations, therefore, the scope of environmental review adjusts in relation to the amount of discretion....").

CSF's other last minute objections to the EIR's analysis, when examined closely, do not stand up to scrutiny. For example, CSF hinges much on a discussion in the Draft EIR – corrected in the Final EIR – stating that a well on the site was "inoperable." As shown in the evidence before the City, and disclosed in the EIR, the well is fully capable of being rendered operable and was demonstrated through tests to be capable of producing significant water. The Draft EIR's reference to the well being "inoperable" presumably only referred to the fact that it was not currently set up for operation, not that it would never be able to do so. To the extent the Draft EIR was unclear about this, this was corrected in the Final EIR– yet CSF persists in manufacturing a water supply crisis from this rather than reading the words and the facts in

contest. On these and other factual questions, CEQA is clear that an agency's findings are entitled to deference even if project opponents see the facts differently.

**Conclusion**

We do not share CSF's dim view of the integrity of the City staff and Planning Commissioners who have recommended approval of the Hunter Project. These public officials have recommended approval of the Project because it is good public policy; it is also necessary to effectuate the City's full compliance with state housing law. By contrast, CSF invites this Council to violate the law. We hope and expect the Council will not do so.

Once again, we appreciate your careful review of the Project.

Very truly yours,

Daniel R. Golub

**Subject:** [External] To St. Helena City Council regarding the Hunter Project
**Date:** Monday, May 1, 2023 1:53:50 PM

---

Dear City Council Members,

This note is to submit my opinion on the proposed Hunter Project development.

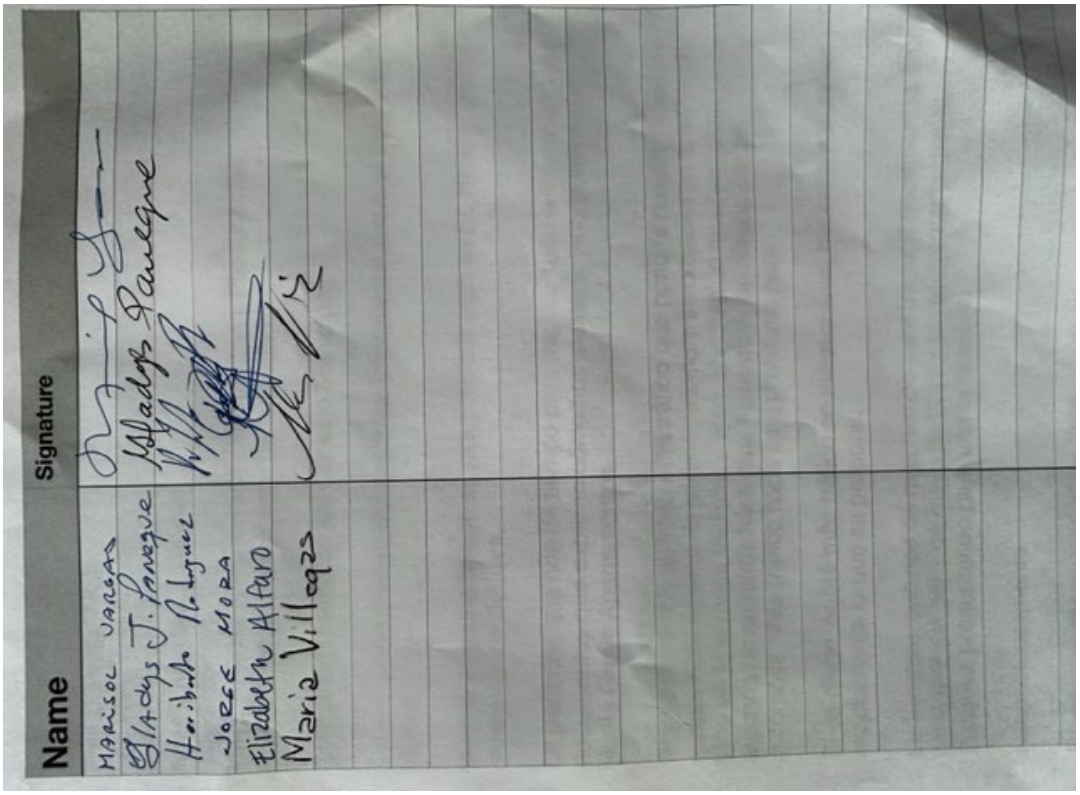
I support and encourage the development of affordable and market-rate housing in St. Helena, but I strongly object to building homes in the proposed Hunter Project location before the traffic and circulation problems are addressed.

Although the Project will "implement the General Plan Circulation Element by completing the planned extension of Starr Avenue and the partial planned extension of Adams Street…", it does not address the real negative impact of the additional traffic on surrounding streets, nor does it address the high safety risk and problems that would occur in the event of a real emergency.

In the current plan, all local residents would have to be funneled through Pope or Adams streets to reach Highway 29 or the Silverado Trail. The Pope Street bridge is already a frequent bottleneck for access to the Silverado Trail. The evacuation drills that were tested with Vineyard Valley residents for this EIR do not take into account the magnitude of the problems that would occur with all neighborhoods attempting to evacuate during a significant local emergency.

While the proximity to Main Street for local workers may reduce some traffic, the public schools are located on the east side of Main Street and most families will be driving their children to those schools.

Please consider taking action to upgrade our ability to accommodate more traffic before the Hunter Project plan is implemented.



In regard to the current site map, I also feel it will be critical to add green space and playground for the residents. I trust that these issues would be addressed during future site planning approvals.

Thank you,

Laurel Krsek

Maria Villegas

# HUNTER SUBDIVISION

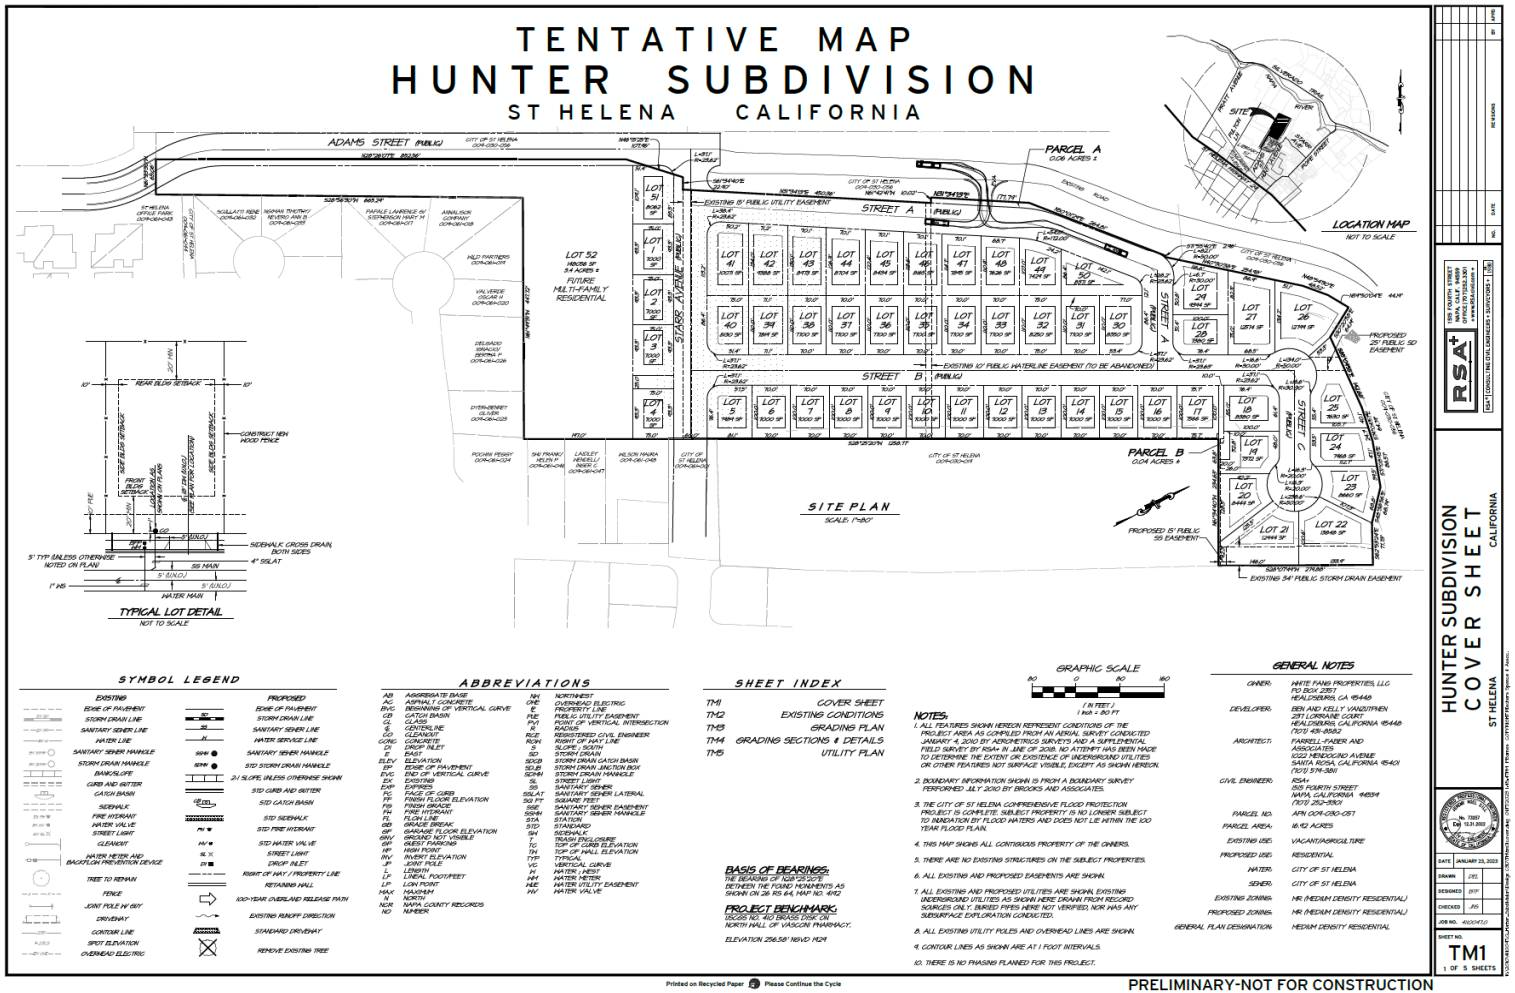
Request by Ben and Kelly Vanzutphen to subdivide a 16.9-acre parcel to establish 51 single-family residential lots and one parcel for future multi-family development

(Tentative Map #2022-001)

Community Development Department

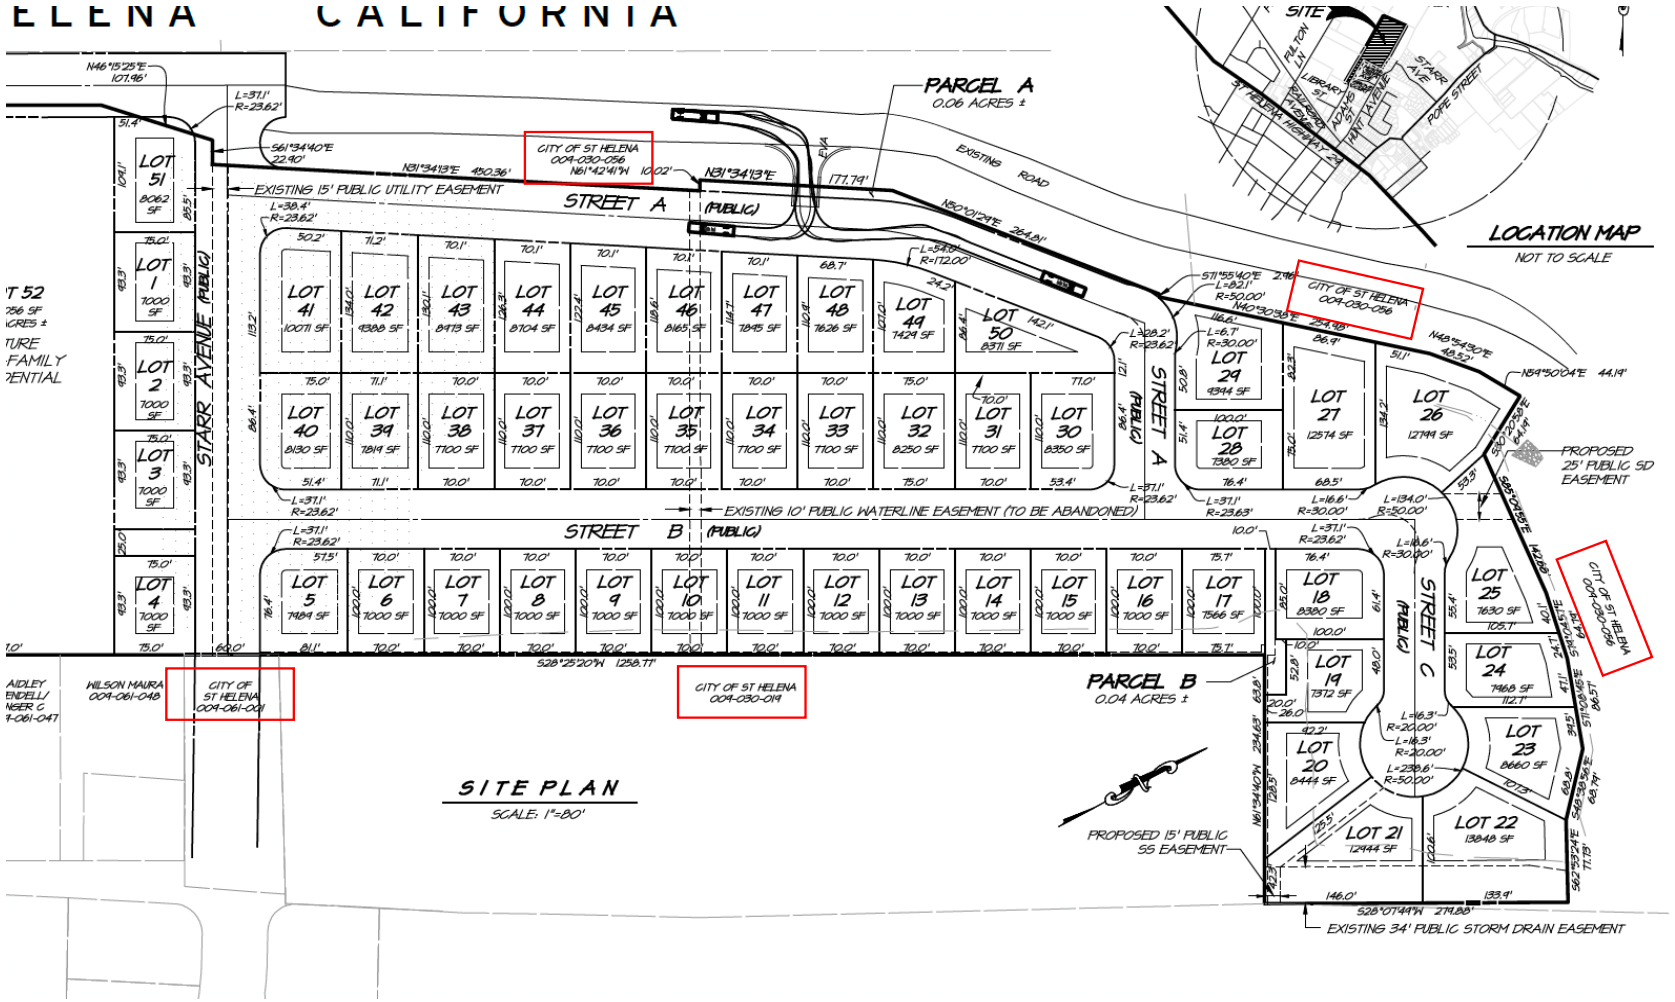
May 1, 2023

# Presentation Summary



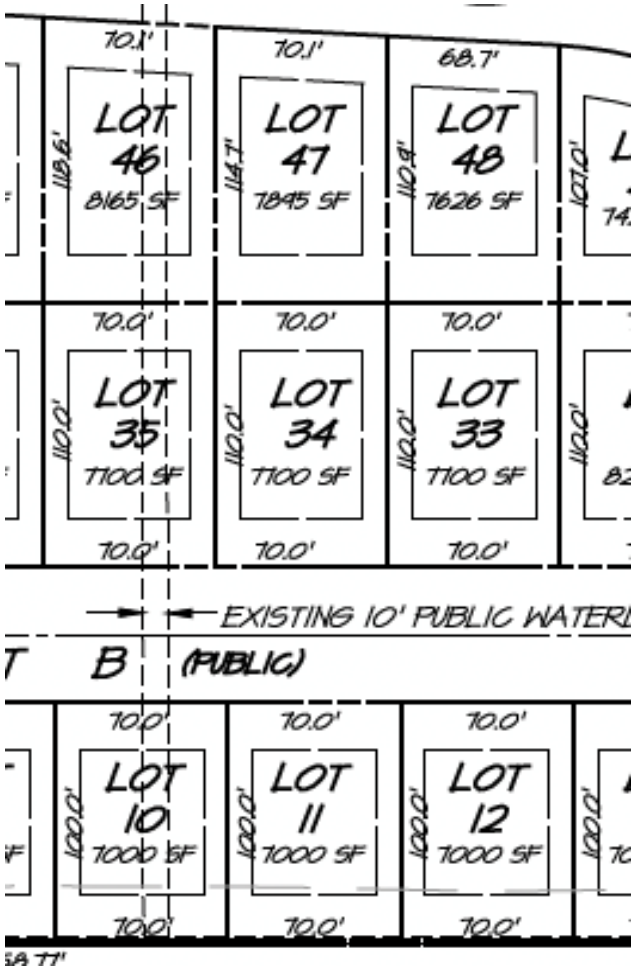
- Project Description
- Location and Setting
- Analysis of Map Approval Findings, Including General Plan and Zoning
- Environmental Impact Report
- Issues of Concern to the Community
- Updates since February Planning Commission
- Planning Commission Recommendation
- Next Steps

# Project Description

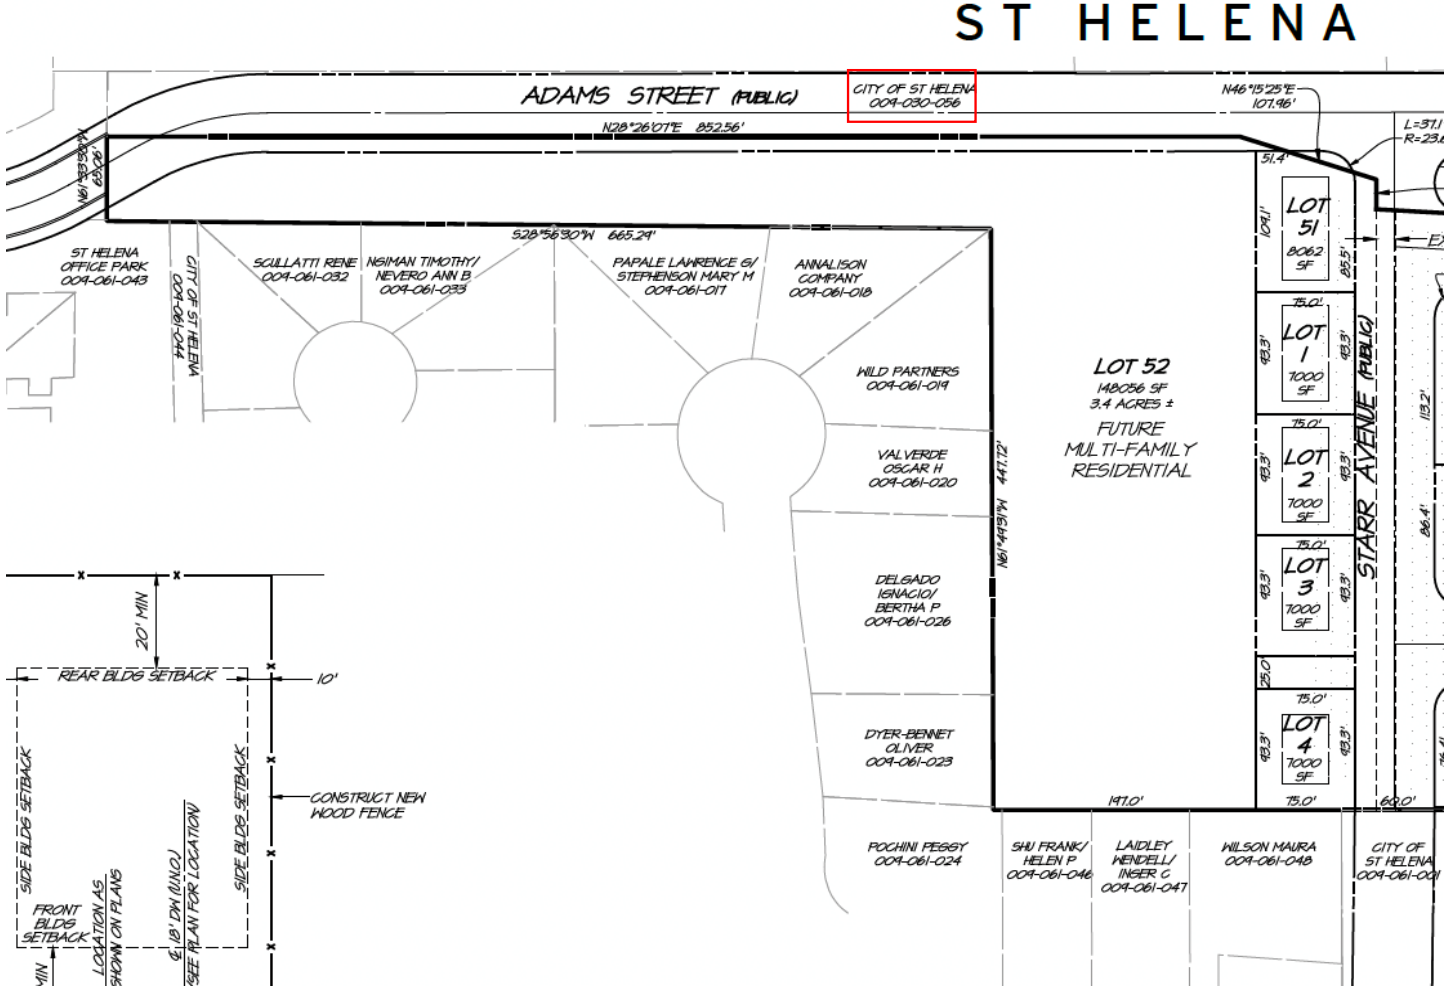


The proposed project being considered by the City Council is a **Tentative Subdivision Map** to subdivide a 16.9-acre parcel of land in the eastern area of the city, east of the existing terminus of Adams Street.

The proposed subdivision would create 51 lots for single family homes, and a separate parcel (lot 52) on which multi-family attached housing units would be built.



# Project Description



# Project Description

# Project Description

# Project Description

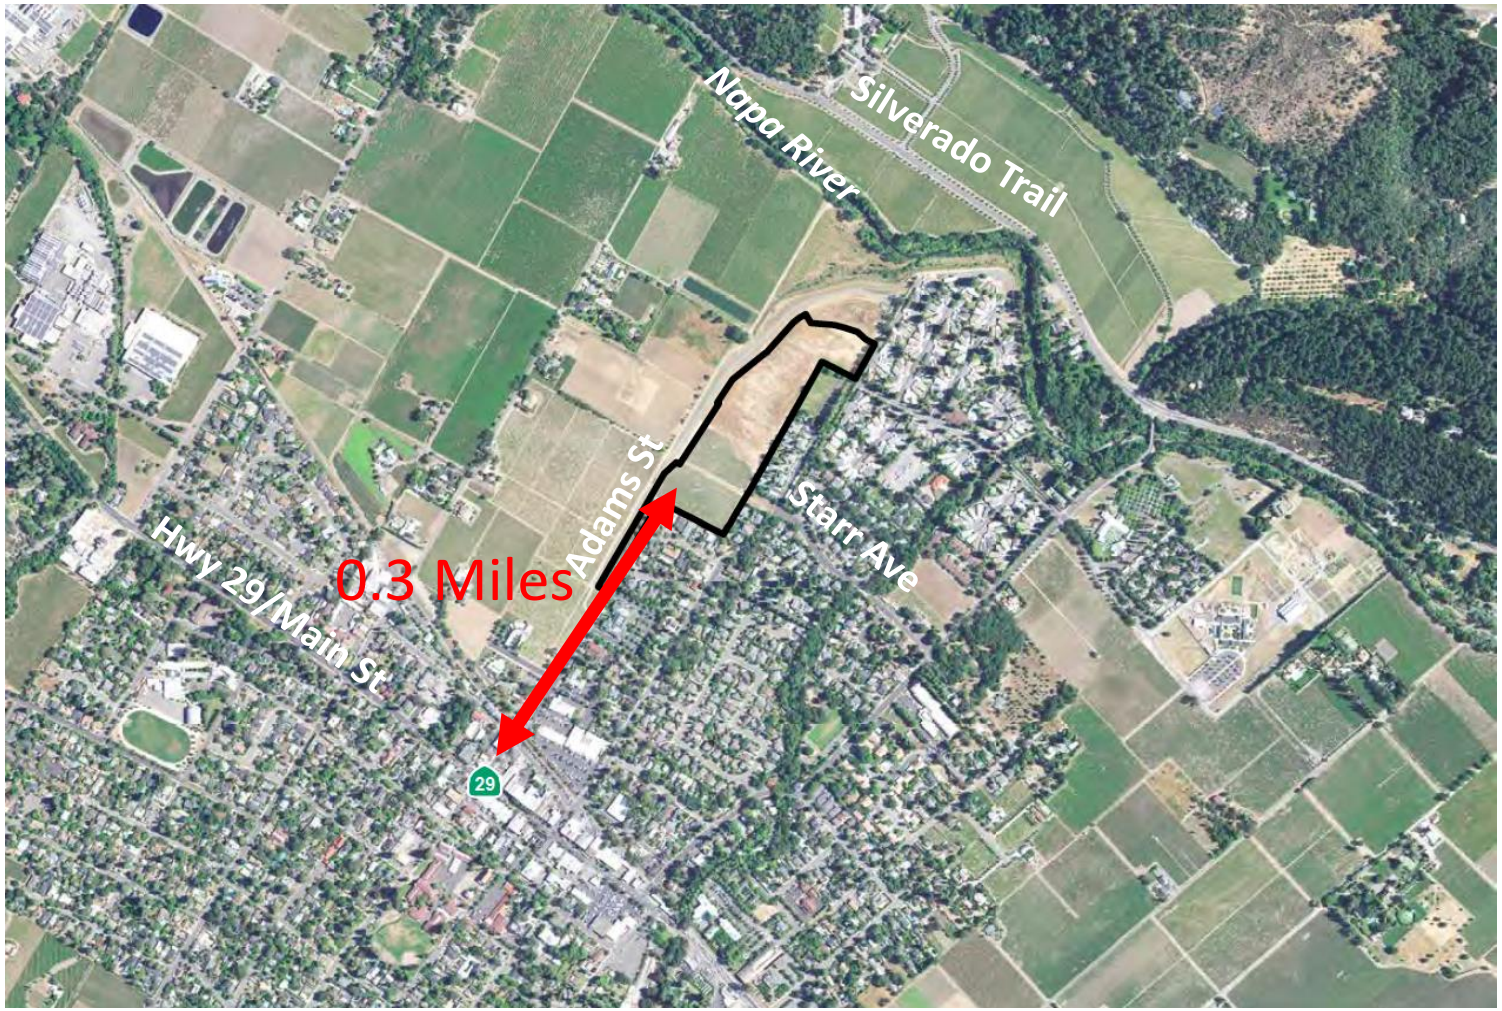
# Project Description

The Applicant proposes to construct a total of 87 single- and multi-family homes and accessory dwelling units:

- Single Family Homes: 51 units
- Attached Multi-Family: 25 units
- Accessory Dwelling Units: 11 units
- TOTAL: 87 units

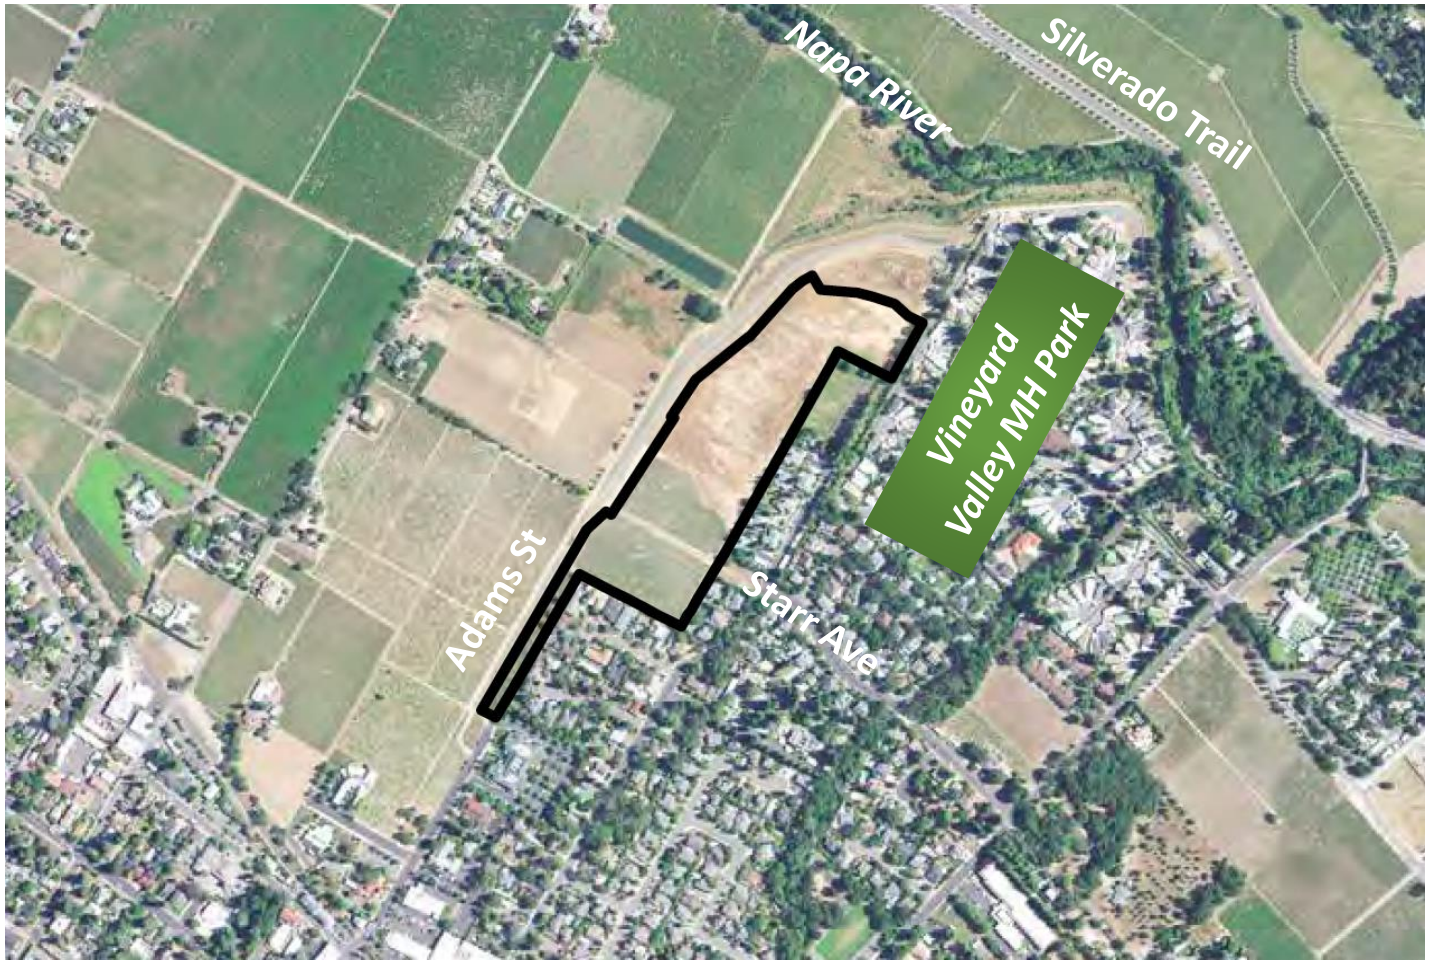
The overall residential density of the project, including all residential types, is 5.15 units per acre (87/16.9 = 5.15).

# Future Required Approvals



Several future applications would be needed to be approved in a public hearing process before the project can be developed (in addition to complying with conditions of approval):

- Affordable Housing Agreement (City Council)
- Approval of Final Map/Subdivision Improvement Agreement (City Council)
- Design Review (Planning Commission)
- Conditional Use Permit for Multi-Family Housing (Planning Commission)



The public will be notified of the above items and invited to the hearings.

The only application before the Commission at this time is the Tentative Subdivision Map and the Final EIR.

# Analysis: Tentative Subdivision Map Findings

Section 16.16.080(A) of the SHMC defines the findings which must be made to recommend approval of a tentative map. A map can be denied *only* if facts in the record support a conclusion that these findings *cannot* be made.

# Analysis: Tentative Subdivision Map Findings

A. In recommending approval or conditional approval or in approving or conditionally approving a tentative map, the planning commission and city council shall find:

1. That the proposed subdivision, together with the provisions for its design and improvement, is consistent with the general plan, any applicable specific plan, and other applicable provisions of this code; and

2. Except for condominium conversion projects where no new structures are added, that the design of the proposed subdivision provides, to the extent feasible, for future passive or natural heating or cooling opportunities in the subdivision, as described in the state Subdivision Map Act and any guidelines promulgated by the city council.

# Analysis: Govt Code Limits on Denials

Government Code Section 65589.5(j)(1): If a housing development project complies with applicable *objective* general plan, zoning, and subdivision standards and criteria in effect at the time the application was deemed complete, the City may only deny the project if it finds, based on written findings supported by a preponderance of the evidence in the record that **both** of the following conditions exist:

> “(A) The housing development project would have a specific, adverse impact upon the **public health or safety** unless the project is disapproved or approved upon the condition that the project be developed at a lower density. As used in this paragraph, a "specific, adverse impact" means a significant, quantifiable, direct, and unavoidable impact, based on objective, identified written public health or safety standards, policies, or conditions as they existed on the date the application was deemed complete.
>
> (B) There is no feasible method to satisfactorily mitigate or avoid the adverse impact identified pursuant to paragraph (1), other than the disapproval of the housing development project or the approval of the project upon the condition that it be developed at a lower density.”

# CEQA and Map Approval

Before the proposed Tentative Map can be approved, CEQA must be applied. The City Council will first need to:

- Certify Final EIR, finding that it is complete and adequate
- Because the project has one significant and unavoidable impact (Vehicle Miles Traveled or VMT), adopt a Statement of Overriding Considerations which states that benefits of the project override the unavoidable impact on VMT.

# Analysis: General Plan

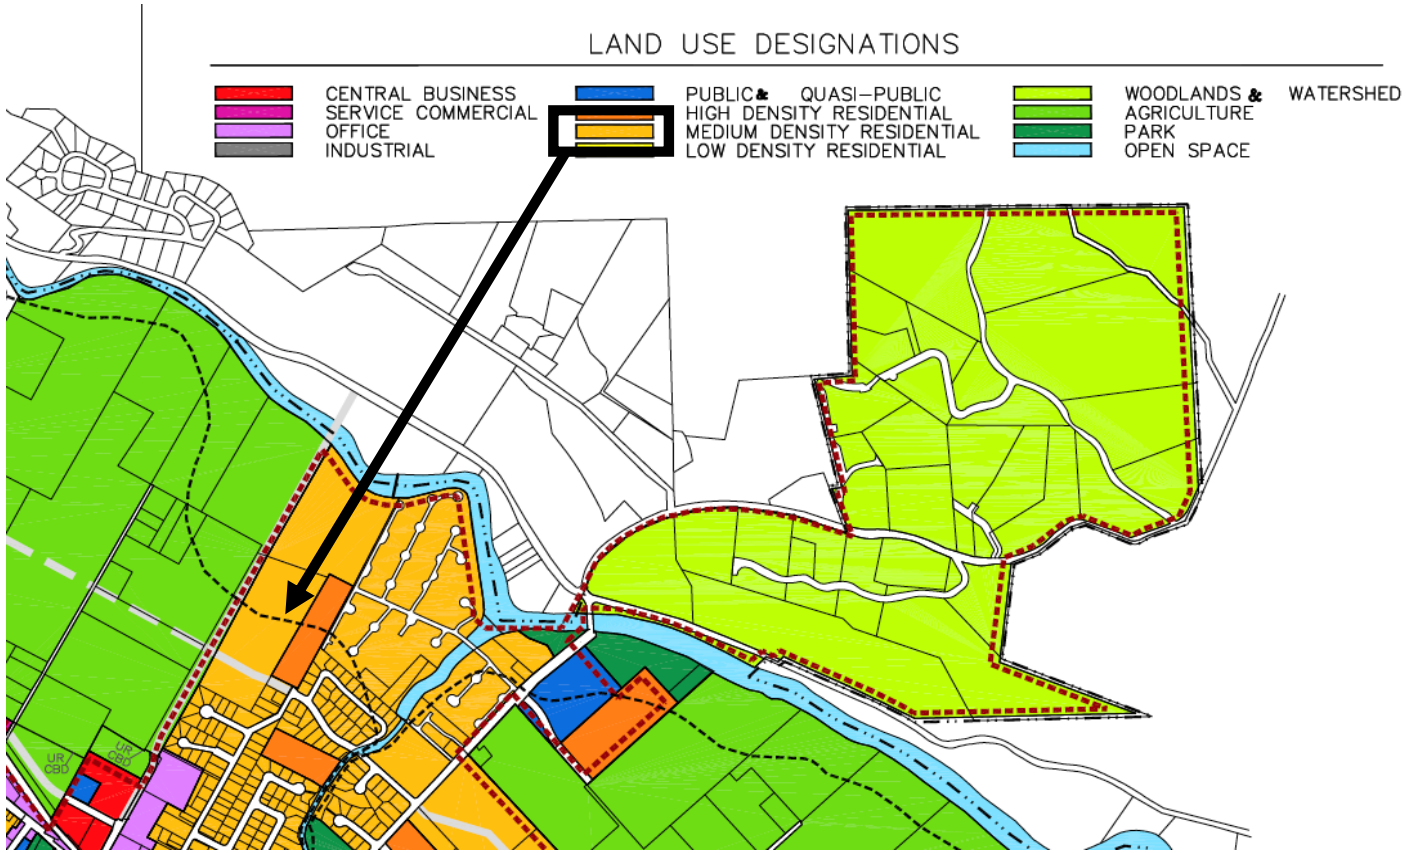
1993 vs 2019 General Plan

Because the project application was deemed complete in 2011, the General Plan and Zoning Code at the time (including the 1993 General Plan) are used for purposes of determining General Plan consistency.

Policies in the 2019 General Plan do not apply for the purpose of determining General Plan consistency.

# Analysis: General Plan

General Plan and Zoning have designated this site for residential development of the type now proposed since 1993.



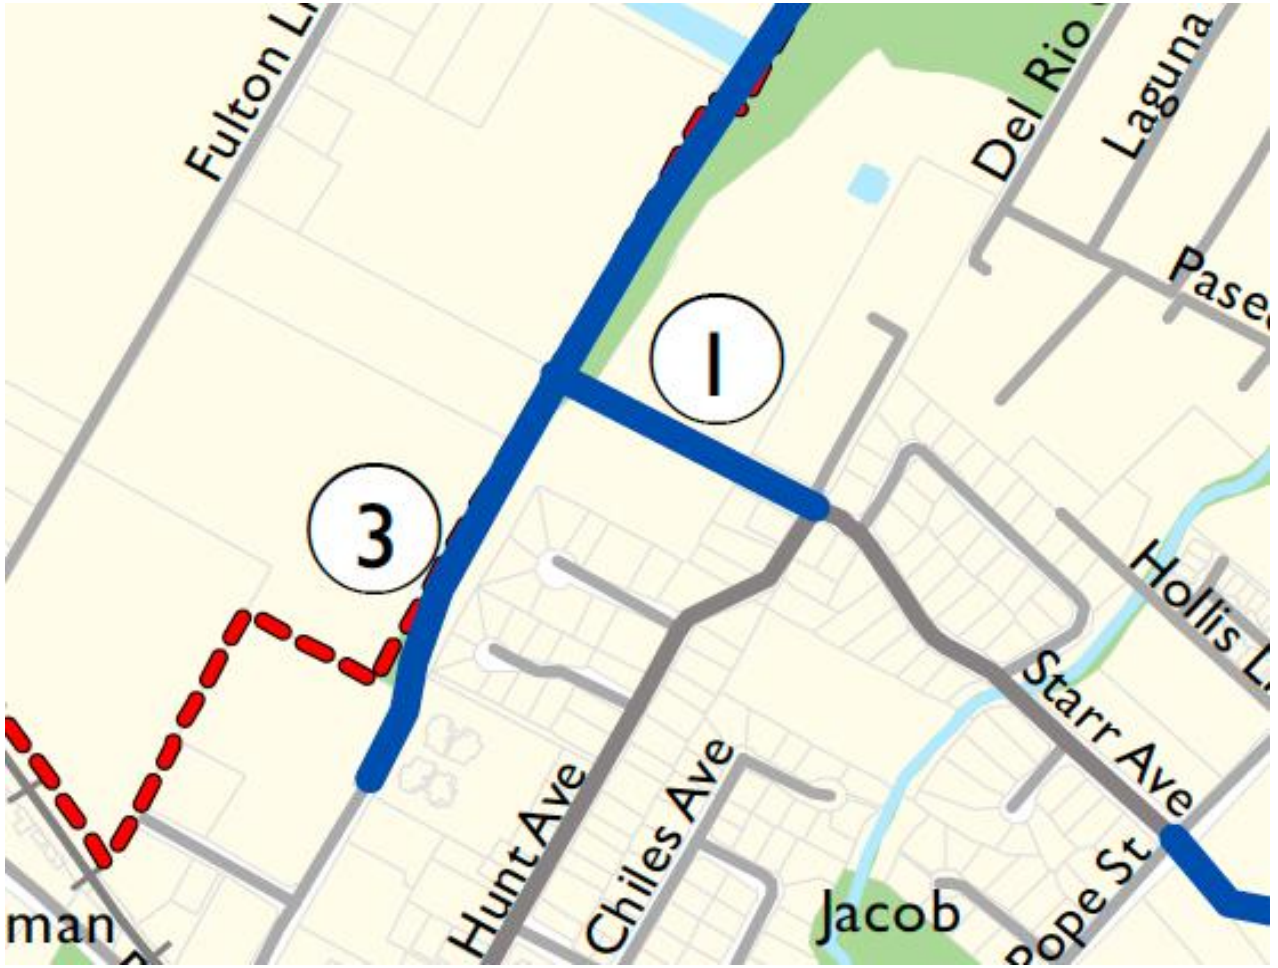
When the General Plan was updated in 2019, the land use designation remained the same, although the density range increased from 5.1 - 12 units/acre to 5.1 - 16 units per acre.

# Analysis: General Plan

## 1993 General Plan

The 1993 General Plan designates the site for Medium Density Residential (5.1 – 12 units per acre). *Project is Consistent with the Land Use Map.*

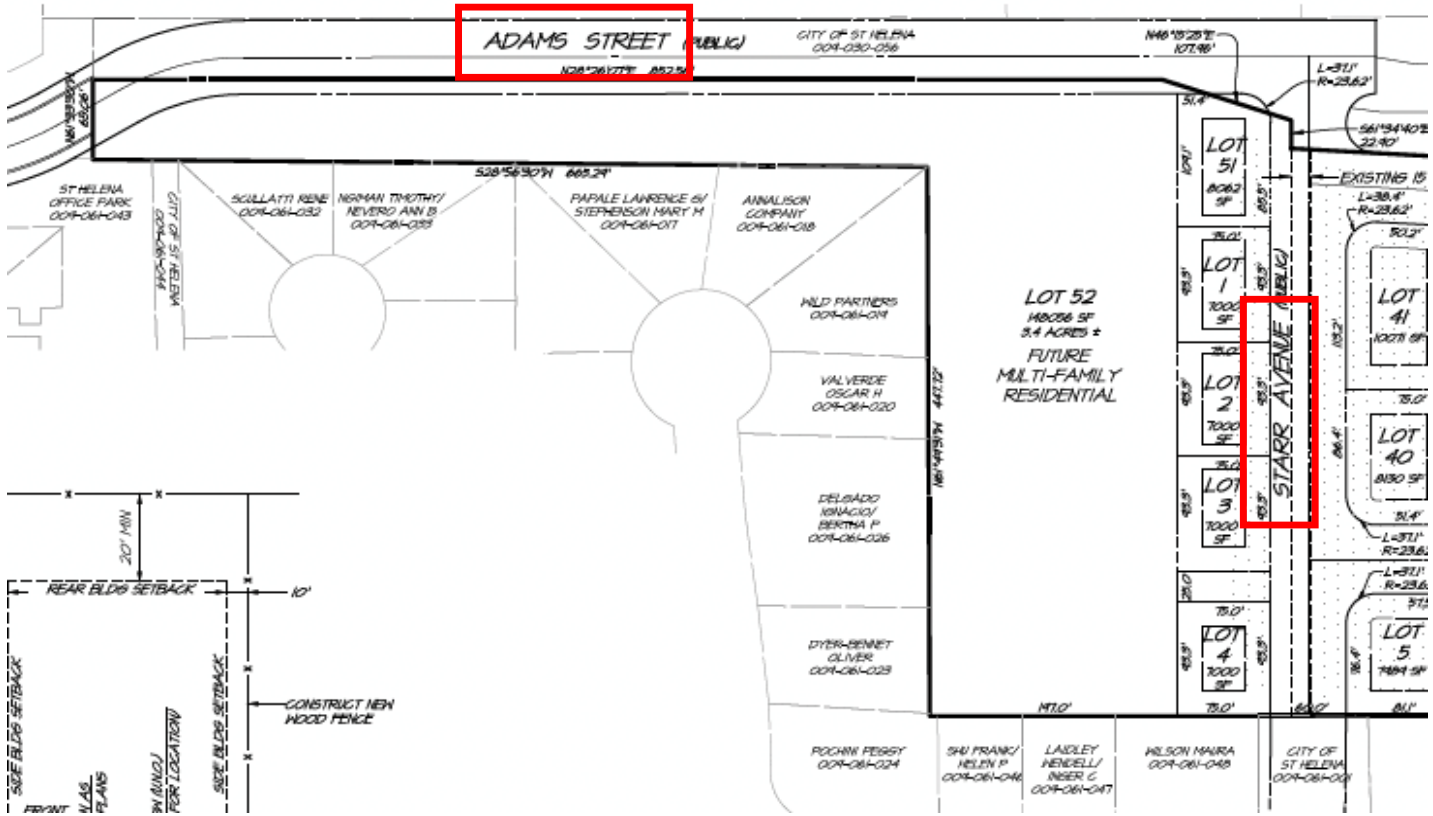
Separate review of objective policies concluded that the project is also consistent with the 2019 General Plan.



# Analysis: General Plan

Figure 5. 3 of 2019 General Plan Potential Future Roadway Extensions

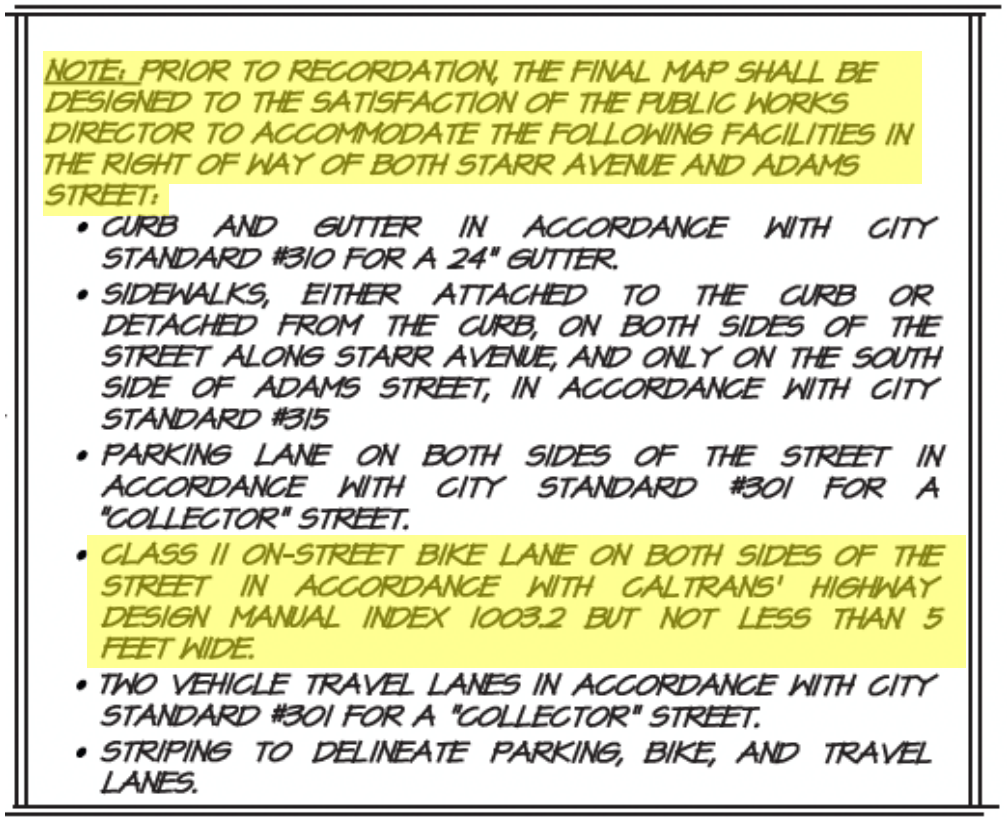
Figure 5.3 shows future extensions of Adams St (#3) and Starr Ave (#1).



*Project provides these connections within the project limits and is consistent.*

# Analysis: General Plan

## 2019 General Plan Potential Future Roadway Extensions



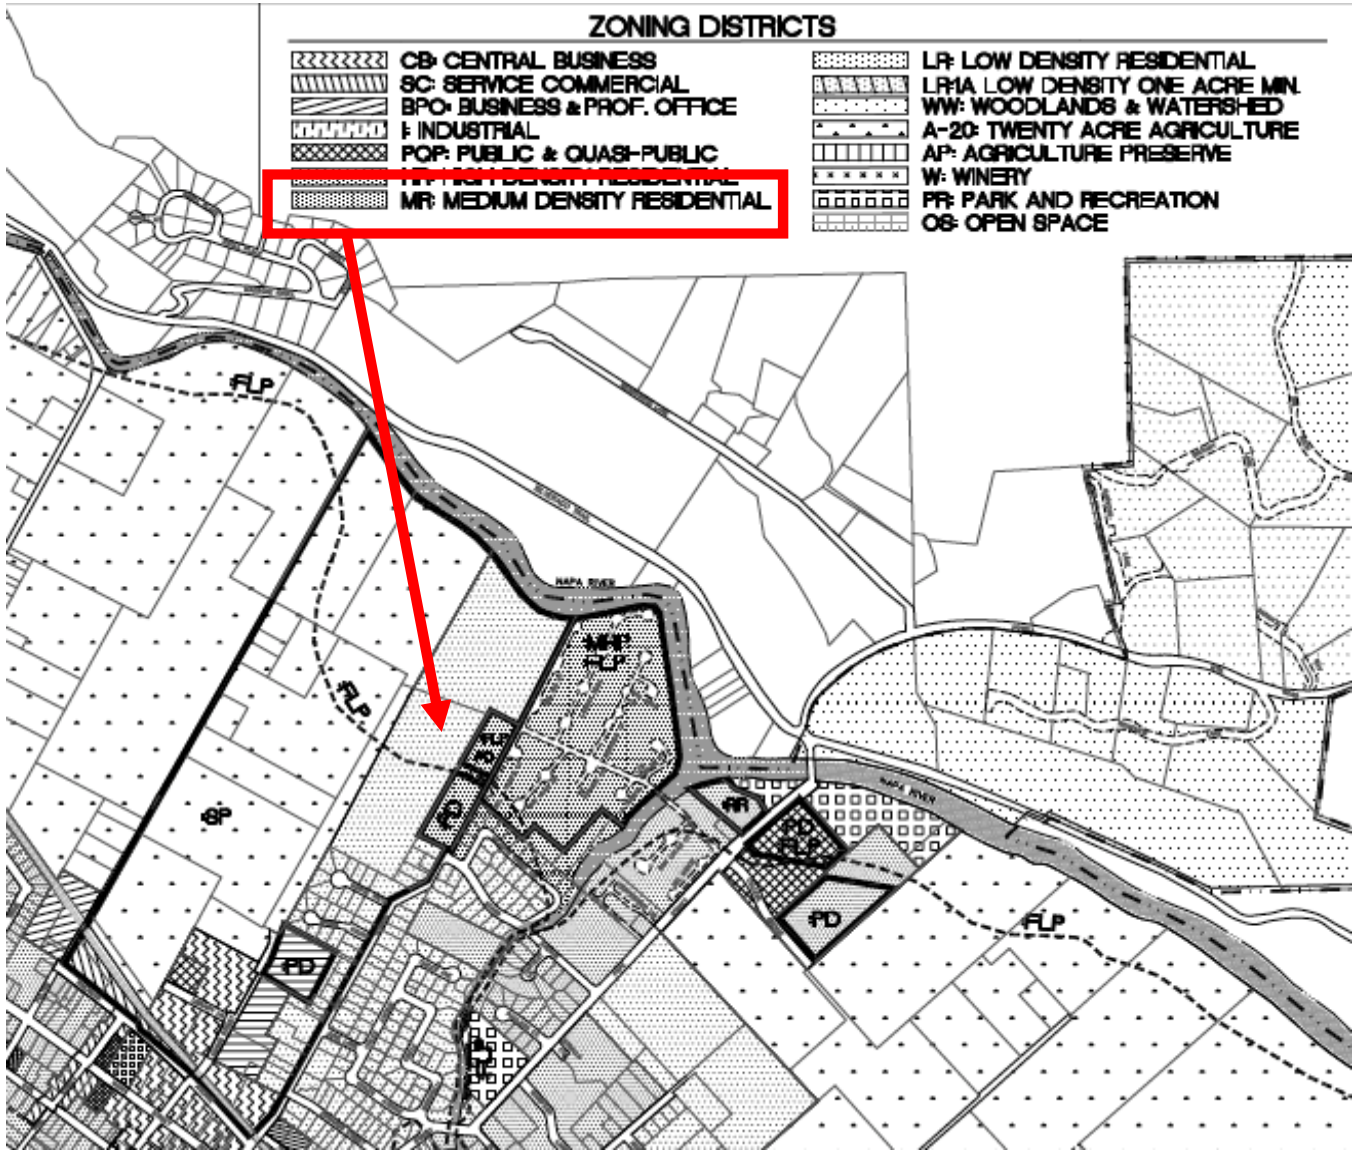
Extensions of Adams St and Starr Ave as shown on the proposed tentative map.

# Analysis: General Plan

## 2019 General Plan Bicycle Network

Tentative map provides for future on-street bicycle facilities in Adams St and Starr Ave

NOTE: PRIOR TO RECORDATION, THE FINAL MAP SHALL BE DESIGNED TO THE SATISFACTION OF THE PUBLIC WORKS DIRECTOR TO ACCOMMODATE THE FOLLOWING FACILITIES IN THE RIGHT OF WAY OF BOTH STARR AVENUE AND ADAMS STREET:



- CURB AND GUTTER IN ACCORDANCE WITH CITY STANDARD #310 FOR A 24" GUTTER.
- SIDEWALKS, EITHER ATTACHED TO THE CURB OR DETACHED FROM THE CURB, ON BOTH SIDES OF THE STREET ALONG STARR AVENUE, AND ONLY ON THE SOUTH SIDE OF ADAMS STREET, IN ACCORDANCE WITH CITY STANDARD #315
- PARKING LANE ON BOTH SIDES OF THE STREET IN ACCORDANCE WITH CITY STANDARD #301 FOR A "COLLECTOR" STREET.
- CLASS II ON-STREET BIKE LANE ON BOTH SIDES OF THE STREET IN ACCORDANCE WITH CALTRANS' HIGHWAY DESIGN MANUAL INDEX 1003.2 BUT NOT LESS THAN 5 FEET WIDE.
- TWO VEHICLE TRAVEL LANES IN ACCORDANCE WITH CITY STANDARD #301 FOR A "COLLECTOR" STREET.
- STRIPING TO DELINEATE PARKING, BIKE, AND TRAVEL LANES.

# Analysis

## Zoning Map

The project site was zoned “MR” (Medium Density Residential) on the 2010 Zoning Map.

*Project is Consistent with the Zoning Map.*

# Analysis: Zoning

## Zoning Code

Development standards for lots in the MR zoning district:

- Minimum lot area: 7,000 square feet
- Minimum lot width and frontage: 70 feet
- Minimum density: 5.1 units per acre

Based on these standards:

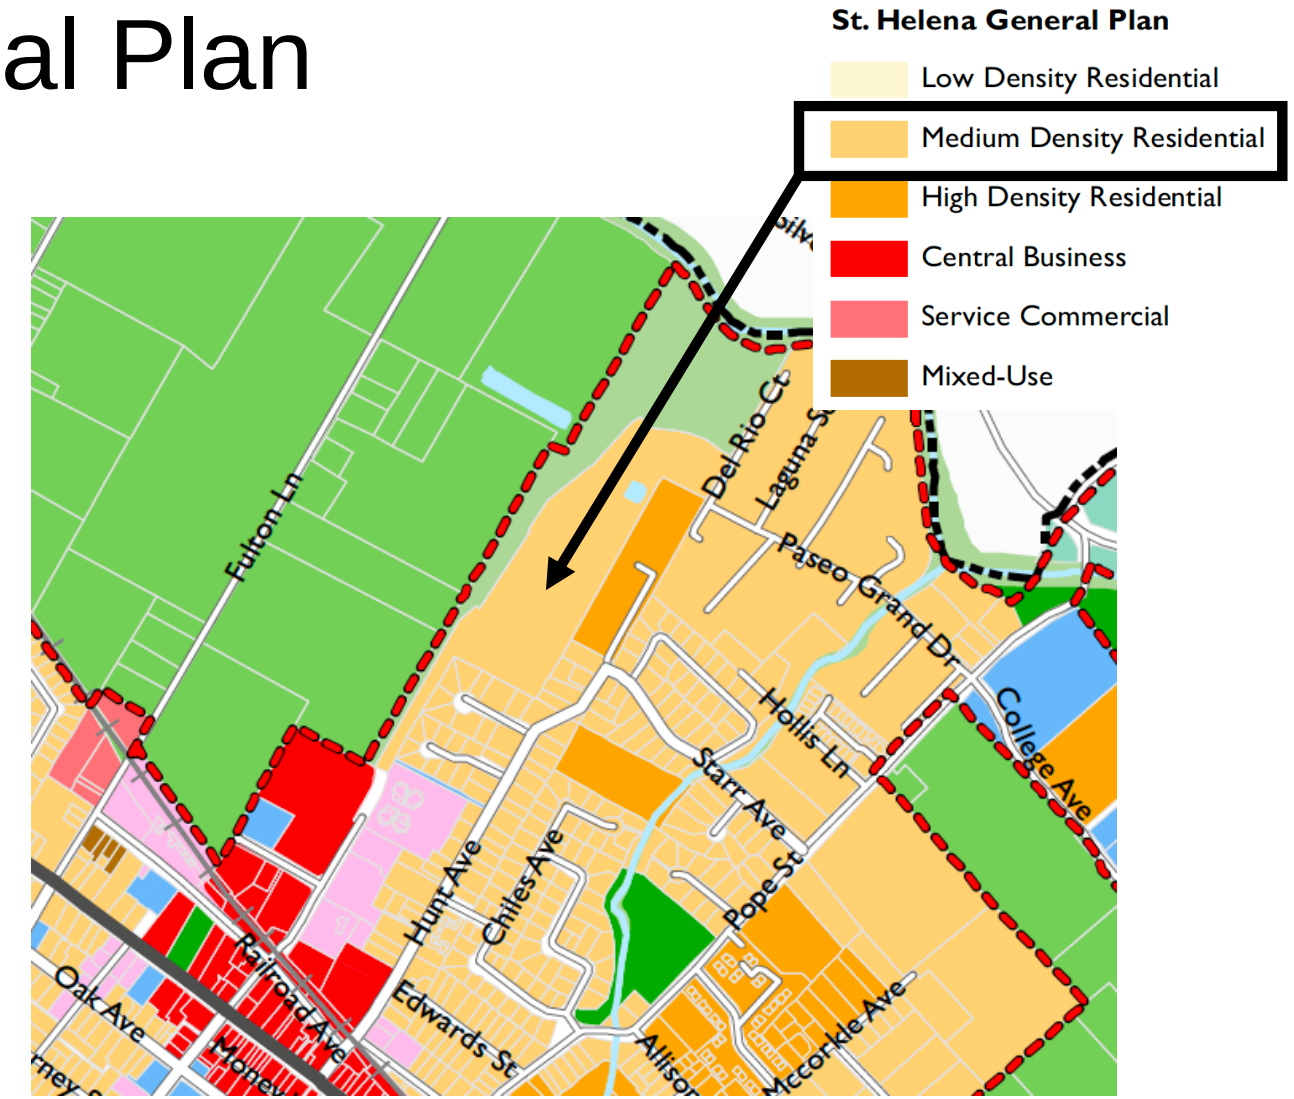
- All proposed residential lots1 are at least 7,000 square feet in size
- All proposed residential lots are at least 70 feet in width
- The overall density of the project, including the proposed 25 multi-family homes on Parcel 52 and the proposed 11 accessory dwelling units, is 5.15 units per acre, which meets the minimum required density.

*Project is Consistent*

# Analysis: Heating and Cooling

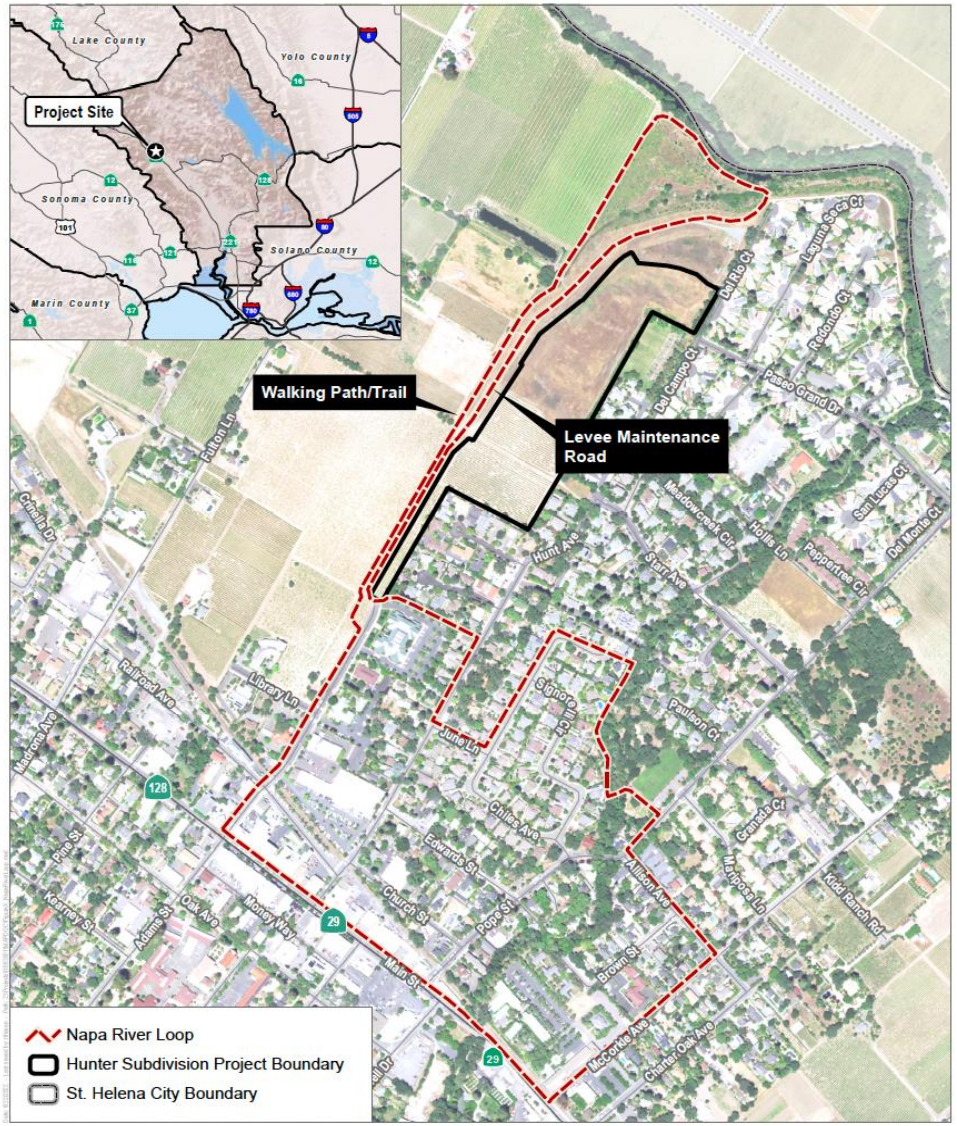
## Passive Heating and Cooling

- Approximately 40 of the proposed lots would allow a house oriented in an east-west configuration, allowing these homes, if properly designed, to take advantage of solar exposure.
- Approximately 40 of the proposed lots would allow for homes oriented so that, if front and rear doors and windows were opened, the prevailing upvalley breeze would provide for natural cooling.
- There is no existing shade on the property, but future homes would be required to install landscaping, including trees that would provide shade.



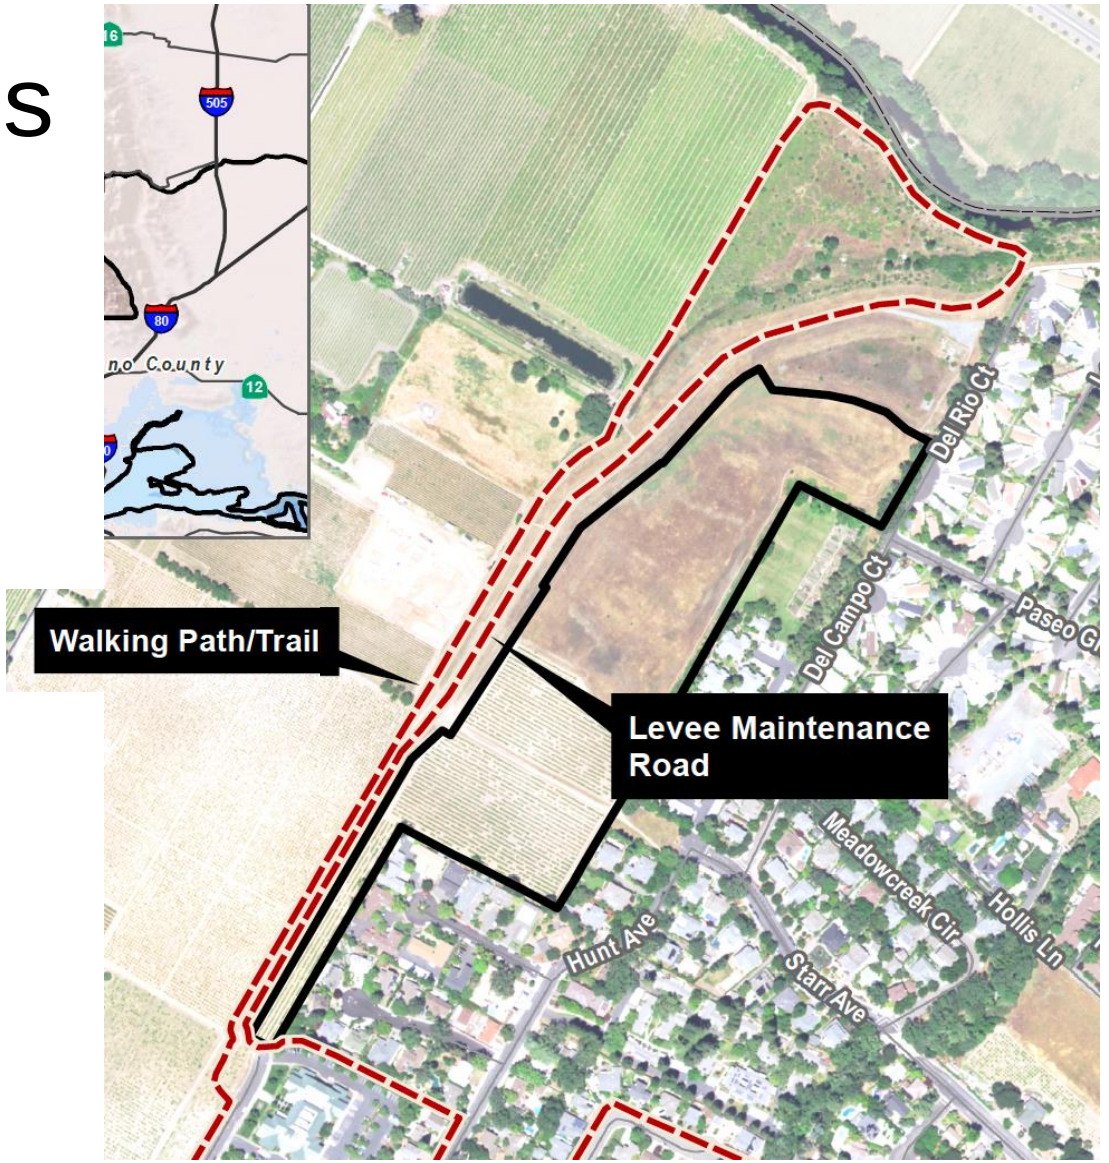
*Project is Consistent.*

# 2019 General Plan



## 2019 General Plan

The 2019 General Plan designates the site for Medium Density Residential (5.1 – 16 units per acre). *Project is Consistent with the Land Use Map.*



Separate review of 2019 General Plan policies concluded the project is also consistent.

# Environmental Impact Report

A Draft EIR was prepared and circulated for public review with a 45-day review period beginning on September 23, 2021 and ending on November 8, 2021.

Due to the volume of comments, the public review period was extended to November 30, 2021 for a total of 67 days.

All materials cited in the EIR are in the Draft or Final EIR or are available upon request at city hall.

# Environmental Impact Report

Key:
Potentially Significant Impact, Mitigation Available
Significant and Unavoidable Impact

- Aesthetics (Potentially Significant, but mitigation available)
- Agriculture and Forest Resources (Less than Significant)
- Air Quality (Less than Significant)
- Biological Resources (Potentially Significant, but mitigation available)
- Cultural and Tribal Resources (Potentially Significant, but mitigation available)
- Energy (Less than Significant)
- Geology and Soils (Potentially Significant, but mitigation available)
- Greenhouse Gas Emissions (Less than Significant)
- Hazards and Hazardous Materials (Potentially Significant, but mitigation available)
- Hydrology and Water Quality (Less than Significant)

# Environmental Impact Report

Key:
Potentially Significant Impact, Mitigation Available
Significant and Unavoidable Impact

- Land Use and Planning (Less than Significant)
- Mineral Resources (Less than Significant)
- Noise and Vibration (Potentially Significant, but mitigation available)
- Population and Housing (Less than Significant)
- Public Services (Less than Significant)
- Recreation (Less than Significant)
- **Traffic and Transportation (VMT)** (Significant and Unavoidable)
- Tribal Cultural Resources (Less than Significant)
- Utilities and Service Systems (Less than Significant)
- Wildfire (Less than Significant)

# Environmental Impact Report

Four Project Alternatives are examined in the EIR:

- Alternative 1) No Project/No Development Alternative,
- Alternative 2) No Project/General Plan
- Alternative 3) Park/Open Space Preserve Alternative
- Alternative 4) Increased Density/Affordable Housing Alternative

# Environmental Impact Report

Based on the analysis in the Draft EIR, Alternative 1, the No Project Alternative, would result in the fewest environmental impacts, and is the "environmentally superior alternative." Section 15126.6(e)(2) of the CEQA Guidelines states that if the environmentally superior alternative is the No Project Alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives.

Of the other alternatives evaluated, Alternative 3, the Park/Open Space Preserve alternative is the environmentally superior alternative. However, according to the Draft EIR, "... this alternative would not avoid all of the significant impacts associated with the Project and all of the identified mitigation would still be required."

# Statement of Overriding Considerations

Because the project has at least one significant, unavoidable impact (Vehicle Miles Traveled), state law requires that the City state why it is accepting the adverse impact.

This is called a “Statement of Overriding Considerations”

# Statement of Overriding Considerations

**CEQA Guidelines Section 15043**

“A public agency may approve a project even though the project would cause a significant effect on the environment if the agency makes a fully informed and publicly disclosed decision that:

(a) There is no feasible way to lessen or avoid the significant effect (see Section 15091); and

(b) Specifically identified expected benefits from the project outweigh the policy of reducing or avoiding significant environmental impacts of the project.”

# Statement of Overriding Considerations

A **Statement of Overriding Considerations** has been prepared which proposes the following reasons why approving the project is appropriate:

1. The Project provides needed housing to the City, particularly affordable housing.

2. The City, per the adopted 2015 Housing Element, has a jobs to housing ratio above the County average, indicating a need for additional housing. As of the most recent Housing Element Progress Report (April 2022), the City had not met its regional housing needs allocation for very-low or moderate income housing.

3. The Project would implement the City's General Plan. The Project site is identified as a housing site in the City's current General Plan, the current Housing Element, and the previous two iterations of the City's General Plan.

# Statement of Overriding Considerations

4. The significant and unavoidable impact is related to VMT. Ultimately VMT per capita will be reduced by providing necessary housing in jurisdictions with a high number of jobs. As stated previously, the City of St. Helena currently has a jobs housing imbalance which the Project will help address.

5. The Project will pay development fees which will assist in needed infrastructure improvements in the City, including wastewater treatment and collection systems.

6. The Project would construct the extension of Starr Avenue and the partial extension of Adams Street consistent with the General Plan Circulation Element.

# Final Environmental Impact Report

A total of 121 Draft EIR comment letters were received. Responses to Comments were prepared and included in the Final EIR. Topics included:

- Concern about the capacity of downstream sewer lines to accommodate additional flows generated by the project.
- Concern about the “high density” of the proposed project.
- Concern about the loss of open space and the ability to walk on informal trails located on the project site.
- Concern about projected water use and the ability of the project to feasibly comply with the City’s water neutrality requirement.
- Concern about future traffic congestion and traffic safety impacts (including for children walking to school).

# Final Environmental Impact Report

(EIR Comments Continued)

- Concern about the project's impact on the ability of residents in the Vineyard Valley mobilehome community to evacuate in the event of an emergency.
- Concern about the ability of the City-constructed levee on the Napa River (built to protect the Vineyard Valley mobilehome community from flooding) to protect new homes in the proposed project.
- Concerns about changes to the appearance of the project site when existing open space and vines are replaced with a suburban neighborhood.
- Concerns about the project's effect on the City's plans to construct a new roadway connection to the Silverado Trail.

# Final Environmental Impact Report

All comments are responded to in the Final EIR. “Master responses” were written to address these frequently expressed comments:

- Emergency evacuation
- Water Neutrality
- Flood protection and Napa River levee
- Wastewater conveyance

Individual responses are provided for all other comments.

# Issues of Concern

Based on public input and prior review of the project, the following are issues of concern to the public. These are not necessarily related to the findings of approval for the tentative map.

- Water Neutrality
- Trail/Open Space
- Levee/Flooding
- Parking
- Aesthetics
- Sewer Capacity
- “High Density” Nature of the Project
- Traffic/Congestion
- Intersection Design Adams Street/Starr Avenue and Starr Avenue/Street A
- Vacation of City Property

# Water Neutrality

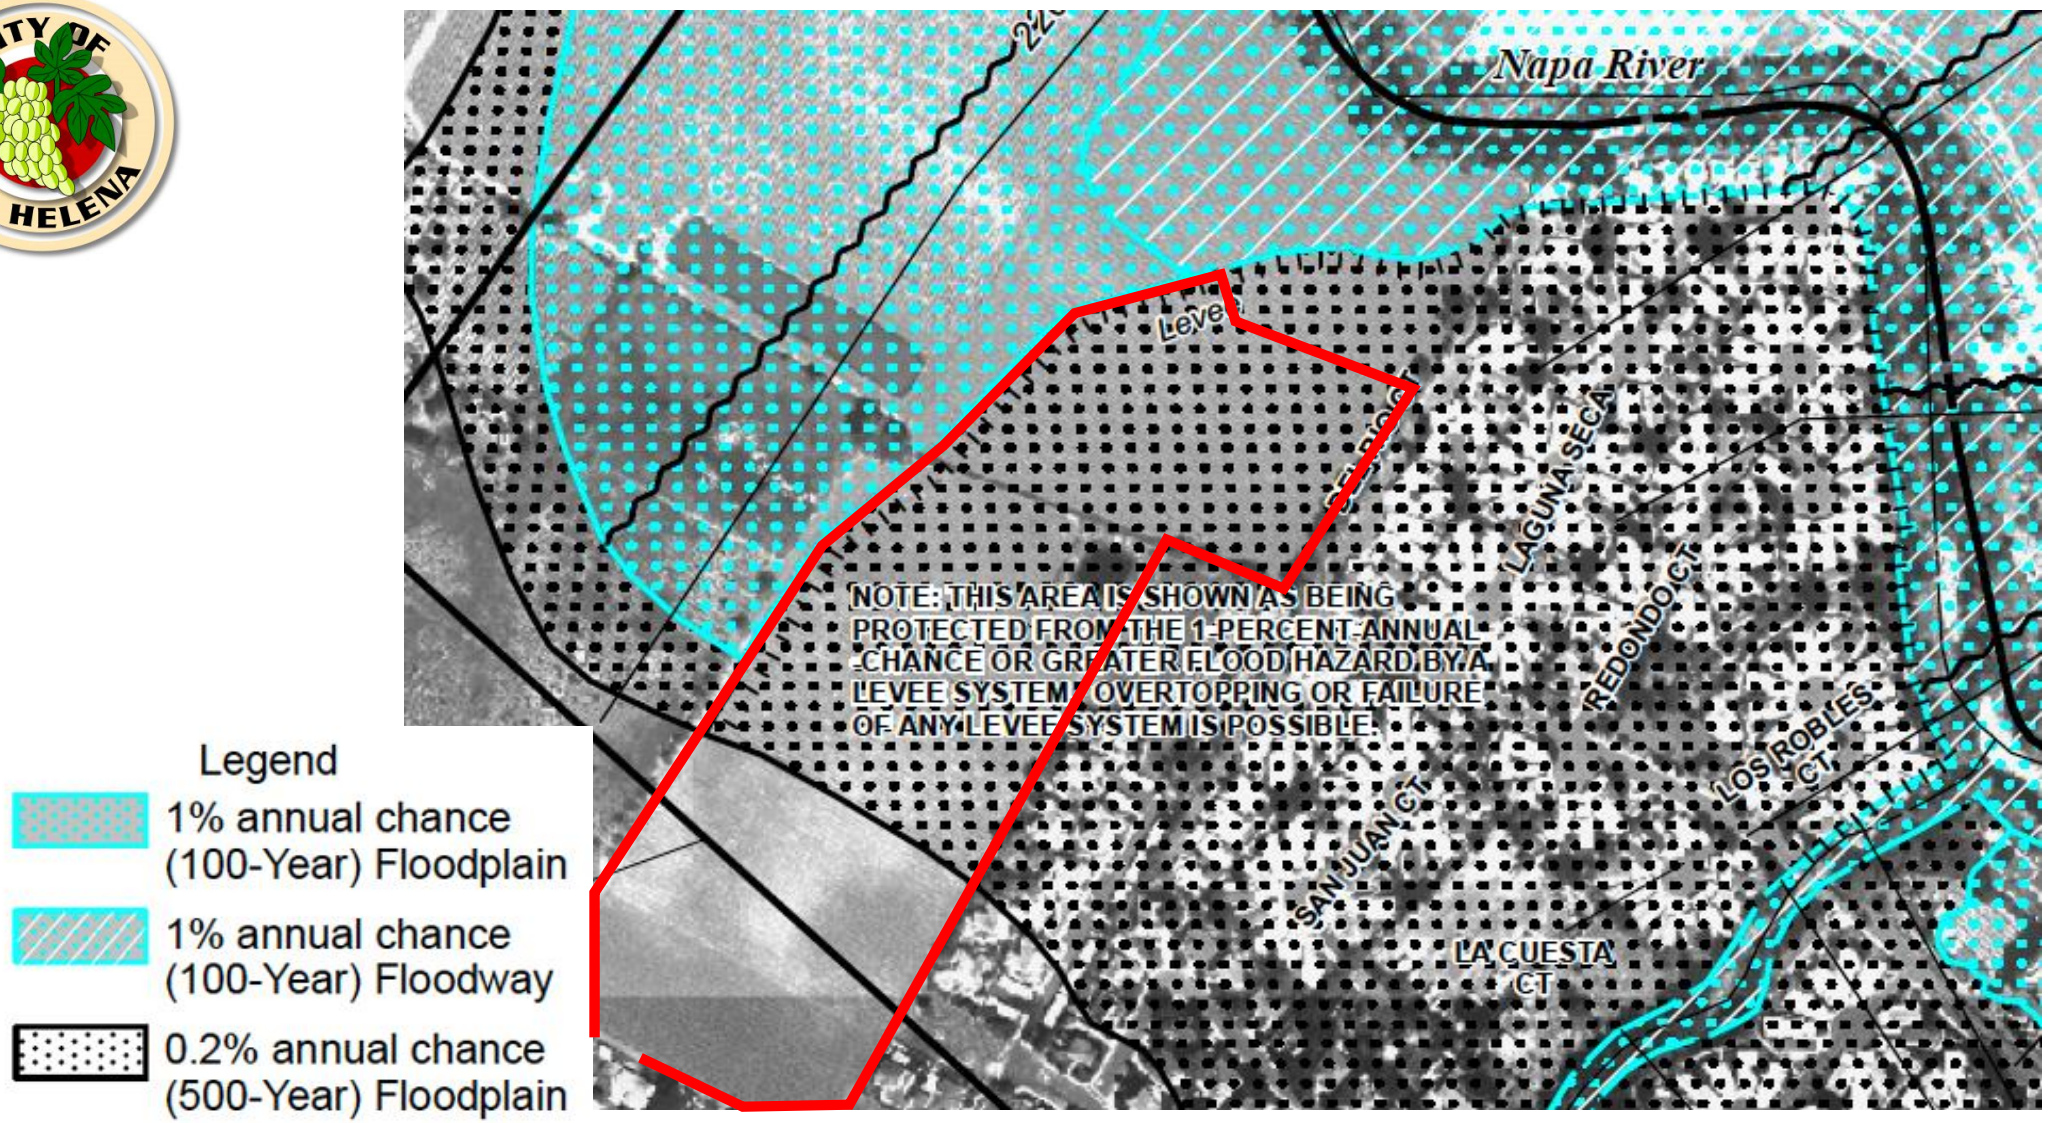
The project is required to comply with the City's water neutrality ordinance, which requires that new development offsets its use of City water. The project will offset its use by:

- Using an existing on-site water well for outdoor irrigation and other uses (approx. 17 acre-feet/year savings)
- Constructing other improvements as specified in the proposed conditions of approval.
- All improvements must be in place before final map can be recorded, or as specified in the Conditions of Approval.
- *Retrofitting of toilets or other fixtures in existing homes is not proposed.*

# Onsite Well

Does the Onsite Well Require a New County Permit?

Because the well has an existing 1973 permit and to the City's current knowledge does not require modification, and because no increase in well use over estimated historic levels is proposed, the evidence before the City does not suggest that a new well permit is required by Napa County.



Given this information, Staff's conclusion is that a new County well permit is not required which might trigger new limitations on well production.

# Napa River Levee

# Napa River Levee

- Completed in 2011
- Reviewed and inspected by the City, U.S. Army Corps of Engineers, several engineering consultants, County, and FEMA
- Designed to provide 200-year flood protection
- FEMA revised its flood mapping to reflect protection provided by the levee
- Inspected monthly

Napa River
NOTE: THIS AREA IS SHOWN AS BEING PROTECTED FROM THE 1-PERCENT-ANNUAL-CHANCE OR GREATER FLOOD HAZARD BY A LEVEE SYSTEM. OVERTOPPING OR FAILURE OF ANY LEVEE SYSTEM IS POSSIBLE.

# Updates Since Planning Commission

Tonight's staff report package includes several minor changes from the package reviewed by the Planning Commission in February:

- Additional comment letters and responses (attachments to staff report)
- Minor changes to the proposed condition of approval (details in staff report)
- Resolutions updated to include today's date and revised conditions of approval

# Planning Commission Recommendation

On February 7, the Planning Commission voted 4-0 to recommend that the City Council:

1. Adopt a Resolution recommending certification of the Final EIR, approval of the Mitigation Monitoring Program, Findings of Fact and Statement of Overriding Considerations; and
2. Adopt a Resolution recommending approval of the requested Tentative Map No. 2022-001, File #PL10-040 for the Hunter Subdivision project.

Separate Resolutions have been prepared for these recommendations.

# Levee Legal Issues

- City Attorney briefing on Levee legal issues

# Next Steps

If the Hunter Tentative Subdivision Map is approved, additional approvals are required before homes can be built:

- Affordable Housing Agreement (CC)
- Final Map/Subdivision Improvement Agreement (CC)
- Conditional Use Permit for Multi-Family (PC)
- Development Review of Homes (PC)

# Questions?

**CITY COUNCIL RESOLUTION NO. XXXX**

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ST, HELENA, CERTIFYING THE ENVIRONMENTAL IMPACT REPORT (STATE CLEARINGHOUSE # 2018032014) FOR THE HUNTER SUBDIVISION PROJECT; ADOPTING FINDINGS PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT; ADOPTING A STATEMENT OF OVERRIDING CONSIDERATIONS; AND ADOPTING A MITIGATION MONITORING AND REPORTING PROGRAM.**

**WHEREAS**, the proposed Hunter Subdivision Project, Tentative Map 2022-001 ("Project") entails the subdivision of a 16.9 acre site (Assessor's Parcel No. 009-030-057; hereinafter, the "Project site") in the City of St. Helena ("City") into 51 lots to accommodate single-family residences, a 3.4-acre parcel that would accommodate 25 attached residential units (which would be income restricted, with 5 units affordable to very low-income families, and 20 to moderate income families), a 0.06-acre parcel that would not be developed, and a 0.04-acre parcel for an existing agricultural well, which sill supply water for all onsite landscaping and other outdoor uses; and

**WHEREAS,** the proposed Project would result in the development of 87 residential units—51 single-family residences, accessory dwelling units ("ADUs") on 11 of the single family lots, and 25 attached residential units—resulting in an average density of 5.1 dwelling units per acre; and

**WHEREAS,** the proposed Project further includes grading of the Project site, construction of the extensions of Starr Avenue and Adams Street, construction of local residential streets, and installation of utility lines; and

**WHEREAS**, the proposed Project requires discretionary approvals from the City, including a Tentative Subdivision Map Approval (insert TSM No. 2022-001) and future discretionary approvals including an Affordable Housing Agreement, design review, and a conditional use permit, all of which must be obtained before development of the proposed Project may proceed;

**WHEREAS**, pursuant to Public Resources Code section 21067 of the California Environmental Quality Act (Pub. Resources Code, § 21000, *et seq.*) ("CEQA") and section 15367 of the State CEQA Guidelines (Cal. Code Regs., tit. 14, § 15000, *et seq.*), the City is the lead agency for the proposed Project; and

**WHEREAS**, pursuant to CEQA and the State CEQA Guidelines, the City determined that an Environmental Impact Report ("EIR") should be prepared in order to analyze all potential adverse environmental impacts of the proposed Project; and

**WHEREAS**, the City issued a Notice of Preparation ("NOP") for the Draft EIR that provided for a comment period of over 30 days, from March 6, 2018 to April 9, 2018, and the NOP

was sent to each responsible agency, trustee agency, the Office of Planning and Research ("OPR"), and interested parties, including members of the public who had requested such notice; and

**WHEREAS**, the City held a public scoping meeting on March 12, 2018 to further solicit comments on the scope of the Draft EIR; and

**WHEREAS**, the City initiated a 45-day public review and comment period for the Draft EIR, issuing a Notice of Availability and releasing the Draft EIR for public review and comment from September 23, 2021 through November 8, 2021; and

**WHEREAS**, pursuant to State CEQA Guidelines section 15086, the City consulted with and requested comments from all responsible and trustee agencies, other regulatory agencies, and others during the 45-day public review and comment period; and

**WHEREAS**, the City received a total of 122 letters during the 45-day public review and comment period, including 2 letters from interest group organizations, and 120 letters from individual members of the public; and

**WHEREAS**, the City held two public meetings, on November 2, 2021, and November 30, 2021, to further solicit public comments on the Draft EIR; and

**WHEREAS**, the City has prepared a Final EIR, consisting of the comments received during the 45-day public review and comment period on the Draft EIR, written responses to those comments, and revisions to the Draft EIR. For the purposes of this Resolution, the "EIR" shall refer to the Draft EIR, as revised by the Final EIR, together with the other sections of the Final EIR; and

**WHEREAS**, the EIR prepared in connection with the Project identified, discussed and sufficiently analyzed significant effects which may occur as a result of the Project, feasible mitigation measures necessary to avoid or substantially lessen the Project's potential environmental impacts and a range of feasible alternatives capable of eliminating or reducing any of these effects in accordance with CEQA and the State CEQA Guidelines; and

**WHEREAS**, the Planning Commission on February 7, 2023, held a public hearing to consider a recommendation to the City Council on the certification of the Final EIR; and

**WHEREAS**, following the conclusion of the public hearing, the Planning Commission adopted Resolution PC2023-001, recommending that the City Council certify the Final EIR; and

**WHEREAS**, all of the findings and conclusions made by the City Council pursuant to this Resolution are based upon the oral and written evidence presented to it as a whole and not based solely on the information provided in this Resolution; and

**WHEREAS**, prior to taking action, the City Council has heard, been presented with, reviewed and considered all of the information and data in the administrative record, including the Draft EIR, the Final EIR; and

**WHEREAS,** the City Council has reviewed and considered as well as the City Council's draft CEQA findings, draft Statement of Overriding Consideration, attached hereto as **Exhibit A**, and the draft Mitigation Monitoring and Reporting Program ("MMRP") attached hereto as **Exhibit B**, and all oral and written evidence presented to it during all meetings and hearings; and

**WHEREAS**, the EIR reflects the independent judgment of the City and is deemed adequate for purposes of making decisions on the merits of the Proposed Project; and

**WHEREAS**, all other legal prerequisites to the adoption of this Resolution have occurred.

**NOW, THEREFORE, THE CITY COUNCIL OF THE CITY ST. HELENA DOES HEREBY RESOLVE AS FOLLOWS:**

**SECTION 1**. The above recitals are true and correct and incorporated herein by reference.

**SECTION 2**. The City Council hereby finds that it has been presented with the EIR, which it has reviewed and considered, and further finds that the EIR is an accurate and objective statement that has been completed in full compliance with CEQA and the State CEQA Guidelines. The City Council finds that the EIR reflects the independent judgment and analysis of the City. The City Council declares that no evidence of new significant impacts or any new information of "substantial importance" as defined by State CEQA Guidelines section 15088.5, has been received by the City after circulation of the Draft EIR that would require recirculation. Therefore, the City Council hereby certifies the EIR based on the entirety of the record of proceedings.

**SECTION 3**. The City Council hereby adopts the "CEQA Findings of Fact" which were prepared in accordance with State CEQA Guidelines sections 15091 and which are attached hereto as Exhibit A and incorporated herein by this reference.

**SECTION 4**. Pursuant to Public Resources Code section 21081.6, the City Council hereby adopts the Mitigation Monitoring and Reporting Program attached hereto as Exhibit B and incorporated herein by this reference. Implementation of the Mitigation Measures contained in the Mitigation Monitoring and Reporting Program is hereby made a condition of approval of the Project. In the event of any inconsistencies between the Mitigation Measures set forth in the EIR or the Findings of Fact and the Mitigation Monitoring and Reporting Program, the Mitigation Monitoring and Reporting Program shall control.

**SECTION 5**. The documents and materials that constitute the records of proceedings on which this Resolution has been based are located at the City of St. Helena City Hall at 1572 Railroad Ave. St. Helena, CA. The custodian for these records is the City of St. Helena City Clerk. This information is provided in compliance with Public Resources Code Section 21081.6.

**SECTION 6**. City staff shall cause a Notice of Determination to be filed and posted with the County Clerk and the State Clearinghouse within five working days of the adoption of this Resolution.

**I HEREBY CERTIFY** that the City of St. Helena City Council approved the foregoing at a Special Meeting of the St. Helena City Council on May 1, 2023, by the following vote:

Mayor Dohring: _____

Vice Mayor Hall: _____

Councilmember Chouteau: _____

Councilmember Hardy: _____

Councilmember Summers: _____

| APPROVED: | ATTEST: |
| --- | --- |
| _____ | _____ |
| Paul Dohring, Mayor | Cindy Tzafopoulos, City Clerk |

ADOPTED AND APPROVED the 1st day of May, 2023.

**EXHIBIT A: DRAFT FINDINGS AND STATEMENT OF OVERRIDING CONSIDERATIONS**

**SECTION 1. FINDINGS REGARDING LESS THAN SIGNIFICANT IMPACTS NOT REQUIRING MITIGATION**

Consistent with Public Resources Code section 21002.1 and State CEQA Guidelines section 15128, the EIR focused its analysis on potentially significant impacts, and limited discussion of other impacts for which it can be seen with certainty that there is no potential for significant adverse environmental impacts. State CEQA Guidelines section 15091 does not require specific findings to address environmental effects that an EIR identifies as "no impact" or a "less than significant" impact. Nevertheless, the City Council hereby finds that the Project would have either no impact or a less-than-significant impact to the following resource areas:

**A. AESTHETICS**

**1. Scenic Vistas**

Threshold: Would the Project have a substantial adverse effect on a scenic vista?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.1-24 through 3.1-26.)

Explanation: The City's 1993 General Plan and the City's recently adopted 2019 General Plan do not designate any specific scenic resources or vistas within the City for protection, and so the Project will not have a substantially adverse effect on any designated scenic vista. Moreover, the Project has been designed to protect views of the surrounding hillsides and open space areas through the orientation of Starr Avenue and Adams Street, and the Project site itself does not include highly valued landscape and is not considered a scenic vista. For these reasons and the reasons discussed in the EIR, the Project would not have a substantial adverse effect on a scenic vista. (Draft EIR, pp. 3.1-24 through 3.1-26.)

**2. Scenic Resources within a State Scenic Highway**

Threshold: Would the Project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Findings: No impact. (Draft EIR, p. 3.1-24.)

Explanation: The Project would not substantially damage scenic resources within a state scenic highway because there is no state highway that would be impacted by the Project. The Project site is located approximately 0.2 miles from SR 29, an eligible state scenic highway, but the Project site is not visible from the highway due to intervening trees, buildings, and structures. The Project site does not contain any scenic resources such as rock outcroppings, does not contain any other significant natural or historical features that are visible from a state scenic highway, and, accordingly, would not limit view of such features from SR 29 or any other state scenic highway. For these reasons and the reasons discussed in the EIR, the Project would not substantially damage scenic resources within a state scenic highway. (Draft EIR, p. 3.1-24.)

### 3. Existing Visual Character of the Site and Surrounding Area

Threshold: Would the Project conflict with applicable zoning and other regulations governing scenic quality or substantially degrade the existing visual character or quality of public views of the site and its surroundings?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.1-26 through 3.1-34.)

Explanation: The Project will comply with the City's Design Review Ordinance and undergo design review to ensure that the Project is visually consistent and compatible with the applicable General Plan, with adjacent buildings, and with the existing environment. Additionally, the Project will comply with the site's zoning requirements, including requirements relating to building height and mass. For these reasons and the reason set forth in the Draft EIR, the Project would not conflict with applicable zoning or other regulations governing scenic quality. (Draft EIR, pp. 3.1-26 through 3.1-27.)

Additionally, the Project will not substantially degrade the existing visual character or quality of public views of the site and its surroundings. Views of the site are limited and primarily available from private property (i.e., backyards), at the terminus of Starr Avenue and Adams Street, along Del Rio Court (a private street) within the immediate vicinity of the site, and from a gravel maintenance road bordering the north/northwest boundary of the site used by the public as a walking trial. (Draft EIR, p. 3.1-27.) Visual simulations in the Draft EIR illustrate the fact that the Project will not substantially degrade the existing visual character or quality of public views of the site and its surroundings. (Draft EIR, pp. 3.1-29, 3.1-21.) For these reasons and the reasons set forth in the EIR, the Project will have a less-than-significant effect relating to this issue, and no mitigation is required. (Draft EIR, pp. 3.1-26 through 3.1-34.)

## B. AGRICULTURE AND FORESTRY RESOURCES

### 1. Farmland Conversion

Threshold: Would the Project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Finding: Less-than-significant impact. (Draft EIR, p. 3.2-12.)

Explanation: While the Project site does include 5.8 acres of Prime Farmland and 0.6 acres of Farmland of Statewide importance that would be converted to urban uses as a result of the Project, the Project would have a less-than-significant impact relating to this issue. The California Land Evaluation and Site Assessment ("LESA") model—a model designed to ensure a quantitative and consistent approach to determining potentially significant impacts to agricultural resources—was used to assess the Project's impact on agricultural lands. Based on the LESA assessment which evaluated the soil resource quality, project size, water resource availability, surrounding agricultural lands, and surrounding protected resource lands the quality of agricultural lands on the

Project site were found to be low quality and did not meet the standard to be considered significant agricultural resources. (Draft EIR, pp. 3.2-9-3.2-10.)As set forth in the EIR, the Project's impacts associated with the removal of prime farmland and farmland of statewide importance would be less than significant. (Draft EIR, p. 3.2-12.)

**2. Agricultural Zoning**

Threshold: Would the Project conflict with existing zoning for agricultural use, or with a Williamson Act contract?

Finding: Less-than-significant impact. (Draft EIR, pp. 3.2-11.)

Explanation: The Project site is not under a Williamson Act contract and does not include any land zoned for agricultural use. (Draft EIR, pp. 3.2-6, 3.2-11.) There are agriculturally zoned lands to the north and northwest of the Project site. The Project would not directly or indirectly affect lands to the north and northwest such that continued agricultural use would be impaired. . Notably, the development of residences on the Project site would not directly or indirectly result in conversion of the agricultural land to the north and northwest of the Project site to non-agricultural uses. The City's Municipal Code (Chapters 17.32 through 17.60 and 17.68) includes provisions that require property owners adjacent to agricultural operations to recognize that adjacent properties have the right to farm and that there is a good faith expectation that the adjacent neighbors will not complain to the City regarding legal normal agricultural activities, including day or night disbursement of chemicals, and creation of dust, noise, or fumes. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.2-11 through 3.2-13.)

**3. Forestland Zoning**

Threshold: Would the Project conflict with existing zoning for, or cause rezoning of, forest land (as defined by Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

Finding: No impact. (Draft EIR, pp. 3.2-6, 3.2-11.)

Explanation: The Project site does not contain any forest or timberland and is not zoned for forest land, timberland, or timberland production. (Draft EIR, pp. 3.2-6, 3.2-11.)

**4. Loss of Forest Land**

Threshold: Would the Project result in the loss of forest land or conversion of forest land to non-forest use?

Finding: No impact. (Draft EIR, pp. 3.2-6, 3.2-11.)

Explanation: The Project site does not contain forest land and is not designated as forest land. (Draft EIR, pp. 3.2-6, 3.2-11.)

**5. Indirect Conversion**

Threshold: Would the Project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

Finding: Less-than-significant impact. (Draft EIR, pp. 3.2-12 through 3.2-13.)

Explanation: While there is agricultural land to the north and northwest of the Project site that is currently in active agricultural production, the Project would result in physical changes to the environment that would . directly or indirectly result in a conversion of this farmland to non-agricultural use. In addition, the City's Municipal Code includes provisions that require property owners adjacent to agricultural operations to recognize that adjacent properties have the right to form and that there is a good faith expectation that the adjacent neighbors will not complain to the City regarding legal normal agricultural activities, including day or night disbursement of chemicals, and creation of dust, noise, or fumes. As noted above, the Project would not convert forest land to non-forest use, as there is no forest land on the Project site. For these reasons and the reasons set forth in the EIR, the Project would have no impact to farmland or forest land. (Draft EIR, pp. 3.2-12 through 3.2-13.)

**C. AIR QUALITY**

**1. Air Quality Management Plan Consistency**

Threshold: Would the Project conflict with or obstruct implementation of the applicable air quality plan?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.3-28 through 3.3-31.)

Explanation: The Bay Area Air Quality Management District ("BAAQMD") has set forth a three-step methodology for determining a project's consistency with the applicable air quality plan. The EIR engaged in this three-step process and concluded based on substantial evidence that the Project would support the goals of the applicable air quality plan (the 2017 Clean Air Plan), that the Project complies with applicable control measures from the applicable air quality plan, and that the Project would not disrupt or hinder implementation of any control measures from the applicable air quality plan. As part of this analysis, the EIR demonstrated the Project would result in less than significant construction and operational emissions and would not result in long-term adverse air quality impacts. For these reasons and the reasons set forth in the EIR, the Project would not conflict with or obstruct implementation of the applicable air quality plan and would thus have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.3-28 through 3.3-31.)

**2. Criteria Pollutant Emissions**

Threshold: Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.3-31 through 3.3-36.)

Explanation: The Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region, the San Francisco Bay Area Air Basin ("SFBAAB"), is in non-attainment under applicable federal or state ambient air quality standards. BAAQMD has developed thresholds of significance to determine whether a project's individual emissions would be cumulatively considerable. The EIR estimated the Project's emissions relating to both construction and operation using the CalEEMod model and concluded, based on substantial evidence, that the Project would not result in a cumulatively considerable net increase of any criteria pollutant (including ROG, $NO_x$, $PM_{10}$, and $PM_{2.5}$) for which the SFBAAB is in non-attainment. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.3-31 through 3.3-36.)

**3. Sensitive Receptors**

Threshold: Would the Project expose sensitive receptors to substantial pollutant concentrations?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.3-36 through 3.3-37.)

Explanation: The Project would not generate substantial criteria air pollutant emissions or associated pollutant concentrations, as construction and operation of the Project would not exceed the BAAQMD significance thresholds for ROG, $NO_x$, $PM_{10}$, and $PM_{2.5}$. Moreover, the Project would not expose sensitive receptors to substantial concentrations of Toxic Air Contaminants ("TACs"), as the Project's TAC emissions during both construction and operation of the Project would be well below the BAAQMD significance thresholds. The Project additionally would not expose sensitive receptors to significant carbon monoxide concentrations, as the Project's carbon monoxide emissions would be less than significant. For these reasons and the reasons set forth in the EIR, the Project would not expose sensitive receptors to substantial pollutant concentrations, and the Project thus have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.3-31 through 3.3-37.)

**4. Objectionable Odors**

Threshold: Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Findings: Less-than-significant impact. (Draft EIR, p. 3.3-28.)

Explanation: The Project does not include a land use associated with the generation of odors that could affect a substantial number of people and would not generate such odor impacts. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.3-28.)

## D. BIOLOGICAL RESOURCES

### 1. Riparian Habitat and Sensitive Natural Communities

Threshold: Would the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Findings: Less-than-significant impact. (Draft EIR, p. 3.4-43.)

Explanation: There are no riparian habitats or sensitive natural communities within the Project site that were identified in local, regional, or federal plans, policies, or regulations. For this reason and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.4-43.)

### 2. Local Policies or Ordinances Protecting Biological Resources

Threshold: Would the Project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Findings: Less-than-significant impact. (Draft EIR, p. 3.4-43.)

Explanation: The Project would not conflict with any local policies or ordinances protecting biological resources. For example, the Project would not require removal of any trees, and no permit relating to this issue is therefore required. For these reasons and the reasons set forth in the EIR, there would be a less-than-significant impact relating to this issue, and no mitigation is required. (Draft EIR, p. 3.4-43.)

### 3. Adopted Habitat Conservation Plans

Threshold: Would the Project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional or state habitat conservation plan?

Findings: No Impact. (Draft EIR, p. 3.4-43.)

Explanation: The Project site is not located within the boundary of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or any approved local, regional, or state habitat conservation plan. Thus, no impact would occur in this regard, and no mitigation is required. (Draft EIR, p. 3.4-43.)

## E. ENERGY RESOURCES

### 1. Wasteful, Inefficient, or Unnecessary Consumption

Threshold: Would the Project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during Project construction or operation?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.5-14 through 3.5-16.)

Explanation: The Project would not result in inefficient, wasteful, or unnecessary consumption of energy during construction or operational activities. The EIR analyzed the Project's potential consumption of various energy resources, including electricity, natural gas, and petroleum during both the Project's construction and operation phases, and it concluded based on substantial evidence that the Project would have a less-than-significant impact relating to this issue. For these reasons and the reasons set forth in the EIR, the Project would not result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation. (Draft EIR, pp. 3.5-14 through 3.5-16.)

### 2. Conflict with Energy Plans

Threshold: Would the Project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.15-19 through 3.15-20.)

Explanation: The Project is required to meet Title 24 and California Green Building Standards Code (CALGreen) standards to reduce energy demand and increase energy efficiency, and the Project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.15-19 through 3.15-20.)

## F. GEOLOGY AND SOILS

### 1. Rupture of an Earthquake Fault

Threshold: Would the Project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death, involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

Findings: No impact. (Draft EIR, p. 3.6-20.)

Explanation: The Project site is not located within a fault rupture hazard zone. Because the Project site is not crossed by any known active or potentially active fault, the Project would

not directly or indirectly cause potential substantial adverse effects involving rupture of a known earthquake fault, and no mitigation is required. (Draft EIR, p. 3.6-20.)

**2. Landslides**

Threshold: Would the Project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death, involving landslides?

Findings: No impact. (Draft EIR, p. 3.6-20.)

Explanation: The Project site is not located in an area subject to landslides. The Project site is located on relatively flat ground and is not adjacent to any areas with steep slopes or hillsides that could result in a landslide. The Project would therefore not cause potential substantial adverse effects relating to landslides, and the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.6-20.)

**3. Soil Erosion or Loss of Topsoil**

Threshold: Would the Project result in substantial soil erosion or the loss of topsoil?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.6-20 through 3.6-21.)

Explanation: The Project would not result in substantial soil erosion or the loss of topsoil. A potentially significant impact relating to soil erosion or loss of topsoil could occur if the Project would result in soil erosion sufficient to undermine structures or compromise slope stability—e.g., if the Project would result in rills (small narrow channels) and gullies, whereby storm runoff produces deep incisions into the soils and slopes. The Project, however, would not result in such soil erosion because the Project site is on relatively flat land. Moreover, runoff resulting from the Project would not result in substantial soil erosion or loss of top soil, as runoff would be managed and discharged into an existing detention basin. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.6-20 through 3.6-21.)

**4. Septic Tanks**

Threshold: Would the Project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Findings: No impact. (Draft EIR, p. 3.6-21.)

Explanation: The Project would not include septic tanks or alternative wastewater disposal systems; rather, the Project would connect to the City's sewer system to convey wastewater to a treatment plant. For these reasons and the reasons discussed in the EIR, the Project would not result in a significant impact relating to this issue, and no mitigation is required. (Draft EIR, p. 3.6-21.)

**5. Geologic Features**

Threshold: Would the Project directly or indirectly destroy a unique geologic feature?

Findings: Less-than-significant impact. (Draft EIR, p. 3.6-21.)

Explanation: The Project would not directly or indirectly destroy a unique geologic feature. The Project site does not contain any unique geologic features, such as a landform or rock outcrop of scientific, cultural, or aesthetic interest. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue and not mitigation is required. (Draft EIR, p. 3.6-21.)

**G. GREENHOUSE GAS EMISSIONS**

**1. Greenhouse Gas Emissions**

Threshold: Would the Project generate greenhouse gas emissions ("GHGs"), either directly or indirectly, that may have a significant impact on the environment?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.7-30 through 3.7-31.)

Explanation: The Project would not generate GHGs, either directly or indirectly, that could have a significant impact on the environment. The EIR analyzed the amount of GHGs that would be generated by the Project during both its construction and operation phases, and it concluded based on substantial evidence that the amount of GHGs generated by the Project would be below BAAQMD's GHG threshold of significance. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.7-30 through 3.7-31.)

**2. Conflicts with Applicable Plans, Policies, and Regulations**

Threshold: Would the Project conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.7-31 through 3.7-38.)

Explanation: The Project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose or reducing the emissions of greenhouse gases. The City has not adopted an applicable GHG reduction plan. As set forth in the EIR, the Project would be consistent with the Association of Bay Area Governments ("ABAG") and Metropolitan Transportation Commission's Plan Bay Area, the California Air Resources Board's ("CARB") Scoping Plan, and other goals and policies adopted for the purpose of reducing GHG emissions. (Draft EIR, pp. 3.7-31 through 3.7-38.) For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.7-31 through 3.7-38.)

## H. HAZARDS AND HAZARDOUS MATERIALS

### 1. Hazardous Materials

Threshold: Would the Project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.8-15 through 3.8-16.)

Explanation: The Project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials during its construction or operation.

During construction of the Project, no acutely hazardous materials would be used, and while some hazardous materials (such as fuels, motor oil, and lubricants) would be used in small amounts, the materials would not pose a significant risk to off-site residents or construction workers because they would be used and stored in accordance with existing laws and regulations. Moreover, development of the Project would be subject to existing regulatory requirements for hazardous materials, including requirements under the National Pollutant Discharge Elimination System ("NPDES") permit through the development and implementation of a Stormwater Pollution Prevention Plan ("SWPPP"). The SWPPP would require implementation of control measures for hazardous material storage, soil stockpiles, inspections, maintenance, training of employees, and containment of releases to prevent contaminated runoff into nearby stormwater collection systems or waterways. Included within the SWPPP, best management practices would be required to contain hazardous materials and minimize the contact of hazardous materials with stormwater. (Draft EIR, p. 3.8-15.)

During operation of the Project, residents would be expected to use and store typical household hazards such as house paint, cleaning products, herbicides, and pesticides. The amounts of hazardous materials that residents store or use is negligible and not considered sufficient to create a significant safety hazard to the public, or otherwise pose a significant risk to human health or the environment. (Draft EIR, p. 3.8-16.)

For these reasons and the reasons set forth in EIR, the Project would not create a significant hazard to the public or the environment through the routine transport, use, or dispose of hazardous materials, and impacts relating to this issue would be less than significant. (Draft EIR, pp. 3.8-15 through 3.8-16.)

### 2. Acutely Hazardous Materials within ¼ Mile of an Existing or Proposed School

Threshold: Would the Project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Findings: Less-than-significant impact. (Draft EIR, p. 3.8-14.)

Explanation: The Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. The Project site is not located within one-quarter mile of an existing or proposed school. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.8-14.)

**3. Hazardous Materials Sites**

Threshold: Would the Project be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Findings: Less-than-significant impact. (Draft EIR, p. 3.8-14.)

Explanation: The Project would not be located on a site that is included on a list of known hazardous materials sites, as confirmed in the EIR and in a Phase I ESA prepared for the Project. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.8-14.)

**4. Public Airports and Private Airstrips**

Threshold: For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard or excessive noise for people residing or working in the project area?

Findings: No impact. (Draft EIR, p. 3.8-15.)

Explanation: The Project site is not located within an airport land use plan or within two miles of an airport. For these reasons and the reasons set forth in the EIR, there would be no impact relating to this issue. (Draft EIR, p. 3.8-15.)

**5. Emergency Access**

Threshold: Would the Project impair implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.8-20 through 3.8-21.)

Explanation: Neither the construction nor the operation of the Project would impair implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan. During construction, the Project will implement the SWPPP, which would include an Integrated Contingency Plan and an evacuation plan for construction workers in the event of an emergency. Compliance with the SWPPP and the Integrated Contingency Plan would ensure impacts are less than significant during construction. The Project would similarly have a less-than-significant impact during its operation phase, as the City's Fire Department will review

the site plans to ensure adequacy of emergency access. Streets and roads will be adequate in terms of width, turning radius, and grade to facilitate access by City firefighting apparatus, and the Project will have alternative emergency ingress and egress. For these reasons and the reasons set forth in the EIR, the Project will have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.8-20 through 3.8-21.)

**6. Wildland Fires**

Threshold: Would the Project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.8-21 through 3.8-22.)

Explanation: Neither construction nor operation of the Project would expose people to adverse impacts involving wildland fire. CalFire does not identify the Project site as being within an area susceptible to wildland fires. During construction of the Project, the Project will comply with best management practices included within the SWPPP to further ensure that the Project would not result in wildfires. Operation of the Project would not have adverse impacts relating to wildland fires, as the Project will be built in compliance with the California Building Code's requirements for fire protection. Moreover, and as discussed above, the Project is designed with an emergency vehicle access to facilitate the ingress and egress of emergency response vehicles, including the City and Napa County Fire Department's apparatus, and the Project is designed to further provide emergency evacuation access for residents. For these reasons and the reasons set forth in the EIR, the Project would not result in a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.8-21 through 3.8-22.)

**I. HYDROLOGY AND WATER QUALITY**

**1. Compliance with Water Quality Standards**

Threshold: Would the Project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.9-34 through 3.9-39.)

Explanation: The Project would not violate any water quality standards or waste discharge requirements, and it would not otherwise substantially degrade surface or groundwater quality. Construction of the Project would not result in any potentially significant impact relating to this issue because the Project would comply with the Construction General Permit, and the City's Stormwater and Runoff Pollution Control Ordinance would require implementation of a SWPPP to address potential construction-related impacts on water quality. The standard requirements contained in a SWPPP are sufficient to address a project's potential to violate water quality standards or waste discharge requirements. Operation of the Project would likewise not result in any potentially significant impact relating to this issue as the Project would comply with the standards and performance criteria contained in the Small MS4 Permit, which requires

development projects to adhere to site design measures, source control measures, treatment control measures, and certain operation and maintenance requirements that ensure a less-than-significant impact. For these reasons and the reasons set forth in the EIR, the Project would not result in a significant impact relating to this issue. (Draft EIR, pp. 3.9-34 through 3.9-39.)

**2. Groundwater Supplies**

Threshold: Would the Project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.9-40 through 3.9-43.)

Explanation: The Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basis. The County works with local jurisdictions, including the City, to sustainably manage the Napa Valley Groundwater Subbasin in compliance with the Sustainable Groundwater Management Act ("SGMA"). In its most recent assessment of conditions, the County, through its technical consultant, has determined that the Subbasin is not exhibiting significant impacts with regard to the applicable sustainability indicators defined by SGMA, including lowering of groundwater levels, depletion of groundwater in storage, degradation of groundwater quality, and depletion of interconnected surface waters. The EIR additionally includes an analysis of the Project's demand on groundwater resources, including the Project's use of the on-site well, and the EIR concluded, based on substantial evidence, that the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.9-40 through 3.9-43.)

**3. Existing Drainage Patterns and Runoff**

Threshold: Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would result in substantial erosion or siltation on- or off-site?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.9-44 through 3.9-45.)

Explanation: The Project would not alter the course of a stream or river and is not located within a Special Flood Hazard Area ("SFHA") of the Napa River, and accordingly, the Project would not impede or redirect flood flows in a manner that would result in substantial erosion or siltation on- or off-site. Moreover, the Project would not result in substantial erosion or siltation on- or off-site as the off-site City detention basin has been designed with adequate capacity to capture and treat increases in the rate and volume of stormwater runoff associated with development in this area of the City, including development of the Project site with impervious surfaces. Additionally, the Project would be subject to the most recent standards and performance

criteria contained in the Small MS4 Permit and a Stormwater Control Plan that complies with the Bay Area Stormwater Management Agencies Post Construction Manual. The Project's compliance with existing permitting requirements and standard conditions of approval (i.e., MS4 Permit and the City's Stormwater and Runoff Pollution Control Ordinance) are sufficient to avoid water quality degradation, including erosion and siltation. For these reasons and the reasons set forth in the Draft EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.9-44 through 3.9-45.)

**4. Surface Runoff and Flooding**

Threshold: Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner that would substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or offsite?

Findings: Less-than-significant impact. (Draft EIR, p. 3.9-45.)

Explanation: The Project would not substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site. The City-owned off-site detention basin has been designed to store the increase in storm water runoff generated from the Project site during a 100-year storm event. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.9-45.)

**5. Stormwater Drainage System Capacity and Polluted Runoff**

Threshold: Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner that would create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.9-45 through 3.9-46.)

Explanation: The Project would not create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. The Project would comply with the City's Municipal Code, which requires the Project to construct storm drains or improve existing storms drains to ensure adequate capacity is available to carry runoff produced by a 10-year storm event. The Project's utility plan confirms that on-site storm flows at the Project site would be conveyed to the off-site detention center via storm drain lines. Moreover, the existing off-site detention basin was designed to accommodate runoff from the Project site. For these reasons and the reasons set forth in the EIR, the Project's impact relating to this issue would be less than significant. (Draft EIR, pp. 3.9-45 through 3.9-46.)

**6. Flood Flows**

Threshold: Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would impede or redirect flood flows?

Findings: Less-than-significant impact. (Draft EIR, p. 3.9-44.)

Explanation: The Project would not alter the course of a stream or river and is not located within a Special Flood Hazard Area ("SFHA") of the Napa River, and accordingly, the Project would not impede or redirect flood flows in a manner that would result in substantial erosion or siltation on- or off-site. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.9-13.)

**Natural Hazards**

Threshold: In flood hazard, tsunami, or seiche zones, would the Project risk release of pollutants due to project inundation?

Findings: No impact. (Draft EIR, p. 3.9-34.)

Explanation: The Project site is not within a flood hazard, tsunami, or seiche zone, and the Project and does not contain the preconditions necessary for a project to be at risk of hazards due to a tsunami, or seiche which require a reasonable distance and elevation relative to a coastline (for sea level rise or seiche) or large body of water (for seiche waves). There be no impact (or risk) associated with a tsunami or seiche. For these reasons and the reasons set forth in the EIR, there would be no impact relating to this issue. (Draft EIR, p. 3.9-13.)

**7. Conflict with Water Quality Control Plan or Sustainable Groundwater Management Plan**

Threshold: Would the Project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Findings: Less-than-significant impact. (Draft EIR, p. 3.9-46.)

Explanation: The Project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. The County works with local jurisdictions, including the City, to sustainably manage the Napa Valley Groundwater Subbasin in compliance with SGMA. In its most recent assessment of conditions, the County, through its technical consultant, determined that the Subbasin is not exhibiting significant impacts with regard to the applicable sustainability indicators defined by SGMA, including lowering of groundwater levels, depletion of groundwater in storage, degradation of groundwater quality, and depletion of interconnected surface waters. Moreover, the Project would comply with applicable regulations and permits designed to comply with the Water Quality Control Plan for the San Francisco Bay

Region. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.9-46.)

**J. LAND USE AND PLANNING**

**1. Divide an Established Community**

Threshold: Would the Project physically divide an established community?

Findings: No impact. (Draft EIR, p. 3.10-14.)

Explanation: Due to the Project's location, development of the Project would not physically divide an established community because there is no development northwest or northeast of the site. The Project would, instead, provide a continuation of the existing neighborhood with development of a new residential area. For these reasons and the reasons set forth in the EIR, the Project would have no impact relating to this issue. (Draft EIR, p. 3.10-14.)

**2. Applicable Land Use Plans, Policies, or Regulations**

Threshold: Would the Project cause a significant environmental impact due to a conflict with any land use plan, policy or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.10-14 through 3.10-19.)

Explanation: The Project would not cause a significant environmental impact due to a conflict with the applicable General Plan or any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. The EIR analyzed the Project's consistency with the City's 1993 General Plan, 2019 General Plan, Housing Element Update, and Zoning Ordinance, as well as the Project's consistency with the Plan Bay Area 2040. The EIR concluded, based on substantial evidence, that the Project would not result in a significant environmental impact due to a conflict with any of the foregoing. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.10-14 through 3.10-19.)

**K. MINERAL RESOURCES**

**1. Statewide Mineral Resources**

Threshold: Would the Project result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state?

Findings: No impact.

Explanation: The Project site is not located within an area known to be underlain by regionally important mineral resources. The California Geological Survey identifies the Project site as MRZ-4, indicating that insufficient information exists to assign the site with any other mineral resource zone

designation. No mineral resources have been identified in or around the Project site, and none of the previous use of the Project site included mining activities or mineral processing. For these reasons, this issue was dismissed from further discussion during the EIR scoping period (see Notice of Preparation issued March 6, 2018). No comments were received by the City regarding mineral resources during scoping or review of the Draft EIR. The Project would no impact relating to mineral resources, and no mitigation is required.

**2. Locally Important Mineral Resources**

Threshold: Would the Project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

Findings: No impact.

Explanation: The Project site is not located within an area known to be underlain by locally-important mineral resources. The California Geological Survey identifies the Project site as MRZ-4, indicating that insufficient information exists to assign the site with any other mineral resource zone designation. No mineral resources have been identified in or around the Project site, and none of the previous use of the Project site included mining activities or mineral processing. The City's General Plan does not identify the Project site as containing locally important mineral resources. For these reasons, this issue was dismissed from further discussion during the EIR scoping period (see Notice of Preparation issued March 6, 2018). No comments were received by the City regarding mineral resources during scoping or review of the Draft EIR. The Project would have no impact relating to mineral resources, and no mitigation is required.

**L. NOISE**

**1. Groundborne Vibration**

Threshold: Would the Project result in generation of excessive groundborne vibration or groundborne noise levels?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.11-17 through 3.11-18.)

Explanation: The Project would not generate excessive groundborne vibration or groundborne noise levels. The EIR analyzed the vibration that would be generated by the use of heavy equipment necessary for the construction of the Project, and it determined, based on substantial evidence, that vibration generated by the Project would be below the relevant threshold of significance set forth by Federal Transit Administration. For these reasons and the reasons set forth in the EIR, the Project would result in a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.11-17 through 3.11-18.)

**2. Private/Public Airports**

Threshold: For a project located within the vicinity of a private airstrip or an airport land use plan, or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Findings: No impact. (Draft EIR, p. 3.11-14.)

Explanation: The Project site is not located within the vicinity of a private airstrip or an airport land use plan, and it is not located within two miles of a public airport. For these reasons and the reasons set forth in the EIR, the Project would have no impact relating to this issue. (Draft EIR, p. 3.11-14.)

**M. POPULATION AND HOUSING**

**1. Induce Substantial Growth**

Threshold: Would the Project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Findings: Less-than-significant impact. (Draft EIR, pp. 4-3 through 4.6.)

Explanation: The Project would not induce substantial unplanned population growth in the area. While the Project does entail residential development and would result in population growth, the population growth is not unplanned. The Project site was designated for future residential development in the City's 1993 General Plan and 2019 General Plan, and the Project site is located within the City's Urban Limit Line with access to existing utilities. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 4-3 through 4.6.)

**2. Displacing Housing and People**

Threshold: Would the Project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Findings: No impact.

Explanation: The Project does not entail the demolition of any housing, and would not otherwise displace any residents. (Draft EIR, p. 2-2.) For these reasons and the reasons discussed in the EIR, the Project would not have no impact relating to this issue.

## N. PUBLIC SERVICES

### 1. Fire Protection Services

Threshold: Would the proposed Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or a need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection services?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.12-13 through 3.12-14.)

Explanation: The Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or a need for new or physically altered governmental facilities, relating to fire protection services. The Project site would be served by the City's fire department located at 1480 Main Street, approximately 0.2 miles from the Project site. Moreover, the increase in population generated by the Project is within the projected population growth in the City's 1993 and 2019 General Plans and would not generate an increase in population that would necessitate the construction of a new facility or expansion of an existing facility. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.12-13 through 3.12-14.)

### 2. Police Services

Threshold: Would the proposed Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or a need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection services?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.12-14 through 3.12-15.)

Explanation: The Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or a need for new or physically altered governmental facilities, relating to police protection services. The Project would be served by the City's police station, approximately 0.2 miles from the Project site. While the City would likely hire an additional police officer to serve the approximately 213 residents the Project would add to the City, the addition of one police officer would not require the construction of new, or the expansion of existing, police facilities because adequate space is available at the existing St. Helena Police Department Facility. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.12-14 through 3.12-15.)

**3. Education**

Threshold: Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or a need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools?

Findings: Less-than-significant impact. (Draft EIR, p. 3.12-15.)

Explanation: No school would need to be constructed or physically altered in order to accommodate the approximately 28 students that would be generated by the Project. As set forth in the EIR, the local primary school, elementary school, middle school, and high school all have sufficient capacity to accommodate the students generated by the Project. In addition, the Project will pay all required school impact fees consistent with Government Code Sections 65995–65998. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.12-15.)

**4. Parks**

Threshold: Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or a need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for parks?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.12-16 through 3.12-17.)

Explanation: Parks within the vicinity of the Project include Lyman Park, Jacob Meily Park, and Lewis Station, all of which are located within approximately 0.3 miles of the Project site. These parks have adequate facilities to accommodate the Project's estimated 213 residents, with such facilities including picnic and turf areas, children's playgrounds, and a walking trail. Moreover, park and recreational impact fees are imposed on all residential development within the City, and the Project applicant must pay all required park fees, which the City will use to ensure that the increased use of existing parks due to the Project's anticipated residents would not cause result in substantial physical deterioration of the park facilities. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.12-16 through 3.12-17.)

**5. Other Public Facilities**

Threshold: Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or a need for new or physically altered governmental facilities, the construction of which could cause significant

environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for other public facilities?

Findings: Less-than-significant impact. (Draft EIR, p. 3.12-16.)

Explanation: While the 213 residents generated by the Project would increase demand for existing public facilities within the City (including the George and Elsie Wood Public Library and City Hall), Chapter 3.32 of the City's Municipal Code requires payment of a civic improvement fee that would offset any impacts the Project might have. The civic improvement fee was calculated to ensure new development would pay its proportionate share of the cost of existing and future capital assets required to serve the City. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.12-16.)

**O. RECREATION**

**1. Existing Facilities**

Threshold: Would the Project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.12-16 through 3.12-17.)

Explanation: Parks within the vicinity of the Project include Lyman Park, Jacob Meily Park, and Lewis Station, all of which are located within approximately 0.3 miles of the Project site. These parks have adequate facilities to accommodate the Project's estimated 213 residents, with such facilities including picnic and turf areas, children's playgrounds, and a walking trail. Moreover, park and recreational impact fees are imposed on all residential development within the City, and the Project applicant must pay all required park fees, which the City will use to ensure that the increased use of existing parks due to the Project's anticipated residents would not cause result in substantial physical deterioration of the park facilities. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.12-16 through 3.12-17.)

**2. New Recreational Facilities**

Threshold: Does the Project include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?

Findings: No impact. (Draft EIR, pp. 3.12-16 through 3.12-17.)

Explanation: The Project does not propose to construct any new on- or off-site recreation facilities, and the Project would not expand any existing off-site recreational facilities. For the foregoing reasons and the reasons discussed in the EIR, the Project would have no impact relating to this issue. (Draft EIR, pp. 3.12-16 through 3.12-17.)

## P. TRANSPORTATION

### 1. Consistency with Circulation Performance Plans

Threshold: Would the Project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.14-39 through 3.14-40.)

Explanation: The Project would be consistent with applicable plans, city ordinances, and policies addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Notably, the Project would provide adequate sidewalks and bicycle amenities and would not conflict with any plans or policies supporting either the development of these facilities or the use of these facilities. The Project would not conflict with any plans or policies that address transit, pedestrian, and bicycle facilities. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.14-39 through 3.14-40.)

### 2. Transportation Hazards

Threshold: Would the Project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.14-46 through 3.14-51.)

Explanation: The Project would not increase hazards due to a geometric design feature or incompatible use that would contribute to an increase in collisions or create visual obstructions that would impede vehicles, bicyclists, and pedestrians from having safe access to and from the Project site.

The Project would result in the extension and construction of roads, but these roads would be designed to accommodate emergency service vehicles and maintain accessibility for pedestrians and bicyclists according to City street design standards. For example, the Project would extend Starr Avenue northward into the Project site, and intersect with Adams Street, which the Project would also extend eastward from its current terminus. As Starr Avenue is extended northward, it would narrow from an approximately 75-foot right-of-way (ROW) to a 60-foot ROW with 4-foot-side sidewalks and a 6-foot-wide planter strip on both sides of the street, consistent with City's street standards. This extension, along with Adams Street, would be designed to accommodate emergency service vehicles and maintain accessibility for pedestrians and bicyclists according to City street design standards. (Draft EIR, pp. 3.14-46 through 3.14-47.)

The Project would also result in internal public residential streets within the Project site to accommodate neighborhood circulation and provide on-street parking on both sides of the Starr Avenue and Adams Street extensions (where permitted). These roadways would be designed to be consistent with all applicable City street design criteria and conform to the City's Municipal Code

(Section 16.32.060) to ensure that emergency service vehicles can adequately access and circulate within the Project site. As explained in the EIR, there are no visual obstructions that would impede vehicles, bicyclists, and pedestrians from having safe access to and from the Project site. (Draft EIR, p. 3.14-47.)

The EIR additionally considered accident data and a collision analysis to determine whether the Project would increase hazards due to a geometric design feature or incompatible use. The analysis, based on substantial evidence, demonstrates that the Project would have a less-than-significant impact. (Draft EIR, pp. 3.14-47 through 3.14-48.)

The EIR further analyzed the Project's potential to increase hazards during Project construction, and the EIR concluded, based on substantial evidence, that the Project would have a less-than-significant impact. Notably, while certain construction activities could require temporary lane closures, the Project would first be required to obtain construction permits through the City, and the City's traffic engineer would first prepare a temporary traffic control plan for the construction activities. As a result, the Project would not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses during construction of the Project. (Draft EIR, pp. 3.14-49 through 3.14-50.)

For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.14-46 through 3.14-51.)

**3. Emergency Access**

Threshold: Would the Project result in inadequate emergency access?

Findings: Less-than-significant impact. (Draft EIR, p. 3.15-51.)

Explanation: The Project would not result in inadequate emergency access. The St. Helena Fire Department has reviewed the proposed Tentative Subdivision Map, and it did not identify any issues with inadequate emergency access. Notably, the Project includes two primary access points, Star Avenue and Adams Street, as well as a separate emergency vehicle access. In the event of an emergency, there would be three avenues that would enable vehicles to enter or exit the Project site. Moreover, the Project would be consistent with 1993 General Plan Policy 8.5.7 and 2019 General Plan Policy PS4.6, which require all streets and roads be designed with adequate width, turning radius, and grade to facilitate access by City firefighting apparatus, and to provide alternative emergency ingress and egress. Additionally, once the Tentative Subdivision Map is approved, the Project's Final Subdivision Map would be subject to additional review by the St. Helena Fire Department to confirm that the Project provides proper emergency access. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.15-51.)

## Q. UTILITIES AND SERVICE SYSTEMS

### 1. Utilities Infrastructure

Threshold: Would the Project require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction of which could cause significant environmental effects?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-27 through 3.13-30.)

Explanation: While the Project would require new water, sewer, storm drain, electric power, natural gas, and telecommunications infrastructure on site to serve the proposed residential development (e.g., on-site water, sewer, and storm drain lines and utility connections), the Project would not require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunication facilities. As explained in the EIR, the City's water and wastewater treatment and conveyance facilities and the City's stormwater drainage facilities have the capacity to accommodate the demands of the Project, and the Project would not require the construction of new such facilities or expansion of the existing facilities. Additionally, the City collects development impact fees on new development to pay for public improvements relating to water projects, sewer projects, and stormwater drainage projects. The Project applicant would pay these fees, which would help offset any increased demands on the City's water, sewer, and stormwater drainage systems. The Project will be served by Marin Clean Energy for electricity service, by Pacific Gas & Electric Company for natural gas service, and by various service providers for telecommunications services. The Project would not require the relocation or construction of electric power, natural gas, or telecommunications facilities. For these reasons and the reasons set forth in the EIR, the Project would result in a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.13-27 through 3.13-30.)

### 2. Sufficient Water Supplies

Threshold: Would sufficient water supplies be available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-31 through 3.13-32.)

Explanation: Sufficient water supplies would be available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. The long-term safe yield of the City's water supply is 1,950 acre-feet per year, which consists of 600 acre-feet from the City of Napa contract, 900 acre-feet from Bell Canyon reservoir, and an average use of 450 acre-feet from groundwater. Recent water usage in the City is well below the 1,950 acre-feet target, with water usage ranging from 1,882 acre-feet (2013) to 1,465 acre-feet (2016) and averaging 1,637 acre-feet over the last eight years. Even if one were to add the Project's entire water demand of 37.04 acre-feet per year to the highest water demand in recent years of 1,882

acre-feet, this would result in a City-wide water demand of 1,919 acre-feet, which is below the Safe Yield of 1,950 acre-feet.

In addition, the Project will comply with the City's water neutrality policy, meaning that the 37.04 acre-feet per year of water that would be used during Project operation would be completely offset through a combination of using the on-site water well for irrigation needs and implementation of water conserving measures. Notably, the existing on-site agricultural well is proposed to be used to provide non-potable supplies to the separately plumbed landscape irrigation systems throughout the Project site to irrigate public and private landscaping. The on-site well has sufficient capacity to meet the Project's estimated landscape water demand of 17.16 acre-feet per year. Moreover, to comply with the City's water neutrality policy, the Project applicant is required to off-set the Project's water demand as a condition of approval. To comply with Municipal Code section 13.12.030, the Project applicant shall identify and implement offsite improvements that reduce water loss from the public water distribution system and/or identify and implement offsite improvements that result in a net increase in potable water availability equivalent to 19.8 AFY, or a combination of these.

For these reasons and the reasons set forth in the EIR, the Project would result in a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.13-31 through 3.13-32.)

**3. Wastewater Treatment Capacity**

Threshold: Would the Project result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-32 through 3.13-33.)

Explanation: The City's Waste Water Treatment Plant ("WWTP") has adequate capacity to serve the Project's existing demand in addition to the WTTP's existing commitments. The WWTP is permitted, and has capacity, to discharge up to 0.5 MGD during dry weather and up to 2.8 MGD during wet weather of treated effluent. The Project is expected to generate an average of 0.018 MGD of wastewater. As the WWTP currently treats an average flow of 0.384 MGD, the additional 0.018 MGD combined with the current average flow of 0.384 MGD would not exceed the plant's permissible allowable average dry weather flow effluent of 0.5 MGD. Because adequate capacity is available at the WWTP to serve the Project, and for the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.13-32 through 3.13-33.)

**4. Landfill Capacity**

Threshold: Would the Project generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-33 through 3.13-34.)

Explanation: The Project would not generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, and it would not otherwise impair the attainment of solid waste reduction goals. During construction, the Project would contribute less than 0.1% of the Clover Flat Landfill's permitted capacity per day. As this is a relatively minimal contribution, the Clover Flat Landfill would have adequate landfill capacity for the Project's construction debris. During operation, the Project would contribute approximately 0.04 percent of the average unused daily capacity of the Clover Flat Landfill, and the Project would therefore not exceed the capacity of the landfill. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.13-33 through 3.13-34.)

**5. Solid Waste**

Threshold: Would the Project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-33 through 3.13-34.)

Explanation: The Project would comply with applicable federal, state, and local management and reduction statutes and regulations related to solid waste. Notably, the 2016 CALGreen Tier 1 mandatory measures require preparation of a Construction Waste Management Plan that documents the diversion of materials as required by CALGreen and at least 65% of nonhazardous construction waste would be required to be recycled or salvaged. The Project would comply with these mandatory measures. Additionally, the Project would comply with the City's Source Reduction and Recycling Element solid waste diversion requirement and the AB 939 solid waste diversion requirements. The Clover Flat Landfill provides mandated commercial recycling processing services, production of organic feedstocks for composting, and renewable energy generation. The Project would be required to comply with all applicable local and state solid waste diversion, minimization, and recycling regulations. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.13-33 through 3.13-34.)

**R. WILDFIRES**

**1. Impairment of Adopted Emergency Response Plan or Emergency Evacuation Plan**

Threshold: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project substantially impair an adopted emergency response plan or emergency evacuation plan?

Findings: Less-than-significant impact. (Draft EIR, p. ES-3.)

Explanation: The Project is not located on a site designated as a very high fire hazard severity zone ("VHFHSZ") by the California Department of Forestry and Fire Protection ("CalFire") and would therefore have a less-than-significant impact relating to this issue. Regardless, as noted above and discussed in the Draft EIR, the Project would not substantially impair an adopted emergency response plan or emergency evacuation plan. (Draft EIR, pp. 3.8-20 through 3.8-21.) For the foregoing reasons and the reasons discussed in the Draft EIR, the Project would not result in a significant impact relating to this issue, and no mitigation is required. (Draft EIR, p. ES-3.)

**2. Exacerbation of Wildfire Risks**

Threshold: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Findings: Less-than-significant impact. (Draft EIR, p. ES-3.)

Explanation: The Project is not located on a site designated as VHFHSZ by CalFire and would therefore have a less-than-significant impact relating to this issue. Regardless, the Project site is flat, so the Project would not expose Project occupants to fire hazards due to proximity to hilly terrain or landslides due to post-fire conditions. For the foregoing reasons and the reasons discussed in the EIR, the Project would not result in a significant impact relating to this issue, and no mitigation is required. (Draft EIR, p. ES-3.)

**3. Infrastructure-Related Wildfire Risks**

Threshold: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project require installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Findings: Less-than-significant impact. (Draft EIR, pp. 4.16-13 through 4.16-14.)

Explanation: The Project is not located on a site designated as VHFHSZ by CalFire and would therefore have a less-than-significant impact relating to this issue. Moreover, the Project does not require installation of infrastructure that could exacerbate fire risk. For the foregoing reasons and the reasons discussed in the EIR, the Project would not result in a significant impact relating to this issue, and no mitigation is required. (Draft EIR, p. ES-3.)

**4. Landslides and Slope Instability**

Threshold: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project expose people or structures to significant risks,

including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Findings: Less-than-significant impact. (Draft EIR, p. ES-3.)

Explanation: The Project is not located on a site designated as VHFHSZ by CalFire and would therefore have a less-than-significant impact relating to this issue. Regardless, the Project site is flat, so the Project would not expose Project occupants to fire hazards due to proximity to hilly terrain or landslides due to post-fire conditions. For the foregoing reasons and the reasons discussed in the EIR, the Project would not result in a significant impact relating to this issue, and no mitigation is required. (Draft EIR, p. ES-3.)

**SECTION 2. FINDINGS REGARDING ENVIRONMENTAL IMPACTS MITIGATED TO A LEVEL OF LESS THAN SIGNIFICANT**

The City Council hereby finds that feasible mitigation measures have been identified in the EIR and this Resolution that will avoid or substantially lessen the following potentially significant environmental impacts to a level of less than significant. The potentially significant impacts, and the mitigation measures that will reduce them to a less-than-significant level, are as follows:

**A. AESTHETICS**

**1. Light and Glare**

Threshold: Would the Project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Findings: Less than significant with mitigation incorporated. (Draft EIR, p. 3.1-41.) Changes or alterations have been required in, or incorporated into, the Project that avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: The Project would not create a new source of glare that would adversely affect day or nighttime views in the area, and the Project's impacts relating to glare would be less than significant. (Draft EIR, p. 3.1-34.)

The Project would introduce new light sources into an area that is currently undeveloped, and this could potentially impact nighttime views absent mitigation. To ensure that any aesthetic light-related impact of the Project is mitigated to a level of less than significant, the following mitigation measure has been identified:

> ***AES-1****: To minimize spillover light while ensuring adequate nighttime security, the Project applicant shall prepare lighting design guidelines for the Project to be reviewed and approved by the City as part of the Design Review process. The lighting design guidelines shall include a lighting plan noting fixtures and lumens, and standards such as, lighting*

*is to be shielded and downward focused to reduce glare and spillover light, up cast decorative lighting shall be limited to minimize effects on wildlife and to retain the rural ambience of the area, and the use of mirrored glass shall not be permitted. The lighting guidelines shall conform with Lighting Zone 2 of Title 24, Part 6, of the California Code of Regulations. The guidelines and lighting plan shall be approved as part of the Design Review application.*

Implementation of MM AES-1 would ensure that light introduced to the Project site would not adversely affect day or nighttime views in the area by minimizing spillover light and limiting up cast light. With implementation of MM AES-1, the Project's potential direct and cumulative impacts relating to new lights introduced to the Project site would be reduced to a level of less than significant. (Draft EIR, p. 3.1-41.)

**B. BIOLOGICAL RESOURCES**

**1. Special Status Species**

Threshold: Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U. S. Fish and Wildlife Service?

Findings: Less than significant with mitigation incorporated. (Draft EIR, pp. 3.4-43 through 3.4-49.) Changes or alterations have been required in, or incorporated into the Project that avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: No federal or state-listed wildlife species have the potential to occur on the Project site. Only a small number of special-status wildlife species have the potential to occur onsite—native bats, the white-tailed kite, and nesting and migratory birds. There is low potential for these species to occur on the Project site. Nevertheless, absent mitigation, the Project could have a potentially substantially adverse effect on these species.

*Native bats.* The Project is not anticipated to result in any direct impacts to roosting bats. Roosting habitat, such as rock outcrops, trees, caves, and human-made structures, are absent from the Project site. Additionally, the pallid bat is unlikely to roost on or near the Project site due to frequent human disturbance. Moreover, the Project would avoid potential roost sites within the vicinity of the Project site, such as the trees along the southeastern margin of the site.

Absent mitigation, the Project could potentially have indirect impacts on native bats. If bats were to roost in the area during construction, they could be indirectly impacted by construction-related noise. Indirect impacts to roosting bats could also result from increased light, glare, and activity associated with operation of the Project. To ensure that any potential impacts

relating to roosting bats are mitigated to a level of less than significant, the following mitigation measures have been identified:

> ***BIO-1:*** *A qualified biologist shall conduct a habitat assessment for bats in trees adjacent to the Project site within 2 weeks prior to any Project construction (site clearing, grading). The habitat assessment shall include a visual inspection of potential roosting features (bats need not be present) and presence of guano within the Project site and 50 feet around these areas. Potential roosting features found during the survey shall be mapped and described in a survey letter report. If roosting bats (individuals or colonies) are detected within the Project site, California Department of Fish and Wildlife shall be notified as soon as possible prior to any construction activity to confirm the bats can be avoided during construction. If a bat roosting or maternity colony cannot be completely avoided, a qualified biologist shall prepare a bat mitigation and monitoring plan for California Department of Fish and Wildlife review and approval, and that plan shall be implemented prior to commencement of construction that could impact the roosting bats or maternity colony.*

> ***AES-1****: To minimize spillover light while ensuring adequate nighttime security, the Project applicant shall prepare lighting design guidelines for the Project to be reviewed and approved by the City as part of the Design Review process. The lighting design guidelines shall include a lighting plan noting fixtures and lumens, and standards such as, lighting is to be shielded and downward focused to reduce glare and spillover light, up cast decorative lighting shall be limited to minimize effects on wildlife and to retain the rural ambience of the area, and the use of mirrored glass shall not be permitted. The lighting guidelines shall conform with Lighting Zone 2 of Title 24, Part 6, of the California Code of Regulations. The guidelines and lighting plan shall be approved as part of the Design Review application.*

Implementation of MM BIO-1 would ensure that measures be taken to avoid any potentially significant impact to roosting bats during construction of the Project. Additionally, implementation of MM AES-1 would address indirect impacts to native bats relating to spillover light, which can affect some species. With implementation of these required mitigation measures, potential direct, indirect, and cumulatively considerable impacts to native bats would be reduced to a level of less than significant. (Draft EIR, pp. 3.4-46 through 3.4-48.)

*White-tailed kites*. No white-tailed kites have been observed on or near the Project site during the 2011, 2015, 2018, or 2019 biological surveys of the site. Moreover, no tree removal is proposed as part of the Project, so no direct impacts (such as mortality and/or injury to nesting kites) are anticipated as a result of the Project. However, if white-tailed kites were to be breeding near the site before Project initiation, construction-related activities could potentially cause an adult kite to abandon an active nest that is in close proximity to the construction area, potentially leaving eggs or chicks vulnerable to predation or without provisions. In addition, increased lighting and glare associated with the Project's operation could result in indirect impacts to the white-tailed kites' nesting habitat. As explained below, mitigation is necessary to ensure that any potentially significant impact relating to white-tailed kites is mitigated to a level of less than significant.

*Nesting and migratory birds.* No active nests for nesting or migratory birds were documented on or near the Project site during the 2011, 2015, 2018, and 2019 biological surveys. However, trees, shrubs, grassland, and vineyards on or adjacent to the Project site provide potential nesting habitat for bird species protected under the Migratory Bird Treaty Act ("MBTA") and California Fish and Game Code section 3500. Direct impacts to nesting birds could result from vegetation clearing and site grading during Project construction. Potential indirect impacts to birds nesting near the Project site during construction would essentially be identical to those described above for white-tailed kite.

To ensure that any potential impacts relating to white-tailed kite and nesting and migratory birds are mitigated to a level of less than significant, the following mitigation measures have been identified:

> ***BIO-2:*** *If construction activities are scheduled to occur during the breeding season for birds (February 1 through August 31), the Project applicant or their contractor shall implement the following measures to avoid potential adverse effects to nesting raptors and other nesting birds:*
>
> - *Preconstruction surveys by a biologist of all potential nesting habitats within 500-feet of construction activities, where accessible, shall be conducted by a qualified biologist. Surveys shall occur no more than 14 days prior to the initiation of site disturbance. If construction is stopped for 14 days or more during the breeding season, a new preconstruction nesting bird survey must be conducted before work can be restarted to ensure no new nesting has occurred in the interim.*
>
> - *If preconstruction surveys indicate that nests are inactive or potential habitat is unoccupied during the construction period, no further mitigation is required, following submittal of a survey report letter to the City of St. Helena Planning Department.*

- *If active nests are found during preconstruction surveys, a no-disturbance buffer shall be created around active nests during the breeding season or until it is determined by the biologist that all the young have fledged. The buffers shall be established by the biologist in conjunction with the California Department of Fish and Wildlife. Typical buffers may include 500 feet for raptors and 50 to 250 feet for other bird species based on the location of the nest, the nesting species present, and types of construction activities that may cause potential nest abandonment. The perimeter of the buffer zone shall be fenced or marked with staked flagging.*

***AES-1**: To minimize spillover light while ensuring adequate nighttime security, the Project applicant shall prepare lighting design guidelines for the Project to be reviewed and approved by the City as part of the Design Review process. The lighting design guidelines shall include a lighting plan noting fixtures and lumens, and standards such as, lighting is to be shielded and downward focused to reduce glare and spillover light, up cast decorative lighting shall be limited to minimize effects on wildlife and to retain the rural ambience of the area, and the use of mirrored glass shall not be permitted. The lighting guidelines shall conform with Lighting Zone 2 of Title 24, Part 6, of the California Code of Regulations. The guidelines and lighting plan shall be approved as part of the Design Review application.*

Implementation of MM BIO-2 would ensure that measures be taken to avoid any potentially significant impact concerning white-tailed kite, nesting birds, and migratory birds during the avian nesting season. Additionally, implementation of MM AES-1 would address indirect impacts to white-tailed kite, nesting birds, and migratory birds relating to spillover light, which can affect some species. With implementation of these required mitigation measures, potential direct, indirect, and cumulatively considerable impacts to white-tailed kite, nesting birds, and migratory birds would be reduced to a level of less than significant. (Draft EIR, pp. 3.4-46 through 3.4-48.)

For the foregoing reasons and the reasons discussed in the EIR, impacts relating to this issue would be less than significant with the incorporation of MM BIO-1, MM BIO-2, and MM AES-1. (Draft EIR, pp. 3.4-43 through 3.4-49.)

**2. Wetlands**

Threshold: Would the Project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Findings: Less than significant with mitigation incorporated. (Draft EIR, p. 3.4-49.) Changes or alterations have been required in, or incorporated into, the Project that avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: The Project site supports 0.07 acres of wetlands, 870 linear feet of other waters, consisting of four seasonal wetlands and two agricultural ditches. Construction activities would result in the fill of the four wetlands, and construction of a retaining wall on or near the property line may potentially impact agricultural ditches by filling or otherwise altering the structure or flow of these features. (Draft EIR, p. 3.4-49.) To ensure that any potential impacts of the Project relating to wetlands are mitigated to a level of less than significant, the following mitigation measure has been identified:

> ***BIO-3:*** *Wetland permits (e.g., 404 Nationwide Permit, 401 Water Quality Certification, and 1602 Streambed Alteration Agreement, respectively) shall be obtained prior to any grading work. Prior to issuance of a grading permit, the Project applicant shall demonstrate authorization from the Army Corp of Engineers and any other regulatory agency to alter the wetland.*

Implementation of MM BIO-3, through the permitting process for waters of the state and waters of the U.S., compensation would be required for a loss of wetlands that can be avoided or replaced on-site. Compensation may be in the form of off-site replacement or purchase of approved mitigation banking credits. With implementation of MM BIO-3, potential direct, indirect, and cumulatively considerable impacts to wetlands would be reduced to a level of less than significant. (Draft EIR, p. 3.4-49.)

**3. Wildlife Movement and Nesting/Migratory Birds**

Threshold: Would the Project interfere substantially with the movement of any resident or migratory fish or wildlife species or with established native resident migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Findings: Less than significant with mitigation incorporated. (Draft EIR, pp. 3.4-50 through 3.4-51.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: The Project site does not function as a wildlife movement corridor due to the surrounding development, lack of connectivity with other undeveloped areas, and existing and

historic uses of the site. Moreover, the Project site does not provide suitable aquatic habitat for native resident or migratory fish species, and the Project site does not provide an essential habitat linkage or migratory corridor functions for resident or migratory wildlife. Additionally, existing permitting requirements and conditions of approval (e.g., MS4 Permit and the City's Stormwater and Runoff Pollution Control Ordinance) are sufficient to avoid water quality degradation and to meet water quality standards, rendering potential indirect impacts to any native resident or migratory fish via construction runoff in the Napa River less than significant.

Absent mitigation, the Project could potentially impede the use of native wildlife nursery sites. Although the annual grassland onsite does not provide adequate cover or nursery sites for many mammal species, trees along the edge of the site could provide suitable habitat for nesting birds and roosting bats. In addition, some birds may use the grassland for nesting when sufficient (i.e., tall) vegetation is present. Moreover, because the riparian corridor along the Napa River is located approximately 500 feet north of the Project site, absent mitigation, lighting and increased usage of the site by humans may result in indirect effects to local wildlife using the riparian corridor for nursery sites or as a migratory corridor. To ensure that any such potential impacts are mitigated to a level of less than significant, the following mitigation measures have been identified:

> ***AES-1****: To minimize spillover light while ensuring adequate nighttime security, the Project applicant shall prepare lighting design guidelines for the Project to be reviewed and approved by the City as part of the Design Review process. The lighting design guidelines shall include a lighting plan noting fixtures and lumens, and standards such as, lighting is to be shielded and downward focused to reduce glare and spillover light, up cast decorative lighting shall be limited to minimize effects on wildlife and to retain the rural ambience of the area, and the use of mirrored glass shall not be permitted. The lighting guidelines shall conform with Lighting Zone 2 of Title 24, Part 6, of the California Code of Regulations. The guidelines and lighting plan shall be approved as part of the Design Review application.*
>
> ***BIO-1:*** *A qualified biologist shall conduct a habitat assessment for bats in trees adjacent to the Project site within 2 weeks prior to any Project construction (site clearing, grading). The habitat assessment shall include a visual inspection of potential roosting features (bats need not be present) and presence of guano within the Project site and 50 feet around these areas. Potential roosting features found during the survey shall be mapped and described in a survey letter report. If roosting bats (individuals or colonies) are detected within the Project site, California Department of Fish and Wildlife shall be notified as soon as possible prior to any construction activity to confirm the bats can be avoided during*

*construction. If a bat roosting or maternity colony cannot be completely avoided, a qualified biologist shall prepare a bat mitigation and monitoring plan for California Department of Fish and Wildlife review and approval, and that plan shall be implemented prior to commencement of construction that could impact the roosting bats or maternity colony.*

***BIO-2:*** *If construction activities are scheduled to occur during the breeding season for birds (February 1 through August 31), the Project applicant or their contractor shall implement the following measures to avoid potential adverse effects to nesting raptors and other nesting birds:*

- *Preconstruction surveys by a biologist of all potential nesting habitats within 500-feet of construction activities, where accessible, shall be conducted by a qualified biologist. Surveys shall occur no more than 14 days prior to the initiation of site disturbance. If construction is stopped for 14 days or more during the breeding season, a new preconstruction nesting bird survey must be conducted before work can be restarted to ensure no new nesting has occurred in the interim.*

- *If preconstruction surveys indicate that nests are inactive or potential habitat is unoccupied during the construction period, no further mitigation is required, following submittal of a survey report letter to the City of St. Helena Planning Department.*

- *If active nests are found during preconstruction surveys, a no-disturbance buffer shall be created around active nests during the breeding season or until it is determined by the biologist that all the young have fledged. The buffers shall be established by the biologist in conjunction with the California Department of Fish and Wildlife. Typical buffers may include 500 feet for raptors and 50 to 250 feet for other bird species based on the location of the nest, the nesting species present, and types of construction activities that may cause potential nest abandonment. The perimeter of the buffer zone shall be fenced or marked with staked flagging.*

Implementation of MM AES-1 would ensure that lighting associated with the Project would adhere to guidelines and standards that reduce glare and spillover light and would ensure that indirect impacts to wildlife relating to light would be reduced to a level of less than significant. Implementation of MM BIO-1 would avoid any potentially significant impact to roosting bats

during construction of the Project, while implementation of MM BIO-2 would avoid any potentially significant impact concerning white-tailed kite, nesting birds, and migratory birds during the avian nesting season. With implementation of MM AES-1, BIO-1, and BIO-2, potential direct, indirect, and cumulatively considerable impacts relating to this issue would be reduced to a level of less than significant. (Draft EIR, p. 3.4-50.)

**C. CULTURAL RESOURCES**

**A. Historical Resources**

Threshold: Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

Findings: Less than significant with mitigation incorporated. (Draft EIR, pp. 3.5-26 through 3.5-29.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: The Project site is undeveloped and there are no buildings present on the Project site that could be considered historical resources under CEQA; therefore, the Project would not have an impact any historical buildings. There are archaeological resources, however, on the Project site that qualify as a historical resource under CEQA. Notably, the Project site is intersected by CA-NAP-406, which is a small site on which 5,711 pieces of lithic debitage, 17 bifaces, one core, seven edge-modified flakes, one hammerstone, 101 charcoal fragments, seven pieces of baked clay, and 40 historical-era artifacts were found. CA-NAP-406 has been determined to be eligible for inclusion in the National Register of Historic Properties ("NRHP") and the California Register of Historic Properties ("CRHP"). Previous investigations evaluating CA-NAP-406, however, were restricted to portions of this resource located west of the Project site. Phase 1 and Phase 2 archaeological excavations, as well as a ground-penetrating radar ("GPR") investigation, were conducted on the Project site, and based on this evidence, no intact deposits or features associated with CA-NAP-406 appear to extent to within the Project site. It is likely that the upper layer of fill present on a majority of the Project site is comprised largely of redeposited and otherwise disturbed cultural deposits associated with CA-NAP-406. Soils identified below the fill were not found to contain cultural deposits or substantial frequencies of cultural material. However, because there is the potential to unearth unknown resources during Project construction, there could be a potentially significant impact to subsurface archaeological resources, absent mitigation. To ensure that any such potential impacts are mitigated to a level of less than significant, the following mitigation measure has been identified:

> ***CUL-1:*** *The City shall require that an archaeological monitor is present during all ground-disturbing activities with the potential to impact previously identified cultural resources or to encounter unanticipated cultural deposits including tribal cultural resources. The determination for*

*a Native American monitor to be present shall be made by the City, in consultation with the appropriate Native American tribe prior to the initiation of ground disturbing activities. In addition, prior to the initiation of ground-disturbing work, construction crews shall be made aware of the potential to encounter cultural resources and the requirement for cultural monitors to be present during these activities. Areas observed to have potential to contain yet-identified subsurface cultural material or deposits are located throughout the Project site, but primarily would be in the western portion of the site where the existing vineyard is located. It is anticipated resources would not be present in depths of more than 10 feet below the surface. Archaeological and Native American monitoring may be adjusted at the recommendation of the qualified archaeological principal investigator, meeting the Secretary of the Interior Professional Qualifications for Archaeology, and in consultation with the City, based on inspection of exposed subsurface soils and their observed potential to contain intact cultural deposits or material.*

*The archaeological and tribal monitors shall be provided a copy of technical reports prepared for the Project and pertinent appendices to inform their monitoring efforts. The archaeological and tribal monitors shall have the authority to temporarily halt work to inspect areas as needed for potential cultural material or deposits. In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities, all construction work occurring within 100 feet of the find shall immediately stop until the qualified archaeological principal investigator, that meets the Secretary of the Interior Professional Qualifications for Archaeology, can evaluate the significance of the find and determine whether or not additional study is warranted, in consultation with the Tribe. Should it be determined by the Tribe and the archeologist, temporary flagging may be installed around this resource in order to avoid any disturbances from construction equipment. As approved by the City, in consultation with the Tribe this buffer may be adjusted by the Tribe and the archaeological principal investigator to a distance that maintains a protective perimeter around the unanticipated resource, while still allowing for construction to continue in the surrounding area.*

Compliance with Mitigation Measure CUL-1 would ensure that proper procedures and protocol are in place in the event a resource is identified. The procedures require work to stop in the event a resource is discovered and require an archaeologist and/or Native American

representative to be contacted to determine the appropriate course of action depending on the resource. For the reasons discussed herein and the reasons discussed in the EIR, compliance with MM CUL-1, along with Public Resources Code section 5097.98, California Health and Safety Code section 7050.5, and State CEQA Guidelines section 15064.5(e), would ensure that potential direct, indirect, and cumulatively considerable impacts relating to this issue would be reduced to a level of less than significant. (Draft EIR, pp. 3.5-26 through 3.5-29.)

**B. Archaeological Resources**

Threshold: Would the Project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Findings: Less-than-significant impact with mitigation incorporated. (Draft EIR, pp. 3.5-29 through 3.5-30.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: A Cultural Inventory Report and Extended Phase I and Phase II Reports were prepared for the Project, which explain that three archeological sites were previously identified within the Project site (CA-NAP-406, CA-NAP-843, and CA-NAP-1008), two of which (CA-NAP-843 and CA-NAP-1008) were determined not to be NRHP/CRHR eligible. The Cultural Inventory Report determined that impacts to CA-NAP-843 and CA-NAP-1008 would not represent a significant effect, although appropriate mitigation to account for unanticipated impacts would be required. Resource CA-NAP-406 has been determined to be eligible for CRHR (Criterion 4) and NRHP (Criterion D) listing. The Phase I and Phase II archaeological excavations and GPR investigation did not identify any intact deposits or features associated with CA-NAP-406 within the Project site. However, the Project could result in a potentially significant impact relating to this issue absent mitigation, due to the sensitivity of the site for unknown archeological resources that may be present subsurface that could be unearthed during construction activities. To ensure that any such potential impacts are mitigated to a level of less than significant, the following mitigation measure will be implemented:

> ***CUL-1:*** *The City shall require that an archaeological monitor is present during all ground-disturbing activities with the potential to impact previously identified cultural resources or to encounter unanticipated cultural deposits including tribal cultural resources. The determination for a Native American monitor to be present shall be made by the City, in consultation with the appropriate Native American tribe prior to the initiation of ground disturbing activities. In addition, prior to the initiation of ground-disturbing work, construction crews shall be made aware of the potential to encounter cultural resources and the requirement for cultural monitors to be present during these activities. Areas observed to have*

*potential to contain yet-identified subsurface cultural material or deposits are located throughout the Project site, but primarily would be in the western portion of the site where the existing vineyard is located. It is anticipated resources would not be present in depths of more than 10 feet below the surface. Archaeological and Native American monitoring may be adjusted at the recommendation of the qualified archaeological principal investigator, meeting the Secretary of the Interior Professional Qualifications for Archaeology, and in consultation with the City, based on inspection of exposed subsurface soils and their observed potential to contain intact cultural deposits or material.*

*The archaeological and tribal monitors shall be provided a copy of technical reports prepared for the Project and pertinent appendices to inform their monitoring efforts. The archaeological and tribal monitors shall have the authority to temporarily halt work to inspect areas as needed for potential cultural material or deposits. In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities, all construction work occurring within 100 feet of the find shall immediately stop until the qualified archaeological principal investigator, that meets the Secretary of the Interior Professional Qualifications for Archaeology, can evaluate the significance of the find and determine whether or not additional study is warranted, in consultation with the Tribe. Should it be determined by the Tribe and the archeologist, temporary flagging may be installed around this resource in order to avoid any disturbances from construction equipment. As approved by the City, in consultation with the Tribe this buffer may be adjusted by the Tribe and the archaeological principal investigator to a distance that maintains a protective perimeter around the unanticipated resource, while still allowing for construction to continue in the surrounding area.*

Compliance with Mitigation Measure CUL-1 would ensure that proper procedures and protocol are in place in the event a resource is identified. The procedures require work to stop in the event a resource is discovered and require an archaeologist and/or Native American representative to be contacted to determine the appropriate course of action depending on the resource. For the reasons discussed herein and the reasons discussed in the EIR, compliance with MM CUL-1, along with Public Resources Code section 5097.98, California Health and Safety Code section 7050.5, and State CEQA Guidelines section 15064.5(e), would ensure that potential direct, indirect, and cumulatively considerable impacts relating to this issue would be reduced to a level of less than significant. (Draft EIR, pp. 3.5-29 through 3.5-30.)

### C. Human Remains

Threshold: Would the Project disturb any human remains, including those interred outside of formal cemeteries?

Findings: Less-than-significant impact with mitigation incorporated. (Draft EIR, pp. 3.5-30 through 3.5-31.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: A substantial level of archaeological investigation work was conducted to analyze the potential impacts of the Project, including a Cultural Inventory Report, Extended Phase I and Phase II Reports, and a GPR investigation that looked for any subsurface anomalies to a depth of approximately 26 feet below the surface. No human remains have been documented or have been found during the archaeological investigation work conducted for the Project. Nevertheless, due to the high archeological sensitivity of the area around the Project site, it is possible to inadvertently uncover human remains during ground-disturbing Project activities, such as grading and excavation. To ensure that any such potential impacts are mitigated to a level of less than significant, the following mitigation measure will be implemented:

> ***CUL-2:*** *In the event any human remains are unearthed during site disturbing activities, Section 7050.5(b) of the California Health and Safety Code and Section 15064.5(e) of the CEQA Guidelines specifies protocols to follow in the event human remains are discovered. The Code mandates stopping work within 100 feet of the find and contacting the County Coroner to determine the origin of the remains. If the remains are determined to be Native American the Coroner shall contact the Native American Heritage Commission within 24 hours to request that the Commission determine the person or persons it believes to be the most likely descendent from the deceased Native American. The most likely descendent shall be provided with the opportunity to make recommendations regarding the means of treating or disposing of the remains with appropriate dignity. Project-related ground disturbance in the vicinity of the find shall not resume until all statutory requirements have been met and evidence of completion has been submitted to the City, in consultation with the Tribe.*
