City of St. Helena
Special City Council Meeting
Monday, June 26, 2023 @ 6:00 PM
Vintage Hall Board Room - Second Floor
465 Main Street, St. Helena

PLEASE NOTE: Any person who wishes to speak regarding an item on the agenda or make a comment under the "Oral Communication" portion of the agenda may do so, but please observe the time limit of four minutes.

The City Council meeting will be live-streamed on Comcast Channel 28 and on the City's website.

Public comment **for City Council meetings will be accepted via email to publiccomment@cityofsthelena.org. All public comments must be received three hours prior to the meeting. All other public comments received after the deadline will be attached to the item the next business day or soon thereafter. Public comments will not be read out loud but will be publicly available and attached to the on-line City Council agenda.**

Simultaneous Spanish interpretation services during meetings can be scheduled upon request. To ensure interpreters are available, requests must be made at least 72 hours in advance by calling the Office of the City Clerk at (707) 968-2640 or emailing cityclerk@cityofsthelena.org.
The schedule of upcoming meetings and published meeting agendas can be found on the City of St. Helena website at https://sthelena.civicweb.net/portal/.

Servicios de interpretación en español durante la reunión pueden ser solicitados por el público. Para asegurar que los intérpretes estén disponibles, los servicios tienen que ser solicitados al menos 72 horas antes de la reunión llamando a la oficina de la Secretaria de la Ciudad al (707) 968-2640 o por correo electrónico a cityclerk@cityofsthelena.org .
El horario de las reuniones publicadas y próximas puede ser localizado en el sitio de web de la Ciudad en https://sthelena.civicweb.net/portal/ .

1. CALL TO ORDER
2. PLEDGE OF ALLEGIANCE
3. ROLL CALL
   Mayor: Paul Dohring, Vice Mayor Eric Hall:, City Council Members: Anna Chouteau, Lester Hardy, Billy Summers
4. ADOPTION OF THE AGENDA
5. PUBLIC COMMENT:
   Under California law, public comments at special meetings are limited to subjects on the agenda only. Therefore public comment will take place during consideration of the item. Each person's comments shall be limited to 4 minutes.
6. NEW BUSINESS:

6.1. Request by Ben and Kelly Van Zutphen to subdivide a 16.9-acre parcel to establish 51 single-family residential lots, 11 of which are proposed with accessory dwelling units on approximately 13.4 acres. A 3.13-acre parcel will be established to accommodate a 25-unit multi-family housing development. Two additional remnant parcels (Parcel A; 0.06 acres) and (Parcel B; 0.04 acres) will remain with no plans for future development. A total of 87 units are intended to be built. The currently vacant project site is located north of Hunt Avenue and east of the future extension of Adams Street within the Medium Density Residential (MR) Zoning and (MDR) General Plan districts. 5 - 950

CEQA Determination: Environmental Impact Report
Prepared By: Eric Norris, Planning Consultant
Recommendation:
After considering the project, staff report, supporting documents, technical studies and all testimony, written and spoken, the Planning Commission of the City of St. Helena recommends that the City Council:

1. Adopt the attached Resolution certifying the Final EIR, and approving a Mitigation Monitoring Program, Findings of Fact and Statement of Overriding Considerations; and

2. Adopt the attached Resolution approving the requested Tentative Map No. 2022-001, File #PL10-040 for the Hunter Subdivision project.

7. ADJOURNMENT

The next Regular City Council meeting is scheduled for June 27, 2023, at 6:00 p.m.

This agenda was posted at City Hall, 1088 College Avenue, and at Vintage Hall, 465 Main Street, St. Helena, California on June 9, 2023.

Cindy Tzafopoulos, City Clerk

In Compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please call the City Clerk's Office (707) 967-2792. Notification 72 hours prior to the meeting as required by

Section 202 of the Americans with Disabilities Act will enable the City to make reasonable arrangements to ensure accessibility to this meeting.

Any supplemental writings or documents distributed to a majority of the City Council regarding any item on this Agenda, after the posting of the Agenda, will be available for public review in the City Clerk's Office located at 1088 College Avenue, St. Helena, California, during normal business hours and by appointment. In addition, such writings or documents will be made available on the City's web site at https://sthelena.civicweb.net and will be available for public review at the respective meeting.

Report to the City Council
Special City Council - 26 Jun 2023

Agenda Section: **NEW BUSINESS:**

Subject: **Request by Ben and Kelly Van Zutphen to subdivide a 16.9-acre parcel to establish 51 single-family residential lots, 11 of which are proposed with accessory dwelling units on approximately 13.4 acres. A 3.13-acre parcel will be established to accommodate a 25-unit multi-family housing development. Two additional remnant parcels (Parcel A; 0.06 acres) and (Parcel B; 0.04 acres) will remain with no plans for future development. A total of 87 units are intended to be built. The currently vacant project site is located north of Hunt Avenue and east of the future extension of Adams Street within the Medium Density Residential (MR) Zoning and (MDR) General Plan districts.**

CEQA Determination: **Environmental Impact Report**

Prepared By: Eric Norris, Planning Consultant

Reviewed By: April Mitts, Assistant City Manager

Approved By: Anil Comelo, City Manager

BACKGROUND

PLANNING COMMISSION ACTION

On February 7, 2023, the Planning Commission of the City of St Helena held a duly noticed public hearing to consider the Hunter project's Environmental Impact Report and the proposed Tentative Map. At the conclusion of the February 7 meeting, the Planning Commission voted 4-0 (member Rothfeld was absent) to 1) approve Planning Commission Resolution PC2023-001, recommending that the City Council certify the Final Environmental Impact Report for the proposed project and adopt a Statement of Overriding Considerations, and 2) approve Planning Commission Resolution PC2023-002, recommending that the City Council approve Tentative Map TM2022-001.

BACKGROUND

A detailed discussion of the project's background is provided in the May 1, 2023, City Council staff report (included in Attachment 8 to this report). Topics addressed in the May 1 report include:

- 1993 General Plan
- Zoning History

PROJECT PROCESSING

The proposed project being considered by the City Council at this time is a Tentative Subdivision Map to subdivide an approximately 17-acre parcel of land in the eastern area of the city, east of the existing terminus of Adams Street. The proposed subdivision would create lots for 51 single family homes, and a separate parcel (lot 52) on which multi-family attached housing units would be built. The proposed Tentative Subdivision Map is included as Attachment 9 to this report.

Additional information on the proposed project is included in the May 1, 2023, City Council staff report.

ANALYSIS

A complete, detailed analysis of the proposed project is provided in the May 1, 2023, City Council staff report. Topics addressed in the Analysis include:

- Required findings for approval of a Tentative Map
- Required findings to deny a "housing development project" per state law
- Consistency with the 1993 General Plan
- Consistency with the Zoning Code
- Design of the subdivision for passive or natural heating or cooling.

CEQA

A comprehensive draft environmental impact report (EIR) was prepared for the proposed project and circulated for public review from September-November 2021. A final EIR, which includes all of the comments received during the public review period and responses to the comments, has been prepared.

Additional information on the Draft and Final EIR are included in the May 1, 2023, City Council staff report. Topics in the May 1 staff report include:

- Topics addressed in the Draft EIR
- Alternatives Considered
- Potentially Significant Impacts
- Significant and Unavoidable Impact: Vehicle Miles Traveled
- Statement of Overriding Considerations
- Public and Agency Comments on the Draft EIR
- Mitigation Monitoring and Reporting Plan

DISCUSSION

PROJECT ISSUES

The May 1, 2023, City Council staff report provides a detailed discussion of a wide variety of issues related to the project, including:

- Water Neutrality
- Trail/Open Space
- Levee/Flooding
- Parking
- Aesthetics
- Sewer Capacity
- "High Density" Nature of the Project
- Traffic/Congestion
- Intersection Design Adams Street/Starr Avenue and Starr Avenue/Street A
- Vacation of City Property

Please see the May 1 staff report (attachment 7 to this report) for a discussion of these issues.

ADDITIONAL ISSUES FROM THE MAY 1, 2023 CITY COUNCIL MEETING

The following are issues raised at the May 1 City Council meeting, either in public comments or the Council's discussion. Staff's responses are provided.

1. Emergency Evacuation—Many commentors expressed concern that the addition of new homes in the area would hinder the evacuation of persons in the area (and particularly in the Vineyard Valley mobilehome community) during an emergency.

Staff's Response: This issue has been raised many times in public comments on the Draft EIR and the proposed project. Staff understands the concerns expressed by residents. However, staff's conclusion, based on consultation with the St Helena Police and Fire departments, is that the addition of new homes will not negatively affect the ability of the area to evacuate in time of emergency.

For more information, please see Final EIR Master Response #1, "Emergency Evacuation," included as Attachment 1 to this report.

2. Levee Safety—Many commentors expressed concern about the design and maintenance of the adjacent levee. Some commentors have suggested that the levee's integrity is being compromised by the presence of gopher burrows, which they assert results from what they believe is an inadequate program of inspection and maintenance.

Staff's Response: Detailed responses to these and other comments related to the levee and its design and maintenance are included in Attachment 3, Final EIR Master Response #3, "Napa River Flood Protection/Levee."

Records of levee inspections verifying that the levee has been inspected for rodent burrows are available on the City's web site:

https://www.cityofsthelena.org/publicworks/page/flood-control-and-river-restoration-project

3. Affordable Housing/Relationship of the Project to Meeting RHNA Allocations—Several commentors expressed concern that housing in the proposed project "will not be affordable."

Staff's Response: As required by the St Helena Municipal Code, 20 percent of the homes in the project will be affordable to very low, low, and moderate income households. There will be no restrictions on the price of the remaining units, but the City's requirement for affordability will apply to 20 percent of the housing units.

The proposed project is required to comply with the City's Inclusionary Housing requirements (Chapter 17.146 of the St Helena Municipal Code) however it is not required that the inclusionary housing agreement be completed as part of the Tentative Map; a detailed Affordable Housing Agreement spelling out the exact number of units in each income category and where they will be located must be approved by the City Council before a Final Map can be approved (proposed condition of approval #28).

By providing both market-rate and affordable units, the proposed Hunter Project represents about one-third of the 256 housing units allocated to the City in the current 6th Cycle Regional Housing Needs Allocation (RHNA). If the Hunter project is not approved, another location (or locations) would need to be located to build these units. Staff suggests that the Hunter site, which has been proposed for residential development for at least 30 years in the General Plan, is an appropriate location on which to help the City meet its mandated housing needs.

4. Letters from Attorneys—The City received two letters from a law firm (DP&F) representing opponents of the proposed project: "RE: Hunter Subdivision Project Tentative Map No. 2022-001, File #PL10-040," April 30, 2023; and "RE: Hunter Subdivision Project Environmental Impact Report. 2022-001, File #PL10-040," April 30, 2023. The letters raise a number of issues related to the environmental impact report and the recommended approval of the proposed tentative map. The letters are provided as Attachment 4 to this staff report.

Staff's Response: Detailed responses to the DP&F letters, prepared by the City Attorney's office, are provided as Attachment 5 to this staff report.

5. Spanish Language Outreach—Some commenters and City Council members expressed concern that there was no specific Spanish-language outreach associated with the Hunter project. They question whether Spanish-speaking households should have been provided with information in their native language.
Staff's Response: The City currently does not have a policy requiring that public notices for development projects be provided in any language other than English. This is a policy which the City Council may wish to discuss for future projects. All noticing and materials for the Hunter project comply with current City requirements.

6. Status of the Onsite Well—Several commentors, including attorneys representing project opponents and Water Audit California, have suggested that the existing onsite well is not available to be used as proposed to irrigate outdoor landscaping in the proposed project. (The applicant has proposed using the well for all outdoor needs to reduce the need for City-supplied potable water.) Correspondence from project opponents and Water Audit California assert that the well falls into a category of "abandoned" under state law and, therefore, a new permit would need to be obtained (replacing the well's existing 1976 permit). The commentors then assert that the new permit would be subject to severe limitations on water extraction which would be substantially lower than the amount of water use proposed by the applicant.

Staff's Response: Based on a review of the correspondence and relevant state law, staff concludes that the statutes referred to (by Water Audit California in particular) are intended to address wells which have been entirely abandoned and which need to be properly dismantled and capped to prevent accidents. The well in question, although not currently connected to electrical service, on the other hand, is not abandoned, is fully operational, and was verified in 2021 to be able to be pumped at levels exceeding the proposed usage. The limitations which the commentors suggest apply to the well do not, in fact, apply and will not limit use of the well.

7. Statement of Overriding Considerations—Several City Council members discussed the proposed Statement of Overriding Considerations (SOC), which must be adopted due to the presence of one unavoidable adverse impact of the proposed project (too many Vehicle Miles Traveled, or "VMT"). The SOC, in simple terms, is a statement of the reasons why the proposed project's benefits outweigh the adverse impact that would result. Councilmembers asked what would happen if the SOC were not adopted, and whether the project's benefits in fact outweigh its impact on VMT.

Staff's Response: Detailed information on the Statement of Overriding Considerations is provided in the May 1 City Council staff report; the complete text of the SOC is included in the CEQA Resolution attached to this staff report (Attachment 6). Staff's recommendation is that the impact at hand—that the number of miles that will be driven by residents of the proposed project exceeds the standard at issue—is outweighed by the benefits of providing more housing in St Helena and in particular providing 20 percent of units at prices/rents affordable to very low, low, and moderate income households. As discussed earlier in this report, building housing at this site would meet

approximately one-third of the City's current Regional Housing Needs Allocation, an important goal of the City as it seeks to maintain conformance with state housing mandates.

If the SOC is not adopted, project approval could not proceed, the tentative map would not be approved, and development of housing at the project site would not occur. This could in turn lead to a number of adverse outcomes, including potential legal challenge of the Council's decision, issues with the State of California Department of Housing and Community Development (which enforces compliance with state housing law), and increase the risk that the City would receive future "builder's remedy" projects (under the Housing Accountability Act, cities that do not have a housing element in substantial compliance with state law cannot deny certain housing projects, even if they are not in compliance with the City's zoning or general plan). For these reasons, staff recommends that the City Council adopt the Statement of Overriding Considerations.

8. Future Applications—Several Councilmembers asked about future applications which will need to be approved before the project can be developed, and whether additional information is available about these applications.

Staff's Response: The following applications will need to be approved if the tentative map is approved:

- Affordable Housing Agreement—Must be approved by the City Council at a public meeting prior to approval of the Final Map

- Final Map/Subdivision Improvement Agreement (CC)—Must be approved by the City Council before the Final Map is recorded

- Conditional Use Permit for Multi-Family (PC)—Must be approved by the Planning Commission before the multi-family homes can be built

- Design Review (PC)—Must be approved by the Planning Commission before the single family and multi-family homes can be built

There are also numerous conditions of approval as noted in the resolution which will need to be satisfied before the final map can be approved and recorded and building permits issued.

Staff does not have additional information at this time on the details of any of these applications. All of the applications will require a public hearing or be considered at a public meeting of the approving body (Council or Planning Commission) at which the public will be able to provide written and oral comments.

9. Extension of Adams Street to Silverado Trail—Several commentors have asked why the applicant is not required to either build or contribute to the extension of Adams Street to Silverado Trail.

Staff's Response: The extension of Adams Street to Silverado Trail is one of two alternatives included in the General Plan to connect downtown to Silverado Trail. General Plan policy CR1.C states as follows [italics added]:

"CR1.C Evaluate the following new connections to promote increased bicycle, pedestrian, and non-automobile-based transportation, consistent with the requirement for the preparation of a "Special Study" as described in the Circulation Element. Where feasible, preserve existing rights-of-way.

- Starr Avenue extension north to Adams Street
- Consider three options for a connection to Mills Lane: a) Starr Avenue extension to Mills Lane; b) College Avenue extension to Mills Lane; or c) Allison Avenue extension to Mills Lane
- Adams Street from its current eastern terminus to Starr Avenue
- Consider two options to connect downtown St. Helena to Silverado Trail: a) Adams Street extension to Silverado Trail; b) Mills Lane extension to Silverado Trail"

To date, a special study has not been undertaken and the City Council has not made a choice about the appropriate route to connect downtown to Silverado Trail.

The Hunter project is not required to provide the connection to Silverado for several reasons:

1. The City has not yet decided which route to choose (Adams Street or Mills Lane) to connect downtown to Silverado Trail.
2. The proposed project does not require this roadway to provide acceptable circulation. The project adds very small levels of congestion to a handful of intersections, but these impacts to not rise to the level of requiring a substantial new roadway (and a bridge over the Napa River) to correct.
3. The project will pay development impact fees which can be combined with fees from other projects and other funding sources to construct whichever connection to Silverado Trail is ultimately selected by the City.

The proposed project does include the construction of extensions of Adams Street (partial extension to provide access to northern project entrance) and Starr Avenue, which are included in General Plan policy CR1.C. The project does not preclude the eventual extension of Adams Street, since the alignment of that future roadway is outside of the physical limits of the Hunter project.

10. Water Neutrality (Will Project Make City's Water Situation Worse?)—Many commentors have expressed concern that the Hunter project will negatively affect the

City's water system by adding demand for City-provided water. These concerns generally include questions about projected water use and the ability of the project to achieve water neutrality.

Staff's Response: The issue of the City's Water Neutrality requirements has been considered and is the subject of extensive discussion in prior staff reports, the project's Draft EIR, and the Final EIR. Please refer to Attachment 2, Master Response #2 in the Final EIR, "St. Helena Water Supply and Water Neutral Policy For Development," which addresses this issue.

As noted in the discussion of issue #6 above (the status of the onsite well), staff's conclusion is that the onsite well can be used as proposed to provide water for outdoor uses (mostly irrigating landscaping), providing about half of the water savings needed to fully offset the project's water use. The project's conditions of approval require the installation of water-conserving projects elsewhere in St Helena to achieve the rest of the required water savings.

11. Proposed Accessory Dwelling Units—Several commentors asked whether the City would require that the proposed Accessory Dwelling Units (to be built with 11 of the single family homes) are rented to low-income households.

Staff's Response: The proposed Accessory Dwelling Units (ADUs) will not be counted toward the project's required affordable housing (see the discussion of issue #3, above). Because the ADU units will not be part of the required affordable units, and consistent with City practice for other ADUs, the City will not require that these units are rented to low-income households. The use of the ADUs will be up to the owners of the homes with which they are built.

12. Tom Belt Comments: Water Use Projections Are Too Low/Water Use Criteria "Lacks Validation"—This commentor suggests that the project's projected interior water use is too low, citing a 34.9-gallons-per-capita figure used to calculate total water use.

Staff's Response: The 34.9-gallons-per-day figure is based on dividing the projected interior water use of 279 gallons per day per single family home by the number of persons (8, based on 2 persons per bedroom in a 4-bedroom home) used in the calculations. Using the City's average household size of 2.2 persons, the per-capita use is 127 gallons per day.

By comparison, the State of California Department of Water Resources reported in 2021 that, "…current statewide median indoor residential water use is 48 gallons per capita per day, and that a quarter of California households already use less than 42 gallons per capita per day."

[https://water.ca.gov/News/News-Releases/2021/Nov-21/State-Agencies-Recommend-Indoor-Residential-Water-Use-

Standard#:~:text=The%20report%20notes%20that%20the,gallons%20per%20capita%20per%20day.]

The calculations used to project future water use are therefore conservative. Projected daily water use per person (using St Helena's average household size) is approximately three times higher than the statewide average.

13. Tom Belt Comments: Will City Ensure That Water Use Will Not Exceed Projections?—This commentor asked whether the City would ensure that water use does not exceed projections.

Staff's Response: The City meters water use per household, but to date has not implemented any type of program which would flag homes with excessive water use. As noted above, the projected per-person water use for the project is about three times higher than the statewide average, the likelihood that water use will exceed projections is very low.

14. Tom Belt Comments: In-Lieu Fee to Offset Water Use?—This commentor asked whether an in-lieu fee to offset projected water use is too low and would not achieve enough mitigation. The commentor also asked if an in-lieu fee would be adjusted if water use was higher than projected.

Staff's Response: The proposed conditions of approval do not allow the payment of an in-lieu fee to offset the project's water use. Condition of approval #73 requires that the developer build and bring on line one or more projects that would reduce water use in the city or provide additional supply.

As noted in the discussion of issue #12, the water use projections for the project are conservative and not likely to be exceeded. Also, as discussed for issue #13, the City does not monitor household water use, so there is no current process in place to provide for penalties or fees if water use projections are exceeded.

15. Change.Org Petition—In late April, 2023, an online petition in opposition to the Hunter project was posted on the web site Change.org (https://www.change.org/p/save-the-city-of-st-helena-urge-city-council-to-vote-no-on-the-hunter-eir). After reviewing the information in the petition, staff prepared and circulated a press release correcting several factual errors. The press release is included as Attachment 10 to this staff report.

16. Water Audit California Comment Letter—On May 1, 2023 (the date of the previous City Council hearing), Water Audit California delivered a letter Attachment to the City Council and other city officials commenting on and raising concerns about the CEQA process which has been followed for the Hunter project and the adequacy of the analysis of water use and water neutrality. The letter is included as Attachment A letter responding to the Water Audit California letter is provided as Attachment 12.

CITY COUNCIL HEARING 6-26-23

Responses to letters received after publication of this staff report will be attached to the agenda.

CONDITIONS OF APPROVAL

The Resolution for approval of the proposed tentative map includes recommended conditions of approval which include the following minor changes from the conditions included in the Resolution prepared for the May 1 City Council meeting.

COA #69 is proposed to be deleted. As discussed in the attached memorandum from the City of St Helena Fire Department (Attachment 13 to this report), the proposed emergency vehicle access (EVA) from Street A to the levee road is no longer warranted, based in the availability of access to and from the Hunter subdivision on local streets and the designation of the levee road in 2018 as the evacuation route for residents of the Vineyard Valley mobile home community.

~~*69. EVA: From Street A to levee: Prior to the issuance of a Certificate of Occupancy, the emergency vehicle access road (EVA) shall be improved to provide an all-weather access road (paved) from Street A up to the existing levee road to the north. The width of the EVA shall be a minimum of 21 feet from face of curb to face of curb within an overall 25 ft. wide dedicated EVA. The EVA shall accommodate emergency vehicles (must provide for turning radii to accommodate fire vehicles as per the Fire Department requirements.) Turning templates shall be provided with the improvement plans during the plan check process to ensure the EVA can accommodate Fire Department apparatus.*~~

COA #88 is proposed to be revised to clarify the storm drain improvements the condition refers to, and that the developer is responsible for installing these improvements:

COA #88: Prior to the issuance of the first building permit, all City-required ***in-tract drainage*** *improvements* ***as shown on the proposed Tentative Map*** ~~*related to storm water for the project*~~ *shall be installed by the project developer at* ~~*it's*~~ ***the developer's*** *expense. Drainage improvements shall be designed* ~~*and funded by the developer*~~ *in accordance with the Design Criteria utilizing the rationale method and any applicable adopted City drainage plans.*

COA #90 is proposed to be revised to correct a reference to another condition (COA #91):

COA #90: Post-development flows storm water discharge from parcel 009-030-057 shall not exceed the pre-development discharge including the projected build-out, expressed as 30% undeveloped pervious and 70% impervious drainage watershed. Applicant shall prepare an analysis to show compliance with this COA. Refer to COA #90 #91 for additional requirements of the analysis.

COA #91 is proposed to be revised to clarify the use of a Reimbursement Agreement through which the City will reimburse the applicant for offsite drainage improvements:

COA #91: Prior to building permit issuance, the applicant shall provide to the City an analysis of the capacity and condition of existing drainage facilities downstream of the development (including any detention/retention ponds), including recommendations for offsite drainage improvements, which shall be constructed prior to the issuance of the first certificate of occupancy. Site grading and drainage improvements shall be shown on the improvement plans. In the unlikely event that the downstream facilities require improvements, the applicant ***and the City*** *shall enter* ***into*** *a Funding Agreement ~~as a means of reimbursement from~~* ***whereby the applicant is reimbursed for said improvements by*** *~~from~~ the City.*

COA 124 is proposed to be deleted. As discussed above for COA 69, the proposed emergency vehicle access is no longer needed; this condition is therefore not needed.

~~124. Access to the levee road is restricted for public use and only granted to emergency vehicles and emergency egress for Vineyard Valley Mobile Home Park residents. Signage prohibiting its use by the public is recommended. Public access will be granted at the discretion of the Authority Having Jurisdiction during emergencies/evacuations.~~

FISCAL IMPACT

There are no direct fiscal impacts to the General Fund resulting from the approval of the Tentative Parcel Map. Future development of the project site could increase the property tax and impact fee revenues, based on the size and value of the future homes that would be built in the subdivision.

RECOMMENDED ACTION

After considering the project, staff report, supporting documents, technical studies and all testimony, written and spoken, the Planning Commission of the City of St. Helena recommends that the City Council:

1. Adopt the attached Resolution certifying the Final EIR, and approving a Mitigation Monitoring Program, Findings of Fact and Statement of Overriding Considerations; and

2. Adopt the attached Resolution approving the requested Tentative Map No. 2022-001, File #PL10-040 for the Hunter Subdivision project.

MASTER RESPONSE 1: EMERGENCY EVACUATION

Numerous comments were raised regarding emergency evacuation, specifically for residents of the adjacent Vineyard Valley Mobile Home Park (Vineyard Valley). Concerns included the addition of vehicles from the Proposed Project and the potential to hinder evacuation of residents in the area, including in the Vineyard Valley development during an emergency. Commentors asked whether this impact was considered and expressed concern about potential adverse impacts to public safety.

Roads that would provide emergency access near the Project site include Pope Street, Hunt Avenue, Starr Avenue, Adams Street, and Silverado Trail as well as the existing levee maintenance road that borders the northwest boundary of the Project site and the adjacent City detention basin. The Vineyard Valley development currently has only one access to enter/exit the development from Pope Street. Emergency access is provided via the maintenance road adjacent to the northern boundary.

On August 3, 2021, the St. Helena Police Department in conjunction with the St. Helena Fire Department conducted a practice emergency evacuation drill of Vineyard Valley residents. The emergency simulated a major incident, such as a fire, where the residents of Vineyard Valley would be asked to leave in a moment's notice in their vehicles. Residents evacuated in approximately 25 to 30 minutes. The attached “After Action Report,” dated Sept 20, 2021, provides additional detail on the evacuation drill.

Based on the results of the evacuation drill, the St. Helena Police Department has concluded that any additional traffic from the Proposed Project would not significantly impact the ability of Vineyard Valley residents to safely evacuate the development in the event of an emergency. The Police Department also concluded that the proposed extension of Starr Avenue to Adams Street will help facilitate future evacuations by providing additional roadway capacity and additional routing options for emergency traffic (J.Tharp September 2021)[1]. If, for some reason, the levee maintenance road is closed residents of Vineyard Valley would exit using the access onto Pope Street.

Another concern with regard to the Proposed Project’s potential impact on emergency evaluation concerned construction activities and their potential to block access to the levee maintenance road in the event of an emergency. Construction equipment would be staged on the Project site and would not be allowed to to park or be stored on or block access to the maintenance road. Access to the maintenance road would be maintained during all construction activities, even during construction of the extension of Adams Street, to ensure adequate emergency access would be available. All construction trucks and equipment would access the site from either Starr Avenue or Adams Street. No construction vehicles would be permitted on the levee maintenance road.

Emergency access and public safety is evaluated in the Draft EIR in Sections 3.8, Hazards and Hazardous Materials, 3.12, Public Services and Recreation and 3.14, Transportation and

[1] City of St. Helena Police Department, After Action Report, Lt. Justin Tharp, September 20, 2021.

Circulation. The St. Helena Fire Department has reviewed the proposed Tentative Subdivision Map and has not identified any issues with the Project's proposed emergency access.

As discussed in Section 3.8, Hazards and Hazardous Materials, Napa County, in coordination with other jurisdictions including the City, has prepared a Draft 2020 Multi-Jurisdictional Hazard Mitigation Plan Update, which has not yet been adopted (DEIR p. 3.8-11). The plan covers each of the major natural hazards that pose risks to County infrastructure and residents and includes:

- Focusing resources on the greatest risks and vulnerabilities,
- Building partnerships by involving citizens, organizations, and businesses,
- Increasing education and awareness of threats and hazards, as well as their risks,
- Communicating priorities to state and federal officials, and
- Aligning risk reduction with other community objectives.

The potential for the Project to impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan is evaluated under Impact 3.8-3 on page 3.8-20 of the Draft EIR. As noted in the discussion, the Project includes three points of access -- the extension of Starr Avenue, Adams Street, and emergency vehicle access via the levee maintenance road-- to facilitate the ingress and egress of emergency response vehicles, including the City and County Fire Department's apparatus, Project residents, and Vineyard Valley residents. The emergency vehicle access onto the maintenance road would be designed with bollards or a fence that would be kept locked. In the event of an emergency requiring evacuation, police or fire personnel/vehicles would have access to remove the bollards/unlock the gate through a locked box (e.g., knox box) to enable access to the site and as a third egress option for Project residents to evacuate. The Project has been designed to ensure all streets and roads are adequate in terms of width, turning radius, and grade to facilitate access by City firefighting apparatus, and to provide multiple points of emergency ingress and egress to ensure a safe evacuation in the event of an emergency.

The ability of the City's police and fire services to protect future Project homes and residents is addressed in Section 3.12, Public Services and Recreation. As discussed, the Project site would be served by the City's police and fire departments located at 1480 Main Street, approximately 0.2 miles from the site. Development of the Project site would increase the demand for fire protection and emergency services; however, as discussed on page 3.12-14, the Project is required to comply with Chapter 15.36 of the City's Municipal Code and the State Building Code, which requires installation of approved automatic sprinkler systems in all single-family and multi-family buildings. The Project would be developed consistent with 1993 General Plan Policy 8.5.6 and 2019 General Plan Policy PS4.D, which requires new development to meet the minimum fire flow rates specified by the City's Fire Code. In addition, as mentioned above all streets and roads are designed to be adequate in terms of width, turning radius, and grade to facilitate access by City firefighting apparatus, and to provide emergency ingress and egress. The site and construction plans for the proposed single family homes and the multi-family development on Lot 52 would be subject to plan review by the City's Fire Department to ensure proper access for fire and emergency response is provided and required fire suppression features are included.

Section 3.14, Transportation and Circulation also addresses adequate emergency access under Impact 3.14-4 on page 3.14-51. The analysis reiterates what has previously been mentioned: the Project includes two primary access points, Starr Avenue and Adams Street as well as a

separate emergency vehicle access. In the event of an emergency there would be three roadways that would enable vehicles to safely enter/exit the Project site and all streets and roads would be designed to facilitate access by City firefighting apparatus, and to provide alternative emergency ingress and egress.

MASTER RESPONSE 2: ST. HELENA WATER SUPPLY AND WATER NEUTRAL POLICY FOR DEVELOPMENT

Numerous commenters have questioned the ability of the City of St. Helena (City) to meet the water demands of the Hunter Subdivision project (Proposed Project or Project), the viability of relying on the City's Water Neutral Policy, how the effects of climate change and current drought conditions are considered, and whether implications of the outcome of the City's Water Audit lawsuit should be included in the analysis. The following responds to these concerns.

Water Demand

The Draft EIR addresses the City's water supply and availability in Section 3.13, Utilities and Service Systems. The City currently sources its water supply from Bell Canyon Reservoir, extracted groundwater from the Stonebridge Well Complex, and water purchased from the City of Napa (DEIR pp. 3.13-2 and 3). Bell Canyon Reservoir has a physical storage capacity of 2,400 acre-feet (AF) with a safe yield estimated at between 500-1,100 AF. Existing water rights permit the City to divert up to 1,800 AF between November 15 and April 15 of each year. The City owns and operates two active groundwater wells, collectively known as the Stonebridge Well Complex, that have a combined capacity of approximately 595 gallons per minute (gpm). These wells have the potential to provide 960 acre-feet of potable water per year if both are operated continuously (DEIR p. 3.13-7). However, the City limits groundwater production to a long-term average not to exceed 450 AF per year. As stated on page 3.9-19 of the Draft EIR, groundwater pumping at these two wells has averaged 350 AFY between 2006 and 2019, with a range of 182 acre-feet in 2012 to a high of 526 acre-feet in 2013. This period captures multi-year drought conditions and according to monitoring data of a groundwater monitoring well located approximately 600 feet from the Project site, the groundwater level trend has been stable through this period (DEIR p. 3.9-42).

The City of Napa is contracted to provide the City with a minimum of 600 AF of water with an option for an additional 200 AF when feasible (DEIR p. 4.13-4). In the 2019 watershed report for Bell Canyon, the reservoir provided 43.6% of the City's water supply, the City of Napa supplied 42.5%, and the Stonebridge Wells the remaining 13.8% in 2018. However, the share of water from each source can change from year to year as the three sources of water supply allow for flexibility in order to adapt to changing conditions.

As shown in Table 3.13-1 on page 3.13-3 of the Draft EIR, the City's water deliveries have varied from year to year but overall have shown a decreasing trend from 1,882 AF in 2013 to 1,629 AF in 2020. The City's Safe Yield Committee determined that the potable water system can provide a total supply of up to 1,950 AF per year as a sustainable rate on a long-term basis (DEIR p. 3.13-11). This safe yield value recognizes that drought periods will be experienced and that circumstances may require the implementation of water restrictions (Phase III) during a dry year, but that these restrictions do not represent "undue hardships" (St. Helena Municipal Code Title 13 - Public Services, Chapter 13.04 Water Service System, Article 2 Water Shortage Emergencies, Drought and Water Conservation*)*. The Committee considered "undue hardship" to be Phase IV or V restrictions, or three or more consecutive months of Phase III restrictions. The domestic water demand for the Project at 19.88 AF per year is based on the Water Neutral Report prepared for the Project (Appendix J). The Water Neutral Report also estimates

outdoor/landscaping uses, which would be served by the onsite agricultural well and is therefore separate from the analysis of domestic water use.

The Water Neutral Report conservatively assumes the Proposed Project will include eight persons per single family residence which is much higher than the City's average of 2.45 persons per household (DEIR p. 3.13-24),[2] and therefore likely overstates actual water use. However, assuming this conservative estimate of 19.88 AF of domestic water use per year, the additional demand of the Project in combination with the recent total deliveries (1,629 + 19.88 = 1,648.88 AF) would still be far below the City's adopted safe yield of 1,950. Therefore, the new water demand associated with the Proposed Project could be met by the City's potable water system even without the water offset requirements of the City's Water Neutral Policy, as discussed further below.

Water Neutral Policy

The City's Water Neutral Policy included in Chapter 13.12, Water Use and Efficiency, of the Municipal Code requires that new development be water-neutral (from the City-delivered water system) through any combination of on-site water conservation measures and/or off-site retrofitting and/or use of well water (DEIR p. 3.13-21). For the Proposed Project, there are no opportunities for on-site water conservation since the site has no current water demand. Therefore, the Project must demonstrate water neutrality through off-site retrofitting and system improvements which must be demonstrated in a quantitative water analysis of the Project.

Per Municipal Code Section 13.12.050, the developer is responsible for identifying residential or nonresidential properties eligible for retrofitting and verify to the Department of Public Works that the required number of retrofits have been completed prior to the issuance of a certificate of occupancy. Appendix J of the Draft EIR includes the quantitative water analysis completed for the Project as required by the Water Neutral Policy. The report concluded that the offset of the Project water demands could be met through financial assistance with existing system improvements (e.g., payment of required fee) commensurate with the cost of retrofitting existing residences with low flow fixtures, but also includes a variety of suggested methods to increase domestic water supply or reduce demand to offset the Project's domestic water use.

As detailed in the Water Neutral Policy, the water demand of the Project would equate to retrofitting 333 residences with water conservation fixtures, but this is not to say that the policy can only be met through residential retrofits. For example, the Water Neutral Report referenced the potential for assisting the City in repairs to the transmission line between the City and Rutherford where a substantial amount of water is lost due to the current condition of the old pipeline. Reducing water losses is a gain for the supply system.

As part of the Project's proposed Conditions of Approval it states that no building permits may be issued until the developer has identified and implemented offsite improvements that reduce water loss from the public water distribution system and/or identify and implement offsite improvements that result in a net increase in potable water availability equivalent to 19.8 AFY,

[2] Exterior water demand (landscape irrigation, etc.) would be met by an onsite well and is not included in this estimate, which includes interior domestic uses only.

or a combination of these. Therefore, with adherence to this regulatory requirement and the required Conditions of Approval, occupancy of the Proposed Project would not occur until the City's Public Works Department has verified completion of these retrofits or system improvements that meet the City's construction standards to offset the Project's new water demand. As a result, the City would be able to meet the Project's water supply demand and result in a less-than-significant impact.

Climate Change

One of the effects of global climate change is an increase in variabilities of weather patterns and an increased probability to experience periods of drought. While climate change can create drier years in which precipitation is below annual averages, it can also result in very wet years.

The City recognizes that future periods of drought conditions are likely and may become more frequent. The establishment of the safe yield of 1,950 AF per year completed by the City's Safe Yield Committee provides the parameters for long term management of water supply resources. As discussed above, the new water demands for the Proposed Project would be offset through adherence to the City's Water Neutral Policy where retrofits or system improvements equivalent to the proposed new demands would be in place prior to issuance of building permits for development of the Project.

However, as mentioned above, the City may still be forced to enact water conservation and/or water rationing requirements during drought periods because of strains on the system that would be due to the effects of climate change. The City's Municipal Code (Title 13 - Public Services, Chapter 13.04 Water Service System, Article 2 Water Shortage Emergencies, Drought and Water Conservation) establishes the thresholds and requirements for water emergency phases, water conservation, and regulations that can adapt to changing conditions and enact emergency requirements for users as appropriate for long term water supply planning.

Therefore, the Draft EIR does consider the effects of climate change in Project impacts related to water supplies. The EIR determines that the Project can be adequately served based on existing water supplies. Compliance with the City's Water Neutral Policy would further ensure that the Project does not adversely effect the City's future water supplies.

Water Audit Lawsuit

Several comments have referenced the Water Audit lawsuit and have suggested that the outcome of that lawsuit should be considered as part of the analysis of water supply and hydrologic resources related to the Project. The lawsuit claims the City has violated its public trust in its management of water resources. The plaintiffs seek to increase monitoring and oversight of groundwater and surface water resources. The lawsuit claims poor documentation of water uses, including pumping at the City's Stonebridge Well Complex, and water deliveries to vineyards, wineries, and the Meadowood resort.

The Water Audit's complaint does not ask for changes to existing water uses. Instead, it seeks an injunction to stop the City from issuing new groundwater well drilling permits until enough

information is available to make informed water allocation decisions. The Proposed Project does not include a requirement for a new groundwater well drilling permit and so a potential injunction on new well drilling permits would not affect the Project.

As discussed on page 3.9-15 of the Draft EIR, there is an inactive groundwater well located in the northern portion of the Project site that may have been historically used to provide construction water for the City's Flood Protection Project and was used in the past for agricultural irrigation. The Project proposes to use this well for the irrigation of public and private landscaping and all other outdoor uses, which are estimated to require 17.16 AF per year (DEIR p. 3.13-32).

Regarding concerns about hydraulic conductivity with the adjacent Napa River, a site-specific well capacity and sustainability report was prepared that included conducting a 24-hour pump test as part of evaluating the hydrogeologic characteristics of the existing on-site well (Appendix L of the Draft EIR). The pump test ran at a rate of 40 gpm, which was nearly four times as high as the proposed rate for the Project (10.6 gpm). The study concluded that the onsite well draws from an aquifer with high transmissivity (i.e., ability of the water bearing unit to transmit water flow) and that the proposed pumping would not likely adversely affect either local water levels or Napa River flows. The onsite well is screened from 80 feet below ground surface (bgs) to 410 feet bgs, which is within the deeper volcanic aquifer and below the Napa Valley alluvium (the shallow water bearing unit that is considered hydraulically connected to the Napa River).

Therefore, whereas the Water Audit lawsuit is primarily concerned with the management of water resources that would affect the water levels of the Napa River, the well capacity and sustainability report determined that the pumping of the onsite well to supply the Project's public and private landscaping would not adversely affect flows in the Napa River. The analysis under Impact 3.9-2 starting on page 3.9-40 of the Draft EIR provides a detailed analysis of potential impacts associated with using the on-site well.

Considering that the Project does not require obtaining a well drilling permit and that a site-specific hydrogeologic study has demonstrated that the Project would not adversely affect water levels, the outcome of the Water Audit lawsuit would not alter the findings of the Draft EIR.

CEQA requires that the determination of significant effects be based on substantial evidence that include facts, reasonable assumptions predicated upon facts, expert opinion supported by facts, and not speculation (CEQA Guidelines § 21082.2). Therefore, the final outcome of the Water Audit lawsuit may have ramifications for the City in its long-term management of water resources but would not affect the analysis or impact significance determinations that were made in the Draft EIR.

MASTER RESPONSE 3: NAPA RIVER FLOOD PROTECTION/LEVEE

The Hunter Subdivision Project (Project or Proposed Project) was in the past in a flood zone but is now protected from a 200-year flood event (equivalent to less than a 0.5% annual chance) by the St. Helena Comprehensive Flood Protection Project (Flood Protection Project). The Project does not have an impact on the Flood Protection Project's effectiveness or on flood hazards for surrounding communities, either directly or indirectly.

Many commenters have raised concerns that the Project would put people and property at unreasonable risk if a major flood event overtops the levee[3] (i.e., greater than 200-year flood) and/or if the levee fails. These concerns generally revolve around the Project's perceived physical impacts on the levee; the levee's current condition, inspections, and maintenance; a perception that the project would increase existing flood risks for neighboring communities (e.g., Vineyard Valley and Hunt's Grove); confusion over levee certification/accreditation; and legal, liability, and insurance questions.

Comments that raised concerns about growth inducement (due to the levee reducing SFHAs in the City) are comments on the Flood Protection Project, not the Project.

As a general matter, the bulk of the comments received do not question the accuracy of the information contained in the Draft EIR or the adequacy of the analysis presented. Rather, they express differing opinions about levels of acceptable risk and a lack of trust in the design, construction, and maintenance of the Flood Protection Project. The Draft EIR includes a detailed description of the flood hazards present; the engineering, design, and maintenance of the Flood Protection Project; and the City's emergency management procedures in Section 3.9, Hydrology and Water Quality (Draft EIR pp. 3.9-6 through 3.9-13). This information was provided for reference purposes and addresses a majority of the comments received that relate to flooding and levee protection. The reason this information was included in the Environmental Setting section of Section 3.9 (Hydrology and Water Quality), rather than being addressed as an impact, is because impacts of the environment on a project or plan (as opposed to impacts of a project or plan on the environment) are beyond the scope of required CEQA review.[4]

Flood Risks

The Project does not have an impact on the levee's effectiveness or on flood hazards for surrounding communities, either directly or indirectly. California Supreme Court's decision in *California Building Industry Association v. Bay Area Air Quality Management District (2015) 62 Cal.4th 369* held that "agencies subject to CEQA generally are not required to analyze the impact of existing environmental conditions on a project's future users or residents" but they must analyze hazards the project might risk exacerbating. For example, if a project proposes development on a site with existing subsurface hazards, then grading/development of the project may exacerbate the risk of those existing subsurface hazards.

[3] Note that references to the levee are inclusive of the floodwall component of the Flood Protection Project.

[4] "[T]he purpose of an EIR is to identify the significant effects of a project on the environment, not the significant effects of the environment on the project." (Ballona Wetlands Land Trust v. City of Los Angeles (2011) 201 Cal.App.4th 455, 473.)

Accordingly, the State Office of Planning and Research's 2018 revisions to the CEQA Guidelines—which the City uses as its CEQA thresholds of significance—removed reference to property damage, personal injury, or loss of life due to flooding or levee failure (i.e., pre-existing hazards) from Appendix G (included in the CEQA Guidelines).

Placement of the Project within an area protected from the 200-year flood does not substantially increase public exposure to flood risk, even though the risk is not zero. The Draft EIR acknowledges that there is residual risk to residents which is why the Federal Emergency Management Agency or FEMA encourages the purchase of optional flood insurance (i.e., FEMA preferred risk policy) (Draft EIR p. 3.9-8, first paragraph). The Project's Conditions of Approval require that prior to issuance of building permits, all future occupants will be provided information which describes the flood risk and notifies the buyer of the availability of low-cost Preferred Risk Policy flood insurance. Comments that address legal, liability, and/or insurance issues fall outside the scope of CEQA review, because they are not related to impacts of the project on the environment.

It is not the role of the Draft EIR to guarantee that there would be zero risk to life or property in the event of an extreme (i.e., greater than 200-year) or catastrophic flood event. The level of risk to the Project and its residents is reasonably and acceptably low due to the 200-year level of protection afforded by the Flood Protection Project. The description of flood emergency stages, preparedness, and response (Draft EIR pp. 3.9-11 and 3.9-12) remains accurate and indicates a reasonable plan for alerting and protecting residents from major flood events.

In the last paragraph on page 3.9-7, the Draft EIR speculates as to the style of flooding that would occur in the Project site based on its position outside of the regulatory floodway, if there were a levee overtopping event. The style of flooding would be dependent on the location, speed of water level rise, and levee response to an overtopping event. No portion of the Project site is located within the FEMA regulatory floodway. Therefore, the text on page 3.9-7 is revised to remove the reference to flooding being "slow and gradual." Please see Chapter 3, Changes to the Draft EIR for the revised text.

For the same reasons, the text on page 3.9-12 is also revised to remove the characterization of what could happen in the event of a flood. As previously indicated, this would be an impact of the pre-existing environment on the Proposed Project rather than the Proposed Project's impact on the environment. Please see Chapter 3, Changes to the Draft EIR for the revised text.

Clarification on Terminology/Concepts

Many commenters have expressed concern about the levee's design and construction, because it was not designed and built by the Army Corps of Engineers (ACOE) and is maintained by the City. As noted above, the Project does not have an impact on the levee's effectiveness or on flood hazards for surrounding communities, either directly or indirectly. California Supreme Court's decision in *California Building Industry Association v. Bay Area Air Quality Management District (2015) 62 Cal.4th 369* held that "agencies subject to CEQA generally are not required to analyze the impact of existing environmental conditions on a project's future users or residents" but they must analyze hazards the project might risk exacerbating. Accordingly, comments

regarding existing structures, such as the levee, that will not be directly or indirectly impacted the Project, are outside the scope of CEQA review for this Project.

However, for strictly informational purposes the City provides the following: there are numerous non-federal levees throughout the United States that are safely built and maintained by local and/or state entities. The City of St. Helena Department of Public Works oversees inspection, maintenance and repairs of the levee, and has confirmed that the levee was designed and built by qualified contractors in accordance with ACOE engineering and safety standards (Draft EIR p. 3.9-8).

Levee certification is the process that deals specifically with the design and physical condition of the levee and is the responsibility of the levee owner or community in charge of the levee's operations and maintenance. Certification must be completed for the levee to be eligible for accreditation by FEMA. Certification consists of documentation, signed and sealed by a registered Professional Engineer, as defined in Chapter 44 of the Code of Federal Regulations (44 CFR), Section 65.2. By virtue of FEMA's approval of the City's application for a Letter of Map Revision (LOMR) and subsequent revision of the Flood Insurance Rate Map (FIRM), the levee is a FEMA-accredited levee system[5] that has undergone the certification process. While FEMA does not design, build, maintain, inspect, or certify levees, it uses the best available data about flood hazards and levee conditions to create FIRMs and Flood Risk Products (FRPs). These FIRMs and FRPs are tools that provide a more precise, up-to-date picture of the flood hazards facing levee-impacted areas, which is important given that the flood risks change over time.

The modern construction of the levee makes it more secure than other accredited levee systems that may have received accreditation decades ago, and the 200-year level of protection provides substantial additional protection against flooding that takes into consideration increased rainfall and runoff due to climate change.

Levee Condition and Maintenance/Inspections and City Detention Basin

Several concerns were raised that the levee has not been properly maintained and may be subject to reduced performance due to animal burrows, erosion, and/or pump malfunctions. As discussed below, these issues are outside the scope of CEQA review of the Project, because the Project does not physically infringe upon or otherwise affect the levee. (See *California Building Industry Association v. Bay Area Air Quality Management District (2015) 62 Cal.4th 369.)*

However, for strictly informational purposes, the City provides the following: the City employs qualified individuals to inspect the levee on a monthly basis to detect any potential issues and take action on them as they arise. For example, in the past issues were found with the operation/startup of the detention basin's pump and it will be repaired by a qualified contractor. Further, it is up to the professional judgement of the City's engineer as to when any animal burrows may compromise the levee's safety. Per the inspection reports, the City has an animal

[5] A FEMA-Accredited Levee System is levee system that FEMA has shown on a FIRM that is recognized as reducing the flood hazards posed by a 1-percent-annual-chance flood. This determination is based on the submittal of data and documentation as required by 44CFR§65.10 of the NFIP regulations. The area landward of an accredited levee system is shown as Zone X (shaded) on the FIRM except for areas of residual flooding, such as ponding areas, which are shown as Special Flood Hazard Area (SFHA).

burrow control program in place and conducts burrow control activities as needed. The City also makes its levee inspection reports and summary reports available online here: https://www.cityofsthelena.org/publicworks/page/flood-control-and-river-restoration-project.

Several commenters referred to erosion or runoff from the Project affecting the City's detention basin. These commenters are referred to Draft EIR pages 3.9-44 and 3.9-45, which explains that the detention basin was designed assuming the Project would consist of 70% impervious (developed) area, when in fact it would consist of about 58% impervious area. The estimate of the Project's impervious surface coverage was calculated based on design drawings of the Project. Accordingly, as discussed in the Draft EIR on page 3.9-45, the Project would not contribute increase flows or erosion to off-site properties because the detention basin has been adequately sized and designed.

Commenters also requested information on what funds were used to construct the levee (Flood Control Project), what funds the City uses for repair and maintenance of the levee, what funds would be available to repair homes in the event of a levee breach, would the City be held liable in the event of a levee breach, and is the City non-compliant with the terms of Measure A.[6] Concerns regarding the financing of the levee, ongoing repairs and maintenance, financing to address damages in the event of a catastrophic flood, and liability are outside the scope of CEQA review, because they are not related to impacts of the project on the environment. In addition, economic effects of a project are not considered significant effects on the environment unless the economic changes are connected to physical environmental effects (CEQA Guidelines Section 15131(a)).

Regarding the comment suggesting that the City could be non-compliant with the County's Measure A ordinance, it is assumed the commenter is referencing subsection G, which states "none of the projects are intended or designed to encourage population growth in the County." To clarify, the Project site has been designated and zoned for residential development since the City's 1975 General Plan. The City's Flood Protection Project was designed consistent with the intent of Measure A to provide flood protection to residents and businesses in the County. Development of this site with residential uses would not be considered encouraging new population growth in the City because this site has been planned for future development for over 45 years.

[6] Measure A is an ordinance of the Napa County Flood Protection and Watershed Improvement Authority that adopted by Napa County residents in 1998. It is used to finance the Napa River Flood Protection Project. Each City and Town in Napa County receives a portion of Measure A revenues to fund flood protection projects. Subsection G states "none of the projects are intended or designed to encourage population growth in the County."

RE: Hunter Subdivision Project Environmental Impact Report. 2022-001, File #PL10-040

Dear Mayor Dohring, Vice Mayor Hall, Council Members, City Manager Comelo, Community Development Director DeRosa:

As you are aware, we represent the Saint Helena Citizens for a Sustainable Future, a diverse group of City residents. We have provided several letters on this project to the Planning Commission on this project, highlighting several of the procedural and substantive deficiencies in the application process and consideration. (Those letters are included in your Agenda packet for the May 1 meeting, along with Staff's responses, and we encourage you to review those letters in chronological order for context. We have not set out again every point in those letters for sake of brevity; although due to the importance of the issues, some of that information is restated and emphasized below.)

The Planning Commission nevertheless – reluctantly as can be seen in the video of the hearing – passed the project on to the City Council. The Planning Commission appeared severely cowered by pressure to approve housing. Its referral to the City Council is thus not in any way persuasive that the Environmental Impact Report warrants certification, nor the underlying tentative map. A separate letter addresses the serious procedural and substantive issues with the tentative map itself and the Project generally failing to comply with the applicable General Plan and municipal code.

Review of the record shows the Planning Commission made the recommendation of approval on the notion the State is forcing it to approve housing. This violates CEQA. The decision to certify the EIR and approve the Project must only be made by the City because the City independently

believes it is complete and appropriate.[1] The Housing Accountability Act clearly states that it does not overrule CEQA.[2] The Council must make and take sole responsibility for its actions in exercising its judgment under CEQA and to the Project as a whole.

Prior correspondence to the Planning Commission highlighted the defects in the EIR. An attachment to the Staff Report for the February 7, 2023, Planning Commission meeting attempted to respond to those comments. Failing to do so credibly, Staff has tried again, with an additional response included as Attachment 28 to the Agenda Packet.

As discussed below, that response contradicts the EIR itself.[3] It misunderstands the impact and direction of the changed Napa Valley Subbasin management policies set by Napa County. It displays an ignorance of the City and the way people live, work, and go to school here that is disheartening. And it either does not know what a firebreak is, or forgets the existing vineyards protecting the Monte Vista neighborhood, and in turn the rest of the City, that will be removed.

Certification of a final EIR requires this Council to exercise its own independent judgment and analysis.[4] The Council should exercise that judgment to reject certification.

Required Findings

As discussed in our accompanying letter, the Project does not comply with the applicable general plan or zoning code. But even if it did, the subdivision Project must still be denied, as the Council can and must make the following findings:

> 1. The housing development project would have a specific, adverse impact upon the public health or safety unless the project is disapproved or approved upon the condition that the project be developed at a lower density.
>
> 2. There is no feasible method to satisfactorily mitigate or avoid the adverse impact identified other than disapproval of the housing development project or approval upon condition that the project be developed at a lower density.

[1] P.R.C. § 21082.1(c)(3) ("As part of the … certification of an environmental impact report, find that the report or declaration reflects the independent judgment of the lead agency.")
[2] Gov. C. § 65589.5(e) ("Neither shall anything in this section be construed to relieve the local agency from making one or more of the findings required pursuant to Section 21081 of the Public Resources Code or otherwise complying with the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code)."
[3] We note that the "Final" Final EIR, which was presented to the Planning Commission on February 7, 2023, was not posted on the City's website in violation of P.R.C. 21082.1(d). Only an earlier October 2022 version of the document was posted.
[4] P.R.C. § 21082.1(c)(3); CEQA Guideline 15090(a)(3).

(SHMC § 16.16.080(B).) For the following reasons, there is substantial evidence in the record that the Project presents adverse impacts to public health and safety which have not or cannot be mitigated.

By contrast, in order to Certify the EIR, the Council would need to find, in the exercise of its independent judgment, that "[c]hanges or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment."[5] Where significant impacts on the environment are identified, as here, the Council would also need to find "that specific overriding economic, legal, social, technological, or other benefits of the project outweigh the significant effects on the environment."[6] Those findings must be based on substantial evidence in the record.[7] As discussed further below, this standard for adoption of a statement of overriding considerations cannot be made on the current record.

The EIR Fails to Adequately Analyze Groundwater Impacts as the Proposed Well Use on the Property Is Contrary to Current Standards

As discussed in our prior letters but discussed further here in light of Staff's latest attempted response, the Project is for the subdivision of a 16.92 acre property. The EIR analyzed its proposed groundwater use of an on-site well of up to 17.16 acre-feet per year to provide for all on-site irrigation of public and private landscaping, as well as a small remnant of an existing vineyard.[8]

Not only the Draft, but the ***Final*** EIR recognized the well on the property was not in use and described it repeatedly as "inoperable." (E.g., DEIR at 3.9-43 ("the well is currently inoperable and would need to be repaired so it is operational."); 3.13-1 (well "has been used historically to supply irrigation water to the site but is currently inoperable"; 3.9-15; 3.13-2; 3.13-32. The FEIR fixed typographical errors in the text of 3.13-2, but still states the well is not currently in operation.) The Phase I Environmental Site Assessment performed in March 2018 also says the well is inoperable.

Somewhat incredibly, Staff's latest response in Attachment 28 on this issue is to directly contradict the EIR as to the "inoperable" well, and now claim that the well is operable after all. It attempts to drastically revise the CEQA baseline for the Project in an attachment to the Staff report that has not been circulated for public comment. Despite Staff's eleventh-hour efforts, substantial evidence in the record states that there is no operating well on the property, and it has not been operating for a considerable period of time. The use of the well had been long abandoned. The required baseline of "existing" water use on the parcel is zero.[9]

[8] DEIR 3.9-40.
[9] *See* Napa County Water Availability Analysis, May 12, 2015 (discussing throughout analysis of "existing" and "current" water usage compared to a proposed project.)

DEIR Appendix L, a September 9, 2021, Well Capacity Study Memorandum emphasizes that "it is recommended that the annual groundwater use conform with County policy." While phrased as a suggestion by the consultant, this is indeed a legal requirement. The City has always deferred well issues to the County because the City does not have its own department to handle such issues.[10]

Disturbingly, DEIR Appendix L was omitted from the February 2023 Staff Report to the Planning Commission (which we noted at the time), and it has now been withheld from the City Council as well despite it being a critical subject. Appendix L was prepared under the prior standard of a maximum allocation of 1 acre-foot of water per acre. It found the Project already not in compliance with that standard. Given this repeated identified issue, we can only conclude the Applicant does not like its conclusion that the Project's groundwater use must follow County policy and the use is not consistent with that policy, and thus had it removed it from the EIR and the Council's materials.

No update of that analysis has been prepared to comply with the revised substantially reduced allocation limit of the lesser of 0.3 ac-ft/ac or no-net-increase, though the outcome is obvious: the proposed project substantially exceeds the allowed groundwater allocation. The expert that prepared the Well Capacity Study has not opined on Staff's latest response attempting to undo the record.

Seemingly belatedly realizing that the well usage is indeed a significant barrier to the Project, Staff, on behalf of the applicant, has now attempted to estimate a historical use of the well.

There is no evidence, factual or legal, that the no-net-increase calculation can be properly divined from a hypothetical long-abandoned previous use. Staff's response, which is not attested to by a groundwater expert, attempts to reverse engineer a hypothetical past use that does not exist, of which there are no documented records, and which the EIR does not analyze. This is not competent, substantial evidence on which the Council can rely in certifying the EIR. (Indeed, it is not even referenced in the EIR, as it was just invented.) While historical use may in some cases be considered for baseline analysis (but only where the conditions have been in flux making the existing conditions not emblematic), there must be substantial evidence to support that baseline.[11] "**An existing conditions baseline shall not include hypothetical conditions**...."[12] To

[10] As such, Napa County would appear to be a Responsible Agency for the project's groundwater usage. However, the EIR fails to identify Napa County as a Responsible Agency.

[11] *Contra* CEQA Guideline 15125(a)(1) ("Generally, the lead agency should describe physical environmental conditions as they exist at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, from both a local and regional perspective. Where existing conditions change or fluctuate over time, and where necessary to provide the most accurate picture practically possible of the project's impacts, a lead agency may define existing conditions by referencing historic conditions, or conditions expected when the project becomes operational, or both, that are supported with substantial evidence.")

[12] CEQA Guideline 15125(a)(3) (emphasis added).

the extent Staff is now contending a different baseline should have been used, the EIR needs to be revised and recirculated.

In doing this, Staff brazenly accuses our prior comment of misunderstanding the County's unambiguous policy of limiting the use of wells subject to discretionary project approval to the lesser of 0.3 acre-feet per acre or no net increase. That "no net increase" is from "*existing*" uses.[13] This is readily apparent from the County's simple summaries of the new policy, and a published FAQ.

The limitation to the lesser of '0.3 ac-ft/ac or no net increase' applies to new discretionary uses of existing wells. A "Tier 1" analysis must be performed to document the "*existing"* uses on site and the potential increases. From the Napa County FAQ on the new well standards[14]:

> *10. Do the new standards apply to discretionary projects where projects rely on existing wells?*
>
> *Yes, if the project involves an increase in groundwater use on the existing wells.*
>
> *…*
>
> *14. Does the 0.3 AF/acre water use limitation also apply to new or modified discretionary permits?*
>
> *Yes. The WAA Guidelines will be updated to reflect this, but this limit goes into effect immediately.*

As stated by Napa County, its "new regulatory requirements for a Tier 1 analysis are pursuant to CEQA, Napa County's Water Availability Analysis (WAA) Guidelines, dated May 12, 2015, Napa County's Drought Emergency, Governor's Executive Order N-7-22, recent court decisions, and pending State litigation."[15]

These rules are clear. These rules are dictated by State law. They are not optional. Ignoring the County's requirements as dictated by State law, including CEQA and SGMA, and indeed the DEIR's own expert, would be an abuse of discretion.

[13] https://www.countyofnapa.org/DocumentCenter/View/25905/Well-Permit-Standards-and-WAA-Requirements--January-6-2023?bidId=
[14] (*See* Napa County Well Permit Standards FAQ, *available at* https://www.countyofnapa.org/DocumentCenter/View/25906/Well-Permit-Standards-FAQs---15-July-2022.)
[15] https://www.countyofnapa.org/DocumentCenter/View/25905/Well-Permit-Standards-and-WAA-Requirements--January-6-2023?bidId=

The project needs to be revised to comply with the current water use limitations, and the EIR must be corrected and recirculated considering the changes in groundwater policy that are unanalyzed.[16]

Further, as we noted previously, significant new information has been made available which contradicts the EIR's conclusions regarding the state of local groundwater. The significant new information from 2022 is that "**Several wells located near the Napa Valley Subbasin margin in the northeastern Napa area, southwestern Yountville area, and southeastern St. Helena area show periods of groundwater decline during times of drought**."[17] Although the proposed findings for the Project have been slightly modified since we noted this critical information, the EIR's simply ignoring the evidence of an increase in the severity of the project's impacts on groundwater resources is not reasonable.

As we said previously, the project needs to come up with at least an additional 12 acre-feet of water from somewhere else. It cannot do so from the well. The latest response does not change this fact. It does appear Staff, in consultation with the Applicant but not the public, have recognized this is a major problem; but are unwilling to address it directly. Staff have revised one of the conditions for the project: Proposed Condition of Approval 85 now suggests that the well should nevertheless be used for the project in violation of County policy, but then abandoned "if" the contemplated City reclaimed water system ever reaches the site. This is inconsistent with the law and, in any event, unreasonable.

The EIR Fails to Conduct the Required Well Interference Analysis

Further, and relatedly, the water neutrality analysis credits the more-than-17 acre-feet of water use from the well to "groundwater" as opposed to the City's water. By doing so it is purportedly not subject to the City's water neutrality ordinance. But this ignores the fact that the project site well is likely drawing from the same basin that supplies the City's wells. While Staff's latest response in Attachment 28 argues that some of the City's drinking water comes from other reservoirs, it has no actual response to the fact that the Project well will extract groundwater very close to the City's Stonebridge well, and thus is simply taking the City's water via other means.

There is no analysis of well interference which would suggest that the onsite well is a different source of water than the City's wells. This is despite **the City's September 27, 2018 Second Notice of Identified Issues Letter specifically requiring a well interference analysis**.[18] Thus, the EIR

[16] Note also that, because the well is proposed solely as non-potable water for outdoor irrigation and other non-consumption uses, the well is not a public water system that might otherwise be entitled to exceed this limit.
[17] (Napa Valley Subbasin Groundwater Sustainability Plan Summary, Executive Summary (Jan. 2022) p. 2, *available at* https://www.countyofnapa.org/DocumentCenter/View/23549/GSP_Executive-Summary-Abstract?bidId=.)
[18] *Available at:* https://www.cityofsthelena.org/sites/default/files/fileattachments/planning_resources/project/3486/second_issues_letter-final.doc.pdf

should have analyzed well interference. Having failed to do so, the well usage should have been included in the water neutrality analysis and required offset.

As discussed above, the failures to address significant new information regarding changes to County groundwater policy driven by State law and the depletion of groundwater locally is directly related to the severity of the project's impact on groundwater resources and requires additional analysis. The EIR failed to analyze well interference, an issue that was specifically identified as a potential significant impact. The EIR cannot be certified until these real and significant issues are addressed. Depletion of groundwater above allowed limits from the City's groundwater source presents an adverse impact to public health and safety that has not been properly analyzed or mitigated.

The EIR's Water Neutral Analysis Is Outdated and Deficient

Relying on the well for exterior water use and excluding it from its calculations, the EIR fancifully suggests that the Project will be water neutral, despite its demand for nearly 20 acre-feet (approximately 6.5 million gallons) per year beyond that produced by the onsite well. However, this conclusion is drawn from an analysis of potential water offsets from several years prior to the recent drought, the Phase I and Phase II water emergencies, and the substantial cutbacks that were made by residents of the City in response. Those measures greatly reduced water usage already, and there has been no update to the potential water offset analysis in several years, rendering it meaningless. As such, the Water Neutral Report, DEIR Appendix J, is fatally deficient and must be updated to account for current conditions. It relies on an analysis of potential water saving measures from February 2017.[19] There has been no consideration of the substantial changes in the last six years. Substantial new information has emerged since that time that has not been incorporated, including the responses to the drought and water emergency. At the very least, the EIR cannot be certified until Appendix J is updated, as there is no reliable evidence to conclude the water neutrality requirements can be met.

We also note the Applicant has recently requested revision of the Project's conditions of approval to allow for piecemeal compliance with the water neutrality ordinance. That request should be rejected. Given the scope of the offsets required, the Applicant will need to undertake a major water offset project prior to construction, and any such project must be considered in coordination with the development Project as a whole. It cannot be allowed to attempt to offset one house at a time.

The EIR Fails to Analyze or Mitigate Traffic and GHG Impacts

The Project's impacts on vehicles and traffic have of course been a major issue of contention. As the Staff report notes, the Project came to halt nearly a decade ago because improvements were

[19] DEIR Appx. J at Attachment 3, Municipal Water Saving Measures (Feb. 2017).

needed to the Silverado Trail/Pope Street intersection. The Applicant has now tried to move forward ignoring those necessary improvements.

More recently, the Applicant's counsel itself and numerous commenters opposed to the project have stated that the traffic analysis for the project is deficient. While the sides obviously offer different reasons and seek opposing results, it does appear that no one thinks the traffic analysis done here has been sufficient.

As we noted previously, there is extensive evidence in the record that the project's impacts on traffic are improperly analyzed and not mitigated despite available solutions being previously proposed. Although the Applicant suggests only vehicle miles travelled (VMT) and not level of service (LOS) should be the standard under CEQA, the only traffic study provided focuses on the latter.

Yet the EIR completely fails to thoroughly analyze or mitigate VMT. The DEIR's analysis uses an Affordable Housing percentage of 28.73%, whereas as of the current application, there is officially none. Staff's latest attempted response is that there must be some affordable housing in order to comply with the City's code, but no one can say exactly how much because no one knows, as the required information has not been submitted.

The EIR, apparently without relying on any traffic experts, essentially concludes that though the City has not adopted VMT significance thresholds, that the project is indeed significant in its impact, but that there is no mitigation available. This suggestion is directly contrary to the general plan itself, which provides for improvements to the City's street network that would lessen the length of the project's trips – particularly connection of Adams to Silverado Trail.[20] No analysis, however, was conducted; the only traffic study that was prepared on behalf of the Applicant generally indicated that the Project should be required to make improvements to the road network.

Staff's response to this issue is essentially that it sounds expensive and complicated, so there is no reason to look into it. That is not a reasonable response: this is a major development. It will likely cost a hundred million dollars to construct. It will generate well more than that in sales for the developer. That a necessary available on-site mitigation is ignored and unanalyzed because it might cost a small percentage of that is not reasonable.

In short, there is no credible evidence in the record to support the finding that reasonable mitigations or changes have been incorporated into the project to account for the significant impact of VMT, let alone LOS. The operative traffic study identified that road improvements were necessary mitigation. The Project was tabled for nearly a decade for this reason.

The Traffic Study (DEIR Exhibit K) – which the EIR appears to suggest now applies to analysis of the general plan rather than CEQA – repeatedly fails to use reasonable assumptions for the

[20] DEIR 3.14-19.

Project, substantially undercounts the expected traffic increase, and does not comport its analysis with the description or stated intended use of the Project. But whether or not the traffic study is used in consideration with CEQA's transportation element, the EIR's Greenhouse Gas analysis does depend on the traffic study. (DEIR 3.7-27.) As such, the flaws in the traffic study are a CEQA issue as well as a general plan issue, and the operational Greenhouse Gas analysis is inadequate. Idling vehicles are a substantial contributor to GHG emissions.[21] The EIR fails to analyze the significant impact of idling vehicles resulting from the Project sitting in the unmitigated traffic it will create.

Among other issues with the traffic study, the 11 Accessory Dwelling Units, which are touted as providing additional workforce housing, are allocated only 4 AM Peak Hour outbound trips. This makes no objective sense. Reasonable assumptions would suggest the affordable and multi-family units to lead to more trips for the residents of those units given the nature of the local workforce. Staff indicates that standard assumptions were used for these estimates, but there is nothing standard about work-force life in Napa Valley. There is no subway to walk to. Jobs are widely distributed and require driving for essentially all workers. Project-specific analysis is required where general assumptions are known to be inapplicable. The traffic study thus fails to account for the unique nature of the Napa Valley economy and local transportation demands, and significantly understates the impact of the Project.

It also ignores the reality of life in Saint Helena. For example, the traffic report apparently incredibly claims that the 87 new units will result in only two (2) people driving their children to school by crossing Main at Adams – the main access to the Project. And only one (1) will go pick their child up. (Traffic Study Figure 8, February 2023 Staff Report p. 2007.) Staff's latest response in Attachment 28 is to reveal its ignorance of St. Helena: its response is to "assume this comment refers to students attending St. Helena Elementary School on Adams Street" and to acknowledge the estimate of seven (7) students attending just that school (already belying the traffic study).

But anyone that actually lived here would know that all four of our public schools are on the west side of town. Getting to all of them from the Project would involve crossing or accessing Main Street, which is most likely to occur at Adams. Staff's suggestion that parents could choose other routes that are already known to be worse, such as Hunt Avenue or Pope Street, does not bolster the traffic analysis. Indeed, the Project is shown to have a material adverse impact on Pope/Main already.

Even worse, the existing analysis ignores the significant impact that the Project would have on evacuation routes in the event of an emergency. While for an individual scale event, it is possible that connection of Adams to Starr would be beneficial as the EIR and Staff suggests, that is not

[21] *See, e.g.,* U.S. Dept. of Energy, Idling Reduction for Personal Vehicles, *available at* https://afdc.energy.gov/files/u/publication/idling_personal_vehicles.pdf.

supported by substantial evidence for the case of a large-scale event. The City remains bottlenecked, particularly at Pope/Silverado.

As we discussed previously, the traffic study shows a nearly-quarter mile backup at the Pope Street bridge by 2040. The report admits "the project would be inconsistent with the City's LOS policies at the Silverado Trail/Pope Street intersection." And, shamefully, the Traffic Report essentially throws up its hands in acknowledging that improvements to Silverado Trail and Pope Street are necessary; but because they might be hard, nothing can be done about it.

The Traffic Report includes several required mitigation measures and improvements that are recommended to address traffic issues, yet none have been incorporated into the project. While the latest Staff response baldly suggests that the applicant cannot be required to construct these improvements individually, it does not conduct any analysis to reach that conclusion. Rather, the necessary improvements – especially connection of Adams to Silverado Trail, meet the *Nollan/Dolan* essential nexus and rough proportionality tests given that the improvement is necessarily located on, and immediately adjacent to, a very large-scale project.[22] And again, the Silverado Trail/Pope improvements were previously identified as necessary for the Project as well, which is why it languished. By failing to address these necessary issues, the project thus plainly is inconsistent with the General Plan, whether or not LOS is considered as a CEQA element.

The suggestion that a statement of overriding considerations can be adopted now without attending to the previously identified issues is contrary to law. Prior to adopting a statement of overriding considerations, the law requires that a finding be made that the impact is unavoidable and that changes or alterations have been included to mitigate or avoid the significant impacts.[23] That finding must be based on substantial evidence in the record.[24] However, the record of the Project, dating back more than a decade, is replete with evidence that traffic impacts of the Project can indeed be mitigated, and failure to do so is contrary to the applicable general plan principles.

Both the above-noted improvements to Silverado Trail/Pope Street and the planned connection of Adams Street to Silverado Trail have been repeatedly identified as mitigations to the impacts and risks of the project. Further, connection of Adams Street to Silverado Trail would substantially lessen project vehicle miles travelled (VMT), allowing project traffic direct access to a major thoroughfare without the additional distance travelled through City streets. Because such improvements are specifically contemplated in the City's long-term plans, but neither properly analyzed nor included as mitigation measures, failure to require the project to carry out this immediately-adjacent improvement that would directly mitigate the project's impacts on VMT (and LOS) is contrary to the evidence in the record and clearly inconsistent with the General Plan.

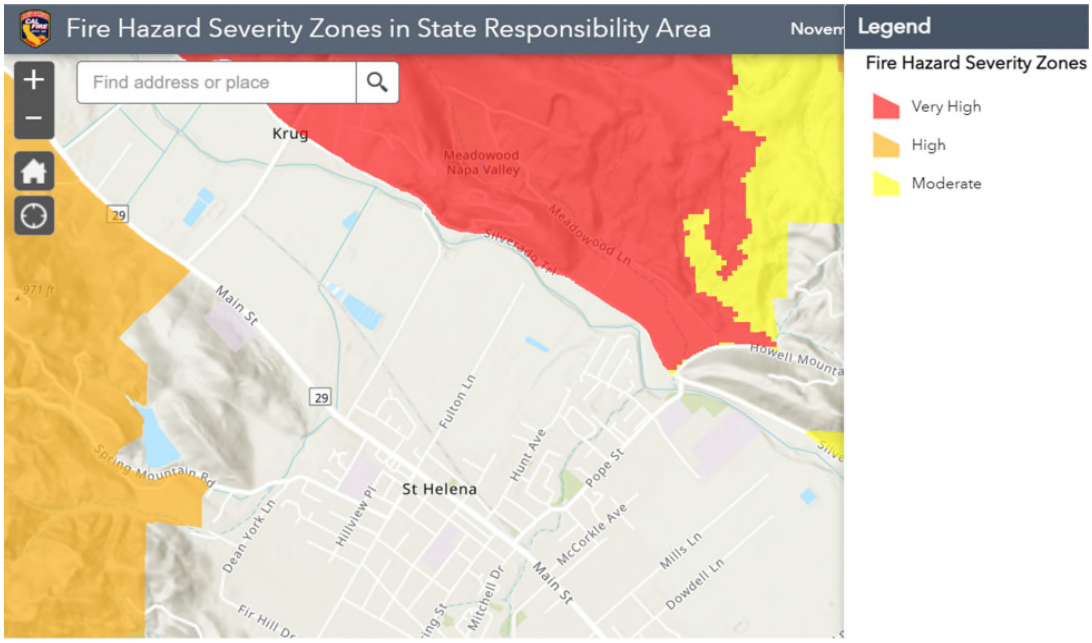
[23] P.R.C. § 21081.
[24] CEQA Guideline 15093.

The EIR Fails to Analyze or Mitigate Impacts to Public Safety



These failings to mitigate the Project's impacts on the road network underscore the EIR's failure to seriously analyze its substantial danger to the public, including wildfire and flood risks. Although the EIR notes that the property actually burned during the Glass Fire, there is no other acknowledgement that the property currently serves as critical firebreak for the rest of the City. Incredibly, Staff's latest response suggests that the Project site does not meet the definition of a firebreak. Staff apparently forgets the existing vineyard on the property – vineyards are widely recognized as acting as crucial firebreaks.[25]

The Board of Forestry's recently adopted 2021 State Fire Regulations emphasize the need to preserve and implement firebreaks in projects.[26] The EIR and proposed findings repeatedly ignore the Project's location near the SRA Very High Fire Hazard Severity Zone. Although the EIR Thresholds in the proposed Findings repeatedly state the issue of concern to be whether a project is "**in or near** state responsibility areas or lands classified as very high fire hazard severity zones" (VHFHSZ), the findings of less-than-significant impacts and related explanations repeatedly state only that the Project is not "in" the VHFHSZ.

Although the proposed findings say on page 63 that the Project is not near a SRA or VHFHSZ, that is obviously incorrect, making the entirety of the EIR's wildfire analysis unreliable and contrary to evidence. The Project is immediately adjacent to the VHFHSZ:

[25] *See, e.g., https://www.northbaybiz.com/2018/06/28/vineyards-as-firebreaks/*

[26] The project is not technically subject to CAL FIRE's jurisdiction, but the agency's emphasis on firebreaks is highly instructive and persuasive. Failure to adhere to State Fire Regulations that did not technically apply, and the naïve belief that urban development was immune to wildland fires, led to the destruction of Coffey Park in the 2017 Tubbs Fire. (*Despite clear risks, Santa Rosa neighborhood that burned down was exempt from state fire regulation,* LOS ANGELES TIMES (Oct. 15, 2017)*, available at: https://www.latimes.com/local/lanow/la-me-ln-coffey-park-explainer-20171011-story.html.*)

(CAL FIRE State Responsibility Area Fire Hazard Severity Zone Map.)[27]

The failure to analyze the Project as "**near**" the SRA/VHFHSZ is a critical shortfall. Again, this property *actually burned in the Glass Fire.*

Removing the Project's critical firebreak of six acres of vineyard is a wildfire impact that is not even acknowledged, let alone analyzed and mitigated. Removing the protective vineyard and expanding development at the Wildland-Urban Interface presents a clear and present danger to the current residents of the entire City. At a minimum, the Project must be revised and conditioned to retain a firebreak between the new development and existing development by leaving the existing vineyard intact.

The risk is substantially worsened by the failure to address the needed road improvements. Without connection of Adams Street to Silverado Trail and the mitigation of the Silverado Trail/Pope Street intersection conditions, the Project presents substantial threats to public safety.[28] The Project lacks safe emergency access and egress and would worsen existing emergency evacuation times for residents of the City. The Project creates specific threats to public safety by failing to mitigate its everyday traffic impacts and ignoring the potential for loss

[27] *See* https://osfm.fire.ca.gov/fire-hazard-severity-zones-maps-2022/.
[28] E.g., DEIR App. K, p. 15 (February 2023 Staff Report p. 1989) (Finding of the current Pope Street bridge: "emergency access can be impeded due to congestion along the bridge, creating difficulty for services to be provided to areas along Silverado Trail.")

of life and property that could occur as a result of the increased traffic on already overburden public roads during a wildfire.

Meanwhile, the Project will obstruct emergency access for existing residents, particularly those in Vineyard Valley. There is no evidence that the levee maintenance road is a suitable evacuation road for the Project. It does not meet the City's Fire Department Access Road Standards, which requires a 30-foot paved road with two feet of shoulders.[29],[30] The second access to Lot 52 also fails to meet this standard. (Relatedly, it is also unclear how the proposed terminus of Adams Street actually fits in the indicated location, which appears to require grading of the current western end of the levee.)

To the extent the levee maintenance road is a planned emergency access route for the Project, it must be improved to meet the City's Fire Access Road standards as part of the Project.[31] In turn, the environmental impacts thereof must be identified and examined in a revised EIR.

There is no evidence that the contemplated additional emergency access point onto the levee can be technically or legally constructed, particularly in light of the required conservation easements and numerous permit issues related to the flood control project, including the Incidental Take Permit under the Endangered Species Act.

The potential construction of housing behind a levee that appears to be substandard and poorly maintained is a significant threat to public safety that has been repeatedly downplayed by the Applicant and Staff, and requires rejection of this Project as currently proposed. As noted by other commenters, the City has repeatedly failed to maintain the levee, yet is financially responsible for the massive liability a failure would cause. As the Project is proposed behind a levee for which the City is entirely responsible, any failure thereof would result in ruinous liability to the City. Unless the Applicant is conditioned to post a security for the liability that it is seeking to take on by developing in a high-risk location, the financial risk of the Project cannot be concluded to warrant a statement of overriding considerations.

The current reemergence of Tulare Lake, inundating 100 square miles of homes and farms, is a prescient reminder that water finds a way to get to the lowest point, despite humans' efforts to defy gravity.[32] As the Project presents a real threat to the safety of the public, it should be rejected irrespective of any other considerations -- whether or not it technically complies with

[29] *See* City of St. Helena Street, Storm Drain & Sidewalk Standards, *available at* https://www.cityofsthelena.org/sites/default/files/fileattachments/public_works/page/2491/publicworkscitystandards_0.pdf

[30] We also note the levee maintenance road does not even meet the lesser Road and Street Standards dictated by Napa County or CAL FIRE for safe evacuation from a property with more than four residences of a paved 20' road with 2' shoulders. See Napa County Road and Street Standards, 2023, available at: https://napa.legistar.com/View.ashx?M=F&ID=11891814&GUID=307CAE5E-C950-4706-9300-255BFD6D91A2

[31] But there is no evidence the levee was designed to carry traffic or support a road, and correspondence from 2015 appears to suggest that the levee was not designed or anticipated to carry a roadway.

[32] https://www.sfchronicle.com/climate/article/tulare-lake-flooding-california-17905335.php

the City's zoning code or general plan (which as we have noted separately, it does not.) (Gov. C. § 65589.5(j)(1)(A) ("The housing development project would have a specific, adverse impact upon the public health or safety unless the project is disapproved.")).

The EIR Is Deficient on Numerous Other Topics that Reveal Its Bias

The EIR's analysis of numerous other topics is insufficient and shows a lack of serious effort to identify and mitigate impacts of the Project. Amongst those issues are the following:

Aesthetics

The EIR suggests there will be no impact on aesthetics, despite the Project being designed contrary to the General Plan's prohibition on the use of cul-de-sacs that obstruct vineyard views. The Project will substantially alter the current view from Adams Street/Library Lane, and remove or otherwise obstruct current vineyard and hillside views. While the EIR and proposed findings suggest the project will undergo design review in the future, no actual designs or use permit application for the multi-family parcel has been considered. As such, the EIR's conclusions are based on speculation, not actual substantial evidence in the record. This is the result of the Project's piecemeal consideration in violation of City code.

Moreover, while the EIR acknowledges the impact of lighting and requires mitigation by the Applicant, there does not appear to be any restriction on future residents from modifying or altering exterior lighting. The mitigation should be revised to address the potential for future spillover lighting-related issues and impose restrictions through appropriate CC&Rs.

Agricultural Resources

The Project calls for removal of multiple acres of vineyard directly contrary to the General Plan. 5.8 acres of Prime Farmland will be lost, again directly contrary to the General Plan, in addition to an 0.6 acres of Farmland of Statewide Importance. The failure to fully analyze or adopt an alternative project to preserve that Farmland lacks substantial or persuasive evidence to justify that this loss cannot be avoided or mitigated.

Air Quality

As discussed above, the Project's operation GHG emissions due to its contribution to vehicles stuck in traffic has not been properly analyzed. Vehicle emissions degrade air quality, both of GHG components and other emissions. As such, the EIR fails to fully consider the Project's air quality impacts.

Biological Resources

The Project is immediately adjacent to the Napa River and the habitat restoration project on the riparian side of the levee. The Project intends to fill four wetlands. While the project is required to obtain a permit for such fill, the proposed findings do not provide any evidence that such fill is

unavoidable, or that Alternative 3, the Park/Open Space Alternative which would preserve the wetlands, is not an environmentally superior alternative to the Project. Indeed, the Alternatives' analysis is sorely lacking, as there are numerous issues with the proposed Project that could have been address by Alternatives, particularly those that avoid removal of the vineyards.

Land Use and Planning

As discussed in the accompanying correspondence, the Project is wildly at odds with the applicable 1993 General Plan policies. It is likewise at odds with the current General Plan as well, for essentially the same reasons. The EIR's conclusion that the Project is consistent with the applicable General Plan and land use regulations, including the City's subdivision code, is contrary to the evidence in the record.

Noise

Because no design and no use permit for the multi-family development on Lot 52 has been presented, it is impossible to evaluate the noise impacts of a dense but undefined development. The EIR lacks any, let alone substantial evidence to support a finding, that the Project, and particularly Lot 52, will not have a significant impact on noise. Once again, the piecemeal approach to the Project renders the EIR insufficient as it fails to consider the whole of the Project.

Recreation

Although the EIR discusses the Project's potential impact on the use of other recreational facilities, it wholly ignores that the site is currently used for recreation, and that recreation site will be lost as a result of the Project. The Project will have a significant and unavoidable impact on recreation for the countless residents that currently use the property for recreation purposes. The proposed findings failure to even mention, let alone mitigate, these impacts lacks substantial evidence and fails to acknowledge the significant impact the Project will have on area residents' recreation.

Failure to Provide Affordable Housing

Because of the significant unavoidable impacts on the environment the Project will have, a statement of overriding considerations is required. A statement of overriding considerations requires balancing of, *inter alia,* the economic benefits of the project with its demands on the environment. However, there is no affordable housing agreement to consider that might balance the benefits of the Project to the pressing need for affordable housing. As noted separately, to the extent an affordable housing agreement is to be proposed in connection with the Project, it must be considered concurrently in order to meaningfully balance the economic and social impacts of the Project. Without that, any purported benefit would be purely speculative and lack substantial evidence.

Given the absence of an affordability plan to consider, there is no basis to conclude that the Project will provide the needed affordable housing consistent with the City's requirements that would warrant a statement of overriding considerations. As noted in our accompanying letter, the Applicant's prior efforts to propose an Affordable Housing Agreement were soundly rejected. The project design of shunting a potentially affordable multifamily project to the side of the single-family development was found contrary to the City's inclusionary policies. Relying solely on the position that the City's code requires some affordable housing and therefore justifies a current factual finding that the Project *does* provide that benefit is akin to concluding that every project complies with the law because the law requires it to.

This is not an instance where the Applicant simply has not yet proposed a plan. It did, and it was soundly rejected. The February 2020 Notification to the Applicant[33] was clear:

> *as we have discussed previously, City staff continues to have concerns with the fact that a portion of the affordable units will be provided as rental ADUs and the remainder of the affordable units clustered on a single parcel. Section 17.146.050(I) declares:*
>
> > *Affordable units shall be comparable in number of bedrooms, exterior appearance and overall quality of construction to market rate units in the same residential project. Subject to the approval of the planning commission, square footage of affordable units and interior features in affordable units need not be the same as or equivalent to those in market rate units in the same residential project, so long as they are of good quality and are consistent with contemporary standards for new housing. Affordable units shall be dispersed throughout the residential project, or, subject to the approval of the planning commission, may be clustered within the residential project when this furthers affordable housing opportunities.*

The Planning Commission has not been presented with any request to approve such a design. Indeed, City Staff concluded in 2020 that:

> *the affordable units are not dispersed throughout the project. Over two-thirds of the units are located on a single parcel, and an additional eleven ADUs will be located on a handful of the other 51 lots. The proposal does not meet the spirit nor the letter of the requirement that the units be dispersed throughout the project.*[34]

It appears that the current external planning consultant is ignoring City Staff's prior conclusions and did not include this information in its staff report for the Planning Commission to consider. The Planning Commission has now passed the project to the City Council without any analysis of

[33] Notification of Final Unresolved Issues and Questions (Feb. 27, 2020), *available at*: https://www.cityofsthelena.org/sites/default/files/fileattachments/planning_resources/project/3486/02-20-2020_unresolved_issues_and_questions_hunter-final-c2.pdf.
[34] Id.

the conflict of the Project with the City's affordable housing policy.[35] Worse, the Staff Report provided to the City Council notes that the Applicant submitted a proposed Affordable Housing Agreement on February 1, 2019, but does not mention the City's rejection in 2020 discussed above. This raises serious questions as to whether the EIR reflects the City's "independent judgment,"[36] and whether the City Council is receiving the full and complete analysis it is entitled to in making such a profoundly important decision.

Given the Applicant's repeated failures to submit an acceptable affordable housing plan, it is impossible to conclude that the Project will comply with the City's affordable housing policy. Indeed, the effort to approve solely the subdivision map to allow the creation of 51 single-family lots without scrutiny of the affordable housing component appears intended precisely to avoid the need to comply with the City's policies of integrating affordable housing of similar types and styles into a project.

To be blunt, the only integrated affordable housing proposal appears to be that a handful of rich people will make money off some poor people living in their backyards, while the rest of the affordable units are packed together in place of an existing vineyard. City Staff previously found this proposal not to meet City code. To approve the Project as currently presented, the Council will now need to ignore City Staff's prior conclusion it is contrary to City code. The City Council would need to make an affirmative finding that the Project is consistent with the City's affordability program and general plan and warrants approval despite its significant unavoidable impacts. It cannot do so on this record.

In light of the above, the Council must exercise its independent judgment to conclude the Project is inconsistent with the General Plan and municipal code and has failed to submit an acceptable affordability proposal or design, and to require the Project to be redesigned consistent with the City's objective standards.

The Required Findings for a Statement of Overriding Consideration Cannot Be Made

Statements of overriding consideration are required to explain in detail how and why the benefits of the proposed project outweigh the unavoidable, adverse environmental impacts and why the City is willing to accept such impacts. CEQA Guideline 15093 provides the following instructions:

> *(a) CEQA requires the decision-making agency to balance, as applicable, the economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposed project against its unavoidable environmental risks when determining whether to approve the project. If the specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposal project outweigh the*

[35] *See generally,* Report to the City Council, Special City Council 01 May 2023.
[36] P.R.C. § 21082.1(c)(3).

> *unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable."*
>
> *(b) When the lead agency approves a project which will result in the occurrence of significant effects which are identified in the final EIR but are not avoided or substantially lessened, the agency shall state in writing* ***the specific reasons to support its action based on the final EIR and/or other information in the record. The statement of overriding considerations shall be supported by substantial evidence in the record.***

The draft statement of overriding consideration fails to identify real, quantifiable benefits, and does not have evidence to rely on for affordable housing in particular. Again, there is no actual affordable housing proposal and the prior proposal was soundly rejected on the basis that the Project's design was discriminatory and inconsistent with City policy and the General Plan. The draft barebones statement "The Project provides needed housing to the City, particularly affordable housing" is not supported by any meaningful evidence in the record and is contrary to the current state of the Project. The Project does not supply a mix of types and affordability of housing as required by the General Plan, and does not supply any of the critical middle-income housing that is sorely lacking in the City.

By evading consideration of the Project's implementation of affordable housing requirements and multi-family use and design elements, it attempts to lock in a single-family development with no opportunity to require compliance with the City's inclusionary housing policies or General Plan requirements for a mix of housing types.

The apparent suggestion that simply all housing projects are good and must be approved is wrong. The Planning Commission made this error. The City Council should not repeat it.

Conclusion

The Applicant has repeatedly attempted to avoid scrutiny of the design of its project. The EIR presented for Certification poorly analyzes only a hypothetical, unsubmitted project, not the Project currently under consideration by the Council. In doing so, the EIR has failed to analyze numerous elements of the Project. Some are incapable of full consideration, such as aesthetics, without an actual proposed multi-family project. Others are clearly inadequate on the current record as discussed in detail above.

As detailed above, the Project's problems are numerous and, in short, present significant threats to public safety, and fail to meet the legal requirements of the City and the State with respect to, at a minimum, safety, environmental, water, and affordable housing.

The Project puts the current residents of the City at substantial risk to benefit White Fang LLC's development interests.

The EIR should not be certified. The substantial deficiencies discussed above require remediation and recirculation following the Applicant's submission of all of the necessary information for consideration of the whole of the Project.

Sincerely,

DICKENSON, PEATMAN & FOGARTY PC

RE: Hunter Subdivision Project Tentative Map No. 2022-001, File #PL10-040

Dear Mayor Dohring, Vice Mayor Hall, Council Members, City Manager Comelo, Community Development Director DeRosa:

As you are aware, we represent the Saint Helena Citizens for a Sustainable Future, a diverse group of City residents. We have provided several letters on this project to the Planning Commission on this project, highlighting several of the procedural and substantive deficiencies in the application process and consideration. (Those letters are included in your Agenda packet for the May 1 meeting, along with Staff's responses, and we encourage you to review those letters in chronological order for context. We have not set out again every point in those letters for sake of brevity.)

The Planning Commission nevertheless –reluctantly as can be seen in the video of the hearing – passed the project on to the City Council. The Planning Commission appeared severely cowered by pressure to approve housing. Its referral to the City Council is thus not in any way persuasive that the tentative map nor its accompanying Environmental Impact Report warrant approval. A separate letter addresses the serious issues with the Environmental Impact Report.

This project has an extensive history. It was previously halted nearly a decade ago due to its impacts on traffic and needed improvements to the Pope Street/Silverado Trail intersection. It has recently moved forward, ostensibly on the notion that traffic is no longer an issue of concern under the California Environmental Quality Act, and thus can be ignored. This is incorrect – the impact on traffic is still highly relevant to whether the project is consistent with the General Plan.

But there are also countless other issues with the project raised by the hundreds of public comments raised in opposition. Some of these significant items are discussed further below.

In short, this Council's function is to determine whether the project is consistent with the City's residents' vision of St. Helena as described in the General Plan. Where it is not, it is the Council's job to reject the project to protect the current residents from the deigns of out-of-town developers. Given the languishing of this project by the applicant, it is subject to the 1993 General Plan rather than the current one; but its failures to fulfill the City's vision are nonetheless apparent.

The City Council Meeting Must Be Rescheduled Because It Does Not Comply with the Law

As a preliminary matter, the City Council has set the matter for hearing on May 1, 2023. That hearing is illegal and contrary to City code. The Planning Commission was required to file its report and recommendation with the City Council *prior* to setting a hearing on the tentative subdivision map. (SHMC § 16.16.070. ("At the next regular city council meeting **following the filing of the planning commission's report with it**, the city council shall fix the hearing date at which the tentative map will be considered by it, which date shall be within thirty (30) days thereafter.")) That did not happen. Indeed, no Planning Commission report and recommendation was prepared separate from the Staff Report prepared by Interwest Consulting Group provided with the public agenda for the May 1, 2023 Special Meeting.

This failure to proceed as required by law has deprived the public of the opportunity to review and comment on the legally mandated Planning Commission report and recommendation prior to the project being set for a hearing. The May 1, 2023, Special Meeting is thus contrary to law and must be rescheduled properly pursuant to SHMC § 16.16.070.

Indeed, it appears throughout the recent process that the City has been poorly served by the latest consultant on the project, Interwest Consulting Group. There has been no independent review of the project - only advocacy for the applicant by the retained outside service. The City has been repeatedly advised to ignore its municipal code to benefit the applicant. The City Council should take a sharp eye to any of the analysis provided by Interwest Consulting Group. Indeed, as discussed further below, the analysis is repeatedly directly contrary to the facts and law.

The Tentative Map Cannot Be Approved Because the Complete Project Has Not Been Presented to the City, As Required by Law

As described extensively in our prior correspondence to the Planning Commission, the City's code clearly and unambiguously requires the applicant to submit for *all* of the necessary approvals to carry out the project, including an affordable housing agreement and required multi-family use permit prior to consideration of a tentative map. The applicant has not done that. This failure to proceed as required by law is fatal to the project, and any approval will be a clear abuse of discretion.

As we set out previously in additional detail, Title 16 of the Saint Helena Municipal Code, the City's Subdivision Ordinance, provides unambiguously that:

> All applicants for tentative maps and tentative parcel maps **shall concurrently submit applications for *all* other discretionary approvals**, including but not limited to, conditional use permits, variances, rezonings, and general plan amendments.

(Subdivision Ord., § 16.04.120 (emphasis added.)) Here, however, the Staff Report directly admits "future applications" are required for additional discretionary portions of the project. This renders the approval illegal, the record incomplete, and consideration now directly contrary to Section 16.04.120's mandate that the requests be made "concurrently."

This isn't just a procedural nicety. Such a system makes perfect sense, as otherwise it is impossible to consider the whole of the project. Ignoring this rule is ignoring the entirety of the Project.

Attachment 29 to the May 1 Agenda, Staff 's second attempt at a response to our prior letter to the Planning Commission of February 6, 2023, acknowledges this failing by the applicant to submit the required approvals over the dozen years the Project has been pending. But it attempts to ignore that failure by arguing that the Applicant was supposedly not told of the requirements, and a state law adopted some six years after the application was deemed complete prevents the City from following its law now. That is wrong on both the facts and the law.

For example, the April 17, 2018 Notification of Identified Issues clearly identifies the requirement for and cites the code sections for the Affordable Housing and Conditional Use Permit for Multifamily Housing. The suggestion that the Applicant was not notified of these issues previously is contrary to the record:

> *The type of uses conceptually proposed on Lot 52 (duet multifamily units) require Conditional Use Permit and Design Review approval (see SHMC section 17.40.030.) and development of Lot 52 is required to meet the minimum gross density on the project site. Based on this, the City is following up on past requests for additional information as to the development of the multifamily parcel (and preferably Use Permit and Design Review applications) which provide more project specifics, and detail how the future development will comply with the requirements of the Medium Density Residential zoning and development standards.*[1]

The City had plainly been requesting this information for a considerable time. The September 27, 2018, Comment Letter indicated that the Applicant had provided a draft Affordable Housing agreement that failed to meet the City's standards. By February 2020, the Applicant had offered

[1] Available at: https://www.cityofsthelena.org/sites/default/files/fileattachments/planning_resources/project/3486/hunter_subdivision_issues_letter-april_2018.pdf

to enter into an Affordable Housing and Regulatory Agreement "in conjunction with the approval of a Tentative Subdivision Map." The City soundly rejected the plan as inconsistent with inclusionary housing principles in its Notification of Final Unresolved Issues and Questions.[2] It also clearly called out the need for a use permit for the multifamily development:

> *With 16.92 acres and a total of 87 units, the overall project density is 5.14 units per acre. The site is located within the Medium Density Residential (MDR) General Plan designation with a density range of 5.1 to 16 units per acre. The site is in the MR Zoning District that permits single family residences and Accessory Dwelling Units. Residential condominium projects, attached duplex or triplex units are permitted in the MDR District subject to the Approval of a Conditional Use Permit in each case. Based on your current subdivision plan,* ***you should concurrently submit a Conditional Use Permit application****.*

(Id. Emphasis added.) The Applicant has ignored this direction for years.

Staff's sole response is to argue the current version of the Government Code Section 65589.5(j), regarding the timing and contents of a response to a housing project application, which did not exist at the time of the project's application, *post hoc* controls the project. However, statutes do *not* generally apply retroactively,[3] and a plain reading of the timelines in Section 65589.5(j)(2) shows that applying that section retroactively to a prior application would have immediately made all actions on the Project – and every other similar project – suddenly untimely. This interpretation is unreasonable, and we are unable to locate any authority that would support Staff's position. Indeed, the First District Court of Appeal recently found directly to the contrary in connection with another amendment to the Housing Development code. Such amendments are ***not*** retroactive unless explicitly stated in the legislation.[4] Section 65589.5(j)(2) is thus inapplicable and is not a basis to ignore the City's code.

The other applications required for the Project – an affordable housing agreement and a use permit for multifamily development – are for other discretionary approvals. They are required by code and recognized in the EIR. They are not precluded by the legal "completeness" (or not) of the tentative map application itself – they are distinct legally mandated discretionary applications.

---

[2] Available at: https://www.cityofsthelena.org/sites/default/files/fileattachments/planning_resources/project/3486/02-20-2020_unresolved_issues_and_questions_hunter-final-c2.pdf

[3] "Generally, statutes operate prospectively only." *Ruegg & Ellsworth v. City of Berkeley (2021) 63 Cal.App.5th 277, 307 [277 Cal.Rptr.3d 649, 671, 63 Cal.App.5th 277, 307]* (quoting cases). "[A] statute may be applied retroactively only if it contains express language of retroactivity or if other sources provide a clear and unavoidable implication that the Legislature intended retroactive application." *Id.* (quoting cases.)

[4] *Ruegg & Ellsworth v. City of Berkeley* (2021) 63 Cal.App.5th 277, 307 [277 Cal.Rptr.3d 649, 671, 63 Cal.App.5th 277, 307], *reh'g denied (May 19, 2021), review denied (July 28, 2021.)*

And in any event, requiring additional supporting and clarifying information after a completeness determination is routine and allowed by the Permit Streamlining Act. The Permit Streamlining Act specifically contemplates the requirement for additional information following a completeness determination, and states specifically that "[t]he agency may, in the course of processing the application, request the applicant to clarify, amplify, correct, or otherwise supplement the information required for the application" and that a completeness determination "shall not be construed as limiting the ability of a public agency to request and obtain information which may be needed in order to comply with [CEQA]."[5] Indeed, the entirety of the EIR process occurred after the completeness determination was made. The suggestion that additional information on the planned "design and improvement"[6] of Lot 52 – which the Council is required to review and approve in connection with the subdivision – cannot be required after the completeness determination is specious.

The City needs to follow its own law and reject the piecemeal attempt at approval of only a part of the Project. Neither the Permit Streamlining Act nor the subsequent amendments to the Housing Accountability Act alter this; it is a failure to submit *all* of the information necessary to analyze the project as a whole, which the City's Subdivision Code – and CEQA – require to be considered and analyzed collectively.

Failure to proceed as required by law is an abuse of discretion.[7]

The Required Findings Cannot Be Made

Without a complete collection of the required discretionary approvals, the City simply cannot make the required findings for approval. The City Council must make two findings to approve a tentative map:

> 1. That the proposed subdivision, ***together with the provisions for its design and improvement***, is consistent with the general plan, any applicable specific plan, and other applicable provisions of this code; and
>
> 2. Except for condominium conversion projects where no new structures are added, that the design of the proposed subdivision provides, to the extent feasible, for future passive or natural heating or cooling opportunities in the subdivision, as described in the state Subdivision Map Act and any guidelines promulgated by the city council.

(SHMC § 16.16.080 (emphasis added.))

Put simply, one must know the entirety of what a subdivision project is in order to properly approve it. The City must approve not just the lots, but the "provisions for [their] design and

[5] Cal. Gov. C. § 65944(a), (c).
[6] SHMC § 16.16.080.
[7] Cal. C. Civ. P. 1094.5; *see, e.g., No Oil, Inc. v. City of Los Angeles (1974) 13 Cal.3d 68, 88 [118 Cal.Rptr. 34, 47, 529 P.2d 66, 79], supplemented (1975) 13 Cal.3d 486 [119 Cal.Rptr. 216, 531 P.2d 784].*

improvement."[8] The applicant continues to evade submission of those details for the most important component of the project.

The application seeks approval of 51 single family lots, and one multi-family lot with purportedly 25 units. That multi-family lot requires separate consideration and approval, as multi-family housing is a conditional use.[9] Conversely, as of this moment in time, the use indicated for Lot 52, the multi-family parcel, is not allowed.[10] The applicant thus is seeking to ram through its single-family lots without any analysis or consideration of the "design and improvement" of the multi-family portion of the project.

Doing so will severely restrict the City's ability to shape the critical affordable housing that the property has the possibility to provide. If the tentative map is approved without consideration of a*ll* of the necessary approvals, it eliminates the ability to require a larger affordable housing component. It also locks the City into directly violating the General Plan, as Lot 52 is entirely planted with vineyards. (Contra 1993 General Plan CD 4.3.5 (4.3.5 "Require future residential development to conform to the pattern and density of older, neighboring areas of town in order to complement existing town character and **ensure that densities are high enough to protect against unnecessary incursion into vineyard agricultural areas**.") Thus, directly contrary to the General Plan's policy of designing projects to avoid removal of vineyard, the City will be left with no choice than to approve the vineyard removal for the only multi-family parcel that is part of – and required by – the project to meet the minimum density requirements of the zoning code.

The property has been described as a key component of the City's housing plans. If that is to be true, it needs to be thoroughly and properly vetted. Rushing through an improper approval of a single-family home subdivision will have irreversible deleterious impacts on the City that will persist long after the current Council is out of office. We agree with and echo the letter from Our Town St. Helena: the discriminatory and inadequate cramming of a small multi-family development into an existing vineyard to make way for 51 luxury, likely-second homes is wholly inappropriate and contrary to the City's urgent needs for affordable housing. It is indeed contrary to law.

Moreover, there is no evidence that the project, which depends on 11 ADUs to purportedly meet the minimum density requirements, would achieve that threshold. Studies show that only approximately half of ADUs are used as rental units.[11] Thus, without deed restrictions requiring the rental of the ADUs, and conditions requiring minimum rental income and related fees, the ADUs are not meaningful additions to the City's housing stock or the required density. But again,

[8] *Id.*
[9]
[10] The applicant initially submitted a map with no development shown in Lot 52 at all. (*See* our Letter of October 31, 2022)
[11] UC Berkeley Center for Community Innovation, Implementing the Backyard Revolution: Perspectives of California's ADU Owners, (April 22, 2021), *available at:* https://www.aducalifornia.org/wp-content/uploads/2021/04/Implementing-the-Backyard-Revolution.pdf.

the applicant has failed to submit the mandated Affordable Housing Agreement that might inform whether such conditions could or would be met.

As discussed further below, the project is inconsistent with the General Plan for a host of reasons, including but not limited to its widespread ignorance of the applicable 1993 General Plan policies, impacts on traffic, public safety, destruction of vineyard, and water usage.

But, more basically, as a result of the failure to submit the multi-family use permit application and design, there is no evidence in the record to support the required second finding on passive or natural heating or cooling opportunities. There is no submitted design for Lot 52, the multi-family housing portion of the project. Although the staff report indicates that some of the single-family homes meet the requirement for passive or natural heating or cooling, there is no evidence that the multi-family homes will.

Put indelicately, on the current record the only finding favorable to the project the City Council could make is that it does not care whether the residents of the purportedly affordable portion of the development have had their interests in passive or natural heating or cooling attended to. And it must make this finding now, based on evidence in the record now – not simply condition future compliance.

As the second required finding cannot be made, the Project must be rejected. The Council can reach this conclusion now without further need to wade through the lengthy issue of General Plan consistency – or lack thereof.

General Plan Inconsistencies

Returning to the larger issue of the first required finding for approval, the woeful attempt in the General Plan consistency analysis provided with the agenda to show the project is consistent with the General Plan firmly demonstrates the opposite.[12] For example, and by no means exhaustive, the provided General Plan consistency analysis mentions only three of the dozens of applicable 1993 General Plan Land Use and Growth Management Elements.

Among those "LU" policies the analysis omits are the following:

> 2.6.5 Encourage the continuation of agricultural and low-intensity uses adjacent to the Urban Limit Line.
>
> 2.6.14 Encourage a mix of housing types and price ranges to allow choice for current and future generations of St. Helenans.
>
> 2.6.17 Minimize situations where new residential development will block public view of surrounding vineyards

[12] As the Project is subject to the 1993 General Plan, all references herein are to that version of the General Plan unless otherwise stated.

> 2.6.20 Encourage the subdivision and development of larger parcels (3 acres or more) as "planned unit developments" to ensure a more comprehensive and creative approach to planning the development as a single unit
>
> > *The "planned unit development" approach provides developers with greater design flexibility while ensuring the City adequate design review.* The *intent* is *to create developments that complement existing community character. The City will favor planned unit developments that provide generous amounts of open space, covered parking, the separation of pedestrian and vehicle traffic, and on larger tracts, a variety of housing types: single-family detached, duplex, and multi-family dwellings, in one and two-story structures.*
>
> 2.6.24 Require residential developers to contribute toward the provision of community facilities and services (e.g., recreation facilities and programs, educational facilities, traffic and transportation facilities and services) consistent with State law requiring a nexus between project impacts and required mitigation.

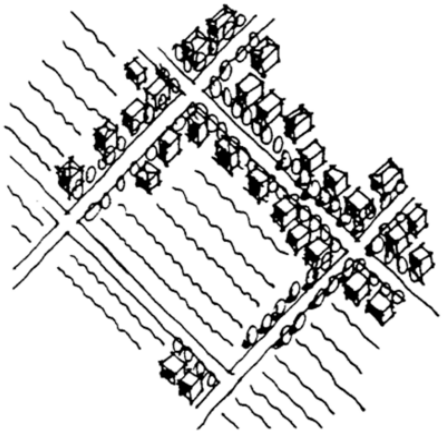
The consistency analysis ignores these elements because the Project ignores them.

The 1993 General Plan Community Design Element reflects a general rejection of 'suburbanization' of the City. In response to the nature of the recent development of the time, the 1993 General Plan, 4.2 Community Form and Character Issues, provided:

> *Residents are clearly concerned that the special character of St. Helena is being lost through new development and growth. Although the last ten years have seen little new development, residents perceive a continuing loss of character and values. In part, this perception is the result of the growth of the valley in general as a tourism destination, and the resultant traffic congestion and impact on local serving businesses. However,* ***it is also the result of the design and planning of new development, that is more suburban in nature than the historic pattern in town.***

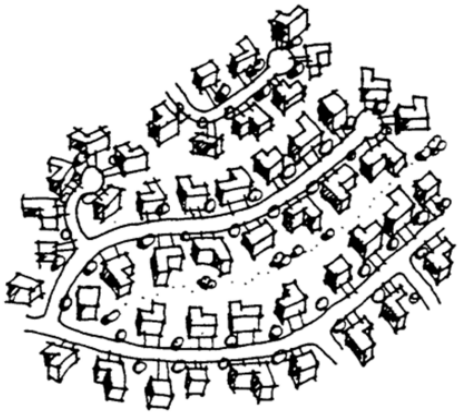
Put plainly: the City looked at the then-recent development on the East side, said 'we don't like it', and directed a return to the classic design of the West side of town.

Again, the General Plan consistency analysis wholly fails to comport the project to the applicable Community Design General Plan policies. It ignores numerous applicable policies, while addressing only a handful of the Community Design elements. Even then, the policies it does address show the project is directly at odds with the General Plan. For example, the consistency analysis states the following:



4.3.5 Require future residential development to conform to the pattern and density of older, neighboring areas of town in order to complement existing town character and ensure that densities are high enough to protect against unnecessary incursion into vineyard agricultural areas.	The proposed subdivision is consistent with the density requirements of the site's General Plan land use designation.

Obviously, the explanation does not match the element. Instead of comporting the design to the older areas of town to avoid incursion into vineyard agriculture, the project merely purportedly meets the bare minimum density by squeezing in one dense parcel. The consistency analysis ignores the remainder of the element, which is unmet.



The next element similarly fails the straight-faced test:

4.4.1 Use the grid pattern of street layout as the template for future developing areas. Streets should be straight, should meet at right angles, and cul-de-sacs and a suburban pattern should be avoided.	The proposed street layout follows a grid pattern as much as possible, given the site's shape and the location of adjacent connecting streets. One cul-de-sac is included in the proposed subdivision where no other street pattern is feasible.

To be clear, this is what the General Plan depicts as desired vs. not:

Traditional Grid Pattern

Suburban Pattern

(General Plan 4.4 at 4-16.)

In short, the City considered whether it wanted a project in the future exactly like that proposed, and rejected it. The excuse that the project meets the grid pattern as much as possible is incredible. Offsetting 'Street A' into an awkward intersection into a prototypical subdivision is directly contrary to the element. The design is also inconsistent with Element 4.6.2, which prohibits cul-de-sacs to block views of vineyards.

The next General Plan element analyzed, 4.4.2, the ability to continue Adams Street to Silverado Trail, also fails. The consistency analysis wrongly states that the project "will complete the planned roadway system." But the planned roadway system extends Adams Street to Silverado Trail. The project, on the other hand, obstructs a clear path to the east, and there is no evidence that construction of a public street on the existing levee is technically feasible nor safe. The levee was not designed to carry traffic, and there is no evidence that Adams Street can feasibly be extended if the project is constructed as proposed. Although the General Plan consistency analysis later acknowledges Transportation Element 5.3.2, which calls for extension of Adams to Silverado Trail, it does not consider how the project is consistent or inconsistent with the plan.[13]

There is no evidence that the project is anything other than a complete obstacle to completion of the road network's second access to Silverado Trail.

[13] The analysis also ignores related Public Health and Safety element 8.2.11: "Encourage and support regional efforts to displace motor vehicles off State Route 29 and onto alternative modes of transit." Failure to address access to Silverado Trail ignores this policy.

Returning to the offered 1993 Consistency Analysis, the next element analyzed again belies the consistency:

4.5.1 The sense of a strong connection to the surrounding agricultural open space and hillsides must be preserved in the future. Views of vineyard, hillsides, creeks and major landscape features should be maintained.	Views of the vineyards to the north of the proposed subdivision are currently available from the levee road, which will not be affected by the proposed project.

The "sense of a strong connection" is plainly destroyed by the Project. The attempt at consistency is quite literally to tell residents they should walk around the Project and look the other direction. And similarly, the next element analyzed again shows the project wholly at odds with the General Plan:

4.7.3 The new eastern entry via the Adams extension should be planned to maximize open space and vineyard views. Where possible, vineyards should be maintained up to the road edge. Residential development should front on the road with sufficient lot depth to allow a generous setback for sound and privacy. Large specimen street trees should be planted in residential areas to mitigate the scale of the street and encourage pedestrian and bicycle movement.	The proposed project extends Adams Street to connect with the northward extension of Starr Avenue, but does not otherwise affect the layout or design of the future extension of Adams Street.

The General Plan thus dictates residential development should front on Adams Street, not an oddly-adjacent 'Street A'. The future extension of Adams Street would plainly not front on residential developments, but instead would be adjacent to a feeder road. Instead of large yards facing Adams Street and preserving vineyards, the project results in the exact opposite – multiple roads created by removing vineyards.

This is also, for example, directly contrary to General Plan policy CD 4.3.26:

> Encourage residential building siting and design that is similar to that found in the older neighborhoods in town. In these areas consistent setbacks, porches and generously landscaped front yards add to community enjoyment by all. Restrict location of driveways and garages to minimize their visual impact on the street.

In short, this Project by no means meets the applicable General Plan's Land Use and Community Design elements.

It also fails to grapple with the most basic General Plan issue that stalled the project previously: traffic. Nearly a decade ago, it was identified that improvements were needed to the Silverado Trail/Pope Street intersection. The most recent traffic study still states that improvements to the intersection are necessary, and that the project will add traffic to that intersection to such an extent that in a short time, traffic will be backed up past the new City Hall. Yet, no mitigation whatsoever has been provided to account for these significant impacts on quality of life.

This violates the General Plan Traffic elements, including 5.4.1 and 5.4.2, which direct the City to attempt to maintain tolerable levels of service (at least LOS C) at the City's intersections.

More critically, the Project is inconsistent with the most important elements of the General Plan – those related to Public Health and Safety. Countless commenters have already opined that the Project is unsafe both to the current residents and the future residents. Those issues include that the project is flood prone, behind an uncertified levee with evidence of deficient maintenance. It is also a necessary firebreak that actually functioned as such in the 2020 fire. The proposed emergency access via the levee maintenance road is not what the levee was designed for and there is no evidence that using the levee for evacuation will be consistent with the long-term structural stability of the levee. Adding substantial population without addressing other transportation issues is a clear and imminent risk to the health and safety of the City's existing residents.

Meanwhile, the consistency analysis analyzed only two of the extensive list of Public Health & Safety elements of the General Plan. Of the two chosen, one is misleading:

8.5.7 Ensure that all streets and roads are adequate in terms of width, turning radius, and grade to facilitate access by City firefighting apparatus, and to provide alternative emergency ingress and egress.	The proposed subdivision has been reviewed by the Public Works and Fire departments for consistency with City roadway standards

The staff report reveals that there actually was *no* standard for intersection design in the City's standards. Thus, despite the intersection of Adams Street/Starr/Street A being clearly awkward and dangerous (and contrary to design standards that could have been referenced such as those by Napa County or CalTrans), the consistency analysis simply states that the subdivision 'has been reviewed.' It has *not* been found safe or adequate. And again, access depends on the levee access road that is not designed for that use.

But most significantly, the consistency analysis ignores numerous other elements that are highly relevant to the Project, and with which it is in conflict. Among the 1993 General Plan Public Health & Safety elements that are unaddressed and unmet are numerous elements discouraging

construction within Flood Hazard Areas. Those Guiding Policies in Section 8.6 clearly discourage development subject to flood risk:

> 8.6.1 Prohibit the introduction of intensive urban development into designated Flood Hazard Areas.
>
> 8.6.2 Uses vulnerable to floods, including public facilities and infrastructure, shall be protected against flood damage at the time of initial construction.
>
> 8.6.3 Prohibit the construction of structures or flood barriers which would unnaturally divert flood waters or would increase flood hazards in other areas.
>
> 8.6.4 Require a grading permit for any filling, grading, or dredging that may increase potential for flood damage.
>
> 8.6.5 Restrict the alteration of natural flood plains, stream channels, and natural protective barriers which help accommodate or channel flood waters.
>
> 8.6.6 Prohibit the siting of uses within Flood Hazard Areas that could result in health and safety hazards due to the release of chemicals or other substances as a result of inundation or erosion.
>
> 8.6.7 Encourage the use of Flood Hazard Areas within new development areas for open space and recreation uses, including parks and greenbelts.
>
> 8.6.8 Ensure that any new development that is allowed within the floodplain is constructed so that the lowest floor elevation is at least one foot above the 100-year flood level.

Development exposed to flood risk is plainly discouraged. Moreover, implementing policy 8.6.11 "Require[s] developers with land adjacent to the Napa River to construct or contribute a fair share toward the construction of necessary flood control improvements."

As has been widely discussed by earlier commenters, the project places the entire development at risk of flooding. The staff report acknowledges the flood risk, but asserts it to be of a 200-year flood, and thus not a "Flood Hazard Area." Even assuming that to be true,[14] though less likely than a 100-year flood (but only by half), the risk to life and property remains and the potential ruinous financial liability to the City remains unaddressed. Indeed, the City's counsel has provided a legal analysis stating that the City could be held liable for flood damage, particularly if the levee is not adequately maintained. As such, compliance with General Plan policy 8.6.11 would suggest that at a minimum the Project be conditioned to indemnify the City from that potential liability via a bond for the replacement costs of the Project, and to be responsible for the costs of maintaining the necessary flood control improvements.

[14] There is considerable inconsistency in the record about the protection level afforded by the levee. We do note the FAQ provided as attachment 23 to the agenda misstates the 500 year flood risk as 0.02% annually. It should read 0.2%.

Finally, the Project conflicts with numerous Public Facilities and Services and Parks and Recreation policies. Among those is PF 9.4.6 which requires "All subdivision proposals shall be consistent with the need to minimize flood damage." However, the Project proposes to develop portions of the site subject to flood risk, and potentially places the City at ruinous financial risk as a result.

Thus, for all of the above reasons, and those stated by the numerous other commenters, the Project is inconsistent with the General Plan and the Council cannot make the required finding of consistency.

Findings For Denial

Pursuant to SHMC § 16.16.080(D), the City Council:

> may deny approval of the tentative map on any grounds provided by the law including, without limitation, a finding that the discharge of waste from the proposed subdivision into an existing community sewer system would result in, or add to, violation of existing requirements prescribed by a state regional water quality control board. A tentative map ***shall be denied*** if ***any*** of the following findings are made:
>
> 1. That the proposed map is not consistent with the general plan, applicable specific plans, or other applicable provisions of this code;
>
> 2. That the design or improvement of the proposed subdivision is not consistent with the general plan, applicable specific plans, or other applicable provisions of this code;
>
> 3. That the site is not physically suitable for the type of development;
>
> 4. That the site is not physically suitable for the proposed density of development;
>
> 5. That the design of the subdivision or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat. Notwithstanding the foregoing, the planning commission may approve such a tentative map if an environmental impact report was prepared with respect to the project and a finding was made pursuant to Section 21081(a)(3) of CEQA that specific economic, social or other consideration make infeasible the mitigation measures or project alternatives identified in the environmental impact report;
>
> 6. That the design of the subdivision or the type of improvements are likely to cause serious public health problems;

> 7. That the design of the subdivision or the type of improvements will conflict with easements of record or easements established by court judgment, acquired by the public at large, for access through or use of property within the proposed subdivision. In this connection, the city council may approve a map if it finds that alternate easements for access or for use will be provided and that those will be substantially equivalent to ones previously acquired by the public. This subsection shall apply only to easements of record or to easements established by judgment of a court of competent jurisdiction, and no authority is granted to the planning commission to determine that the public at large has acquired easements for access through or use of property within the proposed subdivision;
>
> 8. That all requirements of the California Environment Quality Act and the rules and procedures adopted by the city council pursuant thereto have not been met;
>
> 9. That the applicant has failed to submit complete or adequate information;
>
> 10. Subject to Section 66474.4 of the state Subdivision Map Act, that the land is subject to a contract entered into pursuant to the California Land Conservation Act of 1965 (commencing with Section 51200 of the Government Code) and that the resulting parcels following a subdivision of the land would be too small to sustain their agricultural use.

(Emphasis added.) As described above, and by countless other commenters, numerous of these findings can be made here. They include that:

- The proposed map is not consistent with the General Plan as discussed above.
- The design or improvement is not consistent with the General Plan as discussed above.
- The site is not physically suited for the proposed development as discussed above, particularly in regards to its location adjacent to the levee and removal of vineyard firebreaks.
- The site is not suited for the proposed density due to its location adjacent to the levee and lack of development of the road network, existing parking shortcomings, and removal of vineyard firebreaks.
- Substantial unmitigated environmental impacts persist and no overriding considerations justify those impacts, including impacts on groundwater, GHGs, aesthetics, and others as further discussed in our accompanying letter.
- The EIR does not comply with CEQA as discussed in our accompanying letter.
- The Applicant has failed to provide necessary information as discussed above.

Conclusion

The City Council members have a duty to the citizens that elected them to protect the City from adverse interests. It must manage the City consistent with the General Plan and the Municipal Code. This project violates both, and the Council should do its duty and protect the voters from this proposed violation of their collective will.

Sincerely,

DICKENSON, PEATMAN & FOGARTY PC

Hunter Subdivision project

Responses to April 30, 2023 Comments of Joshua S. Devore
Tentative Map No. 2022-001, File #PL10-040

Comment #1

Commenter contends that the May 1, 2023, public hearing should have been rescheduled because the Planning Commission did not file a report and recommendation with the City Council prior to setting a hearing on the tentative subdivision map, as required by St. Helena Municipal Code Sections 16.16.060 and .070.

Response #1

The form of the required Planning Commission report and recommendation is the resolution adopted by the Planning Commission at its April 7, 2023, meeting. Neither the City's municipal code nor the provisions of the State Subdivision Map Act that Sections 16.16.060 and .070 are modeled after require a particular form for that report. The Planning Commission resolution contains the Planning Commission's recommendation, it was available prior to the Council hearing date being set, and was included in the materials provided for the May 1 Council hearing. The City complied with Sections 16.16.060 and 16.16.070 and there was no need to reschedule the May 1 hearing.

Comment #2

Commenter again argues that the applicant was required to concurrently submit all other applications for discretionary permits that would eventually be required for the development of the proposed subdivision. Commenter further argues that the City is not required to comply with Government Code Section 65589.5(j)(2), because to do so would require retroactive application of that statutory requirement, which was enacted after the Hunter Subdivision application was deemed complete.

Response #2

The City has explained in detail in prior reports that Section 65589.5(j)(2) limits the City's ability to deny an application for a housing development project for failure to comply with certain objective requirements after the project application is deemed complete. The City does believe that the Hunter Subdivision project is subject to Section 65589.5(j)(2) (which was adopted over five years ago), and the City is not applying this requirement retroactively in this instance. This issue, including an explanation of why the City is not applying this requirement retroactively, is addressed further in Section 2 of the letter from Daniel Golub and William Sterling (the applicant's attorneys) to City Council dated May 1, 2023 (the "Golub/Sterling letter"). City staff agrees with the legal analysis contained in Section 2 of that letter, and refers readers to that letter for further explanation as to why it is not appropriate to deny the Hunter Subdivision based on the reasons set forth in Comment #2 of Commenter's letter.

Comment #3

Commenter argues in his third comment that the City cannot make the findings required for approval of a tentative map pursuant to Section 16.16.080. Commenter first argues that the City Council cannot make the finding of consistency with the General Plan and Subdivision Ordinance because the City Council is not considering the other future approvals that will be required for ultimate development of the proposed subdivision. Secondly, Commenter argues that the City Council has not made findings that the design of the multifamily development provides, to the extent feasible, for future passive heating and cooling opportunities in the subdivision.

Response #3

Response #2 and the Golub/Sterling letter address why the City is considering this tentative map separate from the future approvals required for development of the property. It is certainly possible and not uncommon for a City Council to evaluate a tentative subdivision map on its own to determine consistency with the City's General Plan and Subdivision Ordinance. City staff has provided the reasons why this proposed subdivision is consistent with the General Plan and Subdivision Ordinance in detail as part of the agenda materials. In his letter the Commenter argues that Lot 52 should not be developed with multifamily units because it is currently planted with vineyards, and that the development would not meet the density or affordability requirements without inclusion of the multifamily units. As discussed in the staff materials provided, this property, including Lot 52, is designated and zoned for residential use, and it would be inconsistent with the City's General Plan or Zoning to prohibit the development of this property for residential purposes.

The Commenter also argues that the proposed accessory dwelling units should not be counted towards the minimum density for the overall project unless there are deed restrictions requiring that the accessory dwelling units be rented. However, the City's Zoning Code explicitly allows that accessory dwelling units may be counted toward minimum density in the Medium Density Residential (MR) Zoning District, and there are not requirements for specific deed restrictions in order for these units to be counted toward minimum density. (SHMC §17.40.060(E)(3).)

Finally, Commenter argues that the City Council cannot approve the tentative subdivision map because there is no evidence that the multifamily units will be constructed in a manner that provides for natural heating or cooling. The requirement to provide for natural heating and cooling opportunities, to the extent feasible, is focused on configuration and design of the subdivision, not construction of the buildings on future lots. As staff previously outlined in the staff materials for the Planning Commission hearing and May 1 Council hearing, the Subdivision Map Act provides examples of natural heating and cooling opportunities. These include design of lot size and configuration to permit orientation of structures to allow for southern exposure, and/or to take advantage of shade or prevailing breezes. This requirement does not pertain to the future construction on the lots created, and staff has addressed how the configuration of the subdivision provides for natural heating and cooling through configuration of the subdivision, to the extent feasible.

Most importantly, with all of Commenter's arguments, it is important to recall the standard that applies to the City Council in reviewing this proposed subdivision. As set forth in Government Code Section 65589.5(j)(1), the City may only deny the project if it finds, based on written findings supported by a preponderance of the evidence in the record that (1) the project would have a specific adverse impact upon the public health or safety unless the project is disapproved, and (2) there is no feasible method to satisfactorily mitigate or avoid the adverse impact other than the disapproval of the housing development project or the approval on the condition that it be developed at a lower density. Commenter does not provide evidence that the alleged inconsistencies with the General Plan and Subdivision Ordinance rise to the level of a "specific adverse impact" as defined in Section 65589.5(j)(1), and therefore, even if these inconsistencies did exist, they are not sufficient grounds to deny the application for the tentative subdivision map.

Comment #4

Commenter makes numerous arguments as to why he believes the proposed subdivision is inconsistent with the City's General Plan.

Response #4

These arguments are also addressed in the Golub/Sterling letter. Please refer to Section 3 of the Golub/Sterling letter for an explanation of why Commenter's arguments do not serve as an appropriate basis for denial of the proposed subdivision.

Hunter Subdivision project

Responses to April 30, 2023 Comments of Joshua S. Devore

Comment #1

Commenter contends that there is no operating well on the project site and asserts that the well has not been operating for some time, rendering it abandoned. Commenter then states that "the required baseline of "existing" water use on the parcel is zero." Commenter further asserts that the City is using historical well production data to provide a hypothetical baseline with regard to the capacity of the project's on-site well.

Response #1

Substantial evidence in the EIR including the pump test (Draft EIR Appendix L, "Well Capacity Study, September 9, 2021") , and acknowledged by the Commenter, confirms that the on-site well is operational. Further, Commenter provides no evidence that the well is abandoned. Indeed, the original application for the project, filed with the City in 2010, not only mentions the then-current use by the City of water from the on-site well, but also expressly calls for the use of the on-site well to provide landscaping water for the project. Accordingly, the record confirms the ongoing intent to continue use of the legally permitted on-site well.

Finally, Commenter incorrectly asserts that the EIR employed a hypothetical baselines of water use based on historic production of the on-site well. As review of the EIR confirms that this is not the case. The EIR states, at page 3.13-31, that the project's "estimated indoor water demand is 19.88 acre-feet per year at completion during normal water years (see Table 3.13-10). The Proposed project's landscape irrigation demand would account for 17.16 acre-feet per year." Given this, the EIR concludes that that project's "entire water demand [is] 37.04 acre-feet per year…." Accordingly, the EIR evaluated the project's entire water demand as new, and thus was employing a baseline of zero water use.

Comment #2

Commenter asserts that the City should update its Well Capacity Study Memorandum "to comply with the revised substantially reduced allocation limit" under Napa County policy as, in his opinion, Napa County's policy applies to the project's on-site well.

Response #2

This comment is based on an apparent misunderstanding of County's current policy regarding wells. The existing well on project site, which was originally permitted in 1976, remains operable (the well was once referenced in the EIR as "inoperable" because it was not in use at the time, but it was subsequently verified in the 2021 test of the well to be operable and capable of meeting projected needs).

Because the well has an existing permit that, to the City's current knowledge, does not require modification, and because no increase in well use over historic levels is proposed, the evidence before the City does not suggest that a new well permit is required by Napa County. Giving this, the pumping limitations cited in the comment (which affect only new wells, or modified wells with new permits) would not apply. Further, as documented in detail in the EIR and in the proposed approval documents, the City's Water Neutrality Ordinance applies to the project.

Comment #3

Commenter states that the water drawn from the project's on-site well may be drawing from the same basin that supplies the City's wells, and contends that the EIR should have included "an analysis of well interference." Commenter asserts that the on-site well is drawing from the same basin as the City's wells, and that "the project's water neutrality analysis should have included the entirety of the project's water use, without any exclusion for the well."

Commenter also cites a September 27, 2018 Second Notice of Identified Issues Letter sent to the applicant by the City as specifically requiring a well interference analysis.

Response #3

The FEIR considers the potential impact of the existing Hunter groundwater well on the Napa Valley Subbasin as a whole. This consideration included the Stonebridge Well (SBW) field. The FEIR acknowledges that the Hunter well is an existing facility and does not represent a new demand on the Subbasin. The FEIR also acknowledges that the City does not rely exclusively on the SBW facility for its water supply. The City also sources drinking water from Bell Canyon Reservoir and City of Napa. Substantial evidence in the FEIR reflects that these sources are hydraulically independent of the Napa Valley Subbasin and reduce the City's dependence on SBW. This is confirmed by the 2021 Well Capacity Study, which noted that,

> "During the 24-hour pumping test, depth to groundwater was steady at 23 feet below ground surface (about 192 feet above sea level)."

Given that there was no drawdown of groundwater levels at the site of the well itself, it can be concluded that use of the well—particularly on an intermittent basis—would not cause a drawdown of water levels at the SBW facility.

Since the project will source its outdoor and domestic water need from such hydraulically independent water sources, the City appropriately did not the impact of the Hunter Development on other, independent, water sources.

Staff's opinion is that the 2021 Well Capacity Study resolves the issue of the well interference study discussed in the September 27, 2018 letter. As discussed above, the 2021 Well Capacity Study found no drawdown of water in the well under constant pumpting.

Comment #4

Comment asserts that, due to its reliance on water-saving measures from February 2017, the EIR's Water Neutral Report must be updated to account for current conditions.

Response #4

This comment does not raise new information but instead reiterates known risks related to groundwater availability during drought conditions. This potential risk and the measures imposed to avoid and reduce potentially significant impacts with regard to the project's use of water are discussed at length in the FEIR.

Comment #5

Commenter opines that the EIR wrongly concludes that is no mitigation available to address the project's significant impacts relating to Vehicle Miles Traveled ("VMT"). Commenter states that improvements to the City's street network would lessen project's trips – particularly connection of Adams to Silverado Trail – and so should be required as mitigation for the project's VMT impacts.

Response #5

As required by CEQA the EIR seeks to identify feasible mitigation measures. The connection of Adams Street to Silverado Trail, via a new bridge over the Napa River, is a multi-million-dollar project. This improvement, and similar improvements raised by the Commenter, are not feasible mitigation measures because a public agency cannot require mitigation that does not bear a reasonable relationship to the burden created by the development. (*See Dolan v City of Tigard* (1994) 512 US 374; *Nollan v California Coastal Comm'n* (1987) 483 US at 835 n4.)

In *Dolan*, the U.S. Supreme Court adopted a "rough proportionality" standard for the relationship between a project's impacts and a dedication requirement imposed by the approving agency. Based on an individualized determination relating to the project, the City would have to demonstrate that both the nature and extent of the required dedication, in this case the multi-million dollar off-site improvements proposed by Commenter, are reasonably related to the impact of the proposed project.

Further, the court in *Alliance for Responsible Planning v Taylor* (2021) 63 Cal.App.5th 1072, 1085, applied the *Nollan/Dolan* test in holding that requiring new development to pay fees to mitigate cumulative traffic was unconstitutional. The court found the measure violated the *Nollan/Dolan* rough-proportionality test because it required a developer to construct improvements, as would be the case here if the City attempt to impose the mitigation measures recommended by the Commenter, would exceed the extent of the development's own impact. Like any government exaction or condition of approval, a mitigation measure cannot violate state or federal constitutional standards. This limitation is explicitly stated in CEQA Guidelines sections 15041(a) and 15126.4(a)(4).

Finally, by providing a new, more convenient travel route between St Helena and local and regional destinations, construction of the new Adams Street connection to Silverado Trail could itself create new VMT by encouraging additional vehicle travel. This potential impact will need to be addressed at the time the City is considering approval of such a project, but is at this time speculative and beyond the scope of the EIR for the Hunter project.

Comment # 6

Commenter contends that the EIR uses an Affordable Housing percentage of 28.73% in its traffic analysis, when there is no affordable housing in the project. Further Commenter stated that the EIR fails to use reasonable assumptions for the project, substantially undercounts the expected traffic increase, and does not comport its analysis with the description or stated intended use of the project.

Response # 6

As noted in the EIR and in the proposed conditions of approval for the Tentative Map, the proposed project will be required to comply with the City's inclusionary housing regulations, and to obtain an approved Affordable Housing Agreement before the map can be recorded. The project will, in fact, include affordable housing as required by the St Helena Municipal Code, which for a project of the size proposed requires that 20 percent of units be affordable. The "28.73%" figure is apparently derived from a statement in the Project Description in the Draft EIR that, "The Proposed Project applicant has proposed to enter into an Affordable Housing Agreement with the City for the 25 multi-family units." This overstates the 20 percent requirement, which for the 76 single-family and multi-family units would be 15 units.

The trip generation rates were calculated using the Institute of Transportation Engineers, Trip Generation Manual, 10th Edition (2017). This manual provides substantial evidence supporting the EIR's estimations of vehicle trips for proposed development projects. The project's trip generation estimates and distribution patterns were reviewed and approved by the City's Traffic Engineer for use in the traffic impact analysis (TIA).

Trip generation is determined by housing type, rather than affordability, per the Institute of Transportation Engineers (ITE), Trip Generation, 10th Edition, 2017. Therefore, as described in Section 3.1 of the Traffic Impact Study, Hunter Subdivision (April 2021), trip generation for the proposed project is based on single-family detached housing (ITE Code 210) and Multifamily Housing, Low Rise (ITE Code 220).

Comment # 7

Commenter states that idling vehicles are a substantial contributor to GHG emissions and opines that the EIR fails to analyze the significant impact of idling vehicles resulting from the project sitting in the unmitigated traffic it will create. Specifically, Commenter objects to what he states is the allocation of 4 AM Peak Hour outbound trips for the 11 Accessory Dwelling Units and claims that the 87 new units will result in more than two people driving their children to school by crossing Main at Adams, and more than one person picking children. He opines that "reasonable assumptions would suggest the affordable and multi-family units to lead to more trips

for the residents of those units given the nature of the local workforce." Further, Commenter objects to the use of standard assumptions given the "unique nature of the Napa Valley economy and local transportation demands."

Response #8

Commenter does not provide any substantial evidence to support his non-expert opinion questioning the EIR's analysis of traffic. The EIR's analysis is supported by the Institute of Transportation Engineers, Trip Generation Manual, 10th Edition (2017) and by the review of the City's Traffic Engineer.

Comment #9

Commenter asserts that improvements to Silverado Trail and to Pope Street and its bridge over the Napa River are necessary and objects to the City's determination that the project applicant cannot be required to construct these improvements individually. Commenter contends that the necessary improvements – "… especially connection of Adams to Silverado Trail, meet the *Nollan/Dolan* essential nexus and rough proportionality tests given that the improvement is necessarily located on, and immediately adjacent to, a very large-scale project."

Response # 9

The Commenter's legal opinion that the City can require the project applicant to construct improvements to the Silverado Trail and Pope Street is just that, legal opinion. As discussed in **Response to Comment #5**, the City has determined that the Commenter's recommended improvements are legally infeasible.

Comment #10

Commenter opines that the City cannot adopt a statement of overriding considerations because the project's VMT impacts are not significant and unavoidable but, in his opinion, can be addressed via requirement of improvements to Silverado Trail/Pope Street and the connection of Adams Street to Silverado Trail.

Response #10

Commenter's opinion regarding the legal feasibility of requiring the project applicant to make improvements to Silverado Trail/Pope Street and the connection of Adams Street to Silverado Trail are addressed in Response to Comment #9 above. The City has determined that the project's VMT impacts are not legally feasibly mitigatable and thus remain significant and unavoidable. Please See Responses to Comment #5. CEQA provides that lead agencies must weigh a proposed project's benefits against its unavoidable environmental risks and may find the adverse impacts "acceptable" if the benefits outweigh those effects. (Public Resources Code §21081(b); CEQA Guidelines §15093(a).) The City Council will undertake such a consideration at its hearing on the EIR and project.

Comment #11

Commenter asserts that the existing vineyard on the property is "crucial firebreak" and objects to that City's position that project is not near a SRA or VHFHSZ because the project "immediately adjacent to the VHFHSZ." The Comment opines that the project "must be revised and conditioned to retain a firebreak between the new development and existing development by leaving the existing vineyard intact."

Response #11

As the City has previously informed Commenter, the project site does not meet the definition of a "firebreak," which is an obstacle to the spread of fire, such as a strip of open space in a forest. The Hunter Property in its current state does not provide an obstacle to fire-spread; in fact just the opposite. The area is under constant scrutiny during weed abatement and fire seasons to reduce the potential for the spread of fire across the site.

Residential homes, such as the proposed project, constructed in accordance with California Fire Code requirements (fire resistant building materials, fire sprinkler systems, etc.) do not constitute a significant fire threat. Residential fires are much easier to contain than grass and vegetation wildfires.

Finally, Commenter is incorrect that the project is "immediately adjacent to the VHFHSZ." The project site and the surrounding land uses are located within an area mapped as "Non-VHFHSZ" under the Local Responsibility Area map by CAL FIRE (CalFire 2019). The VHFHSZ is across the Napa River from the project site – neither immediate nor adjacent.

Comment #12

The Commenter assert that "without connection of Adams Street to Silverado Trail and the mitigation of the Silverado Trail/Pope Street intersection conditions," the project "lacks safe emergency access and egress and would worsen existing emergency evacuation times for residents of the City."

Response # 12

Please see Final EIR Master Response 1 for a detailed discussion of the EIR's analysis of emergency access issues.

Comment # 13

Commenter contends that the project "will obstruct emergency access for existing residents, particularly those in Vineyard Valley" and states that the "levee maintenance road is [not] a suitable evacuation road for the project" because it not 30-feet wide and paved with two feet of shoulders. Commenter asserts that [t]o the extent the levee maintenance road is a planned emergency access route for the project, it must be improved to meet the City's Fire Access Road standards as part of the project."

Response # 13

As stated in the Final EIR:

> Based on the results of the evacuation drill, the St. Helena Police Department has concluded that any additional traffic from the Proposed project would not significantly impact the ability of Vineyard Valley residents to safely evacuate the development in the event of an emergency. The Police Department also concluded that the proposed extension of Starr Avenue to Adams Street will help facilitate future evacuations by providing additional roadway capacity and additional routing options for emergency traffic (J.Tharp September 2021). If, for some reason, the levee maintenance road is closed residents of Vineyard Valley would exit using the access onto Pope Street.

Regarding the standards which apply to the levee road as an evacuation route, the standard cited by the commenter (30-foot width with two-foot shoulders) is incorrectly cited. This standard is for emergency vehicle (e.g., fire apparatus) access. The levee road, which was designated as the official evacuation route for the Vineyard Valley mobilehome community, meets City standards for emergency evacuation.

It should be noted that the City of St Helena Fire Department has determined (as discussed in the June 27, 2023 staff report) that the emergency vehicle access to the levee road is no longer needed and has recommended that it be removed from the proposed tentative map. If the City Council concurs with this recommendation, the easement and permit issues cited by the commenter would become moot.

Comment #14

Commenter asserts that the "the contemplated additional emergency access point onto the levee" cannot be constructed given "required conservation easements and numerous permit issues related to the flood control project, including the Incidental Take Permit under the Endangered Species Act."

Response #14

The proposed emergency access point to the levee road from the project site is shown in Figure 2-4a of the EIR. The levee road is a gravel road owned and maintained by the City of St. Helena. No conservation easements or permits would be required to construct the connection, other than a City encroachment permit (an entitlement which is identified in the EIR project description). There is no evidence that an incidental take permit would be necessary under either the State or Federal Endangered Species Act. The habitat type adjacent to the roadway is annual grassland (see Figure 3.4-1 and page 3.4-9 of the EIR). As discussed in the EIR (Section 3.4), there is low potential for special status species to occur on the project site. White-tailed kite and pallid bat may use trees in the project vicinity for roosting habitat. Preconstruction surveys and avoidance measures, as required by Mitigation Measures BIO-1 and BIO-2, would avoid any potential for incidental take to protected species.

It should be noted that the City of St Helena Fire Department has determined (as discussed in the June 27, 2023 staff report) that the emergency vehicle access to the levee road is no longer needed and has recommended that it be removed from the proposed tentative map. If the City Council concurs with this recommendation, the easement and permit issues cited by the commenter would become moot.

Comment #15

Comment opines that "any failure [of the existing levee] would result in ruinous liability to the City."

Response #15

This is not a comment regarding the adequacy of the City's compliance with CEQA. However, as a point of information, and was already included in the agenda materials for the City's May 1, 2023 hearing regarding the project, the City Attorney advised that:

> The case [law] regarding liability stemming from flood control projects make clear that the City would not be liable for damages simply because a flood event occurred, or even simply based on the failure of the levee, were that to occur at some point in the future. Any risk of liability would be based on and evaluation of the specific facts in event of future flooding, based on the factors described above. To limit its exposure to liability, and more importantly, to protect the community from future flooding, the City should conduct regular maintenance and inspections of the levee, and conduct repairs of the levee when deemed necessary or appropriate. This continuing inspection, maintenance and repair of the levee will help to demonstrate reasonable behavior on the part of the City. Further, the levee was designed and constructed in accordance with US Army Corps of Engineers standards to a 200 year flood standard. There is no indication that the design or the construction of the levee was unreasonable. The City should continue to be diligent in its inspection and maintenance of the levee, as it should with all public infrastructure. However, the City is not subject to strict liability based on its ownership of the levee, and any future liability will be based on whether the City is reasonable, based on the multifactor test described in this memo.

Comment #16

Commenter asserts that the project "will substantially alter the current view from Adams Street/Library Lane, and remove or otherwise obstruct current vineyard and hillside views" and requests mitigation to restrict future residents from modifying or altering exterior lighting.

Response # 16

The project's impacts on views and change in visual character of the project site is addressed in Section 3.1 of the Draft EIR, Aesthetics/Visual Resources. The analysis in Section 3.1 reviews project compliance with the City's General Plan, Zoning Ordinance, and Design Review requirements and also provides visual simulations of the proposed project to illustrate how development of the project would change views of the project site. As noted in Chapter 2, project Description, if the project is approved the City would require additional subsequent discretionary approvals, including Design Review.

Based on the analysis in the Draft EIR, all Aesthetic impacts would be less than significant with the exception of an increase in lighting that would result in a significant impact. Implementation of Mitigation Measure AES-1, which requires lighting design guidelines be developed for the project to minimize glare and light spillover would reduce that impact to less than significant.

The Commenter's opinion that the project would result in undesirable impacts, while not supported by substantial evidence, is noted and forwarded to the decision makers for their consideration.

Comment #17

Commenter objects to the EIR's conclusion that the project will not result a significant impact to agricultural resources.

Response #18

Substantial evidence in Chapter 3.2 of the Draft EIR, Agriculture and Forestry Resources, confirms that the project will not result in a significant impact to agricultural resources. Specifically the Draft EIR states:

> The project site includes 5.8 acres of Prime Farmland and 0.6 acres of Farmland of Statewide Importance (as defined by the FMMP) that would be converted to urban uses as a result of Proposed project implementation (see Table 3.2-1). The site also includes land designated as Farmland of Local Importance and Urban Land. Due to the presence of 6.4 acres of "Important Farmland," the LESA Model (Appendix B) was used to evaluate the quality of agricultural lands on the project site to determine the significance of potential Proposed project impacts. As described above, under Methods of Analysis, the LESA Model is used to provide a quantitative and consistent approach to determining potentially significant impacts to agricultural resources during the environmental review process. The model results in individual scores for the LE and SA factors, along with a total score out of 100 possible points.
>
> The dominant soil type on the project site is Bale clay loam (see Section 3.6, Geology and Soils), which has a relatively high Land

> Capability Classification and average to above-average Storie Index. This resulted in a moderate LE score. The relatively small size of the project site and the amount of urban land near the site resulted in a low SA score, despite the relatively good availability of water (due to the on-site irrigation well). The model returned an LE score of 35 and a SA score of 13.8 for a total score of 48.8 (see Appendix B). As shown in Table 3.2-3, the loss of agricultural resources would be considered significant only if the individual LE and SA subscores are each greater than or equal to 20 points. Therefore, impacts associated with the removal of prime farmland and farmland of statewide importance would be less than significant.

Comment #19

The Commenter recommends adoption of Alternative 3, the Park/Open Space Alternative to avoid fill of wetlands.

Response #19

The Comment is noted and will be provided to decision-makers for their consideration.

Comment #20

Commenter objects to the EIR's conclusion that the project is consistent with the applicable General Plan and land use regulations.

Response #20

Substantial evidence in Chapter 3.10 of the Draft EIR, Land Use, confirms that the project will not result in a significant impact related to any inconsistency with the City's applicable General Plan and land use regulations. Commenter's opinion is not supported by substantial evidence.

Comment #21

Commenter asserts that the EIR lacks substantial evidence to support a finding, that the project, and particularly Lot 52, will not have a significant impact on noise.

Response #21

Substantial evidence in Chapter 3.11 of the Draft EIR, Noise and Vibration, confirms that the project, with the implementation of recommended mitigation, will not result in a significant impact related to noise. Commenter's opinion is not supported by substantial evidence.

Comment #22

The Commenter asserts that the EIR should describe the project as impacting recreational facilities currently on the project site.

Response #22

As detailed in the EIR, the project site is privately-owned and is therefore not a public recreation area. Additionally, as discussed in Section 3.12, Public Services and Recreation, the proposed project applicant would pay required park fees to be used by the City to purchase land to construct new parks or upgrade existing recreation facilities. Commenter's opinion is not supported by substantial evidence.

Comment #23

Commenter asserts that the City cannot consider the development of affordable housing on the site in adopting statements of overriding consideration because there is no currently proposed affordable housing agreement. Commenter further opines that the draft statement of overriding consideration does not identify benefits.

Response #23

As noted in the EIR and in the proposed conditions of approval for the Tentative Map, the proposed project will be required to comply with the City's inclusionary housing regulations, and to obtain an approved Affordable Housing Agreement before the map can be recorded. Accordingly, contrary to the Comment, the project will, in fact, include affordable housing as required by the St. Helena Municipal Code.

The City has determined that the project's VMT impacts are not feasibly mitigatable and thus significant and unavoidable. CEQA provides that lead agencies must weigh a proposed project's benefits against its unavoidable environmental risks and may find the adverse impacts "acceptable" if the benefits outweigh those effects. (Public Resources Code §21081(b); CEQA Guidelines §15093(a).) The City Council will undertake such a consideration, including consideration of the project's required affordable housing, at its hearing on the EIR and project.

CITY COUNCIL RESOLUTION NO. XXXX

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ST, HELENA, CERTIFYING THE ENVIRONMENTAL IMPACT REPORT (STATE CLEARINGHOUSE # 2018032014) FOR THE HUNTER SUBDIVISION PROJECT; ADOPTING FINDINGS PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT; ADOPTING A STATEMENT OF OVERRIDING CONSIDERATIONS; AND ADOPTING A MITIGATION MONITORING AND REPORTING PROGRAM.

WHEREAS, the proposed Hunter Subdivision Project, Tentative Map 2022-001 ("Project") entails the subdivision of a 16.9 acre site (Assessor's Parcel No. 009-030-057; hereinafter, the "Project site") in the City of St. Helena ("City") into 51 lots to accommodate single-family residences, a 3.4-acre parcel that would accommodate 25 attached residential units (which would be income restricted, with 5 units affordable to very low-income families, and 20 to moderate income families), a 0.06-acre parcel that would not be developed, and a 0.04-acre parcel for an existing agricultural well, which will supply water for all onsite landscaping and other outdoor uses; and

WHEREAS, the proposed Project would result in the development of 87 residential units—51 single-family residences, accessory dwelling units ("ADUs") on 11 of the single family lots, and 25 attached residential units—resulting in an average density of 5.1 dwelling units per acre; and

WHEREAS, the proposed Project further includes grading of the Project site, construction of the extensions of Starr Avenue and Adams Street, construction of local residential streets, and installation of utility lines; and

WHEREAS, the proposed Project requires discretionary approvals from the City, including a Tentative Subdivision Map Approval (insert TSM No. 2022-001) and future discretionary approvals including an Affordable Housing Agreement, design review, and a conditional use permit, all of which must be obtained before development of the proposed Project may proceed;

WHEREAS, pursuant to Public Resources Code section 21067 of the California Environmental Quality Act (Pub. Resources Code, § 21000, *et seq.*) ("CEQA") and section 15367 of the State CEQA Guidelines (Cal. Code Regs., tit. 14, § 15000, *et seq.*), the City is the lead agency for the proposed Project; and

WHEREAS, pursuant to CEQA and the State CEQA Guidelines, the City determined that an Environmental Impact Report ("EIR") should be prepared in order to analyze all potential adverse environmental impacts of the proposed Project; and

WHEREAS, the City issued a Notice of Preparation ("NOP") for the Draft EIR that provided for a comment period of over 30 days, from March 6, 2018 to April 9, 2018, and the NOP

was sent to each responsible agency, trustee agency, the Office of Planning and Research ("OPR"), and interested parties, including members of the public who had requested such notice; and

WHEREAS, the City held a public scoping meeting on March 12, 2018 to further solicit comments on the scope of the Draft EIR; and

WHEREAS, the City initiated a 45-day public review and comment period for the Draft EIR, issuing a Notice of Availability and releasing the Draft EIR for public review and comment from September 23, 2021 through November 8, 2021; and

WHEREAS, pursuant to State CEQA Guidelines section 15086, the City consulted with and requested comments from all responsible and trustee agencies, other regulatory agencies, and others during the 45-day public review and comment period; and

WHEREAS, the City received a total of 122 letters during the 45-day public review and comment period, including 2 letters from interest group organizations, and 120 letters from individual members of the public; and

WHEREAS, the City held two public meetings, on November 2, 2021, and November 30, 2021, to further solicit public comments on the Draft EIR; and

WHEREAS, the City has prepared a Final EIR, consisting of the comments received during the 45-day public review and comment period on the Draft EIR, written responses to those comments, and revisions to the Draft EIR. For the purposes of this Resolution, the "EIR" shall refer to the Draft EIR, as revised by the Final EIR, together with the other sections of the Final EIR; and

WHEREAS, the EIR prepared in connection with the Project identified, discussed and sufficiently analyzed significant effects which may occur as a result of the Project, feasible mitigation measures necessary to avoid or substantially lessen the Project's potential environmental impacts and a range of feasible alternatives capable of eliminating or reducing any of these effects in accordance with CEQA and the State CEQA Guidelines; and

WHEREAS, the Planning Commission on February 7, 2023, held a public hearing to consider a recommendation to the City Council on the certification of the Final EIR; and

WHEREAS, following the conclusion of the public hearing, the Planning Commission adopted Resolution PC2023-001, recommending that the City Council certify the Final EIR; and

WHEREAS, all of the findings and conclusions made by the City Council pursuant to this Resolution are based upon the oral and written evidence presented to it as a whole and not based solely on the information provided in this Resolution; and

WHEREAS, prior to taking action, the City Council has heard, been presented with, reviewed and considered all of the information and data in the administrative record, including the Draft EIR, the Final EIR; and

WHEREAS, the City Council has reviewed and considered as well as the City Council's draft CEQA findings, draft Statement of Overriding Consideration, attached hereto as **Exhibit A**, and the draft Mitigation Monitoring and Reporting Program ("MMRP") attached hereto as **Exhibit B**, and all oral and written evidence presented to it during all meetings and hearings; and

WHEREAS, the EIR reflects the independent judgment of the City and is deemed adequate for purposes of making decisions on the merits of the Proposed Project; and

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY ST. HELENA DOES HEREBY RESOLVE AS FOLLOWS:

SECTION 1. The above recitals are true and correct and incorporated herein by reference.

SECTION 2. The City Council hereby finds that it has been presented with the EIR, which it has reviewed and considered, and further finds that the EIR is an accurate and objective statement that has been completed in full compliance with CEQA and the State CEQA Guidelines. The City Council finds that the EIR reflects the independent judgment and analysis of the City. The City Council declares that no evidence of new significant impacts or any new information of "substantial importance" as defined by State CEQA Guidelines section 15088.5, has been received by the City after circulation of the Draft EIR that would require recirculation. Therefore, the City Council hereby certifies the EIR based on the entirety of the record of proceedings.

SECTION 3. The City Council hereby adopts the "CEQA Findings of Fact" which were prepared in accordance with State CEQA Guidelines sections 15091 and which are attached hereto as Exhibit A and incorporated herein by this reference.

SECTION 4. Pursuant to Public Resources Code section 21081.6, the City Council hereby adopts the Mitigation Monitoring and Reporting Program attached hereto as Exhibit B and incorporated herein by this reference. Implementation of the Mitigation Measures contained in the Mitigation Monitoring and Reporting Program is hereby made a condition of approval of the Project. In the event of any inconsistencies between the Mitigation Measures set forth in the EIR or the Findings of Fact and the Mitigation Monitoring and Reporting Program, the Mitigation Monitoring and Reporting Program shall control.

SECTION 5. The documents and materials that constitute the records of proceedings on which this Resolution has been based are located at the City of St. Helena City Hall at 1572 Railroad Ave. St. Helena, CA. The custodian for these records is the City of St. Helena City Clerk. This information is provided in compliance with Public Resources Code Section 21081.6.

SECTION 6. City staff shall cause a Notice of Determination to be filed and posted with the County Clerk and the State Clearinghouse within five working days of the adoption of this Resolution.

I HEREBY CERTIFY that the City of St. Helena City Council approved the foregoing at a Special Meeting of the St. Helena City Council on June 26, 2023, by the following vote:

Mayor Dohring: _____

Vice Mayor Hall: _____

Councilmember Chouteau: _____

Councilmember Hardy: _____

Councilmember Summers: _____

APPROVED:	ATTEST:
_____	_____
Paul Dohring, Mayor	Cindy Tzafopoulos, City Clerk

ADOPTED AND APPROVED the 26th day of June, 2023.

EXHIBIT A: DRAFT FINDINGS AND STATEMENT OF OVERRIDING CONSIDERATIONS

SECTION 1. FINDINGS REGARDING LESS THAN SIGNIFICANT IMPACTS NOT REQUIRING MITIGATION

Consistent with Public Resources Code section 21002.1 and State CEQA Guidelines section 15128, the EIR focused its analysis on potentially significant impacts, and limited discussion of other impacts for which it can be seen with certainty that there is no potential for significant adverse environmental impacts. State CEQA Guidelines section 15091 does not require specific findings to address environmental effects that an EIR identifies as "no impact" or a "less than significant" impact. Nevertheless, the City Council hereby finds that the Project would have either no impact or a less-than-significant impact to the following resource areas:

A. AESTHETICS

1. Scenic Vistas

Threshold: Would the Project have a substantial adverse effect on a scenic vista?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.1-24 through 3.1-26.)

Explanation: The City's 1993 General Plan and the City's recently adopted 2019 General Plan do not designate any specific scenic resources or vistas within the City for protection, and so the Project will not have a substantially adverse effect on any designated scenic vista. Moreover, the Project has been designed to protect views of the surrounding hillsides and open space areas through the orientation of Starr Avenue and Adams Street, and the Project site itself does not include highly valued landscape and is not considered a scenic vista. For these reasons and the reasons discussed in the EIR, the Project would not have a substantial adverse effect on a scenic vista. (Draft EIR, pp. 3.1-24 through 3.1-26.)

2. Scenic Resources within a State Scenic Highway

Threshold: Would the Project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Findings: No impact. (Draft EIR, p. 3.1-24.)

Explanation: The Project would not substantially damage scenic resources within a state scenic highway because there is no state highway that would be impacted by the Project. The Project site is located approximately 0.2 miles from SR 29, an eligible state scenic highway, but the Project site is not visible from the highway due to intervening trees, buildings, and structures. The Project site does not contain any scenic resources such as rock outcroppings, does not contain any other significant natural or historical features that are visible from a state scenic highway, and, accordingly, would not limit view of such features from SR 29 or any other state scenic highway. For these reasons and the reasons discussed in the EIR, the Project would not substantially damage scenic resources within a state scenic highway. (Draft EIR, p. 3.1-24.)

3. Existing Visual Character of the Site and Surrounding Area

Threshold: Would the Project conflict with applicable zoning and other regulations governing scenic quality or substantially degrade the existing visual character or quality of public views of the site and its surroundings?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.1-26 through 3.1-34.)

Explanation: The Project will comply with the City's Design Review Ordinance and undergo design review to ensure that the Project is visually consistent and compatible with the applicable General Plan, with adjacent buildings, and with the existing environment. Additionally, the Project will comply with the site's zoning requirements, including requirements relating to building height and mass. For these reasons and the reason set forth in the Draft EIR, the Project would not conflict with applicable zoning or other regulations governing scenic quality. (Draft EIR, pp. 3.1-26 through 3.1-27.)

Additionally, the Project will not substantially degrade the existing visual character or quality of public views of the site and its surroundings. Views of the site are limited and primarily available from private property (i.e., backyards), at the terminus of Starr Avenue and Adams Street, along Del Rio Court (a private street) within the immediate vicinity of the site, and from a gravel maintenance road bordering the north/northwest boundary of the site used by the public as a walking trial. (Draft EIR, p. 3.1-27.) Visual simulations in the Draft EIR illustrate the fact that the Project will not substantially degrade the existing visual character or quality of public views of the site and its surroundings. (Draft EIR, pp. 3.1-29, 3.1-21.) For these reasons and the reasons set forth in the EIR, the Project will have a less-than-significant effect relating to this issue, and no mitigation is required. (Draft EIR, pp. 3.1-26 through 3.1-34.)

B. AGRICULTURE AND FORESTRY RESOURCES

1. Farmland Conversion

Threshold: Would the Project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Finding: Less-than-significant impact. (Draft EIR, p. 3.2-12.)

Explanation: While the Project site does include 5.8 acres of Prime Farmland and 0.6 acres of Farmland of Statewide importance that would be converted to urban uses as a result of the Project, the Project would have a less-than-significant impact relating to this issue. The California Land Evaluation and Site Assessment ("LESA") model—a model designed to ensure a quantitative and consistent approach to determining potentially significant impacts to agricultural resources—was used to assess the Project's impact on agricultural lands. Based on the LESA assessment which evaluated the soil resource quality, project size, water resource availability, surrounding agricultural lands, and surrounding protected resource lands the quality of agricultural lands on the

Project site were found to be low quality and did not meet the standard to be considered significant agricultural resources. (Draft EIR, pp. 3.2-9-3.2-10.)As set forth in the EIR, the Project's impacts associated with the removal of prime farmland and farmland of statewide importance would be less than significant. (Draft EIR, p. 3.2-12.)

2. Agricultural Zoning

Threshold: Would the Project conflict with existing zoning for agricultural use, or with a Williamson Act contract?

Finding: Less-than-significant impact. (Draft EIR, pp. 3.2-11.)

Explanation: The Project site is not under a Williamson Act contract and does not include any land zoned for agricultural use. (Draft EIR, pp. 3.2-6, 3.2-11.) There are agriculturally zoned lands to the north and northwest of the Project site. The Project would not directly or indirectly affect lands to the north and northwest such that continued agricultural use would be impaired. . Notably, the development of residences on the Project site would not directly or indirectly result in conversion of the agricultural land to the north and northwest of the Project site to non-agricultural uses. The City's Municipal Code (Chapters 17.32 through 17.60 and 17.68) includes provisions that require property owners adjacent to agricultural operations to recognize that adjacent properties have the right to farm and that there is a good faith expectation that the adjacent neighbors will not complain to the City regarding legal normal agricultural activities, including day or night disbursement of chemicals, and creation of dust, noise, or fumes. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.2-11 through 3.2-13.)

3. Forestland Zoning

Threshold: Would the Project conflict with existing zoning for, or cause rezoning of, forest land (as defined by Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

Finding: No impact. (Draft EIR, pp. 3.2-6, 3.2-11.)

Explanation: The Project site does not contain any forest or timberland and is not zoned for forest land, timberland, or timberland production. (Draft EIR, pp. 3.2-6, 3.2-11.)

4. Loss of Forest Land

Threshold: Would the Project result in the loss of forest land or conversion of forest land to non-forest use?

Finding: No impact. (Draft EIR, pp. 3.2-6, 3.2-11.)

Explanation: The Project site does not contain forest land and is not designated as forest land. (Draft EIR, pp. 3.2-6, 3.2-11.)

5. Indirect Conversion

Threshold: Would the Project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

Finding: Less-than-significant impact. (Draft EIR, pp. 3.2-12 through 3.2-13.)

Explanation: While there is agricultural land to the north and northwest of the Project site that is currently in active agricultural production, the Project would result in physical changes to the environment that would . directly or indirectly result in a conversion of this farmland to non-agricultural use. In addition, the City's Municipal Code includes provisions that require property owners adjacent to agricultural operations to recognize that adjacent properties have the right to form and that there is a good faith expectation that the adjacent neighbors will not complain to the City regarding legal normal agricultural activities, including day or night disbursement of chemicals, and creation of dust, noise, or fumes. As noted above, the Project would not convert forest land to non-forest use, as there is no forest land on the Project site. For these reasons and the reasons set forth in the EIR, the Project would have no impact to farmland or forest land. (Draft EIR, pp. 3.2-12 through 3.2-13.)

C. AIR QUALITY

1. Air Quality Management Plan Consistency

Threshold: Would the Project conflict with or obstruct implementation of the applicable air quality plan?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.3-28 through 3.3-31.)

Explanation: The Bay Area Air Quality Management District ("BAAQMD") has set forth a three-step methodology for determining a project's consistency with the applicable air quality plan. The EIR engaged in this three-step process and concluded based on substantial evidence that the Project would support the goals of the applicable air quality plan (the 2017 Clean Air Plan), that the Project complies with applicable control measures from the applicable air quality plan, and that the Project would not disrupt or hinder implementation of any control measures from the applicable air quality plan. As part of this analysis, the EIR demonstrated the Project would result in less than significant construction and operational emissions and would not result in long-term adverse air quality impacts. For these reasons and the reasons set forth in the EIR, the Project would not conflict with or obstruct implementation of the applicable air quality plan and would thus have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.3-28 through 3.3-31.)

2. Criteria Pollutant Emissions

Threshold: Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.3-31 through 3.3-36.)

Explanation: The Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region, the San Francisco Bay Area Air Basin ("SFBAAB"), is in non-attainment under applicable federal or state ambient air quality standards. BAAQMD has developed thresholds of significance to determine whether a project's individual emissions would be cumulatively considerable. The EIR estimated the Project's emissions relating to both construction and operation using the CalEEMod model and concluded, based on substantial evidence, that the Project would not result in a cumulatively considerable net increase of any criteria pollutant (including ROG, NO_x, PM_{10}, and $PM_{2.5}$) for which the SFBAAB is in non-attainment. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.3-31 through 3.3-36.)

3. Sensitive Receptors

Threshold: Would the Project expose sensitive receptors to substantial pollutant concentrations?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.3-36 through 3.3-37.)

Explanation: The Project would not generate substantial criteria air pollutant emissions or associated pollutant concentrations, as construction and operation of the Project would not exceed the BAAQMD significance thresholds for ROG, NO_x, PM_{10}, and $PM_{2.5}$. Moreover, the Project would not expose sensitive receptors to substantial concentrations of Toxic Air Contaminants ("TACs"), as the Project's TAC emissions during both construction and operation of the Project would be well below the BAAQMD significance thresholds. The Project additionally would not expose sensitive receptors to significant carbon monoxide concentrations, as the Project's carbon monoxide emissions would be less than significant. For these reasons and the reasons set forth in the EIR, the Project would not expose sensitive receptors to substantial pollutant concentrations, and the Project thus have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.3-31 through 3.3-37.)

4. Objectionable Odors

Threshold: Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Findings: Less-than-significant impact. (Draft EIR, p. 3.3-28.)

Explanation: The Project does not include a land use associated with the generation of odors that could affect a substantial number of people and would not generate such odor impacts. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.3-28.)

D. BIOLOGICAL RESOURCES

1. Riparian Habitat and Sensitive Natural Communities

Threshold: Would the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Findings: Less-than-significant impact. (Draft EIR, p. 3.4-43.)

Explanation: There are no riparian habitats or sensitive natural communities within the Project site that were identified in local, regional, or federal plans, policies, or regulations. For this reason and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.4-43.)

2. Local Policies or Ordinances Protecting Biological Resources

Threshold: Would the Project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Findings: Less-than-significant impact. (Draft EIR, p. 3.4-43.)

Explanation: The Project would not conflict with any local policies or ordinances protecting biological resources. For example, the Project would not require removal of any trees, and no permit relating to this issue is therefore required. For these reasons and the reasons set forth in the EIR, there would be a less-than-significant impact relating to this issue, and no mitigation is required. (Draft EIR, p. 3.4-43.)

3. Adopted Habitat Conservation Plans

Threshold: Would the Project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional or state habitat conservation plan?

Findings: No Impact. (Draft EIR, p. 3.4-43.)

Explanation: The Project site is not located within the boundary of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or any approved local, regional, or state habitat conservation plan. Thus, no impact would occur in this regard, and no mitigation is required. (Draft EIR, p. 3.4-43.)

E. ENERGY RESOURCES

1. Wasteful, Inefficient, or Unnecessary Consumption

Threshold: Would the Project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during Project construction or operation?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.5-14 through 3.5-16.)

Explanation: The Project would not result in inefficient, wasteful, or unnecessary consumption of energy during construction or operational activities. The EIR analyzed the Project's potential consumption of various energy resources, including electricity, natural gas, and petroleum during both the Project's construction and operation phases, and it concluded based on substantial evidence that the Project would have a less-than-significant impact relating to this issue. For these reasons and the reasons set forth in the EIR, the Project would not result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation. (Draft EIR, pp. 3.5-14 through 3.5-16.)

2. Conflict with Energy Plans

Threshold: Would the Project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.15-19 through 3.15-20.)

Explanation: The Project is required to meet Title 24 and California Green Building Standards Code (CALGreen) standards to reduce energy demand and increase energy efficiency, and the Project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.15-19 through 3.15-20.)

F. GEOLOGY AND SOILS

1. Rupture of an Earthquake Fault

Threshold: Would the Project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death, involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

Findings: No impact. (Draft EIR, p. 3.6-20.)

Explanation: The Project site is not located within a fault rupture hazard zone. Because the Project site is not crossed by any known active or potentially active fault, the Project would

not directly or indirectly cause potential substantial adverse effects involving rupture of a known earthquake fault, and no mitigation is required. (Draft EIR, p. 3.6-20.)

2. Landslides

Threshold: Would the Project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death, involving landslides?

Findings: No impact. (Draft EIR, p. 3.6-20.)

Explanation: The Project site is not located in an area subject to landslides. The Project site is located on relatively flat ground and is not adjacent to any areas with steep slopes or hillsides that could result in a landslide. The Project would therefore not cause potential substantial adverse effects relating to landslides, and the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.6-20.)

3. Soil Erosion or Loss of Topsoil

Threshold: Would the Project result in substantial soil erosion or the loss of topsoil?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.6-20 through 3.6-21.)

Explanation: The Project would not result in substantial soil erosion or the loss of topsoil. A potentially significant impact relating to soil erosion or loss of topsoil could occur if the Project would result in soil erosion sufficient to undermine structures or compromise slope stability—e.g., if the Project would result in rills (small narrow channels) and gullies, whereby storm runoff produces deep incisions into the soils and slopes. The Project, however, would not result in such soil erosion because the Project site is on relatively flat land. Moreover, runoff resulting from the Project would not result in substantial soil erosion or loss of top soil, as runoff would be managed and discharged into an existing detention basin. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.6-20 through 3.6-21.)

4. Septic Tanks

Threshold: Would the Project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Findings: No impact. (Draft EIR, p. 3.6-21.)

Explanation: The Project would not include septic tanks or alternative wastewater disposal systems; rather, the Project would connect to the City's sewer system to convey wastewater to a treatment plant. For these reasons and the reasons discussed in the EIR, the Project would not result in a significant impact relating to this issue, and no mitigation is required. (Draft EIR, p. 3.6-21.)

5. Geologic Features

Threshold: Would the Project directly or indirectly destroy a unique geologic feature?

Findings: Less-than-significant impact. (Draft EIR, p. 3.6-21.)

Explanation: The Project would not directly or indirectly destroy a unique geologic feature. The Project site does not contain any unique geologic features, such as a landform or rock outcrop of scientific, cultural, or aesthetic interest. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue and not mitigation is required. (Draft EIR, p. 3.6-21.)

G. GREENHOUSE GAS EMISSIONS

1. Greenhouse Gas Emissions

Threshold: Would the Project generate greenhouse gas emissions ("GHGs"), either directly or indirectly, that may have a significant impact on the environment?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.7-30 through 3.7-31.)

Explanation: The Project would not generate GHGs, either directly or indirectly, that could have a significant impact on the environment. The EIR analyzed the amount of GHGs that would be generated by the Project during both its construction and operation phases, and it concluded based on substantial evidence that the amount of GHGs generated by the Project would be below BAAQMD's GHG threshold of significance. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.7-30 through 3.7-31.)

2. Conflicts with Applicable Plans, Policies, and Regulations

Threshold: Would the Project conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.7-31 through 3.7-38.)

Explanation: The Project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose or reducing the emissions of greenhouse gases. The City has not adopted an applicable GHG reduction plan. As set forth in the EIR, the Project would be consistent with the Association of Bay Area Governments ("ABAG") and Metropolitan Transportation Commission's Plan Bay Area, the California Air Resources Board's ("CARB") Scoping Plan, and other goals and policies adopted for the purpose of reducing GHG emissions. (Draft EIR, pp. 3.7-31 through 3.7-38.) For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.7-31 through 3.7-38.)

H. HAZARDS AND HAZARDOUS MATERIALS

1. Hazardous Materials

Threshold: Would the Project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.8-15 through 3.8-16.)

Explanation: The Project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials during its construction or operation.

During construction of the Project, no acutely hazardous materials would be used, and while some hazardous materials (such as fuels, motor oil, and lubricants) would be used in small amounts, the materials would not pose a significant risk to off-site residents or construction workers because they would be used and stored in accordance with existing laws and regulations. Moreover, development of the Project would be subject to existing regulatory requirements for hazardous materials, including requirements under the National Pollutant Discharge Elimination System ("NPDES") permit through the development and implementation of a Stormwater Pollution Prevention Plan ("SWPPP"). The SWPPP would require implementation of control measures for hazardous material storage, soil stockpiles, inspections, maintenance, training of employees, and containment of releases to prevent contaminated runoff into nearby stormwater collection systems or waterways. Included within the SWPPP, best management practices would be required to contain hazardous materials and minimize the contact of hazardous materials with stormwater. (Draft EIR, p. 3.8-15.)

During operation of the Project, residents would be expected to use and store typical household hazards such as house paint, cleaning products, herbicides, and pesticides. The amounts of hazardous materials that residents store or use is negligible and not considered sufficient to create a significant safety hazard to the public, or otherwise pose a significant risk to human health or the environment. (Draft EIR, p. 3.8-16.)

For these reasons and the reasons set forth in EIR, the Project would not create a significant hazard to the public or the environment through the routine transport, use, or dispose of hazardous materials, and impacts relating to this issue would be less than significant. (Draft EIR, pp. 3.8-15 through 3.8-16.)

2. Acutely Hazardous Materials within ¼ Mile of an Existing or Proposed School

Threshold: Would the Project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Findings: Less-than-significant impact. (Draft EIR, p. 3.8-14.)

Explanation: The Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. The Project site is not located within one-quarter mile of an existing or proposed school. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.8-14.)

3. Hazardous Materials Sites

Threshold: Would the Project be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Findings: Less-than-significant impact. (Draft EIR, p. 3.8-14.)

Explanation: The Project would not be located on a site that is included on a list of known hazardous materials sites, as confirmed in the EIR and in a Phase I ESA prepared for the Project. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.8-14.)

4. Public Airports and Private Airstrips

Threshold: For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard or excessive noise for people residing or working in the project area?

Findings: No impact. (Draft EIR, p. 3.8-15.)

Explanation: The Project site is not located within an airport land use plan or within two miles of an airport. For these reasons and the reasons set forth in the EIR, there would be no impact relating to this issue. (Draft EIR, p. 3.8-15.)

5. Emergency Access

Threshold: Would the Project impair implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.8-20 through 3.8-21.)

Explanation: Neither the construction nor the operation of the Project would impair implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan. During construction, the Project will implement the SWPPP, which would include an Integrated Contingency Plan and an evacuation plan for construction workers in the event of an emergency. Compliance with the SWPPP and the Integrated Contingency Plan would ensure impacts are less than significant during construction. The Project would similarly have a less-than-significant impact during its operation phase, as the City's Fire Department will review

the site plans to ensure adequacy of emergency access. Streets and roads will be adequate in terms of width, turning radius, and grade to facilitate access by City firefighting apparatus, and the Project will have alternative emergency ingress and egress. For these reasons and the reasons set forth in the EIR, the Project will have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.8-20 through 3.8-21.)

6. Wildland Fires

Threshold: Would the Project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.8-21 through 3.8-22.)

Explanation: Neither construction nor operation of the Project would expose people to adverse impacts involving wildland fire. CalFire does not identify the Project site as being within an area susceptible to wildland fires. During construction of the Project, the Project will comply with best management practices included within the SWPPP to further ensure that the Project would not result in wildfires. Operation of the Project would not have adverse impacts relating to wildland fires, as the Project will be built in compliance with the California Building Code's requirements for fire protection. Moreover, and as discussed above, the Project is designed with an emergency vehicle access to facilitate the ingress and egress of emergency response vehicles, including the City and Napa County Fire Department's apparatus, and the Project is designed to further provide emergency evacuation access for residents. For these reasons and the reasons set forth in the EIR, the Project would not result in a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.8-21 through 3.8-22.)

I. HYDROLOGY AND WATER QUALITY

1. Compliance with Water Quality Standards

Threshold: Would the Project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.9-34 through 3.9-39.)

Explanation: The Project would not violate any water quality standards or waste discharge requirements, and it would not otherwise substantially degrade surface or groundwater quality. Construction of the Project would not result in any potentially significant impact relating to this issue because the Project would comply with the Construction General Permit, and the City's Stormwater and Runoff Pollution Control Ordinance would require implementation of a SWPPP to address potential construction-related impacts on water quality. The standard requirements contained in a SWPPP are sufficient to address a project's potential to violate water quality standards or waste discharge requirements. Operation of the Project would likewise not result in any potentially significant impact relating to this issue as the Project would comply with the standards and performance criteria contained in the Small MS4 Permit, which requires

development projects to adhere to site design measures, source control measures, treatment control measures, and certain operation and maintenance requirements that ensure a less-than-significant impact. For these reasons and the reasons set forth in the EIR, the Project would not result in a significant impact relating to this issue. (Draft EIR, pp. 3.9-34 through 3.9-39.)

2. Groundwater Supplies

Threshold: Would the Project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.9-40 through 3.9-43.)

Explanation: The Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basis. The County works with local jurisdictions, including the City, to sustainably manage the Napa Valley Groundwater Subbasin in compliance with the Sustainable Groundwater Management Act ("SGMA"). In its most recent assessment of conditions, the County, through its technical consultant, has determined that the Subbasin is not exhibiting significant impacts with regard to the applicable sustainability indicators defined by SGMA, including lowering of groundwater levels, depletion of groundwater in storage, degradation of groundwater quality, and depletion of interconnected surface waters. The EIR additionally includes an analysis of the Project's demand on groundwater resources, including the Project's use of the on-site well, and the EIR concluded, based on substantial evidence, that the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.9-40 through 3.9-43.)

3. Existing Drainage Patterns and Runoff

Threshold: Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would result in substantial erosion or siltation on- or off-site?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.9-44 through 3.9-45.)

Explanation: The Project would not alter the course of a stream or river and is not located within a Special Flood Hazard Area ("SFHA") of the Napa River, and accordingly, the Project would not impede or redirect flood flows in a manner that would result in substantial erosion or siltation on- or off-site. Moreover, the Project would not result in substantial erosion or siltation on- or off-site as the off-site City detention basin has been designed with adequate capacity to capture and treat increases in the rate and volume of stormwater runoff associated with development in this area of the City, including development of the Project site with impervious surfaces. Additionally, the Project would be subject to the most recent standards and performance

criteria contained in the Small MS4 Permit and a Stormwater Control Plan that complies with the Bay Area Stormwater Management Agencies Post Construction Manual. The Project's compliance with existing permitting requirements and standard conditions of approval (i.e., MS4 Permit and the City's Stormwater and Runoff Pollution Control Ordinance) are sufficient to avoid water quality degradation, including erosion and siltation. For these reasons and the reasons set forth in the Draft EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.9-44 through 3.9-45.)

4. Surface Runoff and Flooding

Threshold: Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner that would substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or offsite?

Findings: Less-than-significant impact. (Draft EIR, p. 3.9-45.)

Explanation: The Project would not substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site. The City-owned off-site detention basin has been designed to store the increase in storm water runoff generated from the Project site during a 100-year storm event. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.9-45.)

5. Stormwater Drainage System Capacity and Polluted Runoff

Threshold: Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner that would create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.9-45 through 3.9-46.)

Explanation: The Project would not create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. The Project would comply with the City's Municipal Code, which requires the Project to construct storm drains or improve existing storms drains to ensure adequate capacity is available to carry runoff produced by a 10-year storm event. The Project's utility plan confirms that on-site storm flows at the Project site would be conveyed to the off-site detention center via storm drain lines. Moreover, the existing off-site detention basin was designed to accommodate runoff from the Project site. For these reasons and the reasons set forth in the EIR, the Project's impact relating to this issue would be less than significant. (Draft EIR, pp. 3.9-45 through 3.9-46.)

6. Flood Flows

Threshold: Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would impede or redirect flood flows?

Findings: Less-than-significant impact. (Draft EIR, p. 3.9-44.)

Explanation: The Project would not alter the course of a stream or river and is not located within a Special Flood Hazard Area ("SFHA") of the Napa River, and accordingly, the Project would not impede or redirect flood flows in a manner that would result in substantial erosion or siltation on- or off-site. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.9-13.)

Natural Hazards

Threshold: In flood hazard, tsunami, or seiche zones, would the Project risk release of pollutants due to project inundation?

Findings: No impact. (Draft EIR, p. 3.9-34.)

Explanation: The Project site is not within a flood hazard, tsunami, or seiche zone, and the Project and does not contain the preconditions necessary for a project to be at risk of hazards due to a tsunami, or seiche which require a reasonable distance and elevation relative to a coastline (for sea level rise or seiche) or large body of water (for seiche waves). There be no impact (or risk) associated with a tsunami or seiche. For these reasons and the reasons set forth in the EIR, there would be no impact relating to this issue. (Draft EIR, p. 3.9-13.)

7. Conflict with Water Quality Control Plan or Sustainable Groundwater Management Plan

Threshold: Would the Project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Findings: Less-than-significant impact. (Draft EIR, p. 3.9-46.)

Explanation: The Project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. The County works with local jurisdictions, including the City, to sustainably manage the Napa Valley Groundwater Subbasin in compliance with SGMA. In its most recent assessment of conditions, the County, through its technical consultant, determined that the Subbasin is not exhibiting significant impacts with regard to the applicable sustainability indicators defined by SGMA, including lowering of groundwater levels, depletion of groundwater in storage, degradation of groundwater quality, and depletion of interconnected surface waters. Moreover, the Project would comply with applicable regulations and permits designed to comply with the Water Quality Control Plan for the San Francisco Bay

Region. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.9-46.)

J. LAND USE AND PLANNING

1. Divide an Established Community

Threshold: Would the Project physically divide an established community?

Findings: No impact. (Draft EIR, p. 3.10-14.)

Explanation: Due to the Project's location, development of the Project would not physically divide an established community because there is no development northwest or northeast of the site. The Project would, instead, provide a continuation of the existing neighborhood with development of a new residential area. For these reasons and the reasons set forth in the EIR, the Project would have no impact relating to this issue. (Draft EIR, p. 3.10-14.)

2. Applicable Land Use Plans, Policies, or Regulations

Threshold: Would the Project cause a significant environmental impact due to a conflict with any land use plan, policy or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.10-14 through 3.10-19.)

Explanation: The Project would not cause a significant environmental impact due to a conflict with the applicable General Plan or any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. The EIR analyzed the Project's consistency with the City's 1993 General Plan, 2019 General Plan, Housing Element Update, and Zoning Ordinance, as well as the Project's consistency with the Plan Bay Area 2040. The EIR concluded, based on substantial evidence, that the Project would not result in a significant environmental impact due to a conflict with any of the foregoing. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.10-14 through 3.10-19.)

K. MINERAL RESOURCES

1. Statewide Mineral Resources

Threshold: Would the Project result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state?

Findings: No impact.

Explanation: The Project site is not located within an area known to be underlain by regionally important mineral resources. The California Geological Survey identifies the Project site as MRZ-4, indicating that insufficient information exists to assign the site with any other mineral resource zone

designation. No mineral resources have been identified in or around the Project site, and none of the previous use of the Project site included mining activities or mineral processing. For these reasons, this issue was dismissed from further discussion during the EIR scoping period (see Notice of Preparation issued March 6, 2018). No comments were received by the City regarding mineral resources during scoping or review of the Draft EIR. The Project would no impact relating to mineral resources, and no mitigation is required.

2. Locally Important Mineral Resources

Threshold: Would the Project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

Findings: No impact.

Explanation: The Project site is not located within an area known to be underlain by locally-important mineral resources. The California Geological Survey identifies the Project site as MRZ-4, indicating that insufficient information exists to assign the site with any other mineral resource zone designation. No mineral resources have been identified in or around the Project site, and none of the previous use of the Project site included mining activities or mineral processing. The City's General Plan does not identify the Project site as containing locally important mineral resources. For these reasons, this issue was dismissed from further discussion during the EIR scoping period (see Notice of Preparation issued March 6, 2018). No comments were received by the City regarding mineral resources during scoping or review of the Draft EIR. The Project would have no impact relating to mineral resources, and no mitigation is required.

L. NOISE

1. Groundborne Vibration

Threshold: Would the Project result in generation of excessive groundborne vibration or groundborne noise levels?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.11-17 through 3.11-18.)

Explanation: The Project would not generate excessive groundborne vibration or groundborne noise levels. The EIR analyzed the vibration that would be generated by the use of heavy equipment necessary for the construction of the Project, and it determined, based on substantial evidence, that vibration generated by the Project would be below the relevant threshold of significance set forth by Federal Transit Administration. For these reasons and the reasons set forth in the EIR, the Project would result in a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.11-17 through 3.11-18.)

2. Private/Public Airports

Threshold: For a project located within the vicinity of a private airstrip or an airport land use plan, or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Findings: No impact. (Draft EIR, p. 3.11-14.)

Explanation: The Project site is not located within the vicinity of a private airstrip or an airport land use plan, and it is not located within two miles of a public airport. For these reasons and the reasons set forth in the EIR, the Project would have no impact relating to this issue. (Draft EIR, p. 3.11-14.)

M. POPULATION AND HOUSING

1. Induce Substantial Growth

Threshold: Would the Project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Findings: Less-than-significant impact. (Draft EIR, pp. 4-3 through 4.6.)

Explanation: The Project would not induce substantial unplanned population growth in the area. While the Project does entail residential development and would result in population growth, the population growth is not unplanned. The Project site was designated for future residential development in the City's 1993 General Plan and 2019 General Plan, and the Project site is located within the City's Urban Limit Line with access to existing utilities. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 4-3 through 4.6.)

2. Displacing Housing and People

Threshold: Would the Project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Findings: No impact.

Explanation: The Project does not entail the demolition of any housing, and would not otherwise displace any residents. (Draft EIR, p. 2-2.) For these reasons and the reasons discussed in the EIR, the Project would not have no impact relating to this issue.

N. PUBLIC SERVICES

1. Fire Protection Services

Threshold: Would the proposed Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or a need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection services?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.12-13 through 3.12-14.)

Explanation: The Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or a need for new or physically altered governmental facilities, relating to fire protection services. The Project site would be served by the City's fire department located at 1480 Main Street, approximately 0.2 miles from the Project site. Moreover, the increase in population generated by the Project is within the projected population growth in the City's 1993 and 2019 General Plans and would not generate an increase in population that would necessitate the construction of a new facility or expansion of an existing facility. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.12-13 through 3.12-14.)

2. Police Services

Threshold: Would the proposed Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or a need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection services?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.12-14 through 3.12-15.)

Explanation: The Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or a need for new or physically altered governmental facilities, relating to police protection services. The Project would be served by the City's police station, approximately 0.2 miles from the Project site. While the City would likely hire an additional police officer to serve the approximately 213 residents the Project would add to the City, the addition of one police officer would not require the construction of new, or the expansion of existing, police facilities because adequate space is available at the existing St. Helena Police Department Facility. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.12-14 through 3.12-15.)

3. Education

Threshold: Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or a need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools?

Findings: Less-than-significant impact. (Draft EIR, p. 3.12-15.)

Explanation: No school would need to be constructed or physically altered in order to accommodate the approximately 28 students that would be generated by the Project. As set forth in the EIR, the local primary school, elementary school, middle school, and high school all have sufficient capacity to accommodate the students generated by the Project. In addition, the Project will pay all required school impact fees consistent with Government Code Sections 65995–65998. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.12-15.)

4. Parks

Threshold: Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or a need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for parks?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.12-16 through 3.12-17.)

Explanation: Parks within the vicinity of the Project include Lyman Park, Jacob Meily Park, and Lewis Station, all of which are located within approximately 0.3 miles of the Project site. These parks have adequate facilities to accommodate the Project's estimated 213 residents, with such facilities including picnic and turf areas, children's playgrounds, and a walking trail. Moreover, park and recreational impact fees are imposed on all residential development within the City, and the Project applicant must pay all required park fees, which the City will use to ensure that the increased use of existing parks due to the Project's anticipated residents would not cause result in substantial physical deterioration of the park facilities. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.12-16 through 3.12-17.)

5. Other Public Facilities

Threshold: Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or a need for new or physically altered governmental facilities, the construction of which could cause significant

environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for other public facilities?

Findings: Less-than-significant impact. (Draft EIR, p. 3.12-16.)

Explanation: While the 213 residents generated by the Project would increase demand for existing public facilities within the City (including the George and Elsie Wood Public Library and City Hall), Chapter 3.32 of the City's Municipal Code requires payment of a civic improvement fee that would offset any impacts the Project might have. The civic improvement fee was calculated to ensure new development would pay its proportionate share of the cost of existing and future capital assets required to serve the City. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.12-16.)

O. RECREATION

1. Existing Facilities

Threshold: Would the Project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.12-16 through 3.12-17.)

Explanation: Parks within the vicinity of the Project include Lyman Park, Jacob Meily Park, and Lewis Station, all of which are located within approximately 0.3 miles of the Project site. These parks have adequate facilities to accommodate the Project's estimated 213 residents, with such facilities including picnic and turf areas, children's playgrounds, and a walking trail. Moreover, park and recreational impact fees are imposed on all residential development within the City, and the Project applicant must pay all required park fees, which the City will use to ensure that the increased use of existing parks due to the Project's anticipated residents would not cause result in substantial physical deterioration of the park facilities. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.12-16 through 3.12-17.)

2. New Recreational Facilities

Threshold: Does the Project include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?

Findings: No impact. (Draft EIR, pp. 3.12-16 through 3.12-17.)

Explanation: The Project does not propose to construct any new on- or off-site recreation facilities, and the Project would not expand any existing off-site recreational facilities. For the foregoing reasons and the reasons discussed in the EIR, the Project would have no impact relating to this issue. (Draft EIR, pp. 3.12-16 through 3.12-17.)

P. TRANSPORTATION

1. Consistency with Circulation Performance Plans

Threshold: Would the Project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.14-39 through 3.14-40.)

Explanation: The Project would be consistent with applicable plans, city ordinances, and policies addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Notably, the Project would provide adequate sidewalks and bicycle amenities and would not conflict with any plans or policies supporting either the development of these facilities or the use of these facilities. The Project would not conflict with any plans or policies that address transit, pedestrian, and bicycle facilities. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.14-39 through 3.14-40.)

2. Transportation Hazards

Threshold: Would the Project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.14-46 through 3.14-51.)

Explanation: The Project would not increase hazards due to a geometric design feature or incompatible use that would contribute to an increase in collisions or create visual obstructions that would impede vehicles, bicyclists, and pedestrians from having safe access to and from the Project site.

The Project would result in the extension and construction of roads, but these roads would be designed to accommodate emergency service vehicles and maintain accessibility for pedestrians and bicyclists according to City street design standards. For example, the Project would extend Starr Avenue northward into the Project site, and intersect with Adams Street, which the Project would also extend eastward from its current terminus. As Starr Avenue is extended northward, it would narrow from an approximately 75-foot right-of-way (ROW) to a 60-foot ROW with 4-foot-side sidewalks and a 6-foot-wide planter strip on both sides of the street, consistent with City's street standards. This extension, along with Adams Street, would be designed to accommodate emergency service vehicles and maintain accessibility for pedestrians and bicyclists according to City street design standards. (Draft EIR, pp. 3.14-46 through 3.14-47.)

The Project would also result in internal public residential streets within the Project site to accommodate neighborhood circulation and provide on-street parking on both sides of the Starr Avenue and Adams Street extensions (where permitted). These roadways would be designed to be consistent with all applicable City street design criteria and conform to the City's Municipal Code

(Section 16.32.060) to ensure that emergency service vehicles can adequately access and circulate within the Project site. As explained in the EIR, there are no visual obstructions that would impede vehicles, bicyclists, and pedestrians from having safe access to and from the Project site. (Draft EIR, p. 3.14-47.)

The EIR additionally considered accident data and a collision analysis to determine whether the Project would increase hazards due to a geometric design feature or incompatible use. The analysis, based on substantial evidence, demonstrates that the Project would have a less-than-significant impact. (Draft EIR, pp. 3.14-47 through 3.14-48.)

The EIR further analyzed the Project's potential to increase hazards during Project construction, and the EIR concluded, based on substantial evidence, that the Project would have a less-than-significant impact. Notably, while certain construction activities could require temporary lane closures, the Project would first be required to obtain construction permits through the City, and the City's traffic engineer would first prepare a temporary traffic control plan for the construction activities. As a result, the Project would not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses during construction of the Project. (Draft EIR, pp. 3.14-49 through 3.14-50.)

For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.14-46 through 3.14-51.)

3. Emergency Access

Threshold: Would the Project result in inadequate emergency access?

Findings: Less-than-significant impact. (Draft EIR, p. 3.15-51.)

Explanation: The Project would not result in inadequate emergency access. The St. Helena Fire Department has reviewed the proposed Tentative Subdivision Map, and it did not identify any issues with inadequate emergency access. Notably, the Project includes two primary access points, Star Avenue and Adams Street, as well as a separate emergency vehicle access. In the event of an emergency, there would be three avenues that would enable vehicles to enter or exit the Project site. Moreover, the Project would be consistent with 1993 General Plan Policy 8.5.7 and 2019 General Plan Policy PS4.6, which require all streets and roads be designed with adequate width, turning radius, and grade to facilitate access by City firefighting apparatus, and to provide alternative emergency ingress and egress. Additionally, once the Tentative Subdivision Map is approved, the Project's Final Subdivision Map would be subject to additional review by the St. Helena Fire Department to confirm that the Project provides proper emergency access. For these reasons and the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, p. 3.15-51.)

Q. UTILITIES AND SERVICE SYSTEMS

1. Utilities Infrastructure

Threshold: Would the Project require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction of which could cause significant environmental effects?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-27 through 3.13-30.)

Explanation: While the Project would require new water, sewer, storm drain, electric power, natural gas, and telecommunications infrastructure on site to serve the proposed residential development (e.g., on-site water, sewer, and storm drain lines and utility connections), the Project would not require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunication facilities. As explained in the EIR, the City's water and wastewater treatment and conveyance facilities and the City's stormwater drainage facilities have the capacity to accommodate the demands of the Project, and the Project would not require the construction of new such facilities or expansion of the existing facilities. Additionally, the City collects development impact fees on new development to pay for public improvements relating to water projects, sewer projects, and stormwater drainage projects. The Project applicant would pay these fees, which would help offset any increased demands on the City's water, sewer, and stormwater drainage systems. The Project will be served by Marin Clean Energy for electricity service, by Pacific Gas & Electric Company for natural gas service, and by various service providers for telecommunications services. The Project would not require the relocation or construction of electric power, natural gas, or telecommunications facilities. For these reasons and the reasons set forth in the EIR, the Project would result in a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.13-27 through 3.13-30.)

2. Sufficient Water Supplies

Threshold: Would sufficient water supplies be available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-31 through 3.13-32.)

Explanation: Sufficient water supplies would be available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. The long-term safe yield of the City's water supply is 1,950 acre-feet per year, which consists of 600 acre-feet from the City of Napa contract, 900 acre-feet from Bell Canyon reservoir, and an average use of 450 acre-feet from groundwater. Recent water usage in the City is well below the 1,950 acre-feet target, with water usage ranging from 1,882 acre-feet (2013) to 1,465 acre-feet (2016) and averaging 1,637 acre-feet over the last eight years. Even if one were to add the Project's entire water demand of 37.04 acre-feet per year to the highest water demand in recent years of 1,882

acre-feet, this would result in a City-wide water demand of 1,919 acre-feet, which is below the Safe Yield of 1,950 acre-feet.

In addition, the Project will comply with the City's water neutrality policy, meaning that the 37.04 acre-feet per year of water that would be used during Project operation would be completely offset through a combination of using the on-site water well for irrigation needs and implementation of water conserving measures. Notably, the existing on-site agricultural well is proposed to be used to provide non-potable supplies to the separately plumbed landscape irrigation systems throughout the Project site to irrigate public and private landscaping. The on-site well has sufficient capacity to meet the Project's estimated landscape water demand of 17.16 acre-feet per year. Moreover, to comply with the City's water neutrality policy, the Project applicant is required to off-set the Project's water demand as a condition of approval. To comply with Municipal Code section 13.12.030, the Project applicant shall identify and implement offsite improvements that reduce water loss from the public water distribution system and/or identify and implement offsite improvements that result in a net increase in potable water availability equivalent to 19.8 AFY, or a combination of these.

For these reasons and the reasons set forth in the EIR, the Project would result in a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.13-31 through 3.13-32.)

3. Wastewater Treatment Capacity

Threshold: Would the Project result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-32 through 3.13-33.)

Explanation: The City's Waste Water Treatment Plant ("WWTP") has adequate capacity to serve the Project's existing demand in addition to the WTTP's existing commitments. The WWTP is permitted, and has capacity, to discharge up to 0.5 MGD during dry weather and up to 2.8 MGD during wet weather of treated effluent. The Project is expected to generate an average of 0.018 MGD of wastewater. As the WWTP currently treats an average flow of 0.384 MGD, the additional 0.018 MGD combined with the current average flow of 0.384 MGD would not exceed the plant's permissible allowable average dry weather flow effluent of 0.5 MGD. Because adequate capacity is available at the WWTP to serve the Project, and for the reasons discussed in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.13-32 through 3.13-33.)

4. Landfill Capacity

Threshold: Would the Project generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-33 through 3.13-34.)

Explanation: The Project would not generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, and it would not otherwise impair the attainment of solid waste reduction goals. During construction, the Project would contribute less than 0.1% of the Clover Flat Landfill's permitted capacity per day. As this is a relatively minimal contribution, the Clover Flat Landfill would have adequate landfill capacity for the Project's construction debris. During operation, the Project would contribute approximately 0.04 percent of the average unused daily capacity of the Clover Flat Landfill, and the Project would therefore not exceed the capacity of the landfill. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.13-33 through 3.13-34.)

5. Solid Waste

Threshold: Would the Project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-33 through 3.13-34.)

Explanation: The Project would comply with applicable federal, state, and local management and reduction statutes and regulations related to solid waste. Notably, the 2016 CALGreen Tier 1 mandatory measures require preparation of a Construction Waste Management Plan that documents the diversion of materials as required by CALGreen and at least 65% of nonhazardous construction waste would be required to be recycled or salvaged. The Project would comply with these mandatory measures. Additionally, the Project would comply with the City's Source Reduction and Recycling Element solid waste diversion requirement and the AB 939 solid waste diversion requirements. The Clover Flat Landfill provides mandated commercial recycling processing services, production of organic feedstocks for composting, and renewable energy generation. The Project would be required to comply with all applicable local and state solid waste diversion, minimization, and recycling regulations. For these reasons and the reasons set forth in the EIR, the Project would have a less-than-significant impact relating to this issue. (Draft EIR, pp. 3.13-33 through 3.13-34.)

R. WILDFIRES

1. Impairment of Adopted Emergency Response Plan or Emergency Evacuation Plan

Threshold: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project substantially impair an adopted emergency response plan or emergency evacuation plan?

Findings: Less-than-significant impact. (Draft EIR, p. ES-3.)

Explanation: The Project is not located on a site designated as a very high fire hazard severity zone ("VHFHSZ") by the California Department of Forestry and Fire Protection ("CalFire") and would therefore have a less-than-significant impact relating to this issue. Regardless, as noted above and discussed in the Draft EIR, the Project would not substantially impair an adopted emergency response plan or emergency evacuation plan. (Draft EIR, pp. 3.8-20 through 3.8-21.) For the foregoing reasons and the reasons discussed in the Draft EIR, the Project would not result in a significant impact relating to this issue, and no mitigation is required. (Draft EIR, p. ES-3.)

2. Exacerbation of Wildfire Risks

Threshold: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Findings: Less-than-significant impact. (Draft EIR, p. ES-3.)

Explanation: The Project is not located on a site designated as VHFHSZ by CalFire and would therefore have a less-than-significant impact relating to this issue. Regardless, the Project site is flat, so the Project would not expose Project occupants to fire hazards due to proximity to hilly terrain or landslides due to post-fire conditions. For the foregoing reasons and the reasons discussed in the EIR, the Project would not result in a significant impact relating to this issue, and no mitigation is required. (Draft EIR, p. ES-3.)

3. Infrastructure-Related Wildfire Risks

Threshold: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project require installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Findings: Less-than-significant impact. (Draft EIR, pp. 4.16-13 through 4.16-14.)

Explanation: The Project is not located on a site designated as VHFHSZ by CalFire and would therefore have a less-than-significant impact relating to this issue. Moreover, the Project does not require installation of infrastructure that could exacerbate fire risk. For the foregoing reasons and the reasons discussed in the EIR, the Project would not result in a significant impact relating to this issue, and no mitigation is required. (Draft EIR, p. ES-3.)

4. Landslides and Slope Instability

Threshold: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project expose people or structures to significant risks,

including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Findings: Less-than-significant impact. (Draft EIR, p. ES-3.)

Explanation: The Project is not located on a site designated as VHFHSZ by CalFire and would therefore have a less-than-significant impact relating to this issue. Regardless, the Project site is flat, so the Project would not expose Project occupants to fire hazards due to proximity to hilly terrain or landslides due to post-fire conditions. For the foregoing reasons and the reasons discussed in the EIR, the Project would not result in a significant impact relating to this issue, and no mitigation is required. (Draft EIR, p. ES-3.)

SECTION 2. FINDINGS REGARDING ENVIRONMENTAL IMPACTS MITIGATED TO A LEVEL OF LESS THAN SIGNIFICANT

The City Council hereby finds that feasible mitigation measures have been identified in the EIR and this Resolution that will avoid or substantially lessen the following potentially significant environmental impacts to a level of less than significant. The potentially significant impacts, and the mitigation measures that will reduce them to a less-than-significant level, are as follows:

A. AESTHETICS

1. Light and Glare

Threshold: Would the Project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Findings: Less than significant with mitigation incorporated. (Draft EIR, p. 3.1-41.) Changes or alterations have been required in, or incorporated into, the Project that avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: The Project would not create a new source of glare that would adversely affect day or nighttime views in the area, and the Project's impacts relating to glare would be less than significant. (Draft EIR, p. 3.1-34.)

The Project would introduce new light sources into an area that is currently undeveloped, and this could potentially impact nighttime views absent mitigation. To ensure that any aesthetic light-related impact of the Project is mitigated to a level of less than significant, the following mitigation measure has been identified:

> ***AES-1****: To minimize spillover light while ensuring adequate nighttime security, the Project applicant shall prepare lighting design guidelines for the Project to be reviewed and approved by the City as part of the Design Review process. The lighting design guidelines shall include a lighting plan noting fixtures and lumens, and standards such as, lighting*

is to be shielded and downward focused to reduce glare and spillover light, up cast decorative lighting shall be limited to minimize effects on wildlife and to retain the rural ambience of the area, and the use of mirrored glass shall not be permitted. The lighting guidelines shall conform with Lighting Zone 2 of Title 24, Part 6, of the California Code of Regulations. The guidelines and lighting plan shall be approved as part of the Design Review application.

Implementation of MM AES-1 would ensure that light introduced to the Project site would not adversely affect day or nighttime views in the area by minimizing spillover light and limiting up cast light. With implementation of MM AES-1, the Project's potential direct and cumulative impacts relating to new lights introduced to the Project site would be reduced to a level of less than significant. (Draft EIR, p. 3.1-41.)

B. BIOLOGICAL RESOURCES

1. Special Status Species

Threshold: Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U. S. Fish and Wildlife Service?

Findings: Less than significant with mitigation incorporated. (Draft EIR, pp. 3.4-43 through 3.4-49.) Changes or alterations have been required in, or incorporated into the Project that avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: No federal or state-listed wildlife species have the potential to occur on the Project site. Only a small number of special-status wildlife species have the potential to occur onsite—native bats, the white-tailed kite, and nesting and migratory birds. There is low potential for these species to occur on the Project site. Nevertheless, absent mitigation, the Project could have a potentially substantially adverse effect on these species.

Native bats. The Project is not anticipated to result in any direct impacts to roosting bats. Roosting habitat, such as rock outcrops, trees, caves, and human-made structures, are absent from the Project site. Additionally, the pallid bat is unlikely to roost on or near the Project site due to frequent human disturbance. Moreover, the Project would avoid potential roost sites within the vicinity of the Project site, such as the trees along the southeastern margin of the site.

Absent mitigation, the Project could potentially have indirect impacts on native bats. If bats were to roost in the area during construction, they could be indirectly impacted by construction-related noise. Indirect impacts to roosting bats could also result from increased light, glare, and activity associated with operation of the Project. To ensure that any potential impacts

relating to roosting bats are mitigated to a level of less than significant, the following mitigation measures have been identified:

> ***BIO-1:*** *A qualified biologist shall conduct a habitat assessment for bats in trees adjacent to the Project site within 2 weeks prior to any Project construction (site clearing, grading). The habitat assessment shall include a visual inspection of potential roosting features (bats need not be present) and presence of guano within the Project site and 50 feet around these areas. Potential roosting features found during the survey shall be mapped and described in a survey letter report. If roosting bats (individuals or colonies) are detected within the Project site, California Department of Fish and Wildlife shall be notified as soon as possible prior to any construction activity to confirm the bats can be avoided during construction. If a bat roosting or maternity colony cannot be completely avoided, a qualified biologist shall prepare a bat mitigation and monitoring plan for California Department of Fish and Wildlife review and approval, and that plan shall be implemented prior to commencement of construction that could impact the roosting bats or maternity colony.*

> ***AES-1****: To minimize spillover light while ensuring adequate nighttime security, the Project applicant shall prepare lighting design guidelines for the Project to be reviewed and approved by the City as part of the Design Review process. The lighting design guidelines shall include a lighting plan noting fixtures and lumens, and standards such as, lighting is to be shielded and downward focused to reduce glare and spillover light, up cast decorative lighting shall be limited to minimize effects on wildlife and to retain the rural ambience of the area, and the use of mirrored glass shall not be permitted. The lighting guidelines shall conform with Lighting Zone 2 of Title 24, Part 6, of the California Code of Regulations. The guidelines and lighting plan shall be approved as part of the Design Review application.*

Implementation of MM BIO-1 would ensure that measures be taken to avoid any potentially significant impact to roosting bats during construction of the Project. Additionally, implementation of MM AES-1 would address indirect impacts to native bats relating to spillover light, which can affect some species. With implementation of these required mitigation measures, potential direct, indirect, and cumulatively considerable impacts to native bats would be reduced to a level of less than significant. (Draft EIR, pp. 3.4-46 through 3.4-48.)

White-tailed kites. No white-tailed kites have been observed on or near the Project site during the 2011, 2015, 2018, or 2019 biological surveys of the site. Moreover, no tree removal is proposed as part of the Project, so no direct impacts (such as mortality and/or injury to nesting kites) are anticipated as a result of the Project. However, if white-tailed kites were to be breeding near the site before Project initiation, construction-related activities could potentially cause an adult kite to abandon an active nest that is in close proximity to the construction area, potentially leaving eggs or chicks vulnerable to predation or without provisions. In addition, increased lighting and glare associated with the Project's operation could result in indirect impacts to the white-tailed kites' nesting habitat. As explained below, mitigation is necessary to ensure that any potentially significant impact relating to white-tailed kites is mitigated to a level of less than significant.

Nesting and migratory birds. No active nests for nesting or migratory birds were documented on or near the Project site during the 2011, 2015, 2018, and 2019 biological surveys. However, trees, shrubs, grassland, and vineyards on or adjacent to the Project site provide potential nesting habitat for bird species protected under the Migratory Bird Treaty Act ("MBTA") and California Fish and Game Code section 3500. Direct impacts to nesting birds could result from vegetation clearing and site grading during Project construction. Potential indirect impacts to birds nesting near the Project site during construction would essentially be identical to those described above for white-tailed kite.

To ensure that any potential impacts relating to white-tailed kite and nesting and migratory birds are mitigated to a level of less than significant, the following mitigation measures have been identified:

> ***BIO-2:*** *If construction activities are scheduled to occur during the breeding season for birds (February 1 through August 31), the Project applicant or their contractor shall implement the following measures to avoid potential adverse effects to nesting raptors and other nesting birds:*
>
> - *Preconstruction surveys by a biologist of all potential nesting habitats within 500-feet of construction activities, where accessible, shall be conducted by a qualified biologist. Surveys shall occur no more than 14 days prior to the initiation of site disturbance. If construction is stopped for 14 days or more during the breeding season, a new preconstruction nesting bird survey must be conducted before work can be restarted to ensure no new nesting has occurred in the interim.*
>
> - *If preconstruction surveys indicate that nests are inactive or potential habitat is unoccupied during the construction period, no further mitigation is required, following submittal of a survey report letter to the City of St. Helena Planning Department.*

- *If active nests are found during preconstruction surveys, a no-disturbance buffer shall be created around active nests during the breeding season or until it is determined by the biologist that all the young have fledged. The buffers shall be established by the biologist in conjunction with the California Department of Fish and Wildlife. Typical buffers may include 500 feet for raptors and 50 to 250 feet for other bird species based on the location of the nest, the nesting species present, and types of construction activities that may cause potential nest abandonment. The perimeter of the buffer zone shall be fenced or marked with staked flagging.*

***AES-1**: To minimize spillover light while ensuring adequate nighttime security, the Project applicant shall prepare lighting design guidelines for the Project to be reviewed and approved by the City as part of the Design Review process. The lighting design guidelines shall include a lighting plan noting fixtures and lumens, and standards such as, lighting is to be shielded and downward focused to reduce glare and spillover light, up cast decorative lighting shall be limited to minimize effects on wildlife and to retain the rural ambience of the area, and the use of mirrored glass shall not be permitted. The lighting guidelines shall conform with Lighting Zone 2 of Title 24, Part 6, of the California Code of Regulations. The guidelines and lighting plan shall be approved as part of the Design Review application.*

Implementation of MM BIO-2 would ensure that measures be taken to avoid any potentially significant impact concerning white-tailed kite, nesting birds, and migratory birds during the avian nesting season. Additionally, implementation of MM AES-1 would address indirect impacts to white-tailed kite, nesting birds, and migratory birds relating to spillover light, which can affect some species. With implementation of these required mitigation measures, potential direct, indirect, and cumulatively considerable impacts to white-tailed kite, nesting birds, and migratory birds would be reduced to a level of less than significant. (Draft EIR, pp. 3.4-46 through 3.4-48.)

For the foregoing reasons and the reasons discussed in the EIR, impacts relating to this issue would be less than significant with the incorporation of MM BIO-1, MM BIO-2, and MM AES-1. (Draft EIR, pp. 3.4-43 through 3.4-49.)

2. Wetlands

Threshold: Would the Project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Findings: Less than significant with mitigation incorporated. (Draft EIR, p. 3.4-49.) Changes or alterations have been required in, or incorporated into, the Project that avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: The Project site supports 0.07 acres of wetlands, 870 linear feet of other waters, consisting of four seasonal wetlands and two agricultural ditches. Construction activities would result in the fill of the four wetlands, and construction of a retaining wall on or near the property line may potentially impact agricultural ditches by filling or otherwise altering the structure or flow of these features. (Draft EIR, p. 3.4-49.) To ensure that any potential impacts of the Project relating to wetlands are mitigated to a level of less than significant, the following mitigation measure has been identified:

> ***BIO-3:*** *Wetland permits (e.g., 404 Nationwide Permit, 401 Water Quality Certification, and 1602 Streambed Alteration Agreement, respectively) shall be obtained prior to any grading work. Prior to issuance of a grading permit, the Project applicant shall demonstrate authorization from the Army Corp of Engineers and any other regulatory agency to alter the wetland.*

Implementation of MM BIO-3, through the permitting process for waters of the state and waters of the U.S., compensation would be required for a loss of wetlands that can be avoided or replaced on-site. Compensation may be in the form of off-site replacement or purchase of approved mitigation banking credits. With implementation of MM BIO-3, potential direct, indirect, and cumulatively considerable impacts to wetlands would be reduced to a level of less than significant. (Draft EIR, p. 3.4-49.)

3. Wildlife Movement and Nesting/Migratory Birds

Threshold: Would the Project interfere substantially with the movement of any resident or migratory fish or wildlife species or with established native resident migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Findings: Less than significant with mitigation incorporated. (Draft EIR, pp. 3.4-50 through 3.4-51.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: The Project site does not function as a wildlife movement corridor due to the surrounding development, lack of connectivity with other undeveloped areas, and existing and

historic uses of the site. Moreover, the Project site does not provide suitable aquatic habitat for native resident or migratory fish species, and the Project site does not provide an essential habitat linkage or migratory corridor functions for resident or migratory wildlife. Additionally, existing permitting requirements and conditions of approval (e.g., MS4 Permit and the City's Stormwater and Runoff Pollution Control Ordinance) are sufficient to avoid water quality degradation and to meet water quality standards, rendering potential indirect impacts to any native resident or migratory fish via construction runoff in the Napa River less than significant.

Absent mitigation, the Project could potentially impede the use of native wildlife nursery sites. Although the annual grassland onsite does not provide adequate cover or nursery sites for many mammal species, trees along the edge of the site could provide suitable habitat for nesting birds and roosting bats. In addition, some birds may use the grassland for nesting when sufficient (i.e., tall) vegetation is present. Moreover, because the riparian corridor along the Napa River is located approximately 500 feet north of the Project site, absent mitigation, lighting and increased usage of the site by humans may result in indirect effects to local wildlife using the riparian corridor for nursery sites or as a migratory corridor. To ensure that any such potential impacts are mitigated to a level of less than significant, the following mitigation measures have been identified:

> ***AES-1****: To minimize spillover light while ensuring adequate nighttime security, the Project applicant shall prepare lighting design guidelines for the Project to be reviewed and approved by the City as part of the Design Review process. The lighting design guidelines shall include a lighting plan noting fixtures and lumens, and standards such as, lighting is to be shielded and downward focused to reduce glare and spillover light, up cast decorative lighting shall be limited to minimize effects on wildlife and to retain the rural ambience of the area, and the use of mirrored glass shall not be permitted. The lighting guidelines shall conform with Lighting Zone 2 of Title 24, Part 6, of the California Code of Regulations. The guidelines and lighting plan shall be approved as part of the Design Review application.*
>
> ***BIO-1:*** *A qualified biologist shall conduct a habitat assessment for bats in trees adjacent to the Project site within 2 weeks prior to any Project construction (site clearing, grading). The habitat assessment shall include a visual inspection of potential roosting features (bats need not be present) and presence of guano within the Project site and 50 feet around these areas. Potential roosting features found during the survey shall be mapped and described in a survey letter report. If roosting bats (individuals or colonies) are detected within the Project site, California Department of Fish and Wildlife shall be notified as soon as possible prior to any construction activity to confirm the bats can be avoided during*

construction. If a bat roosting or maternity colony cannot be completely avoided, a qualified biologist shall prepare a bat mitigation and monitoring plan for California Department of Fish and Wildlife review and approval, and that plan shall be implemented prior to commencement of construction that could impact the roosting bats or maternity colony.

BIO-2: *If construction activities are scheduled to occur during the breeding season for birds (February 1 through August 31), the Project applicant or their contractor shall implement the following measures to avoid potential adverse effects to nesting raptors and other nesting birds:*

- *Preconstruction surveys by a biologist of all potential nesting habitats within 500-feet of construction activities, where accessible, shall be conducted by a qualified biologist. Surveys shall occur no more than 14 days prior to the initiation of site disturbance. If construction is stopped for 14 days or more during the breeding season, a new preconstruction nesting bird survey must be conducted before work can be restarted to ensure no new nesting has occurred in the interim.*

- *If preconstruction surveys indicate that nests are inactive or potential habitat is unoccupied during the construction period, no further mitigation is required, following submittal of a survey report letter to the City of St. Helena Planning Department.*

- *If active nests are found during preconstruction surveys, a no-disturbance buffer shall be created around active nests during the breeding season or until it is determined by the biologist that all the young have fledged. The buffers shall be established by the biologist in conjunction with the California Department of Fish and Wildlife. Typical buffers may include 500 feet for raptors and 50 to 250 feet for other bird species based on the location of the nest, the nesting species present, and types of construction activities that may cause potential nest abandonment. The perimeter of the buffer zone shall be fenced or marked with staked flagging.*

Implementation of MM AES-1 would ensure that lighting associated with the Project would adhere to guidelines and standards that reduce glare and spillover light and would ensure that indirect impacts to wildlife relating to light would be reduced to a level of less than significant. Implementation of MM BIO-1 would avoid any potentially significant impact to roosting bats

during construction of the Project, while implementation of MM BIO-2 would avoid any potentially significant impact concerning white-tailed kite, nesting birds, and migratory birds during the avian nesting season. With implementation of MM AES-1, BIO-1, and BIO-2, potential direct, indirect, and cumulatively considerable impacts relating to this issue would be reduced to a level of less than significant. (Draft EIR, p. 3.4-50.)

C. CULTURAL RESOURCES

A. Historical Resources

Threshold: Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

Findings: Less than significant with mitigation incorporated. (Draft EIR, pp. 3.5-26 through 3.5-29.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: The Project site is undeveloped and there are no buildings present on the Project site that could be considered historical resources under CEQA; therefore, the Project would not have an impact any historical buildings. There are archaeological resources, however, on the Project site that qualify as a historical resource under CEQA. Notably, the Project site is intersected by CA-NAP-406, which is a small site on which 5,711 pieces of lithic debitage, 17 bifaces, one core, seven edge-modified flakes, one hammerstone, 101 charcoal fragments, seven pieces of baked clay, and 40 historical-era artifacts were found. CA-NAP-406 has been determined to be eligible for inclusion in the National Register of Historic Properties ("NRHP") and the California Register of Historic Properties ("CRHP"). Previous investigations evaluating CA-NAP-406, however, were restricted to portions of this resource located west of the Project site. Phase 1 and Phase 2 archaeological excavations, as well as a ground-penetrating radar ("GPR") investigation, were conducted on the Project site, and based on this evidence, no intact deposits or features associated with CA-NAP-406 appear to extent to within the Project site. It is likely that the upper layer of fill present on a majority of the Project site is comprised largely of redeposited and otherwise disturbed cultural deposits associated with CA-NAP-406. Soils identified below the fill were not found to contain cultural deposits or substantial frequencies of cultural material. However, because there is the potential to unearth unknown resources during Project construction, there could be a potentially significant impact to subsurface archaeological resources, absent mitigation. To ensure that any such potential impacts are mitigated to a level of less than significant, the following mitigation measure has been identified:

> ***CUL-1:*** *The City shall require that an archaeological monitor is present during all ground-disturbing activities with the potential to impact previously identified cultural resources or to encounter unanticipated cultural deposits including tribal cultural resources. The determination for*

a Native American monitor to be present shall be made by the City, in consultation with the appropriate Native American tribe prior to the initiation of ground disturbing activities. In addition, prior to the initiation of ground-disturbing work, construction crews shall be made aware of the potential to encounter cultural resources and the requirement for cultural monitors to be present during these activities. Areas observed to have potential to contain yet-identified subsurface cultural material or deposits are located throughout the Project site, but primarily would be in the western portion of the site where the existing vineyard is located. It is anticipated resources would not be present in depths of more than 10 feet below the surface. Archaeological and Native American monitoring may be adjusted at the recommendation of the qualified archaeological principal investigator, meeting the Secretary of the Interior Professional Qualifications for Archaeology, and in consultation with the City, based on inspection of exposed subsurface soils and their observed potential to contain intact cultural deposits or material.

The archaeological and tribal monitors shall be provided a copy of technical reports prepared for the Project and pertinent appendices to inform their monitoring efforts. The archaeological and tribal monitors shall have the authority to temporarily halt work to inspect areas as needed for potential cultural material or deposits. In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities, all construction work occurring within 100 feet of the find shall immediately stop until the qualified archaeological principal investigator, that meets the Secretary of the Interior Professional Qualifications for Archaeology, can evaluate the significance of the find and determine whether or not additional study is warranted, in consultation with the Tribe. Should it be determined by the Tribe and the archeologist, temporary flagging may be installed around this resource in order to avoid any disturbances from construction equipment. As approved by the City, in consultation with the Tribe this buffer may be adjusted by the Tribe and the archaeological principal investigator to a distance that maintains a protective perimeter around the unanticipated resource, while still allowing for construction to continue in the surrounding area.

Compliance with Mitigation Measure CUL-1 would ensure that proper procedures and protocol are in place in the event a resource is identified. The procedures require work to stop in the event a resource is discovered and require an archaeologist and/or Native American

representative to be contacted to determine the appropriate course of action depending on the resource. For the reasons discussed herein and the reasons discussed in the EIR, compliance with MM CUL-1, along with Public Resources Code section 5097.98, California Health and Safety Code section 7050.5, and State CEQA Guidelines section 15064.5(e), would ensure that potential direct, indirect, and cumulatively considerable impacts relating to this issue would be reduced to a level of less than significant. (Draft EIR, pp. 3.5-26 through 3.5-29.)

B. Archaeological Resources

Threshold: Would the Project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Findings: Less-than-significant impact with mitigation incorporated. (Draft EIR, pp. 3.5-29 through 3.5-30.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: A Cultural Inventory Report and Extended Phase I and Phase II Reports were prepared for the Project, which explain that three archeological sites were previously identified within the Project site (CA-NAP-406, CA-NAP-843, and CA-NAP-1008), two of which (CA-NAP-843 and CA-NAP-1008) were determined not to be NRHP/CRHR eligible. The Cultural Inventory Report determined that impacts to CA-NAP-843 and CA-NAP-1008 would not represent a significant effect, although appropriate mitigation to account for unanticipated impacts would be required. Resource CA-NAP-406 has been determined to be eligible for CRHR (Criterion 4) and NRHP (Criterion D) listing. The Phase I and Phase II archaeological excavations and GPR investigation did not identify any intact deposits or features associated with CA-NAP-406 within the Project site. However, the Project could result in a potentially significant impact relating to this issue absent mitigation, due to the sensitivity of the site for unknown archeological resources that may be present subsurface that could be unearthed during construction activities. To ensure that any such potential impacts are mitigated to a level of less than significant, the following mitigation measure will be implemented:

> ***CUL-1:*** *The City shall require that an archaeological monitor is present during all ground-disturbing activities with the potential to impact previously identified cultural resources or to encounter unanticipated cultural deposits including tribal cultural resources. The determination for a Native American monitor to be present shall be made by the City, in consultation with the appropriate Native American tribe prior to the initiation of ground disturbing activities. In addition, prior to the initiation of ground-disturbing work, construction crews shall be made aware of the potential to encounter cultural resources and the requirement for cultural monitors to be present during these activities. Areas observed to have*

potential to contain yet-identified subsurface cultural material or deposits are located throughout the Project site, but primarily would be in the western portion of the site where the existing vineyard is located. It is anticipated resources would not be present in depths of more than 10 feet below the surface. Archaeological and Native American monitoring may be adjusted at the recommendation of the qualified archaeological principal investigator, meeting the Secretary of the Interior Professional Qualifications for Archaeology, and in consultation with the City, based on inspection of exposed subsurface soils and their observed potential to contain intact cultural deposits or material.

The archaeological and tribal monitors shall be provided a copy of technical reports prepared for the Project and pertinent appendices to inform their monitoring efforts. The archaeological and tribal monitors shall have the authority to temporarily halt work to inspect areas as needed for potential cultural material or deposits. In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities, all construction work occurring within 100 feet of the find shall immediately stop until the qualified archaeological principal investigator, that meets the Secretary of the Interior Professional Qualifications for Archaeology, can evaluate the significance of the find and determine whether or not additional study is warranted, in consultation with the Tribe. Should it be determined by the Tribe and the archeologist, temporary flagging may be installed around this resource in order to avoid any disturbances from construction equipment. As approved by the City, in consultation with the Tribe this buffer may be adjusted by the Tribe and the archaeological principal investigator to a distance that maintains a protective perimeter around the unanticipated resource, while still allowing for construction to continue in the surrounding area.

Compliance with Mitigation Measure CUL-1 would ensure that proper procedures and protocol are in place in the event a resource is identified. The procedures require work to stop in the event a resource is discovered and require an archaeologist and/or Native American representative to be contacted to determine the appropriate course of action depending on the resource. For the reasons discussed herein and the reasons discussed in the EIR, compliance with MM CUL-1, along with Public Resources Code section 5097.98, California Health and Safety Code section 7050.5, and State CEQA Guidelines section 15064.5(e), would ensure that potential direct, indirect, and cumulatively considerable impacts relating to this issue would be reduced to a level of less than significant. (Draft EIR, pp. 3.5-29 through 3.5-30.)

C. Human Remains

Threshold: Would the Project disturb any human remains, including those interred outside of formal cemeteries?

Findings: Less-than-significant impact with mitigation incorporated. (Draft EIR, pp. 3.5-30 through 3.5-31.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: A substantial level of archaeological investigation work was conducted to analyze the potential impacts of the Project, including a Cultural Inventory Report, Extended Phase I and Phase II Reports, and a GPR investigation that looked for any subsurface anomalies to a depth of approximately 26 feet below the surface. No human remains have been documented or have been found during the archaeological investigation work conducted for the Project. Nevertheless, due to the high archeological sensitivity of the area around the Project site, it is possible to inadvertently uncover human remains during ground-disturbing Project activities, such as grading and excavation. To ensure that any such potential impacts are mitigated to a level of less than significant, the following mitigation measure will be implemented:

> ***CUL-2:*** *In the event any human remains are unearthed during site disturbing activities, Section 7050.5(b) of the California Health and Safety Code and Section 15064.5(e) of the CEQA Guidelines specifies protocols to follow in the event human remains are discovered. The Code mandates stopping work within 100 feet of the find and contacting the County Coroner to determine the origin of the remains. If the remains are determined to be Native American the Coroner shall contact the Native American Heritage Commission within 24 hours to request that the Commission determine the person or persons it believes to be the most likely descendent from the deceased Native American. The most likely descendent shall be provided with the opportunity to make recommendations regarding the means of treating or disposing of the remains with appropriate dignity. Project-related ground disturbance in the vicinity of the find shall not resume until all statutory requirements have been met and evidence of completion has been submitted to the City, in consultation with the Tribe.*

Implementation of MM CUL-2 provides specific procedures to follow in the event human remains are identified. The procedures require work to stop and the County Coroner contacted to determine the origins of the remains. For these reasons and the reason set forth in the EIR, compliance with MM CUL-2 and with section 7050.5 of the California Health and Safety Code would ensure that the Project's potentially direct, indirect, and cumulative impacts relating to this issue would be reduced to a level of less than significant.

D. GEOLOGY AND SOILS

1. Seismic-Related Ground Failure and Liquefaction

Threshold: Would the Project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving seismic-related ground failure, including liquefaction?

Findings: Less-than-significant impact with mitigation incorporated. (Draft EIR, pp. 3.6-21 through 3.6-23.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: Seismic ground shaking is an unavoidable hazard for nearly all man-made facilities (buildings and structures) in the region. The geologic setting means proposed facilities are likely to experience ground shaking from at least one major earthquake (e.g., greater than moment magnitude 6.7) sometime during the operational life of a project. The Project site is also underlain by soils that if not properly engineered during construction site preparation, could be subject to secondary effects such as seismically induced liquefaction, differential settlement or compression. If future development of the site is not constructed in a manner that protects residents from geologic and seismic hazards, the Project could have a significant impact. The City General Plan includes policies to address geological impacts, as does the Municipal Code. Initial geotechnical work for the Project site has identified issues related to liquefaction and identified recommendations to avoid or reduce risks due to liquefaction. To ensure that any such potential impacts are mitigated to a level of less than significant, the following mitigation measure will be implemented:

> ***GEO-1:*** *Prior to the issuance of any site-specific grading or building permits, the Project applicant shall have a design-level geotechnical report prepared and submitted to the City of St. Helena Building Department for review and approval in accordance with adopted City standards. The structural designs shall adhere to the currently adopted version of the California Building Code. The report shall identify specific site preparation methods, grading practices, foundation designs, and other recommendations appropriate for minimizing damage from weak soils, expansive soils, differential settlement, and seismic hazards, including liquefaction. Specifically, the following requirements for the geotechnical and soils report shall be met:*
>
> - *Analysis presented in the geotechnical report shall conduct a detailed evaluation of liquefaction in accordance with California*

Department of Conservation Special Publication 117A: Guidelines for Evaluating and Mitigating Seismic Hazards in California.

- *Additional subsurface soil borings shall be completed as necessary to represent the full range of site conditions, including the southern portion of the parcel mapped as alluvial fan.*

- *Analysis presented in the geotechnical report shall include recommendations for building foundations and improvements, including sidewalks, parking lots, and subsurface utilities, that take into consideration the potential effects of settlement, collapse, and expansive or corrosive soils. This includes the recommendation to over excavate to an average depth of 4.5 feet (and up to 10 feet in the location of the former pond) due to anticipated settlement.*

- *All design criteria and specifications set forth in the design-level geotechnical report shall be implemented as a condition of project approval. This report shall be completed as a condition of approval of the final tentative map.*

Implementation of MM GEO-1 and compliance with the California Building Code would ensure that impacts to relating to seismic ground shaking and liquefaction would be reduced to a level of less than significant. With implementation of MM GEO-1, potential direct, indirect, and cumulatively considerable impacts relating to this issue would be reduced to a level of less than significant. (Draft EIR, p. 3.6-23.)

2. Expansive Soils

Threshold: Would implementation of the Project occur on weak, compressible, and/or expansive soils that could result in adverse impacts on habitable structures?

Findings: Less than significant impact with mitigation incorporated. (Draft EIR, pp. 3.6-24.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: The preliminary geotechnical report prepared for the Project indicated that engineered fill was placed on top of a 3-foot layer of soft, weak natural soil with high moisture content across the Project site, and above uncompacted fill in a former pond area. Over-excavation, moisture-conditioning, and recompaction of the recent fill and the underlying weak soils was recommended to avoid future settlement after development. It is anticipated that placement of engineered fill for use as structural building pads, roads, and within utility trenches (including) over excavation and recompaction would remove and/or otherwise address the preexisting

potential for expansive or corrosive soils. To ensure that any such potential impacts are mitigated to a level of less than significant, the following mitigation measure will be implemented: (Draft EIR, pp. 4.6-24.)

> ***GEO-1:*** *Prior to the issuance of any site-specific grading or building permits, the Project applicant shall have a design-level geotechnical report prepared and submitted to the City of St. Helena Building Department for review and approval in accordance with adopted City standards. The structural designs shall adhere to the currently adopted version of the California Building Code. The report shall identify specific site preparation methods, grading practices, foundation designs, and other recommendations appropriate for minimizing damage from weak soils, expansive soils, differential settlement, and seismic hazards, including liquefaction. Specifically, the following requirements for the geotechnical and soils report shall be met:*
>
> - *Analysis presented in the geotechnical report shall conduct a detailed evaluation of liquefaction in accordance with California Department of Conservation Special Publication 117A: Guidelines for Evaluating and Mitigating Seismic Hazards in California.*
>
> - *Additional subsurface soil borings shall be completed as necessary to represent the full range of site conditions, including the southern portion of the parcel mapped as alluvial fan.*
>
> - *Analysis presented in the geotechnical report shall include recommendations for building foundations and improvements, including sidewalks, parking lots, and subsurface utilities, that take into consideration the potential effects of settlement, collapse, and expansive or corrosive soils. This includes the recommendation to over excavate to an average depth of 4.5 feet (and up to 10 feet in the location of the former pond) due to anticipated settlement.*
>
> - *All design criteria and specifications set forth in the design-level geotechnical report shall be implemented as a condition of project approval. This report shall be completed as a condition of approval of the final tentative map.*

Implementation of MM GEO-1 would ensure that impacts to relating to weak, compressible, and/or expansive soils would be reduced to a level of less than significant. MM GEO-1 requires compliance with California Department of Conservation Special Publication

117A, which ensures that unstable soils would be addressed. With implementation of MM GEO-1, potential direct, indirect, and cumulatively considerable impacts relating to this issue would be reduced to a level of less than significant. (Draft EIR, p. 3.6-24.)

3. Paleontological Resources

Threshold: Would implementation of the Project directly or indirectly destroy a unique paleontological resource or site?

Findings: Less than significant impact with mitigation incorporated. (Draft EIR, pp. 3.6-24 through 3.6-25.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: there are no records of fossil finds within the City, and the Holocene alluvium mapped at the surface has a low potential for paleontological resources. However, there is a slight chance deeper excavations on-site for underground utilities, for example, could encounter Pleistocene age alluvium with the potential for fossils. To ensure that any such potential impacts are mitigated to a level of less than significant, the following mitigation measure will be implemented:

> ***GEO-2:*** *In the event that known or suspected paleontological resources (e.g., fossils) are unearthed during grading or trenching, the area of discovery shall be roped off by the construction contractor to include a 50-foot radius buffer and remain off-limits until cleared by a qualified paleontologist. The Project applicant shall retain a qualified paleontologist per the Society of Vertebrate Paleontology (SVP) (2010) guidelines, who shall be tasked with assessing the significance of the fossil find, including documenting the nature, location, and taxa of the find. The qualified paleontologist shall use his/her professional judgement as to the significance of the find, and whether the find should be preserved in a museum repository. Once documentation and collection of the find is completed, the monitor shall remove the rope and allow grading to recommence in the area of the find. Documentation of the fossil find, including appropriate salvage and recovery of fossil specimens and of transfer of to an appropriate repository (e.g., University of California Museum of Paleontology) shall be submitted to the City of St. Helena as evidence of compliance with this mitigation measure.*

MM GEO-2 identifies the appropriate steps if paleontological resources are uncovered during site disturbance. With implementation of MM GEO-2, potential direct, indirect, and cumulatively considerable impacts relating to this issue would be reduced to a level of less than significant. (Draft EIR, p. 3.6-25.)

E. HAZARDS AND HAZARDOUS MATERIALS

1. Upset and Accident Conditions

Threshold: Would the Project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Findings: Less than significant with mitigation incorporated. (Draft EIR, pp. 3.8-16 through 3.8-19.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: Due to the historic use of a portion of the site for agricultural uses, specifically an orchard in the late 1940s, there is a potential for contaminated soils to be encountered during construction activities. While the Phase I ESA concludes that it is unlikely that residual levels of pesticides would be present in significant concentrations, the absence of contaminants of concern such as OCPs and arsenic has not been confirmed through on-site soils testing. While potentially significant impacts are not likely, to ensure that any Project impact concerning hazardous materials are mitigated to a level of less than significant, the following mitigation measure has been identified:

> ***HAZ-1:*** *As a condition of approval for construction and grading permits for the Project site, the Project applicant shall ensure the following subsurface soils testing and follow-up analysis shall be performed prior to obtaining a grading permit:*
>
> - *A soils testing work plan shall be developed in accordance with DTSC's Interim Guidance for Sampling Agricultural Properties (DTSC 2008) by an appropriately licensed individual (i.e., professional geologist, engineer, or similar qualification) for the portions of the Project site historically used for agriculture. Special consideration shall be given to targeting site soils that are representative of historic agricultural use, and to avoid sampling recent fill material placed during levee construction. Prior to carrying out soils testing, the work plan shall be submitted to the Napa County Division of Environmental Health (as the Certified Unified Program Agency for all cities and areas of Napa County) and the City of St. Helena for review and approval.*
>
> - *The number of soil samples, sampling methods, compounds tested, background samples (if applicable), and laboratory analyses shall*

be completed in accordance with DTSC's Interim Guidance. Should analytical results exceed naturally occurring concentrations or applicable CHHSLs, the health risks of such a condition shall be evaluated in human health risk assessment as described in DTSC standards and guidance (e.g., preliminary endangerment assessment guidance manual).

- *The risk assessment shall describe measures that must be implemented to ensure potential health risks to construction workers, site residents, and the general public as a result of hazardous materials are reduced to a cumulative risk of less than one in one million for carcinogens and a cumulative hazard index of 1 for non-carcinogens, or as required by the Napa County Division of Environmental Health acting as the Certified Unified Program Agency and/or DTSC oversight.*

- *In the event human health risk assessment shows elevated chemical concentrations pose a risk to human health or the environment, the risks shall be eliminated or substantially reduced by removal (e.g., excavation of soils and off-site disposal) or remediation of contaminated soils, and/or implementation of institutional controls and engineering controls (IC/EC). IC/EC may include use of a construction risk management plan, use of hardscape to cap problem areas, importation of clean soil in landscaped area to eliminate exposure pathways, and/or deed restrictions. If IC/EC are implemented, an Operations and Maintenance Program shall be prepared and implemented to ensure that the measures adopted are maintained throughout the life of the project.*

- *The soil testing report, and if applicable, the human health risk assessment and Operations and Maintenance Program, shall be subject to review and approval by the City of St. Helena Department of Public Works, the Napa County Division of Environmental Health and/or other regulatory oversight agencies.*

Implementation of MM HAZ-1 would ensure that if soils located within the Project site contain pesticides that exceed CHHSLs for residential development and occupancy, such soils would be removed and/or remediated prior to any site disturbance or occupancy. With implementation of MM HAZ-1, a preliminary soil screening survey would ensure that soils on the Project site would comply with CHHHLs for residential development and occupancy ensuring the impact is mitigated to less than significant. With implementation of MM HAZ-2 and compliance

with all applicable federal, state, and regional regulations regarding hazardous materials, potential impacts related to upset and accident conditions involving the release of hazardous materials into the environment would be reduced to a level of less than significant. (Draft EIR, p. 3.8-18).

F. NOISE

1. Local Noise Level Standards

Threshold: Would the Project generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Findings: Less than significant with mitigation incorporated. (Draft EIR, pp. 3.11-14 through 3.11-20.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: The Project would not result in significant operational noise impacts in excess of applicable standards. The EIR includes analysis of stationary and mobile (transportation) noise impacts to nearby sensitive receptors. The analysis concluded that the Project's operational activities would not result in a substantial noise increase that would exceed applicable City noise standards noise.

Construction of the Project would generate noise that could expose nearby receptors (residences) to elevated noise levels. The City's Health and Safety Code (Chapter 8.24 of Title 8, the Health and Safety Code) requires noise generating construction activities (including demolition, excavation, and building construction), be restricted to the hours between 8:00 a.m. and 5:00 p.m., Monday through Saturday, and prohibited on Sunday and holidays (City of St. Helena Chapter 8.24). This ensures that sensitive receptors are not disturbed by early morning or late night activities. However, the City's 1993 General Plan includes Implementing Policy 8.3.11, which states "Require construction operations to use noise suppression devices and techniques and limit noisy construction activities to the least noise sensitive times (8 a.m. to 5 p.m., Monday through Friday)." Due to the proximity of residences to the Project site and the potential for construction noise to be an annoyance, the impact is considered potentially significant unless City policies and ordinances are implemented. To ensure that short-term construction noise does not have a significant impact upon residential receptors, the following mitigation measure has been identified:

> ***NOI-1:*** *The Project applicant or its contractors shall implement the following for onsite noise control and sound abatement means that, in aggregate, would yield sufficient construction noise reduction during the site preparation, grading/excavation and building construction phases of the Project to ensure compliance with the FTA-based guidance standard of 90 dBA hourly Leq at or beyond the property lines of the nearest residences, as noted.*

Administrative Controls – At all times during site preparation and construction:

- *Comply with Chapter 8.24 of the Municipal Code with respect to allowable construction periods,*
- *Minimize idling time of onsite equipment, and*
- *Either locate onsite stationary construction equipment (such as generators or air compressors) as far from adjacent residential property boundaries as is feasible, or place this equipment inside an approved noise-attenuating casing (e.g., sound-attenuated air intakes and heat vents, exhaust mufflers, etc.), or place this equipment indoors.*

Engineering Controls – All mobile and stationary construction equipment employing an internal combustion engine shall be equipped with suitable exhaust and intake silencers which are in good working order; and

Install Sound Abatement – During site preparation and construction which involves the operation of more than two pieces of heavy equipment (dozer, backhoe, front-end loader, crane, tractor, etc.) for at least one hour and when operating within 25 feet of the exterior of a residence (either offsite or onsite), do the following:

- *Erect a temporary barrier (i.e., plywood sheet) or install sound blankets (or comparable temporary solid barriers) on the Project's construction fencing, or*
- *Locate sound path intervening containers or trailers onsite to block direct line-of-sight between residences and the operating heavy equipment.*

Implementation of MM NOI-1 would substantially lessen construction noise upon adjacent residences by requiring administrative controls, engineering controls, and/or installation of sound abatement. Installation of an effectively placed storage container or a temporary plywood or blanket barrier on a portion of the site boundary that blocks line-of-sight between the source(s) of noise emission and the receptor of concern (e.g., residence) would be expected to provide a minimum of 3-5 dBA of noise reduction. By way of examples, doubling the distance of an operating generator from a receptor would be expected to yield a 6 dB reduction in noise. Proper engine mufflers installed on construction equipment helps ensure that source sound emission levels are further reduced. Implementation of MM NOI-1 would help minimize construction noise impacts to less than significant. (Draft EIR, p. 3.11-16.)

G. TRIBAL CULTURAL RESOURCES

1. Resources Eligible for Listing in Register of Historical Resources

Threshold: Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature,

place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?

Findings: Less than significant with mitigation incorporated. (Draft EIR, pp. 3.5-31 through 3.5-32.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: Based on a review of the Cultural Resources evaluation conducted for the Project site and letters provided by the Tribes in response to letters sent by the City pursuant to AB 52, there are no known tribal cultural resources (TCRs) present, as defined in PRC Section 21074, on the Project site or in its immediate vicinity. Due to the sensitivity of the site for unknown archeological resources that could be unearthed during construction activities, it was determined there would also be potential for unknown tribal cultural resources to be encountered during Project. Therefore, implementation of the following mitigation measure has been identified:

> ***CUL-1:*** *The City shall require that an archaeological monitor is present during all ground-disturbing activities with the potential to impact previously identified cultural resources or to encounter unanticipated cultural deposits including tribal cultural resources. The determination for a Native American monitor to be present shall be made by the City, in consultation with the appropriate Native American tribe prior to the initiation of ground disturbing activities. In addition, prior to the initiation of ground-disturbing work, construction crews shall be made aware of the potential to encounter cultural resources and the requirement for cultural monitors to be present during these activities. Areas observed to have potential to contain yet-identified subsurface cultural material or deposits are located throughout the Project site, but primarily would be in the western portion of the site where the existing vineyard is located. It is anticipated resources would not be present in depths of more than 10 feet below the surface. Archaeological and Native American monitoring may be adjusted at the recommendation of the qualified archaeological principal investigator, meeting the Secretary of the Interior Professional Qualifications for Archaeology, and in consultation with the City, based on inspection of exposed subsurface soils and their observed potential to contain intact cultural deposits or material.*
>
> *The archaeological and tribal monitors shall be provided a copy of technical reports prepared for the Project and pertinent appendices to*

inform their monitoring efforts. The archaeological and tribal monitors shall have the authority to temporarily halt work to inspect areas as needed for potential cultural material or deposits. In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities, all construction work occurring within 100 feet of the find shall immediately stop until the qualified archaeological principal investigator, that meets the Secretary of the Interior Professional Qualifications for Archaeology, can evaluate the significance of the find and determine whether or not additional study is warranted, in consultation with the Tribe. Should it be determined by the Tribe and the archeologist, temporary flagging may be installed around this resource in order to avoid any disturbances from construction equipment. As approved by the City, in consultation with the Tribe this buffer may be adjusted by the Tribe and the archaeological principal investigator to a distance that maintains a protective perimeter around the unanticipated resource, while still allowing for construction to continue in the surrounding area.

While no known TCRs have been identified that may be affected by the Project, implementation of MM CUL-1 would require construction work to stop and a Native American representative contacted (if not already conducting on-site monitoring) if any TCRs are unearthed and appropriate measures to be implemented to evaluate the significance of the find. Compliance with MM CUL-1 would ensure potential impacts would be less than significant. (Draft EIR, p. 3.5-32.)

2. Resources Determined by the Lead Agency

Threshold: Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1?

Findings: Less than significant with mitigation incorporated. (Draft EIR, pp. 3.5-31 through 3.5-32.) Changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, § 15091(a)(1).)

Explanation: Based on a review of the Cultural Resources evaluation conducted for the Project site and letters provided by the Tribes in response to letters sent by the City pursuant to AB 52, there are no known tribal cultural resources (TCRs) present, as defined in PRC Section 21074, on the Project site or in its immediate vicinity. Due to the sensitivity of the site for unknown

archeological resources that could be unearthed during construction activities, it was determined there would also be potential for unknown tribal cultural resources to be encountered during Project. Therefore, implementation of the following mitigation measure has been identified:

> ***CUL-1:*** *The City shall require that an archaeological monitor is present during all ground-disturbing activities with the potential to impact previously identified cultural resources or to encounter unanticipated cultural deposits including tribal cultural resources. The determination for a Native American monitor to be present shall be made by the City, in consultation with the appropriate Native American tribe prior to the initiation of ground disturbing activities. In addition, prior to the initiation of ground-disturbing work, construction crews shall be made aware of the potential to encounter cultural resources and the requirement for cultural monitors to be present during these activities. Areas observed to have potential to contain yet-identified subsurface cultural material or deposits are located throughout the Project site, but primarily would be in the western portion of the site where the existing vineyard is located. It is anticipated resources would not be present in depths of more than 10 feet below the surface. Archaeological and Native American monitoring may be adjusted at the recommendation of the qualified archaeological principal investigator, meeting the Secretary of the Interior Professional Qualifications for Archaeology, and in consultation with the City, based on inspection of exposed subsurface soils and their observed potential to contain intact cultural deposits or material.*
>
> *The archaeological and tribal monitors shall be provided a copy of technical reports prepared for the Project and pertinent appendices to inform their monitoring efforts. The archaeological and tribal monitors shall have the authority to temporarily halt work to inspect areas as needed for potential cultural material or deposits. In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities, all construction work occurring within 100 feet of the find shall immediately stop until the qualified archaeological principal investigator, that meets the Secretary of the Interior Professional Qualifications for Archaeology, can evaluate the significance of the find and determine whether or not additional study is warranted, in consultation with the Tribe. Should it be determined by the Tribe and the archeologist, temporary flagging may be installed around this resource in order to avoid any disturbances from construction equipment. As approved by the City, in consultation with the Tribe this buffer may be adjusted by the Tribe and the*

archaeological principal investigator to a distance that maintains a protective perimeter around the unanticipated resource, while still allowing for construction to continue in the surrounding area.

While no known TCRs have been identified that may be affected by the Project, implementation of MM CUL-1 would require construction work to stop and a Native American representative contacted (if not already conducting on-site monitoring) if any TCRs are unearthed and appropriate measures to be implemented to evaluate the significance of the find. Compliance with MM CUL-1 would ensure potential impacts would be less than significant. (Draft EIR, p. 3.5-32.)

SECTION 3. FINDINGS REGARDING ENVIRONMENTAL IMPACTS NOT FULLY MITIGATED TO A LEVEL OF LESS THAN SIGNIFICANT

The City Council hereby finds that, despite the incorporation of mitigation measures outlined in the EIR and in this Resolution, the following impacts from the proposed Project and related approvals cannot be fully mitigated to a less-than-significant level and a Statement of Overriding Considerations is therefore included herein:

A. TRANSPORTATION

1. Air Quality Management Plan Consistency

Threshold: Would the Project conflict or be inconsistent with CEQA Guidelines Section 15064.3(b)?

Findings: Significant and unavoidable impact. (Draft EIR, pp. 3.14-40 through 3.14-46.) Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR. (State CEQA Guidelines, § 15091(a)(3).) Impacts would remain significant and unavoidable. The Project's significant and unavoidable impact relates to vehicle miles traveled (VMT).

Explanation: The Project's significant and unavoidable impact relates to VMT. The City is using the threshold for residential land uses recommended by the Governor's Office of Planning Research (OPR) in the *Technical Advisory on Evaluating Transportation Impacts in CEQA* (2018). OPR recommends that a residential project that exceeds a level of 15% below existing VMT per capita would have a potentially significant transportation impact. Existing VMT may be defined as the average for the jurisdiction, or regionally. The City has selected the City of St. Helena as the appropriate basis of comparison. The City's average VMT per capita is 11.34, as estimate by the Solano Napa Activity-Based Model (SNABM). The Project VMT per capita, estimated by SNABM based on the Project location, is 11.37. Based on the applied threshold of significance, a Project VMT above 9.64 is considered significant.

Key factors for VMT are location and regional land use patterns. In other words, VMT correlates to how far residents must travel for work, shopping, and other services. Potential mitigation measures include neighborhood/site design to encourage walking and cycling, transportation demand management (TDM) strategies to reduce commute trips. As discussed in the Draft EIR, the Project includes pedestrian and bicycle network improvements. Generally, employment and retail opportunities are not close enough to the Project site to realize large reduction in automotive travel. It is estimated that the project design may reduce VMT by up to 2.0%. TDM strategies are generally geared towards employment uses, where employers can encourage and incentivize alternative means of commuting. As a residential development, the Project is limited in such measures. The EIR estimates such measures would realize a less than 0.5% reduction in VMT. The Project site is not currently served by the local transit operator. Per the City's 2019 General Plan, transit usage across the City is only 1%. Therefore, even if extension of transit to the Project site were to occur, VMT reduction would be negligible.

For these reasons and the reasons set forth in the EIR, the Project's effect on VMT is a significant and unavoidable impact on both a direct and cumulatively considerable basis. (Draft EIR, p. 3.14-46.)

SECTION 4. FINDINGS REGARDING CUMULATIVE ENVIRONMENTAL IMPACTS

Consistent with CEQA's requirements, the EIR for the Project includes an analysis of cumulative impacts. The City Council hereby finds as follows:

A. AESTHETICS

As discussed in the EIR, cumulative impacts to aesthetic resources would be less than significant. (Draft EIR, pp. 3.1-41 through 3.1-42.) the cumulative context for aesthetics includes the area that comprises the viewshed in which the Project site is visible. There were no cumulatively significant aesthetics impacts identified in the 1993 General Plan EIR or the 2019 General Plan EIR. It was determined that the City's design review process, in combination with General Plan policies would maintain the high-quality visual character of existing and future development, would limit impacts to agricultural lands, and would primarily contain growth within the Urban Limit Line, ensuring that cumulative aesthetic impacts would be less than significant. Thus, there is no existing cumulative impact related to visual character or scenic quality. At a localized level, there are no approved or reasonably foreseeable projects that would be visible from the Project site, with the exception of a single-family residence, accessory dwelling unit and barn under construction to the west of the Project site, which would not result in a cumulative impact.

The Project, along with existing and future development within the City, would contribute to the existing ambient light in the Project vicinity by introducing streetlights, landscape lighting, and interior and exterior buildings lights. The 1993 General Plan EIR found lighting to be a potentially significant impact, which would be reduced to less than significant through compliance with General Plan policies and the design review process. These requirements are incorporated

into MM AES-1, which would ensure that the Project's contribution to a cumulative lighting impact would be less than considerable.

B. AGRICULTURAL AND FORESTRY RESOURCES

As explained in the EIR, the Project will not have a cumulatively considerable impact. Based on the land use conversion table prepared by the California Department of Conservation, between 2014 and 2016, 35 acres of the 30,654 acres of County's Prime Farmland were converted to urban and built-up land. However, overall, Important Farmland in the County increased by 149 acres. The Project site contains less than 6 acres of Prime Farmland and less than 1 acre of Farmland of Statewide Importance that were determined to not be of high quality due to a number of factors detailed in the EIR. In addition, the Project site has long been designated for urban use. The St. Helena 1993 General Plan and also the current 2019 General Plan contains policies regarding the preservation of agricultural lands. For these reasons, the Project would contribute to a cumulative impact related to agricultural resources. No mitigation is required. (Draft EIR, pp. 3.2-13 through 3.2-14.)

C. AIR QUALITY

As explained in the EIR, emissions associated with the Project would not result in a cumulatively considerable contribution to cumulative air quality impacts because the Project's construction-related emissions would not exceed the SCAQMD significance thresholds for criteria pollutants. (Draft EIR, p. 4.2-25.)

The cumulative context of an air pollutant is dependent on the specific pollutant being. Ozone (O_3) precursors are a regional pollutant; therefore, the cumulative context would be existing and future development within the entire SFBAAB. This means that O_3 precursors generated in one location do not necessarily have O_3 impacts in that area. Instead, precursors from across the region can combine in the upper atmosphere and be transported by winds to various portions of the air basin. Consequently, all O_3 precursors generated throughout the air basin are part of the cumulative context.

The geographic scope for the cumulative analysis is Napa County and surrounding areas, which are located within the SFBAAB for O_3. The SFBAAB includes all of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, and Santa Clara counties, as well as the southern half of Sonoma County and the southwestern portion of Solano County. The BAAQMD establishes emissions thresholds for regional emissions.

Particulates (fugitive dust and DPM) and TACs would result in localized impacts in close proximity to pollutant sources. There are no other active cumulative projects in the immediate vicinity of the Project site that are anticipated to contribute to localized TAC exposure.

Therefore, the Project would not contribute to a cumulative air quality impact.

D. BIOLOGICAL RESOURCES

For the reasons discussed herein and in the EIR, the Project would not have significant cumulative impacts relating to biological resources with the incorporation of specified mitigation measures. (Draft EIR, p. 3.4-51.)

The geographic context for the analysis of cumulative biological impacts includes the areas contained within the Napa Valley and adjacent foothills (identified as the region), but primarily focused on the area within the city limits. Present and probable future projects within the region (which include, but not limited to, development in the city of St. Helena, Napa County, cities of Calistoga and Napa) are anticipated to permanently remove plant and wildlife resources, which could affect both common and special-status species and their habitat.

The 2019 General Plan Draft Environmental Impact Report (City of St. Helena 2018) notes that development in the City and elsewhere in the cumulative analysis area could cause significant cumulative impacts to nesting raptors and other special-status species; however, these cumulative impacts would be mitigated by compliance with General Plan policies. The Project site is located within an area that has been developed for residential and agricultural purposes and development of this site would not result in the reduction of available habitat, migration corridors, or other essential elements required by special-status species in the region. No special-status species have been documented at the Project site. While the Project would convert approximately 9 acres of potential foraging habitat for raptor species, the area has been disturbed in the past and provides only marginal habitat for burrowing mammal species that are the preferred prey for many resident raptor species. The existing disturbance at the site also greatly limits availability of insect prey for special-status bat species. Additionally, agriculture and natural lands in the vicinity of the city provide greater function and value as foraging habitat for these species. Due to the lack of biological value provided by the Project site, the Project's contribution to any effects on biological resources would be considered negligible. Implementation of MMs BIO-1 through BIO-7, would further reduce the Project's cumulative contribution to regional biological resources impacts. For these reasons, the Project's contribution to any existing cumulative impacts is not considerable.

E. CULTURAL RESOURCES

For the reasons discussed herein and in the EIR, the Project would not contribute to cumulative impacts relating to cultural resources with the incorporation of specified mitigation measures. (Draft EIR, pp. 3.5-32 through 3.5-33.)

The geographic scope of the cumulative impact analysis for the evaluation of potential cumulative impacts on cultural resources is the City of St. Helena.

The 1993 General Plan EIR concluded that the 1993 General Plan could result in substantial adverse changes in the significance of historical resources and would have a significant and unavoidable impact to prehistoric archaeological sites that may contain human remains with religious significance to local Native American groups (City of St. Helena 2010). The 1993 General Plan states that there are a number of historic resources in the City (dating from the mid-nineteenth to mid-twentieth century) vulnerable to incompatible alterations and demolition.

However, the Project site does not include any known historic resources from this time period. The 2019 General Plan EIR concluded that impacts on cultural resources, including historic, archeological and prehistoric associated with buildout of the city would not result in a significant impact. The EIR notes that compliance with 2019 General Plan Policy HR1.5 would minimize or avoid potential impacts on any resources known or not known at this time and that may be encountered in the future. In addition, there are numerous laws, regulations, and statutes, on both the federal and state levels, that seek to protect cultural resources. These would apply to development within and outside the city. However, because the Project site contains a high p for the discovery of unknown subsurface historical or prehistoric resources, the Project's contribution to the cumulative loss of cultural resources is considered potentially significant absent mitigation.

Implementation of MM CUL-1 provides specific procedures to follow in the event a resource is identified. Compliance with this measure, along with PRC Section 5097.98, Section 7050.5 of the California Health and Safety Code, and Section 15064.5(e) of the CEQA Guidelines, would ensure that Project's incremental contribution would be reduced to less than significant and no additional mitigation is required.

F. ENERGY RESOURCES

For the reasons discussed herein and in the EIR, the Project would not have significant cumulative energy impacts. (Draft EIR, pp. 3.15-20 through 3.15-21.)

Other development projects within the region would result in incremental increases in long-term energy consumption similar to the Project through the introduction of new population to the region. Each of these projects, however, would be required to comply with local and state regulations for reducing energy consumption and increasing energy efficiency during operation. Nonetheless, the overall increase in demand for energy resources is a potentially significant cumulative impact. Similar to the Project, cumulative projects would be subject to CALGreen or stricter local regulations which provides energy efficiency standards for commercial and residential buildings. CALGreen would implement increasingly stringent energy efficiency standards that would require the Project and the cumulative projects to minimize the wasteful and inefficient use of energy. In addition, cumulative projects would be required to meet or exceed the Title 24 building standards, further reducing the inefficient use of energy. Future development would also be required to meet even more stringent requirements, including the objectives set forth in the AB 32 Scoping Plan (CARB 2017), which would seek to make all newly constructed residential homes zero net energy consumers by 2020, and all new commercial buildings Zero-Net-Energy consumers by 2030. Furthermore, various federal and state regulations, including the Low Carbon Fuel Standard, Pavley Clean Car Standards, and Low Emission Vehicle Program, would serve to reduce the transportation fuel demand of cumulative projects. In summary, with adherence to the increasingly stringent building and vehicle efficiency standards the Project would reduce energy consumption and would not contribute to a cumulative impact to the wasteful or inefficient use of energy.

G. GEOLOGY AND SOILS

For the reasons discussed herein and in the EIR, the Project would not have significant cumulative impacts relating to geology and soils. (Draft EIR, p. 3.6-25.)

The geographic scope for the analysis of cumulative geologic and soils-related impacts consists of the Project site, as these impacts depend on the site-specific conditions and features on the Project site, such as soil composition and topography. These site-specific impacts would not combine to create cumulative impacts with other projects occurring elsewhere in the City. Therefore, the Project would not have the potential to contribute to an existing cumulative impact.

The geographic scope for the analysis of cumulative paleontological impacts consists of development slated to occur within the City or Napa County on Pleistocene age alluvium. Cumulative impacts on paleontological resources consider whether the impacts of the Project together with other related projects substantially diminish the number of paleontological resources within the same or similar context or property type.

As discussed in the EIR, the chance of encountering paleontological resources at the site is considered low because there are no records of fossil finds within the City, and the Holocene alluvium mapped at the surface has a low potential for paleontological resources. However, there is a slight chance deeper excavations on-site for underground utilities could encounter Pleistocene age alluvium with the potential for fossils. It is possible that construction of the Project in combination with other cumulative projects in undeveloped areas in the City and County underlain by Pleistocene age alluvium could disturb multiple unknown unique paleontological resources, although unlikely to occur. Due to the size of the Project site and the low likelihood of unearthing any fossils, the Project's contribution to a cumulative paleontological impact would not be considerable.

H. GREENHOUSE GAS EMISSIONS

GHG impacts are recognized as exclusively cumulative impacts; there are no non-cumulative GHG emission impacts from a climate change perspective. As discussed above, the Project-related GHG emissions would be less than significant. As such, the Project would not result in a potentially significant cumulative GHG impact. (Draft EIR, p. 3.7-37.)

I. HAZARDS AND HAZARDOUS MATERIALS

For the reasons discussed herein and in the EIR, the Project would not have significant cumulative impacts relating to hazards and hazardous materials. (Draft EIR, pp. 3.8-22 through 3.8-23.)

The cumulative context for the analysis of potential hazardous materials impacts (including hazardous materials usage during construction, exposure to potentially contaminated soils) is generally site-specific, rather than cumulative in nature. Compliance with all applicable federal, state, and local regulations related to hazards and hazardous materials on a project-by-project basis

would be required for all projects within the City. Therefore, these issues are not addressed in the cumulative impact analysis.

Hazardous materials incidents or accidents would also typically be site-specific and would involve accidental spills or inadvertent releases. The effects of such incidents, then, would not be additive to effects from other, similar incidents occurring elsewhere. Associated health and safety risks generally would be limited to those individuals using the materials or to persons in the immediate vicinity of the materials. Therefore, these issues are not addressed in the cumulative impact analysis.

The cumulative context for the use, handling, storage, and transport of hazardous materials is buildout of the City. This geographic scope is selected because (1) cumulative hazardous effects generally require proximity, and (2) City personnel are the first responders to hazardous accidents within the vicinity of the Project site.

The City's 1993 General Plan determined that the routine use and transport of hazardous materials would be a potentially significant impact. However, the City's 2019 General Plan Draft EIR (City of St. Helena 2018) was reviewed and it concluded that the routine use and transport of hazardous materials, hazardous materials use near schools, emergency response, and wildfire hazards were less than significant based on the implementation of existing and applicable laws and regulations.

Therefore, compliance with applicable hazardous materials management laws and regulations adopted at the federal, state, and local level would ensure the Project's contribution to cumulative impacts would be less than considerable.

J. HYDROLOGY AND WATER QUALITY

For the reasons discussed herein and in the EIR, the Project would not have significant cumulative impacts relating to hydrology and water quality. (Draft EIR, pp. 3.7-47 through 3.7-49.)

The cumulative context for the analysis of potential water quality impacts related to surface water is the Upper St. Helena Reach subwatershed. This is because stormwater discharges originating from this area could combine with those of the Project to result in an increase in non-point source pollution discharging into the Napa River upstream of Sulphur Creek. Such increases could result from a combination of construction activities, greater use intensity, increased coverage of impervious surfaces and/or increased use of routine household cleaners and landscape chemicals. New development and/or redevelopment projects in these locations have the potential to generate impacts related to the violation of water quality standards, Basin Plan water quality objectives, and/or TMDLs established for the Napa River.

For groundwater resources, the cumulative context is the Napa Valley Groundwater Subbasin (Subbasin) Development of past, present and reasonably foreseeable projects within this area that results in an increase in groundwater demand could result in impacts related to depletion

of the underlying aquifer, regional lowering of the groundwater table level, or depletions of interconnected surface waters.

Due to the residential nature of the Project and compliance with mandatory existing state and local requirements to ensure protection of water quality in the subwatershed and the Subbasin, the Project's contribution to this potentially significant cumulative impact is less than considerable.

As discussed in the EIR, the rates of groundwater pumping have not exceeded the sustainable yield of the Subbasin. The City has implemented actions to ensure the groundwater Subbasin continues to operate within its sustainable yield. The City's 2011 Water Neutral Policy for Development requires all new development to be water-neutral, through a combination of on-site water conservation measures, off-site retrofitting and use of well water, as allowed. Future development in the City is not expected to result in an increase in total water demand because new development is required to offset new demand with water conservation retrofits of existing facilities, or in-lieu payments to the City to carry out any retrofit projects. In addition, as discussed in the EIR, the on-site agricultural well is expected to yield 350 gpm (as reported by the Project applicant) and demonstrated an ability to pump at a rate of 40 gpm over a 24-hour period with negligible drawdown, which is far more capacity than the 10.6 gpm the Project would require for on-site irrigation. Based on the findings of the well capacity and sustainability test, this rate of pumping would have a highly localized radius of influence, if any, and would be greatly overshadowed by the radius of influence associated with the agricultural and municipal supply wells in the surrounding vicinity. Therefore, given Napa County's active management of the Subbasin under the Sustainable Groundwater Management Act, available information, and the City's implementation of a water neutral development policy, the Project's contribution to a cumulative impact with regard to groundwater is not considerable

As the Project does not have impacts with regard to flooding (since the potential impact is eliminated through use of the off-site detention basin), it would not contribute to any cumulative flooding impacts in the subwatershed.

For the reasons above and explained in the EIR, the Project would not have a considerable contribution to cumulative hydrology and water quality impacts.

K. LAND USE

The Project would not physically divide an established community, and it would not have any incremental impact towards physically dividing an established community; the Project would have no cumulative impacts in this regard. Moreover, the Project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. Again, the Project would have no cumulative impacts in this regard. For these reasons and the reasons discussed in the EIR, the Project would not have significant cumulative impacts relating to land use. (Draft EIR, pp. 3.18-19.)

L. MINERAL RESOURCES

The Project would not impact any mineral resources, as no mineral resources have been identified in or around the Project site, and none of the Project site's previous uses relate to mining activities or mineral processing. (Refer to Notice of Preparation issued March 6, 2018).) The Project would not have any significant cumulative impacts on mineral resources.

M. NOISE

For the reasons discussed herein and in the EIR, the Project would not have significant cumulative impacts relating to noise. (Draft EIR, pp. 3.11-20 through 3.11-21.)

Construction activities associated with proposed or future development within the area would contribute to cumulative noise levels, but in a geographically limited and temporary manner. As other development occurs in the area, noise from different types of uses (e.g., traffic, aircraft, fixed noise sources) would continue to combine, albeit on a localized basis, to cause increases in overall background noise conditions within the area. As a result, such sources do not significantly contribute to cumulative noise impacts at distant locations and are not evaluated on a cumulative level.

Non-transportation noise sources (e.g., those associated with Project operation, which for residential properties include HVAC equipment and landscape maintenance activities) and construction noise impacts are typically project-specific and highly localized (i.e., these do not generally affect the community noise level at distances beyond several hundred feet). These noise sources do not significantly contribute to cumulative noise impacts.

The cumulative context for traffic noise is the traffic volume increases resulting from the Project along with buildout of the 1993 General Plan, and the anticipated increase in traffic volumes along local roadways. The traffic analysis assumed a cumulative context of transportation impacts resulting from the Project along with buildout of the 2019 General Plan. The evaluation concluded that roadway traffic levels would not reach significant levels when compared against existing roadway traffic noise levels. Therefore, the Project's contribution to existing cumulative noise would not be considerable

N. POPULATION AND HOUSING

The Project would not induce substantial unplanned population growth in the area and would not contribute to a cumulative growth impact. While the Project does entail residential development and would result in population growth, the population growth is not unplanned. The Project site was designated for future residential development in the City's 1993 General Plan and 2019 General Plan, and the Project site is located within the City's Urban Limit Line with access to existing utilities. The Project would not demolish existing housing or displace residents and would not contribute to a cumulative impact. (Draft EIR, pp. 4-3 through 4.6.)

O. PUBLIC SERVICES AND RECREATION

Development of the Project would contribute to a cumulative increase in demand for public services and parks and recreational facilities. New fire and police personnel and facilities as well new schools and parks and recreation facilities may be required for 1993 General Plan buildout conditions. This could result in the need for new or physically altered governmental facilities in order to maintain acceptable service ratios, response times, or other performance objectives. However, future development within the City would be required to comply with policies set forth in the City's 1993 General Plan (and now the updated 2019 General Plan) and pay applicable development impact fees as specified in Chapter 3.32, Development Impact Fees, of the City's Municipal Code.

The City recently updated its General Plan in 2019, and the 2019 General Plan EIR notes that the SHFD and the SHPD does not anticipate the need to increase staffing levels or construct any new facilities in order to provide service for future population growth. The projected addition of residents and employees by 2040 (including development of the Project site) would likely increase the demand for emergency fire and police response and preventive services; however, the increase is modest and not expected to create a need for new or expanded fire or police protection facilities and impacts were determined to be less than significant. Therefore, the Project's contribution would not be considerable.

The 2019 General Plan notes that the projected addition of residents and employees by 2040 (including development of the Project site) would likely increase the need for more parks and recreation facilities; however, the impact was determined to be less than significant. As discussed above, the Project would comply with all applicable City goals and policies and pay applicable fees. The Project's incremental contribution to the cumulative increase in demand is considered less than considerable. (Draft EIR, pp. 3.12-17 through 3.12-18.)

P. TRANSPORTATION

As set forth in the EIR, the Project will have a significant and unavoidable cumulative VMT impact. (Draft EIR, pp. 3.14-51 through 3.14-52.)

The VMT analysis considers both existing conditions, and cumulative year 2040 conditions. The analysis concluded that the Project would result in both a direct (existing plus Project) and cumulative (year 2040 Buildout plus Project) impact. For the reasons discussed above, feasible mitigation measures are not available that would reduce this impact to less than considerable. This cumulative impact is significant and unavoidable.

Q. TRIBAL CULTURAL RESOURCES

For the reasons discussed herein and in the EIR, the Project would not contribute to cumulative impacts relating to tribal cultural resources with the incorporation of specified mitigation measures. (Draft EIR, pp. 3.5-33 through 3.5-34.)

The geographic scope of the cumulative impact analysis for the evaluation of potential cumulative impacts on tribal cultural resources is the City of St. Helena.

The 1993 General Plan EIR determined that there would be a significant and unavoidable impact to prehistoric archaeological sites that may contain human remains with religious significance to local Native American groups. However, the City of St. Helena General Plan Update EIR identified that development under the City's 2019 General Plan would result in less-than-significant impacts to TCRs. Policy HR1.5 in the 2019 General Plan would minimize or avoid potential impacts on any resources known or not known at this time that may be encountered in the future and would promote coordination with Native American tribes if any tribal resources are discovered at development sites. The impact on Native American tribal cultural resources was therefore determined to be less than significant.

Numerous laws, regulations, and statutes, on both the federal and state levels, seek to protect cultural resources. These would apply to development within and outside the city. In addition, General Plan policies are designed to safeguard cultural resources from unnecessary impacts. Because all significant tribal cultural resources are unique and non-renewable members of finite classes, all adverse effects or negative impacts erode a dwindling resource base. Although unlikely, there is the potential the Project could adversely affect significant tribal cultural resources that are unique and non-renewable members of finite classes if discovered contributing to a potentially considerable contribution. Therefore, the Project's incremental contribution to the cumulative loss of cultural resources is considered potentially significant.

Implementation of MM CUL-1 provides specific procedures to follow in the event a resource is identified. Compliance with this measure, along with PRC section 5097.98, section 7050.5 of the California Health and Safety Code, and section 15064.5(e) of the CEQA Guidelines, would ensure that Project's incremental contribution would be reduced to less than considerable additional mitigation is required.

R. UTILITIES

The Project would not contribute considerably to a cumulative utilities impact. (Draft EIR pp. 3.13-35 through 3.13-37.)

The cumulative context for utilizes is buildout of the General Plan. Both the 1993 General Plan EIR and the 2019 General Plan EIR determined that cumulative impacts associated with buildout of the City related to utilities would be less than significant.

In order to ensure that the City's future water demand is met by its supplies, the City established a water-neutral policy, which requires all new development to completely offset its water use. With the implementation of this water-neutral policy and other water conservation measures in the City, the City has determined that future water demand is not expected to exceed the 1,950 acre-feet annual use policy limit set by the Safe Yield Committee. As discussed in the EIR, the Project would comply with the City's water-neutral policy by completing offsetting its

water use from the City through the use of water conservation measures and the on-site well for landscape irrigation. Additionally, future development in the City would be required to pay for public improvements related to water projects.

As discussed in the EIR, the City's wastewater treatment plant ("WWTP") has capacity to accommodate Project wastewater flows for treatment. The City has concluded that WWTP should be expanded to accommodate projected 2030 flows. The Project, and other cumulative projects, pay development fees to fund this planned expansion. The Project would pay its fair share of the planned expansion and would contribute a minimal portion of projected flows.

As discussed in the Final EIR, the existing wastewater collection system has a peak wet weather flow capacity issue to the south of the Project site, which results in some overflow of the wastewater system during wet weather events, due to inflow and infiltration. The Project would contribute only 0.5% of peak wet weather flows to this impacted section of the collection system (Carollo Engineers, June 24, 2022). This amount would not considerably increase the existing cumulative inflow and infiltration issue. The system can accommodate the Project during average dry weather flows. The City's Wastewater Master Plan has identified a capital project to address this existing issue, known as WWGM-6. The Project, through required development fees would contribute its fair share to fund capital improvement projects.

The Project includes a stormwater detention basin that has been sized to accommodate runoff resulting from development of the Project site. As described in the EIR, the Project's contribution of stormwater would not contribute to a cumulatively considerable impact on stormwater and drainage facilities within the City.

The Project would not contribute to a cumulative impact for solid waste disposal. The Clover Flat Landfill has enough capacity to remain open until 2047. As described in the EIR, the Project would generate approximately 0.55 tons per day during the 6-year construction period, which is less than 0.1% of the landfill's average unused daily capacity, and 0.225 tons per day of solid waste during operation, which is 0.04% of the average unused daily capacity of the Clover Flat Landfill.

For the reasons discussed herein and in the EIR, the Project would not have significant cumulative impacts relating to utilities.

S. WILDFIRE

The Project is not located in or near a state responsibility area or on land classified as a very high fire hazard severity zone. For these reasons and the reasons discussed in the EIR, the Project would not have a significant cumulative impact relating to wildfires. (Draft EIR, p. ES-3.)

SECTION 5. FINDINGS REGARDING SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

Section 15126.2 (d) of the CEQA Guidelines requires a discussion of any significant irreversible environmental change that would be caused by a project. Generally, a project would result in significant irreversible changes if:

- The primary and secondary impacts would generally commit future generations to similar uses (such as highway improvement that provides access to a previously inaccessible area);
- The project would involve a large commitment of nonrenewable resources (CEQA Guidelines Section 15126.2(d));
- The primary and secondary impacts would generally commit future generations to similar uses;
- The project would involve uses in which irreversible damage could result from any potential environmental accidents associated with the project;
- The project would involve a large commitment of nonrenewable resources; or
- The proposed consumption of resources is not justified (e.g., the project involves the wasteful use of energy).

Implementation of the Project would result in the long-term commitment of resources of the Project site to urban land use. These irreversible impacts, which are unavoidable consequences of urban growth, are described in the EIR. (Draft EIR, pp. 4-2 through 4-3.) Future development of the Project site would likely result in or contribute to the following irreversible environmental changes:

- Conversion of undeveloped land currently partially used as a vineyard. Approximately 16.9 acres of undeveloped land would be converted to urban uses, thus precluding other alternate land uses in the future.
- Irreversible consumption of energy and natural resources associated with the future use of the site.

Development of the Project would result in the commitment of the Project site to urban development, thereby precluding other uses for the lifespan of the Project. Restoration of the site to pre-developed conditions would not be feasible given the degree of disturbance, the urbanization of the area, and the level of capital investment.

Resources that would be permanently and continually consumed by Project implementation include water, electricity, natural gas, and fossil fuels. Wood products, asphalt, and concrete would be used in construction along with gas and diesel fuel. With respect to

operational activities, compliance with all applicable state and local building codes, as well as mitigation measures, planning policies, and standard conservation features, would ensure that resources are conserved to the maximum extent possible. The Project would incorporate a number of sustainable practices that reduce the consumption of energy and water. Nonetheless, construction activities related to the Project would result in the irretrievable commitment of nonrenewable energy resources, primarily in the form of fossil fuels, natural gas, and gasoline and diesel for automobiles and construction equipment.

The CEQA Guidelines also require a discussion of the potential for irreversible environmental damage caused by environmental accidents associated with the Project. While the Project would result in the use, transport, storage, and disposal of minor amounts of hazardous materials during Project construction and operation, as described in the EIR, all such activities would comply with applicable local, state and federal laws related to the use, storage and transport of hazardous materials, which significantly reduces the likelihood and severity of accidents that could result in irreversible environmental damage. The Project itself does not include any uniquely hazardous uses that would require any special handling or storage. Further, the Project does not contain any industrial uses that would use or store acutely hazardous materials.

Implementation of the Project would result in the long-term commitment of resources to urban development. The most notable significant irreversible impacts include the use of non-renewable and/or slowly renewable natural and energy resources, such as lumber and other forest products and water resources during construction activities. Operations associated with future uses would also consume natural gas and electricity.

SECTION 6. FINDINGS REGARDING GROWTH-INDUCING IMPACTS

As required by section 15126.2(e) of the CEQA Guidelines, an EIR must discuss ways in which a project could foster economic or population growth or the construction of additional housing, either directly or indirectly, in the surrounding environment. Also, the EIR must discuss the characteristics of the project that could encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. Growth can be induced in a number of ways, such as through the elimination of obstacles to growth, the stimulation of economic activity within the region, or the establishment of policies or other precedents that directly or indirectly encourage additional growth. Under CEQA, this growth is not to be considered necessarily detrimental, beneficial, or of significant consequence. Induced growth would be considered a significant impact if it can be demonstrated that the potential growth, directly or indirectly, significantly affects the environment.

In general, a project could foster spatial, economic, or population growth in a geographic area if the project removes an impediment to growth (e.g., the establishment of an essential public service, the provision of new access to an area, or a change in zoning or General Plan amendment approval), or economic expansion or growth occurs in an area in response to the project (e.g.,

changes in revenue base, employment expansion). These circumstances are further described below.

Elimination of Obstacles to Growth: This refers to the extent to which a proposed project removes infrastructure limitations or provides infrastructure capacity (e.g., constructing new roads or extending public utilities), or removes regulatory constraints that could result in growth unforeseen at the time of project approval.

Economic Effects: This refers to the extent to which a proposed project could cause increased activity in the local or regional economy. Economic effects can include such effects as the "multiplier effect." A "multiplier" is an economic term used to describe interrelationships among various sectors of the economy. The multiplier effect provides a quantitative description of the direct employment effect of a project, as well as indirect and induced employment growth. The multiplier effect acknowledges that the on-site employment and population growth of each project is not the complete picture of growth caused by the project.

Elimination of Obstacles to Growth

The elimination of either physical or regulatory obstacles to growth is considered to be a growth-inducing effect, though not necessarily a significant one. A physical obstacle to growth typically involves the lack of public service infrastructure. The extension of public service infrastructure, including roadways, water mains, and sewer lines into areas that are not currently provided with these services would be expected to support new development. Similarly, the elimination or change to a regulatory obstacle, including existing growth and development policies, could result in new growth. Because the Project site is located within the City's Urban Limit Line and existing services are stubbed to the site, elimination of obstacles to growth is not a factor for this Project.

Removal of Infrastructure Limitations or Provision of Capacity

The elimination of physical obstacles to growth is considered a growth-inducing effect, although not necessarily a significant one. The physical constraints to growth in the vicinity of the Project site include existing residential development to the south, southwest, west and southeast, which would preclude development immediately to the south, southwest, and southeast of the site, and existing office uses to the west, which would preclude inducing growth to the west of the site. Utility infrastructure is also stubbed to the site so no off-site connections would be required. The connection to existing City infrastructure to serve the Project site would not induce growth in this area. Due to the location of the Project site within the City's Urban Limit Line and access to utilities, the Project would not eliminate any constraints that are currently obstacles to growth in this portion of the City that would hasten development of this area.

The City's Residential Growth Management System is no longer enforceable due to the passage of SB 330 (see Gov't Code sec. 66300) otherwise known as the Housing Crisis Act of 2019. This act prevents cities from establishing or implementing any provision that imposes a limit

on the number of housing units that can be approved or constructed annually or for some other period. Therefore, the City can no longer limit residential growth to approximately two percent per year (no more than nine building permits for market rate housing could be issued each year), while providing for both market rate and affordable housing units (Municipal Code Chapter 17.152).

Economic Effects

Implementation of the Project would affect the local economy through the construction of new residences that would require construction workers during the short-term and would encourage people to either relocate or move to the City to take advantage of proximity to local shops, restaurants, and other amenities in nearby downtown.

Additional local employment can be generated through the multiplier effect. The multiplier effect tends to be greater in regions with larger, diverse economies due to a decrease in the requirement to import goods and services from outside the region.

Two different types of additional employment are tracked through the multiplier effect. *Indirect* employment includes those additional jobs that are generated through the expenditure patterns of direct employment associated with the Project. Indirect jobs tend to be in relatively close proximity to the places of employment and residence.

The multiplier effect also calculates *induced* employment. Induced employment follows the economic effect beyond the expenditures of the residents within a project area to include jobs created by the stream of goods and services necessary to support residences within the Project site. When a manufacturer buys or sells products, the employment associated with those inputs or outputs are considered *induced* employment.

For example, when an employee of the Project goes out to lunch, the person who serves the employee lunch holds a job that is *indirectly* related to the Project. When the server then goes out and spends money in the economy, the jobs generated by this third-tier effect are considered *induced* employment.

The multiplier effect also considers the secondary effect of employee expenditures. Thus, it includes the economic effect of the dollars spent by those employees and residents who support the employees of the Project.

Increased future employment generated by employee spending ultimately results in physical development of space to accommodate those employees. It is the characteristics of this physical space and its specific location that will determine the type and magnitude of environmental impacts of this additional economic activity. Although the economic effect can be predicted, the actual environmental implications of this type of economic growth are too speculative to predict or evaluate, since they can be spread throughout the City, Napa County, and beyond.

Impacts of Induced Growth

The growth induced directly and indirectly by the Project could contribute to the environmental impacts, in the City and the County, as well as the greater regional area. Any such environmental effects, however, are too diffuse and speculative to predict or describe with any particularity.

Indirect and induced population growth in the City would further contribute to the loss of open space because it would encourage the conversion of undeveloped land to urban uses for additional housing and infrastructure. However, it is assumed this new growth would occur within areas of the City designated and zoned for development or planned for potential future urban development. The City has designated areas for future development in order to protect areas of active agriculture, also within the incorporated City but outside of the Urban Limit Line. Again, however, the particular open space that might get converted cannot be predicted with any certainty, all such conversions to urban land use would occur within areas planned for growth designated in the City's General Plan. Development of the property to the north of the Project site is outside of the City's Urban Limit Line and would require a general plan amendment and compliance with CEQA to evaluate potential impacts.

In summary, although the Project can be said to induce growth, the consequences of such growth-inducement are too speculative to meaningfully predict and, furthermore, due to the designation of the Project site for future residential development in the City's 1993 General Plan and 2019 General Plan[1], implementation of the Project would not be considered growth inducing. (Draft EIR, pp. 4-3 through 4-6.)

SECTION 7. FINDINGS REGARDING ALTERNATIVES

The EIR analyzed three alternatives to the Project as proposed and evaluated these alternatives for their ability to avoid or reduce the Project's significant environmental effects while also meeting the majority of the Project's objectives.

A. PROJECT OBJECTIVES

The following objectives have been established for the proposed Project:

- Subdivide the site consistent with the City's General Plan and Zoning for the site to accommodate residential development.
- Provide opportunities to develop a variety of housing types, including multi-family, single-family, and accessory dwelling units, affordable to a range of incomes including, very low, low and moderate-income households.

[1] Also known as the "St Helena General Plan Update 2040," the 2019 is referred to in this EIR by the year of its adoption.

- Provide opportunities to contribute to the provision of workforce and affordable housing consistent with the City's adopted Housing Element and the Regional Housing Needs Assessment (RHNA) approved by the Association of Bay Area Governments (ABAG).
- Minimize traffic-related environmental impacts, such as noise, air quality and greenhouse gases by lowering commute patterns for St. Helena workers by providing more local housing opportunities.
- Support alternative transportation by providing a pedestrian and bicycle linkages through St. Helena, eventually connecting the regional Vine Trail from Calistoga to the Vallejo Ferry.
- Exceed the City's green building ordinance (Municipal Code Chapter 15.53) and incorporate sustainable design features including water conservation measures, drought resistant landscaping with low flow watering systems, south and west side tree placement to reduce reliance on air conditioning units, and pre-wiring for photovoltaic systems.
- Implement the General Plan Circulation Element by completing the planned extension of Starr Avenue and the partial planned extension of Adams Street from where Adams Street terminates to connect to the Project site.
- Minimize City water use by continuing the use of an existing on-site water well for irrigation of Project landscaped areas.

B. ALTERNATIVES CONSIDERED AND REJECTED DURING THE SCOPING/PROJECT PLANNING PROCESS

One of the requirements for an alternatives analysis that is set forth in the CEQA Guidelines is identification of alternatives that were considered by the lead agency but rejected as infeasible during the scoping process. As stated in section 15126.6(c) of the CEQA Guidelines, the EIR should briefly explain the reasons underlying this determination. Among the factors that may be used to eliminate alternatives from detailed consideration in the EIR are:

1. Failure to meet most of the basic project objectives,
2. Infeasibility, or
3. Inability to avoid significant environmental impacts (CEQA Guidelines section 15126.6(c))

Section 15126.6(f)(1) of the CEQA Guidelines states that, "among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries, and whether the applicant can reasonably acquire, control or

otherwise have access to the alternative site (or the site is already owned by the proponent)." However, as stated in this subsection, no single factor establishes a fixed limit on the scope of reasonable alternatives.

An alternate site or off-site alternative was determined to be infeasible for the Project because the Project applicant owns the Project site and it would not be feasible to acquire, control or otherwise have access to a new property within the City large enough to accommodate the Project. Therefore, an off-site or alternate Project location was dismissed from further evaluation.

A reduced density alternative was considered but dismissed because it does not avoid or reduce any potentially significant impacts and would not avoid any health and safety concerns required for the City to make findings under section 15041 of the CEQA Guidelines and Government Code section 65589.5(j). In addition, a reduced density alternative is discouraged by Public Resources Code section 21159.26, if other feasible alternatives exist.

Lastly, a mixed-use alternative that includes commercial uses in addition to residential was also considered and dismissed because it would not be consistent with the underlying land use designation and zoning and would require a General Plan Amendment and rezone. An alternatives analysis is not required to consider alternatives that would require changes to the applicable General Plan. Therefore, this alternative was considered but ultimately dismissed from further review. (Draft EIR, pp. 5-3 through 5-4.)

C. ALTERNATIVES SELECTED FOR ANALYSIS IN THE EIR

1. No Project/No Development Alternative

Description: Alternative 1: No Project/No Development Alternative ("No Project Alternative") The No Project/No Development Alternative considers the effects of forgoing the Project entirely and leaving the Project site in its current undeveloped condition. Under the No Project/No Development Alternative, the Project would not be approved or constructed. This alternative serves to compare the environmental effects of the Project with an alternative that would leave the property in its existing state. (Draft EIR, p. 5-6.)

Impacts: The No Project/No Development Alternative would produce no changes on the Project site, because the site would remain in its current undeveloped condition, effectively eliminating the Project impacts discussed in the EIR. (Draft EIR, pp. 5-6 through 5-7.)

Objectives and Feasibility: The No Project Alternative would not achieve any of the Project's objectives. (Draft EIR, p. 5-6.)

Finding: The City Council rejects the No Project/No Development Alternative on the following grounds: (1) this alternative fails to meet any of the Project objectives; and (2) potentially conflicts with the Housing Accountability Act (Gov't Code section 65589.5) which was enacted to increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local

governments to deny, reduce the density for, or render infeasible housing development projects that are consistent with objective local development standards and contribute to meeting housing need. Therefore, the No Project/No Development Alternative is eliminated from further consideration.

2. No Project/General Plan Alternative

Description: Under this alternative, it is assumed the Project would be developed consistent with the underlying MDR land use designation and MR zoning which allows development of the Project site with residential uses up to a maximum density of 12 dwelling units/acre (du/ac) under the 1993 General Plan MDR designation which was revised to 16 du/ac under the 2019 General Plan consistent with the MR zoning, which permits a maximum density of 16 du/ac. For the purposes of this alternative a density of 9 du/ac was assumed for a total of 152 single-family residential units. Based on the number of units this alternative would result in a population of 372 residents, an increase of 159 residents as compared to the Project. It is assumed Starr Avenue and Adams Street would both be extended to connect to the Project site and the street and lot layout would be very similar to the Project with the exception of the 3.4-acre portion of the site currently designated for multifamily units (Lot 52). This portion of the Project site would be configured to accommodate single-family residences. (Draft EIR, p. 5-7.)

Impacts: Due to the denser development and increased number of residential units, it is anticipated that impacts associated with air quality, greenhouse gases, energy, public utilities, population and housing, and noise would be increased. It is anticipated the same mitigation measures for impacts to nesting birds and bats (biological) and the potential to unearth any previously unknown historic, archeological, or paleontological resource (cultural, geology and soils), potential soil contamination from agricultural chemical residues (hazards), and noise from construction equipment would be still be required. No potentially significant impacts associated with the Project would be avoided or reduced. (Draft EIR, pp. 5-7 through 5-11.)

Objectives and Feasibility: The No Project/General Plan Alternative would develop the site consistent with the underlying land use designation and zoning assuming ag a density of 9 du/ac and would complete the planned extensions of Adams Street and Starr Avenue. However, this alternative would not achieve the Project objective of developing a variety of housing types, including multifamily housing and ADUs. Housing would be less affordable to a range of incomes since development would be limited to single-family homes. This alternative would not minimize traffic-related environmental impacts due to the increase in units and residents. Overall, this alternative would not meet most of the Project objectives. (Draft EIR, p. 5-11.)

Finding: The City Council rejects the No Project/General Plan Alternative on the following grounds, each of which individually provides sufficient justification for rejection of this alternative: (1) this alternative does not avoid the Project's significant and unavoidable impacts on the environment; and (2) this alternative meets the Project objectives to a lesser extent than the

Project. Therefore, the No Project/General Plan Alternative is eliminated from further consideration.

3. Park/Open Space Preserve Alternative

Description: The Park Preserve/Open Space Alternative includes an approximately 1-acre park/open space that would preserve a majority of the on-site wetlands to help lessen impacts to seasonal wetlands (Impact 3.4-2), as shown on Figure 5-1, Park Preserve Alternative. To accommodate the park three lots would need to be removed (Lots 44, 45, 46) and vegetated swales to capture runoff would be located adjacent to developed areas. It is anticipated the park would be landscaped with native plants and may include a small tot lot or be left as passive open space. The remaining approximately 16-acres would be developed with approximately the same number of residential units as the Project and would maintain a density of 5.1 du/ac. The single-family lots would be slightly smaller than the Project and there could be an increase in the number of multifamily units. Site access and internal roads would essentially be the same as the Project. The same number of residents, 213, is conservatively assumed under this alternative, the same as the Project. (Draft EIR, p. 5-11.)

Impacts: With implementation of this alternative, the impact to seasonal wetlands would be less severe than the Project. The Park Preserve/Open Space Alternative includes an approximately 1-acre park that would preserve two of the larger wetland features to help reduce the impacts to jurisdictional waters. The area of impacted wetlands would be reduced to .006 acres rather than 0.07 acres from the Project. All other impacts are anticipated to be similar to the Project. No significant and unavoidable impacts would be avoided. (Draft EIR, pp. 5-12 through 5-13.)

Objectives and Feasibility: The Park Preserve/Open Space Alternative would still manage to achieve all stated Project objectives. The main changes from this alternative would be a small decrease in the residential footprint and the avoidance of seasonal wetlands at the Project site. This alternative would still subdivide the site consistent with the underlying land use designation and zoning, complete the planned extensions of Adams Street and Starr Avenue, provide a variety of housing types, including affordable housing, and provide more local housing opportunities. (Draft EIR, pp. 5-13 through 5-14.)

Finding: The City Council rejects the Park Preserve/Open Space Alternative on the following grounds, each of which individually provides sufficient justification for rejection of this alternative: (1) this alternative does not avoid the Project's significant and unavoidable impacts on the environment; (2) maintenance of isolated wetlands/open space represents an ongoing financial burden on the City; and (3) isolated wetlands offer little habitat value, whereas off-site mitigation may result in higher value habitat with greater connectivity being preserved. Therefore, the Park Preserve/Open Space Alternative is eliminated from further consideration.

4. Increased Density/Affordable Housing Alternative

Description The Increased Density/Affordable Housing Alternative includes the approximately 1-acre park to preserve a majority of the on-site seasonal wetlands with the remaining approximately 16-acres designated for up to 180 affordable housing units, assuming a density of 11.3 dwelling units per acre (du/ac) under the existing Medium Density Residential (MDR) land use designation (current zoning allows for a maximum density of 16.0 du/ac). The units would be attached housing (duplex or triplex) and would be 100% affordable. It is assumed buildings would be no taller than 30-feet, consistent with the underlying MR zoning. Under the technical guidance issued by OPR, a 100% affordable housing project is exempt from the requirement to calculate VMT. Site access and internal roads would essentially be the same as the Project. Using the City's persons per household factor of 2.45 people per unit for medium/higher density residential land uses this alternative would generate 441 residents, an increase of 194 residents as compared to the Project. (Draft EIR, p. 5-14.)

Impacts: Due to the increase in residents, it is anticipated the increase in air pollutants and GHG emissions associated with operation would be slightly higher than the Project due to the increase in vehicle trips, as well as the demand for water supply, wastewater conveyance and treatment, schools, solid waste disposal, and energy. Construction and footprint-related impacts associated with biological, cultural, and geological resources, hazardous materials, and noise would essentially be the same as the Project, as these impacts would be less-than-significant with mitigation. It is anticipated the same mitigation measures for impacts to bats, and nesting birds (biological) and the potential to unearth any previously unknown historic, archeological, or paleontological resource (cultural, geology and soils), and potential soil contamination from agricultural chemical residues (hazards) would be still be required. This alternative would minimize impacts to on-site seasonal wetlands with inclusion of the 1-acre park, similar to the Park Preserve/Open Space Alternative. As a 100% affordable housing project, this Alternative would avoid the significant and unavoidable impact related to VMT. (Draft EIR, pp. 5-14 through 5-17.)

Objectives and Feasibility: The Increased Density/Affordable Housing Alternative would subdivide the site consistent with the underlying land use designation and zoning, would complete the planned extensions of Adams Street and Starr Avenue, and would contribute to the provision of workforce and affordable housing objective. However, this alternative would not achieve the Project objective of developing a variety of housing types, including single-family and ADUs. The housing would be affordable to a range of incomes including, very low, low and moderate-income households, but would not include any single-family or market rate homes. This alternative generally meets a majority of the Project objectives but not all of the objectives. (Draft EIR, p. 5-20.)

Finding: The City Council rejects the Increased Density/Affordable Housing Alternative on the following grounds, each of which individually provides sufficient justification for rejection of this alternative: (1) maintenance of isolated wetlands/open space represents an ongoing financial burden on the City; (2) isolated wetlands offer little habitat value, whereas off-site mitigation may result in higher value habitat with greater connectivity being preserved; and (3) the Alternative

does not meet the Project objectives to provide a variety of housing types, including single family, and accessory dwelling units. Therefore, the Park Preserve/Open Space Alternative is eliminated from further consideration.

D. ENVIRONMENTALLY SUPERIOR ALTERNATIVE

The No Project/No Development alternative is the environmentally superior alternative. It would avoid all Project-related environmental impacts. CEQA Guidelines section 15126.6(e)(3)(A) requires that when the No Project alternative is environmentally superior, another alternative be selected as the environmentally superior alternative. The environmentally superior alternative would be the Park Preserve alternative. This alternative would reduce Impact 3.4-2 by developing a passive park surrounding three out of four of the site's jurisdictional wetlands. However, this alternative would not avoid all of the significant impacts associated with the Project and all of the identified mitigation would still be required.

SECTION 8. DRAFT STATEMENT OF OVERRIDING CONSIDERATIONS

The City Council hereby declares that, pursuant to the State CEQA Guidelines section 15093, the City Council has balanced the benefits of the Project against any unavoidable environmental impacts in determining whether to approve the Project. Pursuant to the State CEQA Guidelines, if the benefits of the proposed Project outweigh the proposed Project's unavoidable adverse environmental impacts, those impacts may be considered "acceptable."

Having reduced the adverse significant environmental effect of the Project to the extent feasible by adopting the Mitigation Measures contained in the EIR, the Mitigation Monitoring and Reporting Program ("MMRP"), and this Resolution, having considered the entire administrative record on the Project, and having weighed the benefits of the Project against its unavoidable adverse impact after mitigation, the City Council has determined that each of the following social, economic and environmental benefits of the Project separately and individually outweigh the Project's potential unavoidable adverse impacts and render those potential adverse environmental impacts acceptable based upon the following overriding considerations:

A. The Project provides needed housing to the City, particularly affordable housing.

B. The City, per the adopted 2015 Housing Element, has a jobs to housing ratio above the County average, indicating a need for additional housing. As of the most recent Housing Element Progress Report (April 2022), the City had not met its regional housing needs allocation for very-low or moderate income housing.

C. The Project would implement the City's General Plan. The Project site is identified as a housing site in the City's current General Plan, the current Housing Element, and the previous two iterations of the City's General Plan dating back to the 1975 General Plan.

D. The significant and unavoidable impact is related to VMT. Ultimately VMT per capita will be reduced by providing necessary housing in jurisdictions with a high number of jobs. As stated previously, the City of St. Helena currently has a jobs housing imbalance which the Project will help address.

E. The Project will pay development fees which will assist in needed infrastructure improvements in the City, including wastewater treatment and collection systems.

F. The Project would construct the extension of Starr Avenue and the partial extension of Adams Street consistent with the General Plan Circulation Element.

The City Council hereby declares that the foregoing benefits provided to the public through the approval and implementation of the Project outweigh the identified significant adverse environmental impact of the Project that cannot be mitigated. The City Council finds that each of the Project benefits separately and individually outweighs all of the unavoidable adverse environmental effects identified in the EIR and therefore finds those impacts to be acceptable.

EXHIBIT B: MITIGATION MONITORING AND REPORTING PROGRAM

Hunter Subdivision Project

Mitigation Monitoring and Reporting Program

SCH No. 2018032014

City of St. Helena

October 2022

Introduction

Public Resource Code (PRC) Section 21081.6(a)(1) requires a lead agency that approves a project where an environmental impact report (EIR) has been prepared that identified significant environmental effect to adopt a mitigation monitoring a reporting program (MMRP) for the mitigation measures or conditions of approval adopted to mitigate or avoid significant effects on the environment. The City of St. Helena is the lead agency for the EIR prepared for the Hunter Subdivision Project EIR (SCH # 2018032014) and is therefore responsible for the adoption and implementation of this MMRP. The EIR prepared for the Hunter Subdivision Project has identified mitigation measures to avoid or lessen Project impacts.

This MMRP has been prepared pursuant to PRC Section 21081.6 and provides the following:

- Verifies completion of the required mitigation measures;
- Provides a methodology to document implementation of the required mitigation;
- Provides a record of the monitoring program;
- Identifies monitoring responsibility;
- Identifies timing for completion of the mitigation measure.

This MMRP describes the procedures used to implement the mitigation measures and methods to monitor each action. If, during Project implementation, any of the mitigation measures cannot be successfully implemented, the City shall immediately inform any affected responsible agencies. The City, in coordination with the responsible agency, will then determine if modifications to the Project are required, or if an alternative mitigation is appropriate.

The following provides a monitoring table listing all the Project impacts and mitigation measures, method to verify compliance, timing of verification, entity responsible to verify compliance and date of verification completion.

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
3.1 Aesthetics/Visual Resources					
AES-1: To minimize spillover light while ensuring adequate nighttime security, the Project applicant shall prepare lighting design guidelines for the Project to be reviewed and approved by the City as part of the Design Review process. The lighting design guidelines shall include a lighting plan noting fixtures and lumens, and standards such as, lighting is to be shielded and downward focused to reduce glare and spillover light, up cast decorative lighting shall be limited to minimize effects on wildlife and to retain the rural ambience of the area, and the use of mirrored glass shall not be permitted. The lighting guidelines shall conform with Lighting Zone 2 of Title 24, Part 6, of the California Code of Regulations. The guidelines and lighting plan shall be approved as part of the Design Review application.	Project applicant shall prepare lighting and design guidelines for review by the City.	Prior to Design Review hearing	Community Development Dept.	No building permit will be issued	

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
3.3 Biological Resources					
BIO-1: A qualified biologist shall conduct a habitat assessment for bats in trees adjacent to the Project site within 2 weeks prior to any Project construction (site clearing, grading). The habitat assessment shall include a visual inspection of potential roosting features (bats need not be present) and presence of guano within the Project site and 50 feet around these areas. Potential roosting features found during the survey shall be mapped and described in a survey letter report. If roosting bats (individuals or colonies) are detected within the Project site, California Department of Fish and Wildlife shall be notified as soon as possible prior to any construction activity to confirm the bats can be avoided during construction. If a bat roosting or maternity colony cannot be completely avoided, a qualified biologist shall prepare a bat mitigation and monitoring plan for California Department of Fish and Wildlife review and approval, and that plan shall be implemented prior to	Project applicant shall retain a qualified biologist to conduct nesting/roosting bat habitat assessment; map and describe any potential roosting features in a survey letter report. If bats are detected the CDFW shall be contacted and bats avoided during construction, otherwise a bat mitigation and monitoring plan shall be prepared for CDFW review and approval.	Perform study two weeks prior to site clearing/grading. City reviews and approves study before issuing permits for any clearing or grading.	Community Development Dept. & Public Works Dept.	No grading permit will be issued	

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
commencement of construction that could impact the roosting bats or maternity colony.					
BIO-2: If construction activities are scheduled to occur during the breeding season for birds (February 1 through August 31), the Project applicant or their contractor shall implement the following measures to avoid potential adverse effects to nesting raptors and other nesting birds: • Preconstruction surveys by a biologist of all potential nesting habitats within 500-feet of construction activities, where accessible, shall be conducted by a qualified biologist. Surveys shall occur no more than 14 days prior to the initiation of site disturbance. If construction is stopped for 14 days or more during the breeding season, a new preconstruction nesting bird survey must be conducted before work can be restarted to ensure no	Project applicant shall retain a qualified biologist to conduct preconstruction nesting bird surveys a minimum of 14 days if construction occurs between February 1 through August 31. A survey report shall be prepared documenting results of the survey. If nesting birds are present buffers shall be created around the trees.	Perform study two weeks prior to site clearing/grading. City reviews and approves study before issuing any permits for clearing, grading, or construction.	Community Development Dept. & Building Dept.	No grading permit will be issued	

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
new nesting has occurred in the interim. • If preconstruction surveys indicate that nests are inactive or potential habitat is unoccupied during the construction period, no further mitigation is required, following submittal of a survey report letter to the City of St. Helena Planning Department. • If active nests are found during preconstruction surveys, a no-disturbance buffer shall be created around active nests during the breeding season or until it is determined by the biologist that all the young have fledged. The buffers shall be established by the biologist in conjunction with the California Department of Fish and Wildlife. Typical buffers may include 500 feet for raptors and 50 to 250 feet for other bird species based on the location of the nest, the nesting species present, and types					

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
of construction activities that may cause potential nest abandonment. The perimeter of the buffer zone shall be fenced or marked with staked flagging.					
BIO-3: Wetland permits (e.g., 404 Nationwide Permit, 401 Water Quality Certification, and 1602 Streambed Alteration Agreement, respectively) shall be obtained prior to any grading work. Prior to issuance of a grading permit, the Project applicant shall demonstrate authorization from the Army Corp of Engineers and any other regulatory agency to alter the wetland.	Obtain required wetland permit to fill the onsite wetland from the agency with jurisdiction.	Prior to site clearing or grading.	Community Development Dept. & Public Works Dept.	No grading permit will be issued	
3.5 Cultural and Tribal Cultural Resources					
CUL-1: The City shall require that an archaeological monitor is present during all ground-disturbing activities with the potential to impact previously identified cultural resources or to encounter unanticipated cultural deposits including tribal cultural resources. The determination for a Native American monitor to be present	The project applicant or their contractor shall retain an archeological monitor during all ground disturbing activities. The City shall determine, in consultation with the local tribe, if a Native American tribal monitor is also required to be onsite	During all ground disturbing activities.	Community Development Dept. & Building Dept.	Construction shall cease until compliance has been verified	

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
shall be made by the City, in consultation with the appropriate Native American tribe prior to the initiation of ground disturbing activities. In addition, prior to the initiation of ground-disturbing work, construction crews shall be made aware of the potential to encounter cultural resources and the requirement for cultural monitors to be present during these activities. Areas observed to have potential to contain yet-identified subsurface cultural material or deposits are located throughout the Project site, but primarily would be in the western portion of the site where the existing vineyard is located. It is anticipated resources would not be present at depths of more than 10 feet below the surface. Archaeological and Native American monitoring may be adjusted at the recommendation of the qualified archaeological principal investigator, meeting the Secretary of the Interior Professional Qualifications for Archaeology, and in consultation with the City, based	during ground disturbing work.				

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
on inspection of exposed subsurface soils and their observed potential to contain intact cultural deposits or material. The archaeological and tribal monitors shall be provided a copy of technical reports prepared for the project and pertinent appendices to inform their monitoring efforts. The archaeological and tribal monitors shall have the authority to temporarily halt work to inspect areas as needed for potential cultural material or deposits. In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities, all construction work occurring within 100 feet of the find shall immediately stop until the qualified archaeological principal investigator, that meets the Secretary of the Interior Professional Qualifications for Archaeology, can evaluate the significance of the find and determine whether or not additional study is warranted, in consultation with the Tribe. Should it be determined by the					

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
Tribe and the archeologist, temporary flagging may be installed around this resource in order to avoid any disturbances from construction equipment. As approved by the City in consultation with the Tribe, this buffer may be adjusted by the Tribe and the archaeological principal investigator to a distance that maintains a protective perimeter around the unanticipated resource, while still allowing for construction to continue in the surrounding area.					
CUL-2: In the event any human remains are unearthed during site disturbing activities, Section 7050.5(b) of the California Health and Safety Code and Section 15064.5(e) of the CEQA Guidelines specifies protocols to follow in the event human remains are discovered. The Code mandates stopping work within 100 feet of the find and contacting the County Coroner to determine the origin of the remains. If the remains are determined to be Native American the Coroner shall contact the Native American	If human remains are unearthed the contractor shall stop all work within 100 feet and contact the County Coroner and the City.	During all ground disturbing activities.	Community Development Dept. and Public Works Dept.	Construction shall cease until compliance has been verified	

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
Heritage Commission within 24 hours to request that the Commission determine the person or persons it believes to be descended from the deceased Native American. The most likely descendant shall be provided with the opportunity to make recommendations regarding the means of treating or disposing of the remains with appropriate dignity. Project-related ground disturbance in the vicinity of the find shall not resume until all statutory requirements have been met and evidence of completion has been submitted to the City, in consultation with the Tribe.					
3.6 Geology and Soils					
GEO-1: Prior to the issuance of any site-specific grading or building permits, the Project applicant shall have a design-level geotechnical report prepared and submitted to the City of St. Helena Building Department for review and approval in accordance with adopted City standards. The structural designs shall adhere to the currently adopted version of the California Building Code.	The project applicant shall prepare a design-level geotechnical report that meets the California Department of Conservation Special Publication 117A: *Guidelines for Evaluating and Mitigating Seismic Hazards in California.* The report shall be reviewed and approved by the City's building dept. The report	Prior to grading or building permits	Community Development Dept. & Building Dept.	No grading permit will be issued	

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
The report shall identify specific site preparation methods, grading practices, foundation designs, and other recommendations appropriate for minimizing damage from weak soils, expansive soils, differential settlement, and seismic hazards, including liquefaction. Specifically, the following requirements for the geotechnical and soils report shall be met: • Analysis presented in the geotechnical report shall conduct a detailed evaluation of liquefaction in accordance with California Department of Conservation Special Publication 117A: *Guidelines for Evaluating and Mitigating Seismic Hazards in California*. • Additional subsurface soil borings shall be completed as necessary to represent the full range of site conditions, including the southern portion of the parcel mapped as alluvial fan.	shall contain specific site preparation methods, grading practices, foundation designs and recommendations.				

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
• Analysis presented in the geotechnical report shall include recommendations for building foundations and improvements, including sidewalks, parking lots, and subsurface utilities, that take into consideration the potential effects of settlement, collapse, and expansive or corrosive soils. This includes the recommendation to over excavate to an average depth of 4.5 feet (and up to 10 feet in the location of the former pond) due to anticipated settlement. • All design criteria and specifications set forth in the design-level geotechnical report shall be implemented as a condition of project approval. This report shall be completed as a condition of approval of the final tentative map.					

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
GEO-2: In the event that known or suspected paleontological resources (e.g., fossils) are unearthed during grading or trenching, the area of discovery shall be roped off by the construction contractor to include a 50-foot radius buffer and remain off-limits until cleared by a qualified paleontologist. The Project applicant shall retain a qualified paleontologist per the Society of Vertebrate Paleontology (SVP) (2010) guidelines, who shall be tasked with assessing the significance of the fossil find, including documenting the nature, location, and taxa of the find. The qualified paleontologist shall use his/her professional judgement as to the significance of the find, and whether the find should be preserved in a museum repository. Once documentation and collection of the find is completed, the monitor shall remove the rope and allow grading to recommence in the area of the find. Documentation of the fossil find, including appropriate salvage and recovery of fossil	If paleontological resources are unearthed during grading or trenching, the contractor shall stop all work within a 50-foot radius and contact a qualified paleontologist to assess the find and the City. If it is a fossil the paleontologist shall determine the appropriate steps.	During grading and trenching.	Community Development Dept., Dept. & Public Works Dept.	Construction shall cease until compliance has been verified	

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
specimens and of transfer of to an appropriate repository (e.g., University of California Museum of Paleontology) shall be submitted to the City of St. Helena as evidence of compliance with this mitigation measure.					
3.9 Hazards and Hazardous Materials					
HAZ-1: As a condition of approval for construction and grading permits for the Project site, the Project applicant shall the ensure following subsurface soils testing and follow-up analysis shall be performed prior to obtaining a grading permit: • A soils testing work plan shall be developed in accordance with DTSC's Interim Guidance for Sampling Agricultural Properties (DTSC 2008) by an appropriately licensed individual (i.e., professional geologist, environmental engineer, or similar qualification) for the portions of the Project site historically used for	The project applicant shall retain a qualified individual to prepare a soils testing work plan in accordance with DTSC's Interim Guidance for Sampling Agricultural Properties to be submitted to the County and City for review and approval. The plan shall address the proper steps to follow if any contaminated soils are identified.	Prior to grading permits	Public Works Dept. and the Napa County Division of Environmental Health and/or other regulatory oversight agencies	No grading permit will be issued	

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
agriculture. Special consideration shall be given to targeting site soils that are representative of historic agricultural use, and to avoid sampling recent fill material placed during levee construction. Prior to carrying out soils testing, the work plan shall be submitted to the Napa County Division of Environmental Health (as the Certified Unified Program Agency for all cities and areas of Napa County) and the City of St. Helena for review and approval. • The number of soil samples, sampling methods, compounds tested, background samples (if applicable), and laboratory analyses shall be completed in accordance with DTSC's Interim Guidance. Should analytical results exceed naturally occurring concentrations or applicable CHHSLs, the health risks of such a

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
condition shall be evaluated in human health risk assessment as described in DTSC standards and guidance (e.g., preliminary endangerment assessment guidance manual). • The risk assessment shall describe measures that must be implemented to ensure potential health risks to construction workers, site residents, and the general public as a result of hazardous materials are reduced to a cumulative risk of less than one in one million for carcinogens and a cumulative hazard index of 1 for non-carcinogens, or as required by the Napa County Division of Environmental Health acting as the Certified Unified Program Agency and/or DTSC oversight. In the event human health risk assessment shows elevated chemical concentrations pose a risk to human health or the					

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
environment, the risks shall be eliminated or substantially reduced by removal (e.g., excavation of soils and off-site disposal) or remediation of contaminated soils, and/or implementation of institutional controls and engineering controls (IC/EC). IC/EC may include use of a construction risk management plan, use of hardscape to cap problem areas, importation of clean soil in landscaped area to eliminate exposure pathways, and/or deed restrictions. If IC/EC are implemented, an Operations and Maintenance Program shall be prepared and implemented to ensure that the measures adopted are maintained throughout the life of the Project. The soil testing report, and if applicable, the human health risk assessment and Operations and Maintenance Program, shall be subject to review and					

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
approval by the City of St. Helena Department of Public Works, the Napa County Division of Environmental Health and/or other regulatory oversight agencies.					
3.11 Noise and Vibration					
NOI-1: The Project applicant or its contractors shall implement the following for onsite noise control and sound abatement means that, in aggregate, would yield sufficient construction noise reduction during the site preparation, grading/excavation, and building construction phases of the Project to ensure compliance with the FTA-based guidance standard of 90 dBA hourly Leq at or beyond the property lines of the nearest residences, as noted. *Administrative Controls* – At all times during site preparation and construction: • Comply with Chapter 8.24 of the Municipal Code with respect to allowable construction periods,	During construction activities the contractor shall demonstrate compliance with Comply with Chapter 8.24 of the Municipal Code. All onsite construction equipment shall be located as far away from any residences but if within 25 ft of an occupied residence shall be shielded to block noise.	During site clearing, grading and building	Police Dept.	Work shall cease until compliance has been verified	

Hunter Subdivision Project Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
• Minimize idling time of onsite equipment, and • Either locate onsite stationary construction equipment (such as generators or air compressors) as far from adjacent residential property boundaries as is feasible, or place this equipment inside an approved noise-attenuating casing (e.g., sound-attenuated air intakes and heat vents, exhaust mufflers, etc.), or place this equipment indoors. *Engineering Controls* – All mobile and stationary construction equipment employing an internal combustion engine shall be equipped with suitable exhaust and intake silencers which are in good working order; and *Install Sound Abatement* – During site preparation and construction which involves the operation of more than two pieces of heavy equipment (dozer, backhoe, front-end loader, crane, tractor, etc.) for at least one hour and when operating within 25 feet of the

Mitigation Measure	Implementation Procedure	Timing of Monitoring	Monitoring Responsibility	Non-Compliance Sanction/Activity	Monitoring Compliance (Initial/Date)
exterior of a residence (either offsite or onsite), do the following: • Erect a temporary barrier (i.e., plywood sheet) or install sound blankets (or comparable temporary solid barriers) on the Project's construction fencing, or • Locate sound path intervening containers or trailers onsite to block direct line-of-sight between residences and the operating heavy equipment.					

INTENTIONALLY LEFT BLANK

CITY COUNCIL RESOLUTION NO. XXXX

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ST. HELENA APPROVING A TENTATIVE SUBDIVISION MAP TO SUBDIVIDE AN EXISTING 16.9-ACRE PROPERTY INTO 51 LOTS FOR SINGLE FAMILY HOMES, ONE PARCEL FOR MULTI-FAMILY DEVELOPMENT, AND TWO LETTERED LOTS, LOCATED AT THE EASTERN TERMINUS OF ADAMS STREET IN THE CITY OF ST. HELENA, CALIFORNIA, APN 009-030-057

PROPERTY OWNER: Ben and Kelly Van Zutphen **APN:** 009-030-057

WHEREAS, the property owner requests adoption of a tentative subdivision map in order to accommodate the subdivision of a 16.9-acre parcel into 51 parcels for single family homes; one 3.13-acre parcel for multi-family homes and two parcels for landscaping and an onsite water well on a property located at the eastern terminus of Adams Street in the Medium Density Residential (MR) zoning district.; and

WHEREAS, a public notice was published in the Napa Valley Register and mailed to residents and occupants within 300 feet of the project site in compliance with state and local law; and

WHEREAS, the Planning Commission on February 7, 2023, held a public hearing to consider a recommendation to the City Council on the approval of the Tentative Map; and

WHEREAS, following the conclusion of the public hearing, the Planning Commission adopted Resolution PC2023-002, recommending that the City Council approve the Tentative Map; and

WHEREAS, on June 26, 2023, the City Council adopted Resolution _____ Certifying the Environmental Impact Report (State Clearinghouse # 2018032014) for the Hunter Subdivision Project; Adopting Findings Pursuant To The California Environmental Quality Act; Adopting A Statement Of Overriding Considerations; and Adopting a Mitigation Monitoring and Reporting Program; and

WHEREAS, the findings made in this Resolution are based upon the information and evidence set forth in the certified Final EIR and upon other substantial evidence that has been presented at the hearings and in the record of the proceedings. The documents, staff reports, technical studies, appendices, plans, specifications, and other materials that constitute the record of the proceedings on which this Resolution is based are on file for public examination during normal business hours at the Planning Division located at City of St. Helena City Hall, 1088 College Avenue, St. Helena CA; and

WHEREAS, the City Council has considered the findings identified in Municipal Code Section 16.16.080(A) to support the recommended approval of the Tentative Parcel Map, and determined based on the evidence in the record before the Planning Commission as follows:

1. That the proposed subdivision, together with the provisions for its design and improvement, is consistent with the general plan, any applicable specific plan, and other applicable provisions of the St. Helena Municipal Code; and

2. That the design of the proposed subdivision provides, to the extent feasible, for future passive or natural heating or cooling opportunities in the subdivision, as described in the State Subdivision Map Act and any guidelines promulgated by the City Council.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF ST. HELENA DOES HEREBY RESOLVE AS FOLLOWS:

SECTION 1: The City Council finds:

(a) That it has reviewed the proposed tentative map and the evidence and testimony received in conjunction with the public hearing on the proposed tentative map, and that the proposed subdivision as conditioned by the proposed conditions of approval attached to this Resolution as Exhibit A, together with the provisions for its design and improvement, is consistent with the general plan, any applicable specific plan, and other applicable provisions of the St. Helena Municipal Code; and

(b) That design of the proposed subdivision provides, to the extent feasible, for future passive or natural heating or cooling opportunities in the subdivision, as described in the State Subdivision Map Act and any guidelines promulgated by the City Council.

SECTION 2: Based on the aforementioned findings, the City Council does hereby approve the Hunter Tentative Subdivision Map, subject to the conditions of approval attached to this Resolution.

SECTION 3: The documents and materials that constitute the records of proceedings on which this Resolution has been based are located at the City of St. Helena City Hall at 1088 College Avenue. St. Helena, CA. The custodian for these records is the City of St. Helena City Clerk.

SECTION 4: The City Clerk shall certify to the adoption of this resolution.

I HEREBY CERTIFY that the City of St. Helena City Council approved the foregoing at a Special Meeting of the St. Helena City Council on June 26, 2023, by the following vote:

Mayor Dohring: _____

Vice Mayor Hall: _____

Councilmember Chouteau: _____

Councilmember Hardy: _____

Councilmember Summers: _____

APPROVED: ATTEST:

_____ _____

Paul Dohring, Mayor Cindy Tzafopoulos, City Clerk

ADOPTED AND APPROVED the 26th day of June, 2023.

EXHIBIT A: PROPOSED CONDITIONS OF APPROVAL

HUNTER SUBDIVISION CONDITIONS OF APPROVAL 6-26-23

Tentative Subdivision Map TM 2022-001
APN 009-030-057

These conditions shall apply to City approval of Tentative Subdivision Map TM 2022-001. However, the only conditions herein that constitute preconditions to the approval of the Final Map are those that explicitly state that they constitute such preconditions, and such conditions may be satisfied through substantial completion, as determined by the City Engineer, by execution of a Subdivision Improvement Agreement, in a form acceptable to the City Engineer, or a combination thereof. Either substantial completion or execution of a Subdivision Improvement Agreement or a combination of both, shall enable the City Engineer to make a determination of substantial compliance with these condition and the Tentative Subdivision Map TM 2022-001.

Planning Division: General Conditions

1. This specific approval is limited to the Tentative Subdivision Map TM 2010-40, and is not intended to serve as an approval of the overall project description that was submitted with the tentative map application.

2. This approval is based upon all conditions of approval set forth herein, including mitigation measures and specified plans and agreements included by reference, as well as all applicable City rules and regulations. Any deviations from the conditions must be reviewed and approved by the City for conformity with this approval. Deviations may require approved changes to these approvals and/or further environmental review. Deviations without the above described approval will constitute a violation of permit approval.

3. Except as specifically authorized in these conditions of approval, the grading, development, use, and maintenance of the property; the size, shape, arrangement, and location of the structures, parking areas and landscape areas; and the protection and preservation of resources shall be subject to Planning Commission approval and shall conform to the conditions of approval below. Notwithstanding the foregoing, the associated grading and construction of infrastructure for the project shall be permitted without Design Review approval if the design of such infrastructure has otherwise been approved by means of the Tentative Map or Final Map. All plans and agreements (such as landscape maintenance plans) required pursuant to these conditions of approval must be submitted for review and approval and shall be implemented as approved by the City.

4. The use and/or construction of any structures or improvements authorized by this approval shall not commence until all necessary planning and building permits pertaining to the use or construction in question are obtained. Before any grading or building permit will be issued by the City, the Owner/Applicant must obtain written clearance from all departments having conditions; such clearance shall indicate that the Owner/Applicant has satisfied all pre-construction conditions.

5. The Owner/Applicant's acceptance of this permit and/or commencement of use, construction and/or operations under this approval shall be deemed acceptance of all conditions of this approval by the Owner/Applicant.

6. The Owner/Applicant shall ensure that potential contractors are aware of City requirements. The Owner/Applicant shall notify all contractors and subcontractors in writing of the site rules, restrictions, and Conditions of Approval and submit a copy of the notice to the Planning Department.

7. Pursuant to the Municipal Code, Section 16.16.100, the Tentative Map approval is valid for a two (2) year period ending May 1, 2025, unless later extended by operation of state law. The Final Map shall be filed by this date or an extension of time shall be requested prior to the expiration date.

8. Pursuant to St Helena Municipal Code, any request for an extension of the Tentative Map must be justified in writing and received by the Planning Department at least twenty (20) days prior to expiration. The time at which such map expires may be extended by the City Council for one year, and on further application twenty (20) days before the expiration of the one year extension, the subdivider may request a second one-year extension, and on further application twenty (20) days before the expiration of the second one-year extension may request a third one-year extension. No extension shall be permitted beyond the third one-year extension.

9. Prior to recordation of the Final Map and subject to City approval as to form and content, the Owner/Applicant shall include all of the mitigation measures and conditions of approval associated with or required by this Project approval on a separate informational sheet(s) to be recorded with the Final Map. All applicable conditions and mitigation measures for the Project shall be printed on grading and/or building plans.

10. Compliance with all permit conditions shall occur in accordance with specific regulations but in all cases not later than prior to occupancy or initiation of use unless another time is set by law or by this approval. Occupancy or final inspection of a project may be withheld if all conditions, including payment of fees for services rendered by the City, are not met.

11. In any action or proceeding to attack, challenge, invalidate, set aside, void or annul the City's approval of applicant's Project, in whole or in part, applicant shall defend, at its own expense and without any cost to the City, and with counsel acceptable to the City, and shall fully and completely indemnify and hold the City, its agents, officers, and employees harmless from and against any and all claims, causes of action, damages, costs, attorney's fees and liability of any kind, so long as the City reasonably promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.

12. This Tentative Parcel Map shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.

13. If the Tentative Map is proposed to be revised, including revisions to these conditions of approval, the revisions shall be approved pursuant to and in accordance with Section 16.16.130 of the St. Helena Municipal Code.

14. The primary purpose of this review is for compliance with the General Plan and Zoning Ordinance. The owner/applicant is responsible for meeting with the Building Official/Fire Inspector to review compliance with Building and Fire Codes, including fire protection systems and the accessibility standards of Title 24.

15. All required fees, including planning fees, development impact fees, park impact fees, and building permit fees shall be paid prior to issuance of building permit unless such payment has been modified by adopted mitigation measures or conditions of approval. Fees shall be those in effect at the time of the issuance of the building permit.

16. This authorizes the creation of a tentative subdivision of a 16.92-acre parcel (APN 009-030-057) located at the north/east terminus of Adams Street into 52 lots. In addition, two lettered lots are created: Parcel A (0.06 acres) is an open space lot adjacent to an internal roadway; Parcel B (0.04 acres) will contain a private water well to be used for irrigation of landscaped areas.

17. All uses of the property shall be in compliance with the MR: Medium Density Residential zoning district regulations.

18. The applicant shall be responsible for compliance with all mitigations measures adopted as part of this project and listed in the Environmental Impact Report and Mitigation Monitoring and Reporting Program (MMRP) adopted as part of this project.

19. All conditions of approval shall be clearly identified and included on all plans submitted for future permit review and issuance.

20. Prior to applying for building permits, proposed future development on any of the newly created lots or parcels shall require the approval of a Design Review application and Use Permit application as applicable, subject to discretionary review by the Planning Commission.

21. The Applicant shall be responsible for all City plan check and inspection costs as described in the St. Helena Comprehensive Fee and Rate Schedule.

Planning Division: Final Map Conditions

22. The owners of the 51 single family residences and the multi-family development on parcel 52 shall be members of a homeowner's association, or another funding mechanism acceptable to the City, dedicated to the maintenance of the project’s common areas, the internal irrigation system (fed by the well on Parcel B), and the well on Parcel B.

23. Prior to recordation of the final map and concurrent with the Subdivision Improvement Plan, the applicant shall submit CC&R's (Codes, Covenants and Restrictions) to the City Attorney, Public Works Director and Community Development Director for review and approval. CC&R's shall be recorded at time of recordation of final map. CC&R's shall include all

restrictions and maintenance regulations pertaining to, landscaping and common areas; shall include all restrictions and maintenance agreements pertaining to roads and access easements; and all restrictions and maintenance agreements pertaining to the irrigation well and internal irrigation water distribution system. The CC&Rs must be recorded prior to issuance of any building permit for any structure on the project site.

24. Pursuant to Section 16.20.090, upon approval of the final map by the City Council, the City Clerk shall execute the appropriate certificate on the certificate sheet and shall, subject to the provisions of Section 66464 of the state Subdivision Map Act, transmit the map, or have an authorized agent forward the map, to the county recorder prior to the issuance of a building permit.

25. Prior to issuance of a Certificate of Occupancy, all overhead utilities on the site shall be undergrounded.

Planning: Misc. Conditions

26. Prior to issuance of building permits, the applicant shall develop a building construction plan to be approved by the Planning Director and Building Official to insure that the homes meet or exceed Title 24 Energy Efficiency Standards and receive a green rating under either the LEEDS, Green Points Checklist, or other acknowledged rating system for energy conservation and green building practices. The latest version of the City of St. Helena green building standards will apply at the time of building permit submittal.

27. All City, state, federal and other applicable local ordinances, rules, regulations and policies in effect at the time of issuance of a grading or building permit shall be complied with.

28. Prior to approval of the Final Map, the applicant shall enter into an Affordable Housing Agreement with the City of St. Helena, which agreement shall be subject to review and approval by the St. Helena City Council. The Affordable Housing Agreement shall be recorded in the Official Records of Napa County, and shall ensure that the project complies with the requirements of Municipal Code section 17.146.050, Residential development project, inclusionary/in-lieu fee requirements. The Affordable Housing Agreement shall demonstrate how the project satisfies the minimum density requirement of the General Plan to construct a minimum of 87 dwelling units, including single family, multifamily, and accessory dwelling units.

Planning: Flooding Conditions

29. Prior to issuance of building permits, the occupant shall prepare a statement that has been approved by the Public Works Director for inclusion in the disclosure documents provided to purchasers of homes which describes the flood risk present at this location and notifies the buyer of the availability of low-cost Preferred Risk Policy flood insurance.

Planning: Landscape Conditions

30. City of St. Helena Community Development Department shall review the final landscape and fencing plan as part of a Design Review approval and prior to issuance of building permits for

construction on the property to ensure compliance with Mitigation Measures. Landscaping shall be native, drought tolerant, compatible with oak trees and requiring minimal irrigation.

31. Landscape plans shall comply with the State of California Model Water Efficient Landscape Ordinance and Section 17.112.140 of the St Helena Municipal Code. Plans shall be designed and verified by a landscape professional and shall include drought tolerant landscaping and low water irrigation systems. Landscaping shall not block vision from exits or at street intersections.

Planning: Construction Activities Conditions

32. Mechanical equipment, including heating and air conditioning units and spa equipment, shall be located away from property lines and shall be shielded or enclosed to minimize noise levels. Noise generated shall not exceed 60 dBa, Ldn. This condition of approval implements Mitigation Measure NOI-1 from the project environmental impact report, Chapter 8.24 of the St Helena Municipal Code, and noise-related policies of the St Helena General Plan, including policy 8.3.11 from the 1993 General Plan and policy PS2.4 from the 2019 General Plan.

33. The applicant and/or construction manager shall notify all contractors and subcontractors that no trespassing is allowed on adjoining properties.

34. To reduce disturbance of residents in the project vicinity, construction activities which generate noise that can be heard at the property line of any parcel of real property within the City limits shall be limited to 8:00 a.m. to 5:00 p.m. Monday through Saturday. Delivery of materials/equipment and cleaning and servicing of machines/equipment shall be limited to 7:00 a.m. to 6:00 p.m. Exceptions to these time restrictions may be granted by the Public Works Director for one of the following reasons: (1) inclement weather affecting work, (2) emergency work, or (3)other work, if work and equipment will not create noise that may be unreasonably offensive to neighbors as to constitute a nuisance. The City Engineer must be notified and give approval in advance of such work. No construction activities shall occur on Sundays or federal or local holidays that generate noise that can be heard at the property line of any parcel of real property within the City limits.

35. This property in the vicinity of an agricultural district. All future purchasers of homes or renters living in the project shall be notified of the expectation of legal, normal agricultural activities on the adjacent land, including day or night disbursement of chemicals, and creation of dust, noise, or fumes, and of the City's Right to Farm ordinance.

Public Works: General Conditions

36. Prior to recordation, the Final Map shall be designed per City standards to the satisfaction of the Public Works Director to accommodate the following facilities in the right of way of both Starr Avenue and Adams Street:

    - Curb and Gutter in accordance with City Standard #310 for a 24" gutter.

- Sidewalks, either attached to the curb or detached from the curb, on both sides of the street along Starr Avenue, and only on the south side of Adams Street, in accordance with City Standard #315
- Parking lane on both sides of the street in accordance with City Standard #301 for a "Collector" street.
- Class II on-street bike lane on both sides of the street in accordance with Caltrans' Highway Design Manual Index 1003.2 but not less than 5 feet wide.
- Two vehicle travel lanes in accordance with City Standard #301 for a "Collector" street.
- Striping to delineate parking, bike, and travel lanes.

37. All public improvements utility connections shall be designed in accordance with the City of St. Helena's Construction Standards (SHMC 16.32.230).

38. The City has adopted the latest edition of the Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual. Applicant is responsible for conformance construction plans in accordance with the BASMAA Manual, SHMC Section 13.32 et. Seq., and the State Water Resources Control Board Phase II Municipal Separate Storm Water System (MS4) General Permit (Order 2013-0001 DWQ). Approval of project by Planning Commission does not constitute compliance with storm water regulations nor a right to develop per approved plans unless this condition of approval is fully satisfied.

39. Grading plans, public improvement plans and connections to public utilities shall be prepared by a California Licensed Civil Engineer.

40. An Encroachment Permit is required prior to starting work within City right of way.

41. All public facilities damaged by construction activities shall be the responsibility of the Applicant and shall be repaired per City standards to the satisfaction of the City at the Applicant's expense.

42. During water shortage emergencies, all construction water used for the project shall be obtained from a source other than a City of St. Helena potable water sources (SHMC 13.04.221).

43. Unless exempted, any ADU or JADU constructed with a new single-family home shall have a separate utility connection directly between the ADU or JADU and the utility and payment of the normal connection fee and capacity charge for a new dwelling are required SHMC 17.116.030(G)(2).

44. Developer shall design and construct all improvements and facilities shown on any approved tentative map, site plan, or other documents submitted for permit approval, in accordance with the St. Helena Municipal Code (SHMC), and the City of St. Helena Design and Construction Standards. Approval of a tentative map depicting improvements that do not conform to the SHMC or City standards does not constitute approval of an exception to the SHMC or City standards unless explicitly stated herein or in another City resolution.

45. The developer shall be responsible for all City plan check, map check and inspection costs. The developer shall deposit funds with the City upon the initiation of plan check services. The amount of the initial deposit shall be determined by the City Engineer. Additional funds may be required based upon actual plan check and inspection costs.

46. If any of the improvements which the applicant is required to construct or install is to be constructed or installed upon land in which the applicant does not have title or interest sufficient for such purposes, the applicant shall do all of the following at least 60 days prior to the filing of the final or parcel map for approval pursuant to Government Code Section 66457:

    a) Notify the City of St. Helena (hereafter "City") in writing that the applicant wishes the City to acquire an interest in the land which is sufficient for such purposes as provided in Government Code Section 66462.5;

    b) Supply the City with (i) a legal description of the interest to be acquired, (ii) a map or diagram of the interest to be acquired sufficient to satisfy the requirements of subdivision (e) of Section 1250.310 of the Code of Civil Procedure, (iii) a current appraisal report prepared by an appraiser approved by the City which expresses an opinion as to the current fair market value of the interest to be acquired, and (iv) a current Litigation Guarantee Report;

    c) Enter into an agreement with the City, guaranteed by such cash deposits or other security as the City may require, pursuant to which the applicant will pay all of the City's cost (including, without limitation, attorney's fees and overhead expenses) of acquiring such an interest in the land.

47. Prior to the issuance of a Certificate of Occupancy, all proposed utilities, both on-site and along project frontages, shall be placed underground. This does not include surface mounted transformers, pedestal mounted terminal boxes and meter cabinets.

48. Except for the existing well on Lot 19 of the Tentative Map that will be providing irrigation water to this development, all existing wells, septic tanks and/or underground fuel storage tanks shall be abandoned under permit and inspection of Napa County Department of Environmental Health. If applicant determines that there are none, prior to the issuance of a grading permit, the project engineer shall provide a letter describing the scope of the search done to make this determination and demonstrating, in a manner consistent with City standards and proper engineering practices and to the reasonable satisfaction of the City Engineer, that there are no other existing wells, septic tanks and/or underground fuel storage tanks within the boundaries of the Tentative Map.

Public Works: Fees

49. Public Works engineering and inspection fees for Improvement Plan and Final Map review shall be due and payable at the time of making the first submittal in connection with the Improvement Plans or the Final Map, as applicable.

50. All Public Works Development Impact fees shall be due and payable at the time of issuance of building permit(s) for the improvements to which they are applicable, unless otherwise authorized by the City.

Public Works: Improvement Plan and Construction Conditions

51. Improvement plans shall be prepared and submitted by a California Registered Civil Engineer for the construction of all necessary and required on-site and off-site improvements including grading, water, sanitary sewer, storm drain facilities, roadway improvements, curbs, gutters, sidewalks, parkway strips and streetlights. All design and construction shall conform to the City of St. Helena Design and Construction Standards, as applicable.

52. Per Mitigation Measure GEO-1, a detailed Soils Investigation/Geotechnical Report (the "Soils Report") shall be prepared and submitted for review with the submittal of the improvement plans. The report shall address, at a minimum, potential for liquefaction, expansive soils, seismic risk, recommendations for roadway structural sections, foundation, and other items as mentioned in the Mitigation Measure. The improvement plans shall incorporate all design and construction criteria recommended in the Geotechnical Report and acknowledgement of inclusion of any recommendations in the soils report applicable to improvements within this development shall be included on a signature line for the Geotechnical Engineer on the cover sheet of the improvement plans. The signature line should include a statement that the Geotechnical Engineer has reviewed the plans and that the plans have incorporated recommendations as outlined in the Soils Report.

53. All private water mains, sewer mains and storm drains shall be clearly labeled "Private" on the improvement plans.

54. Improvements plans shall include a storm water pollution prevention plan. Erosion control measures shall be included within the improvement plans and the projects WDID number shall be included on the cover sheet of the improvement plans.

55. The improvement plans shall include the following note per the *Engineering Controls* portion of Mitigation Measure NOI-1: "All mobile and stationary construction equipment employing an internal combustion engine shall be equipped with suitable exhaust and intake silencers which are in good working order."

56. Roadway Improvements:

    a. The structural section of all road improvements shall be designed based upon a geotechnical investigation that provides the basement soils R-value and expansion pressure test results. A copy of the geotechnical report shall also be submitted with the first set of improvement plan check-prints.

    b. Where new roadway improvements abut existing paving and sidewalk, curb and gutter, the existing pavement and concrete curb and gutter section shall be saw-cut and reconstructed to provide a smooth conforms conform. The limits of such reconstruction shall be as determined by the City Engineer.

c. Pavement markings and signage shall be provided on all streets as necessary and as required by the City Engineer. Signage restricting parking and red painted curbing shall be installed where appropriate. Speed limit signs and other regulatory and informational signs shall be installed at locations determined by the City Engineer.

d. Street lighting shall be designed to provide to meet safety requirements and minimize glare. Street light standard and luminaries of the design, spacing, and locations shall be approved by the City Engineer. All lighting must have shields.

e. Ramps for disabled persons meeting the most recent standards shall be provided at all intersections and at the limits of the improvements where they do not adjoin existing sidewalk improvements. Sidewalk warps shall be provided as necessary to allow a clear four-foot-wide walkway at all locations, including areas where mailboxes, streetlights, and fire hydrants obstruct sidewalks.

57. In accordance with mitigation measure BIO-1 of the approved environmental document, a qualified biologist shall conduct a habitat assessment for bats in trees adjacent to the Project site within 2 weeks prior to any Project construction (site clearing, grading). The habitat assessment shall include a visual inspection of potential roosting features (bats need not be present) and presence of guano within the Project site and 50 feet around these areas. Potential roosting features found during the survey shall be mapped and described in a survey letter report. If roosting bats (individuals or colonies) are detected within the Project site, California Department of Fish and Wildlife shall be notified as soon as possible prior to any construction activity to confirm the bats can be avoided during construction. If a bat roosting or maternity colony cannot be completely avoided, a qualified biologist shall prepare a bat mitigation and monitoring plan for California Department of Fish and Wildlife review and approval, and that plan shall be implemented prior to commencement of construction that could impact the roosting bats or maternity colony. A written report of the findings shall be provided to the City prior to grading.

58. In accordance with mitigation measure BIO-2 of the approved environmental document, if construction activities are scheduled to occur during the breeding season for birds (February 1 through August 31), prior to commencement of construction the Project applicant or their contractor shall implement the following measures to avoid potential adverse effects to nesting raptors and other nesting birds:

- Preconstruction surveys by a biologist of all potential nesting habitats within 500 feet of construction activities, where accessible, shall be conducted by a qualified biologist. Surveys shall occur no more than 14 days prior to the initiation of site disturbance. If construction is stopped for 14 days or more during the breeding season, a new preconstruction nesting bird survey must be conducted before work can be restarted to ensure no new nesting has occurred in the interim.

- If preconstruction surveys indicate that nests are inactive or potential habitat is unoccupied during the construction period, no further mitigation is required, following submittal of a survey report letter to the City of St. Helena Planning Department.

- If active nests are found during preconstruction surveys, a no-disturbance buffer shall be created around active nests during the breeding season or until it is determined by the biologist that all the young have fledged. The buffers shall be established by the biologist in conjunction with the California Department of Fish and Wildlife. Typical buffers may include 500 feet for raptors and 50 to 250 feet for other bird species based on the location of the nest, the nesting species present, and types of construction activities that may cause potential nest abandonment. The perimeter of the buffer zone shall be fenced or marked with staked flagging.

59. In accordance with mitigation measure BIO-3 of the approved environmental document, wetland permits (e.g., 404 Nationwide Permit, 401 Water Quality Certification, and 1602 Streambed Alteration Agreement, respectively) shall be obtained prior to any grading work. Prior to issuance of a grading permit, the Project applicant shall demonstrate authorization from the Army Corp of Engineers and any other regulatory agency to alter the wetland.

60. Prior to the commencement of grading, the developer shall provide evidence that an archaeological monitor has been retained to be present on the site during all ground-disturbing activities per mitigation measure CUL-1.

61. Per mitigation measure CUL-2 of the approved environmental document, if human remains are unearthed during grading operations, work must stop within 100 feet of the find and the county Coroner shall be contacted immediately.

62. Per mitigation measure GEO-2 of the approved environmental document, if known or suspected paleontological resources are unearthed during grading or trenching operations, the area of discovery shall be roped off by the contractor to include a 50-foot radius buffer and remain off-limits until cleared by a qualified paleontologist.

63. Per mitigation measure HAZ-1 of the approved environmental document, the Project applicant shall ensure the following subsurface soils testing and follow-up analysis be performed prior to obtaining a grading permit:

    - A soils testing work plan shall be developed in accordance with DTSC's Interim Guidance for Sampling Agricultural Properties (DTSC 2008) by an appropriately licensed individual (i.e., professional geologist, environmental engineer, or similar qualification) for the portions of the Project site historically used for agriculture. Special consideration shall be given to targeting site soils that are representative of historic agricultural use, and to avoid sampling recent fill material placed during levee construction. Prior to carrying out soils testing, the work plan shall be submitted to the Napa County Division of Environmental Health (as the Certified Unified Program Agency for all cities and areas of Napa County) and the City of St. Helena for review and approval.

    - The number of soil samples, sampling methods, compounds tested, background samples (if applicable), and laboratory analyses shall be completed in accordance with DTSC's Interim Guidance. Should analytical results exceed naturally occurring concentrations or applicable CHHSLs, the health risks of such a condition shall be evaluated in human health risk assessment as described in DTSC standards and guidance (e.g., preliminary

endangerment assessment guidance manual). • The risk assessment shall describe measures that must be implemented to ensure potential health risks to construction workers, site residents, and the general public as a result of hazardous materials are reduced to a cumulative risk of less than one in one million for carcinogens and a cumulative hazard index of 1 for non-carcinogens, or as required by the Napa County Division of Environmental Health acting as the Certified Unified Program Agency and/or DTSC oversight. In the event human health risk assessment shows elevated chemical concentrations pose a risk to human health or the environment, the risks shall be eliminated or substantially reduced by removal (e.g., excavation of soils and off-site disposal) or remediation of contaminated soils, and/or implementation of institutional controls and engineering controls (IC/EC). IC/EC may include use of a construction risk management plan, use of hardscape to cap problem areas, importation of clean soil in landscaped area to eliminate exposure pathways, and/or deed restrictions. If IC/EC are implemented, an Operations and Maintenance Program shall be prepared and implemented to ensure that the measures adopted are maintained throughout the life of the Project.

64. Per mitigation measure NOI-1 of the approved environmental document, the contractor shall implement the following for onsite noise control and sound abatement means that, in aggregate, would yield sufficient construction noise reduction during the site preparation, grading/excavation, and building construction phases of the Project to ensure compliance with the FTA-based guidance standard of 90 dBA hourly Leq at or beyond the property lines of the nearest residences, as noted.

Administrative Controls – At all times during site preparation and construction:

- Comply with Chapter 8.24 of the Municipal Code with respect to allowable construction periods,
- Minimize idling time of onsite equipment, and
- Either locate onsite stationary construction equipment (such as generators or air compressors) as far from adjacent residential property boundaries as is feasible or place this equipment inside an approved noise-attenuating casing (e.g., sound-attenuated air intakes and heat vents, exhaust mufflers, etc.), or place this equipment indoors.

Engineering Controls – All mobile and stationary construction equipment employing an internal combustion engine shall be equipped with suitable exhaust and intake silencers which are in good working order; and

Install Sound Abatement – During site preparation and construction which involves the operation of more than two pieces of heavy equipment (dozer, backhoe, front-end loader, crane, tractor, etc.) for at least one hour and when operating within 25 feet of the exterior of a residence (either offsite or onsite), do the following:

- Erect a temporary barrier (i.e., plywood sheet) or install sound blankets (or comparable temporary solid barriers) on the Project's construction fencing, or

- Locate sound path intervening containers or trailers onsite to block direct line-of-sight between residences and the operating heavy equipment.

Public Works: Improvement Plan and Construction Conditions

65. Starr Avenue: Prior to the issuance of a Certificate of Occupancy, Starr Avenue shall join the existing Starr Avenue at Hunt Avenue and shall be improved to include the facilities listed in condition of approval #35. The structural section of the street shall be per recommendations contained in the Soils Report.

66. Adams Street: Prior to the issuance of a Certificate of Occupancy, Adams Street shall join the existing section of Adams Street (currently a dead end) and be extended into the subdivision. The street shall be improved per condition of approval #35. At the northerly terminus of Adams Street, a conform shall be constructed with Class 2 aggregate base to connect to the existing walking path/access road/levee. A gate shall be included at the terminus of the road and connection to the walking path/access road that has appropriate signage indicating it is not a through road for vehicles. The gate shall be constructed per direction from the Fire Chief and shall include a Knox box. The structural section of the street shall be per recommendations contained in the Soils Report.

67. Street A: Prior to the issuance of a Certificate of Occupancy, Street A shall be improved to include two 10 ft. travel lanes, two 8 ft. parking lanes, curbs, gutters, a 6 ft. planter strips and 4 ft. sidewalk on the south side of the road and a 10-foot distance from the face of curb to the right-of-way line on the west side of the road. The total right-of-way width shall be 56 feet. The area between the curb and the right-of-way line on the west side of the street shall be graded such that it can be passable by pedestrians (cross slopes should not exceed 5%). The structural section of the street shall be per recommendations contained in the Soils Report.

68. Streets B and C: Prior to the issuance of a Certificate of Occupancy, Streets B and C shall be improved to include two 10 ft. travel lanes, two 8 ft. parking lanes, curbs, gutters, 6 ft. planter strips and 4 ft. sidewalks within an overall 56 ft. right-of-way. The cul-de-sac associated with Street C shall be constructed per City Standard 304. The knuckle at the intersection of Streets B and C shall be constructed per City Standard 305. The structural section of the street shall be per recommendations contained in the Soils Report.

~~69. EVA: From Street A to levee: Prior to the issuance of a Certificate of Occupancy, the emergency vehicle access road (EVA) shall be improved to provide an all-weather access road (paved) from Street A up to the existing levee road to the north. The width of the EVA shall be a minimum of 21 feet from face of curb to face of curb within an overall 25 ft. wide dedicated EVA. The EVA shall accommodate emergency vehicles (must provide for turning radii to accommodate fire vehicles as per the Fire Department requirements.) Turning templates shall be provided with the improvement plans during the plan check process to ensure the EVA can accommodate Fire Department apparatus.~~

70. Access from Lot 52 to Starr Avenue shall be for EVA and pedestrian purposes. Ownership of this parcel shall be the same as Lot 52, or the access point shall be made part of Lot 52.

71. Adjacent to Lot 51 there is a portion of existing right-of-way that needs to be vacated by the City prior to the recordation of the final map. The applicant shall provide all descriptions and plats to the City for vacation of this right-of-way. The vacation of the right-of-way by the City of St. Helena shall either be done prior to or concurrently with the recordation of the final map.

72. Per Mitigation Measure AES-1, all streetlights shall include shields and downward focused to reduce glare and spillover light and to minimize effects on wildlife and to retain the rural ambience of the development.

Public Works Water and Sanitary Sewer Improvements Conditions

73. As detailed in the Final EIR for the project, the Developer is required to off-set the Project's water demand of 37.04 AFY. The Project's landscape water demand is estimated at 17.16 acre-feet per year, which is within the capacity of the existing on-site well. Due to the new potable water demand on the City system in the amount of 19.8 AFY, the Developer shall implement an alternative innovative method of mitigating water use as allowed under Section 13.12.030(B) of the SHMC and/or Appendix J of the EIR. The required improvements to offset water demand are as follows: Identify and implement offsite improvements that reduce water loss from the public water distribution system and/or identify and implement offsite improvements that result in a net increase in potable water availability equivalent to 19.8 AFY, or a combination of these. No building permit may be issued until the City has confirmed that the Developer has completed the approved measures and such measures have been accepted by the City, or Developer has entered into a public improvement agreement with the City to ensure the completion of such improvements and provided security in one of the forms described in Government Code section 66499 in an amount equal to the estimated cost of construction of the proposed offsite improvements as determined, or reviewed and approved, by the City Engineer. Any public improvements shall be constructed to St. Helena Public Works Construction Standards whenever applicable.

74. Any modifications to the existing well other than the installation or maintenance of pumping and storage equipment and connection to the onsite irrigation water distribution system, shall require a permit per section 13.16.060 of the St Helena Municipal Code.

75. The Final Map shall include easements to provide for the installation of the private onsite water system connected to onsite well.

76. All homes and the proposed multi-family parcel shall be served by the onsite well for landscaping and other outdoor water use. Only interior fixtures may be served by City of St. Helena domestic water.

77. All parcels must be connected to the internal irrigation well for outside uses, including landscape irrigation and exterior hose bibs.

78. The Applicant shall make written application to the City of St. Helena in conformance with Chapter 13.04 of the St. Helena Municipal Code for Water Service to the new parcels.

79. The applicant/owner shall be required to install water mains and service lines to serve the project parcels with City water. All water mains and lines within the public right of way shall be constructed in conformance with City standards.

80. The applicant/ owner shall make written application to the City of St. Helena for annexation to the Sewer District and for Sewer Service to the new parcels in conformance with Chapter 13.20.070 of the St. Helena Municipal Code.

81. All public water and sewer mains must be located in public right-of-way wherever possible. Where public water and sewer mains must be located on private property, all necessary easement dedications must be made part of the final map or by separate document (if outside of the boundaries of the final map) prior to final acceptance of the improvements by the City.

82. Sewer grades must be designed such that ultimate finished floors are a minimum of 12" above upstream manhole or clean-out rim elevations. Inadequate elevation differentials or grade on private laterals, as determined by the City, must be mitigated by either raising finished floor elevation(s) or installing privately owned and operated sewer lift station(s) with grinder/ejector pump(s) on site.

83. All water improvements shall conform to the City standards.

84. The existing 10 ft. public waterline easement shall be abandoned by separate document once the relocated water line has been built and is operational.

85. Prior to the first Certificate of Occupancy, the existing 12-inch waterline running through the development shall be relocated to Starr Avenue by the applicant/developer. At the westerly end of Starr Avenue, the line shall be reconnected to the existing 12-inch waterline outside north of Lot 46.

86. The proposed well and appurtenances (pump, etc.) for this development shall be owned and operated by the Homeowner's Association for this development. The well shall supply irrigation water for all landscaping of common areas and on all lots within the subdivision to limit use of domestic water produced by the City. Signage shall be provided on each lot warning of the use of well water and that the well water shall not be used for domestic purposes. Piping for all irrigation water from the well shall be purple pipe (same as used for recycled water). Also, disclosure statements (either through disclosures as required by the Department of Real Estate or on the final map) shall be provided to all property owners notifying them about use of well water and statements warning that well water should not be used for domestic purposes. If the City's reclaimed water system becomes available at the project site, the onsite irrigation system shall be connected to the reclaimed water system and the well shall be permanently closed.

87. The sewer easement on lot 21 shall be a minimum of 15 feet wide and shall be located entirely within Lot 21. Statements shall be included on the final map precluding any permanent structures from being constructed within this easement. The sewer line shall be connected to the existing sewer main in Paseo Grand Drive.

Public Works Drainage Improvements Conditions

88. Prior to the issuance of the first building permit, all City-required **in-tract drainage** improvements **as shown on the proposed Tentative Map** ~~related to storm water for the project~~ shall be installed by the project developer at ~~it's~~ **the developer's** expense. Drainage improvements shall be designed ~~and funded by the developer~~ in accordance with the Design Criteria utilizing the rationale method and any applicable adopted City drainage plans.

89. Prior to the issuance of the first building permit, the applicant shall submit for review and approval, drainage plans and hydraulic calculations prepared by a Registered Civil Engineer. The drainage plans and calculations shall indicate the following conditions before and after development:

    - Quantities of water, water flow rates, major water courses, drainage areas and patterns, diversions, collection systems, flood hazard areas, sumps and drainage courses.

90. Post-Development storm water discharge from parcel 009-030-057 shall not exceed the pre-development discharge including the projected build-out, expressed as a 30% undeveloped pervious and 70% impervious drainage watershed. Applicant shall prepare an analysis to show compliance with this COA. Refer to COA #~~90~~ **#91** for additional requirements of the analysis.

91. Prior to building permit issuance, the applicant shall provide to the City an analysis of the capacity and condition of existing drainage facilities downstream of the development (including any detention/retention ponds), including recommendations for offsite drainage improvements, which shall be constructed prior to the issuance of the first certificate of occupancy. Site grading and drainage improvements shall be shown on the improvement plans. In the unlikely event that the downstream facilities require improvements, the applicant **and the City** shall enter **into** a Funding Agreement ~~as a means of reimbursement from~~ **whereby the applicant is reimbursed for said improvements by** ~~from~~ the City.

92. The 100-year overflow and pipeline easement on Lot 25 shall be dedicated on the final map and language shall be included on the final map prohibiting any permanent structures (including garages, sheds, swimming pools, etc.) from being constructed within the easement, as well as provisions (including requirement regarding grading) that ensure that Lot 25 remain in a condition such that it allows relief for the 100-year storm overflows.

93. Prior to Final Map recordation, the developer shall obtain a construction easement from the City over Parcel 009-030-019 to construct the drainage improvements, wall, and fence on lots 5-20. The drainage ditch on Lots 5-20 shall be privately owned and maintained.

Public Works Final Map Conditions

94. A final map, as defined in the State Subdivision Map Act, shall be prepared by a licensed surveyor or civil engineer, showing all parcels, rights-of-way, and easement(s) shall be filed with the City Engineers Office. The final map shall be substantial conformance with the

approved Tentative Map and all applicable conditions of approval. The final map is not valid until it has been approved and recorded.

95. Prior to building permit issuance, the developer shall secure all necessary rights-of-way and easements for both onsite and offsite improvements. Rights-of-way and easements shall be dedicated on the map or provided by separate instrument. The developer shall prepare all necessary legal descriptions and deeds. Offers of dedication shall be either via easement or fee title).

96. The applicant shall transmit by certified mail a copy of the conditionally approved Tentative Map together with a copy of Section 66436 of the State Subdivision Map Act to each public entity or public utility that is an easement holder of record. Written compliance shall be submitted to the City of St. Helena

97. The final map shall not be approved prior to approval of the Subdivision Improvement Plans.

98. Prior to approval of the final map, the developer shall either complete required improvements in accordance with the approved improvement plans or enter into a Subdivision Improvement Agreement with the City. A certificate of occupancy shall not be issued for any structure until required improvements are completed consistent with City standards to the satisfaction of the City Engineer.

99. Abandonment of existing 10-foot public water easement crossing the property shall be included on the final map or by separate document.

100. The unnumbered lot between Lots 3 and 4 as shown on the Tentative Map shall be included as part of Lot 52 and shall not be a separate lot.

Public Works Construction Conditions

101. No grading or other construction shall be performed until the improvement plans have been approved and signed by the City Engineer. Encroachment Permits and Building Permits will not be issued prior to the approval of the improvement plans. An Encroachment Permit is required for any work within the City's rights of way.

102. The developer shall keep adjoining public streets free and clean of project dirt, mud, materials, and debris during the construction period, as is found necessary by the City Engineer.

103. Prior to the issuance of a grading permit, the developer shall provide evidence that a Notice of Intent has been submitted and received by the Regional Water Quality Control Board for a General Construction Activity Storm Water Permit. A copy of the project Storm Water Pollution Protection Plan shall be submitted to the City.

104. If any hazardous waste is encountered during the construction of this project, all work shall be immediately stopped and the Napa County Environmental Health Department, the Fire Department, the Police Department, and the City Inspector shall be notified immediately. Work shall not proceed until clearance has been issued by all of these agencies.

105. Prior to final preparation of the subgrade and placement of base materials, all underground utilities shall be installed and service connections stubbed out behind the sidewalk. Public utilities, Cable TV, sanitary sewers, and water lines shall be installed in a manner which will not disturb the street pavement, curb, gutter and sidewalk, when future service connections or extensions are made.

106. Where soil or geologic conditions encountered in grading operations are different from that anticipated in the soil and/or geologic investigation report, or where such conditions warrant changes to the recommendations contained in the original soil investigation, a revised soil or geologic report shall be submitted for approval by the City Engineer. It shall be accompanied by an engineering and geological opinion as to the safety of the site from hazards of land slippage, erosion, settlement, and seismic activity. Additionally, if field conditions warrant installation of any subdrains, the location, size and construction details must be provided to the City for review and approval prior to construction.

107. Prior to placing the final lift of asphalt, all public sanitary sewer lines shall be video inspected at the expense of the contractor/developer. All video tapes shall be submitted to the City. If any inadequacies are found, they shall be repaired prior to the placement of the final lift of asphalt.

108. All streets, curbs, gutters, sidewalks or other public facilities damaged in the course of construction associated with this development shall be the responsibility of the Developer and shall be repaired per City standards to the satisfaction of the City at the Developer's expense.

109. The applicant shall submit a proposed haul route for all trucking associated with this project to the City Engineer for review and approval prior to issuance of a grading permit.

110. Dust control must be maintained per City standards to the City's satisfaction.

111. A certificate of occupancy shall not be issued for any structure until required improvements are completed per City standards to the satisfaction of the City Engineer.

Public Works Subdivision Final and/or Release of Securities Conditions:

112. All public improvements shown on the Improvement Plans shall be completed and accepted by the City prior to release of any security posted.

113. All punch-list work shall be completed, and any outstanding inspection fees or other charges shall be paid prior to issuance of any certificate of occupancy or prior to acceptance of the improvements, at the discretion of the City.

114. Video inspections shall be made of all storm drain and sewer lines installed by developer as set forth in the approved improvement plans to ensure that they are clean of dirt, rocks, debris or other material. Contractor/developer shall be responsible for cleaning and flushing all storm drain lines prior to acceptance by the City. If flushing of the storm drain system is required, the contractor/developer shall put sufficient plugs/filters in place to ensure that any debris, mud or other material is not washed beyond the piping system in the subdivision nor

into any natural water course. A copy of the DVD of all storm drain lines shall be delivered and reviewed by the City prior to acceptance. This condition shall be satisfied prior to issuance of any certificate of occupancy or prior to acceptance of the improvements, at the discretion of the City.

115. Developer shall provide sufficient security guaranteeing the public improvements for a period of one year.

116. A complete set of As-Built or Record improvement plans showing all substantial changes from the original plans shall be certified by the Civil Engineer of record and submitted to the City Engineer prior to acceptance of the public improvements.

117. Prior to acceptance of the public improvements, the developer shall provide a written statement signed by his or her engineer certifying that they observed the work during construction and that site grading and all private site improvements have been completed in accordance with the improvement plans approved by the City Engineer.

118. Prior to acceptance of the public improvements, the developer shall provide a written statement signed by his or her geotechnical engineer certifying that they observed the work and reviewed testing results, and that all of work was performed in accordance with the recommendations included in the Soils Report or other recommendations necessitated by field conditions.

Fire Department Conditions

119. Prior to the issuance of a Certificate of Occupancy, the developer is responsible for fire hydrants to be included and installed within the development in compliance with City standards (number, location and spacing) to the satisfaction of the Fire Department. Locations of the fire hydrants shall be approved by the Fire Department prior to approval of the final map.

120. Plans submitted for building permit shall exhibit compliance with the current St. Helena Fire Code, as adopted and codified in St. Helena Municipal Code Chapter 15.36.

121. Prior to issuance of future building permits, all construction plans for homes and other structures shall include fire sprinklers as required by the City of St. Helena Fire Department.

122. One hour minimum fire-resistant construction on all exterior walls within 10’ of property boundary is required. Fire resistant construction of interior walls shall be determined by type of occupancy.

123. Any gates installed to control vehicular access to a property are required to be setback 30-feet from the property line and/or edge of pavement, whichever is greater. No vehicle gates may be installed without Fire Department and Public Works Department review and explicit approval.

~~124. Access to the levee road is restricted for public use and only granted to emergency vehicles and emergency egress for Vineyard Valley Mobile Home Park residents. Signage prohibiting~~

~~its use by the public is recommended. Public access will be granted at the discretion of the Authority Having Jurisdiction during emergencies/evacuations.~~

CITY COUNCIL REPORT

Meeting of May 1, 2023

FILE NUMBER: PL10-040 and TM2022-001

SUBJECT: Request by Ben and Kelly Vanzutphen to subdivide a 16.9-acre parcel to establish 51 single-family residential lots, 11 of which are proposed with accessory dwelling units on approximately 13.4 acres. A 3.13-acre parcel will be established to accommodate a 25-unit multi-family housing development. Two additional remnant parcels (Parcel A; 0.06 acres) and (Parcel B; 0.04 acres) will remain with no plans for future development. A total of 87 units are intended to be built. The currently vacant project site is located north of Hunt Avenue and east of the future extension of Adams Street within the Medium Density Residential (MR) Zoning and (MDR) General Plan districts.

PREPARED BY: Eric Norris, Planning Consultant

REVIEWED BY: Maya DeRosa, Community Development Director

APPROVED BY: Maya DeRosa, Community Development Director

APPLICATION FILED:09/09/10 **ACCEPTED AS COMPLETE:**03/25/11

LOCATION OF PROPERTY: North of Hunt Avenue, east of the future extension of Adams Street

APN: 009-030-057

GENERAL PLAN/ZONING: Medium Density Residential (MDR/MR)

APPLICANT: Ben and Kelly Van Zutphen **PHONE:** 707-431-8582

PLANNING COMMISSION ACTION

On February 7, 2023, the Planning Commission of the City of St Helena held a duly noticed public hearing to consider the Hunter project's Environmental Impact Report and the proposed Tentative Map. At the conclusion of the February 7 meeting, the Planning Commission voted 4-0 (member Rothfeld was absent) to 1) approve Planning Commission Resolution PC2023-001, recommending that the City Council certify the Final Environmental Impact Report for the proposed project and adopt a Statement of Overriding Considerations, and 2) approve Planning Commission Resolution PC2023-002, recommending that the City Council approve Tentative Map TM2022-001.

BACKGROUND

The following is a discussion of the project's setting and background.

1993 General Plan

The subject property has been designated since at least 1993 for development with Medium Density Residential homes. The 1993 General Plan land use map designates the property for Medium Density Residential (MDR), which is described as follows in the 1993 General Plan:

The MDR designation provides for single-family detached and attached homes, secondary residential units, public and semi-public uses, and similar and compatible uses. Residential densities shall be in the range of 5.1 to 12.0 dwelling units per gross acre. The MDR designation is the predominant residential designation, occurring throughout large areas of the City. The wide distribution of this designation is intended to maintain a development pattern in newly developing areas that is consistent with historic development patterns.

As discussed later in this report, the proposed subdivision was submitted and accepted as a complete application (that is, ready for staff review and analysis) in 2011, when the 1993 St Helena General Plan was in effect. Although the 1993 General Plan was replaced in 2019 by the current General Plan (the "2019 General Plan"), the 1993 General Plan is used in this report because state law regulating the review of subdivision maps mandates the use of the Plan that was in place when an application was filed. A discussion of the proposed subdivision's consistency with the General Plan adopted in 2019 is included later in this report for informational purposes.

Zoning

At the time that application for the proposed subdivision was accepted as complete, the zoning for the site, as shown on the City's Zoning Map, was Medium Density Residential (MR). The current zoning designation is the same. The Zoning Map as it existed in 2011 and in its current form are both attached to this report.

The MR zoning district provides for single-family detached homes, accessory dwelling units, limited agricultural uses and compatible uses.

The Zoning Code (both at the time of application completeness and today) describes the MR zoning district as follows:

"The MR district is established for consistency with the medium density residential general plan designation. The district provides for single-family detached homes, accessory dwelling units, limited agricultural uses and compatible uses. Residential densities shall not be less than 5.1 dwelling units per acre nor more than sixteen (16) dwelling units per acre." [Zoning Code 17.40.010]

Municipal Code Section 17.40.060 (Development Standards) establishes the standards for lots:

- Minimum lot area: 7,000 square feet
- Minimum lot width and frontage: 70 feet
- Minimum density: 5.1 units per acre

The parcels proposed for single-family residential lots range in size from 7,000 square feet to 12,814 square feet. All proposed lots meet the minimum depth and width requirement of 70 feet.

The MR district allows a minimum density of 5.1 dwelling units per acre up to a maximum of 16 dwelling units per acre. The Tentative Map would accommodate at least 87 units on a 16.9-acre site resulting in a proposed density of 5.15 dwelling units per acre in compliance with the MR district minimum density requirement.

All other applicable standards related to the siting and development of the proposed structures, including lot coverage, floor area ratio, and structure height and setbacks, will be reviewed for compliance when the proposed dwelling units are submitted to the City for design review and a conditional use permit (for the multi-family homes).

PROJECT PROCESSING HISTORY

It is important to note that although this site has remained an undeveloped parcel, it has been designated for residential development since at least 1993 (see General Plan discussion).

2010: Application Submitted

On September 9, 2010, the applicants, Ben and Kelly Van Zutphen, applied to the City to subdivide an approximately 17-acre parcel of land in the eastern area of the city, east of the existing terminus of Adams Street. The proposed subdivision would create lots for 51 single-family homes and 11 accessory dwelling units, and a 52nd lot on which at least 25 multi-family housing units would be built. Several rounds of review and revisions transpired over the course of the next six months.

2011: Application Complete/1st EIR Process Begins

On March 25, 2011, a completeness letter was issued by the City to the applicants along with a request for additional information related to the existing well and site drainage. The Planning Commission held a “pre-scoping” meeting on July 19th to review the Initial Study and gather public comments. On August 6th, the Planning Commission held a second “pre-scoping” meeting and directed the Planning Department to issue a Request for Proposals (RFP) for the project’s Environmental Impact Report. On December 6th, the Planning Commission held a public scoping meeting for the project EIR.

2012: Draft EIR #1 Released for Public Review

On March 19, 2012, the Notice of Preparation for the Draft EIR #1 was circulated. The Draft EIR was released on March 29th for public and agency review with the initial comment period scheduled to end on July 13th, then extended an additional 45 days to end on September 4th, with a Draft EIR public comment meeting held on August 28th.

2013: Planning Commission Considers Draft EIR #1

Urban Planning Partners (consultants contracted to prepare the Draft EIR) commenced preparation of responses to comments in January of 2013. On September 17, 2013, the Planning Commission considered certification of the Final EIR. The item was presented to the Planning Commission then continued to a future date but was not acted on.

Following the Planning Commission meeting and continuance of the item, additional information was submitted to the City that included a re-design of the intersection of Pope Street and the Silverado Trail. This re-design resulted in the requirement for additional CEQA analysis of the project EIR.

2014 - 2015

No significant progress was documented for the project or the project EIR in the years 2014 to 2015.

2016: Draft EIR #1 Revised
Urban Planning Partners completed revisions to the Draft EIR and resubmitted to the City in approximately the middle of 2016. DEIR revisions resulted in request for information regarding water use and affordable housing provisions for the Tentative Map. On October 3rd, City staff requested additional information and funding from the applicant. Staff met with the applicant on December 20th to discuss the details of the request for additional information and funding.

2017: Draft EIR Consultant Quits; New EIR Consultant
On April 21, 2017, the project applicant provided some requested information but did not provide additional funding until May 2017. On May 19th, Urban Planning Partners declined to complete the project EIR and officially confirmed resignation on June 29th. City staff sent requests for consultation services to three planning consulting firms on the City's approved Master Services Agreement list. None of the firms replied to the request for services and on September 14th, the City issued a Request for Proposals soliciting proposals from qualified environmental consultants for the preparation of an EIR for the project. On December 12th, Dudek is contracted to complete the project EIR.

2018: Preparation of EIR #2 Begins/Revised Map and Info Submitted
On March 6, 2018, the city issued a new Notice of Preparation, and the public comment period is initiated, followed by a public scoping meeting held on March 12th. The public comment period ends on April 13th. On August 3rd, the applicant submitted a revised tentative map and supporting documentation, with the subdivision design remaining largely unchanged.

2019: Revised Map and Info Submitted
On February 1, 2019, the applicant submitted an updated tentative map, a proposed Affordable Housing Agreement, and additional technical studies. The applicant was contacted on September 4th and informed that further work on the project application and EIR will not commence until unpaid balances are remitted to the City. On November 26th, the City approved an augmented budget for Dudek to complete additional technical work for the project EIR following payment from the applicant.

2020: EIR Preparation Continues
On March 16th, augmentation of the Dudek budget was approved for the completion of a Vehicle Miles Travelled (VMT) study, General Plan Goals and Policies update, and Wildfire analysis to include in the project EIR.

2021: Draft EIR #2 Circulates for Public Review/Response to Comments Begins On February 9, 2021, the Dudek budget was approved for augmentation again to include a second Administrative Draft EIR, second Screen-check DEIR, and Final EIR preparation. On April 27th, Interwest was contracted by the City to provide planning services and manage the processing of the project. The City held a public comment period on the second Draft EIR from September 23rd to November 8th (45 days); with the comment period later extended to November 30th (67 days total) due to the volume of comments received and requests for additional time from commenters. Dudek began preparation of responses to comments in December.

2022: Response to Comments on EIR #2 Continues/Staff Report Prepared
On April 12, 2022, Dudek requested additional funding to complete the project FEIR. The City prepared a Professional Service Agreement (PSA)to facilitate a sewer line capacity study on April 22nd in response to technical comments raised as part of the Draft EIR public review. The staff report package for Planning Commission is prepared for the November 1, 2022 meeting.

In response to numerous requests from the public for additional time to review the staff report package, the November 1, 2022, Planning Commission meeting was cancelled. The meeting was subsequently rescheduled for February 7, 2023; the staff report package was updated and republished, and new public hearing notices were published and mailed. In response to comments on one aspect of the traffic analysis for the proposed project, a typographical error in the Traffic Impact Analysis was made and the Final EIR was amended to include this change.

PROJECT DESCRIPTION

The proposed project being considered by the Planning Commission at this time is a Tentative Subdivision Map to subdivide an approximately 17-acre parcel of land in the eastern area of the city, east of the existing terminus of Adams Street. The proposed subdivision would create lots for 51 single family homes, and a separate parcel (lot 52) on which multi-family attached housing units would be built. The proposed Tentative Subdivision Map is included as Attachment 3 to this report.

Approval of the tentative subdivision map is the first necessary but not final step for the subdividing of the property; future discretionary applications would define the design of the development that would take place on the lots created by the subdivision.

Including the ADUs, the project as currently envisioned by the applicant would have 87 homes, which is the minimum number of homes that can be built on the site per its existing General Plan and Zoning designations. A summary of the currently proposed residential units is shown below:

Single Family Homes:	51 units
Attached Multi-Family:	25 units
Accessory Dwelling Units:	11 units
TOTAL:	87 units

The overall residential density of the project, including all residential types, is 5.15 units per acre (87/16.9 = 5.15).

Each of the single-family lots would be at least 7,000 square feet in size, with larger corner lots and cul-de-sac lots.

As part of the first phase of construction, infrastructure to support the proposed project would be developed, including:

- Storm drain, and sanitary sewer facilities will be constructed per City standards. All lots have been designed to drain to the street.

- Per the General Plan Circulation Element, Starr Avenue will be extended through the project area across an existing City-owned parcel, and Adams Street will be extended eastward to connect with Starr. Internal roadways would be constructed. All streets have been designed according to the City standards. Starr Avenue and Adams Street will also include on-street bicycle lanes.

An existing well will be preserved on proposed Parcel B and connected to an on-site “purple pipe” water distribution system to provide all landscape irrigation and outdoor needs (car washing, etc.) throughout the project site. The well and onsite water system would be owned and maintained by a homeowners association.

The “panhandle” potion of Lot 52 will be landscaped and maintained by the property owner.

If the proposed Tentative Map is approved, prior to any construction occurring, the project will also require approvals by the City Council of a Final Map, an Affordable Housing Agreement, Design Review approval by the Planning Commission for the proposed single-family homes and a Conditional Use Permit for the development of the proposed multi-family homes. Public meeting notices will be sent for all future hearings. These applications are not being considered at this time but will be submitted and reviewed at a future date.

Also, a small portion of lot #51 (see Attachment 3) is located on City-owned property, currently intended as part of the right of way of Adams Street. A proposed condition of approval requires that this property be vacated and transferred to the applicant prior to recordation of the Final Map.

ANALYSIS

Tentative Maps are governed by Section 16.16 of the St Helena Municipal Code (SHMC), as well as the California Subdivision Map Act. Specifically, Sections 16.16.060 (Planning Commission action) and 16.16.070 (City Council action) require the proposed Map to be first presented to Planning Commission for review and recommendation to City Council. Section 16.16.080(A) defines the findings that must be made for the Planning Commission to recommend approval of a tentative map. While there are a number of concerns that have been expressed by the community, a Tentative Map may only be denied if it is found to be inconsistent with the findings below (from Section 16.16.080 of the St Helena Municipal Code):

A. In recommending approval or conditional approval or in approving or conditionally approving a tentative map, the planning commission and city council shall find:

1. That the proposed subdivision, together with the provisions for its design and improvement, is consistent with the general plan, any applicable specific plan, and other applicable provisions of this code; and

2. Except for condominium conversion projects where no new structures are added, that the design of the proposed subdivision provides, to the extent feasible, for future passive or natural heating or cooling opportunities in the subdivision, as described in the state Subdivision Map Act and any guidelines promulgated by the city council.

In addition, the proposed subdivision is a “housing development project” as defined by State law, and in recent years the State legislature has passed legislation that significantly restricts the grounds pursuant to which a housing development project can be denied. Specifically, Government Code Section 65589.5(j)(1) provides that if a housing development project complies with applicable objective general plan, zoning, and subdivision standards and criteria in effect at the time the application was deemed complete, the City may only deny the project if it finds, based on written findings supported by a preponderance of the evidence in the record that both of the following conditions exist:

1. The housing development project would have a specific, adverse impact upon the public health of safety unless the project is disapproved or approved upon the condition that the project be developed at a lower density. As used in this paragraph, a "specific, adverse impact" means a significant, quantifiable, direct, and unavoidable impact, based on objective, identified written public health or safety standards, policies, or conditions as they existed on the date the application was deemed complete.

2. There is no feasible method to satisfactorily mitigate or avoid the adverse impact identified pursuant to paragraph (1), other than the disapproval of the housing development project or the approval of the project upon the condition that it be developed at a lower density.

Other, more general policy considerations not related to these findings or to consistency with the General Plan (such as the other concerns expressed by the public) should not be cited in a recommendation to approve or deny the proposed subdivision.

The following sections describe staff's analysis of each of the findings required for approval of a tentative map, which staff recommends can be made.

1993 General Plan Consistency
Because the application for the proposed subdivision was deemed complete by the City in 2010, at a time when the City's 1993 General Plan was in place, the 1993 General Plan was used to determine "… consistency with the general plan."

Staff's review of applicable policies from the 1993 General Plan is included as Attachment 4 to this staff report. Staff's recommendation is that the proposed subdivision is **consistent** with all applicable 1993 General Plan policies.

Although consistency with the General Plan adopted in 2019 (the "2040 General Plan Update") is not part of the determination of General Plan consistency, an analysis has been prepared by staff and is included as Attachment 5 to this staff report. The conclusion of staff's analysis is that the proposed project is also consistent with the current (2019) General Plan.

Specific Plan Consistency
The proposed subdivision is not located in a Specific Plan area.

Zoning Code Consistency
For the purposes of the proposed subdivision map, consistency with "… other applicable provisions of this code" is determined by reviewing the map in relation to the density and lot standards for the MR zoning designation.

Other portions of the Zoning Code or the St Helena Municipal Code which deal more specifically with development projects (that is, the construction of homes and other structures) are not relevant to the consistency of the subdivision map, which is the only application being considered at this time. Those separate findings, where needed, would be made at the time subsequent applications are submitted to the City.

As noted earlier in this report, Municipal Code Section 17.40.060 (Development Standards) establishes the standards for lots in the MR zoning district:

- Minimum lot area: 7,000 square feet
- Minimum lot width and frontage: 70 feet
- Minimum density: 5.1 units per acre

Based on a review of the proposed subdivision, staff recommends that the map complies with and is consistent with these standards:

- All proposed residential lots[1] are at least 7,000 square feet in size
- All proposed residential lots are at least 70 feet in width
- The overall density of the project, including the proposed 25 multi-family homes on Parcel 52 and the proposed 11 accessory dwelling units, is 5.15 units per acre, which meets the minimum required density.

(1. Non-residential lots, such as the lot containing the existing well, are not subject to the minimum standards and are not included in this analysis.)

Design for Passive or Natural Heating or Cooling

This standard is described as follows in the State of California Subdivision Map Act:

(b) (1) Examples of passive or natural heating opportunities in subdivision design, include design of lot size and configuration to permit orientation of a structure in an east-west alignment for southern exposure.

(2) Examples of passive or natural cooling opportunities in subdivision design include design of lot size and configuration to permit orientation of a structure to take advantage of shade or prevailing breezes.

(c) In providing for future passive or natural heating or cooling opportunities in the design of a subdivision, consideration shall be given to local climate, to contour, to configuration of the parcel to be divided, and to other design and improvement requirements, and that provision shall not result in reducing allowable densities or the percentage of a lot that may be occupied by a building or structure under applicable planning and zoning in effect at the time the tentative map is filed. [CA Govt Code section 66473.1]

Based on an analysis of the proposed subdivision, staff recommends that the map provides, to the extent feasible, opportunities for passive or natural heating or cooling, as discussed below.

- Approximately 40 of the proposed lots would allow a house oriented in an east-west configuration, allowing these homes, if properly designed, to take advantage of solar exposure.
- Approximately 40 of the proposed lots would allow for homes oriented so that, if front and rear doors and windows were opened, the prevailing upvalley breeze would provide for natural cooling.
- There is no existing shade on the property, but future homes would be required to install landscaping, including trees that would provide shade.

CEQA

A Notice of Preparation of a Draft Environmental Impact Report (SCH# 2018032014) was prepared and available for public review and comment during the state-mandated 30-day public review period from March 6, 2018, through April 9, 2018. A public scoping meeting was held on March 12, 2018. Concerns raised from public agencies and the public include impacts to the property from potential flooding, traffic and circulation impacts, increased water demand, and impacts to cultural resources.

A Draft EIR was prepared with a 45-public review period beginning on September 23, 2021 and ending on November 8, 2021. Due to the volume of comments, the public review

period was extended to November 30, 2021, for a total of 67 days.

The Draft EIR is included as Attachment 6 to this report. The proposed Final EIR, which includes comments on the Draft EIR and responses to comments, is included as Attachment 7. The Mitigation Monitoring and Reporting Program is included in the Resolution in Attachment 1.

One comment received after the publication of the November 2022 Planning Commission agenda package called attention to a minor typographical error in Table 7 of the Traffic Impact Analysis (Appendix K to the Draft EIR) which overstated the project's impact to the intersection of Silverado Trail/Pope Street. Due to a typographical error, the TIA published with the Draft EIR incorrectly showed a future level of service of "E" at this location; the corrected version shows a future level of service of "C" (the analysis of delay was correct and showed a "LOS C" level of delay). This change is shown in Chapter 3 of the Final EIR, "Changes to the Draft EIR."

All documents referenced in the EIR are available for inspection upon request.

Topics Addressed in the Draft EIR

The Draft EIR discusses the project's impacts associated with the following topics.

The Draft EIR's conclusions are discussed later in this report; conclusions of the EIR about the significance of impacts for each topic are shown below.

- Aesthetics (Potentially Significant, but mitigation available)
- Agriculture and Forest Resources (Less than Significant)
- Air Quality (Less than Significant)
- Biological Resources (Potentially Significant, but mitigation available)
- Cultural and Tribal Resources (Potentially Significant, but mitigation available)
- Energy (Less than Significant)
- Geology and Soils (Potentially Significant, but mitigation available)
- Greenhouse Gas Emissions (Less than Significant)
- Hazards and Hazardous Materials (Potentially Significant, but mitigation available)
- Hydrology and Water Quality (Less than Significant)
- Land Use and Planning (Less than Significant)
- Mineral Resources (Less than Significant)
- Noise and Vibration (Potentially Significant, but mitigation available)
- Population and Housing (Less than Significant)
- Public Services (Less than Significant)
- Recreation (Less than Significant)
- Traffic and Transportation (Significant and Unavoidable)
- Tribal Cultural Resources (Less than Significant)
- Utilities and Service Systems (Less than Significant)
- Wildfire (Less than Significant)

Alternatives Considered
The EIR evaluated four Alternatives in addition to the proposed project. The four alternatives (described in detail in the Draft EIR) are:

- Alternative *1) No Project/No Development Alternative, described in the Draft EIR as, "… the Proposed Project would not be approved or constructed. Under this alternative, the Project site would retain its current land use designation and zoning consistent with both the 1993 General Plan and the City's current 2019 General Plan.*

- Alternative *2) No Project/General Plan, described as, "… the Project would be developed consistent with the underlying MDR land use designation and MR zoning which allows development of the Project site with residential uses up to a maximum density of 12 dwelling units/acre (du/ac) under the 1993 General Plan MDR designation which was revised to 16 du/ac under the 2019 General Plan consistent with the MR zoning, which permits a maximum density of 16 du/ac. For the purposes of this alternative a density of 9 du/ac was assumed for a total of 152 single-family residential units."*

- Alternative *3) Park/Open Space Preserve Alternative, described as, "… includ[ing] an approximately 1-acre park/open space that would preserve a majority of the on-site wetlands to help lessen impacts to seasonal wetlands … To accommodate the park three lots would need to be removed … and vegetated swales to capture runoff would be located adjacent to developed areas. … The remaining approximately 16-acres would be developed with approximately the same number of residential units as the Proposed Project and would maintain a density of 5.1 du/ac."*

- *Alternative 4)* Increased *Density/Affordable Housing Alternative, which "... includes the approximately 1-acre park to preserve a majority of the on-site seasonal wetlands with the remaining approximately 16-acres designated for up to 180 affordable housing units, assuming a density of 11.3 dwelling units per acre (du/ac) … The units would be attached housing (duplex or triplex) and would be 100% affordable."*

The alternatives are described in detail and analyzed in Chapter 5 of the Draft EIR.

Based on the analysis in the Draft EIR, Alternative 1, the No Project Alternative, would result in the fewest environmental impacts, and is the "environmentally superior alternative." However, Section 15126.6(e)(2) of the CEQA Guidelines states that if the environmentally superior alternative is the No Project Alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives.

Of the alternatives evaluated, Alternative 3, the Park/Open Space Preserve alternative is the environmentally superior alternative. However, according to the Draft EIR, "… this alternative would not avoid all of the significant impacts associated with the Project and all of the identified mitigation would still be required."

Potentially Significant Impacts
Impacts of potential significance requiring mitigation were identified in the following areas:

- Aesthetics
- Biological Resources
- Cultural and Tribal Cultural Resources
- Geology and Soils
- Hazards and Hazardous Materials
- Noise and Vibration

The Draft EIR concluded that mitigation was available to reduce all of these impacts to a level of Less Than Significant.

A summary listing of all potentially significant impacts and their associated mitigation measures is included in the Executive Summary in the Draft EIR (Attachment 6 to this staff report). Detailed discussions of impacts and mitigation are provided in Section 3 of the Draft EIR.

Significant and Unavoidable Impact: Vehicle Miles Traveled
Based on the analysis in the Draft EIR, impacts related to Transportation and Traffic (specifically, Vehicle Miles Traveled or "VMT") were found to be significant and unavoidable. This impact relates to the number of miles that will be traveled in motor vehicles by persons living in the proposed subdivision (trips to work, school, shopping, etc.). This impact is discussed in detail in Section 3.14 of the Draft EIR.

State law, effective January 1, 2020, requires the local agencies examine this impact and that the impacts of a proposed project on roadway congestion (historically, the standard used by most California cities and counties) is no longer included in an EIR. (The traffic congestion impacts of the proposed project were examined, but for purposes of determining consistency with General Plan congestion policies, this analysis is not included in the Draft EIR.)

The state's intent in requiring that VMT be projected is to focus efforts statewide on reducing unnecessary vehicle travel, generally by locating homes closer to jobs, shopping, and other daily needs, and by increasing the use of public transit, walking, and bicycling. As discussed in the Draft EIR, reductions in VMT for residential projects like the proposed project in semi-rural areas are difficult to achieve.

Compared to a commercial development, which could implement ride-sharing programs, residential projects have few options available to effectively reduce vehicle travel; none are available to reduce VMT for the Hunter subdivision enough to reduce this impact to a level of Less Than Significant.

For this reason, the Draft EIR concluded that this impact is Significant and Unavoidable.

Statement of Overriding Considerations
State law provides a means for the approval of a project which is identified to have one or more significant impacts. To do so, the local agency must adopt a Statement of Overriding Considerations which provides the reasons why the agency feels that the benefits of the project outweigh (or "override") the potential impacts. A Statement of Overriding Considerations has been prepared (included in Attachment 1 to this report) which provides the following reasons why approving the project is appropriate:

1. The Project provides needed housing to the City, particularly affordable housing.

2. The City, per the adopted 2015 Housing Element, has a jobs to housing ratio above the County average, indicating a need for additional housing. As of the most recent Housing Element Progress Report (April 2022), the City had not met its regional housing needs allocation for very-low or moderate income housing.

3. The Project would implement the City's General Plan. The Project site is identified as a housing site in the City's current General Plan, the current Housing Element, and the previous two iterations of the City's General Plan.

4. The significant and unavoidable impact is related to VMT. Ultimately VMT per capita will be reduced by providing necessary housing in jurisdictions with a high number of jobs. As stated previously, the City of St. Helena currently has a jobs housing imbalance which the Project will help address.

5. The Project will pay development fees which will assist in needed infrastructure improvements in the City, including wastewater treatment and collection systems.

6. The Project would construct the extension of Starr Avenue and the partial extension of Adams Street consistent with the General Plan Circulation Element.

The Statement of Overriding Considerations concludes,

The City Council hereby declares that the foregoing benefits provided to the public through the approval and implementation of the Project outweigh the identified significant adverse environmental impact of the Project that cannot be mitigated. The City Council finds that each of the Project benefits separately and individually outweighs all of the unavoidable adverse environmental effects identified in the EIR and therefore finds those impacts to be acceptable.

Public and Agency Comments on the Draft EIR
A total of 121 Draft EIR comment letters were received from the 2021 public review and Response to Comments were prepared and included in the Final EIR. Notification of the availability of the Final EIR was sent to the agencies, organizations, and individuals that provided comments. Topics addressed in the comments include:

- Concern about the capacity of downstream sewer lines to accommodate additional flows generated by the project.
- Concern about the “high density” of the proposed project.
- Concern about the loss of open space and the ability to walk on informal trails located on the project site.
- Concern about projected water use and the ability of the project to feasibly comply with the City’s water neutrality requirement.
- Concern about future traffic congestion and traffic safety impacts (including for children walking to school).
- Concern about the project’s impact on the ability of residents in the Vineyard Valley mobilehome community to evacuate in the event of an emergency.
- Concern about the ability of the City-constructed levee on the Napa River (built to protect the Vineyard Valley mobilehome community from flooding) to protect new homes in the proposed project.
- Concerns about changes to the appearance of the project site when existing open space and vines are replaced with a suburban neighborhood.
- Concerns about the project’s effect on the City’s plans to construct a new roadway connection to the Silverado Trail.

Responses to all of the comments received during the public review period are included in the Final EIR and Responses to Comments, Attachment 7 to this staff report.

Based on thorough review of the comments by City staff, legal counsel, and the EIR consultant, none of the comments or responses raised any issues which would require recirculation of the Draft EIR. Attachment 7 includes a list of minor errata changes to the Draft EIR which were included in the responses to comments.

Mitigation Monitoring and Reporting Plan
A Mitigation Monitoring and Reporting Program was prepared for the potential impacts

that require mitigation and is contained in the Executive Summary, Section ES.6 of the Draft EIR. Findings for Certification of the Environmental Impact Report and adoption of the Mitigation Monitoring and Reporting Program, and approval of Tentative Map File #PL10-040 are contained in the Resolution prepared for this project.

Revised Conditions of Approval

Following the publication of the November 2022 Planning Commission package, City staff and the applicant have discussed a number of changes to the proposed conditions of approval requested by the applicant. Staff ultimately agreed to some of the requested changes, but disagreed with others, as shown below.

Changes agreed to or rejected by staff are shown below; condition numbers reflect the updated conditions of approval as included in the Resolution approving the Tentative Map (attachment 2 to this report). The updated conditions of approval are included in the proposed Resolution approving the Tentative Map.

On February 7, the Planning Commission was also presented with changes to conditions of approval #85, #89 and #90. The Commission recommended that these changes, discussed below. be included in the final conditions of approval.

Conditions Revised

The following conditions of approval reflect changes requested by the applicant and make minor changes suggested by City staff to reflect standard City procedures. The final conditions are shown below, followed by a discussion of the changes made.

COA 22: The owners of the 51 single family residences and the multi-family development on parcel 52 shall be members of a homeowner's association, or another funding mechanism acceptable to the City, dedicated to the maintenance of the project's common areas, the internal irrigation system (fed by the well on Parcel B), and the well on Parcel B.

COA #22 was revised to require that the owners of Lot 52 are part of a HOA or other funding mechanism, and to allow flexibility in the type of funding mechanism established to maintain common areas, the internal irrigation system, and the well on Parcel B.

COA 26: Prior to issuance of building permits, the applicant shall develop a building construction plan to be approved by the Planning Director and Building Official to ensure that the homes meet or exceed Title 24 Energy Efficiency Standards and receive a green rating under either the LEEDS, Green Points Checklist, or other acknowledged rating system for energy conservation and green building practices. The latest version of the City of St. Helena green building standards will apply at the time of building permit submittal.

COA #26 was revised to show a requirement to "meet or exceed" Title 24 Energy Efficiency Standards (prior version required exceedance, which is not consistent with City practice).

COA 27: All City, state, federal and other applicable local ordinances, rules, regulations and policies in effect at the time of issuance of a grading or building permit shall be complied with.

This is a new condition of approval which is typically applied to development projects and inadvertently not included in earlier versions of the conditions of approval.

COA 32: Mechanical equipment, including heating and air conditioning units and spa equipment, shall be located away from property lines and shall be shielded or enclosed to minimize noise levels. Noise generated shall not exceed 60 dBa, Ldn. This condition of approval implements Mitigation Measure NOI-1 from the project environmental impact report, Chapter 8.24 of the St Helena Municipal Code, and noise-related policies of the St Helena General Plan, including policy 8.3.11 from the 1993 General Plan and policy PS2.4 from the 2019 General Plan. [Note: Formerly numbered as COA #31; renumbered due to the insertion of COA #27]

COA #32 was revised to add reference to the sources for the requirement to place HVAC units to minimize noise levels.

COA 36: Prior to recordation, the Final Map shall be designed per City standards to the satisfaction of the Public Works Director to accommodate the following facilities in the right of way of both Starr Avenue and Adams Street:

- Curb and Gutter in accordance with City Standard #310 for a 24" gutter.
- Sidewalks, either attached to the curb or detached from the curb, on both sides of the street along Starr Avenue, and only on the south side of Adams Street, in accordance with City Standard #315
- Parking lane on both sides of the street in accordance with City Standard #301 for a "Collector" street.
- Class II on-street bike lane on both sides of the street in accordance with Caltrans'
- Highway Design Manual Index 1003.2 but not less than 5 feet wide.
- Two vehicle travel lanes in accordance with City Standard #301 for a "Collector" street.
- Striping to delineate parking, bike, and travel lanes. [Note: Formerly numbered as COA #35; renumbered due to the insertion of COA #27]

COA #36 was revised to clarify that City Standard #315 (see the second bullet item) allows the sidewalk to be either attached to the curb or separated from the curb by a parkway strip. This COA was also revised to indicate that "City standards" would be used to determine the design of the facilities shown on the Final Map.

COA 41: All public facilities damaged by construction activities shall be the responsibility of the Applicant and shall be repaired per City standards to the satisfaction of the City at the Applicant's expense. [Note: Formerly numbered as COA #40; renumbered due to the insertion of COA #27]

COA 41 was revised to indicate that City standards will be used to determine whether repairs have been completed correctly.

COA 48: Except for the existing well on Lot 19 of the Tentative Map that will be providing irrigation water to this development, all existing wells, septic tanks and/or underground fuel storage tanks shall be abandoned under permit and inspection of Napa County Department of Environmental Health. If applicant determines that there are none, prior to the issuance of a grading permit, the project engineer shall provide a letter describing the scope of the search done to make this determination and demonstrating, in a manner consistent with City standards and proper engineering practices and to the reasonable

satisfaction of the City Engineer, that there are no other existing wells, septic tanks and/or underground fuel storage tanks within the boundaries of the Tentative Map. [Note: Formerly numbered as COA #47; renumbered due to the insertion of COA #27]

COA 48 was revised to refer include, "… in a manner consistent with City standards and proper engineering practices" as the standard for verifying compliance with this condition of approval.

COA 66: Street A: Prior to the issuance of a Certificate of Occupancy, Street A shall be improved to include two 10 ft. travel lanes, two 8 ft. parking lanes, curbs, gutters, a 6 ft. planter strips and 4 ft. sidewalk on the south side of the road and a 10-foot distance from the face of curb to the right-of-way line on the west side of the road. The total right-of-way width shall be 56 feet. The area between the curb and the right-of-way line on the west side of the street shall be graded such that it can be passable by pedestrians (cross slopes should not exceed 5%). The structural section of the street shall be per recommendations contained in the Soils Report. [Note: Formerly numbered as COA #65; renumbered due to the insertion of COA #27]

COA #66 has been revised to require two 10-foot-wide travel lanes in Street A, rather than 12-foot-wide lanes. This was done to conform with City standards for local streets.

COA 69: Access from Lot 52 to Starr Avenue shall be for EVA and pedestrian purposes. Ownership of this parcel shall be the same as Lot 52, or the access point shall be made part of Lot 52. [Note: Formerly numbered as COA #68; renumbered due to the insertion of COA #27]

COA #69 has been revised to eliminate specific requirements for the width of Lot 52 while maintaining its use for emergency vehicle access and pedestrian use.

COA #85. The proposed well and appurtenances (pump, etc.) for this development shall be owned and operated by the Homeowner's Association for this development. The well shall supply irrigation water for all landscaping of common areas and on all lots within the subdivision to limit use of domestic water produced by the City. Signage shall be provided on each lot warning of the use of well water and that the well water shall not be used for domestic purposes. Piping for all irrigation water from the well shall be purple pipe (same as used for recycled water). Also, disclosure statements (either through disclosures as required by the Department of Real Estate or on the final map) shall be provided to all property owners notifying them about use of well water and statements warning that well water should not be used for domestic purposes. If the City's reclaimed water system becomes available at the project site, the onsite irrigation system shall be connected to the reclaimed water system and the well shall be permanently closed. [Note: Formerly numbered as COA #84; renumbered due to the insertion of COA #27]

COA #85 has been added to require that the onsite irrigation system be connected to the City's reclaimed water system when it is available at the site, and that the onsite well be closed at that time.

COA 87: Prior to the issuance of the first building permit, all City-required improvements related to storm water for the project shall be installed by the project developer at its expense. Drainage improvements shall be designed and funded by the developer in accordance with the Design Criteria utilizing the rationale method and any applicable adopted City drainage plans. [Note: Formerly numbered as COA #86; renumbered due to the insertion of COA #27]

COA #87 has been revised to clarify the timing of this condition, and to state that the developer is responsible for installing improvements as required by the City and the

developer's expense.

COA 89: Prior to the issuance of the first building permit, the applicant shall submit for review and approval, drainage plans and hydraulic calculations prepared by a Registered Civil Engineer. The drainage plans and calculations shall indicate the following conditions before and after development:

•Quantities of water, water flow rates, major water courses, drainage areas and patterns, diversions, collection systems, flood hazard areas, sumps and drainage courses. [Note: Formerly numbered as COA #88; renumbered due to the insertion of COA #27]

COA #89 includes a minor wording change ("Prior to issuance of the first building permit …") to clarify the timing of this condition.

COA 90: Post-Development storm water discharge from parcel 009-030-057 shall not exceed the pre-development discharge including the projected build-out, expressed as a 30% undeveloped pervious and 70% impervious drainage watershed. Applicant shall prepare an analysis to show compliance with this COA. Refer to COA #90 for additional requirements of the analysis. [Note: Formerly numbered as COA #89; renumbered due to the insertion of COA #27]

COA #90 has been revised to clarify that post-development stormwater "leaving the site" must not exceed specified levels (which assume development of the site) and that the applicant provide an analysis to confirm this level.

COA #91 - Prior to building permit issuance, the applicant shall provide to the City an analysis of the capacity and condition of existing drainage facilities downstream of the development (including any detention/retention ponds), including recommendations for on-site and/or off-site drainage improvement, which shall be constructed prior to the issuance of the first certificate of occupancy. Site grading and drainage improvements shall be shown on the improvement plans. In the unlikely event that the downstream facilities require improvements, the applicant shall enter a Funding Agreement as a means of reimbursement from the City. [Note: Formerly numbered as COA #90; renumbered due to the insertion of COA #27]

COA #91 has been revised to provide for potential reimbursement by the City for the cost of downstream flood control improvements built by the applicant.

COA 93: Prior to Final Map recordation, the developer shall obtain a construction easement from the City over Parcel 009-030-019 to construct the drainage improvements, wall, and fence on lots 5-20. The drainage ditch on Lots 5-20 shall be privately owned and maintained. [Note: Formerly numbered as COA #92; renumbered due to the insertion of COA #27]

COA #93 has been revised to clarify that the City of St Helena is the owner of the parcel over which a construction easement is needed, and that individual homeowners will be responsible for maintaining a future drainage ditch on their lots.

COA 98: Prior to approval of the final map, the developer shall either complete required improvements in accordance with the approved improvement plans or enter into a Subdivision Improvement Agreement with the City. A certificate of occupancy shall not be issued for any structure until required improvements are completed consistent with City standards to the satisfaction of the City Engineer. [Note: Formerly numbered as COA #97; renumbered due to the insertion of COA #27]

COA #98 has been revised to indicate that City standards will be used to determine

whether improvements have been installed correctly.

COA 108: All streets, curbs, gutters, sidewalks or other public facilities damaged in the course of construction associated with this development shall be the responsibility of the Developer and shall be repaired per City standards to the satisfaction of the City at the Developer's expense. [Note: Formerly numbered as COA #107; renumbered due to the insertion of COA #27]

COA #108 has been revised to indicate that City standards will be used to determine whether repairs have been completed correctly.

COA 110: Dust control must be maintained per City standards to the City's satisfaction. [Note: Formerly numbered as COA #109; renumbered due to the insertion of COA #27]

COA #110 has been revised to indicate that City standards will be used to determine whether dust control have been maintained correctly.

COA 111: A certificate of occupancy shall not be issued for any structure until required improvements are completed per City standards to the satisfaction of the City Engineer. [Note: Formerly numbered as COA #110; renumbered due to the insertion of COA #27]

COA #111 has been revised to indicate that City standards will be used to determine whether improvements have been installed correctly.

COA 119: Prior to the issuance of a Certificate of Occupancy, the developer is responsible for fire hydrants to be included and installed within the development in compliance with City standards (number, location and spacing) to the satisfaction of the Fire Department. Locations of the fire hydrants shall be approved by the Fire Department prior to approval of the final map. [Note: Formerly numbered as COA #118; renumbered due to the insertion of COA #27]

COA #119 has been revised to indicate that City standards will be used to determine whether fire hydrants have been placed and installed correctly.

Conditions Not Revised As Requested by the Applicant

The applicant requested the following changes, which were not agreed to by staff:

COA 73: The applicant requested to include a dollar cap on the cost of improvements that will be installed at his expense to achieve water neutrality. Staff's position is that improvements to achieve the required reduction in overall domestic water use must be installed to achieve water neutrality, regardless of cost.

COA 88: The applicant requested deleting this condition. Staff disagreed, but did agree to minor wording changes, as discussed above.

COA 90: The applicant requested that this condition be deleted, and that post-development stormwater flows leaving the site be allowed to increase. Staff disagreed, pointing out that the applicant agreed as part of the settlement of a lawsuit with the City not to protest requirements to install the improvements required by this condition.

COA 91: The applicant requested that this condition be deleted. Staff disagreed; this requirement to provide detailed hydrological analysis of proposed stormwater systems is a standard requirement for all development projects.

Tentative Map Updates
To respond to comments received since the publication of the November 2022 Planning Commission package, the updated proposed tentative map includes the following minor changes:

- Lot 52 now shows conceptual grading and elevation and indicates that the proposed use is “Multi-Family Residential”.
- A note has been added to Sheet 4 including condition of approval #35 in its entirety to clarify changes that must be made to accommodate pedestrian and bicycle facilities in the public right of way prior to recordation of a Final Map.
- The property owner’s name has been updated to “White Fang Properties, LLC,” to reflect a change in ownership that occurred in October 2022.

OTHER PROJECT ISSUES

Based on public input and prior review of the project, the following are issues of concern to the public, but not necessarily related to the approval at hand.

- Water Neutrality
- Trail/Open Space
- Levee/Flooding
- Parking
- Aesthetics
- Sewer Capacity
- “High Density” Nature of the Project
- Traffic/Congestion
- Intersection Design Adams Street/Starr Avenue and Starr Avenue/Street A
- Vacation of City Property

These issues are discussed below.

Water Neutrality
The issue of Water Neutrality and the project’s ability to comply with the City’s requirement for no net increase in demand for domestic water, is addressed in detail in Master Response #2 to the comments on the Draft EIR.

In summary, the Draft EIR concluded that a variety of measures (detailed in Appendix J to the Draft EIR) are available that would either decrease water demand or increase the efficiency of the City’s water system so that the additional demand created by the proposed project would be offset and overall citywide demand would not increase. The Master Response also notes that the use of the onsite water well for irrigation and other outdoor uses is part of the overall strategy to reduce water demand for the project.

A condition of approval is also included requiring the applicant to identify and implement specific water system improvements to achieve water neutrality prior to issuance of any building permits.

Trail/Open Space
Many commenters expressed concern about how the project would affect their ability to use the portion of the existing public Napa River Trail system adjacent to the project site.

As noted in the responses to comments on the Draft EIR on this topic, the Final EIR includes this statement:

The Project does not propose removing the existing trail or levee maintenance road, as explained in Section 3.12, Public Services and Recreation on page 3.12-17 and on page 2-23 in Chapter 2, Project Description.

The trail system is located entirely outside of the proposed project and would not be affected by the proposed project. An illustration of the existing trail in relation to the proposed subdivision is included as Attachment 14 to this staff report.

Levee/Flooding
Many commenters expressed concern about various issues associated with the City-constructed levee adjacent to the project site. These include:

- Questions about the engineering standards and requirements used to design and construct the levee.
- Whether the levee was constructed or inspected by the U.S. Army Corps of Engineers.
- Whether the levee would adequately protect the project site.
- Whether the capacity of the City-owned flood basin adjacent to the project site would be affected by the proposed project to the extent that its capacity would be exceeded.
- Whether the City is properly maintaining the levee, including controlling rodents whose burrows could affect the integrity of the levee.
- Whether climate change could cause changes in flooding that would affect the ability of the levee to protect the project site.

Detailed responses to these concerns are provided in Master Response #3 to comments on the Draft EIR. Very brief summaries of the more detailed information in the Master Response include:

- The levee was designed and built by the City to meet US Army Corps of Engineers (USACOE) standards. Numerous levees throughout the US are built by local agencies in the same; not all levees are built by the USACOE.
- The levee was designed to provide protection from a “200-year” flood on the Napa River (a flood event which would be expected to occur once every 200 years, or with a 1-in-200 chance of occurring in any given year). This exceeds the usual 100-year standard.
- The adjacent flood basin was designed to accommodate storm flows from the subdivision, and assumed more paved and developed area (and, therefore, more

storm flows) than would be expected from the project as now proposed. The basin can handle storm flows from the proposed project.

- The City is properly maintaining the levee, including rodent control. Maintenance records are available online and at city hall.

- Because the levee was designed to accommodate a more severe flooding event than required (200-year vs 100-year), future increases in storm flows in the Napa River (if they occur as a result of climate change) would be handled better than if the levee were designed to minimum 100-year standard.

Additional Levee Comments
Since the preparation of the Master Responses, comments have continued to be received regarding the levee adjacent to the project site and the protection it provides to the project area.

These comments and responses from the Public Works Department are addressed in a "Frequently Asked Questions" document included as Attachment 23 to this staff report.

The City has also received comments asserting that the City would be "strictly liable" for any flooding that could occur either due to overtopping or failure of the levee. Those comments are addressed in a separate memo sent to the City Council by the City Attorney, and included with this staff report as Attachment 32.

Parking
Several commenters expressed concern that the new homes in the subdivision would cause parking on local streets to increase. While the responses to the comments from the perspective of the Draft EIR note that parking is not a CEQA issue which needs to be examined in the environmental document, staff offers the following responses from a planning perspective:

- Any development which takes place in the subdivision will be subject to detailed review to ensure that City parking standards are met. These include required parking for single and multi-family homes, both of which require a combination of covered and uncovered onsite parking.

- Parking on public streets is available to anyone; except where specifically signed, the City does not limit parking on public streets in the vicinity of the proposed subdivision.

- Because the project does not contain any features that would tend to attract large numbers of people on a regular basis, staff does not foresee any unusual increases in on-street parking in the vicinity as a result of the proposed project.

Aesthetics
Many commenters expressed concern about the change in appearance of the project site that would occur if homes replaced the existing open fields and vines.

The Draft EIR examines impacts to aesthetics in detail in section 3.1, "Aesthetics/Visual Resources." A brief summary of the Draft EIR's conclusions:

- The St Helena General Plan does not designate any specific views that are to be protected, but does provide general policies which seek to, "… [protect] views from streets, parks, and open spaces to vineyards, agriculture, and hillsides."

- The proposed project orients its major streets so that views of surrounding hillsides

and open space areas will be retained.

- Future development will be reviewed through the Development Review process, at which time specific home designs and placements will be reviewed by City staff and the Planning Commission to ensure that it complies with City standards.

Sewer Capacity
Many commenters expressed concern about the impact of the proposed project on the capacity of sewer lines downstream of the project, and especially in the Vineyard Valley mobilehome community, where the existing sewer system occasionally overflows during heavy rains (when rainfall essentially "leaks" into the City's sewer system and therefore increases flows and causes overflows).

This issue is examined in detail in Master Response #4 in the Final EIR, which includes the results of a detailed analysis of sewer capacity. A summary of the detailed Master Response #4:

- Due to the unwanted infiltration of rainwater into the sewer system during storms, the capacity of the sewer lines downstream of the project is occasionally exceeded, causing overflows. This is referred to a "Peak Wet Weather Flows" or "PWWF."

- During dry weather, flows in the sewer lines do not include rainwater, and the capacity of the lines is not exceeded.

- This lack of capacity during PWWF conditions is known to the City, and a future increase in the size of a sewer line downstream of the proposed subdivision has been identified to correct this problem.

- During dry weather conditions, there is sufficient capacity in the downstream sewer line to accept flows from the proposed project without overflowing.

- During PWWF conditions, flows from the proposed project would represent 0.5% of the flows in the line. While overflows can be expected in the downstream line until improvements are constructed, adding flows from the proposed project would not increase either the number or the severity of the overflows.

- Capacity is available at the City's sewage treatment plan to handle flows from the proposed project.

The proposed project, the EIR concludes, would not have an adverse impact on the City's sewer system.

"High Density" Nature of the Project
Several commenters expressed concern about placing a "high density" residential project adjacent to the existing Vineyard Valley mobilehome community. These commenters were apparently opposed to the project.

Staff notes that the Vineyard Valley community, with an overall density of approximately 5.4 dwelling units per acre (based on a review of aerial photography), is slightly more dense (a "higher density") than the proposed subdivision (5.1 dwelling units per acre).

As noted earlier in this report, the proposed project is at the lowest allowable density in the Medium Density Residential land use category, which ranges from 5.1-12.0 units per acre (1993 General Plan) and 5.1-16.0 units per acre (2019 General Plan).

Based on staff's analysis, the commenters who expressed concern about a "high density" project are expressing an opinion that is not supported by the actual project density. These commenters may be supporting a lower planned density of development for the project site, but the project must comply with the minimum density of 5.1 units per acre.

Traffic/Congestion
Many commenters expressed concern about increased traffic congestion as a result of the proposed project. While this impact is not examined the Draft EIR (because changes in state environmental law have removed discussion of traffic congestion from environmental documents), the traffic analysis prepared for the proposed project included an analysis of traffic and congestion impacts.

A brief summary of the results of the traffic analysis is provided in Attachment 15 to this report. The full text of the analysis is in Appendix K to the Draft EIR (Attachment 6 to this report).

Intersection of Adams Street/Street A/Starr Avenue
During staff's review of the proposed subdivision, concerns were expressed that because the intersections of Adams Street/Starr Avenue and Starr Avenue/Street are relatively close to each other, drivers could face difficulties negotiating the combination of these intersections. A modified design was developed that would end Street A at a cul-de-sac which would be open only to emergency vehicles, eliminating one of the intersections and simplifying the traffic movements.

However, a review of the City's roadway standards concluded that there is no clearly defined objective standard for intersection spacing, and that the proposed design meets all of the City's roadway design standards.

Therefore, staff did not recommend that the subdivision be revised to include the alternative roadway design (a cul-de-sac at Starr Ave/Street A).

Vacation of City Property
A small portion of proposed Lot 51 (at the southwest corner of Adams Street and Starr Avenue) is located on City-owned property which is currently proposed as part of the future right-of-way of Adams Street. This has been reviewed and found to be acceptable by the Public Works department (the portion of Lot 51 is not needed as future right-of-way), but approving the lot as proposed will require that the City vacate this property.

A proposed condition of approval is included to require the applicant to take appropriate steps to transfer this piece of City property to the applicant.

2019 GENERAL PLAN CONFORMANCE

An analysis of the proposed project's conformance with applicable policies of the current 2019 St Helena General Plan is included as Attachment 5 to this staff report. Based on staff's analysis, the project conforms with all applicable policies, including the proposed type and density of residential density proposed.

Note: As discussed earlier in this report, the 1993 St Helena General Plan, which was in effect at the time the application for the proposed subdivision was accepted as complete in 2011, is used in the official determination of consistency with the "General Plan." The analysis of conformance with the current 2019 General Plan is provided for informational purposes only.

ISSUES

Project issues include the significant and unavoidable impacts, public comments received in the Draft EIR, and other issues not related to the approval of the tentative map, as noted above.

PLANNING COMMISSION HEARING 2-7-2023 CORRESPONDENCE

The City has addressed three specific letters received as part of the public testimony from the last Planning Commission hearing (see attachments 17,18 and 20):

- Letter from the law firm of DP&F, dated 10-31-22, titled, "RE: Hunter Subdivision Project Environmental Impact Report, File #PL10-040" (Attachment 16a)

- Letter from the law firm of DP&F, dated 10-31-22, titled, "RE: Hunter Subdivision Project Tentative Map No. 2022-001, File #PL10-040" (Attachment 16b)

- Letter from the Napa County Bicycle Coalition, dated 11-1-22, titled, "Public Comment Re: Item 5.1: Hunter Subdivision Project EIR" (Attachment 19)

The following letters were received immediately prior to the February 7, 2023 Planning Commission meeting:

- Letter from the law firm of Holland & Knight (representing the applicant), dated 2-2-23, titled, "Re: City of St. Helena, Unlawful Conditions on Hunter Subdivision Project"

Response: Staff and the city attorney have reviewed the letter. In response to the first point raised in the letter, city staff is recommending a change to a condition to reflect the settlement.

The City is not persuaded by any of the other arguments raised. There is no improper exercise of discretion when conditions must be completed to the satisfaction of the city engineer because the city engineer's decision rests on established objective industry and city standards. The engineer is satisfied if the applicant satisfies objective engineering standards. Nor is this a valid basis for an unconstitutional-taking claim since the owner will be left with plenty of economic use even if the owner doesn't get everything that it is asking for.

- Letter from the law firm of DP&F, dated 2-6-23, titled, "RE: Hunter Subdivision Project Environmental Impact Report, File #PL10-040" (Attachment 26 to this report)

Response: The response to this letter is Attachent 28 to this report.

- Letter from the law firm of DP&F, dated "RE: Hunter Subdivision Project Tentative Map No. 2022-001, File #PL10-040" (Attachment 27 to this report)

Response: The response to this letter is Attachment 29 to this report.

- Letter from the Napa County Bicycle Coaltion, dated 2-7-23, titled, "Public Comment Re: Item 5.1: Public Hearing - Hunter Subdivision Project" (Attachment 30 to this report)

Response: The response to this letter is Attachment 31 to this report.

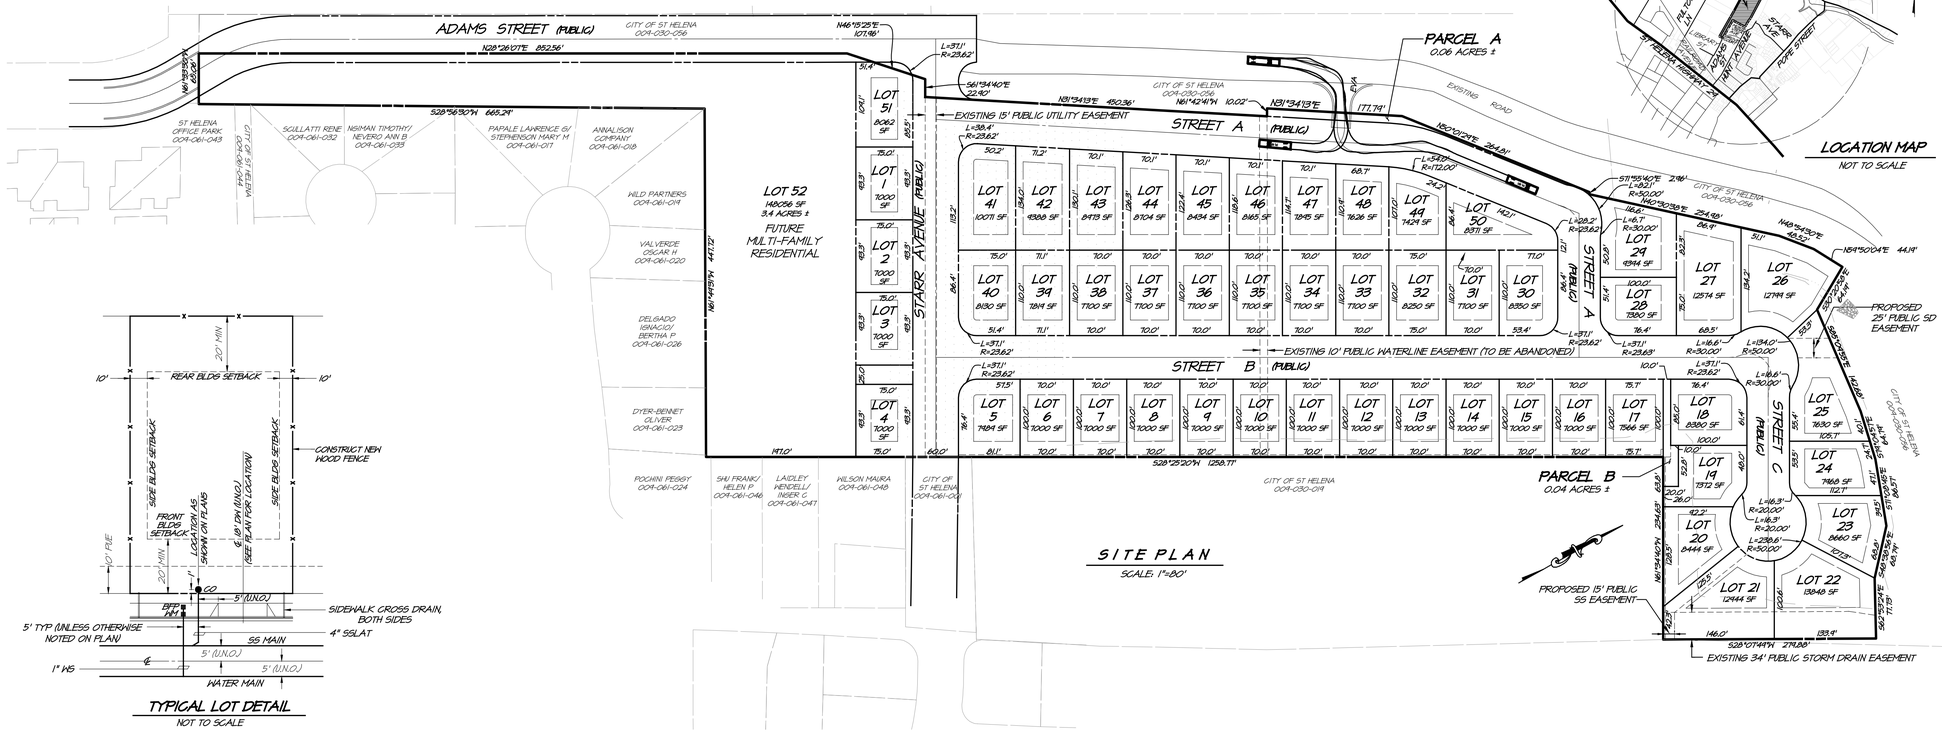
CITY COUNCIL HEARING 5-1-2023 CORRESPONDENCE

Responses to letters received after publication of this staff report will be attached to the agenda.

RECOMMENDED ACTION

After considering the project, staff report, supporting documents, technical studies and all testimony, written and spoken, the Planning Commission of the City of St. Helena

recommends that the City Council:



1. Adopt a Resolution certifying the Final EIR, and approving a Mitigation Monitoring Program, Findings of Fact and Statement of Overriding Considerations; and

2. Adopt a Resolution approving the requested Tentative Map No. 2022-001, File #PL10-040 for the Hunter Subdivision project.

PRESS RELEASE | City Response to Online Misinformation About the Hunter Subdivision

PRESS RELEASE

TODAY'S DATE: May 26, 2023

RELEASE DATE: Immediate

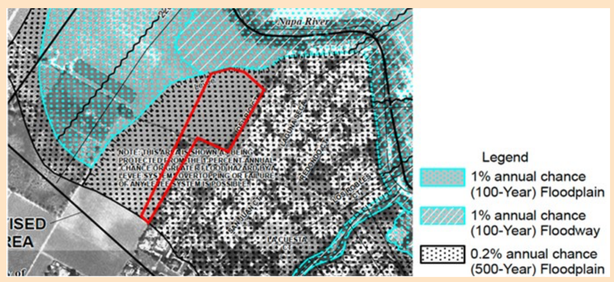
TITLE: City Response to Online Misinformation About the Hunter Subdivision (Press Release 2023-45)

CONTACT: Maya DeRosa, Community Development Director

mderosa@cityofsthelena.org , (707) 967-2783

ST. HELENA, CA – The City of St. Helena is committed to ensuring accurate information is available to the public, particularly in matters pertaining to community development and planning. In response to recent online misinformation regarding the Hunter Subdivision project, the City of St. Helena is re-releasing the Frequently Asked Questions (FAQ) documents to provide accurate details to the community.

The Hunter Subdivision project, which had its most recent public hearing during a special meeting of the St. Helena City Council on May 1, 2023, aims to provide additional housing options within the City of St. Helena, helping the City meet its state-mandated housing needs. The Hunter Subdivision project includes 87 homes, comprised of 51 single family homes, 25 multi-family units and 11 accessory dwelling units (ADUs).



Unfortunately, the project has been subject to misleading information disseminated through various online channels, most recently on NextDoor and with a petition on Change.org that includes an outdated FEMA flood map and other incorrect information. Recognizing the need to counter this misinformation, the City continues to take proactive measures to ensure residents have access to accurate and up-to-date information. This includes providing information on a special page of its website at cityofsthelena.org/planning/page/hunter-subdivision.

Among the factual errors in the text of the Change.org petition is a statement that, "FEMA no longer uses the concept of '100-year flood zones.'" This is incorrect, as noted on FEMA's own website regarding their new "Risk Rating 2.0" process. Under the heading of "What's Not Changing Under Risk Rating 2.0" is a statement that FEMA's flood insurance rate maps (which show 100- and 200-year flood zones, along with other flooding information). This section states that "... critical flood mapping data is necessary and essential for communities. It informs floodplain management building requirements and the mandatory purchase requirement."

The Change.org petition also mischaracterizes FEMA's Risk Rating 2.0 process, suggesting that FEMA has concluded that, "... the risk of catastrophic floods and failing levies in certain high-risk areas is so volatile as to be unpredictable." This is not the case. In fact, the Risk Rating 2.0 is a program that uses modern technology covering a wide range of factors to more accurately set the price of flood insurance. According to FEMA, "FEMA is now able to equitably distribute premiums across all policyholders based on home value and a property's flood risk, and set rates that are fairer and more equitable."

"It is important for the community to understand that FEMA's 'Risk Rating 2.0' system is simply a more holistic way of looking at flood risk," said Joseph Leach, PE, Director of Public Works for the City of St. Helena. "Before version 2.0, the rating system was based on two primary factors, the elevation of the property and the elevation of flood water. With Risk Rating 2.0 many other factors are now included. These include flood frequency, types of flooding and the cost to rebuild. These factors and others are then used to set insurance rates. The system does not move away from flood zones, which are still mapped by FEMA and used to set flood insurance rates. This new system is much like how vehicle insurance policy prices are set. Those policies do not just look at the vehicle driven, but take a more holistic approach by considering the driver's age, their driving record, the type and age of the car, how many miles per year are driven, etc. Risk Rating 2.0 is very much the same, but for flood insurance."

Another misrepresentation on the Change.org website is the FEMA map which uses an outdated FEMA map and shows conditions before the new flood control levee on the Napa River was installed. Additionally, it shows the Hunter Subdivision project boundary incorrectly and in the wrong location on the map. The city is republishing the correct map below which shows the most recent FEMA data (after the construction of the Napa River levee). It shows the Hunter Subdivision project as having a 0.2% or lower annual flood risk (a 1-in-500 chance in any given year) due to the presence of the levee.

More information about FEMA's "Risk Rating 2.0" can be found at fema.gov/es/node/467888.

The FAQ documents for the Hunter Subdivision Project serve as a comprehensive resource, addressing common questions and concerns raised by residents. The FAQs provide clear and concise information on various questions, including:

- Is the Hunter Project in a Floodplain?
- How will the Hunter Project Comply with Water Neutrality Requirements?
- Will the Hunter Project affect emergency evacuation?
- Will we lose access to trails and open space?
- Will the Hunter Project provide affordable housing?
- Will the Hunter Project create traffic congestion?

The City of St. Helena encourages residents to consult the re-released FAQ document as a reliable source of information on the Hunter Subdivision project. It can be accessed on the City's official website at cityofsthelena.org/planning/page/hunter-subdivision. In addition to the FAQ document, the page also provides an FAQ on the levees, a tentative project map and a video presentation.

The City suggests that persons concerned with the potential for flooding on the Hunter Subdivision site refer to the correct, updated FEMA maps, and the correct information on the Risk Rating 2 program, available online at fema.gov/flood-insurance/risk-rating

The City Council is scheduled to have the final public hearing on this item on June 7, 2023 at 6 pm, at Vintage Hall.

Additional questions about the project can be directed to Eric Norris, Principal Planner, at enorris@interwestgrp.com or Maya DeRosa, Community Development Director, at mderosa@cityofsthelena.org.

The City of St. Helena remains committed to upholding transparency, community involvement and accurate information dissemination. By re-releasing the Hunter Subdivision FAQ document and providing platforms for public engagement, the City continues to welcome an informed and inclusive decision-making process.

COMMENT re: Resolution to approve Tentative Map No. 2022-001 and certify the Environmental Impact Report - File #PL10-040 for the Hunter Subdivision project.

Water Audit California, an advocate for the public trust, objects that the Environmental Impact Report ("EIR") does not comply with due process, the procedural requirements of the California Environmental Quality Act ("CEQA"), or public trust duties, and does not contain sufficient evidence of adequate supply of water. Further, the EIR does not consider a reasonable and environmentally preferable alternative.

(A) The EIR does not comply with due process or CEQA.

Public notice requires a reasonable opportunity to consider the business being considered. Notice shall be given of a meeting of a legislative body and that specifies the "business to be transacted or discussed." This EIR has failed in that fundamental duty.

The agenda package for the subject EIR was posted on the CSH website late on the day on Friday, April 21, 2023. On Tuesday, April 25, 2023, at 7:13 p.m., Water Audit staff downloaded a reference copy of 3768 pages. Minutes later, on April 25, 2023 7:21 p.m., a

second copy was downloaded with a total of 3780 pages. This comment references a third copy downloaded on Wednesday, April 26, 2023, at 10:16 p.m., which also consisted of 3,780 pages. Reference was made throughout this comment to the page numbers assigned to the April 26 documents.

On Sunday, April 30, 2023, at 9:22 a.m. Water Audit staff noted that the agenda packet had increased to 4,318 pages, with the additional pages inserted, not appended. For example, the Dudek Well Completion Table that was on page 625 of 3780 on April 26 version is now page 1163 of 4,318 in the April 30 version. Accordingly, the page numbering in this comment do not relate to the packet currently before council.

This conduct renders comments unintelligible, deprives the public of the ability to comment and is a violation of due process.

(B) Without a finding of sufficient water, this project cannot be built.

Water supply resiliency is a threshold of significance for land use change or development projects. An EIR must answer the question posed by *CEQA, Section G, XVIII Utilities and Service Systems (d).*: "Would the project have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?

(a) The CSH water supply has proven inadequate for present needs

CSH relies on surface water runoff and groundwater from three sources to supply municipal water needs. All are vulnerable to water shortages during periods of sustained low rainfall.

The EIR asserts that this project is within the CSH "Safe Yield" declaration of 2,150 acre-feet ("AF"). The definition of "safe yield" is:

> "The safe annual yield of the St. Helena water supply system is that quantity of water which can be reliably delivered on an annual basis through most rainfall years, including a Dry Year (rainfall of 22" to 25.9") without undue hardship on water customers through water shortage restrictions. **It is recognized that the safe annual yield, as so defined, could place significant hardship on water customers in a Critically Dry Year (rainfall at 21.9" or less) or in periods of two or more consecutive Dry Years.**"

In making this determination, the CSH is departing from the principle that sufficient water must be available even in the event of multiple dry years. The California Constitution allows a city to make and enforce ordinances and regulations that do not conflict with the state's own general laws. However, where there is direct conflict between municipal and state law, the state law prevails.

While the City may chose to inflict upon its own citizens the burden of inadequate water by adroit definition, to pass CEQA muster the applicant and the City must establish that

objectively there is sufficient water, even in multiple dry years. The facts and the EIR do not and cannot carry this burden. [1]

(i) State Water Project transfer from City of Napa.

CSH was originally entitled to purchase 1,000 AF of water from the State Water Project North Bay Aqueduct through the Kern County Water Agency, but the mechanism for delivery of the water allotment did not exist. CSH was reluctant or unable to install the necessary engineering works. In 2006, the City of Napa purchased the City's 1,000 AF entitlement in exchange for agreeing to deliver to the City 400 AF. *EIR 728* A December 2011 Amendment increased CSH allocation from 400 acre-feet to 600 acre-feet.

However, these are nominal amounts. The actual deliveries are determined by the Department of Water Resources ("DWR") depending on each year's hydrologic conditions. The full entitlement amount would typically only be available during very wet years. The Department of Water Resources estimates that 62% of SWP contractors' entitlements would be available in a normal year, 29% would be available during a single-dry year, and 5% available during a multi-year dry period. *EIR 729*

Fortunately, because of extraordinary water management by the City of Napa, CSH has been able to skirt catastrophe in drought conditions. See the CSH Water Reports., which show Napa transfers in excess of 600 AF in 2019 and 2020, drought years.

(ii) Surface water collection at Bell Canyon Reservoir

Beginning in the 1960s, Bell Canyon reservoir has been the City's main water source, by collecting rainfall from a watershed to the northeast. While in the past the Bell Canyon Reservoir has been able to produce the largest portion of the City's water supply, recently that has not been the case. Bell Canyon production at 379 AF in 2022 was less than half of 2019 at 836 AF. In 2022, both the water transfer from the City of Napa (392 AF) and Stonebridge (467 AF) were greater than Bell Canyon's contribution (379 AF).

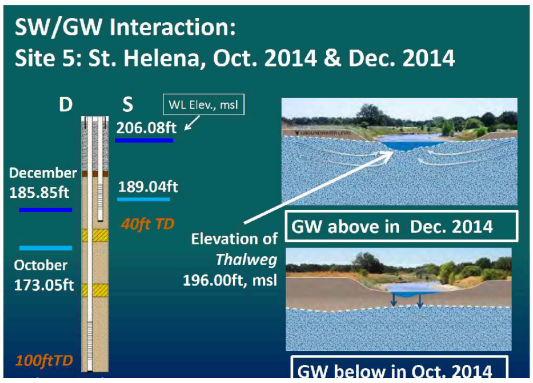
These figures are drawn from CSH's published public Water Reports. The EIR 725 does not cite to a record and are not in full accord with the facts. For example, the EIR states Stonebridge 2020 production to be 302 AF, while the Water Report is 363 AF. More significantly, the EIR omits entirely the years of 2021, 2022 and 2023.

Given climate driven change, historical reference to Bell Canyon production in the safe yield calculation is of little practical use.

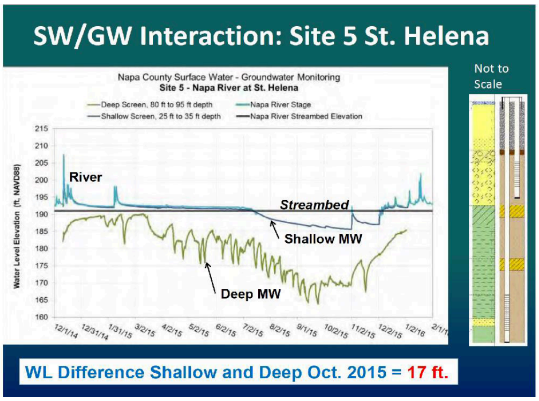
(iii) Groundwater extraction by Stonebridge

The City owns and operates two groundwater wells, collectively known as the Stonebridge Well Complex (herein "Stonebridge"). The City sees Stonebridge as a flexible water source in the system, using groundwater to balance system flows based on availability of water in Bell Canyon.

[1] In Exhibit H it is asserted that an average sufficient supply is 100 gallons per person per day. Under Phase II restrictions CSH residents have been rationed to 65 gallons per person per day.



The EIR states: “The City currently restricts the use of groundwater from these wells with the goal of limiting extraction to 450 AF per year for long term sustainability.” *EIR 729* “In an agreement with the environmental advocacy group Water Audit California, the City is monitoring water levels with a goal of limiting extraction to 450 AF per year on average. (Napa Valley Register, 2021)” *EIR 730* It is true that CSH agreed with Water Audit that it would measure water levels, however, when the City failed to perform, Water Audit sued. The inability to report the current cumulative proximate groundwater extractions required by this EIR is evidence of the City’s continuing failure.



See also: “Furthermore, the City’s groundwater would only account for a minimal amount of water use on the Project site, as the City currently limits the use of groundwater from the City’s wells in an agreement with the Water Audit.” *EIR 750*

Without citation to the record, the EIR asserts: “The Water Audit’s complaint does not ask for changes to existing water uses.” *EIR 2579*

There was and is no agreement between Water Audit and CSH regarding Stonebridge production of 450 AF per year, and there is no Napa Register article to that effect. Water Audit’s position is that the City shall do no harm to the public trust, and the City was unwilling to agree.

The litigation made clear reference to the injury caused to the public trust by CSH groundwater extraction. For example, it cited LSCE graphics presented to the Watershed Information Council in 2015:

At paragraph 46 of the litigation:

> In 2016, LSCE recommended that Napa County install additional monitoring of groundwater/surface water interactions in areas where data was lacking. No additional monitoring was installed. Although the CSH knew that its operation of the Pope Street wells was causing dewatering of the Napa River, no effort to mitigate injury to the public trust was undertaken. Further, the CSH permitted and authorized additional 31 groundwater extraction proximate to the recognized salmonid habitats of Bell Canyon, York, and Sulphur creeks without consideration of the potential impacts on the public trust, including but not limited to the Farmstead project and wells for Anomaly Wines, Beckstoffer and the St. Helena Public Cemetery.

At paragraph 47, Water Audit avowed: "Consultants hired by the CSH to prepare an Environmental Impact Report (EIR) for the proposed Hunter Subdivision twice falsely cite an agreement with Water Audit. No such agreements exist."

Nevertheless, these false assertions persist.

Among the numerous Prayers for Relief was: "CSH must modify its operation of the Pope Street wells to reasonably mitigate injury to the public trust." Clearly the litigation sought to diminish current excessive extraction.

Water Audit dismissed the CSH litigation at the request of prominent local leaders in the hope the City would change its conduct without continuing legal compulsion. The dismissal was made "without prejudice," a legal term meaning that Water Audit can file renewed litigation if CSH does not comply with its public trust duties.

(b) CSH has been in a persistent state of water emergency.

In 2011 CSH adopted a policy and mechanism for dealing with a potential "water emergency." A Phase I emergency was to be declared when storage reached 60%; Phase II was declared with storage reached 39%. Minimum permissible "Fire Storage" is 25%, so when a Phase II emergency is declared, the useful volume remaining is only 14%.

By way of incomplete but illustrative example of the impact on residents, during a Phase I emergency citizens may not add any water consuming appliances and must have City

approval for any appliances replaced. Replacing an existing residential dishwasher during a Phase 1 emergency is subject to City approval.

In October 2020[2] the City declared a Water Shortage Emergency, because the water in the Bell Canyon, the supply capacity of the Stonebridge wells and the water available from the City of Napa was not sufficient to meet the City's projected demands. In November 2020, when Bell Canyon storage reached 39%, the state of emergency was elevated to Phase II. The city did not downgrade from Phase II to Phase I until a year later, at the end of December 2021. During a Phase II emergency residents are limited to 65 gallons per person per day, a third of the community's pre-emergency unconstrained consumption.

As of the date of this comment, CSH has announced it anticipates dropping the Phase I emergency restrictions in July 2023, well over two years[3] after they were first imposed. "The current water rate structure includes a drought period surcharge that begins once the City implemented the Phase I Water Regulations. … Drought rates are 6% higher than non-drought rates."

This hearing is being held while CSH residences may not replace a dishwasher without approval and while they are already paying a premium due to the state of water emergency. Prima facie there is insufficient water in CSH for new development.

Emphasizing the current fragility of the City's water system, in the recent past the City has been unable to take delivery of water from the City of Napa in sufficient volume because the Rutherford pump station deferred maintenance led to a system failure. For months the Bell Canyon water treatment plant has had to rely upon contract workers because the City is unable to attract qualified staff. In February 2023 the City lost from 10-15% of its capacity when a Stonebridge well pump failed without a spare in inventory. Citing "significant deferred maintenance," Public Works Director Joe Leach said "Our water system continues to pose challenges." Truer words were never spoken.

Until the existing challenges are overcome, the City *cannot* commit to any additional demand.

(v) The 1976 well is legally deemed abandoned, and cannot be used for this project.

Although the EIR proposes to use site pumped groundwater, "the Project does not require obtaining a well drilling permit." EIR 2580, *3762.* "[T]here is an inactive groundwater well located in the northern portion of the Project site that may have been historically used to provide construction water for the City's Flood Protection Project and was used in the past for agricultural irrigation. The Project proposes to use this well for the irrigation of public and private landscaping and all other outdoor uses, which are estimated to require 17.16 AF per year. *EIR 2580, EIR 627*

---

[2] Otherwise reliably stated to have been *de facto* imposed on July 1, 2020 – See staff notes to 2022 Water Report

[3] By some measures, three years.

See also: “The Project site contains an inactive groundwater well adjacent to proposed Lot 19 in the northern portion of the property identified as Parcel B … This well may have been historically used to provide construction water for the earth moving activities associated with the City’s Flood Protection Project and may have been used in the past for agricultural irrigation. The existing condition of the well is considered inactive; however, as it was not being used at the time the Notice of Preparation was released. The Phase I Environmental Site Assessment completed for the Proposed Project noted that the well was inoperable at the time of the site visit (Appendix G).” *EIR 623* For the sake of clarity, this engineering work will be referred to as the “1976 well.”

A well analysis is referred to in the EIR as “Appendix L.” However, “Appendix L” was not appended to the DEIR in the Agenda Packet iterations. Reference herein is to Appendix L from the Draft EIR posted on the City’s CEQA webpage.

Appendix L narrative asserts that the 1976 well was tested by 24-hour pumping. That assertion was false. By referencing the pumping report, one can see that while pumping took place over the course of a day, the pumping was not continuous. <<>> It remains unknown how the well would perform under 24-hour sustained load.

Appendix L fails to acknowledge[4] that the wetlands survey did not include the well, as it was on a different property at the time the survey was performed (land then owned by the City.) If, as logic and topography imply, the 1976 well is in a wetland, then there are special concerns that have not yet been considered. A well should be located outside areas of flooding. This well in located proximate to a drainage ditch and collection pond, the latter intended to flood in high water. Good practice requires that the top of the well casing shall terminate above known levels of flooding caused by drainage or runoff from surrounding land. For community water supply wells, this level is defined as the:"...floodplain of a 100-year flood..." or above "...any recorded high tide...", (Section 64417, *Sitting Requirements, Title 22 of the California Code of Regulations*.) Surface drainage from areas near the well shall be directed away from the well. If necessary, the area around the well shall be built up so that drainage moves away from the well. Appendix L does not consider this subject.

Appendix L states that the screening on proximate monitoring wells is “unknown,” while a previous report by the same consultant was able to confidentially state the facts. It is only in the absence of that information that the consultant was then able to assert that the 1976 well does not draw from the Napa River. Had the proper reference been made, the only conclusion that could have been made was that water extracted from the volcanic rock zone in this location does deplete surface water flows.

Finally, Appendix L fails to acknowledge that by state law and municipal ordinance, the 1976 well is deemed to be abandoned, and the failure to destroy it is a continuing misdemeanor. Given the proven connectivity to Stonebridge, this is a serious matter of public health. Abandoned water wells can act as conduits for surface and subsurface pollution to enter groundwater supplies. Once polluted, groundwater is no longer drinkable.

CSH Ordinance 13.16.020 (E) states: “The city desires to require the location, construction and repair of water wells and other water systems to conform to California State

[4] In fact, the Applicant implies the contrary.

Department of Water Resources Standards as noted in DWR Bulletin Numbers 74-81 and 74-90 and as required in California Water Code Section 13801."

Water Code 13801 states in part that each city shall "adopt [an] abandonment ordinance that meets or exceeds the standards contained in Bulletin 74-81. The DWR publishes Combined Bulletins 74-81 and 74-90 (Water Well Standards). Part III, Section 21 reads: "A well is considered 'abandoned' or permanently inactive if it has not been used for one year, unless the owner demonstrates intention to use the well again." Part III Section 22 states "All "abandoned" wells and exploration, or test holes shall be destroyed. The objective of destruction is to restore as nearly as possible those subsurface conditions which existed before the well was constructed taking into account also changes, if any, which have occurred since the time of construction."

Health and Safety Code § 115700 provides that a well is considered 'abandoned' or permanently inactive if it has not been used for one year, unless the well owner properly maintains an inactive well as evidence of the intention for future use. Proper maintenance required to keep a well from becoming abandoned includes *a notice to the local health officer of an intent for future use*. No such notice has been given. The well site has not been kept clear of weeds and brush and has not been protected from flooding or run-off from adjacent lands.

Whether the well is capable of operation is irrelevant. By the process of law the 1976 well is deemed abandoned and it must be destroyed forthwith. Until this is done, the owner is guilty of a misdemeanor, and the City is acquiescent in the crime.

Assuming that the pump production rates are valid, it would seem an easy matter for the Applicant to simply drill a new well. That would pose a problem, however, as a new water availability study would have to consider its impact on the adjacent water course and the cumulative extractions of proximate wells as a matter of law. It is unlikely that a permit would be granted to drill a new well, even in permissive CSH.

Consultant RSA+ acknowledged in 2019 that a well interference study was necessary for the EIR, asserting that "It is assumed this has been performed under Dudek." It had not.

The Dudek "well completion" analysis is prima facie inadequate. Although it makes narrative reference to "well completion reports," no such records are appended or referenced. Wells discussed are not identified by their DWR number. The extraction from numerous large proximate wells are not considered, including but not limited to the Stonebridge wells. The narrative cites no sources.

(vi) Contemporaneous LSCE reports contradict earlier works of sustainability.

The EIR repeatedly asserts that increasing groundwater extraction by this project will be of no consequence as the SGMA process has deemed the status quo groundwater condition is stable and sustainable. In support of this proposition the EIR makes reference on thirty-two occasions to LSCE works published for the County and GSA in 2013, 2014, 2016 and 2017. (for limited example, at EIR 515, 523, 539, 621 & 622).

Fortunately, it is unnecessary to challenge each citation (although for the record, such challenge is made) because the most critical facts are those that were not presented. Omitted in its entirety is the most recent and pertinent of LSCE's work, the *Groundwater Sustainability Annual Report – 2022 (March 2023)* ("LSCE 2023").

In order to assess the groundwater condition, it is necessary to establish objective criteria. LSCE 2023 states that undesirable results for chronic lowering of groundwater levels occur when groundwater levels at (1) 20 percent of the groundwater levels at (2) representative monitoring sites are (3) below the defined minimum threshold (4) in the fall (September through October) (5) for three consecutive *non-drought years.* Note that this is a far more lenient standard than water insufficiency in drought years.

LSCE 2023 states that CSH and four other sites have fallen below the minimum threshold in non-drought years. The recurring and extended states of emergency speak adequately to the groundwater condition during drought.

LSCE 2023 asserts that there is injury to groundwater dependent ecosystems as a result of excess groundwater pumping and illustrates problem by illustrating the adverse surface water / groundwater interface caused by Stonebridge pumping.

LSCE 2023 admits that earlier representations that groundwater pumping was in sustainable balance were in error and now acknowledges that for five of the last seven years the sub-basin was over drafted beyond its sustainable limit, resulting in cumulative water storage loss.

LSCE 2023 concludes that one of the undesirable results of ground water depletion is injury to groundwater dependent ecosystems protected by the public trust. It concludes with multiple plans to remediate the injury, none of which contemplate the effects of further depletions of surface flows by additional extraction. Amongst government agencies, only CSH is considering such counter-productive conduct.

(C) The EIR fails to consider a reasonable and environmentally preferable alternative.

It is a distinction without a difference in terms of environmental injury whether water is extracted on the Hunter site or extracted at Stonebridge. The Stonebridge wells are hydrologically connected to the Hunter wells. To draw an analogy, Stonebridge and Hunter are but two different straws among many other straws sucking from the same glass of water. While there has been inadequate cumulative impact analysis, it is manifestly evident that the metaphorical glass is empty, and the public trust is dying.

The Napa River proximate to the Pope Street wells, June 2021
Image by Dr. Amber Manfree for Water Audit California

In January 2023 Water Audit proposed to the City an alternative to dewatering the Napa River: a transfer of surplus waters in the Rector Reservoir equal to the extraction from Stonebridge. See attached correspondence. An engineering working group from several jurisdictions, including water department staff from CSH, have been diligently considering the proposal (together with other components of resiliency) for the last several months. They have tentatively concluded that there are no significant technical obstacles to the process.

CDFW has opined that the transfer would be environmentally preferable to continued groundwater extraction and agreed that the owner of Rector could have environment credit for that facility's environmental obligations.

The primary obstacle is political intransigence. CSH has never acknowledged this alternative in public, instead continuing to extract from overdrawn public trust resources. This project merely exacerbates the problem.

It is submitted that it is a failure of CEQA process and an abuse of discretion to not consider this environmentally preferable alternative.

In conclusion, the EIR should not be certified. The project should be rejected as being incapable of conforming to CEQA water requirements, or at a minimum, the substantial deficiencies discussed above require remediation and recirculation following the Applicant's submission of all of the necessary information for consideration of the whole of the Project**.**

Respectfully,

Hi Bill,
I enjoyed talking to you recently and leaning more about the general concept of a potential transfer of water to increase St. Helena's water supply. Just to be clear, I conveyed my general interest i are always looking to augment our water supply. I don't have the benefit of many important details at this juncture, and I do not have the authority to formally "engage in a conversation regarding pur offset the City's Stonebridge wells production." Of course I would like to learn more about the process, conveyance possibilities, logistical challenges, engineering issues, and cost details going forw general proposal to our City Manager and Public Works Director, and I will leave it up to them to consider its merits and viability and make recommendations to our city council. I certainly want to exp for our city, and wish to keep communications open, but I do not want to get too far out in front of our city staff or city council. Thank you.
Paul

Greetings, David

It's hard to believe, but almost two years have passed since we last communicated. I hope you and yours are well.

Some things are different now, but unfortunately some things remain the same. Rector Reservoir is full, but the City of St Helena still dewaters the Napa River by its operation of the Stonebridg of the Rector Dam remains a losing reach, stubbornly resistant to rewetting. Expert opinion is that rewetting more than two miles of the mainstem Napa River would be of greater impact than a the Rector reach.

Please consider the following. Let me assure you at the outset, Water Audit will in no way profit from this transaction, although if this works it would be nice to get a producer's credit for the reco

I have spoken to City of St Helena Mayor Paul Doring, (copied on this email) and he would like to engage in conversation regarding purchasing water from DVA to offset the City's Stonebridge **understanding is that this would be a paper transaction only, and that there would be no engineering or construction work involved.** The City of Napa's Mayor Scott Sedgley has, in t community's interest, agreed to allow a senior member of his staff, Joy Eldredge, Napa's Deputy Utilities Director, to take lead on technical issues. She is known to your and CSH engineering systems, and her opinion on water transfer valuation is well respected. CDFW have agreed to participate and have endorsed the concept of the water transfer as a substitute for bypass into th the dam.

Assuming that CSH agrees to reduce Stonebridge operations proportionately, Water Audit is prepared to stipulate that the transfer would constitute DVA bypass pursuant to FGC 5937 and defe period (matching the term of the transfer agreement) any litigation regarding the Rector or Stonebridge reach. My understanding is that present good practice is to plan the quantum of deliverie time after consideration to the water available. Put another way, it will be a fundamentally different agreement than with the Town of Yountville and the Veterans Home.

The net effect is that DVA would be able to generate market rate revenue from its environmental releases to offset the costs of its monitoring programs as well as simultaneously satisfying its F Additionally, the DVA will be brought into the evolving process of coordinated regional water management, which offers the agency substantial peer benefits in changing climatic and regulatory this be a prototype effort, with continuous monitoring, review and revision as lessons are learned.

The Rector system was inspected, reviewed and reported in the spring of 2018 by Guy J. Schott, P.E., Associate Civil Engineer, State Water Resources Control Board Division of Drinking Wate are available on request. Consistent with / part of his reporting:

Rector Reservoir

Owned by State of California Department of Veterans Affairs

Safe yield: 1,670;
Existing Deliveries: DFW <575 AF; Veterans Home & Yountville 740 AF
Nominal surplus to safe yield: 355 AF
***Maximum delivery surplus**: 2,200 AF*

Stonebridge extractions: 400-600 AF

1.) Photos of Rector Reservoir (2018)

2.) SWRCB 1970 Water license.
5.55 cfs direct diversion (X365); 1,767 AF to storage each year, diversion 10.01 to 05.31; total permitted deliveries (dir.&indir) 3,518 AF; maximum storage 4,400 AF

3.) Rector water distribution network showing intertie to Napa/Conn pipeline. Shows raw water distribution to County yard and CDFW Silverado.

4.) December 2000 Department of Water Resources Yield study.
Bathymetric study AF; dead pool 487 AF; carry over storage 2,768 AF; safe yield 1,670 AF. The (unauthorized) raising of spillway elevation offset 54 years of infill on storage capacity.

5.) Storage capacity curve, NET of dead pool.
DVA should have real-time monitoring from 2018.

6.) Veterans Home and Town of Yountville Consumption etc. 1989-2000
Total production during reporting period <740 AF. Note the following is more recent.

7.) ALL DELIVERIES
Note "system losses" ranged up to 22%. Since Water Audit litigation they have been in mid to low single digits.

8.) WATER USED BY CDFW FROM RECTOR RESERVOIR 2005-2017
NOTE: Low CDFW demands from June to October annually. 2017 is an anomaly caused by experimental flows made as part of DVA study. Otherwise <575 AF.

<Attorney/client information redacted>

Good afternoon Paul

Thank you for your email.

As we discussed, this activity does not fall within my usual practice, so please forgive me if I inadvertently do not properly follow protocol. For the record, I do not have authority to speak for anyone. I do not have the authority to compel an agreement. In fact, one could argue that Water Audit should have nothing to do with solving CSH water problems, but as a matter of corporate philosophy we prefer to proffer reasonable solutions when we see them. We appreciate you considering our idea.

I have had preliminary collegial conversations with Ms. Eldredge about this proposition, and from those conversations have some been given some comfort about its viability. "It's not a mad idea," would be a fair characterization. She properly advised that she could not formally participate without her supervisors' instruction, so I went to see Mayor Sedgley, who agreed to take care of whatever was necessary for her to provide temporary guidance to this project. I am most grateful to both of them for being willing to go above and beyond to help solve this problem. Given my understanding of the engineering works, the City of Napa may be a necessary party to any deal here. For the record, by his courtesy Mayor Sedgley in no way bound the City of Napa to any further agreement of any kind. Assumably your staff will engage in appropriate conversations, and technical questions will be resolved. Respectfully, that is not the first order of business.

My communications with DVA on this topic have been professional, and as indicated in my January 18th email, my last was almost two years ago. While acknowledging some merit to this idea, as you have, naturally their first question was "Do you speak for CSH?" Clearly and obviously, I did and do not. At the time CSH counsel was unwilling to discuss the topic. Understandably, for that and other good reasons at the time, the possibility died on the vine. Time has passed, CSH has new leadership, and yet the problem of Stonebridge wells persists, so we are trying again to daylight this prospect for consideration with as little controversy as possible.

Please note: unless you have a willing seller in the DVA the deal is a "non-starter" without further discussion. Respectfully, everything else follows.

As no one should ever characterize my conversation with you as in any way binding on CSH, similarly, no one should ever characterize my communications with DVA as binding on that agency. It would seem efficient for DVA and CSH representatives, without the authority or intent to bind anyone, to meet and see if there's any possibility to be pursued. If not, then there is no waste of time. If so, staff can do what needs to be done to assess logistical, conveyance and engineering matters. I have great faith in engineers to find solutions.

A different order of business seems unfair to Ms. Eldredge and the City of Napa. While CSH may wish to pursue the matter, unless the DVA is onboard the exercise is a waste of time.

Thank you for getting this ball rolling.

Bill

[Quoted text hidden]

Response to Water Audit California's Comments on Hunter Project Subdivision EIR

Water Audit California ("Commenter") submitted a May 1, 2023 letter regarding the environmental impact report ("EIR") for the Hunter Subdivision Project ("Project"). However, a review of the letter confirmed that, in primary part, the letter does not concern the Project EIR. The City has prepared the following response to those comments in the letter that do concern the Project EIR.

Comment #1

Commenter asserts that, due the Agenda packet's length and the timing of its posting online the Commenter was not given a "reasonable opportunity to consider" the Agenda packet for the City Council's May 1, 2023 hearing regarding the Project and EIR.

Response #1

Compliant with State law, the Agenda and supporting material for the City Council's May 1, 2023 hearing were posted on no later than Friday, April 28 2023 – at least 72 hours before the meeting. As to Commenters concerns about the length of the supporting materials for the Agenda, the City notes that these materials were primarily copies of the Draft and Final EIR – which had been available on the City website since September 2021 (Draft EIR) and October 2022 (Final EIR).

Comment #2

Commenter contends that the well pumping information in Appendix L to the Draft EIR "false" because the pumping was not continuous and thus it is "unknown how the well would perform under 24-hour sustained load."

Response #2

Regardless of the validity of Commenter's claims (which are unsupported by any explanation), even if correct, Commenter does not provide any substantial evidence as to why it would be relevant to the EIR's analysis if the on-site well could operate continually for 24 hours.

Comment #3

Commenter suggests that the on-site well is located in a wetland and thus further study is required.

Response #3

First, Commenter's speculation is incorrect. Second, even were it correct the on-site well is existing and such that any impacts of its construction, decades ago, are not impacts of this Project.

Comment #4

Commenter asserts that "water extracted from the volcanic rock zone [from the on-site well] does deplete surface water flows."

Response #4

Commenter provides no substantial evidence, only lay-opinion and speculation. Nothing in this comment provides a basis for revising the EIR's expert analysis of the use of the on-site well for a portion of the Project's water demands.

Comment #5

Commenter asserts that the on-site well is abandoned. Further, Commenter claims that the water from the on-site well is polluted.

Response #5

In addition to being a legally permitted well, substantial evidence in the EIR regarding the pump test, which is acknowledged by the Commenter, confirms that the on-site well is operational. Further, Commenter provides no evidence that the well is abandoned. Indeed, the original application for the project, filed with the City in 2010, not only mentions the then-current use by the City of water from the on-site well, but also expressly calls for the use of the on-site well to provide landscaping water for the project. Accordingly, the record confirms the ongoing intent to continue use of the legally permitted on-site well. Further, as detailed in the EIR, no water from the on-site well is proposed for consumption. Rather, as has always been the case for use of the water from the well, it is to be used for landscaping/irrigation.

Comment #6

Commenter opines that the "Dudek 'well completion' analysis is prima facie inadequate" without reference to "well completion reports" based on a Department of Water Resources ("DWR") "number." Commenter further asserts that the "extraction from numerous large proximate wells are not considered, including but not limited to the Stonebridge wells."

Response #6

The County Well Permit is included in Appendix L of the DEIR. CEQA requires an EIR to consider the environmental conditions as they currently exist. Whether or not there is a DWR identification number for the on-site well is not an environmental concern under CEQA. The well is permitted, and is not abandoned (see **Response to Comment #5, above**). The EIR's groundwater impact analysis (see Impact 3.9-2, beginning on page 3.9-41 of the DEIR) considers impacts to the groundwater sub-basin as a whole, including the Stonebridge Complex wells.

Comment #7

Commenter objects to the EIR's citation to "LSCE works published for the County and GSA in 2013, 2014, 2016 and 2017" and asserts that the EIR should have discussed LSCE's March

2023 Groundwater Sustainability Annual Report. Commenter then states that analysis of the March 2023 Report would have led the City to reach a different conclusion as to the Project's potential impact on groundwater.

Response #7

Other than providing Commenter's non-expert summary of what the Commenter contends is in the March 2023 Report, Commenter provides no substantial evidence as to why the EIR's determinations regarding groundwater in any way call into question by the March 2023 Report. The 2022 water year sustainability report for Napa County, which was published in March of 2023, does not disclose any information not already disclosed in the EIR, namely that 2020 and 2021 were very dry years and in 2022 rainfall was average. Given this pumping from County wells was high in the last 3 years but subsidence is within acceptable limits (less than 0.2 feet).

Further, March 2023 Report is only a snapshot and does disclose the current status of groundwater in the County. Specifically, on May 30, 2023 the Napa County Board of Supervisors voted to end the State of Local Emergency due to drought conditions in Napa County, thus terminating the emergency powers of county officials set forth in Resolution No. 2022-29. Since October 1, 2022, Napa has received nearly 32 inches of rain, exceeding average annual rainfall. Despite a particularly wet winter, eight of the past 10 years have been characterized as dry to very dry conditions. The wetter winter of 2022-2023 has achieved a notable recovery in groundwater levels since 2022. As well, in February of 2023, the City approved a Resolution (1) Memorializing the Termination of the Phase II Water Emergency in November 2021, effective December 2021; and (2) Confirmation of Staff's Proposal to Provide a Recommendation for the Termination of the Phase I Water Emergency at a Council Meeting in July 2023.

RE: Hunter Project EVA from Levee Road to Road A

Upon recent examination of the Hunter Subdivision project, the St. Helena Fire Department has determined that the proposed EVA connecting the Levee Road to Road A is no longer required.

In 2018 the EVA was a proposed recommendation by a former Fire Prevention staff member who believed that additional egress for the residents of the Hunter Subdivision and additional access for emergency vehicles would be necessary. However, we have determined that the current tentative map provides adequate egress and emergency vehicle access without an EVA.

Post 2018, the one-lane levee road became a designated evacuation route for tenants of Vineyard Valley. For this reason, the proposed EVA would be inaccessible for emergency vehicles during an evacuation. Emergency Vehicle access to the levee road is still present at the end of Adams St.

Additionally, the EVA provides no benefit to the residents of the Hunter subdivision, as Roads A and B provide better egress to either Pope St. or Adams St. via Starr Ave.

Based on the updated designation for the levee road, it is the Fire Department's determination that the proposed EVA connecting Road A to the Levee Road is not required.

Best regards,

John Sorensen
Fire Chief

Alec Vidler
Fire Inspector

HUNTER SUBDIVISION

Request by Ben and Kelly Vanzutphen to subdivide a 16.9-acre parcel to establish 51 single-family residential lots and one parcel for future multi-family development

(Tentative Map #2022-001)

City Council

June 26, 2023

Presentation Summary

- Project Description
- Location and Setting
- Changes to Conditions of Approval
- Brief overview of issues addressed in the staff report
- Planning Commission Recommendation

Final Public Hearing

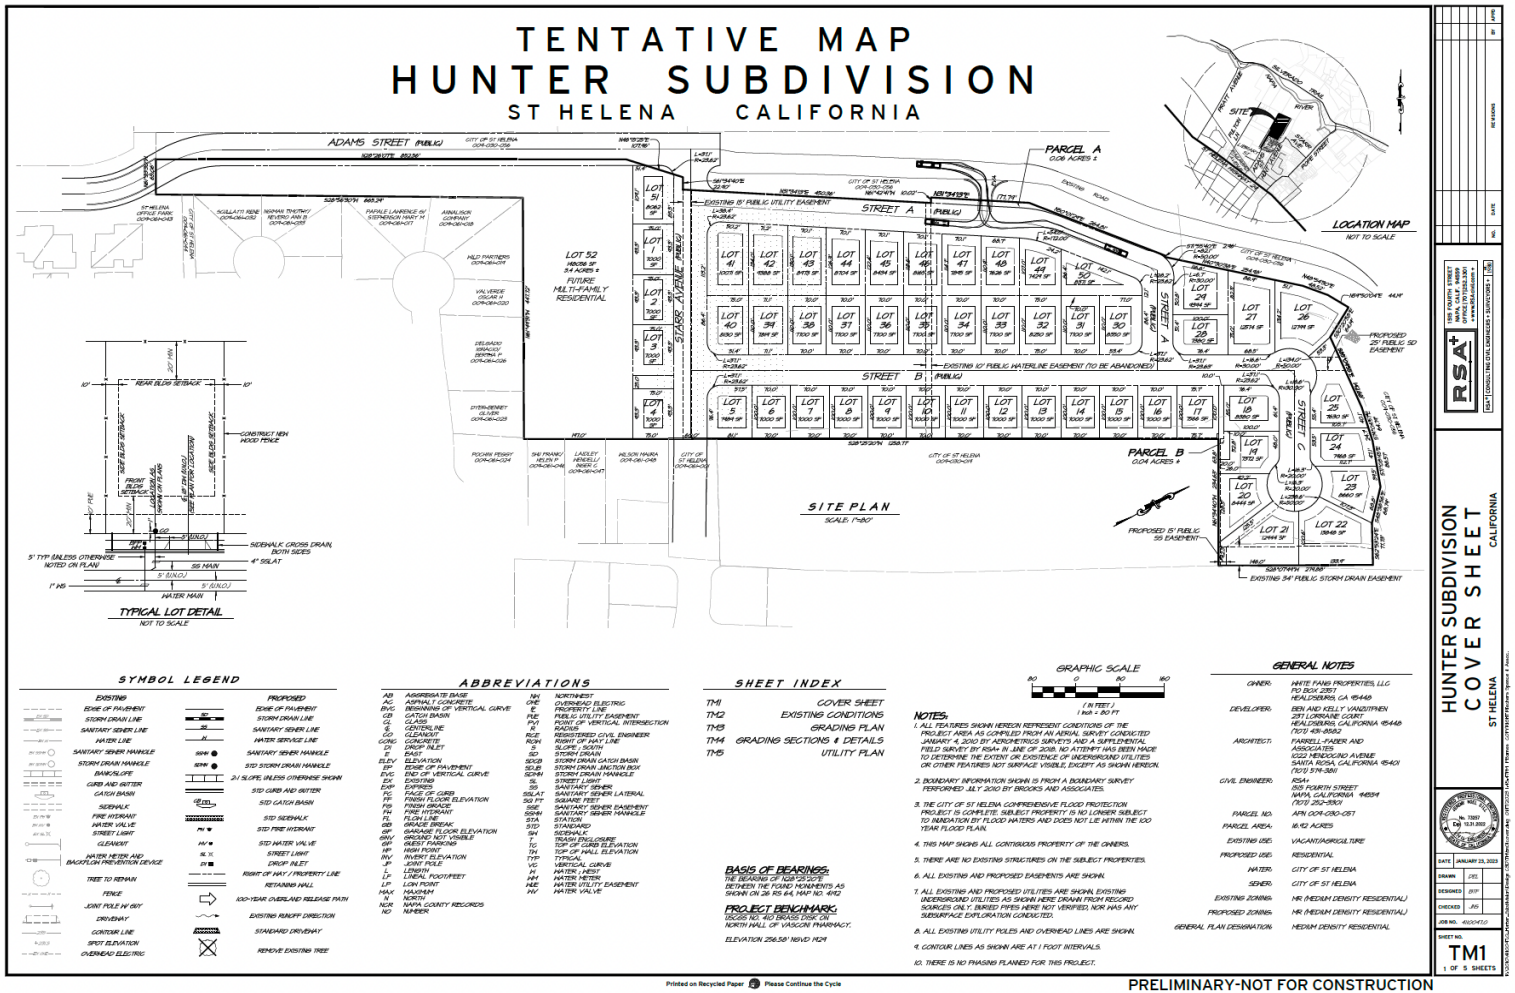
Reminder that tonight's City Council is the final public meeting for the proposed Hunter subdivision.

State law imposes a limit of five public hearings on housing projects. Tonight's City Council meeting is the fifth public meeting.

Project Description

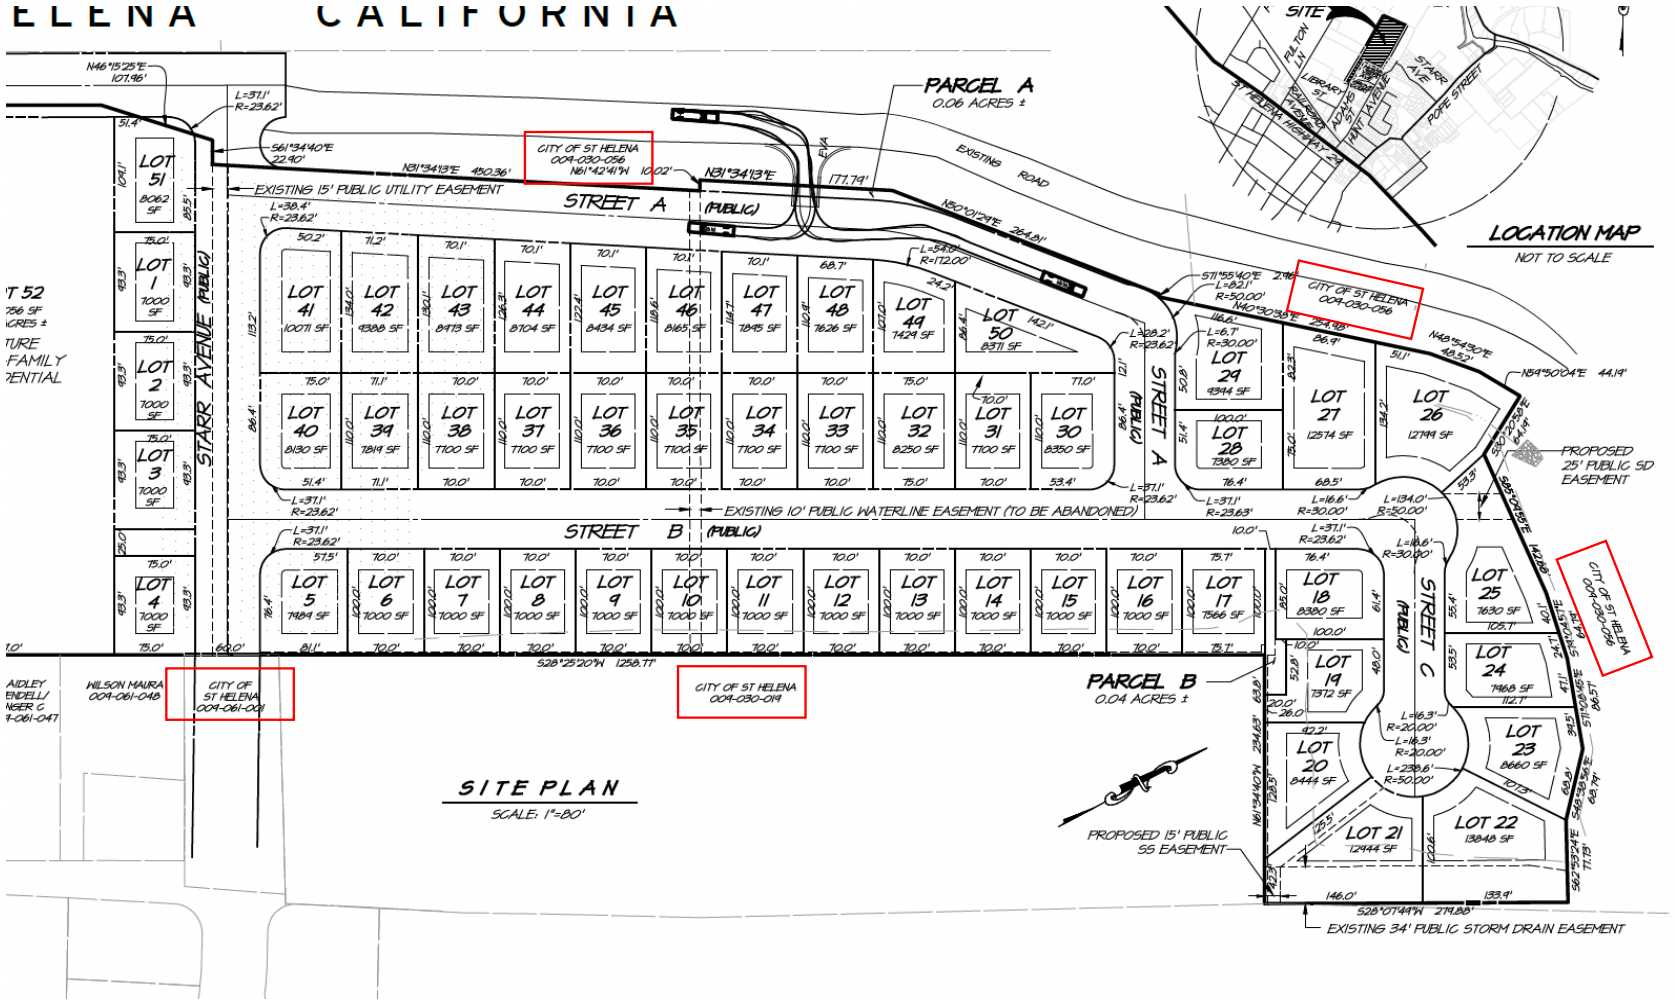
The proposed project being considered by the City Council is a **Tentative Subdivision Map** to subdivide a 16.9-acre parcel of land in the eastern area of the city, east of the existing terminus of Adams Street.

The proposed subdivision would create 51 lots for single family homes, and a separate parcel (lot 52) on which multi-family attached housing units would be built.



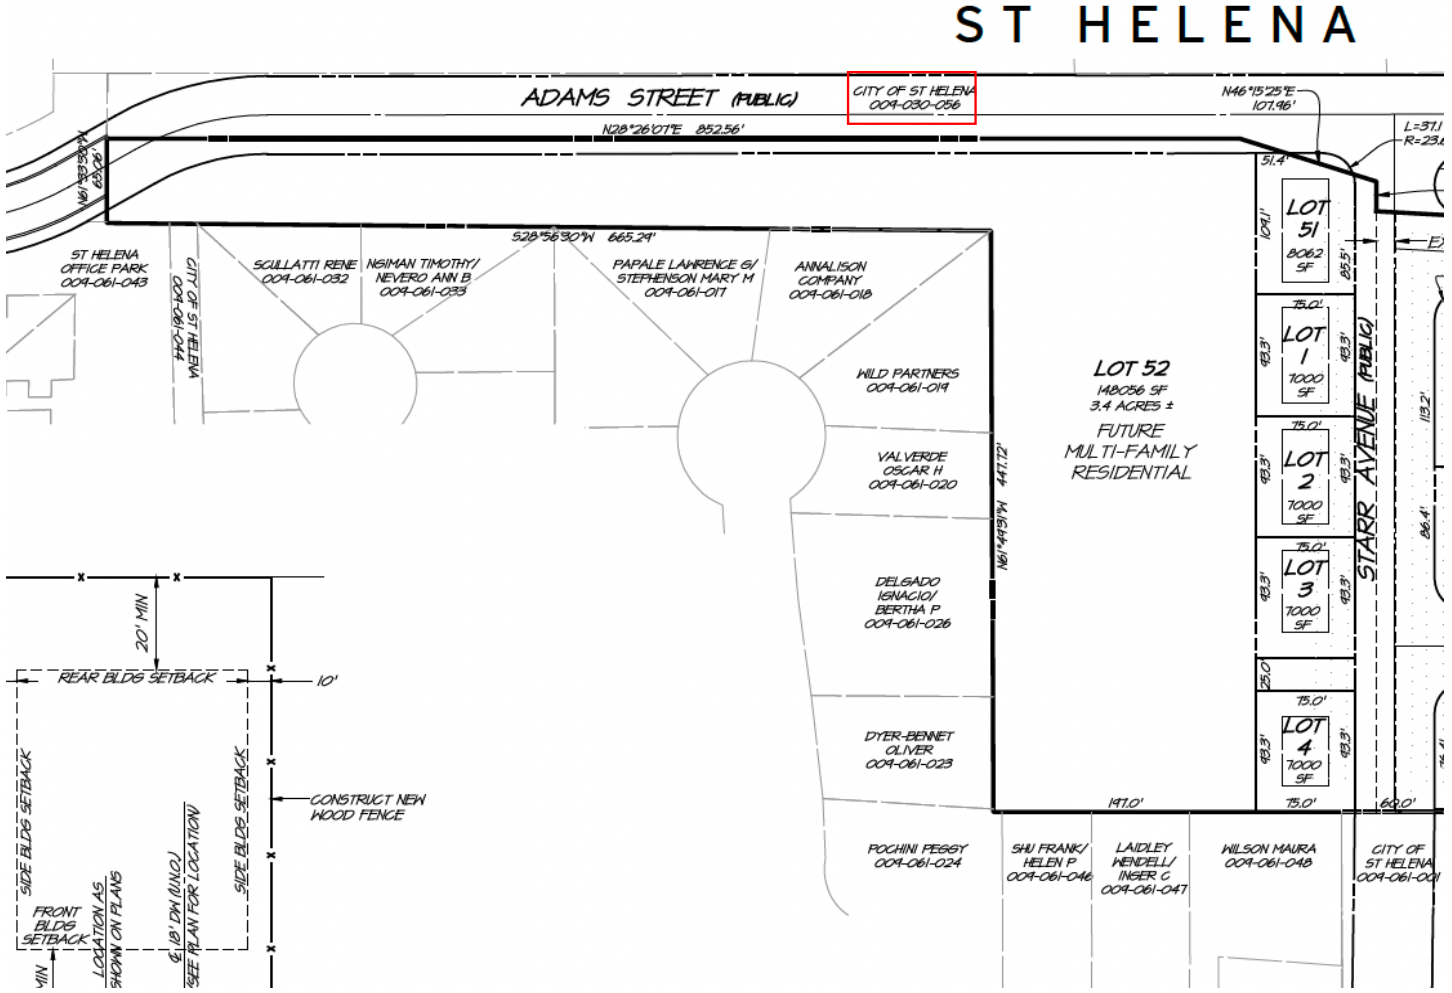
Project Description

The Applicant proposes to construct a total of 87 single- and multi-family homes and accessory dwelling units:



- Single Family Homes: 51 units
- Attached Multi-Family: 25 units
- Accessory Dwelling Units: 11 units
- TOTAL: 87 units

The overall residential density of the project, including all residential types, is 5.15 units per acre (87/16.9 = 5.15).

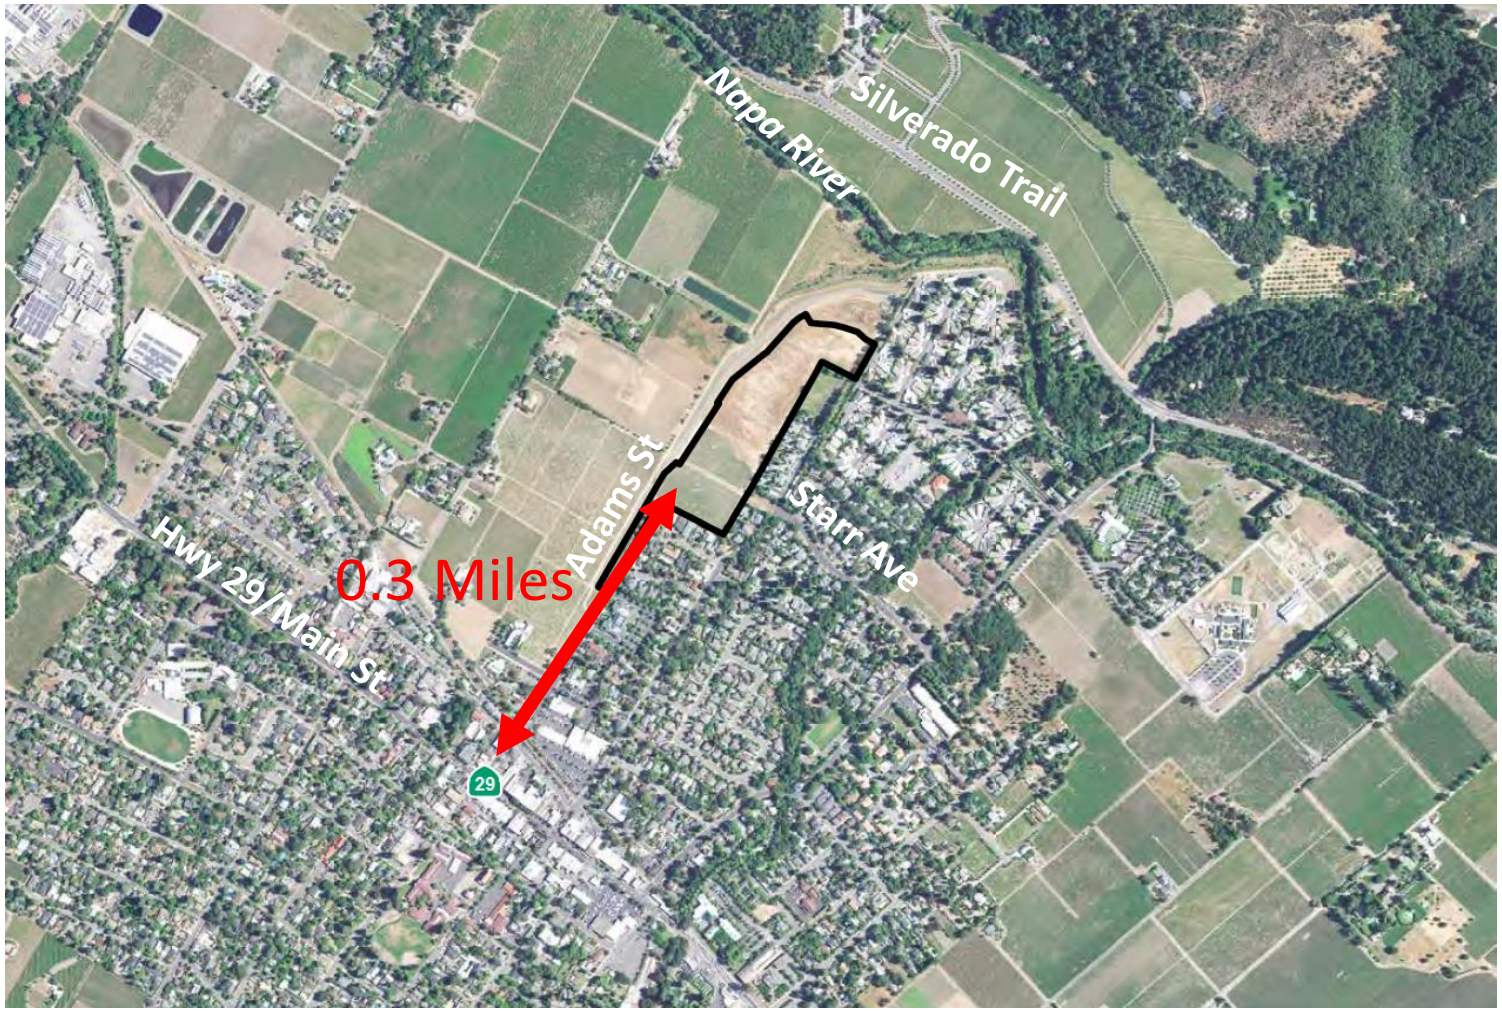


Project Description

Project Description

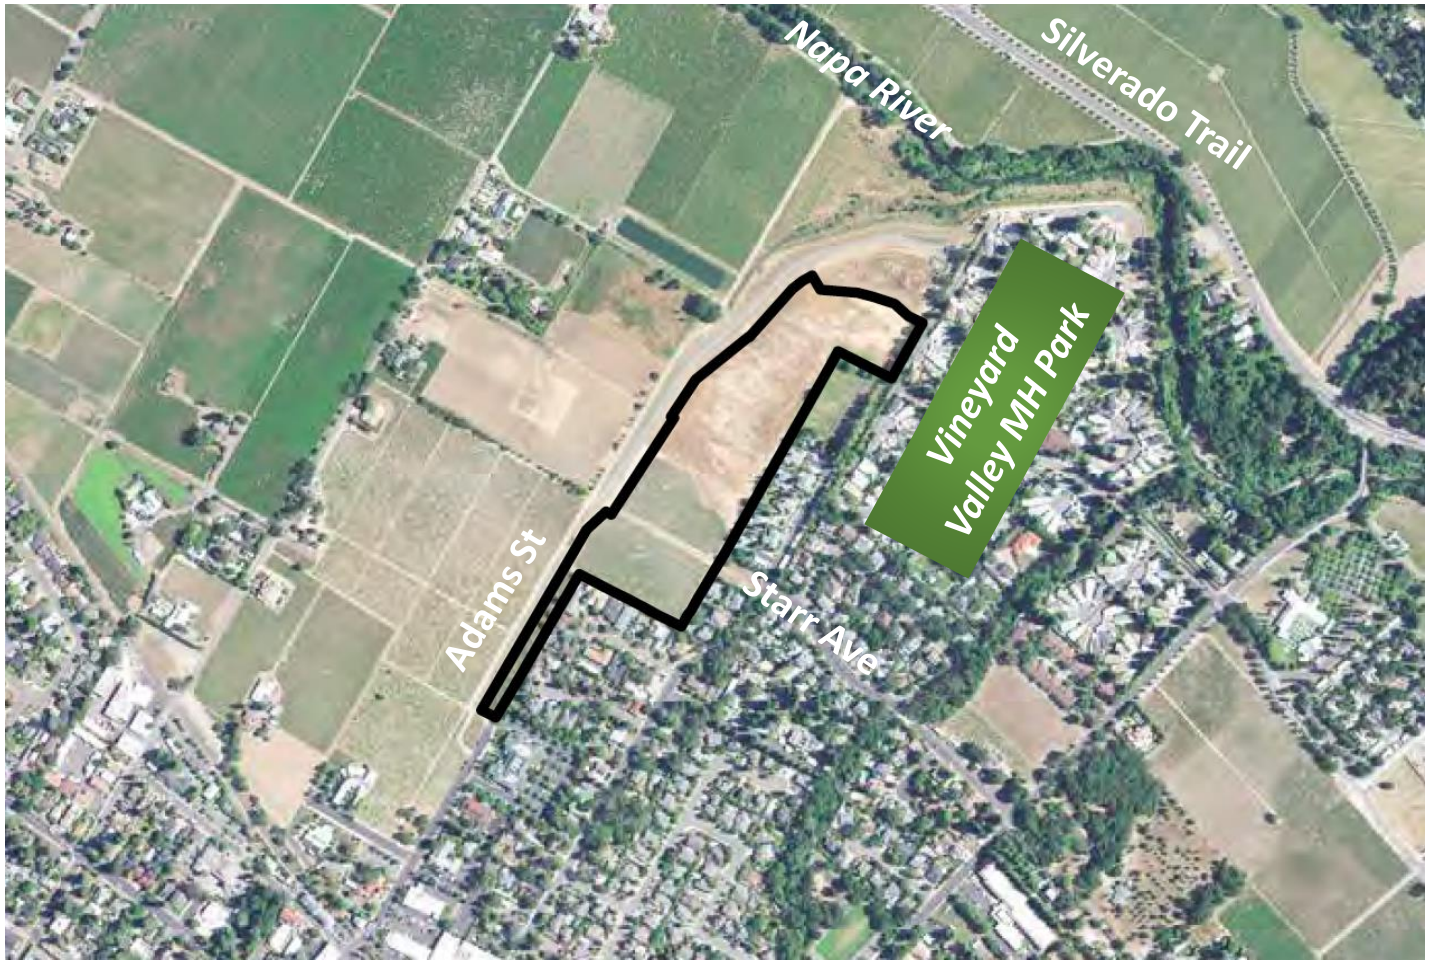
Project Description

Future Required Approvals



Several future applications would be needed to be approved:

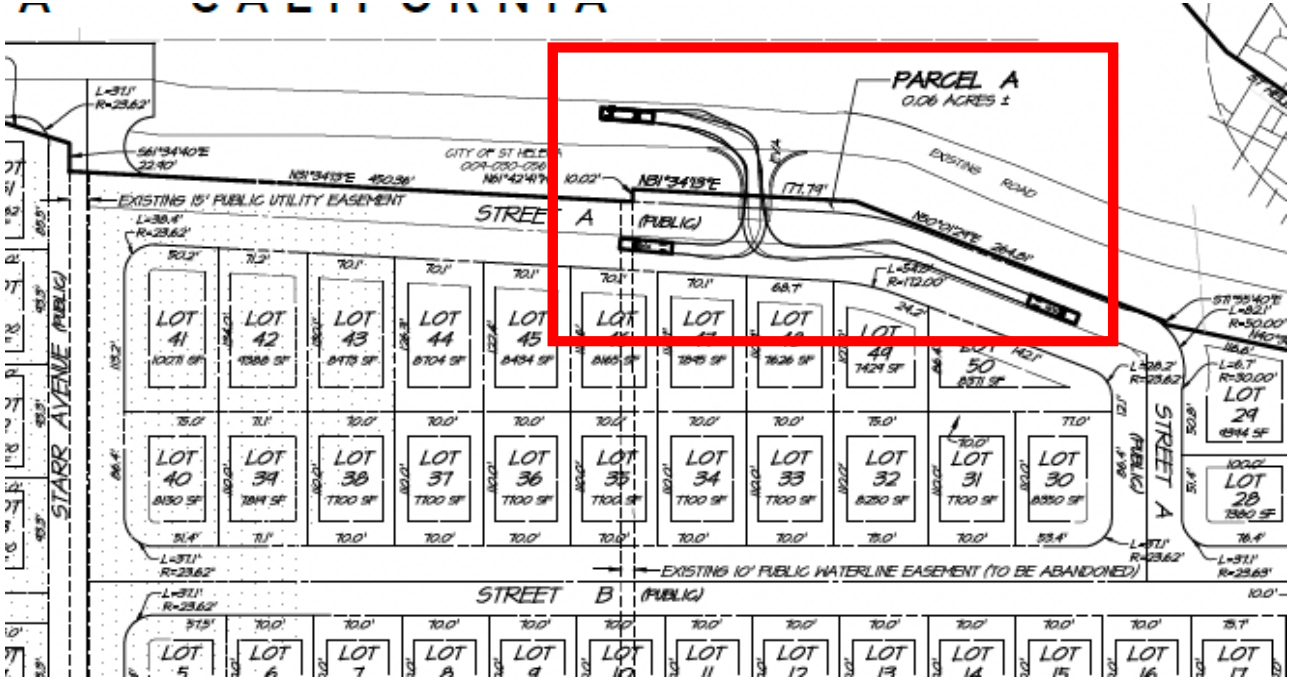
- Affordable Housing Agreement (City Council)
- Approval of Final Map/Subdivision Improvement Agreement (City Council)
- Design Review (Planning Commission)
- Conditional Use Permit for Multi-Family Housing (Planning Commission)



The public will be notified of the above items and invited to the hearings.

The only application before the Commission at this time is the Tentative Subdivision Map and the Final EIR.

Project Location & Land Use



Project Location & Land Use

Changes to Conditions of Approval

Emergency Vehicle Access

Staff recommends deleting the proposed levee access road from Street A to the road atop the levee:

Emergency Vehicle Access

The Fire Department has reviewed the need for the EVA and determined that it is not needed:

1) The EVA is not needed for emergency vehicles

2) Residents of the Hunter subdivision will use public streets to evacuate

3) Post 2018, the levee road has been a designated evacuation route for the Vineyard Valley mobilehome community

Changes to Conditions of Approval

Staff recommends deleting the following condition:

~~*69. EVA: From Street A to levee: Prior to the issuance of a Certificate of Occupancy, the emergency vehicle access road (EVA) shall be improved to provide an all-weather access road (paved) from Street A up to the existing levee road to the north. The width of the EVA shall be a minimum of 21 feet from face of curb to face of curb within an overall 25 ft. wide dedicated EVA. The EVA shall accommodate emergency vehicles (must provide for turning radii to accommodate fire vehicles as per the Fire Department requirements.) Turning templates shall be provided with the improvement plans during the plan check process to ensure the EVA can accommodate Fire Department apparatus.*~~

Changes to Conditions of Approval

Staff recommends revising the following conditions:

88. Prior to the issuance of the first building permit, all City-required ***in-tract drainage*** *improvements* ***as shown on the proposed Tentative Map*** ~~*related to storm water for the project*~~ *shall be installed by the project developer at* ~~*it's*~~ ***the developer's*** *expense. Drainage improvements shall be designed* ~~*and funded by the developer*~~ *in accordance with the Design Criteria utilizing the rationale method and any applicable adopted City drainage plans.*

Changes to Conditions of Approval

Staff recommends revising the following conditions:

90. Post-development flows storm water discharge from parcel 009-030-057 shall not exceed the pre-development discharge including the projected build-out, expressed as 30% undeveloped pervious and 70% impervious drainage watershed. Applicant shall prepare an analysis to show compliance with this COA. Refer to COA ~~#90~~ ***#91*** *for additional requirements of the analysis.*

Changes to Conditions of Approval

Staff recommends revising the following conditions:

91. Prior to building permit issuance, the applicant shall provide to the City an analysis of the capacity and condition of existing drainage facilities downstream of the development (including any detention/retention ponds), including recommendations for offsite drainage improvements, which shall be constructed prior to the issuance of the first certificate of occupancy. Site grading and drainage improvements shall be shown on the improvement plans. In the unlikely event that the downstream facilities require improvements, the applicant ***and the City shall enter a Funding Agreement*** ~~*as a means of reimbursement from*~~ ***whereby the applicant is reimbursed for said improvements by*** *the City.*

Changes to Conditions of Approval

Staff recommends deleting the following condition:

~~*124. Access to the levee road is restricted for public use and only granted to emergency vehicles and emergency egress for Vineyard Valley Mobile Home Park residents. Signage prohibiting its use by the public is recommended. Public access will be granted at the discretion of the Authority Having Jurisdiction during emergencies/evacuations.*~~

Changes to Conditions of Approval

Staff recommends adding the following condition:

125. Prior to Final Map approval, remove the designated emergency vehicle access from Street A to the levee road.

The Fire Department's memo (attachment 13 to the staff report) explains why the emergency access is no longer needed.

The removal of the EVA does not affect the validity of the EIR. The EVA was not assumed to be part of the evacuation system for residents of the Hunter subdivision.

Issues Discussed in the Staff Report

Issue 1: Emergency Evacuation

- Commentors expressed concern that the addition of new homes in the area would hinder the evacuation of persons in the area (and particularly in the Vineyard Valley mobilehome community) during an emergency.

This issue has been raised many times in public comments on the Draft EIR and the proposed project. Staff understands the concerns expressed by residents. However, staff's conclusion, based on consultation with the St Helena Police and Fire departments, is that the addition of new homes will not negatively affect the ability of the area to evacuate in time of emergency.

See Final EIR Master Response #1, "Emergency Evacuation"

Issue: Levee Safety

- Commentors expressed concern about the design and maintenance of the adjacent levee. Commentors have suggested that the levee's integrity is being compromised by the presence of gopher burrows, which they assert results from what they believe is an inadequate program of inspection and maintenance.

Detailed responses to these and other comments related to the levee and its design and maintenance are included in Attachment 3, Final EIR Master Response #3, "Napa River Flood Protection/Levee."

Records of levee inspections verifying that the levee has been inspected for rodent burrows are available on the City's web site.

Issue: Affordable Housing

- Commentors expressed concern that housing in the proposed project “will not be affordable.”

The project is conditioned to comply with the Inclusionary Housing Ordinance requirements. As required by the St Helena Municipal Code, 20 percent of the homes in the project will be affordable to very low, low, and moderate income households. There will be no restrictions on the price of the remaining units or on the proposed ADUs.

By providing both market-rate and affordable units, the proposed Hunter Project represents about one-third of the 256 housing units allocated to the City in the current 6th Cycle Regional Housing Needs Allocation (RHNA).

Issue: Letters from Attorneys

- The City received two letters on April 30, 2023, from a law firm (DP&F) representing opponents of the proposed project commenting on the Tentative Map and the EIR. The letters are provided as Attachment 4 to this staff report.

Staff's response is that none of the comments provide any substantial evidence as to the adequacy of the EIR for the Hunter project or the ability of the City Council to approve the Tentative Map.

Issue: Spanish Language Outreach

- Some commentors and City Council members expressed concern that there was no specific Spanish-language outreach associated with the Hunter project.

The City currently does not have a policy requiring that public notices for development projects be provided in any language other than English. All noticing and materials for the Hunter project comply with current City requirements. However, in an effort to reach the broadest audience, the legal notice materials and mailed notices were bilingual for the June 26th meeting.

Issue: Status of the Onsite Well

- Commentors, including attorneys representing project opponents and Water Audit California, have suggested that the existing onsite well is not available to be used as proposed to irrigate outdoor landscaping in the proposed project.

Based on a review of the correspondence and relevant state law and the historic use of the onsite well, it is staff's understnaidng that the onsite well has never been abandoned. The well is fully operational, and was verified in 2021 to be able to be pumped at levels exceeding the proposed usage.

Issue: Statement of Overriding Considerations

- Councilmembers asked on May 1 what would happen if the Statement of Overriding Considerations (SOC) were not adopted, and whether the project's benefits in fact outweigh its impact on Vehicle Miles Traveled.

If the SOC is not adopted, arguably the project approval could not proceed, the tentative map would not be approved, and development of housing at the project site would not occur. This could in turn lead to a number of potentially adverse outcomes, including legal challenge of the Council's decision and issues with the State of California Department of Housing and Community Development (which enforces compliance with state housing law).

Issue: Future Applications

- Councilmembers asked at the hearing on May 1, 2023 about future applications which will need to be approved before the project can be developed, and whether additional information is available about these applications.

If the Hunter Tentative Subdivision Map is approved, additional approvals are required before homes can be built:

- Affordable Housing Agreement (CC)
- Final Map/Subdivision Improvement Agreement (CC)
- Conditional Use Permit for Multi-Family (PC)
- Design Review of Homes (PC)

Issue: Extension of Adams Street

- Commentors asked why the applicant is not required to either build or contribute to the extension of Adams Street to Silverado Trail.

The extension of Adams Street to Silverado Trail is one of two alternatives included in the General Plan to connect downtown to Silverado Trail.

To date, a special study has not been undertaken and the City Council has not made a choice about the appropriate route to connect downtown to Silverado Trail.

The Hunter project is not required to provide the connection to Silverado for several reasons, as discussed in the staff report.

Issue: Water Neutrality/Water Use

- Commentors have expressed concern that the Hunter project will negatively affect the City's water system by adding demand for City-provided water. These include questions about projected water use and the ability of the project to achieve water neutrality.

The issue of the City's Water Neutrality requirements has been considered and is the subject of extensive discussion in prior staff reports, the project's Draft EIR, and the Final EIR.

Staff's conclusion is that the onsite well can be used as proposed, providing about half of the water savings needed to fully offset the project's water use. Conditions of approval require the installation of water-conserving projects elsewhere in St. Helena to achieve the rest of the required water savings.

Issue: Proposed Accessory Units

- Commentors asked whether the City would require that the proposed Accessory Dwelling Units (to be built with 11 of the single family homes) are to be rented to low-income households.

The proposed Accessory Dwelling Units (ADUs) will not be counted toward the project's required affordable housing. Because the ADU units will not be part of the required affordable units, the City will not require that these units are rented to low-income households (consistent with City practice for other ADUs). The use of the ADUs will be up to the owners of the homes with which they are built.

Issue: Water Use Projections Too Low

- Comment asked whether the City would ensure that water use does not exceed projections.

The City meters water use per household, but to date has not implemented any type of program which would flag homes with excessive water use. The projected per-person water use for the project is about three times higher than the statewide average. The likelihood that water use will exceed projections is very low.

Issue: Will City Monitor Water Use?

- Comment asks whether an in-lieu fee to offset projected water use is too low and would not achieve enough mitigation. The comment also asks if an in-lieu fee would be adjusted if water use was higher than projected.

The proposed conditions of approval do not allow the payment of an in-lieu fee to offset the project's water use. Condition of approval #73 requires that the developer build and bring on line one or more projects that would reduce water use in the city or provide additional supply.

Water use projections for the project are conservative and not likely to be exceeded. There is no current process in place to provide for penalties or fees if water use projections are exceeded.

Issue: In-Lieu Fee for Water?

- Comment asserts that an in-lieu fee to offset projected water use is too low and would not achieve enough mitigation. The comment also asks if an in-lieu fee would be adjusted if water use was higher than projected.

The proposed conditions of approval do not allow the payment of an in-lieu fee to offset the project's water use. Condition of approval #73 requires that the developer build and bring on line one or more projects that would reduce water use in the city or provide additional supply.

Water use projections for the project are conservative and not likely to be exceeded. There is no current process in place to provide for penalties or fees if water use projections are exceeded.

Issue: Change.Org Petition

- In late April, 2023, an online petition in opposition to the Hunter project was posted on the web site Change.org.

After reviewing the information in the petition, staff prepared and circulated a press release correcting several factual errors. The press release is included in the attachments to the June 26 staff report.

Issue: Water Audit CA Comment Letter

- On May 1, 2023 (the date of the previous City Council hearing), Water Audit California delivered a letter commenting on and raising concerns about the CEQA process which has been followed for the Hunter project and the adequacy of the analysis of water use and water neutrality.

Staff's response is included in the attachments to the June 26 staff report. Based on staff's review, none of the comments raise any valid concerns about the adequacy of the EIR for the Hunter project or the noticing of the project.

Recommended Council Actions

1. Adopt a Resolution certifying the Final EIR, and approving a Mitigation Monitoring Program, Findings of Fact and Statement of Overriding Considerations; and
2. Adopt a Resolution approving the requested Tentative Map No. 2022-001, File #PL10-040, for the Hunter Subdivision project, and **adding** condition of approval #125 as presented at this hearing.

Subject: [External] Hunter Project and RHNA

Please distribute this to city council members:

The Hunter Project and RHNA

In 1968 Napa County citizens had the wisdom and foresight to implement the first Ag Preserve in the nation. Probably no one dreamt that it would be so successful, becoming both an agricultural oasis and the backbone of the local economy. To further protect the rural and agricultural nature of the county, and to more effectively manage regional development mandated by ABAG through its "black box" Regional Housing Needs Assessment process, the County and ALL of the cities in the County formed a "Sub RHNA" entity in 2014 through NCTPA (Napa County Transportation and Planning Agency) to gain local control over the allocation process. It enabled the County and its cities to determine amongst themselves the most appropriate locations for development within the county. As a consequence, in the 2015-2023 RHNA 5th Cycle, Saint Helena's allocation dropped to 31 units. In the spirit of the Napa County Ag Preserve and the Greenbelt Alliance there was a general recognition that it made the most sense to accommodate development in the larger urban areas and relieve pressure on smaller towns in the ag heartland. Sub RHNA was enormously successful.

Fast forward to a recent Saint Helena City Council that, out of incompetence, poor guidance or ulterior motive, voted to exit the Sub RHNA collaboration with the County and all its other cities. Incredible! As a direct consequence, Saint Helena's RHNA allocation jumped to 254 units for the 2023-2029 RHNA 6th Cycle. While it is true there is a need for more low income and work force housing in the county, it is manipulative to use this self inflicted higher RHNA number as a lever to build more million dollar plus single family homes in Saint Helena on what is otherwise prime ag land. With Sub RHNA, there was no government mandated Saint Helena housing crisis, and certainly no mandate for a Hunter Project. Instead, as with the original Ag Preserve, better angels had prevailed. In consultation with the County and its smaller municipalities, our larger cities assumed a greater development burden for the sake of us all; for ag preservation and open space, and to protect our economic foundation long term. Let us hope that a future Saint Helena City Council won't make the same blunder as the recent one.

Separately, also regarding the proposed Hunter Project and its "Water Neutrality", who can seriously say with a straight face that sucking half of the project's water needs out of the ground just a few hundred yards upstream from the City's existing groundwater wells WON'T have an impact long term on water availability for current residents. Ludicrous.

May 15, 2023 at 2:17 PM — Shared

On July 31, 2019, The New York Times gave its readers an excruciatingly detailed view from the heart of a multi-fatality wildfire as it swept through Paradise, California.

The article notes that Paradise had a robust disaster plan. "But it had prepared merely for disasters, and this was something else. In a matter of hours, the town's roads were swamped, its emergency plans outstripped. Nine of every 10 homes were destroyed and at least 85 people were dead. Many were elderly, some were incinerated in their cars while trying to flee and others apparently never made it that far."

In my experience, money and clout decide development disputes. Democracy is invited to be grateful for gestures when the people try to speak up. However futile, there is one factor in this land decision that compels me to speak: the blocking of realistic escape routes from Vineyard Valley. I'm sorry the Hunter contingent made a bad business decision, but I and many others are not willing to give our lives for it in the face of the certain fires of the future.

Subject: [External] Objection to Hunter Project

I own a home at 1360 Grove Court and object to the proposed Hunter development in its entirety.
My objections are based primarily on (1) the recurring water shortages/restrictions which already compromise quality of life/green areas, and which would inarguably worsen under the burden of 50-80 additional households; (2) loss of green space within the city - the area in question is part of the largest, most tranquil and iconic park in St Helena - losing it would be an irrevocable tragedy; (3) related to the foregoing, increased fire danger due to loss of that green-space, our most effective in-town, open-space fire break; (4) the frightening traffic impact given 100 or more additional vehicles, the Pope Street bridge and the already extremely congested traffic in and through downtown. This would be a daily hardship and potentially tragic in the event of any evacuation.
For all these reasons, I strenuously object to the proposed Hunter development and trust City Council act responsibly toward those people it represents and vote this project down.
Please work to change the state housing mandates along with other California community. Do not allow this project at the expense of the quality of life of current residents.

Subject: [External] The Final Shoe

Greetings Mayor Dohring, Vice-Mayor Hall, and City Council members: Please consider the following:

Excerpt from St. Helena, California: Dealing with a Field-of-Dreams Levee, Residual Risk, and a Flood of Controversy Posted on July 17, 2016 by UC Davis Center for Watershed Sciences by Nicholas Pinter The final shoe – probably the most problematic element of the St. Helena flood-control debate – is now dropping, five years after the levee's completion. The current issue results from the unusual pathway of the levee, which sweeps well north and west of the neighborhoods previously flooded and includes 16.9 acres of undeveloped vineyard land. Undeveloped until now, that is. Just 17 days before the passage of Measure A, the mechanism that funded large-scale flood engineering throughout Napa County, much of the empty floodplain land behind the St. Helena levee was purchased by a private developer. On Sept. 8, 2010 the developer submitted plans to convert the empty agricultural land behind the levee into high-density residential development, including 87 new residential units[5]. ***This despite an explicit provision in Measure A that "none of these projects are intended or designed to encourage population growth."***

Please listen to the voices of the citizens of St. Helena. No one wants this development built for so many crucial and far-reaching reasons. You have heard them all. I realize you are all under a great deal of pressure from several places, and as Council Member Summers stated in the last meeting, this is a "political chess game". That may be, but what is most important for St. Helena and the people that live here is NOT to build this development. We will ALL suffer the consequences.

Please do the right thing and vote NO.

Respectfully,

Elizabeth Green
Vineyard Valley

Subject: [External] Rebuttal to Press Release re Misinformation on Hunter project

FYI: Please note the rebuttal of last week's Press Release by the author of online petition Angela Zivkovic which opposes the Hunter project and is now registering 983 signatures from the citizens of St. Helena.

"The city of St. Helena recently sent out a press release regarding alleged “misinformation” in the change.org petition (https://www.change.org/p/save-the-city-of-st-helena-urge-city-council-to-vote-no-on-the-hunter-eir), which has now been signed by 971 people. The press release states that the change.org petition is presenting non-factual and misleading information about the levee, flood risks, FEMA maps and new FEMA Risk Rating 2.0. I thank the city for providing the links to these resources and documents to all St. Helena residents. I am glad that we are finally having a real discussion about this. Here are the facts: 1) we are proposing to build a development behind a levee in a flood zone, which means there is a non-zero risk of flooding that could damage those homes, 2) regardless of whether you choose to believe the % risk rating based on the 100-year flood approach, there is a non-zero risk that a flood event that overwhelms the levee will occur, 3) levees fail, 4) there is not a documented risk score for this levee (see discussion below), and 5) in the event of a flood that damages homes those homeowners have a right to sue the city and state, and based on historical legal precedent, they will likely win. First, I would like to directly address the allegation that the petition provides misinformation because in it is stated that the concept of “100-year floods” is now out of date. That is simply a reasonable interpretation of what is stated in the Risk Rating 2.0 Here is the actual language from the https://www.fema.gov/sites/default/files/documents/FEMA_Levees-in-Risk-Rating-2.0_2_22.pdf
On page 1: “Risk Rating 2.0 allows FEMA to calculate premiums more consistently for all policyholders, based on the value of their home and their property’s individual flood risk, by moving toward a graduated risk approach that expands beyond the binary depiction of flood risk centered around the 1%-annual-chance (100-year) flood event.” In other words, it was necessary to devise a more accurate system of assessing risk which “expands beyond” the %-annual-risk approach. The Risk Rating 2.0 system uses real data on screened levees to determine “overtopping frequency.” But for levees where this information was not available, assumptions were made in the following way (page 13, section 3.7.3): “Assumptions for overtopping frequency were required for levee systems that did not have available or reliable information from the LST, NLD, or Fathom. One of two assumptions was applied in these cases. First, if a levee system was identified as accredited on a FIRM, the assumed overtopping frequency was a 1% annual exceedance probability (AEP) flood event. In situations where Fathom data estimated a more frequent overtopping for an accredited levee system, the 1% AEP overtopping frequency was still assumed. However, if Fathom estimated levee overtopping to be less frequent than the 1% AEP for an accredited levee, then the overtopping frequency derived from Fathom was used. Second, FEMA assumed the levee overtopping frequency as a 2% AEP flood event for the remaining 57% of levees (and associated 10% of buildings in leveed areas).” In other words, the 1% or 0.5% risk of flooding is just a default assumption, not an actual assessment of real risk based on real data specific to the levee, in the case of unscreened levees. So the question then is, is the St. Helena levee one of the screened levees? The answer is no. According to the entry for our levee in the National Levee Database (NLD): https://levees.sec.usace.army.mil/#/levees/system/150005212841/summary

our levee (system ID 150005212841) is one of 80% of national levees that have not been screened. Thus, under the Levee System tab the entries are “No Data Entered” or “Unknown” for all of the following fields: Overview, Levee Performance and Potential Lost Benefits, and Incipient Overtopping Annual Exceedance Probability (AEP, or annual probability of the flood event that would load the Levee System to the top). In other words, there is no data available for the AEP for our levee. In the document
https://www.fema.gov/sites/default/files/documents/FEMA_Levees-in-Risk-Rating-2.0_2_22.pdf
on page 7 it is clearly stated that even for those 20% of levees that have been screened: “The NLD reports that these screened levees mitigate the risk for approximately 60% of all buildings behind levees.” So: our levee has not been screened, we do not have a probability rating of the levee overtopping, and even for a screened levee for which probability of overtopping has been established one can only count on risk mitigation for about 60% of homes behind the levee. So where does this leave us? It is up to each individual citizen to decide for themselves. The publicly available National Levee Database and FEMA Appendix D Rating Factor Tables have no risk ratings and probability data for levee failure for the St. Helena Flood Protection Project. We are being asked to take the city’s word for it that we know what amount of residual risk we are taking on by building more homes behind this levee. This “trust us” approach is also what is being asked of us when it comes to safety regarding evacuations during emergency situations. The FEIR does not provide a clear demonstration that every single resident of St. Helena could safely evacuate under a worst-case scenario situation (e.g. multiple fires start simultaneously, in the middle of the night, spread quickly due to high winds, with the power out (i.e. no functioning traffic lights), evacuations ordered for both Calistoga and St. Helena, and the Silverado Trail not a viable egress route). In my opinion, among the questions that must be answered in order to be able to vote on approving the safety of this development in an emergency evacuation are the following: A) How many vehicles can be safely evacuated from the entire city of St. Helena per minute? B) Which specific neighborhoods/streets will have the slowest egress because they are the farthest from Highway 29 and/or because they have special obstacles to making it to Highway 29 (e.g. several left turns into high-traffic streets, high-density apartment building)? C) How long will it take the LAST vehicle from these slow egress neighborhoods to evacuate down to a certain “safe” point on Highway 29? D) What are the projections and numbers for A-C) above if there were the current number of residents in town? E) And what are the projections and numbers for A-C) above if there were 400 more vehicles in the Hunter development needing to funnel into the traffic onto Hunt and Pope Streets? F) Exactly how many officers/volunteers would you need directing traffic to ensure that anyone already on Highway 29 from north of town actually stops and allows vehicles trying to turn onto Highway 29 from Spring Street, Madrona, Hunt, Pope, etc.? G) How quickly would this kind of traffic control need to be implemented and how much risk is there of a major collision blocking ALL egress in the time it takes to mobilize and coordinate the traffic control? H) What mitigations would be necessary to ensure that the LAST vehicle from a slow egress neighborhood makes it down to a specific “safe” point on Highway 29 south of town (e.g. How much could egress rates or egress time be improved if Highway 29 was widened/modified to accommodate the high traffic congestion in the worst-case scenario?). Given that there is a non-zero risk (whatever the number might be) of a flood event that damages homes and becomes a liability for the city, and that we have no clear assessment of how the development would actually affect evacuations during an emergency, why exactly should the citizens of St. Helena believe that this development project does not threaten our public health and safety? Why are we so desperate to build homes in a flood zone behind a levee? It just doesn’t make any sense." Angela Zivkovic

Respectfully,

Elizabeth Green

June 8, 2023

Mayor Paul Dohring
Vice Mayor Eric Hall
Council Members Anna Choteau, Lester Hardy, and Billy Summers
City of St. Helena
1088 College Avenue
St. Helena, CA 94574

Dear Mayor Paul Dohring, Vice Mayor Eric Hall
Council Members Anna Choteau, Lester Hardy, and Billy Summers:

RE: City of St. Helena – Letter of Support and Technical Assistance

The purpose of this letter is to assist the City of St. Helena (City) with its decision-making regarding the Hunter Subdivision Project (Project). As you are aware, the State of California is in a housing crisis, and the provision of housing is a priority of the highest order. The California Department of Housing and Community Development (HCD) recognizes the challenge of interpreting ever-changing housing and land use laws and appreciates the opportunity to provide technical assistance that may lead to better housing outcomes for the state, as well as the City of St. Helena.

HCD understands the City Council will consider the Project at the June 26, 2023 public hearing. HCD understands Ben and Kelly Banzutphen (Applicant) are seeking approval of a tentative subdivision map and certification of an environmental impact report to allow 1.) Development of 51 single-family residential lots with 11 accessory dwelling units on a vacant, approximately 16.9-acre parcel; and 2.) 25 multifamily residential units on 3.13-acres. The Project also includes an anticipated 20 percent of the proposed units will be set aside for lower-income households.

Housing Element Commitments

As the City is aware, the City Council adopted St. Helena's 6th Cycle Housing Element (2023-2031) on May 9, 2023. Under that Housing Element, the City must accommodate a Regional Housing Needs Allocation (RHNA) of 256 total units comprising 104 very low-income units, 59 low-income units, 26 moderate-income units, and 67 above moderate-income units. The adopted Housing Element identifies the Project as essential to meeting the 256 units required by the 6th Cycle RHNA. The approval of the Project would contribute significantly toward meeting the City's RHNA obligations. Further, the Project is consistent with the goals, policies, and implementation programs

outlined in the City's Housing Element. Specifically, the objectives in Implementation Program H-A state that the City will commit to approving and streamlining the Project. Not meeting the objectives in Implementation Program H-A will require the City to identify alternative housing sites to meet its RHNA obligations.

It is important to note that the adopted 6th Cycle Housing Element is currently under review by HCD for substantial compliance with State Housing Element Law and that HCD will continue to monitor the City's progress toward implementation of the programs contained within the Housing Element to ensure the City meets its RHNA requirements.

Housing Accountability Act

In addition, the City should be aware that the Project meets the definition of a "housing development project" under the Housing Accountability Act (HAA). Therefore, the City must consider its obligations under the HAA (Gov. Code, § 65589.5). The HAA limits a local government's ability to deny, reduce the density of, or make infeasible housing development projects that are consistent with objective local development standards that contribute to meeting housing needs. Please see the Housing Accountability Act Technical Assistance Advisory available on HCD's website.[1]

In sum, HCD supports the approval of the Project during this critical housing crisis and appreciates the opportunity to assist the City in meeting its statutory obligations in the decision-making process. If you have any questions regarding the content of this letter or would like additional technical assistance, please contact Jessica Evans at jessica.evans@hcd.ca.gov.

Sincerely,

Shannan West
Housing Accountability Unit Chief

Dear Members of the City Council, Anil Comelo,City Manager & Maya DeRosa, Community Development Director

,Attached is a petition requesting public comment on the Planning Commissioners final report to the City Council in reference to the Hunter Project.

Respectfully,

Maria Villegas, Chairperson

St. Helena Citizens for a Sustainable Future

Petition to Reschedule the June 7, 2023 St. Helena City Council meeting because it does not comply with law.

Petition Summary and Background
Hunter Project

The City Council has set a fifth (5th) and final hearing date of June 7, 2023. That hearing is illegal and contrary to City Code. The Planning Commission was required to file its report and recommendation with the City Council ***prior*** to setting a hearing on the tentative subdivision map. (SHMC § 16.16.070, ("At the next regular city council meeting **following the filing of the planning commission's report with it,** the city council shall fix the hearing date at which the tentative map will be considered by it, which date shall be within thirty (30) days thereafter.") **That did not happen.** Instead, a fourth (4th) hearing was scheduled on May 1, 2023. No Planning Commission report and recommendation was prepared separate from the Staff Report prepared by Interwest Consulting Group provided with the public agenda for the previous fourth (4th) hearing on May 1, 2023, Special Meeting and the June 7, 2023 Special Meeting.

This failure to proceed as required by law has deprived the public of the opportunity to review and comment on the legally mandated Planning Commission report and recommendation prior to the project being set for a hearing. The May 1, 2023, Special Meeting and scheduled June 7, 2023, Special Meeting thus are contrary to law and must be rescheduled properly pursuant to SHMC § 16.16.070.

The Planning Commission was required to file its report and recommendation with the City Council ***prior*** to setting a hearing on the tentative subdivision map. (SHMC § 16.16.070, ("At the next regular city council meeting **following the filing of the planning commission's report with it,** the city council shall fix the hearing date at which the tentative map will be considered by it, which date shall be within thirty (30) days thereafter.") **That did not happen.** Instead, a fourth (4th) hearing was scheduled on May 1, 2023. No Planning Commission report and recommendation was prepared separate from the Staff Report prepared by Interwest Consulting Group provided with the public agenda for the previous fourth (4th) hearing on May 1, 2023, Special Meeting and the June 7, 2023 Special Meeting.

This failure to proceed as required by law has deprived the public of the opportunity to review and comment on the legally mandated Planning Commission report and recommendation prior to the project being set for a hearing. The May 1, 2023, Special Meeting and scheduled June 7, 2023, Special Meeting thus are contrary to law and must be rescheduled properly pursuant to SHMC § 16.16.070.

June 25, 2023

To: Mayor Paul Dohring, Vice Mayor Eric Hall, Council members Chouteau, Hardy, and Summers. City Manager Anil Comello.

From: Pat Dell

I have sent my comments on the Hunter Development EIR to the Planning Commission previously so I will not repeat myself. I have concentrated my efforts in this letter on communicating with the City Council and City Manager on Affordable Housing, City fulfilling the FEMA requirements for maintenance and management of the components of the St. Helena Comprehensive Flood Control and River Restoration Project, safe evacuation in case of a natural disaster for Vineyard Valley residents as well as the persons who would be living in the Hunter development. The Planning Commission kicked the can down the road to you because they said it met the requirement from the state for affordable housing.

THIS IS NOT AN AFFORDABLE HOUSING PROJECT. It is a development of homes for above moderate-income people. The City is required to build only 66 units of above moderate-income houses in the 6th cycle which is 8 years. Are you going to allow Mr. Hunter to fill that entire requirement and deny other builders based on having fulfilled your RHNA requirement? No attention has been given to the inclusionary housing ordinance which is crucial. I have watched this City avoid, fail, drag its feet, do surveys ad nauseum and not do a thing except help Our Town St. Helena to build the only housing for low income and working people that has happened in the 23 years that I have lived here. The City did have an Affordable Housing Committee several years ago whose members were authorized to issue an RFP for Affordable Housing Developers to submit a plan for about 35 units for the Adams Street Property. The Committee received several excellent proposals, the PC liked all of them but the mayor at that time refused to have any of them presented. This is not a primary issue for any City Council member or City Manager or something would be happening. Our Town St. Helena has between 40 and 60 units of affordable housing in the pipeline. You own with no mortgage the entire Adams Street property, the railroad property, the Main Street property. I have not heard or read of any action on your part to build affordable housing on any of those properties. You should have a St. Helena Housing Agency with staff that understands housing and you should be developing an association with an affordable housing builder such as Burbank Housing who know how to get financing.

I have reviewed the FEMA requirements for the City in the LOMR. I have reviewed the inspections of the components of the flood control project from 2015 to the present time. This is attached as an addendum because it is three pages long. I am also attaching the FEMA language in the LOMR. The flood project was completed in 2011 and certified in 2012. It took until 2015 to start inspections. When they were begun there were no emergency procedures, no operations or inspection records present. No refresher training. That remained true in 2016. When reading this I felt sorry for the staff member doing the inspection and submitting the report. He was crying out for help and getting none. I have attached a full review to this report so I will only say that although the project was built to FEMA and ACOE standards the City was and still is negligent in the maintenance of the project.

My comments regarding safe evacuation from Vineyard Valley and the Hunter Project are based on my experience as well as the MASTER RESPONSE section of the EIR in the library. This is a response to comments submitted by people who are concerned about the project. The St. Helena Police Department has made a judgement call pertaining to evacuation based on an emergency drill September 20, 2021.

This was not an adequate drill and no one in the SHPD is a traffic engineer. First of all, it was not a surprise. We were all informed ahead of time. Secondly and most importantly, it only included half of the homes in Vineyard Valley. The residents living on the east side went out over the levy. There are 125 homes on the east side of VV The homes on the west side were told to go out on Pope Street. There are 115 homes on the west side of VV. These people did not have the experience of driving out over the levee. If the emergency is at night there would need to be lights and temporary barriers to prevent people from driving off the levee. If the emergency requires evacuation of the east side of St. Helena it will be bumper to bumper. You have Stonebridge apartments, Silverado Orchards and Vineyard Valley, all high-density communities all trying to get in line on Pope St. Not to mention the people on Star, Meadowcreek etc. who will also need to get out. This is not a simple evacuation exercise solution to a very serious problem. Apparently the SHFD and SHPD recognized the danger was great enough that it required some emergency accommodation. However, none of them are qualified to determine whether there will be damage to the levee by building an onramp for access. This is a disaster waiting to happen and you must deny the building of this project.

Make Mr. Hunter an offer he can't refuse and leave that property agriculture or a proper park for the east side of St. Helena.

Sincerely, Pat Dell

MAINTENANCE OF FLOOD PROJECT COMPONENTS

FLOOD PROJECT COMPLETEDC June 2011

FEMA ISSUED LETTER OF MAP REVISION (LOMR) IN JUNE 2012

FEMA requirements for maintenance of flood project components are as follows:

A. NFIP regulations Subparagraph 60.3(b)(7) requires communities to ensure that the flood-carrying capacity within the altered or relocated portion of any watercourse is maintained. This provision is incorporated into your community's existing floodplain management ordinances; therefore, Responsibility for maintenances of the altered or relocated watercourse, including any related appurtenances such as bridges, culverts, and other drainages structures, rests with your community. We may request that your community submit a description and schedule of maintenance activities necessary to ensure this requirement.
B. FEMA further states "State/Commonwealth or community officials, based on knowledge of local conditions and in the interest of safety, may set higher standards for construction or may limit development in floodplain areas. If your State/Commonwealth or community has adopted more restrictive or comprehensive floodplain management criteria, those criteria take precedence over the minimum NFIP requirements.

The above is to emphasize how important it is to have qualified people do required inspections and that the deficiencies noted are addressed in a timely manner. I do not find this to be the case in my review of inspection reports since they were started in 2015 three years after the LOMR from FEMA. The same deficiencies were reported year after year and up until the present.

I am satisfied that the City of St. Helena hired very capable people in the Mead and Hunt Engineering firm as well as Mitch Swanson as Geomorphologist. The project was built using the highest standards. It was not built by the ACOE because the City of St Helena would have been required to wait approximately ten years to even start the process. This information was provided to me by Eric Sklar who was on the City Council at the time of the development and construction of the project and he was most the most involved CC member working on the development and construction. The following are my observations after reviewing inspection reports from 2015 to 2023.

10-30-15 Josh Shaw and signed by Ste3ve Palmer

A. Erosion of levee embankment at top of outlet behind concrete.
B. Corrosion and rust on metal components
C. No operations or inspection records present. No refresher training.
D. Areas where ground is eroding toward base of structure – foundation concrete structure.

10-26-16 Josh Shaw and signed by Steve Palmer

A. Still no emergency procedures. No operations
B. Erosion by Sulphur creek by outlet gate.
C. Gophers present. Burrows control program not effective or non existent.
D. Concrete structure tilting and sliding.
E. Joint material erosion.
F. No operations or inspection records present. No refresher t raining.

G. Ground eroding at base of structure. (I assume this is the flood wall.)

10-17-17 Josh Shaw with signature of Steve Palmer.

A. No emergency procedures.
B. Trash, debris, weeds and small trees along levee.
C. Gopher holes present.
D. Areas of tilting, sliding and settlement. Needs repair.
E. Joint material eroding
F. Evidence of active seepage.

09-24-18 - Darren Gardell Signed by Steve Palmer

A. No emergency procedures.
B. Trash and debris on levee
C. Minor slope stability problem.
D. Erosion occurring on or near levee.
E. Existing animal burrows program needs to be improved.
F. Tilting and sliding that threatens structure integrity.
G. Ground erosion toward base.
H. Joint material deterioration.
I. Evidence of active seepage.
J. Pump station -NO maintenance and inspection records.

12-06-19 Erica Smithers

A. Minimally acceptable.
B. Excessive vegetation and trees too close to floodwall.
C. Dog feces thrown over wall.
D. Floodwall settled 3 inches in many locations.
E. Silicone within joints throughout floodwall failing.
F. Pumps inadequately maintained.
G. Sump pump overgrown with blackberry bushes.
H. A PLAN WILL BE DEVELOPED.

04-10-20 Erica Smithies IDENTICAL REPORT

07-22-20 Erica Smithies IDENTICAL REPORT

11-05-20 IDENTICAL REPORT

12-01 20 Erica Smithies

a. Floodwall settling and polyurethane sealant cracking.
b. Early signs of erosion Creekside of floodwall.

12-01-20 SOME REMEDIATION DONE

a. Weed abatement along floodwall, access points throughout flood project.
b. New generator installed.

c. Contractor has begun cleaning discharge channel, removing invasive trees.
d. Crews will utilize the basil treatment on bushes to mitigate any future issues.
e. Work will be completed in the spring when access is permitted for such work.

03-05-21 Mark Rincon --- No indication of who did the inspection. Hard to believe it is the Department Head.

A. Unwanted vegetation growth along levee embankment, blackberry bushes etc. (Still no permit?)
B. Erosion Creekside of wall. Being addressed as part of CIP-R19-03. (when ?)

07-07-2021

a. Floodwall settled 1.5 inches (was 3 " in 2018)
b. Small trees and bushes encroaching on floodwall. (I guess basil treatment didn't work?)
c. Polyurethane sealant – seams falling apart in wall. (Was supposed to be budgeted for 2021 so why hasn't it been done?)
d. Dog feces and yard clippings again dumped over wall. (Did City notify Vineyard Valley Manager?)
e. Blackberry bushes returned near well pump.

Recommendations from 07-07-21 report

a. Public Works Engineer to obtain quote during 2021 budget to work on surface cracks in wall.
b. Staff will reach out to Vineyard Valley Management about dumping dog feces, fish carcasses and yard clippings over wall.
c. Continuous animal burrowing in place that includes the elimination of active burrowing and filling of the existing burrows. (If this is true then why are there photographs of burrowing still actively taking place.)
d. Floo9d debris buildup at discharge channel from October 21st heavy rain. (This is 9 months later)

09-14-22 Mark Rincon Ibarra

a. Polyurethane cracking in floodwall still happening. Engineer to obtain quotes within the 2022 construction season. (This has gone on for year after year after year.)
b. Debris in discharge channel. Will be removed as part of RMA work. (What is RMA)

02-14-23 Mark Rincon Ibarra - Taylor Hamilton

a. Gives an A to animal control. (This despite continued photographing of holes from burrowing.)
b. Some brush and weed growth along floodwall.
c. Plywood, brush clippings, used cigar etc. being thrown over floodwall.
d. Wall is still offset.
e. Early erosion base of wall at 17 and 19 Los Robles. (This erosion first mentioned in 2016)
f. Joint material deteriorating and cracking at MOST joints around floodwall.

Subject: [External] Comment on Hunter Project EIR
Date: Friday, June 16, 2023 9:28:21 PM

Hello Cindy - can you please distribute this to the Council members and the appropriate staff? Thanks for your help.

I am writing this letter as a concerned citizen, not on behalf of any organization.

The proposed Hunter Project is an almost 17-acre neighborhood of 51 brand new 3-to-4 bedroom homes that will most likely be valued at or above $3,000,000 each. Right next door, will be a much smaller 3.4 acre neighborhood of 24 two-bedroom homes which will be rented to income-qualified tenants. Even though both neighborhoods are part of the same development, there is a complete separation of the two communities, with no connecting streets. So a housekeeper or gardener living in the small rentals, would need to drive out of his/her community and into the big house community next door to clean the toilets and blow the leaves.

Can you please explain to me how this proposed site plan is consistent with the City of St Helena Municipal Code Chapter 17.146 which states that “affordable units shall be comparable in number of bedrooms, exterior appearance and overall quality of construction as the market rate units in the same residential project”? Or that “affordable housing shall be dispersed throughout the residential project, or subject to approval of the planning commission, may be clustered within the residential project when this furthers affordable housing opportunities”? Has the Planning Commission made a ruling that segregating the affordable housing in the Hunter Project is providing additional affordable housing opportunities? Is there an explanation anywhere in the project documents for this disparity?

The Final EIR for the Hunter Project dated October 2022 on the City’s website advises us to wait for the City to negotiate the inclusionary housing requirements during the Final Map approval process to determine how the 20% affordable housing requirement will be served. But the Tentative Map before the City for approval right now already segregates the smaller and much more densely-packed affordable rental units away from the market rate houses, which basically eliminates any hopes of providing an integrated community during the Final Map negotiations . Unless I am missing something, this appears to be a flagrant abuse of the City’s Municipal Code.

I understand that the City wants to approve this project. But agreeing to this purposeful separation of the haves from the have-nots, without explanation or rationale does not seem right to me. Particularly for a city that proudly professes its “commitment to advancing justice, equity, diversity, and inclusion” [Source: City of St Helena Diversity, Equity and Inclusion Strategy}. Is it possible for the Council and/or staff to address this issue in writing prior to, or include it on the agenda for discussion at the June 26 meeting?

Thank you for your consideration.

Mary Stephenson

June 21, 2023

Dear Members of the City Council of St. Helena,

I am writing a follow-up letter regarding the Hunter Project Final Environmental Impact Report (FEIR). **I am writing to ask you to VOTE NO on approval of the FEIR.** This FEIR does NOT adequately address the safety of CURRENT St. Helena residents in the event of emergency evacuation due to natural disasters (i.e. flood, wildfire). **This FEIR does NOT provide evidence that the negative impact of the proposed development on public health and safety has been mitigated.**

An update on the petition that I notified you about in the last letter: the petition on **Change.org now has 1,045 signatures**, fully 1/3rd of the registered voters of St. Helena, who agree that this FEIR should not be approved, and that the safety of St. Helena residents is at stake.

I am aware that you have received a letter dated June 8, 2023 from Shannan West, Housing Accountability Unit Chief from the CA Department of Housing and Community Development, "urging" the city council to comply with the Housing Accountability Act. I want to make sure and make it crystal clear that the citizens of St. Helena are aware that the Housing Accountability Act does NOT in fact mandate the building of homes if that development threatens public health and safety. **One of the five legitimate reasons to NOT approve a housing development project is the threat to public health and safety.** I am providing below two critical arguments why this threat to public health and safety clause can be invoked in this case.

With regard to sections H5, H6, P2, P3, R1 and R3 of the FEIR:

- Section H5: Emergency access
- Section H6: Wildland fires
- Section P2: Transportation hazards
- Section P3: Emergency access
- Section R1: Impairment of adopted emergency response plan or emergency evacuation plan
- Section R3: Infrastructure-related wildfire risks
- Section Q2: Sufficient water supplies

The FEIR does not provide a clear demonstration that every single resident of St. Helena could safely evacuate under a worst-case scenario situation.

1) The worst-case scenario situation is a wildfire event that bears features of both the Glass Fire and the 2017 fires that ravaged the area. In this worst-case scenario the fires would all start simultaneously, in the middle of the night, and spread quickly due to high winds, with the power out (i.e. no functioning

traffic lights). Evacuations would be ordered for both Calistoga and St. Helena, and the Silverado Trail would not be a viable egress route due to emergency vehicles fighting the fire on Silverado Trail on the East Side. Among the questions that must be answered in order to be able to vote on approving the safety of this development in an emergency evacuation are the following:

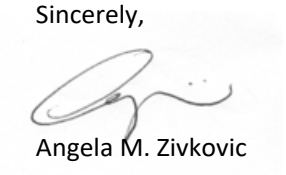
a. How many vehicles can be safely evacuated from the entire city of St. Helena per minute?
b. Which specific neighborhoods/streets will have the slowest egress because they are the farthest from Highway 29 and/or because they have special obstacles to making it to Highway 29 (e.g. several left turns into high-traffic streets, high-density apartment building)?
c. How long will it take the LAST vehicle from these slow egress neighborhoods (e.g. the farthest house within the Vineyard Valley community, a house at the end of a cul de sac) to evacuate down to a certain "safe" point on Highway 29?
d. What are the projections and numbers for a-c above if there were the current number of residents in town?
e. And what are the projections and numbers for a-c above if there were 400 more vehicles in the Hunter development needing to funnel into the traffic onto Hunt and Pope Streets?
f. Exactly how many officers/volunteers would you need directing traffic to ensure that anyone already on Highway 29 from north of town actually stops and allows vehicles trying to turn onto Highway 29 from Spring Street, Madrona, Hunt, Pope, etc.?
g. How quickly would this kind of traffic control need to be implemented and how much risk is there of a major collision blocking ALL egress in the time it takes to mobilize and coordinate the traffic control?
h. What mitigations would be necessary to ensure that the LAST vehicle from a slow egress neighborhood makes it down to a specific "safe" point on Highway 29 south of town (e.g. How much could egress rates or egress time be improved if Highway 29 was widened/modified to accommodate the high traffic congestion in the worst-case scenario?)

2) It is reckless and irresponsible NOT to conduct a more thorough evaluation, with real models and projections about egress times, before approving this FEIR. Whole families could perish if we do not do our job now of evaluating the real risks and hazards involved with adding a development of this size to an area of town that already has traffic congestion, in a town that has limited road infrastructure and high wildfire risk. **The current FEIR does not adequately mitigate the safety concerns during an emergency evacuation. We live in a very unique geographic location that has limitations on the egress routes that can be taken, and at the same time, very high wildfire risks that are increasing with climate change.** We may very well have already reached the maximum safe capacity of this town given the current limitations. It would be like loading more passengers on an airplane than you know can safely exit via the given number of emergency doors. Until we know with some confidence what that maximum capacity is considering the possible egress rates under the current infrastructure, we cannot possibly evaluate the real impact on public health and safety of any development that would add a substantial number of residents and vehicles.
3) Again, I just want to emphasize here that it is absolutely critical that any and all projections about the safety of egress out of town with the new development in place take into account a maximum possible number of additional people and vehicles that could be living there. Given that the proposed development is for 87+ units we must assume that there could be as many as about 400 people, and potentially 400 additional vehicles added to town. The proposed development does not and cannot limit the number of residents or vehicles allowed per household, nor does it limit or prohibit multi-family, or mixed adult households. An example is a household in which there are 2 adults and 5 children, 3 of whom are of driving age. This is actually a real example of a neighbor living close by. They have 5 vehicles and multiple pets, thus they could and probably would drive all 5 vehicles loaded up with personal belongings and companion animals in an emergency situation. Another example is a

house that becomes a rental for 5 adult Culinary Institute students or harvest interns who each drive their own individual vehicle. We cannot bury our heads in the sand and pretend that we know how many people are actually going to choose to live in each household of this development. In addition, the ADU and low-income housing requirements necessitate that there will be more than 87 units constructed in this neighborhood, again, highlighting the need to account for much higher total numbers of residents and vehicles than are being projected in the current FEIR.

4) Finally, I want to reiterate what others have communicated with you already, which is that a large number of home insurance companies have already pulled out of the state of California and will no longer provide insurance for any new homes and developments in the state. This is beyond the long list of insurance companies that already do not cover the city of St. Helena because it is considered to be in a high risk area.

The FEIR does not adequately address public safety with regard to the liability of a flood event. The city has sent out a public notice on this topic supposedly highlighting "misinformation" in my petition and in my letters. I sent in a letter to the editor at the St. Helena Star, and this letter was already forwarded to you. I just want to make sure to highlight the key points again here so that they are not lost:



1) As I mentioned in my previous letter, Dr. Nicholas Pinter, Professor in the UC Davis Department of Earth and Planetary Sciences, and Associate Director of the UC Davis Center for Watershed Sciences, wrote a very insightful and informative blog post on the topic of the St. Helena levee. I feel that it is absolutely necessary that each and every city council member read through this blog post carefully. In his blog he explains that **even with a levee constructed to withstand a "200-year flood" there is residual risk**. In other words, there is *at least* a 0.5% chance that a catastrophic flood event that overwhelms the levee will occur, but this could be higher given the unpredictability of climate change and given that we do not have an estimate of that risk because the risk estimation is not based on the current FEMA Risk Rating 2.0 but instead on the outdated risk rating system which FEMA no longer uses. This last statement is indeed correct for the following reason:
    a. The Risk Rating 2.0 system uses real data on screened levees to determine "overtopping frequency." But for levees where this information was not available, assumptions were made as stated on page 13, section 3.7.3 (https://www.fema.gov/sites/default/files/documents/FEMA_Levees-in-Risk-Rating-2.0_2_22.pdf): "Assumptions for overtopping frequency were required for levee systems that did not have available or reliable information ... if a levee system was identified as accredited on a FIRM, the assumed overtopping frequency was a 1% annual exceedance probability (AEP) flood event." In other words, in the case of unscreened levees the % risk of flooding is just a default assumption necessitated by the fact that only a small minority of levees have been screened since the new risk rating took effect, not an actual assessment of real risk based on real data specific to the levee.
    b. The St. Helena levee has NOT been screened. According to the National Levee Database (NLD): https://levees.sec.usace.army.mil/#/levees/system/150005212841/summary our levee (system ID 150005212841) is one of 80% of national levees that have not been screened. Thus, the entries for "Levee Performance and Potential Lost Benefits", and "Incipient Overtopping Annual Exceedance Probability" (AEP, or annual probability of the flood event that would load the Levee System to the top) are "No Data Entered" or "Unknown".
    c. What all this means is that **NO ONE, not even FEMA, has a real number for the % residual risk that exists of overtopping of this levee**. And this is not even taking into account the effects of climate change.

2) It is absolutely critical that the city council members acknowledge and realize that the levee WILL fail at some point. All levies do. It is just a matter of WHEN (not if) it will happen. The city council is responsible for evaluating the real financial risks and obligations that the city is taking on, given this reality. **It is not an optional exercise to build financial projections around the financial liability and risks associated with this development**. Given the implications of Measure A and CA Water Code Section 12748.3, as discussed in points 5) and 8) below, **the city council is obligated to fully account for the legal and financial liability of the development before they take any actions to approve this project.**
3) The city cannot guarantee that the levee has been maintained as required since its completion in 2010. Maintenance records through 2015 demonstrate failures on multiple levels. There are pictures of dozens and dozens of gopher holes on the levee itself. Dr. Pinter will tell you that is a big problem. And there are lots of other levee maintenance issues. Certainly, the burden of proof in any potential legal case would be on the city to demonstrate that the levee was properly maintained, with anything less than a 100% perfect record being a problem. Legal precedent demonstrates that the CA courts are inclined to side with property owners who have suffered damages rather than with municipalities in such cases (again, please read Dr. Pinter's blog post carefully).
4) The city WILL be liable when the catastrophic flood event occurs and the levee fails. As explained in Dr. Pinter's blog, there is already CA legal precedent that municipalities and the state can and have been liable for damages due to floods even when they were *not* involved in the construction of a levee that failed. In this case, the city of St. Helena is entirely responsible for its maintenance, and would therefore, without question, be liable. In other words, what is at stake here is the approval of a development whose residents would in the future have the full legal right and would likely win in a lawsuit against the city to pay for damages. This has already happened in this city before. The residents of Vineyard Valley, which was the first development that should never have been built inside the FEMA flood zone, sued the city of St. Helena after the 1995 flood. The city of St. Helena is still paying for this bad decision decades later, with deferred maintenance endangering the health of its residents and increasing the cost of living.
5) Furthermore, **Measure A, which was passed to approve and finance the construction of the levee, has a specific provision that "none of these projects are intended or designed to encourage population growth,"** meaning that the levies constructed throughout Napa Valley, including the levee in the city of St. Helena, were NOT intended to promote development behind those levies. This further strengthens any future Hunter development resident lawsuit; they can easily claim that the development should never have legally been built behind this levee. It is, in fact, questionable whether building the development behind this levee is legal.
6) I strongly suggest that the city council and mayor invite Dr. Nicholas Pinter to present and offer his expertise on levee safety. Dr. Pinter has previously expressed his expert opinion that construction immediately next to the levee (and in fact using the levee itself during the construction process) jeopardizes the internal integrity of the levee. **Dr. Pinter can be contacted via his UC Davis e-mail: npinter@UCDAVIS.EDU**
7) I would also like to remind the city council members that before approving anything it is critical to ensure that the city has NO increased financial risks if there is a levee failure, topping, or breach. There are a number of CA court cases that say if you don't maintain a levee you are liable for the damage. The recent Pajarro levee failure is a case in point.
8) Finally, **St Helena has agreed to indemnify the state of California when they accepted a grant of $9M.** Below is the statute memorializing that indemnification:
    a. California Water Code Section 12748.3 specifically applies to St. Helena and the flood control project, which includes the levee. It states, in part, "(c) A county or local agency may receive the funds only if it enters into an agreement with the department pursuant to which the city or

> local agency agrees to indemnify and hold and save harmless the state, its officers, agents, and employee for any and all liabilities for damages that may result from the project. (d) For the purpose of this section, 'liability for damages' includes, but is not limited to, liability for damages, relating to the construction or operation of the project or the failure of the project to operate as intended."

The current FEIR fails to adequately address the concerns cited above. The negative impacts of the proposed Hunter development on the health and safety of current St. Helena residents have NOT been mitigated. **The Hunter development would have significant impacts on public health and safety that cannot be mitigated, which is one of five reasons why a housing development can be denied according to the Housing Accountability Act.** It is the city council's responsibility to vote NOT to approve the Hunter development FEIR and to protect the citizens of St. Helena.

Sincerely,

Angela M. Zivkovic

Date: Tuesday, June 20, 2023 11:45:15 AM

Since the Hunter project was first brought to the city for approval, two profound events occurred in Napa Valley that changed everything for homeowners, businesses and renters. We had two catastrophic fires in 2017 and 2020, with the fires coming down to the highway at Silverado Trail at Pope Street, much too close to the proposed development. This has resoundingly changed the way homes in St. Helena are now able to be insured, especially for customers with million-dollar properties in high-risk areas. St. Helena is designated a high-risk fire zone.

Most mortgage lenders do require home insurance as a condition of the loan. So, if you have a mortgage on your house, it's safe to assume that fire insurance is mandatory.

Over the past few months, the following insurance companies no longer insure new properties in St. Helena because we are designated a high fire-risk zone. They are as follows: (these come from our local insurance company MIV)

State Farm Travelers — Declined

JE Brown — Declined

Oregon Mutual — Declined

Safeco — Declined

Nationwide — Declined

Chubb — Declined

Hartford — Declined

CIG — Declined

Scottsdale — Declined

Bamboo — Declined

Foremost — Declined

Rivington — Not writing any new business in California

Insurance is outrageously expensive through the California FAIR Plan — if you can even get it. "The FAIR Plan ultimately is intended to be a short-term solution for the marketplace. It is more expensive because the majority of the risks are riskier," said Phil Irwin, public relations representative for the California FAIR Plan.

So why do all the above companies believe St. Helena is a high-risk fire zone and the local fire department and the staff see no negative impact after all we have been through? Why would you build several dozen homes in a high-risk fire zone? How are they going to insure these homes?

“If the SOC is not adopted, project approval could not proceed, the tentative map would not be approved, and development of housing at the project site would not occur. This could in turn lead to a number of adverse outcomes, including potential legal challenge of the Council’s decision, issues with the State of California Department of Housing and Community Development (which enforces compliance with state housing law),

and increase the risk that the City would receive future "builder's remedy" projects (under the Housing Accountability Act, cities that do not have a housing element in substantial compliance with state law cannot deny certain housing projects, even if they are not in compliance with the City's zoning or general plan). For these reasons, staff recommends that the City Council adopt the Statement of Overriding Considerations."

We must resist the rhetoric that the state will force St. Helena, demanding that we build housing in a flood and high-risk fire zone. This is not about compliance to zoning or general plan, it is about safety. We can deal with this demand if and when it becomes an issue. We have perfect legal grounds to back us.

This got me thinking about the staff. I understand they feel under pressure from the state to move forward with this project to fulfill state requirements. They are required to tell us this. Again, the state can't and won't force St. Helena to build housing in an unsafe area.

Don't let these proclamations become a scare tactic that undermines our common sense. Common sense tells us that we should never build a huge development in a flood and high-risk fire zone with one exit over a railroad track with an intersection rated F by Caltrans (this is one of the reasons why the mega-Safeway wasn't built). The thought of all the machinery and supplies and workers coming down Main Street (or even worse, winding their way through small neighborhoods with streets where it is now difficult for two cars to pass). Entering and exiting through Adam Street is inconceivable and unsafe. Fire trucks and ambulances could at best only deliver services in a delayed, sporadic and counterproductive manner.

The response to this project is overwhelmingly negative. I understand the staff interprets the flood zone ruling

one way, while Ms. Zivkovic, a Ph.D. at UC Davis, interprets it another way. I'll put my money on Ms. Zivkovic. Her petition clearly shows how 1,000 citizens are feeling about this project.

I understand the City Council is under pressure from a variety of fronts. Big problems. No great solution.

Above all, as elected officials, I want to re-instill a sense of personal responsibility not only for your safety, but the future safety of your neighbors.

Susan Kenward

RE: Hunter Subdivision Project, File #PL10-040

Dear Mayor Dohring, Vice Mayor Hall, Council Members, City Manager Comelo, and Community Development Director DeRosa:

As you know, we represent the Saint Helena Citizens for a Sustainable Future, a diverse group of City residents.

In response to our April 30, 2023, letters discussing numerous concerns with the EIR and Tentative Map for the Project, on May 1, 2023, attorneys representing the applicant submitted a last-minute letter to the City. Staff also has recently posted additional responses to those letters in the Agenda Packet for the June 26, 2023, Special City Council meeting.

This letter provides additional information and responses related to the applicant's counsel's May 1 letter, to the City's most recent Staff Report, to points raised at the May 1, 2023, City Council meeting, as well as expands upon the major points raised in our previous letters. The issues covered in this letter are those that we feel warrant additional explanation and comment due to the importance of the issues and the lack of the Project's ability to address your constituents' substantial concerns.

As discussed at length previously, we continue to disagree with the Applicant on numerous issues, particularly that the project has been illegally piecemealed in violation of City law and CEQA, and that the Housing Accountability Act does not change that. Overall, and as stated in our previous letters, it is abundantly clear from the record, the EIR, and the Staff Report that the Project is attempting to evade and ignore City, County, and State requirements to build a luxury housing project under the guise of addressing a statewide affordable housing crisis.

For the reasons articulated below, in addition to those covered in our previous letters, this Project should not be approved. The points covered in this letter are as follows: (1) the City cannot be forced to approve this Project to meet its obligations under its Housing Element or State law, nor does it need to; (2) the

Project has no stated benefits and as a result the City has no basis for adopting a Statement of Overriding Considerations; (3) in response to recent comments and in order to avoid the application of the City's own safety standards, the project has changed again to be even less safe; (4) the City has failed to analyze impacts to groundwater and well resources pursuant to current State and Napa County groundwater requirements; and (5) subsequent environmental review is required to afford the public a chance to review the Project that is actually presented.

1. **The City Council Must Exercise Its Independent Discretion: Approval of the Project is not required in order for the City to meet its obligations under the City's Housing Element.**

The City is being tremendously pressured to approve a project that essentially no one but the developer wants. The record is replete with evidence that neither the current residents, local NGOs that advocate for affordable housing, or even the City's own recent Staff support the project as it fails to comply with the City's general plan, its inclusive housing law, myriad aspects of City code and policy, the Sustainable Groundwater Management Act, Napa County code and policy, and the California Environmental Quality Act. It puts the City and its residents at substantial financial and personal risk. Yet the tentative map under consideration is explicitly stated to provide "no direct fiscal impacts"[1] to the City.

Contrary to the applicant's attempted *fait accompli* that "the City cannot comply with Housing Element Law without approving the Project,"[2], the City is **not** required to approve this Project in order to meet its obligations under Housing Element Law. The Applicant's implication that the City must approve the project is contrary to law. Nothing can force the City Council to do anything other than exercise its own independent judgment as to the sufficiency of the EIR and the compliance of the Project with the City's municipal code and General Plan.[3]

Further, the City's newly adopted Housing Element (approved on May 9, 2023), contains an alternative to the Project: in the event the Project does not move forward "the City has also included surplus capacity of 116 units in the above moderate-income category to ensure capacity to meet the RHNA [Regional Housing Needs Allocation] is sustained throughout the planning period." (Housing Element at 2-180.) This Project is explicitly **not** needed to meet the RHNA requirements.

We recognize that included in the Staff Report for the June 26, 2023 Special City Council Meeting is a letter from the Department of Housing and Community Development ("HCD").[4] But HCD is not a responsible agency for the Project, and in this context is merely advocating what appears to be a position that all housing projects must be good. As stated extensively previously, that is wrong. This Project must still comply with CEQA, the City's code, policies, and water use regulations. As extensively documented, it does not. Further, this Project will not be helpful to the State's housing crisis – if anything, it will take away an opportunity for a more inclusive, affordable, and better housing opportunity for the City.

Although the applicant claims this Project will assist with overall housing demand there remains no proposal for affordable housing. Staff directly rejected the proposal made four years ago which violated

[1] June 26, 2023 Staff Report, at page 11.
[2] May 1, 2023 letter from applicant's counsel Holland & Knight, at pages 1-2.
[3] Prejudging the Project due to outside influence would violate the Brown Act. Gov. Code § 54950 declares that the intent of the Brown Act is to ensure agency "actions be taken openly and that their deliberations be conducted openly."
[4] Item 6.1 of the Staff Report for the June 26, 2023, Special City Council meeting, pages 259-260.

the inclusionary provisions of the City's code. Including a component of affordable housing in a Project that is segregated (in Lot 52) from the rest of the development is discriminatory and expressly illegal without approval of the proposed affordable housing plan by the Planning Commission. Approving the tentative map prior to that decision illegally revokes the delegated authority to the Planning Commission to first consider such a non-inclusionary proposal.

And finally, the Project proposes to include Accessory Dwelling Units ("ADUs") and count those ADUs within the dwelling units to establish the Project meets the minimum density requirement. However, in the latest Staff report, it is finally acknowledged that there will be no requirement to use those ADUs for housing – affordable or otherwise. Rather, it is now expressly conceded that "the use of the ADUs will be up to the owners of the homes with which they are built."[5] By leaving the use of the ADUs up to the homeowners, these ADUs will just be detached offices or game rooms in the backyard of luxury homes, or perhaps an extra bedroom for guests. There is no evidence in the record, substantial or otherwise, that these ADUs will provide meaningful independent dwelling units.[6] And again, as there is no use permit application for Lot 52, there is no evidence of how many units will actually be constructed there.

As such, there is no substantial evidence in the record to support a finding that the Project, as presented now, complies with the City's objective minimum density requirements.

2. The City has not proposed nor made specific findings that the Project is beneficial and as a result has not fulfilled its obligations under CEQA.

There is no evidence in the record as to any benefits for the City resulting from the Project. While there is of course a general need for housing, and substantial external pressure being applied from non-constituents to approve housing of any kind, the duty of the City Council is to the current citizens to find actual real benefits to the project that outweigh the significant unavoidable impact the Project will cause on the City. The City must identify, with reference to substantial evidence in the record, real benefits of the Project in order to adopt a Statement of Overriding Considerations.

CEQA requires "the decision-making agency to balance, as applicable, the economic, legal, social, technological, or other benefits . . . of a proposed project against its unavoidable environmental risks when determining to approve the project."[7] In doing so, the Council is required to document such benefits, by stating "in writing the specific reasons to support its action based on the final EIR and/or other information in the record."[8]

The most recent letter from the applicant attempts to address this issue, but instead of identifying specific, quantifiable benefits of the Project, the letter explains that the project is beneficial because it complies with the Housing Accountability Act.[9] That is not a benefit.

[5] Staff Report for June 26, 2023 meeting at page 8.
[6] Health and Safety Code section 19970 defines "dwelling unit" as "one or more habitable rooms which are occupied or which are intended or designed to be occupied by one family with facilities for living, sleeping, cooking and eating."
[7] CEQA Guidelines section 15093(a).
[8] CEQA Guidelines section 15093(b)
[9] May 1, 2023 letter from applicant at pages 8-9.

Page 15 of the most recent Staff Report concedes that "there are no direct fiscal impacts to the General Fund resulting from the approval of the Tentative Parcel Map." As such, and since the City has piecemealed the approvals, the decision before the City Council now has no fiscal benefit. And again, other than a generic suggestion that 'all housing is good', the City has not presented the public with any specific benefits of the Project that is actually proposed to support adopting a Statement of Overriding Considerations. The draft Statement of Overriding Considerations still contains no specific benefits, only general platitudes. And the Staff Report concedes that any fiscal or housing benefits from the project can only come from future approvals.

Because there is no affordable housing agreement, there is no affordable housing benefit – the Staff Report makes clear that remains undecided. Even the latest housing element update acknowledges that the Project cannot be considered as "affordable" due to the lack of an affordable housing agreement. As such, in conducting the required balancing, there are no tangible benefits to the Project – which at this point is purely a tentative division of land and does not allow the construction of any housing – affordable or otherwise.

Without a complete Project to consider, there is no way to analyze any potential benefits. The applicant's piecemealing of the Project in direct contradiction to the City's Subdivision Code and CEQA renders any potential benefits from future required approvals purely speculative. There is no evidence cited in the proposed findings of anything other than prejudging that future approvals may lead to future benefits. Such speculation lacks substantial evidence to support adoption of a statement of overriding considerations.

3. The EIR's deficiencies support a finding that this project cannot be approved due to the project's impacts on public health and safety under Government Code section 65589.5(d)(2).

In yet the latest post-EIR significant change to the project, it now appears that the Project is going to abandon its previously proposed emergency access to and from the levee maintenance road. This configuration of the Project was not analyzed by the EIR.

The deficiencies in the EIR as to public health and safety, specifically, in relation to wildfire evacuation and response, warrant disapproval of the Project, contrary to the arguments presented in section 5 of the applicant's counsels' letter.[10] Pursuant to the Housing Accountability Act ("HAA"), Government Code section 65589.5(d)(2), a local agency can disapprove a housing development project "if it makes written findings, based upon a preponderance of the evidence in the record" that "the housing development project … as proposed would have a specific, adverse impact upon public health or safety…." As raised by countless commenters, such is the case here, because the Project is located directly adjacent to land classified as a very high fire hazard severity zone ("VHFHSZ") that burned in the Glass Fire, yet was not analyzed as such.

CEQA requires an EIR to analyze "any significant environmental effects the project might cause or risk exacerbating by bringing development and people into the area affected. For example, the EIR should evaluate any potentially significant direct, indirect, or cumulative environmental impacts of locating

[10] May 1, 2023 letter from applicant at pages 7-8.

development in areas susceptible to hazardous conditions (e.g., ... wildfire risk areas), including both short-term and long-term conditions...."[11]

The EIR fails to adequately address the direct, indirect or cumulative impacts of the Project's location directly adjacent to a VHFHSZ, and does not analyze the Project that is actually proposed, which no longer has emergency access to the levee evacuation road.

a. The EIR fails to adequately address the Project's impacts to emergency access.

The City points to Final EIR Master Response 1 on the EIR's analysis of emergency access issues (page 71 of the City's Staff Report, June 9, 2023.) In that response, the City refers to its "Draft 2020 Multi-Jurisdictional Hazard Mitigation Plan Update, which has not yet been adopted (DEIR p. 3.8-11)."[12] The EIR therefore does not evaluate the impact of an actually adopted emergency response plan, so the ability to truly analyze this impact is limited. Instead of providing an alternate emergency response plan, the DEIR merely states that there is no adopted plan and vaguely describes what the new plan will include (see DEIR at 3.8-11):

- "The City's Fire Department would review the site plans to determine if any additional road widening or access is recommended." (DEIR at 3.8-20.)
- The EIR also states that the Proposed project "would not interfere with the preparation of the City's emergency response plan or Napa County's Emergency Operations plan," (DEIR at 3.8-20), but does not go on to describe how it would not cause such interference.

Due to the proximity of the Project to a VHFHSZ (see our letter on the Project's EIR dated April 30, 2023), the EIR must at a minimum explore the quantitative impacts to evacuation routes and explain how the population surrounding the Project would be able to get out easily in the event of a fire now that the emergency evacuation route originally included in the EIR has been jettisoned.

In considering "whether a project may interfere with implementation of an emergency response and evacuation plan, [a court is] primarily concerned that the public and decisionmakers understand the impact the project will have on the new residents' ability to evacuate and on emergency personnel's ability to protect and service the residents and their property consistent with the adopted plan."[13] Here, the City neither provided enough information to understand the current emergency response and evacuation plan, nor did it provide the details to evaluate the Project's impact on such plan. Worse, it now, at the last minute, appears to have abandoned a key piece of the plan.

In order to provide adequate and meaning environmental review under CEQA, the City should, for example, conduct a quantitative study to determine how long it would take to evacuate new residents of the Project in the event of a wildfire using the various evacuation routes, and should actually identify such evacuation routes.

[11] CEQA Guidelines, § 15126.2(a); see *League to Save Lake Tahoe Mountain etc. v. County of Placer* (2022) 75 Cal.App.5th 63.
[12] FEIR at 4-4.
[13] *League to Save Lake Tahoe* at 136.

a. The Applicant claims that there is no flood risk for the Project area despite being directly adjacent to the levee.

The Applicant appears confident that there is no flood risk for the Project, contrary to direct evidence in the EIR. "The Project site is located adjacent to the southside of the Napa River and just upstream of the confluence of the Napa River and Sulphur Creek."[14] The Napa River has a history of flooding, and the Project site itself flooded in 2005.[15] The Project is proposed to be built directly behind the levee which purportedly protects the site from flood impacts. However, as noted in our previous letters, as well as letters from other commenters, the City has repeatedly failed to maintain the levee. And, the City claims that it will continue "regular maintenance" of the levee, but fails to describe the specifics of such maintenance. [16]

Despite the reality of the Project's location, if the Applicant believes there is no flood risk, then it should have no problem procuring insurance for the homes it builds for the costs to replace them in the event the levee fails. Extensive prior commentary, including advice from the City attorneys, discusses that the City may be held liable in the event of flooding around, over, or through the levee. There is no reason for the City to accept that risk. This risk should be borne by the Applicant and the future residents of the Project, not the City and its residents. Given the ease with which developers tend to disappear once projects are completed, the City should add a Condition of Approval that the developer be required to post a bond for the replacement cost of each house at the time of sale, or otherwise guarantee the replacement costs of the houses in the event of a flood that is not contingent on the Applicant still being in business at the time of the disaster.

b. As previously pointed out, the levee maintenance road does not meet the required road and street standards.

As pointed out in our letter on April 30, 2023, the risk of wildfire impact on the City's current residents is worsened by the failure to address the needed road improvements.[17] The Project will obstruct emergency access for existing residents, particularly those in Vineyard Valley. We discussed that there is no evidence that the levee maintenance road is a suitable evacuation road for the Project, and that the levee maintenance road does not meet the City's Fire Department Access Road Standards, which requires a 30-foot paved road with two feet of shoulders.[18] The levee maintenance road does not even meet the lesser Road and Street Standards dictated by Napa County or CAL FIRE for safe evacuation from a property with more than four residences of a paved 20' road with 2' shoulders.[19]

Rather than addressing these needed road improvements, the Applicant has now apparently recognized that the Project as proposed and analyzed in the EIR does not comply with the City's street standards.

---

[15] DEIR at 3.9-5.
[16] Response to Comment #15, Staff Report for the June 26, 2023 City Council meeting at page 73.
[17] Letter from Josh Devore, April 30, 2023, at pages 12-13.
[18] *See* City of St. Helena Street, Storm Drain & Sidewalk Standards, available at: https://www.cityofsthelena.org/sites/default/files/fileattachments/public_works/page/2491/publicworkscitystandards_0.pdf
[19] *See* Napa County Road and Street Standards, 2023 available at: https://www.countyofnapa.org/DocumentCenter/View/20064/Napa-County-Road-and-Street-Standards---2023-PDF

Instead of attempting to meet such requirements, the City has now apparently given the go-ahead to just delete the levee maintenance road for emergency access from the Project site.[20]

Simply deleting the emergency access from the Project is not what was discussed in the EIR and leaves the current residents struggling to grasp what is really being proposed. It leaves the impression that rather than attempting to meet the City's standards, the applicant has in fact now made things worse, as discussed more in detail below.

c. The City has changed its position as to whether the levee maintenance road is to be used for emergency vehicle access and evacuation access, so the public is left guessing what remain as viable evacuation and emergency access routes for the Project.

The DEIR, FEIR, and most recent Staff Report have created confusion over what the proposed emergency vehicle access ("EVA") and evacuation routes are for the Project. The City continues to contradict its previous findings and statements, as evidenced below.

According to the DEIR:

> "The Proposed Project's tentative map is designed with three points of access; the extension of Star Avenue and Adams Street and an emergency vehicle access (see Figure 2-3 in Chapter 2, Project Description) to facilitate the ingress and egress of emergency response vehicles, including the City and County Fire Department's apparatus and Proposed Project residents."[21]

The DEIR goes on to say:

> "As stated previously, the Proposed Project's tentative map is designed with an emergency vehicle access to facilitate the ingress and egress of emergency response vehicles, including the City and Napa County Fire Department's apparatus. The City's Fire Department would ensure the final site plans provide adequate emergency evacuation and would be consistent with the City's emergency response plan, when it is prepared. In the event of a fire, there would be sufficient access for emergency vehicles to reach the Project site, as well as emergency evacuation access for residents. The Napa County Emergency Operations Plan does not include a vehicle evacuation plan, but in the event of a wildfire, City fire and police personnel would coordinate with Napa County to identify evacuation routes and set up temporary shelters for anyone asked to evacuate."[22]

According to the FEIR:

> "Roads that would provide emergency access near the Project site include Pope Street, Hunt Avenue, Starr Avenue, Adams Street, and Silverado Trail as well as the existing levee maintenance road that borders the northwest boundary of the Project site and the

[20] Yet, because the Project does impact and propose alterations to the connection of the access road to the Adams Street extension, the levee road is still part of the Project and subject to the City's Access Road Standards. The levee road thus still needs to be updated to meet the required access standards.
[21] DEIR at page 3.8-20.
[22] DEIR at 3.8-22.

> adjacent City detention basin. The Vineyard Valley development currently has only one access to enter/exit the development from Pope Street. Emergency access is provided via the maintenance road adjacent to the northern boundary. . . If, for some reason, the levee maintenance road is closed residents of Vineyard Valley would exit using the access onto Pope Street."[23]

Yet, according to the June 26, 2023, Staff Report:

> "It should be noted that the City of St Helena Fire Department has determined (as discussed in the June [26], 2023 staff report) that the emergency vehicle access to the levee road is no longer needed and has recommended that it be removed from the proposed tentative map. If the City Council concurs with this recommendation, the easement and permit issues cited by the commenter would become moot."[24]

> "COA #69 is proposed to be deleted. As discussed in the attached memorandum from the City of St Helena Fire Department (Attachment 13 to [the Staff] report), the proposed emergency vehicle access (EVA) from Street A to the levee road is no longer warranted, based in the availability of access to and from the Hunter subdivision on local streets and the designation of the levee road in 2018 as the evacuation route for residents of the Vineyard Valley mobile home community."[25]

The DEIR and FEIR analyzed the Project including use of the levee maintenance road as an evacuation route for the residents of the Project and Vineyard Valley. Despite the repeated discussion in the EIR, staff has apparently now decided that the levee maintenance road is no longer needed as an EVA route. This conclusion is based on a June 6, 2023 memo from the City of St. Helena Fire Department with no supporting evidence.

So there is no ambiguity: residents of Vineyard Valley are genuinely and severely concerned that this Project is going to get them killed. This is not hyperbole. Abandoning an access point at the last minute in a clear effort to avoid the Fire Department's Access Road Standards is nothing short of horrifying to the people that elected you to protect their interests.

Yet, according to the June 6, 2023 memo from the St. Helena Fire Department, the emergency access to the levee is no longer part of the proposed project. A significant change of this sort should be reincorporated into the original EIR (via the preparation of a subsequent environmental document and recirculation) with additional clarity as to the proposed routes for both evacuation and EVA. The confusion that currently exists, for a Project that sits directly adjacent to a VHFHSZ (contrary to Staff's position that the property is "neither immediate nor adjacent" to a VHFHSZ[26]), is unacceptable, and puts the public in the surrounding community at risk.

[23] Master Response No. 1, FEIR, page 4-3.
[24] Response to Comment #13, Staff Report for June 26, 2023 Special City Council Meeting, at page 72.
[25] Staff Report for June 26, 2023 Special City Council Meeting, Agenda item 6.1, page 14.
[26] Response to Comment #11, Staff Report for the June 26, 2023 Special City Council Meeting at page 71.

This is a substantial, last-minute change, apparently designed to avoid improvement of the levee maintenance road to meet the City's own fire access road standards. It puts the City's current residents in even further jeopardy just to benefit the developer.

The Project would have specific, adverse impacts on public safety due to the Project's failures to address EVA and identifying evacuation routes.

4. The EIR's analysis of the project's impacts on groundwater are insufficient and do not comply with current Napa County groundwater requirements.

As stated in our previous letters, but important enough to note again, pursuant to CEQA Guidelines section 15125(a)(1), the environmental setting for an EIR, "shall not include hypothetical conditions." (CEQA Guidelines section 15125(a)(3))[27]. The DEIR rightly used a baseline existing water use of zero, stating repeatedly that the well on the Project site was not in operation.

Staff has now attempted to retroactively change that analysis, with no evidence to do so except a late-contrived hypothetical calculation of what might have been past groundwater use.[28] Staff and the applicant's counsel now claim that the existing well on the property is actually operable[29] – but that is not what the EIR says, and in any event irrelevant both legally and factually.

There continues to be no evidence whatsoever that the applicant or Staff has consulted with the responsible agency for groundwater use. Staff continue to ignore the numerous public pronouncements of Napa County groundwater standards. In separate correspondence, Water Audit has also made clear that the project plainly fails to meet current groundwater legal requirements.

We also must regrettably note that at the May 1, 2023, meeting, counsel for the City misstated the Napa County standards for well abandonment. "A well is considered to be abandoned when it has not been connected for service to any structure and/or not used for a period of one year."[30] The Project site well was not used for substantially more than one year, as discussed in the EIR. While at the May 1 meeting, the City's attorney noted some items that might suggest an intention not to abandon a well, those conditions only apply where the well owner has provided formal notice of the intent not to abandon the well. That did not happen.

> The well will not be considered abandoned if **all** of the following occur: (1) **the owner declares his or her intention to the director, in writing, to use such well again for supplying water or for other approved purposes**, (2) the well has no defects in construction which would cause pollution or contamination to the ground water by surface water, (3) the well is covered with a safe well cover, (4) the well is marked so as

[27] The Supreme Court has stressed the importance in CEQA of not using hypothetical conditions as a baseline: "An approach using hypothetical allowable conditions as the baseline results in 'illusory' comparisons that 'can only mislead the public as to the reality of the impacts and subvert full consideration of the actual environmental impacts,' a result at direct odds with CEQA's intent." (*Communities for a Better Environment v. South Coast Air Quality Management Dist.* (2010) 48 Cal.4th 310, 322, quoting *Environmental Planning Information Council v. County of El Dorado* (1982) 131 Cal.App.3d 350, 358.)
[28] Response to Comment #1, Staff Report for June 26, 2023 City Council meeting at page 66.
[29] Response to Comment #2, Staff Report for the June 25, 2023 City Council meeting at page 67.
[30] Napa County Code § 13.12.460(A).

to be clearly seen, and (5) the ground area surrounding the well is sloped away from the casing and kept clear of brush and debris. [31]

Legally, the well is abandoned.

But there is no reason to be caught up in such technicalities, as the relevant standard for analysis under CEQA is simply the existing water use. The EIR analyzed that as zero. The project's own consultant said that any increase is capped at Napa County's allocation of groundwater.[32] The current Napa County standard is 0.3 acre-feet per acre.[33] There is no evidence in the record to the contrary. The Project simply is out of compliance.

The failure to consult with Napa County and failure to identify Napa County or its Groundwater Sustainability Agency as a responsible agency in reviewing the EIR is a clear failure to proceed as required by law and an abuse of discretion. Until Napa County reviews, provides input on, and approves the groundwater use for the Project, there is no competent evidence in the record to support a finding that the groundwater use as proposed is permissible.

Given that the Project plainly violates the groundwater limitations, at the very least, Condition of Approval 86[34] requiring the Project to connect to the City's reclaimed water system "if" it becomes available should be revised to require the Project to complete that system to the Project site and connect to it promptly.

5. Subsequent environmental review, allowing for sufficient public comment on all changes to the Project and the EIR, pursuant to Public Resources Code section 21166 is required to incorporate the new information described above.

The changes described above, specifically, in relation to groundwater analysis and emergency access to the Project site warrant subsequent environmental review pursuant to Public Resources Code section 21166 and CEQA Guidelines sections 15162 and 15163. The water baseline and groundwater/well analysis has substantially changed since the EIR was circulated to the public. In addition, in a last-minute change, the deletion of the levee maintenance road as an emergency access route, eliminating access to the Project from the east and north, is a substantial change to the Project, therefore warranting subsequent environmental review of this change.

The EIR should be revised and recirculated, so as to "allow the public a meaningful opportunity to comment" on the changes to the Project and possible additional impacts flowing from such changes.[35]

6. Conclusion

The Applicant's failure to address the major concerns expressed above, yet again, continues to leave the public confused and at risk of suffering from the pitfalls of constantly changing and inadequate

[31] Napa County Code § 13.12.460(B).
[32] DEIR Ex. L.
[33] https://www.countyofnapa.org/DocumentCenter/View/25906/Well-Permit-Standards-FAQs---15-July-2022. See also the extensive discussion in our prior letters.
[34] Condition of Approval No. 86, Staff Report for June 26, 2023 Special City Council meeting at page 197.
[35] CEQA Guidelines sec. 15088.5(a).

environmental review. The City must proceed as required by the current, operative law, and must comply with CEQA in all aspects of the Project.

This is likely the most consequential decision on the long-term future of the City that this Council will make during its tenure. There are no benefits to the tentative map that outweigh the Project's significant impacts on the environment, and it present a specific and grave threat to the public and the City as a whole.

All that said, perhaps most practically, given that the Applicant has failed to apply for any of the other approvals necessary to actually proceed with the Project – including an affordable housing agreement, use permit for multifamily housing, and design review – there would be no prejudice to the Applicant in denying certification of the EIR and rejecting approval of the tentative map at this time.

As is made clear in the Staff Report, no houses can be built until all the other required approvals are obtained. The Applicant can come back for approval of its map and environmental documentation once it is actually ready to proceed with the Project. Until that time, any potential housing benefit is illusory. The tentative map standing alone is merely a Trojan Horse attempt to tie the City's hands on all the future discretionary approvals. The Council can, should, and indeed must reject this piecemeal approach.

Because the City Council is bound to follow the law, not the profits of a developer or the pressures of a state agency, the tentative map should be denied and certification of the EIR rejected.

Sincerely,

DICKENSON, PEATMAN & FOGARTY PC

Subject: Fw: Letter to Shannan West

Good morning all,

Below is a very powerful letter that was just sent from Angela Zivkovic to Shannan West, Chief of Housing Accountability, CA and an excerpt of great importance:

"I would also like to make sure you are aware of recent advancements with regard to the legal liability of ignoring climate change in development projects and point to you a report prepared by the Conservation Law Foundation entitled "Climate Adaptation and Liability" https://www.clf.org/wp-content/uploads/2018/01/GRC_CLF_Report_R8.pdf
In other words, not just the city of Saint Helena but also the state of California could be sued for their part in promoting and pushing the approval of development projects in high-risk areas without properly taking into account the increasing risks of climate change."

Respectfully,

Elizabeth Green
Vineyard Valley

June 21, 2023

Dear Miss West,

I am aware that you sent a "Letter of Support" to Mayor Dohring, Vice Mayor Eric Hall, and Council Members Anna Choutaeu, Lester Hardy, and Billy Summers, of the city of St. Helena, dated June 8, 2023, in which you are offering support for the approval of the Hunter Development, which would result in the building of 87+ housing units. I want to make you aware of the fact that this project would be building homes, including low-income homes, not only in a FEMA flood zone, behind an unscreened levee, but also in a high-risk fire area where safe evacuations during emergency situations have not been fully evaluated. In fact, **this development poses a threat to public health and safety that cannot be mitigated** given current infrastructure limitations, and therefore should not be approved. I am writing to you because you should be aware of this. **It is not only irresponsible but also amoral for state officials to be pressuring small municipalities such as the city of St. Helena to build housing in a high-risk area that could lead to the loss of lives, especially and including the lives of vulnerable, low-income, underrepresented minorities and elderly**. In our rush to provide homes for some people we must make sure that we do not displace and endanger the lives of others.

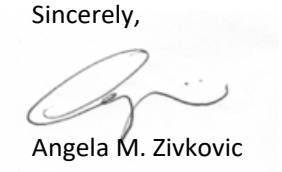
First of all, you should be aware that the proposed Hunter Development is located in a FEMA flood zone. According to the official FEMA map of the city of St. Helena, the Hunter Subdivision project is clearly within a flood zone (https://map1.msc.fema.gov/firm?id=06055C0264E). A levee was constructed to protect the homes that already exist in this flood plain, many of which were already flooded, with lives lost during two flooding events that occurred in 1986 and 1995. However, Measure A, which was passed to approve and finance the construction of the levee, has a specific provision that "none of these projects are intended or designed to encourage population growth," meaning that the levees constructed throughout Napa Valley, including the levee in the city of St. Helena, were NOT intended to promote development behind those levees. Even if we decide to ignore this provision, which may be illegal to do, construction behind levees is a bad idea for many reasons. First, all levees fail eventually, thus building behind a levee always means that at some point homes built in that location will be subject to the dangers of flooding events. Second, when levees fail, the damage that results is worse than if there were no levee there in the first place (https://www.sciencedaily.com/releases/2016/02/160209162403.htm#:~:text=Levees%20often%20prevent%20costly%20flood,not%20there%2C%20the%20study%20found). Third, at a minimum, we should know how much risk we are taking in the assessment of whether it is worth it to build behind a particular levee. In other words, it is important to calculate the residual risk that remains of a flooding event that would overtop the levee. However, the residual risk of levee failure for this levee is unknown. FEMA launched a new risk rating policy starting October 1, 2021 for any new projects (https://www.fema.gov/flood-insurance/risk-rating). This new risk assessment system was put in place because the old approach of evaluating risk was inadequate.

Instead of simply relying on historical projections and ratings based on the physical attributes of a levee at the time of construction, the Risk Rating 2.0 system additionally actually screens individual levees and rates their condition according a set of metrics. However, the St. Helena levee is not one of the 20% of screened levees in the National Levee Database (NLD). As such, the entries for "Levee Performance and Potential Lost Benefits", and "Incipient Overtopping Annual Exceedance Probability" (AEP, or annual probability of the flood event that would load the Levee System to the top) in the NLD for the St. Helena levee are "No Data Entered" or "Unknown." In the absence of these real risk evaluations for unscreened levees the old risk ratings of "100-year flood zone" and "200-year flood zone" are assumed as a default. This means that the real residual risk of levee failure, which takes into account the actual state and maintenance records of the levee, is not known for this levee. In addition to that, due to climate change, the real risk of occurrence of a catastrophic weather event that would lead to levee failure are also unknown. As has been illustrated by recent levee failures all around the country and the state, and as experts in the field will tell you, it is irresponsible to build housing, particularly low-income housing behind levees. It is just a question of *when*, not *if* a catastrophic flooding event will occur which will resulting in levee failure and flooding, with loss of life, as already happened here in this very location just 30 years ago. **Movements are under way around the country to curtail development in flood zones** (https://www.nytimes.com/2020/09/04/climate/flood-fire-building-restrictions.html). Again, because the St. Helena levee is an unscreened levee, there is currently no clear estimate of the % risk of a flood on any given year, nor of the ability of the levee to withstand a future potential catastrophic flood event. **It is not even clear whether the future residents of the Hunter development would be able to secure flood insurance under the new system, given how many insurance companies no longer insure homes in high-risk areas and have in fact even stopped insuring homes in the state of California (e.g. AllState, State Farm)** (https://www.latimes.com/california/story/2023-06-18/state-farm-allstate-wildfire-flood-insurance-california-climate-change-housing-rebuild).

In case you are thinking, well this is St. Helena's problem, not the state's problem: Professor Nicholas Pinter, Professor in the UC Davis Department of Earth and Planetary Sciences, and Associate Director of the UC Davis Center for Watershed Sciences, wrote a very insightful and informative blog post on the topic of the St. Helena levee. In his blog he explains the problem of residual risk of building behind a levee, and highlights the legal implications for not just the municipality but also the state: "Residual risk also can be borne by the governmental agencies that facilitate "field of dreams" levees. Legal liability came to roost in California in 2003, when the Court of Appeals found the state liable for $500 million in damages resulting from a levee break on the Yuba River in February of 1986, the same storms that flooded St. Helena. The case was Paterno v. State of California, and **although the state neither built nor maintained the levee that gave way, the court found that it was responsible for inadequate maintenance and management of the system… In the Paterno case, the financial hit of that $500 million decision shook the financial structure of the entire state, such that California was forced to borrow funds from Merrill Lynch in order to pay the claims against it**."

Secondly, you should also be aware that this housing development also threatens the safety of St. Helena residents with regard to safe evacuations during wildfire. The question is not whether the development would adequately provide access for the development residents out of the development area, but how the project will impact those residents once they leave the development, and the rest of the citizens of St. Helena who all need to evacuate via the same limited routes out of the city and out of the valley. Once the hundreds of additional residents occupying hundreds of additional cars actually drive out of the development, they are going to have to funnel into the existing roadways, which are already impacted and cannot adequately handle evacuation in an emergency situation such as a quickly occurring wildland fires or catastrophic floods. Perhaps you are not aware of the unique geography of the Napa Valley generally, and the city of St. Helena specifically. The city of St. Helena is located in a narrowing portion of the valley, surrounded by mountain ranges on both sides, with high-risk wildland fire areas to the north, east, and west of town. There is effectively only one

egress route out of town, south on Highway 29. With the Silverado Trail often not being a viable egress route due to fires and due to the fact that the only way across the Napa River from the part of town where the Hunter development would be built is across a historic bridge (the Pope Street Bridge), on which two vehicles can barely (and sometimes not at all depending on the vehicle in question) pass by each other. The Pope Street Bridge is not capable of handling even the current number of cars that need to be able to evacuate out of the area. The bridge is extremely narrow with no shoulder. This is an unsafe, inadequate exit route on the best of days, much less during an emergency situation. There is no infrastructure and funding capacity to replace the Pope Street Bridge, and even if there was, as I mentioned, the Silverado Trail is often not a viable egress route given that the last two devastating fires in the area burned all the way down to the trail (e.g. the Glass fire). There is also no infrastructure or funding to widen Highway 29 to increase egress rates, nor could it be done given the physical constraints of the railroad on one side and buildings on the other side of this portion of Highway 29 (called Main Street for the portion that runs through the city of St. Helena).



Third, it is critical to appreciate that climate change is happening and that the extreme weather events that lead to wildfires, floods and landslides are only increasing in both severity and frequency over time. The recent conclusion from the United Nations Glasgow Climate Change Conference (COP26) meeting is that even if all countries that pledged to fully implement changes needed to meet agreed upon greenhouse gas reduction goals are actually able to meet those goals, we are still on a trajectory to see increases in the earth's temperature of at least 1.8 degrees Celsius (https://www.washingtonpost.com/climate-environment/2021/11/09/cop26-un-emissions-gap/). This means that the recently experienced natural disasters in our area including wildfires, flooding, mud slides, and droughts, are only going to be more frequent, more extreme, and more unpredictable over the next 10-20 years and beyond. According to the National Interagency Fire Center the state of California faced over 8,000 fires that burned over 500,000 acres of land in 2002 (https://www.predictiveservices.nifc.gov/intelligence/2002_statssumm/fires_acres.pdf). In 2020 those numbers jumped to nearly 10,000 fires that burned over 4 million acres of land (https://www.predictiveservices.nifc.gov/intelligence/2020_statssumm/fires_acres20.pdf)! The state of California is facing unprecedented increases in wildfire incidences just in the last 20 years, at a time when the earth's temperature has increased by less than 1 degree Celsius (https://www.climate.gov/news-features/understanding-climate/climate-change-global-temperature), while the *best-case* scenario projections for temperature change are on the order of 1.8 degrees Celsius over the next 20 years, strongly suggesting that the incidence and severity of wildfires is only going to increase. More fires means more evacuations and more people that need to be able to leave in a short amount of time in a limited geographic area with limited evacuation routes. The recent wildfires in Napa Valley and Sonoma Valley are a sobering reminder of what happens when wild, unpredictable winds coincide with extreme dry conditions and ignition sources. Due to climate change the "wildfire season" in California is increasing. More and more days out of more and more months of the year, from as early as April to as late as December, there are days when the combined conditions of extremely low humidity and high winds make this area ripe for fires to start (https://www.latimes.com/projects/wine-country-fires-california-sonoma-napa/).

I would also like to make sure you are aware of recent advancements with regard to the **legal liability of ignoring climate change in development projects** and point you to a report prepared by the Conservation Law Foundation entitled "Climate Adaptation and Liability" https://www.clf.org/wp-content/uploads/2018/01/GRC_CLF_Report_R8.pdf. In other words, not just the city of St. Helena but also the state of California could be sued for their part in promoting and pushing the approval of development projects in high-risk areas without properly taking into account the increasing risks of climate change.

Fourth, it is imperative to note that the Hunter development disproportionately endangers the lives and safety of underrepresented minorities, low-income families and the elderly. The Hunter parcel is located on the East side of town, which already houses the most vulnerable citizens in our city, encompassing multiple low-income housing units and homes for the elderly who have a variety of disabilities making it more difficult for them to safely evacuate in an emergency situation. These are individuals who are not only at higher risk from injury but who are also less likely to be able to "evacuate early" as opposed to at the last minute once emergency shelters have been established, making the impact of urgent, last-minute evacuations even more important. They may also be hard of hearing, or have a multitude of disabilities that may make leaving quickly, or even hearing sirens and being aware of an emergency a problem. As examples of recent wildland fires both here in St. Helena, and in Napa as well as Santa Rosa have clearly shown over the last 6 years, wildland fires are increasingly wind-driven, fast-moving, unpredictable, and can occur in the middle of the night. The current roadways and infrastructure (i.e. bridges) are inadequate to ensure the ability of residents to safely evacuate in an emergency situation. **This is especially true for the most vulnerable residents of St. Helena, all of whom live DOWNSTREAM from the proposed development** and would have to compete with hundreds of additional vehicles trying to exit out of town ahead of them. These residents include low-income families from two large low-income apartment complexes, and a large number of elderly individuals in the Vineyard View 55+ community. The proposed development is not in the part of town where half of the homes are second homes that sit unoccupied most of the year. The East side of St. Helena where the Hunter parcel is located is the part of town where there are more people per square mile that need to be able to evacuate in an emergency. The FEIR for this proposed development already concedes that the one environmental impact that cannot simply "be mitigated" is the unavoidable impact on traffic. Phrasing it as a simple "traffic problem" makes it seem like just a minor nuisance. This is not about having to wait a few extra minutes to make a left turn to get to work on a Monday morning. **This could mean the difference between a family being able to evacuate to safety in time, or not being able to do so** because they are stuck in traffic with hundreds more vehicles all competing for egress via the same limited roadways at the same time. **This is also an equity issue:** the very people who are the most likely to have to wait until the last minute to evacuate and thus be in danger when traffic is backed up and they cannot evacuate from fire, are those who do not have the funds or ability to evacuate earlier than "necessary" because they cannot afford to simply pay for a hotel for days on end.

It is reckless and irresponsible to push this sort of development project in areas of the state that are at high risk of flooding and wildland fires. Whole families could perish and it will be blood on your hands for playing a part in pushing the city council to approve this development to meet some quota when real safety and real lives are at stake. It is your responsibility as a public official to make sure that the work you are doing on behalf of the state does not jeopardize the lives of citizens of this state and does not put the state at increased liability and financial strain. Are you sure that your letters urging the city of St. Helena to approve this highly controversial project are the right thing for you to be doing as a public official? I would like to make sure you understand that the citizens of St. Helena are aware that you personally, on behalf of the state of California, endorsed and supported the city to approve this project.

Sincerely,

Angela M. Zivkovic

Dear Mayor, Vice Mayor and City Council:

Let me first acknowledge that I live and work on the *un*ceded land of Onasatis people.

The Hunter Project is also required, per EIR, to make some degree of acknowledgement that they are working on (and profiting from) unceded land that was home to Onasatis people. We know from previous development of Vineyard Valley (and perhaps the levee?) that Onasatis remains have been found in the area of this project. The EIR process requires that this developer must have contact with a representative of the people indigenous to the land they plan to develop about their plans. Simply marking “Insignificant” on the Final EIR does not give anyone any indication that this requirement was fulfilled.

Upon inquiring, Suscol Intertribal Council told me that they had no record that this requirement had been fulfilled. This does not necessarily mean that the requirement was not satisfied, but I am asking that you please make certain this EIR requirement was satisfied and not simply marked “Insignificant” without the work getting completed. On May 1st, I gave applause to Councilman Hardy for several things he said, one of which being his discomfort with hearing so many people feeling unheard and feeling dismissed with numerous items simply marked “Insignificant” that were indeed significant to many voting, tax paying residents. I agree, but how much worse it would be if requirements were ignored yet “checked off”.

Health and safety is certainly significant. It is very puzzling to me how both fire and police chiefs could possibly determine that the Hunter Project would not have any significant impact on evacuation safety. When I inquired as to what information they used to make this determination, I was informed that they used the information gathered from the Vineyard Valley evacuation drill. In that drill, 132 Vineyard Valley residents participated. There are 350 residents. Information from a drill that was a.) planned well in advance b.) in daylight c.) without urgency d.) only 37% participation bears no resemblance to an actual evacuation. The math of Hunter + Vineyard Valley residents using the levee during an evacuation do not add up to something insignificant.

For these reasons, I ask you to please challenge the conclusion that the Hunter Project will not compromise safety during an evacuation.

On the health side of Health and Safety, more and more evidence is provided to us by professionals, doctorate level in prestigious organizations (see below), that human health is greatly impacted by contact with open greenspace. How fabulous it has been to have this benefit in our city. The area where Hunter Project is has been the ONE place that qualifies as open greenspace that takes one out of cityscape and into a natural environment where one can

get a healthy dose of benefits without having to leave town. The Hunter Subdivision will strip this true health resource from our community.

I am asking you to please not cheat us out of this essential health resource.

Interesting variety of credible sources of information of this health benefit here:

https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6388234/

https://www.epa.gov/smartgrowth/smart-growth-and-open-space-conservation

https://www.irvinestandard.com/2021/how-irvines-open-spaces-make-us-feel-happier-healthier-and-more-creative/

https://www.newscientist.com/article/mg24933270-800-green-spaces-arent-just-for-nature-they-boost-our-mental-health-too/

Please vote to preserve the health and safety of the residents of St Helena.

Sincerely,
Gayle DeRusha Davies

City Council

You must deny the Hunter Project for the following reasons:

MEASURE A

SECTION 2. FINDING

G. None of the projects in the Plan are intended or designed to encourage population growth in Napa County. All of the projects are for flood protection, preserving ground water integrity, reducing sediment in the Napa River system, and for maintaining the reliability of the water supply for the existing Napa County populations as of the effective date of this Ordinance.

One of the reasons the voters in St Helena voted for this Ordinance was because it contained the statement that the project would not promote growth. This Ordinance would never have passed without that statement. The Hunter project certainly provides a large amount of growth.

The Hunter project also does not preserve ground water integrity, or reduce sediment in the Napa River. The project is planning on using the flood project detention basin which was built with Measure A money.

Measure A also states that the flood project also should maintain the reliability of the water supply for the existing Napa County populations as of the effective date of the Ordinance. Adding three to four hundred people in the proposed project does not guarantee that there will be water available as stated in the Ordinance.

AFFORDABLE HOUSING

The proposed Hunter project will not satisfy the Cities Regional Housing Needs (RHNA) requirements nor will it be consistent with the St Helena Municipal Codes Inclusionary code Chapter 17.146 which states that the affordable unit shall be comparable in number of bedrooms, exterior appearance as the market rate units in the same residential project and that the affordable housing shall be disbursed though the residential property. The tentative map that is under consideration segregates the smaller lot with the affordable rental units away from the lot with the market rate housing. The Hunter project is NOT AN AFFORDABLE HOUSING project and will not satisfy St. Helena’s RHNA requirements.

EMERGENCY EVACUATION

Safety of people leaving areas surrounding the proposed Hunter project (Stonebridge. Silverado Orchards, Star Avenue, Meadow Creek, Hunts Grove and even the New City Hall) will be compromised because that land is a fire break. There has been much publicity and money spent on fire safety from the City. Many of us are losing our fire insurance because of the fire danger To approve the Hunter development would be contrary to what the City, Insurance Companies, your resident ands the voters of St Helena have said and are still saying. We voted for you to keep us safe, so please vote no for us and keep us safe.

I have lived in St. Helena since the mid-eighties, and we didn't have enough water for the citizens of St. Helena then! At that time the population of St. Helena was 5,000! Today the population has increased to 6,000 plus more wineries, gyms, and businesses, yet our available water has not increased at all!

How very bold of you to charge us higher water prices and penalties and at the same time vote to bring more people into this city!!! THIS INSANITY HAS TO STOP!

How many City Councils and Mayors do we have to live through before a City Council and Mayor understand the stupidity of adding more people to a city that didn't have enough water for 5,000 citizens in 1985 let alone 6,000 plus Hunter Project citizens in 2023 . . . and hasn't done anything to obtain more water!

I SAY ABSOLUTELY "NO" TO THE HUNTER PROJECT!

FIX OUR WATER PROBLEMS FIRST!!

P.S. How many consultants do we have to have before we get decent sidewalks on Main Street?? I know of two in the last few years!!! The money you spent on them could have gone a long way to fixing our Main Street sidewalks. Most senior citizens in this city avoid Main Street because the sidewalks are so very dangerous! No wonder the businesses are suffering!

You have to do better than this!

N. O'Neill

Re: Housing Law Issues – Hunter Subdivision Project

Dear Mayor Dohring, Vice Mayor Hall, and Councilmembers:

Holland & Knight LLP represents Dennis Hunter, Kelly and Ben Vanzutphen, and White Fang Properties, LLC (collectively, the "Applicant Team") in connection with the Hunter Subdivision project located north of Hunt Avenue (APN 009-030-057) (the "Project") in St. Helena (the "City"). Our West Coast Land Use & Environmental Law practice group focuses on enforcing recently reformed provisions of state housing law, in particular Housing Element Law and the Housing Accountability Act (the "HAA"). We write to remind the City of its obligations under state housing law in advance of the June 26, 2023 City Council meeting concerning the Project. Please ensure that this correspondence is included in the record of proceedings related to the Project.

First, the Project is a protected "housing development project" under the HAA, as the City has acknowledged.[1] As such, the City's discretion to disapprove the Project is heavily constrained. Specifically, to disapprove the Project, the City would need to make written findings, supported by a preponderance of evidence on the record, that the Project "would have a specific, adverse impact upon the public health or safety," and that there is "no feasible method to satisfactorily mitigate or avoid the adverse impact … other than the disapproval of the housing development

[1] Report to the City Council (May 1, 2023 Hearing), at 7 (https://sthelena.civicweb.net/document/73337/Hunter%20Project%20-%20EIR%20and%20Tentative%20Map.pdf?handle=1E3AF87EBDF8430C96935C79A339A296).

project or the approval of the project upon the condition that it be developed at a lower density."[2] Suffice it to say, there is *no* evidence in the record to support such a finding, much less a preponderance of the evidence. Whatever concerns have been raised about the project, none of them rise to the level of identifying any "quantifiable" violation of any "objective, identified written public health or safety standards, policies, or conditions as they existed on the date the application was deemed complete."[3] There is therefore no lawful basis on which the Project could be disapproved or reduced in density.

The City's obligations under Housing Element Law are equally relevant to its consideration of the Project. As you know, the City must accommodate a Regional Housing Needs Allocation ("RHNA") of 256 units, of which the Project's 87 units supply roughly a third. The City has consistently relied on these units to meet its RHNA obligations in the draft Housing Elements provided to the Department of Housing and Community Development ("HCD").

Housing Element Law requires that the City's Housing Element "identify adequate sites for housing" and set forth an "inventory of land suitable and available for residential development, including vacant sites and *sites having realistic and demonstrated potential for redevelopment* during the planning period to meet the locality's housing need for a designated income level[.]"[4] Here, the goal "is not just to identify land, but to pinpoint sites that are adequate and realistically available for residential development targets . . . ."[5] The Housing Element must also contain "an analysis of potential and actual governmental constraints upon the maintenance, improvement, or development of housing for all income levels," and must "demonstrate local efforts to remove governmental constraints that hinder the locality from meeting its share of the regional housing need."[6] The City's failure to adequately address these requirements, both generally and with respect to the Project specifically, was central to HCD's rejection of both of the City's prior draft Housing Elements.[7]

As you are aware, on June 8, 2023, HCD's Housing Accountability Unit provided a Letter of Support and Technical Assistance to the City ("HAU Technical Assistance Letter"), which is attached hereto as **Exhibit A**. The HAU Technical Assistance Letter reminds the City of its obligations under both the Housing Accountability Act and Housing Element Law, concluding that "*HCD supports the approval of the Project* during this critical housing crisis and appreciates

[2] Gov. Code § 65589.5(j)(1). The HAA also clarifies that "It is the intent of the Legislature that the conditions that would have a specific, adverse impact upon the public health and safety, as described in paragraph (2) of subdivision (d) and paragraph (1) of subdivision (j), arise infrequently." Gov. Code § 65589.5(3).
[3] Gov. Code § 65589.5(j)(1)(A).
[4] Gov. Code § 65583(a)(3).
[5] *Martinez v. City of Clovis* (2023) 90 Cal.App.5th 193, 193.
[6] Gov. Code § 65583(a)(5).
[7] HCD, "City of St. Helena's 6th Cycle Draft Housing Element" (Dec. 6, 2022), Appx. at 2 ("The element should provide an analysis demonstrating the likelihood of these [Hunter Subdivision Project] units being built during the planning period."); HCD, "City of St. Helena's 6th Cycle Draft Housing Element" (Apr. 7, 2023), Appx. at 2 ("The element should clearly indicate timelines and remaining steps to fully entitle this project and demonstrate the likelihood these units will become available during the planning period.").

the opportunity to assist the City in meeting its statutory obligations in the decision-making process."[8] We expect HCD personnel to monitor the June 26, 2023 City Council meeting.

At its prior meeting concerning the Project, the City Council addressed the EIR's conclusion that the Project would have significant and unavoidable environmental impacts on a single topical area: Vehicle Miles Traveled ("VMT").[9] To be clear, the Applicant Team has consistently disputed this finding.[10] As the City's own consultant admitted at the prior hearing, the EIR's VMT impact finding exists only because the City chose to measure VMT relative to the City's average VMT per capita, rather than regional VMT per capita.[11] This optional policy choice, if applied consistently, will have the effect of declaring all housing in the City to per se have a significant and unavoidable impact, and thus to require a Statement of Overriding Considerations. The City could have easily avoided this issue by employing a regional VMT measurement, which is a more appropriate measure for the City. Moreover, the City's decision to measure VMT in this manner – which *is not necessary to comply with CEQA* – is an unnecessary governmental constraint on housing supply, which Housing Element Law requires the City to disclose and then remove.[12]

In any event, assuming *arguendo* that the EIR's conclusions are correct, the Staff Report's recommendation to adopt a Statement of Overriding Considerations is also correct. CEQA provides for public agencies to adopt a Statement of Overriding Considerations where "specific overriding . . . legal . . . benefits" of approving a project outweigh its significant and unavoidable environmental effects.[13]

At the May 1, 2023 hearing, the City Council ultimately continued the item to June 26, 2023, purportedly to further consider whether the benefits provided by the Project were sufficient to justify the proposed Statement of Overriding Considerations. The considerations previously identified in the draft Statement of Overriding Considerations are more than sufficient:

1. The Project provides needed housing to the City, particularly affordable housing.
2. The City, per the adopted 2015 Housing Element, has a jobs to housing ratio above the County average, indicating a need for additional housing. As of the most recent Housing Element Progress Report (April 2022), the City had not met its regional housing needs allocation for very-low or moderate income housing.

Perry, "Comments to Draft EIR – Hunter Subdivision Project" (Nov. 1, 2021) (enclosing W-Trans, "Comments on the Environmental Impact Report (EIR) for Hunter Subdivision Project" (Nov. 1, 2021); DKS, "Review of City of St. Helena's Application of SB 743 Requirements Project #21082-000 of the Planned Residential Development" (Oct. 20, 2021)) (Planning Commission Report, pages 3006-3017); Pub. Res. Code §21082.2(a).
[11] City of St. Helena, Special City Council Meeting (May 1, 2023), at 2:34:30 (https://www.youtube.com/watch?v=_sNV7B7U6HQ).
[12] Gov. Code § 65583(a)(5).
[13] Pub. Res. Code § 21081(b).

3. The Project would implement the City's General Plan. The Project site is identified as a housing site in the City's current General Plan, the current Housing Element, and the previous two iterations of the City's General Plan.
4. The significant and unavoidable impact is related to VMT. Ultimately VMT per capita will be reduced by providing necessary housing in jurisdictions with a high number of jobs. As stated previously, the City of St. Helena currently has a jobs housing imbalance which the Project will help address.
5. The Project will pay development fees which will assist in needed infrastructure improvements in the City, including wastewater treatment and collection systems.
6. The Project would construct the extension of Starr Avenue and the partial extension of Adams Street consistent with the General Plan Circulation Element.[14]

While these considerations are more than sufficient, the Applicant Team provides the following comments with respect to the Statement of Overriding Considerations, in response to the implication that the Project may not provide sufficient benefits to justify an override, or that the City's determination "may ride on the perceived community benefits"[15] provided by the Project:

- The only VMT "impact" of the Project is, as the most recent staff report states, that "the number of miles that will be driven by residents of the proposed project exceeds the standard at issue."[16] But the draft Statement of Overriding Considerations itself acknowledges that "[u]ltimately VMT per capita will be reduced by providing necessary housing in jurisdictions with a high number of jobs. As stated previously, the City of St. Helena currently has a jobs housing imbalance which the Project will help address." That is to say, the City acknowledges that "ultimately" VMT will actually be *reduced* by approving the Project and other housing developments like it and that the Project will *improve* the City's jobs-housing imbalance. To the extent that the Project has a VMT "impact," it is an extremely attenuated and technical one.
- As the draft Statement correctly notes, the Project will provide much-needed housing and affordable housing to the City, which has severely underbuilt for decades. To this end, we note that Generation Housing, the leading advocate for affordable and diverse housing in the North Bay, has submitted a letter in support of the Project, highlighting that the Project will "deliver a diversity of housing types across the affordability spectrum which will aid in affirmatively furthering fair housing and promoting upward mobility for low-income families."[17]

[14] Report to the City Council (May 1, 2023 Hearing), at 13.
[15] Email Correspondence from Anil Comelo, City Manager, "Hunter – Community Benefits" (May 15, 2023) (attached hereto as **Exhibit B**).
[16] Report to the City Council (June 26, 2023 Hearing), at 9 (https://sthelena.civicweb.net/document/75375/Hunter%20Project%20-%20EIR%20and%20Tentative%20Map.pdf?handle=6B5D3DFF921F4A4AB033355222B81F80).
[17] Generation Housing, "Support for Hunter Subdivision" (June 1, 2023), at 2 (attached hereto as **Exhibit C**).

- There are also several additional public and community benefits that the Applicant Team has already provided. Most notably, the Applicant Team engaged cooperatively with the City to facilitate construction of the levee adjacent to the Property, to protect the Vineyard Valley mobilehome community. Specifically, the Applicant Team cooperated with the City with respect to the land swap required to construct the levee, and provided the City access to the Applicant Team's well as needed for that project. The Applicant Team's voluntary cooperation with respect to the levee constituted a community benefit that the Project has already provided. This stands as an as-yet-unreciprocated benefit provided to the public and the community.
- Finally, as the most recent staff report notes, complying with the City's obligations to comply with the HAA and with Housing Element Law constitute an additional and independent legal "benefit" of approving the Project.[18]

Please consider these other additional benefits as part of the reasons the Project warrants approval. The Project provides more than sufficient benefits to justify staff's recommendation to adopt a Statement of Overriding Considerations, particularly where the draft Statement acknowledges that approving housing like the Project will "ultimately" reduce, rather than cause, VMT impacts. The HAA only permits a city to disapprove an HAA-protected Project for violating objective "public health and safety" standards – not subjectively-established VMT standards – and CEQA gives the city no authority to do anything that housing law forbids.[19] CEQA requires the City to disclose impacts and impose feasible mitigation (which the City has now done), but it would be plainly unlawful for the City to consider these benefits insufficient to override the single environmental "impact" identified in the EIR.

Finally, we note that on May 9, 2023, the City amended its General Plan to adopt the housing element that is currently under review by HCD (the "Adopted Housing Element"). While the Adopted Housing Element has not yet been certified as substantially compliant by HCD, it is nonetheless part of the City's operative General Plan, and as such is legally binding and enforceable. "[T]he propriety of virtually any local decision affecting land use and development depends upon consistency with the applicable general plan and its elements."[20] As such, disapproving the Project would be an act inconsistent with the City's own General Plan.

---

[18] *See Tiburon Open Space Committee v. County of Marin* (2022) 78 Cal.App.5th 700, 733 ("A statement of overriding considerations—which is the finding described in subdivision (b) of section 21081—is to be used in situations where the public agency deems a project sufficiently important or desirable for reasons that override the normal obligation to mitigate significant environmental effects. One of those statutory reasons allows for considerations, conditions, or factors that are 'legal.'") (citing Pub. Res. Code §§ 21081, subds. (a)(3), (b), 21002.1, subd. (b); CEQA Guidelines § 15364).

[19] *Ibid.*; see also 14 Cal. Code Regs. § 15064 (b) ("CEQA does not grant an agency new powers independent of the powers granted to the agency by other laws"); 14 Cal. Code Regs. § 15064(e) ("The exercise of discretionary powers for environmental protection shall be consistent with express or implied limitations provided by other laws")

[20] *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 570 (quotation omitted)

Moreover, the Adopted Housing Element sets forth specific commitments to ensuring that the remaining approvals required of the Project are timely processed. Specifically, Implementation Program H-A states that the City will "Commit to streamlining review of Hunter Subdivision project to completion with the goal of Building Permit applications in 2025."[21] We note that this commitment was specifically referenced by HCD in the HAU Technical Assistance Letter.[22] The City's commitment to streamline all future approvals is therefore legally binding, and the City is precluded from taking any actions inconsistent with this commitment. Despite these binding and enforceable commitments in the City's adopted Housing Element, the June 27, 2023 Staff Report does not describe the remaining process as "streamlined," stating instead that "[a]ll of the applications will require a public hearing or be considered at a public meeting of the approving body (Council or Planning Commission) at which the public will be able to provide written and oral comments."[23] The Applicant Team looks forward to the City's cooperation in identifying meaningful pathways to reduce burdensome processes and accomplish the "streamlined" issuance of the remaining approvals to which the City has committed in its General Plan, as amended by the Adopted Housing Element.

We recognize that new housing can be unpopular, and that there is often substantial pressure on local elected officials to bend to that pressure. But it is precisely for this reason that the state finds itself in a generational housing supply crisis. And it bears repeating that in the application before the Council, the Applicant team has asked for nothing more than to subdivide their own private property in a manner completely consistent with the City's own code and the City's own plans. As the May 1, 2023 Staff Report notes, "the subject property has been designated since at least 1993 for development with Medium Density Residential Homes."[24] The Applicant Team proposes to do just that; an outcome that the City presumably wanted when it adopted the current zoning. In addition to being zoning-compliant, the Project is compliant with all objective standards set forth in the General Plan. Its environmental impacts have been studied exhaustively for more than a decade. The approvals before the City Council have been unanimously recommended by the Planning Commission. Approval of the Project is also indispensable to the City's ability to comply with Housing Element Law. And, with the adoption of the Adopted Housing Element, approval of the Project is also required by the City's General Plan. We therefore encourage the City Council to adhere to the recommendation of City staff, and the Planning Commission, and HCD, and to abide by its own zoning and General Plan, and approve the Project.

Very truly yours,

[21] Adopted Housing Element at 1-10.

Mayor Paul Dohring
Vice Mayor Eric Hall
Council Members Anna Choteau, Lester Hardy, and Billy Summers
City of St. Helena
1088 College Avenue
St. Helena, CA 94574

Dear Mayor Paul Dohring, Vice Mayor Eric Hall
Council Members Anna Choteau, Lester Hardy, and Billy Summers:

RE: City of St. Helena – Letter of Support and Technical Assistance

The purpose of this letter is to assist the City of St. Helena (City) with its decision-making regarding the Hunter Subdivision Project (Project). As you are aware, the State of California is in a housing crisis, and the provision of housing is a priority of the highest order. The California Department of Housing and Community Development (HCD) recognizes the challenge of interpreting ever-changing housing and land use laws and appreciates the opportunity to provide technical assistance that may lead to better housing outcomes for the state, as well as the City of St. Helena.

HCD understands the City Council will consider the Project at the June 26, 2023 public hearing. HCD understands Ben and Kelly Banzutphen (Applicant) are seeking approval of a tentative subdivision map and certification of an environmental impact report to allow 1.) Development of 51 single-family residential lots with 11 accessory dwelling units on a vacant, approximately 16.9-acre parcel; and 2.) 25 multifamily residential units on 3.13-acres. The Project also includes an anticipated 20 percent of the proposed units will be set aside for lower-income households.

Housing Element Commitments

As the City is aware, the City Council adopted St. Helena's 6th Cycle Housing Element (2023-2031) on May 9, 2023. Under that Housing Element, the City must accommodate a Regional Housing Needs Allocation (RHNA) of 256 total units comprising 104 very low-income units, 59 low-income units, 26 moderate-income units, and 67 above moderate-income units. The adopted Housing Element identifies the Project as essential to meeting the 256 units required by the 6th Cycle RHNA. The approval of the Project would contribute significantly toward meeting the City's RHNA obligations. Further, the Project is consistent with the goals, policies, and implementation programs

outlined in the City's Housing Element. Specifically, the objectives in Implementation Program H-A state that the City will commit to approving and streamlining the Project. Not meeting the objectives in Implementation Program H-A will require the City to identify alternative housing sites to meet its RHNA obligations.

It is important to note that the adopted 6th Cycle Housing Element is currently under review by HCD for substantial compliance with State Housing Element Law and that HCD will continue to monitor the City's progress toward implementation of the programs contained within the Housing Element to ensure the City meets its RHNA requirements.

Housing Accountability Act

In addition, the City should be aware that the Project meets the definition of a "housing development project" under the Housing Accountability Act (HAA). Therefore, the City must consider its obligations under the HAA (Gov. Code, § 65589.5). The HAA limits a local government's ability to deny, reduce the density of, or make infeasible housing development projects that are consistent with objective local development standards that contribute to meeting housing needs. Please see the Housing Accountability Act Technical Assistance Advisory available on HCD's website.[1]

In sum, HCD supports the approval of the Project during this critical housing crisis and appreciates the opportunity to assist the City in meeting its statutory obligations in the decision-making process. If you have any questions regarding the content of this letter or would like additional technical assistance, please contact Jessica Evans at jessica.evans@hcd.ca.gov.

Sincerely,

Shannan West
Housing Accountability Unit Chief

Hello Ben and Tim,

I'm very pleased we had the opportunity to meet last week and discuss the project. As we shared on the call, we are looking for a way to ensure that there was no stone unturned as we prepare for the last meeting on your application scheduled for June 7th. It may be that the success of that outcome may ride on the perceived community benefits. To this end, the City has Kosmont consultants under contract and they have been asked to support City staff and you to explore possibilities. Kosmont is a professional group with lots of experience with helping developers and public agencies address such issues. I suggest that your team meet with Kosmont as swiftly as possible. Given the timing issues and my calendar, I suggest that you interact with them without me.

However, I have taken the liberty to send you an invite to connect with them and me on Thursday, May 25th at 1pm. I hope this time works for you.

Please let me know if you have any questions.

Thank you,

Anil Comelo

Re: Support for Hunter Subdivision

Dear Mayor Dohring, Councilmembers, and staff:

We write today to express our **strong support** for the immediate approval of the Hunter Subdivision Tentative Map ("project") and certification of the corresponding Final Environmental Impact Report ("EIR").

Generation Housing is leading the movement for more, more affordable, and more diverse housing in the North Bay. We champion effective policy, sustainable funding resources, and collaborative efforts to create an equitable, healthy, and resilient community for everyone.

We face an unprecedented imbalance in the availability of homes, both for rent and for sale and across the affordability spectrum, relative to the number of jobs in the Bay Area region. Comments on the EIR for this project speak of concerns around the increase in Vehicle Miles Traveled ("VMT") that will be generated by the future residents. This position fails to recognize that the most sustainable outcome for St. Helena and all communities is to build housing which allows workforce members to work where they live.

Earlier this year, Generation Housing released a report that evaluated the challenges born from high housing costs and record setting levels of cost burden.[1] The information collected and analyzed for this report led us to the following realities of excessive time spent commuting:

+ Increased commute times significantly increase transportation expenditures, further limiting burdened households' overall financial flexibility for other necessities, savings, and personal expenditures.
+ Increased commute time has deleterious health effects too: long commute time increases exposure to pollutants, reduces time to exercise, increases stress, anxiety, and depression, and negatively impacts sleep.
+ More time on the road also means less time parents can spend with their children, which we know can impact educational outcomes.
+ It's a climate change issue. Migration away from centralized hubs in search of more affordable housing reduces access to public transportation and adds to overall vehicle miles traveled. Lower wage earners often drive older cars that tend to be more polluting, both increasing harmful greenhouse gas emissions and exposure to pollutants.

[1] Making the Rent: The Human Price of Housing Cost Burden; https://generationhousing.org/wp-content/uploads/2023/03/2023_0322-Making-the-Rent-The-Human-Price-of-Housing-Cost-Burden.pdf

GENERATION HOUSING

427 Mendocino Ave
Suite 100
Santa Rosa, CA 95404

(707) 900-4364
info@generationhousing.org

The proposed project delivers 87 units of housing, which amounts to approximately one-third of St. Helena's regional housing needs allocation for the 6th cycle. More importantly, the project delivers a diversity of housing types across the affordability spectrum which will aid in affirmatively furthering fair housing and promoting upward mobility for low-income families. The project will also promote healthy lifestyles by creating linkages to the Napa Valley Vine Trail.

For the reasons outlined above and so much more, we call on the City Council to immediately approve this project and ensure workforce families in St. Helena have a place to call home.

Respectfully,

Calum Weeks
Policy Director, Generation Housing

Re: CEQA Issues - Hunter Subdivision Project

Dear Mayor Dohring, Vice Mayor Hall, and Councilmembers:

Holland & Knight, LLP ("H&K") represents Dennis Hunter, Kelly and Ben Vanzutphen, and White Fang Properties, LLC (collectively, "Applicant Team") in connection with the Hunter Subdivision in St. Helena (the "Project"), which will be heard at a Special Meeting of the City Council on June 26, 2023. This is the second of two letters we respectfully submit related to the Project; the other letter relates to housing law issues. Please ensure that this correspondence is included in the record of proceedings related to the Project.

These comments supplement material already in the record related to the Environmental Impact Report ("EIR") the City of St. Helena ("City") prepared for the Project pursuant to the California Environmental Quality Act ("CEQA"). Specifically, the information contained in this letter responds to two comment letters the City Council received immediately prior to the first meeting to consider the project from Water Audit California ("WAC") and St. Helena Citizens for a Sustainable Future ("SHC") (collectively "Commenters").

The Staff report thoroughly explains the reasons that none of Commenters' comments identify any legal insufficiency in the EIR that the City prepared and subjected to exhaustive review and comment. We write with additional comments in support of the position – endorsed by City staff and unanimously by the City's Planning Commission – that the EIR be certified and a statement of overriding considerations be adopted.

I. The On-Site Groundwater Well Is Not Legally "Abandoned"

The EIR explains that an existing on-site agricultural well is proposed to be used to provide non-potable supplies to the separately plumbed landscape irrigation systems throughout the Project site to irrigate public and private landscaping. The on-site well has sufficient capacity to meet the Project's estimated landscape water demand of 17.16 acre feet per year ("AFY"). The Final EIR clarifies that (1) "there is an inactive groundwater well located in the northern portion of the Project site that may have been historically used to provide construction water for the City's Floor Protection Project and was used in the past for agricultural irrigation." (at 4-10), and (2) "The Project is proposing to use the existing agricultural well to irrigate the Project's public and private landscaping." (at 4-61, 4-268).

A main point of contention from Commenters is that the Project cannot rely on the groundwater well located on-site (which will supply water for the Project's landscaping irrigation). For example, WAC opines that the question of "[w]hither the well is capable of operation is irrelevant. By the process of law the 1976 well is deemed abandoned and it must be destroyed forthwith." Similarly, SHC claim that "there is no operating well on the property, and it has not been operating for a considerable period of time. The use of the well had been long abandoned." Both of these statements are incorrect.

Health and Safety Code section 115700(d) – on which Commenters rely -- provides that "a 'permanently inactive well' is a well that has not been used for a period of one year, unless the person owning land in fee simple or in possession thereof under lease or contract of sale demonstrates *an intent for future use for water supply*, groundwater recharge, drainage, or groundwater level control, heating or cooling, cathodic protection, groundwater monitoring, or related uses." (emphasis added). The California Department of Water Resources ("DWR") regulatory standards consider a groundwater well to be abandoned or permanently inactive if it has not been used for one year, "unless the owner demonstrates *intention to use the well again*."[1]

Here, Applicant applied for the Project in 2010, at which time the groundwater well was operational and being used by the City. The "Project Description" included in Applicant's application package, which the City's Planning Department received on September 9, 2010, expressly stated that "[t]here is an existing well near the southeastern end of the property that is proposed to be maintained in place *and used for irrigation of the project's landscape areas*. It is a *high producing well that is also capable of supplying additional water to the project should it be found necessary*."[2] The Project Description further explained that "[t]he groundwater well on

[1] See, DWR Bulletin 74, Part III, Section 21; available at https://water.ca.gov/Programs/Groundwater-Management/Wells/Well-Standards/Combined-Well-Standards/Water-Destruction; attached hereto as **Exhibit A**, emphasis added.
[2] See, Applicant's Project Description, attached hereto at **Exhibit B**, at 1; emphasis added.

the site previously used for irrigation of the grape vines is presently used by the City (free of charge) to start the landscape required by their flood control project"[3]

Thus, Applicant provided sufficient notice of an intent to use the groundwater well for a future purpose, and did so at a time when the well was operating. Commenters have not cited any decisional or factual support for their contention that the Project (or the EIR) cannot rely on the groundwater well as a source of water supply for irrigation purposes – only a faulty legal interpretation of the statutory framework.

Commenters' position that the Project cannot rely on the groundwater well for non-drinking irrigation purposes is both impractical and runs contrary to their *other* comments alarmed at the City's dependence on water from other sources (e.g., the State Water Project, Bell Canyon Reservoir), which are addressed below. If Commenters' positions were adopted, it would lead to an absurd result in which an applicant would need to "destroy" (or "fill") a perfectly capable water well, only to then re-construct and re-permit said well. This would lead to an inefficient use of private and public resources, and Commenters cite to no legal authority or precedent of this process being used in the City, Napa County, or anywhere else in California.

SHC are also incorrect in noting that the Phase I Environmental Site Assessment for the Project site indicates that the groundwater well is "inoperable."[4] The Phase I did not opine that the well is incapable of being used (nor would it, as that would be an issue outside the scope of the ASTM standard for Phase Is). The Phase I consultants merely observed that "[a]t the time of the property inspection, the well was not in use."[5]

Finally, it is important to note that none of this affects the ultimate conclusion in the EIR. Regardless of whether the on-site well is operable (and it is), the City would require the Project to offset its demand on water pursuant to the Water Neutrality Ordinance, and compliance with this legal requirement should ensure no significant impacts regardless.

II. The Project Will not Lead to Well Interference and Negatively Impact the Bell Canyon Reservoir

Commenters opine that the Project's water demand will interfere with other groundwater sources serving the City, including the Bell Canyon Reservoir. Specifically, WAC claims that "[w]hole in the past the Bell Canyon Reservoir has been able to produce the largest portion of the City's water supply, recently that has not been the case." WAC further claims that the EIR "omits entirely the years of 2021, 2022 and 2023."

First, the EIR includes a comprehensive discussion of the Bell Canyon Reservoir and the role it plays in the City's water supply mix. See, DEIR at 3.13-3. The EIR quantified the reductions in water supply from the Bell Canyon Reservoir in recent years, and explained that supplies have

[3] *Id*. at 3.
[4] See, Attachment 14h to Staff Report; Phase I Environmental Site Assessment, EBA Engineering, March 8, 2018.
[5] *Id*. at 16.

declined in part due to water release into the Napa River to support fish habitat. In other words, the EIR fully acknowledges that supplies at the reservoir have declined in recent years – and none of the data WAC claims is missing from the EIR implicates its analyses or conclusions regarding the Project's impacts on City water supplies.

Moreover, recent public reports presented to the City Council indicate that, in fact, groundwater capacity has increased at the Bell Canyon Reservoir in 2023. On February 14, 2023, the City Council adopted a resolution memorializing the termination of the City's Phase II Water Emergency in November 2021 (effective December 2021), and adopted a recommendation from staff to terminate the Phase I Water Emergency in July 2023 (upon the presentation of a confirmatory report).[6] A staff presentation indicates that the Bell Canyon Reservoir "has a projected available capacity of 1814 AF in June 2024, which is "well above the 1431 AF level when the Phase I Water Emergency was declared in June 2020."[7] Based upon the assumptions associated with the current supply (i.e. rainfall, customer demand, etc.), the City is projected to have sufficient supply beyond June 2024.[8] Lastly, the staff report confirms a pivotal point: "the City relies on water volume availability from all water sources, *not just water levels at Bell Canyon to meet system demand*."

III. The March 2023 Groundwater Sustainability Annual Report Does Not Undermine the EIR's Water Supply Analysis

Next, WAC attempts to cast doubt into the EIR water supply analysis by challenging the EIR's omission of the 2022 Groundwater Sustainability Report from March 2023 (the "LSCE 2023 Report").[9] WAC states that the EIR references prior groundwater annual reports (from 2013-2017), but fails to incorporate data from the LSCE 2023 Report – which was released just three months ago in March 2023. As noted in the most recent staff report, City staff have reviewed the LSCE 2023 Report and provided their expert opinion that it contains no significant new information altering the conclusions in the EIR. The following provides additional comments supportive of that conclusion.

First, the EIR analyzed the Project's demand on groundwater resources, including the Project's use of the on-site well, and concluded, based on substantial evidence, that the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge. (Draft EIR, 3.9-40 through 3.9-43.) In doing so, the EIR described the current status of groundwater levels in the Napa Valley Subbasin based on prior LSCE reports, and expressly acknowledged how the Subbasin is prone to decreased water supplies during dry-year and multiple dry-year events:

---

[6] https://sthelena.civicweb.net/document/71523/Phase%20I%20Water%20Emergency%20Disposition.pdf?handle=DAA7A51185A04B51A1E05EB6B909863D, attached hereto as **Exhibit C**.
[7] See *id*..; City of St. Helena Water Update (Attachment 1) at 7.
[8] *Id*. at 3.
[9] https://www.countyofnapa.org/DocumentCenter/View/28114/2022-Napa-County-Groundwater-Monitoring-Annual-Report?bidId=

- "Based on an extensive analysis of historical monitoring data on groundwater levels, groundwater in storage, groundwater quality, and interconnections between groundwater and surface water, there have been no basin-wide significant and unreasonable effects with regard to chronic lowering of groundwater levels, reduction in groundwater storage, seawater intrusion, degraded water quality, and land subsidence (LSCE 2016). The basin analysis report found that groundwater levels in the Napa Valley have been stable over the hydrologic base period (1988- 2015), and the prior historical period where data are available, *with recognition that groundwater levels in some areas have been lower during dry water year types* (LSCE 2016). … The 2020 annual report updated the total amount in storage of the Napa Valley Subbasin to 196,651 acre-feet *which is a decrease from the year prior due to a very dry year*; however, the report concluded that the basin continues to be managed sustainably despite the most recent fluctuation (LSCE 2021)." DEIR at 3.9-14; emphasis added.

- "Napa County releases annual reports that provide an update on basin conditions and makes recommendations necessary to continue to maintain and improve sustainable management. The most recent annual report finds that most of the groundwater levels in the wells measured have remained above minimum thresholds, *however seven wells did record groundwater levels below their minimum thresholds including a well near the Project site* (see discussion below)." "However, these thresholds are monitored for evidence of chronic declines and not necessarily as an isolated exceedance, as the annual report still determined that the Subbasin has continued to be managed sustainably through 2020 (LSCE 2021)." *Id*.; at 3.9-14 to 3.9-15; emphasis added.

Despite acknowledging that groundwater levels are susceptible of reduced capacities in the event of drought, the EIR nevertheless concludes that the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basis. Nothing in the LSCE 2023 Report diminishes the accuracy of that conclusion.

Second, viewed objectively, the LSCE 2023 Report does not indicate that groundwater supplies are in such a dire condition as WAC would have the City believe. The LSCE 2023 Report provides an update on groundwater conditions, water use, and Groundwater Sustainability Plan ("GSP") implementation in the Napa Valley Subbasin. It notes that: "[t]he recent very dry water years' conditions emphasize the susceptibility of the Subbasin to substantially reduced recharge and the propensity for increased groundwater pumping to meet water demands. Together, these water budget components result in significantly reduced groundwater storage during these very dry water years." But it also goes on to note that **"[t]he strong beginning of WY 2023 has shown excellent recovery with high levels of precipitation in December 2022 and January 2023**."[10]

The only undesirable event reported in the LSCE 2023 Report was that the seven-year *average* annual net groundwater extraction has exceeded the sustainable yield of 15,000 AFY.

[10] LSCE 2023 Report at ES-8.

Commenter notes this, but ignores the following prefatory remark in LSCE 2023 Report: "Management actions underway include (but are not limited to) the Groundwater Pumping Reduction Workplan and the Napa County Vineyard and Winery Water Conservation Workplan. These workplans, targeted to be completed in 2023, will help to curtail groundwater pumping and **overall water use to enable the Subbasin to achieve the measurable objective established in the GSP of 10% reduction in average annual groundwater pumping**."[11]

Third, the LSCE 2023 Report offers only a "snapshot" of groundwater conditions following a historically dry period in California's history. The LSCE 2023 Report is not demonstrative of historic conditions or future projections of groundwater supplies, including the improved state of groundwater aquifers in the City and Napa County following the 2023 wet season.[12]

IV. Current Status of the State Water Project

In a further attempt to diminish the legitimacy of the EIR's water supply analyses, WAC appears to argue that the EIR omitted key information on the State Water Project ("SWP") and the City's reliance on deliveries therefrom. In particular, WAC claims that the "actual deliveries [from the SWP] are determined by the Department of Water Resources ("DWR")," and "[DWR] estimates that 62% of SWP contractors' entitlements would be available in a normal year, 29% would be available during a single-dry year, and 5% available during a multi-year dry period."[13]

None of this information calls into question the adequacy of the EIR and its water supply analysis. The EIR contains a thorough discussion of the SWP, the City of Napa's SWP entitlements, and the variability of such entitlements in wet, dry and multi-dry years (EIR at 3.13-6). While WAC is correct that SWP entitlements vary based on normal, multiple-dry, and single-dry years, the EIR itself acknowledged this very point. See, e.g., Table 3.13-6 (SWP Reliability Assumptions).

Furthermore, recent DWR public reports indicate that deliveries from the SWP are expected to be plentiful throughout 2023 and beyond. WAC ignores the current state and optimistic forecasts for the SWP. See, e.g.,:

---

[11] *Id*. at ES-9.

[12] See, e.g., **Exhibit C** ("December and January storms provided large quantities of rainwater that resulted in the overtopping of spillways at both Bell Canyon Reservoir and Lake Hennessey — a City of Napa water source for St. Helena"; "Based upon the assumptions associated with the current supply (i.e. rainfall, customer demand, etc.), the City is projected to have sufficient supply beyond June 2024."); Napa County News (May 30. 2023), available at https://www.countyofnapa.org/CivicAlerts.aspx?AID=433, attached hereto as **Exhibit D** ("On May 30, the Napa County Board of Supervisors voted to end the State of Local Emergency due to drought conditions in Napa County, thus terminating the emergency powers of county officials set forth in Resolution No. 2022-29. …. Since October 1, 2022, Napa has received nearly 32 inches of rain, exceeding average annual rainfall. Despite a particularly wet winter, eight of the past 10 years have been characterized as dry to very dry conditions. While the wetter winter of 2022-2023 has achieved a notable recovery in groundwater levels since 2022, overall resilience and sustainability of Napa County's groundwater resources remain a top priority.")

[13] WAC Comment Letter at 2.

- January 26, 2023 – "DWR today announced that recent storms will allow the [SWP] to boost deliveries to 29 public water agencies serving 27 million Californians. Based on the amount of water captured and stored in recent weeks, DWR now expects to deliver 30 percent of requested water supplies – or 1.27 million acre-feet -- in 2023, up from the initial 5 percent announced on December 1."[14]

- March 24, 2023 – "DWR today announced a significant boost in the forecasted [SWP] deliveries this year due to continued winter storms in March and a massive Sierra snowpack. DWR now expects to deliver 75 percent of requested water supplies, up from 35 percent announced in February. The increase translates to an additional 1.7 million acre-feet of water for the 29 public water agencies that serve 27 million Californians."[15]

V. The EIR Was Not Required to Analyze Social Impacts Associated with Loss of "Recreational" Value of Project Site

Section 3.12 of the EIR (Public Services and Recreation) analyzed two recreation-based impacts under CEQA. Specifically, the EIR analyzed whether the Project includes recreational facilities or will require the construction or expansion of recreational facilities which could have an adverse impact on the environment (Draft EIR 3.12-16 to 3.12-17), and whether the Project would increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. The EIR concludes that neither of these impact areas will be significant impact.

However, SHC claims the EIR's analysis of recreation impact is deficient under CEQA because "it wholly ignores that the site is currently used for recreation, and that recreation site will be lost as a result of the Project."[16] Response #22 of th Staff Report correctly refutes this comment on the basis that the project site is privately owned, is therefore not a public recreation area, and accordingly that SHC's opinion is not supported by substantial evidence. Response #22 is correct. Further, even if SHC's unsupported claims were true (the private site is used for public recreation), the loss of that unpermitted public recreational use would be considered a social – not an environmental – impact. Lead agencies need not analyze social or economic impacts of a proposed project, but can consider social or economic impacts in determining whether a physical change in the environment is significant. SHC's concern (public annoyance in finding a new place for recreational activities) is not a recognized CEQA impact.

[14] https://water.ca.gov/News/News-Releases/2023/Jan-23/Recent-Storms-Allow-State-Water-Project-to-Increase-Expected-2023-Deliveries, attached hereto as **Exhibit E.**

[16] SHC Comment Letter at 12.

VI. The EIR Analyzed an Appropriate Range of Alternatives; the City is not Obligated to Consider Every Alternative Proposed by Commenters

WAC contends that the City committed a "failure of the CEQA process and an abuse of discretion" by failing to consider "a transfer of suplus waters in the Rector Reservoir equal to the extraction of Stonebridge," something that WAC purportedly proposed to the City in January 2023. WAC further claims that this is the "environmentally preferable alternative" to, presumably, the Project. The City was under no legal obligation to analyze this suggested alternative, which resembles a water policy for the City to make as opposed to a particular alternative to this Project.

In addition to analyzing the environmental effects of a proposed project, EIRs must consider and analyze project alternatives that would reduce adverse environmental impacts. An EIR must "describe a range of reasonable alternatives to the project ... which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project...." (Guidelines § 15126.6 (a).) However, CEQA does not require lead agencies to consider specific alternatives that are proposed by members of the public or other outside agencies. Nor does an EIR need to consider every conceivable alternative to a project or alternatives that are infeasible. The range of alternatives considered in an EIR is governed by the "rule of reason." Accordingly, an EIR is not required to analyze alternatives that cannot achieve a project's basic objectives.

Here, the EIR analyzes four alternatives: (i) No Project/No Build Alternative, (ii) No Project/General Plan Alternative, (iii) Park Preserve Alternative, and (iv) Increased Density/Affordable Housing Alternative. The EIR also establishes eight (8) project objectives, only one of which concerned water supply. Project objectives include, but are not limited to, "provide opportunities to develop a variety of housing types, including multi-family, single family, and accessory dwelling units, affordable to a range of incomes …."; "provide opportunities to contribute to the provision of workforce and affordable housing consistent with the City's adopted Housing Element and the Regional Housing Needs Assessment (RHNA) …'; "Support alternative transportation by providing a pedestrian and bicycle linkage through St. Helena …" The sole project objective related to water supply is "[m]inimize City water use by continuing the use of an existing on-site water well for irrigation of Proposed Project landscaped areas."

The alternative posed by WAC would accomplish none of the EIR's stated project objectives. Thus, City is not required to endorse or analyze such an alternative.

VII. The City's Statement of Overriding Consideration Satisfies CEQA and Represents Sound Judgment on Behalf of the City's Decisionmakers

SHC claim the City's draft "statement of overriding consideration" included in the May 1, 2023 City Council Staff Report was deficient under CEQA.

As a preliminary point, SHC attempts to write new requirements into CEQA statute. Nothing in CEQA nor the CEQA Guidelines requires statements of overriding considerations to "explain in detail" how project benefits outweigh significant and unavoidable impacts, or "identify real, quantifiable benefits." CEQA Guidelines sections 15093(b)-(c) provide that [w]hen the lead agency approves a project which will result in the occurrence of significant effects which are identified in the final EIR but are not avoided or substantially lessened, the agency shall state in writing the specific reasons to support its action based on the final EIR and/or other information in the record. Statements of overriding considerations focus on the larger, more general reasons for approving a particular project, such as the need to create new jobs, provide housing, generate taxes, and the like. Their purpose is to demonstrate local decisionmakers' weighing of the benefits of a proposed project against its unavoidable environmental risks.

That is precisely what the City did when it prepared a draft statement of overriding considerations in the May 1, 2023 City Council Staff Report. The draft statement finds that each of the social, economic and environmental benefits of the Project separately and individually outweigh the Project's potential unavoidable adverse impacts.

In short, the Project's provision of additional housing opportunities (including affordable housing) constitutes a laudable social and economic benefit supporting the statement of overriding consideration. While SHC may favor different policies other than those furthered by the Project, that does not render the City's statement of overriding considerations legally deficient under CEQA.

Very truly yours,

Daniel R. Golub

EXHIBIT A

DWR Bulletin 74, Part III, Section 21

Part III. Destruction of Water Wells

Section 20. Purpose of Destruction

Part III. Destruction of Water Wells

Section 20. Purpose of Destruction

A well that is no longer useful (See Note 1) (including exploration and test holes) must be destroyed in order to:

- 1. Assure that the groundwater supply is protected and preserved for further use.
- 2. Eliminate the potential physical hazard.

Section 20 Notes:

1. Very often wells are prematurely abandoned and destroyed. However, proper maintenance will ensure that they will continue to produce for many years. The maintenance program should include regular measurement of the water level (depth to water from ground surface), determination of water quality, pump tests (for determination of pump and well efficiency) and cleaning.

Section 21. Definition of Abandoned Well

Section 21. Definition of "Abandoned" Well

A well is considered 'abandoned' or permanently inactive if it has not been used for one year, unless the owner demonstrates intention to use the well again. In accordance with Section 115700 of the California Health and Safety Code, the well owner shall properly maintain an inactive well as evidence of intention for future use in such a way that the following requirements are met:

- (1) The well shall not allow impairment of the quality of water within the well and groundwater encountered by the well.
- (2) The top of the well or well casing shall be provided with a cover, that is secured by a lock or by other means to prevent its removal without the use of equipment or tools, to prevent unauthorized access, to prevent a safety hazard to humans and animals, and to prevent illegal disposal of wastes in the well. The cover shall be watertight where the top of the well casing or other surface openings to the well are below ground level, such as in a vault or below known levels of flooding. The cover shall be watertight if the well is inactive for more than five consecutive years. A pump or motor, angle drive, or other surface feature of a well, when in compliance with the above provisions, shall suffice as a cover.
- (3) The well shall be marked so as to be easily visible and located, and labeled so as to be easily identified as a well.
- (4) The area surrounding the well shall be kept clear of brush, debris, and waste materials.

If a pump has been temporarily removed for repair or replacement, the well shall not be considered 'abandoned' if the above conditions are met. The well shall be adequately covered to prevent injury to people and animals and to prevent the entrance of foreign material, surface water, pollutants, or contaminants into the well during the pump repair period.

Section 22. General Requirement

Section 22. General Requirement

All "abandoned" wells and exploration, or test holes shall be destroyed. The objective of destruction is to restore as nearly as possible those subsurface conditions which existed before the well was constructed taking into account also changes, if any, which have occurred since the time of construction. (For example, an aquifer which may have produced good quality water at one time, but which now produces water of inferior quality, such as a coastal aquifer that has been invaded by seawater.)

Destruction of a well shall consist of the complete filling of the well in accordance with the procedures described in Section 23 (following).

Section 23. Requirements of Destroying Wells

Section 23. Requirements for Destroying Wells

A. ***Preliminary Work.*** Before the well is destroyed, it shall be investigated to determine its condition, details of construction, and whether there are obstructions that will interfere with the process of filling and sealing. This may include the use of downhole television and photography for visual inspection of the well.

- **1. *Obstructions.*** The well shall be cleaned, as needed, so that all undesirable materials, including obstructions to filling and sealing, debris, oil from oil-lubricated pumps, or pollutants and contaminants that could interfere with well destruction are removed for disposal. The enforcing agency shall be notified as soon as possible if pollutants and contaminants are known or suspected to be in a well to be destroyed. Well destruction operations may then proceed only at the approval of the enforcing agency. The enforcing agency should be contacted to determine requirements for proper disposal of materials removed from a well to be destroyed.
- **2.** Where necessary, to ensure that sealing material fills not only the well casing but also any annular space or nearby voids within the zone(s) to be sealed, the casing should be perforated or otherwise punctured.
- **3. I**n some wells, it may be necessary or desirable to remove a part of the casing. However, in many instances this can be done only as the well is filled. For dug wells, as much of the lining as possible (or safe) should be removed prior to filling.

B. ***Filling and Sealing Conditions***. Following are requirements to be observed when certain conditions are encountered:

- 1. **Wells situated in unconsolidated material in an unconfined groundwater zone**. **I**n all cases the upper 20 feet of the well shall be sealed with suitable sealing material and the remainder of the well shall be filled with suitable fill, or sealing material. (See Figure 9A, of Bulletin 74- 81.)
- 2. **Well penetrating several aquifers or formations. I**n all cases the upper 20 feet of the well shall be sealed with impervious material. **I**n areas where the interchange of water between aquifers will result in a significant (See Note 1) deterioration of the quality of water in one or more aquifers, or will result in a loss of artesian pressure, the well shall be filled and sealed so as to prevent such interchange. Sand or other suitable inorganic material may be placed opposite the producing aquifers and other formations where impervious sealing material is not required. To prevent the vertical movement of water from the producing formation, impervious material must be placed opposite confining formations above and below the producing formations for a distance of 10 feet or more. The formation producing the deleterious water shall be sealed by placing impervious material opposite the formation, and opposite the confining formations for a sufficient vertical distance (but no less than 10 feet) in both directions, or in the case of "bottom" waters, in the upward direction. (See Figure 9B.) **I**n locations where interchange is in no way detrimental, suitable inorganic material may be placed opposite the formations penetrated. When the boundaries of the variousformations are unknown, alternate layers of impervious and pervious material shall be placed in the well.
- **3. *Well penetrating creviced or fractured rock.* I**f creviced or fractured rock formations are encountered just below the surface, the portions of the well opposite this formation shall be sealed with neat cement, sand-cement grout, or concrete. **I**f these formations extend to considerable depth, alternate layers of coarse stone and cement grout or concrete may be used to fill the well. The limiting dimensions of coarse stone are usually considered to range between ¼ and 4 inches. Fine grained material shall not be used as fill material for creviced or fractured rock formations.

- 4. ***Well in noncreviced, consolidated formation.*** The upper 20 feet of a well in a noncreviced, consolidated formation shall be filled with impervious material. The remainder of the well may be filled with clay or other suitable inorganic material.
- 5. ***Well penetrating specific aquifers, local conditions.*** Under certain local conditions, the enforcing agency may require that specific aquifers or formations be sealed off during destruction of the well.

C. ***Placement of Material.*** The following requirements shall be observed in placing fill or sealing material in wells to be destroyed:

- 1. The well shall be filled with the appropriate material (as described in Subsection D of this section) from the bottom of the well up.
- 2. Where neat cement grout, sand-cement grout, or concrete is used, it shall be poured in one continuous operation.
- 3. Sealing material shall be placed in the interval or intervals to be sealed by methods that prevent free fall, dilution, and/or separation of aggregate from cementing materials.
- 4. Where the head (pressure) producing flow is great, special care and methods must be used to restrict the flow while placing the sealing material. In such cases, the casing must be perforated opposite the area to be sealed and the sealing material forced out under pressure into the surrounding formation.
- 5. In destroying gravel-packed wells, the casing shall be perforated or otherwise punctured opposite the area to be sealed. The sealing material shall then be placed within the casing, completely filling the portion adjacent to the area to be sealed and then forced out under pressure into the gravel envelope.
- 6. When pressure is applied to force sealing material into the annular space, the pressure shall be maintained for a length of time sufficient for the cementing mixture to set.
- 7. To assure that the well is filled and there has been no jamming or "bridging" of the material, verification shall be made that the volume of material placed in the well installation at least equals the volume of the empty hole.

D. ***Materials.*** **Requirements for sealing and fill materials are as follows:**

- 1. ***Impervious Sealing Materials.*** No material is completely impervious. However, sealing materials shall have such low permeability that the volume of water passing through them is of small consequence. Suitable impervious materials include neat cement, sand-cement grout, concrete, and bentonite clay, all of which are described in Section 9, Subsection D, "Sealing Material" of these standards; and well-proportioned mixes of silts, sands, and clays (or cement), and native soils that have a coefficient of permeability of less than 10 feet per year. Examples of materials of this type are: very fine sand with a large percentage of silt or clay, inorganic silts, mixtures of silt and clay, and clay. Native materials should not be used when the sealing operation involves the use of pressure. Used drilling muds are not acceptable.
- 2. ***Filler Material.*** Many materials are suitable for use as a filler in destroying wells. These include clay, silt, sand, gravel, crushed stone, native soils, mixtures of the aforementioned types, and those described in the preceding paragraph. Material containing organic matter shall not be used.

E. ***Additional Requirements for Wells in Urban Areas.***
In incorporated areas or unincorporated areas developed for multiple habitation, to make further use of the well site, the following additional requirements must be met (see Figure 9C):

- 1. A hole shall be excavated around the well casing to a depth of 5 feet below the ground surface and the well casing removed to the bottom of the excavation.
- 2. The sealing material used for the upper portion of the well shall be allowed to spill over into the excavation to form a cap.
- 3. After the well has been properly filled, including sufficient time for sealing material in the excavation to set, the excavation shall be filled with native soil.

F. ***Temporary Cover.*** During periods when no work is being done on the well, such as overnight or while waiting for sealing material to set, the well and surrounding excavation, if any, shall be covered. The cover shall be sufficiently strong and well

enough anchored to prevent the introduction of foreign material into the well and to protect the public from a potentially hazardous situation.

Section 23 Notes:

1. Determining the significance of interchange of waters whose qualities vary and of the loss of artesian pressures, requires extensive knowledge of the groundwater basin in question. The Department of Water Resources has over the years, and frequently in cooperation with agencies such as the U. S. Geological Survey, undertaken a number of groundwater studies and amassed considerable information and data about the subject. Although much is known about the State's groundwater supplies, detailed studies sufficiently accurate to define interchange problems have been made only in certain areas. In still other areas, there is only partial definition of the problem.

EXHIBIT B

Project Description

HUNTER SUBDIVISION
PROJECT DESCRIPTION

GENERAL INFORMATION

The subject property is a 16.9-acre parcel (APN 009-030-057) located north of Hunt Avenue and east of Adams Street. The site is bounded by single-family homes to the west and southwest, a mobile-home park to the southeast, the flood control project to the east and a City-owned parcel (for access to the flood control project) to the north. There is existing vineyard over a portion or the property with the remaining land being vacant and recently disturbed/graded as part of the flood control project.

The owner, Mr. Dennis Hunter, seeks approval to subdivide the parcel into 51 single-family residential lots, 11 of those with affordable granny units, and a parcel designated for a future 25-unit workforce/affordable housing development. The parcel currently has a *Medium Density Residential* Zoning and General Plan designation allowing for a density range of 5.1 to 16.0 du/acre and maximum yield of 270 du. The proposed 87 units (51 lots + 11 granny units + 25 future multi-family units) results in a density of 5.1 du/acre thereby meeting the minimum requirement.

In terms of development standards, the resulting lots meet or exceed all the shape, size and setback requirements of the MR zoning district. Houses are not being proposed at this time or as part of this application. The affordable units will be deed restricted for a minimum of 30 years (per SB 1818). This project is a housing development entitled to a density bonus and multiple incentives and concessions under the provisions of Government Code §65915.

As indicated above, there are a few remainder parcels being proposed as part of this subdivision. Parcel A is 3.13 net acres and will be set aside for a future 25-unit multi-family development. There is also a small sliver of land along the north PL that is Parcel B.

The project will be served by new public streets including the interconnection of Starr Avenue to Adams Street. These streets are classified as collectors and have been designed to the 60-foot right-of-way standard. All others streets are designed to the minor residential standard (56'). Adams Street is shown on the City-owned parcel with a small portion lying on the subject property.

In terms of utilities, there is an existing sanitary sewer in Hunt Avenue and new water and storm drain lines that run through the property, all of which are accessible for connection by the new project. There are also existing dry utilities nearby in Hunt Avenue and in Adams Street for service of gas, electric, cable and phone to the project. There is an existing well near the southeastern end of the property that is proposed to be maintained in place and used for irrigation of the project's landscape areas. It is a high-producing well that it also capable of supplying additional water to the project should it be found necessary.

HUNTER SUBDIVISION
PROJECT DESCRIPTION

The grading design for the project, as shown on the Tentative Map, is based on the Soil Stockpile Grading Plan dated January 2009 prepared by Mead & Hunt for the flood control project. The grades have been set to utilize the pad that is being constructed and to achieve an earthwork balance in an effort to avoid future offhaul of material. The fill slope along the south and southeast property lines being constructed will be replaced by a retaining wall and drainage swale, also as shown on the Tentative Map. The grading and drainage design has been coordinated with the flood control project based on feedback from and a field meeting with Jon Lander.

It is anticipated that site improvements for the project will be complete within one and one-half years after the approval of the project's entitlements.

HISTORY OF PRIOR KNOWN DEVELOPMENT ACTIVITY

The architectural firm Dahlin Group was retained in May of 2005 to prepare a Master Plan for the site. Following several meetings with City Staff, at Staff's suggestion, the design work was halted to allow for the completion of the General Plan Update program. On May 23, 2006 the Civil Engineering firm Riechers Spence & Associates (RSA) was retained to start Tentative Map work but again at the suggestion of City Staff the work was halted to permit the completion of the General Plan Update program.

In June of 2007 the City first contacted Mr. Hunter with a request for right of entry to the property to explore Indian remains identified in their Cultural Resources Study. The City explained that their flood control project was a life-safety project for the senior residents of the mobile home park. Mr. Hunter signed the right of entry (without charge) on October 11, 2007.

During the summer of 2006 the City again contacted Mr. Hunter to see if he would consider allowing the spoils from the flood control project to be placed on his property. This action would reduce the cost of the flood control project to the City. Mr. Hunter agreed subject to the fill being placed in a compacted form, suitable for development. It was the City's estimate that 37,000 cubic yards of fill would be available. A grading plan was prepared by Civil Design and submitted to the City and a Soils Report for the site was prepared by Miller Pacific Engineering Group.

In the spring of 2008 the City again approached Mr. Hunter to see if he was interested in a possible trade in lieu of the purchase of his property for the flood control project. A number of meetings were held and a lot line adjustment agreed upon. Land was appraised and a price was established. The Agreement of Purchase and Sale was signed in December of 2008.

In the fall of 2007 the City again approached Mr. Hunter asking if he would support placing an Assessment District on property benefiting from the flood control project. Additional money was required to complete the City's project. Mr. Richard McDonnell

HUNTER SUBDIVISION
PROJECT DESCRIPTION

of Vineyard Valley Mobile Home Park, on Marcy 21, 2008 protested the Assessment District which constituted a majority protest and killed the Assessment District. Mr. Hunter agreed to the Assessment District which would place a lien of $586,084.96 on his property.

All of the meetings with the City to this point, including meetings held with Councilman Eric Sklar in attendance, envisioned development of the Hunter parcel. The values of property arrived at for the land trade/sale with the City was based on developable land prices. And, the placement of City fill on the Hunter property was to be done consistent with the future urban development of the parcel. Furthermore, to accommodate development and as part of the land swap, the City's Flood Control Project:

- Removed grape vines along the north side of the property for the extension of Adams Street and through the middle of the site where Starr Avenue was to be extended.
- Moved the water main from the center of the property to the location of the future Starr Avenue right-of-way.
- Up-sized the retention pond and pumps to serve the developed Hunter parcel.
- Created an easement and moved the sewer line.
- Created an easement to facilitate the extension of Starr Avenue.

In September of 2009 architect Mark Scheurer was retained as designer of the project and Mark met with City Staff. In December of 2009 the design work was again put on hold to allow for the completion of the General Plan Update program. The Civil Engineering firm RSA then rejoined the development team.

At the present time the right-of-way for Adams Street has been graded and rocked, the right-of-way for Starr Avenue has been cleared and the water utility installed. The easterly half of the Hunter property has been used as a construction staging area by the City and is devoid of any vegetation. And the stockpile is currently being placed and compacted on the eastern portion of the site (per the stockpile Plan referenced above). The ground water well on the site previously used for irrigation of the grape vines is presently used by the City (free of charge) to start the landscape required by their flood control project.

Staff Report and Presentation
February 14, 2023 City Council Meeting

Report to the City Council
Regular City Council - 14 Feb 2023

Agenda Section: **CONSENT ITEMS**

Subject: **Consideration and Proposed Approval of a Resolution (1) Memorializing the Termination of the Phase II Water Emergency in November 2021, effective December 2021; and (2) Confirmation of Staff's Proposal to Provide a Recommendation for the Termination of the Phase I Water Emergency at a Council Meeting in July 2023.**

CEQA Determination: **Not a CEQA project**

Prepared By: Joseph Leach, Public Works Director and City Engineer

Reviewed By: April Mitts, Assistant City Manager

Approved By: Anil Comelo, City Manager

BACKGROUND

In response to the 2011 Safe Water Yield Committee recommendations and the 2015 State-mandated conservation requirements, the St. Helena Municipal Code Section 13.04 address various mandated conservation requirements and criteria for declaring water emergency phases. Section 13.04.220 establishes that at any time that the City Council finds and determines a water shortage emergency condition exists within the criteria of Sections 13.04.230 through 13.04.250, and that it is necessary to limit usage by the customers of the municipal water department, the City Council shall adopt a resolution setting forth the applicable phase.

The criteria for establishing Phase I Water Regulations, as determined by the Safe Yield Committee in its report dated March 17, 2011, shall be any or all the following:

1. The supply/usage balance, as calculated at the beginning of the fiscal year, is in deficit;
2. The volume of water to be delivered by the City of Napa in any fiscal year will not exceed four hundred (400) AF;

3. The volume of water anticipated to be available prior to the next November 1st, as determined by the Director of Public Works, is not sufficient to meet projected demand through November 1st without demand reduction measures being implemented; or
4. Conditions requiring the establishment of a Phase II water emergency, as determined by the Director of Public Works, appear to be imminent.

St. Helena Municipal Code Section 13.04.010 establishes that the City shall calculate the water supply/usage balance as soon as practicable ***after the end of each fiscal year***. The supply/usage balance is the difference between the safe annual yield of the City's water supply and the total current usage with total current usage being the average usage over the last five fiscal years. The balance is positive, or in surplus, when the safe annual yield exceeds total current usage. The balance is negative, or in deficit, when the safe annual yield is less than total current usage.

As noted above, the 2011 Safe Yield Committee determined the Safe Yield was 1,950 acre-feet of water prior to the 200 acre-feet water increase from the City of Napa which was adopted in the December 2011 Water Agreement Amendment. This 2011 Amendment increased the City's allocation from 400 acre-feet to 600 acre-feet. The current Safe Yield of the City's Water Supply is 2,150 acre-feet.

The annual Water Shortage Emergency (WSE) is determined pursuant to the analytical methodology created by the Safe Yield Committee as identified in its report dated March 17, 2011. This calculation requires compilation and evaluation of multiple data sources including: annual and monthly production volumes for Louis Stralla Water Treatment Plant, Stonebridge Wells and Napa Water; monthly Bell Canyon water levels; operational water in the distribution system; water loss; and delivery to the water enterprise customers. The result of this analysis is the annual water supply/usage balance which then dictates if a water shortage emergency exists.

On June 23, 2020, the City Council adopted Resolution No. 2020-72 declaring a Phase I Water Emergency. Then on October 27, 2020, the City declared a Phase II Water Emergency with the adoption of Resolution No. 2020-107. The Public Works Director subsequently terminated the Phase II Water Emergency in November 2021, effective December 2021; however, it is necessary for the City Council to adopt a resolution declaring as such. The City has remained in a Phase I Water Emergency.

DISCUSSION

When the Phase I Water Emergency was adopted via Resolution 2020-72 on June 23, 2020, the Public Works Director presented criteria to the Council, conforming to the Safe Yield criteria and St. Helena Municipal Code, to support the declaration. ***Attachment 1*** includes annual water demand trends for the past 12 fiscal years, combined water source production over the past 12 fiscal years, and a 17-year summary showing Bell Canyon capacity levels in May, November, and December.

The three tables below show the criteria utilized to determine the necessity to continue or rescind the Phase I Water Emergency.

Bell Canyon Reservoir Capacity

Month	2019	2020	2022	2023
November	57.0%		61.7%	
December	71.7%		100.0%	
May		62.9%		TBD

Water Production Trend (Bell Canyon, Napa Intertie and Stonebridge Wells)
Values in acre-feet; Fiscal Year 2022-23 is through January 2023

Source	2019-20	2020-21	2021-22	2022-23*
Bell Canyon	765	601	379	322
Napa Water	592	487	393	328
Stonebridge Wells	300	576	466	162
Totals	1,657	1,664	1,238	812

Water Demand Trend (i.e. Water Billed)
Values in acre-feet; Fiscal Year 2022-23 is through January 2023

	2019-20	2020-21	2021-22	2022-23*
Water Customers Demand	1,488	1,372	1,032	645
Percent Loss (Audit)	85%	85%	85%	85%
Water Demand	1,751	1,614	1,214	759

It should also be noted that on January 26, 2023, the Department of Water Resources issued a letter to entities with State Water Contracts that their “Table A” water supply would be available to increase (***Attachment 2***).

Finally, the Monthly Water Report for January 2023 (to be included in the February 28, 2023 Council agenda) includes the graph of Projected Water Supply for Bell Canyon Reservoir (***Attachment 1, page 6***). Based upon the assumptions associated with the current supply (i.e. rainfall, customer demand, etc.), the City is projected to have sufficient supply beyond June 2024. While this projection is an estimate, the termination of the Phase I Water Emergency should conform to the recommendation of the Safe Yield Report and SHMC, which would dictate an evaluation after the end of the FY2022-23 in July 2023, with an evaluation of the Bell Canyon Reservoir capacity level at the end of May 2023.

Based on this information presented staff recommendations Council adopt a resolution:

1. Memoralizing the termination of the Phase II water emergency in November 2021, effective December 2021; and
2. Confirming staff's recommendation to bring a water update to the Council in July 2023 to allow for an evaluation of the Bell Canyon Reservoir capacity level at the end of the FY 2022-23 to determine if the corresponding analysis warrants adoption of a resolution terminating the Phase I Water Emergency.

FISCAL IMPACT

The current water rate structure includes a drought period surcharge that begins once the City implemented the Phase I Water Regulations. Drought rates are only applied to use charges (i.e. does not affect service/“base” charges). Drought rates are 6% higher than non-drought rates. It is undetermined the order of magnitude, if any, the loss of revenue to be realized by the City since customer water use may change once the restrictions are rescinded.

RECOMMENDED ACTION

Adopt the attached resolution.

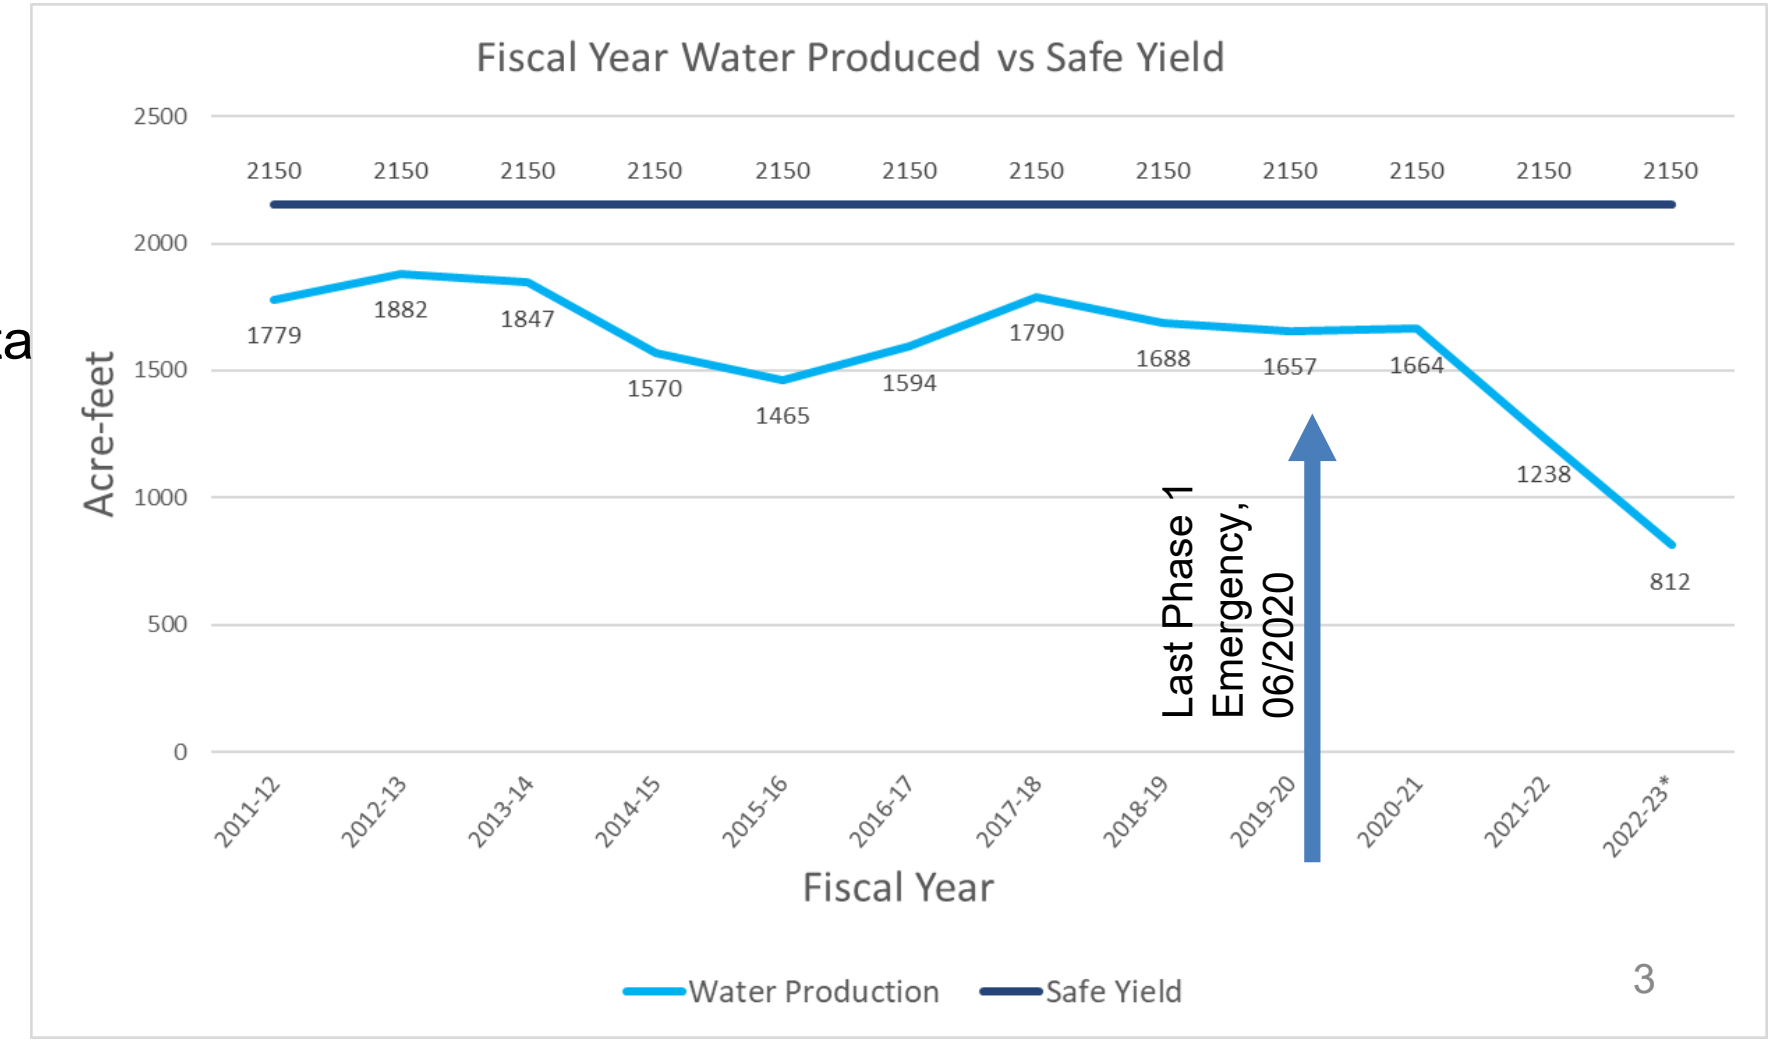
City of St. Helena Water Update Attachment 1

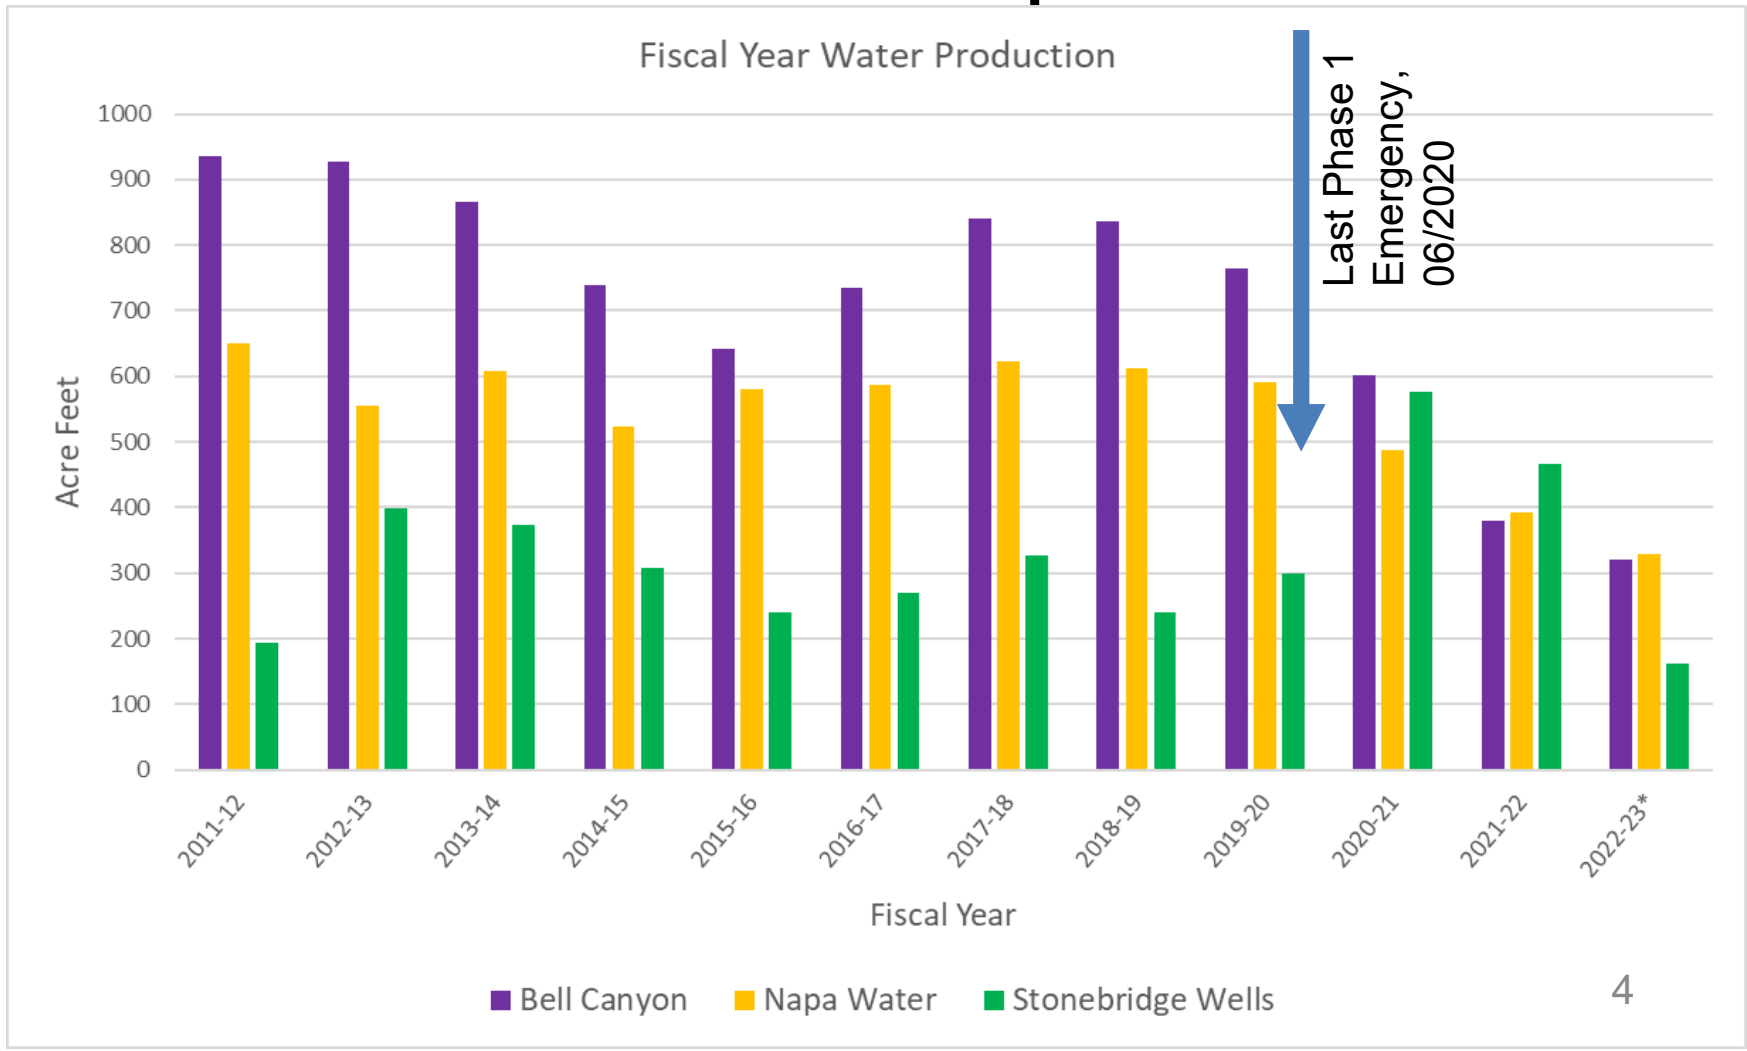
By: Joe Leach, PE

Director of Public Works



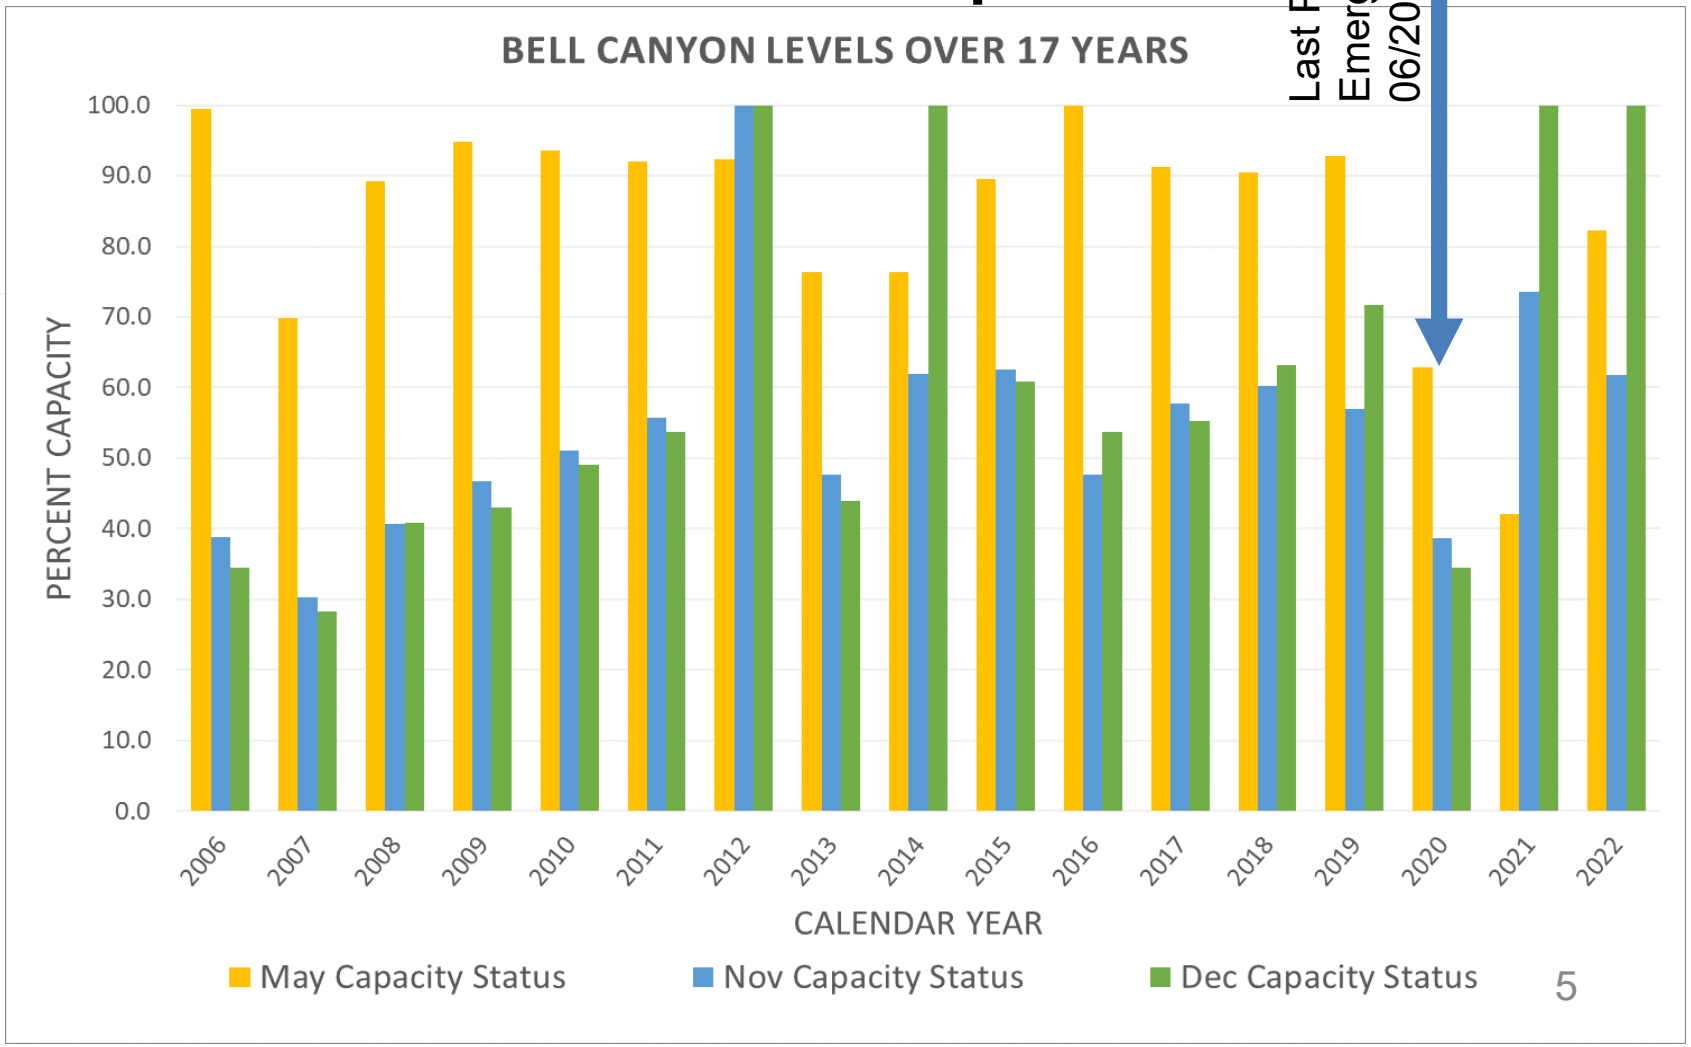
City of St. Helena Water Update

- Fiscal Year water demand incl. 15% “system loss”
- FY2022-23 data thru Jan 31



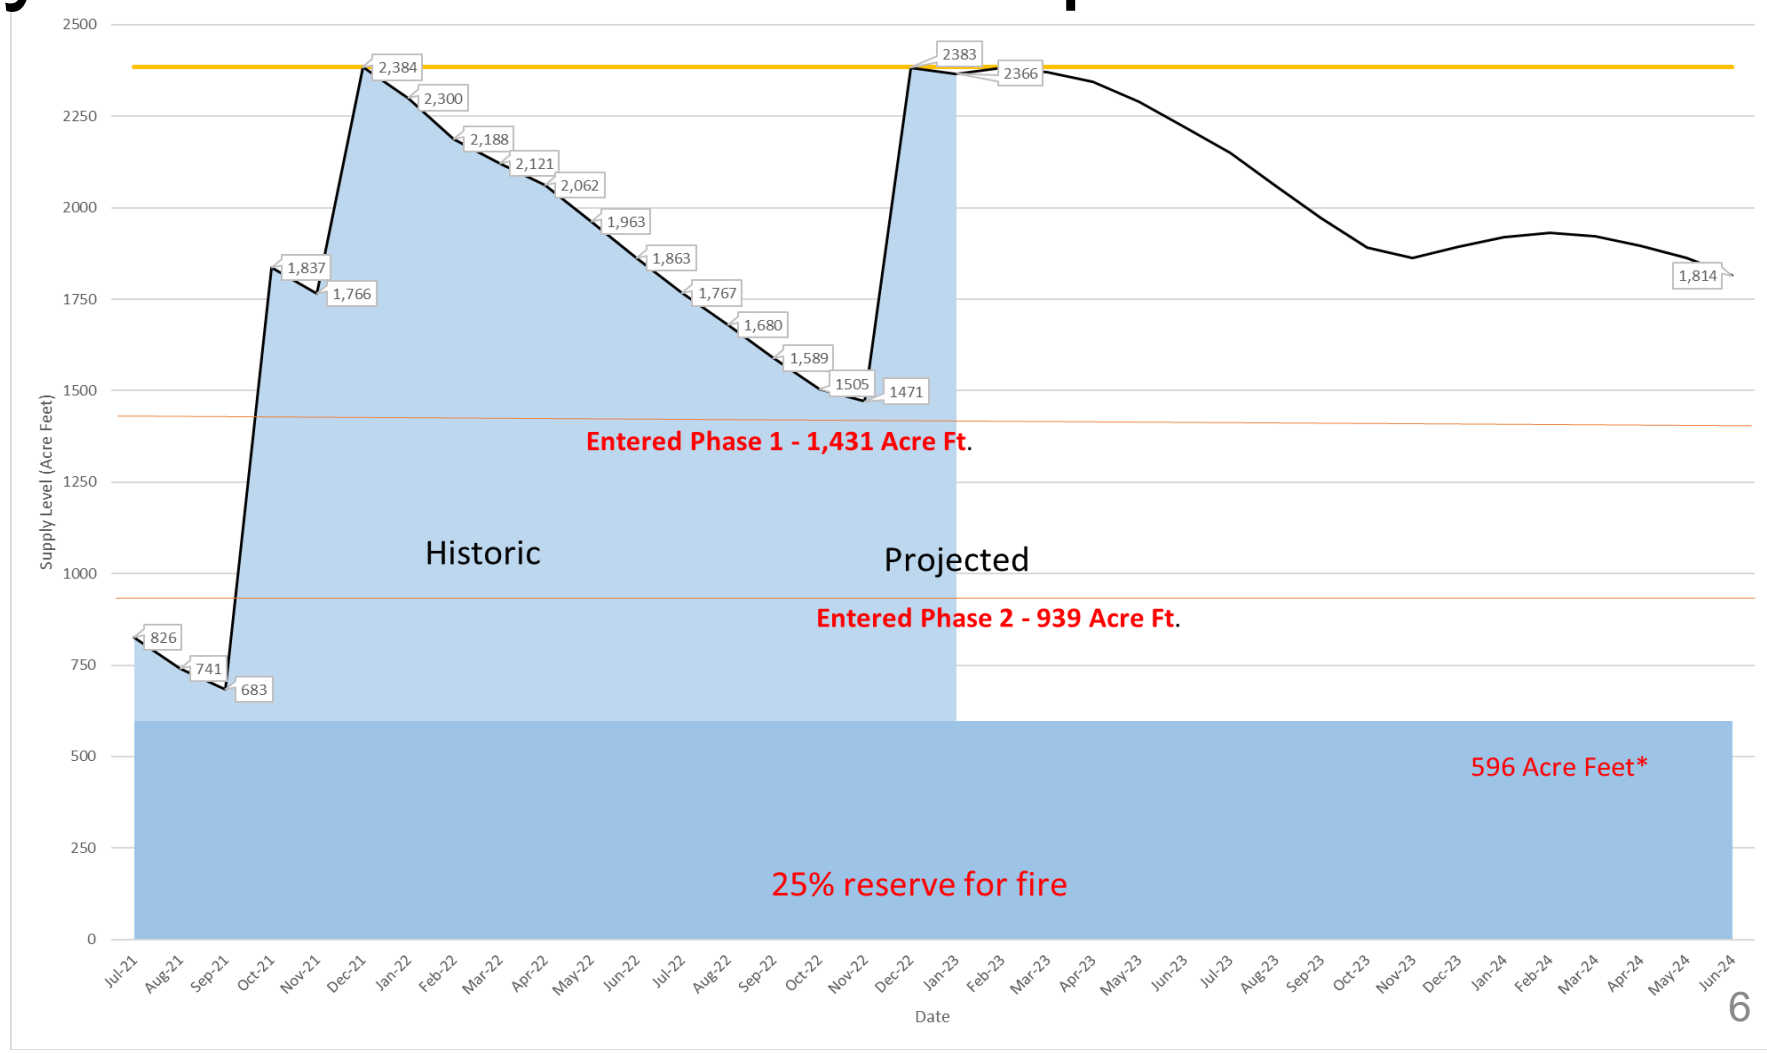
City of St. Helena Water Update

- Fiscal Year water production
- FY2022-23 data thru Jan 31



City of St. Helena Water Update

- Combined Water Source Production since FY 2011-12
- FY2022-23 data thru Jan 31



City of St. Helena Water Update

- Bell Canyon Capacity in May, November and December since 2006
- FY2022-23 data thru Jan 31

City of St. Helena Water Update

- Bell Canyon Reservoir Monthly storage
- Projected sufficient supply (1814 AF) beyond June 2024

City of St. Helena Water Update

- Prior to 2007 no City of Napa water was available
- Post 2011, the City has an annual allocation of 600 acre-feet from the City of Napa with the option to purchase an additional 200 acre-feet per year.
- The 2011 Safe Yield Report assumes limiting the Stonebridge Wells long term average of 450 acre-feet per year. Well usage has been averaging approximately 382 acre-feet/year for the last 5 fiscal years.
- In spite of significant staff turnover during the last several years, Water Operations staff continues to equitably balance the supplies.
- Bell Canyon has a projected available capacity of 1814 acre-feet in June 2024, well above the 1431 acre-foot level when the Phase I Water Emergency was declared in June 2020.
- It is important to note that the City relies on total water volume availability from all water sources and not just water levels at Bell Canyon to meet system demand.

City of St. Helena Water Update

Director of Public Works Recommendations:

- Adopt Resolution to terminate the Phase II Water Emergency retroactive to November 2021.
- Adopt Resolution directing staff to provide Water Supply Update to Council at a meeting in July 2023 to determine if there is need to continue Phase I Water Emergency or if termination is warranted.
- Continue to conserve Bell Canyon Reservoir water by minimizing water treatment operations at Louis Stralla and utilizing Stonebridge Wells and City of Napa water allocation, adhere to recommendations adopted in the 2011 Safe Yield Report and provide monthly updates to City Council.
- Alert City Council of any changes to the City's water supply and/or drought restrictions that may be set by the State that would impact the existing Phase I Water Emergency in advance of any regularly scheduled City Council meeting.

State of California DEPARTMENT OF WATER RESOURCES California Natural Resources Agency
CALIFORNIA STATE WATER PROJECT

NOTICE TO STATE WATER PROJECT CONTRACTORS

Date: January 26, 2023

Number: **23-03**

Subject: **Increase of State Water Project 2023 Allocation to 30 Percent**

From: Original signed by
Ted Craddock
Deputy Director, State Water Project
Department of Water Resources

Due to extreme weather and a series of atmospheric rivers from late December 2022 through January 2023, the Department of Water Resources (DWR) is increasing the State Water Project (SWP) allocation from 5 percent to 30 percent of most[1] SWP contractors Maximum Annual Table A amounts.

Based on currently available information, the 30 percent Table A allocation should be sufficient to eliminate all contractors' provisional human health and safety (HH&S) allocations identified in the Notice to State Water Project Contractors 22-04, Initial 2023 Allocation.

In determining available SWP supplies, DWR has considered several factors including SWP contractors' projected 2023 demands, existing storage in SWP conservation facilities, estimates of future runoff, SWP operational and regulatory requirements from the federal Endangered Species Act and California Endangered Species Act, and water rights obligations under the State Water Resources Control Board's authority. DWR may revise the SWP allocation if warranted by the year's developing hydrologic conditions and available SWP water supplies.

DWR will utilize the 30 percent schedules submitted by the Contractors in October 2022 (as part of initial requests), including any subsequent updates that may have been

[1] Attachment A presents these allocations.

provided to DWR. If a contractor foresees any changes to their water delivery schedule, please communicate such changes with DWR in a timely manner.

If you have any questions or need additional information, please contact John Leahigh, Assistant Division Manager, Water Management, SWP Division of Operations and Maintenance, at (916) 902-9876.

CITY OF ST. HELENA

RESOLUTION NO. 2023-

Resolution of the City Council of the City of St. Helena to: (1) Memorialize the Termination of the Phase II Water Emergency in November 2021, Effective December 2021 and (2) Direct Staff to Provide a Recommendation Related to the Termination of the Phase I Water Emergency at a Council Meeting in July 2023

WHEREAS, Resolution No. 2020-72 established a Phase I Water Emergency and Resolution 2020-107 established a Phase II Water Emergency; and

WHEREAS, based upon criteria established by the City of St. Helena Safe Water Yield Committee and Municipal Code, the Public Works Director ended the Phase II Water Emergency in November 2021; and

WHEREAS, the available water supply appears to be sufficient for the foreseeable future but additional confirming analysis is recommended at the end of the 2022/23 Fiscal Year as delineated in the Safe Water Yield report and St. Helena Municipal Code.

NOW, THEREFORE BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF ST. HELENA AS FOLLOWS:

SECTION 1. The above recitals are true and correct and are incorporated herein by this reference.

SECTION 2. The City Council terminates the Phase II Water Emergency retroactive to November 2021, effective December 2021.

SECTION 3. The City Council hereby requires staff to provide a presentation and recommendation related to the disposition of the Phase I Water Emergency at a Council meeting in July 2023 with the intent to either continue or terminate said conservation requirements.

Approved at a Regular Meeting of the St. Helena City Council on February 14, 2023, by the following vote:

Mayor Paul Dohring: _____

Vice Mayor Eric Hall: _____

Council Member Anna Chouteau: _____

Council Member Lester Hardy: _____

Council Member Billy Summers: _____

APPROVED: ATTEST:

State of Local Emergency expires due to drought conditions

NAPA, CA – On May 30, the Napa County Board of Supervisors voted to end the State of Local Emergency due to drought conditions in Napa County, thus terminating the emergency powers of county officials set forth in Resolution No. 2022-29.

The Board proclaimed a State of Local Emergency on March 8, 2022, following Proclamation of a State of Emergency by the Governor on May 10, 2021, and worsening drought conditions in winter 2021-2022. Government Code section 8630(c) requires local agencies to revisit local emergency proclamations at least once every 60 days until the local emergency is terminated.

Although the State of Local Emergency has ended, the county is still responsible for implementing the Groundwater Sustainability Plan. The reduced water criterion [0.3 acre-feet per acre for new wells in the Napa Valley Subbasin (one acre-foot equals 326,000 gallons)] was adopted June 7, 2022, during the State of Local Emergency. The criterion was put in place to ensure that future development does not further diminish groundwater supplies in the Subbasin.

Since October 1, 2022, Napa has received nearly 32 inches of rain, exceeding average annual rainfall. Despite a particularly wet winter, eight of the past 10 years have been characterized as dry to very dry conditions. While the wetter winter of 2022-2023 has achieved a notable recovery in groundwater levels since 2022, overall resilience and sustainability of Napa County's groundwater resources remain a top priority. The cumulative impact of these recent hotter, drier years has resulted in increased groundwater pumping to compensate for increased temperatures, reduced surface water supplies, and the resulting increased evaporative demand of plants and crops. While groundwater conditions have improved, groundwater level projections for fall of 2023 drop below the established Minimum Threshold values that could negatively impact sustainability for the Subbasin, which is why the county is committed to long-term groundwater sustainability for the public good.

The Governor's Office continues to emphasize this message, stating "next winter's hydrology is uncertain and the most efficient way to preserve the State's improved surface water supplies is for Californians to continue their ongoing efforts to make conservation a way of life" (EO N-5-23). On March 28, 2023, a presentation to the Napa County Groundwater Sustainability Agency on the Water Year 2022 Annual Report concluded with the recommendation that "conservation be a Napa way of life."

DWR News Release (Jan. 26, 2023)

Recent Storms Allow State Water Project to Increase Expected 2023 Deliveries to 1.27 Million Acre-Feet of Water

Published: Jan 26, 2023

SACRAMENTO, Calif. –The Department of Water Resources (DWR) today announced that recent storms will allow the State Water Project (SWP) to boost deliveries to 29 public water agencies serving 27 million Californians. Based on the amount of water captured and stored in recent weeks, DWR now expects to deliver 30 percent of requested water supplies – or 1.27 million acre-feet -- in 2023, up from the initial 5 percent announced on December 1.

The allocation increase is the direct result of extreme weather in late December and nine atmospheric rivers in early January that helped fill reservoirs and dramatically increase the Sierra Nevada snowpack. The SWP's two largest reservoirs (Oroville and San Luis) have gained a combined 1.62 million acre-feet of water in storage -- roughly enough to provide water to 5.6 million households for a year. While Water Year 2023 began with below average precipitation, conditions shifted to extreme above average conditions.

"We are pleased that we can increase the allocation now and provide more water to local water agencies," said DWR Director Karla Nemeth. "These storms made clear the importance of our efforts to modernize our existing water infrastructure for an era of intensified drought and flood. Given these dramatic swings, these storm flows are badly needed to refill groundwater basins and support recycled water plants."

The updated SWP delivery forecast takes into account current reservoir storage and is based on a conservative runoff forecast. It does not take into account the current Sierra Nevada snowpack. DWR will conduct snow surveys on February 1, March 1, April 1, and May 1 and may further update the allocation as the water supply outlook becomes clearer with the new data.

In addition to on the ground surveys, DWR will gather data from its Airborne Snow Observatory (ASO) surveys. For the second year in a row, DWR is broadening the deployment of these more sophisticated technologies, such as ASO surveys, that can collect snow measurements farther upslope of the Sierra Nevada. The data from these flights, which use LiDAR and spectrometer technology to measure snowpack across broad swaths of key watersheds, will be used by DWR to get a more accurate account of California's snowpack and to update water supply runoff forecasts. Since the storms California experienced this month saw variable snow elevations, the data from ASO flights will help DWR verify snow course and snow sensor data and understand how snow has been distributed across the Sierra Nevada.

DWR cautioned that while recent storms have been impressive, two months remain in the wet season and California could see a return to warm and dry conditions prior to April 1. Californians should continue to use water wisely to help the state adapt to a hotter, drier future and the possible return of drought.

The SWP pumps currently are operating at maximum capacity of 9,500 cubic feet per second (cfs) and will continue to be adjusted as needed to meet State and federal requirements. However, had the proposed Delta Conveyance Project been in place, the SWP could have stored an additional 202,000 acre-feet of water – enough to supply more than 710,000 households for a year – between January 1 and January 23 while staying within compliance of rules to protect endangered species.

California traditionally receives half its rain and snow by the end of January. Water managers will reassess conditions monthly throughout the winter and spring. Starting in February, the assessments will incorporate snowpack data and runoff forecasts.

Water managers will be monitoring how the wet season develops and whether further actions may be necessary later in the winter. Additional actions that have been taken previously, such as submission of a Temporary Urgency Change Petition (TUCP) or

installation of the West False River Emergency Drought Salinity Barrier in the Sacramento-San Joaquin Delta, are unlikely this year based on current conditions.

Each year, DWR provides the initial SWP allocation by December 1 based on available water storage, projected water supply, and water demands. Allocations are updated monthly as snowpack and runoff information is assessed, with a final allocation typically determined in May or June.

The lowest initial SWP allocation was zero percent on December 1, 2021, with limited water designated only for any unmet human health and safety needs. Last year's final allocation was 5 percent plus unmet human health and safety needs. Four of the 29 State Water Contractors ultimately requested and received additional human health and safety water supply.

DWR will host a media briefing to discuss this announcement, as well as how DWR and the State are preparing for the remainder of the water year given recent storms and the ongoing drought, later today from 1:00 – 2:00 p.m. (PST). Credentialed media can register for the briefing at

https://ca-water-gov.zoom.us/meeting/register/tZctdu2upzkjGNOvffSJ8Agdiw4GY105t7gG.

DWR News Release (Mar. 24, 2023)

Harnessing Series of Winter Storms, California Increases State Water Project Allocation

Published: Mar 24, 2023

SACRAMENTO, Calif. – The Department of Water Resources (DWR) today announced a significant boost in the forecasted State Water Project (SWP) deliveries this year due to continued winter storms in March and a massive Sierra snowpack. DWR now expects to deliver 75 percent of requested water supplies, up from 35 percent announced in February. The increase translates to an additional 1.7 million acre-feet of water for the 29 public water agencies that serve 27 million Californians.

Consistent storms in late February and March have built up the Sierra snowpack to more than double the amount that California typically sees this time of year. Rainfall has also allowed for robust flows through the system, providing adequate water supply for the environment and endangered fish species while allowing the SWP to pump the maximum amount of water allowed under state and federal permits into reservoir storage south of the Sacramento-San Joaquin Delta.

“California continues to experience weather whiplash, going from extreme drought to at least 19 atmospheric rivers since late December. It really demonstrates that in times of plenty, we need to move as much water into storage as is feasible,” said DWR Director Karla Nemeth. “We’ve been able to manage the system to the benefit of communities, agriculture and the environment. It’s certainly been a welcome improvement following the three driest years on record for California.”

Taking advantage of the extreme high flows in the system, the SWP is making additional water available to any contractor that has the ability to store the water in its own system, including through groundwater recharge. Formally known as Article 21 water, this water does not count toward formal SWP allocation amounts.

The SWP typically evaluates the allocation forecasts monthly using the latest snow survey data, reservoir storage and spring runoff forecasts. The 75 percent forecasted allocation announced today takes into account that data from March. Further adjustments to the forecasted allocation are likely following the milestone April snow survey measurements. April 1 is traditionally when California’s snowpack peaks and starts to melt. DWR is planning to host its April snow survey on Monday, April 3, at Phillips Station, weather conditions permitting.

DWR now expects San Luis Reservoir in Merced County to end the wet season at capacity. Lake Oroville, the State Water Project’s largest reservoir, is at 120 percent of average for this time of year and currently releasing water through the Oroville Spillway to reduce flood risk for downstream communities in anticipation of the spring snowmelt. The SWP will continue to optimize water storage in Lake Oroville to support environmental needs in the summer and allow for carryover storage for next year if dry conditions return.

Preparing California for extreme weather swings will require the rehabilitation and modernization of SWP infrastructure. As the backbone of water supply delivery, California must address subsidence along the California Aqueduct in the Central Valley and advance the Delta Conveyance Project so that the state can move as much water as possible during high flow events.

While California’s surface water conditions have greatly improved this year following three years of historic drought, several water supply challenges remain in parts of the state.

The Colorado River Basin, which is a critical water supply source for Southern California, is still in the midst of a 23-year drought. Millions of Californians also rely on groundwater supplies as a sole source of water, and the state’s groundwater basins will be slow to recover following the extreme drought. Californians should continue to use water wisely to help the state adapt to a hotter, drier future.

DWR will host a media briefing via Zoom at 1 p.m. today to discuss the latest on storm conditions, flood response, and State Water Project operations and the increased allocation forecast. Register here.

Subject: [External] Hunter Subdivision
Date: Saturday, June 24, 2023 5:11:38 PM

As a resident of Vineyard Valley I have reviewed the EIS and believe it addresses the impact that this project is expected to have. The location of the project extends the city's development boundaries and minimizes the impact of scattered development in St Helena. The project is adjacent to other mixed use areas of St Helena and therefore makes a good addition to the city.
I support the project development.
Sincerely,

Bill Thompson
Thompswj@gmail.com
33 Redondo Court
St Helena. CA 94574

St Helena City Council,

I believe that the Hunter parcel is a buildable parcel…with all the entitled rights that it has carried with it from the day the City participated in its creation as a viable City lot in a certain zoning designation. I believe it can, (and existing in a region with a housing shortage, should) be developed.
The Planning Commission and City Council and Citizens of St Helena are not entitled to an inspired project. But they are entitled/required even to receive and approve a project that can demonstrate that it meets the standards of our code. See below section from Code: C. 17.146.050 Residential development project-Inclusionary/in-lieu fee requirements:

I. Basic Requirements for Owner-Occupied and Rental Affordable Units. Affordable units shall be comparable in number of bedrooms, exterior appearance and overall quality of construction to market rate units in the same residential project. Subject to the approval of the planning commission, square footage of affordable units and interior features in affordable units need not be the same as or equivalent to those in market rate units in the same residential project, so long as they are of good quality and are consistent with contemporary standards for new housing. Affordable units shall be dispersed throughout the residential project, or, subject to the approval of the planning commission, may be clustered within the residential project when this furthers affordable housing opportunities.

I believe this is an inspired and valuable piece of our code that we should take pride in. It makes clear that in no way should required/more affordable units be segregated and instead requires that they be integrated. Creating and weaving into our urban fabric varied housing opportunities should be seen as a vital and beautiful facet of meeting our infrastructure obligations. I believe it is a piece of code designed to make critical workforce housing solutions most successful. The Planning Commission provided no legal findings or rationale or even discussion to make the case that approving this method/configuration of parcel map “furthered affordable housing opportunities”. On that point, I do not believe it should have been approved. With the approval of this version of a proposed/tentative parcel map there will exist no plausible way to craft “after the fact” an inclusive approach. It is that simple. I understand it is a challenge create attainable housing for all the sorts of working people that the City needs to be sustainable and to thrive; and I appreciate the amount of effort that has been engaged in by City staff, Dudek, the Developer and even Planning Commission and City Council. However, I believe it is worth the additional effort to get this project properly configured so that it can be most productive.

I believe we (as planners, developers, and as a City) should welcome the development of this legal parcel…as we are obligated and I also believe we should make no excuses or apologies for also requiring it to be developed legally and appropriately to the standards set forth in our code.

I agree with the HCD letter in saying to not reduce the density. I appreciate their support for housing and I would welcome and wholly support a project that would be more dense, but critically also, more integrated, textured and varied as our Code instructs and more critically, REQUIRES. That collaborative approach would be more beneficial for the fabric of town as a whole and also would make a more successful project for the developer. As with any project, until it can be demonstrated that it meets the standard or code, I do not believe it should progress to its next step.

Thank you for your consideration,

Daniel Hale

Date:	Monday, June 26, 2023 12:10:07 PM

Good Evening

I am Greg Reynolds, 290 Pope Street St Helena. I am the managing partner for Vineyard Valley Mobile Home Park.

There continues to be a myriad of concerns we have about the Hunter Project. As our residents have come to understand more about the project, topics of impact are significant and across the board, from levee access and levee maintenance to vista and privacy concerns the electorate here in VV is not happy.

There are so many mitigating circumstances raised in today's current environment around water, fire safety, emergency response, and traffic to name a few that your job as City Council members makes it all the more critical that evidence doesn't get ignored. You have a tough job you need to forecast where a project like this takes the citizens of Vineyard Valley and the greater City of St Helena.

I will focus just on three issues

- Emergency Evacuation (Saving Lives)
- Water specific to Sewer Discharge
- Traffic

Vineyard Valley is a Retirement Community 55 and older approximately 218 homes When everyone is home, the park is home to 350 people, many are retired seniors.

After the last 7 years and recent years with the Glass Fire We have spent more time each year focused on fire suppression, readiness, and safety. This year again primarily in neighborhood outreach, fuel suppression and resident evacuation in the event of an emergency.

After the devastating floods of 86 and 95 the park was transformed with a significant investment in the Flood Wall Project. The design and building of that project attempted to mitigate the flood plain realities **with the Flood Wall, the levee and holding pond and pumps.** The deployment of that significant investment did not include the construction referenced here. The **Hunter Project** was not part of that plan and the safety it proposed to deliver.

We are very concerned that a safe evacuation and access through the back of the park will disappear with this project. We are concerned that the construction will undermine the levee and overwhelm the Army Corp Strategy put in place to protect our 350 residents and their homes. **To build behind a levee** was not the intent of this strategy.

We are concerned about water as many have commented.

We will comment in writing specifically about wastewater flows and what appears to be a plan to connect a portion of the **Hunter Project** to Vineyard Valleys waste water discharge sewer. This is a City sewer that is documented to have significant issues when it does rain. The majority of the Hunter Project single family homes 46 out of 51 will be connected to the VV

sewer. We will be getting most of this sewer flow. Considering the multi-family units as well almost 75% of the total project discharge is directed our way, the VV sewer is already overtaxed, this will clearly drown this infrastructure. As in other parts of the City this is unacceptable and expensive as the City spends and documents every clean up situation.

The traffic data clearly demonstrates significant challenges for our senior contingent. In the FEIR It is clear from the table the Proposed Project Transportation Demand Management (TDM) strategies would result in a **Project VMT to be 15.2 %** higher than the City wide VMT per capita. Final EIR concludes and clearly states that the Proposed Project has a significant and unavoidable impact, **then it is our opinion that the council has an obligation to the citizens of St Helena to protect their environmental integrity and vote to deny acceptance of this project.**

Thank You

Greg Reynolds

Hi Cindy:

Can you submit this letter for tonight's meeting.
Thx,

Joe

****

Mr. Mayor, Council, and Staff,

With the pending decision on the Hunter Project, the City now faces an important and fraught decision. As the council considers this matter, it will likely come to the conclusion that it has "no choice" but to approve the pending application and tentative map, either facing the wrath of many concerned citizens or a precarious legal challenge by the Developer.

However the decision goes, it is imperative that the City acknowledge that both current and prior administrations have painted the City into the corner it now finds itself with two administrative decisions.

1) Re-zoning the parcel to MDR post funding the levee.

My father was flooded out twice in Vineyard Valley. The need to re-engineer the river bed north or the Pope Street bridge was real. In his article "*St. Helena, California: Dealing with a Field-of-Dreams Levee, Residual Risk, and a Flood of Controversy*" (Posted on July 17, 2016 by UC Davis Center for Watershed Sciences), Nicolas Printer has articulated a three-point sniff test to justify construction of a levee to protect floodplain infrastructure if it is:
a) concentrated
b) high in value
c) pre-existing

The Vineyard Valley mobile home park satisfied all three elements of the sniff test, and as such, justified its construction. While one can argue that Vineyard Valley should have never been built in that location, it existed at the time the decision was made to fund the levee.

The decision to effectively rezone agricultural land (soon to be protected by a levee) to Medium Density Residential effectively turned a defensive and justified levee into what Printer calls a "Field of Dreams" levee. "Build it and they will come". And while we assure ourselves that the levee is build to withstand a 200-yr standard with a .5% annual chance of being breached, even today, the New York Times asserts that the rainfall averages that have established these criteria are woefully outdated to a calmer climatic (ie pre climate change) history.

By zoning the land MDR, the City granted entitlement rights to the Developer in a high-risk area.

2) Housing Element

The purpose of the Housing Element (HE) and the Regional Housing Needs Allocation (RHNA) allocations as legislated and regulated by the State of California is an attempt to equitably distribute the anticipated population growth of California to all the Counties and Municipalities of the State. The HE process however does not greatly distinguish the unique challenges of every community in California. In the case of St. Helena and other desirable second home communities, the Housing Element and RHNA processes severely miss the objective in the allocation of target numbers for the "above moderate" (ie. > 120% AMI) or "market rate" category of housing. In many communities of California, a new single family subdivision serving "market rate" would solve both workforce housing needs and RHNA goals. In St. Helena this is just not so. Placing goals on St. Helena to build more market rate housing without capping Average Median Income (AMI) restrictions regarding the market rate development (eg. 200%, 300%...??) serves little purpose other than to open St. Helena up for **speculative development for more second homes.** Surely that argument should be made to the State of California in our HE submission?

So now the State is arguing on behalf of speculative developers to build more second homes in our community that will do little to help the workforce housing shortage.

Moving Forward

While the City is now painted in a corner, it still has options. And it still has leverage. Due to the EIR's "unmitigated significant impact" regarding traffic, the City must make a statement of overriding consideration due to the sufficient benefit of the project to the community. The City should use this leverage to extract benefits beyond property tax receipts.

It seems at minimum that the City should trade a quantity of AMI deed-restricted single-family (SF) homes integrated into the Single Family portion of the project for a quantity of deed-restricted units in the Affordable Multi-family portion of the project. The deed-restricted SF homes could perhaps be smaller parcels with smaller homes, and, or perhaps deed-restricted beyond the 120% AMI cap that defines "affordable". An effort such as this would at least make steps toward creating a more vibrant and integrated community that makes a small contribution toward the workforce housing shortage.

And perhaps we could thread the needle between community wrath and ongoing legal challenges.

At minimum, we should all reflect on past decisions and current policy that have shaped this predicament.

Joe McGrath

TO: City Council
FROM: Sandra McCorkle

I am writing to support the statement submitted by Josh Devore on behalf of St. Helena Citizens for a Sustainable Future. I hope that the Council will carefully consider the statement of Overriding Considerations they are asked to adopt.

As Mr. Devore stated, the Project has no stated benefits and as a result the City has no basis for adopting a Statement of Overriding Considerations. There is no evidence in the record as to any benefits for the City resulting from the Project. CEQA requires "the decision-making agency to balance, as applicable, the economic, legal, social, technological, or other benefits . . . of a proposed project against its unavoidable environmental risks when determining to approve the project." The Council is required to document such benefits, by stating "in writing the specific reasons to support its action based on the final EIR and/or other information in the record."

The most recent Staff Report concedes that "there are no direct fiscal impacts to the General Fund resulting from the approval of the Tentative Parcel Map." As such, and since the City has piecemealed the approvals, the decision before the City Council now has no fiscal benefit. And again, other than a generic suggestion that 'all housing is good', the City has not presented the public with any specific benefits of the Project that is actually proposed to support adopting a Statement of Overriding Considerations. The draft Statement of Overriding Considerations still contains no specific benefits, only general platitudes. And the Staff Report concedes that any fiscal or housing benefits from the project can only come from future approvals. Because there is no affordable housing agreement, there is no affordable housing benefit – the Staff Report makes clear that remains undecided. Even the latest housing element update acknowledges that the Project cannot be considered as "affordable" due to the lack of an affordable housing agreement. As such, in conducting the required balancing, there are no tangible benefits to the Project – which at this point is purely a tentative division of land and does not allow the construction of any housing – affordable or otherwise. Without a complete Project to consider, there is no way to analyze any potential benefits. The applicant's piecemealing of the Project in direct contradiction to the City's Subdivision Code and CEQA renders any potential benefits from future required approvals purely speculative. There is no evidence cited in the proposed findings of anything other than prejudging that future approvals may lead to future benefits. Such speculation lacks substantial evidence to support adoption of a statement of overriding considerations.

Thank you. Sandra McCorkle

Subject: [External] Public comment for tonight"s meeting - June 26, 2023
Date: Monday, June 26, 2023 12:26:22 PM
Importance: High

Submittal for Public Comment to tonight's City Council Special Meeting – June 26, 2023 – New Business item 6.1 – proposed Hunter/VanZuphten project tentative map

Honorable Mayor and City Council,

I am writing to request the City Council, in keeping with your public pledge to operate in a transparent and informative manner, ensure that all questions during the Public Comment at the Hunter project City meeting tonight, be noted by the City Clerk and answered by City Staff or Council prior to the discussion and final vote taken.

As often heard by a frustrated St Helena public, the questions posed by residents during the Public Comment period are often not answered by the Council and City Staff prior to the Council vote. While many of us realize that Council comments during that period are limited to allow the public uninterrupted time, the questions posed by your constituency should not go unanswered before a vote is taken, so we understand fully what the council is committing the taxpayers to. We voted you in to office to represent us in decisions that affect us, and we need to know how you resolve the public's questions in your vote of yes or no. As you are well aware, the decision tonight is one that impacts all St Helena residents, and as you have seen over a decade of opposition, including over 1,000 signatures recently gathered to oppose the project, there needs to be clear and full answers provided before our elected officials vote on something that your constituency so widely and strongly opposes.

I will include my questions here, to ensure that they are included in the meeting and answers are provided to the residents of St Helena before the vote.

1. What is the evacuation route for residents in, and near, the Hunter/VanZuphten project in the event of a flood or levee failure? (Note: This is not a question about fire evacuation.)
    a. Please supply the basic information regarding: What is the projected timing of a levee failure evacuation? What were the numbers used for the number of people and number of cars to safely evacuate? Who did the evacuation modeling? Where can the Public find this report?
    b. What is the flood evacuation route and projected timing specifically for the senior community of Vineyard Valley residents to safely evacuate, since they are situated downriver at lower elevations than the Hunter project housing?

2. In CA State Assembly Bill 1898, the City of St Helena agreed to indemnify the State of California for any damages resulting from the levee project. Is the city of St Helena liable for damages caused by levee malfunction or failure? If not, who is responsible for the liability? If St Helena is not liable, does the City have that in writing? Where can the public access that

information so we are clear about our liability?

3. Did the project's EIR include the allowable Density Bonus and legal ADU (accessory dwelling units) impacts such as water use, surface permeability and stormwater drainage, traffic, fire and flood evacuation timing, etc? (ADU's legally allowed in the remaining 46 housing lots i.e., of the 57 housing lots, 11 will have an ADU, so there are 46 home lots that can also build ADU's. If not, will there be another EIR since these additional impact may have made the project non-mitigatable in numerous ways if it had been included in the initial EIR as Dudek stated clearly in the Public Meeting at the St Helena firehouse on October 22, 2016, which was recorded.

4. What studies have been done to evaluate the impact of the use of the well on the project site specifically because the pre-existing vineyard covering the project site was NEVER irrigated. There is no historic data for how that well will function and how it will impact the Napa River and the City water supply form the Stonebridge wells. Please provide the public information/report that evaluated that well's impacts on:
    a. The Napa River
    b. The City water supply form the Stonebridge wells?

Thank you for your service, and for your commitment to ensuring that the City Council and Staff provide complete and transparent information to the St Helena public.

Ann Nevero

Re: Response to Further Late Comments – Hunter Subdivision Project

Dear Mayor Dohring, Vice Mayor Hall, and Councilmembers:

Holland & Knight LLP represents Dennis Hunter, Kelly and Ben Vanzutphen, and White Fang Properties, LLC (collectively, the "Applicant Team") in connection with the Hunter Subdivision project located north of Hunt Avenue (APN 009-030-057) (the "Project") in St. Helena (the "City").[1]

We write to respond to yet another last-minute letter from opponents of the Project,[2] which urges the City to violate both state housing law and the commitments made in its General Plan, as amended by its recently-adopted Housing Element. At the outset, we note that while the letter specifically purports to respond "to the applicant's counsel's May 1 letter [and] to points raised at the May 1, 2023 City Council meeting," it was not provided until Friday, June 23, nearly eight weeks after those events. Aside from being discourteous to City staff, "late hit" letters raising CEQA issues are highly disfavored by the judiciary. *See Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 568 ("We cannot, of course, overemphasize our disapproval of the tactic of withholding objections, which could have been raised earlier in the environmental

[1] We would like to take the opportunity to clarify a discrepancy in our prior letter, dated June 23, 2023. At Page 3, Paragraph 5, Sentence 1, the letter should have referred to "*water* sources serving the City, including the Bell Canyon Reservoir," and at Page 4, Paragraph 1, Sentence 1, should have said that "*water* levels have increased at the Bell Canyon Reservoir in 2023," but due to an editing error the term "groundwater" rather than "water" was used.

[2] Saint Helena Citizens for a Sustainable Future, "Hunter Subdivision Project, File #PL10-040" (June 23, 2023).

review process, solely for the purpose of obstruction and delay."). We note that the Council continued the prior meeting purportedly for the purpose of allowing staff sufficient time to respond to the opponents' *last* round of objections. It is clear that there will be no end to these types of comments until the Council makes it decision, and this pattern gives rise to a strong inference that these perpetual comment letters are sent for the purpose of delay. It is for these reasons that the Legislature in the Housing Crisis Act has enacted a "five hearing limit" which requires a final vote at the upcoming hearing.

In any event, the letter fails on substance as well as timing, for the reasons that follow.

1. **The City's Discretion With Respect to Project Approval Is Heavily Constrained, and the City Cannot Feasibly Achieve Housing Element Compliance Without the Project.**

As set forth in the Applicant Team's June 23, 2023 correspondence regarding the Project, the City's obligations under the Housing Accountability Act ("HAA") and Housing Element Law weigh strongly in favor of approving the Project. First, the City's discretion to disapprove the Project is heavily constrained, requiring written findings, supported by a preponderance of evidence on the record, that the Project "would have a specific, adverse impact upon the public health or safety," and that there is "no feasible method to satisfactorily mitigate or avoid the adverse impact … other than the disapproval of the housing development project or the approval of the project upon the condition that it be developed at a lower density."[3] Second, under Housing Element Law, the Project's 87 units supply roughly a third of the City's total 6th Cycle Regional Housing Needs Allocation ("RHNA"). The City has consistently relied on these units to meet its RHNA obligations in the draft Housing Elements provided to the Department of Housing and Community Development ("HCD"). To this end, HCD's Housing Accountability Unit provided a Letter of Support and Technical Assistance to the City ("HAU Technical Assistance Letter"), reminding the City of its obligations under both the Housing Accountability Act and Housing Element Law, concluding that "HCD supports the approval of the Project during this critical housing crisis and appreciates the opportunity to assist the City in meeting its statutory obligations in the decision-making process."[4]

The June 23, 2023 correspondence from Saint Helena Citizens for a Sustainable Future ("CSF") begins by encouraging the City to disregard the City's legal obligations. Contrary to CSF's assertions, the City cannot jettison one-third of its entire 6th Cycle RHNA obligation and expect to be entitled to have its Housing Element certified – and the staff report and HCD guidance have well advised the City of the consequences of remaining out of Housing Element

[3] Gov. Code § 65589.5(j)(1). The HAA also clarifies that "It is the intent of the Legislature that the conditions that would have a specific, adverse impact upon the public health and safety, as described in paragraph (2) of subdivision (d) and paragraph (1) of subdivision (j), arise infrequently." Gov. Code § 65589.5(3).

[4] HAU Technical Assistance Letter at 2.

compliance.[5] As we have detailed to HCD on several prior occasions, the Project is the only concrete proposal of any magnitude that appears in the City's Housing Element site inventory.[6] Nearly all of the remaining projections are speculative, and many are particularly unlikely in view of existing uses that show no indication of ceasing during the 6th Cycle. For this reason, the "alternative" referenced by CSF – the supposed "surplus capacity" identified in the City's Housing Element – is no alternative at all. Those projections have not been accepted as satisfactory by HCD, which has twice rejected the City's draft Housing Element to date. Yet CSF proposes that the City discard the only concrete development proposal on the horizon, in spite of the fact that it is zoning-compliant.

For the same reason, CSF's comment that the Project "will not be helpful to the State's housing crisis," but will instead "take away an opportunity for a more inclusive, affordable, and better housing opportunity for the City" is misguided. Again, employing a classic NIMBY tactic, CSF proposes that the City disregard a real, concrete proposal in favor of an imaginary one. No such "more inclusive, affordable, better" proposal exists. The Project, which will comply with the City's inclusionary ordinance and therefore contribute significantly to affordable housing,[7] does exist. Nor does CSF explain why the imaginary "more inclusive, affordable, better" project it has conjured up will avoid the alleged CEQA impacts that it purports to identify elsewhere in the letter and which it claims makes the Project site entirely inappropriate for housing.

Nor has HCD taken the position that "all housing is good" – but the State Legislature and executive branch have certainly taken the position that "building no housing is bad." Under Housing Element Law, all jurisdictions must build *some* housing, and HCD has advised cities that these statutory requirements will actually be enforced in the 6th Cycle. Under these laws, a city is not entitled to decide *whether* it will allow any housing to be built within its borders, but it has broad discretion to decide *where* it is built. And in exercising this discretion, the City zoned and planned the Project Site for housing, and then elected to adopt a Housing Element that places

[5] If the City were to disapprove the Project as CSF suggests, then the Applicant Team – as well as other developers in the City – would be entitled to submit a "Builder's Remedy" application for a different, more intense project on this property that would not be required to conform the City's zoning and General Plan. The Applicant Team would prefer to avoid this outcome and simply develop a medium-density residential development project consistent with the City's zoning, which is what it has proposed to do for more than a decade

[6] Attached as Exhibits A and B are the Applicant Team's November 28, 2022 correspondence to HCD detailing inadequacies with the City's initial draft Housing Element, and HCD's December 6, 2022 correspondence to the City confirming that the initial draft Housing Element failed to substantially comply with state law. Attached as Exhibits C and D are the Applicant Team's March 9, 2023 correspondence to HCD detailing inadequacies with the City's subsequent draft Housing Element, and HCD's April 7, 2023 correspondence to the City confirming that the subsequent draft Housing Element failed to substantially comply with state law. Attached as Exhibit E is the City's Adopted Housing Element. As it recognizes, the City has failed for years to meet is legal requirements to permit sufficient housing to meet its Regional Housing Needs Allocation.

[7] Although there are multiple pathways to comply with the City's inclusionary ordinance, the default pathway, set forth in Chapter 17.146 of the City's Municipal Code, is to ensure that 20% of all new dwelling units are affordable, at income levels commensurate with the City's outstanding RHNA share. In any event, the Project will meet or exceed the requirements for low- or moderate-income housing as set forth in Section 65915 of the Government Code..

87 units – the Project's 87 units – on the Hunter Subdivision site, and specifically committed to streamlining all remaining approvals for the Project by 2025. Those commitments are meaningful, both under Housing Element Law and because they are now incorporated into the City's General Plan.[8] So, contrary to CSF's statements, Housing Element Law is deeply relevant to this determination. Moreover, to disapprove the Project now, while HCD's review of the adopted Housing Element is still pending, would loudly communicate that the City has no intention of upholding any of the commitments set forth therein.

2. The City's Discretion With Respect to Project Approval Is Heavily Constrained, and the City Cannot Feasibly Achieve Housing Element Compliance Without the Project.

Next, the CSF letter posits that the City has failed to identify any benefits of the Project. Again, they are incorrect. As discussed in the Applicant Team's June 23, 2023 correspondence, the considerations previously identified in the draft Statement of Overriding Considerations are more than sufficient on their own:

1. The Project provides needed housing to the City, particularly affordable housing.
2. The City, per the adopted 2015 Housing Element, has a jobs to housing ratio above the County average, indicating a need for additional housing. As of the most recent Housing Element Progress Report (April 2022), the City had not met its regional housing needs allocation for very-low or moderate income housing.
3. The Project would implement the City's General Plan. The Project site is identified as a housing site in the City's current General Plan, the current Housing Element, and the previous two iterations of the City's General Plan.
4. The significant and unavoidable impact is related to VMT. Ultimately VMT per capita will be reduced by providing necessary housing in jurisdictions with a high number of jobs. As stated previously, the City of St. Helena currently has a jobs housing imbalance which the Project will help address.
5. The Project will pay development fees which will assist in needed infrastructure improvements in the City, including wastewater treatment and collection systems.
6. The Project would construct the extension of Starr Avenue and the partial extension of Adams Street consistent with the General Plan Circulation Element.[9]

These are not mere platitudes, as CSF contends. The City does need additional housing and affordable housing. The Project supplies that. The City does have a jobs-to-housing imbalance. The Project will help address that. The Project is consistent with the City's General Plan (and

[8] CSF was conspicuously absent from the Planning Commission and City Council debates concerning the Housing Element. If CSF did not want the Project built, it had ample opportunity to raise those concerns *before* the City repeatedly told HCD that it would put 87 units on the Hunter Subdivision site and then amended its General Plan to write those commitments into law.

[9] Report to the City Council (May 1, 2023 Hearing), at 13.

indeed, with the adoption of the Housing Element, Project approval is required by the City's General Plan). The Project will help reduce VMT impacts by correcting the jobs-to-housing imbalance. The Project will supply the City with development fees. And the Project will provide the extensions of Starr Avenue and Adams Street. Anyone who regards these contributions as only "general platitudes" should consider paying for them.

Moreover, the Applicant Team has already provided several additional public and community benefits. Most notably, the Applicant Team engaged cooperatively with the City to facilitate construction of the levee adjacent to the Property, to protect the Vineyard Valley mobilehome community. Specifically, the Applicant Team cooperated with the City with respect to the land swap required to construct the levee, and provided the City access to the Applicant Team's well as needed for that project. The Applicant Team's voluntary cooperation with respect to the levee constituted a community benefit that the Project has already provided. This stands as an as-yet-unreciprocated benefit provided to the public and the community.

Finally, as the most recent staff report notes, complying with the City's obligations to comply with the HAA and with Housing Element Law constitute an additional and independent legal "benefit" of approving the Project. "A statement of overriding considerations—which is the finding described in subdivision (b) of section 21081—is to be used in situations where the public agency deems a project sufficiently important or desirable for reasons that override the normal obligation to mitigate significant environmental effects. One of those statutory reasons allows for considerations, conditions, or factors that are 'legal.'" [10] So, CSF is incorrect that the City's compliance with the HAA is "not a benefit."[11]

3. The Record Does Not Support Denial of the Project Under the HAA.

Next, CSF argues that the City should deny the Project under the very narrow ground to disapprove certain HAA-protected projects if they are able to make written findings, "based upon a preponderance of the evidence in the record," that the "housing development project … as proposed would have a specific, adverse impact upon the public health or safety, and there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact without rendering the development unaffordable to low- and moderate-income households … ."[12] CSF wrongly asserts that the Project presents such an impact because it is in CSF's opinion near to land classified as a very high fire hazard severity zone. This rationale does not come close to justifying a finding under the HAA – a fact that is underscored by additional statutory text designed to curtail bad faith, NIMBY reliance on this provision to block all housing.

---

[10] *See Tiburon Open Space Committee v. County of Marin* (2022) 78 Cal.App.5th 700, 733 (citing Pub. Res. Code §§ 21081, subds. (a)(3), (b), 21002.1, subd. (b); CEQA Guidelines § 15364).

[11] The City's decision to follow the law would also have the effect of avoiding expenditure of public funds on legal fees – another public benefit.

[12] Gov. Code § 65589.5(d)(2); see also (j).

First, the statute itself elaborates that, as "used in this paragraph, a 'specific, adverse impact' means a significant, quantifiable, direct, and unavoidable impact, based on objective, identified written public health or safety standards, policies, or conditions as they existed on the date the application was deemed complete."[13] CSF conveniently admits this language. Presumably, that is because it is unable to identify any objective written public health or safety standard, policy, or condition that identifies being "near" a fire zone as a specific, adverse impact. (Contrary to CSF's contentions, the nearest fire hazard area is not "adjacent" to the Project in any reasonable sense.) Nor does CSF present any evidence that the impact it alleges is "quantifiable." Nor does CSF present any evidence that the impact it alleges is "unavoidable."

Moreover, and critically, there is no evidence that the impact identified by CSF is "specific" to the Project. To the contrary, the large majority of Napa County is designated as a fire hazard severity zone. If merely being "near" such land were sufficient to create a "specific, adverse impact," then all of Napa County would functionally be exempt from state housing law. To the contrary, forecasting the potential mischief that could be caused by abuse of this law, the Legislature specifically provides in the HAA that "the conditions that would have a specific, adverse impact upon the public health and safety, as described in paragraph (2) of subdivision (d) and paragraph (1) of subdivision (j), arise infrequently."[14] A condition that would apply to most of Napa County is, of course, not one that can be said to "arise infrequently."

4. The City's Staff Report and Applicant's Letters Have Refuted All of CSF's Groundwater Comments

CSF repeats what has now become a tired argument: the on-site groundwater well at the Project is "legally abandoned," and thus the Project (and EIR) cannot rely on it for on-site landscaping irrigation needs, despite it being perfectly capable of providing water in that capacity. Both City Staff and Applicant have responded to this contention ad nauseam. *See, e.g.*, Staff Report at Section 6 (Status of the Onsite Well); *id*. at Attachment 5, Responses 1 and 2; Applicant's May 1, 2023 Letter re Hunter Subdivision Project at 9-10; Applicant's June 23, 2023 Letter re CEQA Issues at 2-3. As stated multiple times, substantial evidence in the record demonstrates that the on-site well is not legally abandoned, but is fully capable of providing 17.16 acre feet per year ("AFY") for public and private landscaping.

CSF also repeats an assertion that the on-site well is subject to new Napa County Well Permit Standards. The Staff Report correctly notes:

> "The existing well on project site, which was originally permitted in 1976, remains operable (the well was once referenced in the EIR as "inoperable" because it was not in use at the time, but it was subsequently verified in the 2021 test of the well to be operable and capable of meeting projected needs). Because the well has an existing permit that, to

[13] Gov. Code § 65589.5(d)(2).

[14] Gov. Code § 65589.5(a)(3).

> the City's current knowledge, does not require modification, and because no increase in well use over historic levels is proposed, the evidence before the City does not suggest that a new well permit is required by Napa County. Giving this, the pumping limitations cited in the comment (which affect only new wells, or modified wells with new permits) would not apply."[15]

CSF claims there is no evidence that the City coordinated with Napa County. In fact, the City released a Notice of Preparation ("NOP") on March 6, 2018 through April 9, 2018, and held a public scoping meeting on March 12, 2018. State and local agencies (including Napa County) were invited to the scoping meeting and provided with a copy of the NOP. In fact, on March 7, 2018, the Napa County Public Works Department submitted such a comment on the NOP. The City provided the County (as well as other state and local agencies) with the full ability to comment on the NOP (and its acknowledgment that the Project would rely on on-site water), and the Draft EIR's analysis of the on-site water well. Nothing more was required under CEQA.

5. There is No Legal or Practical Reason to Recirculate the EIR

Unfortunately but not surprisingly, CSF now requests that the City recirculate the EIR – after 11 years of public review - for ***additional*** public comment. Specifically, CSF contends recirculation is warranted due to what it calls "substantial" revisions to the "water baseline and groundwater/well analysis," and it also demands that recirculation is required merely because the City has confirmed that the levee maintenance road CSF contends is inadequate is not necessary to serve as an emergency access route. Neither of these "changes" justify recirculation and additional public comment under CEQA.

Under CEQA, if a lead agency adds "significant new information" to an EIR after the close of public comment but before it is certified, it must recirculate the EIR for a new round of public comment.[16] New information added to an EIR is not "significant" unless it changes the EIR in which a way that "deprives the public of a meaningful opportunity to comment" on a significant environmental impact or a mitigation measure that the project proponent has declined to implement. a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect that the project's proponents have declined to implement."[17] The CEQA Guidelines describe the types of "significant new information" requiring recirculation, including disclosure of "[a] new significant environmental impact," "[a] substantial increase in the severity of an environmental impact," and the addition of a "feasible project alternative or mitigation measure considerably different from the others previously analyzed."[18]

---

[15] See, Staff Report, Attachment 5, Response #2.

[16] Pub. Res. Code § 21092.1

[17] *Id*.

[18] CEQA Guidelines §§ 15088.5(a)(1)-(3).)

Recirculation is not required simply because new information is added or deleted to an EIR, and courts have recognized that recirculation is intended to be an exception, not the general rule.[19]

Here, the only *revisions* that the Final EIR makes pertaining to the on-site groundwater well are non-technical edits to clarify the non-operating status of the well. See, FEIR at 3-3 ("However, since the well is ~~currently~~ not currently in operation it is likely that ~~if~~ the vineyard is not currently receiving ~~artificial~~ irrigation"); id. ("There is an existing well on the Project site that is presently not in operation (see Section 3.9, Hydrology and Water Quality for more information on the existing well and groundwater resources). These are not "substantial," as CSF claims. The FEIR's revisions to the on-site groundwater well do not introduce a new or substantially more severe environmental impact, alternative or mitigation measure. Nor have the baseline conditions changed pertaining to the EIR's water supply analysis.

With respect to the levee maintenance road, no significant change has been made to the Project – and the change that has been made should be welcomed by residents of Vineyard Valley. The Staff Report includes a June 6, 2023 Letter from the St. Helena Fire Department, who has determined that reliance upon a proposed emergency vehicle access ("EVA") connecting the Project to the levee road is not required because the Project provides adequate egress and emergency vehicle access without relying upon the levee road. The Fire Department's letter does not undermine or conflict with the EIR's conclusion that the Project will not cause a significant hazard risk; if anything, it bolsters that conclusion. CSF incorrectly assumes that the deletion of COA 69 (*EVA: From Street A to levee*) is a "substantial change" to the Project. This is incorrect, and neither City nor Applicant are proposing a substantial reconfiguration, design, or different spatial placement of the Project or any component thereof. It was CSF who argued that the levee road was inadequate by contending that the road failed to meet certain road standards. (In fact, the road standards CSF cited only applied to roads relied upon for *fire apparatus* access and there is no reason to believe the road is inadequate for emergency evacuation.) But to avoid any argument, and to be responsive to the issues CSF raised, the City has apparently reviewed whether the roads other than the levee road are sufficient to provide evacuation and emegency access. And as the Fire Department noted in its letter, the levee road has now been designated as an evacuation route for tenants of Vineyard Valley and so removing it as an EVA for the Hunter Subdivision should only be helpful in ensuring that Vineyard Valley tenants have sufficient evacuation routes. Now, the only "change" proposed is that the Fire Department has confirmed that the levee road need not not be relied upon for emergency access and evacuation purposes because there are sufficient other roads providing adequate emergency access and that in fact the future Hunter subdivision residents have better egress via Roads A & B and. Now, CSF seeks to use the City's efforts to resolve CSF's concerns against the City. But this is not a significant "change" in the Project or the circumstances, and does not warrant recirculation under CEQA.

RE: City of St. Helena, Initial Draft Housing Element

Dear Ms. Williams and Ms. Coy:

We understand that you are in the process of reviewing the City of St. Helena's initial draft Housing Element, submitted to HCD on September 7, 2022. As you know, our West Coast Land Use & Environmental Law practice group focuses specifically on enforcing recently reformed provisions of state housing law, and in particular Housing Element Law. We have been engaged to represent Dennis Hunter in connection with the Hunter Subdivision project located North of Hunt Avenue (APN 009-030-057) (the "Project" or "Hunter Subdivision Project"). As proposed, the Project consists of 51 single-family residences (11 of which will feature accessory dwelling units), as well as a 25-unit affordable multifamily development with 5 very low income and 20 moderate income units. We submit these comments in response to the City's initial draft Housing Element, which makes several commitments and representations regarding the Project.

To meet the City's Regional Housing Needs Allocation (RHNA) responsibilities, the draft Housing Element would rely on the one hand upon a Project that the City has failed to bring up for a vote for 12 years, and on the other hand on a set of sites where any development is speculative at best and unlikely at worst. Neither of these bases provide an adequate foundation for the City's compliance with its legal obligations to accommodate its fair share of the regional housing need.

The draft Housing Element depends on the Hunter Subdivision Project to produce a substantial number of the units that the City is counting on to meet its RHNA responsibilities. Remarkably, however, the draft housing element fails to disclose that the Project application has been has been pending since 2010, when the Project applicants first applied to subdivide the parcel, and that there is still, at this time, *no* commitment by the City to complete the required CEQA review and actually vote to approve the Project by any date certain. The Project application was

accepted as complete in early 2011. For the next six years (2011-2017), the City conducted a CEQA analysis, only to abandon that analysis at the last minute, purportedly because the relevant consultant resigned. The City engaged a new consultant in 2018, but rather than simply completing the EIR begun in 2011, it elected to start over with a second EIR. Now, four years later, it is entirely unclear that the City is committed to concluding the CEQA process and moving the Project forward. Most recently, at a November 1, 2022 meeting, the St. Helena Planning Commission was scheduled to conduct a hearing on, and vote to recommend certification of, the Final EIR for the Project. At this hearing, the Commission voted unanimously (at staff's recommendation) to continue the item "to a date uncertain in 2023." In short, the City has repeatedly demonstrated its intent to forestall ever voting to approve the Project, and to otherwise frustrate the Project from proceeding, a pattern which continues to this day.

In view of this, it is astonishing that the Project features heavily in the City's plans for accommodating its 6th Cycle RHNA allocation, as set forth in the draft Housing Element. Specifically, the draft Housing Element uncritically includes as among the housing units it can be counted on to approve within the next cycle "87 units that are pending planning/entitlement approval under the Hunter Subdivision project[,]" an amount representing a significant portion of St. Helena's total RHNA allocation (254 total units, with 162 low-income units, 26 moderate-income units, and 66 above-moderate units).[1] In light of the Project's history, the draft Housing Element's assertion that these units will be developed within the 6th Cycle is questionable at best. The City's Housing Element should not be allowed to count housing units that the City has failed to actually vote to approve over the past 12 years, unless the certification of the Housing Element is contingent upon a firm schedule to actually vote on the Project.

The applicants were equally surprised to learn that the City has listed all 87 units as market rate units, despite the fact that the Project application clearly proposes that 25 of those units be affordable at below market rates to lower income and moderate income households. Specifically, the draft Housing Element states: "While the Hunter Subdivision project is proposing approximately 25 affordable units, because the affordable agreements are not in place at the time of Housing Element, all unit credits were assumed to be above moderate."[2] To be clear, there is no serious dispute that the Project applicants intend to develop these 25 units as affordable housing. The applicants submitted a proposed Affordable Housing Agreement in 2019, although it has yet to be approved by the City Council. It is extremely rare, if not impossible, for a project to have "affordable housing agreements . . . in place" before project approvals, since such agreements are almost always recorded after project approvals take place. If having a recorded affordable housing agreement in place is a prerequisite to counting units towards a City's affordable housing RHNA targets, then few, if any, of the City's sites can be counted on to produce affordable units.

[1] St. Helena, "City of St. Helena 2023-2031 Housing Element Update, Public Review Draft" (June 2022), at 2-153, 1-7 (https://sthelenahousing.com/images/docs/SHHEU_Housing_Element_2022_06_29_RLc_Web.pdf).
[2] St. Helena, "City of St. Helena 2023-2031 Housing Element Update, Public Review Draft" (June 2022), at 2-153-154 (https://sthelenahousing.com/images/docs/SHHEU_Housing_Element_2022_06_29_RLc_Web.pdf).

The Project's proposed 25 affordable units are far more concrete than many other affordable units that the City has projected in its sites inventory. For instance, the City projects that 57 affordable units (all low- or very low-income) will be developed across three City-owned sites (6 units at 1480 Main St., 20 units at 1572 Railroad Ave., and 31 units at Adams St.).[3] These projections are, frankly, fanciful. Because commercial use is a primary use at 1480 Main St., the 6 affordable units at that site cannot be completed until commercial structures are developed, which in turn requires the demolition of an existing building. The same goes for the 31 affordable units projected for Adams St., where "residential uses are permitted on upper stories [*i.e.*, above ground floor commercial uses] within the Central Business district." The ground floor commercial uses that must first be developed do not exist, and the City's analysis indicates that the parcel is currently leased to a vineyard, with no indication of the lease's expiration date. The 20 units projected for 1572 Railroad Ave., meanwhile, cannot be completed until active uses at the site (currently City Hall) cease and those buildings are demolished. Beyond the practical constraints associated with developing these units on sites with active uses, the City makes no effort to identify funding sources for any of these projections. And of course, no affordability agreements are in place for these 57 units, despite the fact that the City's draft refuses to count the Project's 25 affordable units for precisely that reason.

The same issues plague the City's affordable (and market rate) unit projections for privately owned sites.[4] The 20 affordable units projected at 821 Pope St. would replace a single-family residence, but the City gives no indication that that owner is willing to sell. The same is true for the 24 affordable and 24 market rate units projected for 1447 and 1515 Spring St., parcels that are similarly occupied by single-family residences with no apparent plans to sell. And while the City has indicated owner interest in developing 882 and 886 College Ave. (currently vacant) and Spring St. (currently a vineyard), there is no basis for accepting the City's conclusions that development will occur at anywhere near the scale projected (30 units and 88 units respectively). Here again, there is no affordability agreement in place for any of these projected affordable units. None of these sites even have active project applications, to say nothing of being near ready for final approval (as the Project is).

In view of these deficiencies in the City's other identified sites, the City needs the Project's 87 units in order to realistically accommodate its RHNA allocation. It is therefore particularly important that timely action on Project approval be a condition of counting the Project as part of the City's plan to comply with Housing Element Law. In view of the City's past (and ongoing) approach to the Project, and the size of the Project in relation to the City's total RHNA allocation, we respectfully submit that the City's Housing Element cannot be found substantially compliant with state law until at least the following actions are taken:

- First, the City should amend its draft Housing Element to provide commitments to ensure that the Project is actually developed in the 6th Cycle timeframe. The Housing Element

[3] St. Helena, "City of St. Helena 2023-2031 Housing Element Update, Public Review Draft" (June 2022), at 2-156-158 (https://sthelenahousing.com/images/docs/SHHEU_Housing_Element_2022_06_29_RLc_Web.pdf).
[4] *See* St. Helena, "City of St. Helena 2023-2031 Housing Element Update, Public Review Draft" (June 2022), at 2-161-170 (https://sthelenahousing.com/images/docs/SHHEU_Housing_Element_2022_06_29_RLc_Web.pdf).

statute provides that identified sites can only count for "the number of units that can realistically be accommodated on that site."[5] As such, HCD routinely requires draft Housing Elements relying on "pipeline" units to demonstrate that those units are actually likely to be built during the relevant period, and where necessary to "include programs with actions that commit to facilitating development and monitoring approvals of the projects[.]"[6] This approach is appropriate here, given the City's past course of conduct and the large share of the City's RHNA allocation that the Project represents. Specifically, the revised Housing Element should commit to holding a final vote on the Project EIR, and all other approvals necessary to commence development, in the first six months of 2023. Certification of the Housing Element should be contingent upon these actions being promptly taken within that timeframe.

- Second, the City should amend its draft Housing Element to address the Project's decade-plus CEQA process as a governmental constraint. Housing Elements must contain both an analysis of "potential and actual governmental constraints upon the maintenance, improvement, or development of housing for all income levels" and a schedule of actions that "[a]ddress and, where appropriate and legally possible, remove" such constraints.[7] Given that the Project application was submitted in 2010, the City's subsequent approach to the Project plainly reflects actual government constraints on the development of housing. And while the current draft Housing Element addresses the City's land-use controls as government constraints generally,[8] it makes no mention of the extraordinary CEQA-related delays that have stalled the Project for more than a decade. The revised Housing Element should analyze the City's CEQA practices as a constraint to housing, and further commit to mitigating that constraint.

- Third, the City should amend its sites inventory to correctly indicate that 25 of the Project's 87 units will be affordable. HCD requires that sites inventories "specify whether the site or a portion of the site is adequate to accommodate lower income housing, moderate-income housing, or above moderate-income housing."[9] The Project's 25 moderate and low income units will not be available at market rates, and the City cannot use them to accommodate its market rate RHNA allocation. It must instead plan

[5] Cal. Gov. Code § 65583.2(c). *See also* Cal. Gov. Code § 65583.2(c)(2) (inventory projections must take into account "the realistic development capacity for the site").

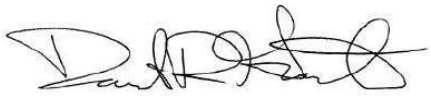
[7] Cal. Gov. Code § 65583(a)(5); (c)(3).
[8] St. Helena, "City of St. Helena 2023-2031 Housing Element Update, Public Review Draft" (June 2022), at 2-129 (https://sthelenahousing.com/images/docs/SHHEU_Housing_Element_2022_06_29_RLc_Web.pdf).
[9] HCD, "Housing Element Sites Inventory Guidebook" (May 2020), at 9 (https://www.hcd.ca.gov/community-development/housing-element/docs/sites_inventory_memo_final06102020.pdf).



for market rate units elsewhere, to the extent necessary to meet its market rate RHNA allocation.

- Finally, in light of the highly speculative assumptions the City has made about the sites other than the Project site in the draft Housing Element inventory, the City must adopt a more reasonable and conservative projection about the number of housing units that can realistically be projected to occur on the sites in the next planning period.

As such, we request that HCD find that the draft Housing Element will not be found in substantial compliance with state law unless these amendments to the Housing Element are implemented. We further request that HCD inform the City that further obstruction of the Project will result in the decertification of its Housing Element. This approach is appropriate and sadly necessary in view of the City's demonstrated history of frustrating housing, including affordable housing.

Should HCD require further information with respect to the Project or the City's actions with respect thereto, we are happy to provide it.

Very truly yours,

Maya DeRosa, Planning & Building Director
Planning Department
City of St. Helena
1572 Railroad Avenue
St. Helena, CA 94574

Dear Maya DeRosa:

RE: City of St. Helena's 6th Cycle (2023-2031) Draft Housing Element

Thank you for submitting the City of St. Helena's (City) draft housing element received for review on October 5, 2022. Pursuant to Government Code section 65585, subdivision (b), the California Department of Housing and Community Development (HCD) is reporting the results of its review. In addition, HCD considered comments from Holland & Knight, Generation Housing, and Nancy Dervin pursuant to Government Code section 65585, subdivision (c).

The draft element addresses many statutory requirements; however, revisions will be necessary to comply with State Housing Element Law (Article 10.6 of the Gov. Code). The enclosed Appendix describes the revisions needed to comply with State Housing Element Law.

For your information, pursuant to Assembly Bill 1398 (Chapter 358, Statutes of 2021), if a local government fails to adopt a compliant housing element within 120 days of the statutory deadline (January 31, 2023), then any rezoning to make prior identified sites available or accommodate the regional housing needs allocation (RHNA) shall be completed no later than one year from the statutory deadline pursuant to Government Code sections 65583, subdivision (c) and 65583.2, subdivision (c). Otherwise, the local government's housing element will no longer comply with State Housing Element Law, and HCD may revoke its finding of substantial compliance pursuant to Government Code section 65585, subdivision (i). Please be aware, if the City fails to adopt a compliant housing element within one year from the statutory deadline, the element cannot be found in substantial compliance until these rezones are completed.

Public participation in the development, adoption and implementation of the housing element is essential to effective housing planning. Throughout the housing element process, the City should continue to engage the community, including organizations that represent lower-income and special needs households, by making information regularly

available and considering and incorporating comments where appropriate. Please be aware, any revisions to the element must be posted on the local government's website and to email a link to all individuals and organizations that have previously requested notices relating to the local government's housing element at least seven days before submitting to HCD.

Several federal, state, and regional funding programs consider housing element compliance as an eligibility or ranking criteria. For example, the CalTrans Senate Bill (SB) 1 Sustainable Communities grant; the Strategic Growth Council and HCD's Affordable Housing and Sustainable Communities programs; and HCD's Permanent Local Housing Allocation consider housing element compliance and/or annual reporting requirements pursuant to Government Code section 65400. With a compliant housing element, the City will meet housing element requirements for these and other funding sources.

For your information, some general plan element updates are triggered by housing element adoption. HCD reminds the City to consider timing provisions and welcomes the opportunity to provide assistance. For information, please see the Technical Advisories issued by the Governor's Office of Planning and Research at: https://www.opr.ca.gov/planning/general-plan/guidelines.html.

We are committed to assisting the City in addressing all statutory requirements of State Housing Element Law. If you have any questions or need additional technical assistance, please contact Jamillah Williams, of our staff, at Jamillah.Williams@hcd.ca.gov.

Sincerely,

Paul McDougall
Senior Program Manager

Enclosure

APPENDIX
CITY OF ST. HELENA

The following changes are necessary to bring the City's housing element into compliance with Article 10.6 of the Government Code. Accompanying each recommended change, we cite the supporting section of the Government Code.

Housing element technical assistance information is available on HCD's website at https://www.hcd.ca.gov/hcd-memos. Among other resources, the housing element section contains HCD's latest technical assistance tool, *Building Blocks for Effective Housing Elements (Building Blocks),* available at https://www.hcd.ca.gov/building-blocks and includes the Government Code addressing State Housing Element Law and other resources.

A. Review and Revision

Review the previous element to evaluate the appropriateness, effectiveness, and progress in implementation, and reflect the results of this review in the revised element. (Gov. Code, § 65588 (a) and (b).)

As part of the evaluation of programs in the past cycle, the element must provide an explanation of the effectiveness of goals, policies, and related actions in meeting the housing needs of special needs populations (e.g., elderly, persons with disabilities, large households, female-headed households, farmworkers, and persons experiencing homelessness).

B. Housing Needs, Resources, and Constraints

1. *Affirmatively further[ing] fair housing in accordance with Chapter 15 (commencing with Section 8899.50) of Division 1 of Title 2…shall include an assessment of fair housing in the jurisdiction. (Gov. Code, § 65583, subd. (c)(10)(A).)*

   Enforcement: While the element includes analysis of fair housing complaints, it must describe the City's compliance with existing fair housing laws and regulations. For additional information, please see pages 28-30 on HCD's Affirmatively Furthering Fair Housing (AFFH) Guidance Memo at https://www.hcd.ca.gov/community-development/affh/index.shtml.

   Concentration of Fair Housing Issues: The assessment of fair housing (AFH) demonstrated that there is a concentration of several fair housing issues within the east and southeast quadrant of the City. For example, this area has the highest concentrations of lower-income households, highest percentage of single-headed households, greatest percentage living below the poverty line, high exposure to environmental burdens, and is considered the only low-resourced area in the City. As a result, the analysis should address trends, past and current policy efforts, and their effectiveness, neighborhood investment or disinvestment, local data and knowledge, and other relevant factors, particularly relative to equitable quality of life, resources, and strategies to address any inequities in quality of life.

2. *Include an analysis and documentation of household characteristics, including level of payment compared to ability to pay, housing characteristics, including overcrowding, and housing stock condition. (Gov. Code, § 65583, subd. (a)(2).)*

   Housing Costs (For Sale and Rental Prices): While the element includes estimated rents and for sale housing costs for residents, it utilizes American Community Survey (ACS) data. The element should supplement census data with other sources (e.g., local knowledge) to better reflect current market conditions.

3. *An inventory of land suitable and available for residential development, including vacant sites and sites having realistic and demonstrated potential for redevelopment during the planning period to meet the locality's housing need for a designated income level, and an analysis of the relationship of zoning and public facilities and services to these sites. (Gov. Code, § 65583, subd. (a)(3).)*

   Progress towards Regional Housing Needs Allocation (RHNA): The element is crediting 87 above moderate-income units from the Hunter Subdivision Project towards the RHNA. However, HCD has received public comment indicating that the Hunter Subdivision project has been pending since 2010 and there are concerns about the City's ability to process and approve this project during the planning period. The element should provide an analysis demonstrating the likelihood of these units being built during the planning period.

   Nonvacant Sites: The element must include an analysis demonstrating the potential for redevelopment of nonvacant sites. In addition, the element could analyze the extent that existing uses may impede additional residential development. The element included a site-by-site description along with some general information about the characteristics for each site. While the element included an analysis of some sites existing uses, it did not provide an analysis for all sites. For example, Sites 1, 2, 3, 11, and 13 included information on the existing use but provided no analysis on the likelihood for redevelopment. For example, Site 1 and 2 stated that development will occur upon the removal of the existing uses and structures. However, the element did not include any information on the likelihood that this will occur during the planning period. Additionally, Site 6 includes two parcels with separate owners and states that one of the owners is interested in developing pursuant to Senate Bill 9, however provides no description or analysis about the likelihood that the second parcel will redevelop. Sites 7 and 9 do not include any analysis of the existing uses or information about the likelihood for redevelopment. Lastly, Sites 5, 6, 10, and 12 analysis is entirely dependent on property owner interest. The element should either provide additional information on these sites such as the nature of meetings with property owners, the likelihood that the owner will redevelop during the planning period or additional information that indicates the likelihood for redevelopment.

   To facilitate a complete analysis, the element can summarize past experiences converting existing uses to higher density residential development, include current market demand for the existing use, provide analysis of existing leases or contracts that would perpetuate the existing use or prevent additional residential development and include current information on development trends and market conditions in the City and relate those trends to the

sites identified. The element could also consider indicators such as age and condition of the existing structure expressed developer interest, low improvement to land value ratio, and other factors. Based on a complete analysis, the element may need to add or modify programs to further encourage and incentivize redevelopment of sites.

Lastly, HCD received a number of comments concerning sites identified in the inventory that have a low likelihood of redevelopment due to existing buildings in commercial districts and on privately-owned property. As noted above, the element should provide additional analysis and information demonstrating the likelihood of redevelopment on these sites.

Realistic Capacity: The element is generally assuming 75-80 percent of maximum allowable densities on most sites. However, while the element provides assumptions of buildout for sites included in the inventory, it must also provide support for these assumptions. For example, the element mentions realistic capacity assumptions were taken into account for sites selection but should demonstrate what specific criteria, trends, factors, and other evidence led to the assumptions. The estimate of the number of units for each site must be adjusted as necessary, based on the land use controls and site improvements, typical densities of existing or approved residential developments at a similar affordability level in that jurisdiction, and on the current or planned availability and accessibility of sufficient water, sewer, and dry utilities.

The element also assumes that Site 5 will be developed for 50 lower-income units. However, this site allows a maximum allowable density of 26 units per acre and the site size is 1.8 acres equating to a total capacity of 46 units. While the site may have owner interest to develop beyond the maximum allowable densities, the element must either revise the capacity assumptions within the allowable densities or include a program to increase the sites allowable density.

The element also should analyze the likelihood that the identified units will be developed as noted in the inventory in zones that allow 100 percent nonresidential uses. This analysis should consider the likelihood of nonresidential development, performance standards, and development trends supporting residential development. For additional information, see the Building Blocks at https://www.hcd.ca.gov/analysis-of-sites-and-zoning.

Publicly-Owned Sites: The element must include additional discussion on each of the City-owned sites identified to accommodate the RHNA. Specifically, the analysis should provide support for residential capacity assumptions, existing uses and any known conditions that preclude development in the planning period and the potential schedule for development. If zoning does not currently allow residential uses at appropriate densities, then the element must include programs to rezone sites pursuant to Government Code section 65583.2, subdivisions (h) and (i). In addition, the housing element must include a description of whether there are any plans to sell the property during the planning period and how the jurisdiction will comply with the Surplus Land Act Article 8 (commencing with Section 54220) of Chapter 5 of Part 1 of Division 2 of Title 5.

Replacement Housing Requirements: If the sites inventory identifies sites with existing residential uses, it must include a program to provide for replacement. Absent a replacement housing program, these sites are not adequate sites to accommodate lower-income households. The replacement housing program has the same requirements as set forth in Gov. Code section. 65915, subdivision (c)(3).

Infrastructure Availability: The element included a capacity analysis for water, sewer and dry utilities. The analysis noted that there are some deficiencies in the current infrastructure system and additional upgrades will be needed to meet current demand such was the water distribution system, wastewater collection system, and storm drainage system. The element must include a program committing to actions and a timeline to make sufficient infrastructure available to accommodate the RHNA. Additionally, while the element included an analysis of infrastructure capacity, the element must specifically indicate if total infrastructure capacity (existing and planned) is available to accommodate the RHNA.

Environmental Constraints: The element describes a few environmental conditions within the City and indicates that the City certified a FEIR with the 2040 General Plan Update that described environmental constraints and mitigation measures. However, the element must specifically describe any known environmental constraints or any other conditions that preclude development on identified sites within the planning period.

Sites Inventory Electronic Form: Please note, pursuant to Government Code section 65583.3, subdivision (b), the City must utilize standards, forms, and definitions adopted by HCD when preparing the sites inventory. Please see HCD's housing element webpage at https://www.hcd.ca.gov/community-development/housing-element/index.shtml for a copy of the form and instructions. The City can reach out to HCD at sitesinventory@hcd.ca.gov for technical assistance. Please note, upon adoption of the housing element, the City must submit an electronic version of the sites inventory with its adopted housing element to sitesinventory@hcd.ca.gov.

Zoning for a Variety of Housing Types:

- *Emergency Shelters* – The element states that emergency shelters are required to provide sufficient parking for employees and one space per two beds pursuant to AB 139 (Statutes of 2019). However, pursuant to Government Code section 65583, subdivision a)(4)(A), parking for emergency shelters should only be the number of spaces necessary for staff working in the shelter and no more than other uses in the same zones. The element should discuss compliance with this requirement or include a program, if necessary. Additionally, the element should describe any siting or spacing requirements imposed on emergency shelters. Lastly, the element must include an analysis of the suitability and capacity of the zone(s) identified to accommodate emergency shelters. Specifically, the analysis should demonstrate whether the I and SC zone have sufficient capacity to accommodate the identified housing need for emergency shelters. For example, identifying the number of parcels, typical parcels sizes, whether the sites are nonvacant, and the potential capacity for adaptive reuse. Lastly, in analyzing the

suitability of these zones, the element should address proximity to transportation and services and any conditions inappropriate for human habitability.

- *Transitional and Supportive Housing* - While the element indicates that the City permits supportive housing by-right in all residential zones, the element must specifically demonstrate compliance with AB 2162 (Statutes of 2018). Specifically, supportive housing shall be a use by-right in zones where multifamily and mixed uses are permitted, including nonresidential zones permitting multifamily uses pursuant to Government Code section 65651. The element must demonstrate compliance with this requirement and include programs, if necessary.

- *Accessory Dwelling Unit (ADU)* – The element notes that ADUs are allowed in most residential zones. However, ADUs must be permitted in all zones that allow for residential uses including the AP Zone, mixed-use and commercial zones. The element should analyze consistency with this requirement and include a program, if appropriate. Additionally, after a cursory review of the City's ordinance, HCD discovered several areas which were not consistent with State ADU Law. This includes, but is not limited to, the definition of a cooking facility, definition of an efficiency kitchen, allowing both an ADU and JADU for conversions on a lot with an existing or proposed single-family dwelling, separate conveyance of an ADU or JADU, and restricting bedroom count. The element must include a program to update the City's ADU ordinance in compliance with state law.

4. *An analysis of potential and actual governmental constraints upon the maintenance, improvement, or development of housing for all income levels, including the types of housing identified in paragraph (1) of subdivision (c), and for persons with disabilities as identified in the analysis pursuant to paragraph (7), including land use controls, building codes and their enforcement, site improvements, fees and other exactions required of developers, and local processing and permit procedures... (Gov. Code, § 65583, subd. (a)(5).)*

   Land-Use Controls: The element must identify and analyze all relevant land use controls impacts as potential constraints on a variety of housing types (e.g., multifamily rental housing, mobilehomes, transitional housing), as follows:

   - *Zoning* – The element must include an analysis of all residential zones, especially those identified to accommodate a variety of housing types and the regional housing needs allocation (RHNA) i.e., mixed-use, central business, overlay zones, etc., As part of the analysis, the element should identify all applicable land use controls including development standards, allowable densities, zoning, and any other relevant requirements. The analysis should evaluate these requirements for impacts on achieving maximum densities, cost, feasibility and supply (number of units) of housing. Lastly, the element should identify and analyze any minimum unit size requirements.

   - *Parking* – The element notes that mobile home units are required to provide two spaces per mobile home unit in addition to centralized parking and multifamily housing is required to provide 1.5 – 2 parking spaces per unit. The element should

analyze these requirements and their impacts on cost, supply, housing choice and affordability and include programs to address identified constraints.

Local Processing and Permit Procedures: The element briefly discusses the required permits for a typical single family, subdivision, and multifamily project. This is not a complete analysis and does not address the requirements. The element must describe and analyze the City's permit processing and approval procedures by zone and housing type (e.g., multifamily rental housing, mobilehomes, housing for agricultural employees, supportive housing. The analysis should consider processing and approval procedures and time for typical single-family and multifamily developments, including type of permit, level of review, approval findings and any discretionary approval procedures. The analysis must evaluate the processing and permit procedures' impacts as potential constraints on approval certainty, feasibility, and housing supply and affordability. For additional information and sample analysis, see the *Building Blocks* at https://www.hcd.ca.gov/processing-permitting-procedures.

Additionally, the element indicates that multifamily requires a conditional use permit (CUP) and design review, however the element also states that multifamily is allowed by right and subject only to "routine approvals" and design review. The element must clearly detail the approval process for multifamily housing by zone. For your information, subjecting multifamily housing to an exception process such as a CUP in zones where multifamily housing is already allowed is generally considered a constraint. As noted above, the element must clarify what type of discretionary process and identify and evaluate any approval findings or decision-making criteria for this requirement. The analysis should address impacts on housing cost, supply, timing and approval certainty. Based on a complete analysis, the element should include programs to address or remove the identified constraints.

Design Review: The element's analysis of the design review process states that every development including an individual single-family home and multifamily housing must go through design review and approvals from planning commission which can take an average of three months processing time. In addition, the various approval criteria include subjective language related to the compatibility of design with the neighborhood and surrounding areas, compatibility with historical character, and designs that promote harmonious transitions. Design review processes that have little to no guidance or clarity and requiring findings related to character are generally considered a constraint. The element must analyze this process and the approval criteria for potential constraints on approval certainty, feasibility, supply and affordability. Based on a complete analysis, the element may need to include or modify a program to address and remove or mitigate any identified constraints.

Local Ordinances: While the element included a discussion of the City's inclusionary requirement, it must specifically identify and analyze any other locally adopted ordinances such as short-term rental ordinances that directly impact the cost and supply of residential development.

On/Off-Site Improvements: While the element indicates on and off-site improvements are listed in St. Helena's municipal code, it must specifically identify subdivision level improvement requirements, such as minimum street widths (e.g., 40-foot minimum street width) and analyze their impact as potential constraints on housing supply and cost. For additional information and a sample analysis, see the Building Blocks at http://www.hcd.ca.gov/community-development/building-blocks/constraints/codes-and-enforcement-on-offsite-improvement-standards.shtml.

Fees: The element includes a hypothetical example of fees for single family and a multifamily project that focuses on detailing impact fees for each project type. However, a complete analysis should identify all fees and costs including permit processing and planning fees, development fees, exactions, and any other applicable fees and analyze as potential constraints on housing supply and affordability. For more information, please visit: https://www.hcd.ca.gov/planning-and-community-development/housing-elements/building-blocks/fees-and-exactions.

Building Codes and Enforcement: While the element states that the City has authority to deem any structure unsafe, it should specifically discuss the City's code enforcement process (e.g., whether code enforcement activities are compliant-based or proactive).

Constraints on Housing for Persons with Disabilities:

- *Reasonable Accommodation* – The element identifies approval findings for granting a reasonable accommodation including finding related to impacts on surrounding uses – essentially a CUP finding. However, reasonable accommodation should be a unique exception process from a CUP, especially given its importance in addressing barriers to housing for persons with disabilities. The element should include a program to amend the Reasonable Accommodation Ordinance and remove constraints, namely the "potential impact on surrounding uses" approval finding. Additionally, the element should also indicate whether the City charges any fees to applicants filing reasonable accommodation requests.

- *Other Requirements* – The element must also include an analysis of zoning, development standards, building codes, and process and permit procedures as potential constraints on housing for persons with disabilities. Specifically, the analysis must describe any zoning code definitions of family and any spacing or concentration requirements for housing for persons with disabilities.

- *Residential Care Facilities of Seven or More* – The element states that these uses are permitted with a CUP in high-density residential zones. For your information, excluding these uses from residential zones and/or subjecting the uses to a CUP is generally considered a constraint and programs should be modified as appropriate with specific commitment to allow the use in residential zones with objectivity and certainty.

- *Residential Care Facilities of Six or Fewer* – The element indicates that group homes of six or fewer are excluded from some residential zones. For your

information, these uses must be allowed in any area zoned for residential use. The element should include or modify a program to address this requirement committing to allowing these uses in any zone that permits residential uses.

5. *An analysis of potential and actual nongovernmental constraints upon the maintenance, improvement, or development of housing for all income levels, including… …the length of time between receiving approval for a housing development and submittal of an application for building permits for that housing development that hinder the construction of a locality's share of the regional housing need in accordance with Government Code section 65584... (Gov. Code, § 65583, subd. (a)(6).)*

   Permit Times: The element must include an analysis of the length of time between receiving approval for a housing development and submittal of an application for building permits that potentially hinder the construction of a locality's share of the regional housing need.

6. *Analyze any special housing needs such as elderly; persons with disabilities, including a developmental disability; large families; farmworkers; families with female heads of households; and families and persons in need of emergency shelter. (Gov. Code, § 65583, subd. (a)(7).)*

   Special Needs Households: While the element includes data and a general discussion of housing challenges faced by special needs households, it still must provide an analysis of the existing needs and resources for each special needs group including extremely low-income households, persons with disabilities including developmental disabilities, female headed households, and farmworkers. For example, the element should discuss the existing resources to meet housing needs (availability of shelter beds, number of large units, number of deed restricted units, etc.), an assessment of any gaps in resources, and proposed policies, programs, and funding to help address those gaps.

C. Housing Programs

1. *Include a program which sets forth a schedule of actions during the planning period, each with a timeline for implementation, which may recognize that certain programs are ongoing, such that there will be beneficial impacts of the programs within the planning period, that the local government is undertaking or intends to undertake to implement the policies and achieve the goals and objectives of the Housing Element... (Gov. Code, § 65583, subd. (c).)*

   To address the program requirements of Government Code section 65583, subdivision (c)(1-6), and to facilitate implementation, programs should include: (1) a description of the City's specific role in implementation; (2) definitive implementation timelines; (3) objectives, quantified where appropriate; and (4) identification of responsible agencies and officials. Programs to be revised include the following:

   - *Ongoing Programs*: Numerous programs continue to indicate an "ongoing" implementation status. While this may be appropriate for some programs, programs

with quantified objectives or specific implementation actions must include completion or initiation dates resulting in beneficial impacts within the planning period. This includes but is not limited to Programs H-U, H-X, H-KK and H-P.

- *Timelines*: The element includes two programs with timelines for implementation towards the end of the planning period (Programs H-S and H-I). Given the importance of these programs and to achieve beneficial impact throughout the planning period, the element should revise these programs to be implemented earlier in the planning period.

2. *Identify actions that will be taken to make sites available during the planning period with appropriate zoning and development standards and with services and facilities to accommodate that portion of the city's or county's share of the regional housing need for each income level that could not be accommodated on sites identified in the inventory completed pursuant to paragraph (3) of subdivision (a) without rezoning, and to comply with the requirements of Government Code section 65584.09. Sites shall be identified as needed to facilitate and encourage the development of a variety of types of housing for all income levels, including multifamily rental housing, factory-built housing, mobilehomes, housing for agricultural employees, supportive housing, single-room occupancy units, emergency shelters, and transitional housing. (*Gov. Code, § *65583, subd. (c)(1).)*

   As noted in Finding B3, the element does not include a complete site analysis, therefore, the adequacy of sites and zoning were not established. Based on the results of a complete sites inventory and analysis, the City may need to add or revise programs to address a shortfall of sites or zoning available to encourage a variety of housing types. In addition, the element should be revised as follows:

   Shortfall of Sites (Program H-A): The element notes that several sites do not currently permit residential uses or have appropriate densities and will need to be rezoned to accommodate the RHNA. While the element included Program H-A to rezone sites, the program should identify acreage, allowable densities, and anticipated units to be rezoned and must specifically commit to meet all requirements pursuant to Government Code section 65583.2, subdivisions (h) and (i). For example, the program must commit to permit owner-occupied and rental multifamily uses by-right for developments in which 20 percent or more of the units are affordable to lower-income households. By-right means local government review must not require a CUP, planned unit development permit, or other discretionary review or approval.

   Replacement Housing Requirements: The housing element must include a program to provide replacement housing. Absent a replacement housing program, these sites are not adequate sites to accommodate lower-income households. The replacement housing program must adhere to the same requirements as set forth in Government Code section 65915, subdivision (c)(3).

   Sites Identified in Multiple Planning Periods: While the element includes Program H-A to maintain an inventory to comply with Government code section 65583.2 (c), this program must commit to zone and allow for the following:

- sites must meet the density requirements for housing for lower income households, and
- allow by-right approval for housing developments that include 20 percent or more of its units affordable to lower income households (Gov. Code, § 65583.2, subd. (c).).

Nonvacant Sites Reliance to Accommodate RHNA: As the element relies upon nonvacant sites to accommodate the regional housing need for lower-income households, it should include a program(s) to promote residential development of those sites. The program could commit to provide financial assistance, regulatory concessions, or incentives to encourage and facilitate new, or more intense, residential development on the sites. Examples of incentives include identifying and targeting specific financial resources and reducing appropriate development standards. For additional information, see the Building Blocks at https://www.hcd.ca.gov/identify-adequate-sites.

Publicly-Owned Sites: The element identified publicly-owned sites to accommodate a portion of the RHNA. The element should include a program with numerical objectives that ensures compliance with the Surplus Land Act, provides incentives and actions along with a schedule to facilitate development of publicly- owned sites. Actions should include outreach with developers, issuing requests for proposals, incentives, fee waivers, priority processing and financial assistance.

Senate Bill 9 Implementation: The element relies on the implementation and usage of Senate Bill 9 to accommodate a portion of the RHNA, promote a variety of housing types and choices, and implement affirmatively furthering fair housing requirements. While the element included program H-T to support lot splits, the element must include specific actions to implement and incentive the usage of SB 9. This includes but is not limited to establishing a compliant ordinance, development standards, incentives, and marketing and outreach to developers and property owners.

Program H-C – Water Sewer Priority: For your information, water and sewer service providers must establish specific procedures to grant priority water and sewer service to developments with units affordable to lower-income households. (Gov. Code, § 65589.7.) While the element commits to granting priority water and sewer to developments with units affordable to lower income households, local governments are also required to immediately deliver the housing element to water and sewer service providers. HCD recommends including a program, policy, or commitment to deliver the adopted housing element to water and sewer providers and include a cover memo describing the City's housing element, including the City's housing needs and regional housing need. For additional information and sample cover memo, see the Building Blocks at https://www.hcd.ca.gov/priority-for-water-and-sewer.

3. *Address and, where appropriate and legally possible, remove governmental and nongovernmental constraints to the maintenance, improvement, and development of housing, including housing for all income levels and housing for persons with disabilities. The program shall remove constraints to, and provide reasonable accommodations for housing designed for, intended for occupancy by, or with supportive services for, persons with disabilities. (Gov. Code, § 65583, subd. (c)(3).)*

As noted in Findings B4 and B5, the element requires a complete analysis of potential governmental and non-governmental constraints. Depending upon the results of that analysis, the City may need to revise or add programs and address and remove or mitigate any identified constraints. In addition, the element should be revised as follows:

Program H-B (Growth Management System): The element notes that the City implemented a growth management system which likely violates SB 330 (Housing Crisis Act, 2019, Gov. Code, § 66300). The element included a program to remove the growth management system, however included the timeline has "ongoing." The element should include a specific implementation timeline for when this system will be removed and implementation should happen earlier in the planning period (e.g., one year).

4. *Promote and affirmatively further fair housing opportunities and promote housing throughout the community or communities for all persons regardless of race, religion, sex, marital status, ancestry, national origin, color, familial status, or disability, and other characteristics... (Gov. Code, § 65583, subd. (c)(5).)*

   As noted in Finding B1, the element requires a complete AFFH analysis. Depending upon the results of that analysis, the City may need to revise or add programs. Additionally, while the element did include programs to address fair housing issues and contributing factors, several programs will need to be revised with increased metrics, geographic targeting for place-based strategies, and implementation steps to facilitate meaningful change. Additionally, while the element included some programs for place-based strategies, these programs must include geographic targeting for the Southeast quadrant of the City, include actions that improve one's quality of life related to housing, transportation, safety, education, recreation, infrastructure, etc., and quantified metrics that target beneficial impacts for people, households and neighborhoods (e.g., number of people or households assisted, number of housing units built, number of parks or infrastructure projects completed). HCD will follow-up under a separate cover with additional information.

D. Public Participation

Local governments shall make a diligent effort to achieve public participation of all economic segments of the community in the development of the Housing Element, and the element shall describe this effort. (Gov. Code, § 65583, subd.(c)(9).)

While the element described various efforts to achieve public participation in the preparation of the housing element update, it should also describe how comments were considered and incorporated into the element.

RE: City of St. Helena, Initial Draft Housing Element

Dear Ms. Williams and Ms. Coy:

We understand that you are in the process of reviewing the City of St. Helena's subsequent draft Housing Element, submitted to HCD on February 7, 2023. Holland & Knight has been engaged to represent Dennis Hunter, Ben and Kelly Vanzutphen, and White Fang Properties, LLC (collectively, the "Applicant Team") in connection with the Hunter Subdivision project located North of Hunt Avenue (APN 009-030-057) (the "Project" or "Hunter Subdivision Project"). As proposed, the Project consists of 51 single-family residences (11 of which will feature accessory dwelling units), as well as a 25-unit multifamily development, for a total of 87 units. 20% of the Project's units will be affordable, pursuant to the City's inclusionary zoning ordinance.

As you know, on December 6, 2022, HCD completed its review of the City's initial draft Housing Element and provided its feedback to the City. That feedback detailed the changes required for the City to comply with State Housing Element Law. The City's revisions, which were submitted on February 7, failed to address many of HCD's comments.

The Applicant Team provides this letter to detail several of the remaining deficiencies. Although we know HCD looks at much more than a single development when reviewing a City's Housing Element, it is no exaggeration that in this case, this single project is critical to the City's compliance with Housing Element Law. First, with 87 total units, the Project represents more than one third of the City's total RHNA allocation of 256 units. Second, the Project is the only pending residential development of any significance in the entire City.[1] This matters because the City's sites inventory is largely predicated on projects of comparable size; 7 of the 12 sites are

[1] *See* Revised Housing Element at 2-194 ("Currently there is one single-family residence and four moderate-income units, not to exceed 120 percent of the AMI, that are approved and undergoing building permit processing. In addition, there are 87 units that are pending planning/entitlement approval under the Hunter Subdivision project.").

projected for 20+ units, with the largest (Site 10) projected for 88 units.[2] As such, the City's treatment of the Project is the best, and possibly only, indicator of how the City is likely to treat comparably-sized projects proposed during the 6th planning cycle. It is for these reasons among others that members of the City's Planning Commission emphasized in a recent hearing that HCD would be closely watching the City's treatment of this Project as it considered the City's compliance with Housing Element law.

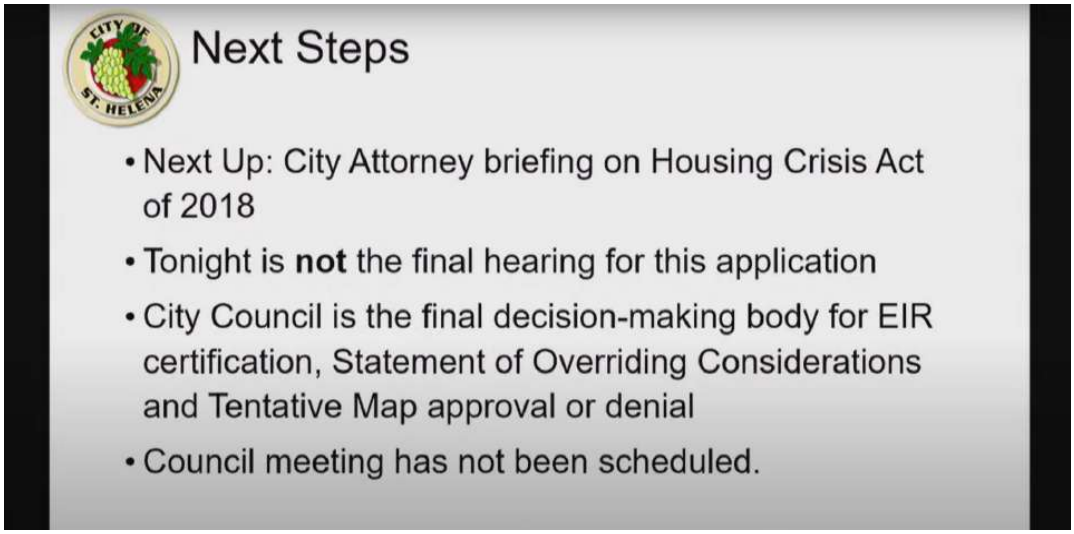
As such, the Applicant Team requests that HCD consider and incorporate the following comments into its review of the City's subsequent draft.

I. The City has not provided an analysis demonstrating a likelihood that the Hunter Subdivision Project will be built within the planning period.

Housing Element Law requires that the City's Housing Element provide "an inventory of land suitable and available for residential development, including vacant sites and sites having realistic and demonstrated potential for redevelopment during the planning period to meet the locality's housing need for a designated income level, and an analysis of the relationship of zoning and public facilities and services to these sites."[3]

In its review of the City's initial draft Housing Element, HCD wrote:

> The element is crediting 87 above moderate-income units from the Hunter Subdivision Project towards the RHNA. However, HCD has received public comment indicating that the Hunter Subdivision project has been pending since 2010 and there are concerns about the City's ability to process and approve this project during the planning period. The element should provide an analysis demonstrating the likelihood of these units being built during the planning period.[4]



In response to this feedback, the City supplemented its draft to add the following: "The Hunter Subdivision project is anticipated to receive planning approval in the near future. The Final Environmental Impact was released in October 2022 and the project is scheduled for hearing before the City's Planning Commission in February of 2023."[5]

This statement is misleading to the point of untruth. At this time, only one discretionary approval is before the City: a Vesting Tentative Map. The Planning Commission did certify the Final EIR for that Vesting Tentative Map at a recent hearing. That determination, however, must still be ratified by the City Council, and as of this writing, the City Council has conspicuously declined to schedule a hearing on the matter. This raises the concerning possibility that the City may delay such a hearing until HCD has completed its review of the Housing Element, so that its subsequent treatment of the Project will be less closely scrutinized.

Moreover, although the City's revised draft states that the necessary approvals for the Project are "anticipated," the City took the opposite tack at the February 7, 2023 Planning Commission

[2] Revised Housing Element at 2-218, Table 57.
[3] Gov. Code, § 65583(a)(3).
[4] HCD, "City of St. Helena's 6th Cycle (2023-2031) Draft Housing Element" (Dec. 6, 2022), Appendix at 2.
[5] Revised Housing Element at 2-195.

hearing. There, Planning Commissioners and City staff repeatedly emphasized that they were "only" voting on the Vesting Tentative Map, and not on other discretionary approvals that would be required for the Project, in an effort assuage the concerns of Project opponents. These remarks are summarized on the following slide, which was prepared by City staff and presented at that hearing:[6]

At a minimum, this approach indicates a reluctance to approve the Project, undermining the subsequent draft's statement that approvals are "anticipated … in the near future."

Further, the two misleading sentences added by the City hardly supplies the "analysis demonstrating the likelihood of these units being built" that HCD required. If the City had provided such an analysis, it would have disclosed the fact that the City has subjected the Project to numerous onerous conditions that undermine the feasibility of the Project actually being built. Many of these conditions are wholly subjective, and some of them seek to obligate the Applicant Team to perform core municipal functions on the City's behalf.

Specifically, the Planning Commission's approval of the Vesting Tentative Map was premised on 123 Conditions of Approval (the "Conditions"), which are attached hereto as **Attachment A**. The Conditions are problematic for numerous reasons. For example, many of them afford impermissible discretion to City officials. *See* Exhibit A, Conditions 33, 44, 47, 55, 72, 97, 100, 101, 105, 108, 110, 116. Other Conditions simply require the Applicant Team to perform "to the City's satisfaction" or otherwise leave the determination to "the discretion of the City." *See* Conditions 40, 107, 109, 111, 112, 113. *See also* Conditions 35 ("the Final Map shall be designed to the satisfaction of the Public Works Director"), 118 (fire hydrants must be installed "to the satisfaction of the Fire Department"). These Conditions essentially vest City officials

[6] *See* Planning Commission Hearing (Feb. 7, 2023) at 57:56 (https://www.youtube.com/live/N1RUOjqb4Z4).

with unbridled discretion to stall 1/3 of the City's 6th Cycle RHNA, even if the units are technically "approved." and should at a minimum have been disclosed to HCD.

The requested analysis would also have disclosed, for example, the City's practice of applying a citywide VMT baseline average for residential uses, rather than using a regional baseline average, which OPR guidance supports.[7] Notably, because the City employed a citywide baseline, the Project EIR treats the Project as though it will have significant VMT impacts despite the fact that it provides the lowest allowable density under the applicable Medium Density Residential zoning. This result would not have occurred if the City applied a regional baseline for calculating VMT impacts. Moreover, this result suggests that, if the City continues to employ a citywide baseline, essentially all new housing projects of any consequence will be considered to have significant VMT impacts, and require the City to prepare an EIR and adopt a statement of overriding considerations for each such project. This approach suggests the type of excessive CEQA processing against which HCD has warned as a potential violations of Housing Element Law and the Housing Accountability Act.[8] But at a minimum, the City's practice must be disclosed and analyzed, both with respect to the Project and as a potential governmental constraint on the approval of housing Citywide.

Again, the City's treatment of the Project matters. The Project represents 1/3 of the City's 6th Planning Cycle RHNA. As Planning Commission Chair Ponte stated at the February 7, 2023 hearing, "This is probably the biggest open piece of land … left inside our development borders."[9] And yet the Project has been pending since 2010 – the 4th Planning Cycle. This history merits far more than a single paragraph in the City's 400+ page draft, dismissing valid skepticism with misleading assurances that the Project "is anticipated to receive planning approval in the near future."

Instead, HCD should not certify the Housing Element until the City has demonstrated its commitment to issue *final* approvals for a Project that can be feasibly be developed at this location.

II. The City has not provided an analysis demonstrating the redevelopment potential of the nonvacant sites in its housing inventory.

Beyond the Project itself, the City's other projections remain inadequate, because they fail to provide the requisite analysis to support the Housing Element's fanciful projections.

a. City-owned sites.

Of the twelve sites in the City's inventory, three – Sites 1, 2, and 3 – are owned by the City. Collectively, the City projects that 57 units will be developed on these sites: 6 units on Site 1, 20 units on Site 2, and 31 units on Site 3. All are projected as 100% lower-income.[10]

In its responses to the initial draft, HCD stated:

> The element must include additional discussion on each of the City-owned sites identified to accommodate the RHNA. Specifically, the analysis should provide support for residential capacity assumptions, existing uses and any known conditions that preclude development in the planning period and the potential schedule for development. If zoning does not currently allow residential uses at appropriate densities, then the element must include programs to rezone sites pursuant to Government Code section 65583.2, subdivisions (h) and (i). In addition, the housing element must include a description of whether there are any plans to sell the property during the planning period and how the jurisdiction will comply with the Surplus Land Act Article 8 (commencing with Section 54220) of Chapter 5 of Part 1 of Division 2 of Title 5.[11]

The City did not comply with this direction. In fact, the City made only one site-specific addition, to Site 1 (6 units). Here, it added a vague statement that "While the Mixed-Use Zone could potentially support 100 percent commercial development, the City has identified this site as suitable for housing development with intentions to develop."[12] With respect to Site 2 (20 units) and Site 3 (31 units), the City made no effort to supplement its analysis or otherwise comply with HCD's guidance.[13] Thus, there is no support for the City's capacity assumptions, no analysis of existing uses (Site 2 hosts City Hall, and Site 3 is leased to a vineyard), and no potential schedule for development.

Nor is there any commitment to rezone as needed to accommodate the projections. This is particularly relevant to Site 3, which is in the "Central Business" zone. Indeed, the draft indicates that "no land use changes are proposed as residential uses are permitted on upper stories within the Central Business district."[14] But given that Site 3 currently features no buildings, the City's statement presupposes the build-out of enough multi-story commercial buildings to accommodate 31 lower-income units on the upper stories of those buildings. And yet, the City has provided no discussion of that process, or any support for the assumption that such development would occur during the planning period.

As such, the City failed to comply with HCD's directions regarding City-owned sites, and its analysis remains deficient with regard to these 57 units.

[13] Revised Housing Element at 2-199-200.
[14] Revised Housing Element at 2-200.

b. Privately-owned nonvacant sites.

Of the remaining nine sites in the City's inventory, six are nonvacant, but instead have active uses. Addressing these sites in its responses to the City's initial draft, HCD stated:

> Nonvacant Sites: The element must include an analysis demonstrating the potential for redevelopment of nonvacant sites. In addition, the element could analyze the extent that existing uses may impede additional residential development. The element included a site-by-site description along with some general information about the characteristics for each site. While the element included an analysis of some sites existing uses, it did not provide an analysis for all sites. For example, Sites 1, 2, 3, 11, and 13 included information on the existing use but provided no analysis on the likelihood for redevelopment. For example, Site 1 and 2 stated that development will occur upon the removal of the existing uses and structures. However, the element did not include any information on the likelihood that this will occur during the planning period. Additionally, Site 6 includes two parcels with separate owners and states that one of the owners is interested in developing pursuant to Senate Bill 9, however provides no description or analysis about the likelihood that the second parcel will redevelop. Sites 7 and 9 do not include any analysis of the existing uses or information about the likelihood for redevelopment. Lastly, Sites 5, 6, 10, and 12 analysis is entirely dependent on property owner interest. The element should either provide additional information on these sites such as the nature of meetings with property owners, the likelihood that the owner will redevelop during the planning period or additional information that indicates the likelihood for redevelopment.[15]

Here again, the City's analysis remains inadequate. In particular, the City's projections with respect to Site 7, Site 9, and Site 10, which collectively total 156 units (more than half of the City's total RHNA of 256), are speculative and unsupported considering the existing uses.

> **Site 7 (20 units; 10 lower-income and 10 moderate income)**.[16] This 1.0 acre parcel is currently occupied by a single family residence. In its comments, HCD stated that the City's analysis of Site 7 did "not include any analysis of the existing uses or information about the likelihood of redevelopment."[17] Despite HCD's instruction to do so, the City did not update its draft to provide any discussion of owner interest in redevelopment. Nor did the City provide any support for the seemingly-arbitrary affordability projections. The City's only addition explained its conclusion that the parcel is similar to other parcels that were recently redeveloped. However, with no discussion of whether the existing use is likely to cease during the planning period, the City has failed to demonstrate the property's realistic potential for development.

[15] HCD, "City of St. Helena's 6th Cycle (2023-2031) Draft Housing Element" (Dec. 6, 2022), Appendix at 2.
[16] Revised Housing Element at 2-207.
[17] HCD, "City of St. Helena's 6th Cycle (2023-2031) Draft Housing Element" (Dec. 6, 2022), Appendix at 2.

Site 9 (48 units; 24 lower income and 24 above moderate income).[18] These two parcels total 2.4 acres and are both occupied by single-family residences. In its comments, HCD stated that the City's analysis of Site 9 did "not include any analysis of the existing uses or information about the likelihood of redevelopment."[19] Here again, the City failed to provide the requested analysis. There is no discussion of owner interest in redeveloping (here, agreement from two separate property owners would be required). Nor is there any support for the arbitrary affordability projections. As with Site 7, the City explained that Site 9 was similar to other properties that were recently redeveloped, but offered no support for the notion that the existing owners would support such redevelopment.

Site 10 (88 units; 44 lower income and 44 moderate income).[20] This 4.4 acre parcel is an active vineyard. In its comments, HCD noted that Site 10 "is entirely dependent on property owner interest," and stated that the amended housing element "should either provide additional information on these sites such as the nature of meetings with property owners, the likelihood that the owner will redevelop during the planning period or additional information that indicates the likelihood for redevelopment."[21] Here again, the City failed to provide the requested discussion of owner interest in redevelopment. Its only addition indicates that the City has "seen recent development of housing on properties with existing vineyards." But without an analysis specific to this vineyard and this property owner, there is no support for the City's assumption that these 88 units (themselves more than 1/3 of the City's RHNA) will be developed in the 6th Cycle.

Moreover, all three of these sites were included in the City's 5th Cycle sites inventory. This fact casts further doubt on the likelihood that they will be redeveloped during the 6th Cycle, much less at the intensities projected in the draft.

As such, the City should revise its draft to include an analysis demonstrating that redevelopment of the sites listed in its sites inventory is likely to occur in the 6th Cycle <u>at the projected intensities</u>. If (as seems likely) it is unable to do this with respect to the current sites, then it must either identify other sites or commit to programs that will facilitate the required development.

III. The City has not demonstrated that adequate water supply exists to accommodate the RHNA.

Gov. Code § 6553.2(b)(5) provides that the sites inventory must contain a "description of existing or planned water, sewer, and other dry utilities supply, including the availability and access to distribution facilities[,]" and further specifies that "[p]arcels included in the inventory must have sufficient water, sewer, and dry utilities supply available and accessible to support housing development or be included in an existing general plan program or other mandatory program or plan, including a program or plan of a public or private entity providing water or

[18] Revised Housing Element at 2-210.

[20] Revised Housing Element at 2-212.
[21] HCD, "City of St. Helena's 6th Cycle (2023-2031) Draft Housing Element" (Dec. 6, 2022), Appendix at 2.

sewer service, to secure sufficient water, sewer, and dry utilities supply to support housing development."

The revised draft's discussion of the City's water supply essentially concedes that the City lacks adequate water supply to accommodate its 6th Cycle RHNA.[22] In relevant part, this discussion states:

> The City has adequate water supply to meet current demand, however the effects of climate change will likely reduce water supply from current sources. The City needs to obtain new water supplies and/or achieve more water savings in order to reliably meet future water demand. At the same time, the City recognizes that any new water supply, even if forthcoming, is likely to be expensive, potentially increasing the unit cost of potable water. The main emphasis within the General Plan (regarding water supply) is on conservation, seeking to reduce demand by all classes of users.
>
> According to the City's Water Shortage Emergency Ordinance, if the City's water balance pursuant to the safe yield calculation is in deficit, then the City must comply with Phase I water restrictions. Most importantly, this requires that any new water demand, such as from a new residential project, must be completely offset by a reduction in current water demand, to the satisfaction of the Director of Public Works.[23]

Although the City states that it "needs to obtain new water supplies and/or achieve more water savings in order to reliably meet future water demand," the Housing Element makes no commitment to obtain additional supply. Nor does the Housing Element commit to reductions in existing water usage.

Instead, the Housing Element indicates that the City will simply employ its existing policy of requiring all new developments to completely offset their water usage. Specifically, Implementation Program H-VV states that the City will enforce "requirements for water-efficient landscaping for new residential and commercial construction, as well as implementing the 'Water Neutrality' policy for all new development."[24] Thus, the City places the burden of reducing consumption entirely on the new developments that it is required to plan for and accommodate. If new housing cannot do so, then the City's policy is that there can be no new housing. Obviously, this is inconsistent with Housing Element Law.

Housing Element Law mandates that that "[p]arcels included in the inventory must have sufficient water[.]"[25] If they do not have sufficient water, they cannot be used to satisfy the City's RHNA. But the City's draft fails to analyze whether new developments can feasibly and realistically find the water offsets required by the neutrality policy. As such, if the City intends to subject all new development to a water neutrality policy, then it must first provide an analysis demonstrating why this policy does not render the projections in its sites inventory infeasible. If

[22] Revised Housing Element at 2-150-152.
[23] Revised Housing Element at 2-151.
[24] Revised Housing Element at 1-39.
[25] Gov. Code § 6553.2(b)(5).

it cannot do this, then the City must adopt a program committing to procure additional water to supply its RHNA. At the moment, the draft does neither.

Moreover, despite HCD's instruction that a demonstration of realistic capacity required that estimates "must be adjusted as necessary, based on … the current or planned availability and accessibility of sufficient water, sewer, and dry utilities,"[26] the revised draft made no effort to adjust its sites inventory estimates in view of the water supply issues the draft identifies. To the contrary, the City's edits only reinforce the notion that it lacks sufficient water supply to facilitate the development promised in the sites inventory. Its additions to Implementation Program H-A, for example, state that "each site has the capacity to accommodate at least 16 units and will be available for development in the planning period where water, sewer, and dry utilities can be provided."[27]

Further, the City is aware of demonstrated problems with its own water supply infrastructure, resulting in the waste of significant water supply that could otherwise be used to satisfy the needs of projected new development. The City must disclose that governmental constraint on new housing supply in the Housing Element, and adopt a program committing to reduce or eliminate it.

The current draft's water supply discussion calls the entirety of the City's sites inventory projections into question. To demonstrate that these parcels "have sufficient water," the Housing Element should be revised to either (1) commit to procuring additional water supply to facilitate the City's RHNA; or (2) explain why the water supply constraints disclosed by the current draft do not preclude development of the City's RHNA. The revised Housing Element should also explain why the City's program of applying its water neutrality policy to all new residential development does not render the projections in its sites inventory infeasible.

IV. The City has incorrectly allocated the Project's 87 units.

Finally, the City's draft incorrectly assigns all of 87 of the Project's units as above moderate income, stating: "While the Hunter Subdivision project is proposing approximately 25 affordable units, because the affordable agreements are not in place at the time of Housing Element, all unit credits were assumed to be above moderate."[28]

As an initial matter, the City's position is wholly inconsistent with its sites inventory projections. The sites inventory forecasts 204 lower income units and 69 moderate income units. No affordability agreements are in place for those projects either. In fact, those projects do not even exist. They are wholly speculative. Why the City would refuse to correctly allocate the Project's affordable units simply because an affordability agreement is not yet executed, while confidently stating that the purely hypothetical units in its sites inventory will be affordable, is baffling.

[26] HCD, "City of St. Helena's 6th Cycle (2023-2031) Draft Housing Element" (Dec. 6, 2022), Appendix at 3.
[27] Revised Housing Element at 1-10.
[28] Revised Housing Element at 2-195.

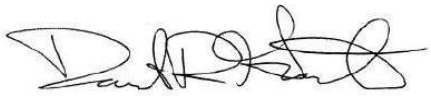
In any event, the City's inclusionary zoning ordinance requires 20% of the Project's units to be affordable. The Applicant Team intends to comply with this ordinance. The City's Housing Element should reflect this.

The City should be required to correct its error before HCD certifies its Housing Element. Accurate counting matters, for several reasons. First, overcounting the number of market rate units the Project will provide distorts the City's other projections. The Project's 20% affordable units will not be developed at market rates, and the City must therefore plan for those market rate units elsewhere.

Second, accurate counting matters for the No Net Loss requirements set forth in Gov. Code § 65863. If the City incorrectly counts the Project's affordable units as market rate units, then final approvals cannot issue unless and until the City makes "a written finding supported by substantial evidence as to whether or not remaining sites identified in the housing element are adequate to" meet the City's RHNA.[29] Given the spurious nature of the City's current projections, it is far from certain that the City would be able to make those findings, thus triggering the requirement to make additional sites available to replace those units.[30] In practice, there is no statutory mechanism for the Applicant Team to compel the City to make those findings, even where (as here) the issue stems from the City's own error. As such, it is critical that the City correctly allocate the Project's 87 units in its sites inventory.

V. The revised draft remains out of compliance with State Housing Element Law.

For at least the reasons discussed above, the City's revised draft Housing Element remains out of compliance with Housing Element Law, and HCD should decline to certify it until the following changes are made:



- With respect to the Project, the Housing Element should not be certified until it is demonstrated that the City will issue final approvals for a project that can be feasibly developed. Further, the City should amend its sites inventory to correctly reflect that the Project will consist of 20% affordable units, as required by the City's own ordinances.
- With respect to the remaining City-owned and privately-owned nonvacant sites in the sites inventory, the City should amend the draft to supply an analysis that demonstrates that development is likely during the planning period, specifically including a discussion of owner interest with respect to each privately-owned site. If it cannot do so, the City should instead either identify alternative sites where development is feasible, or commit to programs that ensure feasibility at the currently-identified sites.
- With respect to all projected developments (including the Project), the City should amend the draft to address its water supply constraints, and should specifically either (1) commit to procuring additional water supply to facilitate the City's RHNA; or (2) explain why the water supply constraints disclosed by the current draft do not preclude development of the City's RHNA. Further, the City should amend the draft to explain why the City's

[29] Gov. Code § 65863(b)(2).
[30] Gov. Code § 65863(c).

program of applying its water neutrality policy to all new residential development does not render the projections in its sites inventory infeasible.

Should HCD require further information with respect to the Project or the City's actions with respect thereto, we are happy to provide it.

Very truly yours,

Daniel R. Golub
William Sterling
West Coast Land Use & Environmental Law Practice Group
Holland & Knight LLP

ATTACHMENT A

HUNTER SUBDIVISION CONDITIONS OF APPROVAL 2-7-23

Tentative Subdivision Map TM 2022-001
APN 009-030-057

These conditions shall apply to City approval of Tentative Subdivision Map TM 2022-001. However, the only conditions herein that constitute preconditions to the approval of the Final Map are those that explicitly state that they constitute such preconditions, and such conditions may be satisfied through substantial completion, as determined by the City Engineer, by execution of a Subdivision Improvement Agreement, in a form acceptable to the City Engineer, or a combination thereof. Either substantial completion or execution of a Subdivision Improvement Agreement or a combination of both, shall enable the City Engineer to make a determination of substantial compliance with these condition and the Tentative Subdivision Map TM 2022-001.

Planning Division: General Conditions

1. This specific approval is limited to the Tentative Subdivision Map TM 2010-40, and is not intended to serve as an approval of the overall project description that was submitted with the tentative map application.

2. This approval is based upon all conditions of approval set forth herein, including mitigation measures and specified plans and agreements included by reference, as well as all applicable City rules and regulations. Any deviations from the conditions must be reviewed and approved by the City for conformity with this approval. Deviations may require approved changes to these approvals and/or further environmental review. Deviations without the above described approval will constitute a violation of permit approval.

3. Except as specifically authorized in these conditions of approval, the grading, development, use, and maintenance of the property; the size, shape, arrangement, and location of the structures, parking areas and landscape areas; and the protection and preservation of resources shall be subject to Planning Commission approval and shall conform to the conditions of approval below. Notwithstanding the foregoing, the associated grading and construction of infrastructure for the project shall be permitted without Design Review approval if the design of such infrastructure has otherwise been approved by means of the Tentative Map or Final Map. All plans and agreements (such as landscape maintenance plans) required pursuant to these conditions of approval must be submitted for review and approval and shall be implemented as approved by the City.

4. The use and/or construction of any structures or improvements authorized by this approval shall not commence until all necessary planning and building permits pertaining to the use or construction in question are obtained. Before any grading or building permit will be issued by the City, the Owner/Applicant must obtain written clearance from all departments having conditions; such clearance shall indicate that the Owner/Applicant has satisfied all pre-construction conditions.

5. The Owner/Applicant's acceptance of this permit and/or commencement of use, construction and/or operations under this approval shall be deemed acceptance of all conditions of this approval by the Owner/Applicant.

6. The Owner/Applicant shall ensure that potential contractors are aware of City requirements. The Owner/Applicant shall notify all contractors and subcontractors in writing of the site rules, restrictions, and Conditions of Approval and submit a copy of the notice to the Planning Department.

7. Pursuant to the Municipal Code, Section 16.16.100, the Tentative Map approval is valid for a two (2) year period ending February 7, 2025, unless later extended by operation of state law. The Final Map shall be filed by this date or an extension of time shall be requested prior to the expiration date.

8. Pursuant to St Helena Municipal Code, any request for an extension of the Tentative Map must be justified in writing and received by the Planning Department at least twenty (20) days prior to expiration. The time at which such map expires may be extended by the City Council for one year, and on further application twenty (20) days before the expiration of the one year extension, the subdivider may request a second one-year extension, and on further application twenty (20) days before the expiration of the second one-year extension may request a third one-year extension. No extension shall be permitted beyond the third one-year extension.

9. Prior to recordation of the Final Map and subject to City approval as to form and content, the Owner/Applicant shall include all of the mitigation measures and conditions of approval associated with or required by this Project approval on a separate informational sheet(s) to be recorded with the Final Map. All applicable conditions and mitigation measures for the Project shall be printed on grading and/or building plans.

10. Compliance with all permit conditions shall occur in accordance with specific regulations but in all cases not later than prior to occupancy or initiation of use unless another time is set by law or by this approval. Occupancy or final inspection of a project may be withheld if all conditions, including payment of fees for services rendered by the City, are not met.

11. In any action or proceeding to attack, challenge, invalidate, set aside, void or annul the City's approval of applicant's Project, in whole or in part, applicant shall defend, at its own expense and without any cost to the City, and with counsel acceptable to the City, and shall fully and completely indemnify and hold the City, its agents, officers, and employees harmless from and against any and all claims, causes of action, damages, costs, attorney's fees and liability of any kind, so long as the City reasonably promptly notifies the applicant of any such claim, action, or proceedings and the City cooperates fully in the defense of the action or proceedings.

12. This Tentative Parcel Map shall be binding upon all parties having any right, title or interest in the real property or any part thereof, their heirs, successors and assigns, and shall inure to their benefit and benefit of the City of St. Helena.

13. If the Tentative Map is proposed to be revised, including revisions to these conditions of approval, the revisions shall be approved pursuant to and in accordance with Section 16.16.130 of the St. Helena Municipal Code.

14. The primary purpose of this review is for compliance with the General Plan and Zoning Ordinance. The owner/applicant is responsible for meeting with the Building Official/Fire Inspector to review compliance with Building and Fire Codes, including fire protection systems and the accessibility standards of Title 24.

15. All required fees, including planning fees, development impact fees, park impact fees, and building permit fees shall be paid prior to issuance of building permit unless such payment has been modified by adopted mitigation measures or conditions of approval. Fees shall be those in effect at the time of the issuance of the building permit.

16. This authorizes the creation of a tentative subdivision of a 16.92-acre parcel (APN 009-030-057) located at the north/east terminus of Adams Street into 52 lots. In addition, two lettered lots are created: Parcel A (0.06 acres) is an open space lot adjacent to an internal roadway; Parcel B (0.04 acres) will contain a private water well to be used for irrigation of landscaped areas.

17. All uses of the property shall be in compliance with the MR: Medium Density Residential zoning district regulations.

18. The applicant shall be responsible for compliance with all mitigations measures adopted as part of this project and listed in the Environmental Impact Report and Mitigation Monitoring and Reporting Program (MMRP) adopted as part of this project.

19. All conditions of approval shall be clearly identified and included on all plans submitted for future permit review and issuance.

20. Prior to applying for building permits, proposed future development on any of the newly created lots or parcels shall require the approval of a Design Review application and Use Permit application as applicable, subject to discretionary review by the Planning Commission.

21. The Applicant shall be responsible for all City plan check and inspection costs as described in the St. Helena Comprehensive Fee and Rate Schedule.

Planning Division: Final Map Conditions

22. The owners of the 51 single family residences and the multi-family development on parcel 52 shall be members of a homeowner's association, or another funding mechanism acceptable to the City, dedicated to the maintenance of the project's common areas, the internal irrigation system (fed by the well on Parcel B), and the well on Parcel B.

23. Prior to recordation of the final map and concurrent with the Subdivision Improvement Plan, the applicant shall submit CC&R's (Codes, Covenants and Restrictions) to the City Attorney, Public Works Director and Community Development Director for review and approval. CC&R's shall be recorded at time of recordation of final map. CC&R's shall include all

restrictions and maintenance regulations pertaining to, landscaping and common areas; shall include all restrictions and maintenance agreements pertaining to roads and access easements; and all restrictions and maintenance agreements pertaining to the irrigation well and internal irrigation water distribution system. The CC&Rs must be recorded prior to issuance of any building permit for any structure on the project site.

24. Pursuant to Section 16.20.090, upon approval of the final map by the City Council, the City Clerk shall execute the appropriate certificate on the certificate sheet and shall, subject to the provisions of Section 66464 of the state Subdivision Map Act, transmit the map, or have an authorized agent forward the map, to the county recorder prior to the issuance of a building permit.

25. Prior to issuance of a Certificate of Occupancy, all overhead utilities on the site shall be undergrounded.

Planning: Misc. Conditions

26. Prior to issuance of building permits, the applicant shall develop a building construction plan to be approved by the Planning Director and Building Official to insure that the homes meet or exceed Title 24 Energy Efficiency Standards and receive a green rating under either the LEEDS, Green Points Checklist, or other acknowledged rating system for energy conservation and green building practices. The latest version of the City of St. Helena green building standards will apply at the time of building permit submittal.

27. Prior to approval of the Final Map, the applicant shall enter into an Affordable Housing Agreement with the City of St. Helena, which agreement shall be subject to review and approval by the St. Helena City Council. The Affordable Housing Agreement shall be recorded in the Official Records of Napa County, and shall ensure that the project complies with the requirements of Municipal Code section 17.146.050, Residential development project, inclusionary/in-lieu fee requirements. The Affordable Housing Agreement shall demonstrate how the project satisfies the minimum density requirement of the General Plan to construct a minimum of 87 dwelling units, including single family, multifamily, and accessory dwelling units.

Planning: Flooding Conditions

28. Prior to issuance of building permits, the occupant shall prepare a statement that has been approved by the Public Works Director for inclusion in the disclosure documents provided to purchasers of homes which describes the flood risk present at this location and notifies the buyer of the availability of low-cost Preferred Risk Policy flood insurance.

Planning: Landscape Conditions

29. City of St. Helena Community Development Department shall review the final landscape and fencing plan as part of a Design Review approval and prior to issuance of building permits for construction on the property to ensure compliance with Mitigation Measures. Landscaping shall be native, drought tolerant, compatible with oak trees and requiring minimal irrigation.

30. Landscape plans shall comply with the State of California Model Water Efficient Landscape Ordinance and Section 17.112.140 of the St Helena Municipal Code. Plans shall be designed and verified by a landscape professional and shall include drought tolerant landscaping and low water irrigation systems. Landscaping shall not block vision from exits or at street intersections.

Planning: Construction Activities Conditions

31. Mechanical equipment, including heating and air conditioning units and spa equipment, shall be located away from property lines and shall be shielded or enclosed to minimize noise levels. Noise generated shall not exceed 60 dBa, Ldn. This condition of approval implements Mitigation Measure NOI-1 from the project environmental impact report, Chapter 8.24 of the St Helena Municipal Code, and noise-related policies of the St Helena General Plan, including policy 8.3.11 from the 1993 General Plan and policy PS2.4 from the 2019 General Plan.

32. The applicant and/or construction manager shall notify all contractors and subcontractors that no trespassing is allowed on adjoining properties.

33. To reduce disturbance of residents in the project vicinity, construction activities which generate noise that can be heard at the property line of any parcel of real property within the City limits shall be limited to 8:00 a.m. to 5:00 p.m. Monday through Saturday. Delivery of materials/equipment and cleaning and servicing of machines/equipment shall be limited to 7:00 a.m. to 6:00 p.m. Exceptions to these time restrictions may be granted by the Public Works Director for one of the following reasons: (1) inclement weather affecting work, (2) emergency work, or (3)other work, if work and equipment will not create noise that may be unreasonably offensive to neighbors as to constitute a nuisance. The City Engineer must be notified and give approval in advance of such work. No construction activities shall occur on Sundays or federal or local holidays that generate noise that can be heard at the property line of any parcel of real property within the City limits.

34. This property in the vicinity of an agricultural district. All future purchasers of homes or renters living in the project shall be notified of the expectation of legal, normal agricultural activities on the adjacent land, including day or night disbursement of chemicals, and creation of dust, noise, or fumes, and of the City's Right to Farm ordinance.

Public Works: General Conditions

35. Prior to recordation, the Final Map shall be designed to the satisfaction of the Public Works Director to accommodate the following facilities in the right of way of both Starr Avenue and Adams Street:

    - Curb and Gutter in accordance with City Standard #310 for a 24" gutter.
    - Sidewalks, either attached to the curb or detached from the curb, on both sides of the street along Starr Avenue, and only on the south side of Adams Street, in accordance with City Standard #315
    - Parking lane on both sides of the street in accordance with City Standard #301 for a "Collector" street.

- Class II on-street bike lane on both sides of the street in accordance with Caltrans' Highway Design Manual Index 1003.2 but not less than 5 feet wide.
- Two vehicle travel lanes in accordance with City Standard #301 for a "Collector" street.
- Striping to delineate parking, bike, and travel lanes.

36. All public improvements utility connections shall be designed in accordance with the City of St. Helena's Construction Standards (SHMC 16.32.230).

37. The City has adopted the latest edition of the Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual. Applicant is responsible for conformance construction plans in accordance with the BASMAA Manual, SHMC Section 13.32 et. seq., and the State Water Resources Control Board Phase II Municipal Separate Storm Water System (MS4) General Permit (Order 2013-0001 DWQ). Approval of project by Planning Commission does not constitute compliance with storm water regulations nor a right to develop per approved plans unless this condition of approval is fully satisfied.

38. Grading plans, public improvement plans and connections to public utilities shall be prepared by a California Licensed Civil Engineer.

39. An Encroachment Permit is required prior to starting work within City right of way.

40. All public facilities damaged by construction activities shall be the responsibility of the Applicant and shall be repaired to the satisfaction of the City at the Applicant's expense.

41. During water shortage emergencies, all construction water used for the project shall be obtained from a source other than a City of St. Helena potable water sources (SHMC 13.04.221).

42. Unless exempted, any ADU or JADU constructed with a new single-family home shall have a separate utility connection directly between the ADU or JADU and the utility and payment of the normal connection fee and capacity charge for a new dwelling are required SHMC 17.116.030(G)(2).

43. Developer shall design and construct all improvements and facilities shown on any approved tentative map, site plan, or other documents submitted for permit approval, in accordance with the St. Helena Municipal Code (SHMC), and the City of St. Helena Design and Construction Standards. Approval of a tentative map depicting improvements that do not conform to the SHMC or City standards does not constitute approval of an exception to the SHMC or City standards unless explicitly stated herein or in another City resolution.

44. The developer shall be responsible for all City plan check, map check and inspection costs. The developer shall deposit funds with the City upon the initiation of plan check services. The amount of the initial deposit shall be determined by the City Engineer. Additional funds may be required based upon actual plan check and inspection costs.

45. If any of the improvements which the applicant is required to construct or install is to be constructed or installed upon land in which the applicant does not have title or interest

sufficient for such purposes, the applicant shall do all of the following at least 60 days prior to the filing of the final or parcel map for approval pursuant to Government Code Section 66457:

a) Notify the City of St. Helena (hereafter "City") in writing that the applicant wishes the City to acquire an interest in the land which is sufficient for such purposes as provided in Government Code Section 66462.5;

b) Supply the City with (i) a legal description of the interest to be acquired, (ii) a map or diagram of the interest to be acquired sufficient to satisfy the requirements of subdivision (e) of Section 1250.310 of the Code of Civil Procedure, (iii) a current appraisal report prepared by an appraiser approved by the City which expresses an opinion as to the current fair market value of the interest to be acquired, and (iv) a current Litigation Guarantee Report;

c) Enter into an agreement with the City, guaranteed by such cash deposits or other security as the City may require, pursuant to which the applicant will pay all of the City's cost (including, without limitation, attorney's fees and overhead expenses) of acquiring such an interest in the land.

46. Prior to the issuance of a Certificate of Occupancy, all proposed utilities, both on-site and along project frontages, shall be placed underground. This does not include surface mounted transformers, pedestal mounted terminal boxes and meter cabinets.

47. Except for the existing well on Lot 19 of the Tentative Map that will be providing irrigation water to this development, all existing wells, septic tanks and/or underground fuel storage tanks shall be abandoned under permit and inspection of Napa County Department of Environmental Health. If applicant determines that there are none, prior to the issuance of a grading permit, the project engineer shall provide a letter describing the scope of the search done to make this determination and demonstrating to the reasonable satisfaction of the City Engineer that there are no other existing wells, septic tanks and/or underground fuel storage tanks within the boundaries of the Tentative Map.

Public Works: Fees

48. Public Works engineering and inspection fees for Improvement Plan and Final Map review shall be due and payable at the time of making the first submittal in connection with the Improvement Plans or the Final Map, as applicable.

49. All Public Works Development Impact fees shall be due and payable at the time of issuance of building permit(s) for the improvements to which they are applicable, unless otherwise authorized by the City.

Public Works: Improvement Plan and Construction Conditions

50. Improvement plans shall be prepared and submitted by a California Registered Civil Engineer for the construction of all necessary and required on-site and off-site improvements including grading, water, sanitary sewer, storm drain facilities, roadway improvements, curbs, gutters,

sidewalks, parkway strips and streetlights. All design and construction shall conform to the City of St. Helena Design and Construction Standards, as applicable.

51. Per Mitigation Measure GEO-1, a detailed Soils Investigation/Geotechnical Report (the "Soils Report") shall be prepared and submitted for review with the submittal of the improvement plans. The report shall address, at a minimum, potential for liquefaction, expansive soils, seismic risk, recommendations for roadway structural sections, foundation, and other items as mentioned in the Mitigation Measure. The improvement plans shall incorporate all design and construction criteria recommended in the Geotechnical Report and acknowledgement of inclusion of any recommendations in the soils report applicable to improvements within this development shall be included on a signature line for the Geotechnical Engineer on the cover sheet of the improvement plans. The signature line should include a statement that the Geotechnical Engineer has reviewed the plans and that the plans have incorporated recommendations as outlined in the Soils Report.

52. All private water mains, sewer mains and storm drains shall be clearly labeled "Private" on the improvement plans.

53. Improvements plans shall include a storm water pollution prevention plan. Erosion control measures shall be included within the improvement plans and the projects WDID number shall be included on the cover sheet of the improvement plans.

54. The improvement plans shall include the following note per the *Engineering Controls* portion of Mitigation Measure NOI-1: "All mobile and stationary construction equipment employing an internal combustion engine shall be equipped with suitable exhaust and intake silencers which are in good working order."

55. Roadway Improvements:

    a. The structural section of all road improvements shall be designed based upon a geotechnical investigation that provides the basement soils R-value and expansion pressure test results. A copy of the geotechnical report shall also be submitted with the first set of improvement plan check-prints.

    b. Where new roadway improvements abut existing paving and sidewalk, curb and gutter, the existing pavement and concrete curb and gutter section shall be saw-cut and reconstructed to provide a smooth conforms conform. The limits of such reconstruction shall be as determined by the City Engineer.

    c. Pavement markings and signage shall be provided on all streets as necessary and as required by the City Engineer. Signage restricting parking and red painted curbing shall be installed where appropriate. Speed limit signs and other regulatory and informational signs shall be installed at locations determined by the City Engineer.

    d. Street lighting shall be designed to provide to meet safety requirements and minimize glare. Street light standard and luminaries of the design, spacing, and locations shall be approved by the City Engineer. All lighting must have shields.

e. Ramps for disabled persons meeting the most recent standards shall be provided at all intersections and at the limits of the improvements where they do not adjoin existing sidewalk improvements. Sidewalk warps shall be provided as necessary to allow a clear four-foot-wide walkway at all locations, including areas where mailboxes, streetlights, and fire hydrants obstruct sidewalks.

56. In accordance with mitigation measure BIO-1 of the approved environmental document, a qualified biologist shall conduct a habitat assessment for bats in trees adjacent to the Project site within 2 weeks prior to any Project construction (site clearing, grading). The habitat assessment shall include a visual inspection of potential roosting features (bats need not be present) and presence of guano within the Project site and 50 feet around these areas. Potential roosting features found during the survey shall be mapped and described in a survey letter report. If roosting bats (individuals or colonies) are detected within the Project site, California Department of Fish and Wildlife shall be notified as soon as possible prior to any construction activity to confirm the bats can be avoided during construction. If a bat roosting or maternity colony cannot be completely avoided, a qualified biologist shall prepare a bat mitigation and monitoring plan for California Department of Fish and Wildlife review and approval, and that plan shall be implemented prior to commencement of construction that could impact the roosting bats or maternity colony. A written report of the findings shall be provided to the City prior to grading.

57. In accordance with mitigation measure BIO-2 of the approved environmental document, if construction activities are scheduled to occur during the breeding season for birds (February 1 through August 31), prior to commencement of construction the Project applicant or their contractor shall implement the following measures to avoid potential adverse effects to nesting raptors and other nesting birds:

- Preconstruction surveys by a biologist of all potential nesting habitats within 500 feet of construction activities, where accessible, shall be conducted by a qualified biologist. Surveys shall occur no more than 14 days prior to the initiation of site disturbance. If construction is stopped for 14 days or more during the breeding season, a new preconstruction nesting bird survey must be conducted before work can be restarted to ensure no new nesting has occurred in the interim.

- If preconstruction surveys indicate that nests are inactive or potential habitat is unoccupied during the construction period, no further mitigation is required, following submittal of a survey report letter to the City of St. Helena Planning Department.

- If active nests are found during preconstruction surveys, a no-disturbance buffer shall be created around active nests during the breeding season or until it is determined by the biologist that all the young have fledged. The buffers shall be established by the biologist in conjunction with the California Department of Fish and Wildlife. Typical buffers may include 500 feet for raptors and 50 to 250 feet for other bird species based on the location of the nest, the nesting species present, and types of construction activities that may cause potential nest abandonment. The perimeter of the buffer zone shall be fenced or marked with staked flagging.

58. In accordance with mitigation measure BIO-3 of the approved environmental document, wetland permits (e.g., 404 Nationwide Permit, 401 Water Quality Certification, and 1602 Streambed Alteration Agreement, respectively) shall be obtained prior to any grading work. Prior to issuance of a grading permit, the Project applicant shall demonstrate authorization from the Army Corp of Engineers and any other regulatory agency to alter the wetland.

59. Prior to the commencement of grading, the developer shall provide evidence that an archaeological monitor has been retained to be present on the site during all ground-disturbing activities per mitigation measure CUL-1.

60. Per mitigation measure CUL-2 of the approved environmental document, if human remains are unearthed during grading operations, work must stop within 100 feet of the find and the county Coroner shall be contacted immediately.

61. Per mitigation measure GEO-2 of the approved environmental document, if known or suspected paleontological resources are unearthed during grading or trenching operations, the area of discovery shall be roped off by the contractor to include a 50-foot radius buffer and remain off-limits until cleared by a qualified paleontologist.

62. Per mitigation measure HAZ-1 of the approved environmental document, the Project applicant shall ensure the following subsurface soils testing and follow-up analysis be performed prior to obtaining a grading permit:

    - A soils testing work plan shall be developed in accordance with DTSC's Interim Guidance for Sampling Agricultural Properties (DTSC 2008) by an appropriately licensed individual (i.e., professional geologist, environmental engineer, or similar qualification) for the portions of the Project site historically used for agriculture. Special consideration shall be given to targeting site soils that are representative of historic agricultural use, and to avoid sampling recent fill material placed during levee construction. Prior to carrying out soils testing, the work plan shall be submitted to the Napa County Division of Environmental Health (as the Certified Unified Program Agency for all cities and areas of Napa County) and the City of St. Helena for review and approval.

    - The number of soil samples, sampling methods, compounds tested, background samples (if applicable), and laboratory analyses shall be completed in accordance with DTSC's Interim Guidance. Should analytical results exceed naturally occurring concentrations or applicable CHHSLs, the health risks of such a condition shall be evaluated in human health risk assessment as described in DTSC standards and guidance (e.g., preliminary endangerment assessment guidance manual). • The risk assessment shall describe measures that must be implemented to ensure potential health risks to construction workers, site residents, and the general public as a result of hazardous materials are reduced to a cumulative risk of less than one in one million for carcinogens and a cumulative hazard index of 1 for non-carcinogens, or as required by the Napa County Division of Environmental Health acting as the Certified Unified Program Agency and/or DTSC oversight. In the event human health risk assessment shows elevated chemical concentrations pose a risk to human health or the environment, the risks shall be eliminated or substantially reduced by removal (e.g., excavation of soils and off-site disposal) or

remediation of contaminated soils, and/or implementation of institutional controls and engineering controls (IC/EC). IC/EC may include use of a construction risk management plan, use of hardscape to cap problem areas, importation of clean soil in landscaped area to eliminate exposure pathways, and/or deed restrictions. If IC/EC are implemented, an Operations and Maintenance Program shall be prepared and implemented to ensure that the measures adopted are maintained throughout the life of the Project.

63. Per mitigation measure NOI-1 of the approved environmental document, the contractor shall implement the following for onsite noise control and sound abatement means that, in aggregate, would yield sufficient construction noise reduction during the site preparation, grading/excavation, and building construction phases of the Project to ensure compliance with the FTA-based guidance standard of 90 dBA hourly Leq at or beyond the property lines of the nearest residences, as noted.

Administrative Controls – At all times during site preparation and construction:

- Comply with Chapter 8.24 of the Municipal Code with respect to allowable construction periods,
- Minimize idling time of onsite equipment, and
- Either locate onsite stationary construction equipment (such as generators or air compressors) as far from adjacent residential property boundaries as is feasible or place this equipment inside an approved noise-attenuating casing (e.g., sound-attenuated air intakes and heat vents, exhaust mufflers, etc.), or place this equipment indoors.

Engineering Controls – All mobile and stationary construction equipment employing an internal combustion engine shall be equipped with suitable exhaust and intake silencers which are in good working order; and

Install Sound Abatement – During site preparation and construction which involves the operation of more than two pieces of heavy equipment (dozer, backhoe, front-end loader, crane, tractor, etc.) for at least one hour and when operating within 25 feet of the exterior of a residence (either offsite or onsite), do the following:

- Erect a temporary barrier (i.e., plywood sheet) or install sound blankets (or comparable temporary solid barriers) on the Project's construction fencing, or
- Locate sound path intervening containers or trailers onsite to block direct line-of-sight between residences and the operating heavy equipment.

Public Works: Improvement Plan and Construction Conditions

64. Starr Avenue: Prior to the issuance of a Certificate of Occupancy, Starr Avenue shall join the existing Starr Avenue at Hunt Avenue and shall be improved to include the facilities listed in condition of approval #35. The structural section of the street shall be per recommendations contained in the Soils Report.

65. Adams Street: Prior to the issuance of a Certificate of Occupancy, Adams Street shall join the existing section of Adams Street (currently a dead end) and be extended into the subdivision. The street shall be improved per condition of approval #35. At the northerly terminus of Adams Street, a conform shall be constructed with Class 2 aggregate base to connect to the existing walking path/access road/levee. A gate shall be included at the terminus of the road and connection to the walking path/access road that has appropriate signage indicating it is not a through road for vehicles. The gate shall be constructed per direction from the Fire Chief and shall include a Knox box. The structural section of the street shall be per recommendations contained in the Soils Report.

66. Street A: Prior to the issuance of a Certificate of Occupancy, Street A shall be improved to include two 10 ft. travel lanes, two 8 ft. parking lanes, curbs, gutters, a 6 ft. planter strips and 4 ft. sidewalk on the south side of the road and a 10-foot distance from the face of curb to the right-of-way line on the west side of the road. The total right-of-way width shall be 56 feet. The area between the curb and the right-of-way line on the west side of the street shall be graded such that it can be passable by pedestrians (cross slopes should not exceed 5%). The structural section of the street shall be per recommendations contained in the Soils Report.

67. Streets B and C: Prior to the issuance of a Certificate of Occupancy, Streets B and C shall be improved to include two 10 ft. travel lanes, two 8 ft. parking lanes, curbs, gutters, 6 ft. planter strips and 4 ft. sidewalks within an overall 56 ft. right-of-way. The cul-de-sac associated with Street C shall be constructed per City Standard 304. The knuckle at the intersection of Streets B and C shall be constructed per City Standard 305. The structural section of the street shall be per recommendations contained in the Soils Report.

68. EVA: From Street A to levee: Prior to the issuance of a Certificate of Occupancy, the emergency vehicle access road (EVA) shall be improved to provide an all-weather access road (paved) from Street A up to the existing levee road to the north. The width of the EVA shall be a minimum of 21 feet from face of curb to face of curb within an overall 25 ft. wide dedicated EVA. The EVA shall accommodate emergency vehicles (must provide for turning radii to accommodate fire vehicles as per the Fire Department requirements.) Turning templates shall be provided with the improvement plans during the plan check process to ensure the EVA can accommodate Fire Department apparatus.

69. Access from Lot 52 to Starr Avenue shall be for EVA and pedestrian purposes. Ownership of this parcel shall be the same as Lot 52, or the access point shall be made part of Lot 52.

70. Adjacent to Lot 51 there is a portion of existing right-of-way that needs to be vacated by the City prior to the recordation of the final map. The applicant shall provide all descriptions and

plats to the City for vacation of this right-of-way. The vacation of the right-of-way by the City of St. Helena shall either be done prior to or concurrently with the recordation of the final map.

71. Per Mitigation Measure AES-1, all streetlights shall include shields and downward focused to reduce glare and spillover light and to minimize effects on wildlife and to retain the rural ambience of the development.

Public Works Water and Sanitary Sewer Improvements Conditions

72. As detailed in the Final EIR for the project, the Developer is required to off-set the Project's water demand of 37.04 AFY. The Project's landscape water demand is estimated at 17.16 acre-feet per year, which is within the capacity of the existing on-site well. Due to the new potable water demand on the City system in the amount of 19.8 AFY, the Developer shall implement an alternative innovative method of mitigating water use as allowed under Section 13.12.030(B) of the SHMC and/or Appendix J of the EIR. The required improvements to offset water demand are as follows: Identify and implement offsite improvements that reduce water loss from the public water distribution system and/or identify and implement offsite improvements that result in a net increase in potable water availability equivalent to 19.8 AFY, or a combination of these. No building permit may be issued until the City has confirmed that the Developer has completed the approved measures and such measures have been accepted by the City, or Developer has entered into a public improvement agreement with the City to ensure the completion of such improvements and provided security in one of the forms described in Government Code section 66499 in an amount equal to the estimated cost of construction of the proposed offsite improvements as determined, or reviewed and approved, by the City Engineer. Any public improvements shall be constructed to St. Helena Public Works Construction Standards whenever applicable.

73. Any modifications to the existing well other than the installation or maintenance of pumping and storage equipment and connection to the onsite irrigation water distribution system, shall require a permit per section 13.16.060 of the St Helena Municipal Code.

74. The Final Map shall include easements to provide for the installation of the private onsite water system connected to onsite well.

75. All homes and the proposed multi-family parcel shall be served by the onsite well for landscaping and other outdoor water use. Only interior fixtures may be served by City of St. Helena domestic water.

76. All parcels must be connected to the internal irrigation well for outside uses, including landscape irrigation and exterior hose bibs.

77. The Applicant shall make written application to the City of St. Helena in conformance with Chapter 13.04 of the St. Helena Municipal Code for Water Service to the new parcels.

78. The applicant/owner shall be required to install water mains and service lines to serve the project parcels with City water. All water mains and lines within the public right of way shall be constructed in conformance with City standards.

79. The applicant/ owner shall make written application to the City of St. Helena for annexation to the Sewer District and for Sewer Service to the new parcels in conformance with Chapter 13.20.070 of the St. Helena Municipal Code.

80. All public water and sewer mains must be located in public right-of-way wherever possible. Where public water and sewer mains must be located on private property, all necessary easement dedications must be made part of the final map or by separate document (if outside of the boundaries of the final map) prior to final acceptance of the improvements by the City.

81. Sewer grades must be designed such that ultimate finished floors are a minimum of 12" above upstream manhole or clean-out rim elevations. Inadequate elevation differentials or grade on private laterals, as determined by the City, must be mitigated by either raising finished floor elevation(s) or installing privately owned and operated sewer lift station(s) with grinder/ejector pump(s) on site.

82. All water improvements shall conform to the City standards.

83. The existing 10 ft. public waterline easement shall be abandoned by separate document once the relocated water line has been built and is operational.

84. Prior to the first Certificate of Occupancy, the existing 12-inch waterline running through the development shall be relocated to Starr Avenue by the applicant/developer. At the westerly end of Starr Avenue, the line shall be reconnected to the existing 12-inch waterline outside north of Lot 46.

85. The proposed well and appurtenances (pump, etc.) for this development shall be owned and operated by the Homeowner's Association for this development. The well shall supply irrigation water for all landscaping of common areas and on all lots within the subdivision to limit use of domestic water produced by the City. Signage shall be provided on each lot warning of the use of well water and that the well water shall not be used for domestic purposes. Piping for all irrigation water from the well shall be purple pipe (same as used for recycled water). Also, disclosure statements (either through disclosures as required by the Department of Real Estate or on the final map) shall be provided to all property owners notifying them about use of well water and statements warning that well water should not be used for domestic purposes.

86. The sewer easement on lot 21 shall be a minimum of 15 feet wide and shall be located entirely within Lot 21. Statements shall be included on the final map precluding any permanent structures from being constructed within this easement. The sewer line shall be connected to the existing sewer main in Paseo Grand Drive.

Public Works Drainage Improvements Conditions

87. Prior to the issuance of the first building permit, all City-required improvements related to storm water for the project shall be installed by the project developer at its expense. Drainage improvements shall be designed and funded by the developer in accordance with the Design Criteria utilizing the rationale method and any applicable adopted City drainage plans.

88. Prior to the issuance of the first building permit, the applicant shall submit for review and approval, drainage plans and hydraulic calculations prepared by a Registered Civil Engineer. The drainage plans and calculations shall indicate the following conditions before and after development:

    - Quantities of water, water flow rates, major water courses, drainage areas and patterns, diversions, collection systems, flood hazard areas, sumps and drainage courses.

89. Post-development flows leaving the site shall not exceed pre-development flows.

90. Prior to building permit issuance, the applicant shall provide to the City an analysis of the capacity and condition of existing drainage facilities downstream of the development (including any detention/retention ponds), including recommendations for off-site drainage improvements, which shall be constructed prior to the issuance of the first certificate of occupancy. Site grading and drainage improvements shall be shown on the improvement plans.

91. The 100-year overflow and pipeline easement on Lot 25 shall be dedicated on the final map and language shall be included on the final map prohibiting any permanent structures (including garages, sheds, swimming pools, etc.) from being constructed within the easement, as well as provisions (including requirement regarding grading) that ensure that Lot 25 remain in a condition such that it allows relief for the 100-year storm overflows.

92. Prior to Final Map recordation, the developer shall obtain a construction easement from the City over Parcel 009-030-019 to construct the drainage improvements, wall, and fence on lots 5-20. The drainage ditch on Lots 5-20 shall be privately owned and maintained.

Public Works Final Map Conditions

93. A final map, as defined in the State Subdivision Map Act, shall be prepared by a licensed surveyor or civil engineer, showing all parcels, rights-of-way, and easement(s) shall be filed with the City Engineers Office. The final map shall be substantial conformance with the approved Tentative Map and all applicable conditions of approval. The final map is not valid until it has been approved and recorded.

94. Prior to building permit issuance, the developer shall secure all necessary rights-of-way and easements for both onsite and offsite improvements. Rights-of-way and easements shall be dedicated on the map or provided by separate instrument. The developer shall prepare all necessary legal descriptions and deeds. Offers of dedication shall be either via easement or fee title).

95. The applicant shall transmit by certified mail a copy of the conditionally approved Tentative Map together with a copy of Section 66436 of the State Subdivision Map Act to each public entity or public utility that is an easement holder of record. Written compliance shall be submitted to the City of St. Helena

96. The final map shall not be approved prior to approval of the Subdivision Improvement Plans.

97. Prior to approval of the final map, the developer shall either complete required improvements in accordance with the approved improvement plans or enter into a Subdivision Improvement Agreement with the City. A certificate of occupancy shall not be issued for any structure until required improvements are completed to the satisfaction of the City Engineer.

98. Abandonment of existing 10-foot public water easement crossing the property shall be included on the final map or by separate document.

99. The unnumbered lot between Lots 3 and 4 as shown on the Tentative Map shall be included as part of Lot 52 and shall not be a separate lot.

Public Works Construction Conditions

100. No grading or other construction shall be performed until the improvement plans have been approved and signed by the City Engineer. Encroachment Permits and Building Permits will not be issued prior to the approval of the improvement plans. An Encroachment Permit is required for any work within the City's rights of way.

101. The developer shall keep adjoining public streets free and clean of project dirt, mud, materials, and debris during the construction period, as is found necessary by the City Engineer.

102. Prior to the issuance of a grading permit, the developer shall provide evidence that a Notice of Intent has been submitted and received by the Regional Water Quality Control Board for a General Construction Activity Storm Water Permit. A copy of the project Storm Water Pollution Protection Plan shall be submitted to the City.

103. If any hazardous waste is encountered during the construction of this project, all work shall be immediately stopped and the Napa County Environmental Health Department, the Fire Department, the Police Department, and the City Inspector shall be notified immediately. Work shall not proceed until clearance has been issued by all of these agencies.

104. Prior to final preparation of the subgrade and placement of base materials, all underground utilities shall be installed and service connections stubbed out behind the sidewalk. Public utilities, Cable TV, sanitary sewers, and water lines shall be installed in a manner which will not disturb the street pavement, curb, gutter and sidewalk, when future service connections or extensions are made.

105. Where soil or geologic conditions encountered in grading operations are different from that anticipated in the soil and/or geologic investigation report, or where such conditions warrant changes to the recommendations contained in the original soil investigation, a revised soil or

geologic report shall be submitted for approval by the City Engineer. It shall be accompanied by an engineering and geological opinion as to the safety of the site from hazards of land slippage, erosion, settlement, and seismic activity. Additionally, if field conditions warrant installation of any subdrains, the location, size and construction details must be provided to the City for review and approval prior to construction.

106. Prior to placing the final lift of asphalt, all public sanitary sewer lines shall be video inspected at the expense of the contractor/developer. All video tapes shall be submitted to the City. If any inadequacies are found, they shall be repaired prior to the placement of the final lift of asphalt.

107. All streets, curbs, gutters, sidewalks or other public facilities damaged in the course of construction associated with this development shall be the responsibility of the Developer and shall be repaired to the satisfaction of the City at the Developer's expense.

108. The applicant shall submit a proposed haul route for all trucking associated with this project to the City Engineer for review and approval prior to issuance of a grading permit.

109. Dust control must be maintained to the City's satisfaction.

110. A certificate of occupancy shall not be issued for any structure until required improvements are completed to the satisfaction of the City Engineer.

Public Works Subdivision Final and/or Release of Securities Conditions:

111. All public improvements shown on the Improvement Plans shall be completed and accepted by the City prior to release of any security posted.

112. All punch-list work shall be completed, and any outstanding inspection fees or other charges shall be paid prior to issuance of any certificate of occupancy or prior to acceptance of the improvements, at the discretion of the City.

113. Video inspections shall be made of all storm drain and sewer lines installed by developer as set forth in the approved improvement plans to ensure that they are clean of dirt, rocks, debris or other material. Contractor/developer shall be responsible for cleaning and flushing all storm drain lines prior to acceptance by the City. If flushing of the storm drain system is required, the contractor/developer shall put sufficient plugs/filters in place to ensure that any debris, mud or other material is not washed beyond the piping system in the subdivision nor into any natural water course. A copy of the DVD of all storm drain lines shall be delivered and reviewed by the City prior to acceptance. This condition shall be satisfied prior to issuance of any certificate of occupancy or prior to acceptance of the improvements, at the discretion of the City.

114. Developer shall provide sufficient security guaranteeing the public improvements for a period of one year.

115. A complete set of As-Built or Record improvement plans showing all substantial changes from the original plans shall be certified by the Civil Engineer of record and submitted to the City Engineer prior to acceptance of the public improvements.

116. Prior to acceptance of the public improvements, the developer shall provide a written statement signed by his or her engineer certifying that they observed the work during construction and that site grading and all private site improvements have been completed in accordance with the improvement plans approved by the City Engineer.

117. Prior to acceptance of the public improvements, the developer shall provide a written statement signed by his or her geotechnical engineer certifying that they observed the work and reviewed testing results, and that all of work was performed in accordance with the recommendations included in the Soils Report or other recommendations necessitated by field conditions.

Fire Department Conditions

118. Prior to the issuance of a Certificate of Occupancy, the developer is responsible for fire hydrants to be included and installed within the development (number, location and spacing) to the satisfaction of the Fire Department. Locations of the fire hydrants shall be approved by the Fire Department prior to approval of the final map.

119. Plans submitted for building permit shall exhibit compliance with the current St. Helena Fire Code, as adopted and codified in St. Helena Municipal Code Chapter 15.36.

120. Prior to issuance of future building permits, all construction plans for homes and other structures shall include fire sprinklers as required by the City of St. Helena Fire Department.

121. One hour minimum fire-resistant construction on all exterior walls within 10’ of property boundary is required. Fire resistant construction of interior walls shall be determined by type of occupancy.

122. Any gates installed to control vehicular access to a property are required to be setback 30-feet from the property line and/or edge of pavement, whichever is greater. No vehicle gates may be installed without Fire Department and Public Works Department review and explicit approval.

123. Access to the levee road is restricted for public use and only granted to emergency vehicles and emergency egress for Vineyard Valley Mobile Home Park residents. Signage prohibiting its use by the public is recommended. Public access will be granted at the discretion of the Authority Having Jurisdiction during emergencies/evacuations.

April 7, 2023

Maya DeRosa, Planning & Building Director
Planning Department
City of St. Helena
1572 Railroad Avenue
St. Helena, CA 94574

Dear Maya DeRosa:

RE: City of St. Helena's 6th Cycle (2023-2031) Revised Draft Housing Element

Thank you for submitting the City of St. Helena's (City) revised draft housing element that was received for review on February 7, 2023. Pursuant to Government Code section 65585, subdivision (b), the California Department of Housing and Community Development (HCD) is reporting the results of its review. HCD considered comments from Holland and Knight; David Kellogg and Generation Housing; pursuant to Government Code section 65585, subdivision (c).

The revised draft element addresses many statutory requirements described in HCD's December 6, 2022 review; however, revisions will be necessary to comply with State Housing Element Law (Article 10.6 of the Gov. Code). The enclosed Appendix describes the revisions needed to comply with State Housing Element Law.

Public participation in the development, adoption and implementation of the housing element is essential to effective housing planning. During the housing element revision process, the City must continue to engage the community, including organizations that represent lower-income and special needs households, by making information regularly available while considering and incorporating comments where appropriate. Please be aware, any revisions to the element must be posted on the local government's website and to email a link to all individuals and organizations that have previously requested notices relating to the local government's housing element at least seven days before submitting to HCD.

For your information, pursuant to Assembly Bill 1398 (Chapter 358, Statutes of 2021), if a local government fails to adopt a compliant housing element within 120 days of the statutory deadline (January 31, 2023), then any rezoning to make prior identified sites available or accommodate the regional housing needs allocation (RHNA) (Program H-A) shall be completed no later than one year from the statutory deadline pursuant to Government Code sections 65583, subdivision (c) and 65583.2, subdivision (c).

Otherwise, the local government's housing element will no longer comply with State Housing Element Law, and HCD may revoke its finding of substantial compliance pursuant to Government Code section 65585, subdivision (i). Please be aware, if the City fails to adopt a compliant housing element within one year from the statutory deadline, the element cannot be found in substantial compliance until these rezones are completed.

Please be aware Chapter 654, Statues of 2022 (AB 2339), adds specificity on how cities and counties plan for emergency shelters and ensure sufficient and suitable capacity. Future submittals of the housing element may need to address these statutory requirements. For additional information and timing requirements, please see HCD's memo at https://www.hcd.ca.gov/sites/default/files/docs/planning-and-community/ab2339-notice.pdf.

Several federal, state, and regional funding programs consider housing element compliance as an eligibility or ranking criteria. For example, the CalTrans Senate Bill (SB) 1 Sustainable Communities grant; the Strategic Growth Council and HCD's Affordable Housing and Sustainable Communities programs; and HCD's Permanent Local Housing Allocation consider housing element compliance and/or annual reporting requirements pursuant to Government Code section 65400. With a compliant housing element, the City will meet housing element requirements for these and other funding sources.

For your information, some general plan element updates are triggered by housing element adoption. HCD reminds the City to consider timing provisions and welcomes the opportunity to provide assistance. For information, please see the Technical Advisories issued by the Governor's Office of Planning and Research at: https://www.opr.ca.gov/planning/general-plan/guidelines.html.

We are committed to assisting the City in addressing all statutory requirements of State Housing Element Law. If you have any questions or need additional technical assistance, please contact Jamillah Williams, of our staff, at Jamillah.Williams@hcd.ca.gov.

Sincerely,

Paul McDougall
Senior Program Manager

APPENDIX
CITY OF ST. HELENA

The following changes are necessary to bring the City's housing element into compliance with Article 10.6 of the Government Code. Accompanying each recommended change, we cite the supporting section of the Government Code.

Housing element technical assistance information is available on HCD's website at https://www.hcd.ca.gov/planning-and-community-development/hcd-memos. Among other resources, the housing element section contains HCD's latest technical assistance tool, *Building Blocks for Effective Housing Elements (Building Blocks),* available at https://www.hcd.ca.gov/planning-and-community-development/housing-elements/building-blocks and includes the Government Code addressing State Housing Element Law and other resources.

A. Housing Needs, Resources, and Constraints

1. *Affirmatively further[ing] fair housing in accordance with Chapter 15 (commencing with Section 8899.50) of Division 1 of Title 2…shall include an assessment of fair housing in the jurisdiction. (Gov. Code, § 65583, subd. (c)(10)(A).)*

   Enforcement: While the element discussed compliance with existing fair housing laws, it must also address any past or current findings, lawsuits, enforcement actions, settlements or judgements related to fair housing or civil rights. For additional information, please see HCD's prior review and pages 28-30 on HCD's Affirmatively Furthering Fair Housing (AFFH) Guidance Memo at https://www.hcd.ca.gov/community-development/affh/index.shtml.

   Concentration of Fair Housing Issues: The element was revised to briefly indicate that the east side of the City's fair housing conditions are attributed to types of uses and zoning. However, to better formulate appropriate policies and programs, the element must still analyze trends, past and current policy efforts, and their effectiveness, neighborhood investment or disinvestment, local data and knowledge, and other relevant factors, particularly relative to equitable quality of life, resources, and strategies to address any inequities in quality of life. Please see HCD's prior review for more information.

2. *An inventory of land suitable and available for residential development, including vacant sites and sites having realistic and demonstrated potential for redevelopment during the planning period to meet the locality's housing need for a designated income level, and an analysis of the relationship of zoning and public facilities and services to these sites. (Gov. Code, § 65583, subd. (a)(3).)*

Progress towards the Regional Housing Needs Allocation (RHNA): The element is crediting 87 units from the Hunter Subdivision Project towards the RHNA. HCD's prior review found that the City must analyze the likelihood that this project will be built and units will be available during the planning period. Additionally, the prior review found that HCD has received public comments regarding the City's ability to process and approve this project in a timely manner. Further, this analysis is particularly important given that the project has been pending since the 4th cycle planning period and the project will help the City provide housing and build a portion of their RHNA. The element was revised to state that the project will receive "planning approvals in the near future" and the next planning commission hearing is in February. This does not address HCD's prior review. The element should clearly indicate timelines and remaining steps to fully entitle this project and demonstrate the likelihood these units will become available during the planning period. Lastly, the revised element is now crediting these units towards the City's above moderate-income RHNA. However, HCD received public comments from the applicant indicating that 20 percent of the project will be affordable via deed restrictions in line with the City's inclusionary requirements. The element could be revised to credit a portion of these units towards the City's lower-income RHNA. Based on the outcomes of a complete analysis, the element should include a program to monitor the progress of the project and take alternative action if the project is not entitled and permit are not issued in a timely manner.

Realistic Capacity: The element was revised to state that sites are assumed to develop at an average of 80 percent of maximum allowable densities and noted three projects that have developed between 50-100 percent of maximum allowable densities. First, while the element states that most sites were assumed to develop at 80 percent of maximum allowable densities, Sites 2, 4 and 5 have higher build out assumptions (e.g., 85-100 percent). The element should either adjust calculations in the inventory based on the analysis or provide a specific analysis supporting the higher assumptions. Second, the analysis indicates that realistic capacity was based on past trends and notes three projects. However, the element should include all recent residential or multifamily projects to analyze all development activity by zone, size, allowable density, built density and affordability.

The element was revised to indicate that sites in the mixed-use zone do allow 100 percent commercial and that the City will implement Program H-P to incentivize residential development. However, to account for the likelihood of 100 percent nonresidential development, the analysis should discuss recent trends for development in the pertinent zone, including how often 100 percent nonresidential uses occur, then, adjust residential capacity assumptions and add or modify programs, if appropriate.

Nonvacant Sites: The element was revised with additional site characteristics, including owner interest and referenced past projects that redeveloped to residential development with similar existing uses. However, in addition to property owner interest and development trends, the analysis should consider additional factors that are indicative of redevelopment potential. For example, several sites seem to have low underutilization e.g., existing densities vs. allowable densities, floor area ratio (FAR), low lot coverage,

etc., The element could quantify this factor for applicable sites and include additional local or regional examples supporting the trend that underutilized sites will redevelop at the densities and uses identified in the inventory.

Lot Consolidation: The revised element now indicates that Sites 8 and 9 are made up of several parcels. The element should include an analysis evaluating whether these sites will need be consolidated to develop at the densities that were identified in the inventory. Based on a complete analysis, the element may need to add or modify programs with a commitment to facilitate and incentivize lot consolidation.

City-Owned Sites: HCD's prior review found that the element must include an analysis supporting residential capacity assumptions, existing uses and any known conditions that would preclude development. The element was not revised to address this finding. The element did reference that the City conducted feasibility studies for these sites. Where appropriate, the analysis should incorporate more information regarding the outcomes of these feasibility studies to support the likelihood of development on these sites. Please see HCD's prior review for additional information.

Sites Inventory Electronic Form: Please note, pursuant to Government Code section 65583.3, subdivision (b), the City must utilize standards, forms, and definitions adopted by HCD when preparing the sites inventory. Please see HCD's housing element webpage at https://www.hcd.ca.gov/community-development/housing-element/index.shtml for a copy of the form and instructions. The City can reach out to HCD at sitesinventory@hcd.ca.gov for technical assistance. Please note, upon adoption of the housing element, the City must submit an electronic version of the sites inventory with its adopted housing element to sitesinventory@hcd.ca.gov.

Infrastructure: The element was revised to state that adequate infrastructure is available contingent upon the implementation of infrastructure improvements identified in the City's Integrated Utility master plan. However, the element must still include a program committing to actions and a timeline to make sufficient infrastructure and implement the necessary improvements to accommodate the RHNA. Please see HCD's prior review for additional information.

3. *An analysis of potential and actual governmental constraints upon the maintenance, improvement, or development of housing for all income levels, including the types of housing identified in paragraph (1) of subdivision (c), and for persons with disabilities as identified in the analysis pursuant to paragraph (7), including land use controls, building codes and their enforcement, site improvements, fees and other exactions required of developers, and local processing and permit procedures.. (Gov. Code, § 65583, subd. (a)(5).)*

   Land Use Controls: While the element was revised to include a list of all development standards by zone, it must evaluate lot coverage requirements and heights for impacts on achieving maximum densities, cost, feasibility and supply (number of units) of housing.

Parking: The element was revised with an analysis evaluating the 1.5 parking space requirement for smaller bedroom types (i.e., studio and one-bedrooms). While the analysis found that these requirements are not a constraint on development due to the lack of available public transportation, requiring 1.5 parking spaces for a studio apartment is generally considered a constraint and can impact a project's cost, supply (number of units), feasibility and ability to achieve maximum densities. The element should be revised with a program committing to reducing parking requirements.

Local Permit and Processing Procedures: HCD's prior review found that multifamily housing is subject to a conditional use permit (CUP) and it is considered a constraint. Additionally, HCD's certification of the 5th cycle housing element on May 29, 2015 explicitly stated that for the City to remain in compliance, it must complete Program HE1.D which committed to eliminating use permit requirements for multifamily projects in the medium density residential district. Further, HCD's records indicate that the City utilized state funding to remove or lessen discretionary review for multifamily housing (SB2 Planning Grants) and removing the use permit requirements for multifamily housing in certain zones (LEAP Planning Grants).

However, the element provides conflicting information. For example, the element's review and revise section indicates that the City removed the CUP requirement for multifamily housing. Additionally, page 2-162 indicates that a CUP is a required permit, while page 2-160 notes that multifamily is only subject to design review. The element must reconcile this information and clearly indicate if multifamily housing is subject to CUP requirements and whether this constraint has been removed. If this constraint has not been fully addressed, the element must include a program committing to removing this constraint early in the planning period (e.g., one year).

Additionally, the element should address public comments on this revised draft submittal and discuss compliance with the Permit Streamlining Act and intersections with CEQA and timing requirements, including streamlining determinations and add or modify programs as appropriate.

Fees and Exactions: While the element now includes a listing of fees for a typical single family and multifamily development, the element should specifically evaluate impact fees e.g., parks and public safety for impacts on housing cost, supply, and feasibility.

Constraints on Housing For Persons with Disabilities: While the element now includes Program H-F committing to allowing group homes for seven or more persons similarly to multifamily uses, it must also commit to 1) allowing group homes of seven or more in all zones allowing residential uses and 2) permit these uses with objectivity and certainty similar to other residential uses of the same form.

B. Housing Programs

1. *Identify actions that will be taken to make sites available during the planning period with appropriate zoning and development standards and with services and facilities to accommodate that portion of the city's or county's share of the regional housing need for each income level that could not be accommodated on sites identified in the inventory completed pursuant to paragraph (3) of subdivision (a) without rezoning, and to comply with the requirements of Government Code section 65584.09. Sites shall be identified as needed to facilitate and encourage the development of a variety of types of housing for all income levels, including multifamily rental housing, factory-built housing, mobilehomes, housing for agricultural employees, supportive housing, single-room occupancy units, emergency shelters, and transitional housing. (*Gov. Code, § *65583, subd. (c)(1).)*

   As noted in Finding A2, the element does not include a complete site analysis, therefore, the adequacy of sites and zoning were not established. Based on the results of a complete sites inventory and analysis, the City may need to add or revise programs to address a shortfall of sites or zoning available to encourage a variety of housing types. In addition, the element should be revised, as follows:

   Replacement Housing Requirements: The housing element must include a program to provide replacement housing. Absent a replacement housing program, these sites are not adequate sites to accommodate lower-income households. The replacement housing program must adhere to the same requirements as set forth in Government Code section 65915, subdivision (c)(3).

   City-Owned Sites: While the element includes Program H-L (City-Owned Sites), the Program should be revised based on the outcomes of a complete analysis as noted in Finding A2. In addition, the Program should include steps and milestones beyond a request for proposal, including complying with the Surplus Land Act, facilitating all necessary entitlements, assisting with funding, issuing permits and alternative actions to identify other sites within a specified time if development does not proceed as anticipated. Finally, the program should include numeric objectives, including affordability, consistent with the assumptions in the sites inventory.

   Permanent Supportive Housing: The element now includes Program H-F (Municipal Code Updates) to incorporate objective design standards for ministerial design review of multifamily uses. However, the Program should clarify permanent supportive housing pursuant to Government Code section 65651 will also be permitted without discretionary action.

2. *Address and, where appropriate and legally possible, remove governmental and nongovernmental constraints to the maintenance, improvement, and development of housing, including housing for all income levels and housing for persons with disabilities. The program shall remove constraints to, and provide reasonable*

accommodations for housing designed for, intended for occupancy by, or with supportive services for, persons with disabilities. (Gov. Code, § 65583, subd. (c)(3).)

As noted in Finding A3 the element requires a complete analysis of potential governmental and nongovernmental constraints. Depending upon the results of that analysis, the City may need to revise or add programs and address and remove or mitigate any identified constraints.

3. *Promote and affirmatively further fair housing opportunities and promote housing throughout the community or communities for all persons regardless of race, religion, sex, marital status, ancestry, national origin, color, familial status, or disability, and other characteristics... (Gov. Code, § 65583, subd. (c)(5).)*

   As noted in Finding A1, the element requires a complete AFFH analysis. Depending upon the results of that analysis, the City will need to add or revise programs. Goals and actions must specifically respond to the analysis and to the identified and prioritized contributing factors to fair housing issues and must be significant and meaningful enough to overcome identified patterns and trends.

   Additionally, as found in HCD's prior review, programs still should be revised with increased metrics and significant and meaningful actions (beyond the RHNA) to promote housing mobility (more choices and affordability across geographies) and new housing choices and affordability in higher opportunity and relatively higher income areas (e.g., missing middle housing types). Further, as found in HCD's prior review, the element still must include significant and meaningful place-based strategies for community revitalization with actions targeting the southeast quadrant of the City to improve quality of life related to housing, transportation, safety, education, recreation, infrastructure, etc., and quantified metrics that target beneficial impacts for people, households and neighborhoods (e.g., number of people or households assisted, number of housing units built, number of parks or infrastructure projects completed). HCD will follow-up under a separate cover with additional information.

EXHIBIT E

CITY OF ST. HELENA

RESOLUTION NO. 2023-44

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ST. HELENA ADOPTING A GENERAL PLAN AMENDMENT (GPA 2023-001) TO UPDATE THE HOUSING ELEMENT OF THE GENERAL PLAN FOR THE PERIOD OF 2023-2031 AND ADOPTING AN ADDENDUM TO THE GENERAL PLAN ENVIRONMENTAL IMPACT REPORT

Recitals

1. The California legislature has found that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Gov. Code Section 65589.5.); and
2. The legislature has further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." (Gov. Code Section 65589.5.); and
3. The legislature recently adopted the Housing Crisis Act of 2019 (SB 330) which states that "In 2018, California ranked 49th out of the 50 states in housing units per capita… California needs an estimated 180,000 additional homes annually to keep up with population growth, and the Governor has called for 3.5 million new homes to be built over 7 years"; and
4. State Housing Element Law (Government Code Sections 65580 et seq.) requires that the City Council adopt a Housing Element for the eight-year period 2023-2031 to accommodate the City of St. Helena's (City) regional housing need allocation (RHNA) of 256 housing units, comprised of 104 very-low income units, 59 low-income units, 26 moderate-income units, and 67 above moderate-income units; and
5. To comply with State Housing Element Law, the City of St. Helena has prepared Housing Element Update 2023-2031 (the Housing Element); and
6. As provided in Government Code Section 65350 et. seq., the Housing Element constitutes a General Plan Amendment; and
7. As provided in Government Code Sections 65352 – 65352.5 the City of St. Helena referred the Housing Element to all California Native American tribes on the contact list provided by the Native American Heritage Commission and to other entities listed. No California Native American tribe requested consultation; and
8. The Housing Element has been prepared to comply with State law, accommodate the RHNA, affirmatively further fair housing, and facilitate and encourage a variety of

housing types for all income levels, including multifamily housing (Gov. Code Sections 65583.2 and 65583(c)); and

9. The City conducted extensive community outreach over a two-year period including six public meetings/workshops and joint Planning Commission/City Council meetings; and

10. In accordance with Government Code Section 65585 (b), on September 7, 2022, the City submitted the draft Housing Element to the State Department of Housing and Community Development (HCD) for its review; and

11. On December 6, 2022, the City received a letter from HCD providing its comments and findings regarding the draft Housing Element; and

12. On January 31, 2023, the City published a revised draft Housing Element responding to HCD's findings and requested public comment on the draft; and

13. On February 7, 2023, the City submitted a second draft Housing Element to HCD for review; and

14. On April 7, 2023, the City received a second letter from HCD providing additional comments and findings regarding the draft Housing Element; and

15. The City revised the draft Housing Element to address HCD's additional comments; and

16. On May 2, 2023, the City of St. Helena Planning Commission held a duly noticed public hearing on the draft Housing Element where they approved a resolution recommending that the City Council adopt the General Plan EIR Addendum and Housing Element Update; and

17. On May 9, 2023, the City Council of the City of St. Helena conducted a duly and properly noticed public hearing, reviewed the Housing Element and all pertinent maps, documents and exhibits, including HCD's findings, the City's response to HCD's findings, the staff report and all attachments, and oral and written public comments; and determined the Housing Element to be consistent with State law and the General Plan of the City of St. Helena.

Resolution

A. In making the findings in this Resolution, the City Council relied upon and hereby incorporates by reference all of the documents referenced in this Resolution and the associated staff reports, City files for this matter, correspondence, presentations and other materials.

B. **NOW, THEREFORE BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF ST. HELENA AS FOLLOWS:**

1. The foregoing recitals are true and correct and are incorporated by reference into this action.

2. The City Council received an Addendum to the St. Helena General Plan Update Environmental Impact Report (General Plan EIR) (State Clearinghouse No.

2010042001). In accordance with CEQA Guidelines Sections 15162 and 15164, the Addendum evaluated whether the project's environmental impacts are covered by and within the scope of the General Plan EIR and substantiated the City's determination that the Housing Element update policies and programs are within the scope of the General Plan EIR. Therefore, the Housing Element update does not require subsequent action under CEQA, and the Addendum Evaluation, in conjunction with the EIR, adequately analyzes potential environmental impacts.

3. The Housing Element substantially complies with Housing Element Law, as provided in Government Code 65580 et seq., and contains all provisions required by State Housing Element Law.
4. This resolution shall become effective upon adoption by the City Council.
5. The Community Development Department or designee is hereby directed to file all necessary material with the Department of Housing and Community Development for the Department to find that the Housing Element is in conformance with State Housing Element Law and is further directed and authorized to make all non-substantive changes to the Housing Element to make it internally consistent or to address any non-substantive changes or amendments requested by the Department to achieve certification.
6. The City Council adopts a General Plan Amendment (GPA 2023-001) to update the Housing Element of the General Plan for the period of 2023 – 2031 and adopts an Addendum to the General Plan Environmental Impact Report.

Approved at a Regular Meeting of the St. Helena City Council on May 9, 2023, by the following vote:

Mayor Paul Dohring:	**YES**
Vice Mayor Eric Hall:	**YES**
Council Member Anna Chouteau:	**YES**
Council Member Lester Hardy:	**YES**
Council Member Billy Summers:	**YES**

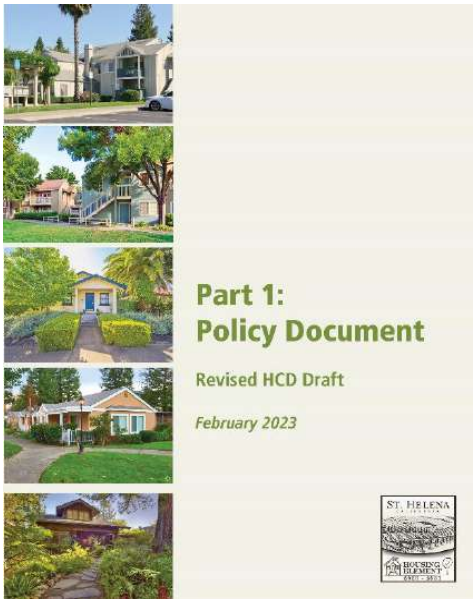
Introduction

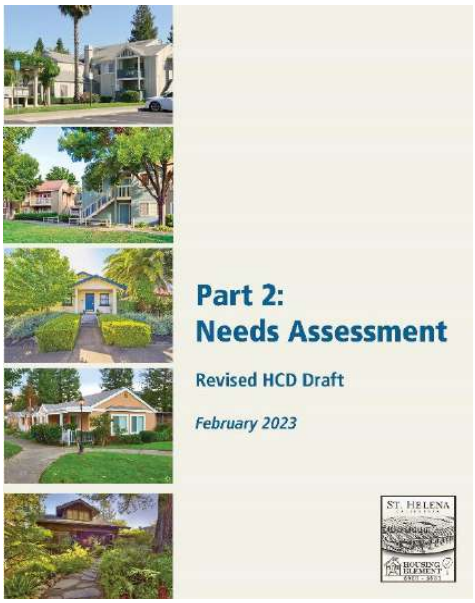
Purpose of the Element

Since 1969, California has required that all local governments (cities and counties) adequately plan to meet the housing needs of everyone in the community. California's local governments meet this requirement by adopting housing plans as part of their "general plan" (also required by the state). General plans serve as the local government's "blueprint" for how the city and/or county will grow and develop and include seven required elements: land use, transportation, conservation, noise, open space, safety, and housing. The law mandating that housing be included as an element of each jurisdiction's general plan is known as "housing-element law."



California's housing-element law acknowledges that, in order for the private market to adequately address the housing needs and demand of Californians, local governments must adopt plans and regulatory systems that provide opportunities for (and do not unduly constrain), housing development. As a result, housing policy in California rests largely upon the effective implementation of local general plans and, in particular, local housing elements.

Although the Housing Element is one of seven required elements of the general plan, it has several unique requirements that set it apart from the other six. State law (Government Code Section 65580 (et seq.)) specifies in detail the topics that the housing element must address and sets a schedule for required updates every eight years. The housing element is also the only element reviewed and certified by the State for compliance with State law. Every jurisdiction in the State of California is required to submit a Housing Element to the Department of Housing and Community Development (HCD) for review and certification.



The 2023-2031 Housing Element establishes a comprehensive plan to address housing needs in St. Helena over the eight-year planning period between January 31, 2023 and January 31, 2031. The Housing Element sets the community goals and policies surrounding the development, rehabilitation, and preservation of housing units to meet the needs of St. Helena residents (present and future. St. Helena is a member of the Association of Bay Area Association of Governments and, therefore, is required submit an updated Housing Element to HCD by January 31, 2023.

Housing Element Update Components

The 2023-2031 Housing Element Update consists of two parts; the Housing Needs Assessment, and this Housing Element Policy Document.

1. The **Policy Document** states goals, policies, implementing program, and quantified objectives for the development, rehabilitation, and preservation of housing. The Policy Document is the action plan that reacts directly to the findings of the Housing Needs Assessment and input from the community. The City will implement the actions specified in the Policy Document throughout the planning period.

2. The **Needs Assessment** identifies and analyzes the existing and projected housing needs, provides a list of sites for housing development that are adequate to accommodate the City's regional housing needs allocation, documents constraints to housing production, and analyzes fair housing. In short, the Needs Assessment provides the context for the City's housing action plan.

Organization of the Policy Document

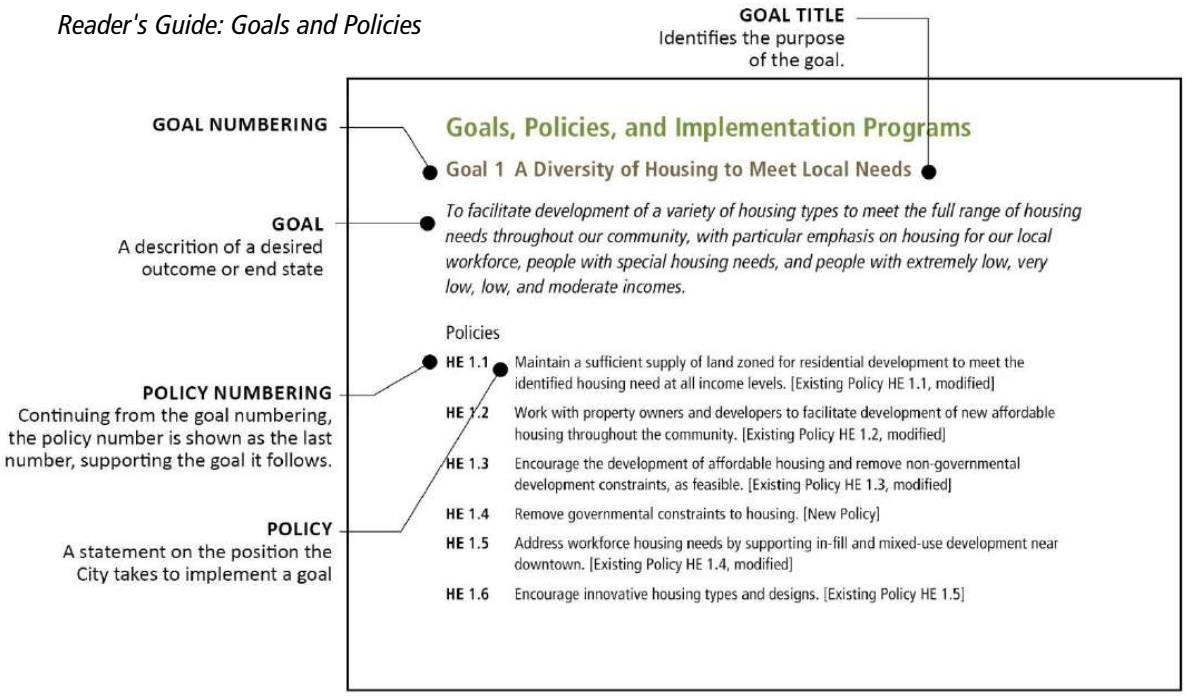
The 2023-2031 Housing Element Policy Document includes six goals, supported by policies and implementation programs that aim to address identified housing needs during the planning period. The goals, policies, and programs of the Housing Element establish a policy framework to guide city decision-making to meet identified housing needs. The Policy Document is organized under the following goal titles:

1. A Diversity of Housing to Meet Local Needs
2. High-Quality Neighborhoods with a Balance of Housing
3. Conservation of Existing Housing
4. Assistance to Support Affordable Housing
5. Resource Conservation
6. Affirmatively Further Fair Housing

Goals

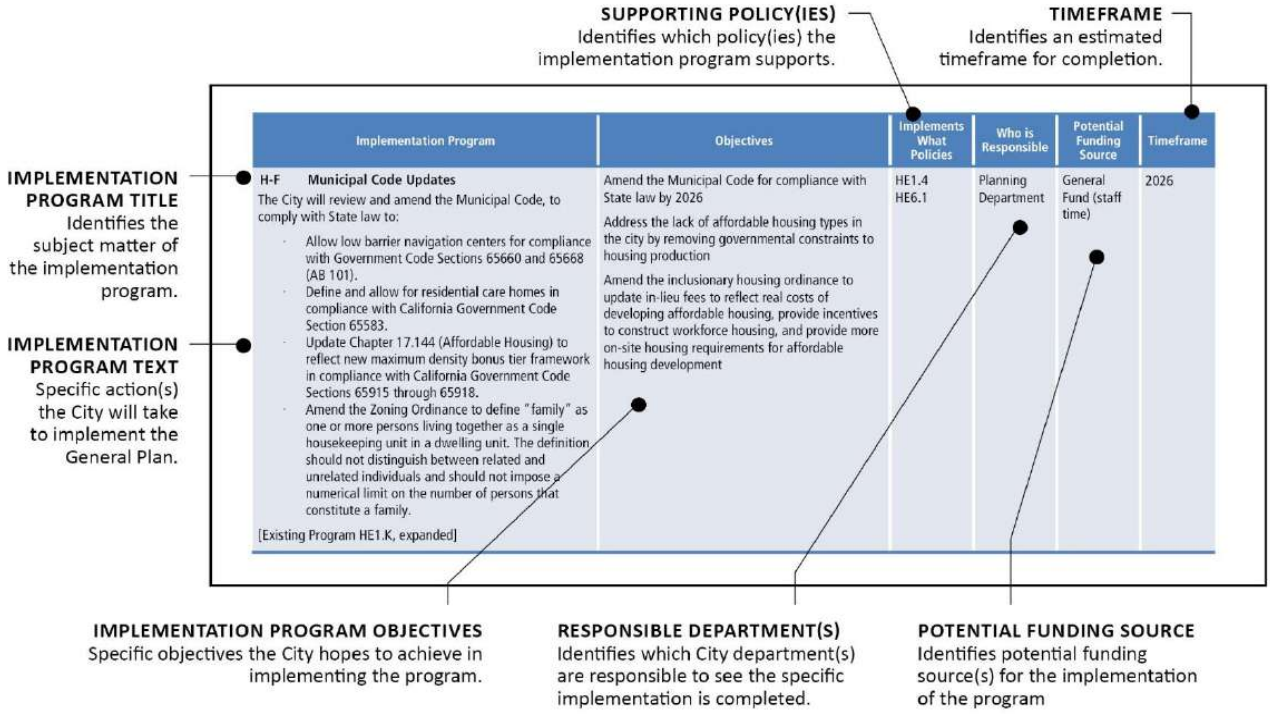
The housing goals are articulated as general "end condition statements," which describe a desired outcome or end state. The goals do not contain an action verb as they reflect a final statement of what the city hopes to achieve. Goals describe ideal future conditions for a topic and tend to be general and broad in nature. How the goal will be achieved is established via the applicable policies and programs.

Policies



Policies are statements on the position the City takes to implement a goal. Policies contained in the Housing Element are important statements as they provide a clear and unambiguous statement that guides a specific course of action for decision-makers to achieve a desired goal. Future actions and development must be consistent with these policies.

Programs



While many policies can be implemented as part of standard City operations, some policies require specific programs to assure their implementation. Housing programs define the specific actions the City will undertake to achieve the stated goals and policies.

For more information, please see the Policy Document Reader's Guide diagrams on the following page.

Reader's Guide: Goals and Policies

Reader's Guide: Implementation Programs

Key Findings and Recommendations

The following section summarizes the key findings in the Housing Needs Assessment and references the resulting programs.

Review of Existing Housing Element

Since the City of St. Helena adopted the Housing Element Update in 2014, the City successfully implemented a majority of the Housing Element implementation programs. Between 2014 and 2021, the City was successful in obtaining additional funding for affordable housing production, preserving existing affordable housing units, and promoting the expansion of multifamily and mixed use housing through the recent 2040 General Plan Update. The City also successfully implemented programs incentivizing and streamlining affordable housing development and revised development standards related to second units for state compliance. While the 2040 General Plan Update process required significant staff time and delayed implementation of some Municipal Code amendments, the City is currently (2022) undertaking a zoning code update that will address the remaining code amendments implementation measures during the 6th cycle. As the code update draws to its conclusion, the City will have more resources available to implement the remaining implementation actions, which have been continued and expanded in the 2023-2031 Housing Element.

Demographic and Economic Trends

Generally, the population of the Bay Area continues to increase because of natural growth and the strong economy drawing new residents to the region. The population of St. Helena increased by 2.1 percent from 2000 to 2020, which is lower than the growth rate of the Bay Area. In 2019, St. Helena's youth population under the age of 18 was 1,050 and senior population 65 and older was 1,636. These age groups represent 17.2 percent and 26.8 percent, respectively, of St. Helena's population. Program H-A commits the City to providing sufficient housing sites to meet the needs of the population and Programs H-H and H-I address workforce housing.

Housing Conditions

Number of Homes. The number of new homes built in the Bay Area has not kept pace with the demand, resulting in longer commutes, increasing prices, and exacerbating issues of displacement and homelessness. The number of homes in St. Helena increased, 4.4 percent from 2010 to 2020, which is above the growth rate for Napa County and below the growth rate of the region's housing stock during this time period. Program H-N, H-O work to facilitate higher density development, and H-P works to provide residential development opportunities in commercial areas through the implementation of mixed-use zoning.

Home Prices. A diversity of homes at all income levels creates opportunities for all St. Helena residents to live and thrive in the community.

- **Ownership.** The largest proportion of homes had a value in the range of $1 million-$1.5 million in 2019. Home prices increased by 118.2 percent from 2010 to 2020. Program H-GG works to increase affordable homeownership opportunities in St. Helena through the pursuit of mortgage credit certificates.

- **Rental Prices.** The typical contract rent for an apartment in St. Helena was $1,470 in 2019. Rental prices increased by 15.7 percent from 2009 to 2019. To rent a typical apartment without cost burden, a household would need to make $59,160 per year. Programs H-DD, H-EE, H-FF, and H-HH work to assist the development of affordable housing. Program H-II includes a commitment to support the Housing Choice Voucher program and to support efforts to expending funding for the program.

Housing Type. It is important to have a variety of housing types to meet the needs of a community today and in the future. In 2020, 63.9 percent of homes in St. Helena were single family detached, 6.1 percent were single family attached, 6.2 percent were small multifamily (2-4 units), and 18.4 percent were medium or large multifamily (5+ units). Between 2010 and 2020, the number of single-family units increased more than multi-family units. Generally, in St. Helena, the share of the housing stock that is detached single family homes is above that of other jurisdictions in the region. Programs aimed at addressing the lack of affordable housing types include H-A, H-B, H-E, H-H, H-I, H-J, H-M, H-P, and H-W.

Cost Burden. A household is considered "cost-burdened" if it spends more than 30 percent of its monthly income on housing costs, while those who spend more than 50 percent of their income on housing costs are considered "severely cost-burdened." In St. Helena, 21.1 percent of households spend 30-50 percent of their income on housing, while 16.6 percent of households are severely cost burden and use the majority of their income for housing. Lower-income, Latinx, and large households are disproportionally impacted by housing cost burdens. Programs including H-E, H-H, H-M, H-DD, H-EE, and H-FF work to reduce the costs of production or create more affordable housing opportunities by streamlining development approvals, incentivizing affordable housing types, generating funds, and reducing fees.

Special Housing Needs

People with Disabilities. In St. Helena, people with disabilities make up around 12 percent of the total population. Children (under 18) make up around 38 percent of the developmentally disabled population, while adults make up around 62 percent. Most of the developmentally disabled population reside with their parent, family, or guardian.

Senior Households. Senior households represent a higher percentage of the total households in St. Helena, at about 39 percent of households in the city. There is a large income disparity between seniors who rent housing and seniors who own their home. Most seniors who rent make 0 to 30 percent of AMI, and sixty-eight percent of senior households in this income category have housing cost burdens. By contrast, most seniors who own make greater than 100 percent of AMI; thirteen percent of senior households in this category experience housing cost burdens.

Farmworkers. The number of permanent farm workers in Napa County has increased from 2,916 in 2002 to 4,290 in 2017, while the number of seasonal farm workers decreased from 7,855 to 5,734. In St. Helena, the migrant worker student population totaled 20 during the 2019-20 school year, an increase of two students since the 2016-17 school year.

Persons Experiencing Homelessness. According to a Point in Time Count provided by the Chief of Police, there is one homeless person who resides in St. Helena. Countywide, many of the persons experiencing homelessness report chronic substance abuse or mental illness.

Programs H-E, H-H, H-I, H-BB, H-FF, H-KK, H-LL, H-NN, H-OO respond to the city's special housing need by streamlining development review, incentivizing development, or providing directly funding for construction or rehabilitation of housing for those with special needs.

Non-governmental and Governmental Constraints

The non-governmental constraints that restrict building in St. Helena include the price of land, cost of construction, flooding, conservation easements and long-term vineyard leases, and a lack of rental accessory dwelling units. The governmental controls analyzed in this section were land use controls, codes and enforcements, on-and off-site improvements, fees and exactions, processing and permit procedures, and regulations affecting housing for persons with disabilities. The land use controls including zoning and current General Plan land use designations do not constrain residential development; however, some changes are necessary to streamline the design review process. Additionally, water and sewer access are constrained, and the City must prioritize service for proposed development that includes housing for lower-income households (Program H-C). Additionally, St. Helena must also amend the Zoning Code to allow for low barrier navigation centers, consistent with State law. See Program H-F for more information.

Sites Inventory and Zoning for a Variety of Housing Types

Sites Inventory. In combination with the City's pending projects and ADU development trends, the sites inventory provides adequate sites to meet the City's RHNA allocation and buffer requirements. St. Helena received a RHNA of 256 total units distributed across very low-income (104 units), low-income (59 units), moderate-income (26 units), and above moderate-income (67 units) categories. A total of 83 lower income housing units can be accommodated on City-owned properties and 332 total housing units can be accommodated on vacant and non-vacant sites. Multiple property owners of vacant and non-vacant sites are supportive of and interested in housing development on their properties. See Program H-A for more information.

Zoning for a Variety of Housing Types. St. Helena's Zoning Code allows for a variety of housing types in the City including multiple-family units, transitional and supportive housing, single-room occupancy units, manufactured and mobile homes, and accessory dwelling units. However, to comply with Section 65915 through 65918 of the California Government Code, St. Helena should amend the Zoning Code to reflect the new

maximum density bonus provisions that were adopted by the State in 2020. Program H-F commits the City to updating the Zoning Code for compliance with State law.

Affirmatively Furthering Fair Housing

Concentrations of Lower- and Moderate-Income Earning Populations. In St. Helena, residents with low and moderate household incomes are concentrated in the eastern portion of the city. The Housing Element ensures available land to accommodate all income levels on sites located across the city. Efforts to combat this impediment are outlined in Programs H-A, H-B, H-N, H-O, H-R, H-S, H-U, H-V, H-W, and H-AA.

Insufficient Housing Stock for Farmworkers. Farmworker housing is a critical need in Napa County and St. Helena due to the presence of year-round agricultural production. The migratory and sometimes seasonal nature of farm work poses housing challenges for the community and are seen as an impediment for St. Helena. Efforts to combat this impediment are outlined in Programs H-E, H-H, H-I, and H-KK.

Lack of Affordable Housing Types. There is a lack of diversity in housing types that restricts development of affordable housing in St. Helena. Local land use and zoning regulations perpetuate this deficiency by limiting the form of housing that can be developed on a particular site. Much of the residentially zoned parcels within the city are zoned low and medium density residential and are not compatible with the construction of duplexes, triplexes, quadplexes and multifamily housing developments. The City is upzoning a number of parcels as a part of the Housing Element Update to allow higher density residential development. Efforts to further combat this impediment are outlined in Programs H-A, H-B, H-E, H-H, H-I, H-J, H-M, H-N, H-P, H-R, H-S, H-V, H-W, H-AA, H-DD, H-EE, H-FF, H-GG, H-LL, and H-NN.

Goals, Policies, and Implementation Programs

Goal 1 A Diversity of Housing to Meet Local Needs

To facilitate development of a variety of housing types to meet the full range of housing needs throughout our community, with particular emphasis on housing for our local workforce, people with special housing needs, and people with extremely low, very low, low, and moderate incomes.

Policies

HE 1.1 Maintain a sufficient supply of land zoned for residential development to meet the identified housing need at all income levels. [Existing Policy HE 1.1, modified]

HE 1.2 Work with property owners and developers to facilitate development of new affordable housing throughout the community. [Existing Policy HE 1.2, modified]

HE 1.3 Encourage the development of affordable housing and remove non-governmental development constraints, as feasible. [Existing Policy HE 1.3, modified]

HE 1.4 Remove governmental constraints to housing. [New Policy]

HE 1.5 Address workforce housing needs by supporting in-fill and mixed-use development near downtown. [Existing Policy HE 1.4, modified]

HE 1.6 Encourage innovative housing types and designs. [Existing Policy HE 1.5]

Implementation Programs

Implementation programs for this goal have been included in a table beginning on the following page.

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-A Available Sites Inventory The City will prepare a sites inventory and suitability analysis that identifies suitable sites for housing development that allows targeted income housing developers to have a clear idea of what sites are suitable for meeting the Regional Housing Needs of the City. To accommodate the remaining lower-income RHNA of 156 units, the City of St. Helena will identify and rezone a minimum of 14 acres to the HDR zoning district, allowing exclusively residential uses and a minimum of 20 units per acre to a maximum of 28 units per acre by January 31, 2026. Rezoned sites will permit owner-occupied and rental multifamily uses by right pursuant to Government Code section 65583.2(h) and (i) for developments in which 20 percent or more of the units are affordable to lower income households and will be selected from sites 2, 3, 5, 8, and 10 in the parcel listing (Table 58). As reflected in *11: Housing Resources*, each site has the capacity to accommodate at least 16 units and will be available for development in the planning period where water, sewer, and dry utilities can be provided. The City will maintain an inventory of parcels meeting the requirements of Government Code Section 65583.2(c); that is, vacant sites identified in two or more consecutive housing elements or nonvacant sites identified in a prior housing element, that are identified to accommodate housing for lower income households. This inventory shall be made available online. All previously used lower-income sites currently meet the lower-income density threshold (20 du/ac), however the City shall update the zoning code to allow by-right approval for housing developments that	Identify housing sites suitable to accommodate: · Very low income: 104 units · Low income: 59 units · Moderate income 26 units · Above Moderate income: 67 units · Total: 256 units Provide sites that proactively work to overcome concentrations of lower- and moderate-income earning populations; with the goal of facilitating the development of 82 lower income units in the western portion of the city Provide sites appropriate for affordable housing types Commit to streamlining review of Hunter Subdivision project to completion with the goal of Building Permit applications in 2025. Evaluate timeline at the end of 2025 and if determined necessary, identify additional housing sites to meet the City's 6th Cycle RHNA requirements	HE1.1	Planning Department	General Fund (staff time)	Within three years of the adoption deadline Publicly-available inventory: by 2024 **Hunter Subdivision** Building permits: 2025 Evaluate timeline by end of 2025

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
include 20 percent or more of its units affordable to lower income households (Gov. Code, § 65583.2, subd. (c).) on these sites. The City will consider AFFH in the identification of sites within the inventory and will work to provide sites that proactively work to overcome concentrations of lower- and moderate-income earning populations on the eastern portion of the city. [New Program]					
H-B Growth Management System The City will remove the Growth Management System (GMS) from the Zoning Code. Due to Senate Bill 330, the GMS cannot currently be enforced. The City shall remove the GMS from the zoning code through the current Comprehensive Zoning Code Update currently underway. The GMS has been removed from the Draft Zoning Code, which is scheduled for adoption in summer/fall 2023. [Existing Program HE1.A, modified]	During the planning period, encourage the development of: · 4 very low-income units · 4 low-income units · 10 moderate-income units · 10 above moderate-income units Address the city's lack of affordable housing by removing governmental constraints	HE1.1 HE1.4	Planning Department	General Fund (staff time)	Implementation: immediate Revised Zoning Code: by 2025 (prior to sunset of SB 330)

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-C Water and Sewer Access The City will continue to give priority access to water and sewer infrastructure to projects that include affordable housing units. As required by State law, the City shall deliver the adopted housing element to water and sewer providers, including a cover memo describing the City's housing element, as well as the City's housing needs and regional housing need. [Existing Program HE1.C, modified]	Establish specific procedures providing priority access to water and sewer infrastructure to developments with units affordable to lower-income households, as required by State law Provide water and sewer providers with the adopted housing element, including cover memo, as required by State law	HE1.3 HE1.4	Planning and Public Works Departments	General Fund (staff time) Water and Sewer Enterprise Funds	Establish procedure: by 2025 Provide providers with housing element: immediately upon adoption
H-D Road and Utility Improvement Coordination The City will continue to work with private property owners/developers to plan for road and utility improvements necessary to support housing on sites identified for lower-income housing, in the event these sites are developed. Funding for off-site improvements will be provided through development impact fees. The City shall annually evaluate funding levels and potential opportunities for use of the funds in line with this program. [Existing Program HE1.E]	During the planning period, encourage the development of: · 4 very low-income units · 4 low-income units · 4 units identified for seniors, farmworkers, or persons with disabilities	HE1.2 HE1.3	Planning Department	General Fund (staff time)	Throughout the planning period, as needed Evaluate funding levels and opportunities: annually

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-E Streamline Special Needs Housing The City will apply streamlined ministerial review to housing developments that meet the needs of lower income households and special needs groups, such as seniors, people with disabilities, farmworkers, and homeless families and individuals. The City shall evaluate the streamlined review policy every two years to identify constraints on special needs housing production. The City shall provide priority processing to development applications that work to provide housing for residents with special housing needs. The City shall also support these applicants by providing technical support through the entitlement process and shall provide additional density bonuses and modifications to development standards (beyond State law) to special needs housing projects proposed on the western half of the city, where fair housing issues are less concentrated. [Existing Program HE1.F, modified]	During the planning period, encourage the development of: · 15 very low-income units · 8 low-income units · 6 units identified for seniors, farmworkers, or persons with disabilities Address the lack of affordable housing types in the city Address the lack of farmworker housing in the city Provide incentives that work to overcome concentrations of affordable housing on the eastern portion of the city	HE1.4	Planning Department	General Fund (staff time)	Evaluate constraints: every two years Apply streamlined review: throughout planning period

H-F Municipal Code Updates The City will review and amend the Municipal Code, to comply with State law to: · Allow low barrier navigation centers for compliance with Government Code Sections 65660 and 65668 (AB 101). · Allow for residential care facilities of six or fewer in zones allowing single-family uses, subject only to the requirements of single-family uses, in compliance with State law (HSC § 1568.0831); and permit facilities with seven or more beds in all residential zones with objectivity and certainty similar to other residential uses of the same form · Update Chapter 17.144 (Affordable Housing) to reflect new maximum density bonus tier framework in compliance with California Government Code Sections 65915 through 65918. · Amend the Zoning Ordinance to define "family" as one or more persons living together as a single housekeeping unit in a dwelling unit. The definition should not distinguish between related and unrelated individuals and should not impose a numerical limit on the number of persons that constitute a family. · Update parking requirements related to emergency shelters for compliance with Government Code section 65583, subdivision (a)(4)(A) to require only be the number of spaces necessary for staff working in the shelter and no more than other uses in the same zones. · Allow accessory dwelling units in all zones allowing residential uses, including the AP Zone, mixed-use and commercial zones.	Amend the Municipal Code for compliance with State law by 2025 Address the lack of affordable housing types in the city by removing governmental constraints to housing production Amend the inclusionary housing ordinance to update in-lieu fees to reflect real costs of developing affordable housing, provide incentives to construct workforce housing, and provide more on-site housing requirements for affordable housing development	HE1.4 HE6.1	Planning Department	General Fund (staff time)	By 2025

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
· Update Chapter 17.116.030 (Accessory Dwelling Units) for compliance with Government Code section 65852.2. · Update Chapter 173.200 (Reasonable Accommodation) to remove discretionary finding requirements that constrain development, including finding #5, which considers impacts to surrounding properties or uses. · Incorporate objective design standards for single-family, small lot, and multifamily developments that provide a ministerial design review process · Provide a by-right streamlined review process for affordable housing developments meeting state affordability thresholds, in compliance with SB 35 and SB 330. · Allow permanent and supportive housing pursuant to Government Code section 65661 without discretionary action. [Existing Program HE1.K, expanded]					
H-G Safety Element Update The City will, in accordance with SB 1035, update the General Plan Safety Element to include any new information on fire and flood hazards, as well as climate adaptation and resiliency strategies. In accordance with SB 99 and AB 747, the updated Safety Element will also include evacuation routes and their capacity, safety, and viability under a range of emergency scenarios and to include information identifying residential developments in hazard areas that do not have at least two emergency evacuation routes. [New Program]	Update the Safety Element by 2024	HE1.4	Planning Department	General Fund (staff time)	2024

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-H Workforce and Farmworker Housing The City will identify and adopt, as appropriate, incentives for development to address the housing needs of "workforce" and farmworker households, with priority given to projects in lower-density higher income on the western half of the city.. As part of this effort, the City will explore the feasibility of adding an above moderate-income workforce housing component to the Inclusionary Housing Ordinance requirements and amend the Ordinance as appropriate. [Existing Program HE1.H, modified]	Identify and adopt, as appropriate, development incentives such as higher density and height allowances, a streamlined design review process, and financial incentives, including fee reductions and waivers and contributions from the City's Housing Trust Fund, to encourage the development of workforce and farmworker housing, including additional incentives for those projects in low-density high-income areas Encourage the development of: · 10 units identified for workforce or farmworker housing during the planning period · 2 workforce housing developments in low-density high-income areas Address the lack of affordable housing types in the city Address the lack of farmworker housing in the city	HE1.4	Planning Department	General Fund (staff time)	By 2025

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-I ADU Workforce Housing Incentive Program The City will implement a program to provide financial assistance for the development of accessory dwelling units in exchange for affordability restrictions that will provide workforce housing. Potential funding sources include, but are not limited to, Housing Trust Funds and Transient Occupancy Tax revenues. To encourage housing mobility and housing choice, the City shall provide marketing of the ADU Workforce Housing Program (and financial incentives) targeted at low-density areas of the city, with particular emphasis on the western half of the city where fair housing issues and existing affordable units are less concentrated. As part of this effort, the City shall hold up to two multi-lingual engagement events. [Existing Program HE1.I]	Establish an ADU Workforce Housing incentive program Market financial incentives to residents in LR and MR zones, particularly on the western portion of the City in combination with Programs H-Q and H-R, encourage the development of: · 80 accessory dwelling units, targeting 60 on the western portion of the city · 20 ADUs with affordability restrictions during the planning period, including 15 within the western portion of the city. · 15 ADUs near downtown Address the lack of affordable housing types in the city Address the lack of farmworker housing in the city	HE1.4	Planning Department	Housing Trust Funds Transient Occupancy Tax State and Federal workforce housing programs State and Federal grant funding	Establish program: by 2025 Provide marketing and engagement events: 2025

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-J Non-traditional Housing Types The City will encourage development of co-housing, ecohousing, a 'green' manufactured home, and other forms of housing, and will ensure these housing types are considered in the city's streamlined approval process. The City will evaluate and update, as appropriate, current zoning practices to remove constraints to non-traditional housing types. The City will also amend the zoning code to provide objective standards for residential development that work for a variety of housing types, including non-traditional housing types. [Existing Program HE1.J, modified]	Evaluate current zoning practices to identify constraints to non-traditional housing types by 2025 Amend the zoning code to remove constraints and provide objective design standards by 2026 Encourage the development of: · 10 missing middle units on infill parcels or in areas within the western portion of the city, consistent with AFFH. · 4 non-traditional housing units during the planning period. Address the lack of affordable housing types in the city	HE1.5	Planning Department	General Fund (staff time)	Encourage non-traditional housing types: throughout the planning period Evaluate zoning: by 2025 Amend zoning: by 2026
H-K Non-Vacant Sites The City shall adopt a policy(ies) to incentivize new or more intense development on sites included in the sites inventory as lower-income capacity, including sites 7, 9, and 11 (for sites 1 and 2, see Program H-L. Incentives may include, but are not limited to, reducing development standards, providing flexible parking standards, priority processing, or deferred fees. The City shall engage property owners within six months of adoption to discuss constraints and potential incentives.	Adopt policies that Incentivize the development of new or more intense uses on non-vacant sites identified as lower-income capacity to meet the RHNA. Encourage the construction of 42 new lower-income units on sites 7, 9, and 11, including 32 on the western portion of the city	HE 1.1 HE 1.2 HE 1.3	Planning Department	General Fund (staff time)	Engage property owners: within six months of adoption Adopt incentives: 2024

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-L City-owned Sites The City will maintain compliance with the Surplus Land Act throughout the 2023-2031 Housing Element planning period. The City will assess the appropriateness of and consider implementing the following: outreach opportunities with housing developers, requests for proposals, development incentives, fee waivers, priority processing, and financial assistance (when available) to facilitate and incentivize developers to develop housing units on City-owned sites. The City plans to make 3 properties available through the Surplus Land Act process over the next two years for a potential development of 57 lower-income units. The City shall conduct studies of City owned sites included in the sites inventor to determine the most efficient use for housing. These include sites 1, 2, and 3. Through this process, the City shall engage local affordable housing developers to determine site constraints and potential policies to meaningfully incentivize affordable housing development on these sites. The City shall proceed with the findings for housing development by 2026. The City anticipates two-and-a-half years to enter into an Exclusive Negotiation Agreement (Fall 2026), and one-and-a-half additional years for land use entitlements and development agreements (Spring 2028). City owned sites included in the inventory (sites 1-3) shall be rezoned incompliance with Govt. Code Section 65583.2(h) and (i) within three years of the adoption deadline (by January 31, 2026.	Engage local affordable housing developers immediately Study city owned sites to determine the most efficient use for affordable housing development within the first year following adoption By 2026, implement an action plan to sell, or release an RFP to develop, City owned land for affordable housing development based on the findings of the conducted studies. Through the action plan, establish and implement a variety of incentives to facilitation housing development. Maintain compliance with the Surplus Land Act throughout the 2023-2031 Housing Element Planning Period Make properties available through the Surplus Land Act process Target Exclusive Negotiating Agreement by Fall 2026 Target land use entitlements issuance by Spring 2028 Encourage the development of 57 lower-income units in the northeast quadrant of the city near transit opportunities, and where fair housing issues are less concentrated, and walkability and environmental scores are more positive	HE 1.1 HE 1.2 HE 1.3	Planning Department	General Fund (staff time)	Engage developers: immediately upon adoption Conduct studies: by July 2025 Implement action plan and incentives for City owned sites: by 2026 Rezone sites: by Jan. 31, 2026

Goal 2 High-Quality Neighborhoods with a Balance of Housing Types

To plan for a balance of housing types throughout the community. [Existing Goal, modified]

Policies

HE 2.1 Encourage higher density development. [Existing Policy HE 2.1, modified]

HE 2.2 Promote higher density development opportunities in low density, high resource areas. [New Policy]

HE 2.3 Promote mixed-use developments. [Existing Policy HE 2.3]

HE 2.4 Promote accessory dwelling unit (ADU) production. [Existing Policy HE 2.4, modified]

HE 2.5 Allow duplexes to the extent required by State law in all single-family residential zones consistent with SB 9. [New Policy]

HE 2.6 Promote the development of missing middle housing with an area median income target of 120 percent (moderate income). [New Policy]

HE 2.7 Promote a balance of housing types and unit sizes throughout the community. [Existing Policy HE 2.6, modified]

Implementation Programs

Implementation programs for this goal have been included in a table beginning on the following page.

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timing
H-M Incentives for Lower-Cost Housing Types The City will continue to provide incentives for higher density housing and will explore possible incentives for building attached market rate housing units for rent and for sale. Incentives may include, but are not restricted to, fast tracking development applications, deferred development fees, reduced parking and/or other city standards, and density bonuses. [Existing Program HE2.A]	Encourage the development of 20 lower income units during the planning period Study potential incentives for attached market rate units by 2027 Address the lack of affordable housing types in the city	HE2.1	Planning Department	General Fund (staff time)	Throughout the planning period Attached market-rate housing study by 2027

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timing
H-N Zoning to Facilitate Higher Density Housing The City will modify the Zoning Code to facilitate higher density housing, consistent with the 2040 General Plan Update and Housing Sites Analysis, and discourage the construction of oversize homes, particularly within the western portion of the city, consistent with AFFH. The City shall revise maximum lot coverage to 55 percent and maximum height to 42 feet in the HR zone and on key housing sites in the MR zone (see Section 17.40.020(N)). The City shall revise the zoning code to allow minor modifications of up to 10 percent increase in lot coverage standards and 5 percent (or two feet, whichever is greater) in maximum height. Minor modifications shall be approved by the Community Development Director without a public hearing. The City shall reduce parking requirements for multifamily uses with three or more units to require one parking space for studio or one-bedroom units. The City shall revise Section 17.40.020 to allow duplexes and triplexes and densities of 5.1 to 16 dwelling units per acres in the MR zone without a conditional use permit. [Existing Program HE2.B, modified]	Modify the development standards within the Zoning Ordinance to encourage higher density developments by 2026 Develop land use patterns that work to overcome geographic concentrations of lower-and moderate-income earning populations Address the lack of affordable housing types in the city	HE2.1 HE2.2	Planning Department	General Fund (staff time)	By 2026

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timing
H-O Exemptions from Minimum Density The City will amend zoning regulations to prohibit exemptions from minimum density requirements. [Existing Program HE2.C]	Prohibit exemptions from minimum density requirements Encourage development patterns that work to overcome geographic concentrations of lower-and moderate-income earning populations	HE2.1 HE2.2	Planning Department	General Fund (staff time)	By 2026
H-P Mixed-use Development Types The City will amend the Zoning Code to create and implement the development criteria set for mixed use development within St Helena. [Existing Program HE2.G, modified]	Amend the Zoning Ordinance to create and implement the development criteria set for mixed use development by 2026 Encourage the development of 20 housing units in mixed-use projects during the planning period Explore and adopt, as appropriate, development incentives such as higher density and height allowances, a streamlined design review process, and financial incentives, including fee reductions and waivers and contributions from the City's Housing Trust Fund, to encourage employers to provide on-site employee housing Address the lack of affordable housing types in the city	HE2.3	Planning Department	General Fund (staff time)	By 2026

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timing
H-Q Direct Assistance for ADU Development The City will continue to provide financial incentives, such as fee waivers and pre-approved plans, for ADU development. The City will also explore additional options such as covering the cost of a feasibility consult or the license fee for pre-approved plans, or capping total fees. The City will work with Napa Sonoma ADU to provide public information regarding ADUs on the City website, including a guide for homeowners explaining the benefits and procedures for adding an ADU and links to resources, including the ADU Feasibility Calculator, Home Match Program, and Standard ADU Plans Program. [Existing Program HE2.J, modified]	Provide direct financial incentives to 10 ADU projects in the planning period Explore additional financial incentives by 2025 Provide informational materials and technical assistance regarding the development of ADUs to 30 households in low-density western portions of the city within the planning period Address the lack of affordable housing types in the city	HE2.4	Planning Department	Housing Trust Fund General Fund (staff time)	Explore additional incentives: by 2025 Provide information al materials: by 2025 Engage Napa Sonoma ADU: annually

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timing
H-R Place-based ADU Strategy The City will target specific areas for ADU incentives and will create incentives to construct ADUs in the low- and medium-density areas near downtown as well as in low-density higher-income areas of the city, particularly on the western portion of the city. Potential incentives include, but are not restricted to, fast tracking development applications, deferred development fees, and reduced parking and/or other city standards. [Existing Program HE2.K, modified]	Establish place-based ADU strategies and incentives by 2026 In combination with Program H-I and H-Q, the development of: · 80 accessory dwelling units, targeting 60 on the western portion of the city · 20 ADUs with affordability restrictions during the planning period, including 15 within the western portion of the city. · 15 ADUs near downtown Proactively work to overcome concentrations of lower- and moderate-income earning households Proactively work to relieve displacement pressures on multifamily zones	HE2.2 HE2.4	Planning Department	General Fund (staff time)	Establish program: by 2026
H-S Affordability Requirements for ADU Incentives The City will link financial incentives and development standard variances to affordability requirements for ADUs. Whenever the City assists in the development of an ADU through financial incentives or by granting a variance, the City will require that either the main house or the ADU is used as a rental unit affordable to lower- and moderate-income households for a minimum of five years through an affordable housing regulatory agreement with the City. [Existing Program HE2.M, modified]	Update the zoning ordinance to include affordability requirements for ADU projects receiving financial or regulatory incentives by 2026 Incentivize the development of: · 12 very low-income units · 14 low-income units · 6 moderate income units	HE2.4	Planning Department	Housing Trust Fund General Fund (staff time)	By 2026

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timing
H-T Illegal Housing Units The City will continue to respond to complaints regarding illegal units. Additionally, the City will work with the property owners to help bring illegal units up to code and to abate the use of non-habitable buildings as living units. [Existing Program HE2.N]	Respond to complaints regarding illegal units Provide technical and financial support to assist five lower income units to be brought up to code within the planning period	HE2.4	Planning and Building Department	General Fund (staff time) Housing Trust Fund	Throughout the planning period
H-U Place-based Density Increases The City will revise the Zoning Code to allow urban lot splits, duplexes, and other two-unit projects in single-family residential zones in accordance with Senate Bill 9. The City will also adopt incentives, which may include fee reductions, deferrals, or waivers; flexible development standards; priority processing, or allowing triplexes on single-family lots if one unit ensures affordability to lower- or moderate-income renters by deed restriction. The City shall publicize informational materials outlining policies and incentives on the City website and through mailing lists and social media outlets. [New Program]	Adopt incentives for small multi-unit SB 9 projects in single-family zones by 2024 Publicize informational materials by 2024; update within 30-days of changes Revise the Zoning Code by 2026 Proactively work to overcome concentrations of lower- and moderate-income populations Proactively work to relieve displacement pressures in multifamily zones	HE2.2 HE2.5	Planning Department	General Fund (staff time)	Allow duplexes: by 2024 Adopt incentives: by 2024
H-V Multi-unit Development in Low-density Higher-income Areas The City will encourage the development of affordable housing on in-fill parcels and in low-density areas in the western portion of the city, in line with the City's commitment to affirmatively further fair housing. As part of this effort, the City will explore and adopt, revisions to development	Post an inventory of potential housing sites on the City's web site immediately following adoption of the Housing Element Explore revisions to development standards to encourage multi-unit infill development (as part of comprehensive zoning code update) by 2026	HE2.2, HE2.6	Planning Department City Council	General Fund (staff time)	Housing sites posted to website in 2023 Standards update: 2026

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timing
standard to encourage multi-unit developments within existing neighborhoods throughout the city. The City will also explore additional incentives to encourage affordable multi-unit projects in high resource areas, including, but not limited to priority permit processing, reduced or waived development fees, reduced parking and/or other city standards, and an additional density bonus. [Existing Program HE2.P, modified]	Facilitate the development of three multi-unit lower-income housing projects on City-owned properties in the planning period Facilitate the development of five lower- or moderate-income infill projects in the planning period Address disproportionate housing needs in infill areas, including overpayment, overcrowding, and displacement risk by increasing housing opportunities; facilitate seven SB9 lot splits to increase housing opportunities in single family neighborhoods in the planning period, with a goal of facilitating development of five lower-income units on these properties Explore additional incentives for affordable multi-unit projects in low-density areas on the western portion of the city by 2026 Encourage the development of eight lower- and eight moderate income multi-family units in high resource areas or on infill parcels within the planning period Proactively work to overcome concentrations of lower- and moderate-income households on the eastern portion of the city Address the lack of affordable housing types in the city				Explore potential addition incentives: by 2026

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timing
H-W Missing Middle Housing The City will review and amend the zoning code and applicable development standards to encourage and promote a mix of dwelling types and sizes, specifically missing middle-density housing types (e.g., triplexes, courtyard buildings, townhomes, live/work) to create a diversity of housing types and densities and increase the availability of affordable housing to reduce displacement risk for residents overpaying for housing. Specifically, the City will add a new mixed use zone, consistent with the 2040 General Plan Update, and will evaluate and revise minimum lot sizes and parking ratios, particularly in high resource, low-density areas. [New Program]	Revise zoning standards to encourage missing middle housing by 2026 To enhance housing mobility and housing choice, encourage the development of a variety of missing middle housing types in infill projects; support the development of three missing middle housing developments between three and 20 units To enhance housing mobility, encourage the development of 15 lower- and 15 moderate-income units in low-density high-income areas	HE2.2 HE2.6 HE2.7	Planning Department	General Fund (staff time)	Revise Zoning Code: by 2026

Goal 3 Conservation of Existing Housing

Improve and conserve existing housing, with particular attention to the rehabilitation and retention of existing affordable units. [Existing Goal]

Policies

HE 3.1 Protect the existing stock of affordable and market rate housing. [Existing Policy HE 3.1]

HE 3.2 Support the conservation of existing housing units for those with special housing needs, including seniors and others with special housing needs. [New Policy]

HE 3.3 Monitor housing conditions. [Existing Policy HE 3.2]

Implementation Programs

Implementation programs for this goal have been included in a table beginning on the following page.

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-X Condominium Conversion The City will continue to restrict the conversion of rental units to condominiums. Current policy allows conversion to condominiums under certain circumstances when the vacancy rate is high. Because the presence of second homes within the community results in an inflated vacancy rate, the City will update the current policy to eliminate the linkage to vacancy rates. To work to reduce displacement pressures in lower-resourced areas, the revised policy will completely restrict all conversions in the eastern portion of the city. [Existing Program HE3.A]	Preserve existing affordable housing stock Update current policy to remove linkage to vacancy rates Completely restrict condominium conversion in the eastern portion of the City Address the lack of affordable housing types in the city	HE3.1	Planning Department	General Fund (staff time)	Update policy by 2026
H-Y Affordable Housing Impact Fee The City will continue to charge an affordable housing impact fee whenever housing units are converted to other uses. The City will exempt conversion projects that create affordable for-sale housing from this impact fee. Collected affordable housing impact fees will be used for the preservation and development of housing opportunities affordable to lower- and moderate-income households, and will give priority to projects in the eastern portion of the city where fair housing issues, and displacement risks exist in greater concentrations. [Existing Program HE3.B]	Evaluate the impact fee against the real cost of affordable housing development every two years Discourage the conversion of residential uses to nonresidential uses Address the lack of affordable housing types in the city by working to retain existing units or generating funding for future affordable units	HE3.1	Planning Department	General Fund (staff time)	Throughout the planning period Evaluate impact fee: every two years

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-Z At-Risk Assisted Affordable Housing Units Although there are no assisted affordable units currently at-risk of conversion to market rate in St. Helena, the City with the assistance of the Napa Housing Authority, shall continue to monitor assisted properties. If units are identified as at-risk of conversion, the City will work with the property owners and/or other parties to ensure that they are conserved as affordable housing. The City will also engage with owners of deed-restricted moderate-income for-sale units (Marietta Townhomes and Voorhees Circle) at-risk of conversion to market rate within the planning period. The City will work with owners to find solutions to extend affordability requirements. [Existing Program HE3.C, modified]	Unless consistent with the terms of an affordable housing agreement with the City of St. Helena, prohibit the conversion of assisted affordable units to market rate Retain all assisted affordable units during the planning period Immediately (by 2024) engage homeowners with expiring deed-restrictions	HE3.1	Planning Department	General Fund (staff time)	Engage at-risk property owners: immediately, and twice annually thereafter
H-AA Vacation Rentals The City will continue to limit the conversion of market rate housing to vacation rentals and will abate the use of illegal vacation rentals, including time shares and fractional interests. To preserve existing affordable housing and reduce displacement pressures, the City shall adopt a policy restricting conversion of units occupied by lower- and moderate- income households in the southeast quadrant of the city to vacation rentals. [Existing Program HE3.D]	Maintain the current stock of market rate housing Restrict the conversion of housing units to vacation rentals occupied by lower- and moderate-income households in the southeast quadrant of the city where fair housing issues exist in greater concentrations Discourage the conversion of market rate housing units to vacation rentals, particularly in low-density higher-resourced areas Address the lack of affordable housing types in the city	HE3.1	Planning Department	General Fund (staff time)	Throughout the planning period

Page 581 of 4069

Agenda Item #6.1.

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-BB Special Housing Needs Rehabilitation Program The City shall actively pursue federal and State funding sources, including CDBG, Affordable Housing and Sustainable Communities (AHSC), Permanent Local Housing Allocation (PLHA), CalHome funds, HOME, and other grant sources to establish a program to support the rehabilitation needs of seniors and others with special housing needs, particularly on the eastern portion of the city where affordable units are generally concentrated and displacement risks are increased[Source: New Program]	Pursue funding to assist with rehabilitation costs for lower income households and seniors During the Planning Period, encourage the rehabilitation/conservation of: · 20 units accessible to seniors · 10 units accessible to persons with a disability	HE3.2	Planning and Finance Departments	CDBG, AHSC, PLHA, CalHome, HOME	Annually and as notices of funding availability are released.
H-CC Annual Progress Report The City will continue to review housing needs, conditions, achievements and challenges as part of the City's regular General Plan review and Annual Housing Element Progress Report, as required by State law. [Existing Program HE3.E]	Submit the Annual Progress Report to the State Department of Housing and Community Development and the Governor's Office of Planning and Research by April 1st of each year Provide transparency on housing-related actions and programs	HE3.3 HE4.6	Planning Department	General Fund (staff time)	Annually

Goal 4 Assistance to Support Affordable Housing

To provide technical and financial resources to support development of affordable housing in our community, especially housing that meets the needs of our local workforce, people with special housing needs, and people with moderate, low, and very low incomes.

Policies

HE 4.1 Develop permanent local sources of funding to support affordable housing. [Existing Policy HE 4.1]

HE 4.2 Aggressively pursue and 'leverage' State and Federal housing funds. [Existing Policy HE 4.2]

HE 4.3 Address farmworker housing needs. [Existing Policy HE 4.3]

HE 4.4 Support housing that meets special needs, including senior citizens and persons with disabilities. [Existing Policy HE 4.4]

HE 4.5 Explore methods to increase Housing Trust Fund money. [Existing Policy HE 4.5]

HE 4.6 Provide transparency regarding information on housing-related actions, fees, and programs. [New Policy]

HE 4.7 Provide local preference in the procurement process when municipal funds may be used for housing. [New Policy]

HE 4.8 Give preference to projects providing workforce housing affordable to up to 140 percent of the AMI. [New Policy].

Implementation Programs

Implementation programs for this goal have been included in a table beginning on the following page.

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-DD Revenue Generation for Affordable Housing The City will continue to generate revenues for affordable housing through the Affordable Housing Trust Fund and Transient Occupancy Tax and will continue to use the revenue to support the development or rehabilitation of affordable housing. [Existing Program HE4.B, modified]	Support the development or preservation of five extremely low or very low-income units Address the lack of affordable housing types in the city	HE4.1 HE4.5	Planning Department	General Fund (staff time) Housing Trust Fund Transient Occupancy Tax	Throughout the planning period
H-EE Reduced Fees for Affordable Housing The City will continue to reduce, defer, or waive fees for affordable housing developments and will explore and adopt as appropriate higher incentives for affordable housing developments with units affordable to extremely low- and very low-income households. [Existing Program HE4.C, modified]	Reduce fees for 30 extremely-low or very low-income units Address the lack of affordable housing types in the city	HE4.1	Planning Department	General Fund Housing Trust Fund	Evaluate and adopt, as appropriate, potential additional incentives: by 2026
H-FF Extremely Low-Income Units The City will continue to prioritize the use of the Affordable Housing Trust Fund in support of the development and preservation of regulated affordable units for extremely low-income households. The City will immediately engage with developers interested in creating or preserving housing for extremely low-income households to discuss available incentives and any financial or technical assistance the City can provide. [Existing Program HE4.D]	Support the development or preservation of six units for extremely low-income households Address the lack of affordable housing types in the city	HE4.1	Planning Department	Housing Trust Fund	Engage prospective developers: immediately upon identification

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-GG Affordable Homeownership The City will continue to pursue mortgage revenue bonds and/or mortgage credit certificates to promote affordable homeownership opportunities for moderate- and lower-income households. The City shall evaluate these opportunities and engage with potential partnering jurisdictions or institutions annually. The City shall also engage with local mortgage brokers and real estate agents to identify existing programs providing downpayment loans or direct assistance to first-time homebuyers and shall make this information available on the city's website, as well as through up to two multi-lingual engagement events targeting the eastern portion of the city. [Existing Program HE4.E]	Research and identify potential funding sources in 2024 and annually thereafter with the goal of establishing a homeownership assistance program in 2026 Collect and publicize information on existing programs available to first-time and lower-income prospective homeowners through State, Federal, or non-profit agencies within 18 months of adoption of the Housing Element; hold up to two multi-lingual events on the eastern portion of the City by 2026 Assist three lower- or moderate-income households transition from rental housing to homeownership Address the lack of affordable housing types in the city	HE4.2	Planning and Finance Departments	General Fund (staff time)	Annually Identify funding for City led program: in 2024 and annually thereafter Collect and publicize information on existing programs: within 18 months of adoption Targeted engagement events: by 2026
H-HH Additional Funding The City will continue to pursue additional funding for affordable housing and will explore new options for affordable housing funding. [Existing Program HE4.F, modified]	Explore new funding sources every two years to support housing for lower- and moderate-income households, seniors, and residents with special housing needs Address the lack of affordable housing types in the city	HE4.1	Planning and Finance Departments	General Fund (staff time)	Explore new opportunities: Every two years

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-II Section 8 Subsidies The City will continue to partner with the City of Napa Housing Authority to provide rental assistance to low-, very low-, and extremely low-income households through Housing Choice Voucher (Section 8) rent subsidy certificates. [Existing Program HE4.G]	Support the City of Napa Housing Authority rental assistance efforts; engage the Housing Authority annually to explore opportunities Provide informational materials regarding Housing Choice Voucher subsidies on the City website by 2024 Address the lack of affordable housing types in the city	HE4.2	Planning Department	General Fund (staff time)	Engage the Housing Authority: annually Informational materials: by 2024
H-JJ Housing Coordinator While the City currently contracts with the City of Napa for Housing Authority services, the City will explore the possibility of establishing a full-time, shared Housing Coordinator for the up-valley communities to: promote development of new affordable housing in low-density higher-resourced areas, assist lower-income households obtain housing in higher resourced areas, and preserve existing affordable units. The City shall enter into a cost-sharing agreement, if feasible. The position would serve all of the up-valley communities, including Napa County. [Existing Program HE4.H]	Meet with potential partner jurisdictions a minimum of two times during the planning period to explore options Identify and procure funds to establish a shared Housing Coordinator for the up-valley communities to promote affordable development in low-density higher resourced areas, assist lower-income households obtain housing in higher-resourced areas, and preserve existing lower- and moderate-income units	HE4.2	City Manager Planning Department	General Fund (staff time) CDBG, AHSC, PLHA), CalHome, HOME, and other grant sources	Engage potential partners: by 2026 Identify potential funding: by 2026

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-KK Farmworker Housing Needs The City will contribute staff time and City resources, as appropriate, to countywide farmworker housing efforts that may occur during the Housing Element planning period. The City will reach out to affordable housing developers to support regional and City efforts to develop farmworker housing, including assisting with financing or applications, incentives and concessions, expedited review or other strategies to encourage the development of housing for farmworkers. [Existing Program HE4.I]	Support local and regional efforts to develop farmworker housing Assist in the development of one farmworker housing project during the planning period Address the lack of farmworker housing in the city	HE4.3	Planning Department	General Fund (staff time) Housing Trust Fund	Outreach to affordable housing developers by 2024 and every two years thereafter
H-LL Special Needs Housing Opportunities The City will encourage new developments to provide a portion of units to meet the special housing needs of seniors and persons with disabilities, including developmental disabilities, throughout the city. The City will provide information on available incentives on the City website and shall immediately engage individuals or agencies interested in special needs production to discuss opportunities and constraints specific to the parcel(s) being considered. [Existing Program HE4.J]	During the Planning Period, encourage the development of: · 10 units accessible to seniors · 5 units accessible to persons with disabilities Address the lack of affordable housing types throughout the city	HE4.4	Planning Department	General Fund (staff time)	Information to website: by 2025 Engage potential developers: immediately upon identification

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-MM Housing Information Transparency The City will, in accordance with AB 1483 (2019), obtain, maintain, update, and make publicly available information related to zoning ordinances, development standards, fees, exactions, affordability requirements, and fair housing laws from the Department of Housing and Community Development, State Fair Employment, and Housing Commission's enforcement program, as well as programs and funding sources for homeowners at risk of foreclosure, the State Historic Building Code, and information on energy conservation opportunities. The City will, as appropriate, share this information on the City website and/or in hard copy form at City offices. Any changes to such information shall be made public within 30 days of changes. The City will provide these items in Spanish, as funding and staff time allows. [New Program]	Create and share a digital information database in compliance with AB 1483 by 2024 Updated information is made publicly available within 30 days of changes Provide information in Spanish, as funding allows	HE4.6	Planning Department	General Fund (staff time)	Database: By 2024 and annually thereafter Update information: within 30-days of any changes
H-NN Funding for New Special Housing Needs The City shall actively pursue federal and State funding sources, including CDBG, Affordable Housing and Sustainable Communities (AHSC), Permanent Local Housing Allocation (PLHA), CalHome funds, HOME, and other grant sources to support the construction of housing for seniors and those with special housing needs. The City shall periodically review available housing programs to identify additional funding sources. [Source: New Program]	Pursue funding to assist with construction and rehabilitation needs of lower income households and seniors During the Planning Period, encourage the development of: · 20 units accessible to seniors · 10 units accessible to persons with disabilities	HE3.1 HE 4.1 HE4.2 HE4.4	Planning and Finance Departments	CDBG, AHSC, PLHA, CalHome, HOME	Annually and as notices of funding availability are release.

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-OO Unit Conversion for Extremely Low-Income Households The City will continue to explore the potential of using Affordable Housing Trust Fund money to purchase existing housing for conversion to restricted affordable housing and will commit funding as appropriate. Priority for use of Affordable Housing Trust Fund monies will be given to the creation of housing affordable to extremely-low-income households, particularly within the western portion of the city, consistent with the commitment to overcome geographic income disparities. [Existing Program HE4.L]	Identify potential funding Engage with owners of local market rate multifamily units to discuss opportunities, if funding allows Assist in the conversion of two units from market rate to extremely low-income during the planning period Proactively work to overcome concentrations of lower- and moderate-income populations Address the lack of affordable housing types in the city	HE4.1	Planning Department	Housing Trust Fund General Fund (staff time)	Identify potential funding: annually Engage owners: immediately as funding and potential properties are identified
H-PP Surplus and Excess Public Land The City will, in accordance with AB 1486 (2019) and AB 1255 (2019), annually identify and inventory a list of sites owned by the City that have been sold, leased, or otherwise disposed of in the prior year. This inventory shall be publicly available and be included in the Housing Element annual report presented to the City Council and submitted to HCD. [New Program]	Regularly maintain an inventory of publicly-owned surplus or excess land on the City website Annually release information regarding publicly-owned sites that have been sold, leased, or disposed of	HE4.6	Planning Department	General Fund (staff time)	2023, with annual updates

Goal 5 Resource Conservation

To promote resource conservation by encouraging housing types and designs that use fewer resources (water, electricity, etc.) and therefore cost less to operate over time, supporting long-term housing affordability.

Policies

HE 5.1 Encourage alternative energy sources. [Existing Policy HE 5.1]

HE 5.2 Encourage energy and resource conservation. [Existing Policy HE 5.2]

Implementation Programs

Implementation programs for this goal have been included in a table beginning on the following page.

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-QQ Green Building Ordinance The City shall update the Green Building Ordinance, as necessary, to meet or exceed periodic updates to the State's Green Building Standards Code (CalGreen). [Existing Program HE5.A, modified]	Ensure compliance with CalGreen throughout the planning period	HE5.1	Planning and Building Department	General Fund (staff time)	Throughout the planning period, as necessary
H-RR Alternative Energy Technologies The City will continue to encourage the use of alternative energy technologies and will explore incentives for the use of solar energy in new and rehabilitated housing. Incentives to adopt as appropriate include, but are not restricted to, ensuring a streamlined review process for applications, allowing applications to be submitted via email and paid by phone, deferred fees, and reduced applicable city standards. [Existing Program HE5.B, modified]	Encourage alternative energy technologies in new and existing developments Explore additional incentives for solar installation	HE5.1	Planning and Building Department	General Fund (staff time)	Explore and adopt incentives, as appropriate: by 2026
H-SS Alternative Energy Technology Information The City will continue to provide public information on energy conservation and alternative energy technologies to residential developers, contractors, and property owners. [Existing Program HE5.C]	Provide information on the City website and at City Hall regarding energy conservation, alternative energy technology options, possible sources of financing, and any applicable information regarding necessary local permits	HE5.1	Planning and Building Department	General Fund (staff time)	2023; updated annually thereafter

Implementation Program	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-TT Cost-Effective Energy Conservation The City will continue to require cost-effective energy conservation measures in all new and rehabilitated housing to promote long-term affordability for occupants. The City will adopt the State's new Energy Efficiency Standards as part of any update to the California Building Standards Code and ensure that all new housing units constructed in the City meet or exceed these standards. [Existing Program HE5.D]	Promote long-term affordability Adopt updated State energy efficiency and building code standards, as necessary, throughout the planning period	HE5.2	Planning and Building Department	General Fund (staff time)	Every three years beginning in 2023
H-UU Energy Conservation Measures The City will continue to participate in AB-811 programs and will explore additional state and federal sources of funding to finance local energy conservation measures. Sources of state and federal funds include, but are not limited to, the California Energy Commission State Energy Program and Energy Efficiency and Conservation Block Grant Program, and the Low-Income Home Energy Assistance Program. [Existing Program HE5.E]	Identify and procure additional funding to support energy conservation measures Provide information on available assistance programs on the City website by 2024 Assist three households, through financial or technical assistance, with the implementation of energy conservation measures	HE5.2	Planning and Finance Departments	General Fund (staff time) State and Federal Grant Funds	Throughout the planning period Explore funding: annually Provide information on assistance programs: by 2024
H-VV Water Conservation The City will continue to apply Municipal Code provisions pertaining to water resources, including requirements for water-efficient landscaping for new residential and commercial construction, as well as implementing the "Water Neutrality" policy for all new development. [Existing Program HE5.H]	Reduce water consumption Require water-efficient landscaping Implement the "Water Neutral" policy Implement the Water Efficient Landscape Ordinance (WELO)	HE5.2	Planning and Public Works Departments	General Fund (staff time)	Throughout the planning period

Page 592 of 4069

Agenda Item #6.1.

Goal 6 Affirmatively Furthering Fair Housing

To assure that housing programs maximize opportunity and housing choice throughout the city and proactively work to overcome patterns of economic segregation and discrimination based upon age, sex, race, sexual orientation, religion, familial status, ethnic background, or disability. [Existing Goal, modified]

Policies

HE 6.1 Support equal housing opportunities for all residents of St. Helena. [Existing Policy HE 6.1]

HE 6.2 Support the fair housing services provider. [New Policy]

HE 6.3 Support regional efforts to affirmatively further fair housing. [New Policy]

HE 6.4 Ensure public investments are equitably distributed throughout the community. [New Policy]

HE 6.5 Consider affirmatively furthering fair housing goals in all housing related decisions. [New Policy]

Implementation Programs

Implementation programs for this goal have been included in a table beginning on the following page.

Implementation Programs	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-WW Affirmatively Furthering Fair Housing The City shall address disparities in housing needs and access to opportunity for all persons regardless race, color, religion, sex, national origin, familial status, disability gender, gender identify, gender expression, sexual orientation, marital status, ancestry, veteran or military status, source of income, and genetic information as protected categories by the California Fair Employment and Housing Act (Part 2.8 [commencing with Section 12900] of Division 3 of Title 2), Section 65008, and any other state and federal fair housing and planning law. The City identified barriers to fair housing through the Affirmatively Furthering Fair Housing Assessment. Actions the City will take to address the identified barriers and foster an inclusive community, include: · Concentrations of Lower- and Moderate-income Earning Populations: H-A, H-B, H-N, H-O, H-R, H-U, H-V, H-W and H-OO. · Insufficient Housing Stock for Farmworkers: H-E, H-H, H-I, and H-KK. · Lack of Affordable Housing Types: H-A, H-B, H-E, H-H, H-I, H-J, H-M, H-N, H-P, H-Q, H-V, H-X, H-AA, H-DD, H-EE, H-FF, H-GG, H-LL, H-NN, and H-OO. · Fair Housing Enforcement and Outreach: H-T, H-II, H-JJ, H-WW, and H-XX. · Limited Resources for Persons with Disabilities: H-BB, H-LL, and H-NN; as well as objectives D, F and G in this program.	A) Work to coordinate annual meetings with jurisdictions and fair housing providers in the county to assist with and participate in promoting fair housing opportunities through pursing potential funding opportunities and joint efforts aimed at educating the community about fair housing issues and resources B) Promote the availability of bi-lingual resources by ensuring that City-provided services and materials are available in Spanish and that information is included regarding the availability of interpretation or translation services C) Facilitate development of multifamily housing on the western portion of the city by providing developers with information on incentives for affordable multifamily development and maintaining a list of available sites (for metrics, see Program H-V) D) Use local permitting and approval processes to ensure all new multifamily construction, as well as ADUs, meet the accessibility requirements of the federal and state fair housing acts; with the goal of facilitating the development of 30 units accessible to seniors and other residents with special housing needs E) Affirmatively recruit a diverse and multi-lingual staff, as positions become available F) Work with Napa Valley Transportation Authority to explore lowering ridership costs for the VineGo paratransit system	HE6.1 HE6.2 HE6.3 HE6.4 HE6.5	City Council City Manager Planning Department	General Fund (staff time)	A and H: annually C: engage with developers twice within the planning period D: by 2027 F and G: Every two years

Implementation Programs	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
· Place-based Strategies for Community Preservation and Revitalization and Displacement Protection: H-A, H-I, H-J, H-N, H-Q, H-R, H-U, H-V, H-W, and H-WW. The City has included additional objectives with this program. The City shall monitor progress toward these objectives annually in the Annual Progress Report and shall implement additional measures as necessary. [New Program]	G) Work with the County of Napa to carry out an ADA self-evaluation and transition plan to remove barriers for persons with disabilities to facilities and programs in Napa County H) Prioritize capital improvement projects for public infrastructure improvements that facilitate affordable housing development in the eastern portion of the city				
H-XX Fair Housing Provider The City will continue to utilize and support Fair Housing Napa Valley as the City's fair housing service provider, responsible for implementing fair housing programs, receiving complaints, and providing referrals to available resources when necessary. The City will work with the Fair Housing Napa Valley to provide educational materials to educate real estate professionals, property owners and tenants on their rights and responsibilities and the resources available to address fair housing issues. [Existing Program HE6.A, modified]	Provide direct funding to Fair Housing Napa Valley with of goal of providing up to $80,000 over the planning period Support fair housing investigations with a goal of assisting with five investigations of existing affordable developments for rent in the southeast quadrant of the city and fair housing issues are more concentrated and displacement risk is higher Provide multi-lingual informational materials to the public regarding tenant rights, fair housing issues, and resources on the City's website and hold one multi-lingual engagement event to present the information targeting residents in the eastern portion of the city Provide a link to Fair Housing Napa Valley on the City's website	HE6.2	City Manager Planning Department	General Fund	Engage Fair Housing Napa Valley: annually Informational materials to City website: by 2024 Engagement event: 2025

Implementation Programs	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-YY Replacement Unit Program The City will adopt a policy and will require replacement housing units subject to the requirements of Government Code section 65915, subdivision (c)(3) on sites identified in the site inventory when any new development (residential, mixed-use or nonresidential) occurs on a site that is identified in the inventory meeting the following conditions: • currently has residential uses or within the past five years has had residential uses that have been vacated or demolished, and • was subject to a recorded covenant, ordinance, or law that restricts rents to levels affordable to persons and families of low or very low-income, or • subject to any other form of rent or price control through a public entity's valid exercise of its police power, or • occupied by low or very low-income households	In order to mitigate the loss of affordable housing units, require new housing developments to replace all affordable housing units lost due to new development	HE3.1 HE6.1	Planning Department	General Fund	Implement: immediately Adopt policy: by January 31, 2024

Implementation Programs	Objectives	Implements What Policies	Who is Responsible	Potential Funding Source	Timeframe
H-ZZ Lot Consolidation To expand opportunities for additional affordable housing, the City will encourage the consolidation of small parcels to accommodate larger-scale and higher density developments that are compatible with existing neighborhoods. The sites inventory includes five parcels equating to 39 lower- and 39 moderate-income RHNA units. These sites were identified based on common ownership and contiguous lots. While all five parcels are within moderate resource areas, two of these parcels (site 9) are located on the western portion of the city, an area with fewer fair housing issues, and adjacent to Spring Street in proximity to high-quality transit opportunities. While these parcels will be processed by-right pursuant to Gov. Code section 65583(c)), the City will also implement other efforts to facilitate and encourage lot consolidation.	Post the sites on the City's website by October 2023 and provide list to interested developers when requested, and review annually for accuracy Develop and implement incentives for lot consolidation by January 2024 such as fee waivers, reduced development fees, expedited permit processing, greater density bonus incentives, and modifications to parking, height, or setback standards Facilitate lot consolidation for high density residential developments by providing appropriate assistance to developers to encourage negotiations between property owners Encourage the development of 39 lower- and 39 moderate income units during the planning period. To increase housing mobility and opportunities in areas where fair housing issues are less concentrated, encourage the development of 15 lower- and 15 moderate-income units on the western portion of the City	HE 1.3 HE 4.6 HE6.1	Planning Department	General Fund Housing Trust Fund	Post sites to website: by Oct. 2023 Implement incentives: by 2024
H-AAA Permit Streamlining Act The City shall amend the Municipal Code to specify who is responsible for making CEQA determinations and within the timeframes of PRC 21080.1 and PRC 21080.2; and determination of when the PSA is triggered per Government Code 65950(a)(5) the Permit Streamlining Act (PSA).	Amend the municipal code for compliance with State law within 18 months of adoption of the Housing Element	HE 1.3 HE 4.6	Planning Department	General Fund (staff time)	Within 18 months of adoption of the 2023-2031 Housing Element

Quantified Objectives

Quantified Objectives by Type

One of the requirements of State law (California Government Code, Section 65583[b]) is that the Housing Element contains quantified objectives for the maintenance, preservation, improvement, and development of housing. State law recognizes that the total housing needs identified by a community may exceed available resources and the community's ability to satisfy this need. Under these circumstances, the quantified objectives need not be identical to the total housing needs, however, the quantified objectives shall establish the number of housing units by income category that can be realistically constructed, rehabilitated, and conserved. The City has established quantifiable objectives in implementation programs throughout the policy document. This section summarizes new construction, conservation, and special needs housing objectives for the 2023-2031 planning period.

New Construction Objectives

Extremely low-income	33 units	166 lower-income units	302 total units
Very low-income	73 units		
Low-income	60 units		
Moderate-income	44 units	136 moderate and above-moderate units	
Above moderate-income	92 units		

Rehabilitation and Conservation Objectives

- Conservation of all existing affordable housing units.
- Conserve 200 manufactured homes at manufactured home parks.
- Rehabilitation of 20 units for seniors and 10 units for persons with a disability

Assistance for Special Needs Households

- 35 units of senior housing
- 18 units for persons with a disability
- 12 units for farmworkers
- Assist in the conversion of two units from market rate to extremely low-income during the planning period.
- Assist three lower- or moderate-income households transition from rental housing to homeownership

Quantified Objectives Summary Table

The City will strive to exceed the following targets for affordable housing development in St. Helena.

	Extremely Low	Very Low	Low	Moderate	Above Moderate	Total
New Construction	33	73	60	44	92	302
Rehabilitation	10	10	5	5	0	30
Conservation/Preservation	0	120	100	231	0	451

1. Introduction

Since 1969, California Housing Element Law has required that local governments develop plans to accommodate and facilitate housing for current and future residents, at all income levels.

Housing Element Purpose

The purpose of the Housing Element is to establish a comprehensive plan to address housing needs in St. Helena over the eight-year planning period between January 31, 2023, through January 31, 2031. The Housing Element sets the policies surrounding the development, rehabilitation, and preservation of housing units that meet the needs of St. Helena residents.

The Housing Element consists of two parts, the Housing Needs Assessment and a Housing Element Policy Document. The Housing Needs Assessment identifies and analyzes the existing and projected housing needs for St. Helena and also identifies sites for housing development that are adequate to accommodate the City's regional housing needs allocation. The Housing Policy document will state goals, policies, quantified objectives, and implementation programs for the development, rehabilitation, and preservation of housing, based upon the findings of the Housing Needs Assessment and input received through public outreach. Then, throughout the eight-year planning period, St. Helena will implement a set of programs to meet the goals included in the Housing Element Policy Document.

Authority

Housing Elements are required by section 65302(c) of the California Government Code. Housing Elements are one of seven mandatory General Plan Elements. Specific requirements for Housing Elements are set forth beginning at section 65580 of the Government Code, with additional guidance provided by the State Department of Housing and Community Development (HCD). The combination of the Housing Needs Assessment and the Housing Element Policy Document will address all applicable requirements of state law.

Status

The St. Helena City Council adopted the prior Housing Element in 2015 for the planning period ranging from January 31, 2015 through January 31, 2023. Upon review of the adopted Housing Element, HCD sent the City of St. Helena a letter of compliance on May 29, 2015.[1] The 2023-2031 Housing Element Update will plan for St. Helena's housing needs through the 8-year planning period of January 31, 2023, through January 31, 2031. While the City's policies and programs guide housing development during the planning period, the City receives credit for housing units that are built during the Regional Housing Need Assessment (RHNA) projection period, which is June 20, 2022, through December 31, 2030, a period of 8.5 years.[2]

Consistency with the General Plan

California Government Code Section 65300.5 requires that a general plan be internally consistent, meaning that no conflicts exist among the elements of the plan. Government Code section 65583(c) requires that a housing element describe how consistency has been achieved among the general plan elements. The most important aspect of consistency among general plan elements is that policies and implementation measures do not conflict but support one another to achieve the overall goals and vision of a general plan.

In preparing the 2023-2031 Housing Element, the City reviewed goals and policies in the various elements of the 2040 St. Helena General Plan. With the passage of SB 1035 in 2018, the City will need to update its Safety Element to include any new information on fire hazards, flood hazards, and climate adaptation and resiliency strategies. Program H-G commits the city to updating the Safety Element. Additionally, the City has committed to remove the Growth Management System through Program H-B, and will need to update the Zoning Code for consistency. Consistency with the remaining components of the 2040 General Plan has been achieved through the adoption of complementary policies in each of the elements that support the goals and policies of the other elements.

Changes to State Law

The following items represent substantive changes to State housing law since the City's last Housing Element was adopted and certified. While this is not an exhaustive list, these items are state mandates that must be addressed in the Housing Element.

Affordable Housing Streamlined Approval Process: Senate Bill 35 (2017)

SB 35 requires a streamlined, ministerial review process, or objective design standards, for qualifying multifamily, urban infill projects in jurisdictions that have failed to approve housing projects sufficient to meet their State-mandated RHNA. Among other requirements, to qualify for streamlining under SB 35, a project must incorporate one of two threshold levels of affordable housing: (1) 10 percent of the project units in jurisdictions that have not approved housing projects sufficient to meet their RHNA for above moderate-income housing or have failed to submit an annual progress report as required under state law; or (2) 50 percent of the project units in jurisdictions that have not approved housing projects sufficient to meet their RHNA for below moderate-income housing. Additionally, the Housing Element must describe the City's processing procedures related to SB 35.

The City is not subject to the requirements of SB 35 as it has successfully met its fair share of local housing needs for the fifth cycle, an accomplishment only shared with a small handful of jurisdictions statewide. The City has not adopted a streamlined approval process for multi-family units related to SB 35 or SB 330, however, it has drafted a process to comply with the law which is being codified as a part of the ongoing Zoning Code Update. The process incorporates objective design standards and ministerial review free of discretionary processes. Program H-F commits the City to amending the Zoning Code to provide a by-right streamlined review

process for affordable housing developments meeting state affordability thresholds, in compliance with SB 35 and SB 330..

Additional Housing Element Sites Analysis Requirements: Assembly Bill 879 (2017) and Assembly Bill 1397 (2017)

These bills require additional analysis and justification of the sites included in the sites inventory of the City Housing Element. The Housing Element may only count non-vacant sites included in one previous housing element inventory and vacant sites included in two previous housing elements if the sites are subject to a program that allows affordable housing by right. Additionally, the bills require additional analysis of non-vacant sites and additional analysis of infrastructure capacity, and by place size restrictions on all sites. The Housing Element sites inventory has been prepared in compliance with AB 879 and AB 1397.

Affirmatively Furthering Fair Housing: Assembly Bill 686 (2017)

AB 686 requires the City to administer its housing programs and activities in a manner to affirmatively further fair housing and not take any action that is inconsistent with this obligation. The City must take actions to overcome patterns of segregation, address disparities in housing needs and access to opportunity, and foster inclusive communities. The Housing Element must include an assessment of fair housing practices, an examination of the relationship of available sites to areas of high opportunity, and actions to affirmatively further fair housing. This Housing Element includes Program H-WW addressing fair housing and AFFH directly, and objectives to affirmatively further fair housing in programs throughout the Element. Appendix A: Affirmatively Furthering Fair Housing includes an analysis of fair housing in St, Helena.

No-Net-Loss Zoning: Senate Bill 166 (2017)

SB 166 amended the No-Net-Loss rule to require that the land inventory and site identification programs in the Housing Element include sufficient sites to accommodate the unmet RHNA. When a site identified in the Housing Element as available to accommodate the lower-income portion of the RHNA is actually developed for a higher income group, the City must either (1) identify, and rezone if necessary, an adequate substitute site or (2) demonstrate that the land inventory already contains an adequate substitute site. This Housing Element has been prepared in accordance with the No-Net-Loss rule and identifies sites that can accommodate 241 units in addition to the City's RHNA requirement of 256. Chapter 11 includes a detailed discussion of the sites inventory process.

Safety Element to Address Adaptation and Resiliency: Senate Bill 1035 (2018)

SB 1035 requires the General Plan Safety Element to be reviewed and revised to include any new information on fire hazards, flood hazards, and climate adaptation and resiliency strategies with each revision of the housing element. Program H-G of this Housing Element commits the City to updating the Safety Element within three years of certifying this Housing Element.

By Right Transitional and Permanent Supportive Housing: Assembly Bill 2162 (2018) and Assembly Bill 101 (2019)

AB 2162 requires the City to change its zoning to provide a "by right" process and expedited review for supportive housing. The bill prohibits the City from applying a conditional use permit or other discretionary review to the approval of 100 percent affordable developments that include a percentage of supportive housing units, either 25 percent or 12 units, whichever is greater. The change in the law applies to sites in zones where multifamily and mixed uses are permitted, including in nonresidential zones permitting multifamily use. The City currently permits transitional and supportive housing within all residential, commercial, and mixed-use zones, subject only to the same conditions as residential uses, in compliance with State law..

Additionally, AB 101 requires that a Low Barrier Navigation Center development be a use allowed by right in mixed-use zones and nonresidential zones permitting multifamily uses if it meets specified requirements. The City does not currently comply with this requirement. Program H-F commits the City to update the zoning code to allow low barrier navigation centers by right in areas zoned for mixed use as well as nonresidential zones permitting multifamily uses.

Accessory Dwelling Units: Assembly Bill 2299 (2016), Senate Bill 1069 (2016), Assembly Bill 494 (2017), Senate Bill 229 (2017), Assembly Bill 68 (2019), Assembly Bill 881 (2019), Assembly Bill 587 (2019), Senate Bill 13 (2019), and Assembly Bill 671 (2019)

In recent years, multiple bills have added requirements for local governments related to Accessory Dwelling Unit (ADU) regulation. The 2016 and 2017 updates to State law included changes pertaining to the allowed size of ADUs, permitting ADUs by right in at least some areas of a jurisdiction, and parking requirements related to ADUs. More recent bills reduce the time to review and approve ADU applications to 60 days and remove lot size and replacement parking space requirements. AB 68 allows an ADU and a junior ADU to be built on a single-family lot, if certain conditions are met. The State has also removed owner-occupancy requirements for ADUs, created a tiered fee structure that charges ADUs based on their size and location, and prohibits fees on units of less than 750 square feet. In addition, AB 671 requires the Housing Element to include plans to incentivize and encourage affordable ADU rentals. In 2020, the City adopted updated ADU regulations which streamlined the review process for ADU construction and conversion The St. Helena Zoning Code allows ADUs in all residential zoning districts, however, to achieve compliance with California Government Code Sections 65852.2 and 65852.22, the City must allow ADUs in all zones that allow for residential uses, including the AP Zone, and any mixed-use, and commercial zones. Additionally, several areas of Chapter 17.116.030 need to be revised for compliance with State law. This includes, but is not limited to, the definition of a cooking facility, definition of an efficiency kitchen, allowing both an ADU and JADU for conversions on a lot with an existing or proposed single-family dwelling, separate conveyance of an ADU or JADU, and restricting bedroom count.

The City is currently undertaking a comprehensive zoning code update that will address these compliance issues. Program H-F in this Housing Element commits the City to revising the code for compliance with State law by 2026.

Density Bonus: Assembly Bill 1763 (2019) and AB 2345 (2020)

AB 1763 amended California's density bonus law to authorize significant development incentives to encourage 100 percent affordable housing projects, allowing developments with 100 percent affordable housing units to receive an 80 percent density bonus from the otherwise maximum allowable density on the site. If the project is within half a mile of a major transit stop, a jurisdiction may not apply any density limit to the project. AB 2345 further amended California's density bonus law to allow residential projects with some on-site affordable housing to receive a density bonus of up to 50 percent. Specifically, a residential development is eligible for a 50 percent density bonus if 11 percent of the units are very low-income, 20 percent are low-income units, or 40 percent are moderate-income units. The affordable units must remain affordable for a minimum of 55 years. In addition to the density bonus, qualifying projects will receive four regulatory incentives or concessions, depending on how much of the development includes affordable units. Specifically:

- One incentive or concession for projects that include at least 10 percent of the total units for lower-income households, at least five percent for very low-income households, or at least 10 percent for persons and families of moderate-income in a common interest development.
- Two incentives or concessions for projects that include at least 17 percent of the total units for lower-income households, at least 10 percent for very low-income households, or at least 20 percent for persons and families of moderate-income in a common interest development.
- Three incentives or concessions for projects that include at least 24 percent of the total units for lower-income households, at least 15 percent for very low-income households, or at least 30 percent for persons and families of moderate-income in a common interest development.
- Four incentives or concessions for projects where one hundred percent of all units in the development, including total units and density bonus units, but exclusive of a manager's unit or units, are for lower income households, as defined by Section 50079.5 of the Health and Safety Code, except that up to 20 percent of the units in the development, including total units and density bonus units, may be for moderate-income households, as defined in Section 50053 of the Health and Safety Code. For these projects, if it is located within one-half mile of a major transit stop, the applicant also receives a height increase of up to three additional stories (33 feet).

The City of St. Helena currently establishes density bonus provisions for affordable housing in Chapter 17.144 (Affordable Housing). The provisions in that Chapter do not reflect the new maximum density bonus tier framework that was adopted by the State in 2020. Because of this, the City is not currently in compliance and has included Program H-F to commit the City to amend the Zoning Code for compliance with California Government Code Sections 65915 through 65918. The City is currently undertaking a Zoning Code Update. The Draft Zoning Code includes density bonus provisions that comply with State law. The Zoning Code Update is currently scheduled for adoption in summer/fall 2023.

Housing Crisis Act of 2019: Senate Bill 330

SB 330 enacts changes to local development policies, permitting, and processes that will be in effect through January 1, 2025. SB 330 places new criteria on the application requirements and processing times for housing developments; prevents localities from decreasing the housing capacity of any site, such as through downzoning or increasing open space requirements, if such a decrease would preclude the jurisdiction from meeting its RHNA housing targets; prevents localities from establishing non-objective standards; and requires that any proposed demolition of housing units be accompanied by a project that would replace or exceed the total number of units demolished. Additionally, any demolished units that were occupied by lower-income households must be replaced with new units affordable to households with those same income levels. The Housing Element must describe the City's processing procedures related to SB 330. Please see Chapter 8: Nongovernmental and Governmental Constraints for more information.

The City has adopted an SB 330 process and checklist to streamline the design and approval of by-right multi-family units within the community, in compliance with SB 330.

Surplus Land Act Amendments: Assembly Bill 1486 and AB 1255 (2019)

AB 1486 refines the Surplus Land Act to provide clarity and further enforcement to increase the supply of affordable housing. The bill requires the City to include specific information relating to surplus lands in the Housing Element and Housing Element Annual Progress Reports, and to provide a list of sites owned by the county that have been sold, leased, or otherwise disposed of in the prior year. AB 1255 requires the City to create a central inventory of surplus and excess public land each year. The City is required to transmit the inventory to the Department of Housing and Community Development and to provide it to the public upon request. The City has committed to transmitting the required information to HCD each year with their annual report in Program H-CC.

Housing Information Transparency: Assembly Bill 1483 (2019)

AB 1483 requires the City to publicly share information about zoning ordinances, development standards, fees, exactions, surplus public lands, fair housing resources, and affordability requirements. The City is also required to update such information within 30 days of changes. The Housing Element will report on the City's compliance with these requirements. Program H-NN specifically commits the City to providing updated information on a range of housing issues through their website and at City offices.

Emergency and Transitional Housing Act of 2019: Assembly Bill 139 (2019)

AB 139 established new criteria for evaluating the needs of the homeless population. The analysis must assess the capacity to accommodate the most recent homeless point-in-time count by comparing that to the number of shelter beds available on a year-round and seasonal basis, the number of beds that go unused on an average monthly basis, and the percentage of those in emergency shelters that move to permanent housing (see Chapter 7: subsection Persons Experiencing Homelessness). The bill also established new parking standards for emergency shelters. Lastly, the bill requires the Housing Element to include a review of the effectiveness of the

housing element goals, policies, and related actions to meeting the jurisdiction's special housing needs (see Chapter 2: Review of Previous Element).

The City is in compliance with State laws related to emergency shelters, supportive housing, and transitional housing. The City currently permits transitional and supportive housing within all residential, commercial, and mixed-use zones, subject only to the same conditions as residential uses, in compliance with State law. Additionally, emergency shelters are identified as a by-right use in the I and SC zoning districts.

Standardization of Sites Inventory Analysis and Reporting: Senate Bill 6 (2019)

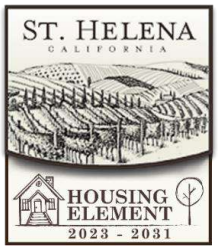
SB 6 requires the City to electronically submit the sites inventory to HCD. The City will submit the final sites inventory to HCD with the adopted Housing Element. Program H-A commits the City to submitting an electronic copy of the inventory to HCD.

Evacuation Routes: Senate Bill 99 and AB 747 (2019)

Two recent bills, AB 747 and SB 99, require the General Plan Safety Element to be updated to identify evacuation routes and their capacity, safety, and viability under a range of emergency scenarios and to include information identifying residential developments in hazard areas that do not have at least two emergency evacuation routes. The bill requires these updates to occur with the 2023-2031 Housing Element Update. Program H-G commits the City to updating to the Safety Element as necessary for compliance with SB 99 and AB 747 during the 6th Housing Element cycle.

Public Participation

Section 65583(c)(5) of the Government Code states that "The local government shall make diligent effort to achieve public participation of all the economic segments of the community in the development of the housing element, and the program shall describe this effort." Public participation played a critical role in the formulation and refinement of the County's housing goals and policies.

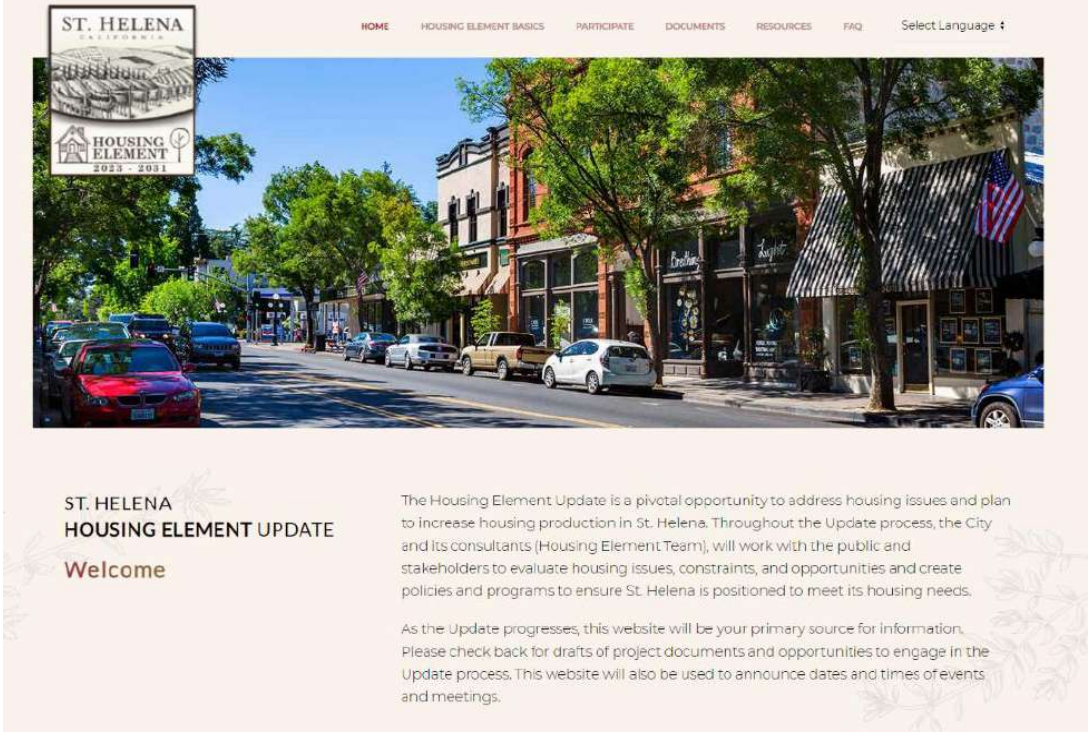


Housing issues affect the entire community – residents, employers, and the public and private sectors. The public participation requirement of housing element law presents an opportunity to engage constituents in a dialogue – defining problems and creating solutions. The inclusion of community stakeholders in the housing element public participation process helps ensure appropriate housing strategies are more efficiently and effectively evaluated, developed, and implemented. An inadequate public participation process may lead to community conflict or in worse case scenarios, anti- development initiatives, and NIMBYism. Successful public participation is important because a diverse cross section of the population can be engaged in defining the housing problem and in crafting community sensitive solutions. Another benefit of broad participation and true engagement of the public is that when it is time to adopt housing strategies and approve housing developments, a greater portion of the community has been involved and participated in the plan and more frequently will support its implementation. Meaningful participation creates stakeholders in the ultimate outcome of the process.

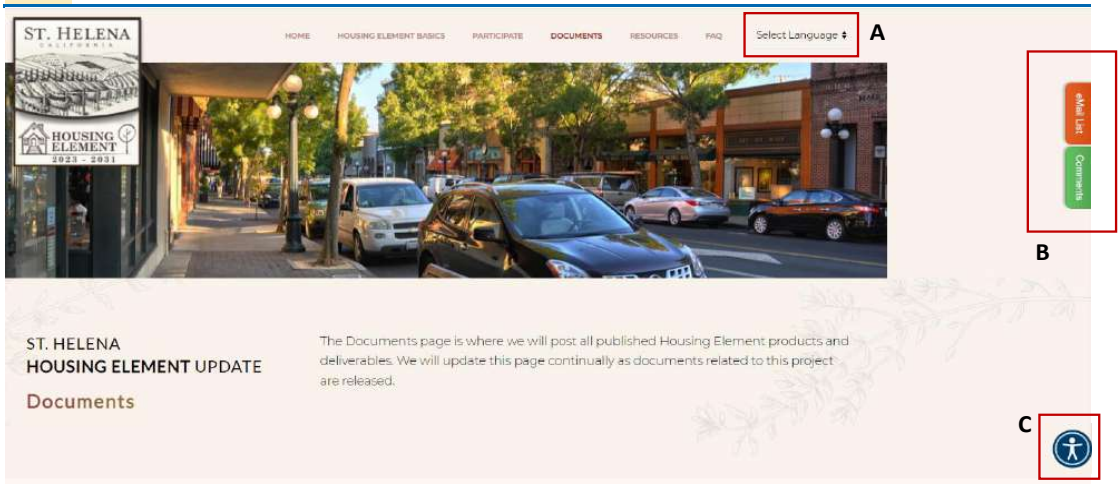
In response to the need for public participation, City planning staff worked with consultants to develop a robust community engagement program tailored to ensure the community and other stakeholders are engaged in the process and are given ample opportunities to provide input. The key objective of the community engagement program is to maximize opportunities for everyone interested in the Housing Element to participate. The engagement program includes branding, a project website, business cards, newsletters and eblasts, announcements on the City website and social medial, multiple workshops, a Housing Element Focus Group, and Planning Commission and City Council study sessions and hearings. This section summarizes our engagement program.

In an effort to Affirmatively Further Fair Housing (AFFH), the City reached out to a broad range of stakeholders, including not just housing developers and residents, but also to Spanish speakers and those working to address fair housing issues and the lack of affordable housing citywide. Throughout the Update, the Project team asked focus group members, workshop participants, the Planning Commission, and the City Council about fair housing issues in the community. The City has incorporated this feedback into Program H-WW: Affirmatively Further Fair Housing, as well as into a variety of programs throughout the Policy Document.

Branding



A branding package was prepared for the project. This included a project logo and style templates for all work products, maps, presentations, and publicity materials. The common branding helps to build recognition for the project and ensure that this effort is distinct in the minds of the community. The logo to the right will be used on all materials developed as part of the Housing Element Update.

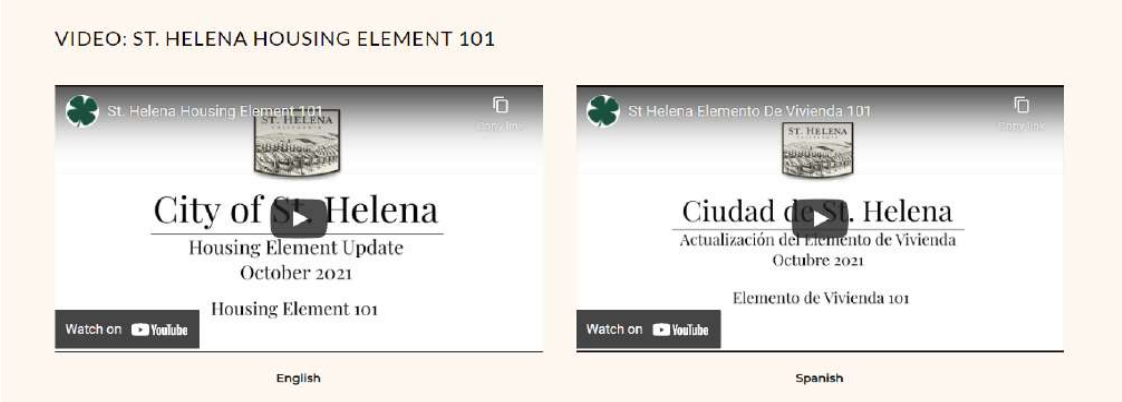


Housing Element Website

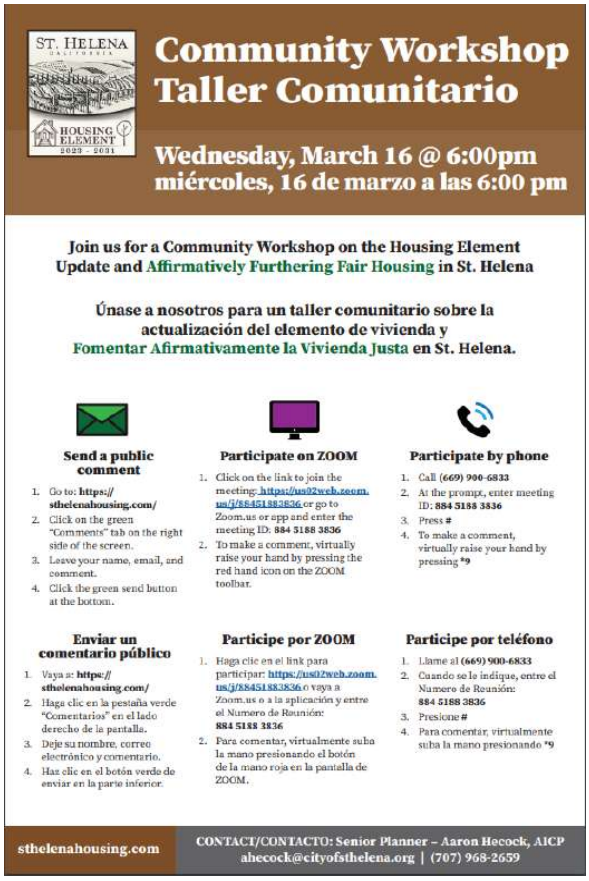
During the development and review of the Housing Element, the City created and maintained a website dedicated to the 2023-2031 Housing Element Update. This website provided easy access to information on the project, including the Housing Element information/Frequently Asked Questions, the project newsletters, and Zoom meeting info. Project documents were posted to the website and comments were encouraged through the provided "Comments" button on each page. A link on the website allowed residents to sign up for the email list. The website also featured a Google Translate menu allowed readers to translate the website into Spanish. Lastly, an accessibility widget was incorporated into the website allowing readers to adjust text size and spacing, contrast, and a number of other aspects of the website to suit the reader's needs.

https://sthelenahousing.com

https://sthelenahousing.com/documents



A: Google Translate Tool: This tool allows users to translate the entire website into Spanish.



B: Email and Contact Buttons: These buttons allow users to join the project email list or provide a comment to the project Team.

C: Accessibility Widget: This widget allows users to choose visibility options for greater accessibility

https://sthelenahousing.com/basics

The project website features a Housing Element 101 video, presented in English and Spanish.

In addition to eblasts and Facebook posts, meetings were announced via the website. Flyers were posted for each event in English and Spanish.

For those unable to attend, event materials, presentations, and videos are posted to the Participate page.

Project Business Cards

To encourage the use of the project website, business cards were made up for the Project. The cards were provided to the City and can be handed out to those looking for additional information on the Housing Element Update. Each card lists the project website address and a QR Code that can direct users to that website.

Newsletters and Email Notifications (eBlasts)

During the Housing Element development, two newsletters will be developed and distributed. The newsletters will be designed to give the community a better understanding of the Update process and the draft Housing Element. Both newsletters will be published in both English and Spanish and made available from the project website.

Newsletter #1: Housing Element Update Overview

Newsletter #1 describes what a housing element is, how and why it is being updated, the project schedule, and how to get involved in the Update process. The newsletter also describes the other components of the project, including General Plan amendments, Safety Element update, and the environmental analysis. The newsletter will publicize upcoming community engagement opportunities and the project website.

Newsletter #2: HCD Review Draft Housing Element

Newsletter #2 will provide a summary of the key findings and changes in the HCD Review Draft Housing Element, particularly key changes to policies and programs, any proposed changes to land use designations (locations or density ranges), and what these changes mean for their community.

Email notifications (eblasts) are sent out to announce upcoming events and the release of project-related documents. Email addresses were compiled from those requesting notification from the City and from those signing up on the project website and at project events. As of May 2022, the Housing Element email list has 32 subscribers.

Images of Newsletter #1 and an eBlast are included on the following page.

NEWSLETTER #1: HOUSING ELEMENT OVERVIEW

St. Helena Housing Element Update!

We are excited to announce that in February 2021, the City of St. Helena kicked off the update to the City's Housing Element. The update is scheduled to take approximately two years, and throughout the process, we invite the public to be part of the planning process and provide input on how St. Helena should provide housing over the planning period (2023-2031).

What is a Housing Element?

Since 1969, every jurisdiction in California has been required to have a Housing Element as part of their General Plan. Unlike other mandatory General Plan elements, the Housing Element must be updated every eight years and is subject to review and approval by the California Department of Housing and Community Development (HCD). Major components of the Housing Element include a housing needs assessment, the identification of sites for housing at all income levels, a review of constraints to housing, and updated policies and programs to carry out the goals of the updated element.

The City's current 2014-2022 Housing Element was adopted in 2015 and was part of the 5th Cycle of housing element updates in the State. This update for the 2023-2031 Housing Element is part of the 6th Cycle of housing element updates. Between the 5th and 6th Cycles, the State has passed over a dozen of new housing laws, many of which aim to lower barriers to building affordable housing. These will all be addressed with this update.

Another major addition to the 6th Cycle Housing Element Update is the inclusion of an Affirmatively Furthering Fair Housing analysis. This analysis will examine housing practices in the city to identify any areas that may perpetuate housing inequities in the community. Once identified, the Housing Element will create policies and programs to help work towards more equitable housing practices.

BOLETÍN #1: RESUMEN DEL PLAN DE VIVIENDA ELEMENTAL

¡Actualización del Plan de Vivienda Elemental en St. Helena!

Nos complace anunciar que, en febrero de 2021, la Ciudad de St. Helena inició la actualización del Plan de Vivienda Elemental de la Ciudad. La actualización está programada para tomar aproximadamente dos años, y a lo largo del proceso, invitamos al público a ser parte del proceso de planificación y proporcionar información sobre cómo St. Helena debe proporcionar vivienda durante el período de planificación (2023-2031).

¿Qué es el Plan de Vivienda Elemental?

Desde 1969, todas las jurisdicciones de California están obligadas a tener un Elemento de Vivienda como parte de su Plan General. A diferencia de otros elementos obligatorios del Plan General, el Elemento de Vivienda debe actualizarse cada ocho años y está sujeto a revisión y aprobación por el Departamento de Vivienda y Desarrollo Comunitario de California (HCD). Los principales componentes del Elemento de Vivienda incluyen una evaluación de las necesidades de vivienda, la identificación de sitios para vivienda en todos los niveles de ingresos, una revisión de las limitaciones a la vivienda, y políticas y programas actualizados para llevar a cabo los objetivos del elemento actualizado.

El actual Elemento habitacional 2014-2022 de la ciudad fue adoptado en 2015 y formó parte del 5º Ciclo de Actualizaciones de Elementos habitacionales en el Estado. Esta actualización para el Elemento habitacional 2023-2031 forma parte del 6º Ciclo de actualizaciones del Plan de Vivienda Elemental. Entre los ciclos 5 y 6, el Estado ha aprobado más de una docena de nuevas leyes de vivienda, muchas de las cuales tienen como objetivo reducir las barreras a la construcción de viviendas asequibles. Todos ellos se abordarán con esta actualización.

Otras de las principales novedades del Plan de Vivienda Elemental del 6º Ciclo es la inclusión de un análisis afirmativo de vivienda justa. Este análisis examinará las prácticas de vivienda en la ciudad para identificar cualquier área que contribuya a perpetuar las desigualdades de vivienda en la comunidad. Una vez identificado, el Plan de Vivienda Elemental, creará políticas y programas para ayudar a conseguir que el desarrollo de viviendas sea más equitativo.

CITY OF ST. HELENA

2023-2031 Housing Element

Reminder:
Community Workshop #3
Today, Wednesday, March 16th!

Join us for a Community Workshop on the Housing Element Update and Affirmatively Furthering Fair Housing in St. Helena!

WHAT IS AFFIRMATIVELY FURTHERING FAIR HOUSING (AFFH)?

Affirmatively furthering fair housing means taking meaningful actions that, taken together, address significant disparities in housing needs and in access to opportunity, replacing segregated living patterns with truly integrated and balanced living patterns, transforming racially and ethnically concentrated areas of poverty into areas of opportunity, and fostering and maintaining compliance with civil rights and fair housing laws.

- California Department of Housing and Community Development

The duty to affirmatively further fair housing extends to all of the City's activities and programs relating to housing and community development. Join us at the workshop to learn more.

Wednesday, March 16, 2022
6:00 pm

Participate on ZOOM

1. To join the meeting: **CLICK HERE** or go to Zoom.us or app and enter the meeting ID: **884 5188 3836**

2. *To make a comment, virtually raise your hand by pressing the red hand icon on the ZOOM toolbar.*

Participate by phone

1. Call **(669) 900-6833**

2. At the prompt, enter meeting ID: **884 5188 3836**

3. Press #

4. Press *9 to speak.

Email a Public Comment

1. Email your comment to: **publiccomment@cityofsthelena.org**

2. In the subject line include: 'Comment on Housing Sites'

Public Workshops

Throughout the Housing Element Update, City staff worked with the consultant team to hold community workshops at critical points in the process.

Workshop #1: Housing Element Basics

On September 16, 2021 the City held a community workshop to introduce the housing element and discuss housing needs, opportunities, and constraints in St. Helena.

The workshop presentation highlighted engagement efforts and let participants know how they can connect with the Project Team.

During the Workshop, participants were prompted to comment on housing needs, issues, and constraints in the community. Several public comments were received and are documented below. These comments and information provided during this discussion were used to inform and confirm data in the Needs Assessment. Additionally, input related to sites and constraints were considered in the development of the initial sites inventory. Finally, comments related to housing needs helped to inform implementation actions and priorities. The City has included a number of programs to address constraints, incentivize affordable and special needs housing development, and encourage workforce and missing middle housing opportunities.

Comment
Jenny
▪ Shortage of affordable housing compounded by 2020 fires. ▪ Rents have increased but wages haven't kept up. ▪ Many residents are struggling to pay rent. ▪ There is a long waiting list for affordable housing (5 year waiting list) ▪ Smoke Free housing is needed, as 2nd hand smoke is an issue in multifamily housing
Nancy
▪ Demand is such that large-scale developments are needed. ▪ Overcrowding is an issue in the city. ▪ Many St. Helena workers commute into the city because they can't afford to live here.
Joe
▪ Multifamily is challenging as affordability is difficult to make cost effective. Subsidies are required to create housing that is affordable. Financing for these projects is difficult. ▪ Affordable projects move slowly and this increases costs. ▪ Market partners may be able to help solve the housing problem. ▪ What in the zoning code can be changed to help reduce costs? ▪ Development standards such as Density, Parking, Height, and Water Neutrality, as well as fees, can be obstacles to development. ▪ NIMBY opposition and land costs can be constraints. ▪ Sites: feasibility is a problem and owners need to be engaged. ▪ Larger sites are located near the urban limit, but density is needed near city center. Height limits should be reconsidered. ▪ Main Street has commercial/retail vacancies. Potential for housing as mixed use. ▪ 900 Crane is for sale and may be a potential site. ▪ Can we expedite rezones for housing? ▪ Multifamily areas that only allow up to a triplex are a constraint. We need to allow more building forms. ▪ Please clear as many hurdles to development as possible.
Ester
▪ Many properties are small and can't hold larger projects. Lot consolidation may be needed. Adams St. property could be a potential low-income housing site.
Paul
▪ Please consider public safety issues and make sure that sites are feasible and safe.

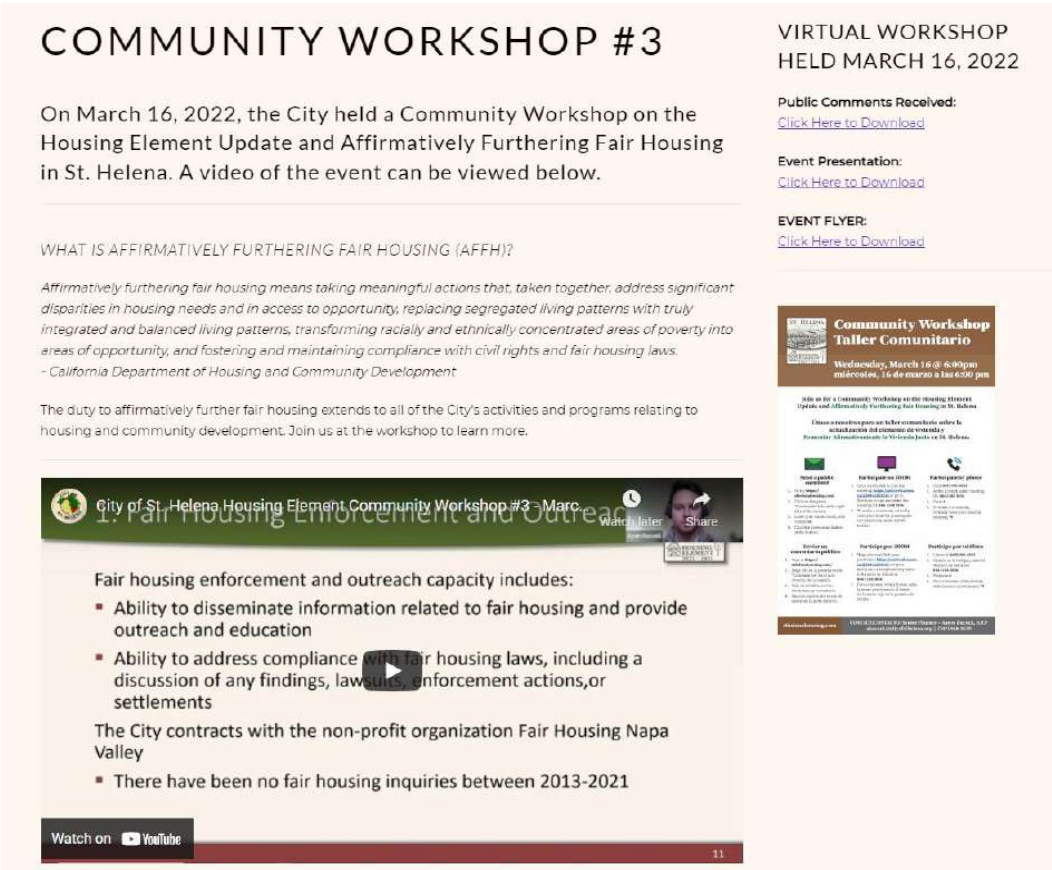
Workshop #2: Housing Opportunity Sites

On January 20, 2022, the City held a Community Workshop to discuss the Housing Element Update and available housing sites in St. Helena. Following the workshop, a map of potential sites was posted to the Housing Element website and the City encouraged residents and stakeholders to submit through the "Comments" button.

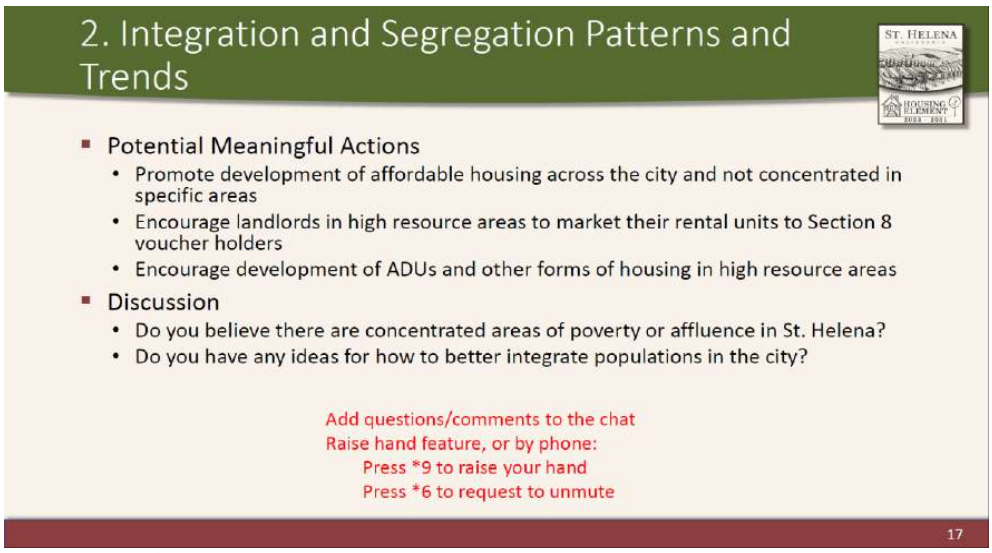
The table below shows public input received at the event and how each participant's input was incorporated into the Draft Housing Element.

Comment	Response
Jeff Farmer: Consider closed catholic school. Some talk with church officials there. Also, the city corp yard. It may be available. ADUs, concern about lack of ADU rentals	The City investigated potential sites and considered ADU affordability trends in the sites inventory.

Comment	Response
Norma: Potential sites: corner of Fulton and east of the railroad tracks, both the north and south side of Fulton. What happened with the big property by vineyard valley (Hunter project). Regarding Pope, there is another site east toward college there may be a big vacant site to consider.	The City investigated potential sites based on public comments and revised the inventory, as necessary.
Joe McGrath: 1998 Spring Street just changed hands and may have a vineyard lease. The 3-acre site. McCorkle sites have a pending contract and may have other plans One other McCorkle site was just renovated Fulton site had interest for housing development in the past. Other sites to consider: across from corps yard on Charter Oak. Consider this please.	The City considered the constraints and sites mentioned here.
Jordan Bentley: 1998 Spring Street changed hands and has a vineyard lease. Please provide a list of properties that can be developed.	The City investigated the constraint mentioned here. The City also provided a list of properties with online map via the project website.
Pat Friday: Crane is a good place for housing. Keep it. Across from Episcopal church, there is a vacant parcel that used to be a church. This may be a possibility. Walking distance to everything. Spring Street across from the cemetery there is a big area of vacant land.	The City investigated potential sites based on public comments and revised the inventory, as necessary.



Comment	Response
Rick Crebs: Consider workforce housing for the missing middle types and incomes.	The City considered workforce and missing middle housing in crafting the Policy Document. Several programs are included to respond to these topics specifically.
Mary Stephenson: Concern that ADUs are not being rented. Over 40 percent of land in city limits is in vineyards. How much of this is zoned for housing? Can we look at these and create a long-term plan? What will remain in vineyard and what will remain in housing? The process to rezone is expensive and time-consuming Lots of expensive houses with ADUs that won't be rented. It's an extension of the main house.	The City considered ADU affordability trends in the sites inventory and are working to promote ADU development through implementation programs. Additionally, the City included a program to explore the removal of the Urban Limit Line.
John Sales: Site on Crane Avenue by the creek has a major power line running across the property. This has to be dealt with before housing can be built on the site.	The City considered the constraint mentioned here and revised the sites inventory accordingly.
Jennifer La Liberte: North Crane: there's another parcel close to the one considered. Consider this. Suggests we include this site if Crane Avenue site is included.	The City investigated potential sites based on public comments and revised the inventory, as necessary.



Comment	Response
Tracy McBride: The City needs low income housing that is ownership based. On the map on your website. The lower income sites are east of main street and site 9 is west of main street. Keep this site to disperse lower income sites around the city. How can we incentivize housing development? With by-right this can make things easier if nothing is developed and the site is reused in the next round. Adams St and church sites: why can't we use these sites? Are churches really harder to redevelop?	The City investigated potential sites based on public comments and revised the inventory, as necessary. The City also worked to provide sites consistent with the goals of AFFH. The City also crafted a number of implementation programs that work to incentivize development of lower and moderate income housing.
Joe McGrath: PG&E property on Mitchell: Consider the site. Adams: would subdivision help the political situation?	The City investigated potential sites based on public comments and revised the inventory, as necessary. The City Council is considering a number of options for the Adams Street property.
Jennifer La Liberte: Please let the public know which sites have been ruled out and why.	The City included information about sites investigated but not selected in the materials posted to the project website following the event.
Nancy Dervin Encourages the City to include feasible sites. Some sites could be higher density and available to lower income families. The site map shows moderate on west site and lower on the east side of town. Is there a disparity between east and west? Please don't force the lowest income earners into the most-dense areas of the city. Mix up housing opportunities.	The City considered feasibility in the selection of each site. Additionally, the City investigated opportunities for density increases at each site. The City also worked to provide sites consistent with the goals of AFFH.

Comment	Response
Steve Goldfarb: Adams Street. Why not include it? Advantages to this property: publicly owned (it can be sold). Please include this. It's feasible. Subdivision may be necessary, and it can house a lot of people across a lot of income categories.	The City Council is considering a number of options for the Adams Street property.
Pat Friday: We need to develop Adams Street; agrees that the property may need to be subdivided.	The City Council is considering a number of options for the Adams Street property.
Norma Ferriz: Consider vineyards that are further out than the city center. The edges of town may have potential for housing.	The City included a program in the DraftHousing Element to explore the removal of the Urban Limit Line.
Tracy McBride: Consider new laws regarding subdivision of sf homes (SB 9).	The City encourages lot splits and ADU development consistent with SB9. The Housing Element includes a program committing the City to allowing and incentivizing SB 9 projects.

Workshop #3: Affirmatively Furthering Fair Housing

On March 16, 2022, the City held a Community Workshop on the Housing Element Update and Affirmatively Furthering Fair Housing (AFFH) in St. Helena. The workshop included an introduction to AFFH, a presentation of initial findings and potential actions, and opportunities for the public to join the discussion and provide comments.

An example slide from the workshop presentation. Presentation available at sthelenahousing.com

The following is a summary of comments that emerged through the public discussion and comment period of the workshop, as well as how the comments informed the Draft Housing Element

Comment	Response
The city needs more housing units and people.	The City has provided sites with capacity to meet the RHNA and to incentivize development citywide.
There is no evidence that ADUs accommodate affordable units.	The City considered ADU affordability trends in the development of the sites inventory and worked to incentivize accessory dwelling units and affordable rental ADUs through implementation programs.
The City of Napa has technical assistance and funding for people that agree to deed restrict ADUs and the City of St. Helena should look at this program.	The City has investigated these and other incentives to the construction of affordable rental ADUs, and has included an implementation program committing the City to providing incentives and technical assistance to support the construction of these units.
The City should have policies that promote both low- and moderate-income housing units.	The City has included implementation programs with objectives aimed at promoting housing for households of all incomes, including moderate-income households.
The cost of construction makes it difficult for the private market to accommodate affordable housing and public financing can help produce deed restricted units.	This comment supports the findings of the constraints analysis. The City provides funding and loans to assist in the development of affordable housing.
Requiring a CUP for multi-family project in the Medium Density district limits opportunities for more units.	The City is currently (2022) exploring changes to development standard through the comprehensive zoning code update.

Focus Group Meetings

As part of the Housing Element Update project, the City formed a Focus Group to assist in the development and review of the Housing Element and Safety Element. The Focus Group served as a technical working group that assisted in generating ideas and commenting on direction. Recommendations from the Focus Group were used to revise drafts of the Housing and Safety Elements and provide recommendations to the Planning Commission and City Council.

The members of the Focus Group were as follows:

- City Councilmember Paul Dohring
- Planning Commissioner Autumn Anderson
- Planning Commissioner Rosaura Segura
- Jennifer La Liberte (Our Town St. Helena)
- Mary Koberstein (Former Councilmember)

The Focus Group was active throughout the Update project. The following provides an overview of meetings.

Past Meetings

Focus Group Meeting #1: Housing Element Overview

Provided an overview of the Housing Element process and project schedule. Collected expectations for the project and insights on housing issues, priorities, and concerns that informed the Needs Assessment. The Focus Group provided critical input related to the most pressing housing needs in the community and encouraged the City to pursue sites that are feasible and can provide capacity for a larger number of units.

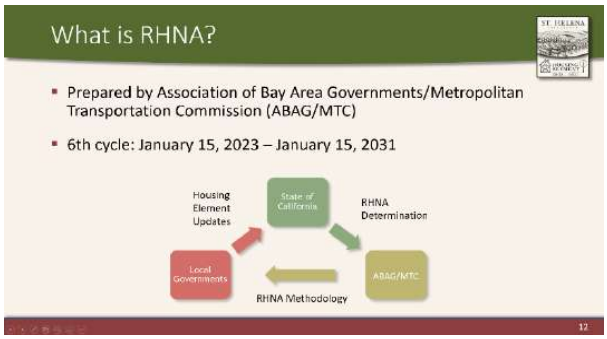
Focus Group Meeting #2: Preparing for the Housing Element

Discussed results of Community Workshop #1 and the integration of community input into the Housing Element Update. Reviewed the next steps in the Update with a focus on site assessment. The Focus Group reviewed the engagement strategy and provided ideas for additional outreach efforts.

Focus Group Meeting #3: Sites Assessment Review

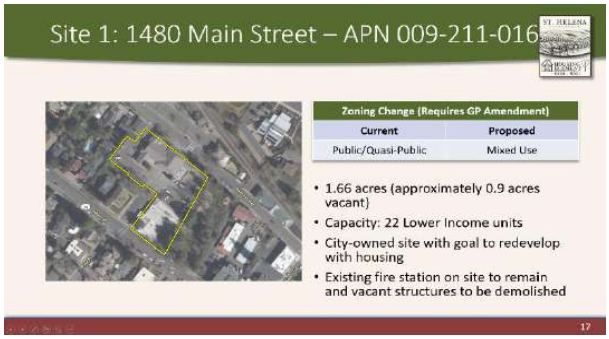
Discussed the results of the vacant and underutilized sites inventory and reviewed sites inventory methodology and assumptions. Focus Group input provided guidance on individual sites, capacity assumptions, and feasibility of affordable unit production.

Focus Group Meeting #4: Public Input on the Sites Assessment



Discussed the results of Community Workshop #2 and how to address community concerns in the Housing Element. The Focus Group considered public comment and provided additional direction on each site. Following this final Focus Group Input, the sites inventory was revised and presented to the City Council for final direction.

Public Meetings with City Leadership



Past Meetings

Planning Commission/City Council
Joint Study Session 1: Housing Element Overview
Held March 23, 2021

Provided an overview of the Housing Element process, project schedule, and project expectations. Discuss housing issues, priorities, and concerns.

Planning Commission/City Council
Joint Study Session 2: Sites Assessment
Held February 22, 2022

Discussed the RHNA and the sites inventory process and presented a walkthrough of potential housing opportunity sites. Discussed the results of Community Workshop #2 and public input on housing sites. Commissions and Councilmembers provided input on sites included in the draft sites inventory and reviewed each for potential constraints. The draft sites inventory was revised according to direction taken during this meeting in the preparation of the public review draft.

Planning Commission/City Council Joint Study Session: Public Review Draft Housing Element
Held July 21, 2022

Solicited input on the Public Review Draft Housing Element. Discussed next steps, HCD review, revisions, and remaining project schedule. Input from this event informed the City's response to comments on the Public Review Draft, discussed in Appendix B.

Future Meetings

- **Planning Commission Public Hearing: Recommendation for Adoption**
  To present the Draft Housing and Safety Elements, associated General Plan and Zoning Code Amendments, and responses to comments from previous Planning Commission and City Council Public Hearings and seek recommendation for adoption to City Council.

- **City Council Adoption Hearing: Adopt Housing and Safety Elements**
  To present the Final Housing and Safety Elements, associated General Plan and Zoning Code Amendments, and responses to comments from previous Planning Commission and City Council Public hearings and seek adoption of the Housing and Safety Elements from City Council.

Other Outreach Activities

St. Helena set out to collect as much feedback as possible from the community, from their general concerns and ideas to where new housing could go. It was also important to us to consider community outreach best practices and consult and partner with organizations working in the community, to ensure we were reaching as many people as possible and doing so thoughtfully.

Sites Inventory Mapping Exercise

As discussed in the summary of Workshop #2 above, the City produced an interactive online map that allowed residents and stakeholders to view and comment on potential housing opportunity sites. The online map was posted for more than a month following the workshop and the City encouraged all those interested in the Housing Element to submit their comments. The City incorporated comments on potential housing sites into the Sites Inventory by removing or revising constrained sites and considering additional sites with potential for residential uses.

Equity Advisory Group

In alignment with community outreach best practices, it was important to include the guidance of and foster partnerships with community organizations to help ensure everyone's voices were heard during the Housing Element update. In response, an Equity Advisory Group (EAG) was formed consisting of 15 organizations or leaders across the region that are advancing equity and affordable housing. A stipend of $1,500 was originally provided for meeting four to five times over 12 months to advise on Housing Element outreach and helping get the word out to the communities they work with.

After meeting twice in 2021, it was decided the best use of the EAG moving forward would be to provide more focused support in 2022 based on jurisdiction need and organization expertise. To date, EAG members have facilitated and hosted community meetings in partnership with 21 Elements, collected community housing stories to put a face to housing needs, advised on messaging, and amplified events and activities to their communities. The EAG continue to work collaboratively with jurisdictions and deepen partnerships, as well as connect community members to the Housing Element Update process. All participating organizations are featured on the Let's Talk Housing website and include the following:

- Ayudando Lations A Soñar (ALAS) www.alashmb.org
- Community Legal Services www.clsepa.org
- El Comite de Vecinos del Lado Oeste (El Comite) www.tenantstogether.org/resources/el-comité-de-vecinos-del-lado-oeste-east-palo-alto
- EPACANDO www.epacando.org
- Faith in Action www.faithinaction.org/federation/faith-in-action-bay-area/
- Housing Choices www.housingchoices.org
- Housing Leadership Council www.hlcsmc.org
- Menlo Together www.menlotogether.org
- Nuestra Casa www.nuestracasa.org
- One San Mateo www.onesanmateo.org
- Peninsula for Everyone www.peninsulaforeveryone.org
- Puente de la Costa Sur www.mypuente.org
- San Mateo County Health www.gethealthysmc.org
- Youth Leadership Institute www.yli.org/region/san-mateo
- Youth United for Community Action www.youthunited.net

Over six sessions, the EAG discussed explicit and implicit barriers to obtaining and maintaining affordable housing and this document outlines key findings, repeated themes, and recommendations from the EAG to the Napa Sonoma Collaborative. Key findings include:

- The current approach to housing policies throughout the region is ad hoc and piecemeal and what is really needed is a holistic approach to housing and homelessness issues
    - Affordable homeownership is missing from the conversation
    - Transitional and supportive housing as a more integrated part of the whole conversation is missing
    - The traditional paradigm of designing affordable housing should be changed at the educational level; design professionals should be educated to think holistically about designing communities and integrating affordable housing patterns into community design
- A lack of community trust leads to a lack of honest and transparent communication and engagement between local governments, partner agencies and the community members
- Additional housing costs are not factored into the affordable housing definition
    - The official definition of affordable housing does not include all related housing costs
        i. Those who live in deed-restricted affordable housing face food shortages, high insurance rates, and rising utility costs to name a few, which are not factored into the official definition of affordable housing. Yet these are costs that must be included in an already strained budget
    - Supercommuting leads to higher gas costs and more wear and tear on cars but is necessary to find and maintain affordable housing
    - The housing situation within the region leads to students working to support their families, creating an unintended consequence of students dropping out of their educational careers and/or leaving the community after they matriculate from High School since they cannot afford housing
    - Onerous regulation leads to displacement
- Affordable homeownership is missing from the conversation as renting is not a sustainable approach for all and it prevents people from accessing the "American Dream"
- The lack of affordable and safe housing due to high development costs, loss of units due to disasters, and/or gentrification are some of the contributing factors to the housing crisis within the region.
- Discrimination is both subtle and overt
    - Tenants are susceptible to landlords taking advantage of them due to a very specific cocktail of issues including but not limited to:
        i. Language barriers
        ii. Cultural Barriers
        iii. Stereotypes
        iv. Disabilities
        v. Income
    - Discrimination is a multilayered situation:

    i. Tenants in substandard/unhealthy housing live in precarious situations and are afraid to complain due to the fear of being evicted (which means that they live in substandard living conditions)
    ii. There is a very real fear that rents will increase if tenants complain about substandard situations
  - Stereotypes associated with low-income tenants and voucher holders are a real barrier to obtaining housing
    i. Criminal backgrounds and subsidies contribute to stereotypes which make landlords leery of renting.
    ii. SB 329 makes it illegal to reject housing vouchers, however, it still occurs
  - Discrimination is hard to determine since there aren't enough vacancies to even apply for housing
- The lack of available land coupled with regulations and high impact fees are contributing factors to astronomical development costs

The City considered these key findings in the development of the Needs Assessment and Policy Document. The Policy Document includes programs focused on regional coordination on housing issues, increasing affordable homeownership opportunities, providing transparency on housing-related decisions and actions, removing governmental constraints, incentivizing affordable housing construction, and working with Fair Housing Napa Valley to provide fair housing services.

2. Review of the Existing Housing Element

This section examines the effectiveness of the 2015 Housing Element, the progress made in achieving the goals, objectives and policies outlined in the Housing Element, along with a discussion of the Element's appropriateness given current conditions within the City of St. Helena. This evaluation will inform the policies and programs developed as part of the 2023-2031 Housing Element Update.

Housing Production During the 2015-2023 Planning Period

The City's RHNA for the 2015-2023 planning period was for eight units affordable to very low-income households, five units affordable to low-income households, five units affordable to moderate income households, and 13 units affordable to above moderate-income households, for a total of 31 housing units. Table 1 compares units permitted and constructed to the 5th cycle RHNA. Between 2015 and 2021, the City permitted a total of 110 units, including seven very low-, nine low-, and four moderate-income units. All permitted projects have been constructed.

Table 1 Progress Toward the 5th Cycle RHNA

	Very Low	Low	Moderate	Above Moderate	Total
RHNA	8	5	5	13	31
Permitted Units	7	9	4	90	110

Source: City of St. Helena, 2021 Housing Element Annual Progress Report, 2022.

Progress toward the Lower Income Housing Goals

The City has issued building permits for the Turley Flats affordable housing project, an 8-unit multifamily project with loan funding from the Affordable Housing Trust Fund (all low income), and occupancy of all units occurred in 2019. Further, the City has issued building permits for the Brenkle Court 8-unit affordable housing project (two very-low and six low income). In 2020, the City approved a deed restricted affordable housing project (four low to very-low income and one moderate income) at 963 Pope Street. The combined affordability of these units is expected to help the City make significant progress toward meeting these unit counts.

Most of the housing permitted during this planning period was above moderate-income housing. Between 2015 and 2021, 90 of the 110 units constructed were above moderate-income units.

Progress in Implementation

The 2015 Housing Element established the six goals with coordinated policies and implementing programs, organized around the following goal areas:

1. A Diversity of Housing to Meet Local Needs
2. Efficient Land Use and High-Quality Neighborhoods
3. Conservation of Existing Housing
4. Assistance to Support Affordable Housing
5. Resource Conservation
6. Equal Housing Opportunities

Table 2 provides a detailed evaluation of the implementing programs that support each of these goals, and the subsequent sections discuss the extent to which the 2015 Housing Element policies and implementing programs helped the City of St. Helena meet the goals.

Diversity of Housing to Meet Local Needs

Facilitate development of a variety of housing types to meet the full range of housing needs in our community, with particular emphasis on housing for our local workforce, people with special housing needs, and people with extremely low, very low, low and moderate incomes.

In order to supply a diversity of housing types to meet local needs, the 2015 Housing Element developed Policies 1.1 through 1.6 and implementing Actions 1.A through 1.K. Policies 1.1 through 1.6 focus on ensuring that the City provides a sufficient supply of residential land to meet the housing needs of the community, encouraging and facilitating the development of affordable housing, removing constraints to housing production, and providing workforce and mixed-use development near downtown. In line with these policies, the City proceeded with successfully implementing Actions 1.A through 1.K, which range from large efforts, such as streamlining approvals for affordable multifamily projects and providing priority access to water and sewer infrastructure to development with affordable units, to smaller efforts, such as encouraging non-traditional housing types. While many of these programs were completed, the City did not revise the definition of "family" within the Municipal Code for consistency with State law and must include a program in the 2023-2031 Housing Element to address this compliance issue.

Efficient Land Use and High-Quality Neighborhoods

Make efficient use of land within the Urban Limit Line to protect agricultural lands, promoting compact, well-designed developments that 'fit in' with existing neighborhoods and contribute to the overall livability of our community. Encourage a balance of housing types throughout the entire community.

Policies 2.1 through 2.6 encourage higher density development where appropriate, mixed-use development, second units, and a variety of housing type throughout the community. These policies are supported by Implementing Actions 2.A through 2.P. Most notable among these actions is the progress towards incentivizing

higher density housing (Action 2.A), which has been supported by the removal of the Use Permit requirement for multi-family housing in the High Density Residential land use designation and Housing Opportunity Sites located on parcels designated Medium Density Residential. Additionally, the City has implemented state-mandated ADU regulations (Action 2.I) and integrated a mixed-use land use designation into the 2040 General Plan (Action 2.H). While some of these programs were completed with the recent General Plan Update, programs related to zoning changes are being undertaking in the current (2022) comprehensive Zoning Code update. These programs should be continued in the 2023-2031 Housing Element.

Conservation of Existing Housing

Improve and conserve existing housing, with particular attention to the rehabilitation and retention of existing affordable units.

Policies 3.1 and 3.2 are designed to conserve the existing housing stock through restricting conversion of rental units to condominiums and to monitor housing conditions citywide. Actions 3.A through 3.E implement these policies. Actions 3.A, 3.C, and 3.D help protect current housing stock by working to limit conversion to more limited uses, such as vacation rentals, or to nonresidential uses. Action 3.B implements an affordable housing impact fee to help monetarily incentivize the conversion of existing housing units. Action 3.E describes reporting requirements and commits the City to producing an annual Housing Element progress report, as required by HCD. Since the last Housing Element, the City has implemented a Housing Impact Fee, actively limits short-term rentals to twenty five units, and continuously looks for methods to promote the conservation of existing housing.

Assistance to Support Affordable Housing

Provide technical and financial resources to support development of affordable housing in our community, especially housing that meets the needs of our local workforce, people with special housing needs, and people with moderate, low, and very low incomes.

Policies 4.1 through 4.5, as well as Implementing Actions 4.A through 4.L, are designed to support this goal of actively assisting affordable housing growth, especially for special needs groups, such as farmworkers, seniors, and persons with disabilities. The City has made significant efforts to provide financial incentives, including reducing the application and impact fees for affordable housing projects and will continue to do so into the foreseeable future. During the 5th cycle, the City committed substantial amounts of Affordable Housing Trust Fund monies (approximately $2,450,000) to three different affordable housing projects (Turley Flats, Brenkle Court, and 963 Pope), anticipated to result in the construction and/or occupancy of 21 new affordable housing units in St. Helena through 2021. The City has also passed Measure E, which increased the Transit Occupancy Tax rate by one percent, which generates further funds towards affordable housing. Estimated annual revenue from this measure is approximately $280,000. Since 2015, the City has fully funded all funding requests made by affordable housing developers to assist with the design and construction of affordable housing units within St. Helena.

Resource Conservation

Promote resource conservation by encouraging housing types and designs that use fewer resources (water, electricity, etc.) and therefore cost less to operate over time, supporting long-term housing affordability.

The City of St. Helena took an active role in promoting the use of alternative energy sources and encouraging energy conservation, as targeted by Policies 5.1 and 5.2 and Programs 5.A through 5.H. During the 5th cycle, the City implemented these actions by adopting the 2019 State Building Codes, including the CALGreen Building Code, creating a "Rapid Permit" procedure for solar installations, and adopting a "water neutral" policy for new development. Additionally, the City is engaged with the Napa Valley Transportation Authority to adopt a countywide bicycle and pedestrian plan, which works to increase accessibility and promote tourism across the county while reducing vehicles on the road.

Equal Housing Opportunities

Assure that housing programs maximize choice, avoid economic segregation and avoid discrimination based upon age, sex, race, sexual orientation, religion and ethnic background

The sixth and final goal has one policy and two implementing programs, which commit the City to supporting Fair Housing Napa Valley as the City Fair Housing Provider. The City works with Fair Housing Napa Valley to provide information to the public regarding the rights and responsibilities and resources available to address fair housing issues. The City provides funding to Fair Housing Napa Valley and responds to all referrals from the agency. This governmental cooperation between local and county level agencies allows for enhanced coordination to combat housing insecurity across the region.

In the upcoming cycle, the City should be strengthened to promote a proactive approach to fair housing consistent with the State's requirements related affirmatively further fair housing (AFFH). Additional policies and programs will be needed to address fair housing issues. Additionally, the City should analyze all goals, policies, and programs through the lens of AFFH, and should apply fair housing objectives as appropriate.

Effectiveness of 2015 Housing Element

As discussed in the preceding section and in Table 2, the City implemented many policies and programs to facilitate housing production. Most importantly, the City has made great strides in securing additional funding for affordable housing and working with local stakeholders and county organizations to improve housing accessibility. From preserving existing housing and promoting the expansion of multifamily housing through relaxed regulation, the City recognizes the severity of the housing crisis and has worked progressively to do its part in adding housing towards meeting and exceeding RHNA goals. However, in some cases, the City did not have the necessary staff resources or funding to implement programs. While the 2040 General Plan Update process required significant staff time and delayed implementation of some Municipal Code amendments, the City is currently (2022) undertaking a comprehensive Zoning Code update that will address the remaining code amendment implementation measures during the 6th cycle. As the code update draws to its conclusion, the City

will have more resources available to implement remaining implementation actions, which have been continued in the 2022 Housing Element Update.

Effectiveness in Meeting the Needs of Special Needs Populations

The previous Housing Element had one program targeting special needs populations, Program 1.F. Program 1.F calls for the fast-tracking of housing developments that meet lower income and special needs populations. During the fifth cycle, 13 units of deed restricted affordable housing units were approved. No housing developments specifically tailored to the needs of special needs communities, such as seniors and farmworkers, were approved or built during the planning period. The previous housing element also contained the following quantified objectives tailored towards Special Needs Households:

- Assist in the acquisition of low-interest loans to 10 first-time homebuyers.
- 20 percent of new units to meet senior needs.
- 10 percent of new units accessible to persons with disabilities.
- Purchase of 3 existing housing units and conversion to regulated affordable housing for lower-income households.

The City of St. Helena did not meet any of the previously listed quantified objectives during the fifth cycle. However, the City made significant progress with the construction of 8 units of market-rate housing that was fully compliant with Americans with Disabilities Act (ADA) requirements. This equates to 7.3 percent of new units being accessible to persons with disabilities during the fifth cycle.

The 2023 Housing Element Update provides new and updated programs to commit the City new actions that work to meet the needs of special needs populations. Program H-E, a revised version of Program 1.F, commits the City to providing a streamlined ministerial review process for special needs housing, with a goal of encouraging the development of 6 units for seniors, farmworkers, or persons with disabilities. Program H-BB, a new program, commits the City to pursuing funding to assist with rehabilitation costs for lower income households and seniors. Program H-KK specifically commits the City to supporting efforts to improve access to farmworker housing in the City and region. Program H-LL commits the City to encouraging developers to include units dedicated to those with special housing needs in new developments. Finally, Program H-NN commits the City to pursue funding to assist with funding new housing projects for populations with special needs.

Table 2 Program Implementation Status pursuant to GC Section 65583

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE1.A	Continue to exempt permits for regulated affordable units as well as second units from Growth Management System	Ongoing	The City currently exempts all units, including affordable housing units and Accessory Dwelling Units from the Growth Management system in compliance with current state law. This provision will be removed in a future zoning code update.	Modify to reflect removal of the GMS
HE1.B	Review and possibly amend the Growth Management System to encourage the production of regulated affordable and workforce housing units.	2017	The City Council reviewed the Growth Management system in 2016 (as required) and provided direction to update and potentially amend the GMS Ordinance, after the 2040 General Plan update is completed. Given that the only multi-family housing applications reviewed by the City in recent years have been approved, it does not appear that the current GMS Ordinance is affecting the development of workforce housing. As explained above, the Growth Management System will be removed from the Municipal Code as part of the comprehensive zoning code update.	Modify to reflect removal of the GMS, merge with HE1.A
HE1.C	Give projects that include affordable housing units priority access to water and sewer resources over other new projects should the capacity of the local water or sewer systems become inadequate to meet the full demand for new connections.	Ongoing	The City provides priority access to water and sewer resources to projects to affordable housing projects.	Keep

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE1.D	Revise the permitting process to streamline the review of affordable housing and market rate multifamily projects.	2016	In an effort to implement this Goal, the City has removed the Use Permit requirement for multi-family housing in the High Density Residential (HR) zone and all of the Housing Opportunity Sites (Key Housing Sites, see Section 17.40.020(N)) located within the Medium Density Residential (MR) zone and has established a streamlined approval process consistent with SB35 and SB330. Further, as mentioned above, affordable housing units are not subject to the GMS Ordinance limitations.	Delete
HE1.E	Work with private property owners/developers to plan for road and utility improvements necessary to support housing on key opportunity sites, in the event these sites are developed.	Ongoing	The City is continually looking for grant and other funding opportunities to off-set the costs of infrastructure Further, the 2040 General Plan update and current Capital Improvement Program provide direction and discussion regarding needed infrastructure improvements.	Keep
HE1.F	When possible, fast-track housing developments that meet lower income and special housing needs.	Ongoing	The City is committed to expediting any affordable housing applications that are submitted for review and action. Eight owner-occupied affordable housing units were approved by the City in Dec. 2016 (Self-Help Affordable Housing Project called the Brenkle Ct. Project from Our Town St. Helena (OTSH)). Building permits for each unit were issued in 2019. An additional five deed restricted affordable units were approved in 2020 however building permits have not yet been issued.	Modify
HE1.G	Maintain the local preference policy to possibly include people needed for work during city emergencies.	2017	No revisions to the current local preference policy for affordable housing units has been made as of yet.	Delete

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE1.H	Explore, and adopt as appropriate, a program to address the housing needs of "workforce" households, which have incomes above 120 percent of AMI, but are still unable to afford market rate housing.	2017	The City Council has expressed an interest in reviewing housing needs Citywide. Pending development applications anticipated to increase the demand for employee housing are being asked to make efforts to address the housing impacts associated with their individual developments.	Modify and Expand
HE1.I	Implement a program to provide financial assistance for the development of second units in exchange for affordability restrictions that will provide workforce housing.	Ongoing	The City Council has expressed an interest in finding ways to deed restrict and/or incentivize the use of ADUs as rental units.	Keep
HE1.J	Encourage development of co-housing, ecohousing, 'green' manufactured homes and other 'nontraditional' forms of housing. Ensure these housing types are addressed in the development of design guidelines to streamline to approval process.	Ongoing	The City Council has expressed an interest in reviewing housing needs Citywide now that the 2040 St Helena General Plan has been adopted. In addition, the Comprehensive Zoning Code update includes standards for small lot development and standards to encourage a variety of housing types.	Keep
HE1.K	Amend the Zoning Ordinance to define "family" as one or more persons living together as a single housekeeping unit in a dwelling unit. The definition should not distinguish between related and unrelated individuals and should not impose a numerical limit on the # of persons that constitute a family.	Ongoing	No revisions to the current zoning code definition of family have been made as of yet as the comprehensive zoning code update is still underway. However, all City actions are made in keeping with California State law, as it has precedence over any in-consistent locally adopted land use definitions.	Required Keep

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE2.A	Provide incentives for higher density housing. Explore possible incentives for building attached market rate housing units for rent and for sale.	Ongoing	In an effort to implement this Goal, the City has removed the Use Permit requirement for multi-family housing in the High Density Residential land use designation and all of the Housing Opportunity Sites located within other land use designations (Medium Density Residential). In addition, the City has created an SB 330 Checklist to further streamline the design and approval of by-right multi-family units within the community.	Keep
HE2.B	Study potential modifications to the Zoning Ordinance to facilitate higher density housing [and discourage construction of oversize homes]. Modify the Zoning Ordinance to encourage higher density developments [and restrict construction of large single-family units], including current floor area ratios and yard and setback requirements.	Ongoing	The City Council has expressed an interest in reviewing housing needs Citywide. The comprehensive zoning code update is in progress and these items will be addressed as part of that effort.	Keep
HE2.C	Amend regulations to discourage exemptions from the minimum density requirements. The City shall discourage exemptions for minimum density requirements and establish mitigation measures for exemptions in the Zoning Ordinance.	Ongoing	The comprehensive zoning code update is in progress and these items will be addressed as part of that effort. However, all City actions are made in keeping with California State law, as it has precedence over any in-consistent locally adopted land use definitions.	Keep

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE2.D	Modify section 17.100 of the Zoning Ordinance to rename the Mobilehome Park Overlay District to "Manufactured Housing Overlay District". Develop policies to streamline the review process for this overlay district on residential land for projects that create land-ownership opportunities for residents. Support giving residents the right of first refusal if an existing park is to be sold.	Ongoing	No revisions to the current zoning code have been made yet as the comprehensive zoning code update is currently underway. However, all City actions are made in keeping with California State law and any request to implement a Manufactured Housing Overlay District would be reviewed as such.	Delete
HE2.E	Amend the "Subdivisions" section of the Municipal Code. The City will amend Title 16 of the Municipal Code to prevent subdivision activity from effectively resulting in lower densities and a loss of potential housing units on the site.	Ongoing	No revisions to the current "Subdivisions" section of the Municipal Code have been made as of yet. The City Council has expressed an interest in reviewing housing needs Citywide.	Delete
HE2.F	Update the General Plan Land Use Element in consideration of the established Housing Element land use goals and policies. Amend General Plan Elements concurrent with adoption of the General Plan Update as needed to ensure internal consistency.	2015	The St Helena 2040 General Plan update incorporates the adopted 2015 Housing Element. The Housing Element and General Plan are consistent.	Modify for required Safety Element Update

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE2.G	Promote both 'vertical' and 'horizontal' mixed-use. Encourage mixed-use developments that combine compatible uses on the same site, either in the same structure or adjacent structures. Amend the Zoning Ordinance accordingly. Amendments to the Zoning Ordinance include permitting the FAR for the residential component of a mixed-use development to be 'additive' rather than within the established FAR for that zone, and allowing commercial and residential users to 'share' their parking, resulting in a lower overall parking requirement. Requirements for covered parking should also be reconsidered.	2017	The St Helena 2040 General Plan update incorporates the adopted 2015 Housing Element. This update includes the creation of a mixed-use land use designation and will be followed by a comprehensive zoning code update, intended to create and implement the development criteria set for mixed use development within St Helena.	Revise for zoning code consistency

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE2.H	Explore the possibility of allowing mixed use and live/work units in non-residential zoning districts. Explore and adopt as appropriate modifications to non-residential Zones that would permit, either as of right or as a conditional use, residential uses including mixed use and integrated live/work units. Analyze requirements that commercial projects provide housing for a portion of the employment that will be generated on site. The City will study and determine what portion of employment generated will require housing, whether housing will be required on-site or allowed off-site, if pricing for the non-inclusionary units will be tied to anticipated salaries for employees in the commercial portion of the project, and if in-lieu fees will be permitted for smaller sized projects. Explore and adopt as appropriate development incentives such as higher density and height allowances, a streamlined design review process, and financial incentives, including fee reductions and waivers and contributions from the City's Housing Trust Fund, to encourage employers to provide on-site employee housing.	2017	The St Helena 2040 General Plan update includes the creation of a mixed-use land use designation. The comprehensive zoning code update will create and implement the development criteria for mixed-use development within St Helena.	Delete

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE2.I	Review and revise development standards pertaining to second units. Ensure that the development of second units is physically and financially feasible in targeted areas. Give particular attention to parking standards, setbacks, and impact fees.	Ongoing	In 2020, the City adopted updated ADU regulations which streamlined the review process for ADU construction and conversion, in keeping with the requirements of State law. The St Helena 2040 General Plan update was adopted in May 2019. A comprehensive zoning code has begun and will include additional direction regarding the development of Accessory Dwelling Units.	Delete
HE2.J	Provide financial assistance for second unit development. Incentives might include low interest loans or fee waivers.	2020	The City of St. Helena has amended its zoning ordinance to be compliant with state law with regards to ADUs, their permitting, and reduced impact fees.	Modify and Expand
HE2.K	Target specific areas for second unit incentives. Create incentives to construct second units in the medium density areas near downtown. Incentives to adopt as appropriate include, but are not restricted to, fast tracking development applications, deferred development fees, and reduced parking and/or other city standards.	Ongoing	The City of St. Helena has amended its zoning ordinance to be compliant with state law with regards to ADUs, their permitting, and reduced impact fees.	Keep
HE2.M	Link financial incentives and development standard variances to affordability requirements for second units. Require that either the main house or the second unit is used as a rental unit that is affordable to moderate or below moderate households whenever the City assists in development through financial incentives or by granting a variance.	Ongoing	The City Council has expressed an interest in reviewing housing needs Citywide which is expected to occur along with the comprehensive zoning code update. The City has also begun its 6th Cycle Housing Element Update which will identify Key Housing Opportunity Sites and potential rezoning opportunities withing the City.	Modify

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE2.N	Respond to complaints regarding illegal units. The City will work with the property owners to help bring illegal units up to code and to abate the use of non-habitable buildings as living units	Ongoing	While the City does not have a dedicated Code Enforcement Department, Planning and Community Improvement Department staff is responsible for responding to Code Enforcement complaints and prioritize life and safety issues, such as substandard housing, in these efforts. Additional Code Enforcement improvements have been identified as an element of the adopted City Council goals.	Keep
HE2.O	Identify appropriate 'target' areas for conversion of single-family homes to multi-unit dwellings, Identify areas, zoning districts, or specific sites where conversion would be appropriate or desirable.	Ongoing	A majority of the City's residential land is designated as Medium Density Residential, allowing conversion of existing SFD to MFD at a density of 5.1-16 units per acre. The City has also begun its 6th Cycle Housing Element Update which will identify Key Housing Opportunity Sites and potential rezoning opportunities withing the City. The 6th Cycle Housing Element identifies sites for rezoning to increase density and encourage affordable housing production.	Delete
HE2.P	Develop a program to encourage affordable housing in clusters of 4-6 units on Infill parcels on west side of town. The City will post an inventory of available sites on the City's website. City will explore and adopt as appropriate incentives to encourage affordable housing clusters, including, but not limited to priority permitting processing, reduced or waived development fees, reduced parking and/or other city standards, and an additional density bonus.	Ongoing	The City Council has expressed an interest in reviewing housing needs Citywide and have prioritized creation of a Citywide Housing Strategy as one of the Council Goals. This is expected to occur along with the comprehensive zoning code update. Incentives for the development of these units including parking ratio reductions, will be included as a part of this review. Further, a majority of the City's residential land is designated as Medium Density Residential, allowing conversion of existing SFD to MFD at a density of 5.1-16 units per acre. The City has also begun its 6th Cycle Housing Element Update which will identify Key Housing Opportunity Sites and potential rezoning opportunities withing the City.	Delete

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE3.A	Restrict conversion of rental units to condominiums. Current policy allows conversion to condominiums under certain circumstances when the vacancy rate is high. The presence of second homes results in an inflated vacancy rate. The policy should be further studied to reflect a general guiding principle of preserving the affordable housing stock while eliminating the current linkage to vacancy rates.	Ongoing	The City will endeavor to work the Napa Housing Authority to create regulations to restrict the conversion of rental units to condominiums.	Keep
HE3.B	Charge an affordable housing impact fee whenever housing units are converted to other uses. Exempt conversion projects that create affordable for-sale housing from this impact fee.	Ongoing	The City currently charges an Housing Impact Fee. Further, the City Council has expressed an interest in reviewing housing needs Citywide and have prioritized creation of a Citywide Housing Strategy as one of the Council Goals. This is expected to occur concurrently with the comprehensive zoning code update.	Keep
HE3.C	Address the potential loss of assisted units. Identify assisted properties at risk of conversion to market rates and work with the property owners and/or other parties to ensure that they are conserved as affordable housing.	Ongoing	The City Council has expressed an interest in reviewing housing needs; the maintenance of assisted units will be a part of this discussion.	Modify based on current at-risk units
HE3.D	Continue to limit the conversion of market rate housing to vacation rentals. Abate the use of illegal vacation rentals, including time shares and fractional interests.	Ongoing	The City strictly limits the use of residential units for short-term rental (STR) use to a maximum of 25 STR units within the City. Funds collected from these units are utilized to assist with active and aggressive enforcement of these limitations. This enforcement continued to be a priority throughout the planning period.	Keep

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE3.E	Review housing needs, achievements and challenges as part of the City's regular General Plan review. As required by State law, submit a progress report to the State Department of Housing and Community Development and Governor's Office of Planning and Research by April 1st of each year.	Annually	This report is being done as a part of this Goal and as of 2021 reporting year (submitted April 2022), the City of St. Helena is up to date on its reporting requirements regarding Housing Element implementation with the Office and HCD.	Keep
HE4.A	Review and possibly amend the inclusionary housing ordinance to: Adjust the inclusionary housing ordinance to require further distribution of affordable units within the various income categories… Balance collecting housing impact fees with the requirement to construct affordable housing, either on or off site depending on the size of the site and other site conditions, for larger commercial developments… Increase as appropriate residential construction in-lieu fees and/or create a sliding scale for larger houses. Add an above moderate-income workforce housing component to the Inclusionary Housing Ordinance requirements.	Ongoing	The City Council has expressed an interest in reviewing housing needs Citywide. Potential revisions to the inclusionary housing requirements will be included as a part of this review.	Delete

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE4.B	Generate Revenues for Affordable Housing through the Transient Occupancy Tax. Either increase the Transient Occupancy Tax or increase the number of transient occupancy rooms and apply the increased revenue to support affordable housing.	Ongoing	The City passed Measure E which increased the Transit Occupancy Tax rate by 1% and those funds raised go towards affordable housing.	Keep
HE4.C	Reduce, defer, or waive fees for affordable housing developments. The City will establish a set of criteria for project eligibility to have fees reduced, deferred or waived. The City will explore and adopt as appropriate higher incentives for affordable housing developments with units affordable to extremely low and very low income households.	Ongoing	Since 2010, the City has made significant efforts to provide financial incentives, including reducing the application and impact fees for affordable housing projects and will continue to do so into the foreseeable future. Since 2016, the City committed substantial amounts of Affordable Housing Trust Fund monies (approximately $2,450,000) to three different affordable housing projects, anticipated to result in the construction and/or occupancy of 21 new affordable housing units in St. Helena through 2021. Since 2015, the City has fully funded all funding requests made by an affordable housing developers to assist with the design and construction of affordable housing units within St. Helena.	Keep
HE4.D	Prioritize the use of Housing Trust Funds in support of the development and preservation of regulated affordable units for extremely low-income households.	Ongoing	Since 2010, the City has made significant efforts to provide financial incentives, including reducing the application and impact fees for affordable housing projects and will continue to do so into the foreseeable future. Since 2016, the City committed substantial amounts of Affordable Housing Trust Fund monies (approximately $2,450,000) to three different affordable housing projects, anticipated to result in the construction and/or occupancy of 21 new affordable housing units in St. Helena through 2021. Since 2015, the City has fully funded all funding requests made by an affordable housing developers to assist with the design and construction of affordable housing units within St. Helena.	Keep

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE4.E	Pursue mortgage revenue bonds and/or mortgage credit certificates. Promote affordable homeownership opportunities for moderate- and lower-income households.	Ongoing	The City continues to look for options to incentivize affordable housing development, and will expand these efforts as a part of continued Citywide housing review.	Keep
HE4.F	Pursue additional funding for affordable housing. Explore other options for affordable housing funding, including a real property transfer tax and Housing Trust Fund contributions from the wine and hospitality industry in Napa Valley.	Ongoing	Since 2010, the City has made significant efforts to provide financial incentives, including reducing the application and impact fees for affordable housing projects and will continue to do so into the foreseeable future. In 2018, the City joined with all municipalities in Napa County, put Measure E on the ballot, requesting voter approval of a special tax to increase Transit Occupancy Taxes on hotels by one percent, with these additional funds being for the sole purpose of housing. This measure was approved and went into effect January 1, 2019. Estimated annual revenue from this measure is approximately $280,000.	Keep
HE4.G	Continue Section 8 rent subsidy certificates. Work with the City of Napa Housing Authority to provide continued rental assistance to low, very low and extremely low-income households.	Ongoing	The City continues to contract with the City of Napa for Housing Authority services, including Section 8.	Keep
HE4.H	Explore the possibility of establishing a full-time, shared Housing Coordinator for the up-valley communities to promote development of new affordable housing and enter into a cost-sharing agreement if feasible. The position would serve all of the up-valley communities, including Napa County.	Ongoing	The City continues to contract with the City of Napa for Housing Authority services, including Section 8.	Keep

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE4.I	Address farmworker housing needs. The City will contribute staff time and City resources, as appropriate, to countywide farmworker housing efforts that may occur during the Housing Element planning period. The City will reach out to affordable housing developers to support regional and City efforts to develop farmworker housing, including assisting with financing or applications, incentives and concessions, expedited review or other strategies to encourage the development of housing for farmworkers.	Ongoing	The City continues to look for options to incentivize affordable housing development, and will expand these efforts as a part continued Citywide housing review.	Keep
HE4.J	Establish regulations requiring that a portion of units in all new developments meet the special housing needs of seniors and persons with disabilities, including developmental disabilities. Target 20 percent of new housing units to meet senior household needs and 10 percent accessible to persons with disabilities.	Ongoing	The City continues to look for options to incentivize affordable housing development, and will expand these efforts as a part continued Citywide housing review. A recent eight-unit market rate project (632 McCorkle) approved within the City will provide two fully compliant ADA units.	Delete
HE4.K	The City shall participate with mediation between property owners if needed to facilitate affordable housing. The City will provide staff resources and/or work with affected parties along with an outside mediator if necessary to address issues raised by community members in response to affordable housing development applications.	Ongoing	The City continues to look for options to incentivize affordable housing development, and will expand these efforts as a part continued Citywide housing review.	Delete

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE4.L	Explore the potential of using Housing Trust Fund money to purchase existing housing for conversion to restricted affordable housing and commit funding as appropriate. Priority use of Housing Trust Fund monies will be given to the creation of housing affordable to extremely low-income households.	Ongoing	Since 2010, the City has made significant efforts to provide financial incentives, including reducing the application and impact fees for affordable housing projects and will continue to do so into the foreseeable future. Since 2016, the City committed substantial amounts of Affordable Housing Trust Fund monies (approximately $2,450,000) to three different affordable housing projects, anticipated to result in the construction and/or occupancy of 21 new affordable housing units in St. Helena through 2021. Since 2015, the City has fully funded all funding requests made by an affordable housing developers to assist with the design and construction of affordable housing units within St. Helena.	Keep
HE5.A	Adopt a Green Building Ordinance. The City shall adopt building code standards that meet or exceed the State's Green Building Standards Code. The Planning and Building Department shall coordinate this effort with the Climate Protection Task Force.	Ongoing	The City adopted the most recent standard building code updates in 2017 and again in 2019 and will continue to do so as updates are required.	Keep
HE5.B	Encourage use of alternative energy technologies. Create incentives for the use of solar energy in new and rehabilitated housing. Incentives to adopt as appropriate include, but are not restricted to, ensuring a streamlined review process for applications, deferred fees, and reduced applicable city standards.	Ongoing	The City currently issues building permits for solar panel installation, backup battery installation, and electric vehicle charging infrastructure under the "Rapid Permit" category and will continue to do so into the foreseeable future. The City has extended services for Solar Permits to be submitted via email and paid over the phone to expedite further the process and reduce the number of trips into City Hall to get the permit.	Keep

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE5.C	Provide public information on alternative energy technologies for residential developers, contractors, and property owners. The City will provide information on its web site and/or at City Hall regarding alternative energy technology options, possible sources of financing, and any applicable information regarding necessary local permits.	Ongoing	The City currently provides Green Building Code information upon request and has updated the City website, allowing additional information to be provided on an on-going basis.	Keep
HE5.D	Require cost-effective energy conservation measures in all new and rehabilitated housing to promote long-term affordability for occupants. The City will adopt the State's new Energy Efficiency Standards as part of any update to the California Building Standards Code and ensure that all new housing units constructed in the City meet or exceed these standards.	Tri-Annually	The City continues to work toward concurrent building code adoption along with standard building code updates. The last update being January 1, 2020, with adoption of the 2019 Code Standards.	Keep

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE5.E	Provide low-interest loans for implementation of energy conservation measures. The City will identify a source of loan funds to provide energy conservation assistance to homeowners and homebuilders. The City will continue to participate in AB-811 programs and will explore additional state and federal sources of funding to finance local energy conservation measures. Sources of state and federal funds include, but are not limited to, the California Energy Commission State Energy Program and Energy Efficiency and Conservation Block Grant Program, and the Low Income Home Energy Assistance Program.	Ongoing	No additional ability to provide loans from City funds have been identified as of yet, however the City continues to seek opportunities to assist home owners with low-cost options for energy conservation.	Keep
HE5.F	Provide public information on alternative energy technologies for residential developers, contractors, and property owners. The City will provide information on its website and/or City Hall regarding alternative energy technology options, possible sources of financing, and any applicable information regarding necessary local permits.	Ongoing	The City currently provides Green Building Code information upon request and has recently updated the City website, allowing additional information to be provided on an on-going basis. In 2018, the City added information regarding solar panel installation, backup battery installation, and electric vehicle charging infrastructure to the City's website to ease access to the requirements and incentives available.	Delete or merge with 5.C

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
HE5.G	Require bicycle and pedestrian amenities and connectivity to surrounding areas, in all new housing developments. Support programs to develop more local and regional walking and biking trails. In addition to requiring bicycle and pedestrian connectivity in all new residential developments, the City will provide staff time in support of regional trail programs.	Ongoing	The City engaged with the Napa Valley Transportation Authority on the adoption of a county wide bicycle and pedestrian plan. Further, the City has engaged with the Vine Trail organization in an effort to assist with implementation of the best route for the trail through St Helena. The City has established a Trails Committee and a Trails and Open Space Plan to promote pedestrian connectivity has been drafted and is expected to be adopted by the City Council in 2023. Finally, it is anticipated the comprehensive zoning code update, will include additional requirements for bicycle parking.	Delete
HE5.H	Continue to apply Municipal Code provisions pertaining to water resources. City will continue to require water-efficient landscaping for new residential and commercial construction, as well as implementing the Water Use Efficiency and Use Guidelines.	Ongoing	The City has adopted a "Water Neutral" policy for all new development (Municipal Code Chapter 13.12) and continues to implement a Water Efficient Landscape Ordinance (MWELO) in keeping with anticipated State requirements.	Keep
HE6.A	Provide educational materials at City Hall, through the press and directly to interested parties to educate real estate professionals, property owners and tenants on their rights and responsibilities and the resources available to address fair housing issues.	Ongoing	The City works with Fair Housing Napa Valley to put on an annual housing workshop to highlight the rights and responsibilities of tenants and landlords, in addition to discussing affordable housing challenges generally.	Keep
HE6.B	Continue to utilize and support Fair Housing Napa Valley for implementing fair housing programs, receiving complaints, and providing referrals to available resources when necessary.	Ongoing	The City contracts with Fair Housing Napa Valley to support fair housing and allocates direct funding as part of the budget process for their assistance.	Merge with 6.A

#	Implementation Actions	Timeframe	Status of Program Implementation	Recommen-dation
Goal 3 Quantified Objective:	Assist in the acquisition of low-interest loans for rehabilitation, including energy conservation, of 10 lower-income housing units by January 31, 2023, of the end of the Housing Element planning period (two extremely low income, two very low income, three low income, and three moderate income households).	12/31/2022	City was awarded $500,000 HOME funds grant in 2017 and initiated implementation of a program to make 0-interest, 0-payment 30-year loans for rehabilitation work to owners of deed restricted homes. To date, the City has expended or committed approximately $448,000 of these funds to assist 18 low-income homeowners and continues to roll out funds as loans are repaid. The City was awarded another $500,000 in HOME funds in 2020 however the City is waiting for approval from HCD to begin processing loan requests as they review the updated guidelines and environmental documentation.	Establish new Quantified Objectives in the Housing Element Update
Goal 1- Quantified Objective:	Construct four units of affordable housing to Extremely-Low income households; four units of housing affordable housing to Very Low Income households; five units for Low Income households; five units for Moderate Income households; and 13 units for above Moderate Income households by October 31, 2022 (31 total RHNA).	12/31/2022	The City has issued building permits for the Turley Flats affordable housing project, an 8-unit multifamily project with loan funding from the Affordable Housing Trust Fund (all low income). Occupancy of all units occurred in 2019. Further, the City has issued building permits for the Brenkle Court 8-unit affordable housing project (two very-low and six low income). In 2020, the City approved a deed restricted affordable housing project (four low to very-low income and one moderate income) at 963 Pope Street. The combined affordability of these units is expected to help the City make significant progress toward meeting these unit counts.	Establish new Quantified Objectives in the Housing Element Update
Goal 4 Quantified Objective:	Reduce, defer or waive fees for 18 housing units affordable to extremely low, low, very low- and moderate-income households.	12/31/2022	The City has both reduced and deferred fees (through a loan from the Affordable Housing Trust Fund) for the Turley Flats Affordable Housing Project, an 8-unit multi-family development at 1105 Pope St, the Brenkle Court 8-unit affordable housing project access off of McCorkle, and the 5-unit affordable housing project at 963 Pope Street. Combined, the City has reduced, deferred or waived fees for 21 affordable housing units as of Jan. 1, 2022.	Establish new Quantified Objectives in the Housing Element Update

3. Demographic and Economic Trends

In order to understand the current housing needs of St. Helena residents, this section examines historic, current, and projected population, household, and employment trends. The figures for St. Helena are compared with the equivalent figures for Napa County and the Bay Area, to frame the St. Helena figures within the trends of the greater region.[3]

The data for the analysis of population, household characteristics, and employment come from the last four decennial Censuses, the 2015-2019 American Community Survey, the U.S. Department of Housing and Urban Development's (HUD) 2013-2017 Comprehensive Housing Affordability Strategy, the California Department of Housing and Community Development's (HCD) 2020 5th Cycle Annual Progress Report Permit Summary, the California Department of Finance's (DoF) 2020 E-5 series, and the 2010-2021 California Employment Development Department (EDD) Local Area Unemployment Statistics.

The Association of Bay Area Governments (ABAG) supplied an HCD Preapproved Data Package that included the vast majority of the data included in this analysis. Additionally, ABAG, in coordination with Baird + Driskell Community Planning provided a Housing Needs Data Report that directly informed this section of the Needs Analysis.[4]

The Bay Area continues to see growth in both population and jobs, which means more housing of various types and sizes is needed to ensure that residents across all income levels, ages, and abilities have a place to call home. While the number of people drawn to the region over the past 30 years has steadily increased, housing production has stalled, contributing to the housing shortage that communities are experiencing today. In many cities, this has resulted in residents being priced out, increased traffic congestion caused by longer commutes, and fewer people across incomes being able to purchase homes or meet surging rents.

The 2023-2031 Housing Element Update provides a roadmap for how to meet our growth and housing challenges. Required by the state, the Housing Element identifies the existing housing conditions and community needs, reiterates goals, and creates a plan for more housing. The Housing Element is an integral part of the General Plan, which guides the policies of St. Helena.

This section presents information regarding population, household, and income trends between 2010 and 2019, with some additional analysis for the period between 2000 and 2010.

---

[3] For the purposes of this Housing Needs Assessment, the Bay Area is defined to include the following counties in the Association of Bay Area Governments (ABAG): Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Sonoma, and Solano.

[4] ABAG/MTC Staff and Baird + Driskell Community Planning, Housing Needs Data Report: St. Helena, May 2021.

Key Findings

- **Population**. Generally, the population of the Bay Area continues to increase because of natural growth and the strong economy drawing new residents to the region. The population of St. Helena increased by 2.1 percent from 2000 to 2020, which is lower than the growth rate of the Bay Area.
- **Age.** In 2019, St. Helena's youth population under the age of 18 was 1,050 and senior population 65 and older was 1,636. These age groups represent 17.2 percent and 26.8 percent, respectively, of St. Helena's population.
- **Race/Ethnicity.** In 2020, 65.1 percent of St. Helena's population was White while 1.6 percent was African American, 1.3 percent was Asian, and 30.9 percent was Hispanic or Latinx. People of color in St. Helena comprise a proportion below the overall proportion in the Bay Area as a whole.
- **Employment.** St. Helena residents most commonly work in the Health & Educational Services industry. From January 2010 to January 2021, the unemployment rate in St. Helena increased by 1.3 percentage points. Since 2010, the number of jobs located in the jurisdiction decreased by 2,620 (32.4 percent). Additionally, the jobs-household ratio in St. Helena has decreased from 3.47 jobs per household in 2002 to 2.23 in 2018.

Population Trends

The Bay Area is the fifth-largest metropolitan area in the nation and has seen a steady increase in population since 1990, except for a dip during the Great Recession. Many cities in the region have experienced significant growth in jobs and population. While these trends have led to a corresponding increase in demand for housing across the region, the regional production of housing has largely not kept pace with job and population growth. Table 3 shows population growth trends. In 2020, the population of St. Helena was estimated to be 6,073. From 1990 to 2000, the population increased by 19.2 percent, while it decreased by 2.3 percent during the first decade of the 2000s. In the most recent decade, the population increased by 4.5 percent to 6,073. The population of St. Helena makes up 4.4 percent of Napa County.[5]

Table 3 Population Growth Trends

	1990	1995	2000	2005	2010	2015	2020
St. Helena	4,990	5,531	5,950	5,960	5,814	6,079	6,073
Napa County	110,765	117,216	124,279	132,314	136,484	141,010	139,088
Bay Area	6,020,147	6381961	6,784,348	7,073,912	7,150,739	7,595,694	7,790,537

Source: California Department of Finance, E-5 series, 2020.

[5] *To compare the rate of growth across various geographic scales, Figure 1 shows population for the jurisdiction, county, and region indexed to the population in the year 1990. This means that the data points represent the population growth (i.e. percent change) in each of these geographies relative to their populations in 1990.*

Figure 1 displays population growth trends indexed to the population in the year 1990. Since 2000, St. Helena's population has increased by 2.1 percent; this rate is below that of the region as a whole, at 14.8 percent. In St. Helena, roughly 8.7 percent of its population moved during the past year, a number 4.8 percentage points smaller than the regional rate of 13.4 percent.

Figure 1 Population Growth Trends, Indexed to 1990

Source: California Department of Finance, E-5 series Note: The data shown on the graph represents population for the jurisdiction, county, and region indexed to the population in the first year shown. The data points represent the relative population growth in each of these geographies relative to their populations in that year.
For some jurisdictions, a break may appear at the end of each decade (1999, 2009) as estimates are compared to census counts. DOF uses the decennial census to benchmark subsequent population estimates.
For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-01.

Household Trends

As shown in Table 4, between 1990 and 2020, the number of households in St. Helena increased moderately, by an average 0.73 percent annually, however much of this growth occurred prior to the year 2000. From 1990 and 2000, the number of households increased at a rate of 2.1 percent annually. Between 2000 and 2010, this rate decreased to an increase of only 0.1 percent annually, or about 21 households per year. The rate increased slightly to an average of 0.5 percent per year between 2010 and 2020, or about 105 households per year. In

contrast, the number of Napa County households grew by one percent annually between 2010 and 2020, representing an increase of about 5,000 households per year.

Table 4 Household Trends

Household Trends	1990	2000	2010	2020	Average Annual Growth 1990-2000	Average Annual Growth 2000-2010	Average Annual Growth 2010-2020
St. Helena	2,138	2,380	2,401	2,866	1.2%	0.1%	2.0%
Napa County	41,312	45,402	48,876	48,484	1.1%	0.8%	-0.1%

Source: Census 1990, 2000, 2010, 2020.

Average Household Size

Average household size (Table 5) is a function of the number of people living in households divided by the number of occupied housing units in a given area. In general, a decline or increase in average household size signals that the population and the number of households are growing at different rates. Overall, the average household size in St. Helena was slightly smaller than in Napa County in 1990, 2000, and 2010 and considerably smaller in 2020. With the number of households growing, and a slight drop in population in St. Helena between 2000 and 2020, average household sizes fell from 2.48 to 2.38 persons per household between 2000 and 2010 and then to 2.08 persons per household by 2020. In contrast, the population in Napa County increased more rapidly than the number of households, leading to increases in the average household size from 2.62 to 2.69 persons per household between 2000 and 2010 and up to 2.78 by 2020.

Table 5 Average Household Size, St. Helena and Napa County

	1990	2000	2010	2020
St. Helena	2.31	2.48	2.38	2.08
Napa County	2.54	2.62	2.69	2.78

Source: Census 1990, 2000, 2010, 2020.

Household Tenure

The number of residents who own their homes compared to those who rent their homes can help identify the level of housing insecurity – ability for individuals to stay in their homes – in a city and region. Generally, renters may be displaced more quickly if prices increase. In St. Helena there are a total of 2,702 housing units, and fewer residents rent than own their homes: 41.2 percent versus 58.8 percent (Figure 2). By comparison, 35.8 percent of households in Napa County are renters, while 44 percent of Bay Area households rent their homes.

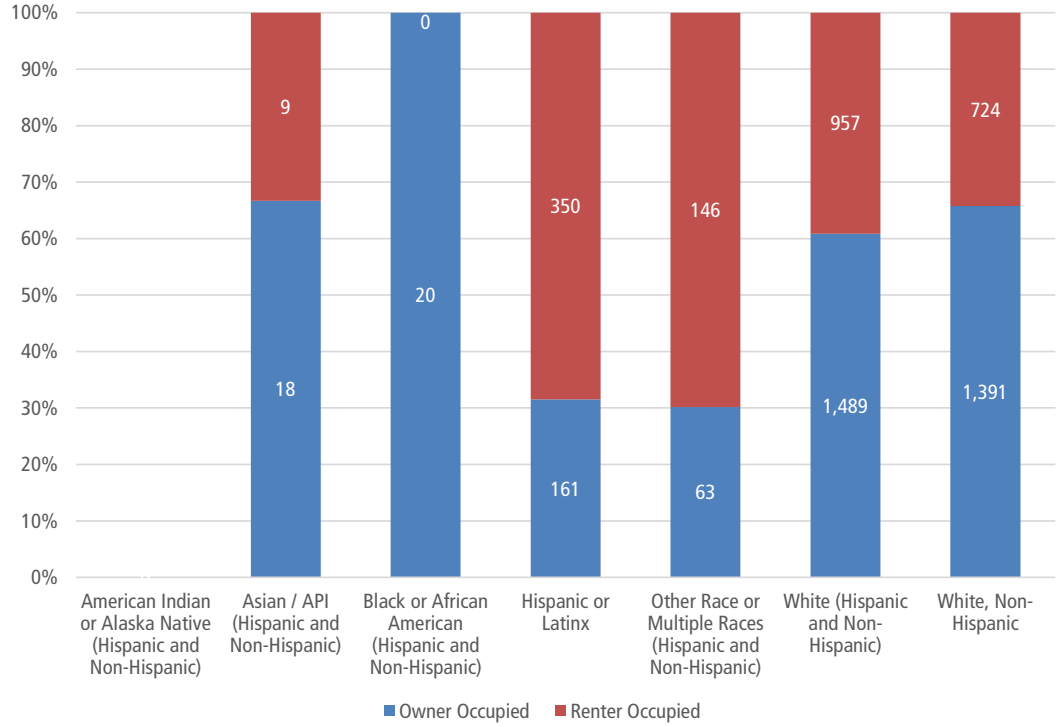


Figure 2 Housing Tenure

Universe: Occupied housing units
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25003 For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-16.

Homeownership rates often vary considerably across race/ethnicity in the Bay Area and throughout the country. These disparities not only reflect differences in income and wealth but also stem from Federal, State, and local policies that limited access to homeownership for communities of color while facilitating homebuying for white residents. While many of these policies, such as redlining, have been formally disbanded, the impacts of race-based policy are still evident across Bay Area communities. Figure 3 shows housing tenure by race. In St. Helena, 100.0 percent of Black households owned their homes, while homeownership rates were 66.7 percent for Asian households, 31.5 percent for Hispanic or Latinx households, and 60.9 percent for White households. Notably, recent changes to state law require local jurisdictions to examine these dynamics and other fair housing issues when updating their Housing Elements.

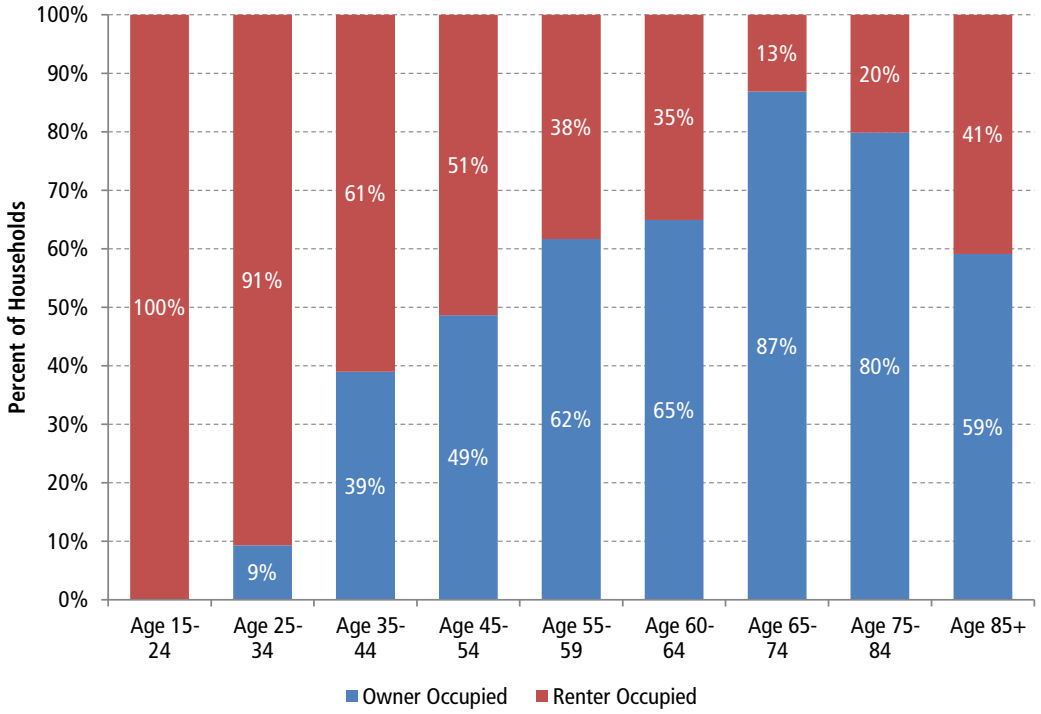

Figure 3 Housing Tenure by Race of Householder

Universe: Occupied housing units
Notes: For this table, the Census Bureau does not disaggregate racial groups by Hispanic/Latinx ethnicity. However, data for the white racial group is also reported for white householders who are not Hispanic/Latinx. Since residents who identify as white and Hispanic/Latinx may have very different experiences within the housing market and the economy from those who identify as white and non-Hispanic/Latinx, data for multiple white sub-groups are reported here. The racial/ethnic groups reported in this table are not all mutually exclusive. Therefore, the data should not be summed as the sum exceeds the total number of occupied housing units for this jurisdiction. However, all groups labelled "Hispanic and Non-Hispanic" are mutually exclusive, and the sum of the data for these groups is equivalent to the total number of occupied housing units.
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25003(A-I)For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-20.

The age of residents who rent or own their home can also signal the housing challenges a community is experiencing. Younger households tend to rent and may struggle to buy a first home in the Bay Area due to high housing costs. At the same time, senior homeowners seeking to downsize may have limited options in an expensive housing market. In St. Helena, 75.1 percent of householders between the ages of 25 and 44 are renters, while 19.7 percent of householders over 65 are (Figure 4).

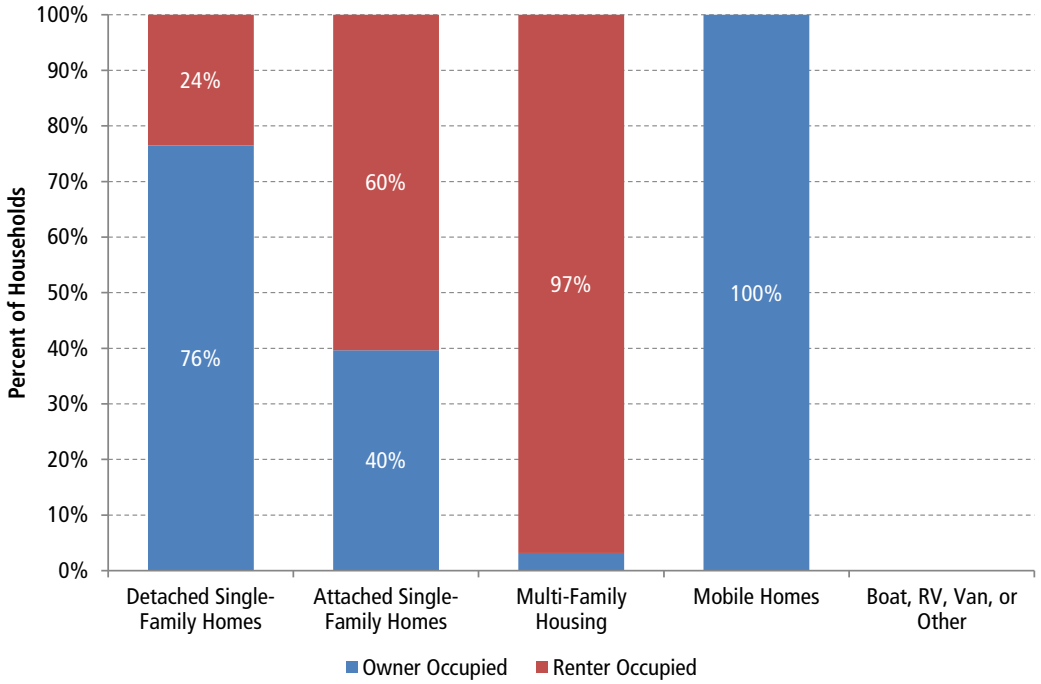

Figure 4 Housing Tenure by Age

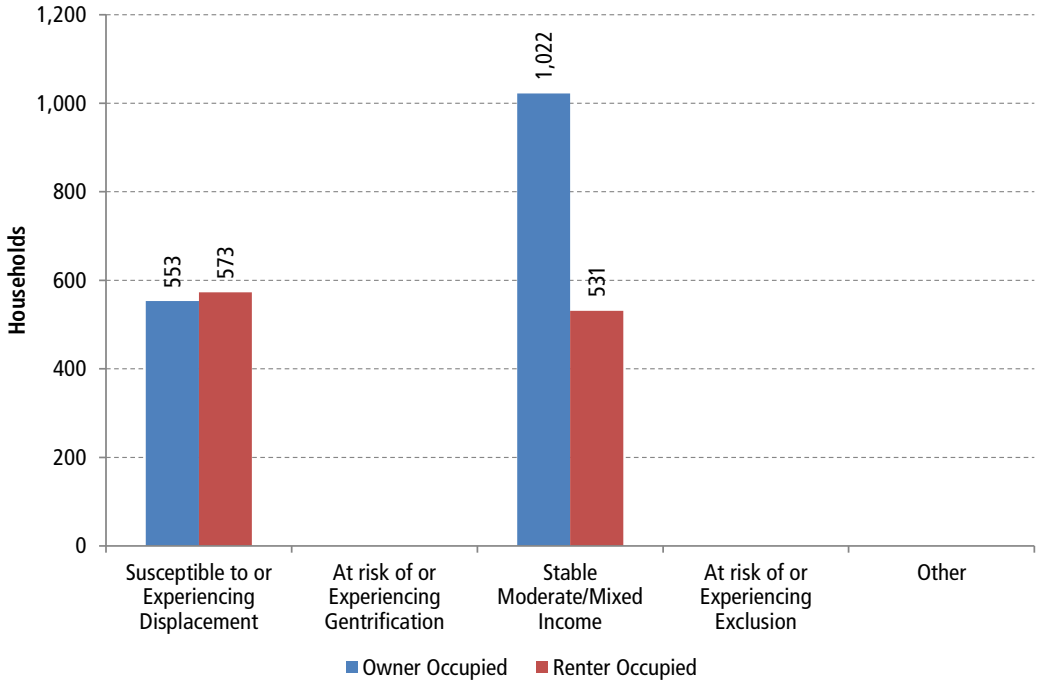
Universe: Occupied housing units
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25007 For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-18.

In many cities, homeownership rates for households in single-family homes are substantially higher than the rates for households in multi-family housing. In St. Helena, 76.5 percent of households in detached single-family homes are homeowners, while 3.2 percent of households in multi-family housing are homeowners (Figure 5).

Figure 5 Housing Tenure by Housing Type



Universe: Occupied housing units
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25032 For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-22.

Households by Displacement Risk

Because of increasing housing prices, displacement is a major concern in the Bay Area. Displacement has the most severe impacts on low- and moderate-income residents. When individuals or families are forced to leave their homes and communities, they also lose their support network.

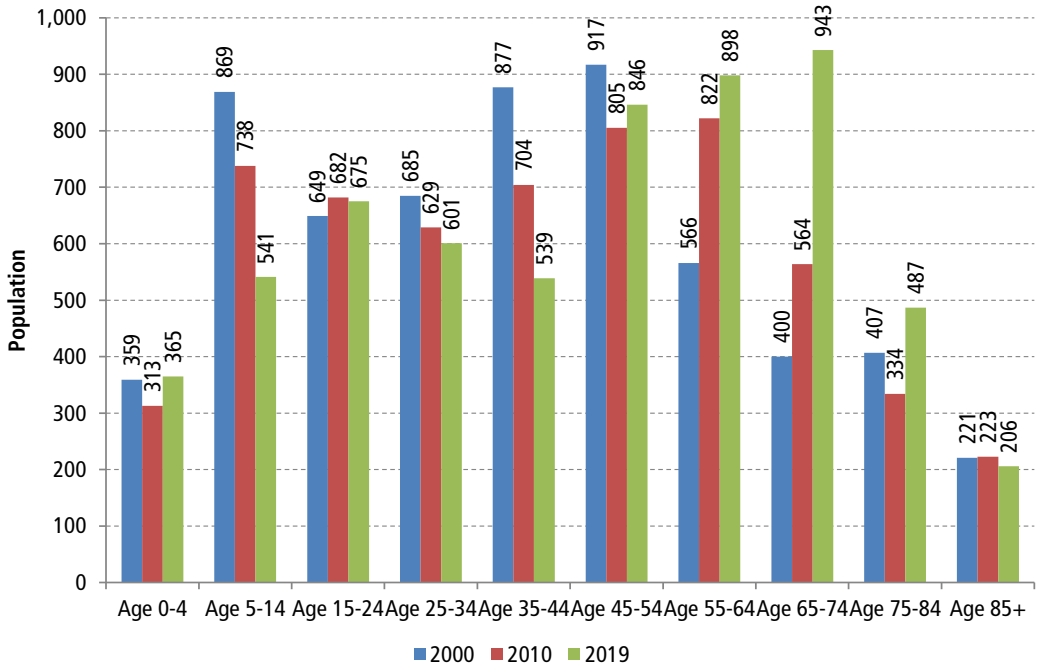
The University of California, Berkeley has mapped all neighborhoods in the Bay area, identifying their risk for gentrification. They find that in St. Helena, 42.0 percent of households live in neighborhoods that are susceptible to or experiencing displacement and 0.0 percent live in neighborhoods at risk of or undergoing gentrification. Figure 6 shows households by displacement risk and tenure.

Figure 6 Households by Displacement Risk and Tenure

Universe: Households
Notes: Displacement data is available at the census tract level. Staff aggregated tracts up to jurisdiction level using census 2010 population weights, assigning a tract to jurisdiction in proportion to block level population weights. Total household count may differ slightly from counts in other tables sourced from jurisdiction level sources. Categories are combined as follows for simplicity: At risk of or Experiencing Exclusion: At Risk of Becoming Exclusive; Becoming Exclusive; Stable/Advanced Exclusive At risk of or Experiencing Gentrification: At Risk of Gentrification; Early/Ongoing Gentrification; Advanced Gentrification Stable Moderate/Mixed Income: Stable Moderate/Mixed Income Susceptible to or Experiencing Displacement: Low-Income/Susceptible to Displacement; Ongoing Displacement Other: High Student Population; Unavailable or Unreliable Data
Source: Urban Displacement Project for classification, American Community Survey 5-Year Data (2015-2019), Table B25003 for tenure.
For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-25.

Equally important, some neighborhoods in the Bay Area do not have housing appropriate for a broad section of the workforce. UC Berkeley estimates no households in St. Helena are in neighborhoods where low-income households are likely to be excluded due to prohibitive housing costs.[6]

[6] *More information about this gentrification and displacement data is available at the Urban Displacement Project's webpage: https://www.urbandisplacement.org/. Specifically, one can learn more about the different gentrification/displacement typologies shown in Figure 18 at this link: https://www.urbandisplacement.org/sites/default/files/typology_sheet_2018_0.png. Additionally, one can view maps that show which typologies correspond to which parts of a jurisdiction here: https://www.urbandisplacement.org/san-francisco/sf-bay-area-gentrification-and-displacement*



Demographic Trends

Age Distribution

The distribution of age groups in a city shapes what types of housing the community may need in the near future. An increase in the older population may mean there is a developing need for more senior housing options, while higher numbers of children and young families can point to the need for more family housing options and related services. There has also been a move by many to age-in-place or downsize to stay within their communities, which can mean more multifamily and accessible units are also needed.

Figure 7 shows population growth trends. In St. Helena, the median age in 2000 was 39.2; by 2019, this figure had increased, landing at around 49 years. More specifically, the population of those under 14 has decreased since 2010, while the 65- and-over population has increased.

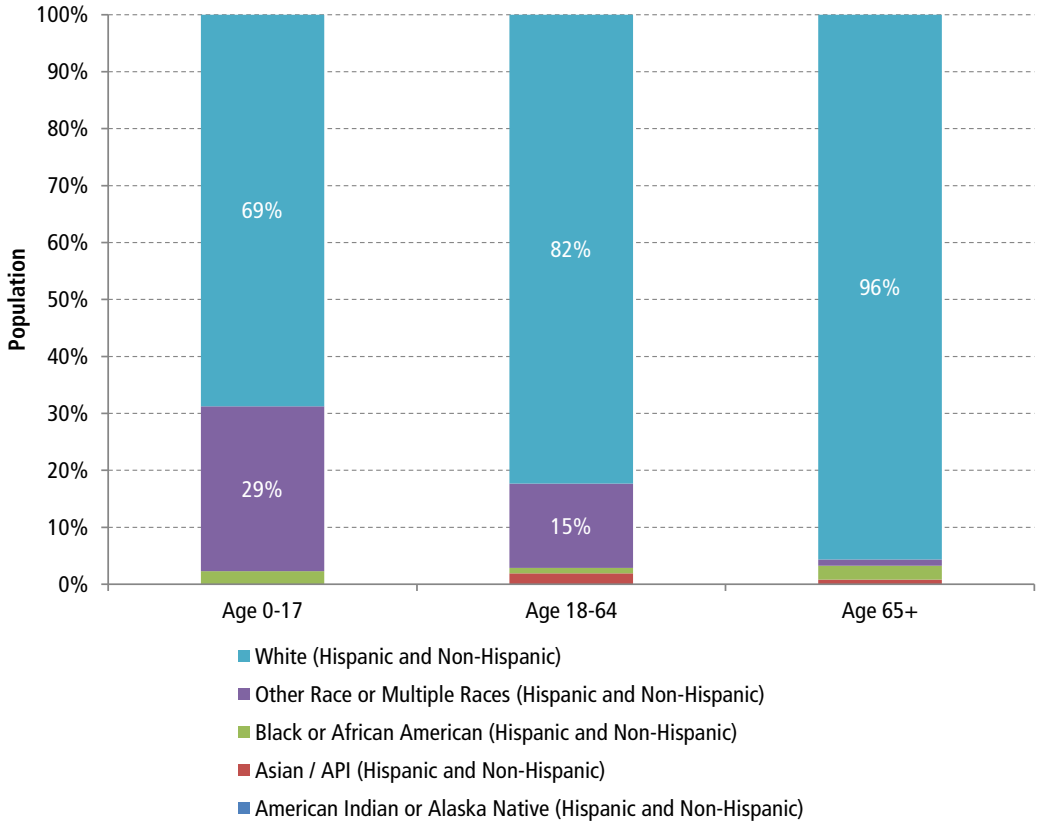


Figure 7 Population Growth Trends

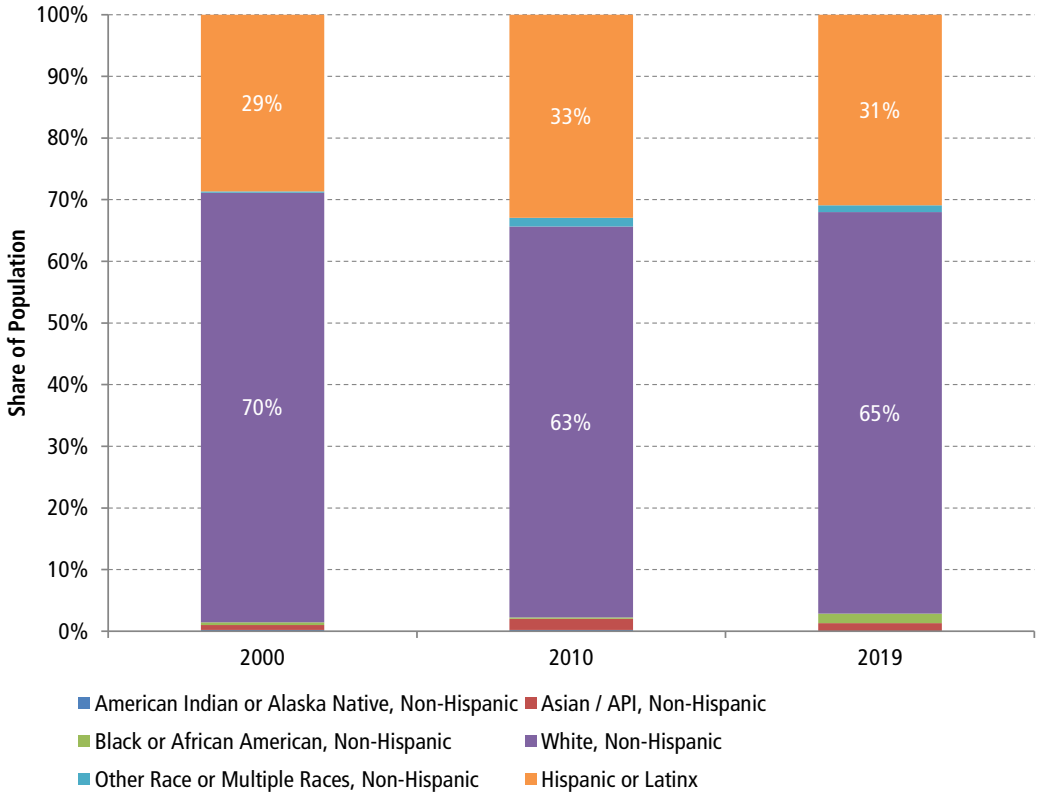
Universe: Total population
Source: U.S. Census Bureau, Census 2000 SF1, Table P12; U.S. Census Bureau, Census 2010 SF1, Table P12; U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B01001
For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-04.

Looking at the senior and youth population by race can add an additional layer of understanding, as families and seniors of color are even more likely to experience challenges finding affordable housing. People of color make up 4.3 percent of seniors and 31.2 percent of youth under 18 (Figure 8).

Figure 8 Senior and Youth Population by Race



Universe: Total population
Notes: In the sources for this table, the Census Bureau does not disaggregate racial groups by Hispanic/Latinx ethnicity, and an overlapping category of Hispanic / non-Hispanic groups has not been shown to avoid double counting in the stacked bar chart.
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B01001(A-G)
For the data table behind this figure, please refer to the Data Packet Workbook, Table SEN-02.

Race and Ethnicity

Understanding the racial makeup of a city and region is important for designing and implementing effective housing policies and programs. These patterns are shaped by both market factors and government actions, such as exclusionary zoning, discriminatory lending practices and displacement that has occurred over time and continues to impact communities of color today. Since 2000, the percentage of residents in St. Helena identifying as White has decreased – and by the same token the percentage of residents of all other races and ethnicities has increased – by 4.6 percent, with the 2019 population standing at 3,973. In absolute terms, the Hispanic or Latinx population increased the most while the White, Non-Hispanic population decreased the most. Figure 9 shows population trends by race.

Figure 9 Population by Race, St. Helena, 2000-2019

Universe: Total population
Notes: Data for 2019 represents 2015-2019 ACS estimates. The Census Bureau defines Hispanic/Latinx ethnicity separate from racial categories. For the purposes of this graph, the "Hispanic or Latinx" racial/ethnic group represents those who identify as having Hispanic/Latinx ethnicity and may also be members of any racial group. All other racial categories on this graph represent those who identify with that racial category and do not identify with Hispanic/Latinx ethnicity.

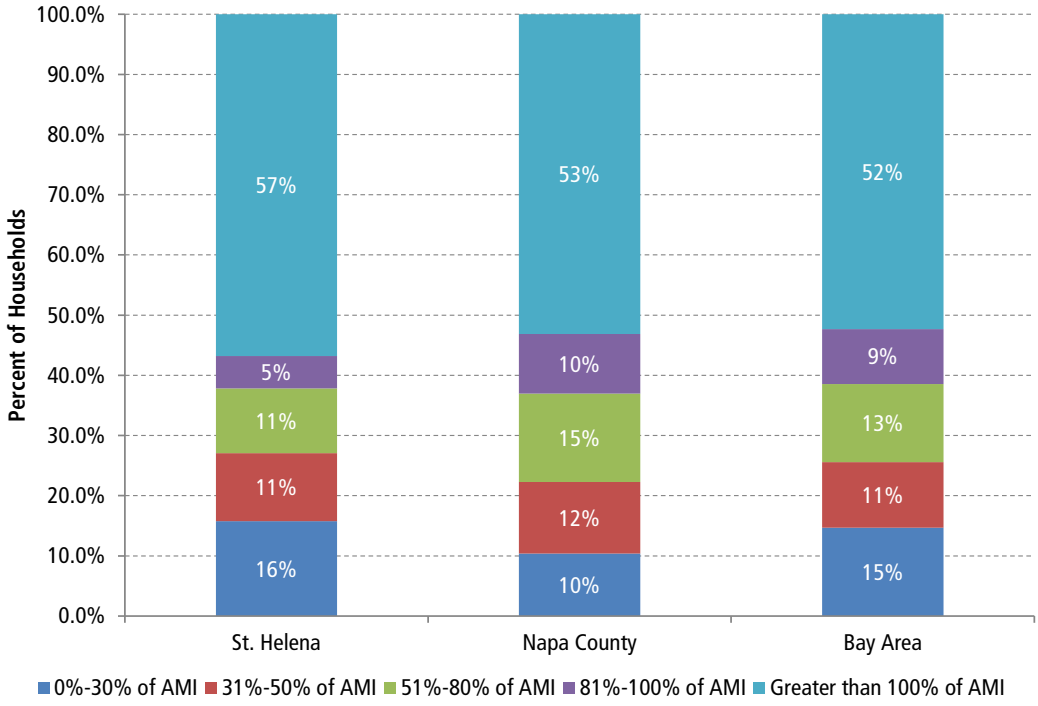
For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-02.

Income

Household Income Distribution

Despite the economic and job growth experienced throughout the region since 1990, the income gap has continued to widen. California is one of the most economically unequal states in the nation, and the Bay Area has the highest income inequality between high- and low-income households in the state.[7]



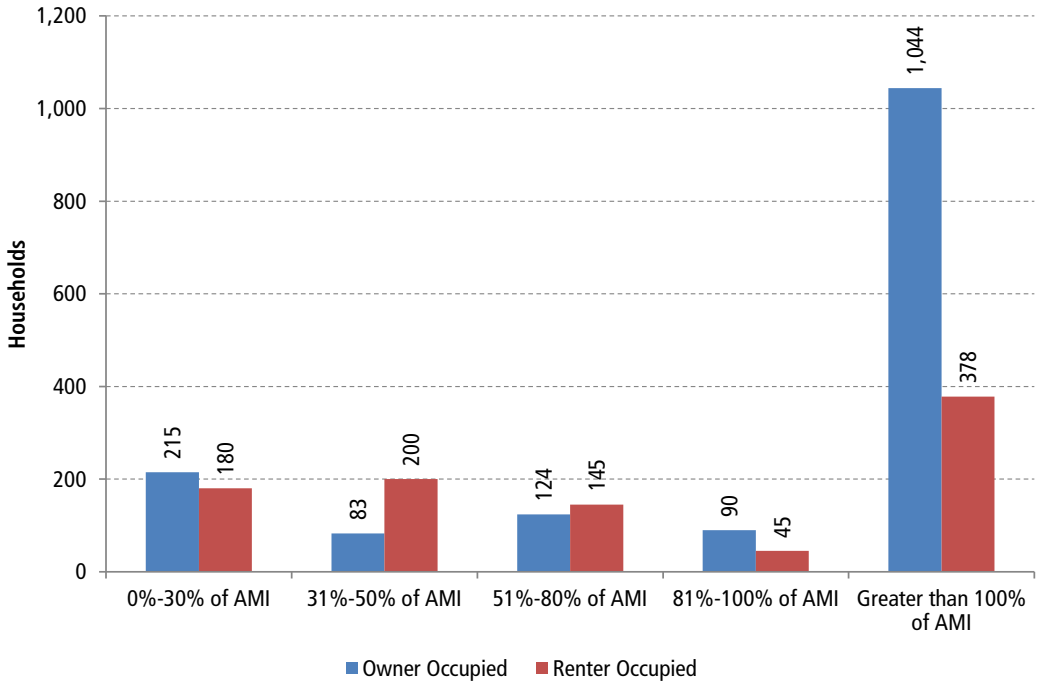
[7] *Bohn, S.et al. 2020. Income Inequality and Economic Opportunity in California. Public Policy Institute ofCalifornia.*

Household Income Categories

The Department of Housing and Urban Development defines income categories as a percentage of the Area Median Income (AMI). Households whose income equals 30 percent or less of the AMI are considered extremely low-income; households with incomes between 30 and 50 percent of the AMI are classified as very low-income; and those between 50 and 80 percent of the AFI are low-income. The CHAS data set also provides information on households earning between 80 and 100 percent of the AMI and households with incomes above 100 percent of the AMI.

In St. Helena, 56.8 percent of households make more than 100 percent of the Area Median Income (AMI)[8], compared to 15.8 percent making less than 30 percent of AMI, which is considered extremely low-income (Figure 10).

Figure 10 Households by Household Income Level



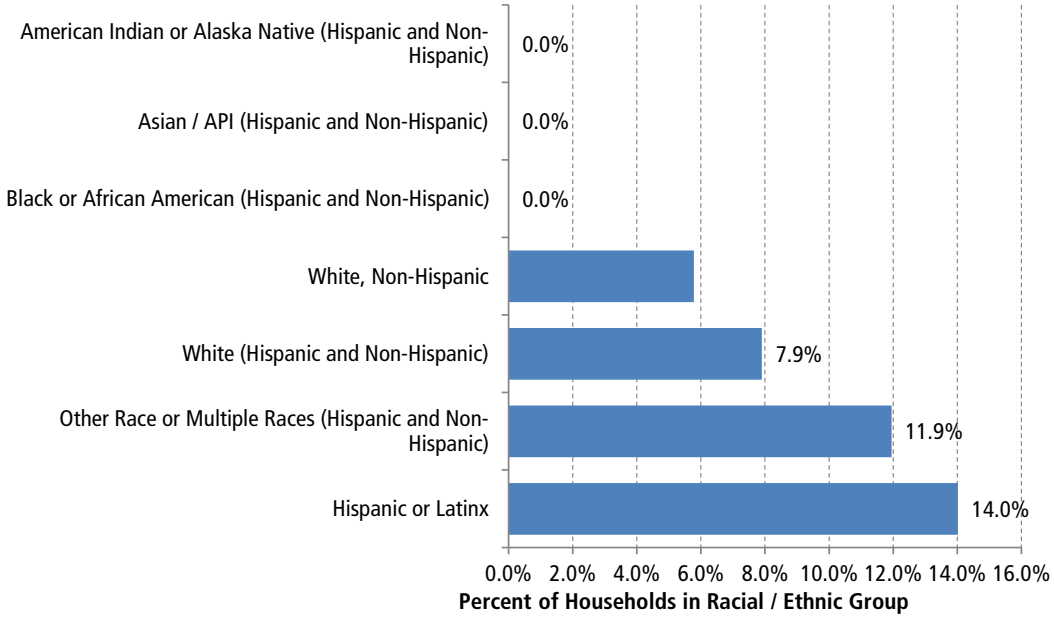
Universe: Occupied housing units
Notes: Income groups are based on HUD calculations for Area Median Income (AMI). HUD calculates the AMI for different metropolitan areas, and the nine county Bay Area includes the following metropolitan areas: Napa Metro Area (Napa County), Oakland-Fremont Metro Area (Alameda and Contra Costa Counties), San Francisco Metro Area (Marin, San Francisco, and San Mateo Counties), San Jose-Sunnyvale-Santa Clara Metro Area (Santa Clara County), Santa Rosa Metro Area (Sonoma County),

[8] *Income groups are based on HUD calculations for Area Median Income (AMI). HUD calculates the AMI for different metropolitan areas, and the nine county Bay Area includes the following metropolitan areas: Napa Metro Area (Napa County), Oakland-Fremont Metro Area (Alameda and Contra Costa Counties), San Francisco Metro Area (Marin, San Francisco, and San Mateo Counties), San Jose-Sunnyvale-Santa Clara Metro Area (Santa Clara County), Santa Rosa Metro Area (Sonoma County), and Vallejo-Fairfield Metro Area (Solano County). This is then adjusted for household size.*

and Vallejo-Fairfield Metro Area (Solano County). The AMI levels in this chart are based on the HUD metro area where this jurisdiction is located. The data that is reported for the Bay Area is not based on a regional AMI but instead refers to the regional total of households in an income group relative to the AMI for the county where that household is located. Local jurisdictions are required to provide an estimate for their projected extremely low-income households (0-30 percent AMI) in their Housing Elements. HCD's official Housing Element guidance notes that jurisdictions can use their RHNA for very low-income households (those making 0-50 percent AMI) to calculate their projected extremely low-income households. As Bay Area jurisdictions have not yet received their final RHNA numbers, this document does not contain the required data point of projected extremely low-income households. The report portion of the housing data needs packet contains more specific guidance for how local staff can calculate an estimate for projected extremely low-income households once jurisdictions receive their 6th cycle RHNA numbers.
Source: U.S. Department of Housing and Urban Development (HUD), Comprehensive Housing Affordability Strategy (CHAS) ACS tabulation, 2013-2017 release
For the data table behind this figure, please refer to the Data Packet Workbook, Table ELI-01.

Throughout the region, there are disparities between the incomes of homeowners and renters. Typically, the number of low-income renters greatly outpaces the amount of housing available that is affordable for these households. In St. Helena, the largest proportion of renters falls in the Greater than 100 percent of AMI income group, while the largest proportion of homeowners are found in the Greater than 100 percent of AMI group (Figure 11).

Figure 11 Household Income Level by Tenure



Universe: Occupied housing units
Notes: Income groups are based on HUD calculations for Area Median Income (AMI). HUD calculates the AMI for different metropolitan areas, and the nine county Bay Area includes the following metropolitan areas: Napa Metro Area (Napa County), Oakland-Fremont Metro Area (Alameda and Contra Costa Counties), San Francisco Metro Area (Marin, San Francisco, and San Mateo Counties), San Jose-Sunnyvale-Santa Clara Metro Area (Santa Clara County), Santa Rosa Metro Area (Sonoma County),

and Vallejo-Fairfield Metro Area (Solano County). The AMI levels in this chart are based on the HUD metro area where this jurisdiction is located.

For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-21.

Currently, people of color are more likely to experience poverty and financial instability as a result offederal and local housing policies that have historically excluded them from the same opportunities extended to white residents.[9] These economic disparities also leave communities of color at higher risk for housing insecurity, displacement or homelessness. In St. Helena, Other Race or Multiple Races (Hispanic and Non-Hispanic) residents experience the highest rates of poverty, followed by White (Hispanic and Non-Hispanic) residents (Figure 12).

Figure 12 Poverty Status by Race

Universe: Population for whom poverty status is determined
Notes: The Census Bureau uses a federally defined poverty threshold that remains constant throughout the country and does not correspond to Area Median Income. For this table, the Census Bureau does not disaggregate racial groups by Hispanic/Latinx ethnicity. However, data for the white racial group is also reported for white householders who are not Hispanic/Latinx. Since residents who identify as white and Hispanic/Latinx may have very different experiences within the housing market and the economy from those who identify as white and non-Hispanic/Latinx, data for multiple white sub-groups are reported here. The racial/ethnic groups reported in this table are not all mutually exclusive. Therefore, the data should not be summed as the sum exceeds the population for whom poverty status is determined for this jurisdiction. However, all groups labelled "Hispanic and Non-Hispanic" are mutually exclusive, and the sum of the data for these groups is equivalent to the population for whom poverty status is determined.

[9] *Moore, E., Montojo, N. and Mauri, N., 2019. Roots, Race & Place: A History of Racially Exclusionary Housing the San Francisco Bay Area. Hass Institute.*

Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B17001(A-I) For the data table behind this figure, please refer to the Data Packet Workbook, Table ELI-03.

Extremely Low-Income Households

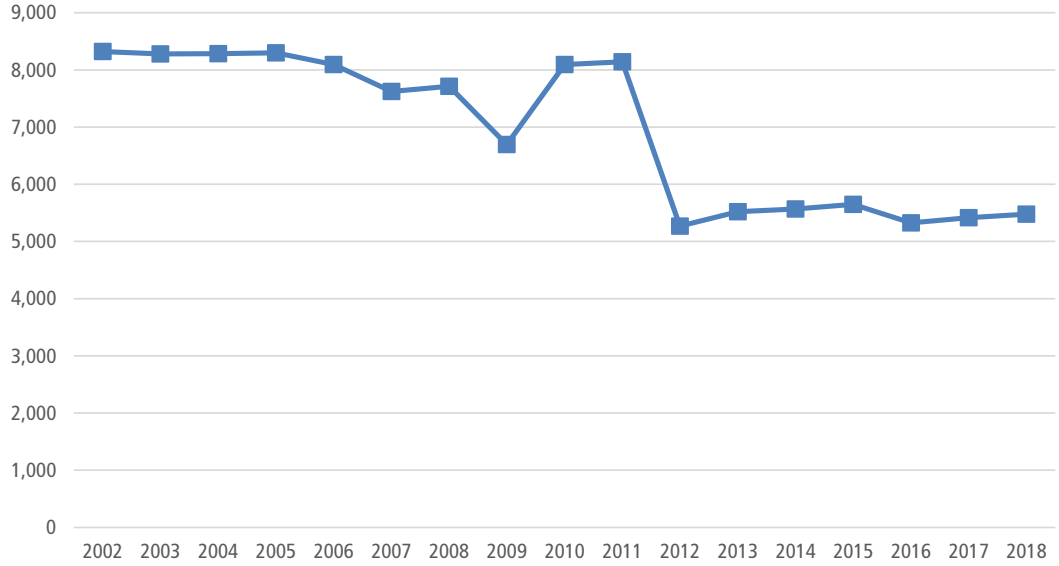
In St. Helena, 56.8 percent of households make more than 100 percent of the Area Median Income (AMI), compared to 15.8 percent making less than 30 percent of AMI, which is considered extremely low-income (see Figure 10). Regionally, more than half of all households make more than 100 percent AMI, while 15 percent make less than 30 percent AMI. In Napa County, 30 percent AMI is the equivalent to the annual income of $27,950 for a family of four. Many households with multiple wage earners – including food service workers, full-time students, teachers, farmworkers, and healthcare professionals – can fall into lower AMI categories due to relatively stagnant wages in many industries.

Within the Housing Element, cities must estimate the extremely low-income housing need in the community. Based on HCD guidance, the City of St. Helena estimates that approximately 52 extremely low-income housing units are needed in the planning period. This estimate was calculated based on HCD guidance, as 50 percent of the very low-income housing need, as identified by the RHNA (Table 6).

Table 6 St. Helena Regional Housing Needs Allocation

Geography	Very Low Income (<50 percent of AMI)	Low Income (50%-80 percent of AMI)	Moderate Income (80%-120 percent of AMI)	Above Moderate Income (>120 percent of AMI)
St. Helena	104	59	26	67

[1] Per HCD guidance, the extremely low-income need in St. Helena is estimated at 50 percent of the very low income RHNA requirement, or approximately 52 units.



Employment Trends

Balance of Jobs and Workers

A city houses employed residents who either work in the community where they live or work elsewherein the region. Conversely, a city may have job sites that employ residents from the same city, but more often employ workers commuting from outside of it. Smaller cities typically will have more employed residents than jobs and export workers, while larger cities tend to have a surplus of jobs and import workers. To some extent the regional transportation system is set up for this flow of workers to the region's core job centers. At the same time, as the housing affordability crisis has illustrated, local imbalances may be severe, where local jobs and worker populations are out of sync at a sub-regional scale.

One measure of this is the relationship between workers and jobs. A city with a surplus of workers "exports" workers to other parts of the region, while a city with a surplus of jobs must conversely "import" them. Between 2002 and 2018, the number of jobs in St. Helena decreased by 34.2 percent (Figure 13).

Figure 13 Jobs in St. Helena

Universe: Jobs from unemployment insurance-covered employment (private, state and local government) plus United States Office of Personnel Management-sourced Federal employment
Notes: The data is tabulated by place of work, regardless of where a worker lives. The source data is provided at the census block level. These are crosswalked to jurisdictions and summarized.
Source: U.S. Census Bureau, Longitudinal Employer-Household Dynamics, Workplace Area Characteristics (WAC) files, 2002-2018
For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-11.

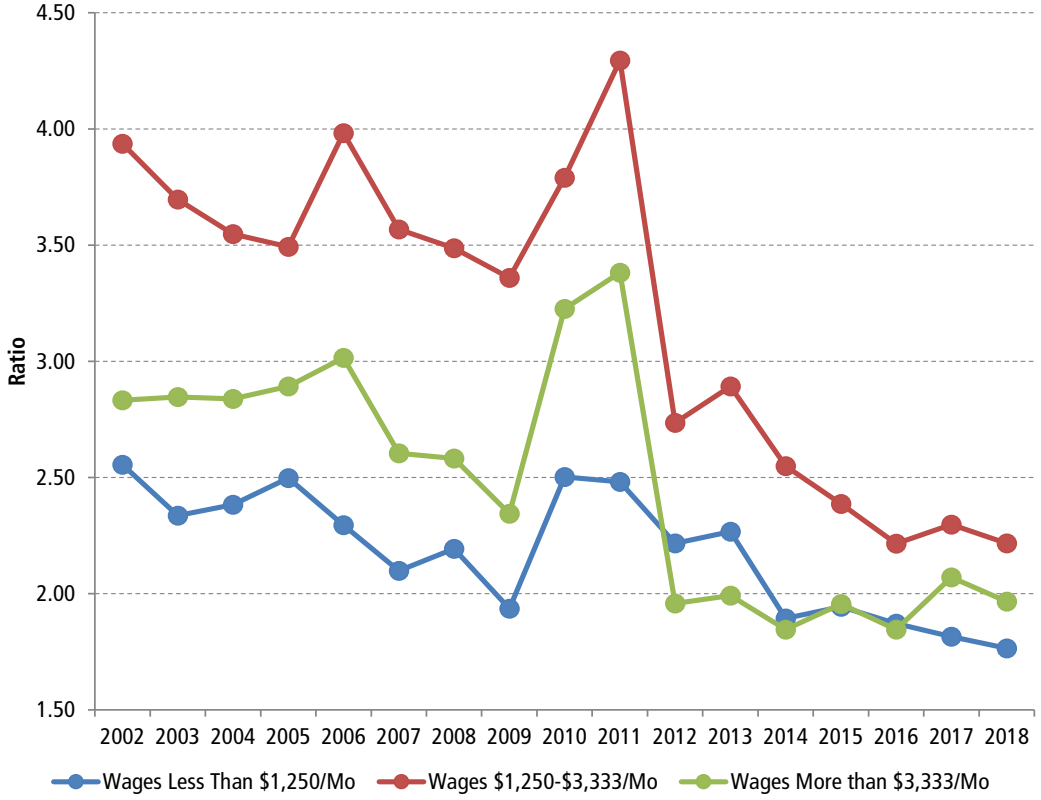
There are 3,005 employed residents, and 5,476 jobs[10] in St. Helena - the ratio of jobs to resident workers is 1.82; St. Helena is a net importer of workers. Figure 14 shows the balance when comparing jobs to workers, broken down by different wage groups, offering additional insight into local dynamics. A community may offer employment for relatively low-income workers but have relatively few housing options for those workers - or conversely, it may house residents who are low wage workers but offer few employment opportunities for them. Such relationships may cast extra light on potentially pent-up demand for housing in particular price categories. A surplus of jobs relative to residents in a given wage category suggests the need to import those workers, while conversely, surpluses of workers in a wage group relative to jobs means the community will export those workers to other jurisdictions. Such flows are not inherently bad, though over time, sub-regional imbalances may appear.

St. Helena has more low-wage jobs than low-wage residents (where low-wage refers to jobs paying less than $25,000). This disparity implies that, every day, low wage workers commute to St. Helena from their residences outside of the city. At the other end of the wage spectrum, the city has more high-wage jobs than high-wage residents (where high-wage refers to jobs paying more than $75,000). This figure suggests that high-wage

[10] *Employed residents in a jurisdiction is counted by place of residence (they may work elsewhere) while jobs in a jurisdiction are counted by place of work (they may live elsewhere). The jobs may differ from those reported in Figure 5 as the source for the time series is from administrative data, while the cross-sectional data is from a survey.*

workers are also commuting into St. Helena. Since both high wage workers and low wage workers are faced with commuting into St. Helena for work, it suggests a lack of housing, both market-rate and affordable, within the city. (Figure 14).[11]

Figure 14 Workers by Earnings, by Jurisdiction as Place of Work and Place of Residence

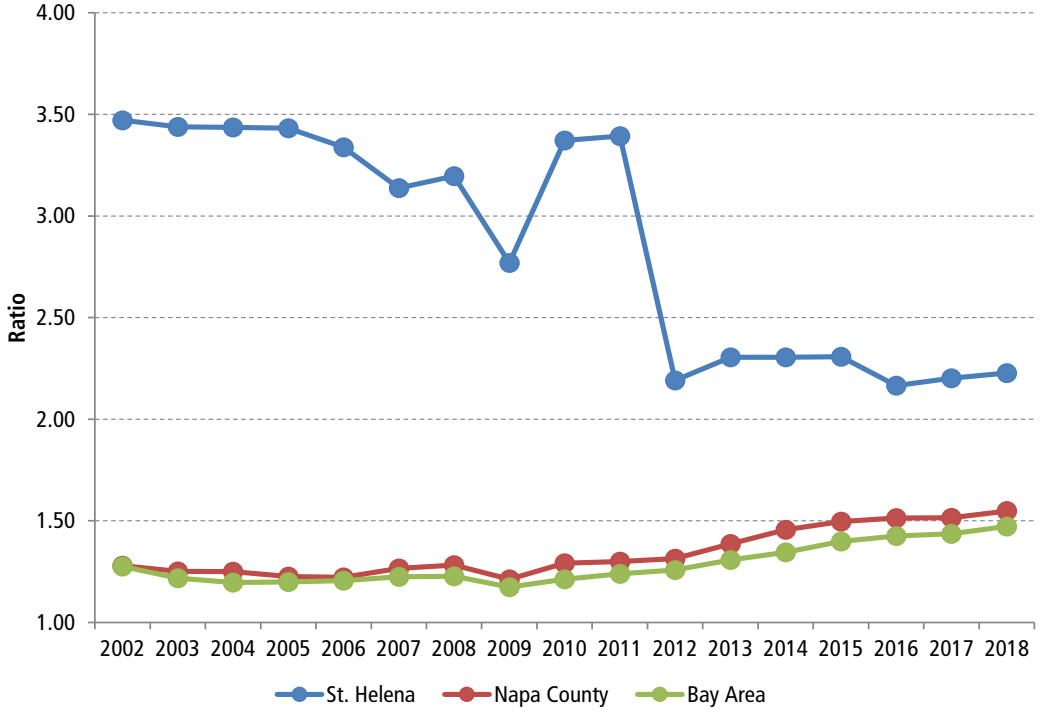


Universe: Workers 16 years and over with earnings
Source: U.S. Census Bureau, American Community Survey 5-Year Data 2015-2019, B08119, B08519 For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-10.

Figure 15 shows the balance of a jurisdiction's resident workers to the jobs located there for different wage groups as a ratio instead - a value of one means that a city has the same number of jobs in a wage group as it has resident workers - in principle, a balance. Values above one indicate a jurisdiction will need to import workers for jobs in a given wage group. At the regional scale, this ratio is 1.04 jobs for each worker, implying a modest import of workers from outside the region (Figure 15).

[11] *The source table is top-coded at $75,000, precluding more fine grained analysis at the higher end of the wage spectrum.*

Figure 15 Jobs-Worker Ratios, By Wage Group

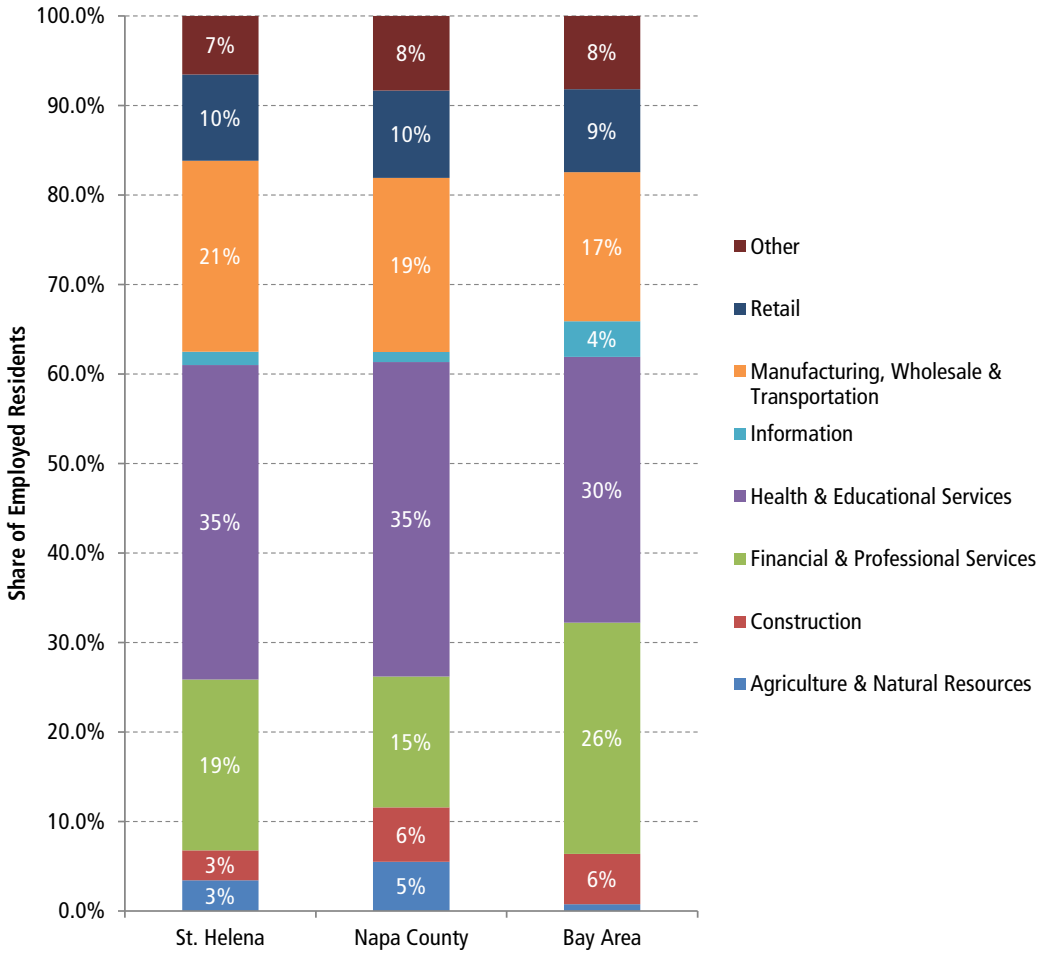


Universe: Jobs in a jurisdiction from unemployment insurance-covered employment (private, state and local government) plus United States Office of Personnel Management-sourced Federal employment
Notes: The ratio compares job counts by wage group from two tabulations of LEHD data: Counts by place of work relative to counts by place of residence. See text for details.
Source: U.S. Census Bureau, Longitudinal Employer-Household Dynamics, Workplace Area Characteristics (WAC) files (Jobs); Residence Area Characteristics (RAC) files (Employed Residents), 2010-2018
For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-14.

Such balances between jobs and workers may directly influence the housing demand in a community. New jobs may draw new residents, and when there is high demand for housing relative to supply, many workers may be unable to afford to live where they work, particularly where job growth has been in relatively lower wage jobs. This dynamic not only means many workers will need to prepare for long commutes and time spent on the road, but in the aggregate, it contributes to traffic congestion and time lost for all road users.

If there are more jobs than employed residents, it means a city is relatively jobs-rich, typically also with a high jobs to household ratio. Thus, bringing housing into the measure, the jobs-household ratio in St. Helena has decreased from 3.47 in 2002, to 2.23 jobs per household in 2018 (Figure 16).

Figure 16 Jobs-Household Ratio



Universe: Jobs in a jurisdiction from unemployment insurance-covered employment (private, state and local government) plus United States Office of Personnel Management-sourced Federal employment; households in a jurisdiction
Notes: The data is tabulated by place of work, regardless of where a worker lives. The source data is provided at the census block level. These are crosswalked to jurisdictions and summarized. The ratio compares place of work wage and salary jobs with households, or occupied housing units. A similar measure is the ratio of jobs to housing units. However, this jobs-household ratio serves to compare the number of jobs in a jurisdiction to the number of housing units that are actually occupied. The difference between a jurisdiction's jobs-housing ratio and jobs-household ratio will be most pronounced in jurisdictions with high vacancy rates, a high rate of units used for seasonal use, or a high rate of units used as short-term rentals.

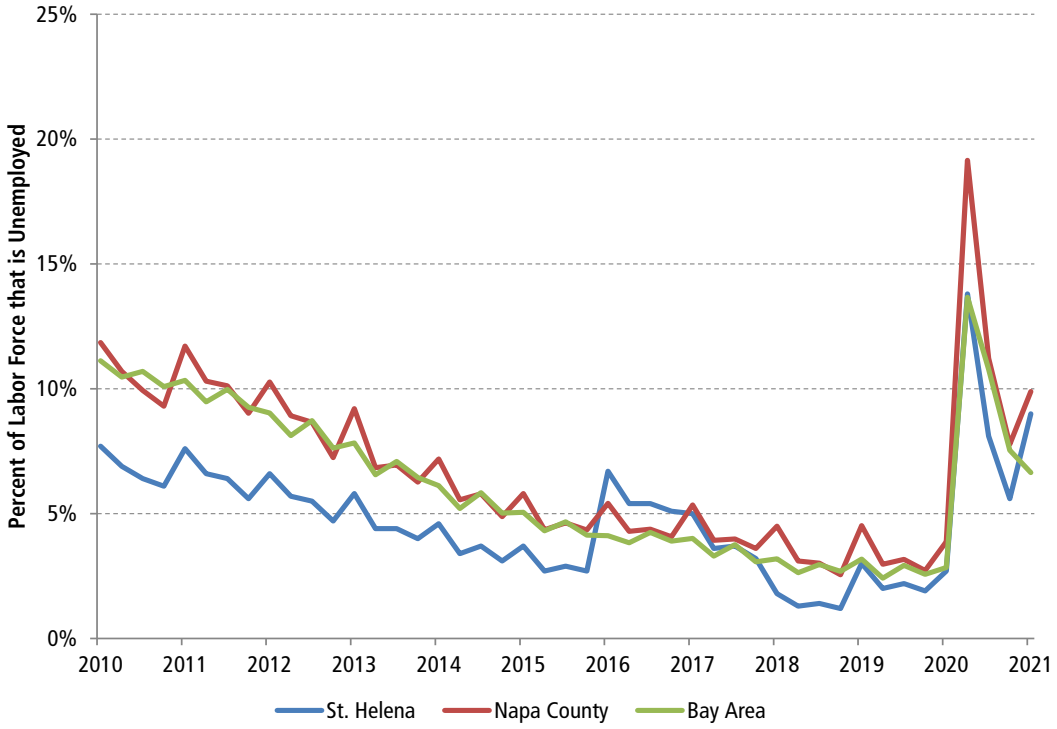
For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-13.

Employment by Industry

In terms of sectoral composition, the largest industry in which St. Helena residents work is Health & Educational Services, and the largest sector in which Napa residents work is Health & Educational Services (Figure 17). For the Bay Area as a whole, the Health & Educational Services industry employs the most workers of any sector.

Figure 17 Resident Employment by Industry



Universe: Civilian employed population age 16 years and over
Notes: The data displayed shows the industries in which jurisdiction residents work, regardless of the location where those residents are employed (whether within the jurisdiction or not). Categories are derived from the following source tables: Agriculture & Natural Resources: C24030_003E, C24030_030E; Construction: C24030_006E, C24030_033E; Manufacturing, Wholesale & Transportation: C24030_007E, C24030_034E, C24030_008E, C24030_035E, C24030_010E, C24030_037E; Retail: C24030_009E, C24030_036E; Information: C24030_013E, C24030_040E; Financial & Professional Services: C24030_014E, C24030_041E, C24030_017E, C24030_044E; Health & Educational Services: C24030_021E, C24030_024E, C24030_048E, C24030_051E; Other: C24030_027E, C24030_054E, C24030_028E, C24030_055E
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table C24030 For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-06.

Unemployment

Figure 18 shows the unemployment rate for St. Helena, Napa County, and the Bay Area. In St. Helena, there was a 1.3 percentage point increase in the unemployment rate between January 2010 and January 2021. Jurisdictions through the region experienced a sharp rise in unemployment in 2020 due to impacts related to the COVID-19 pandemic, though with a general improvement and recovery in the later months of 2020.

Figure 18 Unemployment Rate

Universe: Civilian noninstitutional population ages 16 and older
Notes: Unemployment rates for the jurisdiction level is derived from larger-geography estimates. This method assumes that the rates of change in employment and unemployment are exactly the same in each sub-county area as at the county level. If this assumption is not true for a specific sub-county area, then the estimates for that area may not be representative of the current economic conditions. Since this assumption is untested, caution should be employed when using these data. Only not seasonally-adjusted labor force (unemployment rates) data are developed for cities and CDPs.
Source: California Employment Development Department, Local Area Unemployment Statistics (LAUS), Sub-county areas monthly updates, 2010-2021.
For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-15.

4. Population and Employment Projections

This section uses population, household, and employment projections provided by the Association of Bay Area Governments (ABAG), the California Department of Finance (DoF), and Plan Bay Area. Data specific to St. Helena is used when available (typically from Plan Bay Area 2040) and is supplemented by regional projections for North Napa County (Calistoga, St. Helena, and Yountville) and the Bay Area, available through the recently (2021) released Plan Bay Area 2050.

Key Findings

- ABAG anticipates much higher growth across the Bay Area than in St. Helena. While Plan Bay Area 2050 projects a 35 percent increase in total population from 2015 to 2050 (approximately 2.7 million new residents) across the nine counties of the Bay Area, it projects less than one percent growth in Calistoga, St. Helena, and Yountville.

Population

While Plan Bay Area 2050 does not provide jurisdiction-specific population projections, Plan Bay Area 2040 (2017) projected a 17 percent increase in total population from 2010 to 2040 for St. Helena, which translates to 1,550 new residents, as shown in Table 7. Countywide, Plan Bay Area 2040 projected a similar increase of 16 percent for Napa County.

Table 7 St. Helena, Population Totals and Projections, 2010-2040, Plan Bay Area 2040

Year	2010	2015	2020	2025	2030	2035	2040	Percent Change (2010-2040)
St. Helena	5,830	5,920	6,085	6,415	6,655	6,715	6,800	+17%
Napa County	135,880	136,885	141,240	146,130	151,445	155,860	158,050	+16%

Source: Plan Bay Area 2040.

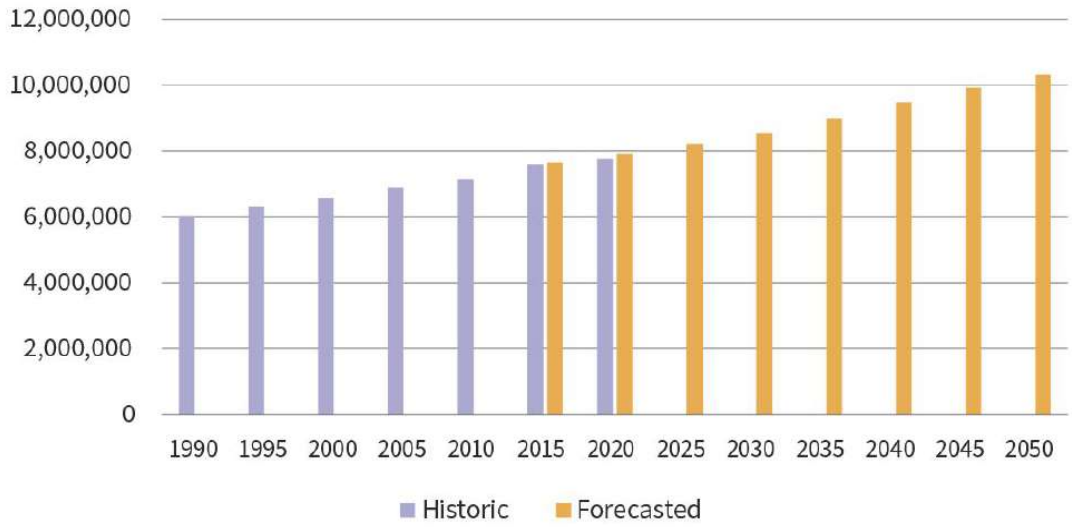
For comparison, the DoF projects a countywide increase of seven percent in total population between 2010 to 2050, which translates to 9,463 new Napa County residents (Table 8).

Table 8 Department of Finance Population Projections, Napa County, 2010-2050

Year	2010	2015	2020	2025	2030	2035	2040	2045	2050	Percent Change
St. Helena	136,587	141,390	138,711	140,748	143,223	145,444	146,602	146,641	146,050	+7%

Source: California Department of Finance. Demographic Research Unit. Report P-2A: Total Population Projections, California Counties, 2010-2060 (Baseline 2019 Population Projections; Vintage 2020 Release). Sacramento: California. July 2021.

ABAG anticipates much higher growth across the Bay Area then in St. Helena. While Plan Bay Area 2050 projects a 35 percent increase in total population from 2015 to 2050 (approximately 2.7 million new residents)



across the nine counties of the Bay Area, the Plan projects less than one percent growth in the North Napa County superdistrict (including Calistoga, St. Helena, and Yountville). Table 9 and Figure 19 show Plan Bay Area 2050 population projections for the Bay Area. While the Plan includes this regional population totals, data for individual subregions, termed superdistricts, is provided for households and jobs rather than population. For more information, please see the discussions on household and job projections below.

Table 9 Plan Bay Area 2050 Population Projections, Bay Area, 2015-2050

	2015	2020	2025	2030	2035	2040	2045	2050	Percent Change
Bay Area	7,660,000	7,940,000	8,230,000	8,560,000	9,010,000	9,490,000	9,930,000	10,330,000	+35%

Source: California Department of Finance. Demographic Research Unit. Report P-2A: Total Population Projections, California Counties, 2010-2060 (Baseline 2019 Population Projections; Vintage 2020 Release). Sacramento: California. July 2021.

Figure 19 Bay Area, Population Totals and Projections, 1990-2050, Plan Bay Area 2050.

Source: Plan Bay Area 2050.

Households

In 2017, Plan Bay Area 2040 projected a one percent increase in total households from 2010-2040 in St. Helena, which translates to 300 or more new households (Table 10). Similarly, Plan Bay Area 2050 projects that the number of households in the Northern Napa County superdistrict (including Calistoga, St. Helena, and Yountville) will grow by less than one percent by 2050, compared to 51 percent growth in the projected number of households in the Bay Area (Table 11).

Table 10 Table 2: St. Helena, Household Totals and Projections, 2010-2040, Plan Bay Area 2040

	2010	2015	2020	2025	2030	2035	2040
Total Households	2,150	2,400	2,425	2,490	2,620	2,705	2,700

For 2010, the base year, a tabulation from the 2010 pre-run microdata, designed to approximate (but may still differ from) Census 2010 counts, is used. Numbers may not add to totals due to rounding. 2015 are modeled estimates, not observed.
Source: Plan Bay Area 2040.

Table 11 Household Projections by Region, 2015-2050

Region	2015	2050	Growth	Percent Growth	Share of Regional Growth
North Napa County	16,000	16,000	0	<1%	0%
Bay Area	2,677,000	4,043,000	1,366,000	+51%	100%

Source: Plan Bay Area 2050.

Jobs

According to Plan Bay Area 2040, ABAG projected in increase of 280 jobs (five percent increase) between 2010 and 2040, which calculates to an annual average growth rate of 0.8 percent (Table 12). Employment is projected to increase in three categories: retail (+27 percent), Information, Government, and Construction (+12 percent), and Health, Educational, and Recreational Services Jobs (+5 percent). In contrast, ABAG expects that employment in the areas of manufacturing and wholesale; agriculture and natural resources, and financial and professional services to stagnate or slightly decrease. Countywide, Plan Bay Area 2040 projected an increase of 12,765 jobs (18 percent increase) at annual average employment growth rate of 2.8 percent in the same time period.

Table 12 Job Totals and Projections, St. Helena and Napa County, 2010-2040

Year	2010	2015	2020	2025	2030	2035	2040	Percent Change (2010-2040)
St. Helena	5,700	5,750	5,765	5,805	5,820	5,820	5,980	5%
Napa County	70,680	70,880	71,905	72,580	74,255	77,260	83,355	18%

Source: Plan Bay Area 2040.

Plan Bay Area 2050, however, projects that employment in the North Napa County superdistrict will decrease by 4,000 jobs by 2050 (Table 13). Employment in the region is assumed to be constrained based on limited job centers and transit options, as well as current and potential future wildfire impacts. Regionally however, the Bay Area job totals are projected to increase by 35 percent between 2015 and 2050, which coincides with the expected Bay Area population growth during that time (also 35 percent). This increase translates to 1,403,000 new jobs.

Table 13 Job Totals and Projections, North Napa County and the Bay Area, 2015-2050

Region	2015	2050	Growth	Percent Growth	Share of Regional Growth
North Napa County	24,000	20,000	-4,000	<1%	0%
Bay Area	4,005,000	5,408,000	1,403,000	35%	100%

Source: Plan Bay Area 2050.

5. Housing Conditions

The following section details the housing conditions in St. Helena and, where available, compares the data to Napa County and the Bay Area. Data sources include the Census, the American Community Survey, DoF, HUD, including the Comprehensive Housing Affordability Strategy (CHAS) dataset, and HCD).

ABAG supplied an HCD Preapproved Data Package that provided much of the data included in this analysis for the City. Additionally, ABAG, in coordination with Baird + Driskell Community Planning provided a Housing Needs Data Report that directly informed this section of the Needs Analysis.[12]

Key Findings

- **Number of Homes.** The number of new homes built in the Bay Area has not kept pace with the demand, resulting in longer commutes, increasing prices, and exacerbating issues of displacement and homelessness. The number of homes in St. Helena increased, 4.4 percent from 2010 to 2020, which is above the growth rate for Napa County and below the growth rate of the region's housing stock during this time period.

- **Home Prices.** A diversity of homes at all income levels creates opportunities for all St. Helena residents to live and thrive in the community.

  - **Ownership.** The largest proportion of homes had a value in the range of $1 million-$1.5 million in 2019. Home prices increased by 118.2 percent from 2010 to 2020.

  - **Rental Prices.** The typical contract rent for an apartment in St. Helena was $1,470 in 2019. Rental prices increased by 15.7 percent from 2009 to 2019. To rent a typical apartment without cost burden, a household would need to make $59,160 per year.

- **Housing Type.** It is important to have a variety of housing types to meet the needs of a community today and in the future. In 2020, 63.9 percent of homes in St. Helena were single family detached, 6.1 percent were single family attached, 6.2 percent were small multifamily (2-4 units), and 18.4 percent were medium or large multifamily (5+ units). Between 2010 and 2020, the number of single-family units increased more than multi-family units. Generally, in St. Helena, the share of the housing stock that is detached single family homes is above that of other jurisdictions in the region.

- **Vacancy Rate.** Vacant units make up 17.4 percent of the overall housing stock in St. Helena. The rental vacancy rate stands at 3.1 percent, while the ownership vacancy rate is 5.3 percent. Of the vacant units, the most common type of vacancy is for seasonal, recreational, or occasional use. This statistic highlights how St. Helena contains many "second homes," which may sit unoccupied for a majority of the year. Additionally, with the increasing popularity of short-term rental sites, such as

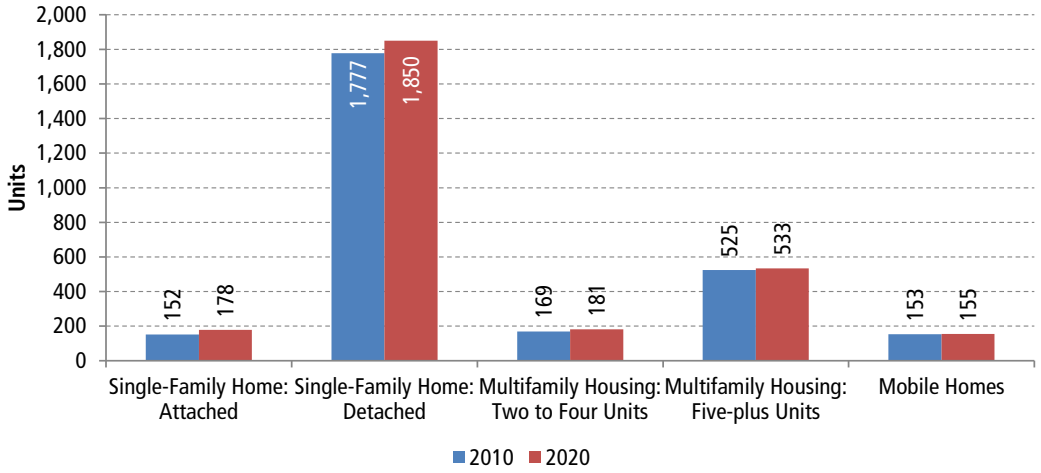
[12] *ABAG/MTC Staff and Baird + Driskell Community Planning, Housing Needs Data Report: St. Helena, May 2021.*

AirBNB, at vacation destinations such as Napa Valley, many homes may be vacant in the sense of not having permanent residents.

- **Overcrowding.** Overcrowding often disproportionately impacts low-income households. 2.5 percent of very low-income households (below 50 percent AMI) experience severe overcrowding, while none of the households above 100 percent of the AMI experience this level of overcrowding.

- **Cost Burden.** The U.S. Department of Housing and Urban Development considers housing to be affordable for a household if the household spends less than 30 percent of its income on housing costs. A household is considered "cost-burdened" if it spends more than 30 percent of its monthly income on housing costs, while those who spend more than 50 percent of their income on housing costs are considered "severely cost-burdened." In St. Helena, 21.1 percent of households spend 30-50 percent of their income on housing, while 16.6 percent of households are severely cost burden and use the majority of their income for housing. Lower-income, Latinx, and large households are disproportionally impacted by housing cost burdens.[13]

Existing Housing Conditions



Housing Stock Characteristics

In recent years, most housing produced in the region and across the state consisted of single-family homes and larger multi-unit buildings. However, some households are increasingly interested in "missing middle housing" – including duplexes, triplexes, townhomes, cottage clusters and accessory dwelling units (ADUs). These housing types may open up more options across incomes and tenure, from young households seeking homeownership options to seniors looking to downsize and age-in-place.

The housing stock of St. Helena in 2020 was made up of 63.9 percent single family detached homes, 6.1 percent single family attached homes, 6.2 percent multifamily homes with two to four units, 18.4 percent multifamily homes with five or more units, and 5.4 percent mobile homes (Figure 20). In St. Helena, the housing type that experienced the most growth between 2010 and 2020 was the detached single-family home.

[13] *Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25070; U.S. Department of Housing and Urban Development (HUD), Comprehensive Housing Affordability Strategy (CHAS) ACS tabulation, 2013-2017 release.*

For the data table behind this figure, please refer to the Data Packet Workbook, Table HSG-01.

Age of Housing Stock

Production has not kept up with housing demand for several decades in the Bay Area, as the total number of units built and available has not come close to meeting the population and job growth experienced throughout the region. According to American Community Survey estimates, in St. Helena, the largest proportion of the housing stock was built 1960 to 1979, with 1,217 units constructed during this period (Figure 21). Since 2010, 1.9 percent of the current housing stock was built, which is 63 units. Between 2015 and 2019, 74 housing units were issued permits in St. Helena. During this time, 73.0 percent of permits issued in St. Helena were for above moderate-income housing, 5.4 percent were for moderate-income housing, and 21.6 percent were for low- or very low-income housing (Table 14).

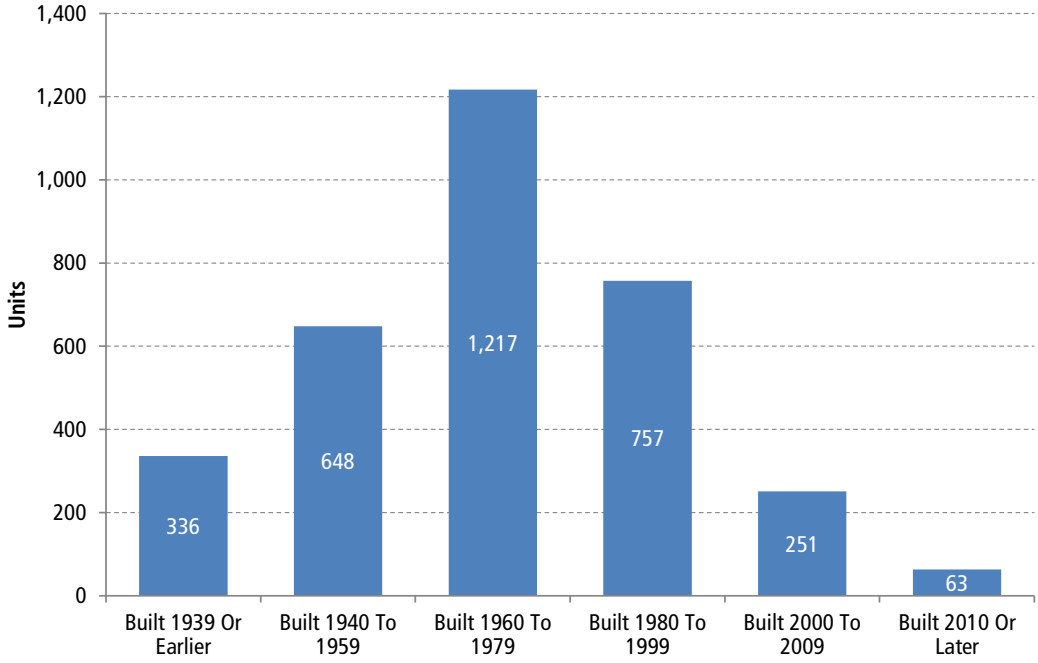

Table 14 Housing Permitting from 2015-2019 St. Helena

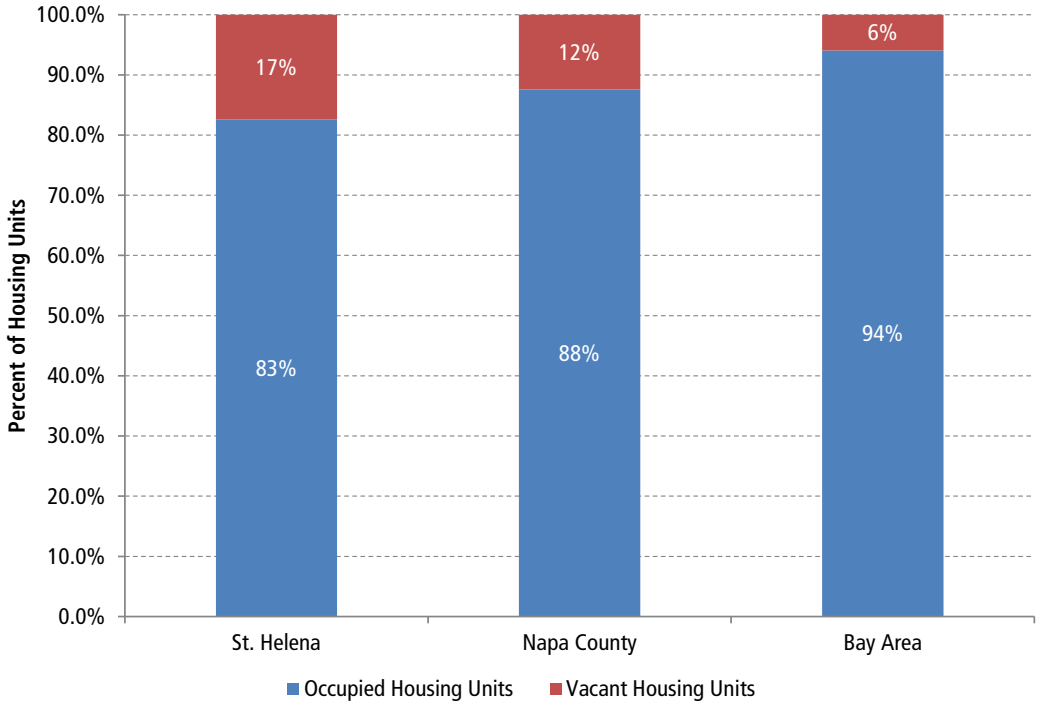
Income Group	Value
Above Moderate-Income Permits	54
Low Income Permits	9
Very Low-Income Permits	7
Moderate Income Permits	4

Source: California Department of Housing and Community Development (HCD), 5th Cycle Annual Progress Report Permit Summary (2020)

According to City records, however, these American Community Survey estimates are low. As reported in Table 1 above, the City permitted 110 units between 2015 and 2021, of which all units have been constructed.

Figure 21 Housing Units by Year Structure Built



Universe: Housing units

Occupancy Rates

Vacant units make up 17.4 percent of the overall housing stock in St. Helena (Figure 22). The rental vacancy rate stands at 3.1 percent, while the ownership vacancy rate is 5.3 percent. Of the vacant units, the most common type of vacancy is for seasonal, recreational, or occasional use. Figure 23 shows the distribution of vacancies by type.[14]

[14] *The vacancy rates by tenure is for a smaller universe than the total vacancy rate first reported, which in principle includes the full stock (17.4%). The vacancy by tenure counts are rates relative to the rental stock (occupied and vacant) and ownership stock (occupied and vacant) - but exclude a significant number of vacancy categories, including the numerically significant other vacant.*

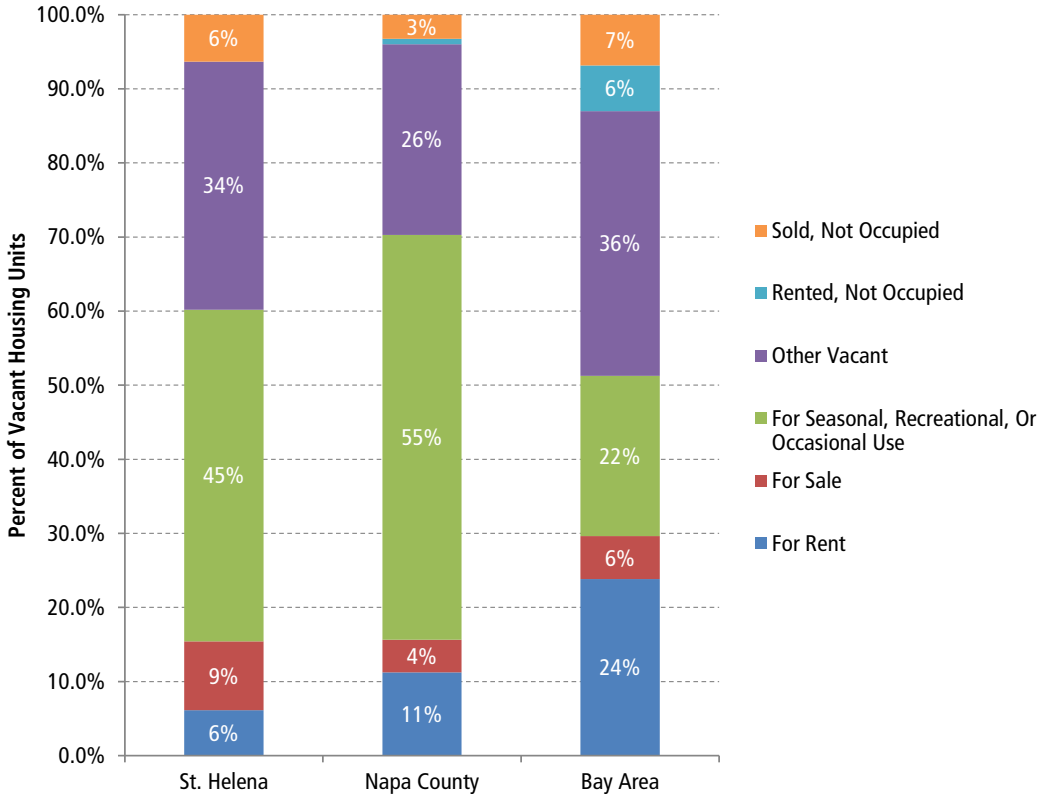

Figure 22 Occupancy Status

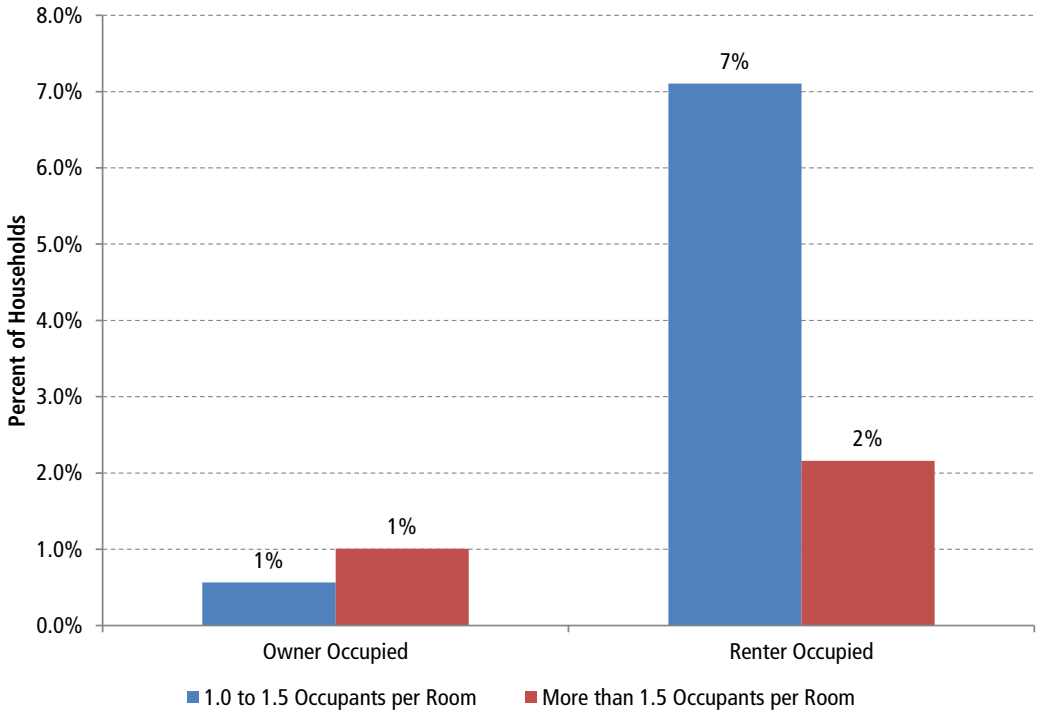
Universe: Housing units
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25002Throughout the Bay Area, vacancies make up 2.6 percent of the total housing units, with homes listed for rent; units used for recreational or occasional use, and units not otherwise classified (other vacant) making up the majority of vacancies. The Census Bureau classifies a unit as vacant if no one is occupying it when census interviewers are conducting the American Community Survey or Decennial Census. Vacant units classified as "for recreational or occasional use" are those that are held for short- term periods of use throughout the year. Accordingly, vacation rentals and short-term rentals like AirBnB are likely to fall in this category. The Census Bureau classifies units as "other vacant" if they are vacant due to foreclosure, personal/family reasons, legal proceedings, repairs/renovations, abandonment, preparation for being rented or sold, or vacant for an extended absence for reasons such as a work assignment, military duty, or incarceration.[15] In a region with a thriving economy and housing market like the Bay Area, units being renovated/repaired and prepared for rental or sale are likely to represent a large portion of the "other vacant" category.

[15] *For more information, see pages 3 through 6 of this list of definitions prepared by the Census Bureau: https://www.census.gov/housing/hvs/definitions.pdf.*

Figure 23 Vacant Units by Type

Universe: Vacant housing units
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25004 For the data table behind this figure, please refer to the Data Packet Workbook, Table HSG-03.

Throughout the Bay Area, vacancies make up 2.6 percent of the total housing units, with homes listed for rent; units used for recreational or occasional use, and units not otherwise classified (other vacant) making up the majority of vacancies. The Census Bureau classifies a unit as vacant if no one is occupying it when census interviewers are conducting the American Community Survey or Decennial Census. Vacant units classified as "for recreational or occasional use" are those that are held for short- term periods of use throughout the year. Accordingly, vacation rentals and short-term rentals like AirBnB are likely to fall in this category. The Census Bureau classifies units as "other vacant" if they are vacant due to foreclosure, personal/family reasons, legal proceedings, repairs/renovations, abandonment, preparation for being rented or sold, or vacant for an extended absence for reasons such as a work assignment, military duty, or incarceration. In a region with a thriving economy and housing market like the Bay Area, units being renovated/repaired and prepared for rental or sale are likely to represent a large portion of the "other vacant" category



Overcrowding

Overcrowding occurs when the number of people living in a household is greater than the home was designed to accommodate. There are several different standards for defining overcrowding, but this report uses the Census Bureau definition, which is more than one occupant per room (not including bathrooms or kitchens).

Additionally, the Census Bureau considers units with more than 1.5 occupants per room to be severely overcrowded.

Overcrowding is often related to the cost of housing and can occur when demand in a city or region is high. In many cities, overcrowding is seen more amongst those that are renting, with multiple households sharing a unit to make it possible to stay in their communities. In St. Helena, 2.2 percent of households that rent are severely overcrowded (more than 1.5 occupants per room), compared to 1.0 percent of households that own (Figure 24). In St. Helena, 7.1 percent of renters experience moderate overcrowding (1 to 1.5 occupants per room), compared to 0.6 percent for those own.

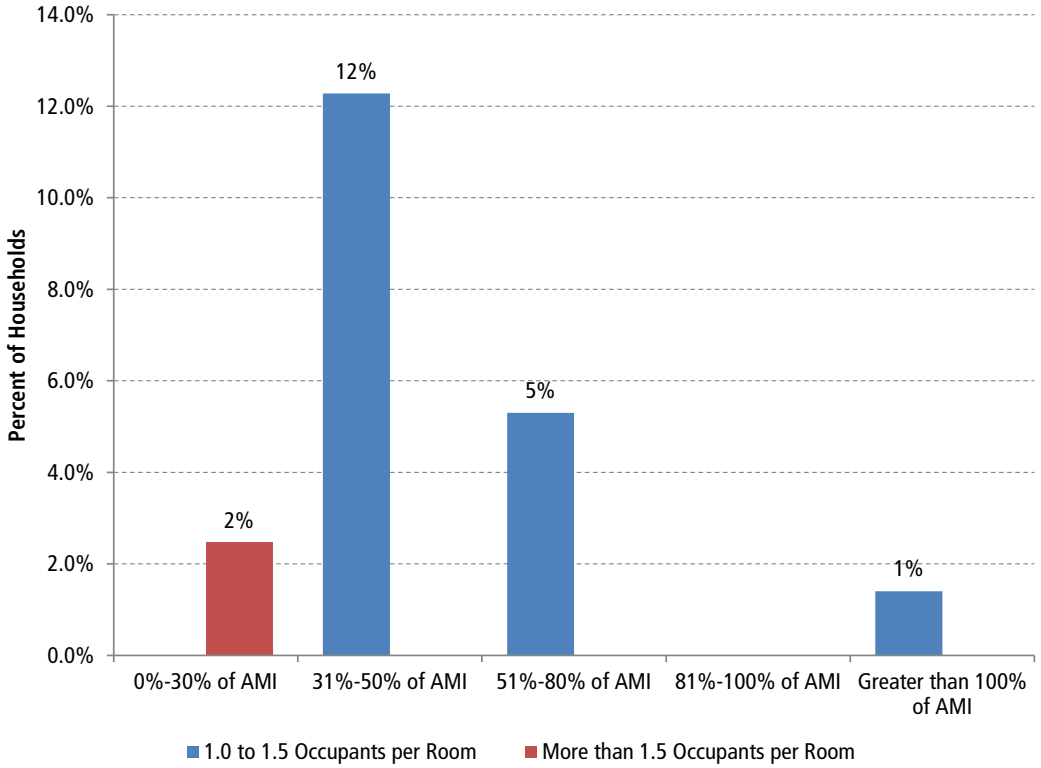


Figure 24 Overcrowding by Tenure and Severity

Universe: Occupied housing units
Notes: The Census Bureau defines an overcrowded unit as one occupied by 1.01 persons or more per room (excluding bathrooms and kitchens), and units with more than 1.5 persons per room are considered severely overcrowded.
Source: U.S. Department of Housing and Urban Development (HUD), Comprehensive Housing Affordability Strategy (CHAS) ACS tabulation, 2013-2017 release
For the data table behind this figure, please refer to the Data Packet Workbook, Table OVER-01.

Overcrowding often disproportionately impacts low-income households. 2.5 percent of very low-income households (below 50 percent AMI) experience severe overcrowding, while 0.0 percent of households above 100 percent experience this level of overcrowding (Figure 25).

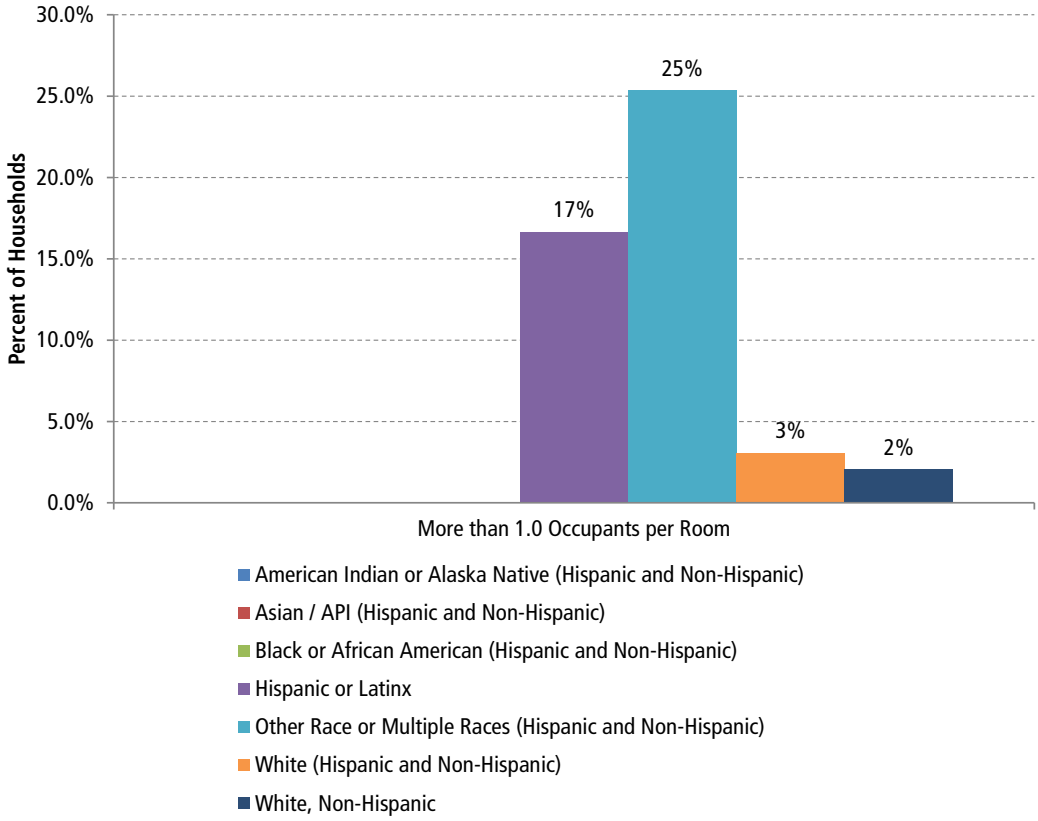

Figure 25 Overcrowding by Income Level and Severity

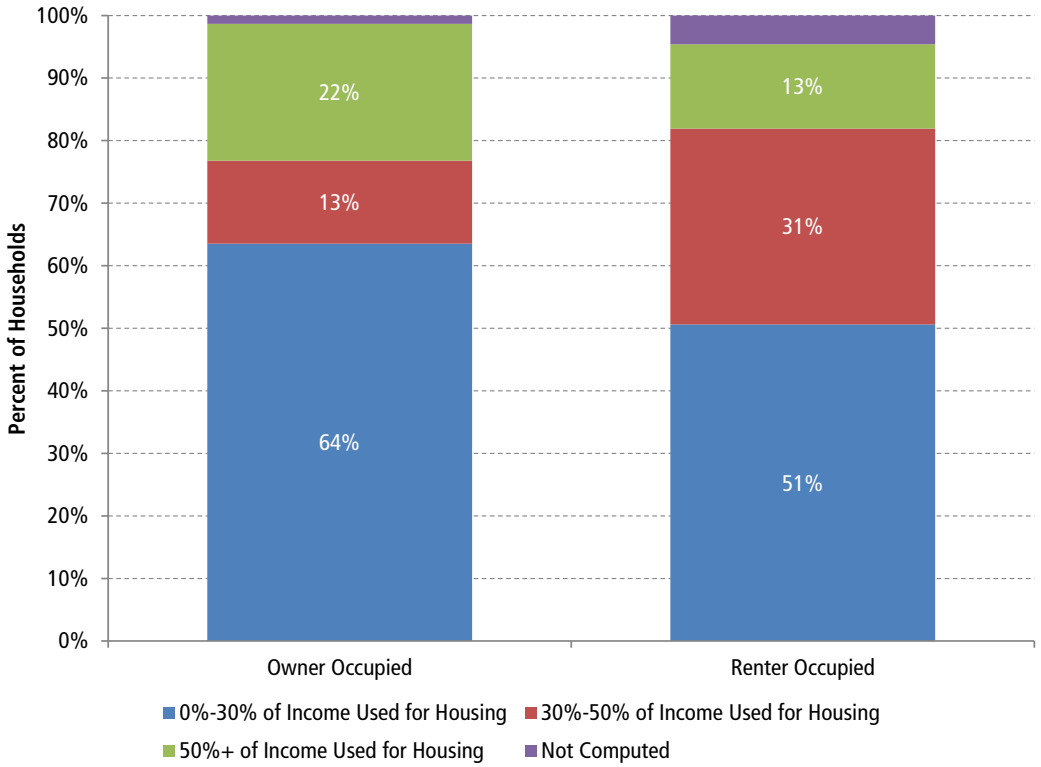
Universe: Occupied housing units
Notes: The Census Bureau defines an overcrowded unit as one occupied by 1.01 persons or more per room (excluding bathrooms and kitchens), and units with more than 1.5 persons per room are considered severely overcrowded. Income groups are based on HUD calculations for Area Median Income (AMI). HUD calculates the AMI for different metropolitan areas, and the nine county Bay Area includes the following metropolitan areas: Napa Metro Area (Napa County), Oakland-Fremont Metro Area (Alameda and Contra Costa Counties), San Francisco Metro Area (Marin, San Francisco, and San Mateo Counties), San Jose-Sunnyvale-Santa Clara Metro Area (Santa Clara County), Santa Rosa Metro Area (Sonoma County), and Vallejo-Fairfield Metro Area (Solano County). The AMI levels in this chart are based on the HUD metro area where this jurisdiction is located.
Source: U.S. Department of Housing and Urban Development (HUD), Comprehensive Housing Affordability Strategy (CHAS) ACS tabulation, 2013-2017 release
For the data table behind this figure, please refer to the Data Packet Workbook, Table OVER-04.

People of color tend to experience overcrowding at higher rates than White residents. In St. Helena, the racial group with the largest overcrowding rate is other race or multiple races (Hispanic and Non-Hispanic) (Figure 26).

Figure 26 Overcrowding by Race



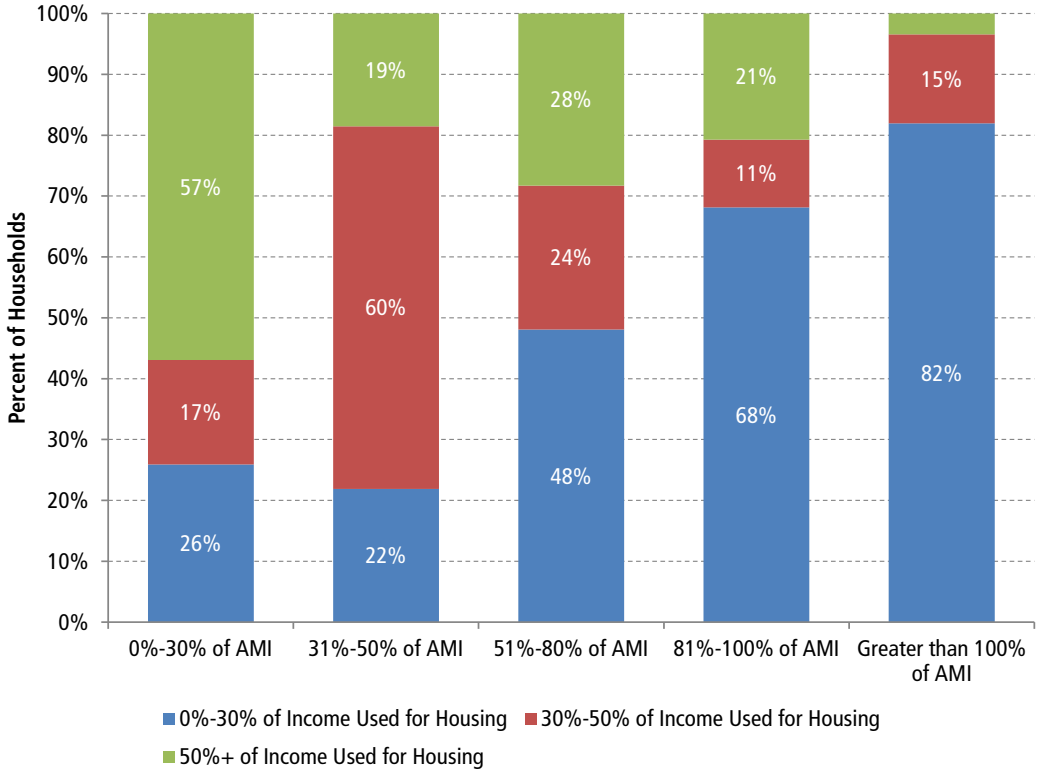
Universe: Occupied housing units
Notes: The Census Bureau defines an overcrowded unit as one occupied by 1.01 persons or more per room (excluding bathrooms and kitchens), and units with more than 1.5 persons per room are considered severely overcrowded. For this table, the Census Bureau does not disaggregate racial groups by Hispanic/Latinx ethnicity. However, data for the white racial group is also reported for white householders who are not Hispanic/Latinx. Since residents who identify as white and Hispanic/Latinx may have very different experiences within the housing market and the economy from those who identify as white and non-Hispanic/Latinx, data for multiple white sub-groups are reported here. The racial/ethnic groups reported in this table are not all mutually exclusive. Therefore, the data should not be summed as the sum exceeds the total number of occupied housing units for this jurisdiction. However, all groups labelled "Hispanic and Non-Hispanic" are mutually exclusive, and the sum of the data for these groups is equivalent to the total number of occupied housing units.
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25014 For the data table behind this figure, please refer to the Data Packet Workbook, Table OVER-03.

Housing Cost Burden

A household is considered "cost-burdened" if it spends more than 30 percent of its monthly income on housing costs, while those who spend more than 50 percent of their income on housing costs are considered "severely cost-burdened." Low-income residents are the most impacted by high housing costs and experience the highest rates of cost burden. Spending such large portions of their income on housing puts low-income households at higher risk of displacement, eviction, or homelessness.

Renters are often more cost-burdened than owners. While the housing market has resulted in home prices increasing dramatically, homeowners often have mortgages with fixed rates, whereas renters aremore likely to be impacted by market increases. When looking at the cost burden across tenure in St. Helena (Figure 27), 31.3 percent of renters spend 30 percent to 50 percent of their income on housing compared to 13.3 percent of those that own. Additionally, 13.5 percent of renters spend 50 percent or more of their income on housing,while 21.9 percent of owners are severely cost-burdened.

Figure 27 Cost Burden by Tenure



Universe: Occupied housing units
Notes: Cost burden is the ratio of housing costs to household income. For renters, housing cost is gross rent (contract rent plus utilities). For owners, housing cost is "select monthly owner costs", which includes mortgage payment, utilities, association fees, insurance, and real estate taxes. HUD defines cost-burdened households as those whose monthly housing costs exceed 30 percent of monthly income, while severely cost-burdened households are those whose monthly housing costs exceed 50 percent of monthly income.
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25070, B25091 For the data table behind this figure, please refer to the Data Packet Workbook, Table OVER-06.

In St. Helena, 16.6 percent of households spend 50 percent or more of their income on housing, while 21.1 percent spend 30 to 50 percent. However, these rates vary greatly across income categories (Figure 28). For example, 56.9 percent of St. Helena households making less than 30 percent of AMI spend the majority of their income on housing. For St. Helena residents making more than 100 percent of AMI, just 3.4 percent are severely

cost-burdened,and 81.9 percent of those making more than 100 percent of AMI spend less than 30 percent of their income on housing.

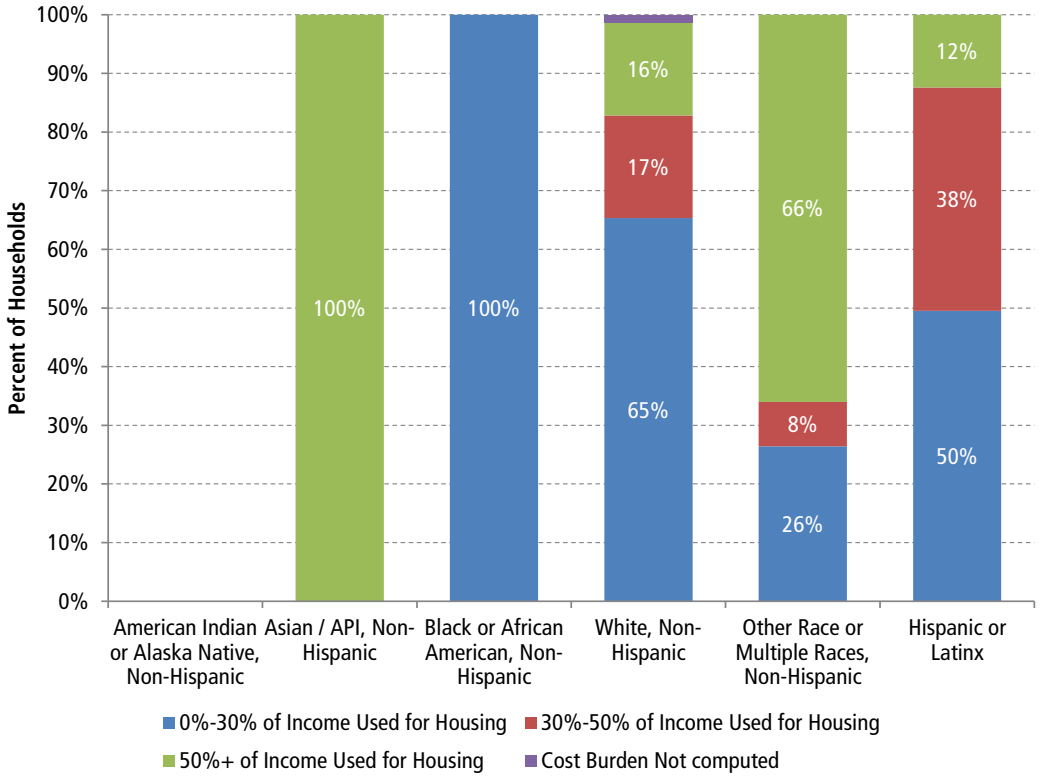


Figure 28 Cost Burden by Income Level

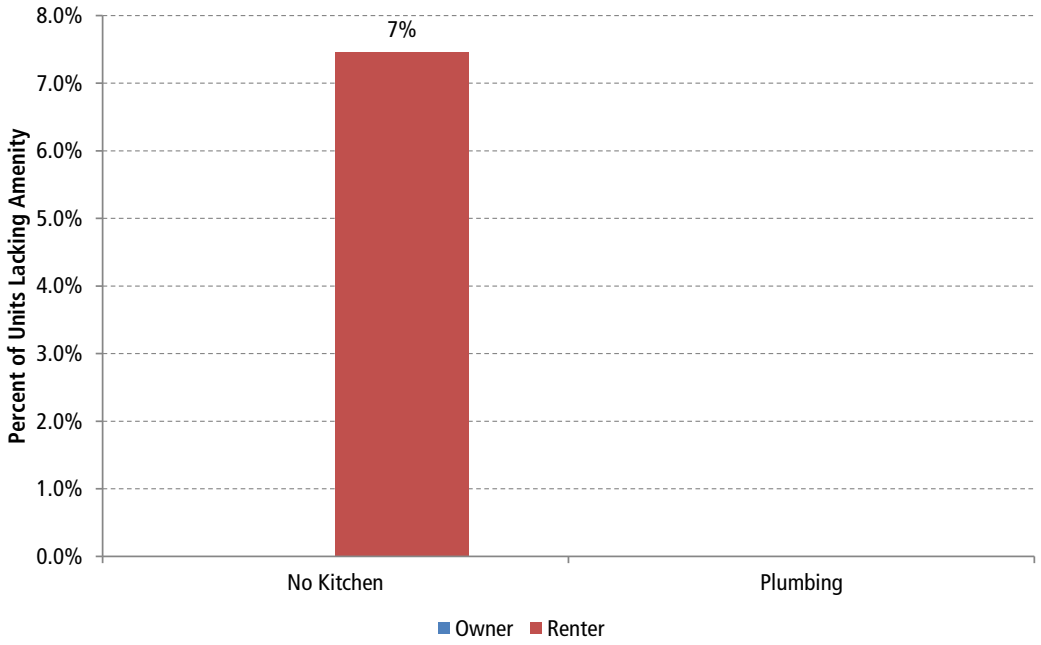
Universe: Occupied housing units
Notes: Cost burden is the ratio of housing costs to household income. For renters, housing cost is gross rent (contract rent plus utilities). For owners, housing cost is "select monthly owner costs", which includes mortgage payment, utilities, association fees, insurance, and real estate taxes. HUD defines cost-burdened households as those whose monthly housing costs exceed 30 percent of monthly income, while severely cost-burdened households are those whose monthly housing costs exceed 50 percent of monthly income. Income groups are based on HUD calculations for Area Median Income (AMI). HUD calculates the AMI for different metropolitan areas, and the nine county Bay Area includes the following metropolitan areas: Napa Metro Area (Napa County), Oakland-Fremont Metro Area (Alameda and Contra Costa Counties), San Francisco Metro Area (Marin, San Francisco, and San Mateo Counties), San Jose-Sunnyvale-Santa Clara Metro Area (Santa Clara County), Santa Rosa Metro Area (Sonoma County), and Vallejo-Fairfield Metro Area (Solano County). The AMI levels in this chart are based on the HUD metro area where this jurisdiction is located.
Source: U.S. Department of Housing and Urban Development (HUD), Comprehensive Housing Affordability Strategy (CHAS) ACS tabulation, 2013-2017 release.
For the data table behind this figure, please refer to the Data Packet Workbook, Table OVER-05.

Hispanic or Latinx residents are the most cost burdened with 38.1 percent spending 30 percent to 50 percent of their income on housing, and Asian / API, Non-Hispanic residents are the most severely cost burdened with 100.0 percent spending more than 50 percent of their income on housing (Figure 29).

Figure 29 Cost Burden by Race



Universe: Occupied housing units
Notes: Cost burden is the ratio of housing costs to household income. For renters, housing cost is gross rent (contract rent plus utilities). For owners, housing cost is "select monthly owner costs", which includes mortgage payment, utilities, association fees, insurance, and real estate taxes. HUD defines cost-burdened households as those whose monthly housing costs exceed 30 percent of monthly income, while severely cost-burdened households are those whose monthly housing costs exceed 50 percent of monthly
income. For the purposes of this graph, the "Hispanic or Latinx" racial/ethnic group represents those who identify as having Hispanic/Latinx ethnicity and may also be members of any racial group. All other racial categories on this graph represent those who identify with that racial category and do not identify with Hispanic/Latinx ethnicity.

For the data table behind this figure, please refer to the Data Packet Workbook, Table OVER-08.

Physical Housing Conditions

In general, the condition of the housing stock in St. Helena is good. This is primarily due to the high value of residential property, recent new construction, and minor to extensive remodeling which has been performed within the last ten years. Property owners are motivated to keep housing in good condition because of the high value of houses and rents.

Housing costs in the region are among the highest in the country, which could result in households, particularly renters, needing to live in substandard conditions in order to afford housing. Generally, there is limited data on the extent of substandard housing issues in a community. However, American Community Survey data (Figure 30) gives a sense of some of the substandard conditions that may be present in St. Helena. For example, 7.5 percent of renters in St. Helena reported lacking a kitchen and no renters lack plumbing. No owners reported lacking either a kitchen or plumbing.

Figure 30 Substandard Housing Issues, St. Helena, 2019

Universe: Occupied housing units
Notes: Per HCD guidance, this data should be supplemented by local estimates of units needing to be rehabilitated or replaced based on recent windshield surveys, local building department data, knowledgeable builders/developers in the community, or nonprofit housing developers or organizations.
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25053, Table B25043, Table B25049
For the data table behind this figure, please refer to the Data Packet Workbook, Table HSG-06.

There are scattered areas where housing condition can be an issue. City staff estimates approximately two percent of the single-family houses and one percent of multi-family units need replacement. These units have improvement costs that exceed the estimated replacement cost. Approximately four percent of single-family houses (approximately 85 units) and two percent of multifamily units (approximately 15 units) are in need of significant rehabilitation, which is defined as having major deficiencies that may require immediate repair. About five percent of the housing stock needs limited rehabilitation (approximately 140 units). These structures exhibit minor repair need and are not considered to have major safety issues.

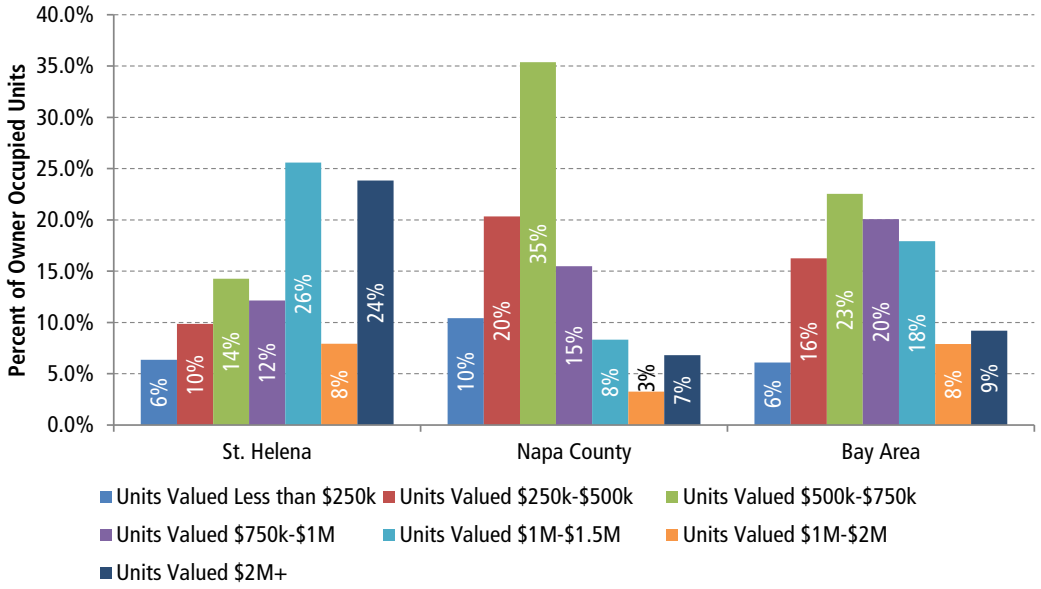
6. Housing Market Conditions

This section provides information on the private housing market in St. Helena and assesses the market's ability to accommodate the housing needs of residents. ABAG supplied an HCD Preapproved Data Package that provided data on home values, affordability, and contract rents in the City. Additionally, ABAG, in coordination with Baird + Driskell Community Planning provided a Housing Needs Data Report that directly informed this section of the Needs Analysis.[16]

Key Findings

- **Home Values.** Home values in St. Helena are high. The typical home value (December 2020) was $1,665,790 in St. Helena, $768,410 in Napa County and $1,077,230 the Bay Area.

- **Affordability.** The current market conditions in St. Helena enable only above moderate-income households to purchase homes, though affordable rental and for-sale housing complexes in St. Helena provide 256 units of affordable housing.



For-Sale Housing

Home prices reflect a complex mix of supply and demand factors, including an area's demographic profile, labor market, prevailing wages and job outlook, and land and construction costs. In the Bay Area, the costs of housing have long been among the highest in the nation. The typical home value in St. Helena was $1,665,790 by December of 2020, per data from Zillow. The largest proportion of homes were between $1 million and $1.5 million (Figure 31). By comparison, the typical home value is $768,410 in Napa County and $1,077,230 the Bay Area, with the largest share of units valued $500,000 to $750, 000.

The region's home values have increased steadily since 2000, besides a decrease during the Great Recession. The rise in home prices has been especially steep since 2012, with the median home value in the Bay Area nearly doubling during this time. Since 2001, the typical home value has increased 156.7 percent in St. Helena from $648,900 to $1,665,790. This change is above the change in Napa County, and above the change for the region (Figure 32).

Figure 31 Home Values of Owner-occupied Units

Universe: Owner-occupied units
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25075 For the data table behind this figure, please refer to the Data Packet Workbook, Table HSG-07.

Figure 32 Zillow Home Value Index (ZHVI)

Universe: Owner-occupied housing units
Notes: Zillow describes the ZHVI as a smoothed, seasonally adjusted measure of the typical home value and market changes across a given region and housing type. The ZHVI reflects the typical value for lower to moderate valued homes in a

neighborhood. Specifically, the ZHVI is based upon the valuations of homes between 35th to 65th percentile range on a standardized curve encompassing all owner-occupied housing units, including both single-family homes and condominiums.

More information on the ZHVI is available from Zillow. The regional estimate is a household-weighted average of county-level ZHVI files, where household counts are yearly estimates from DOF's E-5 series For unincorporated areas, the value is a population weighted average of unincorporated communities in the county matched to census-designated population counts.

For the data table behind this figure, please refer to the Data Packet Workbook, Table HSG-08.

Affordable Home Purchase Prices

Table 15 examines affordability in another way. Instead of presenting the income required to buy a market rate house in St. Helena, Table 15 examines how much very low-, low-, and moderate-income households in St. Helena could afford to pay for housing, along with the corresponding maximum affordable home price. The table assumes 10 percent down payment, modeling a situation that is more typical of first-time homebuyers who have not amassed sufficient financial resources to make a larger down payment. These buyers are more likely to be in need of affordable housing options than the typical buyers of market rate housing in St. Helena. The lower down payment amount requires the owner to buy mortgage insurance.

As shown, in the case of a three-person household, the affordable home price varies from approximately $203,461 for very low-income, to $325,372 for low-income, and $406,922 for moderate income households. The income limits increase with household size, and a six-person household with very low, low, or moderate income can afford to buy a home priced at $262,243, $419,548, and $542,493, respectively. Based on this data and current market prices, lower-income households have very few options for purchasing a home in St. Helena, while moderate-income households may be able to afford to purchase a condominium or a small single-family home.

Table 15 Affordable Home Purchase Prices by Income Level, Napa County

Extremely Low-Income Households at 30 percent of Median Family Income

	Studio	1 Bedroom	2 Bedroom	3 Bedroom	4 Bedroom	5 Bedroom

Note: Based on 2021 Napa County Area Family Income (Family of 4) of $109,200, per State income limits .
[1]Assumes that 30 percent (35 percent for moderate) of income is available for either: monthly rent, including utilities; or mortgage payment, taxes, mortgage insurance, and homeowners' insurance.
[2]Assumes 90.0 percent loan at 5.0 percent annual interest rate and 30-year term; assumes taxes, mortgage insurance, and homeowners' insurance account for 20 percent of total monthly payments.
Source: Mintier Harnish, 2021.

Current Market Rate For-Sale Housing

Since 2019, the price of for-sale housing in St. Helena has shifted even higher, making home ownership practically unattainable to working class residents of St. Helena. All single-family homes are for sale at prices greater than $1,000,000. The median price of for-sale housing is $1,872,500 and the average price of for-sale housing is $2,965,458, which are both prices unaffordable to lower- and moderate-income households. Currently there are only four units listed for under $1,000,000: three mobile homes and one condominium.

Table 16 Residential Properties for Sale, January 2023

Rental Housing

Similar to home values, rents have also increased dramatically across the Bay Area in recent years. Regionwide, some renters were priced out, evicted, or displaced, particularly communities of color. Residents finding

themselves in one of these situations may have had to choose between commuting long distances to their jobs and schools or moving out of the region, and sometimes, out of the state.

In St. Helena, the largest proportion of rental units rented in the $500 to $1000 per month category, totaling 24.4 percent, followed by 22.2 percent of units renting in the $1500 to $2000 per month category (Figure 33). Both countywide, and in the Bay Area as a whole, the largest share of units is in the $1500 to $2000 per month category.

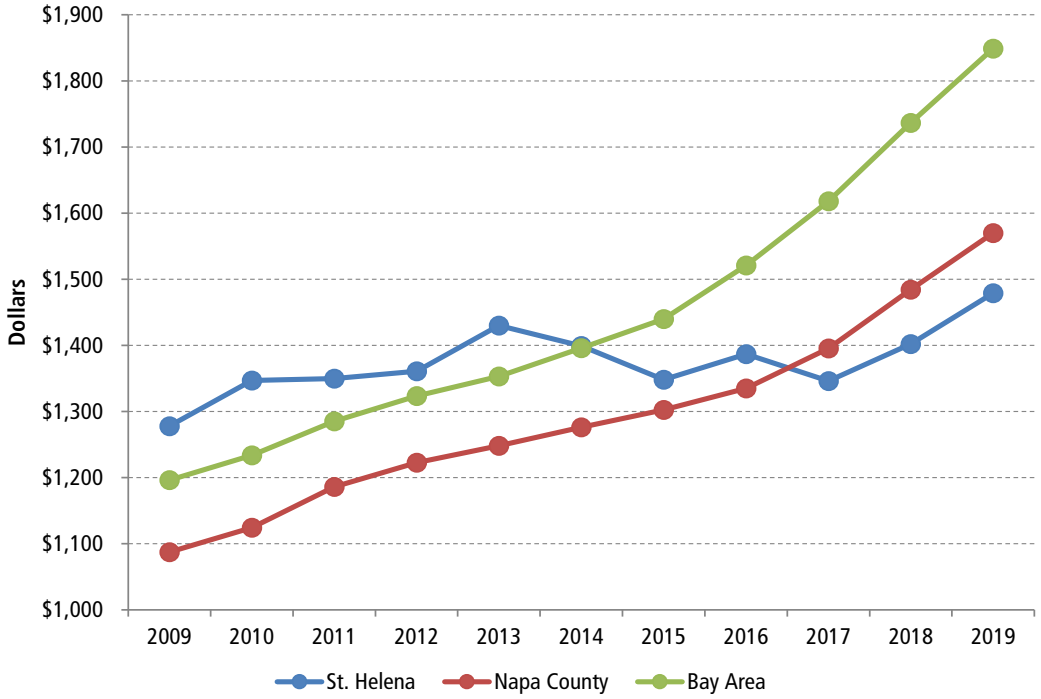

Figure 33 Contract Monthly Rents for Renter-occupied Units

Universe: Renter-occupied housing units paying cash rent
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25056 For the data table behind this figure, please refer to the Data Packet Workbook, Table HSG-09.

Since 2009, the median rent has increased by 15.7 percent in St. Helena, from $1,390 to $1,470 per month (Figure 34). In Napa County, the median rent has increased 23.0 percent , from $1,270 to $1,560 per month. The median rent in the region has increased significantly during this time from $1,200 to $1,850 per month, a 54 percent increase.

Figure 34 Median Contract Monthly Rent

Universe: Renter-occupied housing units paying cash rent
Notes: For unincorporated areas, median is calculated using distribution in B25056.
Source: U.S. Census Bureau, American Community Survey 5-Year Data releases, starting with 2005-2009 through 2015-2019, B25058, B25056 (for unincorporated areas). County and regional counts are weighted averages of jurisdiction median using B25003 rental unit counts from the relevant year.
For the data table behind this figure, please refer to the Data Packet Workbook, Table HSG-10.

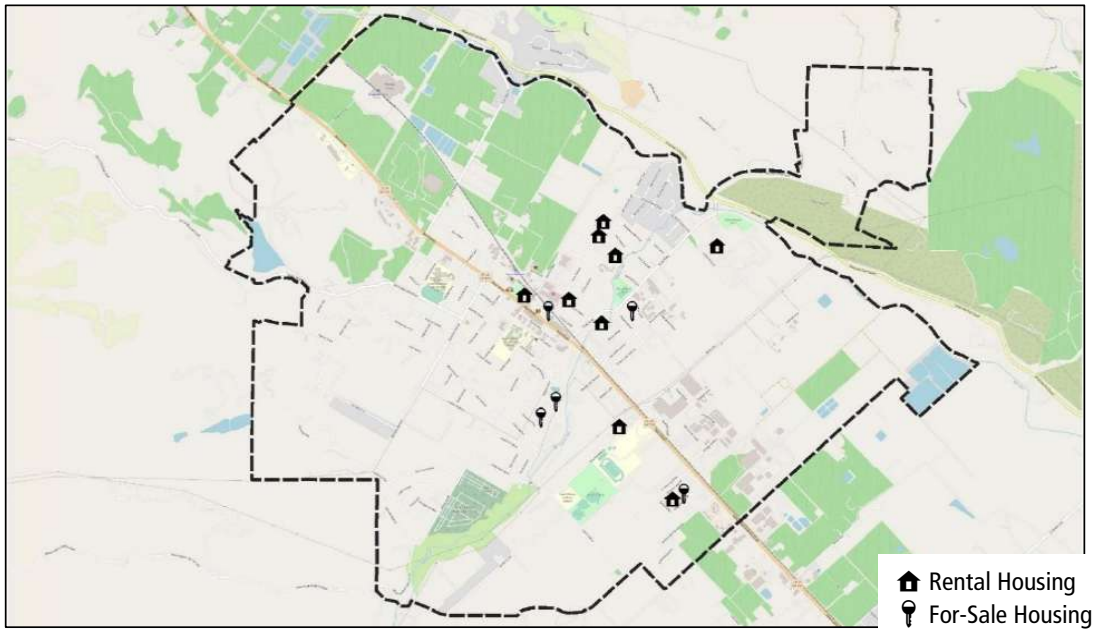
Affordable Rental Rates

In addition to maximum home purchase price, Table 15 also calculates maximum monthly gross rent. This calculation assumes that 30 percent (35 percent for moderate) of income is available for either: monthly rent, including utilities; or mortgage payment, taxes, mortgage insurance, and homeowners' insurance. Among three-person households, the maximum monthly gross rent that can be paid is calculated at $1,229 for very low-income households, $1,965 or low-income households, and $2,458 for moderate income households. While a studio, one-bedroom, and some of the two-bedroom market rate apartments in St. Helena are affordable to low income and a portion of very low-income households, they are in limited supply. Average apartment rents throughout Napa County are only affordable to low-, moderate-, and above moderate- households. In addition, single family rental units are significantly more expensive and are affordable only to above moderate-income households.

Affordable Housing Complexes

Table 17 lists affordable housing complexes and units in St. Helena, which are shown on Figure 35. These include four rental complexes, five for-sale subdivisions, and 13 regulated affordable units in the City, that increase the supply of housing and focus on meeting the housing needs unmet by the private housing market

- The rental complexes noted in Table 17 provide 214 units of affordable housing to St. Helena residents. Waiting lists for affordable units can be quite long. For instance, as of January 2022, Hunt's Grove Apartments has a five-year waiting list[17] and Stonebridge has a three to four year waiting list.[18] Recently, the City has reduced and deferred fees for a five-unit affordable project at 963 Pope Street, which is currently under construction.



- The five for-sale subdivisions (Marietta Townhomes, Wallis Subdivision, Magnolia Oaks, and Brenkle Court) provide 41 affordable for-sale units with deed restrictions. The City of St. Helena contributed funds to the Marietta townhomes in 1997, including $130,000 in silent second mortgages and $12,500 in building fees. The City also reduced fees and contributed significant funds to the Brenkle Court development in 2016 and approved an additional five deed-restricted affordable units at this location in 2020.

- The 13 regulated affordable apartments in the City are incorporated into the Wydown Hotel, Hunt Street Apartments, Turley Flats, and Grayson Avenue Apartments. The City has both reduced and deferred fees (through a loan from the Affordable Housing Trust Fund) for the Turley Flats Affordable Housing Project, an 8-unit multi-family development.

In addition, mobile home parks like Vineyard Valley, although not officially regulated as affordable housing, do represent a housing option in St. Helena that is affordable to moderate income households.

Current Market Rate Rental Housing

Since the release of the 2019 ACS data, the cost of rental housing in St. Helena has increased dramatically. For most looking to move to St. Helena, the price of market rate housing is almost entirely out of reach. Based on Zillow data, there are two available apartments for rent in St. Helena posted for a contract rent rate of $1,850 and $2,150. Several detached single-family homes are listed for rent at prices which are wholly out of reach of lower, moderate, and most above moderate-income households. The average market rent rate of available single-family homes is $8,356 per month and the median rent is $6,450 per month.

"At Risk" Units

State law requires an analysis of the risk of conversion of affordable housing to market-rate housing within the next ten years. The 2009 Housing Element identified one affordable housing complex, the Woodbridge Apartments, as at-risk for losing its federal subsidies. In 2013, the City worked with the property owners and CalHFA to re-finance and renovate 50 units of affordable housing. Through this effort the Woodbridge Apartment Complex will continue to offer regulated affordable housing through November 2067. The 2014-2022 Housing Element reported no units at-risk of conversion.

The California Housing Partnership provides information on affordable housing developments subsidized through HUD, the U.S. Department of Agriculture, the Low-Income Housing Tax Credit Program, and public housing. Table 20, shows data on assisted affordable units with information on the estimated affordability end year and an estimation of at-risk status. As shown on the table, the California Housing Partnership's Preservation Database (2020) does not identify any affordable housing developments with subsidies expiring during the 2023-2031 planning period.

Table 20 Assisted Affordable Housing Developments by Conversion Risk Status, St. Helena

7. Special Housing Needs

California Government Code Section 65583 (a) (7) requires an analysis of any special housing needs, "such as those of the elderly, persons with disabilities, large families, farm workers, families with female heads of household, and families and persons in need of emergency shelter."[19] This section provides estimates of the prevalence of each of these special needs populations, discusses special housing concerns, and analyzes their housing cost burdens within St. Helena to the extent that available data allows. Data sources include the HCD Preapproved Data Package and Housing Needs Data Report prepared for St. Helena by ABAG, as well as the U.S. Census Bureau, American Community Survey.

Key Findings

- **People with Disabilities.** In St. Helena, people with disabilities make up around 12 percent of the total population. Children (under 18) make up around 38 percent of the developmentally disabled population, while adults make up around 62 percent. Most of the developmentally disabled population reside with their parent, family, or guardian.

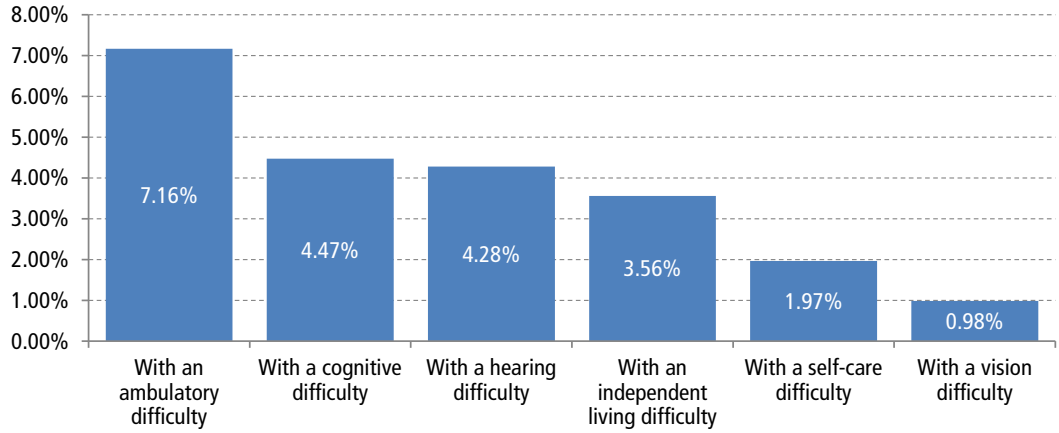
- **Senior Households.** Senior households represent a higher percentage of the total households in St. Helena, at about 39 percent of households in the City. There is a large income disparity between seniors who rent housing and seniors who own their home. Most seniors who rent make 0 to 30 percent of AMI, and sixty-eight percent of senior households in this income category have housing cost burdens. By contrast, most seniors who own make greater than 100 percent of AMI; thirteen percent of senior households in this category experience housing cost burdens.

- **Large Households.** In St. Helena, most large households are renters. Among units with three or more bedrooms in St. Helena, approximately 77 percent renter occupied. In St. Helena, 43.2 percent of large family households experience a cost burden of 30 to 50 percent, and an additional 6.8 percent of households spend more than half of their income on housing.

- **Female-headed households.** Female-headed households in St. Helena make up 10 percent of the total population, while married-couple family households make up around 42 percent. In St. Helena, around 23 percent of female-headed households with children fall below the federal poverty line, while around 18 percent of female-headed households without children fall below the federal poverty line.

- **Farmworkers**. The number of permanent farm workers in Napa County has increase from 2,916 in 2002 to 4,290 in 2017, while the number of seasonal farm workers decreased from 7,855 to 5,734. The migrant worker student population totaled 20 during the 2019-20 school year, an increase of two students since the 2016-17 school year.

[19] *California Government Code Section 65583 (a) (7) at https://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=GOV&sectionNum=65583. Accessed March 20, 2022.*



- **Persons experiencing homelessness.** According to a Point in Time Count provided by the Chief of Police, there is one homeless person who resides in St. Helena. Countywide, many of the persons experiencing homelessness report chronic substance abuse or mental illness.

People with Disabilities

People with disabilities face additional housing challenges. Encompassing a broad group of individuals living with a variety of physical, cognitive and sensory impairments, many people with disabilities live on fixed incomes and need specialized care, yet often rely on family members for assistance due to the high cost of care.

When it comes to housing, people with disabilities are not only in need of affordable housing but accessibly designed housing, which offers greater mobility and opportunity for independence. Unfortunately, the need typically outweighs availability, particularly in a housing market with such high demand. People with disabilities are at a high risk for housing insecurity, homelessness, and institutionalization, particularly when they lose aging caregivers. Figure 36 shows the rates at which different disabilities are present among residents of St. Helena. Overall, 11.9 percent of people in St. Helena have a disability of any kind.

Figure 36 Disability by Type

Universe: Civilian noninstitutionalized population 18 years and over
Notes: These disabilities are counted separately and are not mutually exclusive, as an individual may report more than one disability. These counts should not be summed. The Census Bureau provides the following definitions for these disability types: Hearing difficulty: deaf or has serious difficulty hearing. Vision difficulty: blind or has serious difficulty seeing even with glasses. Cognitive difficulty: has serious difficulty concentrating, remembering, or making decisions. Ambulatory difficulty: has serious difficulty walking or climbing stairs. Self-care difficulty: has difficulty dressing or bathing. Independent living difficulty has difficulty doing errands alone such as visiting a doctor's office or shopping.
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B18102, Table B18103, Table B18104, Table B18105, Table B18106, Table B18107.
For the data table behind this figure, please refer to the Data Packet Workbook, Table DISAB-01.

Existing Resources

In-Home Supportive Services (IHSS), offered by Napa County, is a helpful resource to help allow persons with disabilities to find the help they need. IHSS offers personal in-home care services to low income aged, blind, and persons with disabilities who are at risk for out-of-home placement.

Gaps in Resources and Action Items

To address the unmet needs of people with disabilities in St. Helena, Programs H-BB, H-LL, and H-NN are included to directly improve housing accessibility and increase housing options for persons with disabilities. Program H-BB commits the City to pursuing State and Federal grants to gain funds necessary to construct and rehabilitate housing units accessible to persons with a disability. Program H-NN includes funding to assist with construction and rehabilitation of homes accessible to those with special housing needs. Program H-LL is designed to encourage developers to incorporate the needs of persons with disabilities.

People Living with Developmental Disabilities

Developmental disabilities are defined as severe, chronic, and attributed to a mental or physical impairment that begins before a person turns 18 years old. This can include Down's Syndrome, autism, epilepsy, cerebral palsy, and mild to severe mental retardation. Some people with developmental disabilities are unable to work, rely on Supplemental Security Income, and live with family members. In addition to their specific housing needs, they are at increased risk of housing insecurity after an aging parent or family member is no longer able to care for them. Table 21 contains data on people with developmental disabilities in St. Helena. In St. Helena, of the population with a developmental disability, children under the age of 18 make up 38.1 percent, while adults account for 61.9 percent.

Table 21 People with Developmental Disabilities by Age, St. Helena

Age Group	Total
Age 18+	12
Age Under 18	20
Total	32

Universe: Population with developmental disabilities
Notes: The California Department of Developmental Services is responsible for overseeing the coordination and delivery of services to more than 330,000 Californians with developmental disabilities including cerebral palsy, intellectual disability, Down syndrome, autism, epilepsy, and related conditions. The California Department of Developmental Services provides ZIP code level counts. To get jurisdiction-level estimates, ZIP code counts were crosswalked to jurisdictions using census block population counts from Census 2010 SF1 to determine the share of a ZIP code to assign to a given jurisdiction.
Source: California Department of Developmental Services, Consumer Count by California ZIP Code and Age Group (January 2022)

Existing Resources

There are several housing types appropriate for people living with a development disability: rent subsidized homes, licensed and unlicensed single-family homes, inclusionary housing, Section 8 vouchers, special programs for home purchase, HUD housing, and SB 962 homes. The design of housing-accessibility modifications, the proximity to services and transit, and the availability of group living opportunities represent some of the types

of considerations that are important in serving this need group. Incorporating 'barrier-free' design in all, new multifamily housing (as required by California and Federal Fair Housing laws) is especially important to provide the widest range of choices for disabled residents. Special consideration should also be given to the affordability of housing, as people with disabilities may be living on a fixed income. The most common living arrangement for individuals with disabilities in St. Helena is the home of a parent, family member, or guardian (Table 22).

People living with developmental disabilities often face problems finding employment or a supportive housing. In Napa, Sonoma, and Solano counties, North Bay Regional Center aids those with developmental disabilities with the process of gaining employment and establishing independence, along with providing general community access and family support. North Bay Regional Center is one of twenty-one Regional Centers in California dedicated to assisting those with developmental disabilities. North Bay Regional Center is based out of the Napa County Airport Business Park located north of American Canyon, which is accessible from St. Helena via the 10 and 11 bus lines.

Gaps in Resources and Action Items

Recently, an eight-unit market rate fully ADA compliant housing development was completed in St. Helena, providing some much-needed housing to persons with special needs. The City wishes to encourage more ADA compliant developments to address the unmet needs of people with developmental disabilities. To pursue this goal, Program H-LLis included in the Housing Element to encourage new developments to allocate a portion of units being built to meet the needs of special needs groups, including people with developmental disabilities.

Table 22 People with Developmental Disabilities by Residence

Residence Type	Total

To get jurisdiction-level estimates, ZIP code counts were crosswalked to jurisdictions using census block population counts from Census 2010 SF1 to determine the share of a ZIP code to assign to a given jurisdiction.
Source: California Department of Developmental Services, Consumer Count by California ZIP Code and Residence Type (January 2022)

Seniors

Senior households often experience a combination of factors that can make accessing or keeping affordable housing a challenge. They often live on fixed incomes and are more likely to have disabilities, chronic health conditions and/or reduced mobility.

Senior Households

Table 23 shows data for households by age of householder for occupied housing units. As shown, in St. Helena, approximately 39 percent of households are 65 and older.

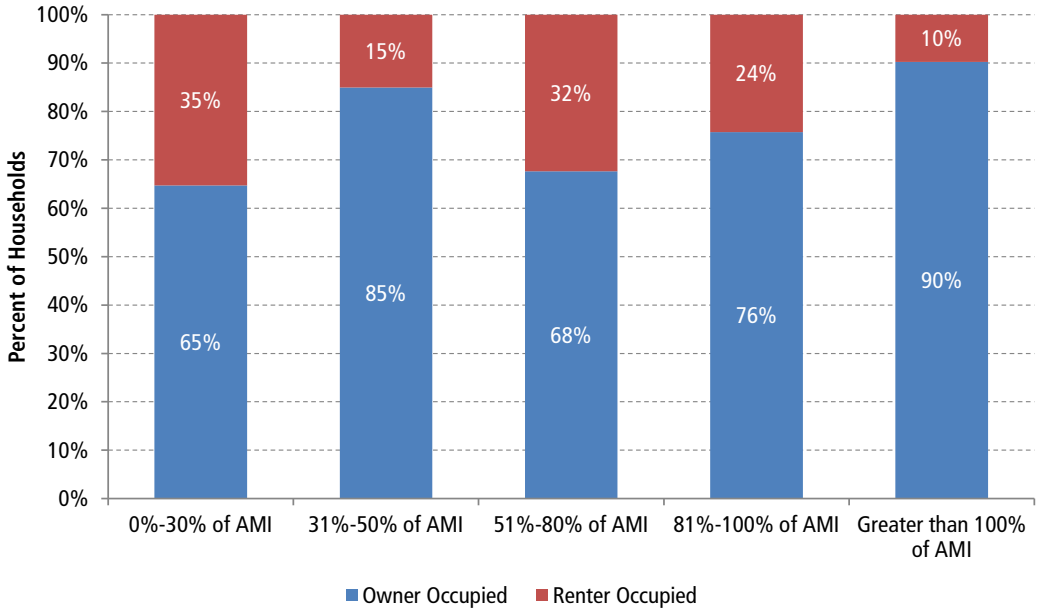

Table 23 Households by Age

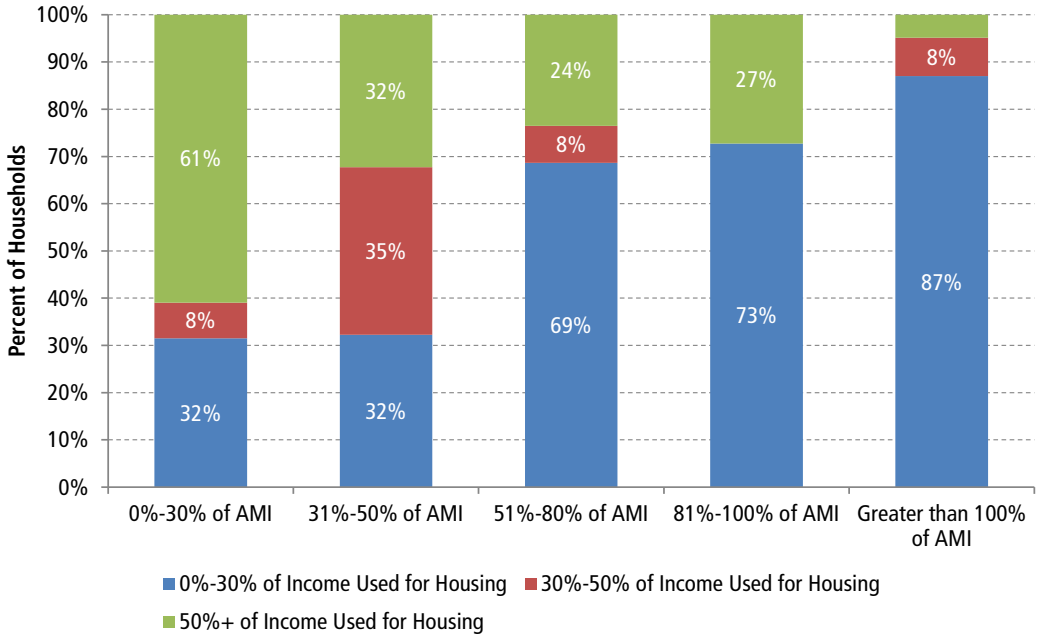
Age	Number	Total by Grouping	Percent
Age 15-24	37	1,646	61%
Age 25-34	247		
Age 35-44	272		
Age 45-54	510		
Age 55-59	352		
Age 60-64	228		
Age 65-74	525	1,056	39%
Age 75-84	377		
Age 85+	154		
Total	2,702	2,702	100%

Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25007

Seniors who rent may be at even greater risk for housing challenges than those who own, due to income differences between these groups. The largest proportion of senior households who rent make 0-30 percent of AMI, while the largest proportion of senior households who are homeowners falls in the income group Greater than 100 percent of AMI (Figure 37).

Figure 37 Senior Households by Income and Tenure



Universe: Senior households
Notes: For the purposes of this graph, senior households are those with a householder who is aged 62 or older. Income groups are based on HUD calculations for Area Median Income (AMI). HUD calculates the AMI for different metropolitan areas, and the nine county Bay Area includes the following metropolitan areas: Napa Metro Area (Napa County), Oakland-Fremont Metro Area (Alameda and Contra Costa Counties), San Francisco Metro Area (Marin, San Francisco, and San Mateo Counties), San Jose-Sunnyvale-Santa Clara Metro Area (Santa Clara County), Santa Rosa Metro Area (Sonoma County), and Vallejo-Fairfield Metro Area (Solano County). The AMI levels in this chart are based on the HUD metro area where this jurisdiction is located.
Source: U.S. Department of Housing and Urban Development (HUD), Comprehensive Housing Affordability Strategy (CHAS) ACS tabulation, 2013-2017 release
For the data table behind this figure, please refer to the Data Packet Workbook, Table SEN-01.

Elderly Housing Cost Burden

When cost-burdened seniors are no longer able to make house payments or pay rents, displacement from their homes can occur, putting further stress on the local rental market or forcing residents out of the community they call home. Understanding how seniors might be cost-burdened is of particular importance due to their special housing needs, particularly for low-income seniors. 60.9 percent of seniors making less than 30 percent of AMI are spending the majority of their income on housing. For seniors making more than 100 percent of AMI, 87.0 percent are not cost-burdened and spend less than 30 percent of their income on housing (Figure 38).

Figure 38 Cost-Burdened Senior Households by Income Level

Universe: Senior households
Notes: For the purposes of this graph, senior households are those with a householder who is aged 62 or older. Cost burden is the ratio of housing costs to household income. For renters, housing cost is gross rent (contract rent plus utilities). For owners, housing cost is "select monthly owner costs", which includes mortgage payment, utilities, association fees, insurance, and real estate taxes. HUD defines cost-burdened households as those whose monthly housing costs exceed 30% of monthly income, while severely cost-burdened households are those whose monthly housing costs exceed 50% of monthly income. Income groups are based on HUD calculations for Area Median Income (AMI). HUD calculates the AMI for different metropolitan areas, and the nine county Bay Area includes the following metropolitan areas: Napa Metro Area (Napa County), Oakland-Fremont Metro Area (Alameda and Contra Costa Counties), San Francisco Metro Area (Marin, San Francisco, and San Mateo Counties), San Jose-Sunnyvale-Santa Clara Metro Area (Santa Clara County), Santa Rosa Metro Area (Sonoma County), and Vallejo-Fairfield Metro Area (Solano County). The AMI levels in this chart are based on the HUD metro area where this jurisdiction is located.
Source: U.S. Department of Housing and Urban Development (HUD), Comprehensive Housing Affordability Strategy (CHAS) ACS tabulation, 2013-2017 release
For the data table behind this figure, please refer to the Data Packet Workbook, Table SEN-03.

Existing Senior Housing Resources

Within St. Helena, there are 159 senior housing units, as shown on Table 24. With approximately 1,056 seniors households in the city, the city has a need for both market rate and affordable senior living facilities. The largest senior living facility, locally owned Silverado Orchards, has a residential capacity of 103. This facility is not income restricted. The only income restricted senior living facility, Woodbridge Village, has 50 units, with most being one-bedroom units. As a stark representation of the high demand and low supply of affordable senior living units, according to a manager at Woodbridge Village, there is a waiting list stretching several years to live in their affordable senior housing complex.

Table 24 Senior Housing Units, St. Helena.

Facility Name	Address	Tenure	Number of Units	Income Restriction
Silverado Orchards	601 Pope Street	Rent	103	No
Saint Helena Home Care	2011 Olive Avenue	Rent	6	No
Woodbridge Village	727 Hunt Avenue	Rent	50	Yes

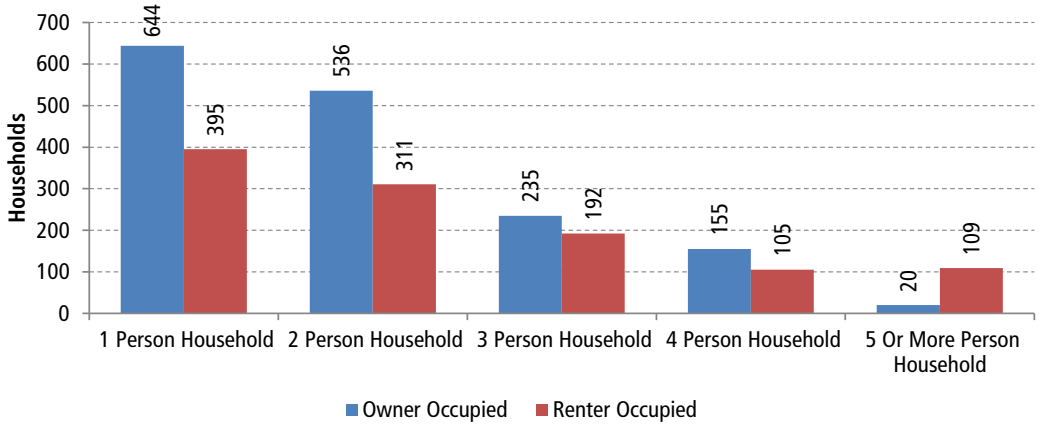
Source: City of St. Helena, 2022; U.S. News, 2016.

Gaps in Resources and Action Items

Given the high proportion of St. Helena households that are senior, especially seniors aged 75 and older, it is important to work to address their housing needs. The Rianda house provides seniors with a meeting place and valuable information on topics ranging from housing and income-assistance to medical referrals, as a welcome and positive resource for seniors in St. Helena. There are still many needs of seniors that are not being met, however, and changes to St. Helena's housing policies could make it easier for seniors to age in place. Often, when seniors are released from a hospital stay and return to their own homes, they have trouble navigating inside the home and getting to neighborhood services like the grocery store and doctor's office.

The 2023-2031 Housing Element includes three programs directly related the senior housing.

- Program H-BB commits the City to pursuing funding for costs specifically associated with housing rehabilitation for lower income households and seniors. Such funding can help with the conservation of 20 units accessible to seniors, along with other units for persons with a disability.
- Program H-LL commits the city to encouraging new developments accessible to persons with special needs, which includes seniors. This program specifies 10 senior-accessible units being constructed in the next Planning Period.
- Program H-NN commits the City to pursuing federal and State funding for costs associated with both new construction and rehabilitation for lower-income households and seniors. Such funding can support the development of 20 units accessible to seniors.



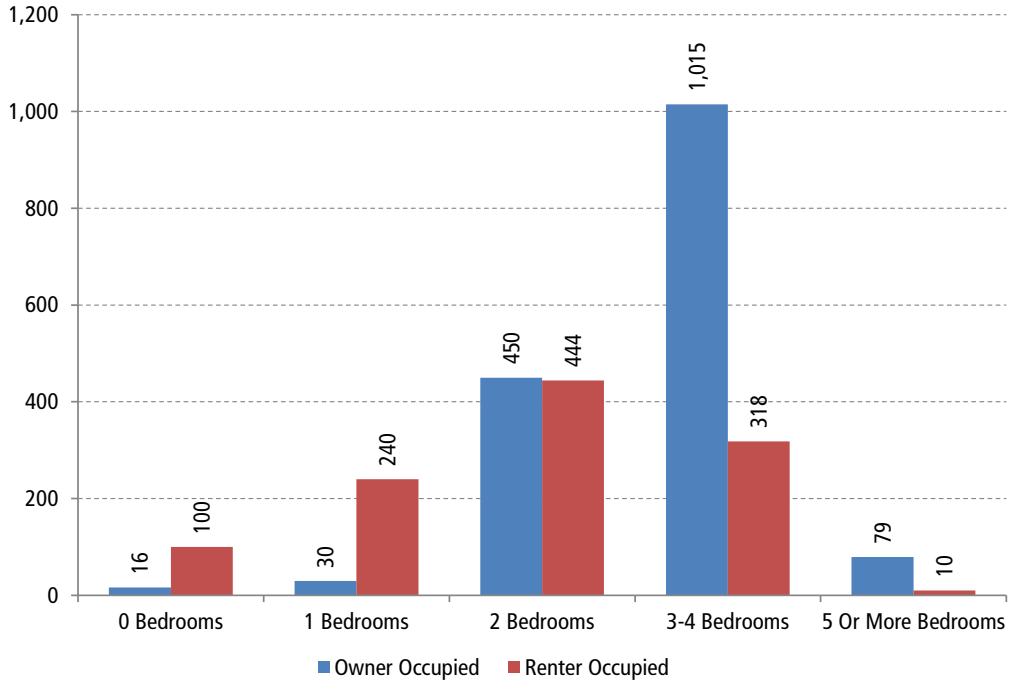
Additional policies and programs that the City should consider include zoning that encourages families to consider ADUs and JADUs to accommodate their aging relatives or caregivers. Such policies could also provide for more elder-friendly neighborhoods, improved lighting to increase visibility, and safe accessible sidewalks and walking paths.

Large Households

Large households often have different housing needs than smaller households. If a city's rental housing stock does not include larger apartments, large households who rent could end up living in overcrowded conditions. In St. Helena, for large households with five or more persons, most units (84.5 percent) are renter occupied

(Figure 39). In 2017, 47.3 percent of large households were very low-income, earning less than 50 percent of the area median income (AMI).

Figure 39 Household Size by Tenure

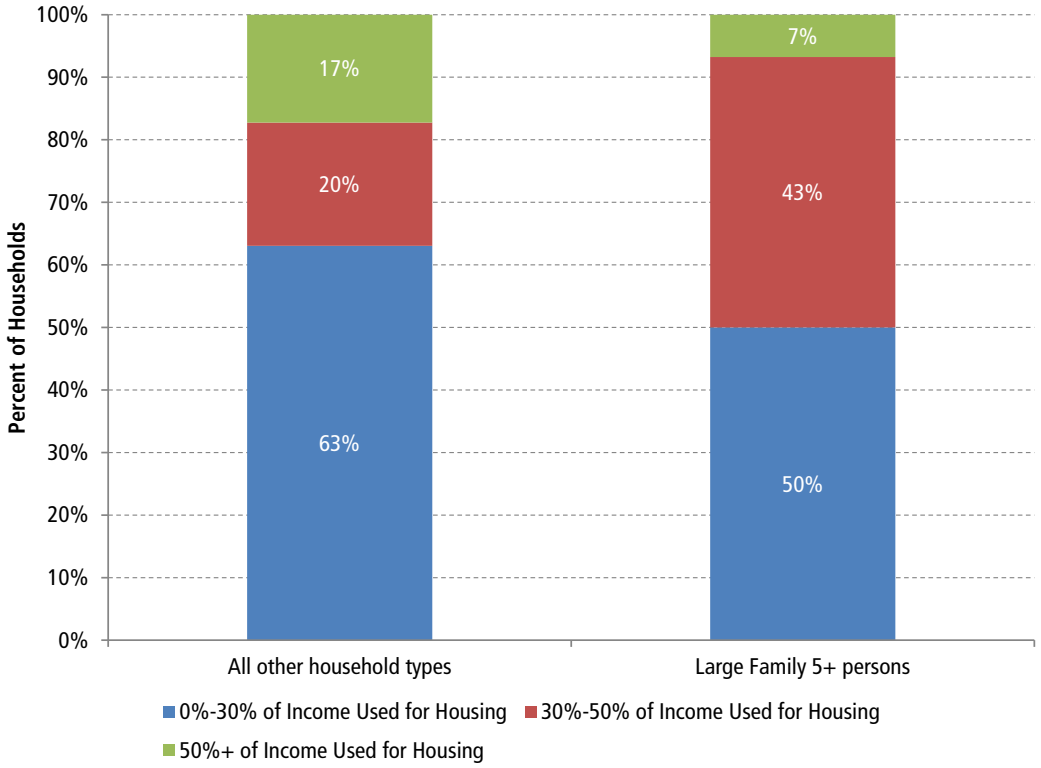


Universe: Occupied housing units
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25009 For the data table behind this figure, please refer to the Data Packet Workbook, Table LGFEM-01.

Existing Resources

The unit sizes available in a community affect the household sizes that can access that community. Large families are generally served by housing units with three or more bedrooms, of which there are 1,422 units in St. Helena. Among these large units with three or more bedrooms, 23.1 percent are owner-occupied and 76.9 percent are renter occupied (Figure 40).

Figure 40 Housing Units by Number of Bedrooms



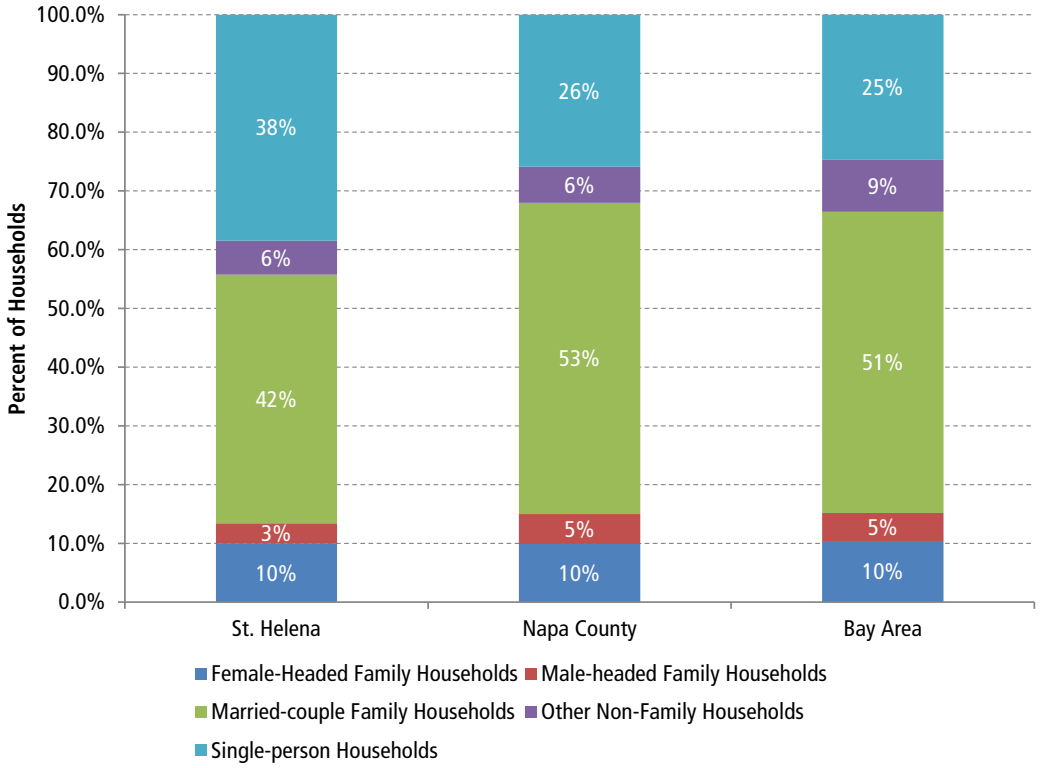
Universe: Housing units
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B25042 For the data table behind this figure, please refer to the Data Packet Workbook, Table HSG-05.

Gaps in Resources

Large family households often have special housing needs due to a lack of adequately sized affordable housing available. The higher costs required for homes with multiple bedrooms can result in larger families experiencing a disproportionate cost burden than the rest of the population and can increase the risk of housing insecurity.

In St. Helena, 43.2 percent of large family households experience a cost burden of 30 to 50 percent, while 6.8 percent of households spend more than half of their income on housing. Some 19.7 percent of all other households have a cost burden of 30 to 50 percent, with 17.2 percent of households spending more than 50 percent of their income on housing (Figure 41).

Figure 41 Cost Burden by Household Size



Universe: Occupied housing units
Notes: Cost burden is the ratio of housing costs to household income. For renters, housing cost is gross rent (contract rent plus utilities). For owners, housing cost is "select monthly owner costs", which includes mortgage payment, utilities, association fees, insurance, and real estate taxes. HUD defines cost-burdened households as those whose monthly housing costs exceed 30 percent of monthly income, while severely cost-burdened households are those whose monthly housing costs exceed 50 percent of monthly income.
Source: U.S. Department of Housing and Urban Development (HUD), Comprehensive Housing Affordability Strategy (CHAS) ACS tabulation, 2013-2017 release
For the data table behind this figure, please refer to the Data Packet Workbook, Table OVER-09.

Female-Headed Households

Households headed by one person are often at greater risk of housing insecurity, particularly female- headed households, who may be supporting children or a family with only one income. In St. Helena, the largest proportion of households is Married-couple Family Households at 42.3 percent of total, while Female-Headed Households make up 10.0 percent of all households (Figure 42).

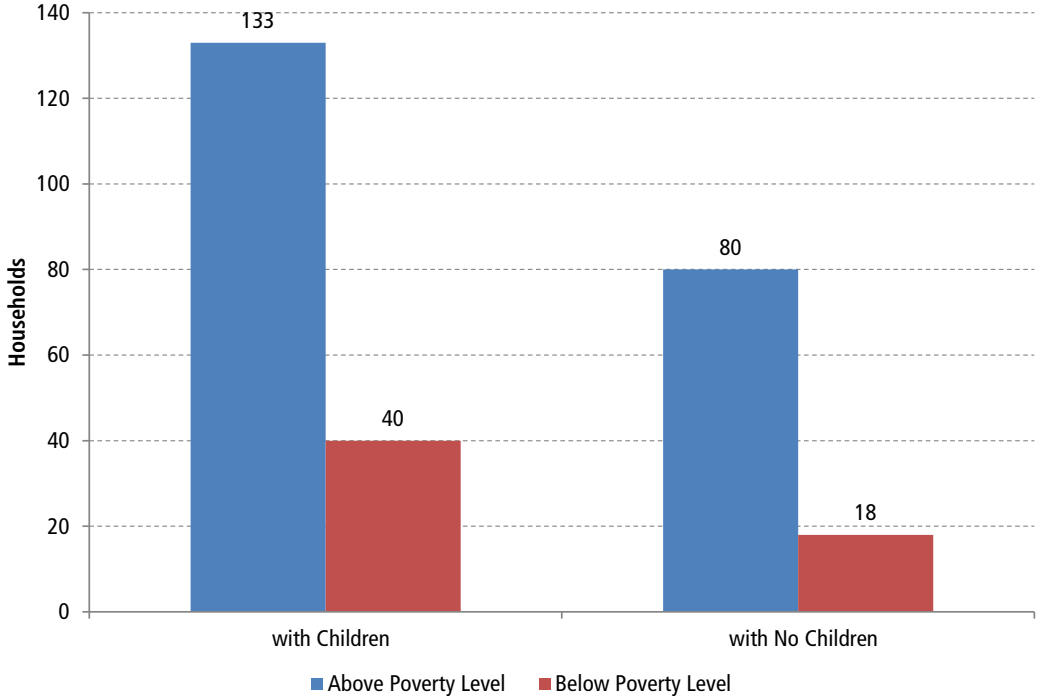


Figure 42 Household Type

Universe: Households
Notes: For data from the Census Bureau, a "family household" is a household where two or more people are related by birth, marriage, or adoption. "Non-family households" are households of one person living alone, as well as households where none of the people are related to each other.
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B11001 For the data table behind this figure, please refer to the Data Packet Workbook, Table POPEMP-23.

Female-headed households with children may face unique housing challenges, with pervasive gender inequality resulting in lower wages for women. Moreover, the added need for childcare can make finding a home that is affordable more challenging. In St. Helena, 40 female-headed households with children fall below the Federal Poverty Line, while 18 female-headed households without children live in poverty (Figure 43).

Figure 43 Female-Headed Households by Poverty Status

Universe: Female Households
Notes: The Census Bureau uses a federally defined poverty threshold that remains constant throughout the country and does not correspond to Area Median Income.
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B17012 For the data table behind this figure, please refer to the Data Packet Workbook, Table LGFEM-05.

Existing Resources

As discussed previously, childcare is a major concern for female-headed households, especially those with very young toddlers who need constant care and supervision. In St. Helena, the St. Helena Preschool For All, Inc. provides scholarships to low-income families to allow their children will be able to attend two years of preschool from ages 3 to 4. St. Helena Preschool for All, Inc. also partners with local childcare facilities, including Mila's Preschool and Childcare Center, to help facilitate their program.

Gaps in Resources and Action Items

St. Helena's northwestern area contains a higher proportion of female single-parent households compared to the rest of St. Helena and most of Napa County. As such, the City recognizes the importance of meeting the needs of female-headed households within the city. A major cost to female-headed households and single-parent households is transportation. All sites in the sites inventory of this Housing Element, which projects possible housing locations for the planning period, are located within walking distance of the no. 10 bus route, which enables direct connection to Napa or Calistoga. Additionally, all sites are within proximity of the central commercial district of St. Helena, which allows for cheaper, easier access to markets and commercial services.

Farmworkers

Across the state, housing for farmworkers has been recognized as an important and unique concern. Farmworkers generally receive wages that are considerably lower than other jobs and may have temporary housing needs. Finding decent and affordable housing can be challenging, particularly in the current housing market.

Table 25 estimates the migrant worker student population between 2016 and 2020. In St. Helena, the migrant worker student population totaled 20 during the 2019-20 school year, an increase of two students since the 2016-17 school year. The trend for the region for the past few years has been a decline of 2.4 percent in the number of migrant worker students since the 2016-17 school year. The change at the county level is a 19.4 percent increase in the number of migrant worker students since the 2016-17 school year.

Table 25 Migrant Worker Student Population

Academic Year	St. Helena	Napa County	Bay Area
2016-17	18	903	4,630
2017-18	12	1173	4,607
2018-19	22	1,090	4,075
2019-20	20	1,078	3,976

Universe: Total number of unduplicated primary and short-term enrollments within the academic year (July 1 to June 30), public schools
Notes: The data used for this table was obtained at the school site level, matched to a file containing school locations, geocoded and assigned to jurisdiction, and finally summarized by geography.
Source: California Department of Education, California Longitudinal Pupil Achievement Data System (CALPADS), Cumulative Enrollment Data (Academic Years 2016-2017, 2017-2018, 2018-2019, 2019-2020)
This table is included in the Data Packet Workbook as Table FARM-01.

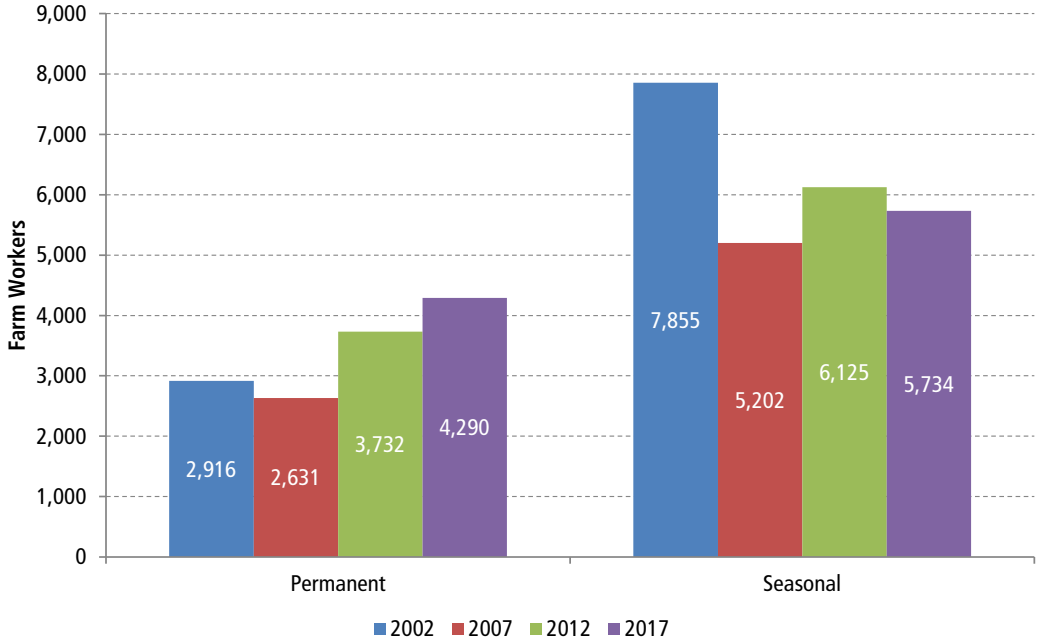

Table 26 presents an estimate of the total farmworkers in Napa County. Since 2007, the county has seen an increase in farmworker jobs. As of 2017, the county is reported to have more than 10,000 hired farm workers, of which 43 percent worked more than 150 days. The number of permanent farm workers in Napa County has increased since 2002, totaling 4,290 in 2017, while the number of seasonal farm workers has decreased, totaling 5,734 in 2017 (Figure 44). Notably, hired farm workers in Napa County represent a large proportion of the Bay Area's permanent (24.8 percent) and seasonal (31.4 percent) farm workers (Table 26).

Table 26 Farm Labor, Napa County

	2002	2007	2012	2017	County Distribution	Percent of Total Bay Area Farmworkers
Permanent	2,916	2,631	3,732	4,290	43%	24.80%
Seasonal	7,855	5,202	6,125	5,734	57%	31.40%
Totals	10,771	7,833	9,857	10,024	100%	28.20%

Universe: Hired farm workers (including direct hires and agricultural service workers who are often hired through labor contractors)
Notes: Farm workers are considered seasonal if they work on a farm less than 150 days in a year, while farm workers who work on a farm more than 150 days are considered to be permanent workers for that farm.
Source: U.S. Department of Agriculture, Census of Farmworkers (2002, 2007, 2012, 2017), Table 7: Hired Farm Labor

Figure 44 Farm Labor by County, Napa County

Universe: Hired farm workers (including direct hires and agricultural service workers who are often hired through labor contractors)
Notes: Farm workers are considered seasonal if they work on a farm less than 150 days in a year, while farm workers who work on a farm more than 150 days are permanent workers for that farm.
Source: U.S. Department of Agriculture, Census of Farmworkers (2002, 2007, 2012, 2017), Table 7: Hired Farm Labor For the data table behind this figure, please refer to the Data Packet Workbook, Table FARM-02.

Existing Resources

Five different kinds of housing exist for farmworkers in Napa County: farmworker centers, owned and operated by the Napa County Housing Authority (NCHA); private accommodations designated for agriculture employees that accommodate five or more employees and are monitored by the Napa County Department of Environmental Management; private accommodations designated as farm labor dwellings accommodating fewer than five residents, private apartments or other housing rented or owned by farmworkers; and affordable housing projects subsidized by the County and by incorporated cities, some of which have units set aside specifically for farmworker households.

Gaps in Resources and Action Items

Given the special housing needs of farmworkers in the region, the Housing Element contains Program H-H, which specifically encourages the development of more workforce or farmworker housing during the planning period through various incentives. Of the discussed incentives, most impactful is the City's commitment to explore opportunities to use funds from the City's Housing Trust Fund to help assist in the construction of farmworker housing. Additionally, programs H-E, H-I, H-KK, H-LL, H-NN also commit the City to exploring a variety of methods to better meet the housing needs of special needs households, including farmworkers.

Extremely Low-Income Households

Extremely-low income households are defined as households that make less than 30 percent of AMI, which equates to $27,950 for a family of four. Approximately 395 households in St. Helena are extremely-low income households, which includes 215 homeowners and 180 renters (see Figure 11). The City currently estimates that there is a need for 52 additional housing units for extremely low-income households in the current planning period, which is 50 percent of projected very low-income housing needs (see Table 6).

Existing Resources

Currently, St. Helena has an estimated 214 units of deed restricted affordable housing, listed on Table 17. This figure stretches across the need for extremely low, very low, low, and moderate-income housing. Given that there are 52 units needed for extremely low-income households, there is clearly a lack of adequate housing supply for extremely-low income households.

Beyond the availability of deed restricted affordable housing, there are a variety of resources available to assist extremely-low-income households with their recurring expenses. Extremely low-income households who are enrolled in the Supplemental Nutritional Assistance Program (SNAP), or any other qualifying government program, are eligible to be enrolled in the PG&E CARE Program, which allows for the lowest available electricity rates. Additionally, when households are enrolled in CARE, they are also permitted access to a fifty percent discount on their bill from the St. Helena Water District. The City also offers hardship payment agreements that can be arranged in person at City Hall to prevent water or sewer shutoff.

Gaps in Resources and Action Items

To help address the needs of extremely low-income households, numerous programs are included in this Housing Element to commit the City to preserving and expanding access to affordable housing to extremely low-income households. Program H-EE commits the city to continue reducing, deferring, or waiving the development fees for extremely low- and very low-income units. Program H-FF commits the City to prioritizing using the Affordable Housing Trust Fund to preserve existing or develop new extremely low-income housing units. H-II commits the City to continue supporting and participating in the Section 8 housing program with the City of Napa Housing Authority. Program H-OO commits the City to exploring the possibility of working with property owners of market rate multifamily complexes to convert some units to extremely low-income deed-restricted units.

Persons Experiencing Homelessness

Homelessness remains an urgent challenge in many communities across the state, reflecting a range of social, economic, and psychological factors. Rising housing costs result in increased risks of community members experiencing homelessness. Far too many residents who have found themselves housing insecure have ended up unhoused or homeless in recent years, either temporarily or longer term.

Addressing the specific housing needs for the unhoused population remains a priority throughout the region, particularly since homelessness is disproportionately experienced by people of color, people with disabilities, those struggling with addiction and those dealing with traumatic life circumstances. According to the City of St. Helena, there is one homeless person who resides in St. Helena. This data was provided by a point in time assessment by the Police Chief of the St. Helena Police Department in 2021.

Gaps in Resources

Countywide, the most common type of household experiencing homelessness is those without children in their care. Among households experiencing homelessness that do not have children, 53.7 percent are unsheltered. Of homeless households with children, most are sheltered in transitional housing (Table 27).

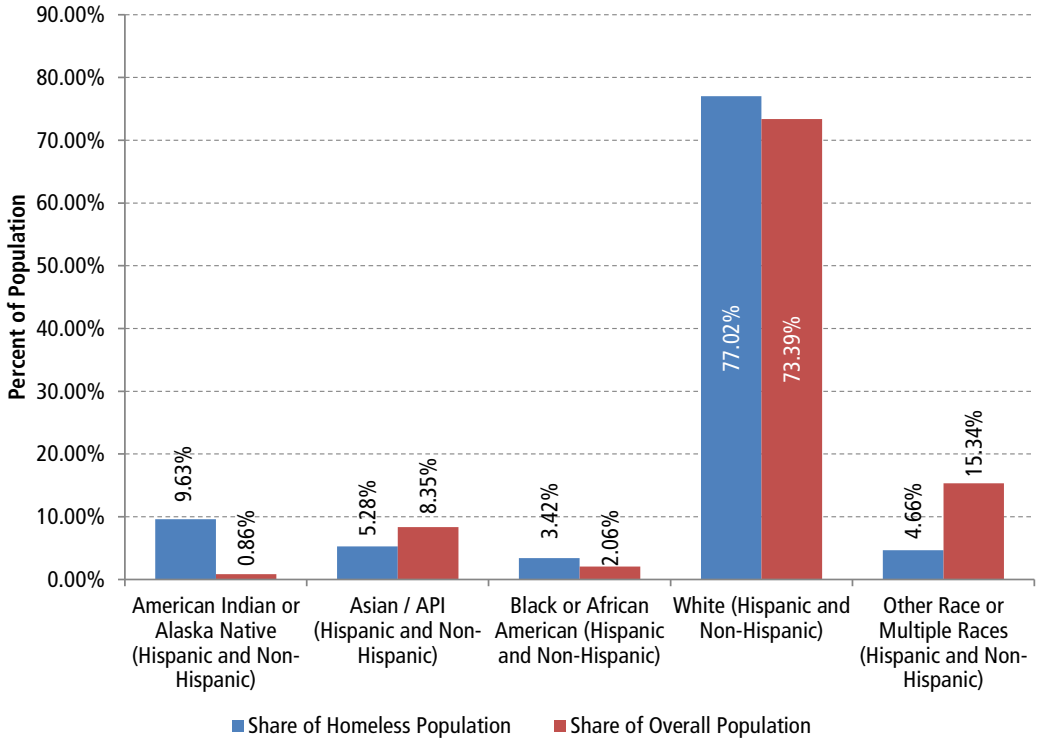

Table 27 Homelessness by Household Type and Shelter Status, Napa County

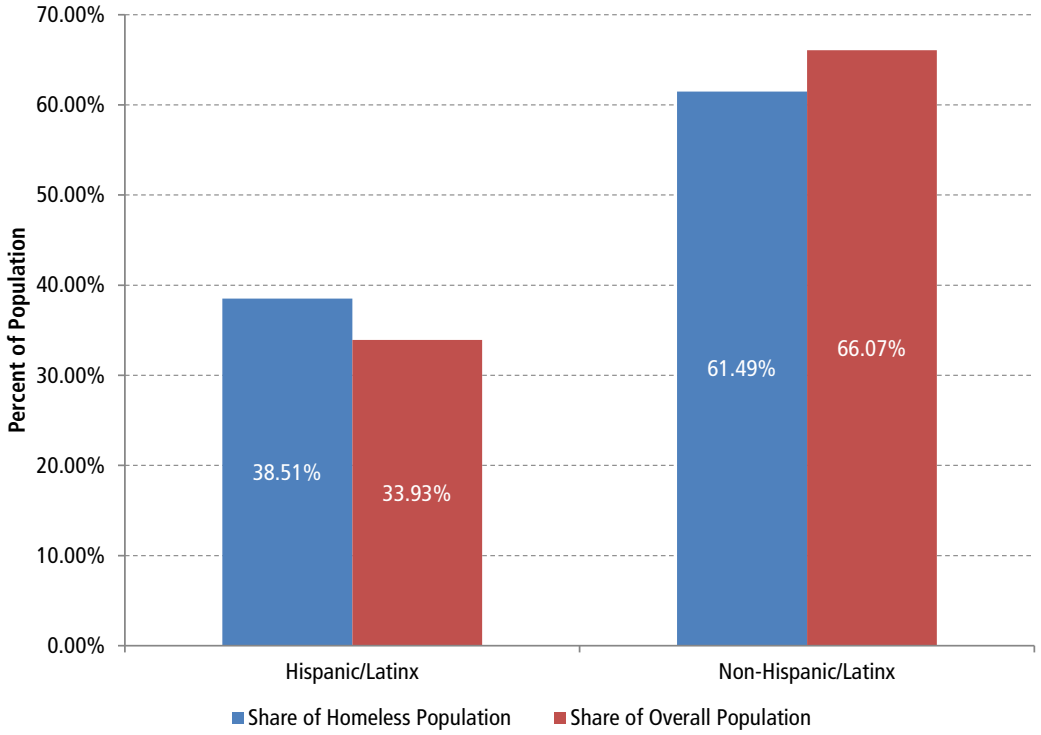
	People in Households Composed Solely of Children Under 18	People in Households with Adults and Children	People in Households without Children Under 18
Sheltered - Emergency Shelter	0	13	119
Sheltered - Transitional Housing	0	34	6
Unsheltered	0	5	145

Universe: Population experiencing homelessness
Notes: This data is based on Point-in-Time (PIT) information provided to HUD by CoCs in the application for CoC Homeless Assistance Programs. The PIT Count provides a count of sheltered and unsheltered homeless persons on a single night during the last ten days in January. Each Bay Area county is its own CoC, and so the data for this table is provided at the county-level. Per HCD's requirements, jurisdictions will need to supplement this county-level data with local estimates of people experiencing homelessness.
Source: U.S. Department of Housing and Urban Development (HUD), Continuum of Care (CoC) Homeless Populations and Subpopulations Reports (2019)
For the data table behind this figure, please refer to the Data Packet Workbook, Table HOMELS-01.

People of color are often disproportionately impacted by homelessness, particularly Black residents of the Bay Area. In Napa County, White (Hispanic and Non-Hispanic) residents represent the largest proportion of residents experiencing homelessness and account for 77.0 percent of the homeless population, while making up 73.4 percent of the overall population (Figure 45).

Figure 45 Racial Group Share of General and Homeless Populations, Napa County



Universe: Population experiencing homelessness

Notes: This data is based on Point-in-Time (PIT) information provided to HUD by CoCs in the application for CoC Homeless Assistance Programs. The PIT Count provides a count of sheltered and unsheltered homeless persons on a single night during the last ten days in January. Each Bay Area county is its own CoC, and so the data for this table is provided at the county-level. Per HCD's requirements, jurisdictions will need to supplement this county-level data with local estimates of people experiencing homelessness. HUD does not disaggregate racial demographic data by Hispanic/Latinx ethnicity for people experiencing homelessness. Instead, HUD reports data on Hispanic/Latinx ethnicity for people experiencing homelessness in a separate table. Accordingly, the racial group data listed here includes both Hispanic/Latinx and non-Hispanic/Latinx individuals.
Source: U.S. Department of Housing and Urban Development (HUD), Continuum of Care (CoC) Homeless Populations and Subpopulations Reports (2019); U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B01001(A-I)
For the data table behind this figure, please refer to the Data Packet Workbook, Table HOMELS-02.

In Napa County, Latinx residents represent 38.5 percent of the population experiencing homelessness, while Hispanic or Latinx residents comprise 33.9 percent of the general population (Figure 46).

Figure 46 Hispanic or Latinx Share of General and Homeless Populations, Napa County

Universe: Population experiencing homelessness
Source: U.S. Department of Housing and Urban Development (HUD), Continuum of Care (CoC) Homeless Populations and Subpopulations Reports (2019); U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B01001(A-I)
For the data table behind this figure, please refer to the Data Packet Workbook, Table HOMELS-03.

Many of those experiencing homelessness are dealing with severe issues – including mental illness, substance abuse and domestic violence – that are potentially life threatening and require additional assistance. In Napa County, homeless individuals are commonly challenged by severe mental illness, with 177 reporting this condition (0). Of those, some 44.1 percent are unsheltered, further adding to the challenge of handling the issue.

Table 28 Characteristics for the Population Experiencing Homelessness, Napa County

	Chronic Substance Abuse	HIV/AIDS	Severely Mentally Ill	Veterans	Victims of Domestic Violence
Sheltered - Emergency Shelter	70	0	91	8	11
Sheltered - Transitional Housing	0	0	8	0	4
Unsheltered	91	1	78	6	17

Universe: Population experiencing homelessness
Source: U.S. Department of Housing and Urban Development (HUD), Continuum of Care (CoC) Homeless Populations and Subpopulations Reports (2019)

In St. Helena, there were no reported students experiencing homelessness in the 2019-20 school year (Table 29). Napa County has seen a 29.1 percent decrease in the population of students experiencing homelessness, and the Bay Areas as a whole experienced an 8.5 percent decrease. However, during the 2019-2020 school year, there were still some 13,718 students experiencing homelessness throughout the region, adding undue burdens on learning and thriving, with the potential for longer term negative effects.

Table 29 Students in Local Public Schools Experiencing Homelessness

Geography	2016-17	2017-18	2018-19	2019-20
St. Helena	0	0	0	0
Napa County	381	433	249	270
Bay Area	14,990	15,142	15,427	13,718

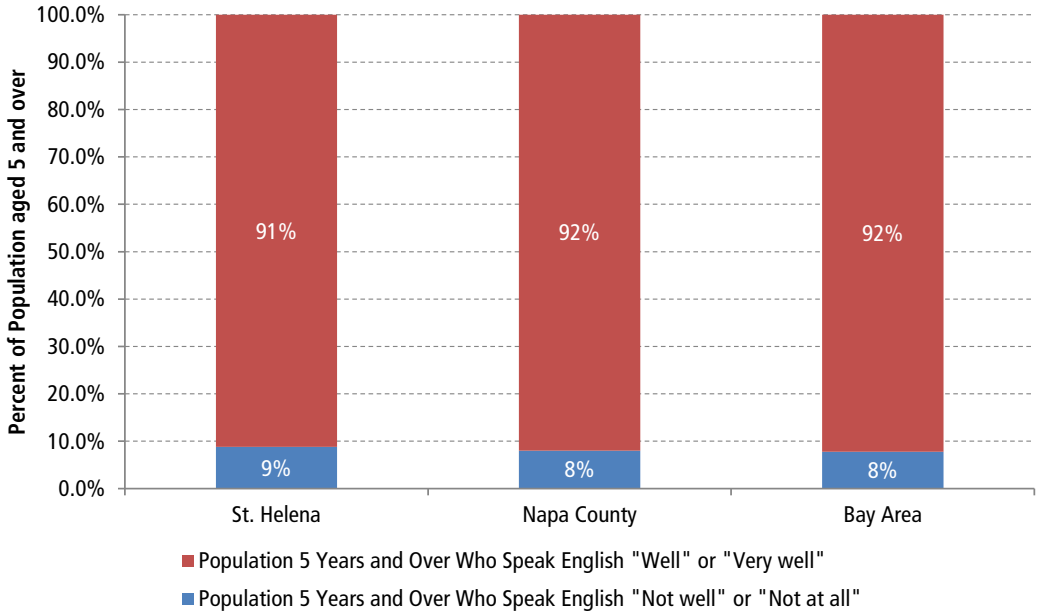
Universe: Total number of unduplicated primary and short-term enrollments within the academic year (July 1 to June 30), public schools
Notes: The California Department of Education considers students to be homeless if they are unsheltered, living in temporary shelters for people experiencing homelessness, living in hotels/motels, or temporarily doubled up and sharing the housing of other persons due to the loss of housing or economic hardship. The data used for this table was obtained at the school site level, matched to a file containing school locations, geocoded and assigned to jurisdiction, and finally summarized by geography.
Source: California Department of Education, California Longitudinal Pupil Achievement Data System (CALPADS), Cumulative Enrollment Data (Academic Years 2016-2017, 2017-2018, 2018-2019, 2019-2020)

Existing Resources & Action Items

Given the documented need for emergency shelters in Napa County, St. Helena is subject to Government Code Section 65583(a) (4). This code section, which became effective as of January 1, 2008, requires jurisdictions to designate zoning districts adequate for facilities to accommodate the identified need for emergency shelters, wherein emergency shelters must be allowed without a conditional use or other discretionary permit.[20] [21] The City is in compliance, as emergency shelters are currently a permitted use by-right in the Service Commercial and Industrial zones.

[20] *Building Block for Effective Housing Elements, "Adequate Sites Inventory and Analysis: Zoning for Emergency Shelters and Transitional Housing". http://www.hcd.ca.gov/hpd/housing_element2/SIA_variety.php. Accessed February 14, 2014.*
[21] *Senate Bill 2, Chapter 633. Amendment to Acts 655582, 65583 and 65589.5. Approved by Governor on October 13, 2007. Effective January 1, 2008. Accessed February 17, 2014.*

The City is in compliance with State laws related to emergency shelters, supportive housing, and transitional housing. Emergency shelters are identified as a by-right use in the I and SC zoning districts. According to a Point in Time Count provided by the Chief of Police, there is one homeless person who resides in St. Helena. There are several parcels in these zones that can accommodate an emergency shelter, including APN 009-580-022-000 (I zoning district) and APN 009-194-005-000 (SC zoning district). These parcels are vacant, habitable, and in proximity to transportation and services. Combined, they total 1.48 acres and can provide capacity for 15 beds, by conservative assumption of 10 beds/acre. In addition, the City must allow transitional housing, as defined in Section 50675.2 of the Health and Safety Code, and supportive housing, as defined in Section 50675.14 of the Health and Safety Code, as residential uses. As required by state law, transitional and supportive housing must be subject only to the same permitting process as other similar residential uses in the same zone without undue special regulatory requirements. For example, a proposed multifamily supportive housing project would be subject to the same permitting process as any other similar multifamily development in the same zoning district. As required, the City allows transitional and supportive housing in all residential, commercial, and mixed use districts, subject only to the requirements of residential uses.



Emergency shelters, transitional housing, and supportive housing are subject to subjective design review, which poses a significant constraint to development. To overcome this constraint, Program H-F commits the City to adopting objective design standards, as well as a by-right streamlined review process for affordable housing developments meeting state affordability thresholds, in compliance with SB 35 and SB 330.

Non-English Speakers

California has long been an immigration gateway to the United States, which means that many languages are spoken throughout the Bay Area. Since learning a new language is universally challenging, it is not uncommon for residents who have immigrated to the United States to have limited English proficiency. This limit can lead to additional disparities if there is a disruption in housing, such as an eviction, because residents might not be aware of their rights, or they might be wary to engage due to immigration status concerns.

Figure 47 shows population data by English proficiency. In St. Helena, nine percent of residents five years and older identify as speaking English not well or not at all, which is slightly higher than the proportion for Napa County. Throughout the region the proportion of residents five years and older with limited English proficiency is nine percent.

Figure 47 Population with Limited English Proficiency

Universe: Population five years and over
Source: U.S. Census Bureau, American Community Survey 5-Year Data (2015-2019), Table B16005For the data table behind this figure, please refer to the Data Packet Workbook, Table AFFH-03.

8. Non-governmental and Governmental Constraints

Constraints on the development of housing are divided into non-governmental constraints and governmental constraints. Non-governmental constraints include the price of land, cost of construction, flooding, conservation easements and long-term vineyard leases, and a lack of rental accessory dwelling units. Potential governmental constraints include land use controls, codes and code enforcement, on and off-site improvements, fees and exactions, processing and permit procedures, and regulations affecting housing for persons with disabilities.

Key Findings

- The possible non-governmental constraints discussed include the price of land, cost of construction, flooding, conservation easements and long-term vineyard leases, and a lack of rental accessory dwelling units. Land costs represent a significant component of the cost of housing development in St. Helena because the high price of vacant land. The cost of construction in St. Helena higher than the state average and further constrains development. Overall housing production costs for both single-family and multiple-family rental development indicate that a subsidy would probably be necessary for some moderate-income households, and all lower income households to own or rent new units in St. Helena.

- The governmental controls analyzed in this section were land use controls, codes and enforcements, on-and off-site improvements, fees and exactions, processing and permit procedures, and regulations affecting housing for persons with disabilities. The land use controls including zoning and current General Plan land use designations do not constrain residential development; however, some changes are necessary to streamline the design review process.

- The Growth Management System (GMS) does not appear to place an undue burden on market rate development, since there has never been a year when the demand for residential building permits has exceed the number of available permits. Furthermore, housing projects affordable to households at up to 120 percent of AMI are exempt from the GMS. Due to recent state laws, the GMS is not currently enforceable.

- The on- and off-site improvement standards related to water, sewer, parking, and other miscellaneous regulations impact housing development in a variety of different ways. Sewer capacity is sufficient to support additional development. Water capacity during a normal year is sufficient and is expected to remain sufficient through 2023, but there will always be water shortages in dry years. The City has demonstrated its commitment to providing water and sewer service to affordable housing developments, and has included a program committing the City to continue to do so throughout the planning period.

- Neither the building codes nor the building fees represent a governmental constraint to development. St. Helena adopted the 2019 California Building Codes Standards, and although they have made some

changes to the Code such as seismic control measures, these changes were necessary for safety and do not unduly affect housing production. The fee structure for both single-family and multiple-family development reflects the costs of the development to the City, and therefore does not present an unnecessary constraint on residential development.

- The City works diligently to process applications quickly and without unnecessary delay. Permitting and processing procedures and timelines for residential development, both single and multifamily, are not a constraint to development.

Non-governmental Constraints

Price of Land

According to Zillow.com, there were approximately eighteen vacant lots for sale in St. Helena in March 2022, though many are large and in undeveloped rural areas. Sales are reported between $229,000 and $17,500,000 for properties ranging in size from less than one acre to 280 acres. A public comment made during a community workshop indicated that larger vacant sites tend to be located near or beyond the urban limit.

Table 30 Price of Vacant Land, March 2022

Site	Acres	List Price	Price per Acre
10 Acres or Less	0.35	$525,000	$1,500,000
	0.74	$595,000	$804,054
	1.00	$375,000	$375,000
	1.00	$225,000	$225,000
	1.00	$975,000	$975,000
	1.08	$450,000	$416,667
	1.14	$5,000,000	$4,385,965
	1.58	$475,000	$300,633
	2.40	$1,000,000	$416,667
	5.01	$1,850,000	$369,261
	10.00	$2,695,000	$269,500
Total	25.30	$14,165,000	$559,881

Site	Acres	List Price	Price per Acre
More Than 10 Acres	15.90	$3,995,000	$251,258
	23.09	$2,950,000	$127,761
	32.00	$17,500,000	$546,875
	92.72	$229,000	$2,470
	110.63	$1,795,000	$16,225
	160.69	$549,500	$3,420
	280.00	$649,000	$2,318
Total	715.03	$27,667,500	$38,694

Source: Zillow.com, accessed March 28, 2022.

Construction Costs

Construction costs include both hard costs, such as labor and materials, and soft costs, including architectural and engineering services and development fees. Average residential construction costs in St. Helena begin at $300 to $700 per square foot, which is higher than statewide averages, which are currently ranging between $131 per square foot to $195 per square foot.[22] High-end, custom-built single-family homes, both locally and statewide, can cost more than $500 per square foot. Soft costs (including architectural and engineering fees, property taxes during construction, city and utility fees, and construction loan interest and fees) typically increase these costs by approximately 35 to 40 percent. Construction costs can be higher if lots require substantial site work due to steep slopes, unstable soils, waterways, and other environmental concerns.

Public comments made during Housing Element workshops indicated that construction costs are a major constraint to the production of affordable housing, and that 100 percent affordable projects are not profitable without public subsidies, grant funding, or other public investment.

Flooding

Napa Valley areas near the Napa River and along some of its tributaries are prone to flooding. Napa River flows are largely influenced by precipitation; peak flows generally occur in January and February. Some of the worst flooding in the immediate area of St. Helena has occurred in and around the Vineyard Valley Mobilehome Park, which is near the confluence of Sulphur Creek and the Napa River. Flood hazards also exist in the York Creek and Sulphur Creek Watersheds in St. Helena.

[22] *Local estimate provided by city staff communication with Joe McGrath in March 2022. Statewide estimate sourced from: ProMatcher Home Construction, California Home Construction Costs & Prices, provided at https://home-builders.promatcher.com/cost/california.aspx*

All new construction and substantial improvements in special flood hazard areas as defined by the Federal Emergency Management Agency are required to comply with the provisions of Municipal Code Chapter 15.52 "Flood Damage Prevention." The development standards are intended to meet, if not exceed, minimum National Flood Insurance Program (NFIP) criteria for requirements for floodplain management regulations. New development in these areas is required to assure that proposed development: 1) is designed or modified and anchored to prevent flotation, collapse and lateral movement of the structure; 3) uses construction materials and utility equipment that are resistant to flood damage; and 4) uses construction methods that minimize flood damage. In addition, projects must be elevated 18 inches above the base flood elevation.

Conservation Easements and Vineyard Leases

Agricultural land in St. Helena is valued for both a productive agricultural land and as open space that helps shape the character of St. Helena. Focus Group members and community workshop participants expressed, however, that conservation easements and long-term vineyard leases are a barrier housing production in the City. Sites included in the available sites inventory were screened for these constraints.

Lack of Rental Accessory Dwelling Units (ADUs)

While ADUs are often a less expensive housing option, Focus Group members and community workshop participants expressed that many ADUs in the City are not being rented, but are being used as additional square footage for the primary resident, a friend, a relative, or as a vacation rental. Programs H-Q, H-R, and H-S, work to encourage and incentivize development of accessory dwelling units.

Availability of Financing

A number of funding opportunities are currently available to support affordable housing development and the creation and preservation of homeownership opportunities. The Department of Housing and Community Developments lists active programs with current funding available to developers, non-profits, and local governments online. Statewide programs available for affordable housing development include Community Development and Block Grant (CDBG), Emergency Solutions Grants (ESG), HOME Investments Partnerships Programs (HOME), Housing for Healthy California (HHC), and the Multifamily Housing Program (MHP), among others. Programs available for homeowners or to assist in the creation or preservation of homeownership opportunities include CalHome, the Foreclosure Interventions Housing Preservation Program, and Homeownership Super NOFA. For a complete list, please see https://www.hcd.ca.gov/programs-active. Additionally, policies and programs under Goal 4: Assistance to Support Affordable Housing work to address non-governmental constraints by committing the City to seek additional funding opportunities to support affordable housing development, work to reduce fees for developers for affordable housing developers, and pursue mortgage credit certificates to assist prospective homeowners.

Governmental Constraints

Local government can directly influence housing production cost through land use controls, building codes, on and off-site improvement standards, fees and exactions, processing and permit procedures, regulations affecting housing for persons with disabilities, locally adopted ordinances, and with government codes and enforcement. This section discusses each of these topics and identifies the governmental controls that may adversely affect housing production.

Land-Use Controls

St. Helena has a variety of land use controls to maintain the standard of living, local environment, and safety of its residents. The two major instruments dictating land use control in the City are the Zoning Code and General Plan, which affect housing production because they determine the location, amount of land, development standards, and density of housing. These tools, as well as the City's agricultural preservation measures are discussed in this section.

Preservation of Agricultural Land

One major overarching theme and goal of the City's land use controls is to encourage in-fill development while preserving land for agriculture. The agricultural soils of St. Helena are identified as Prime Farmland by the California State Department of Conservation, Division of Land Resource Protection, Farmland Mapping and Monitoring Program. The wines produced from the grapes in this region achieve international recognition for their superb quality, sustaining an industry at the heart of the City and region's economy.

Roughly one-half of the 3,254 acres within the incorporated limits of the City are considered urbanized area. This portion of the St. Helena is defined by an Urban Limit Line (ULL) which denotes the area within which urban development is allowed. Cities use ULLs to establish where they intend to encourage and discourage land development through public-infrastructure investments, land-use regulations, land acquisitions, and other actions. Within the ULL, cities typically adopt land use policies that encourage urban development (i.e., in-fill development). Outside the ULL, cities set aside lands to be used for less urban land uses, such as preserving land for agriculture and open space. There are 1,779 acres of land outside of the ULL, but inside the incorporated limits of the City of St. Helena. Most of this land is farmed and planted for vineyards.

Zoning Code

Title 17 of the St. Helena Municipal Code outlines both the residential and nonresidential zoning designations. Table 31 provides a list of all of the residential zoning districts as well as information on the rights and requirements associated with each district. Residential uses are permitted, subject to design review, in the following zones: Twenty-Acre Agriculture (A-20), Winery (W), Woodland Watershed (WW), Agricultural Preserve (AP), Low Density Residential One Acre Minimum (LR-1A), Low Density Residential (LR), Medium Density Residential (MR), and High Density Residential (HR). Table 31 shows permitted residential uses by zoning district.

Table 31 Zoning Districts that Permit Residential Uses

Residential Use	Zoning District							
	A-20	W	WW	AP	LR-1A	LR	MR	HR
Agricultural Employee Housing	P	P	P	P	P	P	P	P
Dwelling, Accessory Dwelling Unit (ADU)	P	P	P	-	P	P	P	P
Dwelling, Duplex (new)	-	-	-	-	-	-	UP	P
Dwelling, Multiple-Family	-	-	-	-	-	-	-	P
Dwelling, Multiple-Family (key housing sites only)	-	-	-	-	-	-	P	P
Dwelling, Single-Family	P	P	P	P	P	P	P	P
Dwelling, Triplex (new)	-	-	-	-	-	-	UP	P

Transitional Housing	P	P	P	P	P	P	P	P
P = Permitted; UP = Use Permit Required; (-) = Not Permitted								

Source: City of St. Helena, 2022.
Note: For an expanded table with more uses, notes on conditions, and zones where residential uses are conditionally permitted, see Table 42.

In terms of units per acre, the lowest allowable density is in the AP district. The AP district permits, by right, one single-family dwelling per lot, agricultural employee housing (up to 36 beds or 12 units), supportive housing, and transitional housing. The A-20 and W districts allow one single-family dwelling and one second unit by right on 20 acres of land. With a Use Permit, these districts can accommodate more than one single-family dwelling, as well as farm labor housing above the initially permitted density. Both the LR and LR-1A districts permit by right single-family dwellings, mobile and manufactured homes, and intermediate and residential care facilities for six or fewer persons. In addition, both districts permit as a conditional use single-family dwellings at less than one unit per acre and intermediate and residential care facilities for seven or more persons.

The MR district allows the same uses as the LR district and also allows duplexes and triplexes with a Use Permit. Unlike the previously mentioned districts, the MR district allows multiple-family dwelling projects that are located on "key sites" subject to design review. The HR district, in addition to allowing the same residential uses as the LR and MR districts, permits multiple-family dwellings, apartments, and dwelling groups containing four units or less. With a Use Permit, structures with more than four units, multiple-family dwellings,

apartments, and dwelling groups are permitted. The HR district is the only district that permits single room occupancy units (SROs).

In addition to the residential districts described above, some overlay districts can affect the type and amount of housing that can be built, including the Planned Development, Rural-Residential, Specific Plan, Historic Preservation, and Mobile Home Park overlay district. An overlay district expands upon the regulations already set by the underlying zoning district. For example, the Planned Development Overlay District (PD) allows for a wider variety of development, including mixed-use development not otherwise allowed in the Zoning Code. The PD zone is often applied to large pieces of land and requires approval of a rezoning and a conditional use permit application.

Table 32 shows density and intensity ranges allowed in the Zoning Code for each zoning district in dwelling units per acre (du/ac), or Floor Area Ratio (FAR) for commercial districts. Table 33 shows development standards by zoning district. As shown, density is allowed up to 28 dwelling units per acre and development standards are minimal, required setbacks for residential development are between 10 and 30 feet, depending on the zone, and minimum unit sizes are not regulated in residential zones. Further, the HDR zone, the City's primary multifamily zone, allows three-story developments up to 35 feet in height. Finally, the City is in the process of creating a new Mixed-Use zone to increase residential capacity in previously commercial and professional office districts.

Development standards related to maximum lot coverage and height pose potential constraints to multifamily affordable housing development. Currently the City allows 45 percent lot coverage and a maximum height of 30 feet in the MR and HR zones. Due to the potential to constraint affordable housing development, the City has, in the proposed Draft Zoning Code and in Program H-N: Zoning to Facilitate Higher Density Housing included development standards and actions, respectively, that commit the City to increasing lot coverage to 55 percent and maximum height to 42' (three stories) in the HR zone and on multifamily sites in the MR zone. Please note that the MR zone is a single-family zone, but the zoning code has been updated to allow multifamily uses on housing opportunity sites identified in the 5th Cycle Housing Element Update. Additionally, the program commits the City to allowing minor modifications to these standards that can be approved by the Community Development Director without a public hearing. Minor modifications should include up to 10 percent modification to maximum lot coverage and up to five percent (or two feet, whichever is greater) modification in maximum height.

Table 32 Density/Intensity Standards by Zoning District

Residential Zoning District	Corresponding General Plan Land Use Designation(s)	Minimum Density of Land Use Designation	Maximum Density of Land Use Designation
A-20	Agriculture	Min. 5 acres/parcel	Max. 40 acres/parcel
W	Woodland and Watershed	Min. 5 acres/parcel	No maximum
WW	Woodland and Watershed	Min. 5 acres/parcel	No maximum
AP	Agriculture	Min. 5 acres/parcel	Max. 40 acres/parcel
LR-1A	Low Density Residential	1.0 du/ac	5.0 du/ac
LR	Low Density Residential	1.0 du/ac	5.0 du/ac
MR	Medium Density Residential	5.1 du/ac	16.0 du/ac
HR	Higher Density Residential	16.1 du/ac	28.0 du/ac
CB	Central Business	N/A	Max. FAR 2.0
SC	Service Commercial	N/A	Max. FAR 0.5
BPO	Business and Professional Office	N/A	Max. FAR 0.5
Mixed Use[1]	Mixed Use	12 du/ac	20 du/ac

1: The City has adopted a new mixed-use designation within the 2040 General Plan Update and has released a Draft Comprehensive Zoning Code Update that includes a new Mixed-Use zone. Because the sites inventory assumes rezoning land to the new Mixed-Use zoning district, mixed-use development standards are shown in this table based on the October 2022 Public Review Draft Zoning Code.

Overlay Zones

The Zoning Code outlines standards for several overlay zones that allow residential uses. The following summarizes each of these overlay zones.

Historic Preservation Overlay Zone. The purpose of the HP overlay district regulations is to preserve the unique architectural character of those certain specific structures which have contributed to the city's historic development. No permits for remodeling or demolition shall be issued for properties within the HP district which would result in exterior changes to building facades, structures, or to passage ways providing inter-accessibility within a block, unless such change is approved by the planning commission. When it can be demonstrated to the satisfaction of the Planning Commission and City Council that preservation and/or restoration of designated properties cannot and is not economically viable, the City may grant certain incentives in the form of relaxation of certain provisions of this chapter only when it can be shown that such relaxation makes preservation or restoration economically feasible. The HP overlay zone does not impose additional development standards beyond those of the base zoning district.

Mobilehome Park Overlay (MHP) District. The purpose of the MHP mobilehome park overlay district is to provide, when combined with an underlying residential zoning district, a place which allows the establishment and operation of mobilehome parks. The city of St. Helena's MHP mobilehome park regulations are intended to complement and be subordinate to state law. The state law governing mobilehome parks is entitled the "Mobilehome Parks Act" and may be found in Division 13, Parts 2.1 and 2.3 of the California Health and Safety Code. Mobilehome park regulations are contained in the California Code of Regulations, Title 25, Division 1, Chapters 2 and 2.2. The city of St. Helena does not assume responsibility for the enforcement of the regulations contained therein and all mobilehome parks within the city remain subject to the jurisdiction of the California Housing and Community Development Department in its role as the enforcement agency for the above described State laws. Nothing contained in this chapter shall be construed to abrogate, void or minimize such other pertinent regulations and all pertinent state and city regulations concerning the development and operation of mobilehome parks shall be observed. Mobilehomes located within areas of special flood hazard are required to be in compliance with Chapter 15.52, Flood Damage Prevention. The MHP overlay district does not impose additional development standards beyond that of the base zoning district.

Planned Development Overlay (PD) District. It is the purpose of the PD planned development overlay district to encourage high quality, innovative and creative development in the city. The PD planned development overlay district is intended to provide for the consideration and approval of development plans

which serve public objectives more fully than development permitted under conventional zoning regulations. Planned development overlay districts are typically characterized by (in whole or in part): significant variations from the standards of the zoning ordinance, mixed land uses, a variety of housing types, the assembly of small parcels of land into a larger more effective unit, the preservation of open space, natural features or historical structures and structures with diverse building setbacks, lot sizes and building heights. The PD planned development overlay district may be combined with any existing zoning district provided both design and the proposed uses including density for residential land use designations can be found consistent with the policies of the General Plan. Development standards applicable to the zoning district which the planned development district is being combined shall be required unless modified in conjunction with approval of the planned development overlay district. The city shall address issues related to landscaping, parking, site design, ingress and egress, signage, lighting, relationship to adjoining properties and land uses, setbacks and yards and any other items toward achieving an integrated and compatible project within the city and environs.

Specific Plan Overlay (SP) District. The SP district is established to implement the policies of the general plan which call for the preparation and adoption of specific plans in certain areas of the community described in the general plan. In addition, the SP district is established to provide the city with the ability to require and/or to implement specific plans when the city council finds it necessary and appropriate. When applied to properties in advance of the adoption of a specific plan, the SP district serves to alert individuals to the requirement for a specific plan. When applied to properties after the adoption of a specific plan it serves to alert individuals to the policies and regulations of a specific plan. No new development will be approved within the specific plan areas designated in the general plan until a specific plan meeting the requirements of Section 65451 of the Government Code, has been adopted by the city. The city council may determine that a site development plan for a specific property may be prepared in-lieu of a specific plan for the entire specific plan area. The site development plan shall be prepared and adopted prior to approval of new development. The site development plan shall include an analysis of infrastructure improvements as determined during review of a pre-application pursuant to Section 17.84.030. Based on the pre-application review, the city council shall determine the scope of the proposed specific plan or site development plan. The proposed specific plan or site development plan and associated documents shall be prepared under the supervision of the city with all costs paid by the property owners unless the city determines that all or a portion of the costs will be paid by the city. The SP Overlay district does not impose additional development standards, however standards for any specific plan should be developed under the supervision of the City, as stated previously.

Rural Residential Overlay (RR) District. It is the purpose of the RR rural-residential overlay district to identify those parcels within the city which are not serviced by city water or sewer and which have the ability to subdivide into additional parcels. Minimum lot sizes which are larger than the minimum lot sizes established for the underlying zoning district are required for parcels which do not have city water or sewer services. The following regulations shall apply in all districts with which are combined RR district. The only uses permitted shall be those uses permitted in the district with which the RR district is combined; provided, however, where water is available from a private well, the land may not be subdivided into less than one acre or if water is available from a mutual or utility company the land may be subdivided into parcels of twenty thousand (20,000)

square feet or greater as determined by the health officer of the city; or if sanitation and public water are available the land may be subdivided into parcels not less than ten thousand (10,000) square feet. "Health officer of the city" as used in this section, is defined to mean the official or officials of the city charged with the duty of enforcing the health ordinances of the city and the official or officials of any other governmental agency with whom the city has contracted for the enforcement of such ordinances.

Please note, the Rural Residential Overlay (RR) District is being deleted through the Comprehensive Zoning Code Update currently (2023) underway and scheduled for adoption in fall 2023.

General Plan

St. Helena adopted the current General Plan in 2019. The General Plan has a planning horizon of 2040. The city of St. Helena consists of approximately 3,254 acres. Of that total, 19 percent are designated for residential uses, four percent for commercial uses, 2.5 percent for business/industrial uses, and 69 percent for open space and agriculture.[23] Not all the land within the City Limits are available for development; rather approximately 1,475 acres within the Urban Limit Line (ULL) are eligible for development.[24] Thirteen land use designations cover the land in St. Helena.

The ULL contains land use designations including Low, Medium, and High Density Residential, Central Business, Service Commercial, Industrial, Business and Professional Office, Parks and Recreation, Public/Quasi-Public, Open Space and Agriculture. Some land outside, yet contiguous to the ULL has a General Plan designation of Urban Reserve (UR) indicating that it should be considered first if land outside the ULL is needed for development. All lands with a UR land use designation are zoned A-20.

Residential Growth Management System

The Residential Growth Management System (GMS) limits the number of building permits available for residential growth each year.[25] The stated purpose of the system is "to regulate the residential growth of the City to approximately two percent per year, while providing for both market rate and affordable housing units."[26] The GMS previously instituted a cap of 2,800 units by 2010, which resulted in a restriction of nine permits being issued per year. Program H-B commits the city to removing the GMS from the Zoning Code, thus removing this governmental constraint and further encouraging the construction of housing to meet RHNA goals.

Requests to Develop Below Allowable Density

During the previous housing element cycle (2014-2023) there were no requests to develop housing opportunity sites below allowable density.

Building Codes and Enforcement

For the purpose of establishing proper regulations for the administration of the various codes covered in the Building Code, the City has adopted Chapter 1 of the California Building Code, Chapter 1 of the Plumbing Code, Chapter 1 of the Mechanical Code, and Annex H of the Electrical Code, 2019 Edition, excepting additions, revisions and omissions listed in Section 15.08.020 of the Municipal Code. The major local amendments included the continuation of St. Helena's program for the seismic retrofit of unreinforced buildings and the requirement that all new construction install an approved automatic fire-suppression sprinkler system. Existing residential structures that undergo additions or repairs equal to at least 50 percent of the existing floor area, and units experiencing a change in occupancy to a more hazardous use, also require the installation of an approved sprinkler system.[31] Otherwise, Title 15 of the St. Helena Municipal Code closely adheres to the 2019 California Building Standards Code and places no greater constraints on housing development than any other jurisdiction in the State that follows this model code.

The City has the power to inspect and declare unsafe any structure or piece of equipment, be it existing or under-construction, that does not meet specific Municipal Code standards. These include, but are not limited to, structures with insufficient modes of egress; structures that are unsafe or that have been made structurally unsound due to fire, earthquake, or other natural disaster; buildings that are deemed a public nuisance; and buildings that have been constructed or maintained in violation of local or state law. Once a building has been declared unsafe, the building official may issue notice that the structure be repaired, vacated, or demolished within a reasonable amount of time and with the appropriate permits.[32]

The enforcement of building codes within the City of St. Helena is centered on the inspection of new construction and remodels or renovations requiring building permits. However, for existing structures, City Staff prioritizes code enforcement complaints according to the severity of the violation on the community and individuals. Situations that appear to pose a serious risk to health and safety are given top priority; others are pursued in the order in which they are received, as resources are available. In most cases for non-emergency complaints, a warning letter or courtesy notice is sent to the alleged violator to verify the status of the potential compliant and to obtain compliance. The purpose of this first step is to inform the alleged violator that there is a possible code violation on their property and to give them time to correct it. If the violation still exists after the correction date, the inspector will conduct a subsequent inspection and send a follow up notice with additional correction time. Staff provides detailed instructions on how a violation can be corrected and will

[31] *Municipal Code, 15.36.060 Fire protection systems.*
[32] *City of St. Helena. St. Helena Municipal Code, Title 15. http://www.codepublishing.com/CA/sthelena/. Accessed January 31, 2022.*

meet with the property owner as necessary to assist in getting the violation corrected. The City also contracts with the Napa Housing Authority who assists property owners and tenants with any issues that may arise.

On/Offsite Improvement Standards

The St. Helena Municipal Code lists requirements for new development related t, streets and roadways, including , street widths, sidewalks, curbs, and gutters, as well as water and sewer connections and parking requirements.

Street and Roadway Improvements

The City of St. Helena Standard Specifications for Public Improvements governs the requirements for public infrastructure improvements. Developers are completely responsible for the cost of these general improvements to the properties.

Residential street widths in St. Helena follow the specifications outlined in Table 34. The requirements for street widths in St. Helena do not serve as barriers to housing production as they are significantly less than the requirements of nearby jurisdictions which have much more housing stock available. The City of St. Helena Standard Specifications for Public Improvements allows for developers to construct subdivisions with narrower streets, thus allowing for more homes with less acreage reserved for rights-of-way.

Table 34 Residential Street Width Requirements

Type	St. Helena	Napa Yountville	American Canyon
Residential			
Single-Family Residence	16′	Standard: 56′ (both sides parking) Rural: 29′ With Parking: 48′	40′
2-10 units	20′		
11-60 units	25′		
Over 60 units	30′		
Non-residential			
One-way access drive	16′	60′ to 82′	Not Applicable
Two-way access drive	25′		

Source: Section 902, City of St. Helena Standard Specifications for Public Improvements, 2015.

Sidewalks

According to the City of St. Helena Standard Specifications for Public Improvements, Standard No. 315, the minimum standard sidewalk width is four feet in residential areas and 10 feet in business or commercial areas. This sidewalk standard is compliant with Americans with Disabilities Act (ADA) standards and are only what is necessary for the activities occurring in their respective areas. Curbs are required to be designed with a six-inch top, 12-inch gutter, and six-inch rise above the roadway surface. The sidewalk, curb, and gutter standards do not pose a constraint to housing development.

Landscaping

Landscaping is required for projects subject to design review and the Water Efficient Landscape Ordinance. All open space and common areas are required to be landscaped and landscaping plans must be approved through the design review process. Further, St. Helena requires compliance with California's Model Water Efficient Landscape Ordinance (MWELO), which focuses on several goals, including water conservation and environmental quality. Although the MWELO requirements add additional planning cost to projects, they are State mandated requirements.

Landscaping requirements work to ensure efficient water use and basic environmental quality, health, and safety and are not a constraint to development. However, subjecting landscaping plans to the design review process constrains the development of affordable housing. Through the current (2022) comprehensive zoning code update, the City is revising the code to provide a ministerial review process for projects meeting objective design standards, including standards addressing landscaping.

Street Signs

Street signs are not a required improvement to developments to be paid for by the developer. Street signs, and other signs, are subject to the requirements of Municipal Code Section 17.112.

Other

Other miscellaneous improvements required by the City of St. Helena can include curb, gutter and sidewalk treatments, fire hydrants, and street trees. When new development fronts a public street, the developers may be required to provide curb, gutter, and sidewalk treatments to the specifications supplied by the Public Works Director.[33] If the Fire Chief or Public Works Director decides that there is not sufficient supply of fire hydrants nearby, new development would cover the cost of additional hydrants as necessary.[34] Finally, if a new development fronts a planting strip, the owner must care for and maintain the trees and other vegetation in the strip.

Sewer

The City of St. Helena owns the Wastewater Treatment Plant, which provides secondary-level treatment for domestic and commercial wastewater within the City. The plant has a permitted average dry weather treatment capacity of 0.5 million gallons per day (mgd) and can treat up to 2.8 mgd during wet weather.[35] In 2016, the City initiated planning efforts to upgrade the existing Plant in order to meet stricter environmental requirements. Working with the Regional Water Resources Control Board, the City developed a strategy to

[33] *Municipal Code 12.08.090 Plans and specifications.*
[34] *Municipal Code 16.32.110 Fire protection.*
[35] *California Regional Water Quality Control Boar San Francisco Bay Region. Order No. R2-0210-0105, NPDES No. CA0038016. http://www.waterboards.ca.gov/rwqcb2/board_decisions/adopted_orders/2010/R2-2010-0105.pdf.*

meet the new requirements, and began construction of the needed improvements in 2022. Construction is expected to be completed by fall 2023. [36]

Per Chapter 727, Statutes of 2004 (SB 1087), sewer providers must grant priority for service allocations to proposed development that include housing units affordable to lower-income households. Local public and private wastewater service providers must adopt written policies and procedures that grant priority for service hook-ups to developments that help meet the community's share of the regional need for lower-income housing. In addition, the law prohibits wastewater service providers from denying, conditioning the approval, or reducing the amount of sewer service for an application for development that includes housing units affordable to lower-income households unless written findings are made as specified in Government Code Section 65589.7(c).

Water

The City has three sources of potable water: Bell Canyon Reservoir, water purchased from the City of Napa under a long-term water supply contract, and groundwater from City-owned and operated wells. Bell Canyon Reservoir is the City's primary source of potable water. Bell Canyon is an on-stream reservoir with a physical storage capacity of 2,384 acre-feet, although the maximum amount of water that is available annually to the City is 992 acre-feet (AF). The City also purchases significant water quantities from the City of Napa through a contract, expiring in 2035, which guarantees delivery of a minimum of 600 AF per year. Additionally, the City pumps groundwater from its two wells. The City seeks to limit groundwater withdrawals to 450 AF in normal years.

The City calculates a safe annual yield for its water system as "the quantity of water which can be reliable delivered on an annual basis through most rainfall years, including a dry year (rainfall at 22" to 25.9") without undue hardship on water customers through water shortage restrictions. The City defines "undue hardship" as three or more consecutive months of Phase II water restrictions or Phase III water restrictions. Based on water supplies available in 2020, the City estimates the safe annual yield of its water system is 992 AF.

In 2011, the City adopted a new Water Shortage Emergencies Ordinance. The ordinance establishes three water shortage emergency phases with increasing water use restrictions. Phase I water regulations are triggered when the supply/usage balance is in deficit, meaning that the five-year rolling average of total water usage exceeds the safe annual yield of the City's water system. Under Phase I regulations, water customers are prohibited from expanding or installing new water-using appliances, plumbing, or improvements, such as landscaping and pools, unless the installation will result in no increase in water use. Replacement fixtures must be water efficient. In addition, new water connections for new development may only be approved if the projected water demand for the project can be offset by a corresponding reduction in the existing water

Accessed January 28, 2022.

demand on the city water system. New development proposals may demonstrate that the project is water-neutral through a combination of on-site water conservation measures, off-site retrofitting or well water.

Phase II water shortage emergency regulations include all Phase I regulations plus mandatory conservation measures. Under Phase II, residential water users are limited to 65 gallons per person per day. An additional allocation of 2,500 gallons per month for single-family homes landscape irrigation is provided during the April through October billing cycle. Multiple-family or mobile home occupants are permitted up to 70 gallons per day per 1,000 square feet of landscaped area or for dedicated irrigation meters, a 60 percent limit of current reference evapotranspiration. There are strict penalties for non-compliance of these mandatory conservation measures. In addition, no new water connections are permitted during a Phase II water emergency. Phase III water shortage emergency regulations limit water use further to 60 gallons per person per day, and place additional limits on landscape irrigation.[37]

The City has adequate water supply to meet current demand, however the effects of climate change will likely reduce water supply from current sources. The City needs to obtain new water supplies and/or achieve more water savings in order to reliably meet future water demand. At the same time, the City recognizes that any new water supply, even if forthcoming, is likely to be expensive, potentially increasing the unit cost of potable water. The main emphasis within the General Plan (regarding water supply) is on conservation, seeking to reduce demand by all classes of users.

According to the City's Water Shortage Emergency Ordinance, if the City's water balance pursuant to the safe yield calculation is in deficit, then the City must comply with Phase I water restrictions. Most importantly, this requires that any new water demand, such as from a new residential project, must be completely offset by a reduction in current water demand, to the satisfaction of the Director of Public Works. Phases II and III involve the imposition of mandatory water restrictions on customers. If Phase II appears imminent, the City Council must appoint a Water Board which, if Phase II is implemented, will work with the Director of Public Works to ensure compliance by all sectors (residential, commercial, and industrial) with Phase II restrictions. Phase III restrictions are severe.

Per Chapter 727, Statutes of 2004 (SB 1087), water providers must grant priority for service allocations to proposed developments that include housing units affordable to lower-income households. Public and private water providers must adopt written policies and procedures that grant priority for service hook-ups to developments that help meet the community's share of the regional need for lower-income housing. In addition, the law prohibits water providers from denying, conditioning the approval, or reducing the amount of water service for an application for development that includes housing affordable to lower-income households unless written findings are made as specified in Government Code Section 65589.7(c). A city may deny, condition, or reduce water services to developments that include lower-income housing units if the city does not

[37] *City of St. Helena. Report to the City Council. June, 23 2020. https://sthelena.civicweb.net/document/41860/2020 Accessed January 28, 2022.*

have "sufficient water supply" as defined in Government Code Section 66473.7(a) (2) or is operating under a water shortage emergency as defined in Section 350 of the Water Code.

The 2040 General Plan contains Implementation Action PF1-J that commits the City to granting projects that include affordable housing units priority access to water resources over other new projects should the capacity of local water systems become inadequate to meet the full demand for new connections.

Parking

St. Helena is a rural jurisdiction with limited public transport options, making commuting by automobile a common practice among residents of all income groups. Some local employers, such as wineries located off of the State Highways, only have access through roadways without suitable sidewalks or bus service. Thus, for residential developments in St. Helena, it is necessary to have some adequate amount of parking to sustain regular life for residents of the rural town. Additionally, within neighborhoods, it is important to keep enough cars off the street due to some streets having little to no parking availability. For example, many streets in St. Helena's older neighborhoods only offer one-side parking and some roads on the edges of town have no paved side parking at all.

Residential parking requirements vary according to the number of dwelling units, as follows:

- One to two dwelling units: Minimum of two spaces per unit, with one of the spaces in a garage or carport.
- Three or more dwelling units (studio and one bedroom units): One covered space plus a half space per unit
- Three or more dwelling units (two or more bedroom units): One covered space plus one additional whole space per unit
- Rooming, boarding, or lodging house: Minimum of one space per room, and two spaces for the owner-occupied unit.
- Mobile home: Minimum of two spaces per unit plus centralized space for guest parking.[38]

Exceptions to these requirements are provided for housing subject to the affordable housing ordinance (see Locally Adopted Ordinances for more details). Some examples of parking minimum exceptions include projects built for senior citizens and deed-restricted affordable projects built with funding from the Federal or State government.[39] For all other uses not covered in the Municipal Code or State Density Bonus Law, the Planning Commission has the power to set the parking requirements based upon the general parking guidelines of the City.

The City of St. Helena's parking standards do not impose undue constraints to development of multifamily uses with two or more bedrooms. As shown in Table 35, when compared to other nearby jurisdictions, St. Helena's housing requirements are not only less restrictive, but much less complex. However, parking standards for

[38] *Municipal Code 17.124.030 Minimum on-site parking requirements*
[39] *Municipal Code 17.144 Affordable Housing*

multifamily uses with three or more studio or one-bedroom units require 1.5 parking spaces per unit. This requirement is a constraint to development of smaller unit multifamily uses. Program H-N commits the City to limiting parking requirements for these uses to one space per unit through the currently (2023) ongoing Comprehensive Zoning Code Update scheduled for adoption in fall 2023.

Table 35 Parking Requirements, St. Helena, Napa, Yountville

Type	St. Helena	City of Napa	Town of Yountville
1-2 dwelling units	2 spaces per unit with 1 in garage/carport	*Single-family:* 2 spaces per unit with 1 in garage + 1 for each bedroom in excess of 2 and guest parking	2 space, 1 covered and 1 screened; 4 for duplex with 1 covered and 1 screened
3+ dwelling units (studios and 1 bedroom units)	1 covered space + ½ space per unit	1.5 per unit (1-3 units) 1.4 per unit (4-49 units) 1.25 per unit (50+ units)	3 dwelling units – 4 spaces, 2 covered, 2 screened 4 dwelling units – 6 spaces, 3 covered, 3 screened Additional units require 1 additional covered and 1 additional screened space per 2 units
3+ dwelling units (2 or more bedroom units)	2 space per unit with 1 covered	Varies, from 1.75-2 spaces per unit plus 0.4 space for each bedroom in excess of 3	
Rooming, boarding, or lodging house	1 space per room and 2 for owner-occupied unit	1 space per sleeping room with ability for planning commission to override under certain circumstances	1.14 spaces per room
Mobile home	2 spaces per unit with centralized guest parking	*Not specified, however, using single family requirements:* 2 spaces per unit with 1 in garage + 1 for each bedroom in excess of 2 and guest parking	*Not specified, however, using single family requirements:* 2 space, 1 covered and 1 screened; 4 for duplex with 1 covered and 1 screened

Source: Chapter 17.124, City of St. Helena Municipal Code, 2015; Town of Yountville Municipal Code 17.116.020; City of Napa Municipal Code 17.54.040.

Parking requirements are additionally not a constraint given the size of the parcels identified in the Sites Inventory. For example, one site with large capacity identified in the sites inventory is Site 8, a 1.5 acre vacant lot located at 882 and 886 College Avenue. This site is projected to have a capacity of 39 units with 15 lower income and 15 moderate income units. If the complex were to have 15 two-bedroom units, 15 one-bedroom units, and 9 studios, it would need a total of 66 parking spaces with 39 of them being covered. The St. Helena Standard Specifications for Public Improvements, Standard Number 321A and 321B call for parking spaces that are 19 feet long by 9.5 feet wide, which equates to 180.5 square feet per parking space. Thus, for Site 8, there would be an allocation of 11,913 square feet of surface space allocated for parking, which accounts to approximately 18.23 percent of the site. This allocation does not pose an undue constraint on the project and provides sufficient parking for the projected residents of the project. Further, developers can design garages, overhangs, and other architectural features which can allow for greater building footprint and thus less land allocated to uncovered parking.

The City's parking minimums are also in line with State data. According to the Department of Motor Vehicles, there were 147,603 registered vehicles in Napa County in 2021, equating to approximately 1.06 vehicles per

person in Napa County. St. Helena's parking minimums, particularly figures regarding multifamily one-bedroom units, matches the data provided by the DMV.

To help promote the development of emergency homeless shelters, Assembly Bill 671 (2019) was passed which included a variety of measures to incentivize the construction of such facilities, including the requirement that jurisdictions can only require the number of spaces necessary for staff working in the shelter and no more than other uses in the same zones. According to Municipal Code Section 17.124, emergency homeless shelters are considered an unlisted use, which leaves it up to the planning commission to determine the parking requirements. Emergency homeless shelters are permitted in the Industrial and Service Commercial zoning districts, which only conditionally permit housing. Commercial and industrial parking requirements require one parking space per 300 square-feet of office area, one parking space per 650 square-feet of industrial uses, and one parking space per 1,000 square feet of warehouse space., respectively. Based on these standards, the City does not currently comply with State law. The City is committed through Program H-F to amend the Zoning Code to require only be the number of spaces necessary for staff working in the shelter and no more than other uses in the same zones..

Further, the City is also evaluating and revising, as necessary, parking requirements for multifamily uses as a part of the currently ongoing (2023) Comprehensive Zoning Code Update to identify and remove potential constraints to housing development. The Update is scheduled for adoption in fall 2023.

The City does not impose any on-site and off-site improvement standards beyond those necessary to achieve health and safety requirements. The City's on-and-off site improvements standards, including roadway improvements, water and sewer requirements, and parking standards do not constrain residential development in St. Helena.

Fees and Exactions

The City's building department fee schedule is designed to directly offset the costs incurred by the City when processing and reviewing development applications, and to inspect new construction. Fees are charged when a building permit is issued and are based on building plans and estimated construction costs.

Development impact fees are charged to new projects in order to offset costs for the construction, expansion, and maintenance of off-site improvements that either were built for the purposes of the new project or were existing improvements from which the new developments will benefit. In the case of St. Helena, impact fees are charged for public safety, civic facilities, water and wastewater services, drainage, traffic mitigation, and schools. In 2013, the City conducted a comprehensive study and update of all of its development impact fees. As a result, total impact fees for single-family houses decreased from $19.78 per square foot to $16.32 per square foot, a 17.5 percent reduction. Fees for multiple-family development increased from $13.78 per square foot to $21.37 per square foot, a 55 percent increase.

The single-family fee calculations shown in Table 36 are based on an example 2,300 square foot single family residence with three-bedrooms and two-bathrooms with a total construction cost estimate of approximately

$920,000 ($400 per square foot). The multifamily fee calculations shown in Table 36 are based on an example eight unit, three story 6,780 square foot multi-family development project.

Table 36 Planning and Development Fees

Fee Description	Single-Family	Multiple-Family
Planning and Application Fees		
Variance	$4,500	$4,500
Conditional Use Permit (CUP)	$5,200	$5,200
General Plan Amendment	$13,000 deposit plus staff time	$13,000 deposit plus staff time
Zone Change	$8,200 deposit plus staff time	$8,200 deposit plus staff time
Site Plan Review	$2,578	$2,578
Specific Plan	$25,000 deposit plus staff time	$25,000 deposit plus staff time
Specific Plan Amendment	$4,100	$4,100
Development Agreement	$13,500	$13,500
Building Inspection / Permit	$1,838	$1,838
Home Occupation Permit	$200 standard, $250 expanded	$200 standard, $250 expanded
Lot Subdivision	$6,300 minor; $35,000 major	$6,300 minor; $35,000 major
Lot Line Adjustment	$3,000	$3,000
Tentative Tract Map	$4,500	$4,500
Final Parcel Map	$2,100	$2,100
Design Review	<1,000 square feet: $2,600 >1,000 square feet: $3,700	$3,700
Environmental Fees		
Negative Declaration	$5,600 plus staff time	$5,600 plus staff time
Mitigated Negative Declaration (In-House)	$11,600 plus staff time	$11,600 plus staff time
Mitigated Negative Declaration (Contract)	$3,200 plus staff time	$3,200 plus staff time
Environmental Impact Report	$9,000 deposit plus staff time	$9,000 deposit plus staff time
Permit Fee	$433	$5,503
City Impact Fees		
Public Safety Fee ($1.04/sq ft)	$2,392	$7,051
Civic Facilities Fee ($1.95/sq ft)	$4,485	$13,221
Parks Fee ($7.16/sq ft)	$16,468	$82,580

Water System Fee ($3.05/sq ft)	$7,015	$16,747
Wastewater System Fee ($0.45/sq ft)	$1,035	$4,475
Drainage System Fee ($0.73/sq ft)	$1,679	$4,678
Transportation Fee ($1.94/sq ft)	$4,462	$16,001
Housing Fee (2.5% of construction cost)	$18,400	$27,933
Other District Fees		
School District Fee ($3.20/sq ft)	$6,831	$21,696

Source: City of St. Helena Planning Department, Mintier Harnish, 2022.

City impact fees are included in Table 36 above. Among these, the costliest fee is the Parks fee of $7.16 per square foot. These funds are used to develop and maintain City parks, a critical resource in the community. The City's wastewater impact fee ($0.45 per square foot), drainage system fee ($0.73 per square foot) and public safety fee ($1.04 per square foot) are particularly low. Further, the City's civic facilities and transportation fees are both under $2 per square foot. Importantly, City impact fees for multifamily listed in Table 36 are based on an eight-unit development, as explained previously, and have a lower per unit cost than City impact fees shown for a typical single-family use. These impact fees are based on the City's actual costs and are reevaluated and revised each year. The City's impact fees do not impose undue impacts to housing cost, supply, and feasibility, and are not a constraint to the development of housing.

Continuing with the example single-family and multi-family projects used in Table 36,Table 37 provides a breakdown of the cost-per-unit and estimated proportion of fee cost for the example project. These fees would be $70,830 and $21,525 per unit, respectively. This represents 7.7 percent of the single-family home project's construction cost and 12.3 percent of the multi-family home project's construction cost.

Table 37 Construction Cost Summary, Cost Per Unit and Cost Per Square-Foot

	Single-Family	Multiple-Family
Building Size (square feet)	2,300	6,780
Construction Cost (per square-foot)	$400	$206.49
Valuation	$920,000	$1,400,000
Total Estimated Fees Per Unit	$70,840	$21,525
Fees as % of Construction Cost	7.7%	12.3%

Source: City of St. Helena Planning Department; Mintier Harnish, 2022

The multiple-family development impact fees have increased to reflect the costs of the improvements necessary to serve multifamily residential development. Without the funds collected through the fees, the City could not

afford to make the necessary improvements in infrastructure, and thus the fees do not represent an undue governmental constraint to housing development. In addition, fee reductions and adjustments for affordable and other housing projects are permitted on a case-by-case basis, as approved by City Council under Section 3, Chapter 3.32 of the St. Helena Municipal Code.

In comparison to nearby jurisdictions, St. Helena's planning fees are similar in range, as shown on Table 38. For rezoning, St. Helena has some of the most expensive fees in the region, however for tentative tract or parcel maps, St. Helena has some of the lowest fees in the region. Overall, St. Helena does not have fees that result in an extremely significant cost difference between development projects situated in the city and those situated outside of the city in nearby jurisdictions.

Table 38 Planning Application Fees – Surrounding Jurisdictions, Single-Family and Multiple-Family

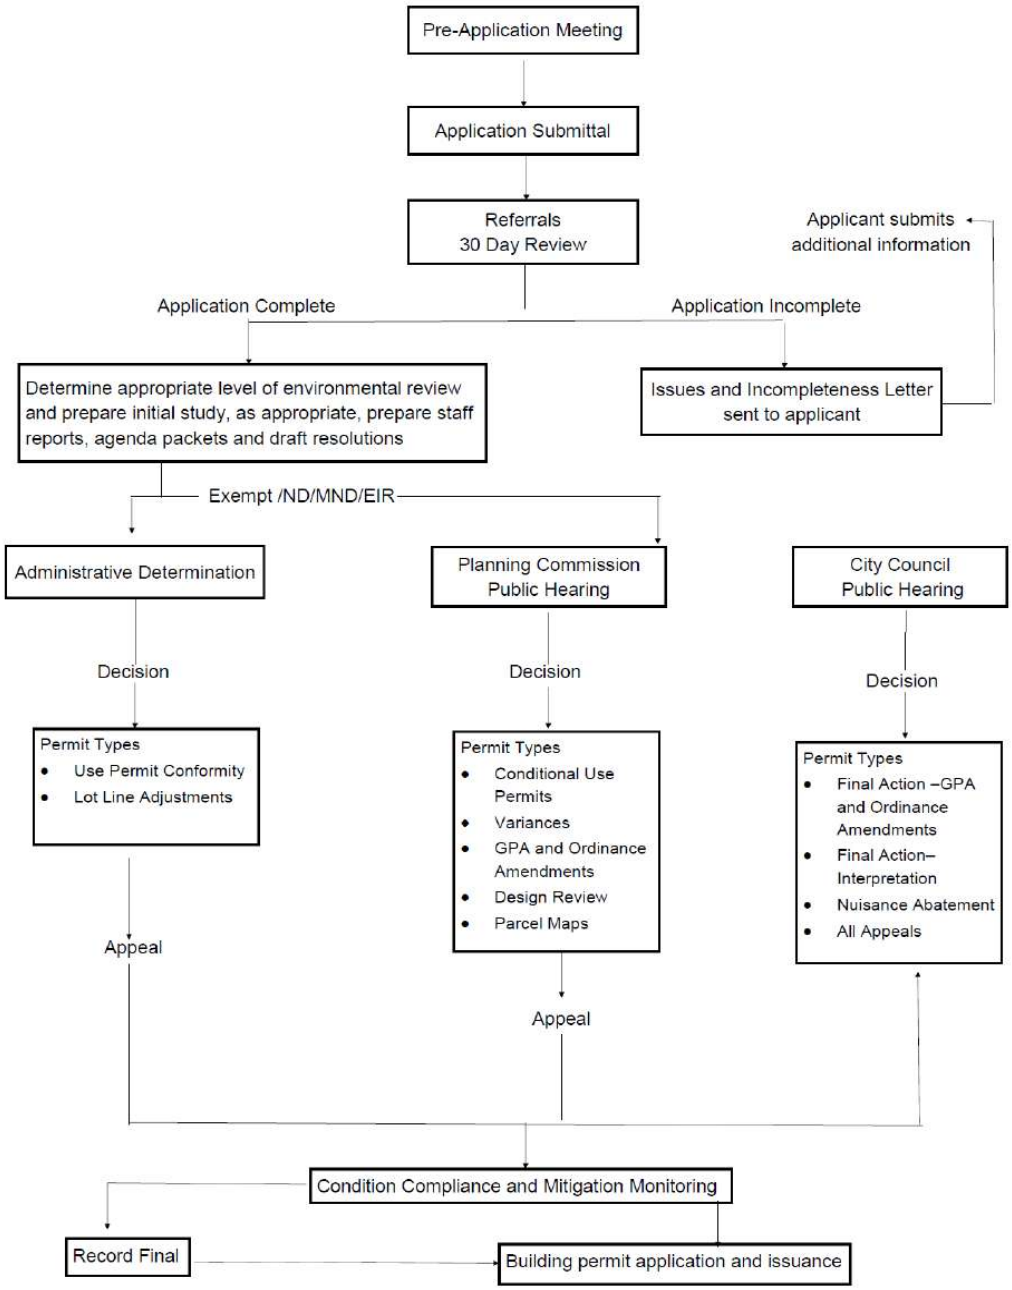
Jurisdiction	General Plan Amendment	Zone Change	Tentative Tract Map	Variance
St. Helena	$13,000 deposit plus staff time	$8,200 deposit plus staff time	$4,500	$4,500
City of Sonoma	$16,581	$981	$3,735 plus $395 per lot plus engineering time	$2,279
Yountville	$7,500 deposit plus staff time	$7,500	$5,000 plus staff time	$2,500
American Canyon	$8,312	$3,714	$8,129	$1,896
County of Napa	Established by resolution of the Board of Supervisors	N/A	$622.90 plus staff time	$6,100.90 plus staff time

Source: City of St. Helena Planning Department; Mintier Harnish, 2022

Given similar fee structures to nearby jurisdictions and the development impact fee study in 2013, St. Helena's fee structure does not pose an undue constraint on the production of housing.

Processing and Permit Procedures

St. Helena, as with other jurisdictions, has two primary types of processing and permit procedures: ministerial and discretionary.



Ministerial Permit Procedures

Ministerial permits are any permits that do not require a decision-making body to provide additional input before its approval. Ministerial permits are handled internally within the planning department and are approved by the planning director. Ministerial permits cover all development that is permitted by right in zones without design review. An example of a common ministerial permit is one for the construction of an accessory dwelling unit on a lot with a preexisting single-family dwelling. Ministerial review typically takes 2-4 weeks. As shown in Table 41, there is very little delay among previous projects. Ministerial permit procedures do not pose a constraint to housing development.

Discretionary Permit Procedures

Discretionary permits are any permits requiring a decision-making body to exercise judgment prior to its approval. As shown in Figure 48, after successfully completing a use permit and passing State environmental review, discretionary permits can be handled administratively through the Planning Director, or through public review with the Planning Commission. If an appeal is made against the project, the project is sent to City Council for review.

Figure 48 Discretionary Permit Process Flowchart

Discretionary permits in St. Helena include general plan amendments, code amendments, specific plans, variances, development agreements, use permits, parcel and subdivision maps, design review, permit/map extensions, lot line adjustments, appeals, revocation of land use permits, and interpretations. As shown in Table 39 and Table 40, most discretionary permits take 3-6 months to process, with some permits taking less time (conditional use permit) or significantly more time (general plan amendment). For the purposes of residential development, conditional use permits (CUPs) and design review are the most pertinent to affecting the affordability, speed, and thus availability of affordable housing.

Table 39 Typical Processing Procedures by Project Type

	Single-Family Unit	Subdivision (20 units)	Multiple-Family (20 Units)
Required Permit Procedures	Ministerial Review - ADU	Tentative Map	Conditional Use Permit
	Design Review – new SFD	Final Map	
		Design Review	Design Review
		Initial Environmental Study	Initial Environmental Study
		Environmental Impact Report	Mitigated Negative Declaration
Estimated Total Processing Time	2 months	12 months	9 months

Actual Project Times

Table 41 outlines a selection of seven projects with their entitlement approval dates and issuance of building permits. The time between entitlement and building permit issuance is negligible in St. Helena and is not a constraint to the city meeting its share of the regional housing need.

Table 41 Timelines for Permit Procedures

Description of Project	Entitlement Approval	Building Permit Issued	Time Elapsed
A single family dwelling with an accessory dwelling unit (601 Fulton)	3/19/2020	3/25/2020	4 days
An accessory dwelling unit (1856 Adams St, B)	3/12/2020	6/2/2020	3 months, 20 days
An accessory dwelling unit (1730 Stockton St, B)	1/6/2020	4/9/2020	3 months, 3 days
An accessory dwelling unit (940 Hunt Ave)	9/17/2020	9/17/2020	Same day
A single family dwelling (222 Pope St)	7/28/2020	7/28/2020	Same day
An accessory dwelling unit (1607 Kearney St, B)	6/1/2020	6/4/2020	3 days
An accessory dwelling unit (1135 Church St, B)	6/8/2020	6/23/2020	15 days

Source: City of St. Helena, Mintier Harnish, 2022.

Conditional Use Permit (CUP)

Conditional use permits (CUPs) are required when a land use is listed as a conditional use for a zoning district in the Zoning Code. Conditional Use Permits are subject to review by the Planning Commission, which considers compatibility with surrounding uses, public input, and staff feedback. Conditional use permits typically take three months to fully process, which is not considered a constraint to residential development. All projects that require a conditional use permit, except for the installation or modification of fences, require design review.

Design Review

Design Review is a process undertaken by the Planning Commission on certain projects to promote environmental quality, foster attractiveness, sustain functional utility, preserve neighborhood character, protect public investments, encourage a mix of uses, and raise the level of community expectations for the quality of the environment. [44] Chapter 17.164 of the St. Helena Municipal Code outlines the City's Design Review policies. The Municipal Code lists 14 specific design criteria considered by the Planning Commission:

1. Consistency and compatibility with applicable elements of the general plan;
2. Compatibility of design with the immediate environment of the site
3. Relationship of the design to the site;
4. Determination that the design is compatible in areas considered by the board as having a unified design or historical character;
5. Whether the design promotes harmonious transition in scale and character in areas between different designated land uses;
6. Compatibility with future construction both on and off the site;
7. Whether the architectural design of structures and their materials and colors are appropriate to the function of the project;

[44] *St. Helena Municipal Code. 17.165 Design Review.*

8. Whether the planning and siting of the various functions and buildings on the site create an internal sense of order and provide a desirable environment for occupants, visitors and the general community;
9. Whether the amount and arrangement of open space and landscaping are appropriate to the design and the function of the structures;
10. Whether access to the property and circulation systems are safe and convenient for pedestrians, cyclists and vehicles;
11. Whether natural features and vegetation are appropriately preserved and integrated with the project;
12. Whether the materials, textures, colors and details of construction are an appropriate expression of its design concept and function and whether they are compatible with the adjacent and neighboring structures and functions;
13. Whether the landscape design concept for the site, as shown by the relationship of plant masses, open space, scale, plant forms and foliage textures and colors, create a desirable and functional environment and whether the landscape concept depicts an appropriate unity with the various buildings on the site; and
14. Whether sustainability and climate protection are promoted through the use of green building practices such as appropriate site/architectural design, use of green building materials, energy efficient systems and water efficient landscape materials.[45]

The Planning Commission examines all proposed new structures and some exterior additions (e.g. additions on historical residential properties, addition of new residential floors) in relation to the above listed design criteria and arrives at one of three recommendations: approve, approve with minor modifications, or disapprove.

Projects that are subject to design review include:

- Any exterior modification to a commercial, multi-family, or designated historic building, including new construction
- The construction of a new single-family home
- Structures, buildings or site modifications requiring use permits in any district, excluding fences
- Additions to a single-family home which create a second or third floor, story or living space where one does not currently exist
- Any new structure prior to the issuance of any future building permits for structures on newly created parcels created on maps approved after January 1992
- Any new public facility, or modification thereof
- Demolition, except when required for emergency protection of public health, safety or welfare

[45] *St. Helena Municipal Code. 17.165 Design Review.*

The following projects are subject to administrative design review, which means that they are ministerially decided on by city planning staff as opposed to the Planning Commission:

- Any form of repair or maintenance where the work solely involves the replacement of materials in like kind and form or to any such work in areas not visible to the public from the public right-of-way or areas accessible to the public
- Accessory dwelling units, subject to requirements identified in SHMC 17.116.030
- Alteration, modification, or addition to an existing single-family home that is not eligible for design review
- Construction of an accessory structure in keeping with all development criteria of the zoning district in which the structure is proposed

Design review is required for practically all projects, including all primary residential structures. The City has not adopted a design review exemption for affordable housing development in the City. Therefore, design review is considered a significant constraint to affordable housing development in the City.

The complex and subjective nature of the design review process is a constraint housing production. Through the current comprehensive zoning code update, the City is working to codify objective design standards for single-family, small lot, and multifamily uses. Program H-F commits the City to amending the Municipal Code to provide objective design standards for residential development and a ministerial, by-right, process for approval of developments meeting all zoning and design standards.

Currently (2023) the MR zone does not allow for multifamily uses without a conditional use permit (CUP), with the exception of 5th Cycle Housing Element opportunity sites. Although the MR zone is primarily a single-family zone, the requirement for a CUP in this zone constrains the development of smaller multifamily uses. Program H-N commits the City to allowing duplexes and triplexes and a density range of 5.1 to 16 dwelling units per acre in the MR zone without a CUP.

Please note: the City implemented 5th Cycle Housing Element program HE1.D which committed the City to eliminating use permit requirement for multifamily projects on Housing Opportunity sites (Key Housing Sites) in the medium density residential zone. Section 17.40.020 was amended to permit the following:

> *N. Multiple-family dwellings, apartments, and dwelling groups at a density up to the maximum allowed by the medium density residential district shall be allowed as a permitted use on the following MR zoned parcels, which are identified as "Key Housing Sites" in Table 42 of the city's 2015-2023 housing element, and are identified as follows by street address and assessor's parcel number (APN): 567 Pope St. APN 009-070-002; 591 McCorkle Ave. APN 009-070-003; 1817 Spring St. APN 009-322-009; Sulphur Springs Ave. APN 009-362-015; Spring St. APN 009-441-023 and 009-552-002; 576 Pope St. APN 009-552-003; 1105 Pope St. APN 009-090-003. (Ord. 17-2 § 6 (part); Ord. 16-8 § 1; Ord. 15-2 § 7 (part): Ord. 12-2 § 6: Ord. 07-5 § 2 (part): Ord. 05-4 § 1 (part): Ord. 03-4 § 11: prior code § 27.51)*

Further, The City has received SB 2 and LEAP grants from the State of California to assist with encouraging and streamlining affordable housing development in the city. The City has applied these funds to the Comprehensive

Zoning Code Update currently underway. The Draft Update works to overcome constraints and encourage development by incorporating objective design standards for residential development and removing CUP requirements for duplexes and triplexes and densities of 5.1 to 16 du/ac in the MR zone, among other efforts.

Table 42 Housing Types Permitted by Base Zoning District

Zone Type	Agricultural			Residential				Commercial/Office			I	WW

P=Permitted C=Conditional —=Prohibited

[1]Permitted if the single-family dwelling(s) existed prior to October 1, 1993.

[2]Additional dwellings for occupancy by owners, caretakers and/or other employees, provided density does not exceed one dwelling unit per each five acres of the winery's contiguous property is a Conditional Use.

[3]Six or fewer persons only.

[4]New construction of single-family dwellings where the minimum density of 2 units or greater is a Conditional Use.

[5]Limited to upper floors only.

[6]Permitted only to parcels identified in the adopted Housing Element.

[7]Upper floors only in conjunction with a mixed-use project

[8]Subject to the restrictions outlined in SHMC 17.60.030, including a maximum 850 square feet floor area, one off-street parking space, and residency requirements.

Note: The Zoning Code text takes precedence over this table and there may be additional requirements or limits not noted on this table.

If the zone is not present in the table (PQP, PR, OS), it does not allow any residential uses by right or through any permitting processes.

Source: St. Helena Municipal Code, Title 17.

SB 330 Streamlining

On October 9, 2019, Governor Newsom signed into law SB 330, the Housing Crisis Act of 2019. The act amends existing state laws and creates new regulations around the production, preservation and planning of housing. The bill has been in effect since January 1, 2020 and sunsets on January 1, 2025. SB 330 will affect both project planning procedures and community planning outcomes.

The goal of SB 330 is to create certainty in the development of housing projects, speeding up the review of these projects, preserving affordable housing and preventing certain zoning actions that reduce the availability of housing. SB 330 does the following (not a comprehensive list):

- Creates a new vesting process for zoning and land use ordinances, policies, and standards in place at the time a preliminary application is submitted (with limitations);
- Requires that the historic status or designation of any site be determined at the time an application for a discretionary action is deemed complete;
- Prohibits imposing or enforcing non-objective design review standards established after January 1, 2020;
- Limits the number of public hearings to five for housing projects that meet all objective design standards; and
- Prohibits actions that reduce the total zoned capacity for housing (i.e., down-zoning).

A project that meets any of the following criteria per California Government Code Section 65589.5(h)(2)(B) is subject to the provisions of SB 330:

1. The project consists of residential units only;
2. The project is a mixed-use development consisting of residential and non-residential uses with at least two-thirds of the square footage of the project designated for residential use, including dwelling units and any uses accessory to the residential units; or
3. The project is transitional or supportive housing.

New Preliminary Application Form. SB 330 creates a new vesting process for discretionary housing projects during the five-year period of the bill. It achieves this through the creation of a new "preliminary application" process that establishes a new date for the purposes of locking projects into the ordinances, policies, and standards in effect when a preliminary application (including all required information) is submitted and deemed complete. This vesting does not apply to California Environmental Quality Act (CEQA) determinations, including historic resource determinations pursuant to CEQA.

Once a complete Preliminary Housing Development Application is submitted (along with other required applications if applicable), the zoning, design, subdivision, and fee requirements in effect as of that date will remain applicable to the project for the duration of the review and entitlement process, provided that all the following provisions are satisfied:

- Complete discretionary entitlement applications must be submitted and accepted by the Planning Department within 180 days of the Preliminary Housing Development Application being deemed complete;
- If the entitlement applications are deemed incomplete after filing, the application must submit all missing or incomplete items to the Planning Department within 90 days of being notified in writing by Planning Department staff;
- The project may not increase by more than 20 percent in the number of units or total square footage indicated in the Preliminary Housing Development Application, except as the project may be revised using the State Density Bonus; and
- The project must commence construction within 30 months of site permit issuance.

Note that the following modifications may be required even when a Preliminary Housing Development Application is on file:

- Development impact fees, application fees, capacity and connection fees, or other charges may be annually adjusted based on a published cost index;
- Requirements necessary to avoid an adverse impact to public health or safety, or to avoid or lessen an impact under CEQA may be applied; and
- Applicants may submit a new or amended Preliminary Housing Development Application at any time, in which case the requirements in effect at that time shall apply.

The City has created a preliminary SB 330 process and checklist to streamline the design and approval of by-right multi-family units within the community. Program H-F provides a by-right streamlined review process for affordable housing developments meeting state affordability thresholds, in compliance with SB 35 and SB 330.

Procedures for Selected Housing Types

The following section describes the processing and permit procedures for selected housing types that are typically used by lower income households. For more housing types, see the Zoning for a Variety of Housing Types section.

Multifamily Rental Housing

Multifamily rental housing is housing traditionally identified as any housing available for rent that has greater than one dwelling unit in a building. Some examples of multifamily rental housing include duplexes, triplexes, fourplexes, and apartment buildings. Multifamily rental housing is permitted entirely in the High Density Residential (HR) district only. Multifamily rental housing is permitted in the Medium Density Residential (MR) district only on parcels identified in the housing element. MR zoned parcels identified in the fifth cycle housing element are currently codified as being the MR zone parcels that allow multifamily housing. Currently, all multifamily rental housing projects, affordable and market rate, are subject to subjective design review.

Therefore, multifamily rental housing is constrained by the design requirements set forth in the Zoning Code. Program H-F is included to commit the City to adopting objective design standards to reduce barriers to multifamily rental housing and eliminate subjective design standards.

Mobile Homes

Mobile homes, or manufactured homes, are small, prefabricated homes which are often situated on rented portions of land in mobile home parks. Mobile homes can offer affordable pathways to home ownership and stable shelter for many low-income households. Mobile homes, as shown in Table 42 are permitted in all residential zoning districts in St. Helena. Mobile homes in St. Helena are subject to the following conditions in all residential zoning districts:

- To be occupied only as a single-family residential use,
- To be subject to all provisions of the zoning ordinance applicable to conventionally built dwellings,
- To be attached to a permanent foundation system in compliance with all applicable building regulations,
- To be covered with an exterior material customarily used on conventionally built dwellings extending to the top of the foundation,
- To have parapet walls or roofs which utilize shingles or other materials customarily used on conventionally built dwellings;

These requirements do not constitute a constraint to the development of mobile homes. However, mobile homes are subject to subjective design review, which poses a significant constraint to their development. Program H-F is included to commits the City to incorporate objective design standards for single-family, small lot, and multifamily developments, including mobile homes, that provide a ministerial design review process for projects that meet zoning and design standards.

Housing for Agricultural Employees

Housing for agricultural employees is permitted in the agricultural zone for up to 36 persons, thus complying with California Health and Safety Code Section 17026.1. Housing for agricultural employees is also permitted for up to six persons in all residential zones and in the WW zone. Housing for agricultural employees is subject to subjective design review, which poses a significant constraint to development. Program H-F commits the City to incorporate objective design standards for single-family, small lot, and multifamily developments, including farmworker housing, that provide a ministerial design review process for projects that meet zoning and design standards.

Supportive and Transitional Housing

Supportive and transitional housing is permitted in the AP zone, all residential zones, and the WW zone. Supportive and transitional housing is subject to subjective design review, which poses a significant constraint to development. Program H-F commits the City to incorporate objective design standards for single-family,

small lot, and multifamily developments, including transitional and support housing, that provide a ministerial design review process for projects that meet zoning and design standards.

Constraints to Housing for Persons with Disabilities

On January 1, 2002, SB 520 went into effect, requiring local jurisdictions to analyze potential governmental constraints to the development, improvement, and maintenance of housing for persons with disabilities as part of a jurisdictions housing element update. Under SB 520, housing elements must also include one of the following: 1) a program to remove constraints, or 2) provide reasonable accommodations for, "housing designed for occupancy by, or with supportive services for, persons with disabilities." A jurisdiction can fulfill this second clause in a variety of ways including establishing policies that facilitate the provision of housing that is physically accessible to people with mobility impairments, residential care facilities for individuals with Alzheimer's, housing for persons with AIDS/HIV, and transitional housing that serves homeless with disabilities.

Reasonable Accommodation

The City of St. Helena adopted a reasonable accommodation ordinance in 2015 that provides a procedure to request reasonable accommodation for persons with disabilities seeking equal access to housing under the federal Fair Housing Act and the California Fair Employment and Housing Act (the Acts) in the application of zoning laws and other land use regulations, policies, and procedures.

A request for reasonable accommodation may be made by any person with a disability, their representative or any entity, when the application of a zoning law or other land use regulation, policy or practice acts as a barrier to fair housing opportunities. A person with a disability is a person who has a physical or mental impairment that limits or substantially limits one or more major life activities, anyone who is regarded as having such impairment or anyone who has a record of such impairment. This chapter is intended to apply to those persons who are defined as disabled under the Acts.

A request for reasonable accommodation may include a modification or exception to the rules, standards and practices for the siting, development and use of housing or housing-related facilities that would eliminate regulatory barriers and provide a person with a disability equal opportunity to housing of their choice. Requests for reasonable accommodation shall be made in the manner prescribed in Section 17.200.030.

Requests for reasonable accommodation are submitted on an application form provided by the Planning Department, or in the form of a letter, to the Planning Director and should contain the following information:

1. The applicant's name, address, and telephone number.
2. Address of the property for which the request is being made.
3. The current actual use of the property.
4. The basis for the claim that the individual is considered disabled under the Acts.
5. The zoning code provision, regulation or policy that is the subject of the applicant's requested reasonable accommodation, and a narrative and graphic (where applicable) description of the specific accommodation requested.

6. Why the reasonable accommodation is necessary to make the specific property accessible to the individual.

Requests for reasonable accommodation shall be reviewed by the Planning Director if no discretionary permit approval is required other than the request for reasonable accommodation. Requests for reasonable accommodation submitted for concurrent review with another discretionary permit application shall be reviewed by the review authority reviewing the discretionary permit application. The Director shall make a written determination within forty-five (45) days and either grant, grant with modifications, or deny a request for reasonable accommodation in accordance with Section 17.200.060. The written decision to grant or deny a request for reasonable accommodation will be consistent with the Acts and shall be based on a consideration of the following factors:

1. Whether the housing which is the subject of the request will be used by an individual considered disabled under the Acts.
2. Whether the request for reasonable accommodation is necessary to make specific housing available to an individual with a disability under the Acts.
3. Whether the requested reasonable accommodation would impose an undue financial or administrative burden on the town.
4. Whether the requested reasonable accommodation would require a fundamental alteration in the nature of a town program or law, including but not limited to land use or zoning.
5. Whether the requested reasonable accommodation would adversely impact surrounding properties or uses.
6. Whether there are reasonable alternatives that would provide an equivalent level of benefit without requiring a modification or exception to the City's applicable rules, standards and practices.
7. Whether the accommodation would alter the significance of a historic structure.

In granting a request for reasonable accommodation, the Planning Director may impose any conditions of approval deemed reasonable and necessary to ensure that the reasonable accommodation would comply with the findings required by subsection A of this section, including but not limited to the following:

1. Inspection of the property periodically, as specified, to verify compliance with this chapter and any conditions of approval.
2. Removal of the improvements, where removal would not constitute an unreasonable financial burden, when the need for which the accommodation was granted no longer exists.
3. Time limits and/or expiration of the approval if the need for which the accommodation was granted no longer exists.
4. Recordation of a deed restriction requiring removal of the accommodating feature once the need for it no longer exists.
5. Measures to reduce the impact on surrounding uses.
6. Measures in consideration of the physical attributes of the property and structures.
7. Other conditions necessary to protect the public health, safety and welfare.

A determination by the Planning Director to grant or deny a request for reasonable accommodation may be appealed to the City Council in compliance with Section 17.08.180.

The City's required finding *"5. Whether the requested reasonable accommodation would adversely impact surrounding properties or uses"* poses a potential constraint to housing for residents with disabilities seeking equal access to housing under the federal Fair Housing Act and the California Fair Employment and Housing Act (the Acts). HCD indicates that, given its importance in addressing barriers to housing for persons with disabilities, reasonable accommodation should not impose discretionary findings similar to that of a Conditional Use Permit, such as impacts to surround uses. Program H-F commits the City to update the municipal code to remove this discretionary finding.

Zoning and Land Use

The City of St. Helena allows residential care facilities serving six or fewer persons as a permitted use in the LR-1A, LR, MR, and HR residential zones. For compliance with state law, the City must allow these uses in any zone allowing single-family uses, subject only to the conditions imposed upon residential uses in the same zone. The City currently allows single-family homes in the A-20, W, and WW zones. The City should revise the municipal code to allow residential care facilities of six or fewer in these zones.

Residential care facilities serving seven or more persons require the approval of a Conditional Use Permit. A use permit requirement in zones allowing multifamily uses is a constraint to the development of these uses. The City should revise the municipal code to allow residential care facilities of six or fewer in these zones.[46]

Program H-F commits the City to updating the municipal code to allow residential care facilities in all zones, subject only to the requirements imposed upon single-family uses; and facilities of seven or more in all zones, subject only to the same requirements as multifamily uses.[47]

The City's parking and loading requirements do not have specific provisions related to persons with disabilities, but there is a provision stating that "rest homes, convalescent hospitals, residential care and similar group care facilities" require only one space for each four beds, which is a reduced requirement compared to the two parking spaces required for typical "one-and two-family dwelling units."[48] Consequently, the reduced parking requirements for group care facilities decrease the parking requirements for some disabled persons, but parking requirements for residential development need to serve all disabled persons.

Permits and Processing

The City's permitting and processing procedures do not negatively affect the ability to design or retrofit homes that will be accessible for the disabled or constrain the siting of group homes. The City, however, applies the

[46] *City of St. Helena Municipal Code, Title 17.*
[47] *City of St. Helena Municipal Code, Title 17.*
[48] *City of St. Helena Municipal Code, Chapter 17.124: Parking and Loading Requirements*

same process required for other renovations to retrofitting homes for accessibility, and the City does not have a special process for such retrofits.

As discussed above, residential and intermediate care facilities with fewer than six persons are permitted in residential zones. Although care facilities with seven or more persons are permitted with a Conditional Use Permit in the residential zones, no additional permits are required. This is consistent with the City's requirements for other multifamily uses such as condominiums, townhomes, apartments, and dwelling groups containing more than four units, which also require a Conditional Use Permit. There are no additional requirements placed on residential or intermediate facilities.

Building Codes

In 2019, the City of St. Helena adopted the 2019 California Building Code with minor amendments. The changes made to this Code by the City, enumerated in the Governmental Constraints section of this document, do not unfairly treat residential and intermediate care homes differently than other residential uses. Nevertheless, no specific exemptions to the 2019 California Building Code exist for housing for disabled persons. The City of St. Helena does not have local universal design requirements but adopted a reasonable accommodate ordinance in 2015 which provides a reasonable accommodation procedure related to "a zoning law or other land use regulation, policy or practice acts as a barrier to fair housing opportunities", including building codes and the issuance of Building Permits.

Definition of Family

The Municipal Code currently (2022) defined "family" as:

"Family" means any of the following groups living together in the same dwelling unit as a single housekeeping unit:

1. Any number of persons related by blood, marriage or legal adoption;
2. A nuclear family identified by extended cohabitation;
3. A group not exceeding five persons whose interpersonal relationships relating to shared household expenses, duties and private lives are indistinguishable from groups listed in subsections 1 and 2 above.

The definition of family in a jurisdiction's municipal code can pose some challenges for persons with special needs who may have live-in caregivers, group home arrangements, or other arrangements not reflective of the typical nuclear family. Additionally, the definition used by a city can cause confusion or difficulty when applying to programs such as Community Development Block Grants, which use a more inclusive definition of a family unit.

In the previous element, Program 1.K was included to amend the zoning ordinance to define "family" as one or more persons living together as a single housekeeping unit in a dwelling unit, as required by State law. This change has not been made to the Zoning Code, however, all City actions are made in keeping with California

State law, as it has precedence over any in-consistent locally adopted land use definitions. The City is undergoing a comprehensive Zoning Code update, which will address the existing outdated adopted definition of "family." Further, Program H-Fis included in this Housing Element, committing the City to updating this definition specifically.

Spacing or Concentration Requirements

The City of St. Helena does not have any additional spacing or concentration requirements for housing for persons with disabilities. There are no spacing requirements for group homes, residential care facilities, transitional housing facilities, and supportive housing facilities.

In the Service Commercial (SC) and Central Business (CB) districts, supportive housing is permitted only on the upper floors, which is the same requirement imposed on all other residential developments in these zone.

Locally Adopted Ordinances

St. Helena has passed five development-related local ordinances to help ensure growth of quality housing and to create a balance between the need for affordable housing and the market demands of the tourism industry.

Bed and Breakfast Inns

Bed and breakfast inns, a common sight in many tourist-oriented towns like St. Helena, are regulated by a use permit process that requires certain findings to be made, including that:

A. The establishment of a bed and breakfast inn is consistent with the purpose of the general plan, including policies regarding the displacement of rental units in the housing stock.

B. The establishment of a bed and breakfast inn will not be detrimental to a building, structure or feature of significant aesthetic, cultural, architectural or engineering interest or value of a historical nature.

C. The establishment of a bed and breakfast inn is compatible with and will not be detrimental to the character of the neighborhood and surrounding land uses. [49]

Additionally, bed and breakfast inns are required to only use up to four bedrooms, a requirement that helps ensure that larger homes are still partially available for use as a permanent residential dwelling. Such affordances can be considered helpful to special needs groups, such as large households. Given these strict requirements, St. Helena's bed and breakfast inns ordinance does not pose additional constraints to housing and helps limit potential reduction of housing units in the case of a homeowner wishing to convert their residential property to a bed and breakfast.

Short-Term Rentals

Short term rentals are strictly regulated in the City of St. Helena to reduce the impact on the area's already scarce housing inventory. The City allows only twenty-five short-term rental permits at a time with a maximum

[49] *City of St. Helena. St. Helena Municipal Code, Title 17. http://www.codepublishing.com/CA/sthelena/. Accessed January 9, 2023.*

of four bedrooms in the household being used for short-term rentals. Additionally, the City restricts uses of the propety by guests and enforces additional regulations on sounds and general activities during the hours of 10 P.M. to 7 A.M. Given the strict measures in place, the short-term rentals ordinance doesn't pose additional constraints to housing. Instead, the ordinance incentivizes property owners to use their homes for other uses with less stringent requirements, which may include long-term rentals.

Time-Share Uses

Time-shares are strictly regulated in the City of St. Helena, are considered commercial uses, and are permitted only in commercial zoning districts. Any existing housing stock in the city is prohibited from being converted into a time-share. As such, the time-share ordinance is not a constraint to housing, but instead assists with ensuring residential land is being put to more productive, residential purposes that assist with alleviating the existing housing crisis.

Affordable Housing

The City's affordable housing ordinance is a codified ordinance that specifies how the City will provide density bonuses, concessions, and incentives for the construction of affordable housing projects that are designed for seniors, low-income, very low-income, and moderate-income (in the case of condonminiums) persons and families. The affordable housing ordinance also specifies how the City will grant priority for the provision of water and sewer services to affordable developments, a requirement stated in California Government Code Section 65589.7. The affordable housing ordinance also describes the process in which a person voluntarily donates land to the City for residential development use. The ordinance additionally allows for vehicular parking ratios to be beneath those required by the city, subject to Californai Government Code 65589.7 and a recorded covenant against the property.

The affordable housing ordinance does not pose any constraint to housing, but instead acts to formalize State mandated programs and laws designed to incentivize affordable housing.

Housing Trust Fund, Housing Impact Fee and Inclusionary/In-Lieu Fee Requirements

In September 2004, the City Council passed Ordinance 2004-7 adding Chapter 17.146 Housing Trust Fund, Housing Impact Fee, and Inclusionary/In-Lieu Fee Requirements to the St. Helena Municipal Code. The regulations are designed so that new non-residential developments and additions are required to pay a housing impact fee and new residential developments containing five units or more are required to include 20 percent of their units as affordable housing, and developments with less than five units pay an in-lieu fee. The fees collected from the nonresidential and residential development then go into a Housing Trust Fund. The use of Housing Trust Fund monies is directed exclusively to "increase and improve the supply of housing affordable to households of moderate, low and very low income" including costs such as land, construction, financing, and reimbursements to the City.[50] The monies are available for both ownership and rental projects and services.

[50] *St. Helena Municipal Code. 17.146.030*

These affordable housing requirements do add additional cost to market rate residential development in the process of creating additional affordable housing in St. Helena. To minimize the impact on the price of market rate housing, the Municipal Code allows developers to submit an "alternative equivalent proposal" and offers a series of concessions or incentives.[51] An "alternative equivalent proposal" enables developers to meet the affordable housing requirements through alternative means like dedicating vacant land as long as the proposed alternative aligns with the purpose of the Municipal Code and is approved by the City Council. Concessions and incentives that are automatically available to residential developers who construct inclusionary units include the opportunity to submit a preliminary development proposal, priority in the City application process, and fee deferment. In addition, the City Council can grant additional concessions and incentives including extra density bonuses, changes to City standards, and monetary assistance. The automatic and discretionary concessions and incentives help expedite the process of building affordable housing and therefore minimize the cost to developers.

[51] *St. Helena Municipal Code. 17.146.050*

9. Opportunities for Energy Conservation

Government Code Section 65583(a) (7) requires the "analysis of opportunities for energy conservation with respect to residential development." [55] This is important due to the key role played by energy efficiency in determining the relative affordability of housing. Lower rates of energy usage decrease utility costs for residents, making a housing unit more affordable. The discussion that follows outlines current State policies and development standards along with local City policies that promote energy conservation for new and existing development in the City of St. Helena.

Instituted by legislative action in 1978 to reduce overall energy consumption statewide, the California Building Energy Efficiency Standards set thresholds and guidelines for energy efficiency for both residential and nonresidential construction. The revised standards for 2022 went into effect August 11, 2021, under Title 24, Part 6, of the California Code of Regulations. Title 24 is otherwise known as the California Building Standards Code. The energy requirements of the new State code are significantly more stringent than the prior codes (heat pump requirements for single-family and multi-family homes and businesses; electricity-ready requirements for single-family homes; and new solar power requirements for high-rises, hotels/motels, tenant spaces, offices, stores, restaurants, schools, and civic spaces) and are intended to progress to 100 percent clean electricity and carbon neutrality by 2050 or earlier.

In addition to the Building Energy Efficiency Standards, Part 11 of Title 24 contains California's Green Building Standards Code (CALGreen). St. Helena adopted the revised standards in 2019, with amendments to require all new indoors plumbing fixtures to meet the 20 percent reduction in water use, a 20 percent reduction in cement use in foundations, and certified U.S. EPA Phase II certified wood-burning devices or pellet-fueled device. These amendments are not considered an impediment to housing development.

On a local level, the 2040 City of St. Helena General Plan Climate Change Element addresses energy conservation for residential development by including goals such as:

- reducing energy demand through improved building and design;
- reducing consumption and divert waste; and
- increasing community engagement and advocacy.

The City participates in an AB811 program that allows commercial and residential property owners to finance renewable energy, water efficiency, and energy efficiency improvements through a property tax assessment. Additionally, the City of St. Helena is currently implementing a program to reduce GHG emissions from City facilities and has an Active Transportation and Sustainability Committee and a Water Advisory Board that oversee its natural resources for energy conservation.

[55] *HCD Building Blocks for Effective Housing Elements, "Opportunities for Energy Conservation." Accessed September 24, 2008. http://www.hcd.ca.gov/hpd/housing_element/index.html.*

The City has included Programs H-RR through H-UU to educate, encourage, and fund pushes for energy conservation within the community. Through education provided by the City, residents, contractors, and property owners can learn about various ways to integrate energy conservation programs into St. Helena residential developments. The City also intends to stay up to date on State efficiency and building code standards to ensure new and rehabilitated housing developments provide future owners and tenants with long-term cost-savings and energy efficiency.[56] Additionally, to further encourage energy efficiency, the City also aims to explore the possibility of offering low-interest loans for energy conservation measures, in addition to continuing to participate in AB-811 programs to finance local efforts.

[56] *See St. Helena Municipal Code Chapter 15.18*

10. Zoning for a Variety of Housing Types

Key Findings

- St. Helena's Zoning Code allows for a variety of housing types in the City including multiple-family units, transitional and supportive housing, single-room occupancy units, manufactured and mobile homes, and accessory dwelling units. However, to comply with Section 65915 through 65918 of the California Government Code, St. Helena should amend the Zoning Code to reflect the new maximum density bonus provisions that were adopted by the State in 2020. Additionally, St. Helena must also amend the Zoning Code to allow for low barrier navigation centers, consistent with State law.

Multiple-Family Rental Housing

The St. Helena Zoning Code allows multiple-family dwellings subject to design review in the High Density Residential (HR) zoning district. In addition, the Medium Density Residential (MR) district permits the construction of attached duplex or triplex units with a Conditional Use Permit.[57] Multiple-family rental housing is subject to subjective design review, which poses a constraint to development. For more information regarding the design review process and development standards applied to multi-family housing, see the Governmental Constraints section.

Density Bonuses for Affordable Housing

Per California Government Code Sections 65915 through 65918, local governments are required to provide density bonus provisions to projects that comply with specific standards. Legislation approved in 2020 increased the maximum density bonus amounts for very-low-, low-, and moderate-income housing. The California Government Code describes how maximum densities shall be calculated for very low-, low-, and moderate-income housing in a tabular format. Additionally, local governments are also required to provide one or more incentives for qualifying projects and are required to accept an incentive proposed by a developer unless the incentive proposal is found to cause environmental harm, a health and safety issue, a cost reduction, a detriment to historical property, or otherwise contrary to law. Both density bonuses and incentives are granted based on the number of affordable units present in each project.

The City of St. Helena currently establishes density bonus provisions for affordable housing in Chapter 17.144 (Affordable Housing). The provisions in that Chapter do not reflect the new maximum density bonus tier framework that was adopted by the State in 2020. Because of this, the City is not currently in compliance and has included Program H-F to commit the City to amend the Zoning Code for compliance with California Government Code Sections 65915 through 65918. The City is currently (2023) undertaking a Comprehensive Zoning Code Update. Density bonus provisions in the Draft Zoning Code have been revised for compliance with State law. The Comprehensive Zoning Code Update is scheduled for adoption in fall 2023.

[57] *City of St. Helena. St. Helena Municipal Code, Title 17.*

Housing for Permanent and Seasonal Agricultural Employees

Sections 17021.5 and 17021.6 of the California Health and Safety Code establish specific requirements for the permitting of agricultural employee housing in a jurisdictions' zoning code. Specifically, Section 17021.5 mandates that "employee housing providing accommodations for six or fewer employees shall be deemed a single-family structure with a residential land use." [58] Furthermore, designated employee housing, as defined above, cannot be subject to Conditional Use Permit requirements, zoning variance, fees, taxes, or any other requirement other than those pertaining to a traditional single-family structure. Section 17021.6 pertains to larger employee housing facilities featuring a maximum of 36 beds in group quarters, or 12 single-family units. Under this legislation, such units are deemed an agricultural land use and cannot be subject to any restrictions, conditional use requirements, zoning variance, fees, taxes, or other requirements not imposed on other agricultural uses in the same zone.

The City is in compliance with Sections 17021.5 or 17021.6 of the California Health and Safety Code. The A-20, AP, and W zoning districts allow large employee housing facilities (12 units or 36 beds) by right. Whereas, the WW, LR-1A, LR, MR, and HR zoning districts allow agriculture employee housing for six or fewer persons subject to design review. Housing for permanent and seasonal agricultural employees is subject to subjective design review, which poses a significant constraint to development. Program H-F commits the City to amending the Zoning Code to replacing subjective design review with objective design standards and SB 330-compliant streamlined review. The City is currently (2023) undertaking a Comprehensive Zoning Code Update. The Draft Zoning Code incorporates objective development and design standards for residential development. These standards will apply to housing for permanent and seasonal agricultural employees. The Comprehensive Zoning Code Update is scheduled for adoption in fall 2023.

Zoning for Emergency Shelters, Transitional Housing, and Supportive Housing

AB-139 requires local government to identify a zone(s) where emergency shelters are allowed by-right without a conditional use or other discretionary permit. Local governments are authorized to impose only those development standards that apply to residential or commercial development within the same zone. However, a local government may impose specified objective standards, including standards for off-street parking based on demonstrated need, as specified. The intent of these regulations is to help streamline the development of varying housing types.

AB-139 requires the need for emergency shelter to be assessed based on the capacity necessary to accommodate the most recent homeless point-in-time count, the number of shelter beds available on a year-round and seasonal basis, the number of beds that go unused on an average monthly basis, and the percentage of those in emergency shelters that move to permanent housing. The bill also requires sufficient parking for employees and one space per two beds in the shelter. Under AB-139 and California Government Code Section 65651, local governments shall allow supportive and transitional housing as a by-right use in all districts where

[58] *California Government Health and Safety Code 17021.5 (b)*

single-family and multiple-family dwelling unit uses are allowed. Additionally, the State requires that these uses be subject only to those regulations that apply to other residential dwellings (i.e., single-family dwellings, multiple-family dwellings) of the same type in the same district.

The City is in compliance with State laws related to emergency shelters, supportive housing, and transitional housing. The Zoning Code allows both supportive and transitional housing by-right in all residential zoning districts, and allowed in non-residential and mixed use zones subject to the same requirements imposed upon residential uses. Emergency shelters are identified as a by-right use in the I and SC zoning districts. According to a Point in Time Count provided by the Chief of Police, there is one homeless person who resides in St. Helena. There are several parcels in these zones that can accommodate an emergency shelter, including APN 009-580-022-000 (I zoning district) and APN 009-194-005-000 (SC zoning district). These parcels are vacant, habitable, and in proximity to transportation and services. Combined, they total 1.48 acres and can provide capacity for 15 beds, by conservative assumption of 10 beds/acre. Emergency shelters, transitional housing, and supportive housing are subject to subjective design review, which poses a significant constraint to development. Program H-F commits the City to amending the Zoning Code to replacing subjective design review with objective design standards and SB 330-compliant streamlined review through the currently ongoing (2023) Comprehensive Zoning Code Update. The Draft Zoning Code (released October 2022) incorporated objective development and design standards for residential development. The Comprehensive Zoning Code Update is scheduled for adoption in fall 2023.

Residential Care Facilities

California Government Code Section 65583 requires that housing elements provide a program to "address and where appropriate and legally possible, remove governmental constraints to the maintenance, improvement, and development of housing for persons with disabilities. The program shall remove constraints to and provide reasonable accommodations for housing designed for, intended for occupancy by, or with supportive services for, persons with disabilities." In line with encouraging the development of housing for those with disabilities, the State requires that small, licensed residential care facilities (defined as facilities with six or fewer residents) be allowed "by right" in all residential zones. Additionally, the State, through HCD, requires that cities consider constraints to reasonable accommodation for large, licensed residential care facilities (defined as facilities with seven or more residents).[59]

The City of St. Helena allows residential care facilities serving six or fewer persons as by-right uses in the LR-1A, LR, MR, and HR residential zones. For compliance with state law, the City must allow these uses in any zone allowing single-family uses, subject only to the conditions imposed upon residential uses in the same zone. The City currently allows single-family homes in the A-20, W, and WW zones. The City should revise the municipal code to allow residential care facilities of six or fewer in these zones. Just like all other residential uses, residential care facilities are subject to design review, which poses a significant constraint to development. Program H-F is included to commit the City to amending the Zoning Code to replacing subjective design review

[59] *HCD Building Blocks for Effective Housing Elements, "Constraints for People with Disabilities." Accessed May 19, 2022. https://www.hcd.ca.gov/community-development/building-blocks/constraints/constraints-for-people-with-disabilities.shtml*

with objective design standards and SB330-compliant streamlined review through the currently ongoing (2023) Comprehensive Zoning Code Update. The Draft Zoning Code (released October 2022) incorporated objective development and design standards for residential development. The Comprehensive Zoning Code Update is scheduled for adoption in fall 2023.

Residential care facilities serving seven or more persons require the approval of a Conditional Use Permit. A use permit requirement in zones allowing multifamily uses is a constraint to the development of these uses. The City should revise the municipal code to allow residential care facilities of six or fewer in these zones.[60]

Program H-F commits the City to updating the municipal code to allow residential care facilities in all zones, subject only to the requirements imposed upon single-family uses and facilities of seven or more in all zones, subject only to the same requirements as multifamily uses.

Low Barrier Navigation Centers

California Government Code Section 65660 identifies low barrier navigation centers are facilities that focus on moving people into permanent housing and connecting temporary residents with opportunities for income, public benefits, health services, shelter, and housing. Similar to displaced persons shelters, these facilities are intended to accommodate people with disabilities, pets and their owners, partners (if not a gender-specific site), the storage of possessions, and survivors of domestic violence. Specifically, the State mandates that low barrier navigation centers have services "to meet the diverse needs of (the) population." As of 2018, low barrier navigation centers are allowed, subject to design review, wherever multiple-family dwellings and mixed-use development are allowed. In addition, local governments may not impose parking requirements onto low barrier navigation centers.

The City is not currently in compliance and has included Program H-F to commit the City to amend the Zoning Code for compliance with California Government Code Section 65660. In updating the Code the City shall list low barrier navigation facilities as allowed by-right wherever multiple-unit dwellings and mixed-use development are allowed.

Single Room Occupancy (SRO)

Single-room occupancy residential units are a traditional form of affordable housing for very low- and low-income individuals. These units consist of a single room, often between 80 and 250 square feet in size, with or without cooking and sanitary facilities, that is rented out, often on a daily, weekly, or monthly basis. The St. Helena Municipal Code currently permits single-room occupancy type units in the form of Lodging Houses serving up to two paying occupants in an owner-occupied dwelling, as an accessory use in the LR and MR zoning districts. The HR zoning district currently allows single room occupancy units, subject to design review. As defined under Chapter 17.04 of the Municipal Code, lodging houses are buildings other than hotels, motels or bed and breakfast inns, where individuals can pay a rent in exchange for accommodations, including room and board, or board alone. Lodging houses serving more than two and up to five occupants require a use

[60] *City of St. Helena Municipal Code, Title 17.*

permit. Accessory structures featuring cooking and sanitation facilities are required to meet design and building standards like those of standard single-family and second units. Units without such facilities are subject to significantly fewer requirements and are more likely to address very low- and low-income housing needs.[61]

Factory Built Housing and Mobile Homes

Government Code Section 65852.3(a) requires that manufactured and mobile homes, including the lots on which they are installed, meeting certain standards of construction and be subject to the same development standards that apply to conventional, stick built, single-family homes.[62] In accordance with this legislation, the St. Helena Municipal Code, Title 17, defines a single-family dwelling to include a "mobilehome constructed to meet 1976 HUD standards, when placed on a permanent foundation, which is designed or used exclusively as a residence, including only one dwelling unit." [63] Mobile units meeting the above definition are permitted under single-family site development standards in all zones that allow single-family housing units.

In addition, the Low Density Residential (LR), Low Density Residential One Acre Minimum (LR-1A), Medium Density Residential (MR) and High Density Residential (HR) districts specifically permit as an allowed use, permanent mobile homes constructed in accordance with the 1974 safety standards and installed on a permanent foundation. Chapter 17.100 of the Municipal Code sets forth requirements for the Mobilehome Park Overlay (MHP) zoning district that applies the State Mobilehome Parks Act to the establishment and operation of mobilehome parks within the boundaries of the City of St. Helena.[64] Under these provisions of the Municipal Code, St. Helena fully adheres to the State standards regarding manufactured and mobile homes, and mobile home parks. Factory built housing and mobile homes are subject to subjective design review, which poses a significant constraint to development. Program H-F is included to commit the City to amending the Zoning Code to replacing subjective design review with objective design standards and SB 330-compliant streamlined review through the currently ongoing (2023) Comprehensive Zoning Code Update, scheduled for adoption in fall 2023. The Draft Zoning Code (released October 2022) incorporated objective development and design standards for residential development in compliance with State law.

Accessory Dwelling Units

Accessory dwelling units (ADUs) are defined as attached or detached dwelling units that provide independent living facilities on the same parcel as a legal single-unit or multiple-family unit dwelling, and which include permanent provisions for living, sleeping, eating, cooking, and sanitation. Due to the lower cost of construction and reduced environmental impact, the State has enacted many laws aimed at incentivizing the development of ADUs to help combat the worsening housing crisis. The State requires local governments to treat all ADUs that comply with specific standards as ministerial approvals. Local governments reserve the exclusive right to impose

[61] *City of St. Helena. St. Helena Municipal Code, Title 17.*
[62] *GCS 65852.3(a) standards include the constructed or purchased after October 1976, certified under the National Manufactured Housing Construction and Safety Standards Act of 1974, and installed on a foundation system pursuant to Section 18551 of the Health and Safety Code.*
[63] *City of St. Helena. St. Helena Municipal Code, Title 17.*
[64] *City of St. Helena. St. Helena Municipal Code, Title 17.*

specific design and development standards, which include, but are not limited to setbacks, minimum and maximum parcel size, and maximum height. Second units are exempt from the GMS in Municipal Code Section 17.152.040.

On January 10, 2023, the City adopted a new ADU Ordinance for compliance with California Government Code Sections 65852.2 and 65852.22. The City now permits ADUs or JADUs on any lot that is zoned to allow single-family dwelling residential use or multifamily dwelling residential use (including all residential, mixed-use, and agriculturally zoned parcels). The updated Ordinance also addressed compliance issues related to the definition of a cooking facility, definition of an efficiency kitchen, allowing both an ADU and JADU for conversions on a lot with an existing or proposed single-family dwelling, separate conveyance of an ADU or JADU, and restricting bedroom count, to meet the requirements of State law.

The City is currently undertaking a Comprehensive Zoning Code Update that will address any remaining compliance issues that HCD may find in their review of the newly Adopted ADU Ordinance. Program H-F in this Housing Element commits the City to revising the code for additional compliance with State law by 2026, though the City expects to adopt the Zoning Code Update in summer/fall 2023.

11. Housing Resources

Future Housing Need

State Housing Element law requires that a local jurisdiction accommodate a share of the region's projected housing needs for the planning period, called the Regional Housing Needs Allocation (RHNA). Compliance with this requirement is measured by the City's ability to provide adequate land with adequate density and appropriate development standards to accommodate the RHNA. The Association of Bay Area Governments (ABAG), as the regional planning agency, is responsible for allocating the RHNA to individual jurisdictions within the region.

For the sixth Housing Element cycle, the City of St. Helena has been allocated a RHNA of 256 units, divided into four income levels as follows:

- Very Low Income: 104 units (41 percent)[65]
- Low Income: 59 units (23 percent)
- Moderate Income: 26 units (10 percent)
- Above Moderate Income: 67 units (26 percent)

The City must ensure the availability of residential sites at adequate densities and appropriate development standards to accommodate these units by income category.

Credits Towards RHNA

Projects with housing units approved or permitted that would not be occupied before the start of the planning period can be credited towards meeting the City's RHNA. These units can count towards the RHNA based on affordability and unit count provided it can be demonstrated that the units can be built within the planning period of February 2023 through February 2031. Affordability (income category) is based on the actual or projected sale prices, rent levels, or other mechanisms establishing affordability of the units within the project. In addition, the City can project the number of Accessory Dwelling Units (ADUs) that may be built between 2023 and 2031, based on trends of ADU permitting during the last three years.

Pending or Approved/Entitled Projects

Currently there is one single-family residence and four moderate-income units, not to exceed 120 percent of the AMI, that are approved and undergoing building permit processing. In addition, there are 87 units that are pending planning/entitlement approval under the Hunter Subdivision project. While the Hunter Subdivision

[65] *The City has a RHNA allocation of 104 very low income units (inclusive of extremely low income units). Pursuant to State law (AB 2634), the City must project the number of extremely low income housing needs based on Census income distribution or assume 50 percent of the very low income units as extremely low. Therefore, the City generally estimates 52 extremely low and 52 very low income units.*

project is proposing approximately 25 affordable units, because the affordable agreements are not in place at the time of Housing Element, all unit credits were assumed to be above moderate.

On February 7, 2023, the Planning Commission approved a resolution recommending that the City Council approve the Hunter Subdivision project. The Project was presented to and discussed by the City Council at a duly noticed public hearing on May 1, 2023. A second public hearing for the project is scheduled for June 2023 where City Council action on the proposed project is expected to occur. If approved by the City Council, the applicant will need to record the tentative tract map with Napa County Recorders Office which is expected in the fall of 2023 and then submit for final map approval by the City Council in late 2023 to early 2024. The project may then undergo Design Review which could be completed within 12 months of final map approval; with the issuance of building permits expected in 2025. As referenced in Chapter 8, *Non-Governmental and Governmental Constraints*, recent trends show building permits were issued within four months of entitlement approval for recent housing unit developments, with many projects receiving building permits within a week of entitlement approval. Program H-A further ensures the City is committed to supporting the Hunter Subdivision project through completion and finding alternative solutions if the project is not meeting timelines for the 6th Cycle. As an alternate strategy should there be delays with the Hunter Subdivision beyond control of the City, such as developer financing challenges, the City has also included surplus capacity of 116 units in the above moderate-income category to ensure capacity to meet the RHNA is sustained throughout the planning period. Table 43 details the pending and entitled projects with housing units.

Table 43 Pending and Entitled Projects

Project Number	Address	APN	Zoning	Project Description	Net Units
PL20-046	777 Pratt Ave.	009-030-060	Twenty-acre Agriculture District (A-20)	Construction of a single-family residence	1 above moderate-income
PL20-015	963 Pope St.	009-090-012/013	Medium Density Residential	Construction of four (4) new deed restricted affordable housing units on a site with one (1) existing deed restricted unit.	1 moderate and 4 lower-income
#2010-40	Terminus of Adams Street	009-030-057	Medium Density Residential	Hunter Subdivision Tentative Map to subdivide the 16.9-acre parcel into 51 single-family lots and a 3.4-acre multi-family parcel. The applicant intends to construct 51 single-family residences, 11 ADUs, and 25 multi-family units.	87 above moderate-income*

**The project is subject to Inclusionary Housing requirements with 20% affordable housing.*

Projected Accessory Dwelling Units

Pursuant to Government Code Section 65583.1, the City can satisfy its regional housing need using ADU and junior accessory dwelling unit (JADU) trends and existing resources and incentives that promote their development. Using 2018-2021 data on ADUs/JADUs, the City has issued permits for approximately 9 ADUs on average. Extending this trend over the next 8 years, the City can assume approximately 72 ADU units will be permitted over the next planning period. Feedback from public outreach and research on ADU rental prices indicated that ADUs are typically rented at market rate and should be considered above moderate.

Remaining RHNA

Accounting for the entitled, approved and pending projects, as well as projected ADUs, the City has a remaining RHNA of approximately 184 units, including 159 lower- and 25 moderate-income units. Existing pending and approved projects and ADU trends currently meet the City's above moderate RHNA requirement. Table 44 details the existing progress towards the 6th cycle RHNA and the remaining RHNA that the City must demonstrate the availability of sites with appropriate zoning and development standards.

Table 44 Progress Towards RHNA

Income/ Affordability Category	RHNA Allocation	Pending or Approved	Estimated ADUs	Remaining RHNA
Lower	163	4	0	159
Moderate	26	1	0	25
Above Moderate	67	88	72	0
Total	256	92	72	184

Residential Site Inventory

Following the analysis of RHNA credits, specific sites throughout the city were considered for potential for housing development. Site selection for the residential site inventory started with City owned sites where residential development is in line with short-term City goals, then vacant and nonvacant sites zoned for residential use, and lastly sites that could be rezoned to accommodate residential development or residential development at a higher density. Several constraints were considered for each site, including environmental concerns, utility or infrastructure access, feasibility of redevelopment during the next planning period, and realistic capacity assumptions. Sites identified for lower income housing must meet certain density and site requirements, including a minimum density of 20 units per acre, parcel size between 0.5 and 10 acres, and access to high performing schools, jobs, amenities, health care facilities, and grocery stores. Zoning designations with allowable density appropriate for lower income housing capacity include Mixed Use (12-20 du/ac) and High Density Residential (16-26 du/ac).

City-Owned Sites

A review of City-owned properties for sites that are feasible for housing and reflect City priorities was conducted by the City Council in 2021. There are three City-owned properties (1480 Main Street, 1572 Railroad Avenue, and Adams Street/Library Lane) where near-term affordable housing development is in line with community and City priorities for these sites. In 2015, Vernazza Wolfe Associates, Inc conducted a *Feasibility Analysis and Comparison of Sites for New Affordable Housing Development* which looked at site feasibility and capacity for each of the three City-owned sites. The study evaluated potential risks and time to develop each site and identified the number of units, cost per unit, and funding gaps associated with each site. The analysis determined the three City-owned sites included in the site inventory are suitable for development of housing with 100 percent of units dedicated to lower-income housing. The capacity analysis factored in the size of the site, buildable footprints, maximum allowable floor area ratio and height, a ground-floor commercial

assumption, and required open and support services spaces. The inventory incorporated the 2015 site feasibility and capacity analysis and revised certain assumptions as needed based on land use changes and new density bonus law. The City is interested in redeveloping these sites and intends to conduct studies to determine the most efficient use of these sites for housing and proceed with the findings for housing development by 2025, consistent with Program H-L. In 2022, the City hired an appraiser to get the most current real estate valuation of all city surplus sites. The City is engaging the services of a consultant in spring 2023 to help begin the surplus land act process.

Site 1: 1480 Main Street (APN 009-211-016)

Table 45 Site 1 Summary

Current Use	Fire Stations and Vacant City Hall Structures
Parcel Size	1.66 acres (0.9 acres available for redevelopment)
Existing General Plan Land Use	Central Business and Public/Quasi-Public
Existing Zoning	Public/Quasi-Public
Proposed Land Use and Zoning	Mixed-Use
Allowed Density	12 to 20 units/acre
Site Capacity	22 units
Assumed Capacity and Income Category	6 Lower Income units

Site 1 is a 1.66-acre property owned by the City of St. Helena located at 1480 Main Street. City goals for the site include redevelopment of the portion of the site fronting Main Street with a visitor-serving commercial uses as a primary use and housing as a secondary use. The site is currently developed with the St. Helena Fire Department on the northern portion of the site and a vacant one-story building on the southwestern portion of the site. Only the vacant components of the site are proposed for redevelopment. A General Plan Amendment and Rezone change is proposed to change the land use and zoning designation from Central Business & Public/Quasi-Public to Mixed-Use. While the Mixed-Use Zone could potentially support 100 percent commercial development, the City has identified this site as suitable for mixed use housing development with intentions to develop.

The 2015 site feasibility and capacity analysis evaluated housing capacity of the site by analyzing current and adjacent land uses and zoning, site topography, environmental sensitivities, service connection feasibility, as well as setback, height, lot coverage, FAR, density, parking, and landscape requirements. The analysis identified two development scenarios for the site, resulting in a maximum capacity of approximately 44 units in scenario one or 46 units in scenario two. The assessment also accounted for the required number of-site parking spaces, 82 spaces in scenario one and 88 in scenario two. No environmental constraints or service connection obstacles were identified on the site. According to the analysis, development of 44 housing units would result in a building lot coverage of approximately 39 percent in both development scenarios. In the Draft Zoning Code there is currently no standard for building coverage in the proposed Mixed-Use zone, therefore the resulting lot coverage would not conflict with the City's Zoning Ordinance. Due to the existing Fire Department, the site developable area is assumed to be approximately 0.9 acres (the location of the vacant building on the southwestern portion of the site), which is approximately half the area assumed in the 2015 analysis. The inventory conservatively assumes a maximum of 6 housing units, as the site area could approximately 22 units based on half the units assumed in the 2015 study.

Site 2: 1572 Railroad Avenue (APN 009-193-002)

Table 46 Site 2 Summary

Current Use	Temporary City Hall
Parcel Size	0.93 acres
Existing General Plan Land Use	Business and Professional Office
Existing Zoning	Business and Professional Office
Proposed Land Use and Zoning	High Density Residential
Allowed Density	16.1 to 26 units/acre
Site Capacity	24 units
Assumed Capacity and Income Category	20 Lower Income units

Site 2 is a 0.93-acre property owned by the City of St. Helena located at 1572 Railroad Avenue. City goals are in line with affordable housing development on the site. This site is currently used as a temporary location for City Hall. A General Plan Amendment and Rezone is proposed to change the land use and zoning designation to High Density Residential.

The entire 0.93-acre site is able to be redeveloped with the removal of the existing buildings. Based on allowed density under High Density Residential, 24 units would be permitted as a baseline. Density bonus provisions allowed with affordable housing projects would increase the number of units permitted on-site. However, 20 lower-income units were assumed in order to ensure adequate off-street parking capacity. According to the 2015 site feasibility and capacity analysis, which evaluated housing capacity of the site by analyzing current and adjacent land uses and zoning, site topography, environmental sensitivities, service connection feasibility, as well as setback, height, lot coverage, FAR, density, parking, and landscape requirements, the site can accommodate a total of 20 housing units with adequate area for the required 38 parking spaces. According to

the 2015 assessment, development of 20 housing units on the site would result in a building lot coverage of approximately 31 percent and would be consistent with the maximum lot coverage allowed in High Density Residential zone, 45 percent. The 2015 feasibility analysis and site assessment did not identify any environmental constraints or service connection obstacles that would affect redevelopment of the site. Twenty housing units is slightly higher than 80 percent of the maximum allowable density, at 83 percent. However, given that the City owns and intends to redevelop the site for housing and that this is consistent with the findings 2015 site feasibility and capacity analysis, the development of 20 housing units on-site is considered feasible.

Site 3: Adams Street (APN 009-150-006)

Table 47 Site 3 Summary

Current Use	Vacant
Parcel Size	5.6
Existing General Plan Land Use	Central Business
Existing Zoning	Central Business
Proposed Land Use and Zoning	Central Business
Allowed Density	n/a
Site Capacity	n/a
Assumed Capacity and Income Category	31 Lower Income units

Site 3 is a 5.6-acre property owned by the City of St. Helena located at the terminus of Adams Street and the crossroads of Adams Street/Library Lane. City priorities of the site include a mix of public, commercial, and residential uses. The site is currently vacant but being leased for a small vineyard operation. No land use changes are proposed as residential uses are permitted on upper stories within the Central Business district.

The site inventory assumes a portion of the site, approximately 1.3 acres, would be dedicated for affordable housing, while the remainder of the site would be used for other public and commercial uses such as a potential location for City Hall and Police station. Based on the 2015 site feasibility and capacity analysis, which evaluated housing capacity of the site by analyzing current and adjacent land uses and zoning, site topography, environmental sensitivities, service connection feasibility, as well as setback, height, lot coverage, FAR, density,

parking, and landscape requirements, approximately 31 units could be accommodated on the portion of the site adjacent to the Public Library. The site would also accommodate 58 parking spaces where only 53 are required. According to the 2015 site feasibility and capacity analysis, development of 31 housing units on the 1.3 acre portion of the site would result in a building lot coverage of 28 percent. There is no standard for building coverage in the Central Business zone, therefore the resulting lot coverage would not conflict with the City's Zoning Ordinance. No environmental sensitivities or service connection constraints were identified for the site. This site was identified as a housing opportunity site in the 5th housing element cycle.

Privately Owned Vacant and Nonvacant Properties

After reviewing the pending and approved projects, existing ADU/JADU trends, and City-owned properties, additional capacity is needed to fully accommodate the City's RHNA and to allow for a buffer. A desktop and City tour of parcels that could accommodate more housing and meet the City's regional housing needs was conducted. Pursuant to Government Code section 65583.2(a), these included:

- Vacant sites zoned for residential use
- Vacant sites zoned for nonresidential use that allow residential development
- Residentially zoned sites that are capable of being developed at a higher density than existing conditions
- Commercially zoned sites that are capable of being developed at a higher residential density than existing conditions
- Sites suitable for rezoning to allow for residential uses or allow residential uses at a high density
- Sites zoned for residential use or suitable for rezoning to allow residential uses with expressed property owner interest for residential development

Suitability of Nonvacant Sites

The City has recently seen redevelopment of nonvacant, residentially zoned parcels for housing development. Recently redeveloped parcels included those with existing single-family residences. In addition, the City has recently seen the development of housing on sites with existing vineyards. Examples of recent development trends in residential zones and on properties with existing vineyards include the following:

- 632 McCorkle Avenue: The completed project demolished an existing single family residence to construct 8 new housing units
- 684 McCorkle Avenue: The completed project demolished an existing single family residence to construct 8 new, affordable housing units
- 963 Pope Street: The approved project merged two existing parcels with an existing single family home and constructed 4 new multi-family housing units; all 5 units will be affordable
- 500 Mills Lane: The completed project constructed a single-family residence, ADU, and barn on a property with an existing vineyard

- 601 Fulton lane: The completed project constructed a single-family residence, ADU, and barn on a property with an existing vineyard

The site inventory identified nonvacant residentially zoned sites with similar conditions to trends detailed above (nonvacant sites with existing, single-family residences). The projects listed above were infill sites that redeveloped parcels with existing single family residences with multi-family developments and affordable housing. These projects were located on parcels zoned Medium and High Density Residential. The conditions and characteristics of these projects are similar to Sites 6, 7, and 9 which each have one existing single-family residence and are zoned Median and High Density Residential.

The 632 McCorkle Avenue project had a density of 14.9 units per acre which is 57 percent of the maximum allowed density of the site, the 684 McCorkle Avenue project had a density of 14.7 units per acre which is 56 percent of the maximum allowed density, and the 601 Fulton Lane project had a density of 17.1 units per acre which is 107 percent of the maximum allowed density. The recent redevelopment projects have an average density of 15.5 units per acre, which equates to an average of 73 percent of the maximum allowed density on each site. The site inventory assumes a capacity of approximately 80 percent of the maximum allowed density on each site. This is slightly higher than the average density of recently constructed and approved projects. However, the sites identified in the inventory are larger than the recent redevelopment projects listed above which allows for more efficient layout and greater capacity for development. In addition, two of the three recently redeveloped sites were narrow parcels where the parcel size and shape limited the configuration and available area for housing development on-site.

Other jurisdictions in the region have also seen redevelopment of nonvacant, residentially zoned parcels for housing development as well. Additional redevelopment projects on nonvacant, residentially zoned parcels in the region include the following:

- City of Calistoga – 2008 Grant Street: The approved project includes demolition of an existing residential structure, a three-sided wooden garage, and a large, fire-damaged shed on a 5.84-acre parcel and construction of 15 single-family homes
- City of Calistoga – Yellow Rose Ranch: The proposed project consists of the demolition of an existing single-family residence, barn, and four accessory buildings and construction of 46 single-family homes, 33 attached ADUs, and 12 detached ADUs
- City of Napa - Browns Valley Subdivision: The proposed project includes the demolition of a single-family residence, barn, and several outbuildings and construction of 11 single-family homes
- City of Napa – Old Sonoma Road Mixed Use: The proposed project includes the demolition of nine existing non-historic buildings and rehabilitation of three existing historic buildings into two townhome clusters, six new condominium structures, eight single-family homes, and commercial space. The project proposes a total of between 155 and 162 housing units.

- City of Napa – Redwood Grove Housing: The proposed project includes the removal of an existing single-family residence and construction of a two-story, 34-unit, multi-family, 100 percent affordable housing development.

Site 4: 905 Main Street (APN 009-180-008)

Table 48 Site 4 Summary

Current Use	Vacant
Parcel Size	0.27 acres
Existing General Plan Land Use	Mixed-Use
Existing Zoning	Service Commercial
Proposed Land Use and Zoning	Mixed-Use
Allowed Density	12 to 20 units/acre
Site Capacity	5 units
Assumed Capacity and Income Category	4 Above Moderate Income units

Site 4 is a 0.27-acre property located at 905 Main Street. The property is a vacant site in a location prime for development along Main Street. The property owner has expressed interest in development of the site with housing and community members have expressed support for this use. A zoning change is proposed to change the zoning designation from Service Commercial to Mixed-Use, which would bring the property into conformance with the existing General Plan land use designation and incentivize owner redevelopment of the site due to the new allowed on-site uses. In addition, mixed-use development incentives anticipated under Program H-P, such as streamlined design review and fee waivers, would further encourage development of housing on the site. The Mixed-Use land use designation is a new designation introduced in the City's recent 2040 General Plan Update. The City is currently in the process of updating the Zoning Ordinance to include a Mixed-Use zone consistent with the General Plan and anticipates to adopt these changes in Fall of 2023. Because the Mixed-Use zone has not yet been adopted in the Zoning Ordinance, there are no recent development trends in the city for sites zoned Mixed-Use. According to the City of Napa's Housing Element Update, two recent mixed-use projects in the city had an average of 92 percent of the maximum allowed

density of the sites. Napa's sites inventory assumed a realistic density of 80 percent of the maximum allowed density of each site based on the density of recent mixed-use developments, which averaged 83 percent of the maximum allowed density.[66] There is potential that Site 4 could be developed with 100 percent commercial uses. However, the inventory only includes one site with a Mixed Use land use and only a total of four above-moderate housing units. In addition, the property owner has expressed to the City that they are interested in developing housing on the site. The site is vacant, and the entire 0.27-acre site is able to be developed. Based on 80 percent of the maximum allowed density under Mixed-Use, four above-moderate income units are feasible.

[66] City of Napa. 2022. Housing Element Update. file:///C:/Users/lsegal/Downloads/Napa%20Housing%20Element%20Rev%2002%2020230216.pdf

Site 5: Main Street between Mills Lane and Dowdell Lane (APN 009-660-005)

Table 49 Site 5 Summary

Current Use	Vacant
Parcel Size	1.8 acres
Existing General Plan Land Use	Service Commercial
Existing Zoning	Service Commercial
Proposed Land Use and Zoning	High Density Residential
Allowed Density	16.1 to 26 units/acre
Site Capacity	45 units
Assumed Capacity and Income Category	45 Lower Income units

Site 5 is a 1.8-acre property located on Main Street between Mills Lane and Dowdell Lane. The property is a vacant site in a location prime for development along Main Street. The site is privately owned currently but a local affordable housing non-profit has secured an exclusive option to purchase the property to develop affordable housing, consistent with an approved development agreement for the Farmstead Hotel. A General Plan Amendment and Rezone is proposed to change the land use and zoning designation from Service Commercial to High Density Residential to allow for affordable housing development. The affordable housing project is in the preliminary site design phase which is pending pursuant to adoption of the Housing Element Update and subsequent rezoning of the property to accommodate multi-family housing.

The entire 1.8-acre site is vacant and able to be developed. Based on allowed density under High Density Residential, a total of 45 housing units would be permitted. The affordable housing non-profit organization that owns the site intends to develop a housing project affordable to households earning between 30 percent and 60 percent of the AMI (very low- and low-income). A conceptual site plan was analyzed which determined

four-story development along Fountain Court and three-stories along Main Street with structured parking could yield approximately 45 units and all required parking spaces. The inventory assumes 45 units. While this is greater than 80 percent of the maximum allowable density of the site, it is consistent with the non-profit's project plans and less than the maximum density of the project site (46 units).

Site 6: 709 McCorkle Avenue (APN 009-100-031)

Table 50 Site 6 Summary

Current Use	Single Family Residences
Parcel Size	0.9 acres
Existing General Plan Land Use	Medium Density Residential
Existing Zoning	Medium Density Residential
Proposed Land Use and Zoning	Medium Density Residential
Allowed Density	14 units/acre
Site Capacity	5 units
Assumed Capacity and Income Category	4 Above Moderate Income units

Site 6 is composed of a 0.9-acre property located at 709 McCorkle Avenue. The property is underutilized with one existing single family residence and a large undeveloped space. The site is considered underutilized based on the additional density, FAR, height, and lot coverage available. The property owner along with community members and local nonprofit groups expressed interest in developing more housing on the site. The property owner inquired with the City regarding the possibility of subdividing the property pursuant to SB9, which would allow the lot to be split into two lots with development of up to two units on each lot. The current land use and zoning designation is Medium Density Residential and no changes to land use or zoning are proposed.

The site is composed of a single family lot which could accommodate 14 units under current land use regulations. Due to the existing residence on the site, the inventory conservatively assumed additional units would be added pursuant to SB 9. Each lot can be split into two lots with development of up to 2 units on each

lot, for a total of 4 above moderate units (a net increase of 3 units). In addition, each lot could develop ADUs for a total net capacity of 5 units. However, a total of 4 above moderate income units were assumed, given the property owner's development interests.

Site 7: 821 Pope Street (APN 009-503-001)

Table 51 Site 7 Summary

Current Use	Single Family Residence
Parcel Size	1.0 acres
Existing General Plan Land Use	High Density Residential
Existing Zoning	High Density Residential
Proposed Land Use and Zoning	High Density Residential
Allowed Density	16.1 to 26 units/acre
Site Capacity	26 units
Assumed Capacity and Income Category	10 Lower Income and 10 Moderate Income units

Site 7 is a 1.0-acre property located at 821 Pope Street. The site is underutilized with one existing single-family residence and large undeveloped areas on-site. The site is considered underutilized based on the additional density, FAR, height, and lot coverage available. Land use designations and existing development surrounding the site consist of multi-family housing. The current land use and zoning designation is High Density Residential and no changes to zoning are proposed. This site mirrors the condition of properties that were recently redeveloped with multi-family housing in the city. Similar to the 632 McCorkle Avenue, 684 McCorkle Avenue, and 963 Pope Street projects, this site contains existing single family residences on a large parcel but is underutilized as it is located on a High Density Residential zone

The entire 1.0-acre site is able to be redeveloped. Based on allowed density under High Density Residential, development of 26 units would be permitted. However, a total of 20 units, 10 lower income units and 10 moderate income units, is assumed in order to accommodate off-street parking capacity.

This site was included in the 5th Cycle Housing Element and is considered non-vacant, therefore requiring by-right approval for projects with at least 20% affordable units.

Site 8: 882 and 886 College Avenue (APN 009-070-043, -044, -045)

Table 52 Site 8 Summary

Current Use	Vacant
Parcel Size	1.5 acres
Existing General Plan Land Use	Public/Quasi-Public
Existing Zoning	A-20 (Agriculture)
Proposed Land Use and Zoning	High Density Residential
Allowed Density	16.1 to 26 units/acre
Site Capacity	39 units
Assumed Capacity and Income Category	15 Lower Income and 15 Moderate Income units

Site 8 is composed of three adjacent properties that total 1.5 acres located at 882 and 886 College Avenue. All three properties are vacant and are owned by a single property owner who has expressed interest in residential development on these properties. The site is adjacent to areas with existing multi-family development. A General Plan Amendment and zoning change is proposed to change the land use and zoning designation from Public/Quasi-Public and Agriculture to High Density Residential.

The entire 1.5-acre site is able to be redeveloped. Based on allowed density under High Density Residential, 39 units would be permitted. However, a total of 30 units, 15 lower-income units and 15 moderate income units, is assumed in order to accommodate off-street parking capacity. Future development of the site would not be dependent upon lot consolidation as all three parcels are under the same ownership. Furthermore, Program H-ZZ would incentivize lot consolidation at the time the property is developed.

Site 9: 1447 and 1515 Spring Street (APN 009-590-003, -010)

Table 53 Site 9 Summary

Current Use	Single Family Residences
Parcel Size	2.4 acres
Existing General Plan Land Use	High Density Residential
Existing Zoning	High Density Residential
Proposed Land Use and Zoning	High Density Residential
Allowed Density	16.1 to 26 units/acre
Site Capacity	62 units
Income Category	24 Lower Income and 24 Above Moderate Income units

Site 9 is composed of two adjacent properties that total 2.4 acres located at 1447 and 151 Spring Street. Both properties are underutilized with one existing single-family residence and large undeveloped areas on each parcel. The overall site is considered underutilized based on the additional density, FAR, height, and lot coverage available. This site mirrors the condition of properties that were recently redevelopment with multi-family housing in the city. Similar to the 632 McCorkle Avenue, 684 McCorkle Avenue, and 963 Pope Street projects, this site contains existing single family residences on large parcels but is underutilized as it is located on a High Density Residential zone. The site is surrounded by single- and multi-family development and sites zoned High Density Residential, similar to the 632 McCorkle Avenue and 684 McCorkle Avenue projects. The current land use and zoning designation is High Density Residential and no changes to zoning are proposed.

The entire 2.4-acre site is able to be redeveloped. Based on allowed density under High Density Residential, 62 units would be permitted. However, a total of 48 units, 24 lower income units and 24 above moderate income units, is assumed in order to accommodate site circulation improvements and adequate off-street parking

capacity. The site is currently underutilized and does not meet the minimum density of the High Density Residential Zone (16.1 units/acre) with a current density of 0.83 units/acre. The site has two existing housing units, which equals approximately three percent of the total allowed capacity of the site (62 units). The existing building lot coverage is approximately eight percent and the maximum allowed lot coverage is 45 percent. Future development of the site would not be dependent upon lot consolidation as all three parcels are under the same ownership. Furthermore, Program H-ZZ would incentivize lot consolidation at the time the property is developed.

This site was included in the 5th Cycle Housing Element, therefore requiring by-right approval for projects with at least 20% affordable units.

Site 10: Spring Street between Hudson Avenue & Valley View Street (APN 009-441-023)

Table 54 Site 10 Summary

Current Use	Vineyard
Parcel Size	4.4 acres
Existing General Plan Land Use	Medium Density Residential
Existing Zoning	Medium Density Residential
Proposed Land Use and Zoning	High Density Residential
Allowed Density	16.1 to 26 units/acre
Site Capacity	114 units
Assumed Capacity and Income Category	44 Lower Income and 44 Moderate Income units

Site 10 is a 4.4-acre parcel located on Spring Street between Hudson Avenue and Valley View Street. Recent property owner interest in residential development of the site indicates opportunity for housing. Additionally, Focus Group meetings showed interest in High Density Residential uses on this residentially zoned parcel in the form of town homes, which is compatible with the surrounding residential neighborhoods. The site is considered underutilized as it has a residential land use designation but is currently used as vineyards. As previously discussed, the City has seen recent development of housing on properties with existing vineyards. Site 10 has greater development potential than the recently developed vineyard parcels since it is is located on a residentially zoned parcel, while the 500 Mills Lane and 601 Fulton Lane projects were located on parcels with a land use and zoning designation of Agriculture and therefore are only allowed to develop one housing unit and one ADU per parcel. A General Plan Amendment and zoning change is proposed to change the zoning from Medium Density Residential to High Density Residential.

The entire 4.4-acre site is able to be redeveloped. Based on allowed density under High Density Residential, 114 units would be permitted. However, a total of 88 units, 44 lower income units and 44 moderate income units, is assumed in order to accommodate adequate off-street parking capacity.

This site was included in the 5th Cycle Housing Element and is considered non-vacant, therefore requiring by-right approval for projects with at least 20% affordable units.

Site 11: 1637 Spring Street (APN 009-600-018)

Table 55 Site 11 Summary

Current Use	8 Detached Residential Housing Units
Parcel Size	1.1 acres
Existing General Plan Land Use	Medium Density Residential
Existing Zoning	High Density Residential
Proposed Land Use and Zoning	High Density Residential
Allowed Density	16.1 to 26 units/acre
Site Capacity	28 units
Assumed Capacity and Income Category	8 Additional Lower Income units

Site 11 is a 1.1-acre parcel located at 1637 Spring Street. Recent property owner interest in adding housing units on-site indicates there is opportunity to develop additional housing. The property owner emailed City Staff on March 7, 2022, interested in the development of additional housing units on the property . The property owner stated a desire to double the number of housing units on the site and expressed support for changing the land use designation from Medium Density Residential to High Density Residential, to match the current zoning. Further, correspondence with the property owner confirmed they are interested in including the site in the site inventory. The land use designation of the site is currently Medium Density Residential, changed from High Density Residential during the latest General Plan Update in 2019. However, the site is still zoned High Density Residential and is adjacent to other parcels zoned High Density Residential. A General Plan Amendment is proposed to change the land use designation from Medium Density Residential to High Density Residential, in conformance with the current zoning designation.

Based on allowed density under High Density Residential, a total of 28 units would be permitted. With the existing 8 units and current on-site structures, the site is underutilized based on density, FAR, and lot coverage. Based on discussions with the property-owner and existing site layout, approximately 8 additional units could

be accommodated on-site. Therefore, the inventory assumed 8 lower income units, resulting in 16 units total on-site, based on the property owner's development interests. The site is underutilized and currently does not meet the minimum density of the High Density Residential Zone (16.1 units/acre) with a current density of 7.3 units/acre. The site has 8 existing housing units, which equals approximately 29 percent of the total allowed capacity of the site (28 units). The existing building lot coverage is approximately 30 percent and the maximum allowed lot coverage is 45 percent.

Site 12: 620 McCorkle Avenue (APN 009-502-003)

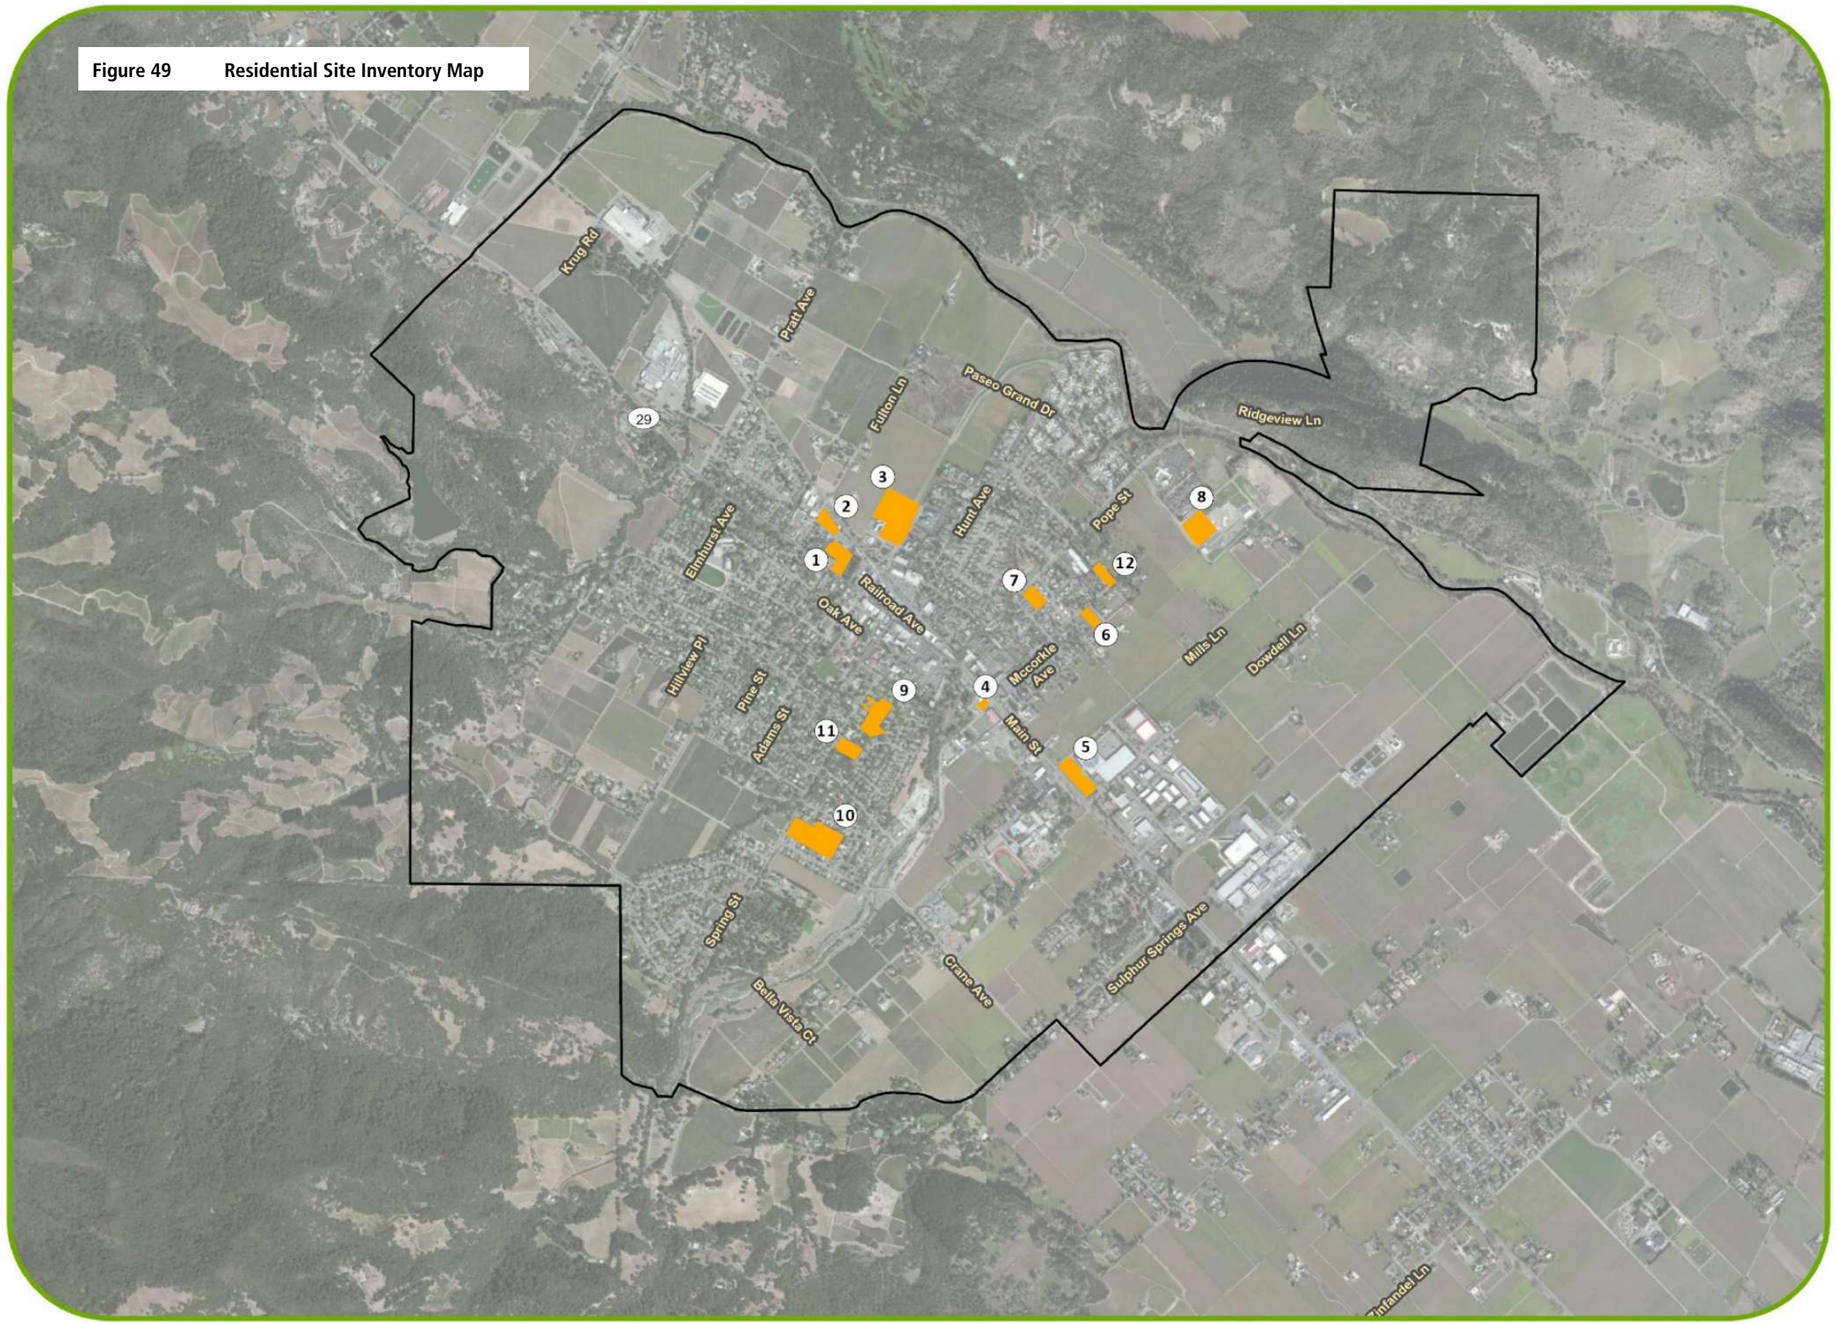
Table 56 Site 12 Summary

Current Use	Single Family Residence
Parcel Size	0.76 acres
Existing General Plan Land Use	Medium Density Residential
Existing Zoning	Medium Density Residential
Proposed Land Use and Zoning	Medium Density Residential
Allowed Density	5.1 to 16 units/acre
Site Capacity	12 units
Assumed Capacity and Income Category	3 Additional Above Moderate Income units

Site 12 is a 0.76-acre parcel located at 620 McCorkle Avenue. The site is considered underutilized as it is zoned medium density residential but is currently developed with a single family residence. The site is considered underutilized based on the additional density, FAR, height, and lot coverage available. The site is surrounded by single- and multi-family development and properties zoned Medium and High Density Residential. In addition, community feedback from public meetings and public comment letters have shown the site is a strategic location for housing and the community is interested in including this site in the site inventory. The current land use and zoning designation is Medium Density Residential and no changes to zoning are proposed. This site also is adjacent to recent redeveloped sites at 632 McCorkle Avenue and 684 McCorkle Avenue, which removed an existing single-family residence with multi-family units.

The entire site could accommodate approximately 12 units based on allowed density alone. However, three additional above-moderate income units are assumed in order to accommodate adequate off-street parking capacity and existing residential uses. Therefore, the inventory assumed three additional above moderate income units, resulting in four units total onsite.

Summary of Site Inventory



In combination with the City's pending projects and ADU development trends, the site inventory provides adequate sites to meet the City's RHNA allocation and buffer requirements. Between these three methods, the city can accommodate a total of 472 housing units, including 207 lower-income, 70 moderate-income, and 195 above moderate-income units. Table 57 shows a summary of the number of housing units accommodated by pending projects, ADU trends, and the site inventory.

Table 57 Summary of Housing Units

	Lower Income	Moderate Income	Above Moderate Income	Total
Pending Projects	4	1	88	93
ADU Trends	0	0	72	72
Site Inventory

Availability of Infrastructure and Services

The City of St. Helena is dedicated to improving existing and new infrastructure and facilities to support existing and future development. The City's annual budget devotes funds towards the Public Works Department which provides design, construction, maintenance, and operation of public facilities and infrastructure within the city. Public Works is responsible for infrastructure including streets, storm drains, parks, water treatment, water distribution, wastewater collection, and wastewater treatment. Environmental compliance services provided by Public Works also includes storm water pollution prevention, sustainability, protection of public trees and floodplain administration, response to infrastructure and weather emergencies. The city's existing infrastructure system may require minor upgrades to address age and condition-related issues. New construction would be located in areas served by existing infrastructure.

The Integrated Urban Master Plan analyzed future infrastructure and water supply capacity accounting for planned development within the city, including the Hunter Subdivision project, and estimated buildout proposed under the 2040 General Plan, which would be about 7,400 residents by the year 2040. The City's RHNA plans for the addition of a total of 256 housing units within the planning period. Currently the city has a population of approximately 6,073. Therefore, the additional 256 units would not exceed buildout assumed in the Master Plan.

Wastewater System

The City's Integrated Utility Master Plan was adopted in 2021 and serves as the guiding document for planning and implementing sewer system improvements through the year 2040. The plan is consistent with the population, land use, employment, and housing projections presented in the 2040 General Plan. The City also has a Sewer System Management Plan that was developed in 2006 and last updated in April 2016. The City's sewer system service area consists of the City limits and includes approximately 24 miles of active gravity sewer pipelines, 0.4 miles of force mains, and two lift stations that convey flow to the Wastewater Treatment Plant. Improvements to the Wastewater Treatment Plant began in 2022 to adhere to stricter environmental requirements and are expected to be completed in 2023.

A capacity analysis of the existing wastewater collection system showed a storm event would result in multiple pipeline capacity deficiencies and sanitary sewer overflows at several locations with the existing system. Wastewater collection systems improvement projects proposed by the Utility Master Plan included gravity main improvements with pipeline replacement and lift station improvements. These improvements would be constructed based on prioritization within the Master Plan and developed as a Capital Improvement Project. The improvements would be financed through City budgeting and collection of project impact fees. As discussed under the Government Constraints section, impact fees in the city do not represent a constraint to housing.

Potable Water System

The City's Integrated Utility Master Plan serves as the guiding document for planning and implementing water system improvements through the year 2040, consistent with growth under the 2040 General Plan. Previously, the City utilized the Water Master Plan, developed in 2006, to identify infrastructure need to the year 2020. The City's water system service area extends beyond the City limits to unincorporated areas in the Meadowood Napa Valley Resort/Neighborhood area and area between Chaix Lane and Zinfandel Lane along Main Street. There are three main water supply sources: Bell Canyon Reservoir, Stonebridge wells, and an interconnection with the City of Napa. The City's water system consists of approximately 47 miles of water distribution pipelines.

A capacity analysis of the existing water distribution system showed there is one pump station, the Holmes pup station, that does not have sufficient firm pumping capacity to meet maximum day demand. Evaluation of the existing treated water storage system capacity found one area that does not have adequate capacity to meet peak hour demand, fire flow storage, and emergency storage. Improvement projects proposed by the Utility Master Plan to prevent system failures caused by leaks, fails, and main breaks include rehabilitation and replacement of water main and transmission lines, which would enable the City to meet potable water demands. The potable water improvements would be constructed based on prioritization within the Master Plan and developed as a Capital Improvement Project. The improvements would be financed through City budgeting and collection of project impact fees. As discussed under the Government Constraints section, impact fees in the city do not represent a constraint to housing.

Storm Water System and Drainage System

The City's Integrated Utility Master Plan guides planning and implementing the storm drainage system improvements through the year 2040 with growth projections consistent with the 2040 General Plan. Previously, the Storm Drainage Master Plan, developed in 2000, served as the City's guide to analyze the existing storm drain system and plan for implementation of improvements. The City's storm drainage collection system service area consists of the city limits and includes street drainage, inlets, gravity pipelines, open channels, one storm water detention basin, and 33 outfalls that discharge in Sulphur Springs Creek, York Creek, or Napa River.

Evaluation of existing storm drainage capacity showed there would be multiple areas of flooding throughout the system in the event of a 10-year, 50-year, and 100-year storm. Improvement projects proposed by the Utility Master Plan to mitigate storm water system capacity issues include implementing an annual storm drain rehabilitation and replacement program with the assumption that approximately 1.25 percent of the system would be replaced per year until 2040. Storm water infrastructure upgrades would be constructed based on prioritization within the Master Plan and developed as a Capital Improvement Project. The improvements would be financed through City budgeting and collection of project impact fees. As discussed under the Government Constraints section, impact fees in the city do not represent a constraint to housing.

Dry Utilities

PG&E is responsible for supplying electricity and natural gas to the City and surrounding areas. Other dry utilities such as telephone and data services and cable television are serviced by contracted providers within the city, including Xfinity and AT&T.

Circulation System

The City's Circulation Element, updated in 2019 along with the General Plan, identifies the principal components of the City's circulation system and issues related to parking, public transit, and pedestrian and bicycle infrastructure. The Circulation Element also includes standards and guiding principles for implementing transportation improvements.

The City's street network is largely grid based with some streets east of State Route 29 that are not fully connected to the network. State Route 29 (Main Street) is the main street used for traveling north-south throughout the city and is the main route for vehicles traveling between Lake County, northern Sonoma County, and the City of Napa and other destinations further south. It runs northwest to southeast through the city and divides the city in two. Congestion along State Route 29 is a major issue within the city and pushes traffic onto local city streets. Much of the traffic congestion seen in the city is caused by tourists traveling throughout the region. The primary transit option in the city is the Vine bus service, however ridership is low with only 0.9 percent of St. Helena residents commuting via transit. Future improvements to the City's transportation network include improvements aimed at reducing congestion along State Route 29 and enhancing alternative modes of travel, including the addition of pedestrian and bicycle infrastructure.

Environmental Constraints

In 2019, the City certified a FEIR with the 2040 General Plan Update that analyzed all potential environmental impacts associated with the population and development growth proposed under the plan. City Council also adopted CEQA Findings and a Statement of Overriding Considerations identifying public benefits that override the significant and unavoidable impacts of the General Plan, including agricultural preservation, a balanced mix of land uses and sustainable land use pattern, creation of construction jobs, managing effects of regional traffic, and a shift to a multi-modal circulation system. Environmental clearance for future development projects may tier from the General Plan FEIR, thereby expediting the approval process. Mitigation measures set forth in the FEIR include measures to minimize impacts associated with potential flooding, and other environmental constraints.

There are no known conditions that would preclude any of the selected sites from being developed within the planning period. Sites 4 and 7 are located in the Federal Emergency Management Agency (FEMA) flood hazard zone, Zone X, an area of moderate- to low-risk. Development within Zone X would not preclude the properties from development, as future development would be subject to development standards contained within the Saint Helena Municipal Code, which incorporates FEMA standards for construction in flood hazard zones, as well as relevant policies within the City's General Plan which regulate development in flood risk areas. In

addition, future development would comply with applicable mitigation measures within the 2040 General Plan EIR, including HYDRO-1 which ensures that no development will impede waters in the floodway, raises base flood levels, or expose housing to undue risk from flooding. The remaining sites are not located within a FEMA flood zone. None of the sites are located within a state of local fire hazard severity zone.

1. Introduction

In 2018, the California State Legislature passed Assembly Bill (AB) 686 to expand upon fair housing requirements and protections outlined in the Fair Employment and Housing Act. The law requires all State and local public agencies to facilitate deliberate action to explicitly address, combat, and relieve disparities resulting from past patterns of segregation to foster more inclusive communities. AB 686 created new requirements that apply to all housing elements due for revision on or after January 1, 2021. The passage of AB 686 protects the requirement to affirmatively further fair housing within State law.

AB 686 defined "affirmatively further fair housing (AFFH)" to mean "taking meaningful actions, in addition to combat discrimination, that overcome patterns of segregation and foster inclusive communities free from barriers that restrict access to opportunity." AB 686 added an assessment of fair housing to the Housing Element which includes the following components:

- A summary of fair housing issues and assessment of the City's fair housing enforcement and outreach capacity
- An analysis of segregation patterns and disparities in access to opportunities
- An assessment of contributing factors
- An identification of fair housing goals and actions.[67]

1.1 Approach to Analysis

This AFFH analysis is consistent with the 2021 California Department of Housing and Community Development's Affirmatively Furthering Fair Housing Guidance for All Public Entities and for Housing Elements (AFFH Guidance Memo) which provides guidance on the preparation of housing elements and ensures statutory requirements are satisfied, pursuant to Government Code Section 65583(c)(10).

This AFFH analysis evaluates fair housing issues on the following topics:

1. Fair Housing Enforcement and Outreach Capacity
2. Integration and Segregation Patterns and Trends
3. Racially and Ethnically Concentrated Areas of Poverty
4. Disparities in Access to Opportunity
5. Disproportionate Housing Needs

[67] *Housing and Community Development (HCD). 2021. https://www.hcd.ca.gov/community-development/affh/index.shtml*

6. Other Relevant Factors, including historical disinvestment, lack of infrastructure improvements, and presence of older affordable housing units that may be at risk of conversion to market-rate housing.

Fair housing priorities goals and actions are also provided specific to St. Helena to address as implementation actions for the Housing Element. The goals and actions address the major contributing factors for the topics above.

1.2 Fair Housing Methodology

The California Government Code Section 65583 (10)(A)(ii) requires cities and counties to analyze areas of segregation, racially or ethnically concentrated areas of poverty, disparities in access to opportunity, and disproportionate housing needs, including displacement risk.

To conduct this analysis, the City utilized data from a variety of sources, including:

- The Housing and Community Development (HCD) AFFH Data Viewer
- AFFH Segregation Report by ABAG
- Napa Sonoma Collaborative
- Urban Displacement Project (UDP)
- U.S Housing and Urban Development (HUD)
- CalEnviroscreen
- California Tax Credit Allocation Committee (TCAC)
- The Comprehensive Housing Affordability Strategy (CHAS)
- US Census American Community Survey (ACS)
- AllTransit
- Walk Score

Additionally, the analysis includes input from sources of local knowledge, including special needs groups, housing advocacy organizations, housing and services providers, and residents.

1.2.1 Housing and Community Development's AFFH Viewer

The AFFH Data Viewer is a tool developed by HCD that features census block group and tract level data from an expansive collection of sources including ACS, HUD, TCAC, UDP, and CHAS. The Data Viewer tool serves as a resource for local and regional governments and provides the ability to explore spatial data patterns concerning fair housing enforcement, segregation and integration, racially and ethnically concentrated areas of poverty, and disparities in access to opportunities and housing. The Data Viewer is

intended to assist in the creation of policies that alleviate disparities, combat discrimination, and increase access to safe and affordable homes.

1.2.2 AFFH Segregation Report

The University of California, Merced and STIR Labs, on behalf of ABAG, prepared reports for jurisdictions in California studying segregation patterns and current land use policies that correlate with patterns of racial segregation. The report for St. Helena addresses racial and income segregation using the racial isolation index, racial dissimilarity index, and Thiel's H-Index at the neighborhood level within and regional level.

1.2.3 Napa Sonoma Collaborative

The Napa Sonoma Collaborative (NSC) is a collaboration between Napa and Sonoma Counties that aims to address housing challenges within the region. NSC is made up of housing staff from jurisdictions within Napa and Sonoma Counties and is working to raise awareness and increase participation in the Housing Element update process. The collaborative conducted outreach to gather information on fair housing issues within local communities and discuss constraints to affordable housing.

1.2.4 Urban Displacement Project (UDP)

The UDP was developed to track neighborhood change and identify areas that are vulnerable to gentrification and displacement in California. Indicators of gentrification and displacement are measured at the census tract level based on data from the 2015 ACS. UDP indicators examine census tracts to identify areas that qualify as disadvantaged neighborhoods. Additionally, census tracts identified as disadvantaged neighborhoods by UDP's criteria are further analyzed to explore changes in the percentage of college educated residents, non-Hispanic White population, median household income, and median gross rents over time to determine levels of gentrification and displacement risk.

1.2.5 CalEnviroscreen

The California Office of Environmental Health Hazard Assessment developed a screening methodology to identify communities disproportionately burdened by multiple sources of pollution. This tool, called the California Communities Environmental Health Screening Tool (CalEnviroScreen), utilizes existing environmental, health, and socioeconomic data to rank census tracts based on 20 distinct indicators. In general, if a community has a high score for that indicator, it is more impacted by pollution burdens and population vulnerabilities compared to other communities. Designated disadvantaged communities are those with CalEnviroScreen percentile scores of 75 or higher, meaning that they scored within the highest 25 percent of census tracts across California. There are no disadvantaged communities in St. Helena.

1.2.6 California Tax Credit Allocation Committee (TCAC)

HCD and the TCAC created the California Fair Housing Task Force to provide research, evidence based policy recommendations, and other strategic recommendations to HCD and other related state

agencies/departments to further the fair housing goals.[68] The Task Force created the AFFH Data Viewer, an interactive mapping tool to assess population and housing characteristics related to fair housing and access to opportunity to aid in the development of policy for the promotion of equitable and inclusive communities. The data viewer includes Opportunity Maps made from composite scores of three different domains made up from a set of indicators data shown in Table 1. The Opportunity Maps include a measure or "filter" to identify areas with poverty and racial segregation. To identify these areas, census tracts were first filtered by poverty and then by a measure of racial segregation. The criteria for these filters were:

- **Poverty Status.** Census tracts with at least 30 percent of population that earned an income that was below the federal poverty level.
- **Racial Segregation.** Census tracts with a location quotient that is higher than 1.25 for Black, Hispanic, Asians, or all non-White populations in comparison to the county.

Table 1 Domains and List of Indicators for Opportunity Maps

Domain	Indicator
Economic	Poverty, Adult Education, employment, Job proximity, median home value
Environmental	CalEnviroScreen 3.0 pollution indicators and values
Education	Math proficiency, reading proficiency, high school graduation rates, student poverty rates

Source: California Fair Housing Task Force, Methodology for the 2020 TCAC/HCD Opportunity Maps, December 2020

1.2.7 AllTransit

AllTransit is an online database that details transit opportunity for communities. The website explores metrics that reveal the social and economic impact of transit, specifically looking at connectivity, access to jobs, and frequency of service. The AllTransit performance score explores metrics that reveal the social and economic impact of transit, such as connectivity, access to jobs, and frequency of service.

1.2.8 Walk Score

Walk Score provides walkability services and apartment search tools to addresses across the United States, with the mission "to promote walkable neighborhoods." Walk Score measures walkability by assigning a numerical walkability score based on distance to amenities within a 30-minute walk and evaluates pedestrian friendliness by analyzing population density and road metrics, including block length and intersection density.

[68] *Office of The State Treasurer (STO). 2021. https://www.treasurer.ca.gov/ctcac/opportunity/2020-tcac-hcd-methodology.pdf*

1.2.9 Community Engagement and Outreach

As part of the Housing Element Update, the City implemented a community engagement program, soliciting input from the general public, housing stakeholders, and City decision makers. Results and feedback obtained during the community engagement program have been incorporated into the Housing Element, including this section on affirmatively furthering fair housing practices. Please see Chapter 1 for more details on the City's outreach efforts.

2. Summary of Fair Housing Issues

This summary guides the prioritization of contributing factors to fair housing issues and the creation of goals and actions to address these issues. Fair housing issues are conditions that restrict fair housing choice or access to opportunity in the geographic area of interest. Fair housing choice means realistic housing opportunities exist, can be accessed without discrimination towards protected characteristics such as race, color, religion, sex, disability, etc., and are informed with adequate information regarding options.

2.1 Regional Trends

Impediments to fair housing within Napa County, and the Bay Area as a whole, include the following:

- Residential segregation between White residents and non-White residents has increased in the last decade.
- Areas with higher percentages of non-White residents generally have less access to proficient schools, jobs, and cleaner air and water.
- Median rental prices rose an approximately $483 (unadjusted for inflation) since 2009, from $1,087 to $1,570, an increase of 44.4 percent in a 10-year period.
- The average home value increased from approximately $319,926 to $768,414 in less than 20 years, from 2001 to 2020 (unadjusted for inflation).
- Housing Choice Voucher holders and those with disabilities often find it difficult to find an appropriate housing unit based on located a unit of appropriate size and/or cost.
- Disability, race, and familial status are the most common bases of housing discrimination complaints forwarded to the California Department of Fair Employment and Housing and the Office of Fair Housing and Equal Opportunity.

2.2 Local Trends

Contributing factors identified as impediments to fair housing in St. Helena are discussed in detail below and include descriptions of how each impediment is addressed in this Housing Element.

2.2.1 Concentrations of Lower- and Moderate-Income Earning Populations

HUD defines a Lower and Moderate Income (LMI) area as a census tract or block group where over 51 percent of the population earn an income that is considered lower or moderate relative to the area median income. In St. Helena, residents with low and moderate household incomes are concentrated in the eastern portion of the city. The Housing Element ensures available land to accommodate all income levels on sites located across the city. Efforts to combat this impediment are outlined in Programs H-A, H-B, H-N, H-O, H-R, H-U, H-V, H-W and H-OO, which focus on maintaining an inventory of sites suitable for residential development and prioritize and incentivize housing development for lower- and moderate-income residents in the western portion of the city.

2.2.2 Insufficient Housing Stock for Farmworkers

Farmworker housing is a critical need in Napa County and St. Helena due to the presence of year-round agricultural production. The migratory and sometimes seasonal nature of farm workers pose housing challenges for a community and are seen as an impediment for St. Helena as the City tries to house its entire population. Efforts to combat this impediment are outlined in Programs H-E, H-H, H-I, and H-KK, which work to support regional and City farmworker housing efforts, including creating incentives and fast-tracking development for workforce/farmworker housing.

2.2.3 Lack of Affordable Housing Types

There is a lack of diversity in housing types that restricts development of affordable housing in St. Helena. Local land use and zoning regulations perpetuate this deficiency by limiting the form of housing that can be developed on a particular site. Much of the residentially zoned parcels within the city are zoned low and moderate density residential and are not compatible with the construction of duplexes, triplexes, quadplexes and multifamily housing developments. The City is upzoning a number of parcels as a part of the Housing Element Update to allow higher density residential development. Efforts to combat this impediment are outlined in Programs H-A, H-B, H-E, H-H, H-I, H-J, H-M, H-N, H-P, H-Q, H-V, H-X, H-AA, H-DD, H-EE, H-FF, H-GG, H-LL, H-NN, and H-OO, which focus on maintaining an inventory of sites suitable for residential development, updating municipal code for developing workforce/farmworker housing, ADUs, housing for disabled and homeless persons, and non-traditional housing types, increasing development density, and fast-tracking housing development.

2.3 Enforcement and Outreach Capacity

Fair housing enforcement and outreach capacity is the ability of a local jurisdiction and fair housing agencies to distribute fair housing and tenants' rights information to their community. Enforcement and outreach capacity also includes the ability to address compliance with fair housing laws, such as investigating complaints, resolving issues, and conducting fair housing testing.

2.3.1 Regional Resources

Several organizations in Napa County provide aid for fair housing issues and outreach. Table 2 shows organizations and agencies that collaborate with local governments, including St. Helena to address housing and community needs and provide the following services:

- Housing Need Assessment
- Homelessness Needs
- Market Analysis
- Fair housing testing and complaints
- Fair housing counseling and education
- Tenant/landlord counseling and mediation
- Homeless prevention program
- Rental assistance program
- Rent/deposit grant program
- Home seeking services
- Shared housing counseling placement
- Homebuyers' education learning program

2.3.2 Local Resources

The City of St. Helena contracts with the non-profit organization Fair Housing Napa Valley (FHNV), a regional non-profit fair housing agency, to assist residents with fair housing counseling services, connections to rental assistance and homelessness prevention programs, and to conduct fair housing testing. FHNV assists residents and landlords throughout the city, providing mediation, investigation, and referral services. In addition to the fair housing services provided by active organizations, the Napa County Housing Authority administers the Housing Choice Voucher program for St. Helena and other jurisdictions in the county.

The City complies with existing fair housing laws and regulations. The City does not place more scrutiny or deny projects or individuals of their right to tenancy, residence, or entitlement based on memberships of protected class, in compliance with Government Code section 65008. Implementation of the 6th Cycle Housing Element would bring the City's adopted regulations and policies into compliance with other fair housing regulations such as Program H-F which would bring density bonus provisions into compliance and allow for greater incentives for affordable housing. The City is also proposing updates to their existing Inclusionary Ordinance to promote more housing choices for residents.

2.3.2.1 Ability to Address Complaints

The Department of Justice's Civil Rights Division initiated fair housing testing in 1991. This is a technique used to uncover evidence of discrimination in rental housing. Fair housing testing involves one or more individuals who pose as prospective renters for the purpose of determining whether a landlord is complying with local, State, and federal fair housing laws. Enforcement actions may be taken when investigations yield evidence of a pattern or practice of illegal housing discrimination. Testing may be initiated following the filing of a specific housing discrimination complaint or, as is the case when testing for disability discrimination, as part of an overall effort to determine whether the design or architectural features of a specific rental facility comply with state and federal accessibility requirements. In Napa County, fair housing testing is used to identify unlawful housing discrimination practices based on the real or perceived race, ethnicity, color, religion, gender identity or expression, national origin, disability, familial status, marital status, age, ancestry, sexual orientation, and source of income of prospective renters. Fair Housing Napa Valley conducts fair housing testing of rental properties to assess how well rental properties are conforming to fair housing laws, assists residents in filing fair housing complaints, provides education and technical assistance to housing providers, and provide conciliation services for tenants and landlords.

The Department of Fair Employment and Housing (DFEH) maintains a record of housing discrimination complaints filed in local jurisdictions. From 2015 - 2019, 256 fair housing complaints originating in Napa County were filed with DFEH. Overall, disability-related discrimination comprised the largest proportion of cases (56 percent). The next highest basis for discrimination were race and familiar status, comprising nearly 8 percent each. According to the HCD AFFH Data Viewer, no fair housing inquiries for the City of St. Helena were received between 2013 and 2021. Fair housing inquiries are comments or questions related to fair housing received by HUD's Office of Fair Housing and Equal Opportunity (FHEO), not formal

discrimination complaints. The lack of inquiries is low for the region, as seen when compared to the cities of Santa Rosa (received 61), Sonoma (received 8), and Napa (received 33).

2.3.3 Findings, Lawsuits, and Enforcement Actions

There are currently no active fair housing lawsuits or enforcement actions in the city. However, historically, low-income and minority populations have struggled to procure affordable housing opportunities in the city. In addition, residents have challenged the City for not doing enough to combat housing segregation issues between the western and eastern portions of the city.

In 2013, the City of St. Helena signed a settlement agreement with Esvin Calderon as well as other residents and fair housing providers who had filed a lawsuit against the City on the basis that the City "promoted or maintained policies, practices, or actions that had the purpose of effect of displacing or excluding Latino residents and low-income residents from the City". According to the settlement the City would comply with a list of requirements that would promote the development of affordable housing units in the city, including depositing $500,000 to the City's Affordable Housing Trust Fund and amending the St. Helena Municipal Code to support and prioritize affordable housing development, and to host fair housing workshops in collaboration with Napa Valley Fair Housing.

In 2016, St. Helena Residents For An Equitable General Plan, the McCorkle East Side Neighborhood Group, and the Protect the St. Helena Vineyard Riverwalk Community Group filed a claim with the City citing that the city is "a segregated city, with an affluent White west and diverse east side where most Hispanics, seniors, and members of other protected groups live largely in a concentrated area near the Napa River."

The City is in the process of adopting a new Zoning Ordinance to be consistent with the 2040 General Plan, which would permit duplexes and triplexes within the MR District (see Program H-N). This would create additional housing choices and affordability levels in the MR Districts on the western side of the city. In addition, several programs, including H-BB, H-EE, and H-XX would implement placemaking strategies to outreach and work with the more diverse and older populations living in the east due to the historic development patterns.

3. Segregation and Integration Patterns and Trends

To inform priorities, policies, and actions, the housing element must include an analysis of integration and segregation, including patterns and trends. Integration generally means a condition in which there is not a high concentration of persons of a particular race, color, religion, sex, familial status, national origin, or having a disability or a particular type of disability in a specific geographic area. Segregation generally means the opposite condition, in which there is a high concentration of the characteristics described above in a specific geographic area. To adequately assess the patterns of integration and segregation, this section identifies trends at the regional scale (Napa County) and at the local scale (St. Helena).

3.1 Race and Ethnicity

The ethnic and racial composition of a community relates to other housing characteristics including household size, locational preference, and economic opportunity. Additionally, race/ethnicity is a known contributor to unfair housing practices. Historical patterns of racial/ethnic segregation were results of governmental policies from the federal to local level that promoted exclusionary actions and disparate treatment of people of color such as redlining, racially restrictive covenants, and mortgage lending practices. The existence of concentrations of minorities living in one location may be an indicator that some minority groups do not have as many housing choices as non-minority residents.

3.1.1 Regional Trends

Regionally, the urbanized areas of Napa County are more diverse, with a minimum of 40 percent of the population consisting of non-White residents, as demonstrated in the geographic depiction of 2014-2018 ACS data shown in Figure 1. Comparatively, populations in the less urbanized and less densely populated areas of Napa County are generally more predominantly White with populations consisting of about 60 percent or greater of White residents.

HUD utilizes the racial/ethnic dissimilarity index as a measure of segregation. The racial/ethnic dissimilarity index represents the extent of which any two racial/ethnic groups differ across a defined geographical area. The index ranges from 0-100, where 0 represents perfect integration between the two racial/ethnic groups and 100 representing perfect segregation. An index value below 40 is generally considered low segregation, a value between 40 and 54 is considered a moderate level of segregation, and a value above 55 is a high level of segregation.[69] Racial/ethnic segregation in Napa County slightly increased between 2010 and 2019. Table 3 shows racial/ethnic segregation in Napa County using the dissimilarity index using data from HUD's AFFH mapping tool. Black and Asian/Pacific Islander residents are the most segregated compared to other racial and ethnic groups. Segregation between Black and White residents and between Asian/Pacific Islander and White residents is high, since their racial dissimilarity index scores are above 55 for 2019. Segregation between Non-White and White residents and between Hispanic and White residents

[69] *HUD, 2020. https://www.hud.gov/sites/dfiles/FHEO/documents/AFFH-T-Data-Documentation-AFFHT0006-July-2020.pdf*

is considered low, since their racial dissimilarity index scores are below 40 for 2019. In Napa County, there has been an increase in segregation across all measured racial/ethnic groups between 2010 and 2019.

Table 3 Racial/Ethnic Dissimilarity Trends (Napa County)

Racial/Ethnic Dissimilarity Index	1990	2000	2010	2019
Non-White/White	19.58	26.18	31.24	36.84
Black/White	56.22	52.61	58.76	67.86
Hispanic/White	21.86	28.94	30.13	35.61
Asian or Pacific Islander/White	37.11	38.97	57.35	64.47

Source: Affirmatively Furthering Fair Housing Mapping Tool – Table 3, Version AFFHT0006, 2022

3.1.2 Local Trends

St. Helena is more diverse compared to rural areas of Napa County, which are predominantly White, and less diverse than the cities of Napa and American Canyon. According to 2015-2019 ACS estimates, White residents comprise the largest racial/ethnic group in St. Helena, followed by Hispanic/Latino residents. The predominant population throughout the entire city is White, as shown in Figure 3. The northwest area of the city has the highest predominance of White residents, although the southeast area of the city is predominantly White as well. The eastern areas of the city have the largest non-White populations, as shown in Figure 3.

3.2 Persons with Disabilities

Persons with disabilities include those with a physical or mental impairment including hearing, vision, mobility, cognitive function. For persons with disabilities, fair housing choice and access to opportunity include access to accessible housing and housing in the most integrated setting appropriate to an individual's needs as required under federal civil rights law, including equitably provided disability-related services that an individual needs to live in such housing. For example, persons with disabilities who are unable to use stairs or need a zero-step shower may not have actual housing choice without the presence of housing units with these accessibility features.[70]

High spatial segregation of persons with disabilities may indicate fair housing issues related to both physical needs and economic disparities. According to the *2020 Annual Report on People with Disabilities in America*, more than 25 percent of persons with disabilities (including physical, intellectual, and developmental; sensory; and other disability categories) live below the Census Bureau-designated poverty line, which is 14.5 percentage points higher than people without a disability.[71] Persons with disabilities may be more reliant than persons without disabilities on fixed incomes or access to public transit.

[70] *HCD 2021. https://www.hcd.ca.gov/community-development/affh/docs/affh_document_final_4-27-2021.pdf*
[71] *The Rehabilitation Research and Training Center on Disability Statistics and Demographics. 2020. https://disabilitycompendium.org/annualreport*

3.2.1.1 Regional Trends

According to 2015-2019 ACS estimates, a total of 16,244 Napa County residents had one or more disabilities, which represents approximately 11.8 percent of the county's total population. Figure 4 shows the percentage of the population living with one or more disabilities throughout Napa County. The western areas of the county, which includes the urban areas of the cities, have higher concentrations of persons living with one or more disabilities compared to the eastern areas of the county. The southeastern area of the City of Napa has the highest concentration of persons living with one or more disabilities in the county.

3.2.2 Local Trends

The 2015-2019 ACS estimated a total of 726 residents in St. Helena were living with one or more disabilities, which is approximately 11.9 percent of the total population. Of the 726 individuals living with a one or more disabilities, 466 (64.2 percent) are age 65 or older. The most common type of disability in St. Helena is ambulatory difficulty, defined as those who have serious difficulty walking or climbing stairs, as shown in

Figure 5. Persons with ambulatory disability have specific housing needs and may require housing that is wheelchair accessible or lacks stairs or steps.

Figure 5 Disability by Type (St. Helena)

Figure 6 highlights the percentage of the population living with one or more disabilities in the city by census tract. The southeastern parts of the city, east of Spring Street and Pope Street, have higher concentrations of residents with one or more disabilities (between 10 and 20 percent living with at least one disability).

Agenda Item #6.1.

Page 840 of 4069

3.3 Familial Status

Familial status refers to families with children under the age of 18, including those with legal custody of a child, pregnant persons, and those in the process of adopting or gaining legal custody. Families with children may face housing discrimination by landlords, including being denied housing due to the presence of children or being subject to special restrictions or fees. Differential treatments such as limiting the number of children in a complex or confining children to a specific location or unit are also fair housing concerns. In a 2016 housing discrimination study, researchers found that compared to households without children, households with children were shown slightly fewer units and were commonly told about units that were slightly larger, and as a result, slightly more expensive to rent.[72] Additionally, female-headed households with children require special consideration and assistance because of generally greater needs for affordable housing and accessible day care, health care, and other supportive services.

3.3.1 Regional Trends

Most households in Napa County are family households, comprising approximately 68 percent of the total 48,705 households in the county. Households with children present comprise 28.1 percent (13,699 households) of the total households or 41.4 percent of all family households in the county. Married couples without children represent 46.9 percent of family households. The majority of family households with children are married couple households with fewer numbers of female and male single parent households. Single-parent households are more often at risk for housing issues because they rely on a single income and may require access to affordable childcare. Table 4 shows a breakdown of household type by tenure (owned versus rented) and presence of children in Napa County. Single-parent households are more likely to rent than own, especially female, single-parent households. There are 1,008 single-parent households that own and 2,323 single-parent households that rent in Napa County.

Table 4 Household Type and Tenure (Napa County)

Household Type	Owner-Occupied	Percent of Total Owner-Occupied	Renter-Occupied	Percent of Total Renter-Occupied
Married Couple Family, with Children Present	6,257	20.0%	4,036	23.2%
Single-Parent, Male Householder, no Spouse Present	383	1.2%	577	3.3%
Single Parent, Female Householder, No Spouse Present	700	2.2%	1,746	10.0%
Total Households with Children Present	7,340	23.5%	6,359	36.5%
Total Households	31,276	100%	17,429	100%

Source: U.S. Bureau of the Census, American Community Survey (ACS), Table B25115 Tenure by Household Type (Including Living Alone) and Age of Householder, 2015-2019 Estimates.

[72] *HUD. 2016. https://www.huduser.gov/portal/sites/default/files/pdf/HDSFamiliesFinalReport.pdf.*

Figure 7 shows the percentage of children in married couple households in Napa County. The less urban areas of the county have higher concentrations of children residing in married couple households while the urban areas have a lower percentage of children residing in married couple households. In most areas of the county the majority of children live in married couple households, however the northern half of the county generally has a higher percentage of children living in married couple households compared to the southern half.

Figure 8 shows the estimated percentage of children in households with a female head of household with no spouse or partner. Urban areas of the county, especially areas of the City of Napa and Town of Yountville, have higher concentrations of children in female single-parent households with between 20 and 40 percent of family households headed by a single parent female. The southern area of the City of Napa has the highest concentration of children in households with a female head of household with no spouse or partner, with between 40 and 60 percent of families headed by a single parent female. Less urban areas of the county, outside of incorporated cities, have less than 20 percent of families headed by a single female.

Figure 9 shows the percentage of adults living with a spouse or partner in Napa County. In most areas of the county 40 to 60 percent of adults are living with a spouse/partner. In areas in the southeast portion of the county, and on the west side of the City of Napa, there is a higher concentration of adults living with a spouse/partner, consisting of approximately 60 to 80 percent of adults.

Figure 10 shows the percentage of adults living alone, with less than 20 percent adults living alone in most areas in Napa County. In several of the more urban areas, specifically portions of the City of Napa, Yountville, and St. Helena, there is a higher concentration of adults living alone (greater than 20 percent).

3.3.2 Local Trends

Approximately 58 percent of the total 2,702 households in St. Helena are family households, as shown in Table 5. The majority of families are married couple families with more renters than homeowners. However, more single-parent households own their home than rent. Table 6 shows the breakdown of families with children by tenure and household type.

Non-family households are the second most common household type; a total of 42 percent of households fall into this category. These are primarily individuals living alone. Female single parent families make up about 10 percent of both owner-occupied units and rented units. Compared to the entire county, St. Helena has a greater percentage of non-family households, especially those living alone.

Table 5 Household Type and Tenure (St. Helena)

Household Type	Owner-Occupied	Percent of Total Owner-Occupied	Renter-Occupied	Percent of Total Renter-Occupied
Family Households	920	58	586	53

Total Households	1,590	100%	1,112	100%

Source: U.S. Bureau of the Census, American Community Survey (ACS), Table B25115 Tenure by Household Type (Including Living Alone) and Age of Householder, 2015-2019 Estimates.

The majority of children in St. Helena live in married couple households; however this percentage is less than in rural areas of Napa County. Figure 11 shows the percentage of children in married couple households in St. Helena is between 60 and 80 percent, while more than 80 percent of children in the surrounding rural areas live in married couple households.

Figure 12 shows the percentage of children in female single-parent households in St. Helena. In the northwest areas of St. Helena, 20 to 40 percent of children live in female single-parent households. In the southeast areas of the city less than 20 percent of children live in female single-parent households.

Figure 13 provides estimates regarding the percent of the adult population living with a spouse in St. Helena. Throughout the city, 40 to 60 percent of adults are living with a spouse. Figure 14 shows the

percentage of the adult population living alone in St. Helena. In the western half of the city, 20 to 40 percent of adults live alone while in the eastern half of the city less than 20 percent of adults live alone.

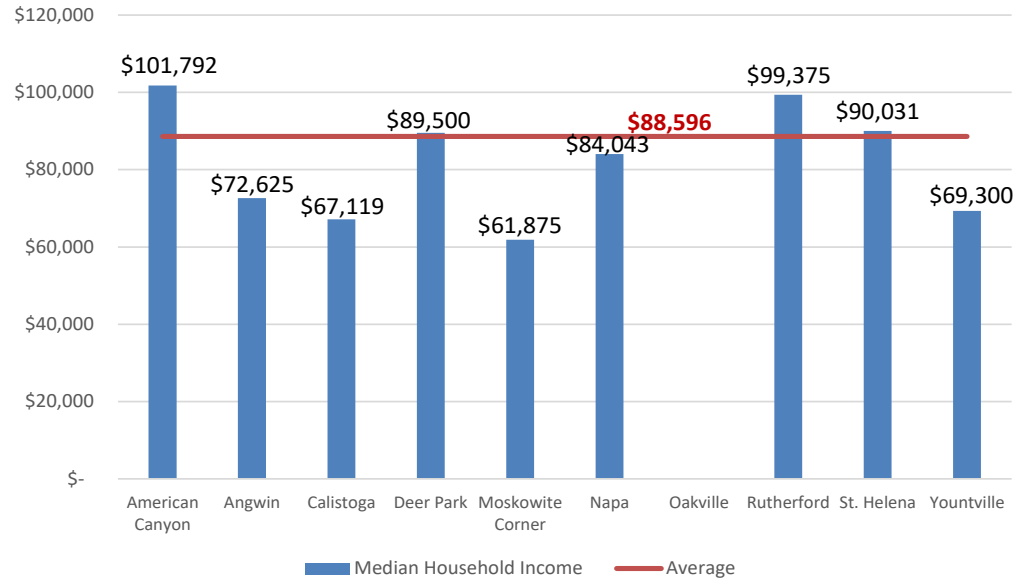
Overall, the northwest portion of the city has a higher proportion of children living in female single-parent households and a higher proportion of adults living alone compared to the southeast portion of the city. The percentages of children living in married couple households and adults living in with a spouse/partner are high throughout the city.

3.4 Household Income



Household income is directly related to the ability to afford housing. Higher income households are more likely to own rather than rent housing. However, as household income decreases, households tend to pay a disproportionate amount of their income for housing and the number of persons occupying unsound and overcrowded housing increases. To achieve fair housing objectives, people in low-income households must have actual choice in housing opportunities – that is, they are able to locate units that are affordable and well maintained in all parts of a jurisdiction and region.

Identifying low or moderate income (LMI) geographies and individuals is important to overcome patterns of segregation. HUD defines a LMI area as a Census tract or block group where over 51 percent of the population is LMI (based on HUD income definition of up to 80 percent of the area median income).

3.4.1 Regional Trends

The median household income of Napa County is $88,596. LMI areas are concentrated in the more urbanized areas of the county, including the City of Napa, St. Helena, and Calistoga. Rural areas of the county tend to have higher income households. Figure 15 shows the median household income for cities within Napa County.

Figure 15 Median Household Income (2015-2019)

Source: Bureau of the Census, American Community Survey American Community Survey, 2015-2019.

Figure 16 shows median household income by block group using 2015-2019 ACS estimates. Block groups with the lowest median income are the eastern area of St. Helena, the area south of Yountville, and areas within the City of Napa.

LMI populations by census tract for Napa County are displayed in Figure 17. Census tracts within Cities of Napa, St. Helena, and Calistoga have the highest percentages of populations with low to moderate income. These areas are the same areas with the highest percentages of non-White population.

3.4.2 Local Trends

Household incomes in St. Helena tend to be higher than the region as a whole, with a median income of $90,031 compared to the median household income of Napa County ($88,596). St. Helena has a higher median income than many of the surrounding cities, including the cities of Napa, Yountville, and Calistoga, as shown in Figure 15.

Figure 18 provides an overview of median household income by block group in the city. The census blocks with the lowest median income are located on the northeast and east side of St. Helena with median incomes of $47,083 and $51,544, which is less than the state median income of $87,100. Community input identified that many of the property owners in this area are not lower income and are in fact very wealthy. The low-medium income trends in this area of the city may partially be attributed to the three affordable housing developments (Stonebridge Apartments, Woodbridge Village Apartments, and Hunt's Grove

Apartments), Vineyard Valley Mobile Home Park, and a senior living community (Silverado Orchards Retirement Community) all located within these two census blocks. The census block with the highest median income is located in the downtown area in the center of the city with a median income of $158,500. The AFFH Data Viewer has no information on median income of the northwest area of St. Helena.

The LMI populations in St. Helena are concentrated on the east side of the city, as shown in Figure 19. According to HUD estimates, in the eastern area of the city 68 percent of the population are LMI populations. In contrast, on western side of city less than 20 percent of the population is LMI. This pattern closely corresponds with areas of the city that have a greater non-White population concentration, which is also greater on the eastern side of the city.

3.5 Racially and Ethnically Concentrated Areas of Poverty

To identify racially and ethnically concentrated areas of poverty (known as R/ECAPs), HUD developed thresholds based on racial and ethnic concentration and income level. The threshold for racial and ethnic concentration is a non-White population of 50 percent or more within metropolitan or micropolitan areas (in rural areas it is 20 percent). Areas of "extreme poverty" are defined using the poverty test as those with more than 40 percent of the population at or below the poverty line or a poverty rate or three times the average of the metropolitan area, whichever is less. Areas that meet both the racial/ethnic concentration threshold and the "extreme poverty" threshold are considered R/ECAPs.

3.5.1 Poverty and Segregation

3.5.1.1 Regional Trends

There are no R/ECAPs within Napa County, however there is a small area of in the southern portion of the City of Napa that would be considered an area of extreme poverty with more than 40 percent of the population below the poverty line. According to 2015-2019 ACS estimates, approximately 8 percent of the population of Napa County are below the poverty level. Several areas within county have 10 and 20 percent of the population below the poverty line, including areas in the southern region of the county, in and around the Cities of Napa, American Canyon, and St. Helena. Figure 20 shows the poverty status within Napa County.

3.5.1.2 Local Trends

St. Helena does not have any R/ECAPs. According to 2015-2019 ACS estimates, approximately 8 percent of the population of St. Helena are living below the poverty level, consistent with poverty rates of Napa County. The western half of the city has a greater percentage of the population below the poverty line, between 10 and 20 percent. This area also had a higher percentage of children in a female single parent household.

Figure 21 displays the percentage of the population whose income is below the poverty line in St. Helena. The poverty rates in St. Helena have shifted over time. The 2010-2014 ACS estimated the eastern half of the city had a greater percentage of the population below the poverty line, opposite of the trend shown by the 2015-2019 ACS estimates.

Figure 22 shows neighborhood segregation in St. Helena using to data from UC Berkeley's Urban Displacement Project (UDP). According to the UDP the predominant racial/ethnic composition in St. Helena is Latinx-White. ABAG's Segregation Report also analyzed neighborhood segregation in St. Helena between 2010 and 2020 using the racial isolation index, racial dissimilarity index, and Thiel's H-Index. The isolation index showed White residents are the most segregated racial group in the city, followed by Latinx residents. The dissimilarity index showed segregation is greatest between Asian/Pacific Islander and White residents, followed by Latinx and White residents. However, the dissimilarity index is an unreliable measure for Asian/Pacific Islander and Black/African populations in St. Helena because their populations are too

small for accurate calculation. Thiel's H-index for neighborhood level segregation indicated racial segregation between all racial groups within the city is less than in the average Bay Area jurisdiction. Compared to all Bay Area jurisdictions, St. Helena is less diverse, with a smaller percentage of the population consisting of people of color.

ABAG's Segregation Report also analyzed neighborhood level income segregation between 2010 and 2015 in St. Helena using the income group isolation index, income group dissimilarity index, and Thiel's H-index. The isolation index showed above moderate income residents are the most segregated income group in the city followed by very low income residents. Among all income groups, segregation of the moderate income population has changed the most between 2010 and 2015, becoming less segregated. The dissimilarity index showed income segregation is greater in St. Helena than in the average Bay Area jurisdiction between lower income residents and non-lower income residents and between very low income residents and above moderate income residents. Overall, segregation between lower income residents and residents who are not lower income increased between 2010 and 2015. According to Thiel's H-index for neighborhood level income segregation, income segregation in the city is less than the average Bay Area city and remained about the same between 2010 and 2015. Compared to all Bay Area jurisdictions, St. Helena has a similar share of very low income residents, lower share of low and moderate income residents, and a higher share of above moderate income residents.

In summary, ABAG's segregation report found White residents and above moderate income residents are the largest and most segregated racial and income groups in St. Helena.

3.5.2 Concentrated Areas of Affluence

While racially R/ECAPs have long been the focus of fair housing policies, racially concentrated areas of affluence (RCAAs) must also be analyzed. Racially concentrated areas of affluence (RCAAs) are affluent communities that are predominantly White.[73] According to a policy paper published by HUD, White residents are the most racially segregated group in the United States and are typically more affluent than majority non-White communities. In addition to having a higher median income, areas of affluence experience less overcrowding, less housing cost burden on renters, and are generally less susceptible to displacement compared to LMI areas.

RCAAs have not been studied extensively, nor has a standard definition been published by HCD or HUD. HCD has created a metric to identify RCAAs by analyzing the total White population for each census tract and comparing it to the average percentage of total White populations for all census tracts within a given Council of Government (COG) region. This compared value is referred to as the Location Quotient (LQ). For example, a census tract with an LQ of 1.5 has a percentage of total White population that is 1.5 times higher than the average percentage of total White population within the COG region. HCD identifies RCAAs as census tracts with an LQ of more than 1.25 and a median income 1.5 times higher than the COG AMI (or 1.5x the State AMI, whichever is lower).

3.5.3 Regional Trends

There are several RCAAs in Napa County, which are primarily located in more rural areas of the county. Most of the RCAAs are concentrated along the western portion of the county with several RCAAs located within the northwest part of the City of Napa as well as in the rural areas northeast of the City of Napa. shows RCAAs in Napa County.

The population of Napa County is predominantly White, with the highest concentration of White residents residing in rural areas of the county. Figure 23 highlights the predominantly White census tracts in Napa County. Areas with a lower concentration of White residents are generally located within the valley where population density is higher. The more rural areas along the eastern boarder of Napa County have high concentrations of White populations, which corresponds with areas that have the highest median incomes in the county.

3.5.4 Local Trends

There are no RCAAs identified within St. Helena. However, similar to patterns of affluence throughout Napa County, areas of St. Helena with higher median incomes correspond to areas with higher proportions of White residents. The northwestern area of the city has a larger proportion of White residents and a higher median income, while the southeastern area has greater racial/ethnic diversity and a lower median income. The northwestern area of the city has a predominant White population (over 50 percent) and the

[73] *Goatz, Damanio and Williams, "Racially Concentrated Areas of Affluence: A Preliminary Investigation" https://www.huduser.gov/portal/periodicals/cityscpe/vol21num1/ch4.pdf, (2019).*

southeastern area of the city has a large White population and large Hispanic population (approximately 48 percent each). Figure 26 shows the overlap of high median income and predominant White population in St. Helena.

In addition to having a higher median income, areas of affluence in St. Helena experience lower percentages of overpayment by homeowners, more positive economic outcomes, and more positive environmental outcomes compared to LMI areas.

3.6 Disparities in Access to Opportunities

According to HCD guidance, land use policies and planning often translate into the ability of residents to access neighborhoods of opportunity, with high-performing schools, greater availability of jobs that afford entry to the middle class, and convenient access to transit and services. The limits on housing choice and access experienced by people within protected classes, such as race, sexual orientation, or disability, have far-reaching impacts on access to job opportunity, quality education, and mental and physical health.[74] Access to opportunity often means both improving the quality of life for residents of low-income communities, as well as supporting mobility and access to 'high resource' neighborhoods. This encompasses education, employment, economic development, safe and decent housing, low rates of violent crime, transportation, and other opportunities, including recreation, food, and healthy environment (air, water, safe neighborhood, safety from environmental hazards, social services, and cultural institutions).

The analysis of place-based characteristics linked to opportunity indicators, quality education, employment, transportation, and healthy environment, seeks to understand the disparity between communities in terms of access to real and potential economic benefits and quality of life.

3.6.1 Transit Access

Reliable access to public transit is crucial, especially for low-income residents and/or persons with disabilities, to provide connections to employment opportunities. Access to employment via public transit can reduce income burden and increase housing mobility, which enables residents to locate housing in more areas.[75] The lack of a relationship between public transit, employment opportunities, and affordable housing may impede fair housing choice. Persons who depend on public transit may have limited choices regarding places to live.

3.6.2 Regional Trends

As Napa County is largely rural, residents mainly depend on their personal vehicles for commuting and traveling. Public transit options do exist in Napa County, primarily Vine Transit, a fixed route bus service

[74] *HCD. 2021. https://www.hcd.ca.gov/community-development/affh/docs/affh_document_final_4-27-2021.pdf*
[75] *Ong, Paul and Evelyn Blumenberg, "Job Accessibility and Welfare Usage: Evidence from Los Angeles." UCLA Department of Policy Studies, (1998).*

operated by the Napa Valley Transportation Authority. Vine Transit operates fixed bus route service throughout the county from American Canyon to Calistoga and provides connections to the Vallejo Ferry Terminal, and El Cerrito Del Norte BART station, SolTrans stations in Vallejo and Fairfield, and the Suisun/Fairfield Train Station. Lake Transit Authority connects southern areas of Lake County to northern Napa County, with bus stops in Calistoga, St. Helena, and Deer Park. Additionally, several low cost, on demand shuttle services are available to the public providing fixed route and door-to-door transit within the city limits of their operating city, including the Yountville Trolley, St. Helena Shuttle, Calistoga Shuttle, and American Canyon Transit. Residents and visitors with physical and/or cognitive disabilities may be eligible to participate in VineGo Paratransit Service, a shared ride service providing curb-to-curb transportation. VineGo offers rides within and between cities throughout the county as well as to Kaiser Vallejo Medical Center.

The Commuter Bike Path (Vine Trail) runs parallel to the Napa Valley Railroad and provides an off-street route walking/biking path for recreation and commuting. Ultimately the Vine Trail will cover 47 miles from Vallejo to Calistoga. Currently 12.5 miles of the path has been completed from Kennedy Park in the City of Napa to Yountville. Sections of the Vine trail have also been completed in American Canyon and Calistoga.

AllTransit is an online database that provides details on transit opportunity throughout the United States, specifically looking at connectivity, access to jobs, and frequency of service. Napa County received an AllTransit performance score of 3.3 which equates to a low combination of trips per week and number of jobs accessible by transit.[76] Approximately 1.5 percent of commuters use public transit in Napa County. The cities of Napa (4.6), Yountville (4.6), and Calistoga (4.0) have the highest scores with a slighter greater combination of number of trips per week, accessible jobs, and available transit routes.

3.6.3 Local Trends

The City of St. Helena has an AllTransit performance score of 2.4 with approximately 1.0 percent of workers who commute using public transit. This score is lower than the County score of 3.3. One Vine Transit bus route passes through St. Helena, providing connections to the City of Calistoga to the north and City of Napa to the south. Additionally, the St. Helena Shuttle Service provides both a fixed route and an on-demand, door-to-door transit service option within the city limits.

Walk Score is a tool that produces a walkability index by assigning a numerical walkability score to cities and neighborhoods. Walkability is measured by analyzing population density, distance to amenities, and road metrics such as block length and intersection density. St. Helena has a walk score of 83, which is considered very walkable, and most errands can be accomplished by foot[77]. St. Helena's walkability score is most negatively affected by the limited number of parks within walking distance from different areas of the city.

The Environmental Protection Agency (EPA) also has a walkability index, which ranks block groups according to their relative walkability. The EPA walkability map, shown in Figure 27, shows that walkability varies across the city. The highest walkability scores are in downtown and along Main Street where most of the commercial areas are concentrated. Further from downtown and in the western and eastern parts of the city, walkability scores are below average.

Agenda Item #6.1.

Page 878 of 4069

3.6.4 Access to Quality Education

Economics literature has consistently found about a 10 percent increase in wages/salary with each additional year of education.[78] Educational attainment is directly linked to housing opportunities. TCAC education domain scores, which are used to identify areas of higher or lower education opportunities, incorporate a variety of indicators including math and reading proficiency scores, high school graduation rates and student poverty rates to assess educational outcomes at the census tract level.

3.6.5 Regional Trends

Napa County is served by five school districts: Napa Valley Unified School District, St. Helena Unified School District, Calistoga Joint Unified School District, Howell Mountain School District, and Pope Valley School District. An overview of education outcomes across the Napa County is illustrated in Figure 28 which shows the TCAC Opportunity Areas map. Education outcomes vary throughout the county. Areas in the western portion of the county and portions of the more urban areas have more positive education outcomes compared to eastern portions of the county and southern parts of the City of Napa.

3.6.6 Local Trends

The City of St. Helena is served by the St. Helena Unified School District which is comprised of four schools: a primary school, elementary school, middle school, and high school. Altogether, approximately 1,243 students were enrolled in 2020 from the City St. Helena and the surrounding areas. Approximately 45 percent of students were White and 52 percent were Hispanic/Latino. St. Helena Unified School District reported a high school graduation rate of 92.9 percent in 2020, 90.1 percent in 2019, and 94.1 percent in 2018. The district reported all students who did not receive high school diplomas in 2019 were Long Term English Learners and socio-economically disadvantaged students.[79]

Figure 29Figure 28 shows TCAC scores for education outcomes for St. Helena at the census tract level. St. Helena has better education outcomes than other areas of Napa County. At the city level, the southern and eastern areas of the city have better education outcomes than the western areas.

3.6.7 Economic Outcomes

Housing opportunities are directly related to economic opportunities. Access to high quality employment close to desired and affordable housing results in more housing opportunities and shorter commute times. The analysis for economic opportunities uses TCAC economic indicators, employment participation data

[78] *The Rehabilitation Research and Training Center on Disability Statistics and Demographics. 2020.* *https://disabilitycompendium.org/annualreport*

[79] *St. Helena Unified School District 2021-22 Local Control and Accountability Plan* *https://www.sthelenaunified.org/cms/lib/CA50000465/Centricity/Domain/36/LCAP%20Control%20Accountability%20Plan%202021%202022.pdf*

from the ACS, Metropolitan Transportation Commission (MTC) Equity Priority Communities (EPC), and the HUD Jobs Proximity Index.

TCAC economic opportunities are measured by census tract. They consider poverty, adult education, employment, job proximity, and median home values. A higher economic index score reflects more positive economic outcomes. The MTC EPC identifies concentrations of underserved populations in order to direct funding for housing and transportation equity. The HUD Jobs Proximity Index assesses the accessibility to job opportunities at the census block group level.

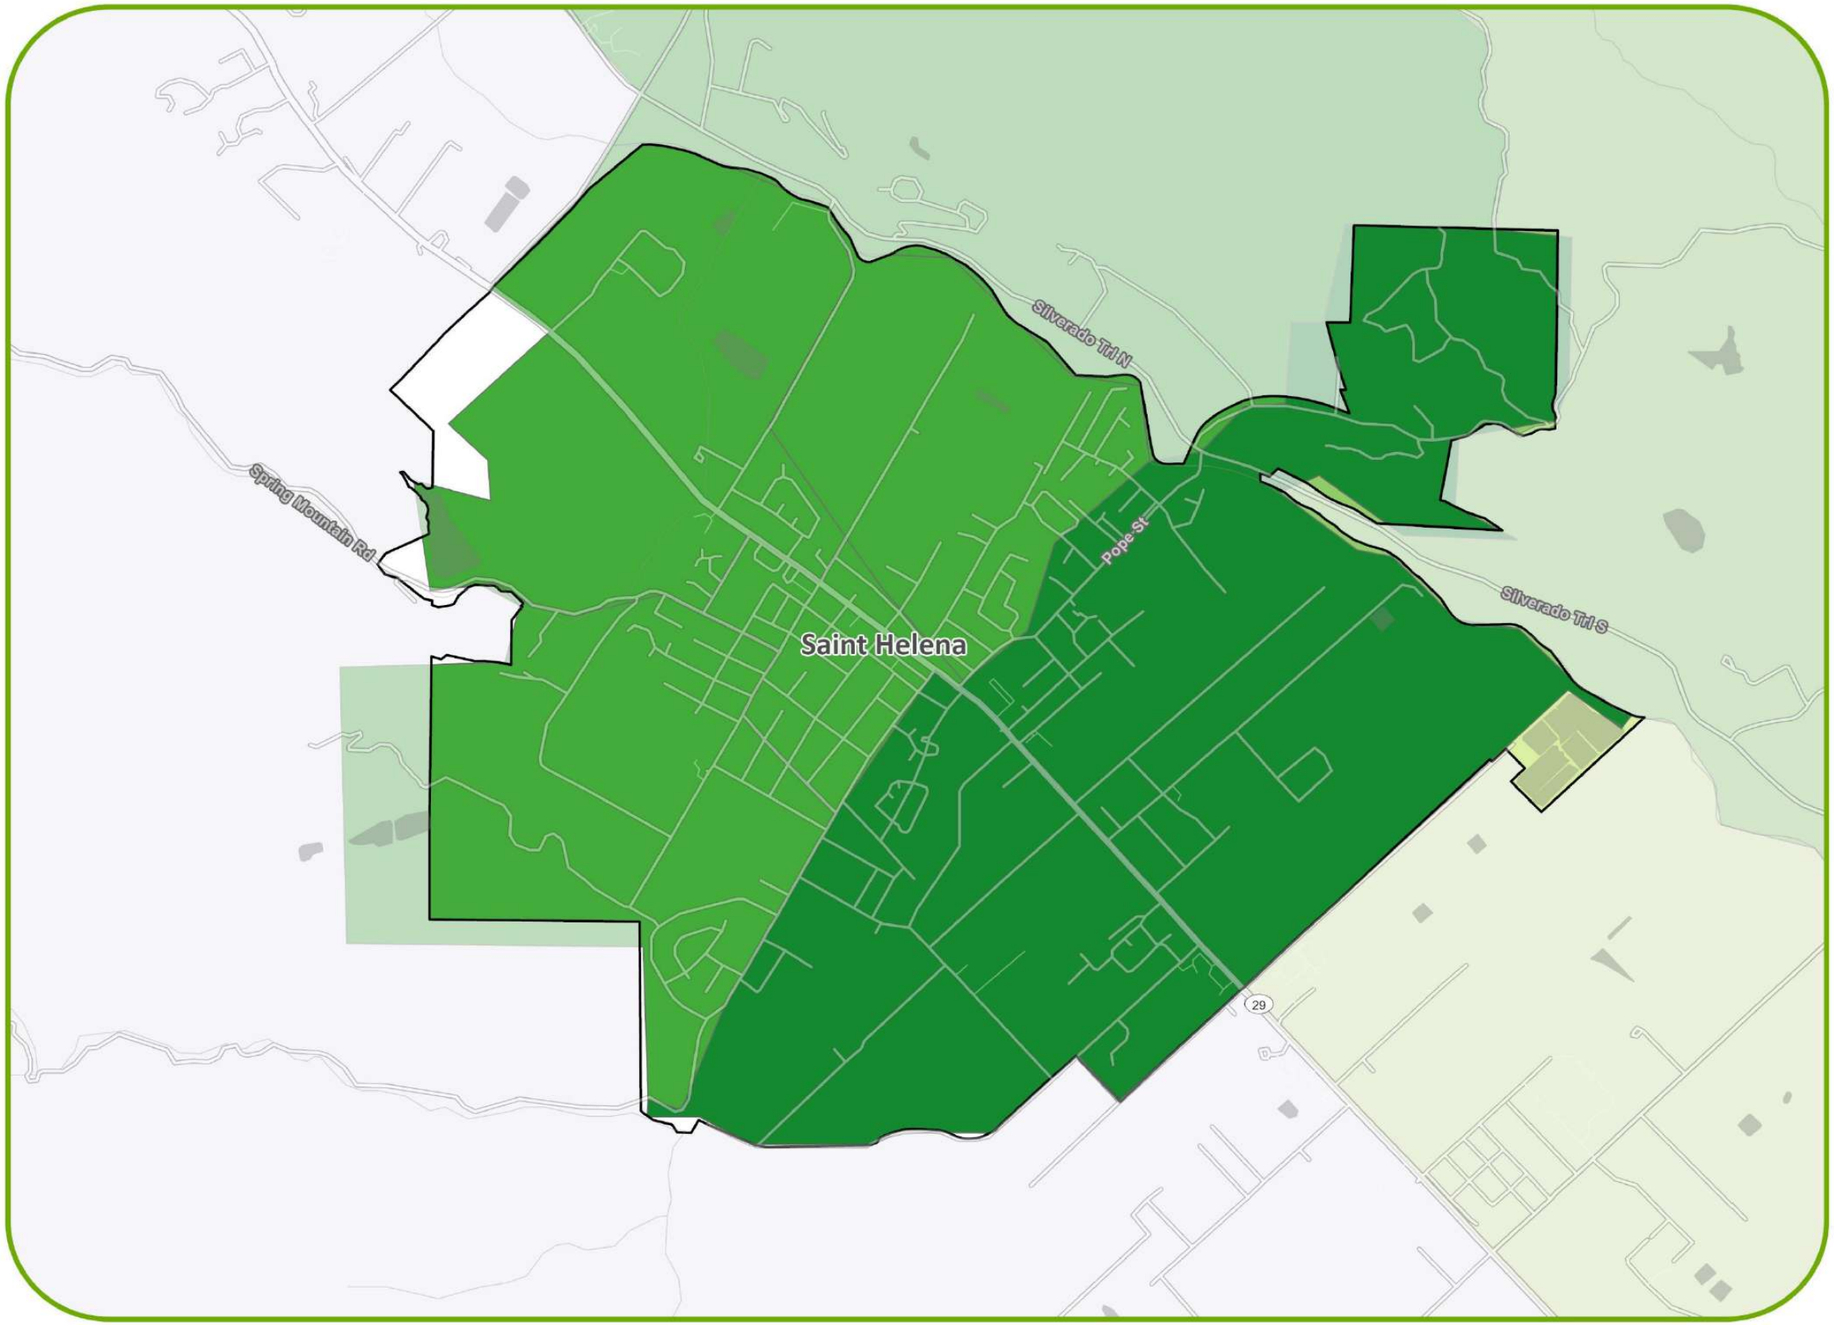

Figure 29:
TCAC Opportunity Areas – Education Outcomes (St. Helena)

3.6.8 Regional Trends

According to the California Employment Development Department, the unemployment rate of Napa County was 3.9 percent in February 2022 (not seasonally adjusted). Top employers in the county include manufacturing (including large- and small-scale wine manufacturing), healthcare, and accommodation and food service. The 2015-2019 ACS estimates reported 74,549 workers in the County of Napa with a labor force participation rate of 65 percent of persons 16 years and older. Approximately 33.7 percent of workers commute 30 or more minutes to work with a countywide mean commute time of 25.6 minutes.

Figure 30 shows the TCAC Opportunity Areas map for economic outcomes across the county. Economic outcomes are varied with more positive outcomes generally located in the western areas of the county and less positive outcomes in the eastern areas of the county. This trend may be attributed to the high concentration of vineyards and wineries in the western and central areas of the county and low population density in eastern areas of the county.

3.6.9 Local Trends

According to the 2015-2019 American Community Survey (ACS), there are 3,159 persons in the labor force in St. Helena with a labor force participation rate of 61 percent. The California Employment Development Department reported the unemployment rate was 3.1 percent in December 2021 (not seasonally adjusted), slightly less than the county. Top industries in the city reflect county trends, with the highest number of workers in manufacturing, healthcare, and accommodation and food service.

Figure 31 shows the TCAC Opportunity Areas map for economic outcomes in St. Helena. Much like the county, economic outcomes are varied across the city. Western areas of the city have more positive economic outcomes and eastern areas have less positive economic outcomes. This pattern of lower economic outcomes in the eastern areas of the city reflects the lower median incomes and greater ethnic diversity that is also experienced in these areas. The eastern areas of the city contain affordable housing developments, a mobile home park, and senior living community which may be contributing to lower median incomes and lower median home values.

ACS 2015-2019 estimates show approximately 22.4 percent of workers commute 30 or more minutes to work and the mean commute time is 19.6 minutes. Figure 32 shows the job proximity index in St. Helena which assesses the accessibility of employment opportunities based on distance, a higher index score corresponds to closer job proximity. Job proximity throughout St. Helena is consistently high (closest proximity), especially when compared to the southern and eastern areas of the county.

Agenda Item #6.1.

Page 888 of 4069

3.6.10 Healthy Environment

Access to a healthy environment is necessary for communities within a city to thrive. Healthy environment analysis considers patterns in the disparities found within individual neighborhoods and protected area groups. These disparities can vary in a number of categories, including air quality, water quality, safe neighborhood, environmental hazards, social services, and cultural institutions. Recent California laws, AB 1550, Senate Bill (SB) 535 and SB 1000 emphasize the importance of environmental justice as a fair housing issue. Environmental Justice, as defined by HUD, means ensuring the environment and human health are protected fairly for all people regardless of race, color, national origin, or income, and consideration the means by which federally assisted projects may have disproportionately adversely affect human health or the environmental on minority and low income populations.[80] The California Office of Environmental Health Hazard Assessment developed the California Communities Environmental Health Screening Tool (CalEnviroScreen) a screening methodology to help identify California communities disproportionately burdened by multiple sources of pollution called. High scoring census tracts tend to be more burdened by pollution from multiple sources and are most vulnerable to its effects, taking into account their socioeconomic characteristics and underlying health status.

3.6.11 Regional Trends

The CalEnviroScreen map for Napa County identifies the degree to which communities are considered burdened by pollution. Figure 33 below shows the pollution burden for Napa County, representing the potential exposure to pollutants and resulting adverse environmental conditions. The more urban areas on the western side of the county have a higher pollution burden, especially within and to the south of the City of Napa. Figure 34 shows TCAC Opportunity Map for environmental outcomes in the county. Similar to the CalEnviroScreen map, the TCAC Opportunity Map shows that the western areas of the county have less positive environmental outcomes compared to the eastern areas of the county. This may be caused by the mountains flank the valley which block wind flow and trap pollution. Additionally, the western and central areas of the county have a higher concentration of people, traffic, and agriculture which produces greater levels of pollution and pesticides. Eastern areas of the county tend to be forested and are less populated

3.6.12 Local Trends

Pollution Burden in St. Helena is lower than many other areas in the county, as shown in Figure 35. However, the eastern areas of the city have a slightly higher pollution burden (overall score of 40) compared to the rest of the city, with high burdens of pesticides, cleanups, and groundwater threats. The western areas have a slightly lower burden (overall score of 33) with high burdens of pesticides, cleanups, groundwater threats, and solid waste. Pesticide use is considered high throughout the city likely due to pesticide applications on nearby vineyards. There are two cleanup sites located within the city including one site with an active dry-cleaning business and one site with a manufactured gas plant that was dismantled in 1930. These two cleanup sites are also sources that pose groundwater threats to the city. A

[80] *HUD, 2021. https://www.hudexchange.info/programs/environmental-review/environmental-justice/*

third cleanup site is located outside the city limits, southeast of the city, with a food market that has detected high pesticides in the soil beneath the building. A solid waste facility is located in the eastern area of the city which may potentially expose neighboring communities to environmental burdens such as odor, pests, and truck traffic. The southern and eastern areas of the city have a higher pollution burden, which corresponds with areas with higher ethnic diversity, higher populations with a disability, and lower median incomes discussed in the previous sections.

Figure 36 shows the TCAC Opportunity map for environmental outcomes in the City of St. Helena. The southern and eastern areas of the city have less positive environmental outcomes compared to the western areas.

3.7 Disproportionate Housing Needs

Disproportionate housing needs generally refers to a condition in which there are significant disparities in the proportion of members of a protected class experiencing a category of housing need when compared to the proportion of members of any other relevant groups, or the total population experiencing that category of housing need in the applicable geographic area. For purposes of this definition, categories of housing need are based on such factors as cost burden and severe cost burden, overcrowding, homelessness, and substandard housing conditions

3.7.1 Housing Cost Burden

Housing cost burden is defined as the proportion of a household's total gross income spent on housing costs. Households that spend at least 30 percent of their total gross income on housing costs (rent, mortgage, utilities, and other housing-related costs) are considered cost burdened, and households spending over 50 percent on housing costs are considered severely cost burdened. The higher the housing cost burden, the more likely residents are to live in overcrowded and substandard conditions and are less likely to afford to relocate. Low-income households and persons in protected classes disproportionately experience severe housing problems. Housing problems are households that has one or more of the following problems: lacks a complete kitchen facility, lacks complete plumbing facility, a household that is overcrowded, or a household that is cost burdened.

3.7.2 Regional Trends

Figure 37 shows areas of Napa County where renter households overpay for housing (spend more than 30 percent of household income on housing costs). Overpayment by renters is a widespread issue across the county, especially in the more urban areas of the county as well as the northeast and southeast areas of the county. Similar to overpayment by renters, overpayment by homeowners is common throughout the county, highlighting that the costs of housing are too high for both renters and homeowners. Figure 38 shows areas of the county where homeowners overpay for housing, which is most prevalent in the urban areas of the county as well as the northwest and southeast areas of the county.

3.7.3 Local Trends

Housing cost burden among renters is widespread in St. Helena. Figure 39 shows that 40 to 60 percent of renters overpay for housing in all areas of the city. Additionally, data from HUD's Comprehensive Housing Affordability Strategy (CHAS) indicates lower income households are disproportionately overpaying for housing.

Lower-income households experience higher cost burden than moderate income and above households in St. Helena. Approximately 41 percent of extremely low-income households (those earning 30 percent or less of the local area median income (AMI)) are considered severely cost burdened (spend 50 percent or more of their income on housing). Both renters and owners experience cost burden in St. Helena, with higher proportions of lower income households spending greater than 30 percent or 50 percent on housing. Table 7 shows housing cost burden of lower income households in St. Helena. Generally, a higher percentage of renters than owners experience cost burden, however, more owners than renters experience severe cost burden.

3.7.4 Substandard Housing

HUD considers housing units to be "standard units" if they are in compliance with local building codes. Substandard housing is housing that poses a risk to the health, safety, or wellbeing of its occupants or neighbors, includes housing that does not have operable indoor plumbing, electricity, or heat. Housing age can be an important indicator of housing condition in a community. Like any other tangible asset, housing is subject to gradual physical or technological deterioration over time. If not properly and regularly maintained, housing can deteriorate and discourage reinvestment, depress neighboring property values, and eventually impact the quality of life in a neighborhood. Typically, housing over 30 years old is more likely to have rehabilitation needs that may include new plumbing, roof repairs, foundation work, and other repairs. Some older housing units may have health risks such as lead paint and asbestos. Housing issues such as mold may elevate health conditions such as asthma.

3.7.5 Regional Trends

In Napa County approximately 73 percent of all housing units were built before 1990. These older units potentially require minor repairs and modernization improvements. Figure 41 shows the approximate break down by age of housing units.

Source: Bureau of the Census, American Community Survey, 2015-2019

The County of Napa has a total of 881 substandard housing units, approximately 2 percent of the total occupied units in the county. A housing unit is considered substandard if it lacks complete plumbing or kitchen facilities. Of the 881 substandard units, approximately 15 percent lacked complete plumbing facilities and 85 percent lacked complete kitchen facilities. Table 8 shows a breakdown of the number of substandard housing units in Napa County and St. Helena. In the past, lack of telephone service was also an indicator of housing conditions. Today, with the widespread availability of cell and internet phone services, many households have chosen not to install land line telephone services, and availability of telephone service is no longer considered an indicator of substandard housing conditions.

Total	48705		2702	

Source: Bureau of the Census, American Community Survey, 2015-2019.

3.7.6 Local Trends

As shown above in Figure 41, approximately 79 percent of the city's housing stock was built prior to 1990, potentially requiring minor repairs and modernization improvements.

Table 8 shows 83 units, about 3 percent of the St. Helena's housing stock, are considered substandard. All identified substandard units lacked complete kitchen facilities.

3.7.7 Homelessness

"Homelessness," as defined by HUD, describes an individual, who is not imprisoned or otherwise detained, who:

- Lacks a fixed, regular, and adequate nighttime residence; and
- Has a primary nighttime residence that is:
  - A supervised publicly or privately operated shelter designed to provide temporary living accommodations (including welfare hotels, congregate shelters, and transitional housing for the mentally ill);
  - An institution that provides a temporary residence for individuals intended to be institutionalized; or
  - A public or private place not designed for, or ordinarily used as, a regular sleeping accommodation for human beings.

Throughout Napa Country, homelessness has become an increasingly important issue. Factors that contribute to the rise in homelessness include a lack of housing affordable available for low- and moderate-income households, increases in the number of persons whose incomes fall below the poverty level, reductions in public subsidies, and lack of support for persons with extreme developmental, physical, and mental disabilities.

3.7.8 Regional Trends

Napa County's 2020 Point-In-Time Count indicated there were 464 persons experiencing homelessness in the county on any given night; mostly in the City of Napa. This is an increase from 322 persons in the 2018 Point-In-Time Count.

3.7.9 Local Trends

The number of homeless persons in St. Helena is unknown as the 2020 Point-In-Time Count does not include a breakdown of the homeless population by jurisdiction. Based on St. Helena's share of the countywide population, 3.9 percent, it is estimated the City's homeless population is approximately 18 persons.

3.7.10 Overcrowding

Overcrowding is defined as housing units with more than one person per room (including dining and living rooms but excluding bathrooms and kitchen) and severe overcrowding refers to more than 1.5 persons per room. Large families generally have special housing needs due to lower per capita income, the need for affordable housing, or the need for larger units with three or more bedrooms, resulting in overcrowding. Some households may not be able to accommodate high-cost burdens for housing and accept smaller housing or reside with other individuals or families in the same home. Potential fair housing issues emerge if non-traditional households are discouraged or denied housing due to a perception of overcrowding.

Household overcrowding is reflective of various living situations such as a housing unit that is inadequately sized to meet a household's needs, the necessity or desire to have extended family members reside in an existing household, or unrelated individuals or families share a single housing unit.

Not only is overcrowding a potential fair housing concern, but it can also potentially strain physical facilities and the delivery of public services, reduce the quality of the physical environment, contribute to a shortage of parking, and accelerate the deterioration of homes. As a result, some landlords or apartment managers may be more hesitant to rent to larger households, thus making access to adequate housing even more difficult. According to local fair housing service providers and property managers, addressing the issue of large households is complex as there are no set of guidelines for determining the maximum capacity for a unit. Fair housing issues may arise from policies aimed to limit overcrowding that have a disparate impact on specific racial or ethnic groups with higher proportion of overcrowding.

3.7.11 Regional Trends

In Napa County, approximately 6 percent of occupied housing units are overcrowded. As shown in Figure 42, overcrowded housing is most prevalent in the cities of Napa and Calistoga. The City of Napa has the highest percentage of overcrowded units. Certain areas within the city have between 14 and 36 percent of households that are overcrowded. Rural areas experience less overcrowding, and some rural areas have no overcrowded or severely overcrowded units.

Table 9 shows the percentage of housing units that are overcrowded. Renter-occupied households had a larger proportion of overcrowded households in the county.

Table 9 Overcrowding by Tenure

Jurisdiction	Overcrowded (1+ occupants per room)			Severely Overcrowded (1.5+ occupants per room)		
	Renter	Owner	Total	Renter	Owner	Total
St. Helena	9.26%	1.57%	4.74%	1.44%	1.01%	1.18%
Napa County	11.92%	2.99%	6.18%	3.50%	0.64%	1.66%

Source: Table B25014 Tenure by Occupants Per Room 2015-2019 ACS. Bureau of the Census, American Community Survey, 2015-2019.

3.7.12 Local Trends

Based on 2015-2019 ACS estimates, approximately five percent of households in St. Helena are overcrowded, compared to 6 percent for the county as a whole. As shown in Table 9,a higher proportion of renter households are overcrowded than owned households in St. Helena. Figure 43 shows the percent of overcrowded households throughout the city, no concentrated areas overcrowding of households are shown. ACS estimates indicate overcrowding is a more common housing issue for Hispanic/Latino households than White households where approximately 20 percent Hispanic/Latino households in St. Helena are overcrowded compared to three percent of White households.

3.7.13 Displacement

Displacement, as defined by HCD, is used to describe any involuntary household move caused by landlord action or market changes. Shifts in neighborhood composition are often framed and perpetuated by established patterns of racial inequity and segregation. Movement of people, public policies, and investments, such as capital improvements and planned transit stops, and flows of private capital can lead to displacement. Displacement is fueled by a combination of rising housing costs, rising income inequality, stagnant wages, and insufficient market-rate housing production. Decades of disinvestment in low-income communities, coupled with investor speculation, can result in a rent gap or a disparity between current rental income of the land, and potentially achievable rental income if the property is converted to its most profitable use. These processes can disproportionally impact people of color, as well as lower income households, persons with disabilities, large households, and persons at-risk or experiencing homelessness.[81]

3.7.14 Regional Trends

The Urban Displacement Project (UDP) is an initiative out of the University of California, Berkeley that conducts data-driven research to better understand gentrification and displacement in order to generate more equitable and inclusive cities. UDP provides data to identify "sensitive communities," communities that are vulnerable to displacement caused by housing costs or with market-based displacement pressures within or near the community. As shown in Figure 44 below, portions of the cities of Napa and Calistoga are identified as sensitive communities by UDP. These communities are also more racially/ethnically diverse and have lower household median income compared to other areas of the county.

3.7.15 Local Trends

UDP did not identify any areas within St. Helena that are considered vulnerable to displacement, as shown in Figure 45. However, research from the University of California Berkeley indicates that 42.0 percent of households in St. Helena live in neighborhoods susceptible to or experiencing displacement.

4. Local Area of Knowledge

The AFFH analysis identified the eastern portion of St. Helena as generally experiencing more fair housing issues than other areas of the city. Fair housing issues in this area include higher levels of minority populations, low and moderate median income, overpayment of housing, higher median rent, and lower economic and environmental outcomes. The predominant population in this area of the city is White, however it has the highest non-White population of all areas within the city. Additionally, this area has a higher proportion of persons living with a disability compared to other areas. Overall, the eastern portion of the city is a moderate resource area, the same as the rest of the city. Some factors that could play into the trends seen in the data could be the location of existing retirement and older adult living facilities. The population living within these communities are, many time, fixed income and more often single-headed households. In addition, most of the city's high density land use and housing is located in this eastern portion of the city, which tends to be the housing type most affordable to lower income residents and single-parent households. As part of the Housing Element, the City is committing to improving the number of affordable units city-wide. In addition, with the recently adopted General Plan, the city envisions the redevelopment of Main Street within the eastern portion of the city with new, mixed-use development to increase economic opportunities and investments in this area.

4.1 Local Actions and Policy Efforts

In 2018, the City funded the 2018 St. Helena Housing Update Report, a housing analysis study that identified contributing factors to housing challenges in St. Helena. The report identified that residents believe new housing development primarily occurs east of Highway 29, however according to the report the majority of new construction was located west of Highway 29. In addition, the report also identified community opposition as a challenge to housing development in the city, leading to delays and increased project costs. Community members often desire to maintain the rural character of the city and are very concerned with how new development will impact surrounding neighborhoods.[82]

In October of 2020, the City Council adopted the Resolution 2020-105: Affirming that Discrimination and Systemic Racism Constitute A Public Health Crisis Causing Disparities in Mental Wellbeing, Language Access, Housing, Economic Development, Health, and Criminal Justice Experience, and Reaffirming Its Commitment to Advancing Justice, Equity, Diversity, and Inclusion in the City. This resolution commits the City to erasing barriers to opportunities to minority populations, including housing. The Staff Report to City Council for Resolution 2020-105 recommends actions to address racial equity and social justice in the community, including providing Spanish translation for City Council and Planning Commission meetings, provide all City communication in Spanish and reviewing adopted by other cities that promote inclusivity and access to affordable housing.

[82] 2018. St. Helena Housing and Community Report. https://www.cityofsthelena.org/sites/default/files/fileattachments/planning_resources/page/3395/staff_report-white_paper.pdf

The City also prepared a Diversity, Equity, and Inclusion Strategy to outline the City's efforts towards diversity, equity and inclusion, and social justice. The strategy includes actions such as creating a Diversity, Equity and Inclusion Committee to discuss topics, including housing and racial justice, and offering live Spanish interpretation for regular and special City Council and Planning Commission meetings. The City continues to provide Spanish interpretation for City Council and Planning Commission meetings.

4.2 Stakeholder Input

The City held three housing workshops to receive feedback from the community on housing issues and the Housing Element Update (on September 16, 2021, January 20, 2022, and March 16, 2022). During these workshops, participants frequently brought up concerns regarding the lack of affordable housing for lower income households and the "missing middle" as well as the need to support affordable home ownership. AFFH related concerns included the high cost of housing, transportation accessibility, ADU trends (specifically that ADUs tend to be utilized as vacation rentals and not housing).

4.2.1 Other Relevant Factors

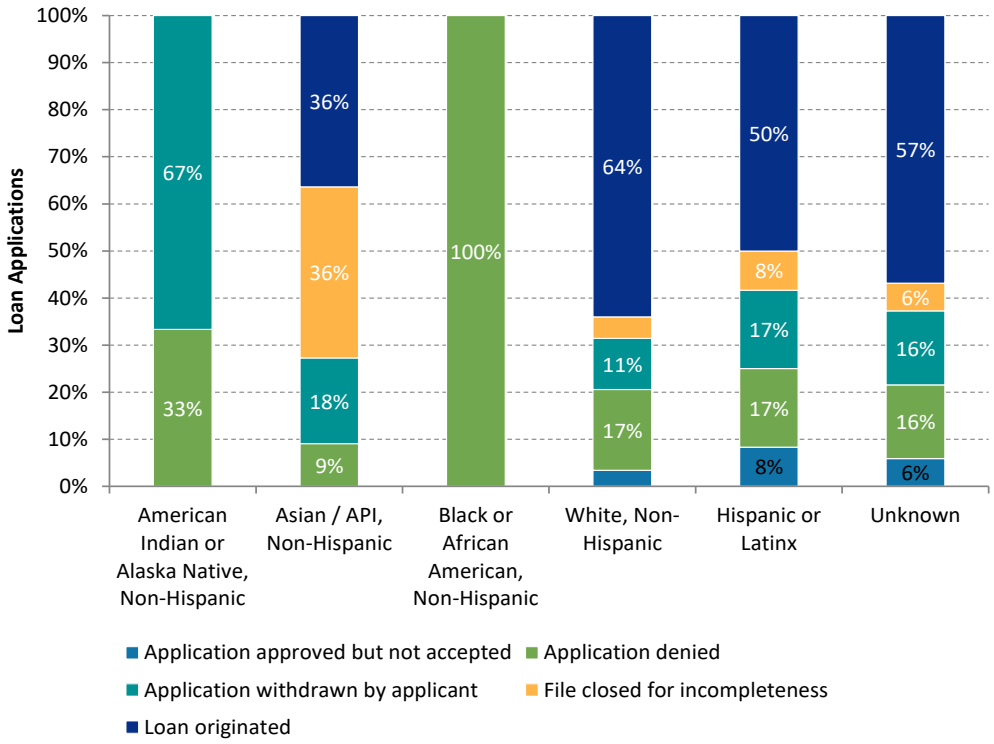
Other factors to fair housing issues in St. Helena that have not been previously discussed in this analysis include lack of sufficient housing for farmworkers, availability of affordable units in a range of sizes, access to transportation, access to home ownership. These contributing factors limit the accumulation of wealth and access to housing resources in historically marginalized communities.

4.2.2 Farmworker Housing

An estimated between 6,000 and 9,000 farmworkers are employed Napa County. Sufficient affordable housing options are lacking for farmworkers who are often lower income and have special housing needs, such as seasonal housing. The number of farmworkers employed in St. Helena is unknown, however the city's central location with regard to vineyards and wineries throughout the county would imply a number of farmworkers are employed in proximity to the city.

4.2.3 Access to Transportation

St. Helena's public transportation system is operated by Vine Transit which operates one bus route (Route 10) in the city. Route 10 has four stops in the city, however all four stops are along the main road, State Route 29. Areas of the city located further north or south are more than 0.25 miles from a bus stop. This bus route connects the City of Napa and the City of Calistoga where connections to destinations further north or south can be made. Residents who live or work in St. Helena have limited options for traveling via public transit, potentially limiting their housing options.



4.2.4 Access to Home Ownership

Increasing housing costs has produced a barrier to home ownership for St. Helena residents. As of December 2020, Zillow reported typical home values in St. Helena were estimated at $1,665,790, much

higher than the typical home value in Napa County, which is estimated at $768,410. Typical home values reflect the value of homes in the 35th to 65th percentile range. Home values have been consistently on the rise since 2000 (with the exception of the recession). This trend has made it more difficult for residents, especially lower income residents, to afford homes. Affordable housing projects in the city generally consist of rental units, which does not provide opportunities for lower income residents to own homes.

Mortgage application filing and acceptance data from 2018-2019 indicates there are racial/ethnic disparities among homeownership opportunities for residents in Napa County. As shown in Figure 46, 64 percent of White, Non-Hispanic applicants and 50 percent of Hispanic/Latinx had their loan originated, compared to 36 percent of Asian/ API applicants, 0 percent of Black/African American, and 0 percent of American Indian/Alaska Native applicants.

Figure 46 Mortgage Applications and Acceptance by Race

Source: Federal Financial Institutions Examination Council's (FFIEC) Home Mortgage Disclosure Act loan/application register (LAR) files

4.2.5 Opposition to New Development

According to the 2018 St. Helena Housing Update Report, city residents are "deeply concerned with maintaining the rural character of town" and therefore residents generally oppose housing projects that are perceived to changing neighborhood character. Many previous and ongoing multi-family housing projects

have been met with comments and concern from community members regarding environmental impacts, such as increases in water demand and increases in traffic as well as impacts to existing neighborhoods and community character.

4.2.6 Location of New Housing

Some residents of the city feel the city is segregated between east and west of Main Street, where the west side of the city consists of a greater percentage of White, affluent residents while the east side of the city has a greater percentage of non-White and low-income residents. In addition, residents have stated that the multi-family housing in the city is located in the eastern area. According to the 2018 St. Helena Housing Update Report, the majority of new construction over the last 10 years has been west of Highway 29.[83] The Magnolia Oaks housing development consists of 44 multi-family housing units, 10 of which are affordable to low-income residents. While this project is located just west of Highway 29, other recently multi-family projects have been constructed on the east along McCorkle Avenue. The City is in the process of adopting a new Zoning Ordinance to be consistent with the 2040 General Plan, which would permit duplexes and triplexes within the MR District (see Program H-N). This would create additional housing choices and affordability levels in the MR Districts on the western side of the city. In addition, Programs H-BB, H-EE, and H-XXwould implement placemaking strategies to outreach and work with the more diverse and older populations living in the east due to the historic development patterns.

5. Sites Inventory Analysis

5.1 Opportunity Areas

HCD and TCAC opportunity maps identify areas throughout the state whose characteristics support positive economic (low poverty, high employment, high median household income), educational (reading and math proficiency, high school graduation rates, low student poverty rates), and environmental outcomes (low exposure to pollution). A census tract with a designation of high resource would indicate there are strong educational and economic opportunities, meaning opportunity for current and future residents.

According to the 2022 TCAC Opportunity Map, the entire city is considered an area of moderate resource. However, the eastern portion of the city is has a higher percentage of non-White residents, lower household median income., higher percentage of cost burden among renters and owners, and less positive economic and environmental outcomes compared to the rest of the city. These demographic And socio-economic patterns influenced the locations of potential lower income sites in the city.

[83] Erica Skylar. 2018. St. Helena Housing Update Report. https://www.cityofsthelena.org/sites/default/files/fileattachments/planning_resources/page/3395/staff_report-white_paper.pdf

5.2 Improved Conditions

According to the 2022 TCAC Opportunity Map, the entire city is considered an area of moderate resource. Demographic and socio-economic spatial patterns show that census blocks with low- and moderate-income households, greater Hispanic/Latino populations, and higher rates of housing problems are located throughout the eastern half of the city. Sites that accommodate housing unit densities appropriate for lower-income units are scattered around the city. Sites that can accommodate most of the lower income units are located in the western and southern part of the city, which has a higher household median income and more positive economic and environmental outcomes. Approximately 38 percent of the total proposed units and 36 percent of the proposed lower-income units planned for in the sites inventory (Appendix B) are located in the eastern part of the city, which has a higher percentage of low- and moderate-income populations and non-White residents. .

Figure 47 shows the site inventory in relation to the TCAC Opportunity Map. Sites proposed within the eastern area of the city, are diverse with a mix of lower income and non-lower income sites. Lower income sites spread across the city. Site 7 (821 Pope Street) and Site 8 (882 and 886 College Avenue) have 50% lower income units and 50% moderate income units. The rest of the proposed lower income sites are 100% lower income units.

5.2.1 Exacerbated Conditions

The northern and eastern parts of the city contain block groups considered moderate resource with a higher concentration of Hispanic/Latino population, higher percent of renter occupied units, higher percentage of overpayment by residents, less positive economic outcomes, and higher pollution burden compared to the moderate and high resource areas of the city. According to California Housing Partnership data, all federal and State subsidized housing within St. Helena is in moderate resource areas in the northern and eastern portions of the city. The Sites Inventory does not exacerbate conditions in vulnerable areas of the city by identifying sites that can accommodate lower income units throughout the city. Additionally, one underutilized site was identified that could accommodate above moderate units in the eastern part of the city, which has a higher percentage of non-White residents and cost burden and lower economic and environmental outcomes.

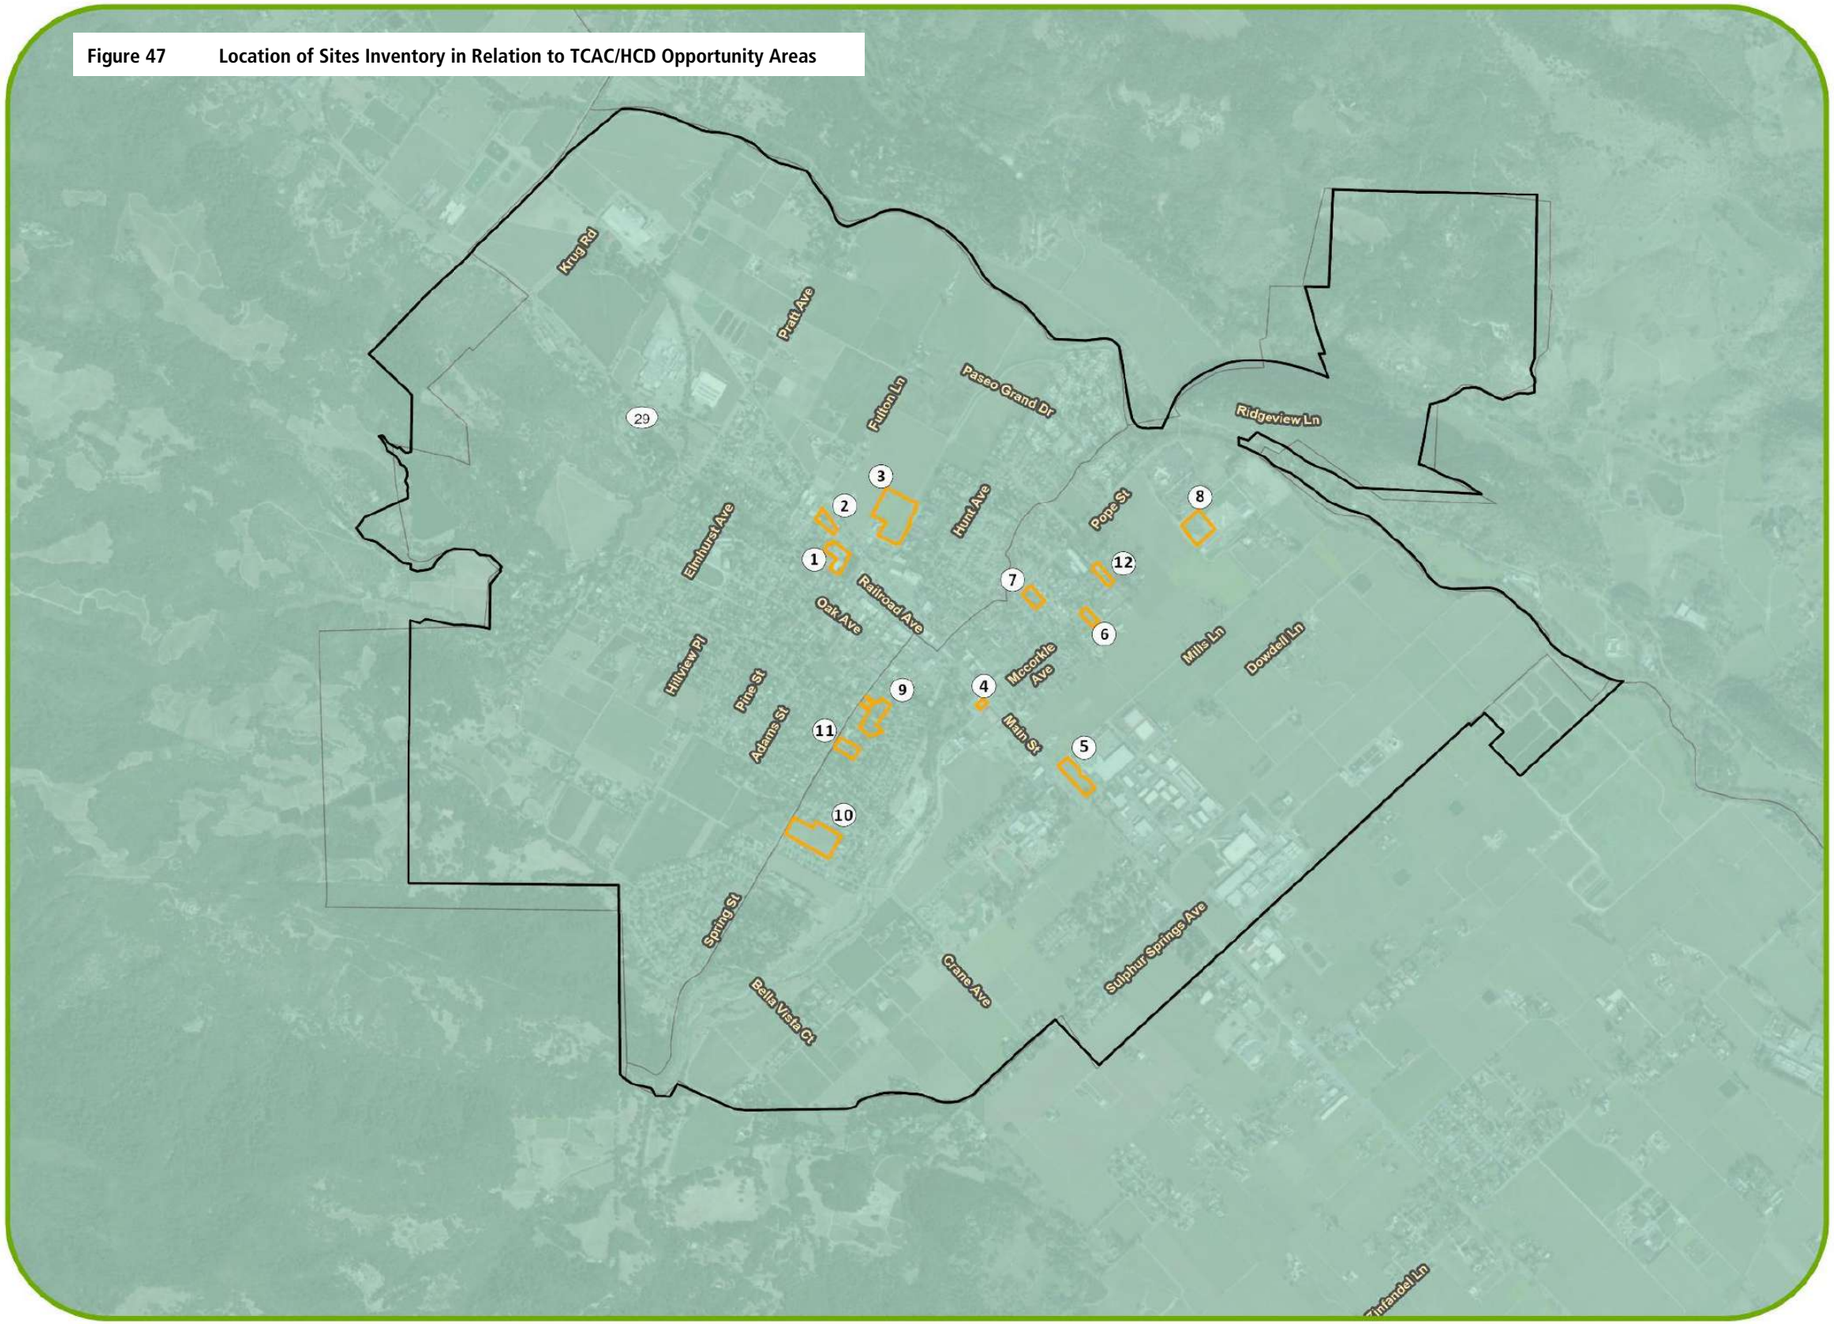
5.2.2 Racially/Ethnically Concentrated Areas of Poverty and Affluence

There are no racially/ethnically concentrated areas of poverty or affluence identified in St. Helena. However, eastern areas of the city have a larger population of Hispanic/Latino residents as well as LMI populations compared to other areas of the city. In contrast, western areas of the city have higher concentrations of White residents, higher median incomes, and lower concentration of LMI populations. Sites feasible for lower income housing were identified in these affluent areas.

5.2.3 Access to Opportunity

The city is categorized into 2 census tracts, both of which are considered moderate resource. Housing units in the sites inventory are not disproportionately concentrated in different resource areas, and the sites identified in the eastern areas are scattered on vacant and underutilized parcels to facilitate the development of lower- and above moderate-income units.

5.2.4 Disproportionate Housing Needs



The fair housing assessment found a need for affordable housing for people with disabilities and adequate low-income households. The City incentivizes the development of extremely low-, very low-, low-, and moderate-income housing by reducing development fees and relaxing development standards to incentivize housing development. The City may also assist in acquiring and assembling property, subsidizing on-site and off-site improvements, and assisting in relocation activities as well as clearing and demolition.

5.2.5 Subsidized Housing

In 2019, approximately 1,105 households received Housing Choice Vouchers in the County of Napa, with 10 households receiving rental assistance and 6 households on the wait list in St. Helena.[84] The AFFH Data Viewer does not have data on Housing Choice Vouchers for St. Helena.

[84] *City of Napa Housing Authority's Annual Report Housing Services Agreement, 2019, https://www.cityofsthelena.org/sites/default/files/fileattachments/planning_resources/page/3395/2018-2019_housing_services_annual_report.pdf*

6. Contributing Factors

This assessment of fair housing issues identifies factors that contribute to fair housing issues in the City of St. Helena, as shown in Table 10.

Table 10 Factors that Contribute to Fair Housing Issues

Identified Fair Housing Issue	Contributing Factor	Meaningful Action
Fair housing enforcement and outreach	· Lack of fair housing requirements and information provided to residents · Outreach and communication of services are limited to English · Limited fair housing testing and enforcement	· Participate in FHNV meetings, at least once annually, to coordinate regional responses to housing discrimination issues (Program H-XX)
Lack of affordable housing and displacement of residents	· Increasing rent and house/property costs · Dominance of single family housing · Land use and zoning laws · Availability of affordable units in a range of housing types	· Diversify and expand the housing stock to accommodate the varied housing needs of different groups (Programs H-E, H-H, H-I, H-J, H-W, H-LL) · Pursue down payment and mortgage assistance resources through the Housing Trust Fund or other resources (such as CalHome) for local funding to assist lower and moderate-income residents (Program H-GG) · Development of affordable housing on City-owned sites (Program H-V) · Provide by right approvals for multi-family housing projects that meet objective design and development standards (Program H-V) · At least once annually, provide an information on accessory dwelling units (ADUs) in the city, and target outreach to residents in the high resource

		southwest of Main Street and northeast of Pratt Street (Program H-Q)
Concentration of lower income and minority households in the southeastern areas of the city	· Land use and zoning laws · Location of existing affordable housing	· Prioritize affordable housing in high resource areas southwest of Main Street and northeast of Pratt Street (Program H-V) · Encourage construction and renting of ADUs in high resource areas to increase supply of variety of housing types in the city (Programs H-I, H-R) · Prioritize CIP in the eastern part of the city (Program H-WW) · Revise inclusionary housing ordinance for more lower income units, realistic in-lieu fees, workforce housing, and more on-site housing requirements (Program H-F) · Invest in public infrastructure projects in low and moderate resource areas that improve the quality of life for residents (Program H-WW)
Limited resources for persons with disabilities	· High cost of transportation for persons with disabilities · Lack of ADA compliant sidewalks	· Reduce ridership costs for VineGo paratransit system (Program H-WW) · Work with the County of Napa to carry out the ADA self-Evaluation and transition Plan to remove barriers for persons with disabilities to facilities and programs in Napa County (Program H-WW)

Appendix B: Comments on the Public Review Draft 2023-2031 Housing Element Update

The City received multiple comment letters on the Public Review Draft 2023-2031 Housing Element Update. Comments on the Public Review Draft were received between June 29, 2022, and July 30, 2022. Key changes in response to public input include revisions to various programs and the addition of a new site in the sites inventory.

Response to Comments

In response to these comments, the City has made a number of revisions to the Public Review Draft Housing Element, including:

- 1: Policy Document – Program H-Y: Corrected spelling error and added Voorhees Circle (now program H-Z).
- 1: Policy Document – Policy HE 2.5: Revised language for clarity.
- 1: Policy Document – Program H-C: Urban Limit Line: Deleted program.
- 1: Policy Document – Program H-J: Updated funding sources to include State and Federal programs and grants (now program H-I).
- 1: Policy Document – Program H-M: Zoning to Facilitate Higher Density Housing: Revised for clarity (now program H-N).
- 1: Policy Document – Program H-R: Affordability Requirements for ADU Incentives: Updated text to specify that a regulatory agreement is required (now program H-S).
- 5. Housing Conditions – Key Findings: Added source information for the data presented in the key finding related to Cost Burden
- 5. Housing Conditions – Physical Housing Conditions: Estimated the number of homes in need of rehabilitation.
- 6. Housing Market Conditions – Affordable Home Purchase Prices: Corrected broken references to Table 15.
- 6. Housing Market Conditions – For-Sale Housing: Revised note on Table 15 to clarify that 2021 data was used.

- 11. Housing Resources – Pending and Approved Projects: Revised Table 36 to identify the existing unit at 963 Pope Street as deed restricted.
- 11. Housing Resources – Remaining RHNA: Revised Table 37 to fix incorrect income categorization for 963 Pope Street.
- 11: Housing Resources – Residential Sites Inventory: Added 620 McCorkle (APN 009-502-003) to the available sites inventory.
- 11. Housing Resources – Pending and Approved Projects: Revised Table 36 to identify the existing unit at 963 Pope Street as deed restricted.
- 11. Housing Resources – Remaining RHNA: Revised Table 37 to fix incorrect income categorization for 963 Pope Street.
- 11: Housing Resources – Residential Sites Inventory: Added 620 McCorkle (APN 009-502-003) to the available sites inventory.

July 26, 2022

TO: Members of the City Council and Planning Commission, City of St. Helena

FROM: Jennifer La Liberte, Executive Director

SUBJECT: Housing Element Update, 2023-2031, Public Review Draft

The Board of Directors of Our Town St Helena and I appreciate the opportunity to comment on the draft Housing Element Update (HEU).

General Comments

Pg 1-4 Potential Funding Sources – There does not appear to be consistency among the potential funding sources for the objectives. Some programs list specific potential sources (though the lists should be expanded) and some list only staff time. It appears this could be related to how current programs are funded. Federal, state, county, local, and private funding sources would seem appropriate for each objective that requires development and construction funding. Also, if detailed funding sources are to be included, then US Department of Agriculture Rural Development should be added.

Pg. 1-6 Throughout the document (beginning on page 1-6), much of the cited data is outdated and does not accurately reflect today's market conditions. For example, the HEU states "typical contract rent for an apartment in St. Helena was $1,470 in 2019," and to avoid being cost burdened, a renter would need to earn $59,160. According to the Napa County 2021 Affordable Housing Needs Report (May 2021) produced by the California Housing Partnership, the average asking monthly rent in Napa County is $1,948 and renters need to earn $77,916 to avoid being cost burdened. Since St. Helena tends to be at the top of the market for Napa County, it's safe to assume (and observe) that those figures are even higher. Marcus & Millchap publishes a quarterly Bay Area multi-family market report that identifies mean rents by county by unit type which would be more accurate even if not specific to St Helena. We know that a typical two-bedroom market rate unit in good condition is renting for $2,100-$2,650 plus utilities, and three-bedrooms in very good condition are at approximately $3,000 per month.

Pg.1-11 How were the specific quantified objectives derived under each of the programs and how do they relate to each other? There appears to be significant overlap in

these objectives. Example: farmworker housing and very low-income housing could be the same housing; senior housing could be incorporated into a low-income project. The Quantified Objectives Summary Table on 1-40 page provides the totals but not the logic in how the quantities were broken out.

Pg. 1-17 "The City will explore possible incentives for building attached market rate housing units for rent and for sale" which is great, but it ought not take five years to explore incentives. And what action comes after exploration? Similarly, why will it take four years to study potential modifications to the Zoning Code to facilitate higher density housing, etc., when the City is already updating the Zoning Code and the HE and should be fairly versed in what changes are needed? Is it possible to make incremental changes? For example, an immediate step the City could take is to remove the conditional use permit requirement in multi-family zones to streamline the process for developers.

Page 1-25 Change Murietta to Marietta. Note: Some Voorhees Circle homes that have not changed hands are also at-risk for conversion.

Pp. 2-23 Beginning on page 2-23, Joe is Joe McGrath, Jordan is Jordan Bentley, Mary Stevenson is Mary Stephenson, John is John Sales, Jennifer Le Liberte is Jennifer La Liberte, and Steve is Steve Goldfarb.

Page 2-57 Employment – what did the unemployment rate increase to? Table 3, under 2010 for Napa County, the comma is in the wrong place.

Page 2-82 Vacant units -- It would be useful to state how many people could be housed in these units which comprise 17.4 percent of the housing stock. If the rental vacancy rate is 3.1 percent and ownership vacancy rate is 5.3 percent, what constitutes the delta (17.4 minus 3.1 minus 5.3)?

Page 2-83 Cost burden – for the last paragraph, what is the time period this data represents?

Page 2-84 How does the fact that an overwhelming portion of our existing housing stock is 40 to 80 years old correlate with the City's preservation goals?

Page 2-88 Table 14 – how many of the permitted units from 2015-2019 have been built?

Page 2-96 Home values – how is "typical home value" defined? Zillow is the cited source, which is providing listing prices, not value. Based on current listings in St. Helena, $1.6 million is at the lower end of the range. Local realtors could provide updated

MLS data which would be timelier and more accurate than Zillow. Also, within this section it is not clear whether existing deed-restricted units are included in totals of rent/homeownership units and monthly cost. It could be that these income-qualified units are affecting the total values. Could this be made more explicit?

Page 2-98 Affordable home purchases – some zeroes are at the beginning of the first sentence and middle of the second sentence that don't make sense.

Page 2-99 Table 15 -- The Area Median Income figures are for 2021. HUD has published new figures for 2022, so the footnote to the table should be adjusted accordingly.

Page 2-103 Table 16 – Christine Apartments, 723 Hunt Ave., four units, should be included as a very low and low income; OTSH purchased in June 2021 and recorded 55-year deed restrictions. Also, Grayson Apartments were funded privately through the inclusionary requirements met by 632 McCorkle and references to tax credits, AHP, etc. should be removed. This is an important point because the housing crisis here will not be solved exclusively through non-profits.

Page 2-154 Table 36 – 963 Pope Street, under "Project Description", the existing house is deed restricted and should be noted.

Page 2-155 Table 37 – if the 4 pending or approved units is referring to 963 Pope St, those should be moved to "lower" income.

<u>Policies</u>

HE 2.5 "Allow duplexes in all low-density residential zones" – please clarify whether this allowance is by right and not with a conditional use permit.

HE 4.8 "Give preference to projects providing workforce housing affordable to up to 140 percent of the AMI" – there doesn't appear to be an implementation program associated with this policy. What preference would be given, and would it be at the expense of another affordability level?

<u>Implementation Programs</u>

H-A, H-NN "Concentration of sites for affordable housing" – OTSH supports the City's efforts to ensure affordable housing sites are identified geographically throughout the city. But we caution that land is scarce, and large sites rarely become available that are suitable for multi-unit housing, and, most that do, tend to be located east of Main Street. We support incentivizing affordable housing wherever it can get

built, and don't support the City prioritizing Affordable Housing Trust Fund dollars for affordable projects in the western portion of the city at the expense of projects in the eastern portion.

H-C OTSH believes we should be planning for a more sustainable and less car-dependent future. We should be exploring opportunities to increase infill density and expand height limits and reduce parking requirements. Up and in should be the focus. The block of land from south of White Sulphur Spring Creek to Grayson and west of Highway 29 and east of Crane vineyard is one of the most poorly utilized sections of the City, and we believe a housing task force could explore how to unlock the potential here. Expanding the Urban Limit Line should be the last option as it runs a great risk of negatively impacting what makes this such a great and desirable place to live with vibrant wine and tourism industries.

H-D Water and sewer access should be prioritized for both affordable and missing middle housing. Also, please define "missing middle" in terms of Area Median Income. The water neutrality requirement should be eliminated for any attached affordable and missing middle housing. The City could consider requiring other trade-offs such as no-irrigation landscaping or rain capture systems.

H-J "ADU Workforce Housing Incentive Program" -- broaden the potential funding sources to include grants, state and federal programs. Also, consider working with the County Assessor to allow a property tax reduction on the larger property in exchange for 30-year a deed restriction on an ADU, with proper monitoring to ensure compliance.

H-M OTSH believe the City should immediately remove the Conditional Use Permit requirement on MDR Zoning. At a minimum, it should be removed for any parcel identified in the HE as a Housing Opportunity Site. Discretionary review is the toehold for opposition to these projects and makes developers wary of taking the significant financial risk that is required for this type of development. Also, consider allowing deed restrictions for missing middle projects (as defined by the City) and in exchange grant fee waivers and eliminate the housing impact fee requirement.

H-P We should not incentivize ADUs beyond existing state mandates unless they have a deed restriction and rental occupancy requirements in exchange. While this may be implied it isn't clearly stated.

H-R, H-DD	"Affordability requirements for ADU incentives; reduced fees for affordable housing" – these should include a reference to the mechanism that will restrict affordability (i.e., affordable housing regulatory agreement).
H-S	"Illegal housing units" – these types of policies or programs can be double edged as they often end up displacing households that cannot afford to live in legal units. Consider a companion program that sees to support households displaced by this program.
H-U	Under Objectives – "Support the development of 3 multi-unit housing projects….support the development of five infill projects…." What does "support" mean? As written it implies a maximum the City will "support" during the planning period.
H-??	Under Goal 3, Conservation of Existing Housing – consider adding an implementation program: "The City will work to obtain CDBG or other available funds to create an 'Affordable Housing Conservation Fund' so units can be acquired quickly when they hit the market and preserved at affordable levels."
H-Z	"Vacation Rentals" – the City should consider prohibiting vacation rentals in certain zoning districts if it hasn't already.
H-FF	"Affordable Homeownership" – the City should work with the County's Proximity Housing Program to provide down payment assistance to St. Helena first-time home buyers. If the County is amenable to working with the City to create a funding set-aside for St. Helena, the City could then market the program or work with others to do so.
H-II	"Housing Coordinator" – this is an immediate need, and a specified time frame is encouraged rather than "ongoing". It would be preferable to do this as a City of St Helena position, but a shared position is better than none. OTSH would prefer the City consider a Housing / Economic Development FTE rather than a lower level, part-time Housing Coordinator. Also, meeting with partner jurisdictions twice during the 13-year planning cycle does not appear to be sufficient.

Proposed Sites

Site maps	It would be helpful to add a north arrow to the aerials.

Page 2-162 The last sentence should read, "However, the future property owner intends to develop 36 to 50 units."

Page 2-170 Table 50, Site 5 – change 50 to 36-50 (if possible).

Housing Opportunity Sites

Adams Street What is the rationale for the size and placement of the Opportunity Site on the Adams Street property?

709 McCorkle This site was recently purchased and is intended to function as an estate compound. It has a low to zero probability of being developed for affordable housing.

741 McCorkle This house was recently renovated with significant capital improvements and is unlikely to be further developed in the next HE cycle.

1637 Spring This site has recently been purchased for the intent of turning it into employee housing.

Proposed site We encourage the City to add 620 McCorkle Avenue (APN 009-502-003-000) as a "key housing site". This 0.76-acre site is zoned MDR and is currently on the market. Including it as a key housing site would eliminate the requirement for a conditional use permit and be consistent with the goal to remove barriers to development of multi-unit housing.

Conclusion

OTSH commends the City for its work on this document. Realizing that the HEU is a mandated document that needs to follow strict guidelines, we hope the City will also create an implementation plan that identifies measures, cost analysis, staff and funding resources, and time frames for meeting the goals contained herein.

Subject: [External] Land designation

Hi
It appears numerous parcels sent to the state to meet our quota fir homes are not currently available for sale? Are they going to be for sale? And we are not aware? Or, emanate domain enforcement would be necessary?
I firmly disagree with the high to med density development of Valley View Hudson vineyard property being developed as traffic on the road is already more than a residential area should have to handle between cut threw traffic to avoid Hwy 29 to the school traffic it's impossible to safely get out of your driveway or even ride a bike!
Spring Street is narrow and I notice in addition three sites are designated as possible development.
The government/ Bay Area need to either agree to continue our exempt status. Recognize us as a primary agricultural area or the Napa Vally will be destroyed!

Housing Element for Public Comment
Aaron Hecock, Senior Planner, City of St. Helena
ahecock@cityofsthelena.org

July 10, 2022

Dear Mr. Hecock,

As concerned St. Helena residents, we have read the Housing Element Update and plan to attend the public forum.

We support the city's efforts to identify appropriate sites for potential development to provide additional housing that is badly needed. Yet after reading about proposed rezoning and adding more density, we remain vigilant in pointing out situations where multi-unit projects would negatively impact neighborhoods.

We have shared with several City officials the situation we face after the recent purchase of the parcels at 1521 and 1541 Elmhurst. The owner, Jennifer Mozzetti, and her friend John Bowman, a self-described developer from Napa, have disrupted this peaceful neighborhood with their alleged plans to develop the parcel at 1541 Elmhurst into a multi-unit site with the "cooperation of the City." They initially claimed, as a result of their purchase of the two parcels, they "owned" the Elmhurst Alley from the property at 1521 extending to the end of the alley.

The city, through correspondence from Eric Janzen on 5/17/22 and several other emails, assured us that the Elmhurst Alley was listed by the County Assessors as a public right of way and is not owned by Ms. Mozzetti.

Elmhurst Alley is a single lane, dead-end alley that extends off busy Spring Mountain Road. It provides access to the vehicles of 5 single family homes in addition to the mail truck, delivery trucks and home health care vehicles that service those homes. The tightness of this alley already poses safety questions for Emergency and Fire Department vehicles.

Any development of the property at 1541 Elmhurst from its current single-family residence to a multi-unit would be unwise and unsafe expanding the number of alley users. (Garbage day finds the street with as many as 15 garbage cans as it is!) Certainly, the goal of adding multi-unit housing in St Helena is a laudable one, but to drop a new multi-unit project in an already dense neighborhood with limited access from a single-lane, blind alley, would be ill-conceived.

Our specific questions are these we hope you can answer:

1.The Housing Element mentions an inventory of possible sites, not yet public, that might be used to develop more housing.
Is the parcel at 1541 Elmhurst currently on this site list or being considered?

2. Can individuals, seeking to develop multi-unit housing on their own properties apply to be included on this site list?

If the answer is "yes" to either question, we kindly request a site visit, in person, by a member of the Planning Commission, so that the impact of adding more housing and residents on Elmhurst Alley will be obvious.

Sincerely yours,

Dayna Van Kleeck

Subject: Re: [External] Public Review Draft Housing Element Available Now!

Dear HCD,

I am concerned about the City of St. Helena putting forth a Housing Element Draft that contains at least one property that the City has repeatedly been told is absolutely not available which is 601 Pope Street. There are other properties on the Draft that are also potentially not available but this one site is positively not available.

We have a huge housing shortage problem, like most communities. Knowingly including unavailable sites is unethical as well as contrary to the purpose of identifying housing opportunity sites.

What should be or can be done about this?

Sincerely,
Nancy Dervin

Subject: [External] Housing sites

I wanted to comment on the list of potential sites for housing that was in the St Helena Star. I've taken the time to look at each of the addresses mentioned. With the exception of one, I found all of them viable locations. My one exception is the vineyard location on Spring St.
One of the things that makes St Helena unique are the vineyards still scattered within the city. They are a part of our heritage, displaying the agriculture that has made this valley the world class jewel that it is. Please allow this one to remain as it is.

Respectfully, Mary Wilson

Subject: [External] Re: [External] A Potential New Opportunity Site

Aaron:

Thanks.
Speaking as a private citizen and neighboring property owner (and concurring with Mary as an OTSH Board member), I would also advocate that this lot [620 McCorkle - APN 009-502-003-000] be added to **this** HE cycle as a "Housing Opportunity Site".

In light of the recent multi-family developments on that street I would recommend however that it remain MDR, otherwise it may cause too much opposition with residents on the south side of McCorkle.
The goal would be to eliminate conditional use requirements which become, as you know, major entanglements in entitlement.

However, as MDR it should be explicitly listed under **17.40.020 Permitted Uses (N):**

N. Multiple-family dwellings, apartments, and dwelling groups at a density up to the maximum allowed by the medium density residential district shall be allowed as a permitted use on the following MR zoned parcels, which are identified as "Key Housing Sites" in Table 42 of the city's 2015-2023 housing element, and are identified as follows by street address and assessor's parcel number (APN): 567 Pope St. APN 009-070-002; 591 McCorkle Ave. APN 009-070-003; 1817 Spring St. APN 009-322-009; Sulphur Springs Ave. APN 009-362-015; Spring St. APN 009-441-023 and 009-552-002; 576 Pope St. APN 009-552-003; 1105 Pope St. APN 009-090-003. (Ord. 17-2 § 6 (part); Ord. 16-8 § 1; Ord. 15-2 § 7 (part): Ord. 12-2 § 6: Ord. 07-5 § 2 (part): Ord. 05-4 § 1 (part): Ord. 03-4 § 11: prior code § 27.51)

Please confirm that the above constitutes "public comment".

Thx,

Joe

Subject: [External] HE Draft Input

Aaron/Maya:

Here are some additional comments/inputs re: Housing Element. Please do not take them as criticism of your hard work. The Housing Element can be a valuable tool to accomplish our municipal housing objectives if we shape it correctly.

Thanks,

Joe

General Comments:

* Current planning meetings should be held in person with a zoom option. It should no longer be acceptable that public meetings are held entirely by Zoom. It also should not be acceptable that participants to Zoom meetings have no idea how many other participants are present, and, if participants "opt-in" to identify themselves, are identified.

* The document and the process are too long, too bureaucratic, and not specific enough with respect to immediate and effective actions and policy changes that will alter the climate in any meaningful way to have a real near-term impact on affordable or missing middle housing.

* The document itself is outdated with may reference to data as far back as 2019 representing "current" data. We lived in a far different world than in 2019.

* A major flaw in the Housing Element process for Above Moderate or Market Rate units. Our State Legislators did not comprehend second home or vacation communities.
So meeting the HE RHNA objective for Above Moderate by enabling, say, the Hunter Project is nonsensical if say 50% of the SFHs ultimately become vacation homes.
Having these types of development consume constrained water, sewer and other valuable resources can impinge on more critical housing needs.

Specific Section / Page Comments:

Page 1-11:

H-C We should be planning for a more sustainable and less car-dependent future. We should be exploring opportunities to increase infill density and explore expanding height limits, and reduce parking requirements. Up and In should be the focus. The block of land from south of White Sulphur Spring Creek to Grayson and West of Highway 29 and east of Crane vineyard is one of the most poorly utilized sections of the City. We should unleash a task force to see if we can unlock

potential here. Expanding the Urban Limit Line should be our last option, and runs great risk of negatively impacting what makes this such a great and desirable place to live with a vibrant wine industry and tourism economy.

Page 1-12:

H-D. Water and sewer access should be prioritized for both affordable and missing middle. Also please define "missing middle" in terms of AMI %. 200%? Water Neutrality Requirement should also be eliminated for any attached affordable and missing middle. Mandate no-irrigation landscaping instead. All new buildings in CA are highly water efficient by California Building Code. It is better that we have new stock than old stock re: environmental sustainability (similar to newer car fleet vs. older regarding emissions).

Page 1-17:

H-M. It should not take 4 more years following 3 years working on the Housing Element to understand what Zoning Ordinances need to be changed to enable housing.

1) Start with removing the Conditional Use Permit requirement in some manner on MDR Zoning. At minimum, it should be reduced for any parcel identified in Housing Element as Housing Opportunity Site (not just Key Housing Opportunity Site") . It is imperative to reduce or eliminate "discretionary" review. Discretionary review is the toehold for opposition on these projects. It is also a toehold for CEQA opposition.
2) Define "Missing Middle" in terms of AMI. 200%?
3) Tradeoff off 2:1 (or some such ratio) of affordability requirements on private developers for below moderate units for moderate to missing middle (200%) cutoff units. Ie a developer can meet "affordable" designation if he/she builds (2) deed-restricted moderate to missing middle (80-200%AMI?) units for every (1) required < moderate unit (<80% AMI unit).
4) Eliminate Water Neutrality requirements for above. This is just one more hurdle.
5) Eliminate Housing Impact Fees for above. By very nature these projects are having a POSITIVE housing impact.
6) Reduce overall permit fee structure for above. (on page 2-142 it calculates 12.3% of multi-family costs on Permits & Fees. This is right after it the HE states that governmental constraints are not a factor?)

Pg 1-15:
H-J. What can we do to entice existing ADUs into a deed-restricted affordable? How about a tradeoff on property tax relief on that unit for 30-yr deed-restriction and rental occupancy rate compliance??

Pg 1-19:
H-P. We should not further incent ADUS beyond existing state mandates unless they have deed-restriction and rental occupancy requirements in exchange.

Pg 1-29:
H-II. What are the accountabilities of the Housing Coordinator? Why would we not do this under existing Departments?

Pg 1-34:
H-UU. We should be considering "no-irrigation" landscaping (at least after plants take hold).
We should eliminate the Water Neutrality Requirement on any deed-restricted affordable < 200% AMI. This is a cumbersome and complex and expensive requirement to comply with. New attached buildings under CBC are highly water efficient and perform well below 65 GPD per capita. Nix the irrigated landscaping as a tradeoff.

Pg 2-38:

HE1.B. This document indicates that because units have been built in last cycle that Growth management System was not an obstacle. This is untrue. 632 McCorkle was "lucky" in that we straddled two years and literally consumed (8) of the (9) available allocation. Had this been a 10 unit project, it is not clear what the City would have done. Had there

been another similar project, it is unclear what the city would have done. Uncertainty is the enemy of Investment and the friend of Risk.

Pg 2-103

Table 16 - Grayson Apartment 2 units funding source were **not** Tax Credits, nor AHP, nor RHCP, nor City funded. These two units were **funded privately** through inclusionary requirements on 632 McCorkle. This is an important point, because we will not solve the housing crisis here exclusively through non-profits.

Pg 2-125:

Saying that Building Codes and Zoning Ordinances are not a "governmental constraint" to development is an entirely untrue statement and somewhat offensive coming from a government agency. While I would not argue that enhancements in the California Building Code are in most cases warranted, they have most definitely affected housing costs and housing production and have contributed to the shortage of affordable housing stock. Enhancements to CBC in ADA, Seismic, Fire, and Environmental requirements have played a significant role in the increase in housing costs. This must be acknowledged. As for Fire Code, nearly all of the costs in the building code are for suppression systems to extinguish a fire that starts inside the building. Most homes in CA are destroyed by fire from outside the building.. The CBC however is very clear and the requirements do not have broad interpretation, so while costly to comply with, is not a great impediment.

Zoning Ordinances however and discretionary reviews are something entirely different. Developers do not like uncertainty. If a Zoning Ordinance can be interpreted differently by different people - that is problematic. And if the outcome of a Design Review Meeting may be different based on the makeup of a Commission that is problematic. Developers do not like uncertainty. This is why discretionary reviews are highly problematic. To bring a complete application to Design Review Submission - let's say 8-12 units - could easily require an investment of $250K. Surveys, Civil Plans, Arch Plans, Elec Plans, Plumbing Plans, Mechanical Plans, etc. This all with the possibility of project Denial.

Lastly. CEQA is a major governmental constraint and should be acknowledged as such. CEQA should have no role in infill projects within ULL unless special circumstances warrant.

2-132:

We should articulate what Design Review is "not". For projects that are entitled, Design Review has no function in determining whether a project can be built or not to its entitlement. It would be much preferable to establish objective design guidelines that should be followed for multi-family rather than subject applications to a highly subjective process.

2-138:
Parking requirements for 2 Bedrooms within the ULL should be reduced to 1.5 spaces for <200% AMI.

Housing Opportunity Sites Input

For the sites listed, the probability that any given site gets developed in the next HE cycle range between 0% and 95% (Phelps Site). Most sites identified have a low probability (< 10%?) chance of being developed.

709 McCorkle: This site has recently been purchased and is intended to function as an estate compound.

741 McCorkle: This house has been recently renovated with significant capital improvements, and is unlikely to be further developed in this HE cycle.

1637 Spring Street: This site has recently been purchased for the intent of turning it into employee housing. My understanding is that the current plan is to convert 1 BRs into 2 BRs through garage conversion.

620 McCorkle: Per prior inputs, this site should be added to the Housing Opportunity Site and Key Housing Opportunity Site list.

RE: 2023-2031 Housing Element Draft
VIA: Email

Dear Mr. Hecock:

First of all ,we would like to thank you for the this very through and professional work product. It is obvious that much research and attention to detail has been taken.

A question. Under the Water Section it is stated that "although the maximum amount of (Bell Canyon) water that is available to the City is 992 acre-feet". Why?

In Section 11. Housing Resources -Future Housing Needs we note the following:

> The City must ensure the availability of residential sites at adequate densities and appropriate development standards to accommodate these units by income category.(Emphasis added).

Based upon our work in attempting to find suitable land for new "affordable" Essential worker housing our experience, in part, differs from the report's conclusions:

Regarding the City owned Adams Street parcel considerable thought should be given to identifying the Eastern most portion of the parcel, not the Western end for "affordable" housing. SHHC submitted as preliminary site plan so indicating. Thus, leaving the West end for a potential city hall location or other civic functions. To us, it does not make sense to place any type of affordable" housing at the West end.

Site 4: 905 Main Street. When SHHC made inquiries, we were informed that the owner expressed that this for-sale price of this parcel would exceed $1,000,000. Given the suggested density of five units that would make the land cost per unit $200,000. For most "affordable" housing the land cost should be nearer to $50,000 per unit to qualify for the necessary grants and/or financing thus making this parcel financially unfeasible.

Site 7: 81 Pope Street. Zillow estimates that the current price for this property is approximately $2,000,000. Again, that would work out to a land cost of $100,000 per unit of the projected 20 "affordable Units (to say nothing of the cost of demolishing the existing structure). . For most "affordable" housing the land cost should be near to $50,000 per unit to qualify for the necessary grants and/or financing thus making this parcel financially unfeasible.

Site 9: 1447 and 1515 Spring Street. The Zillow estimated sales price for each of the existing residences at $1.6mm to $1.75mm, totally $3.35mm in value. For the estimated 24 units that works out to a land cost of $139,583.00 per unit. For most "affordable" housing the land cost should be near to $50,000 per unit to qualify for the necessary grants and/or financing thus making this parcel financially unfeasible.

Site 10: Spring Street between Hudson Avenue & Valley View. From my notes during the public comment portion, I believe it was Joe McGrath who said that this property had recently been sold and lease-back on a long-term basis. Based upon that it would appear this parcel is not currently available.

Site 11: 601 Pope Street. This property owner declined SHHC's to acquire this parcel under a long-term lease. We offered $200,000 per year for a sixty-five-year lease and their response was "oh, we just like the way it looks".

Site 12: 1637 Spring Street. As recently as this spring this property owner expressed No interest, and the direct quote was "let them try and develop it."

Therefore, Mr. Hecock, unless that City is prepared to use Eminent Domain as in Kelo v. New London, it appears that the identified sites does not fulfill the "must" requirement of available sites to satisfy Saint Helena's 2023-2031 RHNA requirements.

RE: 2023-2031 Housing Element Draft
VIA: Email

Dear Mr. Hecock:

Again, we would like to thank you for leading this sixth Housing Element 2023-2031 document incredibly rich document full of quite important and relevant data.

However, we have some considerable concerns over facts stated and conclusions reach:

Issue #1:
In this report you state "The Housing Element ***must*** also identify ***adequate*** residential sites ***available*** for a variety of housing types for all income levels; provide assistance in developing ***adequate*** housing to meet the needs of low- and moderate-income households; address governmental constraints on the maintenance, improvement, and development of housing; conserve and improve the condition of the existing stock of affordable housing; and promote housing opportunities for all persons". (Aaron Hecock-Report to the City Council & Planning Commission Meeting -21 July 2022, page 4) (Emphasis added).

Response #1A:
Not being lawyers we referred to recognized authorities on the words contained in the above Issue #1.

Merriam-Webster Dictionary:
Ensure – "We define **ensure** as "to make sure, certain, or safe" and one sense of insure, "to make ***certain*** especially by taking necessary measures and precautions," is quite similar. But insure has the additional meaning "to provide or obtain insurance on or for," which is not shared by **ensure."**

> **Certain** – Ascertained; precise; identified; definitive; clearly known; unambiguous; or in law, capable of being identified or made known, without liability or to mistake or ambiguity, from data already given."

Realistic- means "based upon what is real rather than on what is wanted or hoped for"

> **Real –** means "having objective independent existence; not artificial, fraudulent, or illusory; being precisely what the name means; occurring or existing in actuality"

Black's Legal Dictionary:
Adequate means "Sufficient; proportionate; equally sufficient; equal to what is required; suitable to the case or occasion; satisfactory"
Availability Means "This phrase, among mercantile men, is a term well understood to be anything which can readily be converted into money; but it is not necessarily or primarily money."

Ready means **"**Prepared for what one is about to do or experience; equipped or supplied with what is needed for some act or event; *prepared for immediate movement or action"*(Emphasis added)

Demonstrate means "to prove indubitably"

Indubitable Proof "Evidence of which is not only found creditable but is of such weight and directness as to make out the facts alleged beyond a doubt."

Must "This word, like the word 'shall' is primarily of mandatory effect."

Based upon the above definitions SHHC is perplexed as to how the Housing Element can, in good conscience, or on any legal basis include 601 Pope Street or 1837 Spring Street as both owners have stated that they are not interested.

I just spoke to the owner who has been a dear friend of our families for 37 years and she stated ,"No one contacted me and further had no interest in allowing their back acreage to be developed into 'affordable' housing."?

Response #1B:
During the public comment section of the July 21m, 2022 2023-31 Zoom Housing Element, Rick Crebs, from SHHC, raised the issue of financial feasibility of Sites #4, 905 Main Street is stating "When SHHC made inquiries, we were informed that the owner expressed that this for-sale price of this parcel would exceed $1,000,000. Given the suggested density of five units that would make the land cost per unit $200,000. For most "affordable" housing the land cost should be nearer to $50,000 per unit to qualify for the necessary grants and/or financing thus making this parcel financially unfeasible".

Similar financial analysis was also offered on Site #7 821 Pope Street, (land costs of $100,000 per unit); Site #9 1447 & 1515 Spring Street, (land costs of $139,583 per unit).

Based upon that information provided during the Housing element Zoom meeting of Thursday, July 21, 2022, a question was directed by a city council member to the city's staff relative to the property valuations statements raised by Rick Crebs of SHHC on valuations attributed to Zillow. The response was questioned of the authenticity of the Zillow valuations. This seems odd in that the Housing Element report refers to Zillow eight (8) times as the authority on real estate valuations.

It was further stated that grants or low interest loans would off set the high land costs.

Please allow SHHC to provide a current financial analysis as present in SHHC's Offer to Develop 88 Units (using 2.3 acres at the East end of the Adams Street city owned parcel).

Use of Grants: Adams Street as an example:

Total Construction Costs $43,116,112 or average of $489,956 per unit (Leased, not sold land)

Funding necessary to complete this project: (Projected)

City/County	$2,000,000	(4.4%)
Other Grants	$32,337,084	(75.0%)*
Mortgage or Bond	$ 7,054,364	(16.40%)
Total	**$43,116,112**	**100% (rounded)**

*The largest grants that SHHC has been able to discover are from the California Department of Housing Affordable Housing Sustainable Communities (AHSC) grants which currently has a maximum grant amount of

$35mm, so the Adams Street project comes close to it. This information is supplied to illustrate the extreme difficulty present in realistically financing the Saint Helena community to provide the "Must" in the RHNA requirement.

Issue #2:

In this report you state "The issue of owner consent to being included on the housing opportunity sites list has come up on several occasions. Being listed as a housing opportunity site in no way terminates or otherwise affects existing uses on-site. Furthermore, there are currently no legislative or other means to compel a private property owner in this process, meaning we cannot force or otherwise require that they build housing. That said, owner consent is not a requirement for inclusion in the housing opportunity sites inventory (Government Code 65583.2). The inventory is to show that there are suitable sites to meet the City's RHNA and the programs are there to help housing developers to make that happen. Designating sites as suitable for housing falls within the City's authority to regulate land uses. If the Housing Element were to designate an already developed site."

Response to #2:
Mr. Hecock, it is true that California government Code does not include language requiring "owners Consent". but, by the same logic, it does not exclude requiring the "owners' consent." This, it would seem that your comment is non-responsive. Further, Code 65583.2 refers to Government code 65583 which, in part, states "(3) An inventory of land suitable and available for residential development, including vacant sites and sites having ***realistic*** and ***demonstrated*** potential for development during the planning period to meet the locality's housing need for a designated income level, and an analysis of the relationship of zoning and public facilities and services to these sites, and an analysis of the relationship of the sites identified in the land inventory to the jurisdiction's duty to affirmatively further fair housing. (Emphasis added).

Further, in referring to the word definitions provided above, that the proposed Saint Helena Housing 2023-2031 Document on a factually basis fails to meet with any degree of accuracy of the meanings of the authenticated meaning of the words; **Adequate**, **Available**, **Demonstratable**, **Ensure**, and **Must.**

In closing, such vagueness in the prior Housing Element Reports may have been tolerated in the past. However, our town is critically deficient in sufficient "affordable" housing for all AMI's. The fact that so many are required to commute to work in the Upper Valley each day clearly contributes to unnecessary Green Housing Gas (GHG) emissions to say nothing of the cost to commute which further contributes multiple well vetted studies that conclude that the majority of those renting are cost burdened. Many in the 50-60% of household income!

Lastly, the lack of a strategy to affirmatively address Saint Helena's housing crisis is to deny, or turn its back, on its pledge to work towards a policy of Diversity, Equity, and Inclusion.

Our town can no longer rely upon the old "Three Card Monty Trick" in addressing the statutory issues the Housing Element requires.

SHHC's First Suggestion:
The city should consider removing Sites 4 (905 Mains Street, Ste 7 (821 Pope Street, Ste 9 1447 & b1515 Springs Street as being financially unrealistic due to associated land costs and instead revise the Adams Street parcel from 30 unit of Lower Income to the recommendations in the following graph:

Table 50 Summary of Housing Units (Extracted)

	Lower Income	Moderate Income	Above Moderate Income	Total

Pending Projects	0	**4**	**88**	**92**
ADU Trends	0	0	72	72
Recommended Changes		**Site Inventory**		
Site 3 (Adams Street)	**-22**	**9**	**76**	**63**
Site 4 (905 Mains Street)	**0**	**0**	**-5**	**-5**
Site 7 (821 Pope Street	**-10**	**-10**	0	**-20**
Site 9 (1447 & 1515 Spring Street)	**-24**	0	**-24**	**-48**
Totals	**-56**	**-1**	**47**	**-10**
Remaining Sites (Consolidated)		**Site Inventory**		
Sites 1, 2, 5, 6, 8, 10, 11,12	152	87	244	483
Color Code -Purple-Doubtful				
Red - Subtractions				
Green -Additions				

The results reached is close to a net neutral on units for each category of AMI housing. And the inclusion of 88 units plus 50 for the OTSG/Phelps's project equates to a realistic 54% of Saint Helena's 2023-31 RHNA required allocation.

SHHC's Second Suggestion:

While draconian, the only true solution SHHC sees to the significant challenges in achieving the forthcoming coming 2023-31 RHNA Site locations allocations is for the city to firmly state that it will undertake, if necessary, Eminent Domain proceeding as in the Kelvo v. New London U.S. Supreme Court Decision.

In closing, it is time to discard the Housing Element word games from the past and boldly put forth only those Opportunity Sites that are ***certain*** and ***available***.

EXECUTIVE SUMMARY

This chapter provides a summary of the Draft Environmental Impact Report (EIR) for the proposed Hunter Subdivision Project (Proposed Project). Included in this chapter are areas of known controversy and issues to be resolved, a summary of Proposed Project alternatives, a summary of all Proposed Project impacts and associated mitigation measures, and a statement of the ultimate level of significance after mitigation is applied.

ES.1 DOCUMENT PURPOSE

This EIR was prepared by the City of St. Helena (City), as lead agency, to inform decision makers and the public of the potential significant environmental effects associated with the Proposed Project. This EIR has been prepared in accordance with the California Environmental Quality Act (CEQA) of 1970 (California Public Resources Code, Section 21000 et seq.) and the Guidelines for Implementation of the California Environmental Quality Act (CEQA Guidelines; 14 CCR 15000 et seq.) published by the Public Resources Agency of the State of California.

This Draft EIR is a “project” EIR, pursuant to CEQA Guidelines Section 15161. A project EIR examines the environmental impacts of a specific project. Feasible mitigation measures are recommended, when applicable, that could reduce significant environmental impacts to a level of insignificance or avoid significant environmental impacts.

ES.2 PROJECT LOCATION

The 16.9-acre Project site (Assessor’s Parcel Number is 009-030-057) is located in the northeast portion of the City, at the eastern terminus of Adams Street, three blocks east of downtown and State Route 29, and west of the Napa River (see Figure 2-1 in Chapter 2, Project Description). The Project site is generally rectangular with a “panhandle” extension that connects the site to Adams Street west of the panhandle (see Figure 2-2 in Chapter 2, Project Description).

ES.3 PROJECT DESCRIPTION

Project Background

The majority of the Project site was acquired by Dennis Hunter in 1997. Planning efforts were first initiated for development of the Project site in 2005 and an application was submitted to the City in September 2010 that included a request for a Tentative Map to subdivide the property for residential development. A completeness letter for the proposed subdivision was issued by the City on March 28, 2011. Since the Proposed Project application was submitted in September 2010 and deemed complete by the City in 2011, this EIR uses the 1993 General Plan as the applicable general plan for the purposes of evaluating the Proposed Project. Nonetheless, this

EIR also evaluates consistency with the City's current "General Plan Update 2040"[1] for informational and consistency purposes.

The Proposed Project would consist of subdividing the 16.9-acre Project site to include 51 lots to accommodate single-family residences, a 3.4-acre parcel that would accommodate 25 attached residential units, a 0.06-acre parcel "A" that would not be developed, and a 0.04-acre parcel "B" for an existing agricultural well site.

The 25 attached units would be income restricted, with 5 units affordable to very low-income families, and 20 to moderate income families. The 51 lots would be developed with single-family market-rate housing units (one dwelling per lot). The Proposed Project applicant has proposed accessory dwelling units on 11 of the single-family lots, designated for above-moderate income groups. The City's Zoning Ordinance (Municipal Code Section 17.116.030) and state law provides for the construction of an accessory dwelling unit on any lot which is zoned for residential use and has an existing single-family residence. The 87 residential units (including single-family, multi-family and accessory dwelling units) would have an average density of 5.1 dwelling units per acre.

Project Objectives

Proposed Project objectives allow for the analysis of reasonable alternatives to the Proposed Project. Reasonable alternatives must be analyzed in accordance with Section 15126.6 of the CEQA Guidelines.

The Proposed Project objectives are as follows:

- Subdivide the site consistent with the City's General Plan and Zoning for the site to accommodate residential development.
- Provide opportunities to develop a variety of housing types, including multi-family, single-family, and accessory dwelling units, affordable to a range of incomes including, very low, low and moderate-income households.
- Provide opportunities to contribute to the provision of workforce and affordable housing consistent with the City's adopted Housing Element and the Regional Housing Needs Assessment (RHNA) approved by the Association of Bay Area Governments (ABAG).
- Minimize traffic-related environmental impacts, such as noise, air quality and greenhouse gases by lowering commute patterns for St. Helena workers by providing more local housing opportunities.

[1] For consistency, this EIR refers to the "General Plan Update 2040" as the "2019 General Plan," reflecting the year it was adopted (as with the "1973 General Plan" and the "1993 General Plan").

- Support alternative transportation by providing a pedestrian and bicycle linkage through St. Helena, eventually connecting the regional Vine Trail from Calistoga to the Vallejo Ferry.
- Exceed the City's green building ordinance (Municipal Code Chapter 15.53) and incorporate sustainable design features including water conservation measures, drought resistant landscaping with low flow watering systems, south and west side tree placement to reduce reliance on air conditioning units, and pre-wiring for photovoltaic systems.
- Implement the General Plan Circulation Element by completing the planned extension of Starr Avenue and the partial planned extension of Adams Street from where Adams Street terminates to connect to the Project site.
- Minimize City water use by continuing the use of an existing on-site water well for irrigation of Proposed Project landscaped areas.

ES.4 AREAS OF CONTROVERSY/ISSUES TO BE RESOLVED

Section 15123(b) (2) of the CEQA Guidelines requires that areas of controversy known to the lead agency must be stated in the executive summary prepared as part of the EIR. Section 15123(b)(3) of the Guidelines requires that an EIR identify issues to be resolved; this includes the choice among alternatives and whether or how to mitigate significant impacts. Issues of interest to the public and public agencies were identified during the 30-day public comment period for the Notice of Preparation that was circulated from March 6, 2018 through April 9, 2018.

Concerns raised from public agencies and the public include impacts to the property from potential flooding, traffic and circulation impacts, increased water demand, and impacts to cultural resources. All of these concerns are addressed in this EIR.

The Notice of Preparation and comment letters received during the Notice of Preparation review period are included in Appendix A of this EIR.

ES.5 EFFECTS FOUND TO BE LESS THAN SIGNIFICANT

Due to certain aspects of the Proposed Project, characteristics, or existing regulatory requirements, the Proposed Project is not anticipated to have significant impacts regarding wildfire. The following provides an overview of why the effects associated with this issue area was found this be less than significant and therefore not further analyzed in further in Chapter 3 of this Draft EIR.

Wildfire

The Proposed Project is not located in a Very High Fire Hazard Severity Zone (VHFHSZ) as designated by the California Department of Forestry and Fire Protection (CAL FIRE). The

Project site is located in a non-VHFHSZ within a Local Responsibility Area, with the closest VHFHSZ in a State Responsibility Area approximately 1 mile to the northeast (CAL FIRE 2008). Between the Project site and the VHFHSZ is the Napa River.

Starting in August 2020 there were a number of wildfires including the LNU Lightning Complex Fire and the Glass Fire that burned large areas of Napa County including a small portion of the Project site. Based on the current CAL FIRE maps the Project site is not located within a State Responsibility Area and is not designated as a VHFHSZ. Emergency access and the potential for the Proposed Project to expose people or structures to loss, injury or death involving wildland fires is addressed in Section 3.8, Hazards and Hazardous Materials. Adequate emergency access is addressed in Section 3.8 and Section 3.14, Transportation. The Project site is flat so fire hazards due to proximity to hilly terrain or landslides due to post-fire conditions would not be a concern. In addition, the Proposed Project does not require installation of infrastructure that could exacerbate fire risk. Because the Project site is not located within a VHFHSZ and future development is not anticipated to have significant impacts due to wildfire this topic is not further analyzed in this document.

ES.6 SUMMARY OF ENVIRONMENTAL IMPACTS AND MITIGATION MEASURES

Table ES-1, Summary of Environmental Impacts and Mitigation Measures, provides a summary of the impact analysis and a summary of environmental impacts resulting from implementation of the Proposed Project pursuant to CEQA Guidelines Section 15123(b)(1). For a more detailed discussion of Proposed Project impacts, please see Chapter 3 of this EIR. Table ES-1 also lists the level of significance of an impact prior to mitigation and lists all applicable mitigation measures identified for significant impacts, as well as providing the level of significance after mitigation.

Table ES-1
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	Impact Before Mitigation	Mitigation Measure(s)	Level of Significance After Mitigation
3.1 Aesthetics/Visual Resources			
3.1-1: Would the project have a substantial adverse effect on a scenic vista? This would be a less-than-significant impact.	LTS	None required.	LTS
3.1-2: Would the project conflict with applicable regulations governing scenic quality or substantially degrade the existing visual character or quality of public views of the site and its surroundings? This would be a less-than-significant impact.	LTS	None required.	LTS
3.1-3: Would the project potentially create a new source of substantial light or glare which would adversely affect day or nighttime views in the area? This would be a potentially significant impact.	PS	AES-1: To minimize spillover light while ensuring adequate nighttime security, the Project applicant shall prepare lighting design guidelines for the Project to be reviewed and approved by the City as part of the Design Review process. The lighting design guidelines shall include a lighting plan noting fixtures and lumens, and standards such as, lighting is to be shielded and downward focused to reduce glare and spillover light, up cast decorative lighting shall be limited to minimize effects on wildlife and to retain the rural ambience of the area, and the use of mirrored glass shall not be permitted. The lighting guidelines shall conform with Lighting Zone 2 of Title 24, Part 6, of the California Code of Regulations. The guidelines and lighting plan shall be approved as part of the Design Review application.	LTS
3.1-4: Would the proposed project contribute to cumulative changes in the existing visual character or conflict with applicable regulations governing scenic quality? The project's contribution would not be considerable.	LTS	None required.	LTS
3.1-5: Would the proposed project contribute to a cumulative increase in light and glare? The project's contribution would not be considerable with mitigation.	PS	See Mitigation Measure AES-1. Mitigation Measure AES-1 mitigates this impact and no additional mitigation is required.	LTS
3.2 Agriculture and Forestry Resources			
3.2-1: Would the project convert Prime Farmland and Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? This is a less-than-significant impact.	LTS	None required.	LTS
3.2-2: Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of farmland, to non-agricultural use or conversion of forest land to non-forest use? This is a less-than-significant impact.	LTS	None required.	LTS
3.2-3: Would the proposed project contribute to cumulative impacts associated with the loss or conversion of existing agricultural resources? The project would result in a less than considerable contribution.	LTS	None required.	LTS

Table ES-1
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	Impact Before Mitigation	Mitigation Measure(s)	Level of Significance After Mitigation
3.3 Air Quality			
3.3-1: Would implementation of the proposed project conflict with or obstruct implementation of the applicable air quality plan? This is a less-than-significant impact.	LTS	None required.	LTS
3.3-2: Would implementation of the proposed project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard? This is a less-than-significant impact.	LTS	None required.	LTS
3.3-3: Would implementation of the proposed project expose sensitive receptors to substantial pollutant concentrations? This is a less-than-significant impact.	LTS	None required.	LTS
3.3-4: Would the proposed project contribute to cumulative air quality emissions within the existing area? The contribution would not be considerable.	LTS	None required.	LTS
3.4 Biological Resources			
3.4-1: Would the proposed project have a substantial adverse effect, either directly or through habitat modifications, on species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? This would be a significant impact.	PS	BIO-1: A qualified biologist shall conduct a habitat assessment for bats in trees adjacent to the Project site within 2 weeks prior to any Project construction (site clearing, grading). The habitat assessment shall include a visual inspection of potential roosting features (bats need not be present) and presence of guano within the Project site and 50 feet around these areas. Potential roosting features found during the survey shall be mapped and described in a survey letter report. If roosting bats (individuals or colonies) are detected within the Project site, California Department of Fish and Wildlife shall be notified as soon as possible prior to any construction activity to confirm the bats can be avoided during construction. If a bat roosting or maternity colony cannot be completely avoided, a qualified biologist shall prepare a bat mitigation and monitoring plan for California Department of Fish and Wildlife review and approval, and that plan shall be implemented prior to commencement of construction that could impact the roosting bats or maternity colony. BIO-2: If construction activities are scheduled to occur during the breeding season for birds (February 1 through August 31), the Project applicant or their contractor shall implement the following measures to avoid potential adverse effects to nesting raptors and other nesting birds: • Preconstruction surveys by a biologist of all potential nesting habitats within 500-feet of construction activities, where accessible, shall be conducted by a qualified biologist. Surveys shall occur no more than 14 days prior to the initiation of site disturbance. If construction is stopped for 14 days or more during the breeding season, a new preconstruction nesting bird survey must be conducted before work can be restarted to ensure no new nesting has occurred in the interim. • If preconstruction surveys indicate that nests are inactive or potential habitat is unoccupied during the construction period, no further mitigation is required, following submittal of a survey report letter to the City of St. Helena Planning Department. • If active nests are found during preconstruction surveys, a no-disturbance buffer shall be created around active nests during the breeding season or until it is determined by the biologist that all the young have fledged. The buffers shall be established by the biologist in conjunction with the California Department of Fish and Wildlife. Typical buffers may include 500 feet for raptors and 50 to 250 feet for other bird species based on the location of the nest, the nesting species present, and types of construction activities that may cause potential nest abandonment. The perimeter of the buffer zone shall be fenced or marked with staked flagging. See Mitigation Measure AES-1. Mitigation Measure AES-1, which addresses spillover light that can affect some species mitigates this impact and no additional mitigation is required.	LTS
3.4-2: Would the proposed project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act through direct removal, filling, hydrological interruption, or other means? This would be a significant impact.	PS	BIO-3: Wetland permits (e.g., 404 Nationwide Permit, 401 Water Quality Certification, and 1602 Streambed Alteration Agreement, respectively) shall be obtained prior to any grading work. Prior to issuance of a grading permit, the Project applicant shall demonstrate authorization from the Army Corp of Engineers and any other regulatory agency to alter the wetland.	LTS

Page 970 of 4069
Agenda Item #6.2.

Table ES-1
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	Impact Before Mitigation	Mitigation Measure(s)	Level of Significance After Mitigation
3.4-3: Would the proposed project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? This would be a potentially significant impact.	PS	See Mitigation Measures AES-1, BIO-1 and BIO-2. Mitigation Measures AES-1, BIO-1 and BIO-2 mitigate this impact and no additional mitigation is required. BIO-1 (requires preconstruction habitat assessment and avoidance of roosting bats), BIO-2 (requires preconstruction surveys and avoidance of nesting birds), and AES-1 addresses spillover light that can affect some species.	LTS
3.4-4: Would the proposed project contribute to cumulative impacts with respect to biological resources? The project's contribution would not be considerable.	LTS	None required.	LTS
3.5 Cultural and Tribal Cultural Resources			
3.5-1: Would the project cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines Section 15064.5? This would be a significant impact.	PS	CUL-1: The City shall require that an archaeological monitor is present during all ground-disturbing activities with the potential to impact previously identified cultural resources or to encounter unanticipated cultural deposits including tribal cultural resources. The determination for a Native American monitor to be present shall be made by the City, in consultation with the appropriate Native American tribe prior to the initiation of ground disturbing activities. In addition, prior to the initiation of ground-disturbing work, construction crews shall be made aware of the potential to encounter cultural resources and the requirement for cultural monitors to be present during these activities. Areas observed to have potential to contain yet-identified subsurface cultural material or deposits are located throughout the Project site, but primarily would be in the western portion of the site where the existing vineyard is located. It is anticipated resources would not be present at depths of more than 10 feet below the surface. Archaeological and Native American monitoring may be adjusted at the recommendation of the qualified archaeological principal investigator, meeting the Secretary of the Interior Professional Qualifications for Archaeology, and in consultation with the City, based on inspection of exposed subsurface soils and their observed potential to contain intact cultural deposits or material. The archaeological and tribal monitors shall be provided a copy of technical reports prepared for the project and pertinent appendices to inform their monitoring efforts. The archaeological and tribal monitors shall have the authority to temporarily halt work to inspect areas as needed for potential cultural material or deposits. In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities, all construction work occurring within 100 feet of the find shall immediately stop until the qualified archaeological principal investigator, that meets the Secretary of the Interior Professional Qualifications for Archaeology, can evaluate the significance of the find and determine whether or not additional study is warranted, in consultation with the Tribe. Should it be determined by the Tribe and the archeologist, temporary flagging may be installed around this resource in order to avoid any disturbances from construction equipment. As approved by the City in consultation with the Tribe, this buffer may be adjusted by the Tribe and the archaeological principal investigator to a distance that maintains a protective perimeter around the unanticipated resource, while still allowing for construction to continue in the surrounding area.	LTS
3.5-2: Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5? This would be a potentially significant impact.	PS	See Mitigation Measure CUL-1. Mitigation Measure CUL-1 mitigates this impact and no additional mitigation is required.	LTS
3.5-3: Would the project disturb human remains, including those interred outside of formal cemeteries? This would be a less-than-significant impact.	PS	CUL-2: In the event any human remains are unearthed during site disturbing activities, Section 7050.5(b) of the California Health and Safety Code and Section 15064.5(e) of the CEQA Guidelines specifies protocols to follow in the event human remains are discovered. The Code mandates stopping work within 100 feet of the find and contacting the County Coroner to determine the origin of the remains. If the remains are determined to be Native American the Coroner shall contact the Native American Heritage Commission within 24 hours to request that the Commission determine the person or persons it believes to be descended from the deceased Native American. The most likely descendant shall be provided with the opportunity to make recommendations regarding the means of treating or disposing of the remains with appropriate dignity. Project-related ground disturbance in the vicinity of the find shall not resume until all statutory requirements have been met and evidence of completion has been submitted to the City, in consultation with the Tribe.	LTS
3.5-4: Would the proposed project cause a substantial adverse change in the significance of a tribal cultural resource that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources, or a resource determined	PS	See Mitigation Measure CUL-1. Mitigation Measure CUL-1 mitigates this impact and no additional mitigation is required.	LTS

Table ES-1
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	Impact Before Mitigation	Mitigation Measure(s)	Level of Significance After Mitigation
by the lead agency to be significant? This impact is considered potentially significant.			
3.5-5: Would the proposed project contribute to cumulative impacts to cultural resources, including historical and archeological resources as defined in CEQA Guidelines Section 15064.5 and human remains? This impact is considered potentially significant.	PS	See Mitigation Measure CUL-1. Mitigation Measure CUL-1 mitigates this impact and no additional mitigation is required.	LTS
3.5-6: Would the proposed project contribute to cumulative impacts to tribal cultural resources, currently listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources, or a resource determined by the lead agency to be significant? This impact is considered potentially significant.	PS	See Mitigation Measure CUL-1. Mitigation Measure CUL-1 mitigates this impact and no additional mitigation is required.	LTS
3.6 Geology and Soils			
3.6-1: Would implementation of the proposed project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking and/or liquefaction? This would be a potentially significant impact.	PS	GEO-1: Prior to the issuance of any site-specific grading or building permits, the Project applicant shall have a design-level geotechnical report prepared and submitted to the City of St. Helena Building Department for review and approval in accordance with adopted City standards. The structural designs shall adhere to the currently adopted version of the California Building Code. The report shall identify specific site preparation methods, grading practices, foundation designs, and other recommendations appropriate for minimizing damage from weak soils, expansive soils, differential settlement, and seismic hazards, including liquefaction. Specifically, the following requirements for the geotechnical and soils report shall be met: • Analysis presented in the geotechnical report shall conduct a detailed evaluation of liquefaction in accordance with California Department of Conservation Special Publication 117A: *Guidelines for Evaluating and Mitigating Seismic Hazards in California*. • Additional subsurface soil borings shall be completed as necessary to represent the full range of site conditions, including the southern portion of the parcel mapped as alluvial fan. • Analysis presented in the geotechnical report shall include recommendations for building foundations and improvements, including sidewalks, parking lots, and subsurface utilities, that take into consideration the potential effects of settlement, collapse, and expansive or corrosive soils. This includes the recommendation to over excavate to an average depth of 4.5 feet (and up to 10 feet in the location of the former pond) due to anticipated settlement. • All design criteria and specifications set forth in the design-level geotechnical report shall be implemented as a condition of project approval. This report shall be completed as a condition of approval of the final tentative map.	LTS
3.6-2: Would implementation of the proposed project occur on weak, compressible, and/or expansive soils that could result in adverse impacts on habitable structures? This would be a less-than-significant impact.	PS	See Mitigation Measure GEO-1. Mitigation Measure GEO-1 mitigates this impact and no additional mitigation is required.	LTS
3.6-3: Would implementation of the proposed project directly or indirectly destroy a unique paleontological resource or site? This would be a potentially significant impact.	PS	GEO-2: In the event that known or suspected paleontological resources (e.g., fossils) are unearthed during grading or trenching, the area of discovery shall be roped off by the construction contractor to include a 50-foot radius buffer and remain off-limits until cleared by a qualified paleontologist. The Project applicant shall retain a qualified paleontologist per the Society of Vertebrate Paleontology (SVP) (2010) guidelines, who shall be tasked with assessing the significance of the fossil find, including documenting the nature, location, and taxa of the find. The qualified paleontologist shall use his/her professional judgement as to the significance of the find, and whether the find should be preserved in a museum repository. Once documentation and collection of the find is completed, the monitor shall remove the rope and allow grading to recommence in the area of the find. Documentation of the fossil find, including appropriate salvage and recovery of fossil specimens and of transfer of to an appropriate repository (e.g., University of California Museum of Paleontology) shall be submitted to the City of St. Helena as evidence of compliance with this mitigation measure.	LTS

Table ES-1
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	Impact Before Mitigation	Mitigation Measure(s)	Level of Significance After Mitigation
3.6-4: Would the proposed project contribute to cumulative impacts related to geologic or seismic hazards? This would be a less than considerable contribution.	LTS	None required.	LTS
3.7 Greenhouse Gas Emissions			
3.7-1: Would implementation of the proposed project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? This would be a less-than-significant impact.	LTS	None required.	LTS
3.7-2: Would implementation of the proposed project would conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases? This would be a less-than-significant impact.	LTS	None required.	LTS
3.7-3: Would the proposed project contribute to cumulative GHG emissions within the region? The project's contribution would not be considerable.	LTS	None required.	LTS
3.8 Hazards and Hazardous Materials			
3.8-1: Would implementation of the proposed project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? This would be a less-than-significant impact.	LTS	None required	LTS
3.8-2: Would implementation of the proposed project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? This would be a potentially significant impact.	PS	HAZ-1: As a condition of approval for construction and grading permits for the Project site, the Project applicant shall the ensure following subsurface soils testing and follow-up analysis shall be performed prior to obtaining a grading permit: • A soils testing work plan shall be developed in accordance with DTSC's Interim Guidance for Sampling Agricultural Properties (DTSC 2008) by an appropriately licensed individual (i.e., professional geologist, environmental engineer, or similar qualification) for the portions of the Project site historically used for agriculture. Special consideration shall be given to targeting site soils that are representative of historic agricultural use, and to avoid sampling recent fill material placed during levee construction. Prior to carrying out soils testing, the work plan shall be submitted to the Napa County Division of Environmental Health (as the Certified Unified Program Agency for all cities and areas of Napa County) and the City of St. Helena for review and approval. • The number of soil samples, sampling methods, compounds tested, background samples (if applicable), and laboratory analyses shall be completed in accordance with DTSC's Interim Guidance. Should analytical results exceed naturally occurring concentrations or applicable CHHSLs, the health risks of such a condition shall be evaluated in human health risk assessment as described in DTSC standards and guidance (e.g., preliminary endangerment assessment guidance manual). • The risk assessment shall describe measures that must be implemented to ensure potential health risks to construction workers, site residents, and the general public as a result of hazardous materials are reduced to a cumulative risk of less than one in one million for carcinogens and a cumulative hazard index of 1 for non-carcinogens, or as required by the Napa County Division of Environmental Health acting as the Certified Unified Program Agency and/or DTSC oversight. In the event human health risk assessment shows elevated chemical concentrations pose a risk to human health or the environment, the risks shall be eliminated or substantially reduced by removal (e.g., excavation of soils and off-site disposal) or remediation of contaminated soils, and/or implementation of institutional controls and engineering controls (IC/EC). IC/EC may include use of a construction risk management plan, use of hardscape to cap problem areas, importation of clean soil in landscaped	LTS

Agenda Item #6.2.

Table ES-1
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	Impact Before Mitigation	Mitigation Measure(s)	Level of Significance After Mitigation
		area to eliminate exposure pathways, and/or deed restrictions. If IC/EC are implemented, an Operations and Maintenance Program shall be prepared and implemented to ensure that the measures adopted are maintained throughout the life of the Project. The soil testing report, and if applicable, the human health risk assessment and Operations and Maintenance Program, shall be subject to review and approval by the City of St. Helena Department of Public Works, the Napa County Division of Environmental Health and/or other regulatory oversight agencies.	
3.8-3: Would implementation of the proposed project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? This would be a less-than-significant impact.	LTS	None required.	LTS
3.8-4: Would implementation of the proposed project expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires? This would be a less-than-significant impact.	LTS	None required.	LTS
3.8-5: Would implementation of the proposed project contribute to a cumulative increase in the potential exposure of people to sites where soil contamination could be present from past or current uses, or to hazards associated with the use and transport of hazardous materials? The project's contribution would be less than considerable.	LTS	None required.	LTS
3.9 Hydrology and Water Quality			
3.9-1: Would implementation of the proposed project violate water quality standards or waste discharge requirements, or otherwise substantially degrade surface or groundwater quality? This would be a less-than-significant impact.	LTS	None required.	LTS
3.9-2: Would implementation of the proposed project deplete groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin? This would be a less-than-significant impact.	LTS	None required.	LTS
3.9-3: Would implementation of the proposed project substantially alter the existing drainage pattern of the site or area through the addition of impervious surfaces resulting in erosion or siltation on- or off-site; increasing the rate or amount of surface runoff resulting in flooding on- or off-site; contributing runoff water which would exceed the capacity of existing or planned stormwater drainage systems or	LTS	None required.	LTS

Table ES-1
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	Impact Before Mitigation	Mitigation Measure(s)	Level of Significance After Mitigation
provide polluted runoff; or impede or redirect flood flows? This would be a less-than-significant impact.			
3.9-4: Would implementation of the proposed project release pollutants during flooding? This would be a less-than-significant impact.	LTS	None required.	LTS
3.9-5: Would implementation of the proposed project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan? This would be a less-than-significant impact.	LTS	None required.	LTS
3.10 Land Use			
3.10-1: Would implementation of the proposed project conflict with the City's 1993 General Plan policies or other regulations adopted for the purpose of avoiding or mitigating an environmental effect? This would be a less-than-significant impact.	LTS	None required.	LTS
3.11 Noise and Vibration			
3.11-1: Would short-term construction noise levels cause a substantial temporary increase in ambient noise levels? This would be a potentially significant impact.	PS	NOI-1: The Project applicant or its contractors shall implement the following for onsite noise control and sound abatement means that, in aggregate, would yield sufficient construction noise reduction during the site preparation, grading/excavation, and building construction phases of the Project to ensure compliance with the FTA-based guidance standard of 90 dBA hourly Leq at or beyond the property lines of the nearest residences, as noted. *Administrative Controls* – At all times during site preparation and construction: • Comply with Chapter 8.24 of the Municipal Code with respect to allowable construction periods, • Minimize idling time of onsite equipment, and • Either locate onsite stationary construction equipment (such as generators or air compressors) as far from adjacent residential property boundaries as is feasible, or place this equipment inside an approved noise-attenuating casing (e.g., sound-attenuated air intakes and heat vents, exhaust mufflers, etc.), or place this equipment indoors. *Engineering Controls* – All mobile and stationary construction equipment employing an internal combustion engine shall be equipped with suitable exhaust and intake silencers which are in good working order; and *Install Sound Abatement* – During site preparation and construction which involves the operation of more than two pieces of heavy equipment (dozer, backhoe, front-end loader, crane, tractor, etc.) for at least one hour and when operating within 25 feet of the exterior of a residence (either offsite or onsite), do the following: • Erect a temporary barrier (i.e., plywood sheet) or install sound blankets (or comparable temporary solid barriers) on the Project's construction fencing, or • Locate sound path intervening containers or trailers onsite to block direct line-of-sight between residences and the operating heavy equipment.	LTS
3.11-2: Would existing residential areas be exposed to vibration peak-particle velocities greater than 0.2-inch per second or vibration levels greater than 80 VdB due to project construction? This would be a less-than-significant impact.	LTS	None required.	LTS

Page 975 of 4069
Agenda Item #6.2.

Table ES-1
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	Impact Before Mitigation	Mitigation Measure(s)	Level of Significance After Mitigation
3.11-3: Would on-site operation noise from the proposed residences result in noise exposure levels that would impact adjacent residences? The impact would be less than significant.	LTS	None required.	LTS
3.11-4: Would the proposed project vehicle trips result in off-site roadway noise level increases that could impact noise sensitive land uses located along such roadways? The impact would be less than significant.	LTS	None required.	LTS
3.11-5: Would the proposed project, in addition to cumulative development in the City, increase traffic noise that exceeds the City's noise standards? The project's contribution would not be considerable.	LTS	None required.	LTS
3.12 Public Services and Recreation			
3.12-1: Would the proposed project increase demand for public services requiring the need to construct new facilities, or expand existing facilities, the construction of which could cause significant environmental impacts? This would be a less-than-significant impact.	LTS	None required.	LTS
3.12-2: Would the proposed project increase the use of existing neighborhood parks or other recreational services such that a substantial physical deterioration of the facility would occur, or require the construction or expansion of facilities that could have a physical adverse effect on the environment? This would be a less-than-significant impact.	LTS	None required.	LTS
3.12-3: Would the proposed project contribute to a cumulative increase in demand for public services, schools, and recreation facilities? The project's contribution would not be considerable.	LTS	None required.	LTS
3.13 Utilities			
3.13-1: Would the proposed project require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities? This is a less-than-significant impact.	LTS	None required.	LTS

Page 976 of 4069
Agenda Item #6.2.

Table ES-1
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	Impact Before Mitigation	Mitigation Measure(s)	Level of Significance After Mitigation
3.13-2: Would the proposed project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years? This is a less-than-significant impact.	LTS	None required.	LTS
3.13-3: Would the proposed project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? This is a less-than-significant impact.	LTS	None required.	LTS
3.13-4: Would the proposed project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals? This is a less-than-significant impact.	LTS	None required.	LTS
3.13-5: Would the proposed project comply with federal, state, and local statutes and regulations related to solid waste? This is a less-than-significant impact.	LTS	None required.	LTS
3.13-6: Would the proposed project contribute to an increase in demand for water supply, wastewater treatment, stormwater or solid waste? The project's contribution would not be considerable.	LTS	None required.	LTS
3.14 Transportation and Traffic			
3.14-1: Would the proposed project conflict with an applicable plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities? This would be a less-than-significant impact.	LTS	None required.	LTS
3.14-2: Would the proposed project conflict or be inconsistent with CEQA Guidelines section 15064.3(b)? This is a significant impact.	SU	None available.	SU
3.14-3: Would the proposed project increase hazards due to a geometric design feature or incompatible use? This is a less-than-significant impact.	LTS	None required.	LTS

Table ES-1
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	Impact Before Mitigation	Mitigation Measure(s)	Level of Significance After Mitigation
3.14-4: Would the proposed project result in inadequate emergency access. This is a less-than-significant impact.	LTS	None required.	LTS
3.14-5: Under Cumulative conditions, would the proposed project conflict or be inconsistent with CEQA Guidelines section 15064.3(b)? This is considered a significant impact.	SU	None available.	SU
3.15 Energy			
3.15-1: Would implementation of the proposed project result in wasteful, inefficient or unnecessary consumption of energy resources during construction or operation? This would be a less-than-significant impact.	LTS	None required.	LTS
3.15-2: Would implementation of the proposed project conflict with or obstruct a state or local plan for renewable energy or energy efficiency? This would be a less-than-significant impact.	LTS	None required.	LTS
3.15-3: Would the proposed project contribute to an increase in wasteful, inefficient or unnecessary consumption of energy resources during construction or operation? The project's contribution would not be considerable.	LTS	None required.	LTS

Page 978 of 4069
Agenda Item #6.2.

ES.7 SUMMARY OF PROJECT ALTERNATIVES

Section 15126.6 of the CEQA Guidelines identifies the parameters within which consideration and discussion of alternatives to a project should occur. As stated in this section of the CEQA Guidelines, alternatives must focus on those that are reasonably feasible and that attain most of the basic objectives of the project. Each alternative should be capable of avoiding or substantially lessening any significant effects of that project. The rationale for selecting the alternatives to be evaluated and a discussion of the No Project Alternative are also required, per Section 15126.6.

Alternatives Evaluated

This EIR includes an evaluation of the following alternatives:

- Alternative 1 – No Project/No Development
- Alternative 2 – No Project/General Plan
- Alternative 3 – Park/Open Space Preserve
- Alternative 4 – Increased Density/Affordable Housing

Alternative 1 – No Project/No Development

The No Project Alternative assumes that the Proposed Project would not be developed and the current undeveloped Project site would remain and not be altered.

Given the development assumptions of the 1975 General Plan, the 1993 General Plan and the 2019 General Plan, all of which assumed residential development on the project site, it is unlikely that this site would remain undeveloped. The Project site is designated as Medium Density Residential (MDR) in both the 1993 General Plan and the 2019 General Plan. According to the 1993 General Plan, the Medium Density Residential (MDR) designation provides for single-family detached and attached homes, secondary residential units, public and semi-public uses, and similar and compatible uses. Although the No Project Alternative would not meet the objectives identified for the Proposed Project and those development assumptions in the General Plans, CEQA requires an alternative that forgoes the project be analyzed.

Alternative 2 – No Project/General Plan

Under this alternative, it is assumed the Project would be developed consistent with the underlying MDR land use designation and MR zoning which allows development of the Project site with residential uses up to a maximum density of 12 dwelling units/acre (du/ac) under the

1993 General Plan MDR designation which was revised to 16 du/ac under the 2019 General Plan consistent with the MR zoning, which permits a maximum density of 16 du/ac.

For the purposes of this alternative a density of 9 du/ac was assumed for a total of 152 single-family residential units. Based on the number of units this alternative would result in a population of 372 residents, an increase of 159 residents as compared to the Project.

It is assumed Starr Avenue and Adams Street would both be extended to connect to the Project site and the street and lot layout would be very similar to the Project with the exception of the 3.4-acre portion of the site currently designated for multifamily units (Lot 52). This portion of the Project site would be configured to accommodate single-family residences.

Alternative 3 – Park/Open Space Preserve

This alternative includes a 1-acre park that would preserve a majority of the on-site wetlands. Although three lots would need to be removed to accommodate the 1-acre park, this alternative would include approximately the same number of units as the Proposed Project, including the 25 affordable housing units. It is assumed up to 11 Accessory Dwelling units could still be constructed on the larger lots.

Alternative 4 – Increased Density/Affordable Housing

The Increased Density/Affordable Housing Alternative includes the approximately 1-acre park to preserve a majority of the on-site seasonal wetlands with the remaining approximately 16-acres designated for up to 180 affordable housing units, assuming a density of 11.3 dwelling units per acre (du/ac) under the existing Medium Density Residential (MDR) land use designation (current zoning allows for a maximum density of 16.0 du/ac). The units would be attached housing (duplex or triplex) and would be 100% affordable. It is assumed buildings would be no taller than 30-feet, consistent with the underlying MR zoning.

Environmentally Superior Alternative

Table ES-2, Comparison of Impacts of the Alternatives, provides a summary of the alternatives impact analysis considered in the EIR and identifies the areas of potential environmental effects per CEQA, and ranks each alternative as better, the same, or worse than the Proposed Project with respect to each issue area.

Table ES-2
Comparison of Impacts of Project Alternatives

Environmental Issue Area	Proposed Project	Alternative 1 No Project/ No Development	Alternative 2 No Project/ General Plan	Alternative 3 Park/Open Space Preserve	Alternative 4 Increased Density/ Affordable Housing
Aesthetics/Visual Resources	LTS/MM	▼	—	—	—
Agriculture and Forestry Resources	LTS	▼	—	—	—
Air Quality	LTS	▼	—	Δ	Δ
Biological Resources	LTS/MM	▼	▼	▼	▼
Cultural Resources	LTS/MM	▼	—	—	—
Geology and Soils	LTS/MM	▼	—	—	—
Greenhouse Gas Emissions	LTS	▼	—	Δ	Δ
Hazards and Hazardous Materials	LTS	▼	—	—	—
Hydrology and Water Quality	LTS	▼	—	—	—
Land Use	LTS	▼	—	—	—
Noise and Vibration	LTS/MM	▼	—	Δ	Δ
Public Services and Recreation	LS	▼	Δ	—	Δ
Utilities	LTS	▼	—	Δ	Δ
Traffic and Circulation	SU	▼	—	▼	▼
Energy	LTS	▼	—	Δ	Δ

Δ Alternative is likely to result an increase in severity of the impact when compared to Proposed Project.
— Alternative is likely to result in similar impacts when compared to Proposed Project.
▼ Alternative is likely to result in reduced impacts when compared to Proposed Project.
LTS/MM = Less than significant impact with mitigation, LTS = Less than significant impact, SU=Significant and Unavoidable

As indicated in Table ES-2, Alternative 1, the No Project/No Development Alternative would result in the fewest environmental impacts, and subsequently would be considered the environmentally superior alternative. However, Section 15126.6(e)(2) of the CEQA Guidelines states that if the environmentally superior alternative is the No Project Alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives.

Of the alternatives evaluated above, Alternative 2, the Park Preserve alternative is the environmentally superior alternative.

INTENTIONALLY LEFT BLANK

CHAPTER 1
INTRODUCTION AND SCOPE OF THE EIR

1.0 PURPOSE AND INTENDED USE OF THIS EIR

The City of St. Helena (City) has prepared this Draft Environmental Impact Report (EIR) to inform the general public, the local community, responsible agencies, trustee agencies, and other interested public agencies, and the City's decision-making bodies (City Council) regarding the potential significant environmental effects resulting from implementation of the proposed Hunter Subdivision Project (Proposed Project), as well as possible measures to mitigate those potential significant effects including alternatives to the Proposed Project. This Draft EIR was prepared in compliance with the California Environmental Quality Act (CEQA) (California Public Resources Code, Section 21000 et seq.), the CEQA Guidelines (14 CCR 15000 et seq.), and the City's procedures for implementing CEQA. This Draft EIR is a "project" EIR, pursuant to CEQA Guidelines Section 15161. A project EIR examines the environmental impacts of a specific project.

As described in CEQA Guidelines Section 15121(a), an EIR is an informational document that assesses potential environmental impacts of a proposed project, as well as identifies mitigation measures and alternatives to a proposed project that could reduce or avoid adverse environmental impacts. As the CEQA lead agency for this Proposed Project, the City is required to consider the information in the EIR along with any other available information in deciding whether to approve the Proposed Project entitlements requested. The basic requirements for an EIR include providing information that establishes the environmental setting (or project baseline), and identifying environmental impacts, mitigation measures, project alternatives, growth inducing impacts, and cumulative impacts. In a practical sense, an EIR functions as a method of fact-finding, allowing an applicant, the public, other public agencies, and agency staff an opportunity to collectively review and evaluate baseline conditions and project impacts through a process of full disclosure. Additionally, this EIR provides the primary source of environmental information for the lead agency and also those responsible agencies to consider when exercising any permitting authority or approval power directly related to implementation of this Proposed Project. It is not the intent of an EIR to recommend either approval or denial of a project.

1.1 USE OF PREVIOUSLY PREPARED ENVIRONMENTAL DOCUMENTATION

A Proposed Project application to develop the site was submitted to the City in 2010, and the City retained an environmental consultant in 2011 to prepare an EIR for the Proposed Project. The environmental review process was completed, and in September 2013, the City's Planning Commission reviewed comments received on the Draft EIR, but no action was taken by the Commission and the item was continued. Revisions were subsequently made to the Proposed Project that required the Draft EIR to be updated.

Updates to the Draft EIR were completed in 2017, but the City opted to not release the Draft EIR for public review due to problems with that document that required additional work. Ultimately, the City released a Request for Proposals for the preparation of this (2021) EIR.

The 2012 and 2017 Draft EIRs were reviewed in preparation of this EIR.

In May 2019, the City adopted the "General Plan Update 2040."[1] However, since the Proposed Project application was submitted in September 2010 and deemed complete by the City in 2011, this EIR uses the 1993 General Plan as the applicable general plan for the purposes of evaluating the Proposed Project. Nonetheless, this EIR will also evaluate consistency with the City's adopted 2019 General Plan for informational and consistency purposes.

CEQA Guidelines Section 15150 allows for incorporation by reference of "all or portions of another document which is a matter of public record or is generally available to the public." Incorporation by reference is used principally as a means of reducing the size of EIRs. This Draft EIR relies in part on data, environmental evaluations, and mitigation measures from the prior Draft EIRs, and other components of environmental documents and plans prepared by the City for areas within the Proposed Project vicinity. These documents are listed here and used as source documents for this Draft EIR. All documents are available for public review during normal business hours (Monday through Friday, 8:30 a.m. to 5:00 p.m.) at the City of St. Helena Planning Division, 1480 Main Street, St. Helena, California 94574, and on the City's website at http://www.ci.st-helena.ca.us/planning/page/ceqa-document-center.

- Hunter Subdivision Project Revised EIR, October 2017
- City of St. Helena 1993 General Plan, adopted September 28, 1993
- City of St. Helena General Plan Update 2040, adopted June 2019
- St. Helena Municipal Code, updated through October 2020

1.2 LEAD, RESPONSIBLE, AND TRUSTEE AGENCIES

Lead Agency

In accordance with CEQA Guidelines Sections 15050 and 15367, the City of St. Helena has been designated the "lead agency," which is defined as the "public agency which has the principal responsibility for carrying out or disapproving a project." The lead agency is also responsible for determining the scope of the environmental analysis, preparing the EIR, and responding to comments received on the Draft EIR. Prior to making a decision to approve a

[1] For consistency, the "General Plan Update 2040" document is referred to in this EIR as the "2019 General Plan".

project, the lead agency is required to certify that the EIR has been completed in compliance with CEQA, that the decision-making body has reviewed and considered the information in the EIR, and that the EIR reflects the independent judgment of the City.

Responsible Agencies

Responsible agencies are state and local public agencies, other than the lead agency, that have some authority to carry out or approve a project or that are required to approve a portion of the project or approve a permit for which a lead agency is preparing or has prepared an EIR or Initial Study/Negative Declaration (CEQA Guidelines Section 15813). The following agencies would potentially act as responsible agencies for the purposes of this Proposed Project:

- **San Francisco Regional Water Quality Board**. Ensures compliance with the City's National Pollutant Discharge Elimination System Permit for any stormwater discharge associated with construction activity.
- **Bay Area Air Quality Management District.** Oversees air quality and has the authority to require mitigation fees.

Trustee Agencies

Trustee agencies are designated public agencies with legal jurisdiction over natural resources that are held in trust for the people of California and that would be affected by a project, whether or not the agencies have authority to approve or implement the project (CEQA Guidelines Section15386). The following agency was identified as a trustee agency with potential jurisdiction over the Proposed Project:

- California Department of Fish and Wildlife

1.3 EIR PROCESS

Notice of Preparation

In accordance with CEQA Guidelines Section 15082, a Notice of Preparation (NOP) was circulated for public and agency review from March 6, 2018 through April 9, 2018 (included as Appendix A). The purpose of the NOP is to provide notification that an EIR for the Proposed Project was being prepared and to solicit guidance on the scope and content of the document. A summary of the comments received on the NOP is included in the Executive Summary, as well as in the introduction of each technical section.

Pursuant to CEQA Guidelines Section 15082, the lead agency held a public scoping meeting on March 12, 2018. Responsible agencies and members of the public were invited to attend and provide input on the scope of the EIR. Comments from agencies and the public in response to

the NOP are provided in Appendix A. General concerns and issues raised in response to the NOP are summarized in the Executive Summary and addressed in this Draft EIR.

Draft EIR and Public Review

This Draft EIR is being circulated for public review and comment for a period of 45 days. During this period, the general public, organizations, and public agencies can submit comments to the lead agency on the Draft EIR's accuracy and completeness. Release of this Draft EIR marks the beginning of a 45-day public review period pursuant to CEQA Guidelines Section 15105. The 45-day public review period for the Draft EIR will be from September 23, 2021 through November 8, 2021. The public can review the Draft EIR at the following address during normal business hours (Monday through Friday, 8:30 a.m. to 5:00 p.m.) or on the City's website at www.cityofsthelena.org.

City of St. Helena
Planning Division
1572 Railroad Avenue
St. Helena, California 94574

The City encourages all comments on the Draft EIR be submitted in writing. All comments or questions regarding the Draft EIR should be addressed to:

Maya DeRosa, AICP, Planning and Building Director
City of St. Helena Planning Division
1572 Railroad Avenue
St. Helena, California 94574
(707) 967-2783
mderosa@cityofsthelena.org

Final EIR and EIR Certification

Upon completion of the Draft EIR public review period, a Final EIR will be prepared that will include written comments on the Draft EIR received during the public review period and the City's responses to those comments. The Final EIR will also include the Mitigation Monitoring Program prepared in accordance with Section 21081.6 of the California Public Resources Code. The Final EIR will address any revisions to the Draft EIR made in response to agency or public comments. The Draft EIR and Final EIR together will comprise the EIR for the Proposed Project. Before the City can review the Proposed Project for approval, it must first certify that the EIR has been completed in compliance with CEQA, that the City Council has reviewed and considered the information in the EIR, and that the EIR reflects the independent judgment of the City. The City Council would also be required to adopt Findings of Fact and a Statement of

Overriding Considerations (if any significant and unavoidable impacts are identified). If no significant and unavoidable impacts (assuming the City Council finds all proposed mitigation measures to be feasible), are identified the City Council would not be required to adopt a Statement of Overriding Considerations if it approves the Proposed Project (see also Public Resources Code Section 21081).

EIR Adequacy

The level of detail contained throughout this EIR is consistent with Section 15151 of the CEQA Guidelines, which states the following:

> An EIR should be prepared with a sufficient degree of analysis to provide decision makers with information which enables them to make a decision which intelligently takes account of the environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure.

1.4 SCOPE OF THE DRAFT EIR

This Draft EIR has been prepared in compliance with CEQA (California Public Resources Code Section 21000 et seq.) and the procedures for implementation of CEQA set forth in the CEQA Guidelines (14 CCR 15000 et seq.).

According to CEQA Guidelines Section 15161, an EIR should focus primarily on the changes in the environment that would result from implementation of a proposed project. This EIR evaluates the potential environmental impacts that may occur from construction and operation of the Proposed Project, including direct, indirect, cumulative, and growth-inducing impacts. Based on a review of the Proposed Project and comments received during the NOP public review period, the City determined that an EIR should be prepared that addresses the following technical issue areas:

- Aesthetics
- Agricultural Resources
- Air Quality
- Biological Resources

- Cultural and Tribal Cultural Resources
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use
- Noise and Vibration
- Public Services/Recreation
- Public Utilities
- Transportation and Circulation
- Energy

This EIR evaluates the direct impacts, reasonably foreseeable indirect impacts, and cumulative impacts resulting from planning, construction, and operation of the Proposed Project using the most current information available and in accordance with the provisions set forth in CEQA and the CEQA Guidelines. In addition, the EIR recommends potentially feasible mitigation measures, where possible, and Proposed Project alternatives that would reduce or eliminate significant adverse environmental effects.

The alternatives chapter of the EIR (Chapter 5, Project Alternatives) was prepared in accordance with Section 15126.6 of the CEQA Guidelines. CEQA requires that the lead agency adopt mitigation measures or alternatives, where feasible, to substantially lessen or avoid significant environmental impacts that would otherwise occur. Proposed Project alternatives are not required, if no significant environmental impacts would occur.

The EIR evaluates the following alternatives to the Proposed Project:

Alternative 1: No Project/No Build Alternative. This alternative assumes no development would occur, and the site would remain in its current undeveloped condition.

Alternative 2: No Project/General Plan Alternative. This alternative assumes development would occur consistent with the General Plan land use designation and zoning.

Alternative 3: Park Preserve Alternative. This alternative includes a 1-acre park that would preserve a majority of the on-site wetlands and would include the same number of units as the Proposed Project, including the affordable housing units and accessory dwelling units.

Alternative 4: Increased Density/Affordable Housing Alternative. This alternative includes a 1-acre park along with up to 180 affordable housing units.

1.5 ORGANIZATION OF THE DRAFT EIR

Chapter 2, Executive Summary—Summarizes the elements of the Proposed Project and the environmental impacts that could result from implementation of the Proposed Project and provides a table that lists impacts, describes proposed mitigation measures, and indicates the level of significance of impacts before and after mitigation.

Chapter 1, Introduction and Scope of the Draft EIR—Provides an introduction and overview of the EIR process and describes the intended use of the EIR and the review process.

Chapter 2, Project Description—Provides a detailed description of the Proposed Project, including its location, background information, Project objectives, and technical characteristics.

Chapter 3, Introduction to the Analysis—Describes the baseline environmental setting and provides an assessment of potential Proposed Project impacts for each technical issue area presented. Each section is divided into four sub-sections: Introduction, Environmental Setting, Regulatory Background, and Impacts and Mitigation Measures (Proposed Project–specific and cumulative).

Chapter 4, CEQA Considerations—Provides information required by CEQA regarding impacts that would result from the Proposed Project, including a summary of cumulative impacts, secondary impacts including potential impacts resulting from growth inducement, and significant irreversible changes to the environment.

Chapter 5, Project Alternatives—Describes and compares the Proposed Project alternatives to the Proposed Project.

Chapter 6, EIR Preparers—Lists report authors who provided technical assistance in the preparation and review of the EIR.

Appendices—Includes various documents and data that support the analysis presented in the Draft EIR.

INTENTIONALLY LEFT BLANK

CHAPTER 2
PROJECT DESCRIPTION

2.0 INTRODUCTION

Ben and Kelly Vanzutphen (Project applicants) have requested approval of a Tentative Subdivision Map. This proposed subdivision, which is the only discretionary action being considered by the City of St. Helena (City) at this time, would form the basis for the proposed Hunter Subdivision Project (Proposed Project), which is the "project" examined in this Environmental Impact Report (EIR). Development of the Proposed Project would require the approval of the Tentative Subdivision Map and several subsequent discretionary approvals, as outlined under Section 2.6 later in this chapter.

The Proposed Project's reasonably foreseeable and potentially significant adverse environmental effects are evaluated in this EIR.

Consistent with California Environmental Quality Act (CEQA) Guidelines Section 15124, this chapter includes: the location and boundaries of the Proposed Project, as shown on a project location map and on a regional map; a statement of the objectives sought by the Proposed Project; a general description of the Proposed Project's environmental characteristics, supporting public facilities; and a statement briefly describing the intended uses of the EIR, including a list of public agencies that are expected to use the EIR in their decision making, and a list of permits and approvals required to implement the Proposed Project.

Information has been provided by the Proposed Project applicant and City planning staff. The following project description serves as the basis for the environmental analysis contained in this EIR. The City will serve as the lead agency with final authority to certify the EIR and approve the Proposed Project (both the Tentative Subdivision Map and subsequent approvals).

2.1 PROJECT SITE

Location and Surrounding Land Uses

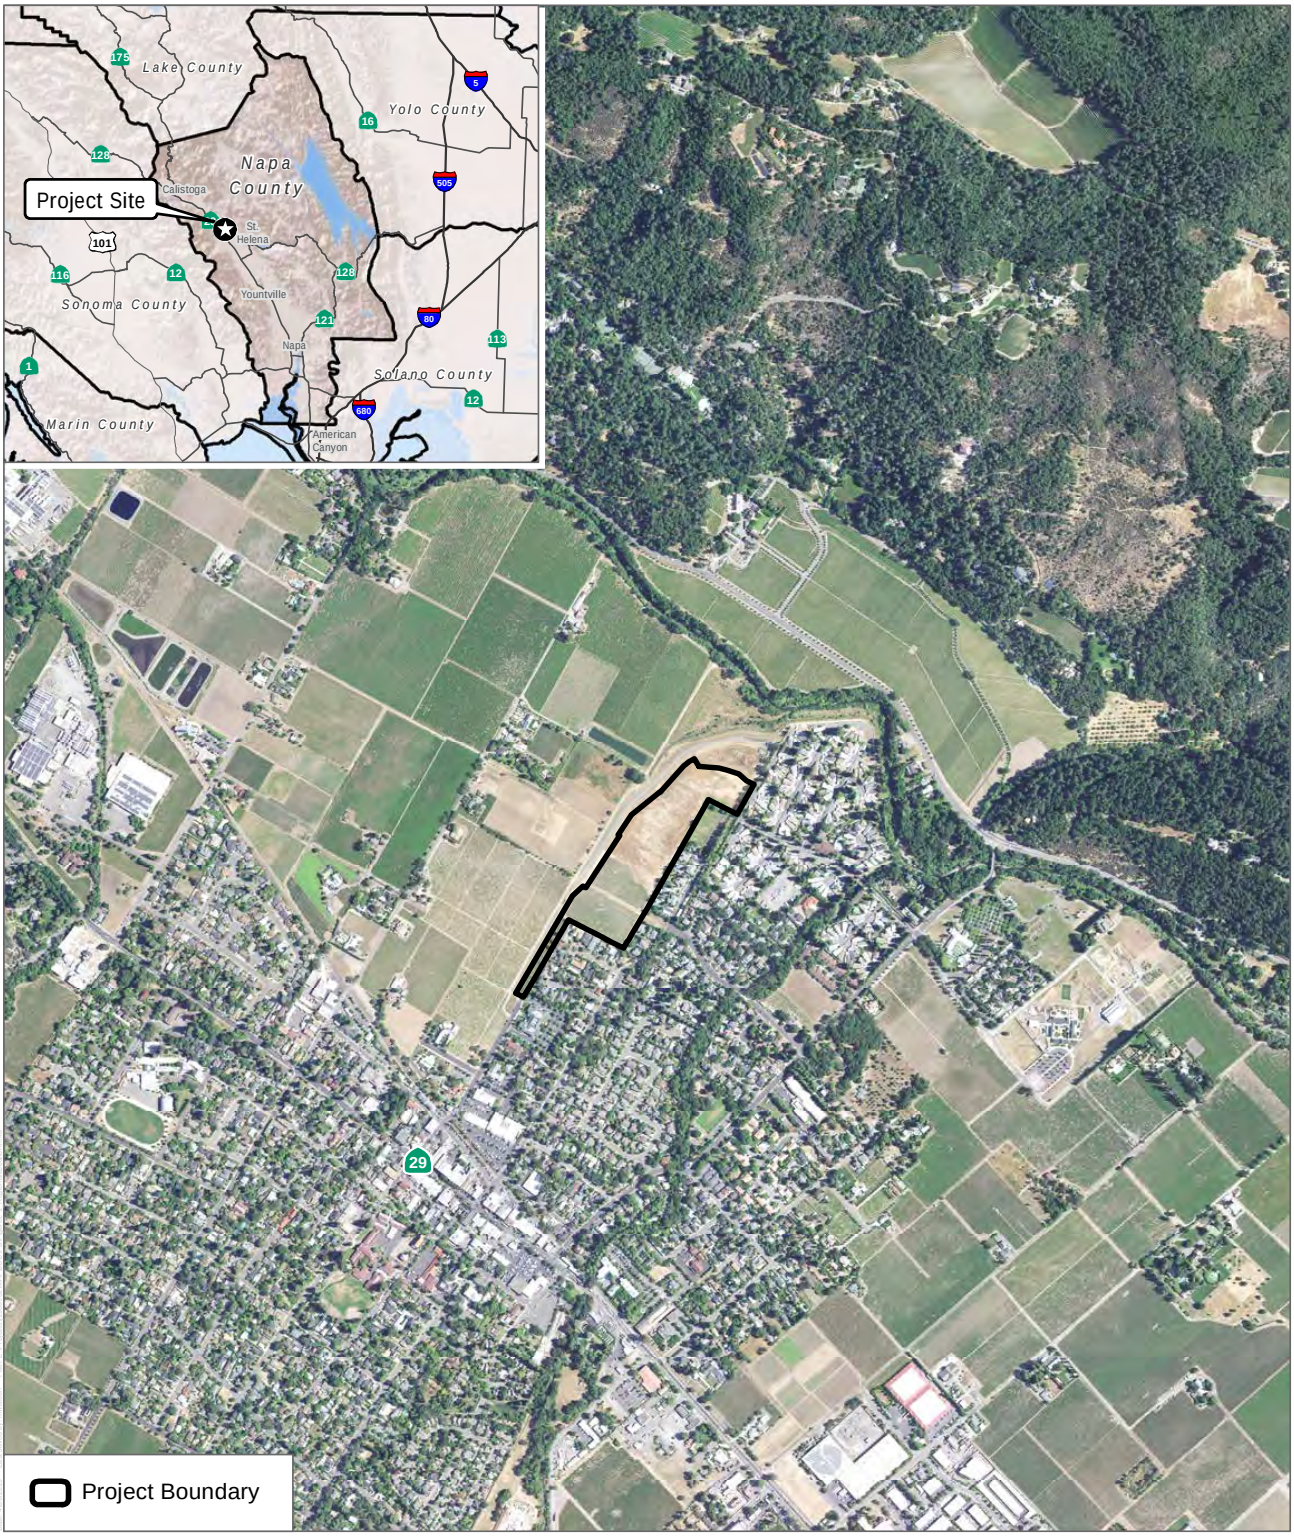
The 16.9-acre Project site (Assessor's Parcel Number is 009-030-057) is located in the northeast portion of the City, at the eastern terminus of Adams Street, three blocks east of downtown and State Route 29 (SR 29), and west of the Napa River, as shown in Figure 2-1, Regional Location.

The Project site is generally rectangular with a "panhandle" extension that connects the site to Adams Street west of the panhandle, as shown in Figure on Figure 2-2, Project Location. Adjacent land uses include single-family and multi-family residential development to the south, including the Vineyard Valley Mobile Home Park and the Hunt's Grove Apartments. Office uses

are located immediately adjacent to the site's most western edge at the terminus of Adams Street. Undeveloped land currently under cultivation is located to the north and northwest. A single-family residence along with a barn and accessory dwelling unit is currently (May 2021) under construction to the west/north of the Project site. A gravel maintenance road used by the public as an informal trail borders the site along the north/northwest boundary along with a separate public trail located on the north/northwest side of the maintenance road (referred to as the "maintenance road/public trail"), and a City storm water detention basin borders the site to the south/southeast. A drainage ditch is located along the northern edge of the property. Figure 2-3 depicts existing and adjacent land uses.

The open space located north and east of the site is part of the St. Helena Comprehensive Flood Protection Project (Flood Protection Project). The Napa River flows from northwest to southeast approximately 500 feet north/northeast of the Proposed Project boundary.

Existing Uses and On-Site Characteristics



Approximately 40% (6 acres) in the southwestern portion of the Project site is under cultivation with a vineyard. Approximately one acre of vineyard is located in the western '"panhandle" portion of the Project site. The remainder of the site is undeveloped. An existing agricultural well is located near the southeastern end of the Project site, adjacent to proposed lot 19 of the Tentative Subdivision Map, shown as Parcel B on the proposed Tentative Map (see Figure 2-4).

Based on the Proposed Project's grading plan, the elevation across the Project site as developed would range from approximately 230 feet above mean sea level (amsl) on its southern edge to approximately 212 feet amsl on its northern edge. The portion of the site planned for the extension of Adams Street ranges from 243 feet amsl to 230 feet amsl.

An existing 10-foot wide public water line easement containing an active 12-inch water line bisects the north/northeast portion of the site. This easement is proposed to be abandoned as part of the proposed Tentative Subdivision Map and the water line relocated.

The existing gravel maintenance road/public trail that starts at the end of Adams Street and borders the Project site along the north/northwest is a popular walking trail for City residents.

Several small Valley Oak trees are present along the eastern boundary of the site along Del Rio Court that would not be removed as part of the Proposed Project. In addition, there is a drainage ditch located in this area and also along a portion of the eastern Proposed Project boundary. The Proposed Project would not impact these existing ditches.

There are no significant natural features on the site, and the City has not officially designated any significant viewsheds that would be affected by development of the site.

Project Background

The majority of the Project site was acquired by Dennis Hunter in 1997. Planning efforts were first initiated for developing the property in 2005. In 2008, the City and Mr. Hunter agreed to a land trade and a lot line adjustment to facilitate the City's Flood Protection Project (see below), resulting in the current configuration of the Project site in 2009. Mr. Hunter allowed the placement of excess fill material from the Flood Protection Project on the site.

The applicant's planning for the Project site was reinitiated later in September 2010, and an application was filed with the City for a Tentative Subdivision Map to subdivide the property for residential development. The application was accepted as complete by the City on March 28, 2011.

In 2011, the City completed construction of the Flood Protection Project which consisted of river channel improvements, a levee, and floodwall construction along the Napa River adjacent to the Project site. The Flood Protection Project was designed and constructed to meet or exceed all design criteria for Federal, State and local flood control projects. In December 2011, the City submitted an application to the Federal Emergency Management Agency (FEMA) to request a Letter of Map Revision (LOMR) that would revise the National Flood Insurance Program (NFIP) map and Flood Insurance Study report for the area subject to the Flood Protection Project. FEMA completed its review of the LOMR and officially revised the FIRM that covers the Project site and effectively removed the Project site from the 100-year flood hazard area. The effective date of the revised FIRM is November 5, 2012. The Project site is now designated Zone X, which FEMA identifies as an area with a moderate to low risk of flooding due to a levee failure and is considered protected from a 100-year flood event (FEMA 2018).

In 2012, the City prepared an EIR to evaluate the Proposed Project[1] and in 2013 the Proposed Project came before the City's Planning Commission for review. The Planning Commission did not take action on the Proposed Project and the item was continued. Additional information was submitted by the Proposed Project applicant, which resulted in the need to revise and update the Draft EIR.

[1] As noted earlier, the Proposed Project requires the approval of the proposed tentative subdivision map and several subsequent discretionary actions. These subsequent actions are discussed later in this chapter.

City of St. Helena 1993 General Plan and 2019 General Plan Land Use Designations and Zoning

The Project site was designated for residential development in the 1975 City of St. Helena General Plan , as Medium Density Residential (MDR) in the City of St. Helena 1993 General Plan, and is designated MDR in the City's recently adopted "General Plan Update 2040" (the 2019 General Plan). Because the tentative map application was submitted in September 2010 and deemed complete by the City in 2011, this EIR uses the 1993 General Plan as the applicable general plan for the purposes of evaluating the Proposed Project, since this version of the plan was in effect in 2011. This EIR also evaluates consistency with the City's current General Plan (adopted 2019) for informational and consistency purposes.

The 1993 General Plan described the MDR land use category as follows:

> **Medium Density Residential (MDR).** The MDR designation provides for single-family detached and attached homes, secondary residential units, public and semi-public uses, and similar and compatible uses. Residential densities shall be in the range of 5.1 to 12.0 dwelling units per gross acre. The MDR designation is the predominant residential designation, occurring throughout large areas of the City. The wide distribution of this designation is intended to maintain a development pattern in newly developing areas that is consistent with historic development patterns.

The current (adopted 2019) General Plan describes the MDR land use category as follows:

> **Medium Density Residential (MDR).** The MDR land use designation includes single-family attached and detached homes, and compatible uses. This designation permits residential densities between 5.1 and 16.0 dwelling units per acre. Retained from the 1993 General Plan, the MDR designation is the City's predominant residential designation and it is intended to maintain a development pattern in St. Helena's higher density areas that is consistent with historic development patterns.

Both versions of the General Plan contain the same basic description of the MDR land use category, except for the maximum density. Under the 1993 General Plan, this land use designation permits densities of 5.1 to 12.0 dwelling units per acre (du/acre) which would allow a maximum of 202 dwelling units assuming a density of 12.0 du/acre. The 2019 General Plan maintains the same MDR land use designation but allows a maximum density of 16 du/acre, which would allow a maximum of 270 dwelling units.

In order to comply with the General Plan, development on the site must include at least 87 dwelling units. The applicant intends to meet this requirement with a combination of 51 single family homes (to be built on the 51 single family lots created by the proposed subdivision), attached multi-family units on lot 52 of the subdivision, and accessory dwelling units (ADUs).

The zoning designation for the Project site is also Medium Density Residential (MR). The MR district implements the MDR General Plan designation. The MR district is described in the current Zoning Code as follows:

> The MR district is established for consistency with the medium density residential general plan designation. The district provides for single-family detached homes, accessory dwelling units, limited agricultural uses and compatible uses. Residential densities shall not be less than 5.1 dwelling units per acre nor more than sixteen (16) dwelling units per acre.

Uses in the MR zoning district include single-family detached homes, ADUs, limited agricultural uses and compatible uses. The MR district also allows attached duplex and triplex units, condominiums, and townhouses, and similar uses with a conditional use permit. Included within the MR zoning is a density bonus that may be given for housing projects that are affordable for persons of very low, low, or moderate income (Chapter 17.40, Section 17.40.60 (F)). The applicant has not requested consideration of a density bonus as part of the Proposed Project application.

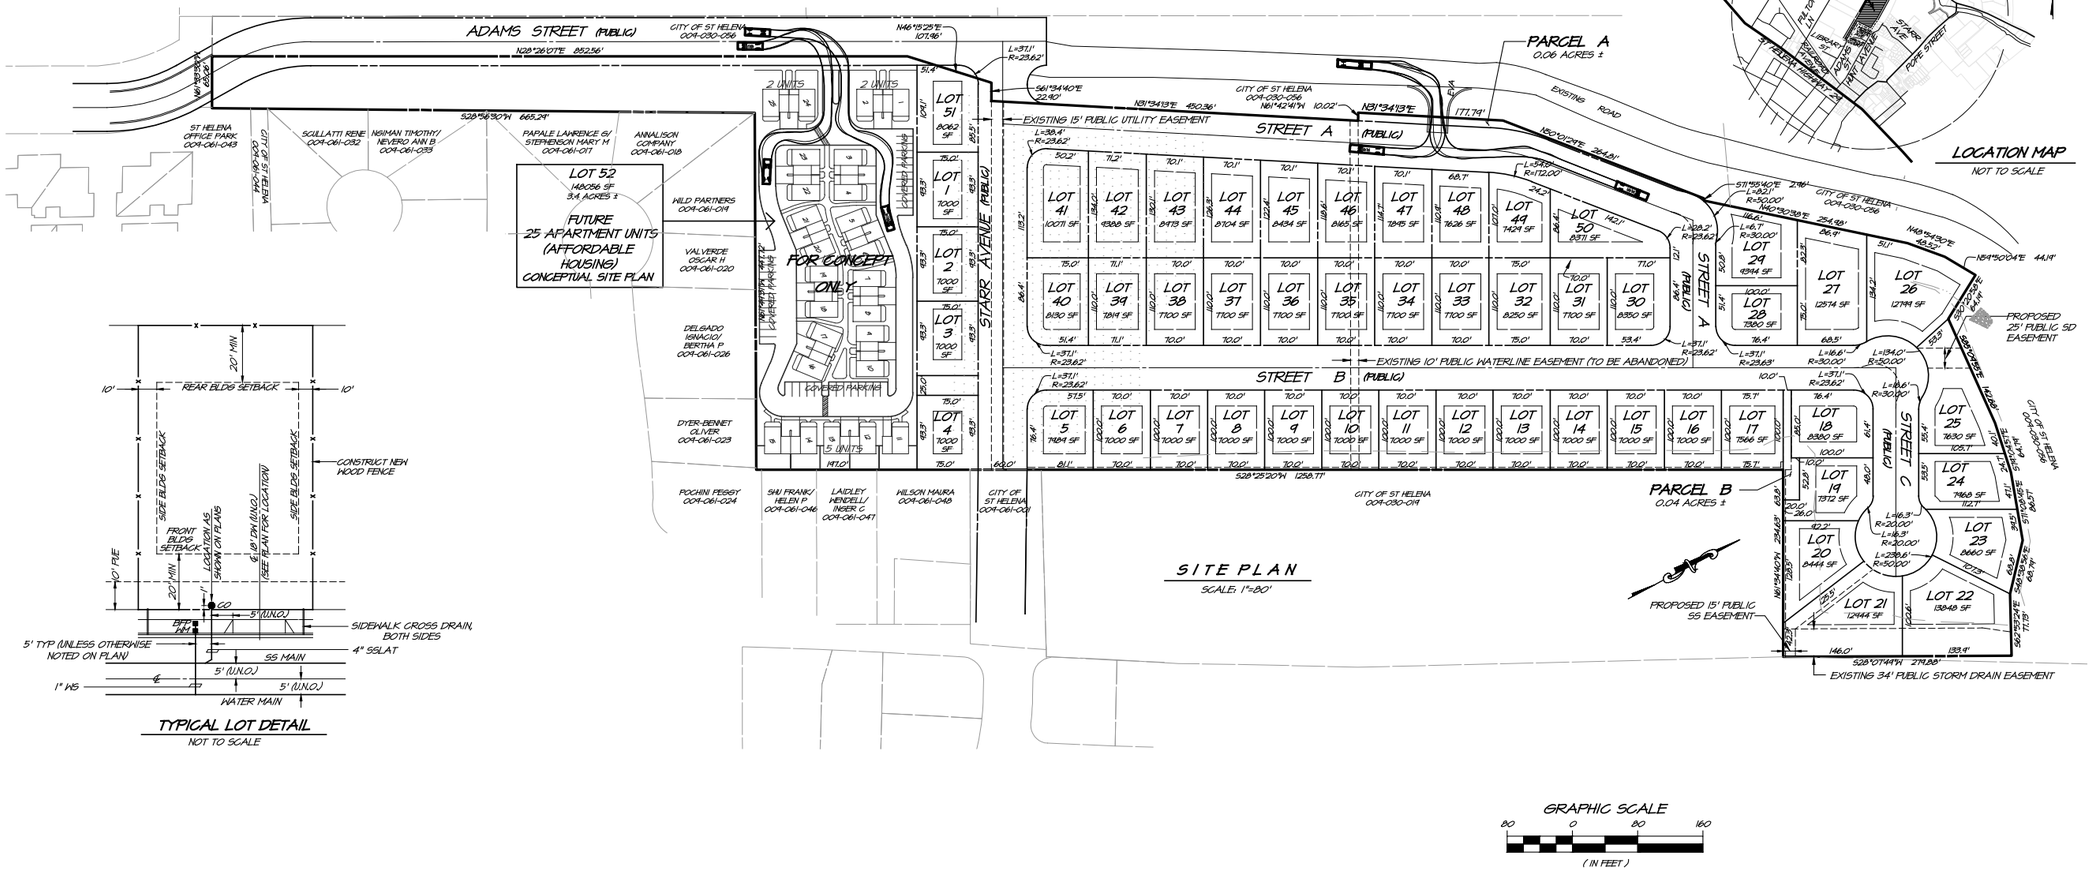
The City's General Plan Housing Element Update 2015-2023 was revised and last updated in May 2015. The City's 2015-2023 Housing Element identifies the site as vacant and underutilized (City of St. Helena 2015b, p.133, Table 43).

2.2 PROJECT OBJECTIVES

CEQA requires an EIR to include a statement of objectives for a project, including the underlying purpose of the project. These objectives help the lead agency determine the alternatives to evaluate in the EIR (CEQA Guidelines, Section 15124(a)). The following is a list of objectives for the Proposed Project:

- Subdivide the site consistent with the City's General Plan and Zoning for the site to accommodate residential development.
- Provide opportunities to develop a variety of housing types, including multi-family, single-family, and accessory dwelling units, affordable to a range of incomes including, very low, low and moderate-income households.
- Provide opportunities to contribute to the provision of workforce and affordable housing consistent with the City's adopted Housing Element and the Regional Housing Needs Assessment (RHNA) approved by the Association of Bay Area Governments (ABAG).
- Minimize traffic-related environmental impacts, such as noise, air quality and greenhouse gases by lowering commute patterns for St. Helena workers by providing more local housing opportunities.

- Support alternative transportation by providing a pedestrian and bicycle linkage through St. Helena, eventually connecting the regional Vine Trail from Calistoga to the Vallejo Ferry.
- Exceed the City's green building ordinance (Municipal Code Chapter 15.53) and incorporate sustainable design features including water conservation measures, drought resistant landscaping with low flow watering systems, south and west side tree placement to reduce reliance on air conditioning units, and pre-wiring for photovoltaic systems.
- Implement the General Plan Circulation Element by completing the planned extension of Starr Avenue and the partial planned extension of Adams Street from where Adams Street terminates to connect to the Project site.
- Minimize City water use by continuing the use of an existing on-site water well for irrigation of Proposed Project landscaped areas.



2.3 PROPOSED PROJECT

The Proposed Project applicant has applied for a Tentative Subdivision Map to subdivide the site into 51 lots (sized for single-family residences), a 3.4-acre parcel, and two lettered lots: a 0.06-acre parcel (Parcel "A") and a 0.04-acre parcel (Parcel "B"), as shown in Figure 2-4, Proposed Tentative Map.

Beyond the Tentative Subdivision Map application before the City at this time, the Proposed Project applicant has stated their intent to ultimately develop the 51 lots with 51 single-family, market-rate residences. Additionally, homes on 11 of the 51 lots would be developed with an ADU as part of their initial construction. Affordability of the attached units would be addressed in an Affordable Housing Agreement which would require approval by the City Council subsequent to approval of the Tentative Subdivision Map.

The applicant intends to ultimately develop the 3.4-acre parcel with 25 attached multifamily residential units. The affordability of these multi-family units will be the subject of the future Affordable Housing Agreement. A conceptual layout of how the multifamily units could be designed is shown in Figure 2-4A. However, this layout has not been formally submitted and is not under consideration for approval at this time.

The applicant has not expressed any intent to develop the 0.06-acre Parcel A.

INTENTIONALLY LEFT BLANK

Page 1006 of 4069

Agenda Item #6.2.

The 0.04-acre Parcel B is being created to accommodate an existing agricultural well, which would be retained and used to irrigate onsite landscaped areas. No other development would take place on Parcel B.

The Proposed Project applicant's ultimate intended development of the site would require several subsequent discretionary approvals—beyond the current application for a Tentative Subdivision Map—that are not before the City at this time. Nevertheless, to ensure full analysis of what is reasonably foreseeable, this EIR analyzes the applicant's ultimate intended development of the site as the Proposed Project.

Table 2-1 provides a breakdown of the total development proposed by the applicant.

Table 2-1
Proposed Project Land Use

Proposed Land Use	Zoning	Acres	Residential Units	Average Density (du/ac)
Single Family Residences	MR	13.4	51	
Accessory Dwelling Units[1]			11	
Attached Units[2]	MR	3.4	25	
Undeveloped	MR	.06	--	
Agricultural Well Site	MR	.04	--	
	Project Total	16.9[3]	87	5.1

Source: Hunter Subdivision Tentative Map 2021.
Notes:
1 Accessory units would be constructed by the applicant/developer concurrently on 11 of the single-family lots.
2. Attached units include duplex or triplex units would be included within Lot 52.
3 Numbers above add to 17 due to rounding. Site area is 16.9 acres.

The 87 residential units (51 single family homes, 25 attached units, 11 ADUs) would provide for an average density of 5.1 du/ac. Because the General Plan establishes a minimum density for the MDR land use category, this is the minimum number of units which can be constructed on the Project site. (The 2019 General Plan allows up to 16 units per acre, for a maximum potential buildout of 270 units.)

As shown on the proposed Tentative Subdivision Map, the single-family lots would range in size between approximately 7,000 and 12,000 square feet, with most of the lots in the 7,000 to 8,000 square foot range. A number of irregular shaped lots would be located along the eastern edge of the Project site and along the cul-de-sac (see Figure 2-4).

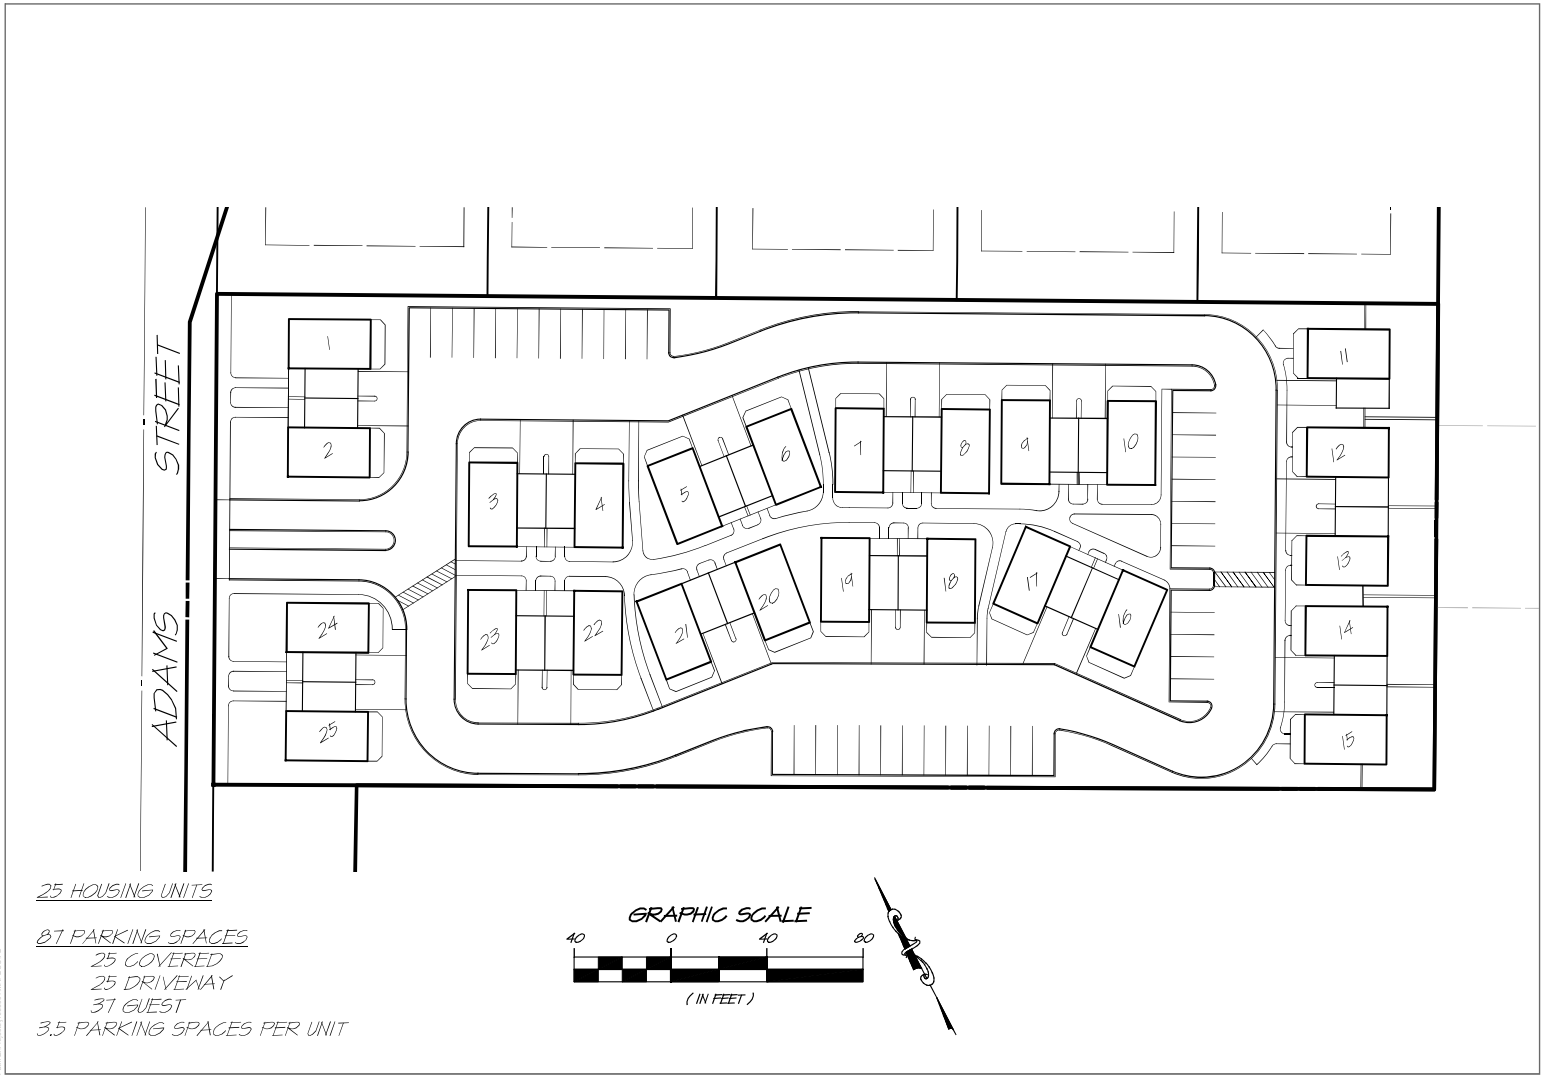
Each lot would have a minimum size of 7,000 square and a minimum width of 70 feet, per the standards of the MR zoning district. The development standards of the MR zoning district require a minimum 20-foot front and rear setback, and a 10-foot setback on the sides (or a 20-

foot setback in a street side yard). The MR zoning establishes a maximum height for principal dwellings of 30 feet (allowing for a 2-story home). Any accessory structure, such as an ADU, would be limited to a maximum height of 15 feet.

The 3.4-acre parcel (Lot 52), is proposed to be developed with 25 attached multifamily housing units including 30,000 to 45,000 total square feet of building area. The applicant's conceptual design for Lot 52 shows two-story, two-bedroom units each with a single-car garage and an on-site parking space plus covered guest parking spaces. A conceptual layout of the Lot 52 site along with conceptual renderings of the structures are shown in Figures 2-5 and 2-6. A specific design for these units has not been filed with the City and would be the subject of a future Design Review application.

Access to Lot 52 would be provided from Adams Street and a driveway connection to Starr Avenue, which would be extended to intersect Adams Street north of the Project site.

As discussed in Section 2.4, below, construction of detached and attached residential units would require design review approval by the Planning Commission, while development of the attached residential units would also require approval of a conditional use permit.



Affordable Units

The Proposed Project applicant has proposed to enter into an Affordable Housing Agreement with the City for the 25 multi-family units. The agreement will stipulate how these units would be managed (such as by the Proposed Project applicant or a non-profit organization) to ensure the required affordability requirements are met and maintained over the term of the agreement.

The Affordable Housing Agreement is still being discussed by the City and the Proposed Project applicant and is not proposed or required for review and approval with the Tentative Subdivision Map. A final Affordable Housing agreement approved by the City Council would be required prior to recordation of a final subdivision map.

Accessory Dwelling Units

The City's Zoning Ordinance (Municipal Code Section 17.116.030) and state law provides for the construction of an ADU on any lot which is zoned for residential use and has an existing single-family residence. Such units may be rented (for a period of not less than 30 days) but may not be sold separately from the main residence. As discussed earlier in this section, the Proposed Project applicant proposes to construct 11 ADUs on 11 of the 51 single family lots created by the proposed Tentative Subdivision Map.

DUDEK

FIGURE 2-6

Conceptual Rendering of Multi-Family Housing

Hunter Subdivision Project

INTENTIONALLY LEFT BLANK

Construction of an ADU would require only ministerial approval on any lot which contains a single-family residence (as is the case in all residentially zoned lots in the City which contain one single-family residence).

The Proposed Project is proposing 11 ADUs which equates to approximately 22% of the total number of single-family residences. By comparison, applications for ADUs in St Helena between 2013 and 2020 totaled approximately 37, equal to about 1.7% of all single-family residences in the city.

Population

The City uses a persons per household factor of 2.45 people per unit for medium/higher density residential land uses (City of St. Helena 2013). Using this factor, the 87 units in the applicant's development proposal (including ADUs) would conservatively generate 213 residents.[2]

Site Access and On-site Circulation

Development of the Project site would require the extension of Adams Street and Starr Avenue onto the Project site to provide two points of ingress and egress, as shown in Figure 2-4.

Adams Street would be extended from the terminus of the existing roadway approximately 550 feet to the northeast, ending at the Project site and connecting to the Project's internal roadway network. The southwestern portion of the existing gravel maintenance road at the end of Adam's Street would be modified by the Proposed Project to enable access to the Project site. The remainder of the maintenance road would remain a gravel road (see Figure 2-4). The existing trail parallel to the maintenance road would remain and would not be altered by the Proposed Project. Sidewalks would be installed on both sides of the Adams Street extension along with a 6-foot wide planting strip.

Starr Avenue would be extended approximately 165 feet northward from Hunt Avenue, crossing a City-owned parcel before entering the Project site and connecting to the Project's internal roadway network before ultimately intersecting with the extension of Adams Street. Sidewalks would be installed on both sides of the Adams Street extension along with a 6-foot wide planting strip.

The extension of Starr Avenue would divide the site into two portions. The western portion would include five single-family lots and the 3.4-acre multi-family lot. The eastern portion would include the other 46 single-family lots, the 0.06-acre remainder parcel "A" and the 0.04-acre parcel "B" for the agricultural well.

[2] Note: ADUs typically are occupied by 1 or 2 people; therefore, it is anticipated fewer than 213 people would occupy the Proposed Project upon completion.

The portion of the site south of the proposed Adams Street extension consists of approximately one acre of existing vineyards, which would be preserved as part of the Proposed Project.

The Adams Street extension is currently a City-owned right-of-way. The Proposed Project applicant would dedicate the additional right-of-way necessary for the extensions of Adams Street and Starr Avenue and would be responsible for construction of the two public road extensions. All new streets would be designed and constructed consistent with existing City street standards.

As shown on Figure 2-4, three new local streets (Streets A, B, and C) are proposed within the Project site. Single-family lots would be located on the south side of Street A, and on both sides of Streets B, C and the Starr Avenue extension.

As shown on the proposed Tentative Subdivision Map (Figure 2-4), the proposed width of the Adams Street and Starr Avenue extensions is 60 feet, consistent with the City's minor residential street standard. Streets A, B, and C would be 56 feet wide and would allow parking on both sides. All streets would include curb, gutter, and 4-foot-wide sidewalks and 6-foot wide planting strips on both sides of the street.

The Proposed Project would provide sidewalks for pedestrians. Bicyclists would use the on-site streets. The Proposed Project would also support subsequent extensions to provide non-vehicular access. Streets A, B, and C would be constructed by the Proposed Project applicant and dedicated to the City.

Emergency vehicle access would be provided via the extension of Adams Street, Starr Avenue, and an emergency vehicle access (EVA) to the existing gravel maintenance road that borders the north/northwest boundary of the Project site. The EVA would prohibit through traffic by installing bollards or other devices to prevent vehicle access. In the event of an emergency the City's Fire and/or Police department would access a knox box to unlock the bollards or other device to allow vehicle access.

On-street parking would be permitted along all Proposed Project streets including the extension of Starr Avenue and Adams Street.

No Class 1 (off-street bike path) or Class II (on-street striped) bikes lanes would be included as part of the Proposed Project.

Landscaping and Lighting

The applicant's proposed landscape plan includes approximately 185 trees, including 24-inch box scarlet maple (*Acer Rubrum*), Chinese pistache (*Pistacia Chinensis*) and tulip tree (*Liriodendron*

Tulipifera), as shown on Figure 2-7. Approximately 74 scarlet maple trees would be planted along the Adams Street extension to the intersection with Starr Avenue and along the Starr Avenue extension. Approximately 57 Chinese pistache trees would be planted along Street A. Approximately 54 tulip trees would be planted along Street B and the Street C cul-de-sac.

Trees would be planted mostly in rows of two to five with 10 feet of separation from streetlights. On the western edge of Starr Avenue the Scarlet Maples are proposed in a solid row of nine trees between Street A and Street B. Sidewalk planting strips would have hydro seed native grasses and drought tolerant plantings between the trees that are adapted to the City's climate.

The existing vineyards on the Project site would be removed with the exception of an approximately one-acre portion of the vineyard that would remain located in the westernmost "panhandle" portion of the site.

All public landscaping and irrigation would be required to meet the California Code of Regulations Title 23. Chapter 2.7 Model Water Efficient Landscape Ordinance requirements.

The Proposed Project includes 28.5-foot-tall standard streetlights along all residential streets.

A Homeowners Association (HOA) would oversee maintenance of public landscaping, including the approximately one-acre vineyard located in the southwestern "panhandle" portion of the site, and streetlights. The streetlights would be designed to conform with Lighting Zone 2 of Title 24, Part 6, of the California Code of Regulations.

Walls/Fences

Per the proposed Tentative Subdivision Map, the rear yard of Lots 1 through 51 would include a 6-foot high wood fence for privacy. A retaining wall that varying in height from 2 to 4 feet is proposed along the rear property line of Lots 5 through 22. The wall would be constructed of concrete masonry block.

Infrastructure Improvements and Public Services

Water, sewer, and storm drain services would be provided by the City. The Proposed Project would include new water, sewer, and storm drain infrastructure on site to serve the residential development designed in compliance with City specifications. The Project site is currently not served by City utilities. There is an existing groundwater well in the eastern area of the site (on proposed Lot 19). The Proposed Project's on-site water, sewer, and storm drain lines are proposed to be located within the street/driveway rights-of-way within the Project site.

Water Supply

With the abandonment of the 10-foot public water main easement and the existing 12-inch water main within this easement, a 12-inch public water main would be realigned and constructed by the City, proposed to be within the Starr Avenue right-of-way, as shown on Tentative Map page TM5. The existing 12-inch water line traverses the site generally north/south to the east of Starr Avenue within a 10-foot easement; this line would be relocated as part of development of the site.

The Project is proposing a looped 8-inch water main within Streets A and B that would connect to the existing water main at two locations. A new 8-inch water main is also proposed within the extension of Adams Street to connect to the existing water main at the southwest end of the Project site. As noted above, an existing 12-inch water line would also be relocated within the site to provide continued service to customers.

Fire hydrants and other appurtenances would be located and installed pursuant to City standards.

An existing agricultural well is located near the eastern end of the Project site that is proposed to be maintained in place (in proposed Lot 19) and used to provide non-potable irrigation of all on-site landscaping areas, including private front and rear yards. The well is proposed by the Project applicant to be owned and maintained by a homeowners' association or similar method; public ownership or operation is not proposed. A lot is shown on the proposed tentative map for the well site and access to the local street for maintenance, power, and water lines.

Water lines would be extended within the Project site from the agricultural well to serve the landscaped areas in the public right-of-way, at the individual homes and the future multi-family site, and the retained vineyard.

The Proposed Project would be designed not to exceed 0.4 acre-feet/year/dwelling unit of water based on the installation of increasingly efficient and lower-water-using fixtures and appliances and irrigation systems. For further detail on the Proposed Project's water demands, see Section 3.12, Public Services/Recreation and Section 3.13, Utilities. For information specific to the agricultural well and use of this well to provide the Project's landscape irrigation requirements, please see Section 3.9, Hydrology and Water Quality.

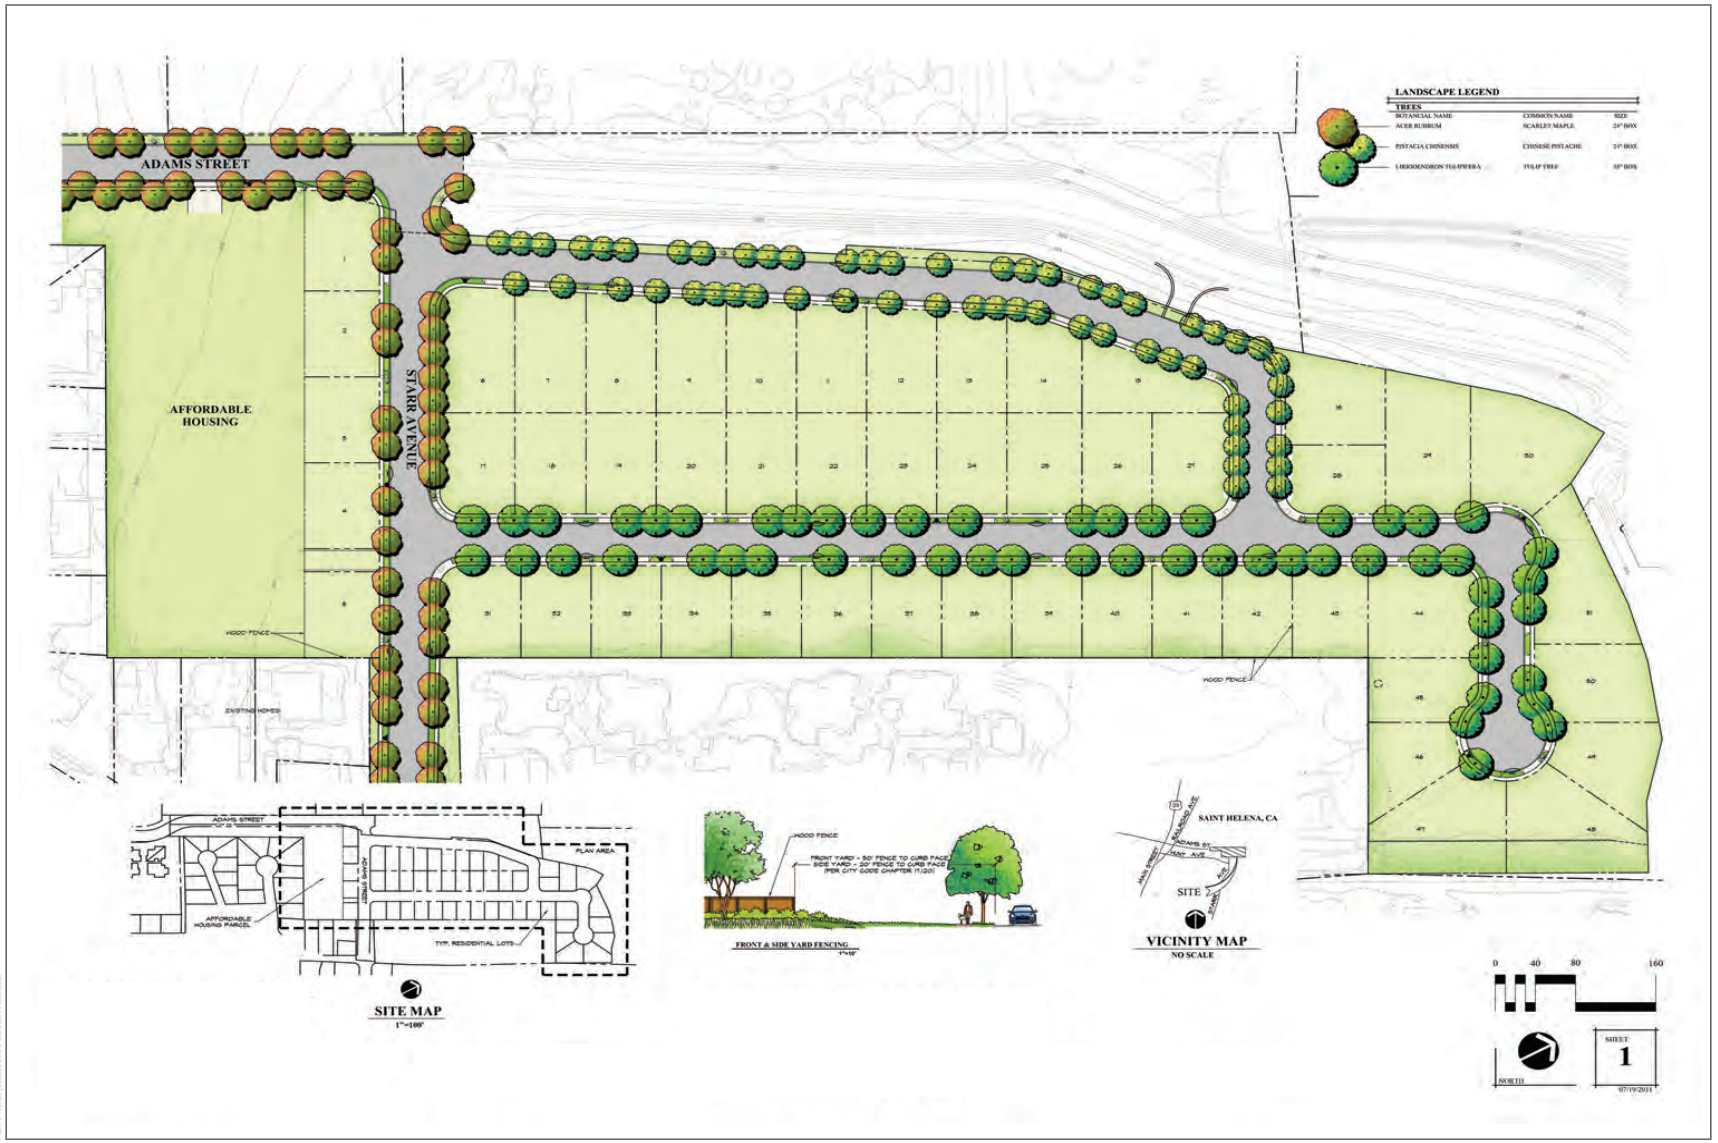

FIGURE 2-7

Landscape Plan

Hunter Subdivision Project

DUDEK

INTENTIONALLY LEFT BLANK

Sewer System

Wastewater flows from the western end of the Project site are proposed to drain into an existing public manhole at the corner of Starr and Hunt Avenue via new 8-inch sewer pipes, as shown on Tentative Map page TM5. The area east of Starr Avenue, lower in elevation, is proposed to drain east through the Project site via new 8-inch sewer pipes, through Lot 21 within a public easement and into an existing public manhole on the adjacent parcel in the Vineyard Valley Mobile Home Park. The Proposed Project would install 8-inch sewer lines within all roadways to service the residences.

All sewer mains are sized to accommodate Proposed Project flows, per City standards, and designed at slopes to provide required self-cleaning velocities. Sewer laterals would be installed per City specifications.

Storm Drainage and Stormwater Quality

The Proposed Project would connect to existing storm drain infrastructure. New storm drain lines would be installed in Streets A, B, C and Adams Street. As shown on Tentative Map page TM 5, the southwesterly portion of the Project site is proposed to drain via gutter flow and proposed storm drain pipes and discharge into the existing Starr Avenue storm drain at several different locations. The rest of the Proposed Project is proposed to drain to the northeast via gutter flow and storm drain pipes and discharge into the existing detention basin. The City requires that all storm drain pipes be sized to accommodate a 10-year storm within the pipe and 100-year storm within the street section.

Police and Fire Services

The Project site would be served by the St. Helena Police Department located at 1480 Main Street in St. Helena. The Police Department provides law enforcement services within the city limits and maintains 24-hour security patrol throughout the community. Fire protection services are provided by the St. Helena Fire Department located on the same site as the police department, which is less than a ¼-mile from the Project site. The fire department provides fire protection services within the city limits, including fire suppression, fire prevention, education, emergency medical and rescue services, and response to incidents involving hazardous materials.

Schools

The Proposed Project site is located within the St. Helena Unified School District, which operates four schools, including a primary school, elementary school, middle school, and a high school. The Proposed Project would be required to pay school impact fees to the School District at the time of building permit issuance.

Solid Waste Disposal

Upper Valley Disposal provides solid waste services to residents and businesses in the City. Solid waste is disposed of at the Clover Flat Landfill, a Class III landfill site, located off Silverado Trail north of the City.

Natural Gas, Electricity, Cable, and Telephone

The Proposed Project also includes natural gas, electrical, cable television, and telephone to serve proposed development. Natural gas is provided by PG&E and electric services would be provided by PG&E or MCE Clean Energy Community Choice Electricity program. Telephone service would be provided by AT&T and cable and internet services would be provided by a variety of providers including Xfinity, AT&T, and Valley Internet.

Offsite Improvements

Off-site improvements required for the Proposed Project include extending Starr Avenue approximately 165-feet to connect to the Project site and extending Adams Street approximately 550-feet to provide access to the site.

An emergency access for fire equipment would also be built to connect Street A with the existing maintenance road. All of these improvements would take place on land owned by the City.

Construction Details, Phasing, and Timeline

The applicant has not prepared a proposed phasing plan. According to the applicant, buildout of the Proposed Project would occur based on market conditions and the timeliness of obtaining building permits. The City may require the site be graded and construction of the backbone infrastructure be completed for the entire site as the first phase; however, the details of the Project's phasing plan have not yet been finalized.

If the Tentative Subdivision Map is approved and the applicant seeks and obtains all other required approvals, it is assumed the first phase of construction would require site clearing, grading, and trenching for utilities followed by construction of the roadways and residences.

For the purposes of the analysis it is assumed construction of homes would occur over a 6+ year period with the exception of the multi-family units, which the applicant proposes to build within a year of approval of Design Review, Use Permit to construct the units, and approval of the Final Subdivision Map.

Grading

Grading of the site would create a gradual downward slope from west to east towards the existing City storm water detention basin. To level the site and to ensure a stable base for new development, the existing fill/soils on the site would be removed, recompacted and returned to the site along with additional fill. The finish grade of most of the area east of Starr Avenue would be increased over the existing grade by the placement of approximately 1.5 to 2.5 feet of fill material; west of Starr Avenue the finish grade would be approximately 1 foot lower than the existing grade. The maximum depth of cut would be approximately 1.5 feet and the maximum depth of fill would be 5.0 feet. A former pond, located in the southeastern portion of the Project site, would require excavation of up to 10 feet due to anticipated settlement.

The estimated net grading quantity, as provided by the Proposed Project applicant, is approximately 24,321 cubic yards of fill to replace the 10,202 cubic yards of cut (RSA 2020).[3] This quantity does not include the spoils from the joint trench, roadways, curb and gutter, or foundations. It is the applicant's intent to balance the soils on site and not require the export or import of soils. Importing of some material, such as base rock, sand, and peat gravel that is used in the joint trenches, building foundations, and roadways would be required.

A summary of estimated earthwork quantities, provided by the applicant, is shown below.

Table 2-2
Earthwork Summary

Location/Item	Cut (CY)	Fill (CY)
Site Total	10,202	24,321
Pad Spoils[1]	5,200	
Trench Spoils[2]	4,500	
Vertical Spoils[3]	3,825	
Expansion[4]	510	
Subtotal	*24,237*	*24,321*
Import[5]	84	
Total	24,321	24,321

Notes:
1 Pad spoils assumed to be 100 cubic yards (CY) per lot due to post tension slab construction.
2 Trench spoils include water, sewer, storm drain, bioretention, irrigation water from well and joint trench.
3 Vertical spoils assumed at 75 yards per house and includes utility trenching in lot, landscape and final grading excavations to remove dirt from finished pad for drainage purposes.
4 Expansion assumed at 5% of the site total cut amount.
